London Transport, in short, has solved its teething problems satisfactorily, and is now half-way through its first crucial three-year period. It is no fault of the Board that its net revenues are some £384,000 below the amount required to pay the standard dividend. This sum, in fact, amounts to no more than 1.3 per cent. of traffic receipts, to 1.6 per cent. of operating expenses, and to 16.7 per cent. of the past year's renewals provision. Earnings for the "C" stock, in fact, are the relatively small resultant of large operating factors, and, to that extent, the stock is "razor-edged." And it is a chastening thought that four-fifths of the 4 per cent. dividend is derived from a source which has no direct connection with transport operations—namely, advertising and other rents. These facts have a vital bearing on the establishment of "standard" dividends. A year ago we regarded the capability of the Board to earn 5½ per cent. by 1938 as neither wholly certain nor wholly improbable. Under the present changed conditions we would question neither the Board's power to maintain the present 4 per cent. rate next year nor its intention to fulfil its obligation to pay 5½ per cent. in the following year. That, perhaps, is no more than a reasonable conclusion to a problem in divination, within a legal framework which the Board, had it been free to determine its own natal auspices, might have arranged differently. But beyond June, 1938, the hardest prophet would scarcely care to go. The ascertainment of probable future earning power is wholly contingent on the final clarification of operating conditions and renewals policy.

INVESTMENT NOTES

Course of Share Values.—During October ordinary share prices climbed to new heights both in London and New York. Our customary chart, shown on this page, discloses that the advance was, in fact, concentrated on the first part of the month in London, and it was hardly more evenly distributed over October's thirty-one days in America. Time and again, the London market appeared to be on the verge of a speculative upswing of the kind which argues a dangerous loss of touch with realities and is, like the profaned sabbath in the Victorian homily, "a certain forerunner of sorrow." Appearances, however, were invariably deceptive, and markets recovered their poise before any one of these movements had gone very far. Although total "markings" in the Official List averaged 12,727 each day, compared with 8,726 in October last year and 7,285 in October, 1932 (excluding Saturday bargains), and many Stock Exchange staffs worked overtime, the general impression remained that the lion's share of purchases was being "paid for"—in other words, that it represented not speculation but investment, optimistic perhaps, but investment nevertheless. There was consequently no disposition to look for any early or substantial set-back. Industrial reports remain good, and there is nothing in this week's King's Speech which vitally affects the markets either way. Argentine stockholders will anxiously await the forthcoming Bill to impose an import

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS (1928 = 100)

levy on beef. Their colleagues who hold home railway stocks will examine the proposed adjustment of the Freight Rebates Scheme with somewhat less foreboding. For the rest, the coal programme should help the investor in the long run, while the promise of new consideration for the shipping industry probably means a higher subsidy than would normally be payable after the recent rise in freight rates. The promised Bill to regulate the unit trusts will be wholly salutary. We discuss the American investment outlook, after Mr Roosevelt's resounding victory, in a subsequent Note. The prevailing belief that prices in London (as in New York) are high but may go higher may be read in the light of recent movements in the Actuaries' Index of 178 ordinary securities. This index has risen by 1.7 per cent. since the beginning of last month, 18.6 per cent. since the end of October last year, and 57.5 per cent. since October 31, 1932. Last Tuesday the Index (December 31, 1928 = 100) stood at 90.7, against 89.2 a month ago and 78.3 a year ago, the corresponding yield figures being 3.54, 3.61, and 3.77

per cent. respectively. Movements in some of the constituent groups in the Index are shown below:—

Group (and No. of Securities)	Price (Dec. 31, 1928 = 100)			Yield (%)		
	Year Ago (Nov. 5, 1935)	Month Ago (Oct. 6, 1936)	This Week (Nov. 3, 1936)	Year Ago (Nov. 5, 1935)	Month Ago (Oct. 6, 1936)	This Week (Nov. 3, 1936)
Investment Trusts (13)	55.3	60.2	61.9	3.72	3.77	3.69
Coal (7)	89.2	110.9	114.7	4.22	3.24	3.07
Iron and Steel (12)	67.3	82.7	86.3	3.20	3.70	3.55
Motors (5)	54.7	60.3	62.1	3.80	3.95	3.86
Oil (5)	71.5	90.2	93.7	3.15	3.07	2.93
Electric Supplies (10)	124.4	150.0	158.5	4.13	3.63	3.49
Shipping (4)	16.0	22.6	24.8	...	0.55	0.48

The groups which have been most popular in the last few weeks, it will be seen, are precisely those which have gained most during the past year. The *terrain* of recovery is now clearly demarcated.

Wall Street Greets Roosevelt.—Most prophets conceded the election to President Roosevelt, but those who estimated that Wall Street's reaction would put prices down have been wrong on all counts. Only Maine and Vermont were left to comfort the Republicans, who so recently were boasting that as Maine went, so went the nation. And only utilities have been left to comfort the bears in the bull market which developed after the election. Wall Street has been more enthusiastic than at any time since the long upward trend came to a temporary halt early this year. Turnover on Wednesday reached 3,290,000 shares, and prices went ahead rapidly (as may be seen from the Standard Statistics' indices quoted on page 275). Government bonds were firm, and speculative bonds were as popular as the leading shares. The reasons given for this enthusiastic disregard of forecasts are various. The suggestion that the market had been converted by Roosevelt's eloquence seems hardly sufficiently respectful to Wall Street's political stability. Anticipations of inflation have been reported as the main motive; but inflation in the uncontrollable German sense can hardly be expected by anyone. Presumably when Wall Street talks of inflation it uses the term to describe recovery under Democratic, or rather Rooseveltian, auspices, as contrasted with "normal" recovery under Republican rule. Alternatively, inflation in the market's usage this week may mean the dividend distributing influence of the profits tax, plus the effect of the relief expenditures, and in this sense there may be some justification for a rise in prices, if the market has previously been discounting their effects in anticipation of a Landon victory. But this hardly seems to explain the actual rise on Wall Street this week; the market has never put money odds on Landon's return, and the Government's financial policies in the future are likely to be less inflationary, even in the broadest sense, than at present. The major influence, surely, is still the progress of economic recovery, which is no longer restrained by the uncertainties of a possibly complete change in Government policy. We may surmise that, whatever else may be unknown about Mr Roosevelt's future policies, he will at least strive to prevent history from repeating itself, and to hold economic recovery in proper control. It will be an odd development if the patient is still fed with stimulants after he is up and about and no longer at death's door.

A Rubber Boom.—A bout of unexpected and uncalculating buying of rubber shares occurred at the beginning of this week. Brokers were instructed to buy at any price, to secure any shares available, and to buy the commodity if they could not buy shares. The reasons adduced for this enthusiastic outburst were singularly unconvincing. When investors burned their fingers in 1910-12 and 1925-26, the price of the commodity at least touched 12s. and nearly 5s. respectively. The highest price this week was 8½d. Some operators may be speculating on a "runaway" such as occurred in 1925 as a result of the continuance of output

restriction on a rising curve of demand. But the present international scheme is far more elastic than its Stevensonian predecessor, whose operation postulated a complex and rigid scale of releases, originally devised in the cloister rather than the market. The present scheme allows of rapid re-adjustment of quotas if necessary. The administrators of the Stevenson Plan showed more care for the profits of producers than the well-being of the industry, and made the grave tactical error of raising the so-called "pivotal price" (to a figure, incidentally, some two-and-a-half times the present price) on the eve of a sudden spurt in demand. The present International Committee has followed a more far-sighted policy. This week's effervescence has actually followed the Committee's decision, last week, to raise production quotas to a level estimated to effect only a very moderate reduction in world stocks of rubber. And these are far more ample than they were ten or eleven years ago. There is substance in the view that a price in the neighbourhood of 8d. a pound is not only at the upper limit of desirability but is also recognised as such. Since reasonably efficient estates can produce rubber at 4d. to 5d., the price assures them of a reasonable profit, but not of the return discounted by some of Monday's share values. If rubber shares are ever to become an "investor's market," a change of organisation as well as of psychology is urgently necessary. At present, there are far too many separate companies in the industry. In the twelve months to June 30th last, our "Industrial Profits" figures showed that net earnings of £2,659,000 were shared among no fewer than 346 rubber companies, whose total preference and ordinary capitalisation averaged no more than £185,000 per company. This figure contrasts with an average of £1,138,000 for the whole of the 2,138 companies engaged in every branch of British industry, whose results we analysed on that occasion.

Rubber Earnings Outlook.—The buying of rubber shares in the boom has been characterised by a singular lack of discrimination, yet in few other markets does such diversity exist, or is care in selection of greater importance. The market has been fired by two great expectations: First, that average rubber prices will be considerably higher in the present year, and over the coming twelve months, than a year before, and, secondly, that the 5 per cent. increase in quotas will both enable costs to be lowered and net receipts to be expanded. The companies which are in the best position to benefit from the rise in prices, therefore, naturally have a relatively low capitalisation in relation to output (or, put alternatively, produce a large quantity of rubber per unit of capital). They include some high cost producers whose margin of receipts over expenses has recently been very narrow, but who may expect a quick proportionate increase owing to higher prices, provided that costs remain unchanged. As costs have been increasing significantly, however, there is no guarantee that the profit margin has expanded to the same extent as prices. It must be remembered, also, that high cost companies gain least from the expansion in permitted output. It would seem, therefore, that the most favoured producers are those with a high equity in changes of price, and a low level of costs. In the accompanying table a selection of companies which

(a) Based on output in latest financial year. (b) For year ending May, 1935. (c) For year ending May, 1936.

With but few exceptions, dividend yields show a rather remarkable uniformity around 3 per cent. On the assumption of a "normal" return of 6 per cent. on rubber shares generally, current valuations would seem broadly to anticipate a doubling of profits in the next financial year or so. Without a detailed investigation into the prospects of each company, it would be rash to assert outright that an increase of this magnitude is impossible. The 70 per cent. quota, ordained for the first half of 1937, represents a rate of output somewhat in excess of the level current in 1935. Prices, further, may be expected to average about 2d. per lb. in excess of that year, though, in the meantime, costs will have increased. For most companies, therefore, the equivalent of a two-penny rise in prices fixes the upper limit of any increase in profits during 1937. Reference to the table suggests that, for the majority of producers listed, this would easily suffice to double the profits earned in 1935 or in the 1935-36 season, though the offset due to higher costs must be remembered. For the current year, however, both average prices are less than those assumed for 1937 and output has been on a much lower scale. Provided that no set-back in rubber prices occurs, it would seem that the current valuation of high-g geared rubber shares is not entirely excessive, if framed on prospects over a year ahead. Measured against prospective earnings for the present year, prices certainly seem to have been carried too far. And until a further improvement in the general situation justifies an even higher output quota, there can be no room for an additional rise in share values.

Bucket Shops Again.—Whether through human cupidity, or from a relaxation of ordinary standards of care, it seems inevitable that "share-pushers" should flourish like the rose when the security markets are active. It is only too clear that the "bucket shops" have recently been reaping a rich harvest. Available evidence suggests, moreover, that some of the leaders of the "profession" operate with a considerable degree of co-ordination, or even central control. If A fails to induce his fish to bite, he frequently leaves B to dangle a more colourful bait. And if one firm suspects that a "victim" is, in fact, merely seeking information for the purpose of combating their activities, the whole "market" immediately seals its lips. The action of certain leading banking institutions in reminding their clients that status reports regarding firms which make uninvited offers of their investment services can be obtained from the banks is therefore highly desirable. It may, perhaps, be assumed that the Stock Exchange authorities have given their full support to this procedure, which should happily serve the public weal, the banks' own interests, and the fair name of the "House." Many commentators would welcome the legal prohibition of the share-pusher's activities, as a logical extension of the ban on house-to-house security peddling. Such a step, however, inevitably introduces the vexed question of a charter for the Stock Exchange. The Government, Mr Runciman stated in the House of Commons on Thursday, is losing no time in dealing with the matter. In the meantime, however, the recipient of a "bucket shop" circular can best protect himself by asking why anyone should wish to give information, good or bad, to make a stranger's fortune; and by reflecting that, with the advent of winter and the domestic fire, the problem of disposal of these circulars is greatly simplified.

COMPANY NOTES

Lancashire Cotton Scheme.—Last Saturday, the long-awaited capital reconstruction of the Lancashire Cotton Corporation was published. The market's reaction on Monday, when the stock fell by 3 points to 85, fairly measures the scheme's general reception. Its scope is, inevitably, severe, for a total of £7,905,425 must be found, of which £5,840,292 arises from the writing-down of fixed assets (from £9,056,872), while the balance is required to eliminate fictitious assets. The nettle has thus been firmly grasped. The proposed capital changes may best be presented in the following summary form:—

EXISTING CAPITAL	£	NEW CAPITAL	£
6½% 1st deb. stk.....	2,000,000	5% deb. stk.....	1,500,000
Amount due to guarantor	627,500	5% non-cum. £1 pref.....	500,000
5½% income deb. stk.....	4,569,700	5% non-cum. pref.....	627,500
Ordinary shares	238,173	Ordinary stock (5s. in £)	1,142,425
6% pref. shares	4,131,331	Do. (4s. in £)	47,635
Deferred shares	758,412	Do. (2s. in £)	413,133
		Do. (1s. 8d. in £)	63,201
		Total in exchange	4,293,894
		Add 5% pref. stk. to be subscribed for cash.....	250,000
	£12,325,116		£4,543,894

The first debenture stockholders are to receive 75 per cent. of their capital in a new 5 per cent. debenture (which should command par), and the balance in non-cumulative 5 per cent. preference stock. Their income, on the most favourable assumptions, will thus be cut by 23 per cent. The Sun Insurance Office, whose advances to meet the guarantee of service on the existing debentures rank *pari passu* with them for capital, somewhat generously accepts non-cumulative preference stock at par in settlement, while the income debenture holders are offered ordinary stock at the rate of £1 in £4. The share capital, which is clearly valueless, obtains an *ex gratia* share in the equity to the extent of 31 per cent. Finally, new money will be supplied by the subscription of £250,000 preference stock at par by the Bankers Industrial Development Company.

—And Future Prospects.—The scheme does not inflict manifest injustice on any class. But, as presented, it has two regrettable shortcomings. First, although the current level of earnings is the pivot of the scheme, the directors are content merely to record the improvement to last April (which has long been public knowledge) and to give general indications of improved trading prospects. A second point is related to the provision by which debenture interest is only payable out of profits (up to 1941) before allowing for depreciation. No projected figure is put forward for depreciation, and it is difficult to compute the probable amount, since the assets are not dissected between plant and properties. If we assume an overall rate of 5 per cent., however, the required sum would be £160,000. If, further, we assume that the profits for the past year amounted to £140,000 (the total for the half-year was, in fact, only £59,246), the debenture interest (apart from sinking fund which commences in 1941) would be covered with £65,000 to spare. On these assumptions, profits would need to increase by about £100,000 before any earnings were available for the preference shares, and by nearly £170,000 before the ordinary stock came within sight of earnings. The latter contingency seems as remote as the planets, at present. But the former is of first importance to the existing debenture holders. Is their £25 preference stock worth £10? On our assumptions, only a confident believer in Lancashire's ultimate power of recovery could honestly answer affirmatively. It would be of the utmost help in resolving this unenviable problem if the directors could see their way to indicate more precisely their current earnings expectations and the "normal" depreciation provision which they have in mind.

Central Argentine Report.—This report, which completes the story of an adverse year in Argentine railway history, shows a fall of 2½ per cent. in gross receipts, and an increase of well over one-half per cent. in working expenses. The gross earnings, at £9,613,738, were the lowest since 1921-22. Although the maize traffics showed

a satisfactory increase of £252,850, the failure of the wheat harvest involved a headlong fall in wheat traffics from £847,158 to £318,076. In consequence, operating profits fell by nearly £300,000 to £2,407,447, while the relief from the recent heavy exchange burden has produced a saving of only £227,544 on exchange differences. The trends of the past three years are analysed below:—

	1934	1935	1936
Gross receipts	9,870,864	9,865,160	9,613,739
Working expenses	7,210,963	7,158,446	7,206,291
Operating profit	2,659,901	2,706,714	2,407,447
Income from investments	23,522	33,592	34,816
Exchange losses	1,004,819	1,228,623	1,021,079
Debt interest	998,091	1,019,996	1,037,280
Other charges and expenses	628,648†	316,325	270,042
4½% preference stock:—			
Earned	51,865	175,362	113,862
Paid (3½% in 1936)	...	...	339,350
Carry-forward	498,385	673,747	448,260

† Includes £306,906 provision to write down U.K. and Argentine 1933 Convention Trust "C" Certificates.

It is a little difficult, on the past year's earnings figures alone, to justify the payment of 3½ per cent. on the 4½ per cent. preference stock. This rate of payment is covered only to the extent of one-third, and involves a draft of £225,000 on the balance carried forward. Again, the distribution owes something to renewals policy. An amount of £174,746 has been expended, compared with £314,096 in the previous year, while £99,744 has been charged against revenue for the replacement of electric plant, and £182,423 against the renewals fund for rolling stock broken up. The decision to pay the dividend, in short, involves a draft on the earnings of a previous period to pay a non-cumulative dividend. It would appear, in fact, solely to witness the Board's confidence in the current prospect of improvement. While the company is affected by the same general factors as the other privately-owned companies, and would immediately benefit from effective transport co-ordination, further exchange relief and from power to vary its labour requirements in accordance with traffics, the character of its traffic is much more specialised, for it depends upon the maize crop for a substantial proportion of total receipts—last year amounting to 20 per cent. The current year has already begun in promising fashion, and peso receipts have increased by approximately 14 per cent. Both wheat and maize prospects are considerably improved, and are discounted in a yield of 6.3 per cent. on the first preference stock at 55½. The second cumulative preference stock, which carries gross arrears valued at £24, is quoted at 60.

Gaumont-British Critics.—The Gaumont-British Picture meeting on Monday had an unexpected *dénouement*. Critics from the floor moved unsuccessfully to appoint a shareholders' committee, but succeeded in carrying an amendment adjourning the meeting until consolidated accounts could be presented. This outcome is the more remarkable since apparently there was no organised preparation for it. Shareholders, indeed, can congratulate themselves on having put their points of criticism of the almost meaningless accounts so straightforwardly as to secure spontaneous support for the adjournment. Rarely, indeed, is the financial Demos so demonstrative. For the rest, Mr Mark Ostrer's speech clearly confirmed the interpretation of the accounts put forward in our last issue. The Corporation, in fact, is finding that the cost of producing films for the American market with its "great potentialities" is expensive. To quote the chairman's words, "We cannot guarantee even this year to receive back the whole of our cost." This fact accounts for the passing of the ordinary dividend, and for the special provision of £200,000. But the Corporation, having expanded its production activities so far, is contemplating whether to proceed with its programme or to restrict it to the home market, or to retire from film production completely. It was further disclosed that one of the Corporation's subsidiaries had extended its financial period to fourteen months and, in

consequence, had doubled its dividend (which may have some considerable bearing on the stability of last year's profits) and that £247,904 of the £482,248 increase in the bank overdraft had been expended on film productions. On the mystification surrounding the "Maxwell deal," the chairman vouchsafed no information. Shareholders will await the consolidated statement the more eagerly, since it will contain an independent valuation of all the properties. In the meantime, we reiterate our view that the 10s. shares are a speculative holding at their present price of 10s. 1½d.

British Celanese Problems.—During the depression disappointed British Celanese shareholders could accept the plea that their company had been caught by the slump in the middle of a great expansion programme which only awaited reviving turnover to justify itself. Such a sound business as International Nickel was in the same position. But the same plea for patience, advanced annually during recovery, must lose its persuasiveness with the 1935-36 accounts, published this week. Once again, profits are down. The directors' report explains that prices were lower, and that national mourning combined with a wet spring to check sales. Sales, nevertheless, were a record. If greater turnover were really the only thing requisite to produce soaring profits, the modest decline in prices during the year should not have prevented an improvement. The movement in profits is shown below:—

	1934	1935	1936
Trading profit	2,593,028	2,350,491	2,306,107
Total profit	2,605,380	2,359,420	2,310,784
Expenses	1,477,103	1,248,350	1,237,113

If the profits had been charged with only one year's dividend on the present 7 per cent. first preference capital of £2,500,000, the surplus to meet the annual dividend requirement (£318,750) on the 7½ per cent. second preference would have amounted to some £190,000. The arrears on this issue, however, are approximately ten times that amount at £1,912,500. Yet at the last meeting the chairman spoke of the possibility of paying off all those arrears in not more than one year—once capacity could be fully employed. It is time that shareholders demanded of the directors a clear statement of their position and prospects. They have long been invited to wait until capacity could be fully utilised, yet last year a further increase in plant was undertaken to establish the company "on a much wider basis," and a further £500,000 of capital was raised in first preference shares. If capacity has so far exceeded output year by year since 1929, some unfilled capacity must presumably by now be largely obsolete and should be written down. Alternatively, if the fixed assets, carried at some £7,695,000 (after deducting the depreciation reserve of £3,095,000) are really worth that figure, a conservative board might be inclined to make a higher depreciation allowance than £310,000. Hopes and valuations based on the theory of the superior quality of acetate yarn must now be discounted. At par, the 10s. ordinary shares appear unjustifiably high.

Imperial Airways Report.—The preliminary statement of profits on which we commented last week (page 224) has been followed this week by the full report. It shows that although traffic ton miles increased by the satisfactory rate of 37 per cent., the company's total trading profit was only £6,286 higher at £383,134. After increasing the obsolescence charge—offset by a corresponding reduction in depreciation—and providing for other charges, the net amount available for dividends is increased from £47,520 to £66,456. The fact that earnings have increased from 9.8 to 13.9 per cent., from which the 8 per cent. dividend is paid, is therefore largely accounted for by a reduction in charges, to which a lower allocation for staff provident scheme has contributed most. The following table analyses the disclosed results:—

	Years ended March 31,		
	1934	1935	1936
Profit and other income	321,023	376,848	383,134

Address.....

Investors who are more interested in the working results of the past year's operations (apart from the Government subsidy) are handicapped by the absence from the report either of a complete year's traffic figure or of a statement of the total subsidy received. The traffics announced for the eleven months to February last, however, amounted to £1,632,798. If we assume that the March receipts were equal to the average of January and February, the total for the year would amount to £1,770,285. The 1935 Air Estimates, since amplified by a Supplementary and by the Report on Civil Aviation, showed an amount due to the company for the year 1935-36 of £435,000. We are unlikely to be very far out, therefore, if we put the company's total income at £2,205,285. As the trading profit amounts to £369,434, working expenses and provisions would appear to have absorbed approximately £1,836,000. On these estimates, the company apparently failed to balance its operating account by some £66,000, compared with about £225,000 for the previous year. During the current year, it would appear that the subsidy will be reduced to £383,000. Imperial Airways, however, is in a stage of rapid transition, with the North American service in immediate prospect, and its financial arrangements with the Treasury have not finally been settled. Meanwhile, cash resources are considerable, and the present level of financial assistance meets the company's operating losses, provides generously for obsolescence, and pays a satisfactory rate of dividend. The company is the child of Imperial policy, and continued Treasury support is assured. But even this backing, and the possibility of rights to new capital, appear generously valued by a present price of 51s., which gives a yield of no more than £3 2s. per cent.

"Emmies" and Television.—The full report of Electric and Musical Industries confirms the striking fall in profits which was announced at the end of September. Dividends received, mainly from the two principal operating companies, fell from £451,176 to £266,948, and the reduced dividend was covered with an exiguous margin of disclosed earnings, after a substantial reduction in the amount required for income tax. The profit fluctuations over the past three years are given below:—

	Years ended September 30,		
	1934	1935	1936
Dividends	409,410	451,176	266,948

Carry forward

This sharp setback is attributed not merely to the reduced value of total sales, but also to price reductions which involved a fairly considerable inroad upon profit-margins. No comment is made regarding the trading prospect for the current year. The consolidated balance sheet reveals a sharp fall in overseas subsidiary interests, and the usual superabundance of liquid assets. The market is at present tempted to value neither the normal trading nor armaments prospects very confidently, for the 10s. shares, although they have climbed slowly to 23s. 3d., still yield £4 6s. 6d. per cent. Nor has the official inauguration of television transmissions this week lent any real assistance. The cost of television manufacture has been treated as a charge in the subsidiary's accounts, and the parent company's interest amounts to a mere £500, to which doubtless advances must be added. At present, however, it would appear that all companies in the television industry are strongly competitive in the receiver market, while the two

concerns which are technically equipped to produce transmitting equipment have inevitably incurred much expense for "strategic" reasons without the expectation of any considerable return from this side of the business. Technical superiority in transmission, it would seem, is not, in itself, an inevitable guarantee of a safeguarded market for receivers, although doubtless the goodwill factor is important. Whether share prices are reasonably related to prospects, however, may be doubted (particularly in the case of Baird Television), for television receivers—their present minimum price is about £85—must be considerably cheapened to attract a mass demand.

United Newspapers Preference.—Arrangements have been made under which the proprietors of Daily News, Limited, will resume full control of the *News Chronicle* by purchasing for cash the 50 per cent. interest in *News Chronicle, Limited*, now held by United Newspapers, Limited. As no public issue is in contemplation, the outside investor's interest is limited to the repercussions of the deal on the financial position of United Newspapers, whose 7½ per cent. £1 cumulative preference shares have recently advanced from 18s. to a present price of 25s. 6d. The company's shareholding in *News Chronicle, Limited* was valued in its last published balance sheet at £500,000. Its own liabilities include a bank loan which is understood to have been reduced since the date of the balance sheet (December 31, 1935) from £422,000 to something less than £200,000. It also has outstanding approximately £120,000 of "A" and "B" Unsecured Notes. Some £612,504 of its preference shares are in issue, on which dividend arrears totalled £275,000, gross, at the end of last year. It is evident, therefore, that the sale of the company's *News Chronicle* shareholding for £500,000 would produce an amount in cash approximately equivalent to its total obligations to its own bankers and Note holders and its preference dividend arrears, less tax. The company would then be left with three main assets: (1) land and buildings with a book value at December 31st last of £309,000, whose realisable value is certainly very much less than that figure; (2) a debt owed by *News Chronicle, Limited*, given in the last balance sheet at £97,000; and (3) preference and ordinary shareholdings in *Provincial Newspapers, Limited*, a subsidiary company which is paying dividends on both its first and second preference shares and earning, though not distributing, a profit on its ordinary shares. Some form of reconstruction of United Newspapers is obviously indicated, but when and how it will be effected will be for the Board to suggest. It is clear, however, that if the arrears and obligations are now paid off, the value of the remaining United Newspapers' assets more than covers the preference shares of the company at par; and that if the company continues in existence the earnings from its investments would furnish, say, 3 to 4 per cent. on its preference shares, even if no dividend were paid on *Provincial Newspapers* ordinary, while a dividend of 5 per cent. on *Provincial* ordinary would mean that the dividend on United Newspaper preferences was covered in full. It would seem, on this argument, that the preference shares of United Newspapers, at 25s. 6d. cum 10s. 6d. gross dividend arrears, would be worth this figure, but the margin for appreciation is obviously narrow.

Wall Paper Manufacturers' Profits.—The continuation of acutely competitive conditions in the wallpaper trade is suggested by the setback in the consolidated profits of the Wall Paper Manufacturers' group (after making numerous appropriations) from £722,429 to £707,265. There has, as the report somewhat delicately states, "been a further increase in this country in the number of machines operating which do not come under the control of the company, resulting in over-production." The parent company's income from trading and subsidiaries, after similar provisions, is therefore reduced from £723,509 to £691,426, and the earnings available for the deferred shares, which amount to £421,822, compared with £427,782, are equivalent to 20.6 per cent., from which the 12½ per cent. dividend has been paid for the third year in succession.

The company, in short, is still showing no convincing signs of recovery, despite the acquisition of several competing businesses in 1934, on what appeared at the time to be satisfactory terms to the vendors. In a period of boom activity in the residential building industry, this result is somewhat discouraging, although the deferred shareholders have the satisfaction of knowing that their dividend is well covered by recent earnings. This lack of earnings expansion, however, largely explains the comparatively high yield on the deferred shares, which offer £5 gs. per cent. at the present price of 45s. 9d.

Van Ryn Gold.—This veteran Witwatersrand undertaking, writes our Mining Correspondent, unlike some of its neighbours, has increased its profits. The average received for gold realised was 1s. 1d. down at 140s. 7d., but this was more than offset by the treatment of a record quantity of ore, of somewhat improved grade. Last year's operating surplus thus amounted to £161,150, compared with £130,080, to which is added £42,760 sundry reserves no longer required. On the other hand, £30,470 profit on investments was placed to reserve, taxation absorbed £47,670 in place of £61,060, and £145,000 was written off the fixed assets, reducing them to £386,240. The feature of the year's operations was, of course, the return of 10s. per share of capital. Hence the dividends of 40 per cent. absorbed the same as the preceding year's distributions of 20 per cent. A balance of £23,040 is now carried forward as against £121,700 brought in. The ore reserves show a small increase to 1,293,140 tons and a decline in value to 2.7 dwts. The apparently high yield on the shares is proper, since the bulk of the cash distributions must now be regarded as capital repayment.

Other Company Results.—Our usual summary of the reports of 40 further companies appears on page 289. *Bristol Brewery Georges* have made slightly higher trading profits, though net earnings are only £261,029, against

An ancient land where enchantment lingers, mingling with modern sports and pastimes in a unique manner. Landmarks as old as time look down upon Horse Racing, Motoring, Golf, Tennis, Grand Opera and 20th Century Hotels—to mention a few of the season's highlights. And over all from November to April is the glamour of Egypt's superb climate, offering you Warmth, Comfort and Health through radiant sunshine.

PARIS

THE re-opening of the Bourse on October 2nd was awaited with impatience, and although a large accumulation of buying orders was known to exist, the confusion under which business began again, owing to sellers holding back, was unexpected. The Bourse's adjustment to the new order of things took place in discomfort and an atmosphere of dissatisfaction. Quite apart from the new monetary situation, the market was faced with the tax on devaluation profits earned between September 21 and 26, and with the official attempt to limit the rise in prices to 20 per cent. Immediately on re-opening, there were long lists of local securities for which there were no sellers and therefore no quotations. The market was choked with buying orders which remained temporarily unsatisfied or had to be heavily scaled down, especially in the case of Rentes. Those securities which were quoted showed sharp rises, undergoing some reaction later as the channel became cleared and dealings in other issues, home equities in particular, took place in their turn. After about five sessions, buying orders were being properly filled, and in certain sections a fall in prices occurred which was looked on mainly as a healthy weeding-out process. Rentes and industrials were strong, and in the latter part of the month the market showed signs of settling down, although it paid close and anxious attention to the political situation both at home and abroad. A cheerful mood followed M. Vincent-Auriol's statement, but second thoughts were more chastening and conditions became generally quieter on the approach of the usual *Toussaint* holiday.

BERLIN

THE share market in October was influenced by the gold *bloc* devaluations, and during the first three weeks quotations rose rapidly. The advance, however, was irregular, and in part affected by conjectures regarding the Four Year raw materials Plan. The average gain of heavy industrials, including lignite, rayon and paper pulp shares, was larger than for the finished manufactures group. Non-ferrous metal shares were strong, and potash issues, after long neglect, rose sharply. Commercial banks shares gained considerably, but Reichsbank, although firm, advanced rather less. In the last week of the month the general advance ceased, but many minor shares continued to move upward, and the transfer of Reich holdings of Commerz und Privatbank capital into private hands caused a new advance in commercial bank shares. Foreign-currency and Colonial shares were active, and sometimes strong, with Otavi Copper rising to 46. Reichsmark bonds were steady and quotations slightly advanced. Speculation in foreign-currency loans, in particular Austrian Succession State and Mexicans, continued until late in the month, when selling predominated. Certificated dollar bonds were firm, many industrials gaining about 10 points. The official shares index (1924-26=100) for September was 100.06 against 101.79 for August and the bonds index, 96.08 against 96.05.

AMSTERDAM

HAVING sprung sharply away from their pre-devaluation levels, prices in October continued, mostly under the lead of plantation

shares, to advance at a slower but still fairly rapid pace. The inevitable profit-taking reaction took place towards the middle of the month, following a signal from rubber share prices in the plantations section and Philips Lamps among industrials, but it was neither violent nor long sustained. From then onwards it seemed that the first force of the devaluation impetus had been spent, and the market, though still rising (Royal Dutch passed the 400 mark on October 20th) settled down to a more normal type of activity. Throughout the month, prices were sensitive to fluctuations in the guilder, and in the second fortnight, the market was a little irregular under Wall Street influences and later owing to the European political outlook. Towards the close, activity in rubber issues has become intense, with considerable rises in quotations, and, with the U.S.A. election result, the infection is passing to other sections of the market.

CAPITAL ISSUES

THIS week's activity in the new issue market has followed the recent pattern—two corporation issues, and a handful of smaller and more or less speculative industrial issues. The reception accorded to the *Leicester* issues on unchanged terms 3 per cent. stock, at 99 1/2, with a 22-27 year life—can have left the authorities under no illusion regarding the trustee investor's thoughts on the adequacy of this rate of return. The underwriters of the *Southampton* loan, which opened on Friday, on the same terms, plus an extra year's life, bared their chests at the *Leicester* result, for no less than 76 per cent. of the latter scrip was left with them. A "holiday" and a revision of issue terms appears overdue in this market. Of the industrial issues, *Eastwoods Humber Cement* dual issue of debenture stock and ordinary shares is unusual. The debentures are guaranteed until 1938 by Eastwoods, Limited, a group which has successfully extended its operations through the multiplication of subsidiary concerns. The past history of the cement industry, however, reveals its fundamentally competitive nature, and although the earnings estimates of the directors may be fulfilled, they are based on the installation of two kilns, which will require more than one year for their completion. Both issues carry an appreciable industrial risk, inseparable from concerns beginning *de novo*, to which incidentally, the issue of ordinary shares at 15 per cent. premium would, in calmer times, doubtless be considered inapplicable. The remaining concerns are of smaller stature. *Premier (Trinidad) Oilfields* 5s. ordinary shares are offered at par, on a prospectus which provides adequate technical information. The company, however, is still in the development stage, and while its technical promise may be favourable, the shares cannot be regarded as other than speculative. There are no general investment attractions in the mixed issues of *Ellis and Goldstein* (a wholesale clothing business, of which the vendors retain control, on fairly generous terms) or of *Howards (Newcastle)* which is a retailing concern. Both these issues are of the routine pattern. The capital is divided between 6 per cent. preference and ordinary shares, the latter being offered at premiums to show a 10-12 per cent. earnings yield. The latter cannot be regarded as excessive in the case of any small concern, whose shares have limited marketability. *Martin Bros. (Machinery)* 2s. shares are offered at 50 per cent. premium. This company deals in and rebuilds machine tools, and proposes to construct special machine tools in future. Of the net assets of £35,162, stock, as valued by the chairman, amounts to £28,237, and the undertaking is acquired for £55,000 in shares, creating a goodwill account of nearly £20,000. Although the latest profits are more than double those of the preceding year, the earnings yield in this case is as low as 8.6 per cent. on the issue price, and a substantial further increase in profits is thus anticipated. Investors who are willing to pay the premium asked are therefore capitalising the business on peak earnings and more besides. The industry itself is subject to rapid changes in profitability during the various phases of the trade cycle. A particularly large number of statements for information have been published this week, on behalf of *B. & F. Carter, Wake and Dean, M. Morris Cabinet Makers, Control Systems, Dutton's Blackburn Brewery, County Borough of Yarmouth, Cannock Associated Collieries, and the Racecourse Betting Control Board.*

PUBLIC OFFERS

Leicester (City of).—Issue of £1,500,000 3 per cent. stock at 99 1/2, redeemable at par 1963, or from 1958 on three months' notice. Proceeds to replace short-term mortgages. Estimated population, 261,000; rateable value, £1,913,600. Net debt, £11,736,607 (of which £3,946,392 major trading, and £4,082,920 housing). Lists closed 3.30 p.m. 3rd November. Open for full period. Underwriters left with 76 per cent.

Southampton Corporation.—Issue of £1,250,000 stock at 99 1/2. Redeemable at par 1964, or from 1959 on three months' notice. Rateable value, £1,514,703; estimated population, 177,200. Out-

standing debt, £6,292,124 (£2,111,233 productive and £2,105,097 housing). Proceeds for electricity, water, etc., and to repay £528,380 short-term mortgages.

Eastwoods Humber Cement.—Issue of £150,000 4 1/2 per cent. first mortgage debenture stock at 101, and 800,000 5s. ordinary shares at 5s. 9d. Eastwoods, Ltd., guarantee debenture interest to end of 1938; stock redeemable any time on three months' notice at 5 premium, or in 1966 at 101. Company will erect cement works along River Humber. Production contemplated from first unit 75,000 tons per annum, to give estimated profit of £30,000, less fees, interest and administration. Purchase price, £50,000 cash to Dreadnought Investment Trust. Lists closed 9.1 a.m. November 3rd. Heavily oversubscribed.

Premier (Trinidad) Oilfields.—Issue of 859,988 5s. ordinary shares at par. (Firm applications for 140,000 shares; 300,000 of unissued shares under option at par.) Acquires 500 acres proved and 1,214 acres reserve areas. Managing agents: Trinidad Petroleum Development. In first year 20 wells proposed, 320,000 barrels estimated. Total purchase price of concession and lease, £102,000, payable £77,000 in cash and balance in shares.

Ellis and Goldstein.—Issue of 75,000 6 per cent. cumulative £1 preference shares at 20s. 6d. and 75,000 5s. ordinary shares at 10s. Acquires wholesale coat and costume manufacturing business founded 1912. LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

Combined profits after depreciation, years to March 31st: 1934, £25,992; 1935, £40,858; 1936, £41,595. Rowe and Pitman take preference shares at 20s. 6d. and 203,517 ordinary shares from holders at 10s. net.

Dutton's Blackburn Brewery, Ltd.—Particulars of issue of £750,000 4 per cent. first mortgage debenture stock, redeemable at par 1983, to repay existing debentures and to purchase 179,868 Kirkstall Brewery Company ordinary shares and for general purposes. £249,230 of the new stock to be taken at par by Equity and Law Life Assurance Society. Net assets £822,947. Profits, after depreciation, years to March 31st: 1934, £52,210; 1935, £58,548; 1936, £61,597.

M. Morris Cabinet Makers, Ltd.—Particulars of issue of 325,000 4s. ordinary shares and 60,000 6 per cent. cumulative £1 preference shares, repayable at 22s. 1967 or from 1957 at six months' notice. Business established 1918. Net assets £95,245, acquired for £95,000, payable in 30,100 preference and 324,500 ordinary shares. Profits, before interest, depreciation and leasehold amortisation, years to June 30th: 1934, £9,007; 1935, £16,976; 1936, £22,868. Leadenhall Investments and Finance take 30,100 preference shares at par and 125,000 ordinary shares at 5s. 6d. They will also purchase 29,900 preference shares, and sell all the 60,000 preference shares at 20s. 3d. and 124,000 ordinary shares at 6s. 9d. to William H. Hart and Company.

Wake and Dean, Ltd.—Particulars of an issue of 51,037 6 per cent. cumulative £1 preference shares and 265,212 5s. ordinary shares. Furniture business, near Bristol. Proceeds of issue to repay bank loan and debentures, and for extensions. E. R. Lewis and Company take issue at net cost of £1 per preference and 5s. 7½d. per ordinary share. Total assets £285,061. Profits, after depreciation, years to June 30th: 1934, £12,391; 1935, £17,579; 1936, £22,420.

Cannock Associated Collieries, Ltd.—Issued capital, 1,599,640 £1 ordinary, 260,400 5 per cent. cumulative £1 preference, and 650,397 5 per cent. cumulative redeemable second £1 preference shares. Acquires preference and ordinary shares of three colliery companies. Combined assets, £2,657,484. Combined profits after depreciation, before amortisation, years to June 30: 1934, £159,464; 1935, £178,553; 1936, £222,952.

Racecourse Betting Control Board.—Established 1928; operates totalisator betting system. Particulars of £2,400,000 4 per cent. registered stock, of which £1,200,000 now issued, taken by Cazenove, Akroyds and Greenwood and Company, at 98, less ¼ commission. Redeemable at par 1959, or by drawings at par or 101. First charge on Totalisator Fund. Available balance, years 1933, £169,884; 1934, £267,913; 1935, £354,284.

TENDERS.

South Staffordshire Waterworks Company.—Issue of £250,000 ordinary stock at a minimum price of £175 per £100 of stock. Proceeds to be applied to repayment of money advanced by the company's bankers for development and to the construction of further works.

ISSUES TO SHAREHOLDERS ONLY

Thistle-Etna Gold Mines, Ltd.—Issue of 60,000 new shares of 5s. each at 12s. per share to shareholders registered on October 22, 1936, in the proportion of one new share for every eight shares held.

Rhokana Corporation.—57,709 ordinary shares £1 are offered to holders of ordinary and "A" shares registered on October 19th, at £10 each, at rate of one new share for each 43 ordinary or "A" shares held. These shares when allotted will rank for any dividend in respect of the year ending June 30, 1937, and thereafter and in all respects *pari passu* with the existing fully-paid ordinary shares.

Mowbray and Company.—Issue of 50,000 6½ per cent. cumulative preference shares £1 at 26s. in proportion of one for every six ordinary or preference shares held.

Anglo-American Corporation of South Africa, Ltd.—Issue of 600,000 10s. ordinary shares £3 each in proportion three new shares for each 20 shares held. The new shares will not rank for dividend which will be declared in December, 1936.

CONVERSIONS AND REPAYMENTS

Isle of Man Steam Packet Company.—This company will redeem on January 1, 1937, £300,000 5 per cent. first mortgage debenture stock, 1935-58, at 102½. An issue of £300,000 4 per cent. registered first mortgage debenture stock, 1947-57, is being made to repay the present stock and holders have the right to convert into the new security.

Gulf States Steel Company.—Gulf States Steel Company is redeeming on January 2, 1937, all its first preferred stock outstanding, at \$129.27 per share, which is equal to 110 per cent. of the par value and all dividends which will then be accrued and unpaid on the stock.

REPORTS AND NOTICES

Mr John Charles Denton Carlisle, D.S.O., M.C., has joined the London board of the Commercial Banking Company of Sydney, Ltd.

Mr Leonard S. Redman, of Knoop and Company, Ltd., has joined the board of Protected Fixed Trusts, Ltd.

BANKS

WILLIAMS DEACON'S BANK LTD.—On a site they have occupied for 160 years, Williams Deacon's Bank Ltd., opened on October 29th their new building at 20 Birchin Lane, London, E.C.3. The new building is brick, faced with Portland stone, and in general detail follows the dignified Georgian tradition, which reflects better than any other, perhaps, the spirit of British banking institutions. The bank to-day is represented, not only in Lancashire, but also over a large part of northern England and North Wales, and also in connection with important industrial centres. In 1930 Williams Deacon's concluded an alliance with the Royal Bank of Scotland, which has since proved a great benefit to both parties. The shares of Williams Deacon's are now held by the Scottish Bank, but each still preserves its separate identity, and continues under its own management.

LOYD'S BANK LTD.—Mr A. C. T. Woodward, of Arley Cottage, near Bewdley, has been elected a member of the bank's Birmingham committee.

THE BRITISH OVERSEAS BANK LTD.—The Right Hon. Lord Aberconway has been appointed deputy chairman of the British Overseas Bank, Ltd., for the ensuing year in succession to Sir James Caird, Bart., whose period of office terminated October 31, 1936.

MINES

RHODESIAN ANGLO-AMERICAN, LTD.—The report for the year ended June 30, 1936, shows that there was a surplus of cash and cash assets over liabilities (excluding 5 per cent. debentures) of £75,612. The net profit for the year amounted to £183,398, against £88,540 for fifteen months to June 30, 1935. Adding £291,221 unappropriated profits at June 30, 1935, less income tax at 4s. 9d. in £, absorbing £178,555, leaving £296,064 to Street, London, at 2.30 p.m.

MISCELLANEOUS

ELECTROLUX CORPORATION.—The consolidated net profit for the third quarter of 1936 amounted to \$632,573.52, compared with the third quarter of 1935—\$597,500.02. The total earnings for the first nine months of 1936 were \$2,191,332.21, compared with \$1,989,610.53 for the corresponding period in 1935. This gives an increase for the nine months of \$201,721.68, equal to 10.13 per cent. These figures have been arrived at after deducting all charges, and also all Federal income taxes, including sufficient to cover the new tax on undistributed earnings.

"NEWS CHRONICLE" DEAL (United Newspapers Interest Sold to Daily News, Ltd.).—Negotiations have been completed for the acquisition by the Daily News, Ltd., of the interests of United Newspapers, Ltd., and of Westminster Press, Ltd., in the *News Chronicle*. By these purchases the Daily News, Ltd., will become the sole owner of the share capital of that newspaper. The purchase price is based on a valuation of the copyright of the *News Chronicle* at approximately £1,000,000. The Daily News, Ltd., is also the owner of the *Star*.

WALL PAPER MANUFACTURERS, LTD.—Report for year to August 31, 1936, shows trading profit £691,427, against £723,509 for previous year. Dividend on ordinary stock, 10 per cent. as before, and 12½ per cent. is again paid on deferred stock. The sum of £100,000 is allocated to reduction of goodwill, etc.; £50,000 is put to reserve, and £10,000 to employee pension funds. Carry forward £269,765.

EDMUNDSONS' ELECTRICITY CORPORATION, LTD.—Sir Thomas Royden, Bt., C. H., and Mr. F. H. James, have been appointed to the Board of Edmundsons' Electricity Corporation, Ltd.

HORDEN COLLIERIES.—Horden Collieries profits for year to September 30 advanced by £38,624, to £172,646, after providing £15,000, against nil, for taxation and contingencies. Ordinary dividend is raised from 5 per cent. to 7½ per cent.; £24,532, against £23,253, is placed to debenture sinking fund and £76,041 carried forward, against £74,928 last year.

JOHN I. THORNYCROFT AND COMPANY.—In a preliminary statement the directors announce that the year's trading resulted in a profit of £53,740, which, after meeting debenture interest, is sufficient to wipe out the debit on profit and loss account brought forward from the previous year and to carry forward a credit of £6,777.

COMPANY MEETINGS, &c.

UNITED DAIRIES LIMITED

INCREASED SALES—PURE MILK SUPPLIES

The twenty-first ordinary general meeting of United Dairies, Limited, was held, on the 30th ultimo, in London.

Mr Joseph H. Maggs, chairman and managing director, presided, and in the course of his speech said:—The accounts show that the net profit brought into the balance sheet is £604,847. It is proposed to pay a final dividend on the ordinary stock of 7½ per cent., making 12½ per cent. for the year, and to transfer £100,000 to reserve, bringing that fund up to £876,000, thus leaving a balance of £91,880 to be carried forward.

As regards the year's trading, our net sales increased by over £1,750,000. We handled over 8½ million gallons more milk than last year. Butter sales were again largely in excess of the previous year. Indeed, all our departments show a very healthy state of growth.

As to our retail milk distribution, we are serving more customers than ever; 18 new shops have been opened and two new distributing depots. Our machinery manufacturing section, U.D. Engineering Company, Limited, continues to extend its activities. There is an increased demand, both in the home market and abroad, for the machines designed and produced by this section of our company.

In reviewing the events of the past year everyone must be impressed with the growing appreciation on the part of scientific workers of the outstanding nutritive value of milk. Increased consumption of milk is as vital to the prosperity of the farming industry as it is to the health of the nation. The national habit which has to be formed calls for a campaign of education, but before this can be developed, and advantage taken of the immense amount of scientific material bearing on the nutritive value of milk, one great obstacle has to be cleared from the path. It is the doubt which assails the minds of many members of the medical profession as well as the general public, as to the universally healthful character of the milk supply. The facts relating to the subject have been common knowledge for many years, but these have been met on the part of the industry with a tacit conspiracy of silence which is as paralysing in its effect as it is fatal in its consequences.

I raise this question to-day with a sense of responsibility to the public, in the hope my words may reach a wider audience, and also because I am convinced that by resolute action, and without hardship to even small producers or distributors, the milk supply of the whole nation could be raised forthwith to a plane of absolute safety and decency of production. Nothing can excuse the "hush-hush" policy of the industry in seeking to conceal or to minimise the gravity of the position. To this policy, I am sorry to say, must be attributed the deplorable, unnecessary and easily preventable milk-borne epidemic which has recently raged at Bournemouth and which, according to an official statement, involved 500 cases of infection and some 40 deaths.

United Dairies' repeated warnings of the danger and of the possibility of such epidemics have been endorsed by the leading medical authorities and administrations in no uncertain terms. It is an amazing fact, however, that the purity of the milk supply is still dependent on the voluntary action of distributors, and not upon legal restrictions and requirements.

The milk of United Dairies and of other firms which adopt similar methods of distribution is reliable because it is efficiently pasteurised and bottled. The only real assurance of purity is the assurance of pasteurisation. The relatives and friends of those who suffered in the latest epidemic are asking why all milk is not pasteurised. One answer is there is no law to require it. The Minister of Health has no power to compel it; the Medical Officer of Health cannot demand it—not, at least, until after an outbreak has occurred and the mischief done. If life is lost through an accident it is a calamity, but if it is imperilled by disregard of simple precautions it is an outrage. How long is this position to be tolerated?

There is one other condition which is equally necessary before any scheme of national propaganda for increasing the use of milk can attain real success. It is that all the milk produced in the country must attain a standard of cleanly production equal to that laid down for accredited supplies. Clean production involves no unreasonable or extravagant requirement which would be unattainable by any one of the thousands of small producers. This fact United Dairies has proved conclusively. Until these two fundamentals—clean production and pasteurisation—are dealt with nationally, any widespread propaganda, however potent, for increased consumption cannot be fully effective.

The report was adopted.

BUENOS AYRES WESTERN RAILWAY, LIMITED

DIFFICULT YEAR—IMPROVED PROSPECTS

The forty-seventh ordinary general meeting of this company was held, on the 4th instant, in London.

Sir Follett Holt, K.B.E. (the chairman), presided, and said that with the loss of crops owing to drought the year proved a more than ordinarily anxious one, not lessened by the serious question of exchange. They were much indebted to their colleague, Mr Eddy, who during a nine months' stay in Argentina was not only able to assist in the settlement of many internal matters, but to give material help in obtaining from the Government an exchange agreement which brought them a relief which had helped them and was helping them to weather a bad period.

Apart from the question of crops, two outstanding difficulties remained to be faced—the effect of the cut in exchange made three years ago, which meant the loss of 37½ per cent. of their net receipts, and road competition which continued unabated. Roads were being improved or new ones made all the time, and 'buses and lorries using them had made it impossible for the railway to maintain their old rates in many districts. The position at present was wholly unsatisfactory and would remain so until the necessary bill for transport control had passed the Senate.

The fine cereal crops this season were shaping well, and if they reached maturity safely the Republic generally would go far towards recovering its old-time prosperity in which they would have their share. Actually to date they already showed a small improvement on last year's figures.

With regard to the Trade Agreement now under negotiation between Argentina and the United Kingdom, the three-year agreement now in force had only three days to run before termination, and there were still points that remained unsettled. It was possible that there might be a short extension of time in order that the contracting parties might reach an agreement, as they all hoped would be the case, on a basis which would serve to maintain the trade and good credit which on general average had ruled for a century and more between Argentina and the United Kingdom.

A message received from Mr Harris stated that prospects in general were considerably brighter than at the same date last year.

The report and accounts were unanimously adopted.

CONSOLIDATED AFRICAN SELECTION TRUST, LIMITED

INCREASED PROFITS AND DIVIDEND

The twelfth annual general meeting of Consolidated African Selection Trust, Limited, was held, on the 4th instant, in London.

Mr W. Selkirk, who presided in the absence of Mr Chester Beatty, in the course of his speech, said:—The net profit of £335,953 was nearly £100,000 higher than that of last year, and we are able to recommend to you a final dividend of 2s. per ordinary share, free of tax, which, with the interim dividend of 1s. 6d. paid in May last, makes a total distribution for the year of 3s. 6d., free of tax. This compares with 3s. 3d. per share, less tax, in the preceding year.

As you have been informed, we are proposing to capitalise £125,676 10s. out of that reserve and to apply the amount so capitalised in payment in full for 502,706 new ordinary shares of 5s. each of the company. This will permit distribution to the shareholders of one new share for every two shares held. In past years we have applied substantial sums of profit to capital purposes instead of distributing them in dividends, and this policy has resulted in our acquiring additional revenue-earning assets. The amount we now propose to capitalise represents a portion of these past appropriations from profits.

The Chairman, having dealt exhaustively with their interests on the Gold Coast and in Sierra Leone, and conditions in the diamond market generally, continued: As to the prospects for our company, we are, of course, dependent primarily on the prosperity of the diamond market, and I regard the present outlook as favourable. Our financial position has grown further in strength. We have large developed diamond reserves, well-equipped mines, and an excellent organisation, and I feel that we may confidently look forward to further satisfactory progress.

The report and accounts were unanimously adopted.

At the extraordinary general meeting held subsequently, resolutions were unanimously passed increasing the capital to £850,000, adopting new articles of association, and authorising the capitalisation of £125,676 10s. out of general reserve and the application of such sum to permit the distribution to ordinary shareholders of one new ordinary share for every two shares held.

NORTH BRITISH RAYON, LIMITED

INCREASED PROFIT

The ordinary general meeting of North British Rayon, Limited, was held, on the 5th instant, at the Incorporated Accountants' Hall, Victoria Embankment, London.

The Chairman (Mr Ernest Walls) said that the trading profit showed an increase of £11,027, the net profit representing a return of 9.1 per cent. on the ordinary capital, as against 7.63 per cent. last year. The board were glad to be able to recommend an ordinary dividend at the rate of 6 per cent. per annum. During the year various financial operations had been carried through which had considerably strengthened the liquid position of the company.

Costs were rising and the logical outcome would be an advance in selling price. In U.S.A. there had been several advances during the last 12 months. Unfortunately, in this country, price cutting had been rampant in the industry for the last six months.

During recent years consumption of rayon, as was well-known, had advanced by leaps and bounds. In his opinion we had now reached a stage when we must expect a slowing down in the rate of increase. It had been a rapid growth and he was inclined to think that the next few years would be years of adjustment rather than of increase.

He estimated that during the present calendar year to the end of September, as compared with the corresponding period last year, consumption of rayon had increased, if at all, by only a small percentage.

The great danger to be faced in these circumstances was over-production. It would be deplorable if the disorganisation which resulted from over-production seven or eight years ago were repeated. Viscose rayon manufacture was a comparatively narrow field. With only seven producers engaged in this important industry it ought not to be beyond the wit of man to arrive at some understanding amongst them which would prevent over-production in the future and by doing so would of itself tend to bring about that stabilisation of prices which all in the industry—whether producers or consumers—must surely desire.

The report and accounts were unanimously adopted, and at a subsequent extraordinary general meeting the capital of the company was increased to £450,000.

GAUMONT-BRITISH PICTURE CORPORATION, LIMITED

IMPORTANCE OF AMERICAN MARKET

The ninth annual general meeting of the Gaumont-British Picture Corporation, Limited, was held, on the 2nd instant, at Film House, London, Mr Mark Ostrer (chairman and managing director) presiding.

The Chairman, in the course of his speech, said that notwithstanding the fact that the net profit fell short of the record figure reached a year ago by less than £5,000, and that they were building up substantial reserves in certain subsidiary and associated companies, the directors for the first time in the corporation's history had decided not to recommend the payment of a dividend upon the ordinary shares.

They were the only British company with an organisation in the United States for the marketing of films in that country. Up to date they had contracted business in America amounting to between four and five million dollars, which would give some indication of the progress they had made and of the great potentialities in the U.S.A. He was satisfied they had now proved it impossible to recover from the home market alone the full cost of quality films, nor could the great American producing companies recover their costs without a world market. They were therefore faced with the choice of abandoning their efforts in the American market in favour of a programme of cheaper films for the home market only, or abandoning film production altogether.

They were maintaining their predominant position in the industry with satisfactory profits for the past year. The trading results of their circuits for that part of their current year already completed showed a substantial increase over the profits earned for the corresponding period of last year, amounting in the aggregate to approximately £150,000.

An amendment to appoint a shareholders' committee was lost on a show of hands, but a further amendment adjourning the meeting for the presentation of consolidated accounts, which the chairman had previously stated would be circulated to the shareholders as soon as they were available, was carried, and the meeting was thereupon adjourned.

SUDAN PLANTATIONS SYNDICATE, LIMITED
SATISFACTORY COTTON SALES

The twenty-ninth ordinary general meeting of the Sudan Plantations Syndicate, Limited, was held, on the 5th instant, in London. Mr Alexander MacIntyre (chairman and managing director) said that the accounts indicated a satisfactory financial position. Gross profits amounted to £589,509 and the net profit to £285,272. The directors recommended a dividend at the rate of 10 per cent. for the year ended June 30, 1936.

All their cotton seed had been disposed of at quite satisfactory prices, and their sales of cotton had been good. Stocks at this date were substantially less than a year ago. On the other hand, some part of that decrease was due to the fact that larger sales had been made for forward delivery, which might react to some extent on future sales. Among the problems to be faced were the much-advertised attempts by certain nations to arrive at self-sufficiency by the adoption of alternatives or synthetic products, and in this country there was the competition of artificial silk and staple fibre. In spite of all that, there was the undeniable fact that the world's consumption of cotton was increasing and that for most purposes no satisfactory substitute for cotton had, as yet, been found.

To enable the producer to secure the benefit of market prices and also to enable the spinner and manufacturer to protect themselves it was essential that both should be able to cover themselves by selling or buying futures. The original Sakel Futures Contract had recently become very narrow owing to the decline in the Egyptian growth of that type, and undoubtedly it was to the benefit of all concerned that a broader contract should be established. The Liverpool Cotton Association had substituted for the present contract one based on a new Egyptian growth called Giza 7, which was valued at about 1½d. per lb. less than Sakel, but in so doing they had, in his opinion, committed a serious error and injustice by introducing into that contract a clause whereby Sudan Sakel was penalised to the extent that if it should be necessary at any time to tender cotton on the maturity of a contract, no premium above good standard Giza 7 could be obtained.

On to-day's values that meant a possible premium of about ½d. per lb. for Sudan Sakel, whereas Sakel grown in Egypt, although not better in quality than that produced in the Sudan, could, when tendered, obtain a premium as high as 4d. per lb. That meant that the grower in the Sudan might be prejudiced to the extent of as much as 3½d. per lb. compared with his Egyptian competitor. It was very difficult to understand, or justify, that action by the members of the Liverpool market. He entirely failed to see why there should be given a preference to Egyptian Sakel as against a similar quality of Sakel cotton grown in the Sudan. There was no such differentiation in the old Sakel Futures contract. One would have thought that it was to the interest of the Liverpool market to attract all the business possible, and more especially in connection with those growths produced in the new fields where so much British capital had been invested. It was impossible to resist the feeling that the interests of the *bona fide* producer and consumer had been sacrificed to those of the speculator.

The report and accounts were unanimously adopted.

JANTAR NIGERIA COMPANY, LIMITED

RECORD PROFIT AND DIVIDEND

The twenty-fourth ordinary general meeting of this company was held, on the 4th instant, in London.

Mr Percy Tarbutt (the chairman) said that he felt sure shareholders would agree that the results for the year were satisfactory, the profit of £42,667 and the proposed dividend of 30 per cent. both being records for the company.

Their tin production during the year was governed by the tin restriction scheme, but owing to the increase in the quotas allowed during the year they were able to win and export 376 tons, as compared with 191 tons last year. The reduction of some £20 per ton in the price realised for tin sold during the year was more than offset by the additional tonnage they were allowed to produce, being nearly twice as much as the previous year, and with the slight reduction in costs the results for the year as far as tin winning was concerned showed up very favourably as compared with last year. Their total reserves were only three tons less than they were 10 years ago.

With regard to columbite, they had during the year carried out an intensive prospecting campaign on their Kuru III areas, with the result that to date they had proved 6,975 tons of columbite concentrates of an average value of 1.34 lb. per cubic yard, a very extensive deposit—in fact, he thought they could claim that they had the only known deposit of any size in Nigeria.

During the year they had shipped a total of 290 tons in fulfilment of their contract, which ran until May 1st next, the buyers having the right to renew for a further three years.

With regard to the future, he saw no reason why they should not be able to present to shareholders similar results for the year 1937, which year happened to be their silver jubilee.

The report was unanimously adopted.

KASSALA COTTON COMPANY, LIMITED

INCREASED DIVIDEND

The thirteenth ordinary general meeting of the Kassala Cotton Company, Limited, was held, on the 5th instant, in London.

The Hon. A. M. Asquith, D.S.O. (the Chairman), said that the profit and loss account, after a transfer to Gezira reserve of £5,000, as compared with £2,500 last year, showed a profit of £31,556, as against £19,773 last year, this increased profit being due to larger sales and to the rise which had occurred in the value of cotton and seed. Their average yield per feddan in 1936 of about 3½ kantars compared with 2.6 kantars in 1934 and nearly 5.5 kantars in 1935. Three and three-quarters kantars must be regarded as quite a satisfactory yield.

As to the present growing crop, it was too early to make any positive forecast. They had been lucky in the matter of weather in August, when the cotton was sown. There had been some late rain in October, which they did not like. Their latest cable received from the Sudan this week indicated that blackarm had been fairly general, but that the cotton seemed to be throwing it off. There had been no leaf-curl yet, and, granted a continuance of favourable conditions, there was no reason why they should not have a good crop.

They were glad to be able to recommend the payment of a dividend at the rate of 10 per cent., payable the following day, and if shareholders agreed to that dividend, the amount carried forward would be about the same as that brought forward from last year. The company's relations with the Sudan Government continued to be entirely satisfactory, and the Gezira Research Farm, with its staff of qualified scientists, ably directed by Mr Bailey, continued to contribute towards the solution of the many problems of cotton-growing in the Gezira.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended October 31, 1936, amounted to £11,736,000, against ordinary expenditure of £17,178,500. After allowing for a decrease in Exchequer Balances of £349,401, the operations for the week, as shown below, increased the gross National Debt by £5,093,000 to approximately £7,999 millions.†

(000's omitted)			
Public Department Advances.....	+ 7,400	Treasury Bills	£ 769
		Road Fund	1,247
		P.O. & Tel. (Money) Acts	300
	+ 7,400		2,307

† Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt at September 30, 1936, appeared in the *Economist* of October 3, 1936.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

The steady increase in the world demand for primary products was responsible for another active week on the majority of commodity markets.

Non-ferrous metals, in particular, attracted a good deal of interest, and quotations were marked up all round. The "cash" price of copper rose by about £2 to £44 7s. 6d. per ton, despite a further increase of 10 points in the quotas of the companies adhering to the restriction scheme. One of the factors influencing the rise of prices is the possibility of a marked decline in United States exports owing to increasing internal requirements. Lead and spelter were also dearer. Tin was marked up sharply under the influence of United States purchases, and on the news that the International Tin Committee had at last reached agreement with Siam. The latest developments in the markets for copper and tin are discussed in a Note of the Week.

Expansion of demand was also responsible for the continued

rise in rubber prices in the face of the considerable increase in supplies next year, when the higher export quotas will come into operation. The market in linseed and linseed oil, on the other hand, was again dull owing to the expectation of a heavy crop in Argentina and the uncertainty concerning the future price policy of that country. Among textile raw materials, American cotton is unchanged on the week, but the trend of quotations for jute and wool remained upwards.

Wheat prices suffered a slight setback, partly on improved harvest prospects in Argentina and Australia, but quotations for raw sugar tended to advance and competition at the Mincing Lane tea auctions was brisk at firm prices.

The downward trend of quotations for primary products in the United States was arrested this week. Moody's index of staple commodity prices rose from 102.1 (December 31, 1931 = 100) on October 28th to 103.6 on November 4th compared with 184.0 a month ago and 166.8 last year.

COAL

SHEFFIELD.—There is a steady home demand for all classes of industrial fuel, and orders for household qualities are more plentiful. The bagging trade for secondary sorts also shows improvement. Furnace and foundry coke continues in very strong demand. Supplies are short, contract deliveries accounting for the greater part of the output. On the export market conditions show little change. Prompt shipments are fairly steady, with prices firm.

NEWCASTLE-ON-TYNE.—The month has opened with unabated strength in all classes of screened steam coal, and there is little likelihood of any falling off in demand before next spring. Trade ahead is very good, large quantities of both screened and graded steam coal having been sold over the whole of next year to Scandinavia. Durham gas coals are now much firmer, while the coking and bunker coal position is improving.

GLASGOW.—Collieries are well booked for export until the spring of next year and, with home industrial activity well maintained, the outlook is quite bright. At the moment, however, the prompt position leaves room for improvement. The recent storms have accentuated the tonnage scarcity, and, as stocks are heavy, there has been some idle time at some of the pits. Better progress has, however, been made during the past day or two. Lanarkshire house coal was advanced by 1s. 6d. per ton, and medium-class qualities in Ayrshire by amounts ranging from 6d. to 1s. 6d. per ton.

CARDIFF.—Conditions on the Cardiff coal market show little change. Inland demand is fairly active, particularly for domestic and industrial coals, but export business continues comparatively quiet, and shipments are far below the normal value for this time of year. Last week total exports in the foreign and coastwise trades totalled only 332,000 tons, compared with 366,400 tons in the previous week and 389,588 tons in the corresponding week last year; since the beginning of the year the decrease, compared with the corresponding period in 1935, exceeds 2,000,000 tons. Washed and sized smalls are the only classes which are realising prices above the old schedule figures. The supply of large classes continues in excess of current demand. Coke is strong and in good demand, while quotations for patent fuel are steady.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that the iron and steel markets continue busy. In one or two departments business has been less active as consumers have largely covered their forward requirements and because producers have filled their order books as far forward as they care to sell. In most sections of the market, however, a considerable volume of new business is offering in the form of supplementary parcels from consumers who under-estimated their requirements when contracting for supplies earlier in the year.

The tightness in the pig iron market has become more noticeable, particularly in the foundry iron department, and a condition of scarcity is also threatened in hematite.

There is a heavy request for semi-finished steel, and, although producers are operating at capacity, they are experiencing difficulty in meeting the requirements of consuming industries. But the position in this market, although tight, is certainly better than in the corresponding period last year, when operations at many consuming works were hampered.

In the finished steel section a high rate of output is being maintained. The requirements of consuming industries, however, continue to increase, and heavy as production is, it is barely sufficient to keep pace with demand. The time required by works for the execution of an order is lengthening, and it has become almost impossible to place orders for structural steel for near delivery.

SHEFFIELD.—Business in the iron and steel market remains at a very high level. Many producers of foundry iron are fully booked for the first three months of next year and some even beyond. Very little material is available in the open market and any small parcels are immediately taken up. Consumers rely chiefly upon Derbyshire production of forge and foundry; there is merely a trickle from Lincolnshire and producers in that area are virtually off the market in Sheffield. An additional blast furnace has this week been put into operation in Derbyshire; this will ease a little the pressure for supplies. Makers of West Coast hematite are not at all desirous of making further bookings at present, except at a premium of around 10s. per ton. The position in East Coast mixed numbers is not quite so difficult, although makers are unable to accept the full volume of business on offer. The market for finished iron continues to show improvement in the absence of Continental business. Common and marked bars are the most active, demand for crown iron remaining somewhat slow.

There is an ever-increasing demand for basic steel billets which it is barely possible to meet, and acid billets are also in heavy request. Business in steel strip, bars and stainless sheets also is very active. At the moment all prices are unchanged, but the view is widely held that prices may be raised at the turn of the year owing to increased costs of production.

Sheffield set up a new record in the output of steel ingots and castings in September, the official returns showing production at 142,800 tons. Total output during the first nine months of this year was only 220,700 tons below the total for 1935, when production reached 1,388,000 tons.

MIDDLESBROUGH.—Shipments of pig iron from the Tees during October were 6,670 tons, against 6,906 tons in September. The quantity shipped coastwise during October was 3,865 tons, of which 1,990 tons went to Scotland, 1,050 tons to Wales, and 825 tons to other ports. Manufactured steel shipped last month was 29,870 tons, and manufactured iron 3,085 tons. Total iron and steel shipments during October were 39,625 tons, a drop of 6,600 tons compared with the previous month, and the smallest volume since February.

These figures indicate the pressure for material from home users. There has been an increase in the quantity of iron and steel imported into the Tees from abroad and coastwise, the quantity for the year ending October 31, 1936, being 55,167 tons, compared with 49,372 tons in the previous year. The quantities unloaded during the last twelve months consisted of 11,429 tons of pig iron, 39,333 tons of crude sheet bars, and 5,405 tons of plates, bars, angles, etc. The new import licences system came into operation this week.

Business in pig iron is quiet, as there is no surplus available for the market. Prices of foundry and hematite pig iron remained unchanged, although it is believed that hematite makers are seeking permission to demand a premium of 10s. per ton from home users. Meantime, merchants who have export contracts for hematite are unable to obtain delivery. Steelmakers are concentrating on fulfilling orders already booked.

constructional steel and shipbuilding requirements being very heavy. The scrap market is firmer with a strong tone, although users are adhering to the price of 60s. per ton, delivered. There is no difficulty in disposing of good Durham blast-furnace coke at 24s. 6d. per ton, delivered furnaces.

GLASGOW.—Demands on the steel makers in this district seem to be ever increasing. The steel plants in the West of Scotland, though working at capacity, are unable to meet the requirements of users. Considerable additions to plant are at present in progress, and it is hoped that it will be possible to increase output appreciably in several directions early next year. It is expected that new plant at Motherwell will come into operation in the course of the present week. Demands from the shipyards are now on a large scale, and heavy tonnages are also being taken up by the local structural and other engineers. At the sheet mills plants are fully employed, and the recent improvement in export business is maintained. Tube makers are also busy at the moment, and much of the available plant is in operation. Manufacturing industries in the Glasgow district have almost without exception well-filled order books, and there are prospects of regular employment for plant and men for months to come.

CARDIFF.—There has been a slight lull in the demand for tinplates, and works are not generally employed up to the authorised 65 per cent. of capacity. Home inquiries are relatively better than export demand, and shipments at Swansea last week were only 52,844 boxes, compared with 84,040 boxes in the previous week, and 65,406 boxes in the corresponding week last year. Prices are unchanged at 18s. 4½d. f.o.b. for inland business and at 18s. 9d. f.o.b. for export. The main strength of the galvanised sheet trade still lies chiefly in the domestic demand, and quotations are unchanged at £14 per ton for home delivery and £12 10s. f.o.b. for export. Steel sheet and tinplate bars were unchanged at £6 per ton, delivered.

OTHER METALS

COPPER.—Despite last week's increase in the production quotas, and a warning from Sir Auckland Geddes at the Rhokana meeting, the standard cash quotation advanced by 11 10s. 3d. to £44 5s. per ton on Wednesday—the highest since 1931. Sir Auckland reminded his hearers that producers wished to stabilise prices at a level which would stimulate consumption and that rapid decisions could be taken at any time "to ensure an adequate supply of copper for all needs." Hard on the heels of this warning came the news on Thursday that the restricting countries had decided upon a further 10 per cent. increase in quotas, to 105 per cent. of the standard tonnages—to be effective immediately. Although the market suffered a reaction on receipt of this news, the setback was short-lived and prices closed on Thursday at a slightly higher level than on the previous day. Although producers have given abundant evidence of their desire to check the rise in prices, it is not certain that the peak has yet been reached. Speculation is active and exports from the United States seem likely to reach negligible proportions in the near future. But when the increased supplies released by recent quota increases come on to the market, some reaction in quotations appears inevitable.

Sales on the London Metal Exchange: 3,000 tons on Monday, against 2,800 tons last week; 3,450 tons on Tuesday, against 3,800 tons last week; 3,900 tons on Wednesday, against 4,450 tons last week. Domestic spot was quoted at 10.40 cents per lb. in New York on Wednesday, against 9.97½ cents a week ago and 9.50 cents a month ago. Wednesday's official closing price for standard cash in London was £44 5s. to £44 7s. 6d., compared with £42 8s. 9d. to £42 11s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 47,255 tons, show an increase of 275 tons, while stocks of rough copper, at 1,215 tons, show a decrease of 175 tons on the week.

LEAD AND SELLER.—The scarcity of supplies, to which attention has several times been drawn in this column, coupled with a strong buying movement, lifted the price of lead to over £20 per ton—the highest point since 1930. Should demand continue on its present scale, even higher prices would not occasion surprise; but a setback in demand might be followed by a sizeable reaction in quotations. The rise in lead has had some effect also on spelter prices, but the margin between the two metals—at £4 per ton—remains abnormally wide. World output of smelter zinc outside Spain, according to the *Metalgesellschaft*, fell from 124,014 metric tons in August to 120,090 metric tons in September. Despite this decline, however, production is still running ahead of current consumption.

Sales of lead on the London Metal Exchange: 1,200 tons on Monday, against 850 tons last week; 3,000 tons on Tuesday, against 1,750 tons last week; 3,000 tons on Wednesday, against 2,500 tons last week. The New York quotation on Wednesday was 4.90 cents per lb., against 4.70 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £20 5s. per ton, compared with £18 13s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 1,300 tons on Monday, against 1,100 tons last week; 1,900 tons on Tuesday, against 1,550 tons last week; 2,800 tons on Wednesday, against 1,000 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.85 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 5s. per ton, against £15 1s. 3d. last week.

TIN.—After considerable fluctuations, tin prices rose sharply on Tuesday and Wednesday, closing on the latter day with a net gain on the week of £11 10s. in the cash price and of £10 5s. in the forward position. The monthly statistics published on Monday had not been encouraging and caused a setback on the market. During October, according to A. Strauss and Company, the visible supply including the Straits carry-over, at 16,952 tons, showed an increase of 1,858 tons on the month. Since the Arnhem carry-over also rose last month by 127 to 960 tons, the net increase in visible supplies was 1,985 tons. Nevertheless, a strong American demand and optimistic views regarding the future of the restriction scheme served to turn the tide, and forced up the cash price on the London Metal Exchange by £9 to £217 per ton on Wednesday—i.e. only 17s. 6d. below this year's peak. The forward quotation scored a rise of £8 5s. on Tuesday and Wednesday to £214 10s. per ton—a new record for the current year. A further rise of some £7 per ton took place after Thursday's meeting of the International Committee, when it was learned that an agreement had been reached with Siam and that this would shortly be submitted to the Governments concerned. No further details of the agreement are available as we go to press. The next meeting of the Committee was fixed for December 11th.

Sales of tin on the London Metal Exchange: 375 tons on Monday, against 150 tons last week; 600 tons on Tuesday, against 400 tons last week; 475 tons on Wednesday, against 600 tons last week. The New York quotation on Wednesday was 47.40 cents per lb., against 45.52½ cents a week ago and 45.00 cents a month ago. Wednesday's official closing

quotation in London for standard cash was £217 to £218 per ton, compared with £205 10s. to £206 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 957 tons, a decrease of 173 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £14 5s. per flask of 76 lbs., as against £14 2s. to £14 2s. 6d. last week. Chinese antimony was quoted at £56 per ton ex warehouse, the same as last week. Chinese wolfram for "October-November" shipment was quoted at 28s. 6d. to 29s. 6d. per unit, c.i.f., the same as last week. Refined platinum at £9 15s. per ounce remains unchanged.

TEXTILES

COTTON.—Manchester.—The better feeling in the market has been maintained. In certain sections a considerable business has been done and producers have extended their order lists. Prices have gone against buyers. There has not been much change in raw cotton prices. There is some uncertainty concerning the American Government crop report due to be published on Monday next. The re-election of President Roosevelt has been interpreted as a bullish factor. Production of "outside growths," however, during the next twelve months will be substantial.

American yarn quotations have been advanced and an encouraging business has been done. Freer buying continues to take place in Egyptian qualities. The larger output of yarn is being well absorbed.

A large inquiry has been experienced in piece-goods, and some manufacturers have sold freely. Most producers are now in a position to hold firmly to quotations as longer engagements are now held than a month ago. A substantial demand has been met with for India with encouraging sales, chiefly in white yarn dhooties, light bleaching descriptions and fancies. More contracts have been arranged in special makes for Java and Singapore. Some improvement has shown itself in the offtake for Egypt, and steady buying has taken place in printed and dyed fabrics for South America and West Africa. Rather freer operations have taken place for the Dominions and the home trade in a wide variety of goods. Reports from most Lancashire towns are better than for some time and idle looms are being restarted.

JUTE.—Dundee.—Trading in the jute industry proceeds along satisfactory lines. Buyers in all sections are showing a fair interest and prices of all products are very firm, with a tendency to rise. Indian jute mills have already purchased a substantial proportion of their raw jute requirements for the present season, estimated at about seven million bales; it is estimated that they have bought four and a half million bales from a crop forecast at 8,711,000 bales. As other countries are calculated to have purchased 1½ million bales, the statistical position of the fibre is strong. Hence, quotations are more likely to rise than to fall during the remaining eight months of the season.

Quotations for Calcutta goods have improved, but there is still no sign of any agreement being reached concerning working hours between the of any agreement being reached concerning working hours between the associated mills and the "outside" mills. Production in India, however, though considerably greater for several months past, is only keeping pace with demand. Stocks of both hessians and heavy goods at the end of the month of October were smaller than at the end of September. Hessian stocks declined by 1½ million yards to 97 million yards and sacking stocks fell by 20½ million yards to 94½ million yards. A year ago stocks of hessians stood at 74½ million yards and stocks of sackings at 138 million yards.

The full group of Daisee-2/3 was sold this week at the advanced rate of £18 15s. per ton, December-January, and single marks were quoted at £19 2s. 6d., with Daisee-4 at £17 15s. for good marks and £18 10s. for full group. Tossa-2/3 was named at £19 11s. 3d. and four at £17 12s. 6d. full group, November-December. First Marks were more or less nominal at £21 15s., and good Lightnings ranged from £19 15s. to £20 5s., with Hearts at £19 2s. 6d., November-December.

Jute yarns are very firm at 2s. 1d. for common 8 lb. cops and 2s. 2d. for 8 lb. spools. Twist is being sold at 3½d., the lowest for 3 ply 8 lb. and sacking yarns from 2½d. for 24 lb. weight and 3½d. for 8 lb. chains. Rove is dearer and now mostly quoted at £20 for 48 lb. and at £16 10s. 200 lb., and the finer yarns are well foretold and named at 2s. 4d. for fourth grade 8 lb. warp. Carpet yarns are firm at 3½d. for 14 lb. warp.

A steady business is being done in jute cloth and prices are tending higher. Quotations are up ½d. to 2½d. for 10 oz. 40 in. and 2½d. for 8 oz. A feature is the large business that has been done in lineoleum hessians at considerably higher prices. Heavy goods are very steady.

Calcutta hessians are quoted at 16s. 11d. for 10 oz. 40 in. and at 13s. 4d. for 8 oz., November, and at 13s. 9d. and 13s. 4d. for December. Liverpool twills are in some demand at 42s. 9d. and "B" twills at 37s. 9d., November-March.

GRAIN MARKETS

WHEAT.—The firmer tendency noted at the beginning of last week was not maintained and prices in this country closed on Wednesday showing a further decline on the week. The movement is mainly attributable to improved crop prospects in Australia and Argentina, due to better weather conditions in those countries. Selling pressure of new Argentine and Australian wheat is increasing while Continental demand—apart from good Italian buying—has been rather quiet.

On Wednesday last, "December" futures were quoted in Chicago at 114½ cents per bushel, against 115½ cents the week before and 113 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 42s. 6d. per 496 lbs., against 44s. a week ago; No. 2 Northern Manitoba, ex ship, 42s. 3d., against 43s. 6d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour

last week totalled 1,516,000 quarters, against 1,555,000 in the previous week and 1,558,000 quarters in the corresponding week a year ago.

FLOUR.—In sympathy with wheat, flour prices have eased in the period under review. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 36s. 6d. per 280 lbs., against 37s. a week ago; delivered inner London, 36s., as compared with 36s. 6d. a week ago; Manitoba patents, ex store, 33s. 3d. to 34s. 9d., against 34s. 9d. to 36s. 3d. a week ago. Australian, ex store, 32s. 6d., against 32s. to 32s. 6d. a week ago.

BARLEY.—With the continuance of favourable crop prospects in Argentina and a slow demand, prices are again lower. "December" futures were quoted at 58½ cents per bushel in Winnipeg on Wednesday, against 59½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new), at farm, 28s. to 29s., as against 29s. to 30s. a week ago; "English malting" (new), at farm, 34s. to 50s., against 34s. to 50s. last week; Californian (new), ex ship, 47s. to 58s., against 47s. to 58s. last week; Chilean, brewing, ex ship, 36s. 6d. to 42s., against 36s. 6d. to 42s. a week ago.

OATS.—While English oats are dearer this week, imported descriptions have eased in sympathy with the wheat markets. On Wednesday, "December" futures were quoted at 41½ cents a bushel in Chicago, against 41½ cents a week ago and 41½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 21s. per 336 lbs., against 20s. a week ago; "English White" (new), at farm, 21s., against 20s. a week earlier; mixed Canadian feed (Vancouver), landed, 20s. 9d. per 320 lbs., compared with 21s. 3d. last week.

MAIZE.—Prices are again easier. "December" futures were quoted on Wednesday at 95½ cents per bushel in Chicago, against 95½ cents a week ago and 94½ cents last month. Quotations in London, Wednesday: "Plate," landed, 22s. 9d. per 480 lbs., compared with 23s. 9d. a week ago; "Plate," ex ship, 21s. 9d., as against 22s. 9d. a week ago; "November," 22s., as against 23s. 1½d. a week ago; yellow maize meal, ex wharf, was quoted at £6 2s. 6d. per ton, as against £6 5s. to £6 7s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Nov. 6, 1935	Dec. 31, 1935	Oct. 28, 1936	Nov. 4, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	85	84½	111½	108½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	97½	75½	115½	114½

The visible supply of wheat in Canada amounts to 86,548,000 bushels, against 86,736,000 bushels last week, and 146,526,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—				
1 week to October 31	Cwts. 275,027	Cwts. 398,423	Cwts. 453,933	Cwts. 435,655
9 weeks to October 31	3,281,739	4,426,189	4,292,733	2,931,708
Average price of English wheat per cwt.	s. d. 4 9	s. d. 4 11	s. d. 6 1	s. d. 8 11

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
October 29, 1932	Cwts. 324,418	Cwts. 378,011	Cwts. 56,462	s. d. 5 7	s. d. 7 10	s. d. 6 2
October 28, 1933	275,027	493,148	48,927	4 9	9 8	5 6
November 3, 1934	398,423	494,560	52,823	4 11	9 1	6 6
November 2, 1935	453,933	521,894	51,147	6 1	9 0	6 2
October 24, 1936	433,293	549,676	72,161	8 8	10 3	6 9
October 31, 1936	435,655	503,604	70,101	8 11	9 11	6 11

OTHER FOODS

BACON.—A further reduction in the official rates was made last week and the market has since had a quiet tone. The official quotations (per wt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 88s. to 90s.; Canadian, 80s.; Danish, 90s., as against 90s. to 94s., 84s. and 94s., last week. Arrivals in London last week included Danish, 12,646 bales; Canadian, 6,116; Dutch, 288; Lithuanian, 1,092; and Polish, 2,681; as against 12,889, 5,748, 998, 1,933 and 2,924 bales, respectively, in the previous week.

BASIC PIG PRICE.—The Pigs Marketing Board announced last week that in accordance with the provisions of the present contract, the ascertained price of green Wiltshire style bacon is 93s. 5d. per cwt. and the ascertained value of offals is 8s. 8d. The ascertained cost of feeding stuffs, as certified by the Ministry of Agriculture and Fisheries, is 8s. 9d. per cwt. in accordance with the price schedule embodied in the contract, the price of the Class I, grade C pig for the month of November is 12s. 2d. per score, against 12s. in October and 11s. 4d. in the same month of last year. The curers will also pay to the Pigs Marketing Board 2d. per score on every pig delivered and accepted during this year, to form a pool out of which will be paid the bonus on pigs delivered during the first four months of the year, in accordance with the 1936 Bonus Scheme.

BUTTER.—After a rather quiet period, the market became much firmer at the end of last week and on Monday New Zealand and Australian salted were not offered. Prices show an all-round improvement. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 106s. to 107s.; Australian, choicest salted, 106s.; Danish, 122s., compared with 98s., 98s. and 120s., respectively, a week ago.

CHEESE.—The market has had a firm tendency, quotations for New Zealand having recovered after last week's easiness. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 82s. to 86s.; Canadian, finest coloured, 69s. to 70s.; and New Zealand, finest coloured, 68s., against 82s. to 86s.; 69s. to 70s.; and 66s. 6d., respectively, a week ago.

COCOA.—Since we commented on cocoa developments on page 204 in last week's issue of the *Economist*, the quotation has again risen by 1s. per cwt. to 39s. 6d., ex quay in Liverpool. Now, in last week's issue of *Gordian*, it was shown that world exports of cocoa beans during the season ended last September were 695,500 metric tons and imports 660,300 tons, leaving an export surplus of 35,200 tons. And, although stocks in the United States were recently estimated to be about 10,000 tons smaller than a year ago, there is no evidence of a coming shortage of cocoa beans. This view is strongly expressed in last week's issue of *Gordian*, according to which supplies of cocoa beans are sufficient "to cover requirements even if world consumption should still increase considerably." The spot quotation in New York on Wednesday was 8½ cents per lb., as against 8½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted 38s. 6d. per 250 kilos, c.i.f. Continent, against 37s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 1,704 bags; delivered, for home consumption, 11,953 bags; exported, 101 bags; stocks, 126,834 bags, against 117,258 bags a year ago.

COFFEE.—The spot markets in London and New York have had a steady tone this week. On Wednesday, Rio No. 7 (cash) was quoted at

8½ cents per lb. in New York, as compared with 8½ cents per lb. last week and 7½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 34 cwt.; delivered, for home consumption, 259 cwt.; exports, 60 cwt.; stocks, 9,490 cwt., against 12,622 a year ago. Central and South American, landed, 39 cwt.; delivered, for home consumption, 2,047 cwt.; exported, 3,068 cwt.; stocks, 62,004 cwt., against 90,180 last year. Other kinds: landed, 4,774 cwt.; delivered, for home consumption, 4,400 cwt.; exported, 3,040 cwt.; stocks, 97,596 cwt., against 117,198 last year.

EGGS.—At the London Egg Exchange there was a good market for Colonial eggs at slightly firmer rates, but the higher-priced varieties—including English—were rather easier. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 20s. to 22s. per 120, as against 22s. to 23s. 6d. last week, while Danish (15½ lb.) made 16s. to 16s. 6d., as against 15s. 6d. to 16s. last week.

FRUIT.—Covent Garden market, says *The Fruitgrower*, appears to be settling down to the usual dull November period, although the decline in business is not quite so pronounced as in some seasons. The apple trade is rather steadier, most of the inferior produce having been cleared. English cookers are, however, still in abundant supply, and no improvement in prices can be recorded. Pears remain in steady demand. English hot-house grapes are also in more active request, but prices show no advance, owing to the heavy supplies of Belgian and Dutch grapes still arriving. English cobnuts are unaltered, but walnuts are cheaper. Chestnuts are arriving in large quantities from foreign sources. Oranges are a moderate trade, while lemons have further declined in price on heavier arrivals. Grapefruit prices remain easy and supplies are not clearing well.

MEAT.—Chilled beef and frozen mutton and lamb were in fair request at Smithfield this week, but trade in other descriptions was rather slow. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 6d. to 3s. 10d. per 8 lbs., as compared with 3s. 4d. to 4s. a week ago. New Zealand frozen mutton was 3s. 2d. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,425 tons, an increase of 130 tons from the corresponding week last year. Beef and veal accounted for 4,710 tons, mutton and lamb 2,648 tons, and pork and bacon 1,242 tons, as compared with 4,805, 2,519, and 1,208 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil, delivered 8 tons; stocks, 1,798 tons, against 1,467 tons a year ago. White, landed, 7 tons; delivered, 62 tons; stocks, 11,874 tons, against 15,188 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. per cwt., ex warehouse, on Wednesday, as compared with 8s. per cwt., a week ago. "November-December" in singles to Continent and U.K. was quoted at 7s. 10½d. per cwt., against 7s. 10½d. last week for "October-November." Movements in London during the past week were as follows: Landed, 29 tons; delivered, 218 tons; stocks, 2,278 tons, against 7,264 tons a year ago.

SUGAR.—The London spot market remains quietly steady. When the result of the Presidential election became known a firmer tendency developed on the New York market. The spot price in New York on Wednesday was 3-50 cents per lb., as compared with 3-39 cents per lb. last week and 3-40 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at from 4s. 10½d. to 4s. 10½d. against 4s. 8½d. to 4s. 9d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 14,380 tons, against 12,008 tons last week and 20,878 tons in the same week of last year; deliveries, 18,032 tons, against 19,137 tons last week and 17,884 tons last year; stocks, 95,639 tons, against 99,291 tons last week and 164,742 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks.

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Oct. 31, 1935.....	14-00	12-42	15-69	11-89	10-12	11-16	14-07
Sept. 24, 1936.....	13-88	12-04	13-29	10-75	9-95	11-48	13-29
Oct. 1, ".....	13-39	11-95	13-41	10-91	9-95	11-55	13-09
Oct. 8, ".....	13-22	11-92	13-82	10-91	9-95	11-55	13-09
Oct. 15, ".....	13-18	12-00	13-87	11-08	9-95	11-63	13-03
Oct. 22, ".....	13-24	12-08	13-96	11-32	10-07	11-59	13-12
Oct. 29, ".....	12-99	12-12	14-61	11-61	10-03	11-62	13-24

The quantities catalogued for the public auctions in Mincing Lane this week comprised 54,372 packages of Indian and 21,322 packages of Ceylon tea. At the Indian auctions on Monday and Wednesday there was a good demand for all descriptions, with quotations fully firm. Prices were generally higher at Tuesday's Ceylon sales, following an active demand and an improvement in quality.

VEGETABLES.—Supplies of tomatoes are now becoming more scarce and prices at Covent Garden are accordingly higher, states *The Fruitgrower*. Moderate supplies of cucumbers encounter a restricted demand. Madeira beans have declined in price, lettuce is very slow, and mushrooms are easy. Greenstuff continues abundant and sells at moderate rates. Celery is plentiful and, although selling well, makes only fair prices. Carrots, turnips and parsnips are a steady trade, with prices showing little variation. The potato trade at the various London markets shows few new features, but inferior samples have eased in price. At the Borough on Tuesday, quotations for best siltland King Edward were unaltered at 8s. to 9s. per cwt.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Business in linseed continues very slow. Owing to the uncertain outlook and rumours that the heavy crop expected this season may prompt the Argentine Government to revise the minimum price guaranteed to growers in a downward direction, brokers are buying only to cover oil and cake commitments. Meanwhile, the latest official reports regarding the newly sown seed in Argentina are satisfactory; provided no untoward weather conditions intervene between now and harvest time, a yield of two million tons is expected by the trade. The balance of the old Plate seed is moving off steadily, and it is estimated that at the end of October only 170,000 tons was left for shipment, or 100,000 tons less than the quantity actually exported in the remainder of 1935. India has an exportable surplus about equal to that of a year ago. The quantity afloat for Europe is now 130,800 tons, against 140,800 tons last week, and that for the United States 93,600 tons, against 50,400 tons a year ago. Linseed oil is barely steady and late prices difficult to maintain.

Cotton seed is lower but steady, though export demand is poor and me demand only moderate. Business in Egyptian crude oil for January delivery ex Hull is reported at £24 10s. per ton, naked. Demand for oil cakes is not so good, but prices are steady.

POTASH.—Although exports of potash from Spain amounted to 2,549 metric tons in 1935 (against 267,305 metric tons in 1934 and 8,666 in 1933) the Spanish civil war has had no significant effect on world potash markets. The reason for this somewhat paradoxical situation is given in a German mining periodical, the *Deutsche Bergwerks Zeitung*. It there stated that the quota of Potasses Ibericas, one of the leading Spanish producers which ceased production at the beginning of the civil war, has been temporarily transferred to the non-Spanish members of the international potash syndicate. It is likely that a similar course was taken by the two other large Spanish potash groups—Union Espanola de Ex-

plosives and Minas de Potassa de Suria. Meanwhile, it is reported that the Spanish mines have not suffered any damage in consequence of the war, so that it will be possible to resume production immediately hostilities cease.

RUBBER.—Active trade buying was more than sufficient to offset the effects of profit-taking by speculators and prices show a further marked rise on the week. The spot price in New York on Wednesday was 17½ cents per lb. compared with 16½ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8½d. per lb., as against 8½d. on the corresponding day last week. In forward positions, business has been done at 8½d. to 8½d. for "December" shipment, as against 8½d. to 8½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 96,673 tons, against 97,730 tons a week earlier. A year ago stocks amounted to 170,541 tons.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, NOVEMBER 9—THE OUTLOOK FOR TIN.—This article reviews the prospects for the Tin Industry, following the agreement just arrived at in Paris with Siam, as a result of which the conclusion of a Restriction Agreement to replace the present Scheme on its expiry at the end of this year is assured.

TUESDAY, NOVEMBER 10—LONDON TIN CORPORATION. Our Special Mining Correspondent, MINOTAUR, in his usual Tuesday article, analyses the position and prospects of this large Tin shareholding company on the basis of the present improved outlook for the Tin Industry.

WEDNESDAY, NOVEMBER 11—COTTON TEXTILE PROSPECTS. Once again interest has been stirred in the Cotton Textile Industry, both by better Manchester advices and by the recently announced reconstruction scheme for the Lancashire Cotton Corporation. This survey investigates achievement and prospects in the Trade up to date.

THURSDAY, NOVEMBER 12—THE BUCKET-SHOP PROBLEM. Recent intensification of Bucket-Shop activities has elicited widespread suggestions for the combating of this menace. In this article the various plans put forward are examined and the basis for a practicable solution of the problem is outlined.

FRIDAY, NOVEMBER 13—INDUSTRY AND NATIONAL DEFENCE. It is now nearly a year since THE FINANCIAL NEWS published its extensive survey of the then forthcoming Armament Programme and its effect on industry and individual companies. This series of articles, as those who read it will know, has since proved highly accurate in its forecasts and in its investment advice based thereon. But a review of the position in the light of the most recent developments will serve to fill up gaps which were then inevitably left open.

IN DEFENCE OF DEMOCRACY

We have had occasion in the past to criticise sharply Sir John Simon's conduct of foreign affairs. We have also had occasion to deplore the apathy which His Majesty's Government have shown towards the grave dangers which are threatening the world as we know it, both at home and abroad. It is all the more pleasure to welcome, in the Public Order Bill, the full text of which has now been published, a genuine and energetic attempt on the part of the Government, acting through Sir John Simon, to stamp out the new menace of deliberate provocation to violence in politics which has begun in recent months to poison the atmosphere of British democracy.

A brief recital of the provisions of the Bill will show that it has not been conceived in any spirit of timidity. It deals with a number of related subjects, which may conveniently be summarised under the four heads of Uniforms, Private Armies, Processions, and Disorder at Meetings. The much-discussed difficulty of defining a political uniform is avoided in the finest tradition of English law by not including any definition at all. The relevant clause merely says that anyone publicly wearing a "uniform signifying association with any political organisation or with the promotion of any political object shall be guilty of an offence." The courts will have to decide what does and what does not constitute a uniform "within the meaning of the Act," just as they decide scores of similar points of definition every day.

The section of the Bill on Private Armies is the crux of the whole matter. In effect, the Bill prohibits the organisation, training or equipment of persons for the purpose of enabling them to be employed either "in usurping the functions of the police or of the armed forces of the Crown" or "for the use or display of physical force in promoting any political object." Moreover, it is not the intention of the organisers which is the test; for the prohibition also extends to the organisation, training or equipment of persons

"in such manner as to arouse reasonable apprehension" that they are to be used for these purposes.

In themselves these provisions go a long way. But some of the supplementary clauses go a surprisingly long way further. The Government have evidently realised to the full the difficulty of securing the normal evidence against organisations which, by their nature, are secretive. It is accordingly provided that the acts and words of "persons appearing to be members or adherents of an association" shall be admissible as evidence, except only if it is proved that the persons in question are not actually members or adherents. Moreover, a Judge of the High Court may grant a comprehensive search warrant on the application of the police. Prosecutions under this clause are not to be instituted without the consent of the Attorney-General; but the penalties for contravention are heavy. The controllers and organisers are liable to imprisonment for two years or a fine of £500, or both, and the funds of the contravening association can be impounded for the benefit of creditors and persons who have subscribed in good faith, any balance being forfeit to the Crown.

The section on processions gives the police—acting on their own authority—power to impose conditions on the organisers of processions. Local authorities in the provinces, with the consent of the Secretary of State, may prohibit processions altogether. In London this power is given to the police and the Secretary of State acting together. Sir John Simon is thus giving himself the power, which hitherto he did not possess, of banning "marches" such as that recently attempted by the Blackshirts through the East End.

Finally, the Bill tightens up the law of meetings. It is to be an offence to carry "offensive weapons" at meetings or to use "threatening, abusive or insulting words or behaviour with intent to provoke a breach of the peace or whereby a breach of the peace is likely to be occasioned,"

whether at a meeting or in any public place. The Public Meeting Act of 1908 is also amended to give the police power to take the names and addresses of persons who, at meetings, "act in a disorderly manner for the purpose of preventing the transaction of the business for which the meeting was called together." This section is not, however, as full-blooded as some of the others, for it applies only to persons hostile to the convenors of the meeting. Nothing in the Bill would enable the police to take the names and addresses of "stewards" who use gross brutality towards peaceful questioners. Moreover, the police are not themselves to prosecute under this section, but are to hand over the names and addresses to the chairman of the meeting.

This, however, is the only exception to the statement that the Bill goes as far as any democrat could wish. Indeed, it may be questioned whether it does not, in some particulars, go too far. It is, of course, true that effective provisions for getting rid of Fascist and other private armies cannot be drafted without putting into the hands of the executive Government powers which might conceivably be used in a very different cause, for the suppression rather than the defence of freedom of speech. If democracy is to defend itself it must submit to a certain measure of discipline, to some limitation of individual freedom. Whatever is needed for the suppression of shirking armies, whatever their political faith or sartorial hue, will be supported by the overwhelming mass of public opinion, more especially now that we have it on the word of the Home Secretary that the funds of both Fascists and Communists have been "supplemented" from abroad. But it is reasonable to demand that not a word more than is necessary for this purpose shall be included in the Act in limitation of the freedom of the citizen.

In spite of a few criticisms which have been made, the Act as a whole emerges well from this test. Sir Oswald Mosley complained on Thursday that he was being made the object of discrimination. But if that is true, it is only because he alone has hitherto had the unwisdom to import into British political life the trappings of Continental totalitarianism. He stands entirely isolated in his plaintive objections; the three political parties are entirely at one in their support of the principles of the Bill, and it promises to have a speedy and smooth passage to the Statute Book. Once there, we trust that it will be administered in the same energetic spirit as has inspired its birth.

The British people are perhaps too prone to congratulate themselves on their own political wisdom. But on this occasion we believe that the whole world, or at least those remaining parts which are allowed to hold opinions, will rejoice to see Great Britain taking timely measures to protect that political freedom which is the most priceless gift to civilisation of the English-speaking peoples.

MR EDEN AND MR BALDWIN

IN the House of Commons on October 5th, and at the Guildhall on Monday, an *exposé* of British foreign policy was given by the Foreign Secretary and by the Prime Minister respectively. In both speeches an attentive listener can detect a new and welcome note. This change of tone is the more striking because it is audible simultaneously in the voices of the two Ministers of the Crown most closely concerned with foreign affairs, who can speak—when they speak the same language—with an authority not much less than that of the whole Cabinet. Their present unison is impressive, because—withstanding Mr Baldwin's well-known appreciation of Mr Eden's abilities—there has at times been a considerable difference of stress in their pronouncements, especially at the height of the Italo-Abyssinian crisis. This divergence has now disappeared; and the change which has brought the two Ministers' utterances into harmony has been mainly on Mr Baldwin's side. The Prime Minister has grown stiffer; the Foreign Secretary has not turned flabbier.

When we say that Mr Baldwin's tone at the Guildhall was stiff, we are not accusing him of being truculent; *a fortiori* not of being aggressive. His gesture was less spectacular, but not the less significant for that. For the Prime Minister on Monday clearly indicated the line at which—if

driven to it by the aggressiveness of countries on the war-path—he and his colleagues have made up their minds to stop retreating.

Such an indication of policy is welcome to Mr Baldwin's countrymen of all parties. During the past eighteen months no one has known whether there was any line at all in the Prime Minister's mind, or whether he would be content to go on retreating as far as the masters of Japan, Italy and Germany might care to push him. To-day we know that, even if Mr Baldwin was prepared for an unlimited retreat last year, he has now set himself a limit. It is desirable that this change in the temper of the Government at Westminster should be noted and taken to heart at Berlin, Rome and Tokyo.

On another occasion not long ago, Mr Baldwin described Fascism, accurately enough, as being the child of Communism; and the Fascist commentators who objected at the time to this account of the origin of their movement may now perhaps find some consolation in the reflection that Fascism, in its turn, seems in a fair way to producing a vigorous rival. Is it to be the "historic mission" of Fascism to poke and prod our sluggish Western Democracy into a new bout of vigour? If Fascism had not appeared on the scene in so aggressive a posture at such unpleasantly close range, it is possible that our Democracy might have died, by inches, of sheer self-complacency and inertia. But Fascism may have saved Democracy from this cow's death by threatening it with a death by violence—thereby stimulating it to fight for its life.

Every great nation has something to give the world. Freedom of the spirit is our contribution; let us see to it that we keep that flame bright at home, and that we are prepared, if necessary, to fight for it to the end.

On Mr Baldwin's lips, these words are a portent; and their meaning would appear to be that the Fascist Powers have overreached themselves in pressing the democratic Powers too hard.

The change of temper evident in Mr Baldwin's speech is probably common to this country and France; and this is the light in which we should read Mr Eden's warm reference to the "cordial relations" between the French and ourselves. If France and Great Britain now make a joint stand for the Democracy which is the breath of their life, then we shall be in a position to reject that exclusive choice between Fascism and Communism which the Fascists and Communists are working—in tacit collusion with each other—to force upon the rest of us.

When we turn from the general to the particular, we find both Mr Baldwin and Mr Eden still eager for the conclusion of a new pact in Western Europe between the Locarno Powers. But both Ministers took care to mention, once again, a condition which has always been laid down in the successive British proposals for a "new Locarno." A new pact in Western Europe must not be negotiated as an end in itself, but only as a preliminary to a settlement covering the whole of Europe. The same point was made in other language in the references in Mr Eden's speech to the relations between Great Britain and Germany. While welcoming the "repeated declarations in Germany of a desire for closer Anglo-German friendship," and hastening to add that "the desire is generally reciprocated in this country," Mr Eden went on to state "two conditions which are inevitably attached to any friendship which this country can proffer to any other country: they are that such friendship cannot be exclusive and cannot be directed against anyone else." Herr Hitler must often before have been given to understand that Great Britain will not be content with any settlement in Europe from which Eastern Europe is excluded, and that she has no intention of lending herself even passively to the furtherance of any military designs which may be harboured by the Government of the Third Reich. It has been Germany's policy to ignore these intractable elements of British foreign policy; but this time Mr Eden has spoken out in language which Herr Hitler cannot pretend to misunderstand. Nothing but good can come of a frank recognition on both sides that this country is not going to play the accommodating rôle in the European drama for which the Führer has cast her.

There was the same happy combination of suavity and frankness in what Mr Eden said about the relations between

this country and Italy. He took note of, and welcomed, the assurances given by Signor Mussolini that Italy did not mean to threaten the British route through the Mediterranean; and his reply was:

"Nor do we. Our position is the same. I repeat the assurance that we have no desire to threaten, or intention to attack, any Italian interest in the Mediterranean."

But in the same context the Foreign Secretary declared that British communications in the Mediterranean waters were not a "short cut" but a vital artery of the British Empire. The unspoken implication of this contention would appear to be that this country does not mean to acquiesce in any alteration, to her disadvantage, of relative naval and air strengths in the Mediterranean area.

By such roundabout paths we come to the inevitable conclusion: re-armament. On this, Mr Eden and Mr Baldwin used almost identical words. They both condemned the present world-wide armaments-race as folly, and they both declared emphatically that this country had no choice in the circumstances but to join in. In saying this to-day, British Ministers are probably speaking for an overwhelming majority of their fellow-countrymen; for the conversion of the British public to this most unpalatable view has been one of the outstanding results of Signor Mussolini's Abyssinian adventure. But if all nations engaged in this folly are to be saved from some irreparable common disaster, re-armament must be restricted to accord with some measure of collective guarantee against any wanton aggressor. The welcome firmness of Mr Eden and Mr Baldwin should convince the other European Great Powers that such is the overwhelming temper of the British people.

BRITISH MONETARY POLICY A SYMPOSIUM

In view of the recent devaluation of the gold bloc currencies, and of the continued expansion of industrial activity in this country, we have invited a number of economists to state what monetary policy ought, in their opinion, to be pursued by Great Britain in the immediate future. We have asked them to assume (1) that Great Britain is in or near the "boom" stage of the trade cycle; and (2) that major disequilibria between different national currency values have been removed. This week we publish contributions from Mr H. D. Henderson, Professor Lionel Robbins and Sir Arthur Salter.

From Mr H. D. Henderson

There is no doubt, in my judgment, that we are now definitely in the boom phase of the trade cycle. In what ways may a boom serve to cause or to aggravate the depression that normally follows it? There are two main possibilities to be considered. First, the boom may generate a tendency towards rapidly rising prices, in which wages and prices may chase one another upwards, the so-called "vicious spiral." Second, it may entail a volume of

activity in the industries producing capital goods so high relatively to the output of consumers' goods that it cannot be sustained indefinitely.

The first of these phenomena is by no means an invariable feature of a boom. It played no part in the boom, such as it was, before 1929 which preceded the most disastrous depression on record. In view of the economically wasteful character of re-armament expenditure, it would not be surprising if we were to see a "vicious spiral" before the present boom ends. If so, it would be essential to check it, and better to do so soon rather than late. But we are as yet a long way from any such development. Prices are rising; but up to a point it is desirable that they should rise; and if they should show signs of rising unduly, an obvious remedy lies to hand which should be the first to be employed. During the depression various steps have been taken to safeguard producers, especially in the sphere of agriculture, against unduly low prices. This puts us now in a position by retracing these steps to abate a rising tendency of prices.

On the other hand, the second phenomenon to which I have referred is already present in a marked degree. If and when re-armament expenditure is seriously reduced, it is difficult to see how to avoid a large contraction in the aggregate volume of constructional activity, or how to contrive that this will not entail a general depression.

But the moral as regards policy in the meantime is far from clear. It would doubtless be possible by a drastic increase of interest rates to bring the private house-building boom prematurely to an end. It by no means follows, however, that the demand for houses thereby choked off would revive so as to come to our rescue when depression set in; and, if not, *cui bono?* Public housing schemes are in a different category; and something useful might be done by going slow with the "over-crowding" policy in the next few years, but getting ready to push it energetically when general activity slackens. But there are limits to the extent to which public works can be appropriately used as a trade cycle "tap"; and it would not be practicable, for example, to hold back the slum-clearance programme at this stage with this end in view.

To any proposal for "damping down" the boom I apply the test:—Will this help us in any way when depression comes? From this angle, I agree with those who hold that this is not the time for unbalanced budgets, and that we must be ready for further increases of taxation. But at this stage I see no advantage in a rise in interest rates. This may become necessary if a "vicious spiral" develops, but not otherwise. Nor, in my view, should we allow our policy in regard to interest rates to be affected by considerations of the foreign exchanges.

From Professor Lionel Robbins

In the present condition of the world there are certain advantages in a secular trend of rising gold prices. It would mitigate the burden of specific customs duties and should do much to produce a political atmosphere favourable to the reduction of obstacles to trade.

But I see no advantages in a rise of internal prices and costs at present in Great Britain. Indeed, I am sure that if such a situation develops we must expect a bad crash later on. At the present time there is real danger of the boom getting out of hand.

To avert this danger it is necessary to recognise its origin. The boom is an internal boom. It has been brought about partly by the prospects of extraordinary Government expenditure, partly by the persistence of conditions which have compelled all new capital coming forward to seek investment opportunities at home. The prices which are likely to rise too much are essentially internal prices.

Hence, while I should not be averse to the most vigorous use of the Bank rate if the situation appeared to warrant it, at the moment I favour other measures more suited to the peculiar nature of the local maladjustment.

I think it is fundamental that extraordinary Government expenditure should be met by taxes rather than loans. We should tax ourselves to the bone rather than risk further credit inflation. Government expenditure other than expenditure on re-armament should be slowed down. I would not favour severe credit contraction. But I think further expansion should be prevented.

At the same time, while we are thus damping down the internal boom, I hold that we should do everything to promote a revival of international trade. Presumably it is Utopian to hope for a lowering of the British tariff; only other people's tariffs are reprehensible! But it would be the most effective equilibrating measure at this juncture. I believe, too, that we should no longer obstruct such international lending as private individuals are willing to undertake. Anything which leads to a revival of international prices and a damping down of internal prices will prevent local maladjustments developing.

But, in order that such measures may be effective, it is essential that the sterling exchange should be maintained. Measures of tariff reduction or freeing of lending would be rendered useless if the sterling exchange were to sag. I am all for caution in approaching a final stabilisation. But I think we should recognise that situations in which there is an opposition between our domestic interest and the consolidation of international stability are not likely to be frequent in the immediate future. The restoration of international monetary stability is a major economic interest for Great Britain.

From Sir Arthur Salter

I agree with the two assumptions on the basis of which you invite me to express an opinion as to the policy which should now be pursued; viz. that we are some distance up on the upward movement of the trade cycle and also that a considerable degree of currency stability is now a possibility.

(1) I regard the prospect of the rising spiral, increasing cost of living, wages, costs of production, etc., as highly undesirable, especially in view of the industrial disputes by which it would be certain to be attended. (2) I do not consider that the time to initiate a rise of interest rates has yet come, and think this should be the last of the counter-acting measures to be tried, though it may become necessary later. (3) I should deplore a Budget which relied, under the above conditions, mainly upon loans rather than taxation. (4) I do not consider that exchange stability should be aimed at beyond the point at which it is consistent with the avoidance of "deflation" (this term being here used in a sense in which it is distinguished from such measures as are proposed in this note with a view merely to counteracting inflation).

In these circumstances I advocate the following policy:—

(1) The prices of articles entering substantially into the cost of living should be carefully watched, and any tendency to rise at once counteracted by the reduction of the relevant tariffs or by the increase of quotas.

(2) Tariffs should also be reduced, or quotas enlarged, where either "lower tariff" commercial agreements can thus be made so as to secure resulting expansion of exports equal to the increased imports; or where an industry has workers easily transferable to work involved in the armaments programme; or where the cost of a raw material of important industries, such as steel, may rise.

It need not be feared that encouragement of imports in such cases would weaken the balance of payments so as to increase the difficulty of maintaining a measure of exchange stability.

(3) I am still in favour of the currency policy of "conditional stabilisation" which I advocated in your columns in July, 1935 (an understanding such as that reached in relation to the franc was the first step then proposed)—i.e. a stabilisation which would stop short of the point at which an otherwise undesirable increase of deflation would become necessary.

(4) I believe that both central and local public works should where possible be temporarily slowed down, but that every preparation should be made to proceed with them at an accelerated pace immediately the boom begins to pass into depression. And other plans for public works, not now in hand, should be got ready for the same time: in particular, for the building of low-rental working-class houses, and for the improvement of our arterial road system.

(5) I think that there should be an increase in direct taxation, and think that a scheme for additional excess profits taxation might serve several useful purposes.

(6) The nest egg of the gold "profit" due to the depreciation of the pound should be reserved to assist the financing of accelerated non-armament public works, when the next depression begins.

I believe all these measures would be of a "corrective" character, and would together greatly mitigate the sharpness of the transition from boom to depression and enable the latter to be greatly relieved when it comes.

THE MECHANICAL AGE

MUCH is said and written about the mechanical age, and about the implications of technical progress. The benefits it has brought in the form of a higher standard of living and its dangers, if used for destructive purposes, are being eagerly discussed. But only occasionally does the public get a glimpse of the work of the engineer in his constant effort to speed up production. Occasionally, controversy about technical developments penetrates the thick walls of the drawing-office. Just recently, the industry has received a good deal of publicity during discussions on re-armament. More, perhaps, than most branches of activity, the engineering industry is always in a process of change. And much has happened since the Balfour Committee published its survey of engineering some eight years ago. In order to throw some light on important recent developments in the industry, we have prepared a special Survey of mechanical engineering, published with this week's issue of the *Economist*.

The engineering industry consists of many highly specialised branches of activity, and to some extent its various sections are almost independent of each other. Indeed, the industry really consists of a large number of separate industries, all of them using metals as their raw material.

The urge to do things more quickly and more cheaply was probably prevalent at an earlier stage in the modern development of this country than abroad. Britain soon became the "workshop of the world," and gathered the fruits of specialisation in the form of a rapidly rising standard of living almost throughout the nineteenth century. But with the growth of engineering skill and specialisation abroad, the industry in this country gradually lost its pre-eminence, though it is still leading the field in many individual branches. Engineering has just been through a period of acute depression, but is now again expanding vigorously. As our Survey shows, the engineering industry as a whole is subject to violent changes in activity. The Board of Trade index of activity in engineering and shipbuilding, for example, declined by about 30 per cent. between 1929 and 1933, while the *Economist* index of general business activity fell by only about 10 per cent. during this period. But in common with general activity, the level of output of engineering is now well above the pre-depression level. The reasons for the violent oscillations in the activity of the industry are not far to seek. During periods of depression, when industrial earning-power is low, many concerns have little to spend on keeping their productive equipment up-to-date. And,

since periods of depression are frequently accompanied by important technical changes, the demand for new equipment expands rapidly as soon as general recovery sets in and profits begin to rise. In contrast to productive equipment, demand for consumption goods is normally much more stable owing to the desire of individuals to continue their current modes of living. Just now, British industry is being extensively re-equipped, and engineers, therefore, are working at full speed. One of the present problems of the industry, revealed by our Survey, is the shortage of skilled labour. Between 1930 and 1934 the number of insured workers in general engineering declined from 592,000 to 523,000. In addition, a substantial number of workers lost in skill as a result of prolonged unemployment. Hence, the industry is unable to keep pace with the increase in demand for its products. In the machine-tool section, for example, there are now many firms which cannot offer delivery inside a year.

Since the Government's re-armament programme is largely concentrated on the metal working industries, many sections of engineering are being subjected to a considerable strain. It is not surprising, therefore, that the recovery in exports has been much less marked than the improvement in imports. After declining from £54.4 millions in 1929 to £27.0 millions in 1933, engineering exports rose again to £38.5 millions in the past year. But imports of machinery, mainly of a specialised kind, have always been substantial and have risen proportionately much more than exports. Thus, the value of imports of machinery during the first nine months of the current year, at £13.2 millions, was only about £1 million below the level of the corresponding period in 1929. The inability of the industry to secure a larger increase in overseas trade in machinery may have unfortunate consequences in the future, when the home market shows signs of declining.

Another interesting aspect of the industry brought to light by our Survey is the enormous technical progress made in recent years, which is already responsible for the growing intensity of the demand for modern equipment. Much has been done in recent years to improve the performance of machine tools, which has rendered existing equipment, though technically still efficient, inferior to modern tools. The same tendency is noticeable in the case of prime movers and boilers and in marine engineering. In the latter branch, for example, technical progress in the design of ship propulsion machinery has evoked a tendency towards replacement of both steam reciprocating engines and steam turbines by internal combustion engines. The consequential change-over from coal to oil has been accentuated by the substitution of oil-firing for coal-firing under boilers. Such far-reaching technical developments frequently mean the replacement of a considerable proportion of existing machinery.

Another development in recent years has been the growing mechanisation of activities hitherto done by human muscle. This tendency is especially noticeable in building. The use of factory-made parts such as windows and doors, hollow block floors and plaster board, has been on the increase, though progress in this country has been less marked than elsewhere. In the United States, for example, there are already a number of concerns which are beginning to supply complete factory-made houses. Machinery is also steadily increasing the comforts of domestic life. The refrigerator, for example, is rapidly rising to the position of a conventional necessity. Again, air-conditioning, which is already employed to some extent in the factory, the cinema, shops and restaurants, may soon penetrate residential buildings. The rapid mechanisation of the laundry industry indicates the quick response of the engineer to the increased demand for services which has been accompanying the rise in the general standard of living in recent years.

The importance of technical developments in engineering can scarcely be exaggerated. Unfortunately, there has recently been a tendency to canalise the ingenuity and adaptability of the engineer into the perfection of destructive equipment. It is to be hoped that by international co-operation this tendency, which is already distorting the structure of heavy industry in so many important countries, will be modified. Engineering, like science, is more fruitful in paths of peace.

SPAIN'S ECONOMIC PROBLEMS

(BY A CORRESPONDENT)

THE next Government in Spain, whatever its political programme, will be judged, ultimately, by its success in ameliorating the economic lot of the Spanish people. To-day, the whole country, apart from a few localised centres of modern industry, is economically one of the most backward in Europe. Its progress has been hampered by a low standard of living, a fatalistic national temperament, a contempt for material goods (a product, largely, of clerical education), and a reluctance to undertake sustained mental or physical effort, due partly to racial and partly to climatic influences. For centuries, Spain based her economy on the possession of a large colonial empire. The loss of the last of her American colonies stimulated an effort to build up a self-supporting system, but the task was never carried to a successful conclusion.

A series of favourable events helped Spain for a time. In the Great War she secured the profits accruing to a neutral comfortably removed from the scene of action. The pressure of population was partially relieved by emigration, especially to South America. Certain sharply defined areas were industrialised, and, for some years before 1931 a moderate increase occurred in Spain's foreign trade. But the depression of the last five years, which has shaken the strongest nations, has ruthlessly revealed the cracks and crevices in her economic structure.

The first and most fundamental of her disabilities results from the sparseness of modern means of communication in a naturally difficult terrain. Geographically, Spain is a miniature continent, with pronounced physical barriers, tending to limit intercourse not only with the outside world, but between one district and another. Although the area of Spain is 2.14 times that of Great Britain, the country has only 15,800 kilometres of broad-gauge and 4,000 kilometres of metre-gauge railways—a total of 19,800 kilometres, against Great Britain's 32,000 kilometres. Roads, where they exist, are usually well built, but their total length is no more than 77,000 kilometres, against 285,600 kilometres in Great Britain. Population is most dense in the regions near the coast, where, even by modern European standards, conditions are relatively satisfactory and even progressive. Here are the national centres of industry and commerce, with an immediate hinterland devoted to intensive agriculture on well distributed holdings. The standard of living of the lowest classes is modest, but it has been relatively stable except in Galicia, where the size of the average holding is unduly small.

The situation of the central areas, however, stands in strong contrast. In these regions cultivation is not intensive, but extensive, the chief crops being wheat, olives and rye. Cattle raising is difficult owing to the deficiency of good pasture. A policy of high protection has tended considerably to increase the acreage under wheat, to the detriment of other cereals. The collapse of world wheat prices

thus had extensive repercussions on Spanish agricultural prosperity. At one time, the internal price of wheat was three times as high as the world price, and the accumulation of increasingly heavy unsold stocks induced the Government, in 1935, to introduce a system of control, based on special taxation and the imposition of production quotas. The problem, however, goes too deep for any extemporised solution.

The chief obstacle to progress has been the existence of large properties, on which a sparse population (about one-tenth as dense as in the coastal regions) works for low wages, and unemployment is endemic. For many labourers only 120 to 150 days' work is available in a year, and there were cases on record in 1935 where wages did not exceed the equivalent of 1s. a day. These conditions obtain in greater or less degree in Aragon, Castile, Estremadura, and Andalusia, where one frequently sees palatial buildings standing cheek by jowl with miserable hovels and even holes in the earth. The Republic, it is fair to say, has endeavoured to ameliorate these conditions, by the introduction of measures of agrarian reform. Between March and June of this year more than 100,000 families were settled on the land—mostly the "Junteros" of Estremadura, who own a pair of mules and cultivate the farm of a landowner, to whom they pay a given share of the harvest. The new policy, however, was interrupted by the outbreak of civil war before it had had time to proceed very far.

Spanish agriculture labours under at least one disadvantage peculiar to itself—namely, a serious shortage of water. Over 68 per cent. of the total area, cultivation is dependent on irrigation. Broadly, all land situated east and south of the line Barcelona-Huesca-Leon-Huelva is "dry." In

Roman and in Moorish times special communal arrangements for conserving water supplies were enforced. Under existing Spanish water law, which took definite shape in 1879, distribution is controlled by local representative bodies, whose decisions are enforced by special courts without power of appeal. In some areas, like the Province of Alicante, private property in water is non-existent; and even running water, or water lifted by pumps, on private property, is the property of the communal water authority. Under such conditions, collective farming on irrigated lands seems likely, in the long run, to produce the most satisfactory results, but its progress is impeded by many factors, not least of which is the low prevailing standard of agricultural knowledge.

If revolutions are compounded equally of human ambition and human misery, the recent course of events in Spain can be readily explained in economic terms. The Republic unhappily came into being at a time when external trade depression was superimposed on internal maladjustment. Agricultural products, which account for two-thirds of Spain's total exports, have seriously declined in volume and value. Many Spanish emigrants have been repatriated, and remittances from others—particularly in South America—which were formerly the largest "invisible" item in Spain's balance of payments, have virtually ceased. Exchange control has been as powerless in arresting currency depreciation as public works and high protection in preventing large-scale unemployment and a flight of capital. Political remedies, whether from Left or Right, cannot cure Spain's organic disease of economic under-development. The first task of any Government which aims at stability must be to remove the causes of under-consumption, which lie at the root of social unrest.

NOTES OF THE WEEK

Armistice.—Mr Baldwin yet speaks for his countrymen, when he speaks his own mind. "To-day, while we are still finding and burying the bodies of the men who fell in the War, the whole of Europe is arming. Could there be a more inconceivable folly for those of us who have the responsibility of governing the great countries of Europe? What good can come of it?" "There is no one in Europe to-day . . . who does not know what war in the long run means." "What can our duty be but to come together and save Europe?" "Every great nation has something to give the world. Freedom of the spirit is our contribution; let us see to it that we keep that flame bright." These words were spoken two days before the eighteenth anniversary of November 11, 1918.

The Depressed Areas.—Neither the publication of a record employment figure, nor the traditionally self-congratulatory character of the Prime Minister's Guildhall speech, has allowed the Government to forget the Depressed Areas this week. Plainly, the Cabinet's present inertia is seriously out of touch with public opinion. In the debate on the address on Monday neither Mr Ernest Brown nor Sir John Simon were able to promise anything beyond the continuance of the present Special Areas Act. And on Tuesday Mr Baldwin refused to see a deputation representing a further batch of "hunger marchers" from the West and North. A motion was then placed on the Order Paper urging that representatives of the marchers should be heard at the bar of the House. Mr Baldwin refused to agree to the discussion of this motion on Wednesday; and Mr Attlee moved the adjournment of the House. He argued that the marchers should not be refused a constitutional opportunity to state their grievances, and that no difficulty had been placed in the way of the Mining Association last summer when they wished to protest against the Government's Coalmines Bill. Mr Baldwin maintained in reply that it would be an undesirable precedent if any group of "marchers" was allowed to lay their

grievances before the House by other means than through the ordinary channels of representation. In principle Mr Baldwin is perhaps right; but the appearance of this week's marchers was an occasion on which it might have been expedient to make an exception. The Cabinet showed more statesmanship next day, when it was agreed that Mr Ernest Brown should see a deputation from the marchers.

Mr Malcolm Stewart's Proposals.—The third and final report of Mr Malcolm Stewart, the resigning Special Areas Commissioner, was issued on Tuesday. It is an admirable document—bold, imaginative and practical—and deserves to be very widely studied. Mr Stewart first surveys the schemes he has been able to assist under the provisions of the present Act. These include the creation of trading estates in Durham and South Wales, land cultivation schemes, afforestation plans, measures of social improvement, assistance to hospitals, and housing. Commitments up to a total of £7,200,000 have been accepted. Mr Stewart also pays a tribute to the work of the Ministry of Labour—particularly to its efforts to promote transfer—ence—and to the exertions of voluntary bodies. But he points out that all this combined effort has not produced any appreciable reduction of unemployment in the Areas, and he remarks that this is not unnatural since the Commissioner's present powers are not intended to enable him to produce any. He consequently thinks, in the first place, that the Commissioner's powers should be enlarged; and secondly, that the Government should take the initiative in adopting a whole series of new measures. They should aim not merely at improving the lot of the unemployed in the Areas and transferring them elsewhere, but also at the deliberate direction of new industries into the Areas. Mr Stewart does not think that there are fundamental economic reasons why new industries should come to London except in special cases. Accordingly, persuasion being "futile," and compulsion, in his opinion, is

inadvisable, he would "induce" industrialists to go to the socially desirable districts by two main methods. First, he would prohibit the location of further new factories in Greater London, unless some good reason for the choice of that area could be shown; and, secondly, he would make concessions in rating, income tax and finance in the Special Areas themselves. Over and above this, he recommends the following specific schemes: Government assistance for—and Government control of—oil-from-coal plants in the Special Areas; the installation of calcium carbide factories in South Wales; the resumption of the Severn Bridge scheme, whose abandonment in face of sectional opposition "filled" Mr Stewart with "dismay"; the development of a national park in South Wales; the opening up of communications with West Cumberland; the improvement of communication with the Tyne; and the alleviation of the rating burden on the Special Areas. Finally, Mr Stewart condemns the action of "certain manufacturers on the North-East Coast" in using tariff and monopolistic powers to block the Jarrow steel scheme. "The establishment of more economic manufacturing conditions in the future has been sacrificed to procure profits made available by the present good demand influenced by the granting of a materially increased tariff on imported steel and by the Defence Programme."

A Plain Duty.—The full details of Mr Stewart's proposals fully thought out proposals will demand mature consideration. But the general strategy he outlines is unquestionably the right one. In the first place, there is a convincing case for the removal of the present restrictions on the Commissioner's powers which preclude him from transgressing the ordinary Departmental "general standard" in making grants or from giving assistance to profit-making activities. Agriculture, he points out, though profit-making, is allowed subsidies: "I sometimes think that the Special Areas are at a disadvantage because there is relatively so little contact with, or common knowledge of, their difficulties compared with those that beset agriculture." Secondly, we have long held the opinion, now endorsed by Mr Stewart, that transference of labour away from the Special Areas should be supplemented by the deliberate diversion of new industries into the Areas. The high degree of "secondary" unemployment, unused social resources in the Areas, and the present low level of unemployment in the rest of the country, are compelling reasons for such a policy. And it may be that the restriction of factory building in Greater London, as well as the grant of special inducements in the Areas, would be the best way to carry it out. The whole strategy might well be organised by a Special Areas Commissioner with enhanced powers, or even by a newly created officer; and after reading Mr Malcolm Stewart's report, we must confess to great regret that he is no longer available for the job. At any rate, it is the Government's plain duty to take bold and determined action, particularly as its own tariff policy is partly responsible for the existing distress in the export industries. It does not even appear that as yet the Areas have obtained a very substantial proportion of defence orders. Yet the public is prepared, and indeed anxious, for the expenditure of whatever money has to be spent, and the cutting of whatever red tape has to be cut, in the task of reviving the Depressed Areas. And the first necessary step is for the Government to adopt the suggestion of a group of its own supporters in the House and remove the Special Areas Act from the Expiring Laws Continuance Bill.

The Cabinet and the Private Arms Trade.—On Tuesday, Mr Kingsley Griffith, on behalf of the Liberals in Opposition, moved an amendment to the King's Speech, regretting the absence from the Speech of any hint of "legislation to implement the Report of the Royal Commission on the manufacture of and trade in arms." Mr Griffith's impressive speech was based on the need for immediate action—and he appealed to Labour to support him—to implement those recommendations of the Royal Commission envisaging complete control over the whole field of manufacture and supply of armaments in the hands of

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Established 1844 Funds exceed £24,000,000

what would amount to a supreme Ministry of Supply. (This was the subject of comment in a leading article in last week's *Economist*.) Mr Griffith said many people had warned Liberals that they might be "led up the garden" if they pressed for a Royal Commission; yet the latter's report now showed remarkable unanimity in its recommendations, most of which were positive. If the Government now accepted that report only in a negative sense—as justifying the Government in doing nothing—then the whole country would have been "led up the garden." He hoped the Cabinet would not ignore the Commission's strong urge for international agreement on arms limitation, as outlined in the American delegation's last proposals for such agreement, and he criticised Sir Samuel Hoare's recent utterances that seemed to foreshadow a *non possumus* attitude on the part of the Government, no matter what international agreement for limitation or reduction of armaments might be the subject of negotiation. He pointed out that our needs in the last war made complete control under a Ministry of Munitions inevitable; and he urged the Government to secure overwhelming public confidence by implementing this major positive recommendation of the Commission. All that Sir Thomas Inskip could promise was that the Government "will welcome an opportunity to consider the recommendations," and he hinted that the Commission's members had not the requisite knowledge of the intricacies involved in their recommendations. Such intricacies were, he said, now being studied by "a body of men well qualified to examine into this question." We agree with Mr Kingsley Griffith, Mr H. B. Lees-Smith, Mr Owen Evans and others: the Government will fail in their duty if they elect to take the Commission's negative recommendation on the nationalisation issue as a warranty for ignoring the impressive body of positive recommendations designed to remove patent faults in the present system.

Unco-ordinated Defence?—The real burden of the debates on Tuesday and Thursday on the King's Speech was the Government's defence programme and the by now familiar issue of its "co-ordination." Sir Thomas Inskip, Minister for Co-ordination of Defence, made an extremely intriguing, if unsatisfactory, speech, in which the following facts were thrown out. The tests in anti-aircraft fire with the new guns in the Mediterranean had been so satisfactory as to cause the Navy to review very favourably its attitude to the aerial danger. Our strategic position did not allow us to think of our Army as being only for home defence; it might have to be sent to the Continent, and even the Territorial Army might have to be sent there after the passing of the necessary Act of Parliament. There was no deficiency in recruiting for the Navy, and a surplus in that for the Air Force. As to the "single-link chain" of factories engaged on work for the Air Force, the Government might even have to modify this, in favour of manufacture and assemblage of machines in each factory, before a war broke out.

In war time the additional jigs and tools for the provision of and making of the whole machines will have been prepared and in war time, or possibly even before war time, it is intended that the whole of the six manufacturing firms will go over to complete production, the apparatus having been already provided.

The number of workers in the aircraft industry had doubled between April of last year and June of this. There were 6 squadrons now in this country, excluding the Fleet Air arm and squadrons abroad; and the programme provides such "reserves" strength as to enable this "first-line strength" to be greatly increased. Some supplies of equipment had not yet begun, but were expected to be in "the full tide of construction" in the early or middle part of next year. A Ministry of Supply with plenary powers could not now be envisaged, he said, for the (scarcely convincing) reasons that it would disorganise prices, costs and the export trade. Thursday's debate saw an impressive indictment by Mr Churchill of the Cabinet for their hesitation over, and unco-ordinated progress with, re-armament. He prophesied that by 1937 Germany would be so far ahead that we should not "catch up" unless we now expanded and accelerated the programme. This so much provoked Mr Baldwin that his lips were suddenly unsealed. He said the Government could not really re-arm in 1934 and 1935 in the face of public opinion; and that last autumn circumstances rendered re-armament acceptable to the country. But the electors last autumn surely accepted it only for support of collective resistance to Italian aggression against Abyssinia, and to possible future aggressors? What Mr Baldwin said comes near an admission that collective security was an opportune disguise under which re-armament could masquerade, to be dropped as soon as the election was thereby won.

* * *

Bomber v. Battleship.—On Friday of last week the report of the Committee of Imperial Defence's sub-committee on the battleship's vulnerability to air attack was issued (Cmd. 5301, 3d.). The two expert advisers to the small sub-committee were the First Sea Lord, Admiral Sir A. Ernle M. Chatfield, and Air Chief Marshal Sir Edward Ellington. The report admits that the sub-committee's most difficult problem was to assess the probable success of anti-aircraft fire from battleships. The Admiralty view is that ships can be so well protected by distribution of armour, etc., as to be immune to *fatal* air attacks. But the question has never yet been tested in practice. The sub-committee's view is that the truth lies somewhere in the middle between the two standpoints. They say that battleships could be crippled if only the attacking air force were strong enough; but they adduce in favour of capital ships the distances from enemy aerodromes at which our ships will have to operate in any future war. Another of their arguments in favour of retention and further construction of capital ships is the vulnerability of our trade routes in wartime if deprived of the protection of British capital ships and their heavy guns. The sub-committee decide against the view that enemy capital ships could be destroyed by any air force that we could build, and observe that, as long as other nations produce capital ships, Britain must have them. The cost of one capital ship is given as equivalent to that of 43 twin-engined medium bombers. The sub-committee sum up thus: "The advocates of the extreme air view would wish this country to build no capital ships (other Powers still continuing to build them). If their theories turned out well founded, we should have wasted money; if ill founded, we would, in putting them to the test, have lost the Empire." The sub-committee emphasise the need for further experiments and for the "fullest collaboration between the Admiralty and Air Ministry." The public will, we think, accept their conclusion without enthusiasm or conviction; for so long as a final judgment cannot be reached except by the experience of actual war conditions, the country cannot accept the extreme "Air" view and scrap its battleships, while other countries continue to build them (Germany for one has just decided to lay down a 35,000-ton battleship). But this conclusion does not invalidate the argument that it would be wise for us to scrap the battleship altogether if other countries could be persuaded to do the same.

The Role of Poland.—The return visit of the Polish Foreign Minister, Colonel Beck, to Mr Eden, which was paid this week, is a welcome manifestation of Anglo-Polish friendship. It also brings to the fore once again the equivocal position of Poland between Germany and Russia. Colonel Beck has always stood for German-Polish understanding since the day in January, 1934, when, with the late Marshal Pilsudski's concurrence, he negotiated the German-Polish ten-year pact. Since then the "forward" policy and tactics of the Nazis, both in Germany and in Danzig, together with their breathings-out of threatenings and slaughter against Russia, have combined to render both the ten-year pact and its chief architect somewhat doubtful in Polish eyes. Poland clearly cannot whittle away her independent sovereignty, the Corridor, Gdynia, Silesia, and the Gdynia-Silesia railway for mere Nazi protestations of friendship. She might soon find herself turned into a military highway to "the undeveloped regions of the East." Evidence of this reorientation in Polish foreign policy was forthcoming when General Gamelin was invited to visit Warsaw last August, and when General Smigly-Rydz returned that visit to Paris in September. These visits were followed by the French armament credits to Poland; and now this very week, while Colonel Beck was in London discussing Danzig and Eastern Europe with Mr Eden, General Smigly-Rydz, the supreme chief of the Polish armed forces, has, as we foreshadowed last August, received his Marshal's baton from President Moscicki. The new Marshal, who now has not only the old Marshal's mantle but also his baton, is known as a jealous guardian of Poland's independent foreign policy, and as desirous of better relations with the Little Entente and with Czechoslovakia. Colonel Beck told the press in London on Tuesday that Czech-Polish relations constituted no international problem, and that he considered the Central European problem could only be solved by collaboration between all the States in that region: the Little Entente three on the one hand and the Rome Protocol group on the other. Poland may now have a great rôle to play in European policy.

* * *

Poland, Czechoslovakia and Roumania.—The relations between Poland and Czechoslovakia are decisive for really stable co-operation in Central Europe; and for this the good relations between Poland and Roumania may be of assistance. Colonel Beck's declaration in London this week that Polish-Czech relations are no international problem may herald a unanimity of view between Colonel Beck himself—who has always been Germanophile and invoked Czech treatment of the Polish minority as a justification of his cool attitude towards Czechoslovakia—and Marshal Smigly-Rydz, who aims at a firm understanding with Czechoslovakia with the help of France and Roumania. M. Krofta, the Czech Foreign Minister, declared in the Parliament last week that his country would prefer to conclude a gentleman's agreement with Poland over the Polish minority, without making it an international question—which accords well with Colonel Beck's words this week. The visit of the Roumanian Foreign Minister, M. Antonescu, to Prague and Warsaw may carry the process of reconciliation, with the decisive influence of Marshal Smigly-Rydz to help it forward, a long step further. After all, Poland's "minorities" record is not untarnished. It was Colonel Beck, who at the League Assembly in September, 1934, announced that Poland would no longer respect the minorities engagements which she concluded after the war with the Principal Allied and Associated Powers. If Colonel Beck returns from London to conclude a firm and durable understanding with Czechoslovakia, and thus with the Central European countries, he would greatly strengthen the influence of his country in the councils of Europe.

* * *

The Skoda Works.—The Czech Skoda Works form one of the most important armaments concerns on the Continent. In the depression of 1931 Skoda had to repay a short-term credit to the French Creuzot-Schneider armaments concern; and the Czech State had to assist them, receiving in return an option on 120,000 new Skoda shares,

divided into two parts. The first option on 60,000 new shares of Kc. 320 nominal at Kc. 550 (as compared with a current market quotation about Kc. 1,750 per share) expires on December 31st. This week Prague has been the centre of a lively discussion between those who desire the State itself to take direct participation in Skoda to the extent of the first half of the whole option, and those who wish this option to be taken over from the State by a private consortium. The Social-Democrats adhered to the first group; and those banks closely identified with the Agrarian Party to the second. The Social-Democrat *rappporteur* of the Chamber's Budget Committee, M. Remes, and Professor Macek, a deputy who is also a financial and currency expert, led the demand for the exercise of the State's option directly instead of its sale to a consortium. The question has been decided in favour of indirect purchase for the State by a banking consortium, led by the Anglo-Czech and Prager Credit Bank, in which the State participates. It is to pay back the State's 1931 advances by subscribing for the increase of Skoda's capital from Kc. 200 millions to Kc. 220 millions, i.e. an issue of 62,500 new shares. The consortium agreed not to place the new shares on the market—thus losing the right to the difference between the Kc. 550 price for each of the new shares and the Kc. 1,750 market price of Skoda shares. The second half of the State's 1931 option has longer to run, and it is not yet decided how that is to be exercised. Meanwhile, Creuzot-Schneider, the majority shareholder in Skoda, have agreed not to participate in this week's new issue, which therefore strengthens Czechoslovakia's own interest in one of the largest arms factories on the Continent. Further interest attaches to the official *communiqué* in Prague this week, which states that Skoda, in addition to the new issue, has now sufficient funds "to buy the shares of a foreign undertaking of an allied nature." This is reported to refer to extensive armaments and machine factories already erected by Skoda in Roumania. In this connection it is interesting to note that last Saturday's official decree in Roumania increasing the official gold price from 110,000 lei per kilogram to 153,333 lei—which only recognises the effective amount of current devaluation—allows the Roumanian National Bank's gold stock to be written up from about 11,000 million lei to about 15,000 millions. The Roumanian State is indebted to the bank already for about 2,940 million lei; but the "writing-up profit" over and above this debt falls to the Treasury, and it is stated that it will be used exclusively for re-armament and re-equipment of the army.

* * *

Madrid Hits Back.—The incalculable fortune of war seems this week to have tipped the scale in favour of the Government forces who are defending beleaguered Madrid. A well-equipped relieving force arrived in the capital on Tuesday from Barcelona; and on Wednesday and Thursday General Franco's forces, who had been fighting a running battle on the south-west outskirts of the city, were forced to withdraw and rally their strength. Meanwhile, despite daily aerial and artillery bombardments of the capital, the Government air force seems to have taken the offensive again; General Franco's less numerous forces have certainly been significantly depleted in the close fighting of the last fortnight; and the General has issued another stern ultimatum to the Government. The rebel forces are still the better equipped with artillery, aircraft and tanks; but their supplies of munitions appear to be diminishing, while the Government's supplies are being gradually built up. As our Barcelona correspondent points out in his very interesting despatch on page 308, the Spanish Government now enjoys a greater degree of unanimity and the influence of Catalonia is increasing. It is becoming clearer that General Franco will be far from ruling Spain if he captures its capital; and he has not yet done even that, after three weeks of bitter fighting at its very gates.

* * *

After the Deluge.—President Roosevelt's victory at the polls last week was so complete and decisive that the opposition to him, which had been so vocal before,

FOREIGN TRADE

has been shamed into silence. It is difficult to argue with 26,000,000 voters, and most Republicans, business men and financiers have given up the attempt. It says a great deal for the ingrained democratic habits of the American people that the bitter hatred of Mr Roosevelt which was shown in the election campaign has been turned overnight into acceptance of his victory and even into a modified promise of co-operation. The reaction of Wall Street has, as usual, been typical of the average business man. The President's victory was the signal, not for a sharp decline of prices, but for a startling rise which has since maintained itself. Whatever may have been said upon the hustings, it is now recognised that another four years of the New Deal will not entirely prevent the further progress of recovery or completely undermine the self-reliance of the American people. Indeed, now that the smoke of battle has cleared away, notice can be taken of the fact that, to judge by all the indications, recovery is proceeding as rapidly now as at any time since 1933. When profits are increasing, even the most hardened Republican cannot be induced to mark prices down because of a Democratic victory. Speculation has now naturally turned to the policy which the President will pursue during his second term. In general, of course, it will be "the mixture as before," but a lively interest is being shown in the precise nature of the ingredients. It looks as if circumstances are going to place the question of labour relations first on the agenda. Mr Roosevelt knows that he owes a large part of his victory to the support of organised Labour. The employers know this, too, and in some industries, notably in steel, they are attempting to ward off the threatened strikes by wage increases. Whether Mr John L. Lewis, whose object is the organisation of the steel-workers in an "industrial" union, will be appeased by this sop remains to be seen. It has also happened that, by accident, the first speech the President made after the election was on this same subject, but he wisely confined himself to generalities. The probability is that his second term will be less radical in economic policy than his first. If there are to be fireworks, they are more likely to come on the purely political issues, and pre-eminently on the issue of Constitutional revision.

* * *

Recovery in France.—The weakness in the forward franc, which is mainly due to psychological factors, has tended to divert attention from the solid industrial recovery which is now plainly beginning in France. A few weeks ago people were asking—rather prematurely—what had become of the promised revival, as they have asked in other countries in the weeks immediately following devaluation. A major economic change takes rather more than

a fortnight to appear. Already, however, not two months after devaluation, evidence of revival is beginning to accumulate; and our Paris correspondent reports a series of encouraging signs this week. Unemployment is significantly falling, contrary to the seasonal trend, which is usually upward at this time of year. Production of coal and iron and steel is rising steadily. During October, the month following devaluation, the number of loaded wagons on the railways was steadily increasing; large orders were being given for wholesale stocks; and the receipts of the big stores in Paris were substantially higher than they had been for many months. At the same time, as our Paris correspondent showed in his letter last week, retail food prices were hardly any higher than they had been before devaluation, although there was a considerable rise between May and September. The business omens are thus extremely favourable. It would appear that, despite the slow return of capital and the slow fall in the rate of interest, the adjustment of export and import prices has already begun to stimulate general revival. Possibly the over-valuation of the franc has not yet been entirely wiped out. But it has been sufficiently reduced to set recovery in motion. Meanwhile the full 1937 Budget figures show a deficit of about 3,500 million francs on the ordinary Budget, as well as a loan Budget, providing for public works, armaments and other items of about 21,500 millions (about £200,000,000). Improving revenues should do much to cover the gap; and various forms of borrowing will do the rest. The most remarkable feature of the French Budget, year in and year out, is the small proportion of revenue raised by direct taxation. About £300,000,000 is raised by indirect taxation (compared with about £400,000,000 in Great Britain), and about £80,000,000 in direct taxation (compared with about £300,000,000 in Great Britain). Yet the debt service in the French Budget takes about £170,000,000 in itself. Doubtless the Popular Front Government will do something to reduce the balance.

* * *

Quota and Boycott in Palestine.—Events in Palestine have again moved swiftly and in an untoward direction. On November 5th the Royal Commission left London for Jerusalem. On the same day in the Commons Mr Ormsby Gore said that the Government had rejected the suggestion that Jewish immigration into Palestine should be suspended while the Royal Commission was at work, but had accepted a recommendation from the High Commissioner that the half-yearly quota should be cut down from about 8,000 to 1,850—without any restriction on the "capitalist" class of immigrants, who have always been outside the Labour Schedule and exempt from any limitation on their numbers. This decision is a departure from the previous practice of His Majesty's Government, which has been to suspend immigration during the periods when successive commissions of inquiry were making their reports on the Palestinian facts. No doubt, the real ground for their unwillingness to suspend immigration this time is a natural and, so far as it goes, commendable disinclination to yield for the third time to force after an outbreak of Arab resistance. The decision has, in fact, been taken on principle, and the issue has been taken as one of principle by both the Jews and the Arabs. Much as they may dislike the severe reduction in the figure, the Jews evidently feel that the essential point for them is that the mandatory Power has refused to be coerced into a suspension of Jewish immigration by Arab "direct action." On the other hand, the Palestinian Higher Arab Committee have immediately retorted to the announcement in the Commons by deciding that the Royal Commission is to be boycotted by the Palestinian Arab community. Thus, neither of the two grounds for his decision which Mr Ormsby Gore mentioned in the House of Commons seems likely to hold. The two grounds were that a total suspension of immigration would be unjustifiable for economic reasons, and that it would be likely to prejudice the Royal Commission's work. It is now certain that the Royal Commission's work will not be

facilitated by the Government's compromise, while on the other hand the Jews are protesting that the reduced quota is inadequate for Palestine's economic needs.

* * *

Self-Liquidating Restriction?—It is encouraging to find evidence of a disposition among the administrators of restriction schemes to accept the implications of a rising market. Within the last three weeks the International Committee has raised the rubber restriction quota for the first half of 1937 to 70 per cent.; the copper quota has been increased to 105 per cent., and this week the tin quota has been unexpectedly increased to the nominal figure of 105 per cent. for the last three months of 1936. There is, of course, no common basis of comparison between these different figures. The "standard" is progressive and realistic in the rubber plantation industry. The tin quota is based on a 1929 figure which understates the present capacity of the largest productive area. The basis for copper is a conventional figure which leaves the Rhodesian companies with a 40 or 50 per cent. margin of capacity when they are producing at "100 per cent." Even this week's tin figure (which caused a net fall of £10 in the price of the metal, after its publication on Wednesday) is composed, by a convenient arithmetical fiction, of 90 per cent. firm production for all the main participating countries, plus 15 per cent. representing the division between Malaya, the Netherlands East Indies, and Nigeria of Bolivia's "surrendered" arrears. As Bolivia has hitherto failed to produce even 75 per cent. of her standard tonnage, and Nigeria is also in arrears, the decision is equivalent to the giving of a freer hand to those countries which are physically able to produce more. All three schemes, in short, are on the way to becoming self-liquidating, with the passing of the emergency which called them into being. The recovery in prices from the lowest point touched during depression has been most striking, and the ability of efficient producers to operate at a reasonable level of profit—to say no more—is no longer even a matter of argument.

	Lowest Price during depression	Price November 11	Change from Lowest
Rubber, per lb.	1½d.	8½d.	+411
Copper, per ton.....	£25	£43 13s. 9d.	+ 75
Tin, per ton	£100 7s. 6d.	£232 10s. 0d.	+124

Although all three schemes are to continue in being, the policy of those concerned seems likely to ameliorate, in prosperity, the danger of effective maintenance of a vested interest created during depression. This week's news of the shipping industry tends in the same direction. Tramp shipping, Mr Runciman announced on Wednesday, is again to have a maximum subsidy of £2 millions, but the regulation providing for reduction on a rise in freight rates is to be retained, and the industry is "expected to make plans on the general assumption" that no subsidy will be paid after the end of 1937. Whether this decision will be cheerfully accepted remains to be seen. The course of our Note shows clearly that the industry, if not exactly prosperous, has in general less need of a taxpayer's prop to-day than a year ago. During the past twelve months our index has risen by 9 per cent., and the recovery from the lowest point touched during depression has been as much as 32 per cent.

* * *

Employment in October.—That industrial activity in this country continues to grow apace is evident from the latest employment returns of the Ministry of Labour. On October 26th the number of insured persons in employment in Great Britain attained the record figure of 11,103,000—21,000 more than the revised figure of 11,082,000 for September, and 599,000 more than a year ago. The improvement in employment was shared by the coal mining, engineering, shipbuilding, metal goods manufacture, wool textiles, cotton and hosiery industries; but, against this, there was a decline, mainly seasonal in character, in hotel and boarding-house service, building and public works con-

tracting, and in the transport and distributive trades. Variations in the incidence of unemployment by industries are shown in the following table:—

NUMBER OF INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN

	Oct 21, 1935	Sept. 21, 1936	Oct. 26, 1936
Coal mining.....	219,043	192,082	176,755
Iron and steel manufacturing.....	35,657	26,077	24,952
Engineering.....	79,802	53,571	50,511
Metal goods manufacture.....	44,384	35,139	32,454
Shipbuilding and repairing.....	62,187	43,209	41,096
Building.....	142,315	117,899	127,492
Public works contracting.....	125,896	114,696	117,231
Cotton.....	84,907	66,523	60,619
Woolen and worsted.....	18,121	20,239	16,960
Hosiery.....	6,868	9,791	6,921
Tailoring.....	24,592	29,341	20,215
Textile bleaching, dyeing, etc.....	19,560	17,670	15,901
Hotel, boarding-house, etc., service.....	73,627	55,670	73,677
Distributive trades.....	212,308	181,657	188,429
Road transport services.....	36,765	28,511	32,302
Shipping service.....	41,816	31,867	34,682
Dock, harbour, etc., service.....	48,284	41,862	44,492
All persons registered.....	1,916,390	1,624,339	1,611,810

During the month the total of unemployed has been reduced by 12,529 to 1,611,810—the lowest figure since March, 1930. Once again the biggest reduction in unemployment occurred in the Midlands, North-Eastern and North-Western districts of Great Britain, whilst the South-Eastern and South-Western districts and Wales suffered a further increase. In addition, London registered a substantial increase in unemployment this month. An encouraging feature of the unemployment returns is the steady absorption of juvenile labour; during the year ended October 26, 1936, the Juvenile Employment Bureaux have been instrumental in filling 2,686,089 vacant situations.

* * *

Iron and Steel Boom.—The output of steel ingots and castings, as recorded by the British Iron and Steel Federation, reached an all-round record last month. Production rose from 1,027,000 tons in September to 1,060,500 tons last month, compared with 907,300 tons a year ago, and 889,800 tons during the corresponding month in 1929. The output of pig iron increased from 650,800 tons to 670,300 tons between September and October, compared with 544,300 tons last year and 688,700 tons in 1929. But although imports of iron and steel are now running at a higher level than last year, the industry is still having difficulties in meeting the rapidly growing requirements of consumers. Even in the finished steel section demand is in excess of capacity, and there is a tendency for deliveries against contracts to fall in arrears. Meanwhile the pressure of home demand is hampering export business. The industry would do well to heed Mr Bruce Gardner's warning (expressed at Tuesday's dinner of the London Iron and Steel Exchange) against the neglect of export business, which may again become essential at some future day.

* * *

Rising Shipping Freights.—The marked improvement in shipping conditions since last August continued during the past month, our shipping freight index for October showing an increase of 5.5 per cent. over September and of 12.3 per cent. over the corresponding month a year ago:—

	Average, 1913	October, 1935	August, 1936	September, 1936	October, 1936
European waters.....	110.0	100.4	100.9	102.2	113.0
North America.....	113.1	87.1	95.3	95.0	96.8
South America.....	123.4	87.7	89.5	93.4	102.6
India.....	106.3	110.0	102.6	108.3	110.6
Far East and Pacific.....	117.4	96.8	99.5	104.0	109.1
Australia.....	127.9	95.3	97.0	98.8	103.6
Total.....	116.3	97.2	97.5	100.3	105.9
1913 = 100.....	100.0	83.5	83.8	86.2	91.1

As will be seen from the next table, freight rates rose on all the principal routes.

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade.....	94.3	+ 4.3	South America:—		
Bay—outwards.....	121.1	+ 3.7	Outwards.....	72.0	+ 9.5
Bay—homewards.....	154.8	+ 33.8	Homewards.....	133.2	+ 9.0
Mediterranean:—			India—outwards.....	84.2	+ 2.1
Outwards.....	91.0	+ 5.0	India—homewards.....	137.0	+ 2.6
Homewards.....	122.3	+ 13.4	Far East, etc.....	109.1	+ 5.1
North America.....	96.8	+ 1.8	Australia.....	103.6	+ 4.8

Meanwhile, the indications point to the maintenance, if not to a further increase, in freight rates. Business in all the leading home trades, with the exception of the United States and the St. Lawrence, remains active. The expansion of the demand for accommodation is due, in no small measure, to the increase in the requirements of primary products by industrial countries a tendency which is likely to continue.

* * *

Sterling and International Prices.—The advance in wholesale prices continues. In England during the past fortnight the complete *Economist* index number has risen by 1.1 per cent., while the primary products index has risen by 2.2 per cent. In the United States the Irving Fisher general index number has advanced by only 0.2 per cent., but primary products have risen by 4.2 per cent. French wholesale prices are still rising, the past fortnight's increase being 1.6 per cent.

* These figures relate to November 4th.

Details of the group indices comprising the complete *Economist* index number at the date of our suspension of the gold standard and for recent dates are given below.

	Economist INDEX (1927 = 100)			
	Sept. 18, 1931	Oct. 14, 1936	Oct. 28, 1936	Nov. 11, 1936
Cereals and meat.....	64.5	81.5	82.0	80.8
Other foods.....	62.2	62.0	62.5	63.7
Textiles.....	43.7	62.2	63.6	65.1
Minerals.....	67.4	84.7	86.0	88.9
Miscellaneous.....	65.8	77.4	77.8	78.3
Complete index ..	60.4	73.8	74.6	75.5
1913 = 100.....	83.1	101.6	102.7	104.0
1924 = 100.....	52.2	63.8	64.5	65.2

Movements in British wholesale prices were irregular. There was a slight but general reaction in the cereals and meat group. In the other food group there were advances in tea, coffee and butter. Cotton is cheaper, but there were advances in wool, flax and jute. Non-ferrous metals are considerably higher than a fortnight ago. Among miscellaneous materials, hides were cheaper, but there were advances in linseed oil, tallow, rubber and sulphate of ammonia.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

THE SOCIAL SECURITY ACT

In the closing hours of the election campaign, the Social Security Act became an issue in a curiously oblique way. The principles of the Act had been approved by both parties, and the Act itself was passed by Republican as well as Democratic votes in Congress. However, it was part of the "must" legislation, and although carefully drafted, was passed with so little discussion that few persons outside of Congress were familiar with its provisions. Under the pension (Old Age Benefit) section, contributions begin on January 1, 1937. Both employers and employees pay 1 per cent. of payrolls, and the employee's contribution is deducted at source. It would appear that few workers were familiar with the contributory feature, and the announcement by employers that deductions would begin in January provoked a storm of protest from diverse quarters; and an Act which had passed Congress almost without debate belatedly became the centre, not of discussion, but of extravagant controversy.

The Old Age Benefit feature of the Social Security Act presents formidable problems of administration, and although the Act becomes effective in two months the forms for registration have not yet been issued. Approximately half of the employed population is affected, say 26 millions. Entrepreneurs, farmers and farm labourers, domestic servants, and governmental employees do not fall under the plan, the last category because pension schemes for them are already in operation, as is the case with railway workers. As the project exists, the beneficiary neither pays in, nor acquires an interest in, a stated sum; rather he and his successive employers pay in a percentage of his weekly wage (initially 1 per cent., rising gradually to 3 per cent. each). The benefit is an individually computed annuity based upon the payments made by and on behalf of each individual worker. The task of registering so many persons, and verifying their birth dates in the remaining weeks of the year, in a country where even such elementary identification papers as birth certificates are possessed by few, to say nothing of the problem of keeping weekly records in order over a period of years, is far beyond anything ever previously undertaken by the clerical machinery of the Federal Government. Actual benefits under the plan are not initiated until 1942; and it is highly probable that in the interim the Act will be amended to some simpler form.

BUSINESS EXCELLENT

October appears to have maintained approximately the level of recent months, although it seems that the autumn pick-up in the motor industry has been a little slower than was anticipated. Perhaps this is attributable to the waning effects of last June's Bonus payments. Otherwise business is excellent by any standards. The non-ferrous metals have been strong, and in fabricated lines there are almost universal rumours of stiffening prices. Forward buying is more frequently mentioned than for a very long time.

Although the price indices show little change from last spring or from a year ago for that matter, the tone of the price structure is quite different. It would be too strong to say that the United States is in a seller's market in anything except labour; but it is clear that it is no great distance from such a state. As yet there has been no problem of securing deliveries, but in some types of heavy machinery (a branch of industry almost prostrate a year ago) the time required for prospective delivery is beyond a year. Such considerations are essential elements of a price system, but our indices can hardly be expected to be sensitive to them, especially indices largely dominated by agricultural prices, subject to incidental annual influences.

The September Federal Reserve Index of industrial production, at 109, has made a new high, almost 20 per cent. above a year ago, and 50 per cent. above September, 1934, just two years ago. The index of manufactures at 110 is in contrast with 69 in September, 1934. September, however, brought no conspicuous change from the preceding summer months—the absence of a seasonal summer recession flowed evenly into the absence of a marked seasonal autumn upturn. This statistical statement rather obliterates the fact that the actual operations of the motor industry in September were at only about half the rate of August.

BUSINESS INDICES
1923-25=100. (Adjusted for seasonal variations)

	Sept., 1936	Aug., 1936	Sept., 1935
Industrial production, total.....	109	108	91
Manufactures.....	110	110	92
Minerals.....	101	98	87
Construction contracts, total.....	61	62	43
Residential.....	49	46	25
All other.....	70	75	58
Factory employment.....	88.9	88.9	81.9
Factory payrolls.....	81.0	81.1	71.7
Freight car loadings.....	72	70	62
Department store sales.....	88	86	81

Over the year, payrolls have risen slightly more than employment, but the persistently stable relation between the two suggests that although hourly rates have generally been restored to or raised above the pre-depression level, weekly money wages are somewhat lower with the lower cost of living as the compensating factor. The net result to the worker is a shorter work-week, with about the same real wages. In at least some industries there is evidence that this combination has resulted in an increase in labour costs per unit of output.

The foreign trade figures of September showed, as usual for that month, a sharp increase of exports, and although the import figures also rose, the result was a small export surplus of \$4.5 millions. The remarkable sensitivity of the American public to the balance of merchandise trade is equalled by their apathy towards the general visible balance; silver imports in September were \$8 millions and gold imports \$172 millions. The following table shows the movement of recent months:—

FOREIGN TRADE OF THE U.S.
(\$000,000)

Merchandise Exports		
July.....	1935	1936
August.....	173	180
September.....	172	178
Nine months.....	199	220
	1,568	1,732
Merchandise Imports		
July.....	177	194
August.....	169	192
September.....	162	216
Nine months.....	1,501	1,765

In both years the trade very nearly balanced, in contrast with the former large export surplus. Imports continue to show a tendency to rise a little faster than our exports; but these minor fluctuations of the merchandise balance continue to be dwarfed by the enormous imports of the precious metals—for the nine months of the current year amounting to \$765 millions of gold and \$147 millions of silver. In both, the figures are a little under the corresponding period of 1935, but not enough so to be indicative. These imports, of gold at least, continued unabated in October, although the London gold price at the fixing, converted into dollars at the then rate, has scarcely deviated from \$34.77—a figure which would not suggest a profitable shipment. So far, it does not appear that the American Stabilisation Fund is following any procedure radically different from that of the past.

NEW YORK, November 3.

FRANCE

BEGINNINGS OF BUSINESS REVIVAL

In their annual Congress, the moderates of the "Alliance Républicaine" of M. Flandin condemned the activity of the Communists. They declared themselves favourable to a dissolution of Parliament, a possibility which had already been envisaged by the Radical-Socialist leader, M. Chautemps before the Congress at Biarritz. That Congress however, decided to continue its support of the present Cabinet. M. Blum, on the other hand, declared to the Socialist Congress that he was well satisfied with the evolution of his economic experiment. He also replied to the latest reproach of the Communists that he was being too lenient with capitalist "magnates."

Meanwhile, signs of a business revival are perceptible; the decline in unemployment was nearly 5,000 between October 10th and 31st, compared with an increase of 13,000 in the same period of 1935. The decline is principally in the textile and leather industries. There has also been an increase in railway traffic (loaded waggons in the month between September 30th and October 27th were 52,000 higher than in 1935); and an increase of 15 to 20 per cent. in the turnover of the Paris big stores, compared with 1935. This was mainly an increase in volume rather than price. Devaluation is thus producing its favourable effects both in trade and on the Stock Exchange. Prices of international and French industrial shares are very strong. Rentes, however, are sluggish, and a spasmodic pressure on the franc seems to show that the return of exported capital is proving slow partly for political reasons and partly because of the Budget deficit.

The re-assembly of Parliament was tranquil. Its chief business is the voting of the Budget, which may entail heated debates. The Budget shows that the crisis in France's finances must be mainly attributed to military expenditure. The public debt charge now represents a percentage of total expenditure which, allowing for devaluations, conversions, etc., is no higher than in the 1913 Budget, when it was 1,200 millions in a Budget of 5,000 millions. But war pensions and re-armament to-day account for over 30 per cent. of total expenditure. This extraordinary expenditure cannot be covered by other means than loans and an increase in tax receipts.

HUGE DEFENCE EXPENDITURE

The deficit now stands at 5,000 million francs. An astute presentation of the accounts and a reform of financial, economic and fiscal policy are therefore necessary to restore confidence. There will consequently be an ordinary Budget, virtually balanced, showing 48,000 millions of expenditure and 44,396 millions of revenue. These estimates merely require a reasonable increase in the revenue estimates of 3,500 millions (which should accrue from the rise in prices, the revival in business and the proposed fiscal reform). The huge total of "extraordinary armament expenditure" will be removed from the ordinary Budget; and a "Pension Fund" will take over war pensions. There will nevertheless remain a deficit of 3,500 millions on the ordinary Budget. But it is pointed out that 50 per cent. of this deficit is the result of fiscal concessions, and the total of 3,500 millions is equal to the annual debt amortization charge.

There still remains, however, a deficit of 21,500 millions over and above this. The various elements of this deficit have been classified under four heads (apart from the ordinary Budget); and each item is covered by a special form of borrowing.

Deficits	Million Fr.	To be covered by
Ordinary Budget.....	3,561	Treasury Bonds.
Re-armament.....	9,502	National Defence Bonds.
Public works.....	2,500	Loans with the aid of the
Pension fund.....	1,000 to 2,000	Caisse d'Amortissement.
P.T.T., railways, etc.....	7,000 to 8,000	Departmental loans.

Total..... 25,000

The total deficit is considerable, though not very much higher than the deficit of recent years. Actually, the French public debt was increased by more than 70,000 millions during the rule of the deflation Cabinets. Nevertheless, if M. Auriol is to obtain these 25,000 millions (to which one must add 3,000 millions of loans coming to

maturity in 1937) he must propitiate savers and take measures favourable to a recovery of business and an increase of fiscal receipts. The declared principle of the Government's Budget Bill is as follows: "To stimulate the creation and the circulation of wealth; . . . to ask more from the very rich and less from the workers, middle classes, consumers and large families; . . . and to render the fiscal system more equitable and more simple." But, though the Bill includes certain measures favourable to the "average capitalist," such as the suppression of the 10 per cent. Laval cut in rentes interest, there are counterbalancing measures such as increased income tax, the imposition of a 50 per cent. tax on the railway reserve funds, etc. The tax on reserve funds (legal or obligatory reserves being excluded) will tend, like the American tax, to increase distributions to stockholders.

The Budget Bill is thus plainly marked by some effort towards redistributive taxation; but coming from a Socialist Minister of Finance it should be considered moderate. In general, though certain political and financial aspects of the French situation are discouraging, a better atmosphere is discernible, resulting from devaluation and the decline of the strike disturbances. Dishoarding has also begun.

PARIS, November 12.

GERMANY

THE FOUR-YEAR PLAN AND LABOUR

The Four-Year Plan and the associated food difficulties are bringing an inundation of regulations and restriction in the domains of raw materials, labour, foreign exchange and prices. The Minister of Economy has come to an agreement with the Director of the Labour Front that Plan questions shall be discussed and jointly regulated by the Organisation of Business and the Labour Front. The chief question between these departments will probably be labour. Some comment was aroused by the fact that General Göring ignored the Labour Front in his special Four-Year Plan organisation.

The necessity for planning construction on a basis of priorities has been officially recognised, and is in part already under way. The principle, as expressed by the Institute for Trade Research, is that works for national defence shall be treated as most pressing. Works for the fulfilment of the Four-Year Plan are to come second, and settlement and house construction third. It seems certain from company reports that the output of iron, steel, cement and some other materials cannot be materially increased beyond the present high quantities. The present production of cement, about 1,200,000 tons a month, is declared to be the maximum possible, although the demand, in particular for motor roads, is increasing. Motor-road construction is withdrawing from cultivation a great deal of land. An ordinance of the Ministry of Labour empowers municipalities and communes to prevent building or excavation whenever such works would impede construction designed in the public interest.

The Commissioner for the Four-Year Plan this week issued six ordinances regulating the supply of skilled labour. Public and private iron and building concerns are required to take on apprentices in reasonable proportion to the number of their skilled employees. In stated conditions the consent of the competent Labour Office must be obtained before additional employees are engaged. The employment of a certain number of persons aged over forty is made compulsory. Public and private construction plans that exceed stated dimensions must be officially registered. Here the aim is to provide where necessary for priority of

execution or for the rationing of materials and labour. The recruiting of workers by means of anonymous advertising is forbidden. Trained metal and building workers who are at present engaged in other industries may be returned to their proper vocations. It is declared that compulsion is not intended. But employers in such cases are obliged to report; whereupon the Labour Offices will negotiate with them and with the employees for transfer of the latter to their proper spheres. The now compulsorily carried "work books," which register the holder's customary occupation, and in a sense bind him to it permanently, are an efficient instrument for enforcing this regulation.

During the past fortnight numerous restrictions in the domains of foreign exchange and foreign trade have been announced. In general, regulation has become much more severe. The obligation to deliver up holdings of foreign currency is now extended to everything of higher value than two marks' worth of token coins. Postage stamps may not be exported. Arbitrage transactions in foreign securities have been almost entirely stopped, with the consequence of sharp declines in the Bourse quotations of these securities. New restrictions have been imposed on concerns (including foreign concerns with offices in Germany) which have assets abroad. In foreign trade all "compensation" transactions of value under Rm. 50,000 have been prohibited.

Every effort is being made to keep prices down. Success, however, is imperfect, in so far as the ultimate consumer is concerned, and unbearable hardship is imposed on traders. It is admitted implicitly in many official utterances, and it appears plainly in bank reports, that the very high production cost of the raw materials must raise the general price level very much unless it can be counteracted by price-cutting in other quarters.

This in part explains present attempts to reduce or at least to stabilise the prices of foodstuffs. As foodstuff prices to the primary producers cannot be cut, the wholesale and retail traders are to suffer. Drastic measures are being taken, and violent threats are being uttered against price offenders. In connection with the revival of the office of Reich Prices Commissary, penal servitude has been introduced—for the first time—as a punishment for price offences, and trials of such offenders are to proceed before the Special Courts which were established in March, 1933, for dealing severely with crimes against the nation and the State.

"KULAKS" AND "HYENAS"

The temper and the terminology of Soviet Russian officialdom in regard to "kulaks" and "speculators" have been entirely taken over, not with the effect of adding to the amenities of German life. A Secretary of State in the Ministry of Justice does not hesitate to attack an alleged group of "hyenas on the battlefield," who will be "annihilated," "extirpated" or "exterminated."

It is remarkable that a Government which claims to have popular support in unexampled measure, never thinks of appealing to the public spirit of citizens, but prefers coercion; and it is painful to see how citizens who in other countries would be rightly regarded as worthy and respectable are denounced as criminals in Germany.

The present unbearably high prices are entirely a consequence of Government policy. Ironically enough, the petty retailers are the worst sufferers. Most traders in this class were vehement supporters of the Nazi movement; and they expected benefits from its triumph. In fact, though they got protection against competitors by way of an embargo on the opening of new shops, their position is worse than ever. To those of them—a great many—who are already miserable and hungry, the prospect of penal servitude for charging an extra profit on eggs is not so very dreadful.

A new Reich loan in the customary form of Treasury certificates was announced last week. This transaction was expected, but uncertainty about the conditions depressed the share market for a time. The conditions differ little from those of the last loan of July, 1936; but the amount, Rm. 500 millions, is Rm. 200 millions smaller.

Apparently the present moment was chosen because of the unexpected return of the money market to liquidity. Money was tight for months after the issue of the July

loan. In October it became easier. The circulation of Gold Discount Bank promissory notes, which had fallen to Rm. 30 millions in September, increased in October to Rm. 407 millions. In November so far money has been plentiful. Nevertheless, only one to ten per cent. instalment of the new loan is to be paid in this year. Slight signs of an improvement in the capital market are visible.

The commercial banks' resources are being pushed ever more into the foreground in discussing methods of financing the Four-Year Plan. Dealing with the problem of long-term investment of bank funds in industry, an authority usually considered competent remarks that "after the meagre years of the State boom" the banks "are hungry for risk-taking with its profitable results."

BERLIN, November 11.

SPAIN

PRESIDENT AZAÑA IN BARCELONA

THE presence of the Spanish Republican President, Señor Azaña, in Barcelona, and the formation of a new Government with the entry therein of the Anarcho-Syndicalists, are the two outstanding political developments of the Spanish situation. Señor Azaña's stay in Barcelona is variously interpreted, and some unkind things are being said about his failure to be at the seat of Government in moments of peril. Señor Azaña is a calm, philosophic sort of person quite capable of ignoring accusation or harsh criticism, as was well demonstrated in the post-rebellion period of 1934, when, although pursued and imprisoned by the Right Government, he declined to say one word in his own defence until completely exonerated and set at liberty by the Supreme Court itself. Then he wrote a damning book, "Mi Rebellion en Barcelona."

The atmosphere of anarchy prevailing in Madrid, which must have been torture for an intellectual with the sensibilities of Señor Azaña, could well explain his desire to depart from the capital for a time. A man of order, constructive in his outlook, he was in the position of seeing the republic of his dreams attacked, on the one hand, by the forces of treason, that is to say the rebels; and his handiwork undermined and torn down, on the other hand, by the forces with whom he would never compact, namely, the Anarcho-Syndicalists. Discussing the situation with your correspondent a short time ago, Señor Azaña warmly denied the charge that he had had an understanding with the Anarcho-Syndicalists in return for their electoral support.

It may be well, however, that Señor Azaña's departure from Madrid has obeyed other motives which will come to light in due time. It has already had the effect of slowing down the headlong rush of the Catalan Government toward the assumption of well-nigh plenary powers without consulting Madrid. It is now accepted as a fact that on the fatal night of July 19th Señor Azaña had hopes of coming to an understanding with the insurgents and thus saving Spain from the horrors and bloodshed which have ensued. But a slip-up occurred between the resignation of the Quirogas Government at midnight and the formation of the short-lived Barrio Cabinet about three hours later. It was this Cabinet which, it seems, was to have come to an understanding with the insurgents. But something mysterious and fatal occurred which made it impossible for Señor Barrio to accomplish his mission.

Was Señor Azaña let down by one of his trusted lieutenants to whom he remarked on learning the truth: "Me has matado!" ("You have killed me!")? Señor Barrio refused to continue, and there is even doubt whether he and his Cabinet ever took office. Another Cabinet, that of Señor Giral, was formed, being but a continuation of that of Señor Quirogas. It has been noted that Señor Azaña has held singularly aloof from the revolutionary forces in Madrid. He has steadfastly refused to treat with the Anarchists. Whatever he must feel about the treachery of the military and their kind, he has with dignity refrained from harsh references to them. The rebels, taking note of this note of moderation in their radio broadcasts, also

commented upon it with a moderation not habitual with them. Can it be that Señor Azaña still hopes to save something of Spain from the wreckage; still hopes that a favourable moment will present itself for coming to an understanding with the rebels? "I am the President of all Spaniards," he has emphasised.

ANARCHO-SYNDICALISTS' POLICY

In the meantime Señor Azaña has had to bow to realities and permit the entry into the Government of the Anarcho-Syndicalists, who now hold four Cabinet posts. Their new Minister of Justice, Señor Juan García Oliver, together with Señor Bonaventura Durruti, form the "Big Two" of the Anarchists at Barcelona, their stronghold. Responsibilities and a sense of realities have undoubtedly had a moderating influence on the Anarcho-Syndicalists, who in the past have been anti-political and anti-State. They then refused to have anything to do with other workers' organisations, preferring to act single-handed in carrying out their revolutionary enterprises. In the first few years of the republic they set in motion five violent and bloody revolutionary movements.

Now for nearly two months they have been collaborating with the Catalan Government and have accepted a programme of "collectivisation" which not only is not the "liberating Communism" of the Anarchists, but is not even orthodox Socialism. While accepting the socialisation of large industries and land holdings, the programme recognises the property of the private owner, and so, in the last analysis, is bourgeois. There has been a feeling that the Anarchists were merely "playing possum," that they were collaborating with the Government during the war emergency, but would promptly again show their teeth when it should be terminated.

The Catalan Government has been fighting against fearful odds to bring order out of chaos. Step by step, and with careful diplomacy, it has battled its way from the position of being a ridiculed and disdained "rubber stamp," apt only to ratify what the proletarian organisations saw fit to do, to the present position of having these same proletarian organisations, now somewhat tamed, in alliance with it and solemnly pledged "to accomplish the agreements and decisions of the Generalitat Council, using all our influence and all the powers of our organisation to bring this about." This is undoubtedly putting an end to subterranean government and to the campaign of terrorism which in Barcelona has cost perhaps four thousand lives and at least twice that number in Madrid. It is only fair to say that much of this terrorism was the work of gangsters bent upon robbery or vengeance. Other killings were sanctioned by secret revolutionary committees. A large number of popular tribunals have now been created to deal speedily with crimes "against the revolution," such as engaging in Fascist activities or having intelligence with the enemy.

While on the subject of "revolutionary terrorism," it must be said with regret that the reports in even the most responsible London Press have been quite one-sided. This is largely due to the fact that correspondents on the Government side were in the midst of these doings and honestly reported them, while the undoubted atrocities of the rebels have been committed away from view and also well covered up. Your correspondent talked with a refugee from Saragossa, who told of daily killings and tortures, and said that the total of executed could not be less than two thousand. How the rebels summarily executed 290 Government militiamen at Toledo is well known. It is accepted as a commonplace that they bombarded at sight Red Cross hospitals and trains; so that the Red Cross sign is no longer displayed on the Government lines.

On the other hand, some quite irresponsible and poisonous stories are being sent out about "red" atrocities. Thus, a writer in England has stated that men, women and children were being nightly tortured in Barcelona. This is completely untrue. Another correspondent, sending his message from Gibraltar, reported that 100 persons had been thrown from windows at Malaga, and in another message stated that scarcely a business or professional man was left in that city. From a United States naval intelligence officer who investigated the affair at Malaga, your correspondent learned that while

a search of houses was going on the cry was raised that Fascists had invaded the town. In a panic, the Government supporters threw several persons—certainly not more than ten—out of the windows. As to the second charge, investigation reveals that there are plenty of business and professional men at Malaga carrying on as usual.

BARCELONA, November 10.

HUNGARY

A MODERATE GOVERNMENT

THE new Government has met with the approval of both Houses of Parliament. It seems that the new Prime Minister, Dr. Darányi, inspired confidence not only in his own party, but among the various Opposition parties. The cautious financial policy of the previous Government will be continued, and the objective will be the maintenance of the purchasing power of the pengő and the balancing of the Budget. This appears to be within sight for the first time since 1931. In foreign policy the new Government intends to aim at economic collaboration with all Hungary's neighbours. In domestic affairs, electoral reform is in the forefront of political discussions, and the future of the Government will largely depend on how this thorny and long-delayed problem is solved.

In spite of the excellent reception of the new Government, the political situation is full of pitfalls, and both energy and tactics are necessary to keep all elements satisfied. So far, Dr. Darányi has shown remarkable skill and determination in assuming real leadership among the various factions of his own party. Much depends on the attitude of Dr. Eckhardt, the leader of the Independent Farmers' Party, the largest opposition party in Parliament. Count Bethlen, the former Prime Minister, has a considerable following among all the parties, and there is little doubt that his counsels will not pass unheeded in a Parliament where he has been a leading figure for more than twenty years. The Social Democrats, with their 14 seats, have practically no political influence; on the other hand, by the force of his strong personality, the Liberal leader, Dr. Rassay, will certainly continue to play an important rôle, to which his fine record of fifteen years of unbroken struggle for democracy entitles him. The Legitimists have a rather weak representation, but they have adherents in practically all political parties.

The devaluation of the gold currencies did not affect the position of the pengő, which for several years has been for all practical purposes a managed currency. The introduction of a uniform surcharge of 53 per cent. for convertible currencies over and above the old gold parity of the pengő marked a virtual devaluation of 35 per cent. in December last. As more than half of Hungary's foreign trade is conducted with countries whose currencies are not freely convertible, the authorities did not feel that the time had come for a new *de jure* stabilisation on gold.

The present elastic system of export premiums and import surcharges adequately meets the situation, though an important proportion of Hungary's foreign trade is temporarily held up by the devaluation of the franc and the lira. Negotiations for the necessary adjustments are proceeding.

THE NEW EXCHANGE POSITION

In trade with France, Switzerland, Italy and Czechoslovakia, the premiums and surcharges hitherto applied in Hungary have been lower than the 50-53 per cent. standard rate ruling where non-clearing countries with freely-convertible currencies (e.g. Great Britain) are concerned. This is, in certain cases, because the payment-agreements in force did not permit Hungary freely to dispose of the proceeds of the exports, and in others because the official quotation of the currency did not allow sufficiently for a decline in its internal purchasing power. There is thus a margin within which adaptations are possible. The National Bank announced on October 9th that the premium and surcharge on lire would be 40 and 43 per cent., over and above the new official rate, and on Czechoslovak crowns 45-46½ per cent. With Switzerland and France, negotiations are proceeding for

the resumption of trade on a basis permitting the application of the standard rate of 50-53 per cent.—the rate applicable in the case of sterling and dollars—in place of the 38-41 per cent. that ruled heretofore.

In trade with Germany, a premium of 18 per cent. is the ruling rate over and above the old parity of the mark. This means that a devaluation of 25 per cent. in the mark is already assured in German-Hungarian trade. As, in the first half of the year, more than a quarter of Hungarian exports went to Germany, the future of the mark is very important. In order to minimise exchange risks, the authorities are anxious that exports to Germany should not exceed imports, and they have achieved that end this year.

The Stock Exchange is experiencing a continuous boom. Leading share prices have doubled in the last two years, and are at the highest point since 1930. The yield of the most popular shares at the present prices is often less than 3, or even 2, per cent. The yield of fixed-interest securities, however, is about 6 per cent.

BUDAPEST, November 1.

CHILE

GENERAL RISE IN PRICES

A CERTAIN economic stringency has developed in Chile during this year, which suggests that the volume of business has reached or soon will reach its peak. The feature of the year is the almost general rise in the prices of articles of prime necessity, affecting agricultural produce as well as articles of national manufacture. The rising tendency has been noticeable in recent years, but it has now become so accentuated that the increase in the cost of living is a serious problem for the authorities.

There are three factors responsible for this trend in prices. The inflation which began in the middle of 1931 and lasted till the beginning of 1933 brought about a complete lack of balance, on the one hand, between domestic and foreign prices, and, on the other, between the nominal value and the real value of social income. It would be difficult to find another country where the foreigner can live as cheaply as in Chile. It is still possible to lunch or dine at good restaurants for more than three weeks at a total cost of £1; the monthly rental of a comfortable apartment or a chalet in the capital fluctuates between £5 and £6. In a recent article, the President of the Banco Central de Chile, Don Guillermo Subercaseaux, made an interesting comparison. He said, "In London, the income derived from a capital of £7,000 is relatively small, almost insignificant. In Chile, this same amount of money converted into Chilean pesos would make the owner a millionaire with an income on which he could live quite comfortably." This enormous disparity suggests that the increase in domestic prices must continue until a new balance is struck, and is one of the reasons for the increase in the cost of living in Chile.

The considerable rise in prices this year is also due to another factor. Immediately after inflation had terminated at the beginning of 1933, a general reaction in business began. To-day the physical volume of business has reached a higher level than in 1929; nevertheless, business development has entered upon a phase of stringency. The third factor must be sought in the fall in the exchange value of the peso. In the course of the current year, the quotation of the dollar in the open market has increased by 15 per cent. and that of the pound sterling by 18 per cent., comparing in both cases present quotations with the average for the year 1935. This increase is certainly in part due to the decline in the purchasing power of the peso in the country, and also to the considerable increase in the demand for these exchanges, as compared with a relatively reduced supply, for purposes of importation and especially for travel.

As a result of the rise in prices, the problem of salaries has become increasingly difficult. Between the middle of 1931, when deflation terminated, and to-day, the cost of living has increased by more than 40 per cent. Wages and salaries have also been increased somewhat; but this in-

crease has been very small, and there is still a wide margin for improvement before the old purchasing power of such income can be restored. In a recent speech, the President of the Republic, Señor Alessandri, appealed insistently to the agriculturists and industrialists to improve voluntarily the situation of their labourers, for on this question the maintenance of peace in the country very largely depends.

Figures for recent months disclose that the building industry continues to display great activity. Imports have continued to increase and in a larger proportion than exports. The wholesale trade shows a tendency to limit or restrict the payment facilities afforded to its *cliente*. The banks, in turn, are adopting a more cautious credit policy; since May last, bank advances have declined somewhat. The movement on the Stock Exchanges is strongly speculative, especially in all classes of mining shares. Stringency is developing in the money market.

The Budget recently approved by Congress is theoretically balanced; revenue and expenditure figure therein at 1,395 million pesos, but 85 per cent. of the revenue is derived from direct and indirect taxation, whose quota in the Budget has been increased progressively in order to replace the revenue from nitrate and the copper industry which to-day is allotted to the Caja Autónoma de Amortización to serve the external debt. In a message to Congress, the Minister of Finance strongly criticised the policy of creating new expenditure, which the Government considers unnecessary. The Minister has stated that possibly the 1937 Budget "will be the last balanced Budget that can be presented, unless Congress radically change their attitude to public expenditure."

SANTIAGO, October 28.

LETTER TO THE EDITOR

THE DEPRESSED AREAS

TO THE EDITOR OF THE ECONOMIST

SIR,—All who are interested in the welfare of the Depressed Areas should be grateful to you for the two brilliant articles which have recently appeared in your columns. They have been lent additional point by to-day's publication of Mr Malcolm Stewart's report. We feel, however, that there is one important consideration which has been insufficiently stressed both by your correspondent and by Mr Stewart: the fundamental distinction between subsidising inefficiency and easing the period of transition to new employment. The basic idea of *laissez-faire* is to obtain the utmost advantages of specialisation. But specialisation necessarily means rigidity, and in changing conditions the problem of trying to relieve the distress caused by rigidity without losing the full advantages of specialisation becomes of overwhelming importance. It is right that the full blast of change should not fall on a small number of people; but their troubles should be mitigated not by measures which encourage them to stop where they are but by helping them to move into new employment.

The further difficulty, however, then remains that a policy of transfer started in a district must have so depressing an effect on those industries and people that are left that there can be no chance of new industries establishing themselves there. The existence of the present transfer policy is itself sufficient to explain the reluctance of new industries to move to the Depressed Areas. The transfer remedy, therefore, must be abandoned as a general policy. It must be confined to those parts which are quite hopeless, but there it must be pushed to the limit.

On the other hand, very often business men may be deterred from settling in the Areas, because of fears of labour troubles, high rates, or other high cost elements, which are in fact baseless. A satisfactory Depressed Areas policy must be based on a knowledge of the order of magnitude of the importance of this factor and to which areas it applies. Such knowledge is not at present available, so far as we know, but even without it, it emerges clearly that any general policy, applied to the Depressed Areas indiscriminately, whether it be a policy of transfer, of subsidy, or worse still of both together, cannot but be bad; for it fails to realise the distinction between uneconomic palliatives, which, however, encourage confidence, and measures which relieve distress while increasing mobility. It is only fair to point that this inevitable problem must render the difficulties of any authority dealing with the Depressed Areas much greater; in particular it underlies the "orthodoxy" of the Government about which your correspondent complains.

But the Government's protectionist policy is unlikely to render areas, depressed because of the decline in world trade, more prosperous.

Yours faithfully,

P. T. BAUER,
A. M. STAMP.

Cambridge, November 11th.

BOOKS AND PUBLICATIONS

AN ATTACK ON 'SOCIALISM'

PROFESSOR MISES' well-known attack on Socialism* (first published in 1922) is here translated into fluent and readable English. Ordinary English readers, Socialist or otherwise, will be astonished by the manner of Professor Mises' book. For his argument is of an extreme and uncompromising character seldom encountered in English controversy. Everything that could possibly be represented as Socialism is to Professor Mises wholly and unconditionally bad; every departure from Socialism is wholly and unconditionally good. Professor Mises condemns absolutely not only nationalisation, "planning," and State control of industry, but redistributive taxation, health insurance, unemployment insurance, trade unions and labour legislation. Indeed, he is even prepared to argue that health insurance creates disease; that capitalist monopolies are on balance good because they restrict production of exhaustible raw materials; and that the functions of a post office might very well be better performed by private enterprise.

The most important economic argument in Professor Mises' book is his contention that rational economic calculation would be impossible in a Socialist community on the ground that if there were no private owners of the means of production, there would be no price of land or capital goods, and consequently no means of reckoning costs. The weakest point in his argument here is his assertion that the managers of a public corporation could not effectively conduct business, or trade in capital goods, unless they were personally shareholders. His critics will doubtless reply that the corporations would buy and sell capital goods, and that the managers might conceivably be paid on a partly profit-sharing basis.

Professor Mises' arguments have already been made familiar in this country by the recent symposium "Collectivist Economic Planning," edited by Professor Hayek. It is doubtful whether the translations of his own book adds much of substance to the argument. It was worth translating, however, if only to demonstrate how different is the Teutonic mind's approach to social problems from that of the compromising English. One may, perhaps, hope that Professor Mises' pupils will sometimes read Marshall and Mill.

SHORTER NOTICES

"*Ideology and Utopia.*" An Introduction to the Sociology of Knowledge. By Karl Mannheim. London: Kegan Paul. 280 pages. 15s. net.

Professor Mannheim's aim is to lay bare the social content of individual thought; to get away from subjective philosophical analysis, and to establish the main social patterns of thinking. Broadly, he divides "thinking for social action" into two kinds; ideologies, which are thought-patterns crystallised by social monopolistic groups into coherent, but rigid, systems, whose object is to stabilise society by conserving the "social absolutes" of the past; and Utopias, which are thought-patterns hammered out by social groups who, baulked of their desires in the society to which they belong, elevate wish-fulfilment into a system of categories fundamentally opposed to those of the ideology current at the time.

In the challenge-and-response dialectic which thus becomes inevitable in society, former absolutes—norms of social thinking—are dogmatised by the ideologists, while antithetical absolutes are raised by the Utopians. There ensues a sifting, chaotic, social epoch: a tussle of conflicting social absolutes in groups of individual minds. Such was the struggle between canonical and secular thought in the Renaissance; such is the state of human thought to-day in Western society. Professor Mannheim's challenging analysis, first written seven years ago in German, is here presented to English readers with an excellent introductory chapter on the approach to the problem: the sociology of human thought. It is a "difficult" book; the author assumes as voluminous a knowledge in the reader as he clearly possesses; but, in the present state of Western society, his is a valuable and important work. The bibliography is the best we have yet seen for any sociological study.

* "Socialism." By Ludwig von Mises. Jonathan Cape. 521 pages. 18s.

"*Motive and Method in a Christian Order.*" By Sir Josiah Stamp. The Epworth Press. 248 pages. 6s.

This volume, Sir Josiah Stamp tells us, as a Fernley Hartley Lecture, "is not directed to economists, nor very definitely to the general reader, but rather to the younger generation of preachers." In the most specifically economic chapter of the book, Sir Josiah examines "motive in the economic life." He argues the orthodox case for regarding "profit" as simply the remuneration of certain types of service connected with risk-bearing. "So long as there is an element of uncertainty in the supplying of demand, there must be profit." Sir Josiah consequently deprecates the use of the phrase "the profit motive."

He then considers "the examination of the Christian motive," and concludes with a note on Social Credit. Here he endorses the criticisms which have commonly been made of both the theory and practice of Major Douglas's plan.

In general, Sir Josiah Stamp does not rate the advantage to be gained by a redistribution of incomes very high, and he is sceptical of the practicability of a social ownership of profit incomes.

"*Men, Money and Markets.*" By M. D. R. Leys. (London) Cobden-Sanderson. 258 pages. 5s.

This book is an elementary introduction to economics, and embraces a very wide range of subjects. The most satisfactory chapters are those dealing with certain aspects of financial organisation, where a number of technical terms are clearly explained, and the problems of paper money, bills of exchange and company promotion are presented in a lively and stimulating manner.

The rest of the book is rather uneven. An attempt is made to summarise the development of the theory of value, and to give an explanation of capital, wages, profit, rent and interest. Such a task is inevitably difficult, and Miss Leys does not altogether succeed in linking up her discussion with any coherent theory of value, and some parts of it are left hanging in the air. This leads to a lack of precision in the distinction drawn between capital as a tool and capital as a sum of money, and to the confusing separation between ordinary and economic rent. There is a tendency also to identify profit with the payment for risk bearing, and to ignore the difficulties inherent in interest. There are a number of irritating slips, e.g. on page 163, where the total amount of the Exchange Equalisation Account is incorrectly given, and on page 131, where one of the joint stock banks is mis-named. In the field of applied monetary practice Miss Leys is an admirable expositor, but the more controversial points of theory can hardly be described concisely in a book of this length.

"*Co-operative Insurance.*" By N. Barou. P. S. King and Son. 383 pages. 15s.

This comprehensive and valuable, if rather solid, work is a survey of co-operative insurance in all its aspects. After discussing the nature of insurance, and the shortcomings of popular and profit-making insurance, the author outlines the principles of the co-operative branch of the trade. He then describes the work of co-operative insurance institutions all over the world, and estimates their future possibilities.

MONEY AND BANKING

THE BANKS' CASH RATIOS

THE October returns of the ten English clearing banks present several interesting features. The first is that in October the banks bought more bills and securities, and also lent more money to their customers. In particular, their advances have risen since August by £15 millions. Part of these additional loans may arise from the prevailing Stock Exchange activity; but there is no doubt that the trade revival is now at the stage where it is reflected in an increased demand for bank credit. The actual October position is illustrated in the following table:—

(In £ millions)						
	Oct., 1935	Sept., 1936	Oct., 1936	August, 1936	Sept., 1936	Oct., 1936
	(a)	(a)	(a)	(b)	(b)	(b)
Capital and reserves	125.7	125.8	125.8	131.8	131.8	131.8
Acceptances, etc.	93.7	95.3	96.1	103.5	101.8	102.9
Deposits (including undivided profits, etc.)	1,998.5	2,143.0	2,164.8	2,208.8	2,219.7	2,243.3
Total liabilities	2,217.9	2,364.1	2,386.7	2,444.1	2,453.3	2,478.0
Cash	201.1	218.5	215.7	230.0	226.1	223.6
Cheques, balances and items in transit	53.3	54.8	58.7	56.4	56.9	60.4
Money at call	136.5	153.5	150.1	157.7	161.2	158.9

Loans and advances	758.7	835.1	845.1	857.2	862.5	872.9
Investments in affiliated banks	25.1	25.2	25.2	25.2	25.2	25.2
Cover for acceptances, pre-mises, etc.	137.7	138.5	139.4	148.2	146.6	147.8
Total assets	2,217.9	2,364.1	2,386.7	2,444.1	2,453.3	2,478.0

(a) Excludes District Bank.

(b) Includes District Bank.

The other interesting point is that for the first time within living memory the aggregate ratio of cash to deposits for all the banks has dropped below 10 per cent. The October ratio is 9.95 per cent., so that the drop cannot be described as large. Even so, it justifies some examination.

First, let us examine the cash ratios of the different individual banks. These are shown below:—

Big Five		Others	
	%		%
Barclays	9.99	Coutts	8.77
Lloyds	9.25	District	10.13
Midland	10.36	Glyn, Mills	9.95
National Provincial	10.00	Martins	10.14
Westminster	10.19	Williams Deacon's	10.05

For the Big Five alone the ratios vary from 9.25 per cent. for Lloyds to 10.36 per cent. for the Midland Bank. This range is not large, although some people may feel a little surprised that it is the Midland Bank which comes at the top of the range. The first point to consider is, what are the merits, if any, attaching to the ratio of 10 per cent.? We doubt very much if a slight reduction would have any serious effect upon public opinion. The real feeling of the public to-day is that the British banks survived the years 1929-33 with hardly a casualty, while the banking systems of practically every other country in the world had to deplore numerous tragedies. At the moment, therefore, opinion is convinced of the impregnability of the British banks, and even if they allowed their cash ratios to fall to 8 per cent. it is doubtful if public opinion would either understand the significance of the reduction or exhibit any alarm.

There is, however, a more practical side to the maintenance of some minimum cash ratio by the joint-stock banks. The cash held by the banks to-day takes two forms: "till-money," consisting of coins and notes held at every branch and also at certain centres throughout the country; and balances held by the banks with the Bank of England, which shows them in the Bank Return as "bankers' deposits." Obviously every clearing bank's

branch must keep sufficient cash in its till to meet the likely demands of its customers. These vary, and to some extent can be foreseen; but as a general rule the actual currency held by the joint-stock banks needs to be about 5 per cent. of their total deposits. The function of a bank's balance at the Bank of England is to provide the funds needed to settle any sum due each day on the result of the day's clearing. Here again, while the actual turnover at the clearing is enormous, each bank's payments and receipts, on the whole, tend to balance. Again, a bank can usually foresee if, owing to one or two big operations by its customers, it is likely to lose large amounts through the clearing; and it can provide against them by calling money from the market. Nevertheless, to take an example from experience in a recent week, the total sum passing through the clearing is of the order of £800 millions a week, or say, £140 millions a day. The share in this daily amount of a single member of the Big Five might be about £25 millions, or 6 per cent. of its deposits. If we admit, again, that payment and receipts would usually balance, so that the margin coming in or out would be only a small fraction of this total turnover of £25 millions, it still appears that, if a bank is to avoid all risk of being "caught short," it ought not to let its balance at the Bank of England drop below 2 or 3 per cent. of its total deposits. This means that, as a matter of banking practice rather than of tradition and psychology, the cash held by the banks in the form both of currency and balances at the Bank of England ought not to fall below 8 per cent. of their deposits. Thus, apart from public opinion, there are limits to which the traditional 10 per cent. cash ratio could be reduced.

We come now to the underlying causes of this drop in the cash ratio. The first is the expansion in clearing bank earning assets, which is automatically balanced by an expansion in deposits. The second is the drop since September in clearing bank cash. The following table shows clearly that this was due to a temporary transference of funds from bankers' to public deposits:—

Date*	Bank of England					Floating Debt	
	Gold	Notes in Circulation	Public Deposits	Bankers' Deposits	Securities	Tender Treasury Bills	Floating Assets†
Sept. 2 ...	£ mill. 245	£ mill. 446	£ mill. 18	£ mill. 101	£ mill. 115	£ mill. 630	£ mill. 195
" 9 ...	246	446	20	100	114	625	213
" 16 ...	247	445	15	102	111	621	223
" 23 ...	248	445	10	108	112	621	219

" 11 ...	249	447	15	98	109	603	286

* Four days earlier for floating debt items. † In banking department only.
‡ Cumulative total of 13 weeks' issues by tender. § "Tap" issues of Treasury bills plus Ways and Means Advances from public departments. ¶ Owing to the end of the quarter and the resulting discontinuity in the weekly floating debt returns, figures for these two weeks could not be calculated.

This has now been rectified, for this week's Bank return shows that public deposits have returned to their normal level, while bankers' deposits are once more nearly £100 millions. Still it is a little disconcerting that conditions can arise whereby the banks' cash can be depleted, even if only for five or six weeks. Also the floating debt return indicates a substantial increase in the floating assets of the Departments, so that apart from fluctuations in public deposits, the Departments are obviously accumulating liquid resources. This cannot be due to post-devaluation purchases of sterling by the Exchange Equalisation Account, which has been quiescent since the middle of October. It looks rather as if it is due to official sales of Funding Loan designed to "clear the decks" for a new Government issue.

This recent temporary contraction in bank cash is more a warning than a sign of a definite change. It is a warning

that in pursuing their policies of cheap money, stimulation to trade, stable prices and exchanges, and debt refunding, the authorities have so far been fortunate in finding them compatible with each other. This good fortune may not last now that depression has given place to recovery, especially if debt refunding has now to be combined with re-armament financing. Technical methods which proved successful in rescuing the nation from depression may not be so efficacious when cheap money has to be pursued during a time of expanding demand for credit, and if any difficulty arises, it is the joint-stock banks rather than the authorities who will have to bear the brunt of the dilemma. These are matters which the authorities ought to be considering to-day.

FINANCIAL NOTES

Anglo-Italian Clearing.—The protracted negotiations between Great Britain and Italy have now ended, and the result appears in two new Agreements, dealing respectively with trade and exchange clearing. The Trade Agreement is comparatively simple, for its main object, in which it succeeds, is to ensure that we recover at least a proportion of our former export trade to Italy. Also we have avoided the danger of committing ourselves too far ahead, for the Agreement can be terminated at the end of June, 1937. The Clearing Agreement is much more complicated, as it had to provide for outstanding debts due to British traders. These debts are divided roughly into three classes. Class (A) covers debts for goods and freight incurred after March 17, 1935, and before November 18, 1935—that is during the currency of the 1935 Agreement. Class (B) covers similar debts prior to March 18, 1935, and those arising during the sanctions "interregnum," from November 18, 1935, to July 14, 1936. Class (C) covers non-commercial debts. All debts arising since July 14, 1936, rank as "new trade." The procedure is that in Italy special "lire arrears accounts" are established, known as "A," "B" and "C." Off-setting "sterling arrears accounts A, B and C" are established in London. There are also a "lire new account" and a "sterling new account," which are fed by the proceeds of new trade. Finally a "sterling general account" is established. All sums due by Italians are paid into the appropriate lire account. In England, payments are made first into the sterling general account, and the money in this account is then allocated as follows:—

18% to sterling arrears account "A"
9% to sterling arrears account "B"
3% to sterling arrears account "C"
70% to sterling new account.

Next, at the end of every quarter, a balance is struck between the sterling new account and the lire new account, and this is to represent Italy's export surplus for the quarter. This surplus is re-allocated as follows:—

60% to sterling arrears account "A"
30% to sterling arrears account "B"
10% to sterling arrears account "C"

There are numerous subsidiary provisions, but these are the main channels by which sterling is to be made available for the discharge of outstanding debts to British creditors. These arrangements hold out hopes that outstanding British claims will be met within the next few years, and show that they are not to be sacrificed to Italy's need for new imports. The British authorities are to be congratulated upon having taken a firm stand which has ended in their securing as satisfactory an Agreement as was possible under the circumstances.

The Foreign Exchanges.—There was heavy pressure on the franc at the end of last week, due to rumours that the franc would be let down to the bottom limit of the present devaluation. This would be equivalent to Frs. 23 per dollar, and at \$4.88 to the pound it would equal Frs. 112½ per pound. As a result of this pressure the one month's rate widened to Frs. 2 discount, or 23 per cent. per annum, while the three months' rate went to Frs. 3

discount, or 11½ per cent. per annum. Money was very tight in Paris over the week-end, as everyone was short of francs. The market has been steadier this week, with the French authorities buying spot francs at Frs. 105.15, but one month's francs remain at Frs. 1½ discount, or 17 per cent. per annum, so that obviously considerable nervousness is felt over the short-run view. Sterling has hovered between \$4.87½ and \$4.88½. Early in the week there were some speculative offerings of dollars inspired by the rumours that President Roosevelt was going "to do something more for silver," but these have now been scotched. Swiss francs have been very steady, but three months' guilders have strengthened to 6 cents discount. It is thought in London that American bankers have been drawing bills against Dutch credits and discounting them for guilders in Amsterdam. The guilders are then sold spot and repurchased forward. This operation brings in a profit of 3½ per cent. on the "swap," less the cost of drawing and discounting the bill, and so gives American bankers a nice turn. It also shows that New York is regaining confidence in the guilder.

The Money Market.—Funds have at last been released from public deposits, and so money has become easier. One or more of the clearing banks was calling every day this week, but there was only a moderate demand for loans.

	Oct. 22, 1936	Oct. 29, 1936	Nov. 5, 1936	Nov. 12, 1936
Bank rate	2	2	2	2
Clearing banks' deposit rate ...	1	1	1	1
Short loan rate:—				
Clearing banks	1-1-1	1-1-1	1-1-1	1-1-1
Others	1-1	1-1	1-1	1-1
Discount rates:—				
Treasury bills	1-1-1	1-1-1	1-1-1	1-1-1
Three months' bank bills	1-1-1	1-1-1	1-1-1	1-1-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The banks are ready buyers of mixed parcels of December and January Treasury bills at ½ per cent., and some of the banks are also buying late January and early February Treasuries at the same rate. There is no demand for early Januarys, and so the banks will not take "running" Januarys (i.e. bills maturing on any date in that month) at less than ½ per cent.

The Bank Return.—The note circulation is practically unchanged, so that few of the notes which went out at the end of October have yet returned. Notes were equally slow in returning a year ago, so that there is no need to suspect any additional foreign hoarding since last week.

	BANK OF ENGLAND				
	Nov. 13, 1935	Oct. 21, 1936	Oct. 28, 1936	Nov. 4, 1936	Nov. 11, 1936

Other securities	12.6	21.6	19.5	20.0	20.3
Proportion	38.4%	43.4%	43.0%	40.4%	40.7%

There has been a big movement of funds from public to bankers' deposits, and public deposits are now down to their normal level for the first time since the end of September. This movement was in reality due to the heavy Government dividend payments on November 1st, but it was off-set in last week's Bank return by the fact that there were no Treasury bill maturities on Monday and Tuesday, November 2nd and 3rd. Up to November 4th, therefore, payments for new Treasury bills were greatly in excess of maturities, and so all the funds released in dividends were temporarily re-absorbed. They have now emerged.

THE STOCK EXCHANGE

AMERICAN RAILROAD PROSPECTS

APPROXIMATELY twelve months ago (see the *Economist* of October 19, 1935, page 761) we discussed the responsibility of Fate and Congress for the tardiness of recovery on the great American railroads. We suggested, nevertheless, that prospects were sufficiently good to justify a policy of selective investment, particularly in the shares of those companies which had been steadily reducing their accrued maintenance arrears. In the interim, railroad securities have had a substantial rise on Wall Street. Although the Standard Statistics Index of railroad securities stands at only 59.2 per cent. of the 1926 figure, its proportionate rise during the past year has been greater than that of either industrials or utilities. An investment of \$1,000 in the 32 railroad stocks in the Standard Index made in the middle of October, 1935, would be worth \$1,700 to-day. What are the prospects of a further advance at a time when a full and fair recovery wind is blowing?

It is a commonplace to say that traffic receipts have failed to increase to the same extent as the production of steel and manufactured products during recent months. That there is a definite time-lag between recovery in the production of raw materials or manufactures and rail transport movements is now well established, whether the curves be ascending or descending. Nevertheless, there has been a steady rise in car-loadings, marked by "peaks" in July and September. An increase of no less than 28.1 per cent. was recorded in the week ended September 26th last. Recently the railroads have even been concerned regarding the adequacy of the supply of certain classes of empty cars. Apart from the March figures, which were affected by floods, the progress of car-loadings each month has been consistent. The monthly figures are given below:—

	Increase 1936			Increase 1936	
	No. of	%		No. of	%
	over 1935			over 1935	
January	4	8.4	June	4	13.0
February	5	7.1	July	4	27.0
March	4	0.4	August	5	19.5
April	4	10.5	September	4	16.4
May	5	16.1			
			39 weeks to Sept. 26th		13.3

For the first half of October the same trend was continued. A national forecast of tonnage to be rail-hauled, published early in October, estimated a continued rise for the fourth quarter of the year, ranging from over 20 per cent. in the Great Lakes territory to 5 per cent. in the Middle-West with an average for the whole country of about 10 per cent.

Despite the reduction of passenger fares, which was imposed on the Eastern railways by the Interstate Commerce Commission, the percentage increase of receipts has kept ahead of the increase in car-loadings. This is due largely to the continuance of the so-called "Emergency Charges," which were extended from June last to the end of December. The Commission, however, did not allow their indefinite extension into 1937 and beyond. The high level of freight receipts nevertheless represents a remarkable achievement, particularly as a large number of individual rates have been lowered to retain traffic against road and water competition—the latter including transport on the canalised rivers, such as the Mississippi, and intercoastal trade via the Panama Canal. In both cases, enormous capital expenditure by the Federal Government, upon flood control and harbour improvements (largely undertaken to relieve unemployment), has assisted the railroads' competitors. The return of President Roosevelt suggests the possibility that further large relief projects may be carried out.

The latest detailed figures of the grouped operating results of Class I railroads (i.e. those earning more than \$1 million per annum) for the first eight months of this

year provide a general impression of the extent of recovery:—

CLASS I RAILWAYS—UNITED STATES		
	First Eight Months, 1936	Increase over corresponding period of 1935
Revenue:		%
Freight	2,093,261,772	17.8
Passenger	270,876,889	14.7
Mail	61,047,529	2.2
Express	36,517,379	8.5
All Other	111,554,078	13.7
Total Operating Revenues	2,573,257,647	16.7
Operating Expenses:		
Maintenance of Way and Structures	301,124,601	15.5
Maintenance of Rolling Stock	511,102,586	14.8
Traffic	66,252,849	5.2
Transportation	912,911,149	11.5
General	104,503,163	11.2
Other expenses	20,154,202	13.2
Total operating expenses	1,916,048,550	12.8
Net operating revenue	657,209,097	30.0
Taxes	204,542,689	26.5
Operating income	452,666,408	31.7
Operating ratio	1936, 74.46%	1935, 77.07%
Rate of Return on Property Investment	1936, 2.30%	1935, 1.66%

The lines operated by these railways total about 237,000 miles, representing a decrease of about 1,200 miles on the previous year. It is safe to claim that no American railroad of interest to the British investor is excluded.

Several interesting movements are disclosed by this table. For instance, it will be noted that the rate of increase in taxation is more rapid than for gross receipts. The continuous rise in taxation (though it bears some relationship to earning power since it is based, in certain States, on gross receipts) is disturbing. The main interest, however, lies in the expenditure figures. The future financial prosperity of the American railroads depends primarily upon their ability to retain a large percentage of gross receipts as net revenue. Large programmes, however, are now being undertaken to overtake arrears of expenditure, chiefly renewals, which would normally have been carried out during the past five years. Unlike most of the British railways, the American companies operate no renewals funding system, to equalise expenditure on renewals over good years and bad. None but the most fortunate of the large railroads would deny that there are still heavy arrears to be overtaken both upon permanent way and on rolling stock. The extent to which such expenditure will be undertaken in the coming year will primarily depend upon the extent to which traffic increases, and, secondarily, on the policy adopted by the individual Boards.

The prospects for the future may also be considerably affected by the policies to be adopted by the President and Congress. Last week's election result may well have its reactions on the net revenues of the American railways. That the President realises the value of an adequate and efficient rail transport system cannot be doubted, but it seems probable that the railroad trade unions will exert continuous pressure upon him and upon Congress for a further improvement in working conditions, rates of pay (although these are at their maximum), and pensions. The railways may, therefore, have to face serious demands for a National Pensions scheme, a six-hour day, full crew laws and other policies which make operation more costly.

It is, therefore, a matter for surprise that the election results did not produce an immediate fall in American rail stocks. The market presumably argued that the progress of trade recovery would offset the possible effects of such legislation; but Wall Street frequently takes a short- rather than a long-term view on railroad stocks. At present, negotiations are being carried on between the railroads,

representative traders' organisations and the Interstate Commerce Commission to readjust the freight rates on certain commodities, so that the conclusion of the Emergency Charges at the close of the year will not result in a serious and sudden loss of revenue. Although there is, as yet, no adequate regulation of the rates charged by water carriers, the work of the Motor Carrier Division of the Interstate Commerce Commission is developing satisfactorily, and there is good reason to suppose that the worst features of cut-throat road competition may be eliminated by the middle of 1937. Railroad financing during the first nine months of 1936 exceeded \$721,250,000, of which approximately \$691,300,000 was raised on long-term bonds and notes, and the balance by short-term financing. Of the total, however, no less than \$500 millions was issued for refunding purposes and the balance for new capital expenditure. These figures show a considerable increase over those of the preceding four years.

Although the basic position of the railroads is thus improving, differences between the financial results of individual railways are clearly likely to be more pronounced during the coming fifteen months than during the last few years, owing to the wide variations in maintenance and renewals policies, and to differences in economic conditions over the whole continent. The figures which follow illustrate the varying degree of success attained by certain important companies in retaining gross traffic as net income during the first nine months of this year:—

(in \$'000)				
FIRST NINE MONTHS EACH YEAR				
Railroad	Total Operating Revenue		Net Railway Operating Income	
	1935	1936	1935	1936
Eastern Trunk Lines:—				
Baltimore and Ohio	104,198	123,297	17,252	21,147
New York Central	225,938	261,539	23,365	32,680
Pennsylvania	269,598	320,017	49,853	59,098
Pocahontas Lines:—				
Chesapeake and Ohio	82,139	98,065	27,034	36,218
Norfolk and Western	55,805	67,305	17,855	23,493
Southern Lines:—				
Illinois Central	70,695	82,236	7,525	9,840
Louisville and Nashville	54,756	65,046	9,565	13,443
Southern	60,284	69,843	9,097	13,398
Western Lines:—				
Atchison	97,357	112,241	10,052	10,889
Burlington	58,987	70,649	3,867	7,952
Great Northern	58,061	65,235	14,966	16,244
Milwaukee	66,547	79,982	742	4,954
Southern Pacific	118,320	143,052	11,631	18,719
Union Pacific	94,063	109,204	10,495	12,979

A year ago, attention was drawn to the satisfactory "retention" possibilities of a number of lines, represented in the table, including the Chesapeake and Ohio and the Norfolk and Western Railways. The subsequent movements in stock prices shown in the following table, have justified this close watch on the net revenue position:

Company	Income after Fixed Charges		Stock (and 1935 Dividend)	Prices			
	1929	1935		Mid-Oct. 1935	Highest 1936	Lowest 1936	Latest
Chesapeake & Ohio	(\$'000) 32,192	(£'000) 31,039	Com. (\$2.80)	44½	77½	51	75½
Norfolk & Western	41,907	25,358	Com. (\$10.00)	187½	308½	210	307½
Pennsylvania	101,378	23,850	Com. (\$1.00)	27	44½	28½	43½
Louisville & Nashville	13,726	4,129	Com. (\$2.50)	42½	102½	57½	96½

In Wall Street's present mood, it would be rash to set a term to the possibility of further improvement in prices. The investor on this side, however, may feel that distance tends to sharpen the distinction between promise and achievement. The economic situation of the United States remains favourable, and the traffic trend is good. But as earnings tend towards "normal," the claim of renewals and other costs may intervene before the stockholder receives his share. The outlook for the next twelve months suggests that discrimination by the investor will provide the best prospects of cash return and capital appreciation.

FOR SECURITY: STABILITY: STRENGTH

SECURITY FIRST TRUST

spreads your investment over the shares or stock of 23 first-class British companies, all sound dividend payers and notable for their very strong financial and trading positions.

THE COMPANIES ARE:

London Midland & Scottish Railway Co. Bass, Ratcliff & Gretton Ltd.
London & North Eastern Railway Co. Distillers Co., Ltd.
Allied Ironfounders Ltd. & I. Ltd. Imperial Tobacco Co. (G.B. & I.) Ltd.
Powell Duffryn Steam Coal Co., Ltd. Geduld Proprietary Mines, Ltd.
Richard Thomas & Co., Ltd. Government Gold Mining Areas (Modderfontein) Cons., Ltd.
City of London Real Property Co., Ltd. Van Ryn Deep, Ltd.
London Brick Company Ltd. J. & P. Coats, Ltd.
Metropolitan Housing Corporation Ltd. International Tea Co.'s Stores, Ltd.
Imperial Chemical Industries, Ltd. Scribbans & Co., Ltd.
Imperial Continental Gas Association. Tate & Lyle, Ltd.
"Shell" Transport & Daily Mirror Newspapers, Trading Co., Ltd. Ltd.

LLOYDS BANK LIMITED are Custodian Trustees of the underlying securities. They collect the dividends thereon and distribute the income to the Sub-Unit Holders on 1st February and 1st August each year.

YIELD: Based on the cash distributions from the investments during the past year, the yield at the present price is approximately 4½ per cent. Proceeds of the sale of bonus shares and of new issue rights are not taken into account. Large capital bonuses are added to the capital of the Trust; fractions of bonus shares and of new issue rights are sold and the proceeds are distributed as capital. All management charges have been allowed for. With a few exceptions, the underlying securities consist of ordinary shares, distributions on which are subject to fluctuation.

Investments in the Trust can be made through any Stockbroker or Bank. Applications for sub-units will only be accepted on the basis of the information contained in the descriptive Booklet EC2 which can be obtained free of charge from the Managers.

INVESTMENT AND COMPANY NOTES

Bucket Shops and Property Companies.—Question time on Tuesday evoked two important statements from the President of the Board of Trade, the first on protecting the public against "bucket shops" (known at Westminster by the more sedate title of share-pushers), and the second on the recent increase in the number of undertakings registered under the Industrial and Provident Societies Act. The news that Mr Runciman intends to appoint a Departmental Committee to consider the operations of share-pushers will be widely welcomed, for as we recorded last week, there is no lack of evidence—inevitable, it seems, in a period of intense Stock Exchange activity—that the "bucket shops" are operating on a large, and apparently well co-ordinated, scale. The announcement of the personnel of the Committee will be awaited with interest. Meanwhile, the public must rely upon the publicity which has been given to the share-pushers' activities, although it must be confessed that comment in the Press and elsewhere has not proved sufficiently penetrating to check the evil. The Official Report of the same day contained an exchange of questions between Mr Brendan Bracken and Mr Runciman regarding industrial and provident societies. Recent property company registrations which have sheltered under the wing of the Industrial and Provident Societies Act can hardly claim to be industrial, and it is widely feared that some may not merit the second adjective. The Act was intended to provide a simple means of incorporation for local or quasi-philanthropic organisations, whose operations did not require the full-scale publicity, nor the strict legal safeguards, enjoined by the Companies Act. For some time, it has evidently been exploited by organisations, for which it was not devised, to avoid the rigours of company law. It offers a number of conveniences in this respect. There is no obligation to issue a prospectus for capital issues; the information which must be registered is less detailed; and the Registrar has no power to intervene except upon non-compliance with the simple requirements of the Act. He is in no way responsible for the *bona fides* of such undertakings, nor can he compel the directors to supply intending subscribers for debentures or shares with the range of financial information which the Companies Act requires. Recent booklets issued by certain of these property concerns have put a persuasive, rather than a descriptive, case for their securities, on which yields quite out of keeping with adequate security are offered. But closer inspection has revealed no information on vital points—such as the total valuation of the properties held, by whom they were valued, what interests the directors previously had in them, and the type of charge which the company holds. If, to these dangers, we add that of limited marketability (to say the least) in the securities, it is clear that the Committee of Fixed Trusts were fully justified in their reference to the matter, and that some restriction should be devised.

The Outlook for Tin Shares.—The news that the tin restriction scheme is to be renewed removes the major uncertainty in the share outlook. Investment policy can now become positive, instead of purely defensive. Although the Committee has shed no light on the provisional agreement, the market has thus found sufficient comfort in the mere assurance that restriction is to be continued. This week's runaway dealings to over £240 a ton (it will be remembered that the quotation was as low as £175 last July) was followed by a substantial reaction on Wednesday. But the final gathering of Siam into the fold, on terms reported to be reasonable, suggests that the wrong side of £200 will not be seen, in the absence of some calamity, for a long time. As in the rubber market a week ago, general optimism has given itself free rein in an indiscriminate marking up of share prices. But the factors which should determine any rational choice of companies for investment purposes are broadly similar. The average price of tin from January to the beginning of November has hardly been in excess of £200. This

compares with a figure of £225 for the whole of 1935. In the coming year, therefore, substantially higher returns per ton, than the 1936 level, should be enjoyed. Until Wednesday's announcement of an increase in the quota, the prospect for company outputs was somewhat more obscure. Average quotas in 1936 have amounted to just under 90 per cent. of standard. Consumption, however, has more than kept pace, and little real progress has been made towards the figure of 25,000 tons, which represents a reasonable volume of stocks. Nor is there any likelihood of a falling-off in demand; on the contrary, consumption is expanding under the same impetus which is common to all base metals. This week's decision to raise quotas by the somewhat considerable amount of 15 per cent., to 105 per cent. of standard, for the last quarter of this year, marks a recognition of the fact that, in the absence of further supplies, the financial stringency which disgraced the tin market for many months was likely to appear anew. Though it would be optimistic to expect this level of output to be retained during the whole of 1937, it is highly probable that a considerably higher average quota will be recorded. Companies best situated to benefit from the double blessing of higher prices and higher output are the efficient, fairly low-cost producers with an elastic response of profits to changes in price. A selection of such producers is presented in the accompanying table.

Company (and Share Denomination)	Latest Costs per ton	Equity Capital per ton of output	Ord. Divs. 1935	Latest Ord. Divs. 1936	Present Share Price	Yield on Div. Latest Full Year
Ayer Hitam (5/-)	53	290	17½	26	s. d.	%
Ipo (16/-)	53	220	12½	18½	18 0	6.9
Kamunting (5/-)	40	340	20	8(e)	38 8	8.2
Malayan Tin (5/-)	57(a)	131(b)	45	57½	41 3	6.7
Pengakalan (5/-)	34	283	17½	10(e)	13 9	7.0
Petaling (2/4)	23(c)	100(d)	45	50(e)	22 0	6.4
Renong Tin (1/-)	65	226	10	20	43 9	4.7
Southern Kinta (5/-)	38	270	12.4	20.1	18 0	9.1
Southern Malayan (5/-)	42(a)	100(b)	22½	35(e)	27 0	5.6
Sungei Way (2/4)	48(a)	200(b)	20	25(e)	7 0	4.2
United Tin Areas of Nigeria (2/6)	56	321	Nil	17½	4 9	6.7

(a) Costs for year ending June, 1935. (b) Calculated on output for year ending June, 1936. (c) Costs for year ending October, 1935. (d) Calculated on estimated output for year ending October, 1936. (e) Interims for 1936.

The striking diversity of dividend yields, which is a characteristic feature of tin share valuations, will again be noticed. On the whole, however, the figures do not suggest that prospects have been unduly discounted by the recent rise in share quotations. It must be remembered that most of the cost and output data on which the table has been constructed refer to a period which includes a fair part of 1935, when production was at a considerably lower level than that now current, or than that which may be expected over the coming year.

Foreign Bond Movements.—Although the average level of the 114 foreign bonds included in the "Municipal and General Securities" index has advanced by nearly 3 points to 102.5, inspection of the component series shows that the improvement is due wholly to the sharp recovery, after a sustained period of hesitation, in bonds whose interest is not being met in cash in London:—

AVERAGE JAN.-JUNE, 1934=100									
Month	Europe	Near & Far East	Egypt	South and C. America			Complete Index	Unde-faulted	De-faulted

Feb.	96.4	107.7	98.8	103.5	86.5	99.3	100.7	104.1	96.8
March	95.1	109.9	99.2	100.2	85.9	96.7	100.0	103.7	95.3
April	97.6	110.0	99.7	101.3	87.9	98.0	100.8	104.7	95.5
May	96.1	106.5	99.2	101.3	88.6	98.1	99.8	104.3	95.0
June	96.3	104.4	99.4	100.2	89.2	97.5	99.1	102.8	95.1
July	94.7	110.6	100.9	99.1	89.2	96.7	99.8	104.4	95.0
August	95.1	113.2	100.7	99.3	89.8	97.0	100.7	105.7	95.3
Sept.	94.7	110.7	99.9	98.8	89.0	96.4	99.7	104.3	94.8
Oct.	95.2	111.7	99.7	105.3	93.0	102.3	102.6	104.3	100.6

† These are current totals. From August, 1935, to April, 1936, 62 unde-faulted, 52 defaulted bonds.

Defaulted bonds, in fact, regained their average level of January-June, 1934, at one bound, and the regional analysis shows that South American State issues have made the greatest contribution. Chinese issues also improved, but Japanese bonds were unchanged.

British Celanese Meeting.—If British Celanese had been running on an even keel of ordinary dividends, shareholders would have welcomed their chairman's review of output capacity, excise policy and patent litigation, at this week's meeting, as an informative contribution to public knowledge of an interesting industry. But as no ordinary dividend has ever been paid, and there are gross arrears of £1,912,500 (9s. per share) outstanding on the company's £4,250,000 of second preference shares, shareholders may be excused a certain preoccupation with the subject of earning power. And here Dr. Dreyfus's speech was, beyond question, disappointing. Last year, in a period of record production, the company's earnings, excluding all arrears, covered approximately ten months' dividend, less income tax, on the second preference shares. And in the current year, four months' working has given estimated profits "somewhat lower than those for the same period of the previous year," but approximately the same as the average for the whole year. If earnings became stabilised on this level, the company would not merely be in no position to overtake past arrears of second preference dividend, but would be regularly piling up new arrears. Shareholders may question whether the board, neglecting the bumper earnings which remain so persistently round the next corner, should not speedily produce a capital reorganisation scheme based on existing pounds, shillings and pence. Such a scheme might deal with balance-sheet items (such as "Goodwill, Patents and Patent Rights"—£1,913,118) whose valuation, under current conditions, is debatable. It might include a funding scheme for second preference arrears. It might face the question whether some downward readjustment of second preference rights was not expedient and equitable. Whether, finally, it would leave the 10s. ordinary shares (now quoted at 9s. 6d.) with more than a token valuation would be made apparent.

Baldwins Capital Proposals.—As recently as 1932 there were no less than eight classes of senior and junior security holders in Baldwins Limited, and even to-day there are three debenture issues (amounting all told to £2,197,252 bearing interest between 5 and 6½ per cent., and redeemable by October, 1938), two classes of preference shares totalling £587,271, and over £2 millions of equity capital. The proposals issued this week should further clarify this complicated structure. Holders of the "A" and "B" preference stocks are asked to sanction the issue of a new class of pre-preference shares, ranking ahead of the "A" preference stock, and limited in total to 60 per cent. of all the junior issued capital. Some £1,500,000 of the new preference capital is to be issued, carrying a 4½ per cent. dividend, to redeem the debentures, and the balance of cash will be provided by an issue of ordinary shares to existing holders. This operation will reduce the charges at present ranking ahead of the preference and ordinary capital by £81,848. Of the three debenture issues, one is repayable in January, 1938, and two in October, 1938, but it would appear that the Board intends to make an offer to the holders (if the present proposals are approved), presumably to effect prior redemption. The scheme, in principle, appears unexceptionable. The position of the existing preference and equity shareholders will be strengthened, by a reduction in pre-preference charges and the elimination of any charge upon the assets. It will not be necessary, at the present price of the ordinary shares, to issue more than £250,000 nominal, and the capital structure will be much simplified. There seems no justification, in short, for the market's reaction in putting the 4s. shares down from 15s. to 14s. 3d.

Ansell's Brewery Progress.—The profits record of this brewery is among the most cheerful in the industry. It is now enhanced by the highest dividend yet paid (25 per cent.) a 50 per cent. bonus issue and a cash issue of 1 for 2 on handsome bonus terms. Shareholders can thank the growing prosperity of the Midlands for this excellent result. Trading profits, at £619,237, are treble those for the year 1932-33. Such results, backed by the recent Mitchells and Butlers' figures, have a significant bearing on the possible experience of other Midland breweries, including Wolverhampton and Dudley. Ansell's disclosed profits, moreover, are struck after charging depreciation, which is no doubt determined on a satisfactory scale. The following table shows the profit allocations for recent years:—

	Years ended September 30		
	1934	1935	1936
Total income	346,240	537,776	619,237
Income tax and fees ...	40,011	64,237	79,078
Interest and redemption	44,235	44,232	44,232
Preference dividend.....	17,500	17,500	17,500
Ordinary Shares:—			
Earned	244,494	411,807	478,427
Paid	142,179	224,358	249,287
Earned %	28.9	46.8	55.1
Paid %	15	22½	25*
Reserves	56,000	190,000	225,000
Carried forward	312,375	309,824	319,964

* Also 498,575 £1 shares to be issued as bonus (1 for 2 held), and 498,575 further shares to be offered (1 for 2 held) at par.

Provisions for reserves are again more generous, though the allocation of £100,000 to general reserve will leave a net depletion of the fund by £400,000 when the forthcoming bonus issue is made. Although the proportion of earnings distributed has always been low, the current level of profits suggests that the capitalisation of reserves is by

now appropriate. The new cash issue is to finance the Thomas Plant acquisitions and further development, though the balance sheet shows a strong liquid position. The extension of properties is shown in the increase from £2,456,091 to £2,886,117 in licensed properties, while an advance in creditors of 68 per cent., to £517,787, includes the balance of purchase consideration for recent acquisitions. The £1 shares are quoted at £10, equivalent to £5 3s. ex rights, and offer a prospective yield on a 25 per cent. dividend of £4 16s. 9d. per cent.

New Issues in October.—The new issue market having woken up with a start from its short and unrestful summer sleep, has lately revealed a scale of activity which approaches boom conditions. Since the September figures appearing in the following table include over £6,000,000 of new money for the L.C.C., the contrast with past months is the more marked:—

(000's omitted) Excluding Conversions					
Monthly average (Old Basis)	United Kingdom	British Possessions	Foreign Countries	Total	
	£	£	£	£	
1932	13,589	2,129	24	15,742	
1933	17,520	2,429	449	20,398	
1934	11,474	2,494	125	14,093	
1935	18,388	1,270	21	19,679	
Monthly Total (Old Basis)					
	Govt.	Other			
August, 1935	Dr. 200	949	1,670	Nil	2,419
August, 1936	Dr. 150	2,949	3,712	Nil	6,511
September, 1935	Dr. 200	2,638	2,291	Nil	4,729
September, 1936	Dr. 200	7,305	448	Nil	7,553
October, 1935	Dr. 600	2,425	854	Nil	2,679
October, 1936	Dr. 150	19,772	4,404	Nil	24,026
(New Basis)					
August, 1935	Dr. 200	9,520	2,105	Nil	11,425
August, 1936	Dr. 150	12,887	4,779	Nil	17,516
September, 1935	Dr. 200	6,582	4,749	Nil	11,131
September, 1936	Dr. 200	10,379	5,382	138	15,699
October, 1935	Dr. 600	7,345	2,355	Nil	9,100
October, 1936	Dr. 150	37,849	4,633	Nil	42,332

Activity has not only been greater, but also more general in character. Corporation issues, despite their waning reception recently, account for over £10,650,000 of the October total. Other issues covered a wide variety of industry, the emphasis being laid less heavily on a real or alleged connection with defence. An interesting sign of the hope of good things still to come was the Philip Hill and Partners issue and a number of small placings by investment trusts. But the Morris placing is destined to become a classic instance of the physical stamina of the "House."

Actuaries' Investment Index.—The further progress recorded in the Actuaries' Index of 178 industrial equities mainly reflects the movements at the end of the previous week, rather than any determined advance this week. The index stands at 91.3, compared with 90.7 a week ago, and 90.2 a month ago (December 31, 1928=100). The corresponding yield figures are 3.52, 3.54 and 3.58 per cent. respectively. The movements of selected groups are illustrated below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month Ago (Oct. 13)	Week Ago (Nov. 3)	This Week (Nov. 10)	Month Ago (Oct. 13)	Week Ago (Nov. 3)	This Week (Nov. 10)
Building Materials (5)	107.0	105.1	106.0	4.67	4.75	4.74
Coal (7)	112.7	114.7	118.5	3.21	3.07	3.04
Electric Light and Power (16)	135.1	134.2	133.3	3.78	3.80	3.83
Motors (5)	59.9	62.1	62.8	3.94	3.86	3.81
Electric Supplies (10)	150.5	158.5	160.0	3.61	3.49	3.46
Home Rails (4)	83.9	82.5	85.5	1.28	1.31	1.29
Breweries and Distilleries (21)	156.6	154.7	160.2	3.76	3.82	3.70

"Wet stocks," to use a convenient Americanism, have been active on good reports from the brewery trade, and a marked rise has been recorded in Distillers units. Home Rails have made renewed progress (the index of

course, is calculated on prices before the traffics are available) and a further rise in coal shares puts them nearly 6 points higher than a month ago, and 27 points higher than the opening level this year.

Mexican Eagle Strike Settlement.—On the afternoon of Friday, October 16th, a sharp fall occurred in Mexican Eagle shares, on rumours of labour troubles, but inquiry at the offices of the London financial agents of the company revealed that no information had been received, and that no statement was being issued. An agency message followed almost immediately, however, confirming the rumour. A week later the market was afflicted by unofficial report and counter-report that the strike had been settled, and considerable fluctuation resulted in the shares, in conditions ideally suited for bear operations. Then the production figures told the story of a 21 per cent. fall for the week ending October 17th, and a further drop occurred in the shares owing to the absence of official news regarding the position. November opened with continued official silence, but towards the end of last week a sudden burst of speculative buying occurred, despite the large open position which was revealed at the end-October carry-over. On Friday, November 6th, an agency message announced that the strike had been settled, and the shares rose by 1s. 7½d. This news became generally known on Saturday, but last Monday morning the London financial agents announced that reports of a settlement were incorrect, and difficult dealing conditions inevitably resulted. In the evening, however, an official statement was issued, after the strike had been in operation for four weeks, to announce its settlement—representing, in fact, the only positive official news on the situation. It will be recalled that when the Amatlan case was proceeding twenty months ago, the shareholders gave an impressive demonstration in support of the company's attitude regarding the Mexican claims. Investors may feel that the release of adequate official information, on this occasion, might have been a graceful return for past favours—for it would at least have obviated erratic movements in a market at the mercy of rumour.

Burma Corporation.—Considerable realisation of Burma Corporation shares ensued after the chairman's announcement at the last annual meeting on the development position and on the capital repayment of one rupee per share. The outlook has been materially improved by the recent recovery in base metals; but the manager observes that analysis of the ore reserves statement must take account of the information given by the chairman last December. The estimate of 3,914,280 tons reserves at June 30th last shows a decrease of 51,000 tons, but average values, except in the case of copper, are somewhat higher. At last year's rate of exhaustion the tonnage represents about eight years' supply. The latest results were favourably affected by the rise in base metal prices, and the Corporation was once more able to dispose of lead stocks in addition to current production. Revenues were adversely affected by the fall in silver resulting from the pricking of the American bubble, and the average price for the second half of the year was barely 20d. per ounce, against nearly 29d. during the first six months. The conjunction of favourable factors with the expanded scale of operations has produced a £273,000 increase in net profit, as the following table shows:—

	1933-34	1934-35	1935-36
Ore mined	449,550	445,290	468,900
Yield, refined lead	70,560	70,560	70,560
Yield, fine silver	5,892,050	5,775,913	5,847,000
Working profit	522,760	710,590	1,078,250
Sundry revenue	42,230	46,740	38,040
Depreciation, etc.	114,510	89,370	75,450
Taxes and duty	117,700	155,740	255,370
Net profit	332,780	512,220	785,460
Per cent. earned	3.3	5.0	8.6
Per cent. paid (free of Indian and British tax)	3.1	4.7	8.3
Reserve funds	149,390	179,390	179,390
Carried forward	16,970	23,110	46,890

The dividend disbursements totalled £761,670, against £476,070; and as the capital has been reduced by repayment, the percentage works out at 8½, as against 4½. Two dividends, totalling 12 annas, were paid, as against 7½ annas for the preceding year. No further addition is made to the reserve fund, but a somewhat increased balance is retained. Investments have been further reduced to just under £30,000, while cash amounts to £712,270 against £1,127,850 owing to the capital return. The results of exploration show that no improvement has occurred in the position at depth on the main ore bodies, but fairly encouraging results are reported in the upper levels and some subsidiary ore bodies. On the basis of last year's dividends, the 9 rupee shares yield about 7½ per cent. free of British and Indian income taxes.

Pahang Consolidated.—Although the directors of this company have consistently criticised the tin restriction scheme, it has inevitably benefited other Malayan producers during the latest year. This, however, is not an argument either pro or con restriction. Last year a substantially increased quantity of ore was treated of slightly lower grade; and, thanks to the increased quota, the company produced 2,300 tons of metal, against 1,640 tons for the previous year, which was sold at a somewhat reduced average price. The accounts receive a windfall arising from the realisation of 404 tons of metallic tin, representing the final Buffer Pool distribution, the cost of which had been borne in preceding years. Net profits were accordingly increased from £76,540 to £173,600, covering a 40 per cent. payment on the ordinary and 15 per cent. on the preference shares, compared with 15 per cent. and 12 per cent. respectively for the previous year. The preference shares thus received their full participating rights. The cash position is good, and development has slightly increased the ore reserves. On the basis of last year's dividend the ordinary shares, even at their recently enhanced price, yield approximately 8 per cent. In view of the further increase in the production quota this yield is undoubtedly satisfactory.

Lake View and Star.—Although the profits for the year ended June 30 last actually exceeded those of 1933-34, shareholders received only 52½ per cent., against 57½ per cent. This apparent anomaly arises from the changed treatment of mine development. In the previous year only £9,630 was charged against revenue, and £62,950 was debited to special development. Last year the charges were £39,120 and £26,980 respectively. The improvement shown in profits—£478,410 against £380,930—was principally due to the absence of serious interruption to operations, which adversely affected the 1935 results. Moreover, earnings were increased by the successful re-treatment of tailings on the Associated property, and the cost ratio showed some reduction. By the inclusion of low-grade material, the ore reserves have been increased to 3,197,200 tons, but the value is 1.83s. lower. Mr John A. Agnew, at Thursday's meeting, emphasised that both average grade and tonnage were conservatively estimated, and that reserves could be kept five years ahead of milling operations.

Other Company Results.—An analysis of the reports of 43 other companies appears on page 339. The upward trend in brewery profits is reflected in the rise in *Bristol United Breweries* profits from £89,933 to £93,543. *Brown Bayley's Steel Works*, whose profits, at £123,542, are more than doubled, has thus been able to pay off preference dividend arrears to July 31, 1935. The full report of *John I. Thornycroft* points out that the repair and maintenance of the "Queen Mary" has been entrusted to that firm. Although the dividend is maintained at 7½ per cent., *Enfield Cycle* profits have fallen slightly, from £18,922 to £18,095. *Fairfield Shipbuilding and Engineering* report a substantial increase of 13½ per cent. in profits, to £51,244. *Short Brothers (Rochester and Bedford)* have raised their dividend by 10 per cent. to 30 per cent., though profits of £75,971

have increased at a smaller rate. Although the *Joshua Hoyle* report refers to continued trading difficulties, recent progress has converted a small loss into a profit of £17,318, which has been applied towards the £20,000 depreciation provision. *Lewis Berger* profits show the moderate increase of £5,736, the latest net earnings being £147,127. The dividend is increased from 15 to 16 per cent. Although *Imperial Smelting* profits rose from £145,428 to £159,836, the report emphasises that the higher profits are not commensurate with increased operations, owing to heavier administration costs and depreciation. *Hawker Siddeley Aircraft* has declared a 30 per cent. dividend for the initial trading period, with a 10 per cent. scrip bonus. *Dennis Brothers* have declared a final dividend, making 166½ per cent. for the year, compared with 150 per cent. for the previous year. The *Unilever* interim dividend is maintained at the sterling value of 30 Dutch cents, or 8d. per £1 stock. *Tate and Lyle* have declared a final dividend of 14 per cent., making 18½ per cent. for the year.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Central Argentine Railway, Argentine Great Western Railway, Central Uruguay Railway Company of Montevideo, Manila Railway (1906), Bengal Nagpur Railway, Imperial Airways, Parnall Aircraft, London Maritime Investment, Phoenix Investment, Chung-loon Rubber Estates (1932), Bukit Kajang Rubber Estates, Birmingham Small Arms, Lake View and Star, and Consolidated Tin Mines of Burma. At the Imperial Airways meeting, Sir George Beharrell explained the nature of the company's progress, both in volume of traffic and in type of craft. He also discussed some details of the Government scheme for carrying the whole of the letter mail within the Empire by air, giving examples of the intended schedules. Viscount St. Davids, at the Argentine Great

EXECUTOR AND TRUSTEE BUSINESS CONDUCTED

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

1/2 AN OUNCE

Issued by The Imperial Tobacco Company (of Great Britain and Ireland), Ltd.

ECONOMIC RECOVERY IN AUSTRIA

Fourth Consecutive Year of Monetary Stability

IMPARTIAL observers of Austria's economic and financial development during 1936 may register two important events which happened at the end of September, 1936; both events are to be interpreted as unmistakable symptoms of the remarkable improvement and consolidation of Austria's economic and financial position during the period under review. On September 25th the appointments of the representative of the League of Nations in Austria and of the Adviser to the National Bank were terminated. A few days after this resolution of the Council of the League of Nations the movement of monetary devaluation started in a number of European States, including three neighbours of Austria—Switzerland, Italy and Czechoslovakia. Without any hesitation the Austrian financial authorities emphatically declared that the Austrian schilling will not be devalued.

The reconstruction work achieved in Austria during the five years' period 1931-1936—following the collapse of the Creditanstalt—may be summarised as the *threefold consolidation of the treasury, the banks and the currency.*

The Budgetary Position

The following table compares the budgetary position and the Estimate for the financial years 1935-37 (in millions of schillings).

	1935	1936	1937
	Closed	Esti-	Finance
	Accounts	mates	Bills
Ordinary budget :			
Expenditure	1,948.50	1,973.75	1,980.23
Revenue	1,894.70	1,947.11	1,940.00
Deficit	53.80	26.64	40.23
Capital expenditure	102.99	35.97	17.49
Combined deficit	156.79	62.61	57.72

The fiscal year 1936 was not burdened with any arrears of uncovered expenditure for 1935, as the greater portion of the deficit resulting from 1935 (127.7 millions) was met out of the proceeds of Government loans floated in and before 1935. No Government loan was floated in 1936 and short-term Government borrowing through the issue of Treasury bonds was kept within normal limits.

Maintenance of Monetary Stability

The stability of the Austrian schilling was easily maintained during the period under review; this is the fourth consecutive year of the monetary stability in Austria.

There was perhaps only one critical moment in 1936 when the monetary basis was exposed to the danger of being shaken; but owing to the intrinsic strength of the position of the National Bank nothing of this sort happened. This critical period was at the end of March, 1936, when the big Austrian Phoenix Life Insurance concern became insolvent. The Government, however, managed to avert any danger of panic and any adverse reaction on the monetary and financial position of the country.

Reorganisation of Phoenix Life Business in Austria

The Phoenix Life insurance business transacted in Austria was reorganised and placed on quite a new sound financial basis. With the co-operation of the other Austrian insurance concerns and with comparatively small sacrifices on the part of the insured public the reconstruction of the Phoenix life business

in Austria was entrusted to a newly founded company. No Government funds were spent on the reconstruction, while new legislation was enacted with a view to placing life insurance business in Austria under stricter control and on a financially more reliable basis.

Position of the National Bank of Austria

The National Bank of Austria maintained the bank rate at the low level of 3½ per cent. (to which it was reduced in July, 1935) all over the year. The position of the bank was very strong during the period under review and may be summarised in the appended table (in millions of schillings).

	Oct. 15, 1935	Dec. 31, 1935	June 30, 1936	Oct. 15, 1936
Notes and deposits	1,219	1,192	1,171	1,170
Cash reserve	378	355	330	359
Bills discounted	230	225	220	213

The cash reserve includes 242 millions of gold (a figure which has practically remained unchanged for the past two years or so). The balance of the cash reserve consists of foreign exchange. It is interesting to note that there was an increase in the foreign exchange holdings since the beginning of the current year by some four million schillings, notwithstanding the fact that the National Bank has paid foreign exchange equivalent to 39 million schillings early this year in final settlement of the "live claims" of the Creditanstalt's foreign creditors.

Factors Responsible for Austria's Rapid Recovery

There is a number of items which are responsible for the rapid recovery of Austria. One of these items is the *foreign tourist traffic*. The revenue derived from this source of foreign capital influx is estimated at some 300 million schillings (over £11,000,000) for 1936; this sum will probably fully meet the deficit of the foreign trade balance, which was 311 millions in 1935 and 296 millions in 1934.

Cheap prices for the accommodation of foreign tourists, reduced railway tickets for foreigners who intend to stay in Austria at least one week, coupled with an up-to-date supply of all facilities for foreigners have attracted an ever-increasing number of tourists from abroad. Austria is proud of the fact that His Majesty King Edward VIII, has spent a week in Vienna and its environs in September, 1936. The Salzburg Musical Festivities, which were first held in 1920 and since have been repeated in August of every year, have raised the lovely town of Salzburg to the rank of a gateway for all foreign tourists visiting Austria and Central and South Eastern Europe. The Grossglockner Alpine Road, which was opened for traffic in August, 1935, has enormously increased the number of motor car tourists in Austria. Vienna has regained its former prominent role as a favourite place for the holding of international congresses, while the lovers of mountaineering were abundant in Tyrol and Carinthia.

Complete Political and Social Order

Austria's economic rehabilitation chiefly through self-help would have been impossible but for the complete political and social order which reigned all over the period under review. The new constitution, which was proclaimed on May 1, 1934, is gradually getting a solid footing in the whole life of the nation as the social and economic corporations, on which the constitution is based, are built up.

COMPANY MEETINGS, &c.

LONDON MARITIME INVESTMENT COMPANY, LIMITED

SATISFACTORY POSITION

The thirty-ninth annual ordinary general meeting of this company was held, on the 10th instant, at Winchester House, London, Sir F. Vernon Thomson, K.B.E. (chairman and managing director) presiding.

The secretary (Mr O. A. Hall), having read the notice convening the meeting and the auditors' report,

The Chairman, in the course of his speech, said: The net profit for the year was £34,244. With the £9,140 brought forward there was thus available £43,384. After payment of the dividend upon the £500,000 5 per cent. cumulative preference stock, the directors recommend the payment of a dividend upon the £500,000 ordinary stock of 4 per cent., less income tax, for the year, carrying forward the balance of £8,916.

The accounts show in clear form the position of the company and, read in conjunction with the report will, I imagine, be regarded as satisfactory.

As stated by me at previous annual meetings during the last five years, this company had investments in the "Royal Mail group," which showed a large depreciation. Fortunately, this depreciation was balanced by appreciation upon other investments of the company, so making it possible for the book value of the investments, taken as a whole, to be stated in the balance sheet at a figure which, in the aggregate, was less than their market value. Owing to the approach of the final liquidation of the "Royal Mail group," the depreciation will shortly become an ascertained loss, and the directors have therefore applied the reserve fund of £250,000 to writing off this loss.

The investments of the company now stand in the balance sheet at £845,180, but, according to a valuation made by the directors as at September 30, 1936, their market value was £1,113,548. It will thus be seen that the financial position of the company continues satisfactory.

BOARD'S POLICY

The adjustment of the balance sheet now effected was a serious problem and one which caused anxious consideration to the directors. It could easily have been handled if this company were what is termed a finance company. Finance companies have each year to value their assets and, if the capital is not fully represented by the value of such assets, it would not be in order to pay a dividend even although one had been earned. In our case the problem was more difficult because the company is what is known as an investment trust company, which may distribute in dividend whatever income it has received, without necessarily having regard to the value of its capital assets. Directly some of these large investments became worthless, their book value had to be dealt with. One method of meeting the situation would have been to have sold good investments of the company sufficient to secure a realised profit to meet the ascertained loss. This course was considered by the directors, but they came to the conclusion that it would be very difficult to acquire new investments as good as those the company would have to sell, showing an equal return. Another method would have been to write up the book value of the good investments to the extent of the ascertained loss. Had this course been adopted, the enhanced figures even then would have been less than the aggregate market value of the investments. All things considered, however, the directors deem the plan now adopted as more in keeping with the actual facts.

Stockholders must not forget that the present board are in no way responsible for the losses which have been dealt with, as these investments were made under the old regime. Having said this, I think it fair also to state that credit for the appreciation upon the most valuable of the other investments is also due to the old regime.

ENCOURAGING SHIPPING OUTLOOK

The general shipping situation has markedly improved since our last meeting, especially within the last six months, and, although I have been closely identified with the two committees established under the British Shipping Assistance Act, I feel bound to say that the temporary subsidy granted by the Government, and the terms upon which it was granted, have been largely instrumental in restoring the position of British cargo shipping. The outlook is more hopeful. There is, however, no boom, nor even the sign

of a boom, in cargo shipping at present, and it should be borne in mind that as it was impossible for British shipowners upon the freights current during the last six years of world trade depression to provide adequate depreciation for the renewal of their tonnage, there is much leeway to be made up.

Prosperity can only return permanently to shipping with the restoration of international trade, upon which the industry depends.

As this company holds a substantial interest in shipping, it may be not inopportune to welcome the recent agreement between the U.S.A., France and Britain as to currency adjustment, as a useful step towards the restoration of international trade. The volume of world trade is still being restricted by trade barriers and extreme economic nationalism. A gradual relaxation of trade barriers would speedily expand world markets and not only benefit British overseas trade and shipping, but reduce unemployment and promote the general prosperity.

The report and accounts were unanimously adopted.

MANILA RAILWAY COMPANY (1906), LIMITED

SUCCESS OF THE SCHEME

The twenty-ninth annual general meeting of the Manila Railway Company (1906), Limited, was held, on the 9th instant, at Shell-Mex House, London.

Lieutenant-Colonel C. A. Reid Scott, D.S.O. (the chairman), said that the surplus in the revenue account was £38,722, and the directors recommended a dividend at the rate of 3 per cent., less tax, on the preference capital, and an additional dividend in respect of the year ended June 30, 1935, at the rate of 1 per cent., less tax, on the preference capital. The scheme of arrangement had proved a great success and a benefit to all concerned was self-evident from the accounts. It had lightened the burden of the Railroad Company, as it had also lightened that of this company, and the big loss shown in the former's accounts for the past year should show a considerable improvement next year in so far as charges for interest were concerned. They had a long way to go, and their future was still bound up with the fortunes of the Railroad Company and a successful liquidation of their large remaining investment in that company.

A comparison of the position to-day with that existing before the scheme showed that they had realised all that they had then told the shareholders as far as matters under their own control were concerned. He felt that the scheme had fully justified the support which the shareholders had given to it.

Very happy relations existed between them and the railroad company, due very largely to the personal contacts of visits by Mr T. Morris Priestley, the managing director. Mr Priestley would visit the railroad again next year in connection with an extension of the railroad system. The railroad company was to be congratulated on having redeemed such a large amount of bonds upon satisfactory terms.

With regard to the Railroad Company's prospects for the ensuing year 1936, the management in their annual report stated that it might safely be anticipated that from a financial standpoint the operations of the company during 1936 would be considerably more favourable than during the past two years.

After an amendment for the rejection of the accounts had been defeated on a poll by 287,813 votes to 33,050 votes, the report and accounts were adopted.

IMPERIAL AIRWAYS, LIMITED**SUBSTANTIAL INCREASE IN TRAFFICS**

The twelfth ordinary general meeting of Imperial Airways, limited, was held, on the 10th instant, at the Hotel Victoria, London.

The Right Hon. Sir Eric Geddes, G.C.B., C.B.E., K.C.B. (the chairman), was prevented by doctor's orders from attending, but his speech, which was read by Sir George Beharrell, who presided in his absence, stated that the balance of profit for the year was £140,705 and that the directors recommended a dividend of 6 per cent. plus a bonus of 2 per cent., both less tax.

The volume of traffic carried showed a substantial increase over that of the previous year. The majority of that increase was due to the rapid growth in Empire air mails, which had risen 78 per cent. in the year. On the Empire routes as a whole, the company flew over 90 per cent. more miles than the minimum necessary to earn their subsidy.

Notwithstanding greatly increased competition on European routes, they carried over 11 per cent. more passengers than in the previous year. Sir Philip Sassoon, the Under-Secretary for Air, stated in the House of Commons in May that the company carried across the Channel in and out of Croydon a greater number of passengers than all their Continental competitors combined.

PROGRESS OF THE COMPANY

During the year the company and its subsidiary and associated companies flew over 6,500,000 miles, and during the current year that figure would probably reach 8,000,000 miles, or an average of over 20,000 miles a day.

The company had always been pioneers in the use of large multi-engined aircraft, and the new Empire flying-boats, called the Canopus or C class, and the corresponding land 'plane type called the Ensign or E class, now under construction, had, like the Hannibal and Scipio classes, been conceived in their main features within the company. From the company's specification, aircraft were now being produced which, they were convinced, were ahead of anything in their class in the world and which were already making history for British civil aviation.

Last year he spoke of new aircraft that they had ordered for the extended Empire services. They had, in fact, ordered 28 of the Empire-type flying-boats and 12 land aircraft, some of which, however, would be used on European services. These represented a capital outlay of approximately £2,000,000.

NEW EMPIRE MAIL SCHEME

Last year he stated that the principal features of a long-term agreement had been agreed with the Government. This agreement had for its foundation the execution of the Government's policy to carry the whole of the letter mail within the Empire by air. The *ipsissima verba* of the agreement had not yet been settled, but the Government and the company were both proceeding with the work that had to be done to put the scheme into effect.

It had been stated in Parliament that it was aimed to achieve a 2½-day schedule to India and to East Africa, and a 4½-day to South Africa and to Singapore, and a 6-7-day schedule to Australia. When the new scheme was in full operation on the Eastern route there would be five services weekly to India, three to Malaya and two to Australia, and on the Southern route three services weekly to Central Africa and two services weekly to Durban.

The first important stage would be to apply the scheme to the whole of the line from England to South Africa. More than two years had now slipped by since the Empire air mail scheme was first submitted to the Government of Australia. He was not able to say definitely that the difficulties had been overcome, but he had some reason to hope that they would be overcome.

With regard to the Atlantic service, a new operating company was to be formed in which Imperial Airways would have 51 per cent. of the capital and the remainder would be held equally by a Canadian company and an Irish Free State company. On the technical side they were about to carry out long-range flights with flying-boats of normal characteristics; they were approaching the time when they would be able to demonstrate the capabilities of the Mayo Composite Aircraft, and they had been experimenting in fuelling while flying.

To carry out these developments, particularly the Empire mail scheme and the Atlantic services, they would, before the next meeting, have to issue fresh capital, but they were unable to proceed with this until the new agreement with the Government had been finally agreed and signed. The Treasury would be consulted as to the terms of the new issue.

The report was unanimously adopted.

CHUNGLOON RUBBER ESTATE (1932) LIMITED**DIVIDEND OF 4 PER CENT.****CURRENT YEAR'S IMPROVED EARNINGS****MR E. B. RIDSDAL'S SPEECH**

The fourth ordinary general meeting of Chungloon Rubber Estate (1932), Limited, was held, on November 10, 1936, at the registered office of the company, 411-419 Salisbury House, London, E.C., Mr E. B. Ridsdal (the chairman) presiding.

The representative of the Secretaries having read the notice convening the meeting and the auditors' report,

The Chairman said:—Gentlemen, the report and accounts having been in your hands for the requisite period, with your permission I will take them as read. (Agreed.) In considering the report, you must take into account that it is for the period ended March 31st last and, therefore, does not reflect the better prices ruling since then, as in the case of those companies making up their accounts to June 30th.

During the year we harvested a crop of 217,719 lbs. of rubber, of which 172,060 lbs. were sold, realising 6.09d. per lb. net (equivalent to approximately 6½d. per lb. landed London) and the balance was low-grade rubber sold without coupons. Our working costs at 3.449d. per lb.—after taking into account the restricted crop—is very satisfactory.

As will be seen from the accounts, the profit earned, after allowing for depreciation and other charges, amounts to £1,112 12s. 8d., and the directors recommend the payment of a dividend of 4 per cent. less tax, which will absorb £1,003 18s. 11d.

SOUND FINANCIAL POSITION

Turning to the balance sheet, it will be observed that our financial position is sound. Cash in hand, War Loan, debtors and rubber stocks total £5,347 13s., and after deducting creditors, the net liquid position is £4,750 10s. 1d.

As regards the estate, the condition generally is satisfactory throughout. During the year we spent on development £337 6s. 1d., which has enabled us to deal with a portion of the work which had to be left in abeyance during the slump, and which is now almost up to date. We are also replanting 25 acres of our older areas with budded material, and this work will be taken in hand during the current year.

As over six months of the current year have already expired I would like to deal with the position for the six months to September 30th last. We have made careful estimates of the profits earned and after making the usual allowances for London expenditure, depreciation, etc., the net earnings have amounted to £1,414 12s., which is equal to nearly 6 per cent. for the six months. As the average price obtained to that date has only amounted to approximately 7d. per lb., the six months to March next will show even better results. I am pleased to tell you this, because I feel that well-managed and favourably situated rubber estates are now on a basis where investors can see a safe and lucrative return on their money. The more speculative factors in the industry appear to me to be disappearing and, taking our own estate as an example, I would like you to consider the following facts:—

The issued capital is only £25,077, which is less than £30 per planted acre; our cash position is quite ample for all present requirements; our standard production assessment for 1936 is 300.245 lbs., or about 500 lbs. per planted acre of mature rubber, whilst our potential output, when our immature area comes into bearing, will be over 400,000 lbs. per annum.

Now as far as I can judge, and with the present restricted output, we shall earn, with rubber at 8d. per lb., profits sufficient to pay dividends of 15 per cent., and each 1d. per lb. over 8d. is equal to nearly 3½ per cent. on the capital.

I am giving you this information in order that you may work out for yourselves the value of your shares, and so that those shareholders who have borne the heat and burden of the day may not overlook the future potentialities of their rubber shareholdings through the low return they have received as reflected in the last years' dividends.

QUESTION OF AMALGAMATION

There has been a good deal of talk recently about the amalgamation of estates. As I have said several times at these meetings, unless estates practically adjoining can be amalgamated, there is very little saving to be made. Take our own case; the only saving I can see is that a portion of the London expenditure, viz., directors' and secretarial fees, could be reduced. These amount to £385, and, assuming that half could be saved, there would only be a saving of £200 by amalgamation with another company. It

would, of course, be an advantage in regard to marketability of shares, and with this object in view the matter will receive our careful consideration.

Before moving the adoption of the report and accounts I would like to express, on behalf of the board and on your behalf, if I may, our thanks to all concerned in the East for the attention given to Estate affairs.

I now propose that the report and accounts for the year ended March 31, 1936, be and they are hereby approved and adopted. I will ask Mr R. de la Bere, M.P., to second this resolution, but before putting it to the meeting I shall be pleased to answer, to the best of my ability, any questions you may care to ask.

Mr R. de la Bere, M.P., seconded the resolution, and there being no questions it was put to the meeting and carried unanimously.

A dividend of 4 per cent., less tax, was declared. The retiring director (Mr W. Egerton Martin) was unanimously re-elected; and the auditors (Messrs Fitzpatrick Graham and Company) having been re-appointed, the proceedings terminated.

ARGENTINE GREAT WESTERN RAILWAY COMPANY, LIMITED**IMPROVING CONDITIONS**

The ordinary general meeting of this company was held, on the 10th instant, in London.

The Right Hon. Viscount St. Davids, chairman of the company, in the course of his speech, said:—The most important thing is, I think, that during the past year we have paid off all our arrears—three and a-half years—on our Second debenture stock, and also the holders of that stock have been paid 5 per cent. upon those arrears. The new factor is that we propose on December 1st to pay a half-year's interest on our five per cent. debenture stock.

The most salient fact in explaining the financial position is this: that during the past year the Buenos Ayres and Pacific Railway lost £985,000 upon exchange, and if they had not had that exchange loss, which it was absolutely out of their power to avert, the financial position of the system would be very, very different.

To turn to some of the details. The passenger traffic which has been falling off for some years has shown a slight improvement; the goods traffic showed a big improvement, it rose from 1,512,000 tons to 1,679,000 tons, being an increase of over 11 per cent. This goods traffic has been steadily rising during the last three years. The wine traffic is the largest since 1930, and has reached nearly 600,000 tons.

As regards prospects for the current year, the general business of the country is improving and, if the prospects of a good cereal harvest is fulfilled, the traffics of the railway are likely to be maintained at least. Sales of wine are expected to be satisfactory, and we think that the amount to be carried by the railway will not be less than last year, and should reach about 600,000 tons. The area under cultivation for fresh fruits and vegetables is still increasing.

The report and accounts were unanimously adopted.

CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO, LIMITED

The ordinary general meeting of this company was held, on the 9th instant, in London.

Mr G. H. Harrison, C.M.G., M.Inst.C.E. (the chairman), who presided, said that the results of the past year's working must still be considered disappointing, although in terms of Uruguayan pesos there had been an increase in most items of traffic. When, however, the receipts and expenditure were converted into sterling, the net currency increase became a sterling decrease of £10,000, due to the fact that the rate of conversion used this year was lower than that applied in the previous period. A debit balance of £177,000 was brought forward from 1934-35, and after charging the full debenture and other fixed interests a final debit balance of £338,000 remained to be carried forward to the current year's account. It was evident that the company was far from being able to meet the arrears which had accrued under the moratorium, and which had to be liquidated before the payment of current interest could be resumed. The committee of stockholders appointed under the moratorium scheme had therefore, in the exercise of the power vested in them, extended the moratorium until September 1, 1937.

The directors were now engaged on a scheme of reconstruction which should prove equitable and clear the way for better times. They hoped to present it for the consideration of the shareholders in the new year.

The report was unanimously adopted.

CENTRAL ARGENTINE RAILWAY, LIMITED**DIVIDEND ON PREFERENCE STOCK**

The annual meeting of the Central Argentine Railway, Limited, was held, on the 12th instant, at River Plate House, London.

Mr W. K. Whigham (the chairman) said that the gross receipts showed a decrease of £250,000. As a result of drought, the earnings from wheat and linseed traffic had decreased by £588,000, those for wheat being the lowest for 18 years. Maize, however, had turned out well and the increased earnings under that heading had gone a long way towards recouping their losses in connection with wheat and linseed. They would have done much better had not the shipment of the maize crop been held up by excessively wet weather during the closing months of the financial year.

Recent developments warranted a little more optimism than had been possible for some time. As evidence of that, he would point to the large increases in traffic returns up to date for the present financial year as compared with last year. For the 19 weeks which had elapsed since the beginning of the new financial year those increases in the aggregate now stood at £370,127 at the average rate of exchange. In all the circumstances the directors had felt themselves justified in recommending a dividend at the rate of 3½ per cent. on the 4½ per cent. preference stock, that being the first time that a dividend had been declared on that stock since 1933.

That dividend might be regarded as a good omen. It was a sign of improvement not only in their own affairs, but in the affairs of Argentina herself. The corner appeared to have been turned and credit should be given to those responsible for the control of the country's Government and finance. He believed that with good will on both sides the majority of their avoidable difficulties could be speedily removed.

A cablegram which had recently come to hand from the Chairman of the Local Committee in Buenos Aires stated that there was every indication that the improved traffic receipts recorded since July 1st this year would continue as there were now some 2,200,000 tons of grain on hand at stations and farms, for which there was a good demand, against 2,000,000 tons last year with weak demand. Passenger traffic showed improved results and in general the outlook was satisfactory.

The report was adopted.

PHOENIX INVESTMENT TRUST, LIMITED**IMPROVED POSITION**

The twenty-second ordinary general meeting of the Phoenix Investment Trust, Limited, was held, on the 12th instant, at 25-31 Moorgate, London.

Mr Norman Holden (the chairman) presided, and in the course of his speech said:—The net revenue available for appropriation comes out at £12,889, as against £13,414. It should be borne in mind that the new money raised by the issue of debentures has scarcely had time to earn its keep, as certain securities were purchased which produced little, if any, revenue during the period under review, but which your directors anticipate will give both a reasonable return and capital appreciation in the future.

Again your directors gave very serious consideration to the ordinary dividend, and although not quite earned we decided to recommend 2 per cent., which I trust will meet with your approval.

With regard to the balance sheet, which is very simple and straightforward, I feel I need only draw your attention to the value of our investments as at the closing of our accounts. They amounted to £484,086, against a book cost of £645,591, and, as stated in the report, the valuation shows a depreciation of 24.08 per cent., compared with one of 36.82 per cent. in September, 1935. I only trust that this improvement will continue.

With regard to our hopes of some repayment on our Russian holdings, the action of the British Government in pressing a £10,000,000 loan on the Soviet, without even a whispered comment about the old debt has naturally postponed any possibility of repayment until this loan is used up. The argument for this policy is that it helps exports. Certainly it does, but so did the loans made before the war, and if it is really economic to make new loans and not bother about the repayment of past ones, it will, I presume, be considered equally advantageous to make still another loan and not trouble about the present one being repaid. What is sauce for the public investor should be sauce for the Chancellor of the Exchequer and *vice versa*.

It should be noted, however, that the tendency of Russia to return to capitalism is increasing in speed, and the influence of the Old Bolshevik Guard is being reduced rapidly and indeed violently.

The report and accounts were unanimously adopted.

BIRMINGHAM SMALL ARMS COMPANY, LIMITED**INCREASED PROFIT AND TURNOVER**

The ordinary general meeting of the Birmingham Small Arms Company, Limited, was held, on the 10th instant, at Birmingham.

Sir Patrick J. H. Hannon, M.P. (deputy chairman), presided in the absence of Sir Alexander Roger, the chairman of the Company, and read Sir Alexander's speech, which stated that the outstanding point of interest to shareholders was the progress in recovery they had been able to achieve during the year under review. The profit for the year, amounting to £270,835, compared with £112,182 for last year. The turnover was the highest of recent years, and all the trading subsidiary companies had earned profits, a position they had not been able to report for the previous two financial years. The favourable result had enabled them to make arrangements for the conversion of their £1,576,811 6 per cent. first mortgage debenture stock to a 4 per cent. basis, and, as the issue price would be 102½ for the new stock, that would enable the premium of 2½ per cent. on the existing stock to be discharged without cost to the company. The costs of the issue would roughly amount to £34,000, but the saving in interest represented £30,000 per annum.

CARS

As to their cars, the names "Daimler" and "Lanchester" remained the hall-mark of car quality. The year under review had shown an increase in sales of the current types of cars, and the introduction of the Daimler light 20-h.p. saloon had substantially increased their turnover. The Daimler fifteen continued to be a popular model, while a fast owner-driven light straight eight had been introduced successfully. They had also recently launched the already popular 14-h.p. Lanchester roadrider. Export sales of cars were 30 per cent. up on the previous year, and the new financial year had started well with a substantial increase. With regard to B.S.A. scout cars, dealers' orders for the home market were three times greater than 12 months ago. The Company's bus orders were nearly double those of 1935. This rate of progress was being maintained. The buses, which incorporate the Daimler fluid flywheel transmission, were being used by 28 municipalities and other transport undertakings, and were widely regarded as representing the best engineering job in the bus world.

MOTOR CYCLES AND CYCLES

The sales of their motor-cycles had exceeded last year's by 12 per cent., which was a satisfactory result considering the poor weather conditions. The Company's percentage of home business had increased from 18 per cent. in 1932 to 23 per cent. in 1935-36. For pedal cycles weather conditions had again been against them, but they had achieved a record year. Their sales were 31 per cent. higher than last year, and export orders had increased by 33 per cent., and they hoped to continue that improvement.

ARMAMENTS

A year ago he told them that the position of the pure armament side of their business was deplorable and that although they had been the sole manufacturers of the Lewis gun, it had been announced in the House of Commons that the new gun known as the Bren, would be manufactured at the Royal Small Arms Factory at Enfield.

They were continuing their representations to the War Office with a view to their being, in the future, sure of sufficient work to give them a reasonable return on the large amount of capital lying virtually idle in their armament business.

A certain amount of work had been given them meantime under the Defence Programme and they might reasonably expect to receive further orders, which would undoubtedly be of great assistance to them during the next three years, but they were in a different position from that of non-armament manufacturers who were receiving work in connection with the Defence Programme.

The tool group, concerned with the manufacture and sale of machine tools and small tools, had had a successful year with a 50 per cent. increase in orders, whilst on the steel side of the group, the year had been one of continuous advancement with satisfactory results.

Speaking generally, he would say that their prospects, if no major political upheaval took place, were, for the current year, good, and in conclusion he would ask shareholders to join with him in thanking their managing director, Mr Geoffrey Burton, their various managers and the entire staff and workpeople, of whom there were over 11,000, for their strenuous and loyal service during the past year.

The report was unanimously adopted.

LAKE VIEW AND STAR, LIMITED**RECORD PROFIT****DISTRIBUTION OF 52½ PER CENT.**

The twenty-sixth ordinary general meeting of Lake View and Star, Limited, was held, on the 12th instant, at 20 Aldermanbury, E.C.

Mr John A. Agnew (the Chairman) said that it gave him great pleasure to draw attention to the fact that a profit of £478,414, after payment of London office expenses, had been made, which was a record in the history of the company. That increased profit arose to a great extent from the successful re-treatment of the tailings from the Associated Mine and to there having been no material interruption to operations throughout the year. The receipts from bullion and returning charges had exceeded for the first time £1,000,000 sterling. Three interim dividends of 12½ per cent. each had been paid or declared during the year, and the board had decided to recommend a final dividend of 12½ per cent., plus a bonus dividend of 2½ per cent., making a total distribution for the year of 52½ per cent.

ORE RESERVE POSITION

The ore reserve position was again one on which they could congratulate themselves. These reserves as at July 1, 1936, showed a total of 3,197,200 tons, of an average value of 25.03s., which represented a net increase of 101,300 tons after allowance had been made for the 584,056 tons extracted during the year and a decrease in value of 1.83s. per ton as compared with the previous year's estimate. The slight fall in value was mainly due to the large tonnage of low-grade ore developed in the Chaffers and Associated leases. It was interesting to observe from a study of the ore reserve position at the Ivanhoe and Chaffers how the general trend of mining operations over the past few years had been from north to south. In the Ivanhoe reserves had been steadily declining, while they had been steadily increasing in Chaffers, until this year they were greater in the latter than in the former.

There had been a very satisfactory increase in the amount of ore broken of over 120,000 tons, the total now amounting to 280,400 tons. That reserve was being added to whenever the walls permitted of shrinkage-stopping being introduced and was held largely in the Associated, Lake View and Horseshoe properties.

He wished to emphasise two statements in the general manager's report. The first was that the average value and tonnage were conservatively estimated and the grade should easily be maintained; the second was that a development footage of 25,000 per annum should be sufficient to keep the reserves five years in advance of milling operations. It would be agreed that that was extremely satisfactory when it was appreciated that the mine was producing at the rate of nearly 600,000 tons yearly.

RE-TREATMENT OF TAILINGS

Last year a start had been made on re-treating the tailings dump on the Associated property. During the year 605,237 tons had been re-treated, and since January the tonnage dealt with averaged over 57,000 a month, considerably exceeding the forecast of 50,000 tons. The plant had given every satisfaction and the manager was to be congratulated on its successful operation during the year.

Working costs had been reduced during the year by 1s. 1.4d. to 25s. 9.49d. per ton, Australian currency, equivalent to 20s. 7d. sterling. That was due to some extent to mine development, which, owing to the smaller footage driven, showed a reduction of nearly 8d. per ton, while ore treatment costs had been lowered by nearly the same amount. Ore extraction had increased by about 4½d. per ton owing to the advance in wages. The wage increase, added to the insurance and holiday pay, was equivalent to a dividend of 7½ per cent. on the capital of the company.

Research work was constantly being undertaken in an effort to increase still further the overall recovery in the treatment plant, and though nothing of an outstanding character had been disclosed during the year, it was being continued, as the manager and metallurgical staff had always before them the possibility of effecting some improvement in this direction.

The effect of the results achieved during the past year or two had been to place the company in a very sound position, and the utmost credit was due to Mr J. F. Thorn, the general manager, and to his very capable staff, who had been responsible for such results. They had had on more than one occasion to express the appreciation of the board for his very capable handling of the affairs of the company.

The report and accounts were unanimously adopted.

PARNALL AIRCRAFT, LIMITED**YEAR OF GREAT PROGRESS**

The first ordinary general meeting of Parnall Aircraft, Limited, was held, on the 10th instant, in London, Sir Louis Vaughan, K.C.B., K.B.E., D.S.O. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that they had two separate claims against the Air Ministry which were somewhat interrelated. The first was for patents assigned to the Secretary of State for Air and for development work prior to the incorporation of Parnall Aircraft, Limited. The claim included improvements and additions to those patents since their company was formed.

The second claim related to development expenditure incurred by the company. He could not give any further information regarding the first claim, but they had no reason at present to doubt that it would be settled amicably and that they would receive fair and adequate recognition from the Government for the very valuable asset placed in their hands.

The appearance of the re-armament programme immediately after the formation of their company and the subsequent receipt of very large contracts made it necessary to increase their manufacturing facilities beyond the compass of their original capital. Starting as one of the smallest and least important contractors to the Air Ministry, to-day they ranked second to none in the importance of the work they were undertaking.

Considerable extensions had taken place to their premises at Yate and Tolworth in order to meet the Air Ministry's requirements. Should the Government require them to undertake more work than could be executed with their present contemplated capacity, they would have to consider the possibilities afforded by the Shadow Scheme. Orders on hand could keep them working to capacity for a long time to come.

They had been fortunate enough to secure the services of Mr H. W. Healy as general manager of the company. He would not like this to be taken as any reflection on the capabilities and merits of those who had borne the heat and burden of the day for the first year's working.

In his opinion shareholders had a very valuable property which would, he hoped, be a source of pride and profit.

The report was unanimously adopted.

BUKIT KAJANG RUBBER ESTATES, LIMITED**DIVIDEND OF 5 PER CENT.**

The twenty-seventh annual general meeting of Bukit Kajang Rubber Estates, Limited, was held, on the 12th instant, at the registered offices, 7 Martin's Lane, London.

Mr W. Arthur Addinsell, the Chairman, moved the adoption of the report and accounts and the declaration of a dividend of 5 per cent. for the year. He said: At the last annual meeting I referred to the substantial increase in profits. On this occasion I record a reduction of £2,597, accounted for principally by a decline of approximately 268,000 lbs. in the crop. This is solely a result of curtailing our output under the Restriction Regulations.

In June last Castlefield (Klang) Rubber Estate, Limited, made a new issue of shares, and your directors were satisfied that they could profitably employ part of this company's available cash by participating in the issue. An allotment of 15,000 shares of 2s. each at 3s. per share was received, costing £2,250. The market value to-day is £3,000, so that we have already secured some appreciation.

I would draw your attention to the recommendation that the book value of buildings and machinery should be written down to the nominal amount of £1.

Your directors deem it prudent to recommend a dividend of 5 per cent. as compared with 6 per cent. It is not an unsatisfactory return for the period under review, and leaves the company in a sound financial position.

The decision of the International Rubber Regulation Committee to increase the quota allowance from January onwards will ensure a larger crop figure, and even if there is no further improvement in price, we can confidently anticipate a higher average net selling price. For the same reasons there is ample justification for expecting an improvement in dividends on our holding in Holyrood Rubber, Limited. The Edensor Company has recently commenced tapping and should soon be a contributor to income.

Revenue expenditure should only exceed last year's figures proportionately to the additional crop, as overhead expenses will undergo little change. The area under rubber in the company's direct ownership is capitalised at the reasonable sum of £37 per acre. Under all these conditions I feel every confidence.

The resolution was passed unanimously.

BENGAL-NAGPUR RAILWAY COMPANY, LIMITED**INCREASED RECEIPTS**

The seventy-eighth ordinary general meeting of the Bengal-Nagpur Railway Company, Limited, was held on the 12th instant, in London.

Sir Trevredyn Wynne, K.C.S.I., K.C.I.E. (Chairman and Managing Director), presided, and, in moving the adoption of the report, said that the gross receipts for the year 1935-36, as compared with earnings for 1934-35, showed an increase of 56½ lakhs, or 7 per cent. Comparing the figures of gross receipts, working expenses, and net earnings for the years 1932 and 1936, he pointed out that for 1936 the figures showed an increase of gross earnings of 136 lakhs, a reduction of 17 lakhs in working expenses and an increase of 153 lakhs in their net earnings.

A very large amount of their gross earnings came from the iron and steel industries. There were three companies at the present time. The Tata Iron and Steel Company, a very big company producing pig iron and steel, the Indian Iron and Steel Company, producing pig iron only, and the Bengal Iron Company. The works of these companies were situated at stations on their railway and all their raw materials, with the exception of coal, were supplied from stations on their railway. Those three companies had come to an agreement to erect a new steel plant at the works of the Indian Iron and Steel Company which would increase their traffic in raw materials. This increase might be very substantial.

On their railway there was practically no limit to the tonnage of iron ore available, its quality being from 50 per cent. to 63 per cent. iron. He had been making inquiries and he understood that iron ore could be delivered at Calcutta for shipment at about 8s. per ton, which might be less for large shipments.

The report was unanimously adopted.

CONSOLIDATED TIN MINES OF BURMA LIMITED**INCREASED OUTPUT**

The annual meeting of the Consolidated Tin Mines of Burma Limited was held, on the 11th instant, in London.

Mr Reginald Pawle, A.R.S.M., M.Inst.M.M., who presided, said that whilst the results showed a modest improvement, they would have been much more favourable if their concentrates had been saleable at the prices ruling in the previous year. The net surplus on operations amounted to £26,496, and there was a total available of £29,272; after payment of the dividend of 6d. per share recommended, there would remain £8,066 to carry forward.

Turning to the balance sheet, which showed a sound liquid position, he would point out with regard to the investment in the subsidiary company (Mineral Products, Limited), which at the height of the economic crisis in 1932 was of negligible value, that at its annual meeting a few days ago he had been able to announce that its capital had now been fully restored, and it was confidently expected that an initial dividend would be paid during the current year.

It was satisfactory to report an output of 1,022 tons for their own company for the past year—an increase of 300 tons. Working costs showed a moderate reduction of £6 1s. 10d. per ton.

It was considered in the best interests of the shareholders that an independent consulting engineer should conduct an examination and valuation of the properties, and submit a comprehensive report. After that, consideration would be given to a scheme for the reconstruction of the capital.

As to prospects, production for the past four months was slightly higher than for the corresponding period a year ago, and the board looked forward with hope and confidence to the future.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 7, 1936, amounted to £15,520,000, against ordinary expenditure of £26,248,000. After allowing for an increase in Exchequer Balances of £266,988, the operations for the week, as shown below, increased the gross National Debt by £11,220,000 to approximately £8,010 millions.†

(000's omitted)		
Treasury Bills	+ 6,775	National Savings Certificates..... - 100
Public Department Advances	+ 4,800	Road Fund..... - 68
Land Sett. (Facilities)	+ 13	
	+ 11,388	- 168

† Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt at September 30, 1936, appeared in the *Economist* of October 3, 1936.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £45,000,000 Treasury bills were opened on November 6, 1936. The amount applied for was £72,395,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 17s. 2d., about 42 per cent. and above in full; Saturday at £99 17s. 3d. and above in full. The average rate per cent. was 11s. 0.59d. The amount allotted was £45,000,000.

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
January 5, 1934	35,000,000	76,260,000	30,000,000	0 18 11.5
July 6, 1934	35,000,000	62,745,000	32,000,000	0 16 4.14

Deduct debenture interest accrued £57,333, estate duty £1,282, interest £964, and income tax £22,082, leaves £46,616 forward.

CENTRAL URUGUAY NORTHERN EXTENSION.—Report to June 30, 1936, shows gross receipts £81,557, against £59,949. Net receipts £34,978, against £23,979. Add balance of fixed quantum receivable from Central Uruguay Railway under working agreement £1,899, making £36,877. Against this has been charged debit balance from 1934-35, £12,454, debenture interest accrued £31,357, interest £4,850, estate duty £712, income tax £8,541, leaving debit forward £21,037.

CORDOBA CENTRAL RAILWAY COMPANY.—Working by the Cordoba Central Railway Company for the year ended June 30th last resulted in twelve months. With the debit of £341,956 for the previous debit to carry-forward of £870,655.

MISCELLANEOUS

LEWIS BERGER AND SONS.—Lewis Berger and Sons report a net profit of £147,127 for the year to July 31, 1936, compared with £141,392 in 1934-35. Depreciation provision was up from £4,000 to £5,000, £1,134 for £8,500 against £6,000. The year's preference dividend absorbed £28,000, ordinary dividend 16 per cent. against 15 per cent. Carry forward £114,133 compared with £109,370 brought in.

EDMUNDSONS ELECTRICITY CORPORATION, LTD.—The results of the operations of the Edmundsons group of companies during the month of October, 1936, as compared with the corresponding month of 1935, show an increase of 15 per cent. of units sold.

ROCHDALE CORPORATION 3½ PER CENT. REDEEMABLE STOCK. 1955-60.—Williams Deacon's Bank, Ltd., give notice that in order to Rochdale Corporation 3½ per cent. redeemable stock 1955-60, the balances of the various accounts will be struck at the close of business on December 1, 1936. The persons who on that date are registered as stockholders will be entitled to receive the dividend next payable.

ROCHDALE CORPORATION 3 PER CENT. REDEEMABLE STOCK. 1956-58.—Williams Deacon's Bank, Ltd., give notice that in order to Rochdale Corporation 3 per cent. redeemable stock 1956-58, the balances of the various accounts will be struck at the close of business on December 1, 1936. The persons who on that date are registered as stockholders will be entitled to receive the dividend next payable.

HENRY MEADOWS.—The directors propose to reorganise the capital. value it is thought that, in addition to amalgamating all the shares, making shares of 5s. in proportion of four for each "B" share of 5s. The "A" portion of one for each twenty "A" subdivided shares of 5s. each in pro- Wolverhampton on December 10th.

IMPERIAL SMELTING CORPORATION, LTD.—The profit and loss account to June 30, 1936, shows a surplus of £69,314, after meeting the dividend on the cumulative preference shares of £134,538, compared with an amount brought forward from the preceding year of £44,016—an increase of approximately £25,000.

The net profit shows at £145,967, against £123,092 for the year ended June 30, 1935, and the total of the net balances carried forward, at £89,135, shows an increase of £11,429. Appended to the report is a consolidated statement of assets and liabilities, which also shows the comparative figures at June 30, 1935.

INTERNATIONAL NICKEL COMPANY OF CANADA, LTD.—Quarterly statement to September, 1936, shows a net profit of \$9,572,105.83, equal to 62 cents per share on common stock after allowing for preferred dividend. This compares with net profit of \$9,070,186.61 for previous quarter, equal to 59 cents per share. Net profit for first nine months of 1936 was \$27,029,079.85, as compared with \$18,080,827.01 for same period in 1935, or \$1.75 per share, as against \$1.14 a year ago. The consolidated balance sheet, September 30, 1936, shows current assets at \$72,598,637.46, including \$43,535,737.56 in cash and government securities, compared with current assets of \$60,109,935.98, including \$32,720,024.06 in cash and government securities, as at December 31, 1935. The total of the earned and capital surplus amounts to \$116,894,400.79.

FOSTER CLARK, LTD.—The report covers a period of 51 weeks to September 16, 1936. Total profit is £81,644, compared with £96,379 for the previous 52 weeks to September 26, 1935. Profit from sales of

investments amounts to £13,291, against £4,424 last year. The latter sum was placed to contingency reserve. No provision is made for taxation this year, against £5,200 last year. A sum of £10,000 is provided for pensions and £10,000 for advertising. Last year £15,575 was placed to contingency reserve. Ordinary dividend for the 51 weeks is 2½ per cent., the same as in 1934-35. The carry-forward is reduced from £69,278 to £64,319.

GALLAHUE, LTD. (OFFER TO ACQUIRE SHARES OF E. ROBINSON AND SONS).—Gallahue, Ltd., has offered to acquire the shares of E. Robinson and Sons, of Stockport. Holders of E. Robinson's 1 ordinary shares are offered 80s. per share, while 30s. is offered for each £1 5 per cent. preference share.

BROWN BAYLEY'S STEEL WORKS, LTD.—Net profits for year to July 31, 1936, were £64,976 higher at £123,542. Dividends on the £500,000 of 5 per cent. (tax free) preference capital are brought up to July 31, 1935, by the payment of three years' arrears. This distribution takes £75,000, while in addition there is this time an allocation of £25,000 to general reserve and £25,000 to reserve for obsolescence of buildings, plant and machinery. The carry-forward is £20,124, compared with £21,582 brought in.

PERUVIAN CORPORATION, LTD.—The accounts for year ended June 30, 1936, show that gross railway traffic receipts have risen over £200,000, to £975,825. Working expenses, however, have also advanced, totalling £807,164, against £617,600, which leaves net receipts £107,511 up at £168,661. A debit of £938,876 is carried forward, against a debit of £780,266 brought in.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

Two unexpected developments occurred to disturb the even tenor of the commodity markets during the past week. The first was a bearish estimate of the American cotton crop and the second a surprise advance in tin quotas.

The improvement in sentiment following last week's announcement of the agreement with Siam carried tin prices to a new high level for the current year. On Tuesday the cash price touched £245 5s. per ton. In the circumstances, the announcement on Wednesday that production quotas would be raised to 105 per cent. of the standard tonnages, with retrospective effect from October 1st, came as a shock to the market and quotations slumped heavily. Nevertheless, the reaction was short-lived and prices remain well above the level of a week ago. Meanwhile, the steep rise in the price of other non-ferrous metals has been checked for the time being.

The United States Department of Agriculture sprung a surprise upon the cotton market on Monday, by forecasting the American crop at 12,400,000 bales. This was substantially in excess of market expectations, and was responsible for a decline in the price of American cotton. Egyptian sakel, on the other hand, scored a recovery, after last week's easiness. Wool continued very strong in sympathy with the buoyant tendency of markets in Australasia, while flax and jute were also marked up. Few new features were apparent on the market in vegetable oils and oilseeds, but good trade buying was responsible for a further advance in the price of rubber.

Wheat quotations were rather higher, despite a week of quiet trading, and other grains were also dearer. Bacon was a firm market, and butter was marked up on shorter supplies. Sugar scored an improvement but, on the other hand, the recent strength of the tea market was not maintained. Eggs declined in consequence of a slackening of demand, but potatoes were rather dearer, the bad weather having retarded loading.

American markets were closed on Wednesday, but the general tendency of prices during the week was again upwards. Thus Moody's index of the dollar prices of staple commodities (December 31, 1931=100) was 186.3 on Wednesday, against 183.6 a week earlier, 183.6 a month ago and 166.5 on the same date last year.

COAL

SHEFFIELD.—There is an active home demand for industrial fuels. Small coal is rather difficult to obtain, demand for supplies by coke and electricity works being at a high level. As a result of the mild weather there is not much business in household coal. There is a fair export demand for prompt shipment, especially for smalls, singles and doubles. Demand for hard coal is easing and enquiries for forward delivery are limited.

NEWCASTLE-ON-TYNE.—The new Anglo-Italian trade agreement, which comes into operation on November 16th, will be of considerable benefit to the coking and gas collieries in this area. This section of the market has already shown much greater strength under an active home trade; and, unless production is considerably increased, supplies will not be easily obtainable when business with Italy is resumed. Quotations for forward shipment exceed current prices. Steam coals of all classes are a firm market, there being little coal of any description available until the end of the winter. Patent oven coke is very scarce, and Danish consumers complain of lack of supplies from this district under trading agreements.

GLASGOW.—Although slow to gather momentum, the seasonal expansion in home demand is now more pronounced, and the general outlook is good. Industrial needs are brisk, and coastwise business proceeds on satisfactory lines; but while shipping collieries are mostly well booked into next year, they are still affected in the prompt position by the displacement of tonnage due to the recent stormy weather. This, incidentally, has diminished the demand for navigation bunkers, but other classes of fuel remain steady, with doubles and pearls scarce in a generally firm market for washed nuts.

CARDIFF.—On the Cardiff coal market on Tuesday disappointment was expressed with the terms of the new Anglo-Italian commercial agreement. In 1929 the United Kingdom exported over 7 million tons to Italy, and the Bristol Channel ports alone nearly 3.2 million tons, while even

in 1932, when most of the international agreements dealing specially with coal were arranged, British exports totalled over 5 million tons, and those of the Bristol Channel ports 2.3 million tons. The pact signed in Rome last Monday limits the importations of coal and coke from this country to a quarterly c.i.f. value of 45.3 million lire, and on the basis of current f.o.b. prices, freight rates, and the sterling lire exchange, this sum represents only about 400,000 tons, or 1.6 million tons for the whole of the experimental period of twelve months. As Italy normally takes roughly half of its British supplies from South Wales, the agreement means that deliveries to Italy from South Wales will amount to a total of approximately 800,000 tons per annum, compared with 2.3 million tons in 1932, and 3.6 million tons in 1930. Moreover, on the assumption that the normal Italian imports from all sources in the period covered by the agreement will be at the rate of from 8 to 8½ million tons per annum, the British share of total imports will be less than 20 per cent., compared with 27.5 per cent. in the pre-war year. On Monday a delegation from the South Wales Executive Board proceeded to Rome to discuss the position with the Italian authorities. The volume of trade shows little change, and at 390,300 tons, shipments in the foreign and coastwise trades last week were 27,500 tons less than in the corresponding week last year. Prices are nominally unchanged, except for some of the smaller grades which have been increased by about 6d. per ton.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that there has been no relaxation in the busy conditions which have ruled in the iron and steel trade for many weeks. The pressure exercised by consumers to obtain urgently needed material is a noticeable feature of the position. In many cases plant has been working continuously for long periods and manufacturers would be glad if there were a lull in the demand to provide an opportunity for an overhaul which is overdue. In most departments makers are concentrating upon meeting their contract commitments and are not seeking new business.

In the pig iron section the scarcity of foundry and hematite iron still causes some concern. Although consumers are closely rationed, a number of producers have fallen behind in their deliveries against contracts. Demand for basic iron is of almost record proportions, but home output plus the imports from Russia appear to be sufficient to meet requirements.

In the semi-finished steel department stringent conditions still rule, but lately the situation has been eased by the imports of material from the Continent. British works are producing practically at capacity, but they are unable to satisfy the full requirements of their customers.

Operations in the finished steel section of the market show no decline from the high rate which has obtained for many weeks. In practically all departments demand is in excess of the capacity of the producers, and, although efforts are being made by them to distribute their output as well as possible among consumers, there is a tendency for delivery arrears against contracts to accumulate.

SHEFFIELD.—Business continues to run at a high level, and there is every indication that this state of affairs will continue to the end of the year and apparently well into 1937. Consumers of forge and foundry iron are finding it increasingly difficult to place contracts, business mainly relating to limited parcels. In this area users have to rely mainly upon now available owing to the growing needs of that district. It is stated that some producers are now having recourse to the rationing of their customers. So far no alteration in quotations has occurred, but there is a general expectation that an upward movement cannot much longer be delayed. There is a distinct shortage of West Coast hematite, and East ago. Demand is keen and business is done subject to a premium of around 10s. per ton. The improvement in the demand for finished iron is well maintained and the outlook is regarded as moderately satisfactory. For requirements show an upward tendency. There is plenty of business in heavy.

All branches of the steel trade here are active and orders on an important scale continue to flow in. One order alone is valued at £100,000 and is for special hollow forgings for Italy. A good deal of shipyard work is coming in and the railways and collieries are placing work here of considerable value.

MIDDLESBROUGH.—Demand for all classes of iron and steel continues to increase. A considerable proportion of the pig iron produced locally is going into direct consumption at the producers' own steelworks. Supplies of foundry iron continue to be rationed to the various consumers, who are pressing for increased tonnages. Actual business in either foundry or pig iron or hematite iron is small, for, owing to the heavy demand, producers are practically sold out until the early months of next year. Prices for shipment to customers abroad are meeting with little success in their efforts to obtain delivery. Re-rollers are receiving good supplies of semi-finished steel from local producers but are also taking some of foreign

The constructional and shipbuilding sections of the steel trade are very active, and, in some cases, deliveries are delayed. A further order has been placed with Tyne shipbuilders for a large twin-screw motor vessel.

New business in foreign ore is little heard of, but deliveries under existing contracts continue to arrive at a steady rate. Good Durham blast-furnace coke is maintained at 24s. 6d. per ton delivered works. Heavy steel scrap can easily be disposed of at 60s. per ton delivered.

GLASGOW.—There has been no change in the iron and steel trades this week, business in all branches being characterised by intense activity. Demands for shipbuilders' material both from the Clyde and East Coast yards are particularly heavy. Re-rollers are finding it difficult to obtain adequate supplies of semis, and it is impossible for them to arrange their programmes for more than just a week or two ahead. Sheet makers are in the export branch is maintained. Business placed with the principal manufacturing industries is on an important scale and is providing work for an increased number of skilled operatives.

CARDIFF.—The rise in the price of tin has stimulated the current demand in the tinsplate market, and works are at present well employed up to the allotted quotas. Shipments at Swansea last week totalled 77,182 boxes, compared with 52,844 boxes the previous week, and 107,230 boxes in the corresponding week last year; and although the home trade was steady, stocks increased from 93,810 boxes to 108,809 boxes, compared with 58,141 boxes in the corresponding week last year. Prices were unaltered at 18s. 4½d. per basis box f.o.t. for inland supplies and at 18s. 9d. f.o.b. There has been a slightly better export market in galvanised sheets, but prices are unaltered and tinsplate bars continue to be quoted at 76 per ton delivered.

OTHER METALS

COPPER.—After rising to £45 per ton, copper prices have shown a reactionary tendency during the past few days. If, as seems likely, this weaker tone continues, operators who have recently been "bulling" the market may be expected to liquidate some of their holdings. Consumers' needs are now better covered and, moreover, consuming industries will be seasonally less active in the near future. Hence, the market seems unlikely, as yet, to repeat its recent display of strength. Meanwhile, the United States domestic quotation was raised by half a cent, as from November 6th, to 10.50 cents per lb., a rise which seems justified in view of the recent advance in the export price to over 10.60 cents. By the raising of the domestic price, the relationship between the two quotations has been normalised once again.

Sales on the London Metal Exchange: 5,150 tons on Monday, against 3,000 tons last week; 3,300 tons on Tuesday, against 3,450 tons last week; 2,300 tons on Wednesday, against 3,900 tons last week. Domestic spot was quoted at 10.52½ cents per lb. in New York on Tuesday, against 10.40 cents a week ago and 9.72½ cents a month ago. Wednesday's official closing price for standard cash in London was £43 11s. 3d. to £43 13s. 9d., compared with £44 5s. to £44 7s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 47,186 tons, show a decrease of 69 tons, while stocks of rough copper, at 1,058 tons, show a decrease of 157 tons on the week.

LEAD AND SPECTER.—A slackening of demand was responsible for the easier tendency in these metals in the early part of the week. Supply conditions remain unchanged; according to the *Metalgesellschaft*, world production of smelter lead in September (excluding Spain) was 112,771 metric tons, against 111,126 tons in August, or almost 5,000 metric tons below the monthly average output in 1935—a figure which, however, includes Spain. On the other hand, consumption has shown a rising trend during the past year, and is outrunning production. The course of lead and spelter prices in the immediate future will be largely governed by the attitude of speculators, who have recently been bullish and who may now be inclined to take their profits.

Sales of lead on the London Metal Exchange: 2,200 tons on Monday, against 1,200 tons last week; 1,900 tons on Tuesday, against 3,000 tons last week; 2,600 tons on Wednesday, against 3,000 tons last week. The New York quotation on Tuesday was 5.10 cents per lb., against 4.90 cents a week ago and 4.65 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £21 5s. per ton, compared with £20 5s. a week ago.

Sales of spelter on the London Metal Exchange: 2,200 tons on Monday, against 1,300 tons last week; 2,400 tons on Tuesday, against 1,900 tons last week; 1,650 tons on Wednesday, against 2,800 tons last week. Tuesday's quotation in East St. Louis was 4.95 cents per lb., against 4.85 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 1s. 3d. per ton, against £16 5s. last week.

TIN.—The upswing of prices, which followed last week's announcement regarding the future of the restriction scheme, continued in the early part of this week, the cash quotation closing at £245 5s. per ton on Tuesday—a new high record for the current year. The official quotation suffered a sharp setback on Wednesday morning, following the publication of the announcement that production quotas for the last quarter of 1936 would be raised by 15 per cent. to 105 per cent. of the standard tonnages, with retrospective effect from October 1st. The increase was to be general except in the case of Bolivia, whose quota was raised from 75 to 90 per cent. It is anticipated that only Malaya and the Dutch East Indies will be able to produce the additional quota now authorised and that some 4,000 tons of additional tin may be expected to come on to the market. Even this increase will not be available for some time. It was possibly this reflection which caused prices to recover on Wednesday afternoon.

Sales of tin on the London Metal Exchange: 825 tons on Monday, against 375 tons last week; 550 tons on Tuesday, against 600 tons last week; 570 tons on Wednesday, against 475 tons last week. The New York quotation on Tuesday was 53.50 cents per lb., against 47.40 cents a week ago and 44.55 cents a month ago. Wednesday's official closing quotation in London for standard cash was £232 to £232 10s. per ton, compared with £217 to £218 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 864 tons, a decrease of 93 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £14 5s. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at 56 per ton ex warehouse, the same as last week. Chinese wolfram for "November-December" shipment was quoted at 30s. to 31s. per unit, c.i.f., as against 28s. 6d. to 29s. 6d. per unit last week. Refined platinum at £9 15s. per ounce remains unchanged.

TEXTILES

COTTON.—Manchester.—At the end of last week a big business was transacted, especially in yarns. The Lancashire Cotton Corporation announced that prices would be advanced on Monday and this decision resulted in heavy buying. The good progress which is being made in connection with the price-fixing scheme in the Egyptian section enabled spinners to advance their quotations and the hardening movement has brought out more orders. The bearish crop estimate of the American Government on Monday last was a distinct surprise for traders; the fall in values in New York and Liverpool, with a possibility of a further decline, has had an unsettling effect and during the last few days the Manchester market has been quieter. Most spinners and manufacturers, however, have now substantial order lists and buyers are finding it difficult to obtain price concessions when definite business is offering. In some quarters there is a disposition to increase forecasts of the probable consumption of American cotton this season and the total may be 12,750,000 bales. Advances are being received of larger supplies of outside growths.

Throughout the week there has been an active demand in the cloth market. The large inquiry has been maintained and a substantial business done. After being rather quieter, freer buying has again taken place in a variety of goods for India. Some encouraging contracts have been reported in dyed fancies for Java. Sales for Egypt have improved and heavy shirtings and coloured cloths have continued to attract attention for West Africa. Sateens and prints have been bought for South America. Rather more activity has been mentioned in fine fabrics for the Continent, especially Switzerland. Standard makes and Coronation materials have moved off fairly freely. Manufacturers with wide looms are now fully sold for nearly six months ahead. Spinners of coarse American yarns have now healthy order books. Determined efforts are being made to improve margins in medium counts. The position in Egyptian qualities is improving.

COTTON PRICES

AMERICAN COTTON SUPPLIES.—The officials of the U.S. Department of Agriculture are in danger of losing their reputation for accuracy as the reports for the 1936-37 crop have been by no means reliable. At the beginning of August the growth was estimated at 12,481,000 bales, and the yield per acre at 199.7 lb. Early in September the probable crop was cut down to 11,121,000 bales, the yield per acre being 179.2 lb. In October there was an increase to 11,609,000 bales and 186.9 lb. yield per acre. On Monday last a further report was due, which was expected to increase the probable crop to 12,000,000 bales, but the actual figure was 12,400,000 bales, the yield per acre being raised to 199.7 lb., the same as in August last. Prices in New York and Liverpool have not fallen to the extent which might have been expected as there continues an active demand from the trade, but a moderate decline has occurred which has caused uncertainty amongst operators. Owing to increased industrial activity, especially in the United States, it is quite likely that world consumption this season will be 12,750,000 bales, against 12,500,000 bales last year. The decrease in the carryover to next season will therefore probably be comparatively small. It is now taken for granted that the restriction of production will be maintained in some form or another, but the authorities at Washington are closely watching the output of other countries and it is estimated that these outside growths for the current season will be 17,500,000 bales, against 16,000,000 bales for last year. Hence there does not seem to be much ground for expecting any big rise in cotton prices in the near future.

WOOL.—Bradford.—At all selling centres in Australasia weekly sales continue and the raw material is still rising in price, despite the absence of Japanese support. It may now be said that Australia has entered upon the most important part of its selling season, big quantities of wool being put weekly upon the market. At the end of the current month the supply of combing wool in South Africa will be practically finished. Hence if Japanese mills still require wools showing length of staple and fine quality, they will be compelled to make their purchases on the Australian market. Japan is at present paying prices in South Africa considerably above what similar wools are costing in Australia. The extended competition of the Continent in Australia has undoubtedly given a fillip to the market. Wool is in very active demand and prices are still moving upwards. The clip this season appears to be well grown, showing sound manufacturing properties. Attention is now centred on the final series of London Sales which begin in Coleman Street next Tuesday. Selling brokers have declared 100,500 bales as being available. The merinos mostly comprise new clip wools, and the crossbreds from New Zealand will be largely shipes, scoured, and old greasy parcels. A very good series is expected with marked advances in prices. Meanwhile, home trade continues healthy with most mills working overtime.

GRAIN MARKETS

WHEAT.—Apart from some active buying of new crop Plate wheat by Italy, the market has been featureless during the past few days. Nevertheless, prices at the close on Wednesday were rather above the level of the previous week. Meanwhile, crop news from the growing areas in Australia and Argentina remains satisfactory.

On Tuesday last, "December" futures were quoted in Chicago at 114½ cents per bushel, against 114½ cents the week before and 116½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 43s. per 496 lbs., against 42s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 42s. 9d., against 42s. 3d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,560,000 quarters, against 1,516,000 in the previous week and 1,408,000 quarters in the corresponding week a year ago.

FLOUR.—Demand has been quiet and quotations have suffered a renewed decline. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 36s. per 280 lbs., against 36s. 6d. a week ago; delivered inner London, 35s. 6d., as compared with 36s. a week ago. Manitoba patents, ex store, 33s. 3d. to 34s. 9d. against 33s. 3d. to 34s. 9d. a week ago, Australian, ex store, 32s. 6d., against 32s. 6d. a week ago.

BARLEY.—The market has been steady this week. "December" futures were quoted at 60½ cents per bushel in Winnipeg on Tuesday, against 58½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new), at farm, 28s. to 29s., as against 28s. to 29s. a week ago; "English malting" (new), at farm, 34s. to 50s., against 34s. to 50s. last week; Californian (new), ex ship, 47s. to 58s., against 47s. to 58s. last week; Chilean, brewing, ex ship, 36s. 6d. to 42s., against 36s. 6d. to 42s. a week ago.

OATS.—Prices are somewhat higher on the week. On Tuesday, "December" futures were quoted at 42½ cents a bushel in Chicago, against 41½ cents a week ago and 41½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 21s. to 22s. per 336 lbs., against 21s. a week ago; "English White" (new), at farm, 21s. to 22s., against 21s. a week earlier; mixed Canadian feed (Vancouver), landed, 21s. per 320 lbs., compared with 20s. 9d. last week.

MAIZE.—After the easiness of recent weeks the market has developed a firmer tone, partly in sympathy with Chicago. "December" futures were quoted on Tuesday at 10½ cents per bushel in Chicago, against 9½ cents a week ago and 9½ cents last month. Quotations in London, Wednesday: "Plate," landed, 22s. 9d. per 480 lbs., compared with 22s. 9d. a week ago; "Plate," ex ship, 21s. 9d., as against 21s. 9d. a week ago; "Plate," "November," 22s. 3d., as against 22s. a week ago; yellow maize meal, ex wharf, was quoted at 66 to 68 5s. per ton, as against 66 2s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURES	Jan. 3, 1934	Jan. 2, 1935	Nov. 13, 1935	Dec. 31, 1935	Nov. 4, 1936	Nov. 10, 1936
Winnipeg (No. 1, Manitoba)	65½	82½	82½	84½	106½	105½
Chicago (No. 2 Winter)	84½	96½	93½	75½	114½	114½

The visible supply of wheat in Canada amounts to 82,876,000 bushels, against 86,548,000 bushels last week, and 145,868,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—				
1 week to November 7	287,208	352,853	452,258	332,624
10 weeks to November 7	3,568,947	4,779,042	4,744,991	3,264,321
Average price of English wheat per cwt.	s. d. 4 8	s. d. 4 11	s. d. 6 1	s. d. 8 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
November 5, 1932	334,481	408,323	58,941	5 6	7 7	6 0
November 4, 1933	287,208	499,216	48,020	4 8	9 7	5 4

OTHER FOODS

BACON.—The market has been generally steady this week, although English and Irish have been in rather quiet demand. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 88s. to 90s.; Canadian, 80s.; Danish 90s., as against 88s. to 90s., 80s. and 90s. last week. Arrivals in London last week included Danish, 11,145 bales; Canadian, 6,310; Dutch, 2,160; Lithuanian, 1,217; and Polish, 2,720; as against 12,646, 6,116, 2,288, 1,092 and 2,681 bales, respectively, in the previous week.

BUTTER.—Supplies of unsalted butter from Colonial sources have been absent from the market this week and quotations for other descriptions have consequently been firmer. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 112s.; Australian, choicest salted, 110s. to 111s.; Danish, 125s. to 126s., compared with 106s. to 107s.; 106s. and 122s., respectively, a week ago.

CHEESE.—The market has been steady to firm. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows:

English, finest farmers, 82s. to 86s.; Canadian, finest coloured, 70s. to 71s.; and New Zealand, finest coloured, 71s., against 82s. to 86s., 69s. to 70s., and 68s., respectively, a week ago.

COCOA.—The spot quotation in New York on Tuesday was 8½ cents per lb., as against 8½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted 39s. 3d. per 250 kilos, c.i.f. Continent, against 38s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 2,241 bags; delivered, for home consumption, 5,548 bags; exported, 4,672 bags; stocks, 118,855 bags, against 114,334 bags a year ago.

COFFEE.—The spot markets both in New York and London have been quietly steady. On Tuesday, Rio No. 7 (cash) was quoted at 8½ cents per lb. in New York, as compared with 8½ cents per lb. last week and 7½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 18 cwt.; delivered, for home consumption, 201 cwt.; exports, nil; stocks, 9,307 cwt., against 12,643 a year ago. Central and South American, landed, 694 cwt.; delivered, for home consumption, 2,682 cwt.; exported, 903 cwt.; stocks, 59,113 cwt., against 85,668 last year. Other kinds: landed, 3,480 cwt.; delivered, for home consumption, 4,291 cwt.; exported, 860 cwt.; stocks, 95,925 cwt., against 112,565 last year.

EGGS.—In consequence of a less active demand, prices have suffered a decline this week. At Smithfield, on Wednesday, English (ordinary) packing, Grade I, about 15-15½ lb., realised 19s. to 20s. per 120, as against 20s. to 22s. last week, while Danish (15½ lb.) made 16s. to 16s. 6d., as against 16s. to 16s. 6d. last week.

FRUIT.—The seasonal quietude associated with November has been accentuated by the bad weather of the past week, and prices are generally easy. At Covent Garden, according to *The Fruitgrower*, the apple trade remains steady, although the volume of supplies keeps prices at a rather low level. Pears, on the other hand, have shown a hardening tendency in consequence of a reduction in the quantity available. English hothouse grapes have shown an improvement, though some imported varieties are selling at lower prices. Cobnuts and walnuts are easy, while Tunis dates are plentiful and cheap. Oranges continue to sell well, but at rather low rates, while lemons show a further drop in prices, consequent upon an increase in supplies. Grapefruit, although cheap, are a rather better trade.

MEAT.—Business at Smithfield was only fair during the past week. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 8d. to 4s. per 8 lbs., as compared with 3s. 6d. to 3s. 10d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. 2d. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 10,000 tons, an increase of 544 tons on the corresponding week last year. Beef and veal accounted for 5,124 tons, mutton and lamb 2,752 tons, and pork and bacon 1,230 tons, as compared with 4,894, 2,453 and 1,376 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 10 tons; delivered, 11 tons; stocks, 1,797 tons, against 1,453 tons a year ago. White, landed, 37 tons; delivered, 45 tons; stocks, 11,866 tons, against 14,987 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. per cwt., ex warehouse, on Wednesday, as compared with 9s. per cwt. a week ago. "November-December" in singles to Continent and U.K. was quoted at 8s. per cwt., against 7s. 10½d. last week for "October-November." Movements in London during the past week were as follows: Landed, 13 tons; delivered, 281 tons; stocks, 2,010 tons, against 6,948 tons a year ago.

SUGAR.—The firmness noted on the New York market a week ago has continued and prices are again higher on the week. London prices have shared in the upward movement. The spot price in New York on Tuesday was 3-70 cents per lb., as compared with 3-50 cents per lb. last week and 3-35 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at from 4s. 11½d. to 4s. 11½d. against 4s. 10½d. to 4s. 10½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 37,021 tons, against 14,390 tons last week and 17,974 tons in the same week of last year; deliveries, 15,836 tons, against 18,032 tons last week and 15,284 tons last year; stocks, 116,824 tons, against 95,639 tons last week and 167,432 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks.

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Nov. 7, 1935	13-33	12-31	15-03	12-18	9-42	11-63	13-53
Oct. 1, 1936	13-39	11-95	13-41	10-91	9-90	11-55	13-09
Oct. 15, "	13-22	11-92	13-62	10-81	9-95	11-63	13-03
Oct. 22, "	13-19	12-00	13-87	11-08	10-11	11-30	13-12
Oct. 29, "	13-24	12-08	13-96	11-32	10-07	11-59	13-22
Nov. 5, "	12-99	12-12	14-61	11-61	10-03	11-62	13-24
	13-03	12-51	14-85	11-93	10-12	11-97	13-40

The quantities catalogued for the public auctions in Mincing Lane this week comprised 52,864 packages of Indian and 21,937 packages of Ceylon tea. Demand for Indian grades was not quite so brisk as last week and quotations were consequently a shade easier. The market in Ceylon grades was irregular and, here also, prices were rather lower.

VEGETABLES.—Canary Island tomatoes, states *The Fruitgrower*, have been a more prominent feature at Covent Garden this week and are rather lower in price. Cucumbers, in limited supply, are not in active demand, but mushrooms hold their price. In consequence of an abundance of supplies, prices of cabbage, cauliflower and savoy remain at a low level. Sprouts are also more plentiful and easier, but celery sells well. Onions are easy. Carrots, turnips and parsnips are moving better, but sell at moderate prices. Meanwhile, the bad weather has somewhat retarded the loading of potatoes, while demand has shown an improvement. Quotations for best siltland King Edward consequently advanced to 8s. 6d. to 9s. 6d. at the Borough on Tuesday, against 8s. to 9s. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—The market has a rather better tone. Indian linseed is in improved demand in near positions, but Plate is neglected so far as English crushers are concerned. Purchasing generally, however, is still restricted owing to the uncertainty surrounding the Argentine Government's policy in regard to the assured minimum prices

to growers. Meanwhile, prospects of the new crop in South America indicate a big yield. Reports of frost and rain in several districts are to hand, but are neither serious nor unusual at this time of year. The old Plate crop continues to move off in fair volume, and the unsold balance is now estimated at 143,000 tons. The quantity now afloat for Europe is 118,200 tons, including 18,200 tons from India, or 12,600 tons less than last week; and for the United States and Canada 77,800 tons, against 55,600 tons a year ago. Trade in linseed oil is mainly for early delivery and is a little more active, though price fluctuations are very small. Business for forward delivery is reported at 24 10s. per ton ex Hull mill January-August.

Cotton seed is dearer in sympathy with Alexandria, but demand is poor. Crude cotton oil has been marked up to 26 per ton, naked, ex

Hull, but is in slow request. Oilcakes are unchanged in price, demand being normal for this time of the season.

RUBBER.—In consequence of an active trade demand, and a further drop in U.K. stocks, the price of rubber scored a renewed advance this week. The spot price in New York on Wednesday was 17½ cents per lb. compared with 17½ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8½d. per lb., as against 8½d. on the corresponding day last week. In forward positions, business has been done at 8½d. for "December" shipment, as against 8½d. to 8½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 94,131 tons, against 96,673 tons a week earlier. A year ago stocks amounted to 167,007 tons.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, NOVEMBER 16—THE SISAL INDUSTRY. During the past year or two several new East African Sisal companies have been floated in the London Market. This article examines the prospects in the Sisal Market and the probable fortunes of the East African companies.

TUESDAY, NOVEMBER 17—TIN SHARES. Our Special Mining Correspondent, MINOTAUR, in his usual Tuesday article, this week takes up the subject of Tin Shares in the light of the fresh increase in the quota and discusses its meaning for leading tin companies, including:

Southern Malayan. Kamunting.
Southern Kinta. Petaling.

WEDNESDAY, NOVEMBER 18—SILVER. Silver has once again come into the speculative limelight as a result of Roosevelt's triumph in the U.S.A. elections and of rumours that the old silver policy might in some way be revived. In this article a Special Correspondent reviews the outlook for the Silver Market under the new conditions.

THURSDAY, NOVEMBER 19—COMPANIES AND THEIR PROFIT-EARNING CAPACITY. No. 26—"CHARTERED." This article analyses the position and prospects of the British South Africa Company, which probably stands to gain more from the copper boom than any Company other than the copper producers themselves.

FRIDAY, NOVEMBER 20—BRAZIL AND THE COFFEE MARKET. There have recently been some slight stirrings in the Coffee Market and some signs that Brazil may improve her relative position in the Market. This article examines the Coffee position and its significance for Brazil and her finances.

POLITICS AND DEFENCE

THE state of the national defences has become the most disturbing issue in British politics. In the field of foreign affairs, events follow each other with bewildering velocity; and the Government's inability to produce a policy for meeting them and its failure to resume the European initiative merely seem to accentuate the importance of its re-armament programme. Defence policy should always be a function of foreign policy; but since the Government lost the initiative in the Italo-Abyssinian crisis and so disarrayed the Powers which had combined in the cause of collective security—or, as Mr Churchill defined it last week, "combined defensive strength against aggression"—the Government have only been able to offer the country one expedient: unilateral re-armament. That is not a policy; yet it begins to appear as a means which has become an end in itself.

The cumulative anxiety of many months over the progress and organisation of the re-armament programme found explosive expression last week in two important Commons debates. In the Thursday night's debate, Mr Winston Churchill cogently epitomised the prevailing anxiety in a forceful attack upon the Government and its leader, Mr Baldwin. Mr Churchill charged the Prime Minister with responsibility for persistent and dangerous delays in inaugurating rapid re-armament, for rejecting the warnings of Mr Churchill and his colleagues until forced belatedly to recognise their justification, and for his eventual refusal to co-ordinate the supplies of the new armaments under the supreme authority of a Ministry of Supply. In this last indictment Mr Churchill was only reverting to contentions which he and others have consistently urged in the House for many months past. But last week Mr Churchill was enabled to plead in aid the recommendation of the recent Royal Commission on the Private Manufacture of Arms for what amounts to a

supreme Ministry of Munitions with its own plans for industrial mobilisation in wartime.

Mr Churchill asked Sir Thomas Inskip: What did the Minister for Co-ordination of Defence mean when he said, on Monday of last week, that the Government's decision in favour of the present system of organising supplies of armaments was not final; that it was being reviewed from day to day; that it would even, if necessary, be completely changed within "a few weeks"? What was there now to study which was not apparent at any time during the last two years? He taunted Sir Thomas with the latter's unfortunate reference to "the years that the locust hath eaten"; forbore to designate the locusts; and reminded Mr Baldwin that he had had, in effect, three years of power in which to meet the dangers which, in consequence of the scale and rate of German re-armament, would compass this country next year.

"Anyone can see what the position is," said Mr Churchill. "The Government simply cannot make up their mind, or they cannot get the Prime Minister to make up his mind. So they go on in strange paradox, decided only to be undecided, resolved to be irresolute, adamant for drift, solid for fluidity, all-powerful to be impotent. So we go on preparing more months and years—precious, perhaps vital, to the greatness of Britain—for the locusts to eat."

With recourse to figures and details, Mr Churchill declared that the air programme was (contrary to Sir Thomas Inskip's vague description of it as "not unsatisfactory") so far behind schedule that the seventy-one new squadrons promised by March 31st next would only be ready if between now and then the output per week was trebled. "I say the Army lacks almost every weapon which is required for the latest form of modern war." The Army's equipment was out of date and inadequate; mechanisation was still only on paper; and our tanks were obsolete. The

Territorial Army was badly under-equipped. Nothing less than a Parliamentary inquiry by "six, seven or eight independent Members, who have some experience of these matters, and are representative of all parties," empowered to establish the facts about the state of re-armament and its organisation, would meet the case.

After this heavy barrage had descended upon the Treasury Bench the House expected a stiff rejoinder. But neither the House, nor the country, nor—least of all—the Conservative Party leaders expected Mr Baldwin to spring a mine beneath his own ranks. Yet his reply had almost this effect. In a pained attempt at self-justification, the Prime Minister proceeded to make a speech which virtually admitted that a Government demand for re-armament, in 1934 and 1935, would have spelled electoral ruin for the "great Party" of which he was the responsible leader. Public opinion, as evidenced in the Fulham by-election and the Peace Ballot, said Mr Baldwin, was against both re-armament and the Government's policy. "A democracy is always two years behind a dictator." What, asked the Prime Minister, with a General Election in the offing, could he do? Then "certain events took place" that taught the public what perils it might have to face. "We got from the country—with a large majority—a mandate for doing a thing that no one, twelve months before, would have believed possible." "Had I taken such action as my right hon. friend desired me to take, it would have defeated entirely the end I had in view." Once again Mr Baldwin has dealt his own reputation a severe blow. For he has said in so many words that he refrained from telling the country the truth about the need of re-armament for reasons of party advantage. And his critics read his remarks as an admission that whereas the Government received a mandate to "fill in the gaps" in our armaments on the convenient pretext that this was necessary for the purpose of enforcing the "collective security" on which the country's mind was set, the Government had no intention of implementing this obligation "up to the hilt," but was thinking of re-armament in different terms.

One positive feature Mr Baldwin did offer. He invited Mr Churchill and his colleagues, and also the Leader of the Opposition, to meet the Government, to lay their anxieties before it in secret, and to receive secret balm for them. But it may be doubted if this is the right way, constitutionally or administratively, to handle the problems arising in the Defence Services and in the industries which supply their needs. It is common knowledge that schedules for deliveries are far in arrear; that many branches of engineering have reached the limits of their capacity; that "civil" orders cannot be fulfilled within businesslike time limits owing to the priority for re-armament orders; that extra skilled workers in many industrial centres are unobtainable; that trade union restrictions prevent rapid increases in apprentices or trainees; that, in consequence, wages are rising and overtime increasing; and that costs are rising rapidly. In the advanced stage of a cyclical business boom—and the majority of economists are agreed that such is the stage at which British industry has now arrived—a large re-armament programme, with its accompanying plans for industrial mobilisation in wartime, demands careful planning on a large scale. In default of this, both normal "civil" business and the re-armament programme must suffer; and rigidities or friction spots may well develop in industry which will have far-reaching and disturbing effects.

We certainly do not wish to see this country drawn in time of peace into all the inconveniences of wartime control, and our efforts to recapture our former prosperity paralysed by the bludgeon of Government compulsion, with its insistence on arbitrary "priority." But this is an argument for—not against—the systematic and expert control of the supply business of the three Services. We need a Ministry of Supply to prevent overlapping, to standardise costing and to co-ordinate contracts under the most skilled advice the Government can command. As things are, we seem to have neither efficiency in meeting our present need nor a rational organisation of industry to cope with the Services' possible needs in a war emergency. As Mr Churchill said: "The proper organisation . . . is four Departments—the Navy, the Army, the Air and the Ministry of Supply, with the Minister for

the Co-ordination of Defence over the four, exercising a general supervision, concerting their actions, and assigning priorities of manufacture in relation to some comprehensive strategic conception." If the Government are prepared "within the next few weeks," radically to overhaul their arrangements for re-armament, they may allay those grave anxieties to which the country and Parliament seem alike at present a prey. The times are not propitious for political discord over the conduct of our national defence programme.

A NEW TRIPLE ALLIANCE?

ON Tuesday of this week the world was startled by circumstantial reports of a Japanese-German convention, to which, so it was said, Italy would adhere. This happy trio, united by mutual recognition of each other's aggressive acquisitions or unilateral diplomatic achievements, would proceed reciprocally to grant each other concessions—Manchuria and Abyssinia came first into the picture—to support each other diplomatically, and to present a worldwide united front against Communism. Further, it was stated that the fulcrum of this lever, which the three "dissatisfied" Great Powers were to insert beneath the rest of us, would be a German-Japanese treaty, providing for anti-Communist measures and military co-operation on the one hand, and, on the other, an exchange of German armaments for raw materials from "Manchukuo." By Thursday no official statements from Tokyo, Berlin or Rome had been made, despite Mr Eden's request to the German Ambassador for information. It was, however, reported that there was no German-Japanese military agreement at all; that there was no treaty; that a "defensive pact of a novel kind" against "Communism" was indeed envisaged by Germany and Japan, to regulate in common their attitudes to Russia; but that no special trade agreement was attached to it. If German-Japanese exchanges increased, it would be by normal methods—presumably as normal as those whereby German "exchanges" have been increased in Central and South-Eastern Europe.

On the face of it, there is nothing new in the alignment of the three "dissatisfied" Great Powers. They are all thoroughly anti-democratic. Two of them have been convicted of wantonly levying war in open contravention of international commitments which they freely entered into; the third has elevated unilateral acts of might and shock tactics to the level of a fine art. They all deny the principles of collective security and progress by negotiation, as enshrined in the League Covenant; and they all demand that they should be the judges, not only in their own cause but also in that of others. For all these reasons, long grown familiar, the world has unanimously refused to accept this week's statement of their united front against "Communism" as the be-all and end-all of their policy. When three such Great Powers line up together merely on an "anti-Communist front," it behoves the other four of the world's Great Powers to stop, look and listen.

We do not know—and we shall certainly never be told—the precise terms of the German-Japanese understanding nor the extent of Italian participation. But there are several comments we can make at once with some assurance. First, this is one of the most significant events that has happened in the international arena since 1918. Secondly, it may prove to be the Nemesis (an exemplarily swift Nemesis) for Anglo-French hesitation in the cause of collective security. Lastly, it is obviously a piece of news which ought to be received with even greater concern in London than in Moscow.

No doubt we shall be told once again by our own false prophets that this is really a piece of good news for the British Empire, because it means that the three predatory Powers are stalking other quarry than ourselves. We will concede to them at once that a joint filibustering expedition against the British Empire is not the business which has brought the three "hungry" Powers together. Indeed, we can go much farther than that in exonerating the new Triple Alliance from the suspicion of harbouring

cold-bloodedly aggressive designs. We do not suppose that they have any immediate intention even of falling upon their designated victim, the Soviet Union. We believe that, as usual, the minatory gesture towards a foreign Power is really just the reverse side of a hortatory gesture towards the three dictatorial Governments' own domestic publics. But this is only another way of saying that the dictatorships are even further than the democracies from being masters of their own destiny. And that is just where the danger lies.

Financially, these three confederates are the weakest of the Great Powers. At the same time, they are all spending on armaments a far larger proportion of their national resources than is being spent by this country, France, the United States or the U.S.S.R. It is no exaggeration to say that in Germany, Italy and Japan today the armaments industry has swallowed up all the others. Since such an economy can only be maintained at the price of a progressive depression of the standard of living of the whole population of a country that lives in this way, the sacrifices that have to be demanded without respite must be justified by perpetually repeated demonstrations that they are a necessary insurance against some terrible danger—Communism. These enormous political drafts upon popular credulity and hysteria cannot, however, be drawn *ad infinitum* without occasional payments on account, like the Japanese militarists' adventure in Manchuria and Mussolini's adventure in Abyssinia. And while these two examples make it clear that the dictators are anxious to keep the necessary payments within limits and to choose the easiest options, at the same time it is plain that in the nature of the case their inevitable payments are bound to become progressively larger. The practical question before us is therefore not whether the three Fascist "dissatisfied Powers" really want to attack either Russia or the British Empire. Obviously, they would rather leave both these Great Powers alone, and would prefer to go on easing their own peoples' pangs of hunger by tossing to them the carcasses of small or weak countries like Abyssinia and China. But fresh victims of some sort must constantly be provided.

Theoretically, the new Triple Alliance has a choice of two alternative policies.

The policy which best fits with its professions—and probably also with its desires—is to attack and break the Soviet Union and then dun the democracies (hat in one hand and machine-gun in the other) for a suitable gratuity to the heroes who will have hazarded their lives in fighting the Bolshevik monster for the salvation of "our common civilisation." This line of policy must seem attractive to the Fascist Powers; for if they were to succeed in dealing a knock-out blow to Russia, they would then have Holland, Belgium, France and Great Britain at their mercy; and these four timid West-European democracies hold, between them, almost all the colonial loot in the world.

Now, under present conditions, there are a number of things that would work together for the good of the Soviet Union's defence. To begin with, there is the vast scale on which the country is built—a scale so vast that even the air-arm of the attacking Powers would find it difficult to reach the new Russian granaries in Western Siberia and the new Russian arsenals in the Urals. At present the only one of them who has a common frontier with the Union is Japan in the Far East; and in this sector contiguity does not work out to the aggressor's advantage, since the Russian air-arm at Vladivostok can bomb Tokyo and Osaka, while the Japanese air-arm in Manchuria cannot get within range of Omsk or Magnitogorsk. Accordingly, before the Triple Alliance can launch a joint war of aggression against Russia with any hope of success, Japan must have made herself mistress of China and Inner Mongolia all along the line of the southern frontier of the Union's Outer Mongolian protectorate. Meanwhile, on the other flank, Germany and Italy must have made themselves masters of Eastern Europe all along the line of the Soviet Union's Western frontier. This second preliminary operation, at any rate, is a formidable undertaking; for how can Germany hope to make even the opening move of swallowing Czechoslovakia without provoking Russian intervention and thereby bringing the Russian air-arm within bombing range of Munich and Berlin?

No. The easier option for a Triple Alliance is not Russia but the British Empire; for, unlike Russia, the British Empire lies strategically at the mercy of this particular combination. If the three of them were to strike at us simultaneously in our present state of almost Beaverbrookian isolation—the German air-arm striking at London and Glasgow, the Italian air-arm at Malta and Aden, and the Japanese navy at Hongkong and Singapore—should we have any chance at all of being able to repel such a concerted attack? What happens to a centipede when three ants sting it at the same moment in the middle and at either end?

To our eyes, this newly heralded Triple Alliance looks very like a consortium of desperate gamblers who have staked their all against the bank. Again, to our eyes, it looks as if Russia and the British Empire are together holding the bank. Things must be very bad in Germany, Japan and Italy if they really hope to persuade the world that, in such a trio, unity against Communism has no sinister significance.

LOCATION OF INDUSTRIES

THIS week's Parliamentary discussions of the plight of the Depressed Areas have made it more plain than ever that the British unemployment problem of to-day is largely a problem of location. The King's visit to South Wales has given vivid expression to a growing public concern. It is clear that the spectacle of acute unemployment persisting on the North-East Coast, in Cumberland and, above all, in South Wales in the midst of an industrial boom has finally convinced the public that ordinary cyclical recovery can work no rapid cure. This conviction was evidently widespread in the House of Commons debate on the location of industry on Wednesday. Both Conservative and Labour members advocated the adoption of positive efforts to direct new factories into these areas; and a motion was accepted urging that "steps should at once be taken to prevent further industrial concentration round London and in the south by directing new undertakings to those areas where unemployment and under-employment have for long caused hardship and distress. . . ."

We welcome Mr Chamberlain's suggestion (which we discuss in a Note of the Week on page 351) that the Government may provide stronger financial inducements to industrialists to come to the Special Areas. To say this is not to ignore the possibility of transference of labour from the Special Areas to other districts. Indeed, thanks to the low unemployment percentage outside the Areas, transference is already proceeding much more rapidly than is sometimes realised. Mr Malcolm Stewart, in his recent report on the Special Areas, shows that the total of persons transferred from the Areas under various Ministry of Labour schemes between January and August, 1936, was 21,713 (Durham and Tyneside, 10,717; South Wales,

9,911; West Cumberland, 1,085). Besides this, 8,238 men from the three Areas are "known to have found work for themselves" elsewhere. This gives a total of 29,957 persons transferred during the eight months; which implies a rate of transference of about 40,000 a year. This, of course, is a gross figure, since an unknown fraction of the number may have returned; and it compares with a total of 282,952 unemployed in the Special Areas on September 21, 1936. If we assumed 100,000 of these (or about 10 per cent. of total insured persons) to be an untransferable minimum, it would take about 4½ years at least, at the present rate, to solve the problem by transfer.

Actually, however, this rate of transfer probably could not be maintained for four years; and, in any case, the problem would not really be solved if it were. For the population of the Areas would remain over 2,000,000; and more of these would lose their jobs as a result of the loss of purchasing power caused by the departure of the present unemployed. Wholesale depopulation of the Areas, in fact, would be extremely slow and expensive because of the very large amount of capital and labour already organised for the production of ordinary distributive and public utility services in the Areas.

It would only, therefore, be economic from the point of view of the community as a whole to take refuge in wholesale transfer if there were overwhelmingly strong economic reasons why new factories should be located in London and the other prosperous areas. Are there such reasons? A *prima facie* examination of the geographical distribution of occupied persons in each industry suggests that there are not. The following table shows a number of industries whose "occupational population," according to the 1931 Census, was largely concentrated in the South-East of England (including Greater London):—

PERCENTAGE OF TOTAL OCCUPIED POPULATION IN CERTAIN INDUSTRIES, TO BE FOUND IN AREAS NAMED
(1931 Census Returns)

Industry	In South-East Area*	In Rest of England and Wales
<i>Total population of England and Wales...</i>	<i>33.7</i>	<i>66.3</i>
Electrical apparatus.....	46	54
Radio	59	41
Motor vehicles and cycles	35	65
Aircraft	57	43
Chemicals and dyes.....	34	66
White lead and paints.....	46	54
Paper industries	53	47
Typewriters and calculators	58	42
Scientific instruments	65	35
Rubber	26	74
15 Minor light industries	41	59
Biscuits	55	45
Sugar	43	57
Sugar confectionery.....	43	57
Animal foods	48	52
Jam and fruit preserves	42	58
Other manufactured food	50	50

* Includes the following: London, Beds, Berks, Bucks, Essex, Herts, Kent, Middlesex, Oxfordshire, Hants, Surrey, Sussex, and Isle of Wight.

Few of the industries showing a high concentration in the South-East can be said to be there because of the availability of raw materials, linked industries or traditional skilled labour. Electrical apparatus and radio, trades of rapid and continuous growth, are concentrated heavily on London, though it produces little of their raw or semi-manufactured materials and components, and though these trades' products could be as well made in the traditional centres of engineering. Aircraft would seem to be a natural appurtenance of the same centres. The remaining products in the list, it might be argued, could be manufactured equally well anywhere.

The first alleged justification for concentration in the London area is the belief that London is the largest market. It is an argument with which it is difficult to quarrel, if the dictum is accepted that production and distribution centres must be indivisible and centred on the largest market. But must one accept this dictum? There are many suppliers

of national consumers' commodities, who operate as efficiently and economically from the provinces. Since the population of Great Britain is equally divided by a line drawn diagonally from the Wash to Pembroke, has London, in the South-East corner of England, a decisive advantage over any other city, in any other corner of the compass, when it comes to a matter of national distribution? If the object of this concentration is London's market, it is a moot point whether it is more profitable for a firm to fight twenty others for their share, or to go all out for a complete capture of a less populous provincial area. Moreover, the recent experience of various manufacturers suggests that centralisation can be overdone. There have been increasing examples lately of manufacturers, particularly in the clothing trade, attempting to capture the trade of country areas by building branch factories in the districts. And, where goods in the same category are highly competitive, as in the radio and vacuum-cleaner trades, more profitable results may conceivably be obtained by planning production, salesmanship, advertising and distribution from a number of strategic points rather than by casting a net of large mesh all over the country.

Mr Malcolm Stewart, who has had an unexampled opportunity to study the problem, expresses the following opinion in his recent report:

Much of the growth of Greater London is not based on strictly economic factors; psychology plays an important part in the matter. There is a considerable portion of industrial production not dependent on considerations which are absolutely essential to its location in London. It is this part of the industrial flow which might reasonably be diverted elsewhere.

Indeed, Mr Stewart believes that, so far from the location of further new factories in London being economically desirable, there would be, from the social and town-planning point of view, positive diseconomies in allowing London to grow any larger.

If he is right, there is a doubly powerful reason for directing the new factories to the Special Areas, and particularly to the North-East Coast and the less mountainous parts of South-East Wales, which are, or could be made, easily accessible to the prosperous areas. What inducements—if compulsion is ruled out—can be used to persuade reluctant industrialists? The necessary factors which should decide industrial location are, we may suggest, the existence of (1) a large local population within reasonable reach; (2) good and sufficient distributive outlets for goods in stock; (3) efficient rail, road and sea communications for national distribution, if expansion is desired; (4) availability of raw or partly manufactured materials from local sources or a port of entry from abroad; (5) adequate labour; (6) a modern factory or factory site permitting economical running costs. There is at least one Special Area which now can fulfil all these essentials. That area is the North-East Coast, comprising, as a local market, Northumberland, Durham and the Tees-side cities of Middlesbrough and Stockton, with a population of 2½ millions. Moreover, the Government has now provided facilities for a large trading estate at Team Valley, Gateshead. That provision supplies the hitherto absent conditions necessary for the manufacture of light commodities. The powers possessed by the Government have, in fact, enabled something to be created for light industry in the Team Valley which normally is only within the power of large-scale finance.

Valuable, however, as the existing and prospective trading estates are likely to be, Mr Stewart's report again leaves little doubt that they will in themselves be insufficient to attract new industries on a really adequate scale. He consequently proposes complete relief from rates, drastic income tax concessions, and the provision of cheap finance. Whatever may be the merits of these particular proposals, the necessity for some such system of far-reaching concessions is the plain and logical conclusion of the whole matter. The cost of such concessions to the community would certainly be less than the combined cost of simultaneously stimulating a boom in over-expanded London and allowing much of the labour and capital in the Special Areas to be permanently lost.

BRITAIN'S OVERSEAS MARKETS

THE trend and distribution of Britain's overseas trade hold up a mirror to changing economic conditions at home and abroad. The revival of business activity in this country has, naturally, been accompanied by a substantial increase in imports. Larger quantities of raw materials are required to feed the expanding industries, and the improvement in the national purchasing power has stimulated purchases of foreign manufactures. Indeed, the volume of imports is now practically as high as in 1929, and purchases of raw materials are substantially above the pre-depression level. British exports, on the other hand, are still only about three-quarters of their 1929 volume. The relatively smaller improvement in exports is due to a multiplicity of causes, such as the tendency to economic nationalism, the uneven incidence of recovery abroad and the virtual absence of British foreign lending. During the first half of this year the volume of British exports was actually somewhat smaller than during the corresponding period of 1935. Since then, however, British exports have resumed their upward trend, and, as our analysis of the October figures on page 355 shows, this favourable tendency has continued in the past month.

Total British imports rose from £539.4 millions during the first nine months of 1935 to £608.0 millions this year. During the same period British exports rose by only £8.3 millions to £320.1 millions. It is of interest to examine the sources of our increase in imports as well as the destination of the slight improvement in exports. The first table of our analysis gives details of imports from, and exports to, European countries and their dependencies in the first nine months of recent years:—

TRADE WITH EUROPEAN COUNTRIES

First Nine Months

(000's omitted)

From or to	Imports				British Exports			
	1929	1933	1935	1936	1929	1933	1935	1936
Soviet Union	17,285	11,098	13,823	12,817	2,680	2,785	2,886	2,711

Other European Countries	5,052	3,865	5,648	7,687	3,913	2,066	3,192	3,288
Total	338,624	172,306	189,142	209,129	173,557	94,937	106,056	100,668

* Including dependencies.

The salient feature is the almost general increase in our imports from the countries listed in this table. Only Italy and Russia sent us a smaller volume of commodities. British exports, too, showed numerous increases, but these were more than offset by lower exports to Finland, Germany, Switzerland, Portugal, Spain, Italy and Roumania. The increase in imports was spread over a large variety of commodities, timber and timber products being an important item in the case of the Baltic countries. The decline in British exports to Italy, incidentally, somewhat exceeded the reduction in imports from that country. Shipments to Russia, Finland, Denmark and Poland during the first nine months of 1936 actually exceeded those of 1929. The value of our purchases from Finland, Poland and Roumania also exceeded those of the corresponding period in the pre-depression year. Our trade with Germany, however, was still only about 50 per cent. of its value in 1929—a reflection of the economic policy adopted by that country.

The next table analyses British trade with foreign countries outside Europe:—

TRADE WITH FOREIGN COUNTRIES OUTSIDE EUROPE

First Nine Months

(000's omitted)

From or to	Imports				British Exports			
	1929	1933	1935	1936	1929	1933	1935	1936
Turkey	£ 1,571	£ 473	£ 471	£ 619	£ 2,501	£ 1,104	£ 763	£ 728
Egypt	16,789	7,798	7,423	8,259	9,293	4,636	5,078	5,765

* Including dependencies.

Both imports and exports showed an appreciable expansion, compared with a year ago, though the value of shipments to these countries in January-September, 1936, was still less than half those of 1929. Our imports from foreign countries outside Europe (except Mexico, Chile, Bolivia and Argentina) were higher than a year ago. The improvement in British exports was less general, the figures for Turkey, Iran, Japan, Mexico, Chile and Brazil showing a decline. The larger purchases from most of these countries consisted partly of raw materials which are being consumed in increasing quantities by British industry. A feature is the appreciable expansion of our trade with the United States. Apart from raw cotton, we imported substantially increased quantities of machinery from the United States. The increase in British exports to that country, which was spread over a fairly large number of commodities, reflects the progress of recovery across the Atlantic. The absence of improvement in our trade with Argentina is partly due to the failure of her last wheat harvest, which tended to reduce her purchasing power.

A third table gives details of our trade with the Dominions and Colonies:—

TRADE WITH BRITISH COUNTRIES

First Nine Months

(000's omitted)

From or to	Imports				British Exports			
	1929	1933	1935	1936	1929	1933	1935	1936
Irish Free State	£ 31,788	£ 12,488	£ 13,320	£ 14,642	£ 26,526	£ 13,812	£ 14,798	£ 15,428
West Africa	8,911	4,707	6,069	7,561	8,796	4,600	6,431	7,612
South Africa	17,902	10,198	9,564	10,266	24,468	16,590	24,049	27,768
India and Ceylon	55,032	31,247	35,370	43,759	63,568	25,532	29,873	27,661
Straits Settlements	10,280	2,600	5,737	3,609	9,502	3,231	4,370	4,600
Australia	43,178	34,335	39,219	43,155	39,843	15,463	21,468	23,355
New Zealand	41,272	31,409	31,426	35,866	15,531	6,970	9,875	12,251
Canada	34,085	32,001	37,252	51,364	26,544	12,114	15,350	16,882
West Indies	4,372	4,744	5,848	6,248	3,996	3,281	3,430	3,575
Other Possessions	24,013	18,001	23,127	24,974	22,681	16,225	18,142	18,071
Total	270,642	181,720	206,963	241,414	240,853	118,218	147,786	157,203
Excluding the Irish Free State	239,054	169,232	193,643	226,772	214,327	104,406	132,988	141,776

The recent trend of Britain's commercial exchanges with the Dominions and Colonies is partly increased prosperity the result of "policy" and partly of "recovery." But while British imports have almost recovered to the pre-depression level, our shipments to the Empire during the first nine months of 1936 were still appreciably smaller than in 1929. Apart from the Straits Settlements, imports show an increase in the case of all countries shown separately, and all save India purchased more commodities than in 1935. On the import side, Canada is sending us appreciably more and taking considerably less than seven years ago. India, by far the most important customer in 1929, now ranks second after South Africa, whose capacity to import has been increased substantially by a prosperous gold mining industry.

The course of our re-export trade is shown in the next table:—

RE-EXPORTS—First Nine Months (000's omitted)				
To	1929	1933	1935	1936
Soviet Union	1,999	500	4,070	7,351
Germany	18,634	7,199	5,638	5,515
Netherlands*	3,976	1,333	1,740	1,577
Belgium*	7,559	3,339	3,574	3,566
France	13,950	5,961	5,116	6,094
United States*	13,112	5,730	5,261	6,420
Other foreign countries	8,684	4,934	7,178	6,680
Irish Free State	7,495	3,403	3,619	3,649
Other British countries	9,329	4,163	4,553	4,180
Total	84,438	37,162	40,554	45,533

* Including dependencies.

Improvement since 1935 is partly due to the fact that this country acts as a distributing centre for primary products, the demand for which has recently increased appreciably.

The tables we have so far considered are based mainly on "political geography." But national financial policy has, since 1931, become an increasingly important factor in determining the direction of international trade. We have, therefore, made a separate analysis distinguishing various groups of countries according to the nature of their currencies. Our classification is necessarily based on conditions before the fall of the gold *bloc*, which occurred only at the end of September. Our first group includes the former gold *bloc*—France, Holland and Switzerland, with their colonial dependencies. The second includes countries with devalued or depreciated, but substantially unrestricted, currencies. The British Empire, as well as many important foreign countries, such as the United States, Japan and Scandinavia, fall into this group. The third group comprises those European countries such as Germany and (until recently) Italy, which have chosen to regulate currency transactions in order to maintain existing gold parities. Finally, Latin America is shown separately, since most of its currencies are both depreciated and subject to restrictions. The results of this analysis are significant:—

BRITISH EXPORTS, 1935-36

To	First 9 months		Change
	1935 (£'000)	1936 (£'000)	
Former gold <i>bloc</i>	28,794	29,697	+ 3.1
Depreciated and devalued:—			
(a) British countries	147,786	157,203	+ 6.4
(b) Other countries	74,284	79,404	+ 7.8
European restricted countries ..	35,325	27,997	- 20.7
Latin America	22,795	23,311	+ 2.3

Exports to European countries with restricted currencies showed a substantial decline between the first nine months of 1935 and 1936. Even the former gold *bloc* and Latin America increased their purchases from this country during this period. Most interesting, however, is the trend of our exports to countries with depreciated and devalued currencies. Both British and foreign countries in this group purchased more commodities during January-September, 1936, than a year ago. Rather surprisingly, the improvement in exports to British countries is less marked than the increase in shipments to other countries. The latter group has now been joined by the former gold *bloc* and by a number of other countries, whose trade may be expected to expand with domestic recovery.

LANCASHIRE'S FUTURE—I

THE popular view of the state of the Lancashire cotton industry can be summarised in very few words. It is agreed that a new and powerful competitor has arisen in Japan, who, by lower wage costs (or, as some prefer to say, by better equipment and organisation) is steadily encroaching on Lancashire's markets. Under the all-embracing heading of Japanese competition, also, publicists of this school usually include the new domestic cotton industry of China and of India. Owing to this and to other causes, it is declared, we are continuously losing ground in international markets. At home the most seriously affected section of the industry is said to be spinning, par-

ticularly in the coarser counts of yarns. The finer yarns, represented by the Egyptian section, are believed to have felt competition less. The weaving and the finishing trades, though seriously affected, are thought to have passed on the worst of the impact to the spinners.

These views date largely from the middle nineteen-twenties, when Lancashire was recognising with growing anxiety that it had failed to recover from the post-war slump. They represent the situation as investigators found it about 1927, and probably owe their wide dissemination to the survey of the textile industries published by the Balfour Committee on Industry and Trade during 1928. At that time the picture was true. But that was eight or nine years ago. The changes which have subsequently occurred have been sweeping, but they have not been widely noticed.

For example, it is no longer true to say that we are losing ground in international competition. Up to 1930 our percentage of international trade in cotton piece-goods was falling steadily. But since then it has been remarkably stable, except in the year 1931, which included the Indian boycott and our own industrial and financial crisis. In the yarns section there has been no deterioration in Britain's percentage of world trade during the last ten years. Even between 1924 and 1930, our percentage fluctuated only between 32.9 per cent. and 30.6 per cent. Since 1930 it has shown, on the whole, a tendency to rise, and it touched over 37 per cent. in 1935. The following table shows the total of British and world export trade, and the British percentage, in cotton yarn and piece-goods, since 1924:—

	1924	1929	1930	1931	1932	1933	1934	1935
YARN (million lb.)								
U.K. Exports	163.1	166.6	137.0	133.5	141.5	135.1	130.4	141.7
Total Exports	525.7	526.2	448.3	435.9	404.2	403.6	398.3	381.4
U.K. %	31.0	31.7	30.6	30.6	35.0	33.6	32.9	37.1
PIECE-GOODS (million £)								
U.K. Exports	153.4	99.3	61.3	37.3	43.8	40.2	39.8	39.5
Total Exports	284.8	233.8	161.7	115.8	110.3	105.8	107.7	104.2*
U.K. %	53.9	42.5	38.0	32.2	39.7	38.0	37.0	37.9*

* Total Exports have been compiled by the Joint Committee of Cotton Trade Organisations. The values of piece-goods exports has been converted into sterling at the mean exchange rates of each year. * Italian exports figure unavailable, but taken at £4.4 millions as in 1934.

Admittedly, Japanese competition has been increasing all the time. Japanese exports of cotton piece-goods rose between 1928 and 1934 from 1,418.8 million square yards to 2,577.2 million square yards, while our own exports fell from 3,866.5 million square yards to 1,993.5 million square yards. But the advance of Japan has not substantially altered our proportion of the *total available trade* since 1930. Other countries, rather than ourselves, have thus had to make room for the Japanese advance. Details of our cotton piece-goods exports show in fact that while we have lost practically all our once important trade with China and Japan, and have relinquished a large part of our Indian business, we have been able to find new outlets in other countries. India, China, Japan, the Dutch East Indies, Ceylon and other Eastern markets accounted in 1913 for 61.7 per cent., and last year for only 30.4 per cent., of our cotton piece-goods exports. Our total trade has certainly been severely reduced in the course of this redistribution, but it may at least be claimed that our *risk* in such regions of growing prosperity as South Africa, West Africa, Australia and New Zealand. If currency devaluation ushers in a period of European revival it may be significant that Europe to-day provides 10 per cent. of our trade, against only 5.1 per cent. in 1913.

In cotton yarn, the risk is still better spread. Here the largest group of importers is classified in the Board of Trade returns as "other countries." Germany comes fourth in the list, Holland third, and India only a lagging fourth. India, in fact, took last year only 10.6 million lbs. of yarn, while Germany took 30.3 million lbs. and "other countries" 38.7 million lbs. In yarn, even more than in the piece-goods trade, European recovery offers important prospects to Lancashire.

In short, while Lancashire has indisputably suffered severely in her export trade, much the largest factor in her difficulties has been a general decline of international trade

in cotton goods. Competition, during the last six years at least, has not seriously affected her proportion of the whole. It is too early, as yet, to say whether shrinkage in international trade as a whole is likely to continue. The tide of economic nationalism and self-sufficiency still appears to be running, but in the last two or three years there has been a marked tendency towards stabilisation, rather than further serious decline, in the volume of world trade in cotton textiles. If and when recovery becomes general, Lancashire may hope, at least, to obtain her fair share of its fruits, whatever their extent. Meanwhile, far-reaching changes have been in progress during recent years in Lancashire's internal organisation, and these will be discussed in a concluding article.

THE HAT-TRICK BY CANDLELIGHT

(BY A CORRESPONDENT)

Two major contributions to the solution of the economic problem have just been produced in English-speaking countries. In view of the frantic experimentation which has been going on in the totalitarian States this must be accounted a triumph for democracy.

The first contribution has been provided by a Cambridge economist who, having re-examined the case of the candle-makers, first elaborated by Bastiat, has demonstrated that the candle-makers were right and Bastiat was wrong. The candle-makers petitioned against the intolerable competition of a foreign rival who was flooding their market with his fabulously cheap products. Their trade, consequently, disappeared and an important part of native industry was rendered completely stagnant. The competitor was the sun, a shameless, unfair "dumper" of light and heat. The petitioners urged that a decree permanently closing all orifices to the light of the sun would provide a stimulus progressively extending to all branches of industry. If more tallow were consumed in making candles there would be more sheep and oxen, and a multiplication of meadows, meat, wool, hides, and, above all, manure, which was the basis and foundation of all agricultural wealth. If more oil were consumed, there would be an extended cultivation of the poppy, the olive, and rape, facilitated by the increased fertility imparted to the land by the additional cattle. No branch of agriculture would escape the cheering development. The increased activity of whale fishing for blubber would stimulate navigation and thereby strengthen the resources for naval defence. Demand for gildings, bronzes, crystals, candlesticks, lamps, lustres and candelabra would overwhelm with orders the manufacturers of *articles de Paris*. No poor *resinier* from his heights on the sea coast, no coalminer from the depth of his sable gallery, but would rejoice in higher wages and increased prosperity.

Having presented the case in his own inimitable style, the late M. Bastiat doubtless went to his grave under the impression that he had exposed the unfortunate candle-makers to eternal derision. But after a century the laugh

has been turned against him. Undoubtedly, the Cambridge eye was caught by the magic word *multiplication*. The candle-makers, fumbling in an elementary way with the problem of the relationship between expenditure, investment and the associated increment of aggregate employment, had anticipated the modern doctrine of the multiplier—a concept wholly outside the range of the waggish Bastiat, who could never have appreciated that one depression can be cured by building Maginot lines and the next one by dismantling them.

Simultaneously with the solution of the problem of employment by the rehabilitation of the candle-makers, the problem of consumption has been solved on the other side of the Atlantic by Mr Albert Wickey, of St. Louis, U.S.A. If Mr Wickey, on the evidence of his name, can trace his ancestry back to the candle-makers, the chain of decisive coincidence will be complete.

Mr Wickey could not afford to travel, so he handed his hat to an air pilot and said, "Pass it on." Mr Wickey, rooted on *terra firma*, dispatched himself vicariously with the salute, "*Fils de St. Louis, montez au ciel*," or other words to the same effect; then he resumed his daily task. The hat travelled through America, Germany, Africa and Asia. Finally, Albert became re-united to it in a New York night club. Judging by the smiling countenance of Mr Wickey in the Press photographs, he had all the pleasure of a world tour without the accompanying fatigue; judging by the charming entertainment directed to his table, he acquired all the renown of a seasoned traveller.

The staggering simplicity of this expedient is the mark of its genius. To a host of perplexing problems it offers a convenient, comprehensive and decisive solution. If the authorities, for example, will only erect a giant hat-stand at Hyde Park Corner we can all enjoy next year's Coronation procession. Indeed, there is now an opportunity for an experiment on a still grander scale. Let an Order-in-Council impose continuous artificial lighting upon the whole of Cambridge. And let a corps of trained investigators trace the waves of prosperity welling out from that centre until they engulf the Depressed Areas. Pending their arrival on those desolate shores, the American principle can be applied from the other end. Let the London hotels each adopt a distressed town and invite the inhabitants to send a knife and fork to a weekly banquet. The cutlery will be returned with a copy of the menu and the hungry bellies will be vicariously filled. Shipping companies, in gratitude for past and future subsidies, will doubtless willingly undertake to carry cargoes of miners' hats on Mediterranean cruises, while the Agricultural Marketing Boards can take school exercise books for a tour of the farms. The two processes, acting in irresistible combination, should certainly sweep the country into full employment and provide an ever-rising standard of living.

Only one problem will remain. The economists will be out of work. Perhaps the sort of vicarious maintenance described above can be afforded to them. But there is one major difficulty. Some economists cannot part with their hats: they need them for talking through.

NOTES OF THE WEEK

The Depressed Areas.—The coincidence of the "Hunger marchers," the publication of Mr Malcolm Stewart's Report, and finally the King's dramatic visit to South Wales, has roused public opinion on a very wide front to a conviction that the Depressed Areas must not be left any longer in their present condition. In the debate in the Commons on Tuesday night a large number of Conservative members joined with the Labour Party in urging that the Special Areas Act should not be included in the Expiring Laws Continuance Bill. Sir Robert Horne, Lord Wolmer, Mr Boothby, Mr Harold Macmillan and several other Conservative members all showed dissatisfaction with the Government. Mr Chamberlain, in reply, pointed out that the fundamental cause of distress in South Wales, the worst hit area, was the loss of coal export markets; but he did not suggest for a moment that the Government

might relax its own import restrictions—not even the meat quotas—in order to recover those markets. He defended the inclusion of the Special Areas Act in the Expiring Laws Continuance Bill on the ground that the Act would otherwise expire altogether next March, and that if the Government wished to alter its policy it could introduce an amending Bill meanwhile. Mr Chamberlain said that he had not fully considered Mr Malcolm Stewart's suggestions, but he "accepted in principle" the proposal to grant special financial concessions to firms in the areas. The House was given the assurance—which clearly did not satisfy it—that Mr Chamberlain "expected and believed" an Amending Bill would be introduced before Christmas. In the end, after an all-night sitting, several Conservative members voted against the Government. The dissentient Conservatives are now to move an amendment

extending the Act to May, 1937, instead of March, 1938; and the Labour Party and Welsh members are to urge its deletion from the Expiring Laws Bill. If the Government is determined to do nothing to revive our export markets, the logical next step in solving the Depressed Areas is, as we argue in an article on the location of industry on page 347, to provide financial inducements to industrialists to come to the Special Areas. Sir John Jarvis, even in existing conditions, has succeeded in reaching agreement with Messrs. Stewarts and Lloyds and Tube Investments, Limited, for a new tube factory at Jarrow; and the plans were completed on Thursday of last week. If the Government can incorporate the further inducements suggested by Mr Stewart in an Amending Bill and introduce it before Christmas, it will meet with the same favourable public response as has been already accorded to the Public Order Bill.

* * *

The Public Order Bill.—Sir John Simon met with a very sympathetic reception in introducing the Public Order Bill into the House on Monday. The principle of the Bill was supported by all parties except the I.L.P. and the Communists; and the second reading was passed without a division. Mr Clynes, Sir Percy Harris, Mr Robert Bernays and Mr Herbert Morrison all admitted, though they regretted, the necessity for the Bill. The provisions banning uniforms and forbidding the organisation of military bodies for political objects were unanimously approved; and few were found to question the wisdom of leaving the definition of uniforms to the courts. The details of the Bill which provoked most doubt were those affecting political meetings and processions. Some members thought that it should not be left to the chairman of a political meeting to bring prosecutions against disorderly interrupters. The Labour Party is to propose an amendment extending the ban on uniforms to cover "other distinctive dress," and some Conservatives wish to prohibit the display of emblems and the carrying of banners bearing provocative inscriptions. These amendments should produce further interesting discussion, but it is to be hoped that the restrictive effects of the Bill will not be carried one inch further than is necessary. At any rate it is now gratifyingly clear that the Bill will be passed substantially in its present form, with the support of all the main political parties.

* * *

The Nationalisation of Trunk Roads.—The Minister of Transport moved on Thursday the second reading of the Trunk Roads Bill, which is to transfer to the Ministry of Transport from the local authorities the full responsibility for about 4,500 miles of main road in Great Britain. The roads affected are the roads radiating from London to Edinburgh, Norwich, Yarmouth, Dover, Brighton, Portsmouth, Southampton, Penzance, Bristol, Gloucester, Birmingham, Glasgow, Manchester and Leeds, together with such important cross-routes as those between Liverpool and Hull, Exeter and Birmingham, Glasgow and Edinburgh. As Mr Hore-Belisha remarked, these are the roads which are "indispensable alike in peace and war." For these roads the State is henceforth to be responsible, although the county councils will still do the actual work of construction and maintenance, as agents of the Ministry. The current cost of these roads is more than £1,500,000, of which the Road Fund has hitherto been paying 60 per cent. There would, therefore, be an extra burden on the Exchequer of about £600,000 a year. But this relief to the local authorities is to be taken into account in fixing the block grants for the next period; while, on the other hand, improvement schemes of £6,000,000 have been approved and others for £12 millions submitted. The most encouraging part of Mr Hore-Belisha's speech was that in which he outlined the future standard for trunk roads:—

They must be designed so as to permit the utmost fluidity of traffic, consistent with the requirements of public safety. Carriageways must be of such width as will allow for the maximum number of vehicles likely to come upon them. They should be subdivided so that traffic proceeding in one direction shall do so on its own track.

They should be kept free of obstruction due to standing vehicles The provision of footpaths should be regarded as an essential feature of design. Cycle tracks should be provided The carriageway should be super-elevated at bends. Road junctions should be so laid out as to give ample vision to drivers of oncoming vehicles. Long-distance traffic should be conducted round and not through the streets in built-up areas We should endeavour to ensure that the road should enhance and not detract from the natural character of the countryside.

This is, of course, an ideal which will take time to realise, especially now that the Road Fund has been robbed of its independence. But it is something to have it officially recognised, and even if the Bill, as was alleged from the Labour benches, owes its birth to the re-armament programme, we may reflect that even the chill wind of menacing war is blowing some good.

* * *

British Civil Aircraft.—A significant sidelight on the degree to which the aerial re-armament programme has invaded the civil aircraft field has been thrown by an announcement by British Airways, Ltd. This company, which receives an annual Government subsidy of £20,000 for its carriage of air mail to Scandinavia, had long been waiting for new D.H.86A machines from the De Havilland works. It was forced earlier this year to buy second-hand Fokker machines from the Dutch to eke out its services to the Continent; for the Air Ministry has recently ordered that the D.H.86A machines now in service must not in future be flown on the company's night mail service. (This, however, did not prevent one of the Fokker machines crashing on Thursday morning, with the loss of pilot and first officer.) The company tried to secure new 20-seater craft, with a cruising speed of about 200 m.p.h., from British works; but the earliest delivery of one machine was quoted as "many months ahead," and even for a 14-seater craft it would have been nine months before the first machine could be delivered. Even the D.H.86A's already in service were delayed in delivery by the pressure of work at the factory on account of orders for Air Force training machines. The British Airways Company therefore negotiated for, and purchased Lockheed "Electra" machines from the Lockheed Corporation of America, who can deliver in February. This decision has been criticised in the House of Commons on the ground that a British subsidised air service concern ought only to use British aircraft. But it is hard to see what else the company could reasonably be expected to do under circumstances which the Government's own programme has evoked. The Swiss, Dutch and Czech air lines use modern American passenger machines; they have factories of their own, none the less; and the Americans have far more frequent and extensive air services even than the British. Their experience of commercial flying with Lockheed and other machines is much greater than our experience with our own. If the Government needs the output of every available air-frame and air-engine maker in this country for re-armament purposes, why should air service companies in this country be expected to buy British machines and wait for them over a year? The purchase of American machines clearly harms neither the air service company here, nor the British makers who cannot fulfil the orders.

* * *

All Eyes on Spain.—The sensation of the week has been, not the penetration of Madrid by General Franco's forces, but the sudden recognition of them as the Government of Spain by Italy and Germany. It is to be presumed that General Franco's brother, who has been in Rome, told Count Ciano, the Italian Foreign Minister, that the rebels must have much larger quantities of warlike stores if Madrid were to be taken and held while the campaign continues. At present, the rebels, who have lost proportionately many more of their attenuated forces than the Government, are still hammering away at the north-west of the capital; whereas the Government forces are more numerous. It is also to be presumed that, as the in-

effective Non-Intervention Committee in London has had to sit by, alternately whitewashing Italians, Portuguese and Germans on the one hand, and Russians on the other, the Italian and German dictators found themselves forced to act precipitately, without waiting for the capture of Madrid as an excuse for recognition. As it is, recognition will enable Italy and Germany to conclude alliances with General Franco, and, in conformity with them, to assist in the "blockade" which the General is declaring against Barcelona. This is by far the most serious stage in the whole sorry Spanish crisis. For if Italy—acting either from her new bases in the Balears or in the Straits of Sicily—stops, or sinks, Russian ships supplying Barcelona, France and this country can scarcely abdicate to such an extent as to permit Signor Mussolini to decree a blockade on behalf of the Spanish rebels. If they did, after all they have tamely suffered in that vital zone of their interests, it would mean more than a "scuttle" from the Mediterranean for them and more than the conversion of that sea into the *mare nostrum* of the Italians. It would be the signal for a combined "forward" policy, certainly by Germany and Italy in Europe and the colonial field, and perhaps by Japan in the Far East. The French Government have decided on emergency naval dispositions to protect their shipping. Both they and the British Government cannot acquiesce in a blockade of Spain which trundles their trade and navies out of the Mediterranean at the mere bark of Signor Mussolini and General Franco. At the very outset of the Spanish rebellion the *Economist* suggested that the best isolating action for Europe would be the declaration of a joint Anglo-French naval blockade of Spain. Now that General Franco's one cruiser is to be the excuse for a blockade of the Spanish Government's ports, supported by Italy and perhaps by Germany, the tables have been dangerously turned on France and England. Rather than trust even to the possibility of the Non-Intervention Committee's establishment of effective supervision of warlike supplies to Spain, Italy and Germany have been forced by General Franco's importunities to act suddenly. At this late stage, the Governments of France and Britain—together with all others on the Committee who will support them—must take a firm stand against such dangerous shock tactics. The time for deprecations and regrets has gone by. On Signor Mussolini's and Herr Hitler's shoulders rests the responsibility for having provoked a tense and critical European situation.

* * *

Herr Hitler's Newest Exploit.—As is by now becoming habitual at week-ends, the German Government informed the other Governments concerned last Saturday that it was denouncing some more articles of the Versailles Treaty. This time they were those which establish special international regimes for certain inland waterways that run partly or wholly through German territory. The Note gave an assurance that, on the German sections of these waterways, Germany would still abstain from all discrimination in the treatment of German and foreign shipping—subject to reciprocal treatment being accorded to German shipping. There is an extraordinary wantonness in Herr Hitler's procedure in this case, since the door which he has thus stayed-in was on the point of being opened to him voluntarily. The treaty regime on the two most important of the rivers in question—the Rhine and the Elbe—has in fact been modified, at Germany's instance and to meet her wishes, through voluntary concessions by the other parties; and the facts about these successful negotiations were brought out in a reply by Mr Eden to a question in the House of Commons on Monday. In regard to the Rhine, the negotiations were started, at Germany's desire, some two years ago, and, notwithstanding the shock produced by the act of March 7th, a new Rhine Convention was initialled in May by all parties except the Netherlands, and was to have come into force at the beginning of the New Year. (The Dutch objections were purely technical, and would no doubt have been overcome.) In regard to the Elbe, again—we comment on the Czech position in the succeeding Note—a new agreement, likewise on the eve of coming into force, had been negotiated directly between Germany and Czechoslovakia. We cannot avoid the conclusion that Herr Hitler rushed in

and Malmö.

**SKANDINAVISKA
KREDITAKTIEBOLAGET**

to batter the door down just because he now knew that it would open of itself if he did not look sharp. This conclusion is deeply disquieting. It confirms the suspicion that some half-yearly act of treaty-breaking is a necessity for the Führer's system of internal government in the Third Reich. If Herr Hitler lives to the normal age, he will have to find nearly fifty more acts of the kind! Is it conceivable that he can devise fifty harmless ones? And how can we believe the word of a ruler who, on May 21st, in reference to what he had just done on March 7th, declared publicly that, thenceforth, Germany would "only carry out by means of peaceable understanding such revisions as will be inevitable in the course of time"?

* * *

Czechoslovakia and the Elbe.—Negotiations between Germany and Czechoslovakia for revision of the status of navigation on the Elbe began last spring. Herr Hitler's unilateral demonstration last Saturday came at the precise moment when an agreed German-Czech river convention was ready to his hand for signature. As far as the Danube is concerned, negotiations involve many other States. In 1935, 8.1 per cent. of all Czech imports and 5.8 per cent. of all exports came by the Elbe. The Oder plays no significant rôle for Czech trade. The Elbe traffic in the first nine months of this year has risen by 17 per cent. above that for the corresponding period of last year. Hitherto Czech trade on the Elbe has resulted in a heavy credit balance to Germany, and if—after last Saturday—Germany, despite Herr Hitler's promise that no discrimination would take place, proceeds to raise river freights against Czechoslovakia, Czech trade would be driven over Poland to Gdynia (which would hit Danzig), down the Danube to the Black Sea, or overland to Trieste. As Czech trade by the Elbe has been greatly assisting Hamburg in her present sorry straits, it is improbable that, from the German side, action will be taken to drive Czech trade to foreign ports and routes. This is confirmed by the express German declaration last week-end that nothing would be altered in the agreements regulating the "free ports" of Stettin on the Oder and of Hamburg on the Elbe—these free zones being allowed to Czechoslovakia. Industrial Bohemia lies just on the "freight-boundary" between Trieste and Hamburg; and Slovakian timber can always use the lower Danube. On the other hand, the German Elbe shipping companies have built many more ships in order to carry Czech trade, and the vulnerability of German Elbe shipping to decisions on the direction of Czech trade was recognised by the German representatives in the German-Czech negotiations noted above. On their side, the Czechs did not wish to add to the inflammable political material already heaped on the Czech-German frontier, and forbore in the negotiations to demand any *quid pro quo*. Herr Hitler's latest unilateral gesture evoked even a sharp protest from Hungary on account of the Danube convention; and Polish-Czech-Austrian trade relations are likely now to improve. The States and statesmen with the best will to negotiate

with Germany on a basis of equal rights have received after the latest German week-end exhibition another violent impulse towards the conviction that it is impossible with safety either to trust or to treat with the rulers of Germany.

* * *

The Vienna Communiqué.—The Italo-Austro-Hungarian conference at Vienna has passed off without any very serious or sensational incident. It was only a school-boy's prank for the Austrian Chancellor and the Hungarian Foreign Minister to propose the health of "The King of Italy, and Emperor of Ethiopia" at a State banquet at which the diplomatic representatives of some twenty ex-sanctionist Powers were among the guests. In its official business, the conference noted and approved the Austro-German agreement of July 11th and the recent Italo-German provisional understanding for tentative collaboration in South-Eastern Europe. The way was also paved for a future unilateral declaration by Hungary of her intention to re-arm; but this was done with cautious circumlocution. The three States merely declared themselves unanimously agreed in favour of the standpoint of the Austrian and Hungarian Governments in regard to equality of rights in the matter of armaments; and they undertook "to maintain contact for the realisation of this principle." The ardent Magyars can never stomach being left behind by the easy-going and unilaterally re-arming Austrians in a matter of national self-assertion and *amour-propre*. But the three Little Entente Powers have been quick to jump upon this passage in the Vienna communiqué in three identical statements published at the beginning of this week; and they maintain the position which they took up three years ago. While re-affirming their acceptance of the principle of equality of rights in armaments, they also insist once more that the application of this principle for the benefit of Hungary must be conditional upon her fixing the scale of her re-armament in agreement with the Little Entente Powers, and also upon her giving them "precise guarantees of security." This latter is easier said than done, and might in the present circumstances therefore perhaps have been better left unsaid.

* * *

Dr. Colijn Sticks to His Guns.—Dr. Colijn, perhaps the most consistent advocate of deflation in Europe, is prepared to recognise facts; but he will not alter his policy. In a statement published this week, after stating once again that the guilders would for the time be left free, subject to Exchange Fund guidance, he proceeded to the following declaration:—

I do not deny that an expansion of credit may, in certain circumstances, so stimulate trade and industry as to lead to a fairly rapid reduction in the number of unemployed. But I do not believe that we are justified in trying to seek relief from our immediate difficulties by such an expansion of debt as will leave those who come after us with the unenviable choice between repudiating national commitments and increasing taxation to a prohibitive level in order to meet the service of the national debt.

One may applaud Dr. Colijn's determination to avoid exchange restrictions and self-sufficiency and to align Holland with the free (or freer) trade policy of the democratic nations. His refusal, however, to adopt the moderate expansionist measures long urged upon him by the Catholic Employers' federations and the Social Democrats lays him open to the charge of conceiving the national welfare in the narrow terms of the financial charge on the Budget rather than the real income of the community. Even in the absence of an expansionist policy, however, devaluation and world recovery should alleviate Holland's position from now onwards. Already signs of business recovery are beginning to be apparent. It may be, indeed, that, thanks to devaluation, recovery may have gone far enough to save Dr. Colijn at the General Election next spring from the fate that overtook M. Laval in France. If it does, Dr. Colijn will have mainly to thank the auspicious stars.

A Statesman's Suicide.—M. Salengro, the young Trade Unionist Minister of the Interior in France and one of M. Blum's closest colleagues and friends, committed suicide on Wednesday, as the direct outcome of one of the grossest campaigns of calumny that has ever defamed French public life. M. Salengro, apparently, had been taken prisoner during the war; but owing to absence of information, military law required that he should be noted as a deserter. When M. Salengro joined M. Blum's Cabinet last spring, his experience of Trade Union affairs singled him out as the man to cope with the "stay-in" strikes which began to paralyse industry at that time. Simultaneously, the Press of the Right, which had never left M. Salengro quite in peace, envenomed by the crushing defeat of the Right at the Election, launched a savage and abusive campaign against the Minister of the Interior on account of his war record. *Gringoire*, a weekly paper owned by M. Chiappe and other extreme Right-wing malcontents, led the onslaught. The Prime Minister established a commission of inquiry, which, with the help of the War Ministry, reported last week, exonerating M. Salengro of desertion, treason and cowardice, and vindicating his honour. The Chamber voted a motion accepting the report by a much larger majority than that usually accorded the Government; and, when the figures were announced, M. Blum embraced his colleague in a moving scene. But the strain of overwork and calumny combined, as he said in a pathetic farewell letter to his Prime Minister, proved too much; and he took his own life. This tragic sequel to deliberate vilification of a statesman by his political opponents has worked a profound effect in a nation whose citizens jealously defend the sanctuary of private life, however much they give rein to political feeling. It is not so long since the man-handling of M. Blum by Right-wing extremists turned Paris against the Right-wing in politics. The hounding of a Cabinet Minister to the length of suicide can only constitute a crushing reverse to those groups who aided, morally or materially, this shameful victory of obloquy.

* * *

The Japanese Armaments Budget.—During the past few months there have been certain signs of discomfort in Japanese minds over the Ishmaelitic rôle for which Japan has cast herself since the autumn of 1931. No doubt there are many intelligent and well-informed Japanese in civilian walks of life who desire to bring their country back into relations of normal friendliness and confidence both with China and with the Great Powers. Unfortunately, however, this element in Japan seems to be as far as ever from any prospect of returning to power—to judge by the report, just published in the *Asahi*, of the Japanese Army's new programme for armaments expenditure. The Army are said to contemplate a six-year plan in which the total armaments bill will amount to 6,200 million yen—3,000 millions for ordinary annual expenditure and 3,200 millions for "re-armament." The latter presumably means replacement of existing armaments, since Japan has never ceased to be one of the heavily armed powers. If this is indeed the Japanese Army's new programme, it works out, over these next six years, at an average annual armaments expenditure of about 1,000 million yen. This is nearly five times the average annual figure of Japanese expenditure on armaments during the decade of moderation between the Washington Conference and the autumn of 1931. Japan like Germany and Italy, is thus committing herself to an armaments effort of an intensity which has seldom been attained before in any country except in war time. This is only another way of saying that the strain will be far too severe, as the country's resources are far too restricted to bear it for more than a short period. The danger-point will come when Japan reaches her peak of preparedness and finds herself faced with the choice of using, forthwith, the means of aggression which she will have accumulated at such cost, or else submitting to see herself outclassed, after all, by other Powers whose greater financial staying-power might enable them to put Japan's armaments out of date by proceeding with their own for a year or two longer. This is perhaps the most alarming aspect of the new Japanese armaments programme.

Britain's Balance of Payments.—With the appearance of the trade returns for the tenth month of the year, it is possible to make a first preliminary guess at the probable outcome of the balance of payments for 1936. The net balance of imports of merchandise and silver in the ten months to the end of October amounted to £275 millions, compared with £213 millions at the same date last year and £230 millions at the end of the first ten months of 1934. At this rate, the deficit on visible trade account for the whole year will be in the neighbourhood of £330 millions, compared with £256 millions in 1935 and £276 millions in 1934. On the other side of the account some increase can be expected from British invisible exports. The *Economist* index of shipping freights, for example, is now some 9 per cent. higher than a year ago, and there has been in addition some increase in the volume of traffic. It would seem to be safe to increase last year's estimate of £75 millions for freight receipts to £80 millions, or by less than 7 per cent. Income from foreign investments is, as usual, the difficult item to estimate. Our figures of industrial profits are of limited assistance, since only a very few of the categories can be assumed to refer in the main to companies operating outside this country. Moreover, there is a considerable time-lag. On the basis of the figures for companies engaged in oil, rubber and tea (not all of which, of course, are foreign), the figures of profits shown in reports appearing in the twelve months ended June 30th last were 13 per cent. higher than a year previously. In the September quarter the rate of increase was 33 per cent. The increase in the profits of all companies, home and foreign alike, in these two periods was 12.6 per cent. and 14.3 per cent., respectively. It is impossible to make allowance for all the factors at work, including such matters as the proportion of fixed-interest capital in British foreign investments, the British share in the rapidly expanding volume of dividends in the United States, etc. As a pure guess, it may be conservatively suggested that last year's figure of £185 millions might be increased by about 8 per cent. to £200 millions. Lastly, the combined total for income from commissions and other sources has remained unaltered, in the Board of Trade's estimates, at £40 millions for four years. The slowly rising tide of prosperity can be assumed to have increased this total since 1932 by £5 millions. A preliminary estimate, together with the official figures for recent years, would thus look as follows:

	(£ millions)			
	1933	1934	1935	1936 (est.)
Import surplus (merchandise and silver).....	263	295	261	330
Government payments	...	...	2	...
Total debits	263	295	263	330
Government receipts	...	9	...	...
Shipping income	65	70	75	80
Income from investments	160	175	185	200
Income from commissions and other sources	40	40	40	45
Total credits	265	294	300	325
Net balance	+2	-1	+37	-5

There is no doubt that Great Britain's balance of payments this year will be less "favourable" than last year, but the above rough estimates do not lend any support to the exaggerated pessimism which is finding expression in some quarters about the position of sterling.

* * *

Labour Conditions in Retail Trade.—In the *Economist* of September 19th we drew attention to the unsatisfactory labour conditions in certain sections of the distributive trades and to the probability of early measures to remedy them. The Ministry of Labour has realised the difficulties which stand in the way of voluntary efforts to bring about a general improvement in the working conditions of shop assistants. Hence, the Ministry now seems anxious to foster the closer organisation and co-operation between employees on the one hand and employers on the other. Once representative bodies are established, the Ministry of Labour would be able to ascertain their views, bring them together in negotiation and, possibly, enforce majority decisions concerning wages, hours and general

working conditions. Although the first condition, namely the establishment of bodies expressing the collective views of assistants and employers, has not yet been realised, there is reason to believe that progress will now be more rapid. Last Monday, the Employers' Consultative Committee, formed to prepare suggestions for wage standards and methods of enforcing them, met Mr Leggett of the Ministry of Labour. On Tuesday, Mr Leggett consulted with the unions, who agreed to appoint a sub-committee to examine the situation and put forward the unions' collective views to the Ministry of Labour. Further meetings are to be held between representatives of both sides and the Ministry of Labour.

* * *

Contracting and Expanding Industries.—Current discussion of the geographical transfer of labour lends special point to the annual figures of the shift between industries published by the Ministry of Labour this week. Changes in the number of persons insured in the main industries were as follows between July, 1935, and July, 1936:—

	Number	Per cent.
Building	+ 44,170	+ 4.4
Distributive trades	+ 37,520	+ 1.7
General engineering, engineers' iron and steel foundry	+ 34,020	+ 6.0
Motor vehicles, cycles and aircraft	+ 30,060	+ 9.9
Railway service (non-permanent workers) ..	+ 16,380	+ 11.2
Public works contracting	+ 12,280	+ 4.4
Gas, water and electricity supply	+ 10,870	+ 5.4
Entertainments and sports	+ 10,170	+ 8.0
Electric cable, apparatus, lamps, etc.	+ 9,550	+ 6.1
National government service	+ 9,380	+ 7.4
Electrical engineering	+ 9,150	+ 8.8
Hotel, restaurant, boarding house, etc., services	+ 9,090	+ 2.1
Steel melting, iron and steel rolling, etc.	+ 8,570	+ 5.2
Cotton	- 21,770	- 4.6
Coal mining	- 45,230	- 4.7

Transfers out of the mining industry to other industries in the year were 31,021, and transfers into the industry 9,491. New entrants into insurance in the industry were over 20,000; and as the net decrease in numbers was 45,230, gross departures must have been not less than 75,000. Since 1925 there has been an increase in the insured population of the building and contracting industries of 62.7 per cent.; of transport, communication and distribution of 47.4 per cent.; and a decrease in mining and quarrying of 23.6 per cent.

* * *

Overseas Trade in October.—There was a marked improvement in our overseas trade last month. Total imports, at £80,539,176, reached the highest level since November, 1931, and the total of £41,764,413 for British exports has not been surpassed in any month since November, 1930. But the tendency for rising imports to outstrip exports was again evident; the import surplus for the first ten months of 1936 is now 28 per cent. higher than a year ago. The following tables give details for the past three years:—

OVERSEAS TRADE IN OCTOBER
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	
Total imports	£ 68,762	£ 73,375	£ 80,539	+ £ 7,164	+ 9.8
British exports	36,749	39,865	41,764	+ 1,900	+ 4.8
Re-exports	4,001	4,732	4,470	- 262	- 5.5
Total exports	40,749	44,597	46,235	+ 1,637	+ 3.7
Excess of imports over exports	28,013	28,778	34,304	+ 5,526	+ 19.2
Transshipments under bond	2,365	2,501	2,736	+ 235	+ 9.4

OVERSEAS TRADE—FIRST TEN MONTHS
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	
Total imports	£ 605,290	£ 612,386	£ 688,136	+ £ 75,740	+ 12.4
British exports	325,755	351,643	361,786	+ 10,143	+ 2.9
Re-exports	43,672	45,255	49,999	+ 4,744	+ 10.5
Total exports	369,428	396,898	411,785	+ 14,887	+ 3.8
Excess of imports over exports	235,862	215,498	276,351	+ 60,853	+ 28.2
Transshipments under bond	19,858	20,460	23,310	+ 2,850	+ 13.9

The raw materials group is once more mainly responsible for this year's increased imports. In the manufactured goods group the rise is smaller; but in both the increase is fairly well spread. Improvement in food, drink and tobacco imports, however, is chiefly in the grain and flour category, where prices have recently been rising. Among exports, the increase in the manufactured goods group completely overshadows all others, but a single one of the twenty categories in this group—vehicles, including locomotives, ships and aircraft—accounts for as much as 60 per cent. of the increase.

Trade by Commodities.—The following table shows recent changes in the more important retained imports:—
RETAINED IMPORTS—MONTH OF OCTOBER

Item and Measure	1934	1935	1936
Wheat	8,131	9,840	8,811
Beef and veal	954	966	1,224
Mutton and lamb	422	313	392
Sugar (unrefined)	1,931	3,942	4,305
Iron ore and scrap	386	384	554
Raw cotton	910	1,320	1,391
Sheep's and lambs' wool	151	202	348
Flax, hemp and jute	22,877	11,911	23,765
Crude petroleum	29,373	45,127	26,991
Hides, wet and dry	98	174	145
Wood pulp	180	201	207
Rubber	423	71	2
Unwrought copper	26,137	27,405	26,452
Flg lead	26,477	13,890	25,431
Tin			
One and concentrates	5,116	3,553	3,668
Blocks, ingots, slabs and bars	684	999	243
Iron and steel manufactures	120	100	101
Machinery	5,675	7,196	10,307

Increased imports of wheat from Empire countries have again counterbalanced the falling off in shipments from Argentina and Russia. Larger purchases from Argentina, Australia and New Zealand are responsible for the rise in total imports of meat. Increased supplies of sugar have come from Australia and Cuba. Strong demand for textile fibres is reflected in last month's higher purchases. Petroleum imports show a substantial reduction, but last year's figure included an exceptionally heavy purchase from Iraq. Home demand for metals and machinery continues to increase. The principal British exports are shown below:—

BRITISH EXPORTS—MONTH OF OCTOBER

Item and Measure	1934	1935	1936
Coal	3,630	3,288	3,226
Iron and steel scrap	17,493	13,381	13,604
Pig-iron and ferro-alloys	12,955	14,715	9,844
Railway material	13,613	15,699	13,408
Total iron and steel manufactures	218,496	219,447	194,360
Textile machinery	6,436	6,342	4,207
Total machinery	32,983	36,304	32,565
Cotton yarn	10,852	12,577	13,048
Cotton piece-goods	175,635	161,095	177,917
Wool yarn	3,536	5,945	4,620
Woolen goods	3,172	2,954	2,650
Woolen tissues	5,548	6,271	6,208
Woolen piece-goods	2,167	3,259	2,980
Woolen tissues	5,417	5,675	7,097
Linen piece-goods	43,624	44,564	41,577
Leather boots and shoes	16,924	18,476	21,922
Leather	297,696	345,359	397,966
Paper and cardboard	897	1,580	892
Locomotives (complete and parts)	6,195	7,907	9,294
Motor vehicles and chassis			

Coal exports, though below the level of the past two years, show some improvement over last month, the reduction in shipments to Spain and the lack of Italian markets being partially offset by increased exports to Scandinavia, Germany and the Baltic countries. The strength of the domestic industrial demand for all commodities in the iron and steel group is responsible for the falling off in exports, which we discuss in a separate Note. There has been a welcome revival in our exports of cotton and linen piece-goods. Foreign demand for British motors continues at a higher level than in recent years.

Declining Steel Exports.—Home demand for iron and steel has increased with such rapidity during the past twelve months that the industry now finds itself in a dilemma. Although production of steel ingots and castings was increased from 8,753,600 tons during the first ten months of 1935 to 9,677,700 tons during the corresponding period this year, the increase was insufficient to keep pace with the growing domestic requirements. Hence, the limitation of imports under the agreement with the Con-

tinental Crude Steel Cartel went by the board, and the industry in this country was glad to be able to obtain larger quantities of iron and steel from abroad in order to supplement home production. Imports of iron and steel consequently rose from 961,761 tons during January-October, 1935, to 1,298,352 tons this year—an increase of no less than 336,591 tons, or 35 per cent. Now, there is much to be said for the argument that increased imports of cheap steel near the peak of demand are preferable to an extension of domestic productive capacity, because the onus of over-extension of capacity is thus thrown on foreign producers. But when the increase in imports is accompanied by a reduction in exports of iron and steel manufactures the situation becomes disquieting, for markets once lost cannot be easily regained. This is exactly what has happened this year, for exports declined from 1,916,259 tons during the first ten months of 1935 to 1,807,988 tons in January-October, 1936. The importance of this tendency was stressed by many speakers at the sixteenth annual dinner of the London Iron and Steel Exchange on November 10th. Mr Runciman pointed out the shortsightedness of a policy to yield to the temptation to fill order books with the profitable and safe home orders to the exclusion of the export trade. Mr Bruce, chairman of the Management Committee of the Exchange, as well as other speakers, also emphasised the importance of export business. The industry would do well to accept this wise advice in the spirit in which it was given.

World Wheat Trends.—Since we last surveyed the world wheat situation in the *Economist* of October 10th, later crop estimates for the current season have become available for a number of additional countries. Thus Argentina is expected to harvest about 226 million bushels, against 215 millions given in our survey a month ago, and a yield of 140 millions in 1935-36. On the other hand, the estimate of Australia's crop has been reduced from 145 million bushels to 129½ million bushels. The two revisions, it will be seen, approximately balance. The International Institute of Agriculture has now published estimates of the world supply-demand position in 1936-37:—

WORLD PRODUCTION, TRADING STOCKS AND PRICES OF WHEAT
(In millions of bushels)

Season	World production (a)		World exportable supplies (b)		World import requirements	World exportable end-of-season stocks	Average price (c.f.f.) Price (shillings per cwt.)
	Exporting Countries	Importing Countries	Season's surplus	Total (incl. carry-over from previous year)			
1926-27 ...	2,397	999	1,398	1,010	812	191	5.12
1927-28 ...	2,534	1,077	1,457	1,063	817	252	11.87
1928-29 ...	2,849	1,077	1,772	1,371	888	444	10.20
1929-30 ...	2,242	1,223	1,019	1,061	671	434	9.98
1930-31 ...	2,682	1,062	1,620	1,324	826	499	6.10
1931-32 ...	2,583	1,126	1,457	1,331	809	523	5.76
1932-33 ...	2,379	1,365	1,014	1,253	629	625	5.77
1933-34 ...	2,221	1,446	775	1,123	546	579	5.21
1934-35 ...	2,209	1,371	838	911	533	376	5.83
1935-36 ...	2,048	1,368	680	747	500	250	6.65
1936-37(c) ...	2,136	1,168	968	676	545	125	7.93

(a) Excluding U.S.S.R., China, Turkey, Iran and Iraq. (b) Including U.S.S.R.
(c) Provisional. (d) August-October, 1936.

The 1936-37 crop was somewhat smaller in importing countries, and heavier in exporting countries, than in 1935-36. Consequently, world trade in wheat will be on a larger scale than in the past season. Exportable supplies at the end of July next year will have been reduced to dangerously small dimensions, reinforcing our conclusion a month ago that "nothing short of a bumper crop next season may be sufficient to prevent a sharp upward trend of prices next summer."

"Corn in Britain."—In a leading article under the above title in our issue dated November 7th we stated that "barley in grain still enters the country duty free." What we should have said was that foreign imports of this cereal are subject to the general 10 per cent. *ad valorem* duty levied under the Import Duties Act, but are free from additional duties. On the other hand—as was correctly stated in our article—pearled barley and other barley products from foreign sources bear a duty of 3s. 6d. per cwt., or 20 per cent. *ad valorem*, whichever is the greater.

UNITED STATES

A CLASS ELECTION

IN a fashionable New York hotel, on election night, only dance music relieved the gloom, as results flashed on an improvised screen. The elegantly dressed clientele grew more and more morose. Three or four times certain selected counties, where Landon had a majority, were permitted to repeat their good news on the screen, and each time the diners and dancers stopped for a spasm of hand-clapping. But when the news flashed that Governor Landon had conceded the election, a waltz was in progress, and it was not interrupted. At one table sat a party of New Dealers, two of them high officials in Washington, one an eminent woman in public affairs. After the election had been conceded by Mr Landon, the woman arose, lifted her glass and proposed for the entire room a toast to the President of the United States. The companions at her table promptly stood and lifted their glasses. But though a painful silence fell over the assemblage not another person stirred, not another glass was raised. And the New Dealers, with one accord, gathered up their things and stole away.

The scene depicts to what an extent the election was fought, and certainly felt, on class lines. A scattered handful of men above a given income level voted for Mr Roosevelt, and a similar scattered handful below that level were for Mr Landon. But, on the whole, the poor won the election from the well-to-do. The class division was not European in its self-consciousness. Not even Mr John Lewis, now acknowledged leader of aggressive labour, believes in the Marxian class war. But the people beat "the interests," in an almost old-fashioned manner.

In retrospect, the beating was worse than anyone had expected, save perhaps the Postmaster-General, Mr Farley, who may have hypnotised himself into crediting his own prediction that Mr Roosevelt would carry every State but Maine and Vermont. But the size of the beating has been seriously distorted by the archaic American election system. Mr Roosevelt won 60.8 per cent. of the popular vote and has 98.5 per cent. of the electoral college. The discrepancy is important psychologically, but only psychologically. What is important politically is that the Democrats have 77 per cent. of the House of Representatives and the Administration can count on 82 per cent. of the Senate. Not since the Civil War have the Republicans fallen to such low representation, and only once, just after the war, were the Democrats reduced to so pitiful a handful. The danger of this result is obvious. The majority is too large for efficient service. It is bound to deteriorate into factionalism. And as the Solid South sent 101 representatives to the lower house, most of whom cannot by wild exaggeration be described as New Dealers, they will constitute an immediate conservative influence.

During his first Administration, friends of the President, when he made unfortunate compromises, pleaded for him that he faced a hostile Congress, and had to walk warily. In the next four years the excuse will be less appropriate; for apart from the Southerners, the President has 233 Democrats in the House to 89 Republicans. Yet the first task of the President will be to consolidate the Democratic victory and avert a reaction in 1940. He cannot ride roughshod over the South. If the Democratic Party, as he aspires, is to replace the Republicans as the Party of prosperity and permanence, it must be built on the South. Under the electoral college system the South gives any acceptable Democrat a head-start in any presidential race, a sure vote of 112 in the 531 votes.

It is too early to outline the programme for the coming four years. The severest criticism to be meted out to President Roosevelt is that he was elected without himself announcing it. The now rapidly rising business activity

will, he hopes, provide enough revenue to balance the Budget within two years without further taxation. He will trim and pare his many New Deal agencies; for his pledge not to add to present taxes was one of the few categorical promises of the campaign. Labour, of course, offers the widest field for legislation and service, and it may provide the greatest disillusionment of the second term. Under Mr Roosevelt, labour hopes to organise on a scale never seen in this country, and in the face of employers whose conceptions of collective bargaining are purely feudal. How this can be done without intense, and often belligerent, conflict is difficult to see. The public so far has not paid much of a price for the new doctrine of unionisation. If strikes and riots and, later on, gross inconvenience to the public become the order of the day, Mr Roosevelt may topple from his place as labour's Messiah. He may have to treat labour more "objectively" than he did on occasion during the last four years. And once he has chilled the enthusiasm of his labour following, his second honeymoon will have ended. If he loses labour he may spoil the dream of a long series of Democratic victories. To make a permanently liberal party composed both of labour and the South would be a feat. President Roosevelt is more enviable to-day, before his inauguration, than he is likely to be a year hence.

These, to be sure, may be foolish apprehensions. Industry and finance may experience a change of heart, and be ready to accept the election as a notice that certain basic concessions are called for. The melon-cutting season is on, and the country is bathed in benevolence. The good neighbour policy of the President actually is tinting domestic as well as foreign affairs. For the moment the President's victory is total and the Opposition is eclipsed. But the defeated men and women who would not toast the President of the United States on election night, and all that they stand for in American life, are not likely to change. Theirs is the economic power, despite the electoral victory. And power, as an American judge remarked last year, is rarely surrendered. It has to be fought for.

WASHINGTON, November 11.

"BOOM MENTALITY"

The marine strike, which began some time ago on the Pacific coast, is now in the second week on the Atlantic seaboard. On this side, it is one of those inter-union quarrels, characteristic of the American labour movement—that is, no demands for wages or hours have been presented, but one group of organised workers has struck to enforce recognition instead of some rival union. It is the most serious labour disturbance since the summer of 1934. It is supposed that the strikes in the steel and motor industries have been averted by anticipating wage concessions, on a very substantial scale. Wages (hourly) in the steel industry are now said to be approximately 17 per cent. above the 1929 figure, and with the working-week shorter, weekly money wages will be presumably close to those of that year. In that case, weekly real wages would be materially higher. This arrangement is one of the first to propose an automatic cost-of-living adjustment; but it is uncertain if the workers will accept this proposal. Wage increases are continually reported in the Press; and in a large number of instances the hourly rate is above that of any previous period.

One of the outstanding developments of the autumn has been the appearance of the distinctly recognisable boom mentality in American industry, more pronounced even than in Wall Street. Although the production, distribution, and price indices are not greatly above the figures of, say, the latter part of the second quarter of the year, their persistent maintenance at a high, and very profitable, level has given the confident expectancy which was lacking at

lower levels. To some extent this is expressing itself in rising prices, although the indices do not yet reflect them; still more, it expresses itself in forward orders, in industries where even in the New Era hand-to-mouth buying was the rule. So rapidly is this movement progressing that, where a week ago one could not report any instances of difficulty in obtaining delivery, now instances are coming to attention. In some, perhaps not many, lines a distinct sellers' market has appeared.

"RECOVERY COMPLETE"

The results of the Election justify recollection of the fact that in eight years the United States has swung through all quarters of the economic compass. The following brief table gives the economic background:—

	Sept., 1928	Sept., 1932	Sept., 1936
Federal Reserve Index of Production	115	67	109
Bureau of Labour Statistics Index Wholesale Prices.....	99	65	81
Index* Industrial Share Prices	162	56	130

* Standard Statistics Co.

Because the method of computing bank deposits has been changed, the bank figures cannot be directly compared, beyond the statement that demand deposits are much higher now than in late 1928, and per dollar velocity lower. In considering the production index two facts must be taken into account. In eight years the population has increased by above 5,000,000; in the decade since the index was designed changes in the national economy have occurred that have made the index somewhat obsolete. But broadly speaking, that economy is now quite comparable with that of the autumn of the 1928 election.

There are, of course, major differences in detail. Among them may be cited the great change in the character of outstanding credit. In 1928 the banks were full of stock market loans, brokers' loans and collateral loans to customers; and in addition there was the enormous figure of "brokers' loans for the account of others." Now there are no "loans for the account of others"; brokers' loans, deflated in the bear market, have not been reflatd in the bull market; and collateral loans by banks have scarcely risen from their lowest point. On the other hand, both the commercial banks and the reserve banks are full of Government paper. The following table shows this shift in the credit structure:—

Reporting Member Bank Items

	Oct. 31, 1928	Oct. 26, 1932	Oct. 28, 1936
	(000's)		
Total loans and investments	\$22,028	\$19,118	\$22,517
Loans on securities	6,958	4,352	2,026
All other loans	9,119	6,164	5,542
U.S. securities	3,027	5,298	*10,531
Other securities	2,924	3,304	3,265
Brokers' loans	†4,907	†452	1,153

† Includes some items listed under collateral loans.

* Includes guaranteed obligations.

Total loans and investments in these banks have been restored to a level slightly above that of eight years ago. In spite of the recovery in activity and the great recent expansion in commercial loans, the "other loans" figure is lower than four years ago. "Other investments" changed remarkably little during the whole eight-year cycle. The principal change has come in the relation of banks to the corporate security markets, and the relation of banks to the Government security market. In the earlier period, the principal function of the banks was the financing of a stock market boom; in the recent period, the principal function of the banks has been the financing of the Federal deficit. Quantitatively, the deflation of bank credit was never a dominant feature of the 1929-32 collapse; the severest incidences of deflation were in extra bank credit, brokers' loans for the account of others, mortgages, and consumer credit (partly financed through banks), etc. In short, having returned to the approximate level of eight years ago, the phase of "recovery from depression" can be regarded as virtually complete.

NEW YORK, November 10.

FRANCE

STAY-IN STRIKES OVER?

PARLIAMENT has adjourned until the end of the month for the ordinary session of the "Conseils Généraux." These assemblies have great political significance, because while voting the annual local budgets, they also sent addresses to the Government. These addresses indicate the temper of the Provinces to the Government and the Senate, whose members are also often "Conseillers Généraux." Here also is the explanation of the rapidity of the recent voting of the scheme for reform of local finances, by means of which M. Auriol, the Minister of Finances, alleviated the local budgets by transferring a small portion of their charges to the national Budget. The local budgets have been considerably increased during the crisis by unemployment and public works expenditure. The total rose from 14,000 million francs in 1929 to 17,000 millions in 1934 and 26,000 millions in 1937. M. Auriol's reform was thus a technical necessity, but it was also a political gesture designed to offset criticisms which representatives of local interests—principally the farmers—might address to the Government on account of the many concessions which it had made to industrial labour.

On the other hand, the stay-in strikes are now nearly over, and social peace has returned—apart from controversies between the Minister of Economy and employers, who are accused of sabotaging the economic policy of the Government by retarding production and raising prices. The claims of the workers now seem to be satisfied, at least for the time, though extremists have been claiming a new increase of wages, since the Minister of Economy admitted that there had actually been an increase of 11 per cent. in the cost of living.

MORE SIGNS OF REVIVAL

Further signs of business revival are perceptible. There has been a substantial rise in coal output, and iron and steel output. Railway receipts in the week ended October 20th (compared with the same week of 1935) were 4.67 per cent. higher and loaded waggons 19.51 per cent. higher. The effects of the recent shipping strike must be taken into account. For the first 44 weeks of the year the rise in receipts is 1.24 per cent., and in loaded waggons 0.76 per cent. (There was a fall of 5.88 per cent. for the same period of 1935 compared with 1934.)

The following monthly indices of the Statistique Générale de la France show a similar improvement:—

	Sept., 1935	July, 1936	Aug., 1936	Sept., 1936
General index	94	98	93	95
Engineering	96	100	98	97
Iron and steel	80	81	73	81
Textiles	68	58	51	64
Mines	99	102	87	91
Building (adjusted figures) ..	68	65	63	60
Leather (" ")	92	108	108	106
Paper (" ")	121	166	165	159
Rubber (" ")	773	959	941	941
Motors (" ")	385	418	412	449

In September 10,482 motor cars and 1,484 lorries were put on the road, compared with 10,213 and 1,404 respectively in August. The figures for the cotton industry are as follows:—

	June, 1936	July, 1936	Aug., 1936	Sept., 1936
Spinning (average per spindle in kilograms):—				
Production	1,348	1,606	1,191	1,722
Deliveries	1,440	1,704	1,185	1,844
Stocks	1,652	1,652	1,714	1,642
Unfulfilled orders	5,557	5,069	4,765	4,926

	June, 1936	July, 1936	Aug., 1936	Sept., 1936
Weaving (average per loom in pieces of 100 metres):—				
Production	5.08	5.46	3.21	4.74
Deliveries	6.05	6.23	3.95	4.90
Stocks	7.50	6.74	6.02	5.74
Unfulfilled orders	25.32	22.02	22.39	21.85

The total of bankruptcies and judicial liquidations was 816 in October, against 452 in September and 718 in August. It must be remembered that paid holidays were still going on in September and that devaluation had not then taken place; so that the October figures will be more significant.

Unemployment is falling. During the six weeks since devaluation total unemployment shows a fall of 1,138 to 406,595 (mostly in textiles). In the same period of 1935 there was a seasonal increase of 7,273. The movement of partial unemployment is much more significant. Employment in 100 firms increased by 0.79 per cent. in comparison with October, 1935, while the percentage of workers on short time—i.e., less than 48 hours—was in October, 1936, 24.17 per cent., against 40.98 per cent. in October, 1935.

The first consequence of the business revival and the political and social excitement has been a flight by timorous capitalists into real values. Hoarded capital has returned to the markets and notably to the Stock Exchange. The following table shows the progress of various groups of shares:—

	May 9, 1936	Sept. 12, 1936	Oct. 10, 1936	Nov. 7, 1936
Industrials	172	138	184	211
Banks	113	100	123	135
Insurance	388	315	425	426
North coal mines	131	88	130	151
Iron and steel	59	41	62	69
Chemicals	174	150	194	228
Railway	62	52	66	66
Electricity	233	190	252	267
Food	399	312	422	454
Foreign Stocks	215	228	301	368
"Rentes" and Debentures	74	72.9	81.8	80.9
3% rentes	66.70	65.45	78	78.7
4½% rentes	70.70	68.60	83.50	83.35

Advances are particularly marked in international shares (60 per cent.) and French industrials (50 per cent.), while the rentes are lagging behind (10 per cent.). This is partly a consequence of the Budget deficit and of the prospect of the huge sums which the Government has to borrow next year. It is also due to fears of new political or social conflicts. Thus 4½ per cent. rentes are not above 83 (November 17th), while 3 per cent. Dutch Government stock or even the 3½ per cent. Swiss are at par. It seems, however, that a small but real recovery of business with a minimum of political and social quiet would be sufficient to raise the rentes to much higher levels. A simple announcement of an administrative reorganisation in the Ministry of Finance pushed the rentes two points forward in a day, partly because it was accompanied by rumours of an introduction in Paris of the English "Open-Market" policy. The appeal of the London and New York Stock Exchanges is also rather hampering to prices on the Paris Bourse.

Foreign trade in October, that is, in the first month after the devaluation, was as follows:—

IMPORTS (In thousand francs.)			
	Oct., 1935	Sept., 1936	Oct., 1936
Foodstuffs	530,211	626,890	763,440
Raw materials	902,695	919,746	1,143,225
Manufactured goods	290,453	315,817	340,475
Total	1,723,359	1,862,453	2,247,140
EXPORTS			
	Oct., 1935	Sept., 1936	Oct., 1936
Foodstuffs	222,091	184,175	259,502
Raw materials	372,511	357,814	397,968
Manufactured goods	758,382	648,050	802,459
Total	1,352,984	1,190,039	1,459,929
Import surplus	370,375	672,414	787,211

The favourable effects of devaluation are not yet perceptible; but these figures naturally cover transactions arranged before devaluation.

The French Public Debt in January, 1935 and 1936, is given in the 1937 Budget Bill as follows:—

NATURE OF THE DEBT (000,000 francs omitted)		
	January, 1935	January, 1936
Perpetual	51,640	50,834
Redeemable	197,825	199,103
Middle-term	24,640	27,320
Floating	49,908	55,885
Total	324,013	333,142

ANNUAL CHARGE

Perpetual	1,832	1,670
Redeemable	11,660	11,419
Middle-term	1,395	1,349
Floating	1,171	1,720
Total	16,058	16,058

The increase in the annual charge is very much less than the increase in the nominal total.

PARIS, November 18.

GERMANY

COLLAPSE IN FOREIGN SHARE PRICES

THE Bourse last week witnessed a complete collapse of all foreign securities and a sharp drop of reichsmark shares. The latter occurred in sympathy with the former, or because holders of mark securities had suddenly to raise cash in order to make good their losses on foreign ones. The collapse of foreign securities is, however, a matter of moment. It was brought about deliberately, in fact was enforced, by the Government for a purpose which is not yet divulged, but which is assumed to be confiscation, sooner or later, in the interest of the foreign-exchange balance.

Officially, it has only been declared that foreign securities were quoted at unreasonably high levels. In fact such securities had risen very much. This was the case not only with the handful of first-class foreign industrials quoted in Berlin, but with some score low-priced and mostly speculative South-East European, Mexican, and other bonds. The advance in these markets was due to the belief that any value expressed in a foreign currency, however dubious, was safer than a reichsmark security, that is, due in the end to distrust of home business conditions, to the increasing insecurity of property and to doubt about the reichsmark itself.

MEASURES AGAINST HOLDERS OF FOREIGN SHARES

It now seems likely that the first victims of these unfavourable home conditions will be the holders of foreign, not of domestic, values. Nazi journals imply that the possession of foreign securities is treason against the nation; and point out that these securities would provide a substantial foreign-exchange fund. Whether any general expropriation (which would naturally be against compensation in marks or more probably in mark bonds) is designed, is not yet clear. But among regulations which are to appear late this week one, it appears, will compel the deposit in a bank of all foreign securities in private hands. It was on November 4th that there appeared a "circular" based on a foreign-exchange decree of the preceding week, which "announced," without, it seems, formally decreeing, the expropriation of German foreign bonds acquired after July 12, 1931 (date of the introduction of foreign exchange control), and of such foreign securities as are not quoted on German Bourses. It is not clear whether this measure has been definitively taken or not. But it seems that "State determination of Bourse prices," to use the phrase of a financial journal, may be a permanent fact. In order to facilitate this "State determination" the Bourse Committee on Saturday announced the suspension of "variable quoting" for some thirty bonds and shares, including all the latter that have any importance. This means that these securities will henceforth be officially quoted only once a day. The severity of the fall in shares may be judged from the following specimens (price fractions omitted):—

	Oct. 31	Nov. 16
A.K.U. Rayon	92	53
Chade (Co. Hsp. de Elec.) Lit. A.C.	428	215
Schles. Bergbau	43	35
Otavi	46	22

Some foreign currency bonds, in particular Hungarians, have fallen in the same proportion.

The Reich Finance Minister last week referred to reports of proposed foreign credits to Germany. "New credits," said the Minister, "could not improve Germany's economic

condition." The old credits, he added, were already a sufficient cause of difficulties.

The Reich Prices Commissary, Herr Wagner, has outlined his intentions, chief of which is to operate by "price-creating," and not merely by restriction. This policy, if it is to be carried out, involves intervention in production. General Göring's Second Decree for the execution of the Four Years' Plan lists ten industries in which labour will be controlled, in that the number of employees in individual undertakings, public or private, may not be increased without permission of the local Labour Office. This implies that labour shortage already exists or is anticipated in these industries.

Winter cereals have suffered from cold and bad weather. Farmers have been ordered, under threat of punishment, to deliver 100 per cent. of their compulsory cereals quotas before February 28th. Last year no such measure was taken, and the theoretical compulsion to deliver was loosely observed. The stricter regulation of this year is due to nervousness about the supply, in particular to fear that the farmers will consume grain as fodder.

Pig-iron output in October was 1,379,000 tons. In the first ten months of 1936 it was 12,788,100 tons, against 10,451,600 tons in the same months of 1935.

The foreign trade return for October shows an unchanged export surplus. The surplus for the year so far has thus been raised to Rm. 395 millions. If the figures for November and December, 1935, are maintained this year, the surplus of the whole year will reach 500 millions, as against Rm. 111 millions in 1935. The latest figures are:—

	September	October	January- October
(Millions of marks)			
Imports			
I. Foodstuffs	110.6	126.9	1,229.3
(a) Livestock	8.4	8.4	75.6
(b) Animal foodstuffs	33.2	38.4	368.0
(c) Vegetable foodstuffs	69.0	80.1	785.7
II. Industrial goods	225.8	229.1	2,265.7
(a) Raw materials	121.5	123.5	1,282.0
(b) Semi-manufactured	71.7	64.1	656.0
(c) Manufactured	32.6	41.5	327.7
Total	336.4	356.0	3,495.0
Exports			
I. Foodstuffs	5.0	6.3	70.9
(a) Livestock	0.1	0.1	2.0
(b) Animal foodstuffs	1.0	1.3	8.0
(c) Vegetable foodstuffs	3.9	4.9	60.9
II. Industrial goods	406.6	425.2	3,819.2
(a) Raw materials	37.9	39.0	337.8
(b) Semi-manufactured	40.5	40.6	385.0
(c) Manufactured	328.2	345.6	3,096.4
Total	411.6	431.5	3,890.1

Both import and export prices declined between September and October.

BERLIN, October 18.

SWEDEN

SCANDINAVIAN SOLIDARITY

OCTOBER 26TH was celebrated in the four Northern countries, i.e. Denmark, Finland, Norway and Sweden, as a "Day of the North" in order further to strengthen the links uniting these countries. The Press of all colours devoted front pages to articles advocating inter-Scandinavian co-operation in various fields of public life. The three Scandinavian kings and the President of the Finnish Republic broadcast speeches. The Swedish Foreign Secretary, M. Sandler, spoke in Oslo, the Finnish M. Holsti in Stockholm, and the Norwegian M. Koht in Helsingfors. Co-operation in the economic field was, of course, one of the main objects. An article by the Swedish Minister of Commerce, M. Skoeld, urged that the main efforts of the Northern countries should be directed towards abolishing international trade barriers. Only a few days later a Latvian paper, the *Brīva Zeme*, considered as the mouthpiece of the Latvian Government, called in a leading article for closer political co-operation between the Northern bloc and the Baltic States, and suggested a conference of Baltic and Scandinavian statesmen in Riga. Though it is known that the idea has always been favoured by the present Finnish Foreign Secretary, M. Holsti, it aroused very moderate enthusiasm in the Scandinavian Press. The four Northern countries—at least the three Scandinavian

States—are far too attached to their traditional neutrality to enter into any kind of combination with the politically rather exposed Baltic border States.

STEADILY RISING PROSPERITY

The curve of prosperity in Sweden continues its upward trend, and trade and production show figures which in some fields surpass the records of the boom year 1929. Foreign trade figures for the first three-quarters of the current year were as follows:—

	1935 January- September	1936 January- September
Imports	1,034.9	1,156.2
Exports	917.7	1,064.7
Import surplus	117.2	91.5

During the same period trade with Great Britain has moved as follows:—

	1935 January- September	1936 January- September
Exports to U.K.	229.0	260.9
Imports from U.K.	206.1	223.9
Export surplus	22.9	37.0

Negotiations for revision of the present trade agreement with Great Britain are expected to begin some time after the turn of the year. Modifications of the present agreement will probably be only small.

Exports of staple goods have been satisfactory. Some 850,000 standards of timber have been sold for delivery this year, and another 225,000 standards for delivery in 1937. Demand has been strongest from Scotland and Holland. Pulp sales have been even more brisk, and not only the current year's output but almost the entire 1937 output has been sold. Marked interest has been shown by American buyers in sulphate pulp for delivery in 1938. The iron and steel industry continues to work at full capacity. Industrial production is expanding, and the general production index rose in September by 2 points to 110, compared with 101 in September, 1935. Employment shows hardly any change. The number of unemployed remains at the very low figure of 20,800. A shortage of skilled labour is reported from the mechanical workshops industries.

Following the general movement of world prices, the Swedish general price index rose in September from 120 to 122 (1913 = 100). For raw materials the index rose from 116 to 118, for half-finished goods from 125 to 127, and for finished goods from 120 to 121.

After the devaluation of the gold currencies, the Treasury, the City of Stockholm, and some of the Swedish mortgage banks called their outstanding foreign loans for redemption. The Treasury has called seven loans of a nominal value of Kr. 332.3 millions; so that practically the entire foreign indebtedness has been redeemed.

STOCKHOLM, November 14.

CHINA

FIRMER ATTITUDE TO JAPAN

RELATIONS between China and Japan have reached an interesting stage during the past few weeks. The prestige of Marshal Chiang Kai-shek has been considerably enhanced by his firm but patient handling of the Kwangsi revolt, and although the unification of China is more apparent than real, the Nanking Government undoubtedly commands the support of the country as a whole. For the past year the tactics of the Government have slowly changed from abject compliance with the demands of the Japanese to something approaching stubborn resistance. So far Marshal Chiang has been clever enough to avoid open conflict; but the present tussle of Oriental wits seems to be going in favour of the Chinese, who may be no match for the Japanese on the field of battle, but are certainly superior in playing a game of patience. The recent negotiations opened between the Japanese Ambassador and the Foreign Minister in Nanking are on a very different plane from the preliminaries to a treaty between victor and vanquished; and there is some hope that they may lead to a reasonable arrangement

by which Japan's encroachment on Chinese territory will be ended in return for ample protection for Japan's trade with China.

The negotiations have been interrupted for the time being, and at the moment of writing, political interest is focussed on Hangchow, where Marshal Chiang Kai-shek is in conclave with the Governors of the Northern Provinces, presumably with a view to preserving Chinese sovereignty in the territory which Japan has been endeavouring to convert into another Manchukuo.

Marshal Chiang returned to Nanking by air early last month after a two months' stay in Canton. Shortly before he left, the Governor of Hongkong paid an informal visit to Canton and exchanged courtesies with Marshal Chiang as well as with the leading officials of the Kwangtung Provincial Council. The visit seems to have been made at a most opportune moment, and British relations with Canton have been re-established on a sound footing after a lapse of five years. There is ample evidence that the Central Government and not least Marshal Chiang fully appreciate the sympathetic support of the British authorities.

The Hongkong Government has presented its Budget for 1937. It was realised that the drop in the dollar to rs. 3d. (the rate for last year's Budget being rs. 8d.) would add enormously to the total, because so large a proportion of the Colony's expenditure is on account of Civil Service salaries paid on a sterling basis; and it was feared that some increase in taxation would be found necessary. Expenditure for 1937 is estimated at \$32½ millions; but, apart from an increase in the tax on motor vehicles, no additional duties have been made. The estimated revenue is \$28½ millions, leaving a deficit of nearly \$3½ millions to be met from the Colony's reserve fund, which is normally not allowed to fall below \$10 millions. This raid on the reserves is, however, justified in the present circumstances; and it is hoped that, unencumbered by additional taxation, the trade of the Colony will be able to regain the ground lost during the past few years. The cut in civil servants' salaries is to be maintained for another year, saving the taxpayers over a million dollars; but the Secretary of State has intimated that the cut "is not to be maintained any longer than is demanded by the obscurity of the financial outlook."

RUMOURED BRITISH LOAN

The rumour, which has since been officially denied, that Great Britain was about to make a loan of several millions sterling to China caused a good deal of excitement in Japan, although it was scarcely credited here. We now know that there was no question of a loan, and that what gave rise to the report was the consideration of extending the Exports Credit Guarantee scheme to British exports to China. Although it is true that many big contracts in China have, of recent years, been placed with non-British concerns because of the more favourable credit terms offered, British manufacturers have not been quite so badly left as some home commentators imagine. The Kwangtung Provincial Textile Mills, for instance, have been entirely equipped with British looms and spinning machinery in addition to the electric power plant. Other Government undertakings in South China have also been equipped with British machinery, while many orders for railway locomotives and plant have been ordered from British factories through the Boxer Indemnity Committee. Nevertheless, the extension of the Credit Guarantee facilities is a great gain to British manufacturers in their efforts to obtain orders.

Now that the Hongkong aerodrome has been made available to aircraft of all nationalities, it can only be a matter of months before the Colony is linked with all the important air services of the world. At present Hongkong is the most easterly point reached by Imperial Airways, and as the Trans-Pacific Clipper Service is now functioning regularly, there is only the gap of some 600 miles between Hongkong and Manila waiting to be filled.

Lord Rothermere has recently spent eight days in this Colony. Unfortunately, a favourable impression of his immediate surroundings did not prevent him taking a gloomy view of the Far East generally, which, he remarked, seemed likely to become a tragic page in Britain's commercial history. This mournful foreboding was the introduction to a so-called interview issued to the four local newspapers and apparently cabled to the *Daily Mail*. As is, perhaps, not surprising, Lord Rothermere's knowledge

of Hongkong, which he was heard to refer to as a Settlement, was of the sketchiest description. He was glad to learn of the appointment of Mr W. M. Kirkpatrick to represent the British Export Credits Board in China and felt sure that this gentleman would come to the same conclusion as himself, "that unless aid on a considerable scale is given to British shipping and British trade there will be no British exports to the great markets of China and Japan in five years' time." He made a great point of the need for speeding up British steamship services, but became rather confused when holding up as an example the quick passages made by foreign liners. Unless Lord Rothermere wants P. and O.'s and Blue Funnel's to compete with their foreign rivals solely for passengers, there seems to be no case for subsidising ships which have speed and carry full loads of British merchandise. The reason for the decline in Britain's trade with China is not to be found in imaginary handicaps to shipping, but in various causes mainly arising from the political and economic troubles of China. Those troubles might have been considerably mitigated by this time if Lord Rothermere had not given so much encouragement, through the wide influence which he wields, to the chauvinistic policy of Japan.

HONG KONG, November 1.

ARGENTINA

STRIKING RECOVERY SINCE JULY

THE remarkable change which occurred in the economic outlook in Argentina just after the middle of the year—due to the big jump in cereal and linseed prices following drought and dust storms in the United States and Canada—has, on the whole, continued. The effect became more pronounced because the news from the Northern Hemisphere coincided with more favourable weather in Argentina. The high prices ruling last July have not been maintained; but prices are much better than this time last year, as is shown by the following table:—

	Wheat	Linseed	Maize
(Price per 100 kilos spot)			
November 30, 1935	8.15	12.50	4.30
July 31, 1936	12.10	15.95	6.10
November 10, 1936	10.60	14.00	5.55

Enormous quantities of maize have been shipped from Argentina in the last three months; and, as most of the contracts were made when prices were very high, the recent decline in value has not materially affected the prosperity of the country.

The figures of Argentine exports for the first 10 months of 1936, with the corresponding figures for the two previous years, are as follows:—

	Volume in Tons	Market Value in Pesos
(First 10 months of each year)		
1934	13,032,286	1,212,939,782
1935	13,956,840	1,331,700,139
1936	11,360,627	1,287,746,571

The value of exports for this year and last year is made up as follows:—

	1935 (Market value in Pesos first 10 months)	1936
Products:—		
Pastoral	483,915,995	439,965,665
Agricultural	742,982,353	828,624,026
Forestral	28,620,469	34,825,148
Mining	7,759,297	6,333,342
Hunting and fishing	7,078,619	5,838,553
Divers	17,389,838	16,113,405

When one remembers that 1935 was a year of unprecedented drought in Argentina, and that during the first half of the current year exports declined so rapidly that an economic crisis threatened, the recovery of the last three months is very striking. The exact extent of the improvement is shown by the values of exports during August, September, and October of this year compared with the same months of 1935:—

	1935	1936	Increase
August	118,017,798	128,367,676	10,349,878
September	120,876,040	160,968,202	40,092,162
October	122,706,131	153,971,045	31,264,914
	361,599,969	443,306,923	81,706,954

As imports during the first nine months of 1936 (the last figures available) were 57,986,708 pesos lower than in the same period of last year, there is reason to expect that Argentina's export surplus will be larger this year than in 1935—a result which appeared beyond possibility when the Argentine peso was falling last June.

During the first half of this year the value of exports showed a fall of 14.8 per cent. compared with 1935; but by the end of last month the decline for the year up to date had been reduced to 3.3 per cent. The effects of this remarkable recovery are reflected in all the economic indices. The value of the peso in the free market, which fell to 18.85 to the £ on July 3rd, is to-day 17.60 (against 18.02 a year ago). Cash revenue for the first ten months of 1936 amounted to 798,365,208 pesos, compared with 732,884,558 pesos in the same period of last year—an increase of 65,480,650 pesos. The value of cheque clearings in the City of Buenos Aires during the ten months is the highest for any year since the world depression, and amounts to 28,144 million pesos for 1936, against 26,663 million pesos last year. The total of liabilities involved in commercial failures was 55,589,983 pesos for the first ten months of 1936, against 79,085,019 pesos and 117,132,128 pesos in the same periods of 1935 and 1934 respectively.

EXCELLENT CROP PROSPECTS

The fears of currency inflation, which were entertained in some circles in Argentina in the second quarter of 1935, at the time of the revaluation of the gold stock, have proved unjustified. The note circulation shows no significant increase. Some of the foregoing indications of improvement, however, are the consequence of the economic progress which Argentina had made and was making before the drought of 1935. The recent recovery came in time to prevent the effects of a drought which otherwise would have been disastrous from being seriously felt, and the downward trends which were apparent last June have all been reversed.

Prospects for the coming crops are excellent, and, so far, throughout the present spring, rain has fallen at fairly regular intervals. Moreover, it has been well distributed and has included grain-growing zones where drought is more or less endemic, such as the South of Buenos Aires Province and the Territory of La Pampa. The dangerous period of the season is now nearly over; for November is the crucial month in Argentina, when drought, hot winds and locusts, and particularly late frosts, can unexpectedly reverse the most optimistic expectations.

Whereas six months ago there was a spirit of gloom in Argentina, and traders regarded a period of depression as inevitable, there is now almost boundless optimism. This is partly because in an agricultural country one night's rain or a drought in a foreign land can change the whole outlook; and hence optimism and pessimism succeed each other easily. But it is also due to the belief that Europe is moving towards war, and that much higher prices for Argentine pastoral and agricultural products are only a question of time.

BUENOS AIRES, November 11.

IRISH FREE STATE

THE NEW CONSTITUTION

THE new Constitution which is being drafted will not be available for some weeks, but its main features can be gathered from Mr de Valera's speech at the annual congress of his own party. The most important fact that emerges from this very interesting and statesmanlike speech is that there will be nothing in the new Constitution to change the existing relations between the Free State and Great Britain. Nor will the question of partition be raised. These vital matters are postponed for the present, and the existing arrangements in respect of the Free State's external relations are to be continued for at least the immediate future. Public opinion has been relieved of much anxiety by this declaration of policy, which excludes the possibility of the announcement of a twenty-six county republic.

Meanwhile the Free State is to put its own house in order. The new Constitution is clearly being drafted on conservative lines. The present system of an executive responsible to the Dail is to be retained, and a second

chamber, partly vocational and partly nominated, is to take the place of the former Senate. Provision is to be made for the election of a new dignitary who is to be above party politics and is to act as ceremonial head of the State. It is not unlikely that, when Anglo-Irish relations improve, this personage may also act as the King's representative; but this will be a later development. The original Constitution has been amended so frequently and in such a piecemeal manner that a complete revision is called for, and there is no reason to suppose that the new proposals, when they appear in concrete form, will contain anything calculated to alarm even the most timid.

In spite of all the Government has done to provide rural employment the flight from the countryside continues. In recent years very substantial inducements have been offered to farmers to engage in extensive cultivation of wheat, beet, tobacco and other crops which give a large amount of employment, and a considerable number of small holdings have been created by the division of larger farms and the breaking-up of pasture land. In spite of all these efforts agricultural employment has not increased, and the population of the rural areas has fallen by 4.8 per cent. since 1926.

INFLUX OF LABOUR INTO DUBLIN

Part of this stream of rural migration finds its way to Great Britain, which receives about 15,000 emigrants from Ireland every year. A larger part flows into the Irish towns, especially into Dublin, the population of which has increased by 15 per cent. in the last ten years. This influx of unskilled labour greatly adds to the difficulty of the housing problem in the capital, where enormous sums are being spent on building new houses for the working classes. As soon, however, as the slums are cleared of their existing inhabitants they are refilled by immigrants from the country; and a new slum problem takes the place of the old.

Considerations of this nature probably underlie the Bill to regulate agricultural wages which is about to be introduced. Of course, wages in agriculture are wretchedly low, but it is impossible to raise them by the creation of any machinery or arbitration. Farmers who employ wage-paid labour are already in difficulties and could not endure a further rise in their costs, while the great majority of farmers do not employ any paid labour at all. The farming community as a whole has far less to gain from the compulsory fixation of money wages than from the slowing down of the urban protective drive which is operating to depress their real incomes by raising the prices of what they have to buy.

The improvement in the external trade position is shown in the following table:—

EXTERNAL TRADE OF THE IRISH FREE STATE

	Imports	Exports	Import Surplus
Oct., 1933-Sept., 1934	38,431,734	18,423,821	20,007,913
Oct., 1934-Sept., 1935	37,342,870	19,247,769	18,095,101
Oct., 1935-Sept., 1936	38,656,266	22,064,851	16,591,415

The decrease in the import surplus is probably sufficient to restore equilibrium in the country's external balance of payments, since the favourable balance on invisible account almost certainly outweighs the import surplus. The latest banking statistics confirm the suggestion that funds have begun to flow into the Free State again and that the drain of the last few years has come to an end.

DUBLIN, November 15.

AUSTRALIA

EXPANDING BUSINESS ACTIVITY

THE financial position in Australia is at present somewhat anomalous. Activity in building and in general business has resulted in increased demand for banking accommodation, and the quarterly average returns of the trading banks to September 30 show that their advances have risen to £266,526,961, showing an increase of £8,499,599 compared with a year ago, and a total increase of £24,190,034 compared with two years ago. Deposits, at £284,279,436, show an increase of only £300,350 for the past year (previous comparisons being affected by the shifting of overseas funds from Australia), and the low rates of interest

on fixed deposits now ruling are relatively unattractive to investors.

The position would warrant an advance in rates, though practical difficulties have to be taken into account for the time being. While the banks have increased their advances, their holdings of Government and municipal securities, at £43,126,382, including Treasury Bills, show a reduction of £6,522,741 during the past twelve months, while their cash assets within Australia have declined by £4,438,816. The foregoing figures apply only to Australian business, and the various movements indicate some increase in external resources as compared with a year ago. During the next few months there should be an increase in London funds as usual in the export season, but the subsequent outlook is affected by the volume of imports, even after allowing for movements of private capital to Australia.

Commonwealth Government securities are showing weakness owing to anticipations of a fresh loan late this year. The previous internal loan of £9,000,000 at 3½ per cent. issued at 98½ and yielding £3 17s. 6d. per cent., including redemption, was not fully subscribed by the public, and business expectation is that a higher yield will be required in future.

MELBOURNE, November 1.

CANADA

BETTER TRADE FIGURES

BUSINESS conditions remain reasonably satisfactory, but for the week ending October 17th the general economic index of the Bureau of Statistics fell from 115.2 to 111.6. But it remained 15 points above the figure recorded for the parallel week in 1935:—

Week Ending	Car Loadings	Wholesale Prices	Bank Clearings	Economic Index
October 3, 1936	78.3	76.7	112.6	114.9
October 10, 1936	77.3	76.7	111.2	115.2
October 17, 1936	77.2	77.1	103.0	111.6
October 19, 1935	75.1	73.0	84.3	96.6

Industrial activity is being well maintained, and continues to be helped by the steady expansion of the mining industry, which pours out a continuous demand for machinery and supplies of all kinds. The increase of employment in September, testified by an addition of 28,539 workers to the pay-rolls of employers reporting to the Bureau of Statistics, was the largest in any month of the present year; and in the eight months period December, 1935, to July, 1936, the number of recipients of public relief fell from 1,212,262 to 1,063,546. The construction industries still tend to lag behind, but they are expected to receive a stimulus from a new housing scheme sponsored by the Federal Government in co-operation with the banks under which the latter undertake to lend money cheaply for the reconditioning of houses. The output of the newsprint industry is keeping up, and for September amounted to 269,782 tons, compared with 223,892 tons in August and 270,053 tons in September, 1935, while the salmon pack of British Columbia for the first eight months of 1936 at 1,200,000 cases is the largest in the last six years.

Foreign trade returns for September are as follows:—

	September, 1935	September, 1936
Exports	\$78,845,842	\$89,582,398
Imports	44,689,463	52,879,429

The Federal Budget position has been steadily improving. The yield of revenue for September was \$32,222,000, as compared with \$26,031,000 in September, 1935. Expenditure for the month was \$33,348,000, a decline of \$4,000,000. For the first six months of the fiscal year ending September 30th the aggregate yield of the Federal revenues was \$233½ millions, a gain of \$34½ millions; and as in this period expenditure, at \$220½ millions, was down by \$2½ millions, the net improvement in the Budget position for the half-year was, roughly, \$37½ millions. As the annual deficit of the Canadian National system will not show any large decrease, the Government will be well satisfied if it can keep the aggregate national deficit below \$75 millions.

Last week representatives of the Canadian and German Governments signed at Ottawa a new trade treaty and a separate pact regulating "payments." The latter pact aims at the allocation of German foreign exchange which

is to become operative on November 15th, and has been given a time limit of one year but will be extended indefinitely until either party gives two months' notice of termination. The net effect of the trade agreement is to change from a temporary to a more permanent basis the most-favoured-nation treatment on tariff rates and Customs regulations which the two countries have been giving to each other since 1933.

Admitting recently that it had only some \$366,000 available to meet a bond issue of \$1,250,000, maturing on November 1st, the Social Credit Ministry of Alberta appealed for assistance to the Federal Government. The latter rejected the request on the ground that the Federal Treasury under existing legislation only had power to make advances to the provinces for the purpose of meeting obligations about unemployment and lacked statutory authority to make loans for the liquidation of debt obligations. The Alberta Government then asked the Bank of Canada for a loan of \$3,500,000 and encountered another refusal; but it is continuing to press for it.

SOCIAL CREDIT ON THE WANE

Canadian financial institutions and political parties were fearful a few weeks ago of Social Credit spreading from Alberta into the neighbouring provinces of Saskatchewan and Manitoba, but recent developments, including a cancellation of Saskatchewan farmers' debts totalling \$75 millions, have definitely forestalled Mr Aberhart. Members of the Federal Cabinet now believe that he and his Social Credit schemes will be discredited and discarded within two years, although he is now as strong in Alberta as he ever was. It is true that the Social Credit Party elected five members to the Legislative Assembly of Manitoba in the recent general election in that Province, but Federal Cabinet Ministers attribute this to the over-confidence of the Liberal-Progressive Government of Mr John Bracken, who has been in power since 1922. In the Province of Saskatchewan, which lies between Manitoba and Alberta, the Social Credit Party were able to elect only two out of twenty-one candidates for the Federal Parliament last October. There can be little doubt that the \$75 millions debt reduction plan recently effected in the Province of Saskatchewan by arrangement of the Federal and Provincial Governments with the mortgage and loan companies was facilitated by the fear that Social Credit might spread into other provinces, particularly Saskatchewan, where the Dominion Government and the Government of Saskatchewan to leave the drought-stricken farmers of the prairies to sink or swim. It affects 40,000 farms and 200,000 persons, many thousands of whom have suffered seven consecutive crop failures. Thus the farmers within the Saskatchewan section of the drought area, which stretches from Crystal City in Southern Manitoba to Calgary in Southern Alberta, will be maintained with reduced financial obligations, until fortune in the form of a good crop again smiles upon them. In Alberta the debtor said to his creditors: "We will arbitrarily reduce interest rates"; while in Saskatchewan the debt reduction plan was effected by a friendly round-table conference.

Critics of Mr Aberhart and his Government have been encouraged by a report of an Alberta Bondholders' Committee representing United States, British and Canadian investors in Alberta securities, which finds that the Social Credit Province is "economically and fiscally solvent and can pay all its interest obligations in full and reasonably expect surpluses in the near future." The Committee thinks that the Alberta Government was not justified in cutting interest rates from more than 5 per cent. to 3 per cent.

Meanwhile, the payment of Social Credit dividends by December 1st has become a distinct possibility; but instead of the \$25 a month which Mr Aberhart promised before the election to every adult citizen the prospects now are for a monthly dividend of only \$5 or \$10. Some 370,000 men and women have registered for dividends, and the necessary machinery is now being set up. The Government will probably stipulate that only goods made or produced in Alberta may be purchased with the social dividend disbursements. Legal tender will be used for purchases from other Provinces.

OTTAWA, November 1.

LETTERS TO THE EDITOR

BRITISH MONETARY POLICY

TO THE EDITOR OF THE ECONOMIST

SIR,—I beg leave to make the following observations upon the points to which my attention is drawn in your footnote to my letter of October 31st.

1. The *Economist* index of the sterling prices of primary products has risen 45.7 per cent. since September, 1931.

This index is liable to produce a grossly exaggerated view of what the population of the Empire has enjoyed out of the recovery in prices. It takes the lowest level of prices as the basis; so that a 50 per cent. fall since 1924 and a 50 per cent. rise on this basis leaves the general run of primary producers still with only 75 per cent. of their gross income in 1924, which was the last year of anything like reasonable recovery for basic industries in general. Then, the distinctive armaments rise in mineral prices does not affect the farming communities, which comprise about 60 per cent. of the Empire's population, and affects (through their customers) only a small proportion of the industries which produce and transport necessity goods. Again, a selection of, I believe, only 17 primary products for calculation leaves out of account innumerable other primary products upon which many millions of the Empire's farmers depend for their money income.

2. The *Economist* has consistently supported the reflationary policy pursued in the last five years, which has resulted in this 45.7 per cent. rise in its primary index.

In our judgment you have supported what has proved in effect to be the least measure of reflation possible without precipitating renewed crises at home and in the Empire. Actually, in most parts of the Empire, primary producers are still not only destitute but desperate. We would refer you particularly to India, where the Calcutta official index records a fall from 178 in 1924 to 96 in 1931, 88 in 1933 and a recovery to only 91 January-June, 1936.

3. The "special" unemployed, in our opinion, cannot be rapidly absorbed in their old trades as a result of any monetary measures, but only by a freeing of international trade.

In our opinion, nothing like adequate relief from other than deflationary restrictions is at all practicable until there is in fact an adequate monetary reflation. This is absolutely essential if primary and other basic producers are again to enjoy the purchasing power which deflation has taken from them this past dozen years. It is in leading the world in adequate reflation that the only effective chance for British statesmanship exists.

Yours, etc.,

W. N. WIGGINS,

Chairman, Monetary Policy Committee.

The Federation of
Master Cotton Spinners' Association, Ltd.
Royal Exchange, Manchester.

[The commodities covered by our index of primary product prices are as follows:—Wheat, maize, rice, bacon, coffee, cocoa, butter, coco oil, cotton, wool, pig iron, lead, tin, copper, petrol, linseed oil, and rubber. The price of every one of these has risen since September 1931; and in only four cases is the rise less than 20 per cent. Our complete index, which covers 58 commodities, has risen 25 per cent. since September, 1931.—Ed. *Econ.*]

THE DEPRESSED AREAS

TO THE EDITOR OF THE ECONOMIST

SIR,—The two illuminating articles by your special correspondent, coupled with the final report of the Commissioner for the Special Areas, show only too clearly that the attempts which have been made to overcome the chronic unemployment in the distressed areas have been a complete failure, and it is becoming increasingly evident that something far more drastic will have to be done if any appreciable results are to be achieved. At the same time, there appears to be general agreement that it would be much more satisfactory to bring new industries into the distressed areas rather than to encourage emigration of the unemployed to other areas which are now more prosperous. The question is how this objective is to be achieved, and the purpose of the present letter is to urge the advantages of a direct subsidy as a means of attaining this end.

Your correspondent tells us that the Board of Trade is opposed to a subsidy on the grounds that it is a first step on the slippery slope towards dictating the location of industry, and the answer to this objection is easy. The phrase "dictating the location of industry" may be applicable to the payment of a subsidy, but, if it is, then it is no less applicable to any other proposal which aims at encouraging the location of new industries in the distressed areas. It is applicable to the proposal to create a special marketing board, to the proposal that new factories in other areas should be prohibited, and so forth. Stripped of pretence, objection to a proposal on the grounds that it tends to dictate the location of industry is simply an argument for *laissez faire* and nothing else.

No one will suggest, of course, that the working out of a scheme for subsidising new industries is not a difficult problem, and it would clearly take up too much of your space to discuss the matter in detail. There are two points, however, which I should like to make here. In the first place, experience seems to show that direct methods are usually, in the end, cheaper and more effective than indirect methods. The relief of unemployment is a case in point. Your recent article on the New Deal brought out very clearly the fact that the dole is a much cheaper and more effective method of dealing with unemployment than any hitherto devised of a less direct character. In the second place, experience shows that industry tends to attract industry. A determined and adequate effort to attract industry to the distressed areas would soon expend their force and achieve nothing.

Yours faithfully,

K. E. EDGEWORTH.

Boosterstown.

BOOKS AND PUBLICATIONS

THE TRADE CYCLE

EVERYBODY wants to know about the trade cycle, and in particular to foretell when the boom will end. Mr Harrod, however, comes not to predict, but to explain. His explanation will be tough reading to all but the most up-to-date economists. Nobody, however, who aspires to a scientific understanding of the trade cycle should on any account miss his book; and the more popularly written sections on remedies and policy might with advantage be read by all who agree that depressions tend to occur and that something ought to be done to stop them.

Mr Harrod's theory is new in the sense that it gives much greater analytical accuracy to widespread but vague ideas connecting the trade cycle with investment, and also that it attempts to relate the theory of the trade cycle to ordinary economic theory. In the main, Mr Harrod builds on the general theory of changes in aggregate business activity set forth by Mr Keynes in his latest book; and some will find Mr Keynes' analysis more intelligible and realistic after reading Mr Harrod's book. The crux of that analysis is the contention that saving and investment, if satisfactorily defined, cannot diverge, and that changes in investment (i.e. the output of capital goods) so affect the total level of output and incomes that the proportion of those incomes saved must be equal to the investment.

* "The Trade Cycle." By R. F. Harrod. Oxford. Clarendon Press. London: Milford, 232 pages. 10s.

Normally, however, the demand for capital—and so the level of ordinary investment—depends on the level of consumption. But this in turn depends partly on the total of incomes; and it is in this twofold relation between the output of capital and of consumable goods that, in Mr Harrod's opinion, the explanation of the trade cycle is to be found.

Suppose, Mr Harrod argues, that the proportion of total incomes saved, and the amount of capital necessary to produce a given amount of consumable goods, both remained constant. Then a steady increase in investment (by the same percentage every year) could be indefinitely maintained. For on these conditions, new investment, the total stock of capital, total output, total incomes and total consumption must all increase in the same proportion. For if there is no change in the percentage of incomes saved, total expenditure must increase in the same proportion as investment; and if there is no change in the amount of capital necessary to produce a given number of consumable goods, the total output of consumable goods must increase at the same rate as the stock of capital. Therefore, consumption will be equal to the output of consumable goods, and the steady advance will be maintained.

In the real world, however, these conditions do not hold; and Mr Harrod consequently conceives the trade cycle to arise—in brief summary—as follows. A small increase in consumption in the depression means a large demand for capital goods; and the production of capital goods leads to a further increase of incomes and consumption. As total

incomes rise, however, and more goes to profit (in which Mr Harrod includes fixed-interest incomes), a higher proportion is saved, and this—in conjunction with various other factors—in the end diminishes consumption below the productive capacity of the new capital goods. Orders for capital goods are shortly reduced; and so the well-known vicious spiral starts. There is only a bottom ("or anyhow there has been one on all past occasions") because increasing poverty diminishes saving. If it were not for payment of dividends out of reserves, borrowing for unemployment relief, etc., the depression might go on indefinitely.

Though a great many other factors are naturally given their proper weight, Mr Harrod thus regards over-saving as the main cause of the collapse, and diminishing saving as the main cause of the recovery. He does not think that changes in interest rates or the volume of money can, in themselves, exert much corrective effect, on the ground that the cyclical forces making for less or more investment are usually too strong to be counteracted by these means alone. Here Mr Harrod implicitly parts company with Mr Keynes, and with Mr Hawtrey. He accordingly does not believe that depressions can be stopped unless governments can in the nick of time (the "breathing space" before cumulative deflation begins) embark on very large public investment plans or make large reductions in taxation on the poor. Mr Harrod is not very sanguine about the possibility of such plans being adopted; but if they are to be, they would have to be planned well in advance, as he points out.

Mr Harrod does not believe in "psychological" theories of the trade cycle. But his own account is a clarification rather than a contradiction of theories which have regarded the boom as a temporary spurt in investment unable to sustain itself. He does not deny that subsidiary causes, e.g. the "foreign balance," or a Stock Exchange crash, may start deflation (and a devaluation start recovery); but he thinks his own account lays bare underlying factors which must in the end prove dominant. Many will agree that the factors described by Mr Harrod would produce a trade cycle, in the absence of other equally important factors. But it is not therefore necessarily certain that they always do.

SHORTER NOTICES

"Farewell to Rousseau: a Critique of Liberal Democracy." By C. W. H. Sutton. Christophers. 220 pages. 7s. 6d.

This book has the interest of being the first attempt to translate the Nazi position in political theory into English terms. The process of translation is hardly complete, however; Mr Sutton has swallowed whole the racial and pseudo-biological theories of the Nazis; and one often has the feeling, in reading his book, that he has lived so long with German thought that he no longer understands the language or common-sense of the English.

Mr Sutton thinks that the tale of democracy is told, and that we stand "at the end of an epoch." In this book he is making "an attempt to remodel political theory in accordance with this view." With some of the more outmoded of democratic assumptions he makes good play; but it is very much a game of putting up the skittles to knock them down again. And Mr Sutton cannot be acquitted of loading the dice at every point against democracy, and even of omitting the most grave charges that can be brought against dictatorship. He says, very ingenuously: "I do not know of any dictatorship in which political discussion as such is forbidden or even frowned on . . . or in which it (the government) does not attempt to reach voluntary agreement as far as possible!"

Nevertheless, what Mr Sutton has to say about the nature and constitution of interest groups, and his description of politics in terms of their conflict, is sensible enough. What is of interest in his book is derived, though it is not acknowledged, from socialist thought; what is not, is apt to be nonsense. It is on the international side, as was to be expected, that the weakness, or rather the bankruptcy, of the Nazi theoretical position is most clearly revealed. Mr Sutton regards socialism as somehow responsible for imperialism, and equates the two as "Economic Nationalism"! The future of Europe he sees as merely a struggle for power between nation-states, with no international obligations or order, and he merely expresses the hope that his own country "will at least be in the final." It does not appear that his hope is very great.

"Commerce and Society." By W. F. Oakeshott. Clarendon Press. 418 pages. 7s. 6d. net.

This book is a history of the economic development of the world, with special emphasis on trade, from pre-classical times to the present day. It covers such diverse subjects as the Greeks, the Romans, the Eastern Empire, Arabs, Muslims, Jews, Mongols, the discoveries of the sixteenth century, the mercantilism of the seventeenth and eighteenth, the growth of banking, the Industrial Revolution, the development of the New Countries, imperialism in Asia, and the gold standard since the war. It is intended to be used as an encouraging introduction to the study of economics in schools and training colleges.

The main value of this work lies in its emphasis on the comprehensiveness of the past. It cannot perhaps help suffering from the dangers of generalisation. But one might include cautions, even for schoolchildren, before referring with so much freedom to "the break-up of the old order" and "the coming of the modern age." One would also like a definition of the much-used word "State." Mr Oakeshott inclines to an economic philosophy of history, though he emphasises the influence of trade, as opposed to other economic relations, on civilisation. His references to the effects of economic changes on culture are interesting and suggestive.

One is supplied with a mass of information: comparisons between the trade-per-head figures for India (22s.) and Great Britain (£49), contrasts between wealth and poverty that have always existed, the power of business in war-time, and the origins of the aristocracy in the middle-classes enriched by commerce. Many of the maps and diagrams are novel and ingenious. But the survey of so much material demands perhaps rather more synthesis in the arrangement than is actually provided.

MONEY AND BANKING

THE NEW FUNDING LOAN

LATE on Tuesday evening the Bank of England announced the issue of a new British Government Funding Loan of £100 millions. The loan consists of 2½ per cent. stock, redeemable at any date between June 15, 1952, and June 15, 1957, at the option of the Government. The price of issue is 98½ per cent., and assuming redemption at the latest possible date, the redemption yield is £2 16s. 11d. per cent. Last December the Treasury issued £200 millions of 2½ per cent. Funding Loan, 1950-61, at 90½, giving a yield to latest redemption of £2 13s. 10d. per cent. On this occasion, therefore, the investor is receiving somewhat more generous terms. The yield on the new loan, however, coincides almost exactly with the £2 16s. 6d. per cent. obtainable on last December's loan at this week's market price of 93½—i.e. three points below last year's issue price.

It is an undeniably sound principle that the borrower should strive to reduce the generosity of his terms for each successive loan. But desirability must wait on expediency, and the Government, like everyone else, must take cognisance of stubborn facts. Last December's Funding Loan needed heavy official support, and has never even looked like regaining its issue price in the intervening period. Some of the strongest municipal borrowers, moreover, have recently floated new loans which have not been over-enthusiastically received, although their issue price has been a couple of points more favourable to subscribers than that of similar issues at the beginning of this year. The Government has shown its willingness to "conform," and has kept its regrets, if any, to itself.

Though the authorities have taken a realist view, it by no means follows that their latest stroke has been timed with less than their usual skill. It is difficult, indeed, to follow the suggestion, made in some quarters, that an inauspicious moment has been chosen for the new issue and that insufficient preparation has been made for it. On the contrary, the evidences of preparation have been so apparent that twice within the past month we have been impelled to warn our readers of the likelihood of an early Government issue. Last September the clearing banks, which had formerly been holding off the market, resumed their purchases of gilt-edged securities, which totalled over £15 millions between August and October. These purchases helped to keep up the whole gilt-edged market. Simultaneously, the Government Departments bestirred themselves to lighten their holdings of 2½ per cent. Funding Loan, which they had been carrying since last December. This is suggested, not only by the experience of the Stock Exchange, but by the temporary expansion during October in public deposits, and more directly by the increase since the end of August of £70 millions in the floating assets of the Departments. One result was that at a time of seasonal increase in the floating debt the quantity of Treasury bills issued by tender was actually reduced by £27 millions. It was obvious that the authorities were rendering themselves more liquid. Our conclusion that the decks were probably being cleared for a new issue has been confirmed, possibly a little earlier than we should have cared to forecast.

Under contemporary conditions, no excessive importance probably attaches either to the date or the terms of the issue. The technique of the authorities—well established by earlier precedents—consists in offering a medium-to-long-term Government Loan to those who choose to subscribe on the terms of the moment, with the implication that any unsubscribed balance will be taken up by the Government Departments, and subsequently re-sold "through the tap" (or more specifically through the Government broker) during a period which may extend over many weeks or months. The exact "date of issue" and the original "advertised price," accordingly, have less than decisive importance. What really matters is the "tap price," which can be varied from day to day, and

which will be governed by the conditions ruling during the next few months—or for as long as "tap" sales continue.

The authorities have been at pains to make it clear that the proceeds of the new loan are not required to finance re-armament. The immediate object of the issue is to provide funds for the redemption of £30.2 millions of 2½ per cent. Treasury bonds falling due on February 1, 1937, and also the outstanding balance of the United Kingdom 5½ per cent. 20-year dollar bonds, maturing on the same date. The latter amount is \$20.1 millions, but its sterling equivalent is uncertain so long as the House of Lords has not had an opportunity to review this month's gold clause judgment by the Court of Appeal, which went against the Treasury. In round figures, however, there will be a surplus of about £60 millions available for the reduction of the floating debt. If the money is so applied, it will not, of course, have been used for re-armament. But if the floating debt is, in fact, increased when re-armament expenditure is paid, at some future date, the distinction will be mainly chronological. Indeed, if the "tap" is still open in six to eight months' time, the cash received in payment may well accrue to the authorities at a time when cash is being paid out for re-armament purposes.

At the moment the floating debt consists of £603 millions of "tender" Treasury bills and £265 millions of floating assets held by the Departments. Other things being equal, the total floating debt will be reduced *pari passu* by subscriptions to the new loan, whether these come from the public or the Departments. It is, however, here advisable to draw an important distinction. Apart from the money required to redeem the loans maturing next February (some of which may already be held by the Departments), any direct public subscriptions to the new loan will be available to redeem tender issues of Treasury bills. Subscriptions by the Departments, however, will merely reduce their floating assets and will not affect tender Treasury bills. As the Departments re-sell their loan through the "tap," they will replenish their floating assets so that the volume of Bills for tender will be reduced. The outlook is further complicated by the fact that the final call of 45 per cent. is not due until January 1, 1937, and by the falling due of the Government's redemption obligations next February. In general, however, it would seem that the redemption of tender issues of Treasury bills facilitated by the new loan will be spread over a period of many months. No immediate contraction in tender issues is therefore to be expected.

On the whole, the authorities may be commended for putting prudence before audacity, and frankness before the flamboyance which was the impression left by last December's issue. This year they had no incentive to delay in the hope of catching a specially "favourable" moment for the primary issue, whose immediate "result" was not even a matter of sentimental concern. Window-dressing as an item of salesmanship technique is relevant only when customers come in through the front door. And if part of the national expenditure on re-armament is to be financed, eventually, by borrowing (as Mr Chamberlain hinted in his last Budget speech) and the next Budget is not to include any substantial addition to taxation (as the Chancellor suggested in a more recent speech)—then the Treasury's ultimate task will be rendered all the easier by a policy of debt-funding in advance. Whether borrowing for re-armament is wise is a matter on which we have already expressed a strong opinion. All we are concerned to point out to-day is that if the Government intend to borrow, the present issue may help to prepare the ground.

One pertinent question, however, remains to be asked. Will the future financial historian attach special significance to this loan as the first official recognition of a turning-point in interest rates?

FINANCIAL NOTES

The Foreign Exchanges.—The London market has been very quiet, but dollars were offered at the week-end on President Roosevelt's "hot-money" declaration. It now appears that official buying of dollars begins so soon as sterling rises to above \$4.89, and while the intervention has been limited in scope, the market for the moment has the impression that the rate will not be allowed to rise above this point. The franc is under strict control from Paris at a pegged rate of Frs. 105.15. Three months' francs have strengthened, but are still quoted at Frs. 2 discount, or 7½ per cent. per annum. Spot guilders have been bid for, and the rate has been firm at Fl. 9.04½, with occasional official Dutch selling of guilders. Three months' guilders have also been in demand at a narrower discount of 5½ cents. The London market has changed its view and now thinks that the rate may fall below Fl. 9.00. Swiss francs have been steady, but sales by the Swiss Control have moved the sterling rate from Frs. 21.25 to Frs. 21.27. Forward Swiss francs remain at a small premium. In Paris, the dollar is quoted at Frs. 21.49 and Frs. 21.50.

The Bank Return.—There is the usual mid-monthly contraction in the note issue, but we are now near the beginning of the Christmas expansion. Gold is again unchanged and the Reserve slightly higher:—

	BANK OF ENGLAND

Other securities.....	14 4	19 5	20 0	20 3	21 7
Proportion.....	39.6%	43.0%	40.4%	40.7%	41.7%

The only significant change in the banking department is a slight—and probably temporary—transfer of funds from bankers' to other deposits.

The Money Market.—Conditions have been quiet and easy, but there has been the usual clearing bank calling on every day. There has been a moderate demand for bills from the banks. There are now no December maturities on offer, and no one is interested in early Januaries, but late January and early February Treasury bills have been bought at ½ per cent. and three months' bank bills at ½ per cent. There has already been a small amount of borrowing into the New Year, but as lenders are asking 1 per cent. over the whole of the intervening period, it appears more profitable to wait and take the chance of having to borrow from the Bank at the New Year. On the other hand, one per cent. New Year money can be used against bonds without additional cost, for the clearing banks' rate for bond money is one per cent. for all dates.

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

Arrangements have now been made for placing the new Russian notes to be issued under the Export Credits Guarantee Department's scheme. No notes have yet appeared, but there will be keen competition for them as soon

as they come forward. The new Funding Loan is not of direct interest to the market, which chiefly wants to know if it will involve any immediate reduction in the Treasury bill tender issue. As we have said above, we do not expect this, and in point of fact £50 millions of bills were to be offered on November 20th, against an allotment of £45 millions the preceding week.

Royal Bank of Scotland.—The latest accounts of this bank indicate the progress of recovery in Scotland. Both deposits and notes in circulation are higher than a year ago, while cash, investments, discounts and advances have all risen. The fall in acceptances, endorsements, etc., is purely fortuitous. This item includes the bank's outstanding forward exchange commitments, and by October of this year the bank had naturally been anxious to reduce them as far as possible in view of the uncertainties arising out of the devaluation of the gold *bloc* currencies.

	October 10th		
	1934 £'000	1935 £'000	1936 £'000
Liabilities:—			
Deposits.....	58,945	64,009	66,801
Note circulation.....	2,793	2,813	2,930
Acceptances, etc.	3,895	3,734	3,534
Assets:—			
Cash.....	6,207	6,833	7,258
Call and short money.....	8,133	7,762	7,720
Investments.....	26,386	30,045	31,638
Treasury bills.....	1,890	1,850	2,035
Other bills.....	1,984	1,934	2,080

Loans on securities.....	860	847	922
Net profit.....	621	629	632
Dividend.....	17%	17%	17%

The net rise in profits may appear small, but the bank has had to rely solely on the expansion in its earning assets as the means of overcoming the deadening influence of ultra-low money rates. It is also possible that by 1935, the trade revival had proceeded far enough to enable the bank to reap the main benefit of all recoveries of debts formerly reserved as bad or doubtful. The main fact is that the trend of Scottish banking profits remains upwards, and this augurs well for the 1936 British banking results.

English, Scottish and Australian Bank.—The last three balance-sheets of this bank provide an interesting contrast with the general trend of banking in Australia. Broadly speaking, the steady increase in both the bank's current accounts and advances conforms to the general banking trend. Trade in Australia is expanding and the banks are reaping the benefit. On the other hand, the English, Scottish and Australian Bank's deposits at interest increased slightly during 1935-36, whereas fixed deposits for all the banks declined by nearly 2 per cent. The increase in this bank's cash also contrasts with the general decrease in the cash reserves of the Australian banks, but this may be the counterpart to an apparently fortuitous and temporary decrease in bills receivable, etc.

	YEAR ENDED JUNE 30		
	1934 £'000	1935 £'000	1936 £'000
Liabilities:—			
Capital.....	3,000	3,000	3,000
Reserve Fund.....	1,650	1,665	1,680
Special depreciation reserve fund	1,583	1,585	1,585
Perpetual stocks.....	1,873	1,873	1,873
Deposits at interest.....	20,131	19,577	19,710
Current accounts.....	11,900	12,832	13,183
Bills payable, etc.	1,870	1,844	2,011

Expenses.....	700	717	749
Taxation.....	79	65	96
Net profits.....	222	243	258
Dividend.....	5%	5%	5%

Gross receipts have risen by £78 millions, but most of the increase has been absorbed by higher expenses and taxation charges. The dividend is unchanged.

THE STOCK EXCHANGE

THE POSITION OF RICHARD THOMAS

ONE of the most striking recoveries of the last few years, striking even among iron and steel companies, has been staged by Richard Thomas and Company. For seven years in succession the company was unable to pay even its preference dividend. The old £1 ordinary shares hovered uneasily for nearly five years between 6d. and 3s. 6d. Now, the group is making a gross profit of some £1,200,000 a year; the preference shares are valued on the basis of a 5½ per cent. yield; and the ordinary shares, now of 6s. 8d. denomination, stand at 17s. 1½d. The company is raising new capital to finance modern and extensive developments. The group now ranks among the Great Powers in the British iron and steel industry, and its ramifications merit detailed survey.

The activities of the group (which are indicated in the accompanying analysis and chart) may be regarded as falling into industrial and geographical sections. The first and most important, the production of steel (from pig iron and scrap), sheets and tinplates, is centred in the Swansea district. The sheet industry is at present prosperous, thanks to the demand for motor production. But the position of the tinplate industry, which is the more important, is less satisfactory. Production is certainly concentrated within a relatively few organisations, for the Richard Thomas group itself controls some 42 per cent. of the productive capacity, and six other concerns control, between them, a similar proportion. But present productive capacity is large, in proportion to present or prospective requirements (at current prices), while the quota scheme and the lack of co-operation in the industry is a drag on efficiency. Sir William Firth, chairman of Richard Thomas, has criticised and, in part, remedied this situation by increasing the scope of his company, but the industry still lacks cohesion. Moreover, the total demand for tinplates, unlike that for other steel products, is still far below the 1929 level. The industry's capacity was created in order to supply a large export demand. In 1913, some 60 per cent. of the output was exported, and in 1929 the proportion reached 66 per cent. The slump in exports, alleviated at first by the depreciation of sterling, but since intensified by the devaluation of the dollar, has reduced the proportion to below 50 per cent. Although the external price level has been strengthened by the working of the International Tinplate Cartel, the recovery during the last two years has been achieved in the home market, which is now absorbing about 50 per cent. more tinplate than in 1929. New uses have been found and old uses have been developed.

Coming technical changes, however, may fundamentally alter the structure of the industry. At Ebbw Vale, Richard Thomas is now erecting a new American continuous strip mill and a new steelworks, which will reduce the cost of tinplate and sheets very substantially. The strip mill, however, is extremely costly—the whole development requires £4,500,000—and the very large annual output of 300,000-350,000 tons of sheets and tinplates will be required to achieve these cost reductions. This represents about one-sixth of the national output, and nearly one-half of Richard Thomas's output. It is true to say, of course—as Sir William Firth might say—that in the long run this development must prove profitable. But it is also possible that it might not prove profitable without a period of price uncertainty and considerable adjustment of Richard Thomas's organisation in South Wales. The company would not, of course, invite a struggle, but if home demand were to fall off, for cyclical or other reasons, difficulties might ensue.

The second main interest of the group is at Redbourn, in Lincolnshire. Here the company produces pig iron and steel from its local ore and coke. The intensive reorganisation at Redbourn should reduce costs. The company, however, "ties" as much of the output as possible. Some pig iron goes to South Wales for the steelworks; part of the

steel is supplied to the re-rolling subsidiary, the Monks Hall Company at Warrington, and part to the Whitehead works at Newport. Some, again, goes to Whitehead Thomas Bar and Strip, a local subsidiary owned jointly by Richard Thomas and the very progressive Whitehead Iron and Steel Company. By these arrangements, the company presumably hopes to avoid the worst effects of competition during depression. Third come the extensive South Wales collieries. Here, again, a considerable part of the output is "tied" for the company's coke ovens. Apart from this tactical convenience, the collieries make a minor contribution to net profits, although recent reorganisations—for example, at Lancaster's Steam Collieries—have probably placed some collieries upon a sound earnings basis.

This completes the list of interests, apart from the ore-fields in Northamptonshire, which were acquired from Ebbw Vale, and a miscellaneous assortment of subsidiaries. The ore-fields represent the last step in the company's far-reaching programme of self-sufficiency in raw materials, but they may have a wider significance. Northamptonshire has natural advantages for steel production under modern protectionist conditions, and whilst no decision has yet been taken, the company might consider the erection of another strip mill there if the Ebbw Vale project proved successful. Finally, the miscellaneous interests, which are mainly designed to further the policy of "tying" output, include such concerns as H. F. Spencer and Company, the sheet merchants, and R. T. Metal Productions, formed to

(1) Including dividends received from subsidiary companies. (2) Including amounts owing to and by subsidiary companies. (3) Less creditors and provisions for taxation and contingencies, and final dividends. No credit is taken for deposit account, but unsecured and bank loans are deducted. † Includes £250,000 transferred to special reserve for revaluation of capital assets. ‡ Includes extraneous profits for 1933, £8,703; 1934, £4,454; 1935, £3,144. § After transferring £57,861 from reserve for taxation and contingencies. ** Balance forward includes £33,600 profit from sale of investments, and £43,759 extraneous credits: an amount of £112,554 received from liquidation of Raglan Collieries and ordinary share premiums less £104,953 Redbourn Works expenditure written off is also credited, and £91,233 has been transferred to general reserve. †† Without deducting unsecured loans and including deposit account, this figure is reduced to Dr. £162,470. ‡‡ Unsecured loans from 1934 onwards.

RICHARD THOMAS GROUPING.

Unbroken Line indicates Control. Broken Line shows Non-controlling Interest. Broken Circles indicate Companies now wound up.

develop new uses for sheets. These, with the Electrolytic Iron interest, which is experimenting in electrical tin depositing, are the outposts, so to speak, of a group which has an annual capacity of 2,000,000 tons of coal, 250,000 tons of pig iron, 600,000 tons of coke, 1,100,000 tons of steel ingots, 750,000 tons of sheets and tinplate, and an indefinite amount of iron ore.

In this development, much of it very recent, two broad objectives are discernible. The first is to reduce costs and to improve efficiency. Each subsidiary has been modernised and reorganised. The main plants are kept abreast of new technical developments. The second is to secure self-sufficiency. On the one hand, the supply of raw materials is safeguarded; on the other, markets are guaranteed as far as possible, both by the acquisition of new consuming interests and by the conclusion of long-term contracts with firms outside the group. Both these principles are reasonable, but they require a heavy capitalisation. The Ebbw Vale steel-works and strip mill alone will cost £4,500,000. In addition, debentures to a total of £1,250,000 are redeemable, optionally or finally, next year. And after the last year's acquisitions, liquid assets are now at low ebb. The company will be forced, sooner or later, to issue new capital.

How will this affect the earning power of the ordinary shares? Extracts from the consolidated profit-and-loss accounts of the last four years in the accompanying table show that last year the earnings on the ordinary shares totalled nearly 14 per cent. This year an interim dividend of 5 per cent. (compared with 3 per cent.) has been declared, and shareholders can reasonably hope for a total dividend of 15 per cent. for the year. At that rate of dividend the ordinary shares offer a prospective yield of 5½ per cent., which compares by no means unfavourably with the prospective yield on some popular steel shares at present. The need for extra capital, however, is giving the market some pause. The money will be soundly spent, but an interval must inevitably elapse before it fructifies. All the indications suggest that the new money will be raised in ordinary shares. The preference shares bear a very high rate of dividend, and it is unlikely that more will be issued. It is possible that the existing debentures might be converted to a lower rate. But the first step, it seems, would probably be an issue of 4,500,000 6s. 8d. ordinary shares, at a price to provide a bonus for the shareholders and a premium for the company. This, in fact, would cover the debenture repayment and leave something over for the Ebbw Vale development; but a further issue would be necessary at some not-far-distant date. As far as the coming issue is concerned, however, shareholders need not be afraid. The economy from the debenture repayment would keep the earnings yield above the 5 per cent. mark, even on last year's profits, on the assumption that the new shares were issued at no more than 10s.

The prospects, on the whole, seem reasonably promising. The company's export market should continue slowly to improve, for, as world prices rise, the demand for tinplate will increase. The home demand for sheets and tinplate is also expanding. It bears little relation to the armaments boom, and is probably less susceptible to cyclical fluctuations than the demand, say, for structural steel. The demand for the group's other products—chiefly surplus steel and rolled products—is likely to be maintained for the time being. Again, the organisation of the industry itself is likely further to improve. The investor's chief qualms, paradoxically, may be due precisely to the pace at which the company's interests are being expanded. Investors may question whether increased capacity—though admittedly more efficient capacity—does not bring dangers of its own at a time when the steel industry is nearing boom conditions. They may ask whence the large demand which is needed to make the new strip mill profitable will come, if it is not to be accompanied by serious price-cutting in the industry. The case for or against Richard Thomas shares, in fact, depends entirely upon the investor's confidence in the group's ability to solve a difficult monetary problem. The principles upon which the management works are known. During the last three years they have been very successful. But the question whether they can be translated into practice as speedily as is implied in the present rate of development remains for the future to answer.

INVESTMENT NOTES

New Treasury Borrowing.—The initial result of the Treasury's offer of £100,000,000 of 2½ per cent. Funding Loan, 1952-57, at 98½ per cent., was a tail of ¾ to a point or more on Wednesday, in existing gilt-edged stocks with comparable redemption dates. The issue was certainly not unexpected, for in a controlled, or semi-controlled, market, coming events cast fairly long shadows before. The terms of the offer, however, certainly came as a surprise to some quarters, which tended to regard the price as a tacit abandonment of the attempt to run a Treasury bluff, and an important pointer to the authorities' attitude towards general interest levels. Naturally, the market would not welcome the long existence of a second "tap" while that of the 2½ per cent. Funding Loan issued last year is still running. With further Government borrowing in prospect, the creation of a veritable Treasury fountain would be obviously anything but a bull point for gilt-edged securities. But the obvious and praiseworthy desire of the authorities to make the new loan "go" has involved the adoption of terms demonstrably less favourable to the Treasury than those of last December's issue. It is true that last year's issue price was never really effective, and that the Treasury, on this occasion, has merely adopted the realist attitude of one who sees no point in keeping his watch ten minutes fast. But the choice of a price for the new loan which was based on the current market quotation, rather than on the issue price of its predecessor, gave the new bonds a flat yield over 2s. per cent. higher than the old, although the two redemption yields were identical within a few pence. As evidence of official acceptance of the view that interest rates have touched bottom, this is not wholly conclusive. It is now clear, however, that the authorities would have been wiser, last December, had they pitched their offer in a slightly lower key.

No Company Law Amendment.—An answer by the President of the Board of Trade to a Parliamentary question by Sir A. M. Samuel on Tuesday makes it clear that the Government is unwilling to set up a Departmental Committee in the near future to consider amendments to the Companies Act, 1929. The Board of Trade's attitude is, broadly, that it has enough on its hands at present with proposed legislation on Unit Trusts and the forthcoming appointment of a committee to inquire into "the urgent question of share-pushing." Indeed, the wording of Mr Runciman's reply suggests that legislation on both these matters must be on the Statute Book before the broader question of Company Law amendment will even be considered. If so, the present Stock Exchange boom is likely to have become a matter for the historian before even the preliminaries of Company Law reform are put in hand. Mr Runciman has committed himself to no definite date for the introduction of the Unit Trust Bill, which will be brought forward merely "as soon as practicable." At the earliest, it is unlikely to be on the Statute Book before the middle of next year, while any legislation arising out of the report of the promised committee on share-pushing (whose terms of reference, apparently, have not yet been fully decided), can hardly be enacted before the middle or end of 1938. Some five years elapsed between the appointment of the Greene Committee, which last considered the state of British Company Law, and the coming into effect of its major recommendations. If a similar time-table is applied to any future change, investors may expect the next revision to date from 1943 or later. Undoubtedly, the interim would provide an extended body of evidence, and, *pro tanto*, add to the value of the new measure. But in this particular terrain, experience is dearly bought.

Wall Street, the President and "Hot" Money.—Wall Street has been very much influenced by the President since the election. The completeness of his victory has apparently convinced many industrialists that Labour is now in the ascendant, and they have anticipated some

Labour demands in the hope of weakening the movement for industrial organisation of labour unions. Wages have thus been increased and many commodity prices are expected to follow. Dividends are now flowing in fullest flood, thanks to the excess profits tax, augmented by bonus distributions to shareholders and employees. The President has declared Budget balancing to be his main task, but many are convinced that this will be a very difficult political feat. There are signs that the utility companies are now more reconciled to negotiation on questions of regulation and Government competition. These and similar factors at first combined to put prices higher, but at the end of last week the President put on the brake by airing the possibility of limiting foreign participation in the American stock markets. He evidently fears that the strong westward flow of funds will raise American stock prices to unreasonable levels, that the accompanying flood of gold will further augment the surplus reserves of the American banking system, and that a sudden reversal of the movement might invite disaster. It is probably true that foreign speculative holdings represent a significant proportion of the normal volume of securities which are traded. For a time, the market behaved as if control were imminent, and prices drifted downward. On Tuesday, however, Mr Morgenthau declared that sufficient powers of control existed, and prices recovered their high levels. It is, indeed, difficult to see what workable method of freezing out foreign investment could be adopted, short of an extremely elaborate international control of all international investments. Discriminatory dividend taxes would be unaffected, and the capital profits tax on foreign nationals was abandoned because it had proved impossible to collect. For the present, the markets have recovered from the check, though a more definite technical reaction appears to be approaching.

Bulgarian Bond Service.—Slowly the means and the ways of the debtor countries improve. Bulgaria, long the subject of regretful *communiqués* by the Council of Foreign Bondholders and the creditors' organisations with which it co-operates, this week sends more cheerful news. Last March (see the *Economist* of March 28th, page 717) the Government undertook to increase the transferred debt service from 15 per cent. to 21½ per cent., out of the total provision of 32½ per cent. in "effective leva" which it undertook to pay to the National Bank. The balances, of 17½ and 11 per cent., have accumulated at the National Bank, and are now the subject of an offer for settlement which the bondholders' organisations recommend for acceptance. The payments recommended represent approximately 40 per cent. of the untransferred balances, and, if accepted, will constitute full discharge of all partly-paid coupons. Throughout the period, the basic undertaking of the Bulgarian Government—to provide 32½ per cent. service in leva, and the balance in non-interest bearing Treasury Bills—has remained unchanged. The new agreement, however, will have an important bearing on the resumption of negotiations for the renewal of the transfer agreement next month, for Bulgaria will come to the table untrammelled by past arrears and, it may be hoped, prepared to recognise the patient claims of her creditors. Her trade and banking position are improving, and while the financial problem of the Treasury is still acute, the creditors' organisations are looking for complete transfer of the present budgetary provision of 32½ per cent., rather than any further increase of the basic rate. The former should be well within Bulgaria's means.

Large "Placings."—In view of the public interest aroused by this month's "placing" of Morris Motors shares, it may be relevant to discuss the extent to which this method of introducing new capital to the market is normally utilised. Broadly, whenever an existing "line" of securities is already dealt in, additions thereto can be conveniently made by formal notification in the official weekly publication of the London Stock Exchange, after permission has been duly obtained from the Com-

PRELIMINARY NOTICE

AMALGAMATED COLLIERIES OF SOUTH AFRICA LIMITED

(Incorporated under the Laws of the Union of South Africa)

CAPITAL in shares of £1 each
 Authorised £2,000,000 Issued and fully paid £1,900,000

DIRECTORS

 LOUIS MARKS GILBERT ROY LEWIS
 HOWARD BUTTON, JOSEPH MORDECHAI
 C.B.E., F.C.A. MARKS
 ALFRED DAVID OWEN

The **LISTS WILL OPEN and CLOSE on WEDNESDAY next, NOVEMBER 25th, for an OFFER FOR SALE by**

VEREENIGING ESTATES LIMITED, AFRICAN AND EUROPEAN INVESTMENT CO. LTD.

and LEWIS AND MARKS LIMITED

OF

200,000 Shares at £1.10.0 per Share
 payable in full on application.

The Shares offered for sale carry the right to the dividend which it is intended to declare in respect of the profits made during the eight months to the 31st December, 1936.

The Offer for Sale shows, inter alia, that:

The Company's principal properties are four collieries of which the mining profits were as follows:—

	1933	1934	1935
CORNELIA COLLIERY.			
Year ended 31st December	£103,154	£125,189	£123,763
LARGO COLLIERY.			
Year ended 30th June	£20,733	£20,894	£22,418
SCHOONGEZICHT COLLIERY.			
Year ended 30th June	£47,403	£50,993	£48,895
10 months ended 30th April	...	...	£48,895
SPRINGFIELD COLLIERY.			
Year ended 30th June	...	...	£25,314

The above profits are from coal mining before providing for Directors' fees, depreciation, interest on loans and South African taxation and, in the case of the Springfield Colliery preliminary expenses and Debenture issue expenses, but after charging engineering fees and administration expenses (except in the case of Cornelia Colliery, which includes no portion of the Vereeniging Estates Limited administration expenses).

The Springfield Colliery profit shown above represents the profit made during the initial development period and includes only four months' deliveries of contract coal to the Victoria Falls and Transvaal Power Company's new station at Klip. It is anticipated that future profits will be on a substantially increased scale.

It is estimated that, after providing for South African Income Tax, Depreciation of Buildings, Plant and Machinery, Remuneration of Directors, General charges, and, in the case of the Springfield Colliery, Debenture interest, the profits of the four Collieries will leave an available balance:—

For the year ending 30th April, 1937 of £203,000
 " " " " " " " " 1938 of £216,000

The latest calculations of the lives of the four collieries as at 1st May, 1936, are estimated as follows:—

Cornelia ... 25 years. Schoongezicht ... 25 years.
 Largo ... 20 years. Springfield ... 40 years.

Approximately 64 per cent. of the output of the four collieries is sold under contract to the Victoria Falls and Transvaal Power Company Limited.

Copies of the Offer for Sale and Forms of Application can be obtained from:

STANDARD BANK OF SOUTH AFRICA, LTD.,
 10 Clements Lane, London, E.C.4;

E. S. MARCUS & CO., 5 & 6 Great Winchester Street, E.C.2;

GREENER, DREYFUS & CO., Salisbury House, London Wall, E.C.2; and the

OFFICES OF THE COMPANY, Stafford House,
 14/20 King William Street, London, E.C.4.

mittee. The published figures relate to the *maximum* numbers of shares or amounts of stock to which such permission extends, and not to the actual amounts which those responsible may actually intend to market within any specified future time. Nevertheless, holders are free to dispose of the whole without further formality, and for that reason we now include these gross items in our regular "Capital Issue" compilations. Actually, the figures involved are considerable. The following table, for example, shows that since the beginning of this year (exclusive of the Morris Motors issue) some 19 "placings" of this character have involved a maximum potential cash total of over £1 million each—the basis of computation in each case being the opening market price applied to the whole of the securities for which "permission to deal" was given:—

		19 Issues	£39,581,928

The aggregate of these issues, it will be seen, is over £39½ millions—i.e. an average of over £2 millions per company. Our table takes no account of the host of smaller "placings," which are included in our regular quarterly articles, the last of which appeared in the *Economist* of October 10th, page 51. It will be apparent, however, that the method of "placing" is an established and widely used part of the machinery of the London capital market; and that no estimate of the extent to which use is made of the market's facilities is complete without some reference to it.

Insurance Share Index.—Each quarter this year has seen a new high level for our insurance share index, which stood at 5,060 on September 20th, compared with 4,965 at the end of June and 4,952 at the end of March. The movements of the component shares, assuming that £1,000 had been originally invested in 1913 in the issues of twenty-four companies, and that all rights had been applied in the purchase of an equivalent holding in the original shares, are set out below:—

	1929	1932	1934	1935	Mar. 31, 1936	June 30, 1936	Sept. 30, 1936
Alliance	1,675	1,638	2,208	2,316	2,478	2,478	2,520
Atlas	3,532	3,000	3,452	3,667	4,063	3,905	3,936
Caledonian	5,700	4,183	4,820	5,032	5,535	5,221	5,535
Commercial Union	4,545	3,352	4,449	4,694	4,789	4,789	4,789
Employers Liability	2,725	1,775	2,355	2,405	2,567	2,658	2,522
Equity and Law	2,009	2,076	3,733	4,670	6,071	6,160	6,205
General Accident	8,133	7,250	10,165	12,099	14,266	14,132	14,932
Gresham Fire	2,872	2,118	4,651	5,166	4,762	4,381	4,762
Guardian	2,596	2,538	3,272	3,487	3,692	3,737	3,763

Scottish Life	2,680	2,583	3,708	4,382	4,494	4,494	4,494
Scot. Union and National	5,213	3,803	4,732	4,996	5,472	5,620	5,620
Sun Fire	2,853	2,364	3,088	3,271	3,422	3,333	3,333
Sun Life	2,237	2,040	2,632	2,972	3,325	3,426	3,325
Yorkshire	3,041	2,731	3,401	3,575	3,865	4,020	4,071
Average	3,406	2,911	4,025	4,497	4,952	4,965	5,060

The table shows that 13 of the 24 issues registered an advance during the quarter, which was particularly appreciable for Caledonian, General Accident, Gresham Fire, and Legal and General. As many as seven shares showed no change, and the four declines were merely slight.

Industrial Profits in October.—The large increase of 18.09 per cent. in the profits of 146 companies whose reports were published last month is the highest rise recorded in 12 months, though it is, perhaps significantly, below the 29 per cent. increase recorded a year earlier by a similar though not identical sample of companies. Total

profits continue to advance satisfactorily, but at a less rapid rate, as the following table shows:—

Reports published in	No. of Companies	Rise in Profits*	Reports published in	No. of Companies	Rise in Profits*
1935—			1936—		
June ...	191	21.72	February ...	205	9.00
July ...	232	13.44	March ...	236	17.39
August ...	38	5.93	April ...	254	9.66
September ...	77	9.28	May ...	269	9.41
October ...	166	29.19	June ...	214	13.50
November ...	160	17.47	July ...	228	15.69
December ...	159	12.27	August ...	47	14.21
1936—			September ...	107	12.32
January ...	128	13.66	October ...	146	18.09

* After payment of debenture interest.

The total net profits covered by the October reports amounted to £8,104,438, compared with £6,862,991 for the preceding year. No single group contributes any large proportion towards the increase of £1,241,447. Motor company profits contributed £1,878,454 towards the total, but the increase in this group—£246,185—is comparatively small owing to the Austin setback. Improved rubber company prospects are more consistently reflected in recent reports, and miscellaneous industrial concerns show average progress. Investment trust revenues, however, continue to lag.

Actuaries' Investment Index.—Although a majority of the component groups bear witness to the general levelling of share quotations at the end of last week, the combined index has, in fact, made further progress, owing to the resumed rises in certain component groups. The average level of the 178 industrials thus stood at 91.6 last Tuesday, compared with 91.3 a week ago and 90.3 four weeks ago (December 31, 1928 = 100), with corresponding yield figures of 3.54, 3.52 and 3.55 per cent. respectively. Movements of component groups are shown below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month ago (Oct. 20)	Week ago (Nov. 10)	This week (Nov. 17)	Month ago (Oct. 20)	Week ago (Nov. 10)	This week (Nov. 17)
<i>Higher this week</i>						
Building materials (5).....	107.6	106.0	107.4	4.64	4.74	4.67
Cotton (6).....	48.0	46.1	48.5	2.00	1.99	1.97
Home rails (4).....	83.2	85.5	87.9	1.31	1.29	1.25
Stores and catering (20).....	88.2	88.2	92.1	3.65	3.68	3.68
<i>Lower this week</i>						
Iron and steel (12).....	84.1	85.8	84.7	3.63	3.57	3.66
Motors (5).....	60.5	62.8	60.9	3.94	3.81	3.70
Oil (5).....	94.9	93.0	92.0	2.90	2.91	2.95

Home rails have again been active, on prospective freights legislation rather than the traffics, which are now making poor comparisons. Cotton shares have again advanced, while the jump in stores and catering shares reflects the reception of the Woolworth capital bonus. Iron and steel and motor shares are still above the average level of a month ago, but oil shares are nearly three points lower at 92.0 per cent. of the end-1928 level.

COMPANY NOTES

Brewery Results.—November is a season of brewery dividends. This year's results are proving a satisfactory stimulant to a market which has recently been showing incipient signs of resumed activity. Industrial recovery has checked the secular decline in beer consumption, and during the past three years output has improved steadily. The main source of increased profits (whose course is set out in the accompanying table) is due to progressive internal efficiency of brewery concerns, and to the substantial economies which have been won by certain concerns through amalgamation. Nevertheless, the profits of such localised concerns as *Stroud Brewery* and *Fremains* have shown an advance which compares very favourably with the average. *Bass, Ratcliff and Gretton*, selling on "name" in a national and "untied" market, has fulfilled expectations by increasing its total dividend to 24 per cent., tax free. In a prosperous industrial and agricultural area, *Northampton Brewery* has substantially increased its total

profits, and the ordinary dividend, raised from 12½ per cent. to 15 per cent., is paid after charging the substantially increased sum of £66,447 for depreciation. In the same area, *P. Phipps and Company* have increased the total dividend from 13½ per cent. to 15 per cent., both tax free. The *Ansells Brewery* results were discussed in last week's *Economist* (page 317), and the yield shown in the table is calculated on the presumed maintenance of a 25 per cent. dividend on the new ordinary capital. The existing shares are still quoted *cum* rights. These results (apart, perhaps, from Ansells, which is energetically developing its oppor-

tunities in the busiest industrial area in England) reflect the general prosperity of localised industrial-cum-agricultural districts. The evidence of recovery in the heavy industries, indeed, may well be more spectacular in later reports. They will, in all probability, suggest a case for selective brewery investment, with emphasis upon the Northern industrial areas. Here the rate of re-employment is now proceeding more quickly, and increased brewery earnings may reasonably be expected—subject to an increase in the sums earmarked for improvements to properties.

Recovery Profits and Dividends.—The important company news this week covers heavy industries, the consumption goods trades, shipping and re-armament. In quality, it has been consistently good, and the market has not been grudging in its appreciation. In the first group Whitehead Iron and Steel show a 16 per cent. increase in their half-yearly profits of £132,600 and maintain the interim dividend at 12½ per cent. A company with a very different record, Dorman Long, has, after fifteen years, re-entered the dividend list with hardly sufficient flourish to satisfy the market, with a 6 per cent. dividend on the ordinary and therefore 14 per cent. for the preferred ordinary shares. The ground was, however, already well prepared in 1935, when £390,778, available for dividend on the reorganised capital, was applied almost entirely to reserve and to the payment of a preference dividend. Considerable activity in Hawker Siddeley Aircraft shares followed the publication of the first complete year's profits, which were distinctly more favourable than recent aircraft results. The prospectus earnings estimate of 25 per cent. is exceeded, and in addition to the 30 per cent. dividend (out of 44½ per cent. earned on the existing capital) a 10 per cent. capital bonus distribution is to be made. In the cycle industry, fears that activity may be slowing down are belied by the Raleigh Cycle Company's preliminary announcement of record net profits of £473,482, exceeding those of the previous period by more than 28 per cent. The holding company therefore declares the satisfactory dividend of 22½ per cent. for the year, against 15 per cent. Tate and Lyle's final dividend makes a total of 18½ per cent. for the year—a very small reduction on the equivalent

of 18.2857 per cent. on the increased capital paid last year. The amount earned for dividends can be estimated at about £1,226,800 (against £1,264,800), after allocating £284,000 to reserve instead of £310,000, and although the fall is not highly significant, despite the market's disappointment, it is probable that the changed position of the beet sugar industry is partly accountable for the difference. The most cheerful influence this week was provided by the unexpectedly large capital bonus of 100 per cent. of Woolworth, on which the 5s. shares touched a record level of 8½. The £3,750,000 required is to be transferred from the carry-forward, which, at December 31st last, stood at no less than £6,541,663. The market also welcomed the return of Peninsular and Oriental to the dividend list, with a payment of 4 per cent.—the first since 1931. It is difficult, in view of the exceptional credits taken into the 1934-35 accounts, to attempt an estimate of earnings, but if the depreciation provision has been maintained and no extraneous items have been included, earnings must have increased by no less than £785,000 gross. In expectation of a good report next month the deferred stock units jumped from 27s. 4½d. to 30s.

Steel Company Capital Issues.—The unprecedented activity and profitability of the steel industry is increasing the demand for new capital for financing extensions of plant. Three years ago, the steel industry found grave difficulty in arranging any new financing, and even eighteen months ago it was still forced to offer debentures to the public rather than finance new expansion by ordinary share issues. The latter, however, now form the major proportion of current capital issues, and are usually offered primarily to existing shareholders, whose nominal value holdings had frequently suffered under capital reductions. The new issues lately announced by the English Steel Corporation and Cammell Laird are of this type and may be followed by a further issue by Richard Thomas.

* Sale of Company's assets to public.

During the year, therefore, some £12,334,500 has been raised from the public, mainly to finance new plant extensions. Does such a rapid return to the capital market suggest a danger that steel capacity may be over-extended? At the moment, there is no reason to believe that this danger is real. Many of the issues—and notably Cammell Laird and English Steel—are to provide new plant for the re-armament programme, and that capacity is technically distinct from constructional steel production. Other issues have been made primarily to replace obsolescent plant rather than to create new. The British Iron and Steel Federation, moreover, appears to be well aware of the danger of over-expansion of ordinary steel capacity. But if the expansion is intensified to include the construction of substantial new steel plant as well as replacements and armament capacity the industry may find itself in the traditional difficulties of over-capacity if the demand for constructional steel begins to decline.

Pastoral Company Results.—Recent reports provide the investor with a clearer indication of the trend of pastoral company earnings. The report of *Dalgely and Company*, for example, shows an increase in profits, after providing for depreciation, of nearly £100,000, to £885,754. After allowance for losses on exchange the amount available for ordinary dividend is increased from £21,789 to £95,851, and for the first year since 1930 the dividend (raised to 6 per cent., tax free) is fully covered by earnings. The following table analyses recent results:—

	Years ended June 30		
	1934	1935	1936
Profit, less depreciation	837,049	787,413	885,754
Expenses	392,815	390,021	386,785

Carry-forward	129,478	116,267†	122,118
† After transferring £40,000 from contingency reserve.			

Australian Mercantile, Land and Finance Company, whose report has also been issued recently, shows an increase in trading profits from £260,953 to £300,560, and in net profits, before charging income tax, from £35,468 to £66,684. The dividend is raised from 2 per cent. tax free to 4 per cent. less tax at 3s. 9d. The figures of *New Zealand and Australian Land* are somewhat difficult to appraise owing to a revision of the profit and loss account, but after charging severe exchange losses, the amount available for dividends fails to cover preference requirements by £30,000, which has accordingly been drawn from contingency reserve. Heavy exchange losses, indeed, are common to all these concerns, and Australian Mercantile is

further subjected to peso exchange depreciation. Broadly, the current prospects appear slightly more favourable for the grazing and wool merchanting business. Dalgely's profits benefited substantially from the past season's improvement, and the clearance of the current clip, despite Japan's self-denying ordinance, is proving highly satisfactory, as the chairman recorded at Thursday's meeting. Conditions in Queensland, which have been sadly affected by drought for a decade, are apparently improving, but Nature's unkindness has left a substantial legacy of loss and depleted flocks. A reduced Australian wheat harvest is estimated in the Dalgely report at 130 million bushels, compared with 142½ million bushels for the previous season, but improved prices seem likely to compensate for this reduction. The prospects of a further steady improvement in the position of the Antipodean concerns seem favourable and are reflected in current share prices. Dalgely £20 ordinary shares, £5 paid, stand at 8½ to yield £4 17s. per cent. on a gross basis, while Australian Mercantile £5 shares yield £4 4s. per cent. gross at par. New Zealand and Australian Land ordinary stock is quoted at 65, and has received no dividend since 1934.

I.C.I. Scheme Upheld.—After a year, to the very day, the House of Lords has confirmed the judgment of Mr Justice Eve in favour of the Imperial Chemical Industries' scheme of capital reduction and amalgamation of the deferred shares with the ordinary shares. Mr Justice Eve, rejecting the petition of a group of dissatisfied deferred shareholders, based his decision on grounds of fact. The same general views—that the meetings held were in order and that the shareholders, acting honestly, on adequate information, were best judges of their own interests—were sustained by the Court of Appeal last March. Thus the view taken of the proposals from the first in the *Economist* has been finally endorsed by the highest tribunal. The succession of appeals will be regarded as an epic of tenacity rather than a revelation of new truth. The final rejection of the appeal enables the contingent dividend provisions in respect of the new ordinary stock arising from the conversion (4 per cent. final dividend for 1935 and 2½ per cent. declared on account of the current year) to be put into effect, and the payments will be made on December 30th to holders registered on November 27th, from which date the conversion will be effective.

The Week's Capital Schemes.—Three schemes involving a reconstruction, an amalgamation and a reduction of capital have been given publicity this week. The *Singer* scheme has closely followed Mr Charles Latham's recent statement (see the *Economist* of October 24th, page 174) and appears to justify the view which was taken regarding the level of the 5s. ordinary stock units. Briefly, a new company is to be formed, with a share capital of £703,300, in 428,425 7 per cent. preference shares of 8s., and 2,127,720 5s. ordinary shares. The existing £386,435 5½ per cent. debenture holders are invited to exchange their holdings at par for a similarly constituted security of slightly longer life, with three years' respite to the company for sinking fund payments. The bank overdraft, amounting to £90,026, will be repaid. To satisfy the claims of the moratorium creditors, 4 per cent. income notes, totalling £117,060, with conversion rights attached, are offered to the extent of 75 per cent. of the outstanding balances. The preference shareholders, who have already received 28 per cent. of the equity in satisfaction of dividend arrears, now suffer a capital cut of 12s. in the £, and their dividend is to be non-cumulative for four years. These new shares will also have conversion rights into ordinary shares for that period. Holders of the existing company's 5s. ordinary shares, finally, will be offered 5s. shares in the new company, with 2s. 6d. liability per share to be paid within three months. The scheme spreads the burden of reconstruction as equitably as the difficult circumstances permit, and is recommended for acceptance by the creditors' and shareholders' committees. The moratorium creditors have consented to a reasonable settlement; the purely contingent position of the preference shares, both as to earnings and capital, is recognised; and the ordinary shareholders are,

quite reasonably, invited to find new cash to preserve their equity. Amalgamation is the *motif* of the *Union Cinema* scheme, which has been under the consideration of shareholders of the company, and of its associates, *Oxford and Berkshire Cinemas*, and *National Provincial Cinemas* for some days. The scheme is very detailed, but consideration of its terms and of the parent company's accounts published this week shows that shareholders of the two latter concerns are invited to surrender their holdings on the basis of current market prices rather than current dividend yields. In considering the terms offered, therefore, it becomes essential to justify the current price of £12 for *Union Cinema* ordinary shares, which yield no more than 2 per cent. on the latest dividend. Capital reduction to the extent of £610,836 is proposed by *Millom and Askam Hematite Iron*. The cancellation of over two-thirds of the ordinary share capital is nominal, but the transfer of 25 per cent. of the resulting equity capital to the preference shareholders represents a real sacrifice. This transfer—266,460 5s. shares—appears to be equitable compensation for six years' dividend arrears. On the directors' estimates, it would take three years to pay off these sums. The prospective presumption of ordinary dividends, therefore, should ensure the ordinary shareholders' approval of the proposals, for they must otherwise wait for several years, even on the current level of earnings.

Base Metal Prospects Reviewed.—Shareholders interested in the fortunes of silver, lead and zinc production have enjoyed two authoritative reviews this week. On the producing side of the business, Mr Chester Beatty's review at the Trepcia Mines meeting provided a background of general optimism. Of the difficulties of the zinc smelting business, no more forceful presentation could be made than Sir Robert Horne's address to the shareholders of Imperial Smelting Corporation. Mr Beatty, of course, found it simple to make a good case for the prospects of the lead industry, and declared that, "over the next few years," they could be regarded as very good. Referring to the position of his company in particular, he drew frank attention to the increase in costs—for wages, supplies, deeper mining, and freights—but declared that the internal position of Yugoslavia showed welcome signs of economic and political improvement. But he found common cause with Sir Robert Horne regarding the position of spelter. The European drive towards self-sufficiency is undoubtedly a disturbing factor in the zinc market. Sir Robert quoted figures, for example, to show that Germany's production had more than trebled during the past four years, and after the completion of a further large plant, capacity will be quintupled. Such factors, coupled with subsidised and bounty-fed zinc, have prevented the Corporation from earning profits on zinc and have compelled it to close down certain of its works. Although, in general, the chairman again predicted a substantial improvement in commodity prices, his open appeal for safeguarding the zinc manufacturing industry terminated a speech which had more woe than weal. The shares closed unchanged on Thursday at 18s. 10½d.

Copper Share Earnings Estimates.—This week's dealings, both in copper and the shares of representative copper producers, have shown further progress on a scale which suggests that speculative support, in each case somewhat checked during last week, is in no way weakened. The first reaction to the increase in the rate of production to 105 per cent. of quotas was that it left little room for speculative anticipation of consumers' requirements. But this week the flames have been fed by a further heavy reduction in world stocks of refined copper, and during the next month or two the market is confidently anticipating a continuation of this trend. Meanwhile, price considerations continue to take second place in calculating the profitability of the Rhodesian producers during the current year. The 10 per cent. release in quotas, which was announced a fortnight ago, is broadly equivalent to a rise of £1 per ton for the companies. We may, therefore, amend the earnings estimates for the three principal

concerns which were given in the *Economist* of October 31st, page 224, to take in the additional 10 per cent. release. On an average copper price of £40 throughout the year, it would seem that Roan Antelope may earn about 70 per cent. on its capital, with an increase of about 4½ per cent. for each £1 increase in the average price. For Khokana, including the participation in Mufulira, earnings at £40 per ton amount to 55½ per cent., with an increase of 3½ per cent. for each £1 rise, while for Rhodesian Selection Trust the corresponding percentages are about 12½ and 1. The significant movement during the last three weeks is the rise in Roan Antelope—plainly justified on our previous estimates—from 55s. 6d. to 63s. 6d. If the copper were to average £42 per ton during the year, the prospective yield would amount to 6 per cent. On Rhokana, at 11½, the estimated return would be 5½ per cent., and on Rhodesian Selection Trust, at 23s. 3d., about 3 per cent. The long-term possibilities of Mufulira and the opening up of the Chingola mine are as generously valued as ever.

Other Company Results.—The Reports of 36 further companies are analysed on page 392. *Daily Mail and General Trust*, 58½ per cent. of whose invested capital is in Associated Newspapers, show an increased net revenue of £306,403. The steady recovery of *Samuel Osborn* has culminated in a 12½ per cent. dividend, against 7 per cent. Net profits are £39,764, against £34,473, but a higher proportion of earnings is distributed. *Weardale Steel* reports a sharp rise in net earnings to £82,779, against £32,925, and the report refers to more regular working and to an increasing demand for coke. The ground lost in the previous year by *Humber* (controlled by *Rootes Securities*) has been more than regained, with net earnings of £241,886, compared with £231,927. In the motor accessories section, *S. Smith and Sons* have made substantial progress. Profits amount to £175,579, against £137,383, the preferred ordinary dividend is raised from 14 per cent. to 17½ per cent., and the deferred dividend from 25 per cent. to 37½ per cent. Rubber company results are now reflecting the benefit of better prices, and show a more consistent improvement. The best increases recorded lately are those of *Malaya General* and *United Temiang*. *British Industrial Plastics* profits are almost unchanged at £37,391. The company operates in an expanding industry, but the report refers to considerable competition. The earnings of *Union Cinema*, whose amalgamation scheme is discussed on page 374, are some 43 per cent. higher at £33,981. A capital bonus of 5 per cent. is declared, while the dividend is increased to 22 per cent. Although the report contains no comment, more active operations in the industry are suggested by the *Viking Whaling* profits, which amount to £87,949, against £32,151. The week's dividend announcements include an *Associated Equipment* distribution of 1s. 6d. per unit, tax free, or 9 per cent., less tax, against 8½ per cent. The consistent progress of *Wiggins Teape* is shown in the progress report for the nine months to September 30th. Estimated net profits are £277,972, or £154,618 after deducting debenture and preference payments, against £271,097 and £147,228 respectively.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings: Mitchells and Butlers, Imperial Smelting Corporation, Electrical and Musical Industries, Dalgely and Company, Pahang Consolidated, Trepcia Mines, and Johore Rubber Lands. Sir William Waters, at the Mitchells and Butlers meeting, discussed the problem created by bogus clubs, which, besides affecting the company's interests, brought undeserved dis-

credit on the good conduct of licensed houses. He also explained the difficulties that had arisen between brewers and barley-growers. At the Dalgety meeting, the chairman reported that the rise in wool prices had benefited the company, and expressed satisfaction that even in the absence of Japanese buying, wool sales were giving good results. Mr Henry Frisby, at the Pahang Consolidated meeting, said he believed that the terrors of restriction were passing away. At the Johore Rubber Lands meeting, the chairman explained that a higher dividend had not been declared because they wished to avoid drawing on the Carry Forward. Statements at the Imperial Smelting Corporation and Trepana Mines meetings are discussed in the Note "Base Metal Prospects Reviewed" on page 375. At the meeting of Electric and Musical Industries, Mr Alfred Clark discussed the company's position in the television world, and anticipated a reduction in the price of receiving sets. The household appliance section had also made substantial progress.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS
TICKET DECEMBER 1 | ACCOUNT DECEMBER 3

COMPARED with the strength displayed on the opening of the new account, last week's "shake-out" proved quite unsensational. Perhaps more was due to the impressive budget of company news this week, than to the basic technical strength, which obstinately refuses to become weakened. But on Tuesday and Wednesday, the "Financial News" index of ordinary shares reached successive high levels, and the industrial markets presented a number of sparkling features against a background of general steadiness.

In the gilt-edged market, naturally, the implications of the £100 millions Funding Loan (discussed on pages 366 and 370) have been thoroughly weighed. That the issue was wholly unsuspected is revealed by the quiet conditions at the opening. On Wednesday the readjustment of existing stock levels was at first rather marked—particularly in the 2½ per cent. Funding—but a recovery which set in later was continued on Thursday, when the closing of the lists at 11.15 a.m. encouraged the market. Small declines were recorded in the home corporation group, despite the expectation of a respite from further borrowing.

A sharp fall in Japanese bonds was the main feature of the foreign bond group. This resulted from somewhat inconclusive reports regarding a tax on Japanese obligations, but the lack of official explanation or denial did not assist the market's confidence that the levy would apply only to Japanese nationals, and the reported Japan-German alliance added further to the market's discomfiture. Chinese bonds were neglected in sympathy. An early advance in Polish 7 per cent. was not held, and German bonds were reactionary until to-day. Support spread for Roumanian and Bulgarian issues. Apart from an initial improvement in Brazilian issues, the South American group were mainly easier.

Home rails opened quietly, and only L.M.S. ordinary showed any evidence of the better things to come when the imminence of the Railway Freights Bill was canvassed. This stock, together with Great Western (in which bearish operators were compelled to buy themselves out dearly) led the rise, in which Southern preferred also shared. London and North Eastern stocks, however, were affected by the traffics. The Argentine rail boom continued at first, with an eager demand for a small volume of stock. Central Argentine made the best progress, and was least affected by the mid-week profit-taking.

Industrial markets have been cheerful without any fireworks this week, and according to most industrial share price indices, new high levels have been reached. The iron and steel section opened the week easier, but gradually became firmer. Stewarts and Lloyds strengthened on the news of the Jarrold plant, and on reports that the Tube Cartel may be revived. The Dorman Long dividend was not particularly well received, but the group as a whole was firm in mid-week. Both the aircraft and motor sections were slightly irregular at the beginning of the week, and turned firmer later. Electrical equipment issues were inclined to dullness most of the time, but there was at first a good investment demand for electric supply shares.

Textile shares enjoyed a good demand on the possibility of better cotton prices, and many shares went ahead. Rayon shares were quiet. Woolworth were the most prominent

share in the market, on the 100 per cent. bonus announcement, and went steadily ahead to a new high record. The Stores group generally were in favour on good prospects for the Christmas trade. Unilever issues were supported in the Catering and Provision group. Demand for brewery issues was well maintained on good trading reports and recent dividend announcements; Distillers went to a new high level, and most other shares showed slight gains. Interest in the shipping section was revived by resumption of dividend payments on P. and O. deferred. Conditions in the miscellaneous industrials group section of the market became brighter in mid-week, and cement and some other building material issues went ahead. Crittall were bought on dividend expectations. Turner and Newall were prominent in anticipation of good results, and held new high levels reached early in the week.

The tone of the oil market was at first dull, without, however, much actual selling, and the lower prices began to attract buyers. Royal Dutch and Shell drew by far the most attention, largely on hopes of interim dividends; a payment of 7 per cent. or 7½ per cent. by Royal Dutch was canvassed. When it was officially announced that consideration would not be given till January to a Shell Transport and Trading interim, the shares fell sharply, and a similar decision by Royal Dutch produced a like effect. The reaction spread to other sections of the market, particularly Eagles. Trinidad issues remained steady throughout.

The rubber market was firm and active. There was evidence of a good public demand, and discriminatory buying, without any tendency to pay fancy prices. The fine adjustment between buying and selling prevented any great advance. Tea shares were on the whole subdued, with little business, though enquiries were made for shares for genuine investment.

An erratic tendency at first among mining shares turned into firm prices and active business. Attention was paid mostly to new concerns, and though for no apparent reason Venterspost were at first an exception, a good demand developed later. The possibility of a new subsidiary for West Witwatersrand was discussed. Interest was maintained in De Beers in spite of the continued absence of any real information about preference arrears. West Africans, over-shadowed by their larger neighbours, were neglected to start with, but got their share of attention later, a sudden demand developing for Consolidated African Selection. Rhodesian issues were mainly dull, except for copper shares under the lead of Rhokana. The Rhodesia Broken Hill meeting did not affect prices. No interest was shown in Australian mines.

In Paris, an upward tendency was sharply checked by news of the death of M. Salengro, and all sections of the market were affected. A listless tone prevailed on the Berlin Bourse, though a small stimulus was provided by the announcement that the revaluation of the prices of Internationals would not affect the prices of German shares. Amsterdam quickly shook off its fears of possible restriction on Wall Street of foreign investment, and business continued active.

NEW YORK STOCK EXCHANGE

At the end of last week prices moved downward on President Roosevelt's reference to the need for restraining foreign buying of American securities. This week conditions improved, as the difficulties of the proposal became more apparent, and its effects upon present holders were less feared. Business news remains as good as ever. The attendance at the Motor Show was encouraging, and earnings and dividend statements during the week have been in the best post-election manner. On good retail trade returns merchandising shares were well supported. By the middle of the week considerable profit-taking developed, but on balance prices did not give way much. As the leading issues yielded slightly, the more speculative and cheaper shares were bought. In mid-week Bethlehem Steel preferred was a very prominent feature. Iron Age estimates steel mill activity this week at 74 per cent. of capacity; power output was 11.9 per cent. up on the corresponding week of last year. On the bond market Treasury issues have been consistently firm for several days, and it is suggested that this may be due in part to anticipatory buying by institutions which may have to compete for the supply in future with the Social Security Fund, which is required to build up a reserve fund.

CAPITAL ISSUES

THIS week's event in the capital market is the entirely unexpected £100 millions *Funding Loan*. Its investment and money market implications are discussed in a leading article on page 366 and an Investment Note on page 370. Of the remaining issues, *Gas Light and Coke* 3½ per cent. preference stock, issued at par, is most important. The proceeds of the issue, which is redeemable in 1970, are required for repaying bank accommodation and for further development. Investors who are content with the prospect of a £3 15s. per cent. yield over the next 34 years could find nothing more secure. *Inter-Union Finance* is a South African hire purchase finance concern. For this reason, the net assets acquired (£94,559) include £232,785 for debtors, while loans from bankers, etc., total £139,268. Profits of the vendor concern have shown a rapid advance since its incorporation in mid-1933, and the existing prosperity in the Union will doubtless justify the introduction of new capital. Whether, however, it will prove sufficiently remunerative to increase profits by as much as 120 per cent. and maintain them at this level depends upon the further course of South African recovery. If the estimates are realised, the prospective earnings yield of 18 per cent. on the 5s. ordinary shares (offered at par) would still have to be associated with a goodwill account representing 20 per cent. of the net assets. That rare feature—a total consideration well below the value of the assets acquired—is revealed by the *London and District Cinemas* prospectus. The company acquires cinema interests, in some of which improvements are at present being carried out. Neither the 5 per cent. debenture stock issued at 99 nor the 5s. ordinary shares at par offer obvious attractions for the general investor. *Ditchburns, Ltd.*, is an addition to the growing number of furniture companies which have recently appeared. The company is in the middle of an expansion programme, and its capital is small—a fact which inevitably limits the ordinary investor's interest, and is necessarily compensated by a high earnings yield prospect. The current profits level, moreover, is at a peak for the past six years. Statements for information have been published this week on behalf of *H. L. Cabinet Works, Drey, Simpson and Company, Wright's Biscuits, Compass Investment Trust, Colony of Grenada, Loyds Retailers and Andrew Buchanan's Breweries*.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

By order of the Board. T. N. HAY,
Toronto, November 9th, 1936. Secretary.

4s. ordinary shares. Profits, years to March 31st: 1934, £29,312; 1935, £22,827; 1936, £30,097. Myers & Co. take issue at 21s., for 3d. commission, and £3,750 fee.

Compass Investment Trust, Ltd.—Particulars of issue of £150,000 3½ per cent. debenture stock, redeemable at par 1956, of which £50,000 taken at 97½, less half commission, by Cazenove, Akroyds and Greenwood and Company, who have also exercised an option on a further £100,000 at same price.

Drey, Simpson and Company, Ltd.—Issued capital 488,000 5s. ordinary shares and 160,000 1s. deferred shares. Pile fabric manufacturers at Stockport for sixty-three years. Net assets £163,529. Net profits, after depreciation: 1933, £7,140; 1934, £10,366; 1935, £12,400. Medley Hartmann and Company take 180,708 5s. shares at par for 4 per cent. commission, and 97,932 ordinary shares at par. Scheme for reorganisation and increase of capital approved since December 31, 1935.

Wright's Biscuits, Ltd.—Issue at par of 100,000 5½ per cent. cumulative redeemable preference shares, taken by Cohen, Laming, Hoare for commission of 1s., less certain expenses. Participation: half of excess over 5½ per cent. ordinary dividend, with 7½ per cent. maximum. Redemption by market or private purchase at price not exceeding 25s. per share. Net assets, £128,113, acquired for £128,010, payable by £78,020 cash and £49,990 in 99,980 10s. ordinary shares. Profits, before depreciation, period July 10th, 1933, to July 30, 1934, £5,758; years to June 30th: 1935, £10,470; 1936, £10,173.

Andrew Buchan's Breweries, Ltd.—Issued capital 150,000 5½ per cent. cumulative £1 preference and 371,425 £1 ordinary shares. Acquires brewer's business of Andrew Buchan and Company and other interests including Griffiths Bros., Ltd. (Newport), certain assets of D. F. Pritchard, Ltd., 82,240 £1 ordinary shares of Crosswell's Cardiff Brewery and capital of D. Williams and Company (Merthyr). Net assets £312,802, plus £356,400 investments, etc., since acquired. Profits, after brewery and before freehold depreciation: 1933, £8,527; 1934, £20,586; 1935, £25,537.

Loyds Retailers, Ltd.—Issued capital 500,000 5s. ordinary shares. Gramophone, radio and furniture dealers. E. R. Lewis and Company take 100,000 5s. shares at 10s., and buy 188,000 shares at 9s. 7.38d. plus expenses. Net assets £100,173. Profits, after depreciation before bank interest, years to June 30: 1934, £17,297; 1935, £34,244; 1936, £49,608. Net assets, £100,174.

FORTHCOMING ISSUE

Amalgamated Collieries of South Africa.—An offer for sale will be made on Wednesday next, November 25th, of 200,000 £1 shares at £1 10s. The offer will show that the company has been incorporated in South Africa to acquire mines, etc., and has purchased four collieries (rights or shares) and undeveloped coal rights for a total purchase consideration of £1,738,658 (£556,246 in £1 shares, £1,182,412 in cash to be used in taking shares at par, and £38,658 cash). The latest mining profits, before depreciation, are: Cornelia, 1935, £123,763; Largo, year to June 30, 1936, £22,418; Schoongegicht, 10 months to April 30, 1936, £48,895; Springfield, year to June 30, 1936, £25,314. Estimated profits for the four collieries, years to April 30: 1937, £273,000; 1938, £286,000.

BONUS ISSUES

Atkinsons Brewery.—A share bonus of 3,100 per cent. is proposed by the directors of Atkinsons Brewery. The board recommends the capitalisation of £465,000 of the unappropriated balance and the issue to ordinary shareholders of 930,000 ordinary 10s. shares credited as fully paid. An extra-ordinary general meeting will be held on November 23rd to consider the scheme.

F. W. Woolworth and Company.—F. W. Woolworth and Company is issuing one free 5s. ordinary share for every ordinary share held on November 30, 1936. The shares are to rank for the final dividend to be paid in respect of the year ending this month. Existing ordinary capital is £3,750,000, and the bonus proposal involves the capitalisation of a similar amount of undivided profits, which will first be transferred to reserve. The directors state that an increase in the capital is desirable in view of the extent of the company's operations. An extra-ordinary meeting has been convened for November 30th to sanction the increase of capital.

ISSUES TO SHAREHOLDERS ONLY

The Ampat (Sumatra) Rubber Estate, Ltd.—Issue of 849,950 2s. shares at par to shareholders and noteholders on register November 13, 1936.

Albert E. Reed and Company.—Issue of 100,000 6½ per cent. cumulative £1 preference shares at 28s. each, and 300,000 £1 ordinary shares at 38s. each, to shareholders on register November 12th, in proportion of one new preference and three new ordinary for every ten shares held.

Anglo-French Exploration.—Issue of 100,000 £1 shares at £1 7s. 6d. each in proportion of two for every 13 held on November 20th. Lists close December 7th. The new shares will rank for any dividend paid in respect of 1936.

Bentley's Yorkshire Breweries.—Issue of 90,000 £1 ordinary shares at 30s. each, one for each three held. To rank for dividend from September 30, 1936.

Brown Brothers.—90,800 new ordinary shares of £1 are offered to ordinary shareholders registered October 30th, at 45s. per share.

CONVERSIONS AND REPAYMENTS

Jeram Rubber Estates.—This company will pay off a loan of £20,000. To provide the funds and to finance the replanting programme, it offers 28,125 shares of £1 to shareholders registered November 5th at 21s. each, in proportion of one share for every four shares held.

Straits Settlements 3½ per cent. Stock (1937-1967).—This stock will be repaid at par on May 15, 1937.

Swedish Loans.—Conversion is announced of 3½ per cent. State Loans of 1908 and 1911, totalling Kr. 54,480,000 (£2,814,000) and Kr. 72,000,000 (£3,788,000) into new 3 per cent. bonds of Kr. 105,000,000 (£5,526,000). The loan will be refunded 1938-97.

Stockholm (City of).—New loan Kr. 28,000,000 (£1,450,000), partly for conversion of 4 per cent. loan, 1908, to be redeemed February 15, 1937. Interest of new loan, 2½ per cent. at 101 per cent. plus stamp duty.

Argentine Republic Sinking Fund Conversion Loan.—The Argentine Government has created and there are being issued in the United States of America \$23,500,000 Argentine Republic sinking fund external Conversion loan 4½ per cent. (U.S. dollar) bonds. Due November 15, 1971.

OTHER RESULTS OF ISSUES

Dewsbury Corporation.—Underwriters left with 89 per cent.

Birmingham Small Arms.—Lists closed 9.5 a.m., November 13th. Oversubscribed.

COMPANY MEETINGS, &c.

MITCHELLS AND BUTLERS, LIMITED

MENACE OF BOGUS CLUBS

BREWERS AND BRITISH BARLEY

SIR WILLIAM WATERS BUTLER'S INTERESTING ADDRESS

The forty-ninth annual general meeting of the shareholders of this company was held at the White Horse Hotel, Birmingham, on the 19th instant, under the presidency of Sir William Waters Butler, Bt.

The Chairman, in moving the adoption of the report and accounts, said: Ladies and gentlemen, I am sure we all regret to hear that Mr F. N. Lones is unable to be present here to-day in consequence of illness.

With reference to the trading of the company during the past twelve months, the Board is fully satisfied with the profits and also the output of our draught and bottled beers, which, of course, is due to the quality of our products continuing to meet with popular favour.

The demand for our bottled ales and stouts is still increasing, all brands being in great demand, particularly our own brewed "Cape Ale," which has a sale of well over 20 million bottles yearly, a quantity probably unequalled by any bottling attached to the brewery in which the beer is brewed.

At the present time I can assure you that you own a sound profit-earning business, and I see no reason why it should not continue to be so, for we are told by economists that the national prosperity we are now enjoying will continue for some time to come, although we have to realise that one cannot be definite, fearing unforeseen economic depressions might result from the troubled state of the world to-day.

I am pleased to inform you that although it is anticipated brewing materials such as hops and barley will probably be more costly this season than last, our well-bought stocks are of such quality and quantity as will reduce the full effect of this probable increase of production costs upon the profits of the year. Although the beer duty is still ten times greater than that imposed upon the trade before the war, notwithstanding the reduction which took place in Mr Neville Chamberlain's Budget of 1933, we shall use any gain in the cost of brewing in the further improvement of our products.

HEAVY EXPENDITURE ON IMPROVEMENTS

The heavy expenditure which we have had to meet, and which, I fear, we shall have to continue to face, is mainly to fulfil the requirements of the licensing authorities in connection with the improvement of old licensed properties and the higher costs of the construction of the new and improved licensed houses we are from time to time erecting, which are admired by the general public and have attracted patronage well up to our anticipations.

In addition to the expenditure I have just referred to, we have also to meet unusual expenditure on buildings brought about by the municipal authorities carrying out schemes in connection with street widening, slum clearance and overcrowding in dwellings.

The result to your company is, of course, that we have to find the money for such capital expenditure, while the trading return on that new capital in consequence of high building costs is much lower than was previously yielded by the property before it was mutilated in connection with such public improvement schemes.

As to meeting capital expenditure, naturally this means that the company must have the necessary cash available, or otherwise it would have to borrow, which as far as possible we endeavour to avoid by making use of reserves which by prudent distribution of profits in the past we were able to set aside.

BOGUS CLUBS

It is a rare position, and pleasing to me, that there is no proposed legislation detrimental to our industry for me to bring before you notice, but rather that a Bill was referred to in the King's Speech which, if enacted, should check the establishment of bogus clubs which are daily proving injurious to your interests and unjustly bringing discredit upon the good conduct of the

licensed house. At the same time I should like to say that the licensed trade has not the slightest objection to the establishment of the genuine working man's club which, of course, has as much right to be founded as the clubs of the well-to-do classes, for all must agree that the working man is entitled to provide his own amenities.

The increase in the number of clubs is unfortunately mainly due to the restrictions which have during the past few years been imposed upon the patrons of the licensed house, in most of which nothing can be offered to them but the mere supply of alcoholic refreshment in a very limited number of hours. They are deprived of any form of recreation and no facilities are permitted for rational enjoyment, the result being that they naturally seek an opportunity of freeing themselves from the irksome restrictions which have to be imposed in licensed houses and make their own provision by forming a club. Thus the licence-holder is deprived of a portion of the custom he should receive, making it extremely difficult for him to carry on with the heavy burden he has to bear in the way of high licence duties, taxes, etc., of an amount far in excess of that paid by the club. If this was the limit of damage suffered by the licensed trader it might even then be difficult to show that he had real ground for complaint, but there is plenty of evidence that the genuine club formed by the co-operation of a group of men is being replaced by the bogus or proprietary club which is run by an individual for his own personal profit, who is permitted to unlawfully sell, not merely distribute, alcoholic liquors at whatever prices and under any conditions he chooses, notwithstanding that the present Club Law lays down that the purchase of alcoholic liquors shall be under the control of a properly constituted committee, and that it shall be the property of the whole of the members of the club. He is even assisted in doing this by a wholesale trader who probably owns the building or holds a mortgage thereon, or gives long credit, and thus finances the proprietor.

STATISTICAL PROOF OF NEED FOR LEGISLATION

That the time has now come when these bogus clubs must be prohibited by law is borne out by the statement made in Licensing Statistics (a Government publication) that during the year ended December 31, 1935, no fewer than 435 clubs were struck off the register, and the number of persons convicted for offences in registered clubs increased from 1,584 in 1934 to 2,053 in 1935, and the number of clubs increased in the two years ended December 31st last by 684, while there was a decrease of 893 "on" licences in the same period.

Lord Amulree, Chairman of the Licensing Commission, speaking on the 20th of last month at a meeting attended by Justices from many parts of the country condemned bogus clubs in these striking terms. He said:—"Unfortunately there have grown up in recent years the bogus club and what they call the bottle party. I am bound to say that these clubs are a disgrace to our civilisation. The proprietors and frequenters of these clubs laugh at the law, and treat it with contempt." At the same meeting, Mr J. J. Mallon, a member of the Commission, strongly supported Lord Amulree, declaring that "the bad club is just about as bad as anything which exists on earth."

COMPETITION FROM COLONIAL WINES

Licensed traders are also much troubled by the tremendous growth, year after year, in the importation of Colonial wines, which are admitted into this country at a low preferential duty. Most of it is retailed in the wine shops which are being opened daily throughout the country. These wine shops require no Licensing Justices' Certificate which, as we are all aware, is difficult to obtain, but can be opened anywhere at any time merely on the payment of an Excise licence.

Having to pay such a small sum for the Excise licence to sell, and the preferential duty being so light, enables these wines to be sold at a very low price, and taking into account the high percentage of alcohol they contain they are the cheapest form of alcoholic beverage that is offered to the public at the present time. They are displacing drinks of a much lower alcoholic strength such as beer and cider, which, certainly, will tend to increase drunkenness.

BARLEY GROWERS' UNFAIR CHARGES

I much regret that barley growers still persist in their charge that brewers have not honoured the arrangement that they would purchase as much home-grown barley as possible which was made with Mr Neville Chamberlain, the Chancellor of the Exchequer, when he intimated that he would be prepared to reduce the Beer Duty subject to the price of beer being reduced to the consumer and the strength increased 2 degrees. Notwithstanding the extra cost to the brewer of this increase in strength, he receives 24s. per barrel less for his beer. In our own case we are prepared to produce evidence that the strength has been increased by that amount and the reduced price put into operation from the day of the Budget of 1933, while the blend of malt we use to-day contains actually 32 per cent. more malt made from English barley than in the year the Budget promise was made.

NEW SEASON'S BARLEY BELOW STANDARD

Returns have been made to the Import Duties Advisory Committee of the amount of British barley which has been used in brewing, and the members of the Brewers' Society have pledged themselves to purchase at least 7,500,000 cwt. of British barley annually provided it is of malting standard, and to increase this quantity as the output of beer increases. But as this season's barley is not equal in malting quality to that of the past two seasons it may be difficult to obtain from British barley growers the quantity brewers have undertaken to purchase, but it is to be hoped that as the season goes on and the barley in stack is threshed the amount required may be available.

As I have explained before, the percentage of English barley we can use must vary with the climatic conditions prevailing during the harvest, and harvests have been favourable since the change in duty, but unfortunately this season, in consequence of the early wet summer, much of the English barley is unfit for brewing, and the average price of the purchases of English barley we have made up to date this season is greater per quarter than last year, but although more costly it is inferior in quality and contains a higher percentage of moisture.

Good quality malting barley is scarce, so much so that we have been driven to buy a quantity of high quality foreign barley at a higher price than English. This is evidence of what I have stated on more than one occasion that in a bad season we are driven to buy foreign barley at shillings more per quarter than best quality English.

A farmer complained in *The Times* last year that brewers would not buy second quality barley, but is this not what one would expect of a firm like ours which must buy only the very best brewing materials?

EFFECT OF 10 PER CENT. AD VALOREM DUTY

Farmers by continuing to press for a higher import duty on foreign barley than the present 10 per cent. *ad valorem* duty, are likely to bring about the position that arose as a consequence of the pressure put on Mr Gladstone in 1880 to repeal the malt tax and instead to impose a heavier burden on beer, which did not bring any gain to the farmer. I have always understood farmers repented their action on that occasion and now they are working to make the brewer pay a higher duty on a material he is bound to purchase to produce good beer when the English harvest is bad. This cannot possibly benefit the English barley grower, but it may lead to the brewer buying these more costly foreign materials in larger quantities.

As I said earlier on, it is very difficult to predict future profits under the abnormal conditions prevailing at the present time not only in this country but also throughout the world, as it is certain that home conditions are very closely connected with world conditions and must fluctuate with them. At the same time it will be some satisfaction to you to know that the trading in this new financial year, but which only covers a few weeks, shows improved profits over the corresponding period of last year.

I have much pleasure in moving the adoption of the report, and I will ask Mr Bainbridge to second it.

Mr Herbert W. Bainbridge seconded the resolution, which was carried unanimously.

ELECTRIC AND MUSICAL INDUSTRIES, LIMITED

RECORD SALES OF SETS—TELEVISION PROGRESS

The fifth annual general meeting of Electric and Musical Industries, Limited, was held, on the 13th instant, at Winchester House, London.

Mr Alfred Clark (the chairman), in the course of his speech, said: The net profit is smaller than last year. The directors, however, have again recommended a 10 per cent. dividend on the ordinary shares, but without a bonus of 2½ per cent., as a year ago.

The principal product of your company is the radio receiving set, and during the year the number of sets sold by the companies was larger than that of the previous year, which had constituted a record. It is the lower selling prices of these sets which is responsible for the greater part of the decrease in profits.

Sales of radio-gramophones and records are down, but in the better-class records, which are generally classified as "Celebrity Records," there has been a slight recent increase.

With regard to television, undoubtedly great public interest has been aroused by the recent demonstrations, which began at Olympia in August, and have been followed by the daily public transmissions at present taking place. At the meeting last year you were informed that we were then busy on an order from the B.B.C. for the installation of a complete Marconi-E.M.I. system of transmission at Alexandra Palace—the new Television Broadcasting Station. That equipment has been delivered and installed. It has passed all the tests to which, under the contract for its supply, it was to be subjected.

It also reached the standard required by our own engineers, and we are proud of it as an example of our work. Since our last meeting we have had a further substantial order from the B.B.C. for a travelling transmission station equipped with our Emitron cameras suitable for picking up direct scenes of both outdoor and indoor events.

Reference is frequently made in the public Press to our wonderful Emitron camera with which out-of-door scenes, as well as studio or theatre scenes, are picked up directly without the use of a film. This camera has been developed and made by us, and "Emitron" is the registered name which we have given it.

Shareholders are aware that in accordance with the recommendations of the Television Committee, the B.B.C. ordered the installation of two different systems, so that their engineers might judge both systems working under practical conditions. Daily broadcasting is now being carried on. We are well pleased with the results obtained by our system, and I have no doubt shareholders will derive the keenest pleasure from any comparison which they may make.

Our television receiving sets are now on sale. As in all new industries, they may be expected gradually to become cheaper in price. It is not so very many years ago that the Marconiphone Company was selling a two-valve radio set; without loud speaker or batteries, for £25, whereas to-day, for such a price, one can purchase a luxurious radio-gramophone.

Our business in household appliances has now completed its third year. Rapid strides were made from the beginning, and the year now under review has shown an important increase over last year's sales of the H.M.V. refrigerators. The reliability of these goods is appreciated by an ever-widening public. Purchasers are recommending them to their friends, and I believe that the sales will continue to grow. In spite of the very many firms now competing with us, we are one of the three firms which do the bulk of the business in these articles.

Our engineers have recently developed an electric iron which is meeting with marked success, and we are selling just as many as we can manufacture. To these articles we have now added electric washing machines and electric ironers for the home laundry.

Any reference to the future outlook must take into consideration the fact that the sales of television apparatus, both for transmission and receiving, are going to form eventually an important part of our trading. While sure, its progress is expected to be slow, but as pioneers in the development of high definition television we intend to hold the premier position we have achieved.

At this season of the year we are always busier than at any other time with the manufacture and sale of radio receiving sets and radio-gramophones, and this year is no exception. We have in hand more orders than the factory can immediately cope with.

We expect to maintain our position as the largest manufacturers of radio receiving sets in the United Kingdom. Our gramophone record business is expected to continue in the same or better volume than last year, and household appliances promise to contribute to our profits.

The report was unanimously adopted.

384

IMPERIAL SMELTING CORPORATION, LIMITED

NATIONAL IMPORTANCE OF THE ZINC INDUSTRY

PLEA FOR ADEQUATE PROTECTION

The seventh annual ordinary general meeting of Imperial Smelting Corporation, Limited, was held, on the 19th instant, at 20 Aldermanbury, London.

The Rt. Hon. Sir Robert Horne, G.B.E., K.C., M.P. (the chairman), in the course of his speech, said: Consolidated revenue of the group for the past year was £145,967, against £123,092 in the previous year. While it is satisfactory to record an improvement in the profits for the year, the gain was not commensurate with the expansion in the group's operations.

A review of operations which are subsidiary to our chief business will serve to reveal to you the wide range which our activities now cover. We have, indeed, divagated into many spheres never contemplated when we started this organisation in 1923. They have all developed naturally from our main purpose; but for the profits which some of them have yielded we should not have been in a position to pay even our preference dividends during these last years. For the disconcerting fact stares us in the face, that, in spite of an efficiency which is second to none in the world, it has not paid us to produce zinc in this country. This arises out of conditions common to many other industries in Great Britain—higher wages, dearer transport and a better standard of life than are maintained by our competitors abroad. But the other industries of the United Kingdom which find themselves so handicapped have received protection, sometimes by application to the Import Duties Advisory Committee, sometimes by the intervention of the Government, and sometimes by both.

THE VICTIM OF NEGLECT

It seems anomalous that the zinc industry—declared by Lord Balfour's Committee after the last war to be a key industry and essential to the safety of this country—should have been the victim of a neglect which has made it unprofitable to maintain it. At a time when other nations—notably Germany—are feverishly trying to increase their zinc production and fostering the industry by bounties and subsidies, we in the United Kingdom have had the experience of witnessing the creation of a tangle so perverse and so inimical to the survival of the zinc industry in this country that, as the Import Duties Advisory Committee found, it could only be unknotted by the passage of a measure to reduce the protection of zinc below the minimum laid down by the Act of Parliament. The matter, of course, cannot rest there, and the Import Duties Advisory Committee did not intend that it should. Twelve months ago I was so convinced that action would be taken to remedy the position that I may have raised hopes in your breasts with regard to the prospects of a dividend this year on our ordinary shares. I much regret to say that while our business has widely expanded, the continued adverse state of the zinc industry and the returns from our investment in it prevent the realisation of my hopes.

Up till now, our expectations have been disappointed. Notwithstanding the urgency of the case from the national point of view and the promises of support that were held out to us, nothing has yet been done, and we are still attempting to carry on an essential industry in a protectionist country without any real protection for ourselves. We are forced to pay for the protection of other industries and get none for our own. We are utilising an important part of the returns on our investments in acid, alloys, pigments, mining, etc., to maintain the production of zinc on which there is no profit. This cannot continue without weakening the whole structure of our undertaking, and this we do not propose to risk.

AN INDUSTRY ESSENTIAL TO THE NATION

Our group directly employs nearly 3,500 men and provides indirectly for probably the wages of 7,000 more. It consumes over 200,000 tons of coal and coke per annum; its inland transport last year totalled over 850,000 tons; and its overseas transport over 220,000 tons. Apart altogether from the essential part it must play in the defence of the country its importance to the industrial well-being of the nation is obvious. We seek no more than a just recognition of the prior right of the producer in the United Kingdom to a fair share of his domestic market and adequate safeguards for the wages and total cost-level of this country against the competition of any external competitor. All efforts, such as were commended to us, to regulate competition from external sources by means of arrangements between producers in other countries have failed, and our case has therefore once again been placed before the "appropriate authorities." We have endeavoured, but without success, to organise an Inter-

national Cartel which would reasonably safeguard the interests of the British zinc industry.

You will better appreciate the difficulty of finding a satisfactory solution of the problem if I give you some details of what is being done in Germany at the present time. In 1932 the zinc production in Germany was 42,000 metric tons; in 1933 production was 50,867 metric tons; in 1934 production was 72,253 metric tons; in 1935 production was 124,129 metric tons; for the first eight months of 1936 production was 89,992 metric tons, that is at the rate of 134,988 metric tons per annum, and a further large plant is about to commence operations.

You will observe that German production of refined metal in 1937 is estimated to be almost five times what it was in 1932. Now I am not presuming to question either the wisdom or necessity for this tremendous increase in German zinc production. It is the direct result of the German Government's decision to make their nation self-contained in the production of the materials and commodities considered essential for their national policies. It has been, and must continue to be, a heavy drain on their finances on account of the substantial subsidies with which the German Government have supported the extension of their local zinc industry.

It is clear, however, that the development of the German industry must have important repercussions on other parts of the world including Great Britain, and that it is vital for this country to take promptly all steps necessary to ensure the stability and reasonable profit-earning capacity of the British industry. In view of the interests of Dominion Zinc producers in this market, these steps must involve, in addition to an adequate duty against foreign imports, satisfactory arrangements between the British and Dominion Governments concerned, covering regulation of imports of zinc from the Empire into this country. We ask for nothing more than that the British Government should accord to the British industry a similar preference to that which the Dominion Governments accord to their own. We cannot accept less in justice to the rights of British shareholders and British labour, nor can we hope to establish the British industry on a sound and permanent basis without such support. I am not without hope that the threatening clouds overhanging the international situation will bring about a decision.

CLOSING OF CERTAIN WORKS

It is unfortunate that the circumstances, above described, have necessitated a recasting of our programme for the development of the British zinc industry. This programme had been built on the declaration of the Chancellor of the Exchequer, Mr Neville Chamberlain, who on February 4, 1932, announced in the House of Commons that the Government intended "by a moderate system of protection scientifically adjusted to the needs of industry . . . to transfer to our own factories . . . work which is now done elsewhere." In the case of zinc we had also in mind the declaration of the Balfour Committee—a declaration to which, in fact, we owe our origin. We were encouraged therefore to enlarge our works at Swansea Vale and Avonmouth and to purchase the plants at Seaton Carew and Bloxwich with the object of reconstructing them on modern lines and obtaining substantially increased production. Owing, however, to the disappointment of our expectations, I regret very much to say that at the end of August we were forced to close down the zinc section at Seaton Carew which, like Swansea Vale, is in one of the most distressed areas of the country, and also to give notice to close the zinc section at Bloxwich at the end of this month. We have made every possible effort to provide work for the displaced men, but unfortunately a number have been forced out of employment. The Bloxwich zinc plant depends largely on residuals from other industries for its operation. The high protection or lower costs ruling in other countries enable foreign works to pay prices for these residuals out of all relation to the price of zinc in this market and as the economic operation of the plant is impossible we have given notice to close it. Germany, it is interesting to note, prohibits the export of these zinciferous residuals. It seems a futility as well as a tragedy that when the Government is trying to devise means at great expense to create new industries in the distressed areas, they should be allowing existing and essential industries to close down for lack of the support which they give to other industries in the prosperous parts of the country.

If I could anticipate the setting up, under the National Programme, of adequate safeguards for our main industry—zinc, I should be justified in saying that the outlook was good and that a ready and reasonable return on your investment in our business could fairly be expected. I trust we shall now receive the Government's decision without delay.

The report and accounts were unanimously adopted.

DALGETY AND COMPANY, LIMITED

IMPROVED POSITION

The fifty-second annual meeting of Dalgety and Company, Limited, was held, on the 19th instant, at 65/68 Leadenhall Street, London.

The Hon. Edmund W. Parker (the chairman), in the course of his speech, said: I address you under more favourable circumstances than have existed for the last few years. I have a brighter story to tell, and I am hopeful that, although we have not reached that prosperous state when we were able to distribute large dividends and bonuses, we have at least turned the corner, and I am sure that the results I am going to comment upon to-day will prove satisfactory to you. We are at last able to recommend an additional payment by way of dividend of 1 per cent., bringing the distribution for the year up to 6 per cent. free of British income tax, and to show definitely improved earnings. I must warn you, however, that during the current year we are faced with a grave drought in Western Australia and with legislation in New Zealand which may affect our earnings to an unknown degree.

BETTER WOOL PRICES

I am glad to say that the rise in the price of wool which manifested itself last season was well maintained, and our results show an increasing benefit. The outlook is more hopeful than it has been for many years, and a break in the drought in Western Australia would go a long way to making the future assume a more roseate hue. The 1935-36 wool selling season was one of the most successful experienced for many years. It was characterised by stability of prices and absence of any sharp fluctuations in the market, and for this reason can be looked back upon with feelings of gratification by all sections of the trade.

Sydney started selling on August 31st this year, followed by Adelaide, Brisbane, Perth and Melbourne in rotation. It was with some degree of nervousness that the opening sales were watched, as no settlement had been made between the Australian Government and the Japanese over the tariff question, and, therefore, it was not expected that Japan would buy a bale. Buyers from that country were there in full force valuing and watching the market, but not operating. It was all the more satisfactory, therefore, to find that there was sufficient buying strength, not only to keep prices well up, as compared with the Sydney closing rates in June, but in every case to improve upon that level.

The New Zealand selling season this year opens at Auckland on November 28th. If the present keen demand for cross-breeds is maintained, and we see no reason why it should not be, taking into consideration the amount of this class of wool which will be required for army clothing, Coronation decorations, etc., Dominion growers should have a prosperous time ahead of them. It will be remembered that Japan was an important buyer last season in New Zealand, and we expect a demand from that country again in the coming months. British buyers will doubtless be the mainstay of the market again, and we think it quite likely that America will want wool.

THE ABSENCE OF JAPAN

The latest sales are proceeding with good competition from the home trade, the Continent and the local manufacturers, and prices are keeping up well, in spite of the fact that an important customer like Japan is not operating, and this will show how sound the statistical position of wool is. At a sale which was held in Brisbane on October 19th no less than 98 per cent. of the offerings was cleared. Japan has been buying heavily in South Africa, but, unless she has been able to change a large part of her machinery, I think we must expect her to come into the market soon for Australian wool.

Lately the market has been rising steadily, and excellent clearances have been made in the primary markets. The average prices for greasy wool realised at the sales held in Sydney last week were £21 8s. 6d. per bale and 16.9d. per lb., in Australian currency. You will realise that these are very much better returns.

At the London wool sales, which opened on the 17th instant, there was a very keen general demand, and prices show a substantial advance on September closing rates. Greasy merinos are 10 per cent. to 15 per cent. dearer, scoured merinos 10 per cent. dearer, with skirtings 20 per cent. up. Fine cross-breeds are 15 per cent. dearer, and medium and coarse cross-breeds, so far in small supply, are quoted 20 per cent. to 25 per cent. up. The quantities available for the present series amount to 100,500 bales, which should be easily absorbed.

The report was unanimously adopted.

PAHANG CONSOLIDATED COMPANY, LIMITED

DIVIDEND 40 PER CENT.

The thirtieth ordinary general meeting of The Pahang Consolidated Company, Limited, was held, on the 17th instant, at Winchester House, Old Broad Street, London, Mr Henry Frisby (chairman and managing director) presiding.

The Chairman, in the course of his speech, said: The output of tin ore for the year was 2,308 tons, compared with 1,651 tons for the previous year. The ore assayed 1.75 per cent., against 1.85 per cent., and we sold our tin at £142 per ton, as against £156 per ton last year.

The percentage of output which we were allowed under the Restriction Scheme was 61 per cent. of the quota, and I wish to draw your attention to this. When you have seen in the newspapers references to an allowed output of 90 per cent. of the quota, that applied only to the other signatories to the Restriction Scheme and not to Malaya. Malaya has always had 25 per cent. less than Bolivia and the Dutch East Indies, and will have 25 per cent. less now than Siam and the Belgian Congo. I cannot—and have never been able to—understand why that is. All I can hope is that it will not be long before that position is altered.

The mines' profit for the year was £183,578, which includes the Buffer Pool profit. We propose to transfer to reserve for development £10,000, and we propose to pay the six months' dividend on the preference shares, £3,500, 20 per cent. on the ordinary shares, making 40 per cent. for the year, which takes £75,000, and an extra 8 per cent. on the preference shares, to which they are entitled under the articles of association, leaving £24,706 to be carried forward. Out of the £183,000 profit which we made on the working of the mines we shall have paid you by to-morrow £165,000, and you may take it from me that it is only the strength of the financial position of the company which enables us to pay such a large amount away.

With regard to the developments, there is not very much this year that is spectacular in any way; in fact, it has been rather humdrum, but still very good. A rich lode in Willinks mine has produced 139,000 tons of ore, and we have crushed 131,000 tons, so that we have an increase of 8,000 tons in our reserves, which now total 688,000 tons—the largest amount the mines have ever had.

We have decided to reopen the Myah mine. I have a great belief that the Myah mine is going to prove a very profitable undertaking, and I know that Mr Baker is of that opinion also.

To-day I say that I think the terrors of restriction have passed or are passing away. The prosperity of the tin industry is going to be so great that restriction will vanish out of existence. My experience over many years has taught me that the price of tin is governed more or less by world trade. The demand for tin is increasing very rapidly, and we have it on probably the greatest authority in this country—the Chancellor of the Exchequer—that we are on the verge of a world trade boom, and if we have a trade boom we must have a tin boom. I think myself that the Tin Restriction Committee have been very unwise in allowing only 17,000 tons of tin to be available for the whole world, and that is why I maintain that in a very few months, instead of saying to us "You may output so much," they will be saying to us, "Get out all the tin you can to help us." I think under those circumstances we need have no fear that tin restriction is going to cripple us as it did before.

Your property has never been in better fettle than it is to-day: it has the largest reserves of ore that it has ever had, it has good and strong finance and a very able staff in the East looking after your interests.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

JOHORE RUBBER LANDS, LIMITED

SOUND FINANCIAL POSITION

The tenth ordinary general meeting of Johore Rubber Lands, Limited, was held, on the 19th instant, in London.

Mr H. M. Graham (the chairman) said that during the year they had harvested a crop of 483,500 lbs. of rubber, of which 428,857 lbs. were sold, realising the equivalent of approximately 6½d. per lb. landed London terms, which was better than the average spot price for the year. Compared with last year, the output represented a reduction of 85,143 lbs., due to restriction. Their working cost at 4.15d. per lb.—after taking into account the reduced crop harvested—must be considered satisfactory for South Johore.

The profit earned, after allowing for depreciation and other charges, had amounted to £2,331. They recommended a dividend for the year of 2½ per cent., less tax.

It might be that some shareholders would think that the directors should have recommended the payment of a larger dividend, but he was sure shareholders would agree that it would be bad policy—if not bad finance—to have done so, because by paying 2½ per cent. they would have to draw upon their carry-forward to the extent of £400.

Their financial position was sound. Cash in hand, war loan, debtors and rubber stocks totalled £16,521, and if from that they deducted the amount due to creditors, the net liquid position was £15,513, or only £700 less than the corresponding item in last year's balance sheet. That also, he felt, must be considered very satisfactory, having regard to the reduced crop harvested.

As regards the estate, the condition was satisfactory throughout, and, according to the last report received from their visiting agent, it was efficiently and economically managed.

As to the position of the company from the date of the balance sheet to September 30th last, the profit which they estimated had been earned for the past six months, after providing for depreciation, and London expenditure, amounted to £2,050, equivalent to 1.9 per cent. on the share capital, or at the rate of nearly 4 per cent. per annum. That was on an average selling price of approximately 7½d. per lb., so that with the recently enhanced price of the commodity the results for the remaining months of the year should be better still.

The report was unanimously adopted.

TREPÇA MINES, LIMITED

ENCOURAGING PROSPECTS

The ninth annual general meeting of Trepça Mines, Limited, was held, on the 18th instant, in London.

Mr A. Chester Beatty (the chairman), who presided, said: The profit and loss account for the year shows a net profit of £402,194. We recommend the payment of a final dividend of 10½d. per share, free of tax, making a total for the year of 1s. 3d. per share, free of tax. This final dividend, together with tax thereon, will absorb £256,369 and leave £32,035 to be carried forward. These figures again show a substantial improvement over the previous year.

The position as regards lead as I see it to-day is definitely better than it was last year. Unless there is some major political disturbance, the probability of which I am not qualified to judge, I think the prospects for lead are very good.

With regard to spelter, I think we may look forward with some confidence to the maintenance during the coming year of a fair price level.

Our sales of pyrites concentrates during the year amounted to just over 50,000 tons, and showed a substantial increase over the previous year. We can now deliver up to 150,000 tons of this commodity annually, and we look forward to a further increase in revenue from this source.

The outstanding feature of the development of the Stantrg Mine during the year has been the opening up of the 545 metre level, and results have been most satisfactory. During the current year we expect to open up a deeper level on the 485 metre horizon.

The ore reserves, as calculated at September 30, 1936, amounted to 3,300,000 tons, of an average value of 9.4 per cent. lead and 6.4 per cent. zinc. This shows an increase in tonnage, as compared with last year, of 293,000 tons.

Turning to the future, I must warn you that we must expect some further increase in costs. On the other hand, current prices of lead, zinc and silver are all considerably higher than the averages at which our last year's production was realised, and if these levels are maintained we can face the extra costs with equanimity, and look forward to a further improvement in our net earnings for the current year.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 14, 1936, amounted to £10,311,000, against ordinary expenditure of £8,123,000. After allowing for a decrease in Exchequer Balances of £477,441, the operations for the week, as shown below, decreased the gross National Debt by £2,665,000 to approximately £8,007 millions.†

GOLD MARKET

Messrs. Samuel Montagu and Company write on November 18, 1936:—The Bank of England gold reserve against notes amounted to £248,660,346 on November 11, showing no change as compared with the previous Wednesday. In the open market about £1,800,000 of bar gold was disposed of at the daily fixing. Conditions have been quiet, but demand has been more general, prices being fixed on occasions at slightly over dollar parity. The s.s. "Corfu," which sailed from Bombay on November 14th, carries gold to the value of about £278,000 consigned to London.

SILVER MARKET

Following the sudden upward movement which occurred last week conditions have been unsettled and prices have been subject to wide variations. The week under review opened with a fall of 1 1/2d., bringing quotations down to 20 1/2d. for both deliveries; speculative buyers were hesitating, and there was little demand to offset reselling by speculators and the Indian Bazaars. Subsequently, the market became quieter, but, on covering orders from China bears, who had sold at last week's high level, prices had recovered to 21 1/2d. by November 14th. After further fluctuations the price on November 18th was fixed at 21 1/2d.

The immediate outlook is uncertain, as operations at present are largely speculative; prices may continue to fluctuate, but with the tendency possibly towards a somewhat lower level.

Quotations for gold and silver are shown below:—

1936	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce .999 fine
			Cash	Two Months	
Nov. 12	142 6	11 11-08	20 1/2	20 1/2	Nov. 12 45 1/2
" 13	142 7 1/2	11 11-06	20 1/2	20 1/2	" 13 45 1/2

SUGAR.—After pronounced easiness at the end of last week, the New York market firmed up; quotations, however, are lower than a week ago. Prices in London have been rather irregular, but are also lower on the week. The spot price in New York on Tuesday was 3.65 cents per lb., as compared with 3.70 cents per lb. last week and 3.35 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at from 4s. 10d. to 4s. 10½d., against 4s. 11½d. to 4s. 11d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 32,284 tons

Nov. 12, "	12-08	12-51	14-95	11-93	10-12	11-97	13-40
Nov. 19, "	12-80	12-21	14-82	11-79	9-75	12-07	13-30

The quantities catalogued for the public auctions in Mincing Lane this week comprised 53,054 packages of Indian and 21,506 packages of Ceylon tea. Demand for the Indian grades was fairly good and prices showed little alteration. At Tuesday's Ceylon auctions, however, common sorts were barely steady, while light liquoring broken orange pekoes up to 1s. 3d. per lb. were irregular and rather easier. Good medium and fine teas sold well.

VEGETABLES.—Home-grown tomatoes are now finishing, but Canary Island are more prominent and are receiving attention, says *The Fruit-grower's* Covent Garden report. Cucumbers are very limited and are now firm at 8s. to 10s. a tray. Cabbage and savoy continue plentiful and cheap; sprouts have fallen in price a little, but good cauliflowers have been

doing better. Celery continues to sell well, but onions are cheaper and roots are only a moderate item. Meanwhile, the potato trade shows little alteration, although some Danish King Edward and Dutch white varieties have been on the market. At the Borough on Tuesday, best siltland King Edward were again quoted at from 8s. 6d. to 9s. 6d. per cwt.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—After a period of greater activity and rising prices quieter conditions now prevail. Crushers showed more interest in the market for Indian linseed at advancing prices and in prices. A fair trade is reported in the latter, up to £10 17s. 6d. per ton, to Hull, though less would now be accepted. Official reports of the progress of the growing plants in Argentina continue to be received and everything points to a big yield. Whether a reduction in the present price guaranteed to growers will come is still the secret of the Argentine Government. The India is expected to have an available surplus of 28,000 tons. Cotton seed done to Hull in black Egyptian, up to £7 15s. having been conceded for January-February and December-March to Hull.

Linseed oil has continued in fair demand by consumers, and there has been some rise in prices following the advance in seed. Raw oil ex Hull mill for November-December delivery is now quoted at £25 per ton, naked. Cotton oil is also firmer, and quotations have been advanced to £27 per ton for crude and £29 for refined ex Hull. Demand for oilcakes is improving.

NITRATE.—World sales of nitrogen rose from 1.8 million metric tons in the year ended June 30, 1935, to 2.4 million metric tons in the following

likely to forbear to prevent his opponents from receiving commodities which are at least as vital for the conduct of modern war as rifles, cannon or machine-guns? He may well be able to hold up British merchant ships within the three-mile limit if the British Navy is to be forbidden to work inside that line. The French Government seem more logical and less inhibited; for they have ordered their Navy to protect their shipping within Spanish waters.

We do not know how to interpret the silence that gapes behind Mr Edén's statement: "It is quite a different situation inside the three-mile limit"; and "nothing that I have said will affect that."

We suspect the Government have made up their mind that, whatever the cost, they will refuse to be drawn into war over Spain, as they refused to be drawn into war over Manchuria or Abyssinia. For indulgence over Manchuria and Abyssinia the bill already presented to us includes the stultification of the League of Nations and the crystallisation of something like a new Triple Alliance between Germany, Italy and Japan. In the Spanish case, the first item on the bill, if General Franco is carried to victory on the wings of his backers, will be the loss of our British naval command of the Mediterranean. Without attempting to say whether peace is worth such a price, we must surely all agree that the price is very high. It must inevitably lead everyone to ask: What are the objects for which the Government is still prepared to fight in the last resort? That, too, was the subject of one of Mr Eden's silences last Friday.

On that occasion, it is true, the Foreign Secretary gave us two pieces of information. British arms, he told us, may, and if the occasion arose would, be used in the defence of France and Belgium against unprovoked aggression in accordance with our obligations. They may, and if a European settlement can be reached they would, be used in defence of Germany were she the victim of unprovoked aggression by any of the other signatories of such a settlement. But, having said these positive things, Mr Eden went on to say that our treaties with Iraq and Egypt were our only other obligations. Beyond this line, he plunged into a silence, covered by another "may" without another "would." His words in this crucial passage were:—

In addition, our armaments may be used in bringing help to a victim of aggression in any case where, in our judgment, it would be proper under the provisions of the Covenant to do so. I use the word "may" deliberately, since in such an instance there is no automatic obligation to take military action. It is, moreover, right that this should be so; for nations cannot be expected to incur automatic military obligations save for areas where their vital interests are concerned.

This silence "may" leave the Powers of the new Triple Alliance in the dark whether Great Britain will or will not go to war with them if they attack any non-British country in the world, with the exception of two in Europe and another two in Asia. But Mr Eden's formula also gives any prospective aggressors a shrewd hint of the strategy they had better pursue if they want to master the British Empire without ever having to fight for the prize. Germany, for example, must not attack France or Belgium. But she now has notice that she will have a sporting chance of immunity from British interference if she adopts the plan of conquering France and Great Britain in Bohemia and in the Ukraine. The cue Mr Eden has given to Germany is to make herself mistress of all the resources of Central and Eastern Europe and then convert these into air-power in Germany at a few minutes' flight from the French frontier and the English coast. His hint to Japan is to keep her hands off Hongkong and Singapore until she has taken the Dutch East Indies. His silent advice to Italy is to wrest the mastery of the Mediterranean out of British hands by establishing herself, not in Malta or Gibraltar, but in the Balearic Islands and Spain and Spanish Morocco.

Let us face facts. The British Empire can be most effectively conquered on foreign ground. Its conquerors have no need to take a yard of British territory to place themselves in a position to hold the British Empire at their mercy. Mr Eden's silence on this point is not golden.

RESTRAINT OF TRADE

THE impending signature, now announced, of the new Trade Agreement between the United Kingdom and Argentina comes at a most opportune moment to direct public attention to the urgent question of British commercial policy. The negotiations for the new Agreement have been long and arduous. The old Agreement was extended by the consent of both parties for a fortnight in the hope that the new instrument would be ready; but even this period of grace ran out before the last details were arranged, and for a few days the only official instrument governing Anglo-Argentine trade was the Treaty of Amity and Commerce signed by Canning in 1825.

The text of the new Agreement will not be published until after signature, but it will probably be found that the terms of the old Agreement are substantially continued, subject to certain concessions to Great Britain (such, for example, as the formal acceptance of an import duty on Argentine meat coming into the British market). Mr Runciman drove a hard bargain in 1933; but the indications are that he and his colleagues have driven an even harder bargain in 1936.

The signature of the Agreement is only the last of a series of events in recent weeks which has underlined the urgent necessity for a complete overhaul of our policy towards foreign trade, imports and exports alike. There is, first of all, a growing anxiety lest the concentration of certain industries upon the home market, and in particular upon the market for munitions of war, should lead them to neglect the export trade. This anxiety was forcibly expressed at the recent annual dinner of the London Iron and Steel Exchange, both by the President of the Board of Trade and also by the Chairman of the Exchange. There are other industries, besides iron and steel, to which the same warning applies. Exports of British motor cars this year, for example, though maintained at a high level, show almost no improvement on a year ago.

Another reminder, from an entirely different direction, of the urgent need to foster exports, has come from the renewed prominence which is being given to the plight of the Depressed Areas, and from the growing realisation that neither the outward transfer of labour nor the inward transfer of industry is a quick or easy solution. Moreover, Lancashire M.P.s have been driving home the fact that, if the coal areas are in the worst plight, other export industries are still almost equally depressed.

A third aspect of the same problem arises out of the growing difficulty, in many industries, of securing prompt deliveries from British suppliers. A rather unnecessary fuss has been made over the action of a British air-line, subsidised by the Government, in ordering aeroplanes from America owing to the impossibility of getting delivery of British models. But are we really to accept the rule that a British firm or individual should put up with almost any delay or inconvenience rather than buy foreign goods?

One more reason for the growing attention to foreign trade is provided by the rising tempo of preparation for war. It is beginning to be realised that in the last war we were brought closer to defeat on the commercial front than on the battlefields of Flanders. From being a method of economic aggression, foreign trade is slowly becoming a means of military defence.

It might be thought that trade between Britain and Argentina would provide a model for the world. It would be very difficult to find two nations between whom trade ought to flow more freely. They are almost exactly complementary in their economic structure; each supplies precisely what the other needs. We are Argentina's largest supplier of industrial products and the largest purchaser of her produce. Argentina is our largest source of food-stuffs and one of the largest markets for our goods. This natural commercial affinity has been strengthened by the investment of £500-£600 millions of British capital in Argentina and in Anglo-Argentine trade. Argentine meat comes from British-bred cattle on British-financed estancias. It is carried to port on British-owned railways, chilled by British frigoríficos, transported on British ships and financed by British banks. At every stage of its movement it stimulates exports, visible and invisible, from Great

Britain. And finally, when it is sold, almost every penny of the proceeds is directly and ascertainably devoted to the purchase of British goods or the payment of debts in England. What is more, Argentina is not only our largest supplier of foodstuffs but one of the nearest. We have it on Mr Lloyd George's authority that "the Allies won the war, thanks, in great part, to Argentine wheat and meat."

These facts are not mentioned in praise of Argentina, but merely to establish the point that here, if anywhere, the fostering of trade should be easy. But what does the British Government do? First of all it enunciates the slogan "the British farmer first, the Dominions second, and the foreigner last." And even when in due course it condescends to trade with foreigners, it drives almost humiliatingly sharp bargains with our best customers. It insists on a narrow bilateralism and discourages that multi-lateral trade which has been the foundation of prosperity for British export industries, British shipping and the City of London. Rather than encourage trade with Argentina, the Government has endeavoured not merely to protect the existence but to foster the expansion of the domestic livestock industry. A policy of this sort, if it is conducted at the expense of imports of meat, is deplorable alike in peace and war. In peace it involves the British consumer or taxpayer in heavy expense to make the poor man's meat dearer, while directly penalising the depressed export industries. In war, it imposes on British shipping the task of importing animal feeding-stuffs in bulk far greater than that of the displaced meat.

Constant repetition of these hard facts is essential. In commercial policy, as in the political field, those who insist most selfishly on observing British interests alone are precisely those who are betraying all our most vital interests. Nine-tenths of the current talk in political circles on trade affairs assumes, almost unconsciously, that the British Empire can live for and by itself. But the actual facts of the trade of the Empire are startlingly different. According to the annual "Statistical Abstract of the British Empire," which has been published this week, no less than 69.6 per cent. of the trade of all British countries last year was with non-British countries. In the trade of the British Empire, foreign trade outweighs purely British trade by more than two to one. If in order to safeguard the 30 per cent. we throttle the 70 per cent., are we not in sober reality dropping the bone for the shadow?

The policy we have pursued since 1932 is leading us to a blank wall. If exports—British exports—are to revive, the policy of the British Government must be directed towards an increase of world trade in general. The limits of purely bilateral agreements on present lines have almost been reached. The section of trade which is still missing is largely triangular or quadrilateral in character. Before the depression, for example, the primary producing nations used to obtain a large part of the funds they spent in Great Britain by exporting their raw materials to Europe, especially to Germany, the third side of the triangle being provided by exports from the Continent to

Great Britain. The British tariff now prevents that trade and keeps the British export industries in idleness.

Conditions have never been so favourable as they are to-day for a forward movement. At home the progress of the boom has turned one trade after another into a seller's market, where it is the consumer rather than the producer who needs protecting. Abroad, the currency agreement of two months ago has provided both the opportunity for an advance and the expectation that a lead will be given by the three great financial Powers. The United States and France have given their lead. The world is still waiting for the British contribution.

BRITISH MONETARY POLICY

A SYMPOSIUM

In view of the recent devaluation of the gold bloc currencies, and of the continued expansion of industrial activity in this country, we have invited a number of economists to state what monetary policy ought, in their opinion, to be pursued by Great Britain in the immediate future. We have asked them to assume (1) that Great Britain is in or near the boom stage of the trade cycle; and (2) that major disequilibria between different national currency values have been removed. In our issue of November 14 (page 297) we published contributions from Mr H. D. Henderson, Professor Lionel Robbins and Sir Arthur Salter; the following are from Professor T. E. Gregory and Sir Henry Strakosch:—

From Professor T. E. Gregory

I do not think that any drastic change in internal monetary policy is called for at the present time, because I do not think that the major elements in our economic situation are governed by the monetary factor. The position of the Depressed Areas is governed by our fiscal policy and the situation of world affairs; the housing boom cannot last indefinitely, whatever monetary policy we pursue; dearer money would not stop re-armament complicating an already complicated position; and, in general, the ratio of industrial advances to deposits is still very low.

Where I think our monetary policy in the recent past has been at fault is in the encouragement of the idea that the responsibility for cheap money lies with Government. The moral authority of the Central Bank has been seriously undermined, and the public has been encouraged to think that dear money can never happen again. The psychological consequences of a rise in Bank rate now would in all probability be out of all proportion to any actual rise; this makes it more difficult to act if action is called for later. We may have to defend the external rate of exchange, and to deal with withdrawals of foreign funds; and I do not think that we ought to abandon Bank rate as an instrument in connection with the external value of our currency.

unless we are certain of the efficacy of alternative methods or unless we are willing to abandon all the benefits resulting from the recent tripartite agreement.

For my part, I am not prepared to believe that the internal boom can go on for ever, and we ought now, while the going is still good, to make every effort we can to extend international trade. If it is thought that we shall always let sterling fall, we cannot hope to avoid further difficulties in France and elsewhere in Europe, and we shall encourage the U.S.A. to follow our example—a vista of endless complications is thus opened up. If we can relieve the pressure on the Distressed Areas by stimulating trade, we make the task of Government immediately and prospectively less difficult at home—for the next depression, whenever and however it comes, will undoubtedly mean an irresistible demand for public works on a large scale.

I suggest (1) that the market be not nursed by any open-market purchases; (2) that the public be warned that cheap money may not last for ever, so as to mitigate the psychological trouble involved; (3) that we follow up this tripartite agreement by effective trade negotiations; (4) that we remove all obstacles to the resumption of international lending; (5) that we announce our determination to defend the existing parities and our willingness not to alter the parity at any time without the consent of the co-signatories of the Currency Pact of September 26th.

From Sir Henry Strakosch

What are the circumstances in which we are considering monetary policy?

The general level of commodity prices has recently risen rather sharply, and is now some 22 per cent. above that of September, 1931. Prices of manufactured goods are at the 1930 level, and only about 5 per cent. below the peak of 1929. The productive capacity of industry is apparently fully employed at profitable prices. A further rise of prices is not necessary, therefore, to stimulate production; it would do no good to our domestic trade, and might prove damaging to our competitive power abroad; for it might well entail a more than corresponding rise in the cost of production. Worse than that, it would probably raise the general level of all values which could sooner or later be used as a basis for new indebtedness, and thus tend once more to make our whole economy vulnerable.

Credit expansion is somewhat in excess of the rate at which production has increased, but, in view of the rising tendency of production, this is not a disturbing factor. International trade, though expanding, is still sadly constricted. Generally, the present activity is not so much the result of a speculative over-expansion, but, to a large extent, due to our re-armament programme, which has to be pursued vigorously.

What, in these circumstances, should be our policy?

There is no longer any need for money rates to be kept artificially low; nor, on the other hand, does the situation call for a deliberate policy of restricting credit. When the expansion of industrial equipment for private account—as distinct from armament purposes—shows definite signs of outrunning normal progress, and/or speculation on the Stock Exchange attains unsound proportions, then will be the time to apply restrictive measures. But much could and should be done to avoid such measures: by the banks refusing to grant loans which do not stand the most rigid test of serving essential production and not speculation, and by the Stock Exchange pursuing meticulously its now well-established policy of refusing permission to deal in issues which do not unmistakably bear the mark of soundness. Bank rate is a drastic and sometimes positively destructive weapon, and should be applied only when other specific measures have failed.

A reduction of import duties and an abatement of measures tending to restrict foreign competition in industry would seem desirable to curb a further rise of prices. Advantage should be taken of these measures to obtain tariff reductions on British goods abroad. While our re-armament programme absorbs an increasing proportion of our productive capacity, influence should be brought to bear on public bodies to postpone public works which have no bearing on defence.

The restoration of international trade must be fostered, all the more because, once the armaments programme is completed, our great productive capacity will have to look for markets abroad. To this end, every country, including our own, has to sacrifice some freedom of action in economic policy for exchange stability. The recently concluded agreement between the main creditor nations provides a means to test the possibility of collaboration to this end.

Expenditure on armaments should, as far as possible, be provided out of taxation, but the burden of that taxation must not be so great as to interfere seriously with economic progress. Expenditure in excess of that limit should be raised by way of loans, redeemable over a period of some ten years.

Our policy must clearly have regard not merely to the specific circumstances of the United Kingdom, but of the Empire as a whole. I see no reason to think that the policy outlined above conflicts with these requirements.

LANCASHIRE'S FUTURE—II

ALTHOUGH the value of world trade in cotton textiles has been severely reduced since 1929, Lancashire has fully maintained her percentage share of available business recently. Japan's increasing gains are no longer being made at her expense. That was the conclusion of the first article which appeared in last week's *Economist*. We now propose to discuss the nature and probable effect of recent changes in the internal economy of Lancashire's cotton textile industry.

In view of the popular belief that depression is still keenest in the coarser sections of the industry, and least in evidence in the finer Egyptian side, it may come as a surprise to many readers to learn that between 1928 and 1934 the output of coarse yarn declined by only 4 per cent., against a fall of over 40 per cent. in medium and fine yarns. The following figures are extracted from the returns of the Censuses of Production of 1924 and 1930, and the Import Duties Inquiry of 1933 and 1934:—

SINGLE YARNS OUTPUT ('000 lbs.)				
Counts spun:	1924	1930	1933	1934
Up to 40's	1,021,879	821,600	949,026	981,866
Over 40's and up to 80's...	313,707	185,164	190,852	178,065
Over 80's and up to 120's..	55,874	36,835	36,616	36,790
Over 120's	3,623	3,504	3,129	4,403
Total	1,395,083	1,047,103	1,179,623	1,201,124

These figures reflect the tendency (prompted by the search for cheapness) to use coarser yarns in fabrics for which fine yarns were formerly used, or, alternatively, to substitute rayon for fine cotton. To some extent, also, they reflect a tendency among some Egyptian spinners to go over to coarser counts.

The contrast between the American and Egyptian sections is not confined to total output. The so-called "spinning margin" (i.e. the gross revenue from which spinners meet their costs) has fallen less for American than for Egyptian yarns since 1927. If the comparison be carried back to 1913, it is still favourable to the American section. In making the necessary calculation, allowance must be made for the wastage of raw cotton in the process of yarn making and for recoveries from saleable cotton waste. Thus, for the trade as a whole, and not necessarily for sections, it may be presumed that 112 lbs. of raw cotton are necessary to produce 100 lbs. of yarn. This was the basis used by the Balfour Committee in arriving at the annual averages for 1913 and 1927, which are contrasted in the following table with the approximate margins for 1936 (before the recent increase):—

SPINNING MARGIN (Pence per lb.)			
	1913 Average	1927 Average	1936 (approx.)
Egyptian	6.55	10.09	6.3*
American	3.00	5.09	4.0*

* To be increased under recent agreement.

These figures are only approximate estimates, but they suggest that the greater hardships of the American spinning section during the earlier years of the long-drawn-out depression have induced considerable progress towards internal adjustment. The Egyptian section was subjected to less pressure in the earlier post-war years. Its greater degree of integration and the substantial cash reserves held by many companies tended to delay the reduction of capacity which was necessary to meet the new conditions.

Returns of profits, so far as they are available in an industry which remains largely in private hands, suggest a similar conclusion. Annual summaries are published by "Tattersall's Cotton Trade Review." The figures are not strictly comparable from year to year, as the number of companies included varies considerably. They refer almost entirely to spinning companies, and omit the large combines (for which separate figures are given). They show diminishing losses in 1932-34, and a small profit in 1935.

We may summarise the conclusions so far suggested by our analysis in the statement that Lancashire, under the stress of acute competition, has reduced her prices to a level which may not be fully competitive with Japan in the qualities and markets in which Japan specialises, but is at least sufficiently low to preserve Britain's share of world trade. Internally, appreciable progress is being made, at long last, with the corresponding process of cost reduction—at least in the spinning section of the industry, which, until recently, was the most distressed section of all. Hitherto, one of the obstacles in the way of vigorous cost reduction has been the traditional method of meeting hard times by "spreading the work," i.e. by adopting short time in the spinning section and reducing the number of looms per operative in the weaving section. Lancashire could possibly afford such measures so long as she dominated the world's cotton trade, but to-day there is no room for them.

It is possible, therefore, that revival in Lancashire may be nearer than is generally supposed. Experience in other industries (notably steel) has shown that little progress can usually be made with large-scale measures of rationalisation while profits are lacking. It is only when some basis of positive earning-power has been re-established that management are able to produce satisfactory reconstruction schemes and to ask investors for new capital. In recent months, Lancashire's internal progress towards cost reduction has been supplemented by the mechanism of the Spindles Act of 1936, whose objective is the elimination of redundant plant. The cost of elimination is to be financed by a levy on the industry, but it is hoped it will be more than offset by the saving effected by full-time working of plant. If Lancashire operates the Spindles Act in accordance with this intention, and not as a means towards increasing prices, she may find it a useful addition to the measures to which she has already groped her own way.

If the Spindles Act (and the parallel measures already in train for the other sections of the industry) fulfil the hopes of their promoters, the second stage in rationalisation will involve the installation of modern plant. Only two years ago Sir W. Preston, the chairman of Platt Brothers, the well-known textile machinery manufacturers, claimed that whereas in the post-war period other countries had expended some £95 millions on new plant, Lancashire had spent only £5 millions. Although the figures have been challenged, it is generally admitted that Lancashire's plant is far less modern than that of her chief competitors. As long as ten years ago evidence given before the Balfour Committee showed that a good deal of plant was already out of date, and that the industry was postponing replacement pending recovery from what was then believed to be a temporary depression. The average age of a good deal of Lancashire's equipment has subsequently risen by nearly as many years as have elapsed. The figures of the Census of Production showed that between 1924 and 1930 electrification progressed more slowly in the Lancashire cotton industry than in almost any other trade of the country.

To-day, Lancashire may have better hope of revival than at any time in the last twelve years. To say this is not

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

£5,500,000

Total Assurances in force at November 15th, 1935, in Great Britain and Ireland

£69,500,000

H. O. LEACH (General Manager), 2, 3 & 4 COCKSPUR ST., LONDON, S.W.1

to suggest that any recovery is in prospect comparable with that, e.g. of the steel industry. The latter can still count on an expanding market within its tariff wall. It has recently benefited from the normal cyclical rise in capital construction; and it is enjoying the adventitious advantage of the re-equipment tide which is now flowing so strongly in British industry and British armaments. Cotton can look for few of these benefits. What it may hope for is rather the arrest and possibly the reversal of the recent decline in its markets—though much depends on the success of the Government in effecting trade agreements to overcome the hardship imposed by trade restrictions in many countries. Adjustments to the new situation may effect such a reduction in costs as will allow moderate profits to be earned by the more efficient firms. But of the establishment of boom conditions, comparable with those in steel and engineering, there is no likelihood whatever.

WHITHER JAPAN?

Less than a month ago Mr Eden assured us that there was a distinct easing of the tension in the Far East. His words had scarcely reached Japan before fighting was renewed in North China. The Army Budget was raised to 1,000 million yen a year for a six-year period, compared with 175 million yen in 1931. And an anti-Communist treaty was signed with Germany. What ground has any Western observer for taking a hopeful view of politics in the Pacific?

Optimism might be justified if events were determined solely by economic considerations; for it is evident that Japan will prosper best if there is peace. True, it is commonly argued by Japanese expansionists that since Japan has a high density of population, and scanty natural resources, she must expand either by trade, by emigration or by war; and since other countries bar trade and emigration, war is the only solution. The argument scarcely requires investigation. If rising barriers obstruct the rapid rise of Japan's trade, this is in part due to the determination of the Japanese to dump their goods abroad at any cost in order to secure imports of raw materials and manufactures necessary for war. As prices of commodities are cut, as subsidies upon Japanese shipping are increased, the terms of trade are rapidly becoming worse. Japan has to export an ever greater volume to maintain her imports.

In short, Japan's economic mechanism is no longer a means of raising her standard of living. Like the German mechanism, its product is guns, not butter. Yet this does not mean that the answer to trade barriers is a war of conquest; but rather a recognition of the fact that the handicapped of a poor material birthright can more easily be lifted by

economic co-operation and by a change in the oppressive economic system now in operation than by war or war preparation. Japanese agriculture, for example, needs a lower debt burden and a supply of new capital; yet Japan eagerly increases her debt and diverts capital to armament.

Nevertheless, it would be folly to base our anticipation of events upon the pressure of economic arguments. Japan at least will not be deterred by logic, and in any case she now advances as alternative justification for her military adventures that she must defend herself against Communism at home by crushing Communism in China. Again, it is fairly clear that one underlying motive for her present agreement with Germany is not fear of an attack from Communist Russia but fear of a political ferment likely to be spontaneously generated by internal conditions in Japan. Month by month ever more stringent measures are being applied in Japan to suppress internal discontent, to destroy such vestiges of responsible parliamentary government as remain, and to control and eliminate even thoughts that might be dangerous for the existing rulers. No one can tell when or how this policy of sitting on the safety-valve will end. But repression at home and imperialist adventure abroad are expedients for diverting the attention of a people—not for enriching it.

If political tension in the Far East seems to be relaxed, it is due not to any change in the policy of Japan or even to economic prosperity, but to a change in the forces opposing her. For the moment, the crisis in the world's affairs has moved elsewhere; but the trend of events is by no means to leave an open field in the long run to the jingoes of Japan. It is apparent, for example, that the Fabian tactics of the Chinese are at last bearing fruit. China is once more a nation. She has a national spirit, a rapidly recovering economy and growing military strength. It is a sign of the change that, when Mr. Kawagoe came recently to Nanking to present his demands, he was met not by further concessions, but by alternative demands. The renaissance of China has been encouraged by the visit of Sir Frederick Leith-Ross and by the extension of Treasury guarantees to trade with China.

The Japanese profess to fear that China is buttressing her own growing strength by an alliance with Russia; and the treaty with Germany may be defended by Japan's apologists as a strategic counter-move. For however strong it may appear on the surface, Japan's strategic position is extremely difficult. Japan has lost the opportunity to attack Russia single-handed. China grows daily stronger. The Japanese navy has never met a first-class opponent, and has started a naval construction race with Powers financially superior to itself. The Japanese soldier has

never been put to the test of a long-drawn-out war.

Still more serious for Japan, if she chooses war, is her almost complete reliance upon the outside world for essential military materials. Roughly two-thirds of her imports come from the United States, the British Empire, and the Dutch Empire—which perhaps explains the reported division of the Dutch East Indies between Germany and Japan as zones of interest. To the same countries go nearly 60 per cent. of her exports. The British Empire alone takes 28 per cent. of her exports and provides 32 per cent. of her imports. If these sources and markets were closed to her, Japan would be defeated. If we draw up a list of military and civilian necessities of war, we find that Japan holds none of the trumps.

Japan has had great success in fighting China. But this must be attributed not in the main to her inherent strength, but rather to the acquiescence of Great Britain and the Western Powers. Yet capitulation to force is no basis for a lasting peace.

Our Government still affirms its belief in the system of collective security, of combination of overwhelming forces against any potential aggressor. What is good for Europe is good for the Far East. Britain should make it quite clear that the full weight of financial support will be given to China; that Japanese aggression, if carried further, will meet with economic penalties. In such action, if we offered it with determination, America would co-operate, provided our sincerity was evident, and the principle of action was not to exploit China, but to co-operate in her free development. Determination to stand by such principles need not be antagonistic to the long-term interests of Japan. There are a great many Japanese who would be eager to co-operate on genuinely free lines in the development of the Far East and in improving their own standard of living. The trouble is that, thanks to our connivance in the past, the military seem to have all the victories. Before liberalism can grow in Japan, militarism must be discredited. In the early days of the Manchurian incident, Mr Stimson opposed a forced inquiry by the League because it would unite the Japanese against the then more or less Liberal Government. His principle was to rely on the Liberals of Japan to cure Japan's aggression. This principle still holds; but, as he soon recognised, it is not advanced by soft words and submission to threats.

The genuineness of our Government's devotion to the principle of collective security has been called in question by its critics. They have not ventured to doubt its desire to maintain the British Empire. Yet, for reasons which we expounded last week, that, too, is imperilled by a policy of retreat before Japan.

NOTES OF THE WEEK

Uniforms and Banners.—The Committee stage of the Public Order Bill was reached on Monday, and various small changes were made in the Bill by agreement between the parties. An amendment was first moved by a Conservative member designed to omit the words prohibiting the wearing of uniforms "in any public place." This would have confined the prohibition to the wearing of uniforms at actual public meetings. Both Sir John Simon, for the Government, and Mr Pritt, for the Labour Party, disagreed with this amendment, and it was withdrawn. Two other amendments by Conservative members, one seeking to insert the words "military or quasi-military" as descriptive of uniforms, and another extending the prohibition to flags or banners, also failed to win support. An amendment moved by Mr Pritt, however, to omit the provision allowing the wearing of uniform "on any ceremonial, anniversary or other occasion" not likely to cause disorder, led to a compromise on the phrase "ceremonial, anniversary or other special occasion." A possible loophole of escape from the uniform ban was thus closed without, it was hoped, prohibiting the inoffensive wearing of uniforms on justifiable occasions. Sir John Simon then proposed an amendment—based on criticisms made in the

previous debate—providing that it should be a good defence for a person charged with the management of a quasi-military organisation that he neither consented to nor connived at the organisation of such bodies. It was generally agreed that the clause in its original form might prove unjust; and after Sir John Simon had assured Mr Herbert Morrison that hypocritical documents would not be a sufficient defence, the amendment was accepted. A further amendment supported by Conservative members affecting the rights of stewards, after being opposed by both the Government and the Labour Party, was withdrawn. Finally, various amendments affecting the use of flags and banners were discussed, and it was agreed between the parties to raise various disputed points at a later stage. The debate as a whole fulfilled the promise of earlier discussions that general agreement would be achieved both on the principle and many of the details of the Bill.

The Milk Report.—The Report of the Reorganisation Commission for Great Britain is issued as we go to Press. This Commission was appointed in February of last year

to review the progress of the Milk Marketing Boards and to suggest the lines of policy for the future. The Chairman of the Commission was Mr A. E. Cutforth, and it included among its members Professor A. W. Ashby and Sir John Orr. The Commission finds that the schemes now in existence have brought undoubted benefits to the producers, distributors and manufacturers of milk, but that "the cost of all these advantages has been met by consumers." Accordingly, they recommend several drastic changes both in the structure and in the policies of the marketing schemes. In the first place, they recommend the creation of a permanent Milk Commission of five members, all appointed by the Government. This Commission should fix prices and have the disbursement of any Government subsidies given to the industry, as well as the more general duties of "co-ordination" and "long-range planning." The Milk Marketing Boards (one for England and Wales, one for Scotland) would be under the obligation of carrying out the policies laid down by the Commission. Secondly, the Reorganisation Commission recommends that the price of liquid milk should no longer be burdened with the loss on selling milk for manufacture at prices below its cost of production. The liquid market can fairly be debited with the loss on sufficient "surplus" to provide it with an adequate reserve of supply (defined as 20 per cent. of the liquid supply), but the loss on the remainder of the "surplus" should, it is suggested, be borne by the State. This proposal would lower the retail price of milk by about 1.2d. per gallon, at a cost to the State of about £5 millions per annum. In addition, it is recommended that further experiments should be made, at State expense, in the provision of milk at "assisted" prices to those at present unable to buy enough. The producer is no longer to receive his share in the actual sum realised by the sale of milk, but he is to be guaranteed a price, fixed annually, at a level "estimated to be sufficient to bring into the market the quantities of milk required." Some of the recommendations in the Report would seem to be of doubtful practicability, others are of dubious wisdom. But on the whole it is, as Sir John Orr states in an Addendum, "an important step in the right direction."

The Iron and Steel Duties.—Strong criticism of the peculiar favours handed out by the Government to the iron and steel industry was expressed in the House of Commons on Tuesday. The debate was actually concerned with changes in the import duties designed to carry out the recent cartel agreement. One resolution raised the rates of duty on a number of iron and steel products from the rates in force in 1935, and another reduced the duty on the same goods to 20 per cent. if imported into this country accompanied by a certificate of origin and "under certain provisions." The curious combination of protection and monopoly accorded to the iron and steel industry was attacked by both Liberal and Labour members, who alleged that supplies were being limited, prices forced up and consumers exploited simply in the interests of monopoly profits. Mr Holdsworth (Liberal) asked whether it was true that imports of steel strip were entirely controlled by one firm and that Continental steel strip was not available to independent users. Dr. Burgin (Parliamentary Secretary to the Board of Trade), in reply, said that "he knew of no outstanding complaints that had not been satisfied," and that the "iron and steel industry was in a much healthier condition than at any time within living memory." These remarks accord strangely with the following statement on the industry, made by Mr Malcolm Stewart in his recent report on the Special Areas:—

The establishment of more economic manufacturing conditions in the future has been sacrificed to procure profits made available by the present good demand influenced by the granting of a materially increased tariff on imported steel and by the Defence Programme . . . The advantage accruing from tariffs should be utilised to promote efficiency and ability to meet foreign competition and not merely as a temporary shelter for making increased profits.

In short, the question whether the iron and steel tariff, on its present lines, is wholly in the national interest is becoming increasingly urgent. In the present shortage of

steel, the tariff is not necessary to maintain employment, and it undoubtedly tends to raise prices and costs at a time when the greatest effort should be made to keep them down. The tariff also inclines producers to neglect the export trade; and is consequently likely to leave the industry worse rather than better off when the present boom has come to an end.

Mr Churchill and Peace.—Mr Churchill's campaign in favour of collective security has caused great interest, though different interpretations are being put upon it. Collective defence, without collective arms limitation, seems to be Mr Churchill's policy. In his speech to the New Commonwealth Society on Wednesday he argued that collective security unsupported by arms was a "disastrous means of deceiving well-meaning pacific communities into putting themselves at the mercy of predatory Governments."

All true members of the League . . . must prove quite plainly that they were enough when added together to restrain, overawe, and in the last resort compel the aggressor, whether from within the League or outside it.

Mr Churchill specially emphasised the terrible consequences of the invention of flying. "It was the 'conjunction of the new air power with the rise of dictatorship that had brought all countries into a peril unknown in barbarous times.'" He was accordingly prepared to contemplate, when practicable, "a plan for an international air force to carry out the decisions of a European, and, if possible, a world council." Undoubtedly, Mr Churchill's campaign will win him much sympathy from centre opinion in this country, and that sympathy would be more widespread if Mr Churchill were to advocate collective arms limitation, at least as an ideal, in addition to collective defence. Doubtless, limitation is, at the moment, impracticable. But if "collective defence" is to be regarded as the means to a real and permanent peace system, and not a mere rallying cry for another arms race, the ultimate objective must never be lost to sight.

The German-Japanese Pact.—On Wednesday the terms of the German-Japanese Pact were published. (It was the subject of an article in last week's *Economist*.) The German Ambassador in London, Herr von Ribbentrop, flew to Berlin on Tuesday to sign it. This was a surprise. The Foreign Minister, Baron von Neurath, might have been expected to perform the function. Probably Herr Hitler hoped to allay British dislike of the Pact by making the German Ambassador in London sponsor it. If so, he has been by now crushingly disillusioned. The Convention contains three Articles and a Supplementary Protocol. Its aim is co-operation between the two Great Powers "in the defence against Communist subversive activities" of the Comintern. Article I provides for exchange of information on "the activities" (*sc. anywhere?*) of the Comintern, for consultation on "preventive measures" and "close collaboration" in their execution. Article II invites other States to join the Convention for these purposes. Article III fixes the duration of the instrument at five years and provides for renewal. The Protocol has three parts. The first states that "the competent authorities" of the two Powers will closely collaborate in inquiries and defensive measures against the Comintern. The second has aroused fears in many countries:—

The competent authorities . . . will within the framework of the existing laws take severe measures against those who at home or abroad are engaged directly or indirectly in the service of the Communist International or promote its subversive activities.

BRITANNIC ASSURANCE COMPANY LIMITED

Chief Office: BROAD STREET CORNER, BIRMINGHAM

"Severe measures" implies military activity. Persons "at home or abroad" can easily be accused, "within the framework of the existing laws" of Germany or Japan, of being engaged "indirectly" in Comintern service, or of promoting its activities. It is clear that "existing laws" does not refer to international law, for which both Powers have shown scant respect. The Russian Ambassador in Berlin was not invited among the Diplomatic Corps to hear the official explanation of the Pact. It is insistently reported that Czechoslovakia is to be soon treated by Germany as another Spain, disintegrating under Bolshevik influences. Germany might thus be conveniently "forced" to intervene militarily. She could then point to the terms of this German-Japanese Pact as a previous declaration of her foreign policy and of the rights it gives her "at home and abroad." The definition of what constitutes "Comintern activities" is a convenient right. For the rest, as we surmised last week, we have not been told anything about military or trade agreements appended to the Pact. It is credibly reported, however, that Japan is to improve her armaments, air force and aircraft factories, etc., with German equipment and advisers, in exchange for raw materials. Japan depends on imports of these herself, and can therefore give Germany only soya bean, linseed, etc., of which Germany needs much greater imports for margarine and Diesel aircraft and tank engines. Thus, the policy of "guns instead of butter" is taken a step further under cover of this Japanese-German Pact. It may, however, well evoke peculiar misgivings in honest Aryan German hearts.

* * *

The Russian Treason Trial.—The same old trial witnessed so many times over was suddenly re-staged in Russia last week. But the attitude into which we are goaded by the humbug of the procedure at the trial does not suit the rest of the story. Unhappily the sentences also followed common form. All nine prisoners were condemned to be shot, and one of the nine was a German subject, so that the verdict affects relations between the Soviet Union and Germany. It has added much fuel to the flames of animosity between these two Powers. The German engineer, Herr Stickling, made the confessions corresponding to those extracted a few months ago from Zinoviev, and a few years ago from one of the British engineers who were victims of another trial. Whatever the guilt or innocence of the accused, this kind of confession can throw no light upon the question in the judgment of the world. For it is simply too good—or, should we say, too bad?—to be convincing. One of the Russian prisoners confessed to having flooded a mine with gas and asphyxiated the miners as his contribution to the execution of a foreign Fascist plot against the regime in Russia. Herr Stickling confessed to having taken up employment in Russia for the purpose of wrecking the Soviet regime under instructions from the authorities of the Third Reich. And the finding of the court was that the plot was hatched under the joint auspices of the German Secret Police and Trotsky. Hitherto, the Soviet Government had put to death none but Soviet citizens on charges like these; for the British engineers received, as their punishment for being found guilty, the reward of being deported from Russia into liberty. This time, however, while absolving Herr Stickling from paying the death penalty, the Russians have incarcerated him for ten years. Even this clemency will aggravate Russo-German relations. Moscow and Berlin appear, in fact, to be manoeuvring against each other in a contest in provocation. In this, either party is trying to push the other into losing its temper and taking some action that will have the effect of putting it in the wrong in the eyes of the democratic World—where there is still a public opinion. One such move was made on the German side at the last Nazi *Parteitag* at Nuremberg. This Novosibirsk trial is the Russian retort. We appreciate the value both the Nazis and the Communists appear to attach to our support. But we would prefer to be wooed by gestures which were not acts of incendiarism.

General Franco's Perplexities.—This week's stalemate in the battle for Madrid can be related to General Franco's perplexities in other regions of Spain. Despite German and Italian recognition of his Junta as the Government of Spain, and the despatch as Ambassador to him of a German General who knows the terrain, he has to contend with redoubled activity among the Government forces in Asturias, Catalonia and south of the capital. Just as he was forced to urge Germany and Italy to recognise him, in order to be able to prevent the Spanish Government from obtaining food or armaments by sea, so he may soon have to rely on Germany and Italy to send him actual troops. His forces are well equipped by foreign aid, but they are becoming every day more depleted. This may account for the lull at Madrid this week. In the north, Government forces have taken the initiative against Saragossa, and have surrounded Huesca. At sea, General Franco's threatened "blockade" is not yet effective. His ships are patrolling the Straits of Gibraltar, where they fired at a Russian ship on Wednesday night. The Balears, save Minorca, are reported to be completely controlled, organised, and manned by Italian troops and air force units. The French decision, however, to convoy their cargo ships within the three-mile limit poses an awkward question to General Franco. A submerged submarine flies no flag at all. If one of General Franco's hastily acquired submarines—or any other, for that matter—torpedoes a French ship, within or without the limit, trouble will ensue. For France has not recognised the General and his friends even as belligerents. Nor have we. British ships can still carry coal or food to Barcelona—only the British Government will not convoy them. Presumably it will say to their owners: "It is your risk if you are sunk." We think the Government may soon be faced with the case of a twentieth century Captain Jenkins. They might well find the country as incensed over such an incident as it was 200 years ago. It then unseated Walpole, who had made a virtue out of "minding Britain's business." In the present Spanish issue, Britain's business may be suddenly thrust under the Government's nose.

* * *

Pan-American Conference.—Next Tuesday representatives of all the North, Central and South American nations—except Canada—will meet at Buenos Aires to discuss peaceful American relations. The conference was suggested by President Roosevelt early this year. Its agenda covers: (a) methods of preventing conflicts and of limiting armaments; (b) the rights of neutrals; (c) the codification of international law; (d) the elimination of force for the recovery of debts; (e) economic co-operation; (f) improvement of communications; and (g) cultural relations. Behind the Conference is a mixture of motives. The United States has recently revised its interpretation of the Monroe Doctrine. The right of intervention in Cuba was abolished in 1934. A new treaty with Panama has been drafted which makes defence of the Canal a matter of co-operation. The Republics of Central and South America, indeed, are less suspicious of the United States' intentions than at any time since the Monroe Doctrine was enunciated. President Roosevelt and Dr. Saavedra Lamas, the Argentine Foreign Minister, have indicated that in their opinion the Conference may supplement the work of the League of Nations. But in many South American States there is a desire not to supplement, but to break away from, the League and retire into isolation. To those citizens in the United States who sympathise with this attitude the three-Power currency agreement with France and Britain has been a disturbing reminder of the attractions of the Old World, while to the Fascist forces which abound in some republics the agreement of three democratic Powers has been viewed as a union against Fascism. Already, indeed, the seeds of social struggle between Fascism and Communism have been planted in South America. Several States have taken sides in the Spanish war. Fascist Governments rule in Paraguay and Brazil. Nevertheless, the Conference may go far to solidify America and ensure peace, and the presence of President Roosevelt attests his eager determination that it shall succeed.

Libel in France.—It hardly needed the tragic death of M. Salengro to demonstrate the necessity for a strengthening of the libel law in France. At a moment when the British libel laws are coming to be regarded as a menace to free speech, the French law is having to be strengthened. The French law is perfectly adequate on paper. But in practice it is almost worthless. French judges are strong believers in freedom of speech; and their own low salaries tend to keep within modest bounds their ideas of financial damage. It is almost impossible to collect damages in an action against a newspaper. Unless the libel is against public interest and morals, there is no recourse against the printer. Unless the article is signed, there is no recourse against the writer. The manager, who is held responsible, may be a mere figurehead; and no effective redress is consequently obtainable. As a result the more wealthy persons and corporations who wish to avoid Press attacks naturally take steps to establish a direct influence over a section of the Press. Nor can one suppose that any but a tiny fraction of French public opinion is likely to be ranged against the proposed reforms.

* * *

Ratification of the Egyptian Treaty.—The Anglo-Egyptian Treaty signed on August 26th has now been endorsed—in the Parliament at Cairo last week and in the Parliament at Westminster this week—by large majorities. This ratification is far from being a formality—as witness the breakdown of treaties concluded without public opinion behind them. The stability of the Anglo-Egyptian Treaty is assured by these majorities; and the smallness of the opposition vote shows how vastly the temper has changed, both in England and Egypt, since those years 1922-30 in which both countries were intransigent over points of detail at the price of postponing a comprehensive settlement of all questions. There are still some English diehards who look askance at a treaty which does not give the British armed forces a free run over the whole of Egypt's territory and territorial waters; just as there are Egyptian diehards who cannot be content, in the Sudan, with anything less than the restoration of Egyptian sovereignty. But what is noteworthy is the rarity of these voices. The essence of the treaty is a give-and-take in which the Egyptians have gone a long way towards meeting our British military desiderata in exchange for a corresponding conciliatoriness on the British side over the Sudan. This reasonable settlement of a relationship which has dragged on for 53 years has required a greater effort of reasonableness on the Egyptian side than on ours. The Egyptians have had to convince themselves that the genuineness of Egypt's independence will not be impaired by the presence of British armed forces in Egypt when this arrangement is based, as it now is, not on *force majeure*, but on a negotiated treaty. This view is borne out by precedents. The military chapter of the Anglo-Egyptian Treaty follows to a large extent the formulae of the Anglo-Iraqi Treaty of 1930 (which has also been followed in the Franco-Syrian Treaty signed the other day). The most striking precedent, however, is the arrangement made in 1713, in the Peace of Utrecht, whereby His Cæsarean Majesty the Holy Roman Emperor, King of Bohemia and Hungary, and Archduke of Austria, agreed with the Federal Government of the United Netherlands that the barrier-fortresses in the Austrian Netherlands (as Belgium then was) should be occupied by Dutch garrisons. No one dreamt that this arrangement about the fortresses was detrimental to the Emperor's independence, since the partner whose troops were to be stationed in the other partner's territory was actually the weaker of the two. This precedent is distinctly encouraging; for the Dutch-Austrian arrangement lasted—and helped to preserve the peace—for nearly 80 years. May the Anglo-Egyptian Treaty of 1936 enjoy as long a life!

* * *

Mexican Expropriation.—On November 18th an Expropriation Bill which had already passed the Mexican Chamber was adopted by the Senate. As the President is himself the promoter of this piece of legislation, the Bill

seems certain to become law. It provides that there shall be no expropriation without compensation. On the other hand, the purposes for which the Government can use the powers conferred by the Bill are described in wide terms. Private property may be expropriated "for the equitable distribution of wealth owned and monopolised for the exclusive benefit of one or several persons to the detriment of the collectivity in general or of any one social class." Passage of this legislation in Mexico City coincides with the outbreak of a fresh dispute between workers and employers on some of the principal Mexican oilfields. In the light of their antecedents, these events have to be taken seriously. The last great wave of radicalism in Mexico broke during the years 1926 and 1927. It was not until 1930 that the ground swell subsided. The most important private interests in Mexico are still in foreign—mainly American and British—hands. There is therefore a Nationalist tinge in the Mexican movement for socialisation. It is difficult for the movement to proceed without foreign complications. In 1926 and 1927, United States citizens who held land or oil concessions in Mexico resisted the Mexican legislation of the day. They were at first supported by the State Department at Washington. In the second chapter of the story, the United States Government changed its policy. A compromise between the Mexican Government and the private interests of United States citizens in Mexico was achieved by the diplomacy of the United States Ambassador, Mr Dwight Morrow. Mr Morrow's premature death was a loss to the cause of inter-American harmony. A policy of conciliation, however, inaugurated at Washington under a Republican regime, is not likely to be abandoned by Mr Roosevelt in order to revert to a policy of coercion. The importance of these events in Mexico lies in their possible effect upon the proceedings at the Pan-American Conference. Delegations from other Latin-American countries will be sundered by two emotions: on the one hand, sympathy with Mexican nationalism; on the other hand, dislike of the radical policy in which Mexican nationalism finds expression. Thus, President Roosevelt will probably be able to induce his Latin-American colleagues not to bring out of the cupboard the bogey of United States imperialism.

* * *

Italy Senses Favours to Come.—It was reported from Rome and New York this week that Italy has opened negotiations for a final settlement of her war debt to the United States. They are stated to be proceeding satisfactorily. Resuming payments after the 1931 Hoover moratorium, Italy defaulted, in common with other States, Britain included, on her debt to the United States in 1933. The debt as funded in November, 1925, was \$2,042.2 millions. This was to be paid in annual payments, rising from \$5 millions in 1926 to \$14.18 millions in the decade 1931-40, and thence by rising annuities to \$81 millions in the last year of the repayment period (1987). These annual payments, principal and interest included, raised the total of payments from \$2,042.2 millions to \$2,407.7 millions. Thus, as the Hoover moratorium began in 1931, the first year of the decade in which Italy's annual payments to the United States were to have risen from the \$5 millions level to the \$14.18 millions level, Italy has so far been spared the trebled incidence of her war debt payments in the current decade. The American Johnson Act

The British and Polish Trade Bank A.G., Danzig

Paid-up Capital: D. Gulden 5,000,000.---
Reserves: D. Gulden 3,527,571.57

shuts the American capital market to her until she resumes payment or makes a settlement with the United States authorities. The London market would be closed to her, if not on political grounds, because of the standing of her credit. She needs capital for pressing internal purposes, as well as to maintain and develop Abyssinia. The present negotiations may be viewed as a ready Italian response to President Roosevelt's broad hint about the vast sums of "hot money" which, apparently free from the transfer difficulties which so unaccountably hinder transfers of debt annuities, can be transferred to America from the European debtor countries. But Italy's readiness to negotiate is, after all, prompted by that gratitude which is based on "a lively sense of favours to come." Whether Americans will be so prodigal of favours to Italy remains to be seen.

Future Re-armament Expenditure.—A recently issued brokers' circular provides some interesting estimates of the magnitude of the re-armament programme. Its authors have been courageous enough to produce an estimate of the probable size of the arms bill for 1937-38, and even to break up their total into a number of component items, including expenditure on wages and salaries, engineering products, shipbuilding, and so on. These detailed figures, which cover almost the whole of the Estimates, show an increase in effective expenditure (i.e. excluding pensions) from £117,400,000 in 1935-36 to £163,700,000 in 1936-37, and £195,000,000 in 1937-38. This last figure would appear to correspond to a net Defence Estimate of some £220,000,000—an estimate which is not *prima facie* unreasonable. The following table shows the main items:—

	(Million £)		
	1935-36	1936-37	1937-38
Charges and salaries	47.1	52.1	57
Food, clothing, etc.	12.2	12.3	16
Oil and petrol	2.5	3.9	5.5
Aircraft, guns, lorries, and all metal supplies	19.5	43.4	55
Building and construction work	10.3	16.0	18
Shipbuilding: new construction	12.1	16.6	23.5
Naval repair and other dockyard work	13.7	17.4	20
Total (excluding pensions)	117.4	161.7	195

The 1937-38 figures are conjectural to a high degree; the Naval construction estimate, however, tallies fairly closely with what is known of the building programme, which will be in hand in 1937-38. Of greater interest, however, is the classification of the known expenditure for this year and last. The increase in engineering and allied output *directly* connected with the re-armament programme is striking, for only about £10,000,000 of this year's increase can be attributed to the aircraft industry. When to this is added the engineering and building work which has been induced *indirectly* by the re-armament programme—the extension and renovation of private factories, etc.—the dependence of our present level of capital-goods activity (and consequently, of industrial activity) upon re-armament becomes only too plain. Moreover, the armaments programme tends to accelerate the upward spiral of costs and prices. In the shipbuilding industry, in which naval expansion has hardly begun, costs are rapidly rising, and may well slow down the mercantile shipbuilding revival. Throughout heavy industry the shortage of labour and of industrial capacity, while limiting armament output—and, still more, commercial production—may raise prices to levels highly disconcerting to taxpayers and civil producers.

Our Bacon Supplies.—There is a particularly strong case for liberalising our bacon import quota at this moment. The incipient boom conditions prevailing in some branches of British industry make it urgently necessary to restrain so far as possible any tendency towards rapidly rising money costs and money wages; and the present rise in the cost of living consequently needs to be checked. Not only can this be done in the case of bacon without any loss of Budget revenue, since imports are restricted by quota instead of tariff; but the condition of the bacon market demands it.

Simultaneously with the rise in employment and money wages, food supplies should normally rise. But bacon supplies have been held down by restriction actually below the depression level. Total supplies in 1932 were over 13,000,000 cwt. The Lane-Fox Commission, reporting when prices were at depression levels, recommended the "stabilisation" of total supplies at about 10,670,000 cwt. Despite the great recovery in employment and purchasing power since then, the figure has only been raised to 10,808,000 cwt. in the present year; and the ratio of imported to home supplies has, of course, been greatly reduced. It is not surprising, therefore, that a deputation representing all the sections of the bacon distributing trades in the country asked the President of the Board of Trade last week to increase the figure of 10,808,000 cwt. by 10 per cent. It was stated in reply that the possibility of arranging for an increase in total supplies under a levy-subsidy scheme would be "further explored in connection with the forthcoming trade negotiations." A levy-subsidy scheme, on the lines of the proposed beef scheme, would certainly be preferable to the present import quota. But the immediate need, demonstrable on every ground, is for an increase in imported supplies.

The Cotton Wages Dispute.—A decision was taken to hand in strike notices as a result of a ballot by the Operative Cotton Spinners' Amalgamation and Cardroom Amalgamation on Thursday. Notices affecting 100,000 persons are thus due to expire between December 7th and December 19th. The employers in the spinning section recently refused the application of the workers for an advance of 14 per cent. on standard lists, or 1s. 8d. in the £. It is believed (our cotton correspondent writes) that some solution will be found of the problem raised by the demands of the operatives for an advance in wages. The position is least difficult in the weaving section, where the application for an advance of 15 per cent. on standard rates and a minimum wage of 7½d. an hour, or 30s. for a full 48-hour week, is being examined by the Conciliation Committee. In the spinning section the approach to a settlement is likely to prove more troublesome.

British Industrial Production.—The rapid progress of industrial recovery during the past twelve months, revealed by our monthly index of business activity, is confirmed by the official index of industrial production, published in last week's *Board of Trade Journal*. The Board of Trade index of production rose by about 10 per cent. between the third quarters of 1935 and 1936, compared with an increase of 8½ per cent. shown by the more comprehensive *Economist* index of business activity:—

Group	BOARD OF TRADE INDEX OF PRODUCTION (1930=100)				
	Year 1934	Year 1935	1935		1936
			Sept. Quarter	June Quarter	
1. Mines and quarries	90.8	91.7	85.8	88.4	89.6
2. Iron and steel	115.7	125.6	124.1	149.5	149.1
3. Non-ferrous metals	122.7	137.3	136.6	140.9	145.3
4. Engineering and shipbuilding	94.0	104.8	102.2	120.3	118.8
5. Building materials and building	133.4	147.0	153.5	157.8	164.3
6. Textiles	113.3	118.9	113.3	124.4	122.3
7. Chemicals, oils, etc.	104.6	110.8	107.7	112.0	111.1
8. Leather and boots and shoes	104.5	116.0	109.7	121.4	116.4
9. Food, drink and tobacco	102.3	107.6	109.2	114.5	115.2
10. Gas and electricity	121.8	132.6	(a)	(a)	(a)
Total of manufacturing industries (2-10)*	108.5	116.9	114.8	128.5	127.0
Total of all groups (1-10)*	106.1	113.5	110.7	122.9	121.7
<i>Economist</i> Index of Business Activity (on same basis)	103	107½	107	114	116

* Includes also various industries not specified above.
(a) No information is available as to the quantities of gas made in each quarter. The available data for electricity have been included in the general index.

Production in the third quarter this year was higher than a year ago in all the industrial groups included in the official index. Expansion was most marked in the case of iron and steel and engineering and shipbuilding. Compared with 1930, the index for building materials and building has attained the highest level. The Board of Trade index regis-

tered a slight decline between the second and third quarters of this year, but this movement was, in fact, much less than the normal seasonal decline. But the seasonal lull in activity has been scarcely noticeable this year. Actually the *Economist* index, which is adjusted for normal seasonal movements in business, registered a further rise during the July-September quarter.

Retail Trade in October.—The steady increase in sales over the counter confirms the evidence of sustained economic recovery contained in the Trade Supplement to this week's *Economist*. The index of the value of retail sales, published in the *Board of Trade Journal*, continued its strong seasonal upward trend. Compared with October, 1935, retail sales last month showed an increase of 7.4 per cent. Sales rose in all districts, the smallest increase being in Scotland (+ 5.5 per cent.) and the largest in the South of England (+ 8.4 per cent.). With the exception of piece-goods, turnover was higher than a year ago in the case of all commodities shown separately in the returns. The rising tide of prosperity augurs well for a continuation of the upward trend.

Railway Rebates and Coal Exports.—The Railway Freight Rebates Bill was introduced in the House of Lords on Tuesday. We discuss it in an Investment Note on page 421. The Government is applying for the benefit of the coal export trade four-fifths of the Rebate Fund in its attenuated form. It will be curtailed after the adjustment of the contributions of the railway companies to their reduced assessments, and after the annual payment of £800,000 for interest and redemption charge on the loan to be raised by the Minister of Transport to reimburse the railway companies for their over-payments to the Fund during the five years 1931-36. Since the rebate system has been in force, the reductions in the conveyance, shipment and wharfage charges of the coal trade have averaged over £2 millions per annum. The largest total was in the financial year 1932-33, when it exceeded £2½ millions, and the smallest in 1935-36 when it is estimated to have amounted to between £1.8 and £1.9 millions. Of the new distributable Fund of approximately £1.5 millions the coal export trade is to receive four-fifths, or £1.2 millions, leaving a balance of about £300,000 per annum for the benefit of the milk and livestock trades. The loss to the coal export trade compared with the annual average amount of the rebate during the five years 1931-36 is therefore, roughly, £800,000 per annum, which, it is presumed, covers the reductions which are to take place in the rebates on shipment dues as well as those on the transport rates from pit to port. The mining industry is also deprived by the terms of the Bill of the benefits of the rebate of 12½ per cent. in the railway rate for the conveyance of pitwood and steel props; while the 10 per cent. allowance on the wharfage rates for pitwood, pitprops and other imported mining timber is to be reduced by, roughly, one-half. In the absence of any compensatory measures by the Government the two coalfields which will suffer most will be South Wales and Durham. The rebates on the coal and coke supplied to iron and steel works as well as on the transport of ores, limestone, etc., are suspended until 1952, unless continued by an Order of the Ministry of Transport after December, 1943. On the basis of the official returns for 1934-35 this represents an increase in the conveyance cost of coal, coke, ores, limestone, etc., consumed by the iron and steel industry of over £1,000,000. The Bill also reduces the rebates to the agricultural industry from about £800,000 per annum to £300,000.

Sterling and International Prices.—There has been a further advance in wholesale prices in both England and the United States. The *Economist's* complete British index number has risen by 1 per cent., while the British primary products index number has risen by 1.3 per cent. In the United States primary products have risen by 2.5 per cent., and the Irving Fisher complete index number by 0.9 per cent. French wholesale prices have only risen by 0.2 per cent., so that the immediate post-devaluation price-level

has now been established. It is 16.1 per cent. above the index number recorded on September 16th, shortly before devaluation.

* These figures relate to November 18th.

Details of the group indices comprising the complete *Economist* index number at the date of our suspension of the gold standard and for recent dates are given below.

	<i>Economist</i> INDEX (1927=100)			
	Sept. 18, 1931	Oct. 28, 1936	Nov. 11, 1936	Nov. 25, 1936
	1931	1936	1936	1936
Cereals and meat	64.5	82.0	80.8	81.8
Other foods	62.2	62.5	63.7	64.0
Textiles	43.7	63.6	65.1	66.3
Minerals	67.4	86.0	88.9	90.0
Miscellaneous	65.8	77.8	78.3	78.4
Complete index ..	60.4	74.6	75.5	76.3
1913 = 100	83.1	102.7	104.0	105.0
1924 = 100	52.2	64.5	65.2	65.9

There were numerous small advances in the cereals and meat group. Among other foods, tea, sugar and butter cheapened, but cheese and coco-oil rose in price. In the textiles group, cotton movements were irregular and silk and jute fell in price. There were sharp advances in wool and flax. Non-ferrous metal prices are still rising. In the miscellaneous group rubber, tallow and Swedish timber have increased in price, but hides are again lower in price.

Progress of the Motor Industry.—The British automobile industry continued rapidly to expand during the season ended September 30th. The accompanying table compiled by the Society of Motor Manufacturers and Traders, shows that the output of both private cars and commercial vehicles during 1935-36 was higher than in any previous year.

Year ended Sept.	Private cars Taxis	Commercial vehicles	Total	Index No.
1913†	—	—	34,000	23
1924†	116,600	100	146,600	100
1927	164,553	141	211,780	144
1932	171,244	147	232,719	159
1933	220,779	189	286,287	195
1934	256,866	220	342,499	234
1935	311,544	267	403,720	275
1936	353,838	303	461,947	315

† Calendar year.

The volume of orders received during the recent exhibition of private cars ensures a further increase in sales in 1936-37. Moreover, requirements of commercial vehicles are also expanding with the progress of recovery, but railways now appear to be holding their own, owing partly to the increase in heavy goods traffic.

UNITED STATES

THE INFLUX OF FOREIGN CAPITAL

IN his Press Conference of November 13th, the President brought up at some length the subject of European buying of American securities, stated that the matter was under study, and suggested that regulations or legislation might be necessary. This theme is often discussed in Wall Street. As Wall Street has seen it, the buying of American securities (or the accumulation of dollar balances) has had its counterpart in the import of gold. No other conclusion could be reached from the data on the balance of payments. Second, it is logically inferred that if this movement were ever reversed, the gold flow would reverse as well; and conceivably the efflux could equal the influx.

Since England has experienced a similar influx in recent years, Wall Street compares British with American practice in meeting the situation, as worked out respectively through the Equalisation Account in London and the Stabilisation Fund here. As is well-known, an influx of funds into London (in gold or otherwise) is taken into the Equalisation Account, and transferred into the Bank of England and so into the credit structure, only in such sums as the monetary authority considers advisable. The operation of our own Stabilisation Fund has been quite different. It was created out of the gold profit, and its assets could become available for use only by a sale of gold to the Reserve Banks in the form of gold certificates, which are not legal tender. It is understood that in this way the Fund provided itself with some \$200 millions of working capital; but this operation, of course, automatically increased member bank reserves by a similar amount. Gold imported since January 30, 1934, whether by the Stabilisation Fund or otherwise, has been immediately sold to the Reserve Banks, and added to member bank reserves, or rather to the excess reserves, since the expansion of member bank credit, rapid as it was, could not keep pace with the torrent of gold. In the period since January, 1934, there have on two occasions been reversals of the gold movement, and on both occasions the gold was subtracted from the member bank reserves rather than from the Stabilisation Fund holding; but the sums involved were negligible.

About a year ago the problem of excess reserves had become sufficiently acute to be a matter of lively discussion. Total reserves (bank cash) were approximately double required reserves, and the flood of gold showed no signs of abating. To meet this situation Washington took two successive steps. In December and again in March, the Treasury successively transferred to its account in the Reserve Bank an aggregate of about \$1,000 millions, reducing member bank reserves correspondingly—a transaction not unlike a form of open-market operation occasionally employed by the Bank of England in pre-war days. The obvious disadvantage of the scheme was that it made an additional demand upon an already burdened Treasury. It was obviously but a temporary expedient, and after March the Treasury withdrew from the position. The Governors of the Reserve System announced an increase of 50 per cent. in required reserves, to become effective on August 15th. This reduced excess reserves by more than \$1,500 millions; but subsequent gold imports were so large that by the end of the calendar year total reserves will be higher than ever; the effects of the August action have already been neutralised by nearly \$500 millions of additional gold since August. The large increase of currency in use will leave excess reserves at the end of 1936 smaller (probably) than they were at the end of 1935; but with a general upward tendency so long as gold continues to pour in at an average rate of close to \$100 millions a month, or to put the same thing another way, so long as the security market continues to be the magnet for foreign funds on a gigantic scale.

Wall Street sees the problem from two angles. There is the point stressed in the Press conference—that this is potentially "hot money," subject to sudden and possibly embarrassing withdrawal. This angle was of acute concern in Wall Street at the end of September, when there were apprehensions of stock market liquidation and heavy transfers consequent upon the devaluation of the gold *bloc*. These specific fears proved groundless, as Europe bought rather than sold, and gold continued to come in on its habitual scale.

The other aspect is more stressed in theoretical discussion. The volume of bank credit in the country is, of course, a function of bank cash, and in theory, the Board of Governors is responsible for the figure of bank cash in the system. Up to a point, the rapid expansion of bank cash (even to the extent of creating "excess reserves") first by open-market operations and then by gold imports, was in harmony with the general policy of refloating bank deposits. But it is quite clear that, as described above, the Reserve authorities have been endeavouring for about a year to control the expansion of bank reserves; and that they have been and can be only moderately successful so long as (a) our stock market is a magnet for the world's current gold production and (b) our Stabilisation Fund is set up in such a way that it can take no action in the circumstances that does not itself increase member bank reserves. The problematical efflux of hot money might cause embarrassments at some future time, although the Stabilisation Fund is able to meet such a contingency with a minimum of disturbances; but the current reality is the inadequacy of the mechanism for handling the influx, in the form of gold, in such a way as not to thwart the obvious desire of the Reserve Board to control the aggregate of bank cash.

In this respect the situation has its analogies with 1929, when the stock market was occasioning an expansion of credit in the form of "brokers' loans for the account of others"—an area quite out of the reach of the then control mechanisms. Now, although direct stock market credit is under complete control, the stock market is the determinant of the basis of bank credit through its international attraction for gold; and the existing mechanisms are not well suited to meet this variant of the general problem of credit control. To sum up, the inflow brings one set of problems which are current realities; the outflow might bring another; but the present mechanism is better designed to meet the remote eventual contingency than the immediate and urgent reality.

THE PRESIDENT'S POWER TO DEVALUE

The provisions of the Act of January 30, 1934, which gave the President discretionary power over the dollar and which created the Stabilisation Fund, expired on January 30, 1936, and were extended for one year by the provision of that Statute. The President has already intimated that he will ask for a continuation of the substance of that Act; but it will be recognised that both the domestic and the international monetary situation are very different from those of three years ago. The emergency legislation adopted at that time requires more than a simple extension; and it is expected that a bill *ad hoc* will be among the earliest items of legislation offered to the 75th Congress in January. The discussion at the Press Conference is understood in Wall Street to be an elaboration of the earlier brief suggestion of the extension of the principles of the Act of January 30, 1934.

In the past month, America's economy has taken on some aspects of a boom with surprising rapidity. Perhaps its most marked form is what may be called a "sellers' market" in labour. The daily Press is full of notices of wage increases—usually about 10 per cent., sometimes greater. The second manifestation is the general

upward tendency in commodity prices, also indicating something of a sellers' market. This tendency seems as yet understated in the price indices. The third is the growing practice of giving orders for future delivery—frequently for a long distance into the future; and the common appearance of complaints over difficulty in securing prompt delivery. In the background, there is the rather belated realisation of the high rate of corporate earnings, suddenly emphasised by the year-end dividend increases—a direct reflection of the tax legislation of last spring. The economic atmosphere is quite different from last May, for example; when, although statistically business was good, there was still a general attitude of caution. Without the slightest intention of pressing the analogy, one may say that the general atmosphere of business following the election of the current year is quite reminiscent of that of November, 1928.

NEW YORK, November 18.

FRANCE

POPULAR FRONT STRENGTHENED

AFTER the ordinary sessions of the local "Conseils généraux," which voted addresses to the Government upholding the rights of property and the "liberty of work," Parliament has resumed work. Only five weeks now remain to pass through the Budget Bill before the end of the year.

The political situation, however, appears to be unaltered. The Popular Front has been strengthened by the political folly of the campaign of calumny which culminated in the tragic death of the Minister of the Interior—M. Roger Salengro, and which brought the Government unexpected support for its new law designed to restrain Press libels. But, at the same time a slight revival of social agitation has accompanied the renewed claims of the Communists for an increase in wages and for French intervention in Spain. But, the whole country, from the Conservatives and the Moderates to the Socialists, are supporting the policy of non-intervention and collaboration with London; so that the Communist demand is of minor importance. Nevertheless, the Communists' campaign, added to the rumours which the Spanish struggle excites daily, are hampering the rise of rentes.

The existing tendency towards a dishoarding of capital as a result of the low rates of interest on the money market suggests that opportune measures of a technical nature might produce rapid effects on the rentes market and on business as a whole. The following table shows that deposits in the four great Parisian banks increased in October for the first time for many months:—

	Sept. 30, 1935.	Aug. 31, 1936.	Sept. 30, 1936.
Credit Lyonnais	11,093	9,493	9,826
Société Générale	9,222	8,060	8,012
Comptoir National d'Escompte	7,029	6,176	6,056
Credit Industriel et Commercial	1,338	1,248	1,241
	28,682	24,977	25,135

Activity in new issues was also better in October, particularly in debenture issues:—

	Existing Companies	Stocks	Debentures	New Stocks	Total
October, 1935	252	11	28	191	12.8
July, 1936	4.3	8	0.5	56.3	74
August, 1936	27.8	26	2.5	82	
September, 1936	39	35	0		
October, 1936	19	53	10		

These figures, and notably those for debentures—the best of the year with the exception of January—show an improvement, particularly if compared with July.

Fiscal receipts in October were Frs. 4,043,000,000, of which Frs. 3,476,236,000 were ordinary receipts, divided as follows:—

Direct taxes	762,366,000
Indirect taxes	2,643,403,000
Other ordinary receipts	70,467,800

These results are 11 millions lower than the yield in October, 1935. The yield of indirect taxes is 44 millions lower, and of direct taxes 32 millions higher. For the

BANKERS TRUST COMPANY
NEW YORK

Incorporated with

in the U.S.A.

London Office:
26 OLD BROAD STREET, E.C.2.

first ten months of the year, fiscal receipts were 648 millions below the estimates, and 223 millions below the 1935 yield.

A significant feature of the industrial depression is the stagnation of building. The persistent dearth of long-term money rates, the uncertainty of prices following the social laws and the devaluation, high taxation, and legislation directed against landlords, lie at the root of the building crisis. Since the beginning of the year requests for building permits have been about one-sixth of those in 1913. The index of building activity is thus at its lowest for many years.

PARIS, November 26.

GERMANY

FOREIGN SECURITIES CONFISCATED

THE Foreign Exchange Board last week announced its measures, already expected, for the confiscation of foreign securities held by German citizens, by foreigners resident in Germany, and by such companies, partnerships, firms, associations and corporations in public or private law as count as "inland" in the sense of the Exchange Legislation. Formally, confiscation has not been decreed; and therefore the question of compensation in a reichsmark equivalent has not arisen. For the moment the new decrees merely create with the securities a fund which is irrevocably in the physical possession of certain banks acting as the Reich's trustees, and no part of which may again pass into private hands. By the time the decrees appeared the Reich had attained its aim of heavily depressing the German Bourse prices. By the end of last week the "spread" between these and the prices on foreign stock exchanges had been in many cases reduced by two-thirds.

A decree of November 19th required the delivery up to a "foreign exchange bank" of foreign securities to be later announced. The Foreign Exchange Board's discretion to choose the securities was entirely free. Foreign securities which were abroad were to be handed over irrevocably to the depot of a German "foreign exchange bank" with a foreign bank. A "foreign exchange bank" is a bank which acts as agent in exchange matters for the Reichsbank, and which, in particular, buys exchange from those persons or concerns which are obliged to deliver up. All German banks of note, including private banking firms, are "exchange banks." The delivered-up foreign securities will be booked in the name of the nominal owner. They may be freely dealt in on the Bourse, and may be transferred from one exchange bank to another; but they may not be handed out to the owners.

Shortly after the decree of November 19th appeared a first list of the securities confiscated. In the first instance, such foreign securities are confiscated as are officially quoted on German Bourses (some of the more important only in Frankfurt-am-Main) and such as are the objects of regular but unofficial bourse dealing. Many *non-valeurs*, including Russians and South-Eastern European pre-war bonds, are exempted. The list contains in all 63 share or bond securities, including the six officially quoted German Colonials.

The Bourse reacted to these decrees with a new heavy fall, and reichsmark shares declined in sympathy. It was not expected that the Government would proceed to realise the

securities summarily, and it was surmised that they would be merely treated, in press language, as "a national exchange reserve." Pessimists, however, reasoned that ultimately, if the exchange position becomes worse, home securities might be commandeered for sale to foreigners, if foreign buyers could be found.

THE RIGHT TO EXPROPRIATE

The exchange regulation system raises the general question of the right of expropriation. Unlimited right to expropriate foreign property, even when it lies within the boundaries of the expropriating State, does not seem to be admitted. British pre-war property in Russia is a case in point. The German Government, however, claims the right to expropriate property which is outside the Reich, and which is subject to the general legislation and to the fiscal competence of foreign Governments. That is the case with balances in foreign banks and with the new foreign security expropriation. Literally interpreted, these German pretensions go very far. In practice, of course, Germany cannot expropriate anything abroad. She can merely threaten the "Inländer" with the familiar penalty of penal servitude if he does not co-operate in his own expropriation, that is, if he does not give his signature, e.g. for transfer of his foreign bank balance to the Reichsbank. This presents the curious anomaly that only nationals of countries which have their own systems of control of foreign exchange or capital export are automatically protected. They could not freely transfer their funds to Germany even if they wished to do so.

The new regulations for delivery up of foreign securities also involve puzzles which foreign banks and capitalists may need to study. It is officially recognised that foreign loans may have been secured on stocks or bonds which have now to be delivered up, but which lie abroad. The new regulations do not recognise without qualification the foreign lender's claim. The German authorities, it is prescribed, may recognise the foreigner's claim, but they may insist on delivery up; and if the value of the security materially exceeds the loan, they will demand delivery of the excess value. Obviously this pretension would not avail against a foreign bank that was in physical possession of the pledged security; but questions of law might easily arise.

BERLIN, November 27.

DENMARK

SCANDINAVIAN CO-OPERATION

THE Scandinavian celebrations on October 27th were an impressive official demonstration of the desire of the countries of the Scandinavian bloc (Denmark, Finland, Iceland, Norway and Sweden) to formulate a joint foreign policy, based on the principle of strict neutrality, and a common domestic policy based on the principle of democratic government. The addresses of the heads of States were broadcast, and the views of leading personalities in politics, trade and industry urging the necessity of closer inter-Scandinavian co-operation were published in the leading papers of each country. The 16,400,000 inhabitants of the Scandinavian countries are an important factor in the world's economy. Their share in world trade is between 4 and 5 per cent, and—not counting inter-Scandinavian trade—is only surpassed by that of Great Britain, the United States, Germany and France. The total foreign trade of Scandinavia amounted in 1935 to about £350 millions (imports about £200 millions and exports about £150 millions), or £2 per head. Scandinavia is Britain's best customer in Europe and her second best (after India) in the whole world.

The ordinary session of the Rigsdag opened in October, and the Prime Minister outlined the Government's programme for the session. The main points are as follows:—

- (1) Continuation of the crisis policy, since no relief from the restrictions under which international trade is at present labouring can be expected; (2) maintenance of the lowest practicable rate of interest and continuation of the conversion policy; (3) relief of unemployment by various State measures; (4) appointment of a Commission to consider a revision of the Constitution; (5) certain reforms in the Army and Navy; (6) revision of the Social Relief Act,

especially on old age benefit; (7) reform of taxation and inter-communal equalisation of rates; (8) regulation of conditions and working hours on board ships; and (9) the furtherance of the trade and the improvement of the standard of living of the Farøe Islands.

The Budget position is sound:—

	1935-36 Budget	1936-37 Budget	1937-38 Estimates
	(In million kroner)		
Total revenue	418.9	417.9	421.2
Total expenditure	405.4	416.7	416.0
Surplus	13.5	1.2	5.2

For 1937-38 the following items of expenditure are the most important:—

	(In million kroner)
Interest	9.7
Ministry of the Interior	31.5
Social Ministry	145.6
Army and Navy	56.2

When introducing the 1937-38 Budget Bill in the Rigsdag, the Minister of Finance said that as a consequence of the recent devaluations in France and Holland it was intended to discontinue the application of the gold clause in Danish Government bonds held abroad, and thereby to obtain a saving on interest.

EXPANDING FOREIGN TRADE

By agreement with the German Government, supplementary permits aggregating 6 million kroner for imports of industrial goods from Germany have been granted for November and December, and there will be equal additional Danish agricultural exports to Germany during the same period. Trade with Italy is now subject to a provisional treaty, and in principle will be in the proportion 1:1, but until further notice the Danish authorities will grant import permits in excess of this figure to liquidate the frozen Danish debts (about 5 million kroner) in the clearing.

The following are the figures of Denmark's foreign trade during the first nine months of the present year as compared with the same period of 1935:—

	Imports	Exports	Import Surplus
	(In million kroner)		
First nine months of 1935	980	937	43
First nine months of 1936	1,058	1,022	36

Exports to Great Britain are unchanged at 555 million kroner, while imports from Great Britain have increased from 357 to 402 million kroner. Exports to Germany have increased from 139 to 211 million kroner. Butter and cheese exports are up to 45 million kroner, while bacon exports have fallen to 33 million kroner.

Three Danish shipbuilding companies have recently placed a joint order amounting to 10½ million kroner with British steel mills. The position of the shipbuilding industry on the whole is good, and orders on hand should provide full employment for about 1½ years hence.

A recent survey reveals that there are now 135,467 motor-cars in Denmark. This is equal to 237 private cars per 1,000 inhabitants.

The number of insured unemployed at the end of October was 68,148, or 16.3 per cent. of the total number insured, against 17.3 per cent. at the same time last year. The wholesale price index for October was 133, or 3 points higher than in the preceding month and 7 points higher than a year ago.

COPENHAGEN, November 20.

BULGARIA

THE NEW CABINET

THE recent reconstruction of M. Kiosseivanov's Cabinet is to be explained as due to a desire to put off the elections. The chief reason alleged is the dismemberment of the former political parties. As a result, the two Ministers belonging to Professor Tzankov's national movement have resigned. The present Cabinet is composed completely of non-party men, mainly high officials enjoying the confidence of the King. It is believed that it will remain in power for another six months.

The devaluation of the French franc and of some other currencies caused a rise in the compensation premiums in Bulgaria. The Government has decided, however, to maintain the present value of the currency by means of foreign exchange restrictions and export premiums. As from November 1st the system of foreign trade regulation has been modified, but the practice of "compensating" imports against exports is preserved. The difference now is that the former two lists of export articles, against which imports were admitted after the cession to the bank of a fixed percentage of free devisen at the official rate of exchange, have been fused into one. The maximum legal premium of 35 per cent. remains in force. Under the new regime imports on a compensation basis will only be allowed within the limits of the regular quota fixed for each importer, but the bank may authorise the importation of certain articles and products over and above these limits. There will also be no discrimination in premiums between the commodities on the former two export lists. The first list formerly comprised raw materials, and the second list other commodities.

ABUNDANT CROPS

Crops of both cereals and fruit have been abundant this year, and have made possible a marked improvement in the national economy as a whole. The rise in prices of raw materials is reflected in a wholesale price level which is at present 7 per cent. above that of last year. Industrial production has increased by nearly 6 per cent., domestic trade by 8 per cent. and banking activity by 5 per cent.

The foreign trade figures at the end of September, 1935 and 1936, were as follows:—

	Imports	Exports
	(Million levas)	
1935 (9 months)	2,051	2,001
1936 (9 months)	2,213	2,243

As compared with last year's results, exports have increased by 12 per cent. and imports by 8 per cent. Great Britain now occupies the second place among Bulgaria's customers with 216 million levas (about £500,000), or 9.5 per cent. of the total. In comparison with last year, exports to Great Britain have increased 2½ times, while British imports into Bulgaria have slightly decreased.

Another result of the general economic improvement is an increase in Budget revenues for the first nine months of the year to 5,400 million levas (13 per cent. over last year); while expenditure was 5,689 million levas. The deficit so far is 289 million levas, as against 421 millions for the corresponding period of 1935.

SOFIA, November 20.

SOUTH AFRICA

IS THE BOOM ENDING?

ALTHOUGH outwardly there is still every sign of the activity and material prosperity that have for some years past characterised Johannesburg and the other principal industrial and commercial centres of South Africa, one is conscious of an undercurrent of doubt. How much longer can this appearance of limitless expansion be expected to be maintained? Indeed, the more cautious leaders of local commerce and industry confess to a preference for an early return to more stable and less spectacular conditions. The present position is felt to have reached, in some respects, a rather too hectic and artificial a level, stimulated partly by the phenomenal expansion in the last few years of the gold mining industry, and more recently perhaps by the unrestrained campaign of publicity conducted both locally and overseas on behalf of the Empire Exhibition which has now experienced half of its four months' duration.

It is to be feared that the Exhibition has in the past two months had considerably more than half its possible measure of revenue-yielding support, and disappointment has sooner or later to be frankly faced. The Exhibition was planned on too ambitious a scale in relation to the obvious limitations imposed both by its geographical remoteness

from potential visitors in overseas centres, and the smallness of the local population. The organisers had in their official estimates based their expectations on an attendance of 2,000,000 visitors. The total white population of the Union is still well below that figure. Moreover, the whole of the available steamship services to South Africa could not, in a period of four or five months, convey to this country 20,000 visitors if such a number were prepared to spend the money and time on the trip. The official estimates were at least twenty times the possible number of visitors even under the most favourable conditions. It is true the official returns of daily attendances have exceeded the 500,000 level, but these, it must be remembered, include re-admissions.

VALUE OF THE EXHIBITION

Nor has it been possible to assess the commercial value of the Exhibition from the point of view of firms represented thereat. Some few have said in course of conversation that satisfactory business has resulted from the enterprise, but observation of adult attendances at the various displays—many of which obviously represent a very heavy expenditure—do not warrant a very optimistic estimate of the possible rewards of this enterprise.

But the actual and potential economic value of such an exhibition cannot be assessed in monetary terms. The Exhibition is undoubtedly providing a spectacular demonstration of South Africa's attractions and resources that should prove of enormous ultimate value to the country. But the immediate financial liability incurred is not liquidated by these potential possibilities, and a good deal of anxiety is felt.

In spite of the perceptible slackening of activity in other industrial and commercial enterprises, the gold mines continue to make new records. Output of gold for the month of October, declared three days ago, represents in value an all-time record of £6,915,282, based on an average price

THE CHASE NATIONAL BANK

OF THE CITY OF NEW YORK

(Incorporated with Limited Liability under the Laws of the U.S.A.)

HEAD OFFICE:

PINE STREET CORNER OF NASSAU, NEW YORK

The Bank offers complete facilities for the provision of all banking services and the handling of Anglo-American and foreign business. Current and deposit accounts are invited and consultation with the management is welcomed.

received for the month of £7 os. 6d. per fine ounce, an increase of 4s. 6d. per fine ounce as compared with the September valuation. The October output totalled 977,425 fine ounces and was the highest month's production since South Africa left the gold standard.

On the other hand, among the indications of a slowing up of recent boom conditions is the steady decline in the value of new buildings for which plans are passed by the Johannesburg City Council; for the month of October the 871 plans deposited represented a value of £790,000, as compared with £835,000 for September, £916,500 in August and £946,000 in July.

According to the report of the Public Debt Commissioners for the financial year ended March, 1936, the Union's indebtedness was reduced that year by no less than £23,028,707, and at the end of the year the outstanding debt stood at £251,086,694, of which 51.15 per cent. represents loans raised in the Union—the highest percentage of internal debt in the Union's quarter of a century, comparing with 42.84 per cent. for the previous year. An interesting appendix to the report shows the following comparative figures of debt and debt charge per head of population:—

	Total Gross Debt £	Debt per head of Population £ s. d.	Annual Charge per head £ s. d.
Australian Commonwealth and States	1,242,114,821	184 2 6	6 13 10
Canada	702,795,458	55 4 10	2 10 10
New Zealand	282,561,098	166 19 8	6 12 9
Union of South Africa	251,086,694	124 16 4*	5 14 0*

* European only (1,974,000 est. at March, 1936).

The annual per head charge compares favourably with that of New Zealand and Australia.

JOHANNESBURG, November 13.

BOOKS AND PUBLICATIONS

PUBLIC FINANCE

THIS translation,* based on the 1934 edition of Professor De Viti De Marco's "Principii di economia finanziaria," will be widely welcomed by English-speaking economists. Professor De Viti is less well-known in England than the other members of the group with which he was associated—Pareto, Pantaleoni and Barone—but in the field of public finance his pre-eminence has long been recognised.

Liberal economists have often been accused of under-estimating the importance of the State in economic affairs, and the politicians who follow their teachings have even now not entirely abandoned the view that the best financial policy is to allow money to fructify in the pockets of private individuals. Professor De Viti's great merit is that he

LETTER TO THE EDITOR

BRITISH MONETARY POLICY

TO THE EDITOR OF THE ECONOMIST

SIR,—May I be allowed to submit that none of the writers contributing to your symposium on this subject has dealt with the problem in a satisfactory manner? They all appear to think that the improvement in our economic condition is a "phase of a trade cycle"; therefore, as in the past, a depression will of necessity follow. The mistake of all is that they do not recognise the origin of the "boom." It is not a "phase of a trade cycle." If it were, the other great trading nations would also experience an improvement; whereas the fact is that Germany, France, Italy, Holland and Belgium have not experienced any improvement in their respective economic conditions.

The cause of the improvement is that we left gold in 1931 and that, to the surprise of the experts, the cost of living, and consequently of production, fell. We enjoyed the full benefit of this until America devaloured in 1933, since when our adverse balance of trade has been steadily increasing; the latest returns show an increase of some £61 millions over the corresponding period of last year.

If this premise be well founded, the course our monetary policy should take is clear. We should reduce the international gold value of our currency in order that we may be in a position to compete in world markets. The three-party agreement with France and the U.S.A. is a step in the wrong direction. It will cause the £ to remain the currency, with the exception of the gold currencies, with the highest international gold value. The effect of this on our trade requires no elaboration. We, in agreement with the rest of the Empire, should reduce the international gold value of our respective currencies by stabilising them at 25 per cent. of their original par values. The domestic purchasing power of our respective currencies would not fall, as we and the Empire are capable of supplying all our needs.

Yours truly,

JOSEPH RICARDO.

6 Crown Office Row,
Temple, E.C.4.

coherent reasoning. Problems of tax incidence and shifting, which were discussed often in isolation by Marshall and Edgeworth, are here fitted into a general theoretical framework. Professor De Viti may not have said the last word on these matters, but all attempts at further analysis will have to take his work as a starting point.

It may, however, be objected that in the applications of his theories Professor De Viti assumes a closer connection between the modern democratic State and the ideal co-operative state than actually exists in reality. May not the preponderance of special interests in the framing of public policy, which gives a monopolistic bias to the modern State, be a fact which has to be analysed not only by the political theorist but also by the economist? In particular, it may be argued that it is the existence of large inequalities in incomes which gives rise to these disturbing tendencies, and that therefore the theory of public finance should not be merely analytical and explanatory. But even if Professor De Viti, as an economist of the classical school, refuses to give us a theory of what measures should be undertaken in order to weaken the forces which stand in the way of the attainment of the co-operative ideal, he has given us an indispensable apparatus for testing the effects of actual policies of taxation and expenditure.

SHORTER NOTICES

"Zero Hour." By Richard Freund. Methuen. 252 pages. 10s. 6d. net.

"Born an Austrian, brought up a German, and anglicised by many years' sojourn in England, where I found a second home and a third nationality": on this basis, and on the testimony of his interesting book, Mr Freund can claim to have achieved an outlook free from national bias. He starts his comprehensive and up-to-date world survey with Germany—on which he has much inner light to shed. He marshals cogent arguments to show that German policy aims at a "free hand" in Central and Eastern Europe, for which the diplomatic separation of France and England is a condition precedent. His quite special knowledge of Central Europe produces a valuable chapter on the Danubian tangle; and on the balance in the Baltic he has clearly had access to special information. The chapters on the disposition of national forces and interests in the Mediterranean and Near East are more common form. (It is highly doubtful if the Italian Navy outclasses the French Mediterranean fleet, as he says: and, if, when Italy's two 35,000-ton battleships are ready, they will be "the fastest in the world.") He has some blunt comments on British diplomacy at Stresa last year, and on British conduct in the Italo-Abyssinian dispute.

But the really outstanding feature of his contribution to current knowledge of foreign affairs resides in his five chapters on India (with information on India's defence problems from "a wise Indian mentor") and the Far East. These important sections bear the impress of a careful, sifting mind, seeing "things before and after," and concerned to lay bare the causes and forces at work.

Mr Freund may be exaggerating when he says that a pro-German British policy is supported by the City, and by Liberal and Labour friends of the League. He concludes that in the three most dangerous volcanoes of the world's volcanic belt—Central Europe, the Mediterranean and the Far East—Britain alone can prevent disaster, if it can be prevented at all. "It is a grave responsibility which cannot be shirked, except at the grave risk of losing the greatest Empire of all time." Mr Freund's able and compact world survey should be read and pondered by British citizens.

"Audits." By A. E. Cutforth. Gee and Company. 362 pages. 10s. 6d.

This is the ninth edition of a work which, from its first appearance in 1907, has occupied its proper place among the standard expositions of auditing technique. It is mainly designed for the student preparing for professional examinations. But it might also be read with advantage by those investors who imagine that an auditor's certificate is a guarantee of annual verity. There has been no reason for this assumption since the celebrated dictum, which declared that the auditor was no more than a watch dog. But those who still imagine that an auditor is a professional bloodhound should read this analysis of his work; for it shows the essential limitations of the services which he performs for the shareholder.

The Theory of Capital in a Developing Community

W. E. ARMSTRONG

Elucidates the principles that govern the processes of Capital Accumulation. Shows that the "period of production," or time dimension of capital is an essential determinant. Shows how money systems transform the fluctuations, accompanying progress in production, into cyclical disturbances.

Routledge

MONEY AND BANKING

"HOT MONEY" IN WALL STREET

FRESH from his triumph at the polls, President Roosevelt recently enunciated a new monetary problem for the United States. It is a problem with which we in England have long been familiar—namely the presence of foreign money which is here one day and gone the next, to the confusion of the exchanges. Thanks to the fears antecedent to devaluation and to the prevailing buoyancy of Wall Street, the American Federal Reserve authorities reckon that to-day there are about \$7,000 millions of foreign funds in the United States, of which \$5,500 millions are invested in securities and the remaining \$1,500 millions lodged on deposit at the banks. These volatile foreign resources President Roosevelt has now described as "hot money," thus enriching the financial vocabulary with a new and expressive term. He has equally made it clear that he views its presence with some anxiety. While other Governments have usually been concerned to check the export of capital, the American Administration is apparently thinking of possible ways of checking its ingress.

This American problem has two aspects, internal and external; and the external problem is the more immediate. Ever since devaluation, the dollar has been strong against both sterling and the franc. From the opening post-devaluation quotations of \$4.93½ to the pound and Frs. 21.42 to the dollar, the exchanges have consistently moved until early last week they stood at \$4.88½ and Frs. 21.55½. Since then the Paris rate has strengthened to Frs. 21.49 and the pound to \$4.89½. Simultaneously there has been a persistent influx of gold into New York, for between September 24th and November 12th there was a net accretion of \$341 millions to the United States monetary gold stocks, the bulk of which represented imports from abroad. Exports from England amounted to £23 millions, or a little more than \$110 millions, while during October alone \$94 millions were shipped from France.

The underlying threat is that if these movements of gold and capital continue, the British and French Exchange Funds will eventually be denuded of their gold resources. Before admitting the validity of this threat, it may be well to analyse more closely the past eight week's gold movements. Part at least of the arrivals from France represented gold engaged for shipment at the end of September, and so arose from conditions which were terminated by devaluation. Again, devaluation has encouraged a certain amount of dishoarding, particularly of foreign gold lodged in London safe deposits. In view of Wall Street's activity, some gravitation of this gold to New York was inevitable. To that extent, therefore, the recent gold movements may be of a non-recurrent character; and in any case they do not represent official transfers of gold from the French or British Exchange Funds.

There is no doubt, however, that if Wall Street were again to become the magnet for world capital that it was in 1927-29, a difficult exchange position might develop. The resources of the French and British exchange funds are not inexhaustible, and beyond a certain point they cannot easily be replenished. We ourselves were able to build up our own exchange fund by means of the influx of funds into London from early 1932 onwards, which enabled us to transmute Government credit into gold. If it were necessary to replenish the fund at a time when funds were leaving the country, we could, of course, revalue the Bank of England's gold and transfer the "surplus" to the Exchange Account. This, however, could only be done once, and it would, incidentally, raise a number of important questions of policy. France has not even this expedient at her disposal, for she used the profit on the revaluation of her gold to constitute her Exchange Fund in the first place. Neither country, in fact, could view with equanimity an indefinitely large influx of funds to Wall Street.

The dimensions of the problem can be stated very simply. The gold now in the British Exchange Equalisation Account is of the order of \$1,000 millions to \$1,500 millions. The French Exchange Fund was fixed last month at Frs. 10,000 millions, or \$500 millions. Foreign funds in the United States have, as we have stated, been estimated at \$7,000 millions, and may have recently been flowing into the country at the rate of \$100 millions or \$150 millions a month. These figures suggest that the British and French Exchange Funds have a reasonable, but not an inexhaustible, margin in hand. Thus President Roosevelt cannot wholly rule out the danger that if Wall Street continued to absorb the world's floating capital it might not be possible to carry out the terms of the Tripartite Agreement or to maintain the value of the pound and franc against the dollar. Again, if the pound were to fall below \$4.86 or the franc were quoted at more than Frs. 22.50 or Frs. 23 (so that France would be confronted with the problem of devaluing anew), the United States might be more immediately concerned than Great Britain with possible consequences.

The internal aspect of the matter may also give Mr Roosevelt food for thought. The fate of his predecessor stands as a warning to the President. Mr Hoover was elected in 1928 on a wave of prosperity. In 1929 the markets broke. In 1932 Mr Hoover was sunk without trace in the maelstrom, and has never re-emerged. The last thing President Roosevelt can desire is a stock market boom based on volatile foreign capital, which at any moment may return home and bring down prices in Wall Street. This danger, we may surmise, looms even larger in the President's mind than the more immediate threat to the exchanges. How can the authorities keep out foreign "hot money" without checking American recovery?

The answer is not easy to discover. The orthodox remedy of higher money rates is ruled out by the existing plethora of credit and member bank excess reserves (the latter still amount to \$2,270 millions). It is equally barred by the financial needs of the Treasury; and, indeed, by the President's sense of the temper of the whole nation. Recovery must go on and must be steered into safe channels rather than throttled down altogether. In any case, the experience of 1927-29 shows that when investors and speculators are convinced that large capital profits are in sight, mere manipulation of interest rates is not in itself an effective deterrent. To be decisive, rates must be raised to so high a level that the entire trend of the market is reversed.

It is true that a good deal has been done since 1933 to stiffen up the banks' margin requirements against security loans, and this will have a certain effect. This brake, however, acts equally against the home and foreign investor. Could President Roosevelt attain his objective by imposing discriminatory taxation against the foreign investor? He has already found that it is more or less impracticable to subject foreign capital profits to the American income-tax law, for his writ does not run in foreign centres. It might be possible to impose an export duty upon American securities, to be collected from the American seller, who would at once add it on to his selling price; and this could be made to reduce seriously the foreigner's expected profit margin. It might also be possible for him (at the cost of controversial legislation and a deliberate interference with American company law) to induce American companies to make certain classes of shares only eligible to American holders. Both these ideas have greater theoretical than practical attractions.

All in all, President Roosevelt must be left to work out his own solution. It is his problem, and, in the words of Michael Finsbury, we can do nothing but sympathise. Yet as signatories to the tripartite monetary agreement, we ought, like Gideon Forsyth, to feel certain qualms of con-

science, especially as we do not want to see the British and French Exchange Funds denuded of their gold to finance a rush of European capital to Wall Street. No one to-day can desire yet another addition to the network of foreign exchange restrictions, and capital ought, as far as possible, to be left free to take its own course. Yet at least we can watch our own situation in London, with the object of preventing it from getting out of hand and shaking the confidence of foreign investors. Already the Continent tends to regard Throgmorton Street and Wall Street as rival magnets. We can endeavour so to frame our own budgetary policy as to minimise any undesirable expansion of credit based on a programme of heavy Government borrowing. We can, and should, recognise that international monetary co-operation cannot end with the day-to-day regulation of exchange rates. It must embrace some co-ordination of credit control in the leading financial centres, and one of the objects of that co-ordination must be to tempt world capital to where it is really needed and to prevent its excessive concentration in one particular place. Here, then, is abundant scope for fresh monetary co-operation.

FINANCIAL NOTES

Extension of Monetary Agreement.—Holland and Switzerland have this week announced their adherence to the tripartite monetary agreement originally made between England, France and the United States. As Belgium had previously adhered, the agreement now comprises four of the six members of the former gold *bloc*, together with England and the United States. Holland and Switzerland have announced general agreement on the underlying matters of principle, such as the undertaking against competitive currency depreciation, and the United States has replied by extending to these countries the arrangement by which gold can be transferred freely between the monetary authorities of the United States and the other signatories to the Agreement. The British Treasury has also issued a statement welcoming the Dutch and Swiss adherence, but Holland has taken no steps to revalue the guilder in terms of gold, and the guilder is still free to fluctuate against gold, and is only restrained by the official intervention of the Dutch authorities. On the other hand, now that Holland is in the new monetary union, the operations of the Dutch Exchange Control can no doubt be made even more effective, and Switzerland has stated that she will be the first to stabilise her currency if England, France and the United States do likewise. Meanwhile, the American authorities have formally prohibited the private exportation of gold from the United States. Hitherto the American banks have been able to buy gold from the Treasury at a fixed price and export it under licence to those countries with whom the United States authorises gold dealings, but now the exportation of gold is to be confined to direct official shipments. This new step shows that Washington recognises that the world is now passing under a form of quasi-gold standard, the key to which lies in semi-rigid gold parities maintained by official international transfers of gold.

Devaluation and Gold.—The extension of the monetary agreement referred to above does not necessarily mean that there will be automatic gold movements between all the six participants in the agreement. The position is that the authorities of each of the five European countries will deal freely in gold with the authorities of the United States, but may deal less freely with each other. One reason is that neither England nor Holland is prepared to fix a definite price for gold in their own currencies. The point is of minor importance, because exchange discrepancies can easily be smoothed out by arbitrage through New York, which can be covered by gold transfers to or from the United States. So long as gold can move freely to or from one point of the hexagon, no direct movements between the other points are necessary. Meanwhile, the

French Government is beginning to modify its previous uncompromising attitude towards private profits accruing from the revaluation upwards of gold in terms of francs. At the time of devaluation it was politically necessary to impose penal taxation on these profits, as otherwise the devaluation legislation might not have got through the Chamber. To-day, it is realised that the sole effect of this taxation is to retard the repatriation of capital and gold, and on the whole there has been a slow outward flow of capital since the middle of October. France is now badly in need of new capital, both to finance the trade revival and also to enable the Treasury to cover its immediate needs, possibly by the issue of a short-term loan. There is an obvious chance for a compromise, which might take the form of withdrawing the punitive taxation on the condition that all private devaluation profits were used by these recipients as subscriptions to a new Government loan. If this expedient succeeded in attracting gold back to France, it might also help in the re-establishment of a free private gold market in Paris. Gold held by the authorities, including the Banque de France, would not be drawn into this market, but it is thought that this step would provide Frenchmen with a legitimate means of acquiring gold from other sources and so might have a reassuring influence upon French public opinion.

United States Balance of Payments.—The Department of Commerce has published, for the third year in succession, an estimate of the balance of international payments of the United States for the first six months of the year. This estimate is given in the following table, to which the figures for the first half, and for the whole, of 1935 have been added for the purposes of comparison (in the conventional notation a plus sign denotes a credit item or in-payment, a minus sign a debit item or out-payment):

UNITED STATES BALANCE OF PAYMENTS (\$ millions)			
	Whole Year, 1935	January- June, 1935	January- June, 1936
Merchandise trade (excluding silver)	+ 236	+ 29	- 9
Tourists' expenditure	- 292	- 103	- 115
Immigrants' remittances ..	- 115	- 64	- 57
Miscellaneous service items...	- 15	- 17	- 1
Interest and dividends	+ 375	+ 145	+ 190
Balance on current account	+ 189	- 10	+ 8
Gold movements	- 1,739	- 802	- 473
Silver movements	- 336	- 79	- 116
Currency movements	- 1	- 11	+ 3
Total	- 2,076	- 892	- 586
Long-term capital	+ 462	+ 100	+ 264
Short-term capital	+ 1,075	+ 560	+ 229
Balance on capital account	+ 1,537	+ 660	+ 493
Unrecorded items	+ 352	+ 242	+ 85

It is clear from these figures that the tendency for American trade in merchandise and services to balance, which has been obvious for some years, still continues. There is actually a small net balance of merchandise imports, while the service items add up to an almost equally small net credit. The increase in tourists' expenditures is a sign of reviving prosperity in America, while the very considerable increase in the receipt of interest and dividends provides strong testimony to the progress of recovery in the countries in which American funds have been invested. The capital accounts still show large abnormal movements, but smaller than in the first half of last year. The large continuing inflow of gold into America is one of the gravest obstacles to a re-establishment of an international monetary system based on gold. But it does not necessarily follow that this flow of gold is due to, or could be prevented by, American policy. Most of it is undoubtedly to be ascribed to the contrast between returning prosperity in America and continuing political uncertainty in Europe.

The Money Market.—The repayment on November 20th of the first instalment of £8 millions due on the French credit replenished bank cash and made money a little easier. Nevertheless, there was some clearing bank calling on every day of this week. The banks bought late January and early February Treasury bills at $\frac{1}{2}$ per cent. The usual rate on three months' bank bills was $\frac{1}{8}$ per cent. Discount houses have not been prepared to pay for bills at a lower rate, for as the clearing banks will probably cease buying bills from next week until the end of December, it is expected that sellers of bills will soon be willing to accept a rate of $\frac{1}{8}$ per cent.

	Nov. 5, 1936	Nov. 12, 1936	Nov. 19, 1936	Nov. 26, 1936
Bank rate.....	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Clearing banks' deposit rate ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate:—				
Clearing banks	$\frac{1}{2}$ – $\frac{1}{2}$ *	$\frac{1}{2}$ – $\frac{1}{2}$ *	$\frac{1}{2}$ – $\frac{1}{2}$ *	$\frac{1}{2}$ – $\frac{1}{2}$ *
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

It is not known how the French authorities are acquiring the sterling needed to repay the French credit, but it is significant that £10.2 millions of gold was imported from France during the past week. The floating assets of the Departments were also reduced by £15 millions during the week ended November 28th, and these cannot be due entirely to "inside" subscriptions to the new Funding Loan, for the total application money only amounts to £10 millions. Inside applications, of course, may have been paid up in full, but it looks as if the Exchange Equalisation Account has also been buying gold from the French authorities, and turning out Treasury bills to make room for it. This week the total tender issue of Treasury bills has risen from £603 to £608 millions, this being the first increase since the end of July. During September and October it contracted by £27 millions, mainly owing to tap sales of last year's Funding Loan and acquisition of Treasury bills by the Departments.

The Bank Return.—Last week witnessed a very moderate increase in the note circulation, but next week the normal month-end withdrawals will inaugurate the Christmas currency expansion, which may easily carry the circulation as high as £470 millions. In the absence of further gold acquisitions by the Bank, the Reserve may fall to about £40 millions.

BANK OF ENGLAND					
	Nov. 27, 1935	Nov. 4, 1936	Nov. 11, 1936	Nov. 18, 1936	Nov. 25, 1936
Issue Department:—					
Gold	197 6	248 7	248 7	248 7	248 7
Note circulation	401 3	447 1	446 6	444 9	445 6
Banking Department:—					
Reserve	57 1	62 5	62 9	64 6	63 8
Public deposits	19 7	27 2	14 9	14 1	12 1
Bankers' deposits	90 9	85 3	98 0	96 1	97 6
Other deposits	36 5	41 8	41 6	44 7	41 7
Government securities ...	85 5	82 0	80 4	79 0	71 2
Discounts and advances..	9 5	7 7	8 6	7 4	6 8
Other securities	12 8	20 0	20 3	21 7	20 4
Proportion	38 8%	40 4%	40 7%	41 7%	42 1%

The repayment of the first instalment of the French credit, amounting to £8 millions, has caused a small transfer of funds from "other" to bankers' deposits. Public deposits are now low, especially in view of next week's impending War Loan dividend. It looks as if the Treasury may have to borrow on Ways and Means from the Bank.

The Foreign Exchanges.—The London market has been fairly quiet. Continental political apprehensions have stimulated some selling of securities in Wall Street

as well as in London, and there has been a tendency to repatriate the proceeds on the ground that in times of anxiety money is safer at home. This has caused dollars to be offered, and sterling has appreciated slightly to \$4.90, thus reversing its previous downward trend. Spot francs have remained pegged by the French authorities at Frs. 105.14 to the pound. Three months' francs have improved to Frs. 1 discount (or under 4 per cent. per annum) but this is entirely due to support by the French Control which, unlike the British Control, operates in the forward market. One consequence of this control is that the exchange market has noticed no indication of the French credit repayment. Nor does last week's Banque de France return record any gold losses, so that the gold now coming to London has either been previously ear-marked, or else is being drawn from the French Exchange Fund. Both spot and forward guilders are stronger, chiefly because of a growing realisation that even if the guilder is still overvalued it is not likely to depreciate immediately. Open forward guilder positions are therefore being covered. Swiss francs are steady at Frs. 21.30, and the Swiss Bank rate has been reduced to the unprecedented level of $\frac{1}{8}$ per cent. There has been some official selling of Swiss francs in London against gold shipments to Switzerland.

Commercial Bank of Scotland.—In many ways the accounts of this bank confirm the general increase in Scottish business and banking activity during the past few years. The Commercial Bank's deposits and note circulation have both again risen, while there has also been an expansion in the bank's cash. Unlike the Royal Bank of Scotland, upon whose accounts we commented last week, the Commercial Bank's acceptances on October 31st last were higher than the year before. This is an interesting point, for the explanation of the year's decline in the Royal Bank's acceptances was that owing to the devaluation of the gold bloc currencies at the end of September the Royal Bank's forward exchange commitments on October 10th (the date of its balance sheet) had been reduced. The Commercial Bank's accounts are dated three weeks later, and so it appears that by then forward exchange business had recovered to its normal dimensions.

	1934	October 31, 1935 (£'000)	1936
Liabilities—			
Capital	2,250	2,230	2,230
Reserve fund	2,850	3,000	3,050
Notes in circulation	3,223	3,351	3,629
Deposits	38,932	40,784	42,017
Acceptances, etc.	1,731	2,209	3,299
Assets—			
Cash, etc.	4,120	4,437	4,738
Call and short money	2,786	3,241	3,419
Discounts	874	1,132	1,143
Investments	21,963	24,409	25,455
Advances	14,529	13,247	13,101
Net profits	379	397	400

The Commercial Bank's advances have fallen slightly during the past year. This is against the general banking trend, but it may be a fortuitous movement which manifested itself on the date of the bank's accounts. Net profits are higher, and the previous year's dividends of 16 per cent. on the "A" shares and 10 per cent. on the "B" shares are being paid once more. Last year's special bonus of 2 per cent. on the "A" shares, to celebrate the bank's 125th birthday, is of course not repeated, and instead allocations to various staff funds are being increased.

English, Scottish and Australian Bank.—In a comment on the accounts in last week's issue we stated that gross receipts had risen by £78 millions. This sentence should have read "gross profits have risen by £78,000." The correct description and results were contained in the table to which the comment referred.

THE STOCK EXCHANGE

RUBBER SHARE PROSPECTS

In the past few weeks the rubber share market has produced fireworks which rivalled those of the rubber famine days of 1925, and even suggested comparison with the celebrated boom of 1910. Seers who had asserted that the industry's youthful volatility had yielded to the staid respectability of middle age have been disillusioned. Rubber prices, after long hesitation, have easily broken through the charmed figure of 8d. a pound and reached a post-1930 record on Thursday at 8 $\frac{1}{2}$ d. Share quotations have leapt upwards with much enthusiasm and less discrimination. How far is the rise justified?

Students of the rubber market have commented on the paradoxical fact that the International Committee's decision to increase supplies of rubber next year precipitated the latest rise in rubber. The market, though aware of the general improvement in the position of the industry, seems previously to have been held back by uncertainty about the size of output quotas in 1937. The Committee's decision was thus an immediate signal for renewed activity. At the same time, the Committee, by permitting a 5 per cent. increase in the quota to 70 per cent. for the first half of 1937, preserved its reputation for holding a fair balance between the interests of consumers and producers.

The recent statistical trends in the industry are shown in the following table:—

PRODUCTION, CONSUMPTION, STOCKS AND PRICES
(Quantities in thousand tons)

Year	World Exports	Consumption			World Stocks outside regulated areas†	Ribbed smoked sheet (London) per lb.
		Total World	U.S. Crude	U.S. reclaimed		
1929	867.9	804.7	467.0	217.0	228.9	10.3
1930	826.1	712.8	376.0	153.5	361.1	5.9
1931	799.7	683.0	355.0	123.0	498.7	3.2
1932	708.7	689.0	337.0	77.5	502.6	2.3
1933	853.4	818.7	412.0	85.0	496.4	3.2

† At end of year.

* End of October.

Two major phases in the present restriction scheme since its inception in June, 1934, may be distinguished. The first eighteen months were spent in solving the administrative problems of regulating so great a diversity of producers—the most important being the control of native rubber shipments from the Dutch East Indies. The tax on native exports was clumsy. It produced unexpected consequences and was strongly resisted by the native growers. No less serious, however, was the check to world consumption late in 1934 and in 1935. Low rubber prices during the depression stimulated demand. But between 1932 and 1934 the price rose from an average of 2 $\frac{1}{2}$ d. per lb. to

6 $\frac{3}{4}$ d. per lb. and fell only slightly to 6d. a lb. in 1935. The rise immediately arrested the reduction of excessive world stocks, and produced complete stagnation in the demand for rubber during 1935. The Rubber Committee was thus impelled to increase the severity of restriction, and output was gradually reduced to 60 per cent. of standard quotas.

At the end of last year, however, a new phase began. Difficulties in the Dutch native situation were first acknowledged by an increase in the standard quota allotted to native producers, and subsequently appeased by energetic manipulation of the export tax, according to price movements, to leave the native a gross return (after tax) of about 12 or 13 cents per kilogram. Since the devaluation of the guilder the tax has been raised to no less than 57 cents, and now absorbs about 80 per cent. of the total value of native rubber produced. Simultaneously, registration of the native areas has been pushed forward, and individual native restriction is promised for the beginning of 1937. Although this may be an optimistic estimate, the native question has, for the moment at least, lost some of its terrors.

Meanwhile, world consumption has been rising more vigorously and stocks have been steadily reduced. A gradual improvement in prices has, therefore, persisted throughout the present year, with only minor checks. This progress was signalled by an increase in the quota to 65 per cent. of standard in the second half of 1936, and again underlined by the further 5 per cent. increase decreed for the first half of next year. The recent rise in prices, moreover, has not been accompanied by much outside speculation. Primarily, it has resulted from demand by manufacturers who had refrained from entering into long-term commitments until uncertainty about the 1937 production rate was removed. The conclusion, recently, of many large-scale forward contracts by estates at prices up to 8 $\frac{1}{2}$ d. (and in some cases up to 9d.) a lb., as far ahead as the end of 1937, also indicates greater confidence. Estimates of future demand may, indeed, have to be revised upwards. For the whole of 1936, absorption will probably total 1,000,000 tons—an increase of 60,000 tons on last year. But during the past six months the average monthly total has been approximately 86,000 tons, equivalent to 1,050,000 tons a year, against a prospective output, on a 70 per cent. quota (including supplies from Siam, French Indo-China, and areas outside the scheme), of about 970,000 tons. Even if there is no further increase in the rate of consumption, therefore, world stocks should continue steadily to fall.

From the short-term standpoint, clearly enough, the outlook for rubber prices appears satisfactory. But even at the present advanced stage of the recovery cycle, current rubber output represents little more than two-thirds of standard capacity, which in turn is probably well below

maximum production. A further increase in consumption is essential before real health can be restored in the rubber industry, and this involves a reasonable level of prices. Prudent investors may well hope that the Committee will still refuse, in the present active business phase, to sacrifice the future for the illusory gains of an immediate boom.

Meanwhile, prospects for rubber producers during the next year or so have improved. Rubber prices this year should average about 7½d. a lb., against 6d. in 1935, and for 1937 there is reason to expect a figure of over 8d. The future tendency of costs is more uncertain. The industry has largely, though not wholly, finished the process of restoring wage and salary cuts and making more liberal allowances for maintenance work, manuring and other essential expenditures which were drastically reduced during depression. But anxiety has recently been expressed, especially in Malaya, at the prospect of a shortage of labour if the level of permitted output is increased beyond 80 per cent. Although this problem may be eased by giving greater encouragement to Indian coolie emigration, an increase in the cost of plantation labour cannot be ruled out.

Again, under the terms of the Restriction Scheme, no new estates may be established, but up to 20 per cent. of the existing area may be re-planted before the end of 1938. Little was done in 1935, but a considerable increase has occurred in the present year and large areas have now been cleared. This has, to some extent, reduced the volume of current potential output, but the higher productivity of the re-planted areas, largely under bud-grafted rubber, should partly compensate for the complete cessation of new planting during a period of steadily expanding consumption. Despite the additional charges, most of the efficient estates have established their costs near a 4d. a pound basis. A number of company chairmen have further declared that, with the assistance of the higher quota, there should be no further increase in expenses per lb. during the next year or two.

Broadly, therefore, reasonably efficient companies should earn a profit margin of approximately 4d. a lb. on an increased output next year. But the distribution of the resulting gains will be strikingly uneven. The table at the foot of the preceding page presents the factors which control the level of rubber profits for a number of leading producers and makes a series of necessarily broad estimates of possible earnings in 1937, assuming that the quota remains unchanged at 70 per cent., and that rubber averages 8d. per lb. over the year. The figures, however, are conservative, for they exclude all income from investments and non-rubber sources. The costs figures are based on the last published accounts and will need modification in due course. We have therefore included a column to show the effect on earnings of a penny change in prices or in costs.

Such figures can obviously claim no prophetic accuracy, but at least they are a guide to the relative order of magnitude of increased earnings. In some cases potential profits are more than three times as high, in others only half as high again as in 1935 or 1935-36. In our final columns we use the figures as a yardstick for comparing existing share valuations.

Companies with the highest "gearing" to changes in price show, in general, the largest potential yields. The prospective advance in profits of these companies may not, even now, have been entirely discounted. But quotations for some of the lower geared producers certainly appear to have been carried too far. For an industry like rubber, an earnings yield of less than 6 per cent., after recovery has been discounted, is unduly low. If increased appropriations are made to reserves, against future adversity, the yield on dividends will be even less impressive.

The conclusions of this survey may be briefly summarised. Given a price above 8d., reasonably equipped producers should earn satisfactory profits even on a 70 per cent. quota. Conditions in the short run favour a further rise in rubber prices, but long-term interests will be better served by increased production, to encourage the improvement in demand now evident. Undoubtedly, as a contributor to an immediate rise in profits, a moderate rise in prices is more powerful than a moderate increase in output quotas. A comparison of the effect on earnings,

shown in our table, of a penny rise in price and a 5 per cent. increase in the quota, is illuminating. But if the controlling authorities take the long view, a further release of supplies may be reasonably expected in 1937. The benefits of increased output do not accrue to producers in the form of higher receipts alone; their ability to keep down unit costs in the face of higher wage demands and heavy replanting expenses depends largely on the spreading of existing overheads over a large volume of output. Again, the amalgamation, where possible, of separate small estates into larger units would assist the same object, and merits renewed consideration. Yet, to-day, approximately half the four hundred-odd rubber companies in the Stock Exchange list have a paid-up capital of no more than £100,000 and a planted area of less than 2,000 acres each. Many of the smaller estates, unquestionably, have a technical efficiency second to none. But their powers of financial resistance are disproportionate to the severity of possible future fluctuations in their industry. Present prospects are favourable, but history has a habit of repeating itself. And that is a consideration which divides prudent investment in selected rubber shares from indiscriminate speculation in a rising market.

INVESTMENT NOTES

A Sharp Reaction.—The advance in stock market activity and prices was sharply checked this week. It was six months since the markets had last paused for breath, and the pace in the interval had been strenuous. On May 26th the *Financial News* Index of 30 industrial ordinary shares (July 1, 1935 = 100) touched 108.6. On November 18th it stood at 124.9, having risen meanwhile at the rate of nearly 2½ per cent. per month. Last Thursday it had fallen back to 121.9. New York clearly shared London's feelings, despite the fact that in both centres the financial newspapers carried heartening reports of higher company earnings and dividends. After every sustained upward movement a technical readjustment performs an indispensable cathartic function. There is no evidence that either London or New York has become top-heavy to the point of immediate danger, though both markets are obviously carrying more hamper. Nor, with a few exceptions, has this week's movement gone far enough to produce the definitely more dangerous secondary phenomena of reaction—namely the uncovering of extensive stop-loss selling orders, and the creation of demands for increased margin on stocks carried by loans. The movement, nevertheless, affords an instructive commentary on contemporary market psychology. The markets are like the dancers at Brussels on the eve of Waterloo. Nothing can interrupt them except the distant sound of cannon. The parallel may not hold entirely; and this time, possibly, there may be no Waterloo. But last week-end, after Berlin and Rome had recognised General Franco's Government and the British Cabinet had met on a Sunday, the market for a moment thought it heard the guns. The double option on peace *plus* re-armament has so far been profitable. But it carries peculiar risks, of which speculators and investors alike have been sharply reminded.

"Country Register."—It is typical of the public's confidence in the Committee for General Purposes of the London Stock Exchange that this week's announcement of the Committee's intention to limit the return of half commission to country brokers (who are non-members of recognised provincial stock exchanges) to a list compiled under its own auspices, has been hailed everywhere as a progressive and praiseworthy innovation. The compilation of White Lists and Black Lists by private bodies frequently carries with it unpleasant implications of restraint of trade, but the Committee's present decision obviously bears no such construction. It is characteristic, again, of the Committee's approach to its problems that a measure which, directly and indirectly, will create an immensely valuable new form of protection for the small investor against the depredations of the bucket shop,

should be primarily conceived as the logical restriction of a pecuniary facility of the Stock Exchange to those who are prepared to submit themselves to Stock Exchange control. Formerly, the "test" for the sharing of commission between Stock Exchange members and country brokers has been the latter's inclusion in a Somerset House Register, admittance to which appears to have been, if anything, more easy to obtain than a motor-driving licence. Henceforth, the Stock Exchange will keep its own register, every name on which will need to be sponsored by two members, will be reviewed annually, and will be subject to removal at any time without the specification of any reason. One result will be a much closer scrutiny to ensure that the Committee's stipulations—particularly the prohibition of advertising—are observed. It will now be easier for a camel to pass through the eye of a needle than for a bucket shop to obtain, and trade on, the species of Stock Exchange "recognition" which inclusion in the List will imply. Unfortunately, for various reasons, brokers with London addresses (who are not Stock Exchange members) are ineligible, although the respectability of many is unquestioned. This geographical distinction may appear fortuitous and, from a public point of view, unfortunate, but the difficulties in the way of its removal are formidable. The Committee's decision comes aptly in the same week as the announcement that Sir Archibald Bodkin, formerly Director of Public Prosecutions, will be chairman of the Board of Trade committee on fraudulent share pushing.

Let Speculators Beware!—Three more restraints have been imposed upon trading on Wall Street, all with the aim of curbing speculation. These follow rapidly on the President's statement of concern over foreign purchases of American securities (which we discuss in a leading article on page 416), and suggest that general measures have been preferred to discriminatory action against foreigners. The Securities and Exchange Commission has decided that members of the Stock Exchange trading on or off the floor on their own account must work to the same margin regulations as the general public. Trading by commission houses, or their partners, on their own account must henceforth be on a cash basis. The object of both regulations is to hasten the segregation of broker and dealer functions, openly desired by the Commission. The volume of speculative dealings will be reduced by limiting floor trading by members on their own account, which in recent weeks has been estimated at about 20 per cent. of total turnover. A third regulation to be imposed on Wall Street is indicated by a Federal Reserve Board proposal to abolish the three-day period of grace allowed at present before margin is put up. All these measures are signs of official concern over the dangerous possibilities of credit expansion for Stock Exchange speculation. If the policy is further pursued, friction and perhaps some hardship will be inevitable. But if the repetition of past speculative orgies is prevented, the price will not be too high.

Railway Rebates Bill.—The text of the Railway Freight Rebates Bill consists of three clauses and a short schedule of considerable legal complexity, but its import for the railway companies and their stockholders is fundamentally simple. In its provisions the Bill (which began its legislative course with a second reading in the House of Lords on Tuesday) follows the outline suggested in the *Economist* of October 3rd, page 26. The overpayments which the railway companies have made into the Rebates Fund during the past quinquennium (arising from excessive rating assessments which the House of Lords finally set aside in January this year) now amount to £9½ millions. On the new assessments agreed for the 1936-41 quinquennium, the income of the Rebates Fund is estimated at £2,330,000. It would, therefore, employ its full resources for four years directly to repay the railways' debt, without providing for any rebates. Payment will accordingly be made in a lump sum from the proceeds of a loan raised on the security of the income of the Rebates Fund. The service of the loan will cost some £800,000 per annum over its projected life of 16 years, and the balance of rather more than £1½ millions remaining annually in the Fund will be

available for a modified scheme of rebates. Under the former dispensation 70 per cent. of the Fund's receipts were used for rebates on coal and coke freights for export and for steelworks, 20 per cent. on certain agricultural traffic, and the balance mainly for industrial freights. The last category is to disappear, and its percentage will be taken over by export coal—now 80 per cent.—while agricultural rebates—20 per cent.—are to be limited to milk and livestock. During 1935-36 the rebates paid by the Fund amounted to £3,600,000. Under the new provisions, export coal (as we show in a Note on page 409) will receive a lower rebate than before, while the steel industry will lose its place in the scheme. This plan combines the virtues of simplicity and equity. The railways receive immediate payment, subject to the final ascertainment of the sums due to them, while the revised Rebates Schedule fortunately coincides with a period of boom prosperity in the steel industry, when increased freight costs can comfortably be met.

The Bill's Implications.—The Bill has two significant consequences for the investor. The new loan, in the first place, will be of high rating, for its service will be secured among the working expenses of the main lines. It will not, apparently, qualify for trustee status, although in point of security it should be comparable with the soundest home corporation issue and the sinking fund provisions over 16 years will undoubtedly prove attractive. The passage of the Bill can hardly occupy much Parliamentary time—indeed, Clause 1 (3) ordains a meeting of the Railway Rates Tribunal before January next to estimate the relief for the first nine months of 1937. What is the railway stockholder's position? The companies are to receive £9½ millions from the Rebates Fund and rather over £3½ millions from the local authorities—repayment of the latter sum is now under discussion between the local authorities and the railways directly. The total credit for the L.M.S. is of the order of £5½ millions, for the L.N.E.R. nearly £4½ millions, and for the Great Western and Southern just over £1½ millions and £1½ millions respectively. How will the railways treat these sums? The L.M.S. took £885,000 into the 1935 accounts and the Southern £250,000. But Sir Josiah Stamp, at the L.M.S. meeting last February, explicitly stated that the board would transfer the repayments for previous years to reserve, and would not treat them as profits available for 1936. No other spokesman has authoritatively discussed the matter, but the Great Western, having drawn £4½ millions from reserves to maintain the 3 per cent. ordinary dividend, and the L.N.E.R. with its special renewals problems, will doubtless consider this lead carefully. If it is generally followed, market hopes of windfall distributions from arrears repayments will be disappointed. The chief interest of stockholders, in fact, is in the companies' reduced rating liability for the current quinquennium (already long discounted by the market) and the presumption that the boards, being more comfortably endowed with cash, may distribute current earnings nearer to the hilt. But they are so near the hilt already that there is little left for them to grasp.

Far-Eastern Bonds.—At a time when markets in general are the prey of politics, it can hardly be expected that the foreign bond market will clothe itself with distinction. The European section, inevitably, has been depressed this week. The incipient recovery among South American bonds, also, has been checked, and, in the Far East, Japanese issues have again reacted sharply. Some confusion, apparently unnecessary, has been caused to British bondholders by vague reports of a tax on the coupons of Japanese external loans. Later rectification of these reports, however, has made it clear that no levy will be inflicted on bonds held outside Japan. This explanation, however, produced no recovery in the market, for it coincided with the "leakage" of the alliance between Japan and Germany. Nor has the troubled state of politics left Chinese bonds untouched. Judged solely in economic terms, China's potentialities as an investment field are considerable, and they were suitably stressed by Sir Frederick Leith-Ross in

a public address this week. China's recent record of treatment of her creditors, moreover, is highly praiseworthy. The Customs Loans have always been fully met; the Salt Gabelle Loans, after a temporary default, are receiving full interest, and arrears of principal repayments will be overtaken by 1940; finally, schemes for dealing with the defaulted railway loans have been agreed, with the sole exception of the Hukuang Loan. These facts are clearly brought out in an authoritative and detailed booklet compiled by a leading firm of jobbers in the foreign market, which also includes a map of existing and projected railways. This survey emphasises the basic improvement in China which has resulted from the Central Government's control of the interior, and the significant contribution made by improved means of transport—including a co-ordinated system of railways development out of local funds. Improved administration is evident in the steadily advancing collections of the Salt Gabelle, against which the Hukuang Railway and "Crisp" Loans, together with the "Vickers" Notes and the "Marconi" Bills and specifically secured. If the investor could persuade himself that the unknowns in the Far-Eastern political equation could be easily resolved, China's recent improvement would make a far deeper impression in the bond market.

Actuaries' Investment Index.—November has closed to the accompaniment of several days of political wrath and the correction of a rather top-heavy speculative position in several groups of industrial and commodity shares. This is recorded in a fall in the Actuaries' Investment Index of 178 industrial equities during the past week. The achievement of post-depression "highs" for many leading shares in the second week in November, however, accounts for a rise in the total index over the month from 90.4 to 91.2 on last Tuesday's prices, compared with a level of 80.1 twelve months ago (December 31, 1935 = 100). The yield figures are 3.57 per cent. this week, 3.54 per cent. a month ago, and 3.73 per cent. a year ago. A selection of component indices follows, together with the usual monthly calculations for representative fixed-interest groups:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Year ago (Nov. 26, 1935)	Month ago (Oct. 27, 1936)	This week (Nov. 24, 1936)	Year ago (Nov. 26, 1935)	Month ago (Oct. 27, 1936)	This week (Nov. 24, 1936)
Fixed Interest						
2½ per cent Consols.....	151.4	151.0	150.1	2.94	2.95	2.97
Misc. Indust. Debts. (17).....	124.8	126.2	126.1	3.89	3.91	3.91
Misc. Indust. Preference (44).....	119.3	123.0	123.0	4.31	4.19	4.20
Ordinary						
Coal (7).....	88.0	113.9	117.5	4.37	3.12	3.11
Cotton (6).....	47.3	47.5	49.2	2.09	2.01	1.95
Electric Light and Power (16).....	131.7	134.6	132.7	3.87	3.79	3.85
Oil (5).....	74.4	93.3	89.2	3.10	2.91	3.05
Home Rails (4).....	63.7	83.6	87.1	1.58	1.31	1.24
Stores and Catering (20).....	83.0	88.5	91.5	3.79	3.64	3.69
Breweries and Distilleries (21).....	136.7	155.7	160.2	4.11	3.78	3.76

The fixed-interest groups give a display of impressive steadiness during the month, and the yield differential between preference shares and debentures is still sub-normal. A variety of influences have been at work in the industrial markets. Impressive brewery company results, recovery possibilities in depressed industries like cotton (and, to some extent, coal) the railway freights rebates legislation, and the correction of technical disparities in the oil market, are all evident. But over each group, this week, has hovered the dismal influence of foreign affairs.

COMPANY NOTES

London Tin Scheme.—This is a short title for a long scheme, which aims at the reconstruction of the London Tin-Anglo-Oriental Mining-Metal Securities group. Essentially, this was the creature of its guiding personality. Those who succeeded to the task of clarifying a complicated system of interlocking interests deserve the thanks of all shareholders. Briefly, London Tin Corporation is to acquire all the tin assets of the two other companies, on terms based on the position of each company at April 30th last. That condition is basic to the whole scheme. The capital of London Tin Corporation will be reduced, and will consist solely of £3,598,236 in 4s. ordinary shares. The

Details of the Issue of which the full prospectus will be advertised on December 1st

THE SUBSCRIPTION LIST WILL OPEN AND CLOSE ON WEDNESDAY,
DECEMBER 2nd, 1936

FOR AN ISSUE OF

1,290,000 SHARES OF 5s. EACH AT PAR

- The Company has been formed to acquire the exclusive licence to manufacture and sell throughout the British Empire the world-renowned LORRAINE AERO-ENGINES, which at the present time are used on such well-known aircraft as the Fokker, Breguet, Potez and Farman. The engines are also used exclusively in the French Colonial Air Forces and almost alone by the French Government for the French Trans-African line from Algiers to Madagascar.
- Aircraft using Lorraine Engines have achieved many records for speed and endurance, including a world's speed record in 1932 and the record between Paris and Madagascar in 1935. The engines were also used in the famous 15,000 miles African flight accomplished by a Squadron of 28 Potez Aeroplanes, which were in the air for a period of 180 hours under most arduous atmospheric conditions; they were used in South Atlantic flights and have been employed by many Foreign Governments, including Holland, Belgium, Italy, Japan, Poland, Roumania, Russia, Spain, Turkey, Yugoslavia and several South American countries.
- Different types of Aero-Engines are being produced by the Lorraine Company ranging in power from 100 h.p. to 1,200 h.p. Outstanding among which are the "Petrel," a "V" 12-cylinder water-cooled, super-charged engine of high power and endurance and the "Sterna," a "V" 12-cylinder of the latest type, also a new 1,200 h.p. 18-cylinder air-cooled engine.
- The exclusive licence includes the right to manufacture and sell Lorraine Aero-Engines within the British Empire for use in high-speed marine craft for both naval and civil purposes; these additional rights should be extremely valuable.
- With 20 years' expert experience the Company will be in an excellent position to manufacture highly technical accessories, such as Gun Fire Interrupter Gears, Balanced Torque Propellers, Air Compressors, Oil Pumps for Retractable Undercarriage and Flap Operations, etc. It is of great importance that the Company will be in a position to commence manufacturing immediately without incurring heavy experimental costs.
- The Board includes men with wide and varied experience in the Aircraft, Engineering and Accessory business, and they will have the assistance of Monsieur Barbarou, Managing Director of the Lorraine Company, who will act as technical consultant without salary. The Lorraine Company will also furnish technical advice and assistance in the initial stages of the Company's development.
- The issue will provide sufficient working capital to enable the immediate erection of completely modern specially equipped works on a freehold site of about 12 acres at Coventry. These works are under contract to be completed in six months. The Directors are confident that the Company is entering a highly promising field at a very favourable time, and that it should be able to earn highly satisfactory returns on its share capital.

Copies of the full Prospectus, upon the terms of which alone applications will be considered, and Forms of Application can now be obtained from:

circular system of interlocked holdings will be eliminated, except for a residual holding of London Tin shares by Metal Securities, which will retain its separate existence while its Ship Carbon interests are being brought to a satisfactory earnings stage. To determine the participation of the two principal concerns—London Tin and Anglo-Oriental—the net assets position has been computed, then subjected to a deduction of 14 per cent. in each case to form an investment reserve, with an additional 10 per cent. to cover certain doubtful Anglo-Oriental investments. The resulting sums have been finally apportioned between the preference and ordinary shareholders. After cancellation of the Anglo-Oriental holdings in London Tin, the respective participations of preference and ordinary shareholders are 57.4 and 42.6 per cent. for London Tin, and 66.7 and 33.3 per cent. for Anglo-Oriental. The final distribution of shares in London Tin, after providing for an allotment to Metal Securities for the assets acquired, is shown in the following statement:—

London Tin—			
Preference shareholders† receive	7,606,131 shares or	42.3%	
Ordinary shareholders‡	5,635,050	31.3%	
Anglo-Oriental—			
Preference shareholders	3,000,000	16.7%	
Ordinary shareholders‡	1,000,000	5.5%	
Metal Securities, Limited receives	750,000‡	4.2%	
† Excluding Anglo-Oriental. ‡ Excluding Metal Securities			
§ Including allotment as shareholders in Anglo-Oriental.			

The effect of these changes is outlined in a *pro forma* balance sheet. It reveals a considerable "hidden reserve" arising from the book valuation of the assets. These are shown at £2,216,085 for quoted, and £1,080,474 for unquoted securities, the respective amounts for subsidiary company interests being £293,220 and £925,300. The floating assets position will also be reasonably comfortable.

Grounds for Approval.—The basic method of the London Tin scheme can hardly encounter objection. Clearly, workmanlike proposals could not have been produced in any other way. The ordinary shareholders of

London Tin may conceivably feel themselves less generously treated than those of Anglo-Oriental—the latter, in fact, would have difficulty in making out a satisfactory claim at all, on the assets values taken over. But the interest of London Tin shareholders in the scheme as a whole far exceeds any tangible advantage which might be gained by active opposition. The support of the buffeted ordinary shareholders of Anglo-Oriental is essential to the scheme, and the income participation rights of London Tin preference shares also claim some recognition. All schemes, ultimately, turn upon earning power, but unfortunately this criterion is inapplicable at the moment to the present plan. A calculation of break-up value, however, suggests that the new 4s. shares in London Tin should be worth about 5s. 6d. On this basis the existing shareholders participate as follows:—

	Wednes- day's Quo- tation	Thurs- day's Quo- tation	New 4s. shares receivable	Estimated break-up value
London Tin—	s. d.	s. d.		s. d.
10s. Preference.....	13 0	14 6	3	16 6
10s. Ordinary	10 3	10 6	2	11 0
Anglo-Oriental—				
£1 Preference	14 0	14 4½	3	16 6
5s. Ordinary	3 0	2 9	1	2 9

That no striking anomalies exist between present market prices and the potential capital value of the new shares may be some consolation to existing shareholders.

Further Brewery Results.—The brewery dividend season is now at its height. During the past week more than a dozen reports have been published. They show almost consistent progress, varying in rate, but leaving no doubt of the general advance in profits. The preliminary announcement of *Ind Coope and Allsopp*, for instance, brings the news of a 2½ per cent. bonus, which raises the total dividend from 25 per cent. to 27½ per cent. The general reserve provision is doubled at £100,000, and the amount carried forward is increased by £20,000. Even with full accounts, strict comparison with previous years will be impossible, owing to the acquisition of Nalder and Collyer during the past year. The latest results, however, imply a further substantial improvement over the previous year, which suggests that the amalgamation with Allsops, coupled with general recovery, is giving handsome returns. The *Mann, Crossman and Paulin* report is less spectacular, for profits are practically unchanged at £399,615, and the dividend is maintained at 20 per cent. Good progress has been made by *Benskin's Watford Brewery*, operating in the prosperous outer circle of London. Profits have increased from £447,431 to £461,638, and the dividend is raised from 17½ per cent. to 20 per cent. The greater expansionary power of companies serving in the Midlands and the North is again reflected in the *Telley* profits, which at £289,575, are nearly £41,000 higher. The dividend, however, is unchanged at 12 per cent, since the increase in profits is absorbed by more liberal provisions for property improvement and pensions. The improvement in the earnings of *W. Butler and Company* is on a smaller but still satisfactory scale, and the increased dividend of 17 per cent., tax free, is still amply covered by earnings of 23.2 per cent., tax free. *Hull Brewery* is paying 17½ per cent., against 15 per cent., from total profits of £130,556, against £123,780. *Morgans Brewery*, which operates in the Eastern Counties, make modest but steady progress, profits having risen from £124,646 for 1932-33 to £138,663 in the latest year. A dividend of 15 per cent. (against 17½ per cent.) is payable on a capital increased by the 20 per cent. capital bonus. The defence programme may have assisted the recent progress of *Brickwoods*, the Portsmouth brewers. The latest profits have reached £240,613, compared with £215,887 for 1934-35, representing an increase comparable with that of the two preceding years. The dividend is raised to 14 per cent., and reserve provisions solidated assets and earnings statements, together with a print of the chairman's speech. Among the reports issued by controlled companies, *Worthington* profits are some £20,600 higher, at £405,864, while *Peter Walker and Sons*, £461,715, should contribute materially to the parent company's results.

South Durham and Cargo Fleet.—The market's first reaction to the South Durham dividends was one of disappointment. It was only moderately appeased by the full accounts. It is true that they show an increase in total profits from £163,435 to £217,272 (which is matched by a comparable advance in the total profits of Cargo Fleet), but the directors have taken a cautious view—one, indeed, which it is difficult to criticise—of the requisite depreciation provision to match a period of peak earnings. South Durham's provision is consequently raised from £55,000 to £85,000, while that of Cargo Fleet is increased by no less than £75,000 to £120,000. After provisions on this scale, the increased dividends of the two concerns, together with the respective issue expenses written off and the £30,000 tax provision of Cargo Fleet, are met with a small margin. The companies' recent revenue accounts are analysed below:—

	South Durham Steel and Iron			Cargo Fleet Iron		
	1934	1935	1936	1934	1935	1936
Profit	105,199	163,435	217,272	94,156	150,636	223,402

* Taxation reserve. † After charging £19,440 Debenture stock issue expenses. ‡ Including £3,000 from income tax account. § After providing £46,474 premium on debentures redeemed and new debenture issue expenses.

Basically, then, the results are satisfactory, but they have not accrued directly in full measure to the shareholders. There is no doubt that the group has expanded its operations considerably—a 10 per cent. addition to the fixed assets and the striking expansion of the current items clearly indicate as much. But the real effect of the £750,000 debenture issue of South Durham had not been felt at September 30th. The new coke ovens and plant improvements at Seaton Carew were still in process of construction, and could have made no contribution to the past year's results. In a full year, the new stock will require £30,000 for service, and during the current year some £26,750. The prospects for the ordinary and "B" ordinary shares therefore depend not only upon the maintenance or otherwise of the present activity in the steel industry but also upon the extent of the economies realised from the new coke ovens. The latter may well be considerable, and if shareholders are justified in assuming that the past year's depreciation provision contains an element of opportunism, the prospect for the next twelve months seems good. The ordinary shares have fallen from 63s. 3d. before the dividend announcement to 60s. 3d. and yield £4 per cent.

Higher Dividends in America.—Recovery has brought higher earnings to many American companies, and President Roosevelt has, so to speak, distributed them. Some substantial dividends consoled the markets this week for a weak start on Monday, when the Dow Jones' index for 30 industrial shares fell 3½ points. On Tuesday, United States Steel Corporation announced a further payment of \$7 per share toward preferred arrears, which will thus be reduced to \$9.25 per share. Republic Steel had already announced a payment of \$12 per share for preferred arrears. Increases in wage payments have been offered by a number of steel companies. The process of recovery has advanced a stage further with the decision of Carnegie-Illinois Steel, a subsidiary of U.S. Steel, to increase its prices by up to \$4 per ton from December 1st for deliveries during the first quarter of 1937. Other companies are expected to follow this example. The Shell Union Oil Corporation has

announced that all preferred arrears, amounting to \$9,727,300, or \$26.12 per share, are to be paid off. Dividends on the common stock are to be resumed (for the first time since June, 1930) by a distribution of 25c. per share. The extent of the recovery may be seen from the reported net profit for 1935 of \$6,812,836, compared with a loss of \$1,353,901 in 1934, and a profit for the first nine months of 1936 of \$16,512,053, compared with \$4,411,649 in the corresponding period of 1935.

Turner and Newall and United Molasses.—These two concerns have but one thing in common. Both have issued preliminary profits statements this week, the first excellent and the second very good. Turner and Newall's net profits for the year to September 30th have reached a new high record of £1,163,308, compared with £780,625 for the previous year. The ordinary dividend is raised from 12½ per cent. to 17½ per cent., and the general reserve provision is doubled at £200,000. These results must compel the investor's admiration. The ordinary stock units have appreciated rapidly in recent weeks, and reached 111s. recently. That they reacted sharply before the dividend announcement was evidently attributable to nervous market conditions and not to any disposition of stockholders to divest themselves of one of the best general equities in the Stock Exchange list. Detailed consideration of the results must await the publication of the report in a fortnight's time. On the United Molasses statement, it appears that the group's earnings should represent some 22 per cent. for the United Molasses equity after raising the depreciation provision to £303,678. Consolidated profits, in fact, rose from £718,200 to £789,044. The dividend of 14 per cent. is broadly in accordance with revised market estimates, and the current yield on the 6s. 8d. shares at 25s. 1½d. is slightly below 4 per cent. Comparison of the net results is affected by a considerable reduction in the amount provided for the redemption of funded income stock. It would appear that approximately £120,000 less has been required for this purpose, and the current year's accounts will benefit from the elimination of the charges of £53,413 required last year. Here, again, detailed comment must be reserved, but it is desirable, perhaps, to stress two factors in the Company's equation—the continued improvement in the freight markets, and the directors' express determination, so far, to maintain the present level of depreciation.

Tube Investments.—The full report of Tube Investments fully bears out the excellent impression given by the 17½ per cent. dividend announced some weeks ago. It shows the company in the midst of an expansion programme which, for the time being at any rate, has swept aside considerations of regular self-financing through capital bonuses. If justification were required for this almost inevitable policy, during a period when resources have been taxed to the limit, it is clearly to be found in an increase of 27 per cent. in the dividends received from the company's subsidiaries, during the past year, and in the certainty, during the current year, that a rapid expansion programme has been required to meet the expansion in demand. With profits at a peak, however, the directors have made a substantial net transfer to reserve, after increasing the contingencies and special depreciation reserve for the whole group from £400,000 to £575,000. Last year the chairman

The Problem of the Foreign Exchanges

by L. L. B. ANGAS

This book goes right to the heart of one of the most crucial economic questions confronting the business-men and statesmen of our day.

Financial News: "Mr. Angas has written the most clear and searching criticism of the gold standard which I have ever read."

Journal of the British Institute of Bankers: "His summing up of the pre-requisites of a successful functioning of a free gold standard is masterly."

Macmillan & Co., St. Martin's Street, W.C.2.

ADVERTISING

WE BELIEVE the precipitous adoption of quality-whittling, price-cutting methods of selling cannot operate to the general good. Far too often such methods have produced long-lingering sickness in products worthy of healthy, fruitful life as contributors to National well-being.

In our chosen capacity as producers of Common-sense Advertising we prefer always to work for the development of better class products which can be sold at the higher, more stable prices justified and maintained by CHARACTER.

Edgar Firth Advertising Service

14, John Street, London, W.C.1

Telephone: CHAncery 7084

Here are some of the interests we serve:

OTTERBURN TWEEDS are "thoroughbred." Even in their own class they are among the more highly-priced materials—and the sales grow steadily.

OTTERBURN BABY RUGS—the highest-priced but surest safeguard of Baby's health and comfort. Over 350,000 Mothers have bought one.

CABANAS CIGARS—the first Havana to be branded, 140 years ago. No better Cigar is made... bought in Cabinets costing anything up to £1,000.

BRITISH ROAD TAR is of National importance. Economical in use and maintenance—the question of road safety is of primary consideration.

"STERLING" Ready-to-Wear GARMENTS for Ladies and Children... made in Stapley & Smith's own Factory and sold at firm prices on the back of style and quality.

PLASMON SCOTCH OATS cost more than ordinary oats. Because of the addition of "Plasmon" and its extra nourishment, they are well worth their price.

IRIDINOID PENS, a character product made by craftsmen and quite incorrodible. Cost more but outlast at least six ordinary pens.

ZENOBIA True Flower Perfumes. The fragrance of English Gardens affectionately reproduced in England. Sold at prices which are not low—or flamboyantly high.

remarked that additions to that account amounted almost to making assurance doubly sure. The following table shows the recent trend of earnings:—

	Years ended October 31,		
	1934	1935	1936
Total revenue	371,370	502,784	639,561
Fees and interest	7,556	6,778	13,679
Preference dividends	44,945	44,946	44,220
Ordinary and liaison shares*—			
Earned	313,869	451,060	581,662
Paid	194,459	217,215	421,116
Earned %	16.4	20.8	24.2
Paid %	10*	10*	17½
Reserve	102,757*	230,545*	150,000
Carry forward	106,119	107,276†	112,669†

* Also 10 per cent. capital bonus requiring from reserve: 1934, £252,757; 1935, £280,545. † After writing off capital increase expenses: 1935, £2,143; 1936, £5,152. ‡ Liaison ordinary shares rank for dividend as equivalent to £1,000 ordinary stock.

The consolidated balance sheet (which, valuable though it is, might well be supplemented by a group earnings statement) shows a general advance in fixed and current assets. It also discloses a reduction in the group interest in Stewarts and Lloyds (other than the liaison share arrangement) from £116,315 to £67,310—a change whose significance is not discussed in the report. The directors are outspoken on the re-armament boom. They "are not enamoured of the violent fluctuations . . . inseparable from the armament trade, and have only made provision to supply armament material . . . directly ensuant from (the company's) normal activities or such as the State has a right to expect. . . ." Tube Investments remains a construction trade equity first and foremost, and only a re-armament share indirectly. At 90s. it yields £3 18s. per cent.—a figure in keeping with its steady prospects of expansion.

TO-DAY

Disastrous fires occur every day, and only too often the vital and uninsurable records of a business are destroyed.

Tate and Lyle.—The publication of the Tate and Lyle report confirms that the slight fall in total profits from £1,363,140 to £1,324,415 (already foreshadowed in the preliminary announcement) has no great significance. The decline, in fact, arises entirely from a fall of £47,123 in revenue from investments and rents, and trading profits are slightly higher. The following table of earnings thus reveals no considerable changes:—

	Years ended September 30th		
	1934	1935	1936
Trading profit	1,189,720	1,183,907	1,192,315
Dividends and Rent	114,968	179,233	132,100
Fees	7,570	7,098	7,013
Other provisions	225,000*	...	...
Debt interest	91,250	91,250	90,562
Preference Dividend	71,500	71,500	71,500
Ordinary Shares:			
Earned	909,368	1,193,292	1,155,340
Paid	765,000	870,400	868,700

Paid %	22½	18.2, 857†	18½

Reserves

Carry Forward	150,000	310,000	284,000
	43,341	56,233	58,874

* £50,000 written off plant, etc., and £25,000 off properties; £150,000 tax equalisation. † On capital, increased by 40 per cent. bonus (or 37.9 per cent. earned, 25.6 per cent. paid on £3,400,000 old capital).

In the balance sheet a few items stand out. Fixed assets and cash are higher—the latter by nearly £1,000,000—but stocks are actually £500,000 lower at £1,187,918, while trade and general creditors have increased from £877,139 to £1,581,831. The general reserve is, doubled at £1,200,000, for in addition to the £284,000 allocation from profits, a transfer of £316,000 is made from the investment reserve, which is no longer required owing to the changing nature of the investments. It is significant that investments in subsidiary companies have fallen from £634,402 to £34,989, while interests in associated concerns have risen by a comparable amount. These changes presumably reflect the company's new interest in cane sugar producers. Though, in the past, the company has obtained substantial profits from beet sugar, the new regime in that industry, as Sir Leonard Lyle himself has implied, offers fewer attractions. The new policy of assisting Colonial cane sugar producers—such as Caroni Sugar Estates—is, therefore, significant, and may well prove remunerative in the long run. The prospects of steady progress of the concern are measured by a yield of £4 2s. per cent., which the shares now offer at their present price of 89s. This is a fair valuation for investors who take a long-term view.

Consolidated Gold Fields.—The disappointment occasioned by the mere maintenance of the Gold Fields' final dividend was accentuated on the publication of the accounts, which show a decrease of some £200,000 in the earnings of the operating company. The repetition of the 20 per cent. dividend involved a larger amount, however, since some 248,690 New Consolidated Gold Fields shares had been issued to Consolidated Gold Fields, which in turn had accepted an offer for a corresponding number of its own shares. We give below a table of salient figures for the past three years:—

	Year ended June,		
	1934	1935	1936
New Consolidated Gold Fields			
Investments	4,882,140	6,068,470	5,373,180
Shares in subsidiaries	1,157,590	1,217,670	1,232,490
Properties and ventures	169,260	122,970	101,110
Loans at short call	731,540	529,840	347,870
Debtors	263,680	214,830	221,790
Cash advances, etc.	354,720	397,070	496,840
Creditors and dividends	660,040	561,380	2,091,380
Consolidated Gold Fields			
Net profit	659,570	662,630	691,260
Preference dividends	140,240	143,170	142,780
Ordinary dividends	517,160	516,250	544,740
Ordinary dividend per cent.	20%	20%	20%
Carried forward	19,540	22,750	26,480

A substantial reduction in investments is shown in the report, which evidently explains the extraordinary expansion in cash to nearly four times the amount of a year ago. The net premium of £767,800 realised upon the issue of the

New Consolidated Gold Fields' shares was transferred to depreciation reserve, while £300,000 has again been allocated to reserve, raising the fund to £1,300,000. At current market prices the investments show a further unrealised profit. The prospects of most of the company's South African interests have been discussed here on the publication of the reports. Since the close of the financial year, the company has taken over the administration of H. E. Proprietary and also the administrative and technical control of Luipaards Vlei, to which favourable references are made. Satisfactory progress is recorded by most of the company's varied interests in Rhodesia and West Africa, and by the tin mining concerns. The operations of Fresnillo, however, have been adversely affected by labour difficulties and by the fall in silver. It seems assumed that no final dividend will be paid by Wiluna, but a favourable account is given of the adjoining Moonlight property, in which the company is interested through Gold Fields Australian Development. Gold Fields shares at £5 x.d. show a yield of 4 per cent.

Other Company Results.—An analysis of the reports of 51 further companies appears on page 446. The results of a number of brewery companies are discussed in a Note on page 424. *Charterhouse Investment Trust*, who have substantially increased their net profits from £94,137 to £140,002, are raising £625,000 by an issue to shareholders with a view to broadening the basis of the concern by increasing the holdings of quoted securities. *Tobacco Securities* profits are some £10,000 higher at £537,832, the dividend remaining at 15 per cent. and the general reserve allocation of £25,000 being unchanged. The amount earned for dividends by *Strand Hotel* is £123,000, against £120,000 and against £119,140 for each of the three preceding years. Variations in the trading position cannot be studied, as these profits, expressed as a round sum, are arrived at after making reserves of unknown amount for contingencies and depreciation. The rapid recovery in *Stewarts and Lloyds of South Africa* profits continues, with net earnings of

£146,944, against £123,257. Shareholders of *Yarrow*, who are paid 15 per cent., against 10 per cent., are informed in the report that prices leave only a small margin, the year's profit being rather under 5 per cent. on turnover. *Armstrong-Siddeley Development* is paying as much as 107½ per cent., compared with 10 per cent., and the profits of £399,620 for a 10-month period are more than double those for the previous full year. *Bowater's Paper Mills* earnings total £155,528, against £131,768, though the accounts include no benefit from Edward Lloyd Investment. Similar progress is shown by the *W. V. Bowater* subsidiary, and *Bowater's Mersey Paper Mill* are paying a first ordinary dividend of 5 per cent. The full report of *Dennis Brothers* shows that net profits continue to advance at a satisfactory rate, being £134,187, against £119,882. Characteristic earnings stability is again shown by *Hay's Wharf*, whose net profits are £9,225 higher at £244,823. Dividend announcements in the past week include an increase of 7½ per cent. in the *Timothy White* payment, which amounts to 30 per cent. for the year. Profits are £49,223 higher at £327,369. The *London, Midland and Scottish* board announces that the final dividend on the 5 per cent. redeemable preference stock will be paid on January 1st.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings: Royal Bank of Scotland, English, Scottish and Australian Bank, Hawker Siddeley Aircraft, Johannesburg Consolidated Investment, Wankie Colliery, Wall Paper Manufacturers, S. Smith and Sons (Motor Accessories), Australian Mercantile Land and Finance, Bushtick Mines (1934), Malaya General Company, Sumatra Para Rubber Plantations, and Bekoh Consolidated Rubber. At the Royal Bank of Scotland Court, the Duke of Buccleuch referred to the highly liquid position of the bank, and explained that although it was perhaps natural to expect a still greater increase in profits, the results could be considered satisfactory in view of lower yields now being obtained. In commenting on trade conditions,

GOLDEN MOMENTS

Ice Hockey

A last minute attack—he's through and scores the winning goal—a Golden Moment for him and his team—a great player, supreme in his particular game—but even he cannot buy a better tobacco than Wills's "Cut Golden Bar" at a shilling an ounce.

he expressed doubt that more than 50 per cent. of available shipbuilding berths in the West of Scotland were occupied, in spite of improving conditions. Mr E. M. Janion, at the English, Scottish and Australian Bank meeting, after dealing with the economic and financial position in Australia, said that the growing demand for accommodation from the banks provided a better outlook for the future. At the first Hawker Siddeley Aircraft meeting, Mr T. O. M. Sopwith explained that the company controlled operating companies engaged in widely varying activities; the greater part of output was concerned with re-armament, but revenue was also derived from the Armstrong Siddeley car and from training schools. Mr Walter S. Webber, at the Johannesburg Consolidated meeting, gave his reasons for believing that fears for the loss of value of gold as an exchange medium were unjustified. At the Wankie Colliery meeting, Sir Edmund Davis remarked that satisfactory arrangements had been made to supply electricity for mining purposes at the Tshotanda wolfram deposits. Mr Alan Sugden, at the Wall Paper Manufacturers' meeting, referred to the problem of over-production of wall-paper, arising not only from a larger number of competitors, but also from the increased number of machines operated by earlier competitors. The Hon. H. U. Moffat, at the Bushtick Mines meeting, summarised the results of the re-estimation of ore reserves. At the Malaya General meeting, the chairman explained the necessity for purchasing export rights. Mr E. F. Slade, at the Bekoh Consolidated Rubber meeting, proposed writing down the capital, a step made necessary by the lower value per acre of rubber properties. At the Sumatra Para Rubber meeting, Mr H. A. Barrett explained how, on the expenditure side, the company was helped by the lower value of the guilder.

Mr John Sanderson, at the Australian Mercantile Land and Finance meeting, pointed out that since the 1934-37 wool selling season opened, an increasingly active demand had been associated with a rising level of values. At the S. Smith and Sons (Motor Accessories) meeting, in alluding to the progress made by their various products, the chairman mentioned that the increase in aircraft production was benefiting the K.L.G. Sparking Plug Co., as the leading makers of aircraft plugs.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS
TICKET DECEMBER 1 | ACCOUNT DECEMBER 3

THIS week the Stock Exchange lost its aplomb, and for one brief moment on Wednesday came near to losing its head, when Paris turned a heavy seller. Interpretation of political news, perhaps, is not the forte of the Stock Exchange, but it inevitably extracted the full dramatic value of a Sunday Cabinet meeting, and the publication of the precise terms of a treaty whose existence and objects had already been known a week. In addition, it had become clear at the end of last week that the account would not provide favours for the hot-blooded speculator on the recent scale, and a perceptible weakening of the technical position was heightened by the vulnerability of certain operators on margins. With the close of the account, it was evident that considerable differences would have to be met, over almost every section of the market, despite the partial recovery recorded on Thursday.

Gilt-edged opened in poor style, with the new Funding Loan at $\frac{1}{2}$ discount, and although the whole list regained part of Tuesday's losses, conditions in mid-week remained very depressed. A closing rally still left sizable losses, which were not regained on Thursday.

In the foreign list, Japanese issues were singled out for special selling. The news of the treaty, further frontier incidents, and the Budget statement all brought in a steady volume of sales, but the Chinese group was saved from similar wrath largely on the optimistic speech of Sir Frederick Leith-Ross on the country's economic possibilities. European bonds were inevitably affected by the political gloom, although German issues made a good recovery, on bear covering, on Thursday. South American bonds least affected, directly, by the week's news resisted the general trend more successfully, but in mid-week irregularity gave place to lower prices, and only Argentine issues kept firm.

The previous week's boom in home rails was pricked. Conditions were "spotty" at first, with no real volume of selling, but no effective volume of support. The Rebates Bill had been discounted fully, and a batch of poor traffics, amid the general conditions of retreat, brought in considerable mid-week selling. Great Western ordinary and "Berwick" second preference were most affected. The Argentine group opened lower, but recovered well on Tuesday and held their ground, despite less spectacular traffics. Cordoba debentures were again a strong feature.

The course of events in Spain and the treaty between Japan and Germany had a depressing influence over the industrial markets on Monday, which was reinforced by the downward rush of prices on Wall Street. On Tuesday a firmer appearance was evident at the start of business, but encouraging company reports were not able to prevent an irregular movement toward the close. Wednesday saw continued weakness with a reduced volume of business, but later in the week less attention was paid to foreign political developments, and prices became a little firmer.

This rise was fairly general in the iron and steel group, which was favourably influenced by the South Durham and Cargo Fleet profits. Among coal shares, Powell Duffryn improved on hopes of better trade in South Wales. The Bristol dividend was a spur to higher prices in the aviation group. In the electrical equipment shares group Crompton Parkinson recovered rapidly from previous weakness. The textile group was one of the few to stand fast against the reaction of the early week, and Courtaulds benefited from the rayon output figures. Woolworth held their ground in a dull Stores section. Profit-taking among miscellaneous industrials was evident most of the time, but Turner and Newall recovered sharply on the excellent profits.

Oil shares have fluctuated in a somewhat alarming manner. The collapse in Mexican Eagle followed week-end news of further strike possibilities, arising from quite Utopian demands from the workers. This evoked substantial selling, which was further augmented by liquidation of shares bought to cover call options at higher prices. The French market, from the first, was a considerable seller of Royal Dutch and Shell, and it threw these shares on the London market on Wednesday in a volume which dealers were compelled severely to check. The apparent steadiness which ensued, however, concealed a fundamentally uneasy market situation.

General uneasiness on the political situation spread to the rubber market, which opened the week in a depressed condition. There was a certain amount of nervous selling, but the lower quotations were the result of sentiment rather than of considerable sales. Business remained depressed, though at the cheaper prices offers of shares were fairly comfortably absorbed. Highly selective investment buying continued to be in evidence, on a more moderate scale. The Tea market did not escape the general influence, but activity has been at such a low ebb that such selling as there was remained confined to a few shares only.

In the mining market, once week-end orders had been carried out, it was clear that sentiment had changed markedly for the worse. The Gold Fields report provided no stimulus, and all sections of the market shared in the general depression. Prices rallied on Tuesday, especially West Witwatersrand, but by mid-week the tone had again become hesitant, and a new decline occurred. Rhodesians throughout remained listless, not even sharing in Tuesday's recovery. There was no demand for copper issues. West Africans were likewise affected by the general trend, and the market seemed unmoved by the news that the Marlu plant had been opened. Tin issues likewise were no exception, though the amalgamation scheme between London Tin & Anglo-Oriental proved a cheerful influence for a time.

In Paris, the political situation, in particular disquiet over Spain, brought on a marked weakness which persisted in spite of a short rally on Tuesday. The Berlin Bourse was weak and unsettled, with no particular trends emerging. Heavy selling took place in Amsterdam, and by mid-week prices resumed their downward course after a short respite.

NEW YORK STOCK EXCHANGE

At the end of last week the Securities and Exchange Commission conspired with the Federal Reserve Board to quench the Stock Exchange's post-election jubiliations. Their new regulations in restraint of speculation were reinforced at the opening of the week by fears of trouble in Europe, and prices fell rapidly. Utilities resisted the depression. On Tuesday the market rallied, under the influence of a number of extra dividend distributions, among which the most prominent were by United States Steel and Shell Union. On the eve of Thanksgiving prices became irregular; motors, rails and steels were lower, mail order shares higher. Treasury issues were firm, and railroad bonds strong. Business news continues to be excellent. Electricity output, for the week ended November 21st was 12.4 per cent. up on the corresponding week of last year, and touched a new all-time high; Iron Age estimates steel mill activity at 74.5 per cent. of capacity this week against 74.0 per cent. last week. Prices of steel products are rising.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

CAPITAL ISSUES

THE shadow of political crisis has covered the markets this week, and has imposed a check upon the recent spate of small industrial issues. Such a check, certainly, was inherently reasonable. Both of this week's issues are of greater substance than some recent offers. *Walsall Conduits*, an electrical engineering concern, has offered 5 per cent. preference shares slightly over par, but the premium asked for the 4s. ordinary shares is high, even for these days, for it amounts to no less than 712½ per cent. This, in other words, is a company which has been brought fairly rapidly to a state of high profitability on relative small fixed assets, and the terms of the offer are based on estimated peak earnings for the current year. The weakness of such terms has been discussed almost *ad nauseam* in these columns. The vendor, whether of shares or fixed assets, is entitled to the best bargain which he can obtain. But while the offer of small denomination shares at premiums of these dimensions enables the company to keep its capital in relation to its asset values, the terms conceal a very real goodwill component (for which the ordinary investor is usually unable or disinclined to provide), and also discount the maintenance, at least, of a level of earnings which, three years ago, would have been considered quite improbable. The component undertakings of *Amalgamated Collieries of South Africa* sell two-thirds of their output to Victoria Falls and Transvaal Power Company under contract, and may thus be expected to share in the expansion of that undertaking. The public participation is small, but the shares appear under good auspices and have satisfactory earnings prospects. Statements "for information only" have been published by *Sydney S. Bird* and *Shop Investments*.

ISSUES OF THE WEEK

January 1 to November 21, 1936, including conversions, Old Basis, £454,323,140.
January 1 to November 21, 1936, excluding conversions, Old Basis, £230,561,259.
January 1 to November 21, 1936, including conversions, New Basis, £519,201,530.
January 1 to November 21, 1936, excluding conversions, New Basis, £378,561,208.

Net Sales National Savings Certificates, week ended November 21, 1936, £50,000.

BY OFFER FOR SALE

Amalgamated Collieries of South Africa.—Offer for sale of 200,000 £1 shares at £1 10s. Acquires four collieries and undeveloped coal rights. Purchase price £1,738,658 (£556,246 in shares, £1,143,754 cash to be used in taking shares and £38,658 cash). Mining profits before depreciation: Cornelia, I., £103,154; II., £125,189; III., £123,763. Lango, I., £20,733; II., £20,894; III., £22,418. Schoongezicht: I., £47,403; II., £50,993; III. (10 months), £48,895. Springfield: £25,314 (initial development period). List closed 9.5 a.m. November 25th. Heavily oversubscribed.

Walsall Conduits.—Offer for sale of 200,000 5 per cent. cumulative £1 preference shares at 20s. 6d. and 500,000 4s. Ordinary shares at 32s. 6d. Manufacturing electrical engineers. Profits, after depreciation: 1933, £63,740; 1934, £88,110; 1935, £98,307. Net assets, £350,491 (including £37,342 estimated net profits from January 1st, less vendor's proportion), purchased for £350,000, payable by 200,000 £1 preference and 749,965 4s. ordinary shares and £7 cash. Standard Industrial Trust take issue for £846,875 and expenses (or preference shares at par, and ordinary at about 28s. 9d.). List closed 9.1 a.m. November 24th. Heavily oversubscribed.

BY STOCK EXCHANGE INTRODUCTION

Sydney S. Bird and Sons, Ltd.—Issued capital, 500,000 2s. ordinary shares. Instrument makers at Enfield, established 1920. Products include "Cylcon" Condenser. Net assets acquired £33,929 for

£40,000 (goodwill £6,071) payable by 400,000 2s. ordinary shares. Profits, after depreciation, years to March 31: 1934, £6,198; 1935, £10,439; 1936, £13,125. Half year to September 30, 1936, £10,547. Whitehead Industrial Trust take 499,993 shares at net cost of 2s. 11.28d.

Shop Investments, Ltd.—Issued capital, 600,000 5s. ordinary shares. Deals and invests in shop properties. Total holding, 69 properties (51 freehold). Valuation £270,355 (£210,455 freehold). Total assets £252,085. Profits after leasehold amortisation, including profit from sales: Period July 21, 1933, to June 30, 1934, £2,696; years to June 30th: 1935, £4,369; 1936, £6,494.

ISSUES TO SHAREHOLDERS ONLY

National Omnibus and Transport.—In order to repay certain loans which have been incurred for the purpose of financing the expansion of the company's interests, the directors have decided to offer 200,000 ordinary shares of £1 at par to ordinary shareholders registered on November 14th, at the rate of one new share for every three ordinary shares held.

The Anglo-Portuguese Telephone Company, Ltd.—Offer to the ordinary stockholders and "A" ordinary shareholders of 185,625 ordinary shares £1 at 23s. per share, in the proportion of one new share for every 6 ordinary stock or six "A" ordinary shares held on November 14, 1936.

Horseley Bridge and Thomas Piggott.—An issue is being made of 150,000 ordinary shares of 10s. each in the proportion of one for every two held on November 6th. The shares will rank in all respects, including dividend, as from July 1, 1936, *pari passu* with the issued ordinary shares.

L. Rose and Company, Ltd.—Issue of 48,750 2s. ordinary shares at 15s. each in proportion of one new ordinary share for every five ordinary shares held on November 18th.

Levers Optical Company.—Issue of 20,000 6 per cent. cumulative £1 preference shares at 21s. each.

CONVERSIONS AND REPAYMENTS

Ampat (Sumatra) Rubber Estate.—This company will redeem its 7 per cent. fifteen-year notes on February 18, 1937, at 101½ per cent., together with accrued interest.

Kay's Atlas Brewery.—The 6 per cent. debentures of this company will be repaid at par on December 31, 1936.

Malayan Rubber Loan and Agency Corporation, Ltd.—The 6 per cent. debenture stock of this company will be repaid at par on February 26, 1937.

FORTHCOMING ISSUE

Coventry Aero-Engines and Components.—A public issue will be made on Wednesday next, December 2nd, of 1,290,000 5s. shares at par. The prospectus will show that the company has been formed to acquire an exclusive licence to make, and sell, in the British Empire, Lorraine aero-engines, the licence including engines for high-speed marine craft. The company will be in a position to make accessories such as gun fire interrupter gears, oil pumps, etc., and will also have the benefit of technical advice from the Lorraine Company. The issue will provide enough working capital for erection of works covering 12 acres at Coventry, which are to be completed in six months.

TRINIDAD CONSOLIDATED OILFIELDS, LTD.—The Company announces that Well No. 19 has been brought into production. The initial output was at the rate of 800 barrels per day.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended November 21st: Venezuela, 17859 barrels; Trinidad, 29,205 barrels; total, 47,064 barrels.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The production for the week ended November 14, 1936, was 364,000 barrels.

COMPANY MEETINGS

ROYAL BANK OF SCOTLAND

ANNUAL GENERAL COURT OF PROPRIETORS

SATISFACTORY YEAR'S RESULTS

IMPROVED TRADE CONDITIONS

DUKE OF BUCCLEUCH'S ADDRESS

The Annual General Court of Proprietors of the Royal Bank of Scotland was held, on the 25th instant, at Edinburgh, His Grace the Duke of Buccleuch, G.C.V.O., Governor of the Bank, presiding.

His Grace said:—I presume it will be your pleasure that the annual report and balance sheet with the auditors' report, which have now been in your hands for some days, shall be taken as read. The directors are pleased to be again in the position to submit a statement which, they are sure, will be considered satisfactory by the proprietors.

INCREASED DEPOSITS

Looking at the liabilities it will be seen that our deposits have increased over the amount shown last year by £2,800,000—bringing the total up to £66,800,985.

These are large figures and reflect the heavy accumulation of unemployed funds in the hands of the banks at the present time.

Notes in circulation at £2,929,938 are £117,000 higher than last year, and the increase under this heading provides indications of a welcome improvement in trade and employment.

Acceptances and endorsements of foreign bills and other obligations show a moderate decrease this year. The decrease of approximately £200,000 is accounted for by a smaller volume of forward exchange transactions.

LIQUID RESOURCES AND INVESTMENTS

The highly liquid position of the bank is again emphasised in the balance sheet. On the assets side it will be seen that cash on hand and with the Bank of England and other London bankers, and money at call and short notice, etc., amount to practically £15 millions and represent 21.4 per cent. of our liabilities to the public in respect of deposits and note issue.

Our bill portfolio, which includes £2,035,000 of British Government Treasury bills, is £331,000 higher than last year's total. We regard that as a satisfactory feature of our balance sheet, although the margin of profit on this side of our business remains very low.

The increase of £1,593,000 in investments in British Government, Indian and Colonial and other securities arises from our larger deposits, to which I have already referred. In passing I may mention that a goodly proportion of our British Government securities are in short and medium-dated stocks.

As usual, all our investments are valued at or under the market prices ruling on the date of our balance.

INCREASE IN ADVANCES

In the Address from the Chair last year, it was mentioned that the balance sheet then before you showed an increase under the heading of advances on cash credit accounts and current accounts of over £800,000, and it is gratifying to report this year a further expansion of £625,000 in this important branch of our operations.

I am glad to say that indications are not wanting that the internal industrial revival and the rise in commodity prices are having their effect in increasing the requests for advances which our customers are making on us, and which, in view of our increased resources, we are more than ever in a position, and ready, to make.

PROFITS

We now turn to the profit and loss account, where we show a small increase of about £3,000 in profits.

In view of the expansion shown under practically every heading in the balance sheet, it is perhaps natural that you should expect, in a year which has been remarkably free from the necessity of providing for bad debts and during which the liquidation of frozen loans has continued, that profits should have shown a

larger increase. We, however, consider the results of our year's working as satisfactory, having regard to the lower yields we are now getting on our investments and the present low earning rates for money, while taxation, salaries and other management charges continue to increase.

Following our usual practice, all bad and doubtful debts have been fully provided for.

APPROPRIATIONS

The directors recommend that a dividend for the half-year, payable at Christmas, at the same rate as formerly—17 per cent. per annum—be declared, and that the same appropriations as last year be made to pension reserve fund, and to bank buildings and heritable property.

After these appropriations there remains the sum of £87,027 16s. 5d., which it is proposed to carry to rest or reserve, which now stands at £3,944,171 10s. 9d.

BUSINESS OF THE BANK

The business of the bank in Scotland and at its five London offices continues to progress, while our associate, Williams Deacon's Bank, Limited, is also benefiting from the improved conditions—particularly in the industrial areas in which it operates.

TRADE REVIVAL

At this meeting it is the practice to say a few words on trade conditions, and I am glad to think that the long-awaited industrial revival is in view, and I am fairly confident in considering that in Scotland we have still to experience the full effect of the revival.

In the shipbuilding industry, which means so much to the West of Scotland, last year's steady and gradual improvement has been maintained throughout the year, but, although some yards are working at practically full capacity and have further building orders in hand, other yards, unfortunately, still show many unoccupied slips. From what we learn it is doubtful if much more than 50 per cent. of the available building berths are occupied at the present time, and, while prospects are brighter than at any time during the past five or six years, it is to be sincerely hoped that the Clyde will obtain its fair share of the Admiralty building programme and so ensure that the spectre of unemployment, which has hung over the industrial West, will soon disappear. The other Scottish shipbuilding yards are also sharing in the activity arising from the demand for new commercial tonnage.

The export trade in coal is far from satisfactory and is still suffering from the many politically imposed barriers on international trade, but now that agreement has been reached with Italy, resumption of trade with that market should help Scottish coal exports, which are so vital to our country.

Fortunately, the home market in coal is good, and that is largely due to the busy conditions in the heavy industries, which look likely to continue for some time. Another feature, offsetting to some extent the disappointing state of our coal exports, is a satisfactory demand from Ireland for our coal.

The iron and steel industry is finding it difficult to meet demands for deliveries. In addition to all the furnaces in normal use, it has been necessary to re-fire some reserve furnaces, so as to cope with the increasingly heavy orders from the building trade, and from shipbuilders, which it is anticipated cannot be fully satisfied for another year or two. It is unfortunate, however, that the heavy home requirements should result in a neglect of the export trade where little business is passing.

Manufacturing engineers are now experiencing boom conditions, but slowness of deliveries of steel sections is proving a handicap. Government contracts are providing a good proportion of work on hand, the total of which is sufficient to keep the industry busy for many months.

In textiles, better results have been shown in the home and export markets, and prospects look reasonably good. Quotas and other restrictions, however, continue to have an adverse effect on Continental trade. Good markets are being experienced with Australia and New Zealand, while trade with the United States shows signs of improving.

Some branches of agriculture, which is still our largest single industry, show better results, but conditions in the fishing industry still remain unsatisfactory.

WORLD TRADE

Overseas trade continues to expand, although the tendency has been for imports to increase much faster than exports.

The recent devaluation of the gold *bloc* currencies and the reciprocal agreements between this country, the United States of America and France are events of major importance. The published statements of the Governments of these three countries that the success of their policy is linked with the development of international trade and the removal of different forms of trade barriers will be approved by all countries and, if the policy outlined is boldly pursued, a big step will have been taken towards a return to world monetary and trade equilibrium.

THANKS TO OFFICIALS AND STAFF

I desire to record the thanks of the directors for the valuable services rendered throughout the year by the officials and staff at the head office, London, Glasgow, Dundee offices and the branches.

Our sincere congratulations are due to the general manager, Mr Whyte, and those associated with him, that in a year in which in many ways banking conditions have not been easy, good management has produced so satisfactory a result.

Some of our proprietors may have seen statements in certain sections of the Press criticising the remuneration and conditions of service of our staff.

It is unusual to deal with such matters at this meeting, but, in the interests of the bank, the proprietors, and members of our staff, I think it right to correct misunderstandings which may have arisen through the statements to which I have referred.

In the spring of this year the whole salary question was gone into very carefully by the directors, and certain adjustments, benefiting particularly the younger members of the staff, were and are being given effect to.

As is usual at this time the directors are making their annual revisions of salaries. These, with the completion of the adjustments above referred to, will be communicated to the staff at the customary time just before Christmas.

I would add that the directors, as the result of their careful examination into the conditions of service and remuneration of the staff, are satisfied that the conditions under which the staff work—the security of employment, the rate of remuneration, the consideration shown during sickness, the pensions granted on retirement (to which no contribution is made by the staff), the payment by the bank of income tax on salaries and pensions—compare very favourably with those in any other type of clerical employment, as indeed is evidenced by the fact that there is no lack of applicants for admission to our service.

APPROVAL OF ACCOUNTS—DIVIDEND

I now beg to propose that the report, containing a statement of the accounts and balance sheet, be approved, and that out of the profits of the year a dividend at the rate of 17 per cent. per annum for the half-year, under deduction of tax, be declared in conformity therewith.

The report was approved, and the Governor, Deputy-Governor, Extraordinary Directors, and the retiring Ordinary Director were re-elected and auditors were re-appointed for the ensuing year.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

The Reporting Manager,

THE ECONOMIST,

8 Bouverie Street,

Fleet Street,

London, E.C.4.

WANKIE COLLIERY COMPANY, LIMITED

REDUCTION IN COSTS

The thirteenth ordinary general meeting of the Wankie Colliery Company, Limited, was held, on the 24th instant, at the Abercorn Rooms, Great Eastern Hotel, London, Sir Edmund Davis (chairman and managing director) presiding.

The Chairman, in moving the adoption of the report and accounts, after dealing with the various items in the balance sheet said:—Turning now to the profit and loss account, the total cost of production amounts to £167,159 on a saleable output of 617,497 tons, as compared with £176,566 on a saleable output of 610,891 tons last year. You will notice that coke and brick-making charges are included in our general costs, but they are, comparatively speaking, small, and as they amount to practically the same in each of the last two years, these comparisons are not vitally affected. I mention this in order that you may appreciate how we are gradually reducing our costs, and I think you will agree that our colliery management is to be congratulated upon this satisfactory result.

The amount written off this year for depreciation is £54,962, compared with £53,905 last year. African and general expenses at £5,339, compare with £5,691, and London expenses at £6,582, compare with £6,934 last year.

Directors' fees and additional remuneration amount to £5,000 this year, as compared with £4,993 last year. The only other items remaining in the profit and loss account are rents and sundry receipts—Africa, £12,313, which compares with £11,851 last year, and registration fees, £185, compares with £139 last year.

PROFIT AND ALLOCATION

If you will turn again to the balance sheet you will see that on the debit side we have brought in, under the heading profit and loss account, the balance at August 31, 1935, £61,397, and deducted the final dividend of 5 per cent. paid on November 22, 1935, £49,875, leaving a carry-forward of £11,522. To this sum we have added the profit for the year, amounting to £133,489, bringing the total up to £145,011, from which we have deducted taxation reserve, £22,244, leaving a net total of £122,767. After deducting the two interim dividends of 5 per cent. each, paid on February 26th and August 17, 1936, which amounted to £99,750, there remains a balance of £23,017. This balance would enable us to pay you a final dividend of 1 per cent. and leave our carry-forward intact, but as this would involve a large number of very small cheques we have, on consideration, decided to add this 1 per cent. to the first interim dividend paid in respect of the current year, which I feel sure will meet with your approval.

COPPER MARKET AND COAL CONSUMPTION

During the year under review we have unfortunately had to face a reduction in our contemplated production owing to the state of the copper market. This has, within the last few months, shown considerable improvement, which will be reflected in a gradual increase in sales.

So that you should realise what this means to us, may I point out that for the year ended August 31, 1935, we supplied Northern Rhodesia with 51,633 more tons of coal than for the previous twelve months, and for the year ended August 31, 1936, 5,292 tons less.

In our current financial year we look to larger sales of coal, due in the first instance to the additional output of copper in Northern Rhodesia, and, secondly, to the extension in Southern Rhodesia of supplies of electricity from municipal power stations to mines in their vicinity, which previously obtained their power requirements from wood fuel or oil.

During the year under review we have made satisfactory arrangements to supply electricity for mining requirements at Tshontanda, where large wolfram deposits are being opened out and equipped. This proposition should reach the production stage in February next.

There has been a small increase in the number of European employees. So far as native labour is concerned we have in general employment 2,400 men. A large number of these have been employed for a considerable time and appear to be very contented in the work for which they are used.

I see no reason why I should not give you my personal views on the subject of the production of copper for 1937 which, subject to nothing unforeseen, I estimate at about 200,000 short tons. That would be an increase of about 40,000 short tons over my estimate for 1935 of about 160,000 tons.

Such an increase would mean larger sales of coal to the mines and the railways, naturally followed by an increase in our profits. The report and accounts were unanimously adopted.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK, LIMITED

SATISFACTORY RESULTS

FURTHER IMPROVEMENT IN THE COMMONWEALTH

The forty-fourth annual general meeting of the English, Scottish and Australian Bank, Limited, was held, on the 25th instant, at 5 Gracechurch Street, London, Mr E. M. Janion presiding in the absence, through indisposition, of Mr Andrew Williamson, the chairman of the bank.

Mr A. A. Shipston (London manager and secretary) read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his speech, said that the past year had witnessed a great improvement in the position in Australia, prices being higher for practically all exportable articles. The most important item was, of course, wool, and the wool cheque for this year amounted to £A.58,000,000, compared with £A.40,400,000 for the previous twelve months, an increase of £A.17,600,000. This naturally caused increased activity in Australian secondary industries, and a reduction in the total of unemployment, as well as stimulating imports from abroad. The demand for accommodation from the banks had increased. The opinion generally held was that Australia was passing through a period of comparative prosperity and that the future, so long as prices continued as they were, was a brighter one than it had been for some time.

OVERSEAS TRADE

Last year there was a favourable balance of trade of £22,000,000, as compared with £16,000,000 for the previous year, which was not quite sufficient to pay interest amounting to £23,000,000 due in London in respect of loans to the Commonwealth and local authorities, but the difference was more than made up by the export of capital from overseas to Australia, largely for investment in gold-mining undertakings. The exchange between here and Australia had remained stable at £125 Australian for £100 sterling.

With regard to the Commonwealth Budget, the Hon R. G. Casey, the Treasurer, stated that the continued all-round improved position in Australia was remarkable. The trades unions reported to the Commonwealth Statistician that unemployment had decreased from 30 per cent. in the second quarter of 1932, the highest level reached, to 12.8 per cent. in the second quarter of 1936, while the number of factory employees had risen from 450,000 last year to 483,000 this year.

The total of savings bank deposits, including the Commonwealth Bank, now amounted to £225,000,000, against £218,000,000 last year. The bank clearings for the six capital cities, excluding Treasury bill transactions, were £1,934,309,000 in 1935 and £980,056,000 for the first six months of 1936, against £888,556,000 in the corresponding half of last year. A further indication of improvement was in building activity, covering both residential and business erections in the capital cities, the figures for which show a very marked advance.

During the year further conversions had been made of Australian loans in London of £21,657,000 and £16,551,000, which brought the total conversions to £198,513,000, with the resultant annual saving of approximately £4,000,000 in interest and exchange, on which the Government, who initiated the movement, and Mr Bruce, who so successfully carried the conversions through, were to be heartily congratulated.

TAXATION

This year's operations had resulted in a further reduction to £2,430,000 in State deficits, while the Federal surplus this year was £3,567,000, against an anticipated one of £17,000 only, so that taking all Government Budgets together, the aggregate result for the year was a surplus of £1,137,000, which was being devoted chiefly to a reduction of income and property taxes.

They welcomed the concessions made to income-tax payers and the reduction in respect of incomes from personal exertion and property, and the final abolition of the special property tax. They were very pleased to see that concessions had been granted to non-resident individual taxpayers, who were now exempted in respect of the first £250 of income.

The Treasurer pointed out also that the Income Tax Assessment Act of 1936, containing the uniform taxation provisions agreed upon, had been passed by the Parliaments of New South Wales and Tasmania, and that similar Bills had been introduced into the Parliaments of Victoria, Queensland and South Australia, also that the Government of Western Australia had announced its intention of passing a Bill on the subject in the near future.

THE ACCOUNTS

With regard to the bank's accounts, the reserve fund showed an addition of £15,000 from the annual profits, and now stood at £1,680,000. The special reserve of £1,585,000 was unchanged, and fully covered the depreciation in Australian currency, for which it was put on one side. Deposits at interest showed an increase of £133,081, and current account credit balances an increase of £350,815, the total at £32,893,249 being £483,896 more than last year, which, under the circumstances, might be considered very satisfactory considering the many more opportunities for profitable investment. Cash in hand, Australian notes, etc., stood at £8,412,214, as against £6,167,832 last year, the increase being mainly due to the smaller amount of Treasury bills now held. The ratio of cash held against demand deposits was now 12s. 9d. per £, or, taking into account the Treasury bills and investments held, it was 17s. 3d. per £, which exhibited a position quite satisfactory from a sound banking point of view. Advances and other assets at £29,112,248 showed an increase of £299,201 on last year's figures. The demand for overdrafts had been insistent, and they had found continued activity in this direction. Business both in exports and imports was active, and secondary industries were having a much more prosperous period than they had experienced for a long time.

PROFIT AND DIVIDEND

After deducting interest on perpetual stocks and after making a transfer to the credit of contingencies reserves, out of which reserves provision for all bad and doubtful debts had been made, the gross profit stood at £1,102,713, an increase of £76,855 over last year's figure. At the same time, however, the expenses of management showed an increase of £31,131, mainly in salaries, which were largely beyond their control, and income and other taxes were also higher than last year by £31,843. The net profit for the year amounted to £257,460, from which £15,000 had been carried to reserve fund, and it was now proposed to allocate £10,000 to officers' provident fund, £50,000 to contingencies reserve, £25,000 to bank premises account, and to pay a further dividend of 2½ per cent., (making 5 per cent. for the year, free of U.K. income-tax), leaving £306,787 to be carried forward.

The business of the bank during the past year had been well maintained and increased in all the States, and their connections had been extended in various directions. The year began under better conditions, and they had found a brighter outlook maintained and a good demand for accommodation from their constituents. Produce prices had been better all round, and they looked upon the future prospects as good, provided they were favoured with good rains for the crops.

The following telegram had been received on the previous day from their joint general managers in Australia:—

"Trading conditions generally buoyant and on the whole prospects are brighter than for some years past."

The chairman concluded by moving the adoption of the report and accounts.

Mr S. M. Ward, in seconding the motion, referring to his recent visit to Australia, said: I was fortunate in arriving at a time when Australia was already recovering from one of the most severe crises in her history. The people rose to the occasion in a way which reflects the highest credit on them. Great sacrifices were made. The Government curtailed all expenditure, adopted a sound financial policy, kept faith with its overseas creditors, and are to-day reaping the well-deserved reward of their efforts. Good seasons and a healthy but not excessive rise in the value of primary products have helped to bring about the present recovery.

That my main preoccupation was with the banking and financial organisation of the country was only natural to one who has spent the greater part of his life in that profession, and one of my earliest impressions was one of admiration for the successful way in which the best traditions of English banking had been adapted to suit the needs of that vast continent, with all its varied requirements in trade, production and industry, from the tropical areas of the North to the rich temperate regions of the Southern States and Tasmania. One feature was particularly noticeable in all those in charge of the banking system whom I had the privilege to meet, and that was their high sense of duty to the community. The fact that the late crisis was so successfully overcome was due to no small extent to the way in which a sound and far-sighted banking system was able to afford liberal assistance to trade and industry in tiding over the period of distress.

Of our own bank I will only say that I went to Australia to judge our organisation on the spot by a pretty high standard, and after very careful investigation I can tell you without hesitation that I give them full marks.

The resolution was carried unanimously.

HAWKER SIDDELEY AIRCRAFT COMPANY, LIMITED**PROSPECTUS ESTIMATES EXCEEDED****GREATLY INCREASED TURNOVER****MR T. O. M. SOPWITH'S REVIEW OF THE GROUP'S PROGRESS**

The first ordinary general meeting of the Hawker Siddeley Aircraft Company, Limited, was held, on the 25th instant, at the May Fair Hotel, Berkeley Street, London, W.

Mr Thomas O. M. Sopwith, C.B.E., F.R.Ae.S. (chairman of the company), presided.

The Secretary (Mr Charles P. Heselden, F.C.I.S.) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and gentlemen,—On this the occasion of our first annual general meeting, I think you will agree that we have cause to be satisfied with the report and balance sheet. These documents have been in your hands for some days, and I propose, with your permission, to take them as read. (Agreed.)

As you will see from the accounts, our revenue for the year amounted to £502,919 16s. 6d., from which have been deducted income tax, amounting to £118,649 3s. 3d., management expenses, directors' fees and audit fees amounting to £6,078 1s. 2d., leaving a balance of £378,192 12s. 1d. available for payment of dividends on the preference and ordinary share capital. As already announced, the board will ask you to recommend to-day out of such profits the payment of a cash dividend for the period ended July 31, 1936, on the 4,000,000 ordinary shares, numbered 1 to 4,000,000, inclusive, issued prior to June last, of 30 per cent., less tax, and a bonus for the said period of one fully-paid ordinary share for every ten of the said ordinary shares, leaving a balance to be carried forward of £10,633 10s. 7d.

WIDE SCOPE OF COMPANY'S ACTIVITIES

I would remind you that we are not an operating company and that our revenue is derived from dividends received from our subsidiary companies. The item represented in the accounts by loans to subsidiary companies, including a loan of £300,000 to the Hawker Aircraft Company, is mainly for the purpose of financing extensions to existing factories, the acquisition of additional land and buildings, the purchase of new plant and machinery, and the provision of working capital. The forecast of increased profits made in your company's prospectus has been justified and the turnover of subsidiaries shows an increase in excess of anticipations.

Your company exercises control over a number of operating companies engaged in widely varying activities. The major portion of the output of these subsidiary companies is in connection with the expansion and re-armament programme laid down by Parliament. The rate of profit earned thereon is controlled—and rightly so—by official costing experts, but while the average percentage of profit is lower, the aggregate is higher than in the past by reason of the greatly increased turnover. I am, however, pleased to say that a gratifying increase in turnover is shown in other branches. Your subsidiary companies manufacture aeroplanes, aeroplane and other engines for naval, military and Air Force purposes. They supply civil and commercial aircraft and engines ranging from light training types to the new air liners under construction for Imperial Airways—and details ancillary to high-grade engineering work.

ARMSTRONG SIDDELEY CARS

The Armstrong Siddeley motor car is our own product, and in addition we derive revenue from our training schools for air pilots and operators. We cater for a considerable commercial market, and I can assure you that your directors devote unremitting care and attention to this side of our activities. I am pleased to record that the Armstrong Siddeley motor car is increasing in popularity, and while the results for the last financial year have been satisfactory, I anticipate the necessity for additional output in the current year and arrangements have been made accordingly. The world-wide reputation for reliability gained by these cars will be further enhanced by the attractive lines of our new models. I had the pleasure recently of presiding at the annual meeting of Armstrong Siddeley agents and was impressed by their enthusiasm for the 1937 productions. The export business of subsidiary companies shows marked improvement, and further efforts will be made to expand in this very important direction.

While in the past year, as our report shows, we have not neglected your interests in the direction of earning profits, we have also devoted considerable time and attention to building

up the capacity of our group of companies. The extensions, additional buildings, and new plant authorised during the year are nearing completion, and the benefits of these, together with certain reorganisations which have been effected, should be felt during the next twelve months. The total number of hands employed by our group of companies is very much greater than at the same period last year and is steadily increasing.

CHANGES IN MANAGEMENT

Turning to the question of management, Sir John Siddeley, for personal reasons, has retired from office, I have been elected chairman of the Armstrong Siddeley Development Company and its subsidiaries, and Mr F. S. Spriggs has been appointed managing director of your own company and will occupy the same position in relation to the Armstrong Siddeley Development Company and subsidiaries. It became apparent during the year that your board would require further assistance, and you will be asked to confirm the appointment as directors of Mr H. K. Jones, who has an intimate knowledge of our products and markets, and Mr Hubert A. Meredith, whose advice and guidance in financial matters will, I am sure, prove invaluable.

As I indicated at our last meeting in June, we have had under discussion the question of making an offer for that portion of the Hawker Aircraft Company's ordinary capital not at present owned by your company. The subject has received mature consideration and we are, within a few days, formulating proposals to this end.

FURTHER DEVELOPMENT

Your directors are aware of the advisability of further widening the sphere of activity of your company as and when a suitable occasion arises, and negotiations are in progress in one or two directions which should afford an opportunity for further development in the future.

While it is hazardous to endeavour to foreshadow profits ahead, I am satisfied that the increased turnover of the subsidiary companies during the past year, which has enabled us to provide what I hope you consider a satisfactory dividend, should, by reason of the additional facilities available, show a further advance during the current year, and, although the actual percentage of profit will still remain comparatively low, the aggregate should be higher.

BONUS TO STAFF

Now I should like to deal with the question of our staff. I am sure you will agree with me when I say that success in a business can only be attained by enlisting the loyalty and good will of every one connected with it. I suggest that the best method of achieving this is to interest those responsible for carrying on the business in its financial success. Personally, I would like to see every employee of the company, from the heads of departments down to the youngest apprentice, a shareholder. Unfortunately, this is not practicable, but I do think it is very desirable that as many as possible of our key-men should have a stake in the company, so that they are directly interested in its welfare.

I trust, therefore, that you will approve the intention of the board to allocate a bonus of £5,000 among such of the employees of your subsidiary companies as they may select, and to give them an opportunity to acquire 20,000 of our unissued ordinary shares at par. I consider it will be very beneficial to the company from every point of view if these men are placed in a position to benefit personally from the result of their own efforts.

The Chairman concluded by moving the adoption of the report and accounts.

MR PHILIP HILL'S TRIBUTE TO STAFF

Mr Philip E. Hill, in seconding the resolution, said he would like to take the opportunity of thanking Mr Spriggs, their managing director, and the staff, and expressing their appreciation of the results which had been achieved. It was his opinion that the suggested bonus to the staff would be of enormous benefit to the shareholders, as undoubtedly it would be an incentive to members of the staff to work even harder to improve the value of their own shares.

The resolution was carried unanimously without question or comment.

The dividends and capital bonus were approved; the retiring directors—Mr Frederick Sigrist, Mr Hubert A. Meredith and Mr Herbert Keene Jones—were re-elected; the auditors, Messrs Price, Waterhouse and Company, were re-appointed; and the proceedings terminated with a hearty vote of thanks to the chairman, directors and staff.

JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY, LIMITED**HIGHLY SATISFACTORY YEAR****PROSPERITY OF THE RAND**

The annual general meeting of the Johannesburg Consolidated Investment Company, Limited, was held, on the 24th instant, in Johannesburg.

Mr Walter S. Webber, who presided, in the course of his speech, said:—The report and accounts for the year ended June 30, 1936, will be regarded as highly satisfactory. The strong financial position of the company has been fully maintained. The profit for the year amounted to £1,086,202. Dividend No. 44 of 3s. and bonus of 1s. per share absorbed £790,000; £300,000 was added to the reserve fund, which now stands at the record amount of £2,600,000, and £166,875 was carried forward.

GOLD-MINING PROSPERITY

The cause of the great change for the better in the position and outlook of the goldmining industry since 1932 is well known—namely, the selling price of gold has gradually increased without any appreciable change in the cost of living and operating costs, with the result that the exchange value of gold, in terms of goods and services, has risen locally by approximately 62 per cent.

A somewhat striking phenomenon is that the sterling price of commodities overseas has actually fallen during the same period, but there are now definite signs that commodity prices overseas are on the upgrade. The industry is crushing at a rate 34 per cent. higher than in 1932, and capital expenditure has increased by a higher percentage. If gold to-day had the same exchange value as in 1932, the crushing rate would have fallen by at least 20 per cent., and there would have been very little capital expenditure. These figures will serve to emphasise how fortunate the industry and South Africa have been in recent years.

The prosperity of the Rand is bound up with the exchange value of gold in terms of goods and services. It can be shown that one-tenth of a pennyweight increase in the cost of mining and recovering gold from one ton of ore would reduce the activity rate of the industry by 3.7 per cent. It is therefore poor policy to set in motion forces which increase the cost of operations. The prevention of such a policy is to some extent within the jurisdiction of the Government, of the public, and of the goldmining industry.

UNJUSTIFIED FEARS

Fears have been expressed that with the passing of the old gold standard gold will lose its value as a medium of exchange, but there are no indications of such a state of affairs. On the contrary, Central Banks and Governments hold the metal in greater esteem than ever before. It has also been feared that a rise in the world output of gold following on its higher value would result in a period of immense abundance of gold, with a rise in the general level of prices as expressed in gold. The consensus of expert opinion is, however, that the increased production in gold will not be out of relation to the general rate of progress of the world, and even if marked fluctuations in the value of gold should continue to occur it will always remain a highly valued commodity.

The average recovery of gold from the mines of the Witwatersrand during 1935 shows a reduction of 1½ dwt. per ton as compared with 1932. This has resulted from the policy of the Mining Groups of milling a grade of ore in conformity with the ore reserve value, which is naturally reduced owing to the inclusion of enormous tonnages of marginal ore now payable. It is the inclusion of this class of ore which has brought about the expansion of the industry.

INCREASE IN EMPLOYMENT

The large increase of the numbers employed by the industry is one of the best measures of the expansion. During 1932, 23,051 Europeans and 214,777 natives were employed, and at the end of September, 1936, the figures were 36,077 Europeans and 301,539 natives. Dr. Pirow was not overstating the case when he said in a recent report that if the present expansion continued during the next six or seven years more than 18,000 additional Europeans and approximately 120,000 additional natives would be required to keep the mines at their full labour complement.

The effect on the prosperity of the Union of this increase in employment requires no elaboration. It will not be possible, however, to obtain the increased native labour force from the confines of the Union and Protectorates or indeed even when

supplementing it by the valuable addition from Portuguese territory. Recently important Government officials from Northern countries have been shown a little of the workings of the mines and of the care taken of the natives. It is thought that they will be willing to recommend regulated and limited recruitment in their territories to work on the mines. The Union Government has given permission to increase the number of natives recruited from north of latitude 22 deg. south. It has been shown that the health of these natives does not suffer. Confidence is felt, therefore, that in time the labour force will be brought up to the necessary strength to enable the mines to be worked at maximum capacity with great advantage to the Union of South Africa and to other countries, including those from which in the past recruiting has been prohibited.

Good relations have prevailed between the mines and their employees throughout the year. Important extensions of the benefits of the Witwatersrand Gold Mines Employees' Provident Fund and an increase in the holiday leave allowance were made.

NOTEWORTHY TAX CHANGE

A noteworthy change in the form of the tax on goldmines was enacted in 1936. The form of tax is simpler and is similar to that used in the calculation of the Government share in leased mines and to that advocated by the company when giving evidence before the Mine Taxation Committee in 1936. The rate of tax is, however, very heavy, and results in the collection of a revenue as heavy as that in force in 1935.

The goldmining companies of the group showed the following results from the year ended June 30, 1936:—Tons milled 11,867,000 (1935: 10,844,000), yield—ounces 2,638,057 (1935: 2,608,913), yield per ton—dwt. 4.446 (1935: 4.812), working costs £10,433,408 (1935: £10,047,810), gross profit, including sundry revenue, £8,272,276 (1935: £8,555,205). The group for the year under review and for a great number of years has produced approximately one-quarter of the gold output of the Witwatersrand.

OTHER MINING INTERESTS

The coal trade in South Africa shows a further improvement, and with the increased development in the goldmining industry the prospects for the trade are bright. The new plant at the Natal Cambrian Collieries, Limited, is working efficiently and the monthly output is steadily increasing. The Consolidated Collieries, Limited, and the New Springs Colliery, Limited, declared dividends of 5 per cent. and 10 per cent. respectively, for their last financial years. A new colliery, the Phoenix Colliery, Limited, was started in the Witbank district under the administration of this company; this colliery will begin selling coal early in 1937.

The diamond market was in a much more satisfactory state throughout the year, and sales showed a substantial improvement compared with the previous year. Moreover, there are encouraging signs, and the market is without doubt getting back to normal. The relations between the Diamond Corporation, the Association of Diamond Producers in South Africa, and the producers of the Congo, Angola and West Africa have been most harmonious; the diamond business is always a difficult and intricate one, but it was never so well organised or so sympathetically handled by all interested as it is to-day. The company's diamond interests have naturally improved and confidence is felt for the future.

The outlook for copper improved progressively throughout the year. Consumption increased materially and stocks were reduced to normal. The restriction of output agreement worked satisfactorily and prices increased substantially. Recently there have been signs that the price might reach an unduly high level, which would tend to reduce consumption and encourage high cost producers to enter the field. The best interests of the Northern Rhodesian low-cost producers would be served by a more or less stable price at a fair level with a constantly increasing consumption. The companies in which we are chiefly interested had a successful year, as will have been gathered from the recently published reports.

Throughout most of the year the market for platinum continued to expand, particularly in platinum for industrial purposes. Unfortunately speculators cornered it some few months ago and rushed the price up, with the result that demand for legitimate purposes was reduced to a minimum and now the price is sagging with users buying to satisfy immediate requirements only. It is to be hoped that the price may soon become more or less stabilised again, as, given a reasonable price and steady supply, the market is bound to grow with increasing trade and prosperity.

The report and accounts for the year ended June 30, 1936, were unanimously adopted.

WALL PAPER MANUFACTURERS, LIMITED

COMPETITION INTENSIFIED

IMPORTANT SUBSIDIARY INTERESTS

The thirty-seventh annual general meeting of the Wall Paper Manufacturers, Limited, was held, on the 26th instant, at the Holborn Restaurant, High Holborn, London, W.C.

After commenting upon the accounts the Chairman (Mr Alan V. Sugden, J.P.) said:—

GENERAL CONDITIONS

I referred last year to the problem of over-production of wall-paper and I must again direct attention to it. There has been an increase in the number of our competitors in this country during the year, to which must be added an increase in the number of machines operating in the possession of competitors earlier in the field. The effect of such an increase in productive machinery on a market which has not expanded in the same degree, has been a reduction in price levels and in profit margins, despite the employment of every effort at economy.

Our Company is fortunate in its possession of other sources of income besides those of wallpaper manufacture. These interests by their increased earnings, together with a reduction in the amount by which it has been found necessary to write down properties and investments, have enabled us to emerge from a difficult year of trading (so far as relates to wallpaper manufacture) with a smaller decline in profit than would otherwise have been the case.

THE PRODUCTS

Another great assurance for the future which our Company possesses, is in its artistic and technical staff and in the quality and variety of its productions.

We are very finely "tuned in" to the needs of all our markets and in addition we are continually introducing new styles evolved from the closest study of contemporary taste, and at every price.

PAINT MANUFACTURE

Our Company has in its subsidiary, The Walpamur Company, a paint business which over a period of years has been steadily growing in importance.

Its success is largely due to its determination to produce the finest possible quality in all its ranges and to spare no effort and no expense in research in the chemical, mechanical, and manufacturing spheres, to keep itself right in the forefront of the trade.

DIVERSITY OF INTERESTS

Our Company, through its Sanderson interest, controls a most up-to-date textile print works at Uxbridge. This factory is engaged in printing cretonnes, linens, furnishing fabrics and chintzes by the latest processes. Quite recently an extension has been added so that shadow prints, which are printed on the warp only, can be finished at Uxbridge by the process of weaving. Here, again, the latest automatic looms have been installed.

The factory undertakes its own distribution in this country, and through agents to all parts of the world. I invite stockholders to ask for Sanderson Fabrics for all furnishings at their local draper or furnisher, or at any of the big stores.

PENSIONS

We again recommend the stockholders to authorise an allocation of £10,000 to the various Employees' Pension Funds. Whilst their financial strength is undoubtedly growing, the change in interest rates on money is causing a drop in income from investment sources, a problem familiar to all trustees, and we feel in good times it is as wise as it is equitable to continue our assistance in rendering their position completely unassailable.

Since the various schemes were instituted £86,087 has been paid out in benefit and there are at the present time 387 old employees in receipt of pensions.

ACKNOWLEDGMENTS

The stockholders will wish to be identified with the Board in expressing our joint appreciation of the loyal efforts of all members of the staff at home and overseas and in whatever capacity during the period under review.

It is to the team work prevailing that we owe so much of the success which has attended the Board's own efforts. I would like to identify the leaders of the Federation of Trade Unions in this acknowledgment and to recognise that though we often differ with

them, their co-operation in keeping peace within the industry is of the greatest value.

Finally, and in a personal sense, I must again thank my colleagues on this Board for their unceasing help and loyalty to me in all the many problems through which we have passed and are now passing.

The report and accounts were unanimously adopted.

SUMATRA PARA RUBBER PLANTATIONS, LIMITED

MR H. A. BARRETT'S REMARKS

The twenty-ninth annual ordinary general meeting of this company was held, on the 20th instant, in London.

Mr H. A. Barrett (the chairman) presided, and in moving the adoption of the report and accounts said that their exportable allowance of rubber for the year under review had been 967,122 lb., out of which quantity they had had to surrender 148,879 lb. to the Netherland East Indies authorities in order, in common with other European-owned estates, to adjust over-shipments by native producers. For that quantity of 818,333 lb. a gross average price of 6.8d. per lb. had been secured, as compared with 5.67d. per lb. for a crop of 1,036,140 lb. in the previous year; the net proceeds realised showed a surplus of £7,944, or only some £1,100 less than in 1934-35, which was not unsatisfactory considering the smaller crop handled. The board recommended the payment of a dividend of 4 per cent. for the year, leaving £8,137 to carry forward. Judged on the year's working, that might appear rather a full distribution, but the directors felt that it was justified by the improvement in the outlook and in the general condition of the industry.

With regard to the current financial period, their exportable crop should approximate to 1,100,000 lb., of which had been sold to date a total of 618,533 lb. at a gross average price of 8d. per lb. On the expenditure side they were being helped to some extent by the lower value of the Dutch guilder. How long they would be allowed to retain that benefit was a matter for conjecture, as already there were rumours of some increase in export duty on products advantaged by the exchange position. On the whole, however, the prospects for rubber producers appeared to be more hopeful than for many years past.

The report and accounts were unanimously adopted.

MALAYA GENERAL COMPANY, LIMITED

BRIGHT PROSPECTS

The twenty-eighth ordinary general meeting of this company was held, on the 23rd instant, in London.

Mr Thomas H. Graham (the chairman) said that one item in the accounts which had not appeared before was the cost of export rights, amounting to £12,853.

The purchase of export rights had been forced upon them by the extremely low standard production permitted under the regulation enactment, necessitating the purchase of these rights in order to enable the company to fulfil its obligations. The amount of export rights purchased was approximately 900,000 lb., and had the output of the estate been less by that quantity working costs would have been considerably increased. As it was, they had been enabled to work to the same low production costs as last year, an all-in figure of less than 4d. per pound.

The net profit of approximately £25,000 had been realised with an average selling-price of no more than 7½d., and as to-day's price of rubber was 2½d. per pound more than it was a year ago the prospects for the current year were very bright, as 1d. per pound excess in price was equivalent to over a further 5 per cent. on the company's capital.

In February he paid a visit to the estate in order to make a general survey of the property and the conditions ruling. He went very fully into the question of replanting, and on his return the board decided to take full advantage of the 20 per cent. replanting permitted under the regulation enactment. It must be remembered that the capital value of a rubber estate shrank rapidly and it was as well to commence replacing the older areas.

The European staff, when he paid a visit, was a smaller one than they had ever had, and he would like to compliment the manager, Mr Husband, and his assistants for the able way in which they took upon themselves much larger supervisory tasks than had been previously thought possible to assign to them. Latterly they had sent out two other assistants, who, it was hoped, would eventually come up to the very high standard of the older members of the staff.

The report was unanimously adopted, and a final dividend of 7½ per cent., making 12½ per cent., less tax, for the year, was declared.

S. SMITH AND SONS (MOTOR ACCESSORIES), LIMITED

A RECORD YEAR

The twenty-second ordinary general meeting of S. Smith and Sons (Motor Accessories), Limited, was held, on the 26th instant, at Cricklewood, London.

Mr Walter Henderson-Cleland, M.C. (the chairman) said that the net profit for the year was £175,579, an increase of £38,196 or 28 per cent. The trading profit, which included dividends from subsidiary companies, showed an increase of £54,150, but they had provided an additional £10,478 for depreciation and income tax costs, £6,459 more than in the last accounts. The year under review had been one of considerable progress for the company. There had been an increase in all departments of the company's business, and both as regarded turnover and profit, the year had been a record one in the history of the company. In the motor section their instruments had been fitted to a larger number of motor cars than in any previous year, whilst their lately introduced Jackall or hydraulic jacking system had made progress, and was fitted as standard by a number of motor car manufacturers.

The British Jaeger Instrument Company had also made progress during the year, and their sales were in excess of those of the previous year. The K.L.G. Sparking Plug Company had increased its sales and, as the leading manufacturer of aircraft plugs, had benefited from the present increase in aircraft production. Their aircraft section had extended rapidly during the year.

The clock group had been consolidated in a company entitled S. Smith and Sons (1934), Ltd., with a capital of £300,000. The business of that group of companies had increased during the year, particularly in synchronous electric clocks.

The motor accessory group still remained the most important part of their business. Sales had increased during the year, and the reputation of Smiths' instruments had never stood higher than it did to-day. The company's trading during the first few months of the current year again showed an increase in turnover, and the call of motor car manufacturers for their products was again greater than for the corresponding period last year.

The report was unanimously adopted and a further dividend of 10½ per cent., making 17½ per cent. for the year, was declared on the non-cumulative preferred ordinary shares.

BUSHTICK MINES (1934), LIMITED

TONNAGE MILLED TO BE INCREASED

The ordinary general meeting of Bushtick Mines (1934), Limited, was held, on the 19th instant, at Bulawayo.

The Hon. H. U. Moffat, C.M.G. (the chairman), in the course of his speech, said:—The issued capital of the company has been increased to £500,000 by the issue of 100,000 shares of 10s. each to provide capital for an increase of the milling capacity and treatment plant, which, in the opinion of the consulting engineers, is justified by the mine ore reserves and in the interests of the more economic operation of the mine.

Certain factors have rendered it advisable to recast and re-estimate the ore reserves. This gives a total of 285,859 tons of ore available on June 30th of an average value of 3.5 dwts. Originally the average grade of the mine was calculated at 4.6 dwts., but, while at that time 3.0 dwts. was regarded as about the pay limit, our experience of actual working shows that this pay limit can be reduced to 2.5 dwts., with a consequent increase in the tonnage of ore reserves.

The lowering of the average grade and increasing the tons milled appears to be the proper policy to serve the best interests of the shareholders, and has accordingly been adopted.

It has been decided to make additions to the plant which will raise the capacity to 15,000 tons per month. Careful consideration has been given to the best method of achieving this increase and expert advice obtained on the matter.

I have every hope of being able to commence making some return to the shareholders before the end of the current financial year.

I would here like to refer to the taxation policy of the Government in respect of gold mining. Before the shareholders can receive any return the Government collects "royalty," "gold premium tax" and "income tax." For the six months ended June 30th last royalty amounted to 8d. and gold premium tax to 7.7d. per ton in the case of Bushtick, or a total of 1s. 3.7d. per ton. Then there is, further, income tax of 3s. in the £ on profits. I trust the Government will give sympathetic consideration to the representations which have been made by the representatives of the mining industry on this matter.

The report was carried unanimously.

1936 — OUR CENTENARY YEAR

is from the past"*

THE
LIVERPOOL
AND
LONDON
AND
GLOBE
INSURANCE CO., LTD.

Head Office: 1 Dale Street, Liverpool, 2 | (Chief Office): 1 Cornhill, E.C.3 London 1

AUSTRALIAN, MERCANTILE, LAND AND FINANCE COMPANY, LIMITED

IMPROVED POSITION AND OUTLOOK

The seventy-second annual general meeting of this Company, was held, on the 26th instant, at 20-22 Coleman Street, London.

Mr John Sanderson (the chairman) said that during the company's financial year prices of wool and stock had assisted those of their debtors who had escaped the worst effects of the drought to make progress in reduction of their liabilities, and it was hoped that the present firm wool market would continue and so bring a further much needed relief to the pastoral industry generally. After the recent disastrously low rainfall in many parts of Australia they might also not unreasonably look forward to some better seasons. From the opening sale in Australia in September, 1935, until March, 1936, demand for wool had been strong and prices had shown a moderate tendency to rise, but at the final clearing sales Japanese competition had been withheld and the market had eased.

It was satisfactory to know that since the 1936-37 selling season opened in Australia in September there had been an increasingly active demand on a rising level of values and, with increasing trade activity throughout the world, there appeared no present reason to fear a marked setback during the current selling season. From the companies' stations they expected there would be produced approximately 8,700 bales of wool as compared with 8,190 during 1935. The total proceeds of the 1935 clip were £124,524 and, as wool was selling to-day on a higher level than last year, he hoped that when he addressed them next year he might be able to repeat a realisation of the 1936 clip from the companies' stations at an appreciable advance.

It was gratifying to the directors to be able to recommend a dividend of 4 per cent. per annum, less tax. Provided that the wool market maintained its present strength throughout the current wool-selling season, and provided the season did not become adverse, they might hope that their Australian business would show satisfactory results for the year ending June 30, 1937. Their Argentine business had been satisfactorily maintained and no opportunity was lost of examining methods by which their activities in that wealthy and progressive Republic might be increased.

The report was unanimously adopted.

BEKOH CONSOLIDATED RUBBER ESTATES, LIMITED

The sixteenth ordinary general meeting of this company was held, on the 20th instant, in London.

Mr E. F. Slade, J.P. (the chairman), in the course of his speech, said that the profit for the year was £6,051, as against £4,989 last year.

The company had entered into forward contracts for the whole of next year for 7½ tons per month, viz., 5 tons at 8d. c.i.f. and 2½ tons at 8½d. c.i.f. Reports from the East showed that the property was in good fettle and was being well and economically managed.

The issued capital of the company was £299,300, and as the planted area was 2,672 acres, the cost price per acre was £112. In 1920, when Bekoh Rubber Estates was reorganised, shareholders were then given 2½ new shares of 2s. each in this company for each share they held. At that time rubber properties were

valued at anything from £100 to £200 an acre because of the high price of the commodity and the dividends then being paid. At present the price of rubber estates varied between £40 and £60 per planted acre. The directors felt that the capital should be written down by one-half so as to bring the cost per acre to £56 instead of £112. As the capital was at present constituted it would be impossible for the company to acquire new areas. If the capital were written down as suggested, the directors were confident that the shares would stand at a premium. It was proposed at a very early date to call an extraordinary general meeting for the purpose of reorganising the company on the lines intimated.

The report was unanimously adopted, and a dividend of 2½ per cent., less tax, was declared.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 21, 1936, amounted to £13,601,000, against ordinary expenditure of £9,449,000. After allowing for an increase in Exchequer Balances of £202,354, the operations for the week, as shown below, decreased the gross National Debt by £3,725,000 to approximately £8,003 millions.†

(000's omitted)	
21% Funding Loan, 1932-7	£ 11,100
National Savings Certificates	+ 50
Treasury Bills	£ 12,209
Public Department Advances	— 2,550
Brit. Shipping Assistance	— 116
	+ 11,150
	— 14,875

† Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt at September 30, 1936, appeared in the *Economist* of October 3, 1936.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

We are informed that the quotations for the centres shown below are as follows:—

Bolivia.—Official commercial rate was 50.00 bolivianos per £ sterling on October 16th.

Nicaragua.—Official selling rate was 110 cordobas per 100 United States dollars on November 5th. Open market rate for 70 per cent. of exchange accruing from exports was 175 cordobas per 100 United States dollars, at same date.

Salvador.—Sight rate on November 11th was 2.50 colones per United States dollar.

Other Central and South American Exchange Rates, together with those of South Africa and Australasia, were given in the issue of November 7th on pages 286 and 287.

The Swiss bank rate was reduced on November 25 from 2 to 1½ per cent. The Danish bank rate has been increased to 4 per cent., and the Bank of Latvia now applies the following rates: (a) for credit institutions, 5 per cent.; (b) for private persons and firms, 5½ per cent. Other overseas bank rates were also given in the above mentioned issue.

GOLD AND SILVER

The following statistics of imports and exports of gold and silver for the week ended November 26, 1936, are issued by the Statistical Department of H.M. Customs and Excise.

GOLD MARKET

Messrs Samuel Montagu and Company write on November 25, 1936:—The Bank of England gold reserve against notes amounted to £248,660,346 on November 18th, showing no change as compared with November 11th. In the open market about £2,150,000 of bar gold was disposed of at the daily fixing. Offerings were taken mainly for New York, prices continuing to be fixed at about dollar parity. It was announced on November 24th by the Secretary to the United States Treasury that the right of private individuals to export gold, which had been previously permitted under licence to countries on an effective gold standard, was now abolished. In future, gold exports will be made only through the Stabilisation Fund to countries adhering to the Monetary Agreement concluded on October 13th last, which provided for an official reciprocal exchange of gold against currencies between parties to the agreement. The new decree only regularises a condition which in fact already existed, and in no way affects the right of private institutions to import gold into the United States for sale to the Treasury.

The amount of gold shipped last week from Bombay was about £326,000 per s.s. "Strathmore."

SILVER MARKET

Prices have continued to fluctuate, but movements during the past week have been smaller. The market has been quiet and the tone indefinite, as the Indian Bazaars and speculators have both bought and sold. A slightly easier tendency developed towards the end of the week, the level of prices not attracting fresh buying in any volume, although there were some bear covering purchases at the lower rates. There have been China sales, but offerings have continued on rather a meagre scale. The immediate outlook is uncertain, as the market is sensitive and would respond easily to pressure either way.

Quotations for gold and silver are shown below:—

1936	Price of Gold per Fine ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce 999 fine
			Cash	Two Months	
Nov. 19	142 2½	11 11-37	21	21	Nov. 18 45½

BRITISH INDIA STEAM.—Dividend on ordinary shares 2½ per cent. against nil for the four preceding years.

HARRODS (BUENOS AIRES), LTD.—Harrods (Buenos Aires), Ltd., announces a profit for the past year of £161,152, against £156,388 for the previous year. In addition to the interest on the funding certificates, a 4 per cent. dividend is to be paid on the 8 per cent. cumulative preference shares for the half-year to August 31st. Arrears up to the end of February last were cancelled under the capital scheme. The net profits of South American Stores (Guth and Chaves) amounted to £10,782, against £14,797.

PENINSULAR AND ORIENTAL STEAM NAVIGATION.—4 per cent. per annum, less tax, is to be paid on December 17th on the deferred stock. Nothing has been paid on the deferred since 1930-31.

SHELL UNION OIL CORPORATION.—All arrears on the 5½ per cent. cumulative convertible preferred \$100 shares are cleared off and payments brought up to date with a distribution of \$28.12½ per share. In addition, a dividend of 25 cents per share has been

declared on the no-par common stock. Both dividends are payable on December 15th to stockholders of record on December 4th.

E.A. PACIFIC RAILWAY SECOND DEBENTURES.—The Buenos Ayres and Pacific Railway Company is to pay the six months' interest to December 31st next, less tax, on its 4½ per cent. second debenture stock. The Argentine Great Western is to receive a sufficient sum to pay the interest on its 4 per cent. second debenture stock.

H. AND G. SIMONDS.—Final dividend of 14 per cent. on ordinary stock, making 18 per cent., is being paid only on old 540,240 ordinary shares (now stock). Recently increased ordinary stock (180,080 shares) ranks *pari passu* with old ordinary as from October 1, 1936.

THE FINE COTTON SPINNERS' AND DOUBLERS' ASSOCIATION, LTD.—Owing to the difficult trading conditions which have continued during the half-year, the directors find they are unable to recommend the payment of any dividend on the preference, preferred ordinary, or ordinary stocks for the half-year ended September 30, 1936.

SUMMARY OF COMPANY PROFIT AND LOSS ACCOUNTS

COAL

SHEFFIELD.—On the export market signs of improvement are noticeable, especially in shipments to France. Prospects for 1937 are now better than expected. Home demand for industrial fuel continues good and consumption of household coal is increasing. Industrial steams are moving freely and best hards are firm. Furnace and foundry coke remain in strong request. Central heating requirements are increasing and there is an active demand for blast furnace coke.

WORKINGTON.—The coal trade is already very brisk and an acute shortage seems certain before the end of December. House coal is in sharp request by local and Irish users. Industrial fuel is readily marketed. One colliery is crushing round coal for its coking plant and, in addition, is buying small coal from South Wales. Coke is a lively market. Prices are firm. Best round coal stands at 23s. 6d. per ton; washed doubles at 22s.; washed singles at 21s.; all f.o.b. smalls cost 15s. 6d. Best house coal is quoted at 35s. 8d.; house nuts at 34s. at station. The price of gas coal is 27s., and that of local coke from 15s. 6d. to 16s. 6d.

NEWCASTLE-ON-TYNE.—Demand for every class of coal in this area is as keen as ever and most collieries are fully stemmed for this year. Forward sales continue to be made and there are now a number of collieries who have a full book for the next twelve months. Northumberland steam collieries enjoy a steady trade with Scandinavia, and coastwise trade is particularly active by reason of the seasonal increase in consumption. All classes of Durham bunkers are difficult to obtain for shipment this year, whilst coking coal is unobtainable.

GLASGOW.—Demand is active in the home market; industrial and public utility needs are on a heavy scale. Household requirements show some expansion, but the advance in prices has concentrated demand mainly on medium-class fuel, prime qualities being no more than steady. For export the collieries are well booked for some time ahead, but continue to find difficulty in the prompt movement of coal owing to the lack of tonnage. Weather conditions have undoubtedly been a factor of late in the tonnage supply, but a contributory cause appears to be the fact that at current fuel prices exporters have to work on small margins to secure business and are therefore not in a position to meet the higher freight rates now ruling.

CARDIFF.—Business on the Cardiff coal market is a little more active. Last week's shipments in the foreign and coastwise trades, at 431,200 tons, were the highest since the week ended January 19th last and they compare with 387,392 tons in the corresponding week in 1935. The increased shipments were due partly to the arrival of shipping tonnage which had been delayed by the recent gales, and it may not be maintained this week. There is better news from Italy which, it is now reported, is making arrangements for the supply of about 85,000 tons per month, of which 45 per cent. is to be anthracite coals. An important development is the purchase of this coal by the Italian Government coal import monopoly and the supply of it through the South Wales Coal Control Board instead of through independent colliery and exporting firms. The only change in price during the week has been an advance of 6d. per ton in washed dry duff. The bulk of the coal is still being sold at the old minimum schedule prices. Coke is very firm up to 25s. per ton for furnace classes, while patent fuel is unchanged at 22s. f.o.b. and Portuguese pitwood at from 22s. to 23s. ex ship.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that business remains active, and that producers are hard pressed to meet the demand, notwithstanding the record production of steel. The system of rationing which has been adopted extensively by manufacturers has only partially relieved the situation, and in some departments consumers complain of the difficulty of placing orders for completion by the dates required.

Although additional plant has been put into operation in the pig iron section, there is still a scarcity of foundry and hematite iron. The situation as regards basic iron is more comfortable than for some time past, as producers have concentrated upon maintaining the output of this description of iron.

Business in semi-finished steel is only limited by the inability of the manufacturers to accept fresh orders, and most of the works are booked up well into 1937.

Demand for all kinds of finished steel materials is of record dimensions. Although efforts are being made to distribute output equally among consumers, there are reports of engineering jobs having been held up owing to the lack of steel. Owing to the strong pressure of home demand, makers are not anxious to accept orders for overseas delivery for the time being.

MIDDLESBROUGH.—Demand for iron and steel tends to increase, and manufacturers who have orders on their books for all classes of material for some months ahead are doing their utmost to keep their regular customers supplied. At present there are 31 blast furnaces in operation in the North-East Coast area, of these, 2 are producing foundry pig iron, 12 hematite pig iron, 16 basic iron, and 1 ferro-manganese. Inquiries from abroad are more numerous than for some time, but, after fulfilling the requirements of both foundry and hematite iron of their own steelworks and those of regular home users, there is practically no surplus for shipment to foreign destinations. The re-starting of a furnace on hematite this week at Messrs. Dorman, Long's South Bank works will increase production by approximately 1,000 tons per week, but more could be disposed of.

The official minimum prices of foundry and hematite pig iron are unchanged, although it is anticipated that owing to rising costs of production there will be increases early in the New Year.

Producers of semi-manufactured steel are having difficulty in keeping pace with home demand, and, although imports of this class of material have increased, there is not sufficient to meet all requirements. The manufactured steel departments, whilst turning out record outputs, are meeting with insistent demands for earlier deliveries. An order for a 9,500 ton cargo vessel has been placed with shipbuilders at Sunderland, and one or two big shipbuilding contracts are expected to be placed on the Tyne very shortly. Blast furnace coke is meeting with a ready market at 24s. 6d. per ton, delivered at the furnaces. Foreign ore continues to arrive steadily. The scrap market continues strong, heavy steel melting material changing hands at 60s. per ton, delivered works.

WORKINGTON.—A furnace with a weekly yield of 3,000 tons has been put out of blast to be re-lined, and there is not now enough West Coast hematite pig iron to go round. There is little movement in the North-West Coast hematite pig iron trade. Sales concern only small lots, none of them above 20 tons or 30 tons, to users in urgent need. Forward

business cannot be entertained. Long ago producers had sold their output to the end of February, and business of any importance will not be resumed before 1937. Local steelmakers use the greater part of the output of the six furnaces remaining in blast between Workington and Barrow. What is left is apportioned among users in the Midlands, South Wales, and Scotland. Prices are unchanged. Nominally, Bessemer mixed numbers stand at £4 5s. 6d. per ton at Glasgow; £4 11s. at Sheffield; £4 13s. 6d. at Manchester; and £4 17s. at Birmingham, with from 2s. 6d. to 8s. per ton extra for low-phosphorus iron. Malleable iron is firm at £6 15s. delivered at Birmingham, and ferro-manganese at £11 5s., home. The position in the steel trade is thus that the orders booked will keep the rolling mills at Workington and Barrow working for another twelve months. Native ore, at 16s. to 17s. 6d. per ton, is in big demand. Production is not adequate for needs and there are heavy imports of hematite ores.

SHEFFIELD.—The iron and steel market is as active as ever, and the difficulty of obtaining all the required supplies is causing consumers some anxiety. Any odd parcels of foundry or forge iron are instantly taken up. Lincolnshire makers are still off the market here, production being required at a distance. This puts an increased strain on Derbyshire producers and a still further increase in output could be absorbed. In the circumstanced makers are not adding substantially to their present commitments. In both East and West Coast hematite demand still exceeds supply and deliveries under contract are in arrears. There is a premium of 10s. per ton on transactions. In finished iron, common and marked bars are in strong request and crown bars are now showing a steady improvement.

Despite increased output, requirements of basic steel billets cannot be met. Although demand for acid billets is good, there is not the same stringency as in basic iron. Requirements of strip, bar and wire rods are as keen as ever, and stainless steel in all forms is in active demand. Prices are firm throughout the market, but are unchanged. The heavy machinery and engineering trades in this district are fully employed. Rolling mills and forges have as much work in hand as they can carry out.

CARDIFF.—Blastfurnaces and steelworks are working at capacity, and there has been a stronger tendency in the tinplate market. Factories are busy with export and inland business, and, although the scheduled prices are unchanged at 18s. 9d. f.o.b. for export and at 18s. 4½d. f.o.t. for home consumption, manufacturers are realising from 6d. to 9d. per box more. Shipments last week registered the highest total for the current year and, at 110,411 boxes, they compare with 63,797 boxes the previous week, and with 48,721 boxes a year ago. Stocks dropped by nearly 30,000 boxes to 88,886 boxes, against 76,153 boxes held in the corresponding week of 1935.

GLASGOW.—Difficulty in securing adequate supplies is now causing a little anxiety to users of steel. Plants are working at capacity, but it is impossible to maintain stocks at the level considered necessary to ensure easy and comfortable working conditions. Steelmakers are being pressed for deliveries, but it is impossible at present for them to increase output. Specifications for all classes of material are plentiful, the demand of the shipbuilding, structural and other sections all tending to increase. Tube-makers here are exceptionally busy, and they, too, are absorbing heavy tonnages. Plate and sheetmakers are active and rolling mills are fully employed. In every branch of the industry in Glasgow and district there is much work on hand and a large amount of new business coming forward.

OTHER METALS

COPPER.—Active trading in the early part of the period under review carried prices upwards, but a reaction subsequently occurred and the standard cash quotation closed on Wednesday 13s. 9d. below the week's best, showing a net loss of 8s. 3d. compared with the previous Wednesday's close. Consumers are now showing reserve and a certain quietude is to be looked for in the immediate future. In the absence of substantial liquidation by "bull" operators, however, the period of seasonal slackness between now and the new year may pass off without a major reaction in quotations.

Sales on the London Metal Exchange: 650 tons on Monday, against 1,800 tons last week; 1,275 tons on Tuesday, against 1,800 tons last week; 900 tons on Wednesday, against 3,200 tons last week. Domestic spot was quoted at 10.45 cents per lb. in New York on Wednesday, against 10.42½ cents a week ago and 9.97½ cents a month ago. Wednesday's official closing price for standard cash in London was £43 16s. 3d. to £43 18s. 9d., compared with £44 2s. 6d. to £44 3s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 45,309 tons, show a decrease of 324 tons, while stocks of rough copper, at 958 tons, remain unchanged.

LEAD AND SELLTER.—Although the market closed on Wednesday below the week's best, both lead and spelter are dearer. Substantial quantities of lead were purchased by consumers and speculators and also, it is believed, by producing interests. No great importance should be attached to the latter's purchases, for producers in general are satisfied with present prices and have no desire to force them up by artificial means. After the difference between lead and spelter prices had widened to almost £7 per ton, spelter rose in price and the margin was accordingly reduced.

At the meeting of the Imperial Smelting Corporation, Sir Robert Horne made a vigorous plea for a greater measure of protection against foreign competition for the domestic spelter industry, stating that his company had had to close certain works in the depressed areas owing to lack of Government support. The argument, however, appears to lack justification, for imports of foreign spelter have actually been smaller this year than last, the increase in total entries being due to shipments from the Dominions—which it is not desired to exclude from the British market.

Sales of lead on the London Metal Exchange: 4,350 tons on Monday, against 500 tons last week; 3,000 tons on Tuesday, against 1,500 tons last week; 1,900 tons on Wednesday, against 2,600 tons last week. The New York quotation on Wednesday was 5.20 cents per lb., against 5.20 cents a week ago and 4.70 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £23 3s. 9d. per ton, compared with £21 17s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 2,750 tons on Monday, against 550 tons last week; 2,600 tons on Tuesday, against 900 tons last week; 4,200 tons on Wednesday, against 4,200 tons last week. Wednesday's quotation in East St. Louis was 5.05 cents per lb., against 5.05 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 17s. 6d. per ton, against £16 2s. 6d. last week.

TIN.—After considerable fluctuations, the market closed on Wednesday only slightly below the previous week's level. In consequence of the interruption of shipments to the United States, Liverpool warehouse

stocks rose by 103 tons to 985 tons last week, bringing total stocks in this country on November 21st up to 1,263 tons. As a result of the increase in home stocks, the backwardation (the amount by which the cash price exceeds the three-months' quotation) has narrowed further, and amounted to only 5s. per ton on Wednesday. It is considered possible that in the period of seasonal slackness during the next few weeks the cash price may even fall below the future quotation.

Sale of tin on the London Metal Exchange: 275 tons on Monday, against 150 tons last week; 190 tons on Tuesday, against 185 tons last week; 375 tons on Wednesday, against 550 tons last week. The New York quotation on Wednesday was 52.50 cents per lb., against 51.25 cents a week ago and 45.57½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £233 5s. to £233 10s. per ton, compared with £234 5s. to £234 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 1,263 tons, an increase of 42 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £14 5s. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £56 per ton ex warehouse, the same as last week. Chinese wolfram for "November-December" shipment was again quoted at 29s. 6d. to 30s. 6d. per unit, c.i.f. Refined platinum at £9 15s. per ounce remains unchanged.

TEXTILES

COTTON.—Manchester.—A rather quieter tone has continued to prevail in the market. The recent advance in prices has checked operations, but in some quarters encouraging orders have been secured. There has been no material change in prices of American cotton. The futures market in Liverpool has been less active, and trade calling has been on a smaller scale than earlier in the month. The latest spinning report indicates that the crop of the United States will be about equal to the last Government estimate of 12,400,000 bales. There have been wide fluctuations in Egyptian Sakel futures. A stiff advance has occurred since the beginning of this week in the November position owing to the rejection of tenders.

American yarn quotations have been firmly held, and some spinners have advanced their prices slightly. Business has been somewhat patchy. In the Egyptian section it has been difficult for spinners to obtain full prices, but now and again these have been paid by buyers who required early delivery.

There has again been a persistent inquiry for cloth for foreign outlets. Actual buying, however, has been somewhat irregular. Most of the contracts arranged have been due to manufacturers giving their customers the advantage of cheap yarn bought several weeks ago. The offtake for India still leaves much to be desired. Transactions for China have been quite exceptional, but further buying has taken place in dyed bancies for Java. A feature of some importance has been the way in which buyers in South America have raised their offers, and an encouraging turnover has been reported in printing and finishing styles. A steady demand has again been experienced in shirtings and coloured goods for West Africa. Standard cloths have moved off fairly well for Germany and Scandinavia, and rather more business has been done in muslins and embroidery fabrics for Switzerland. Drills and sheetings have been booked for the Dominions, and the offtake for the home trade in a variety of cloths has been encouraging.

EGYPTIAN SAKEL COTTON.—This week the spot quotation for Egyptian Sakel cotton in the Liverpool market has been over 1s. per lb., this being the highest price for six years. There has been an advance of 2d. per lb. since the beginning of September. The upward movement has been due to the tight position of current month futures. In the middle of last summer there was some anxiety concerning the supply and quality of Sakel cotton. A few leading operators in the Liverpool market decided to buy speculatively and so far this move has been decidedly successful. During the last week or two heavy tenders of actual material have been made against the future contracts and, as anticipated in some quarters, many of these tenders have been rejected owing to the quality not being up to standard. This development has led to a sharp rise in November futures. Spinners of Egyptian yarns have been harassed by the stiff rise in prices, but it is not believed that any big users have been caught really short. At the present time the situation is being controlled by a small group of traders in Liverpool. The Sakel contract in Liverpool will go out of existence next September and its place will be taken by the new contract known as Giza 7.

WOOL.—Bradford.—The past fortnight has confirmed the improvement in the raw wool situation, prices at the final series of Colonial sales in Coleman Street establishing significant rises. After a successful year in the wool textile industry, the final auctions gave evidence of the strength of the raw wool supply-demand position, merino combing wools being generally 12½ to 15 per cent. above the close of last series, while crossbreds are anywhere from 20 to 25 per cent. higher. The rise in the price of crossbreds is benefiting New Zealand pastoralists, for prices during the new selling season which begins at Auckland to-day (Saturday) will be higher than at any time since 1933. The London auctions have been somewhat interfered with by fog, but apart from that have gone remarkably well, all sections participating in the bidding. Demand has been as keen for merinos as for crossbreds, and the year is ending with prices at the highest point.

Activity in consuming centres continues at a high level, with mills running full and over-time. It is many years since the industry was as

busy as now, and the demand for tops, yarns and piece-goods could hardly be better. So long as the raw material is going forward through the different processes of manufacture, current raw wool prices can be maintained. The new clip is being rapidly sold both in Australia and South Africa, while the prices now realised are increasing the income from the wool clip in Argentina and other producing countries.

GRAIN MARKETS

WHEAT.—After a quiet and uneventful week, prices are practically unchanged. Meanwhile, favourable reports of Argentina's crop are now being received in London and one American authority estimates the probable yield as high as 32½ million quarters. While it is as yet too early to be certain of the out-turn, the crop is officially reported to be in generally good condition.

On Wednesday last, "December" futures were quoted in Chicago at 117½ cents per bushel, against 117½ cents the week before and 115½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 43s. 3d. per 496 lbs., against 43s. a week ago; No. 2 Northern Manitoba, ex ship, 43s., against 42s. 9d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,124,000 quarters, against 1,623,000 in the previous week and 1,186,000 quarters in the corresponding week a year ago.

FLOUR.—Demand has shown no improvement, but prices are unaltered. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 36s. per 280 lbs., against 36s. a week ago; delivered inner London, 35s. 6d., as compared with 35s. 6d. a week ago. Manitoba patents, ex store, 33s. to 34s. 6d., against 33s. 3d. to 34s. 9d. a week ago. Australian, ex store, 31s. 6d. to 32s., against 32s. 3d. to 32s. 6d. a week ago.

BARLEY.—Sellers have shown reserve and prices are accordingly a shade higher on the week. "December" futures were quoted at 62½ cents per bushel in Winnipeg on Wednesday, against 61½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new), at farm, 28s. to 29s., as against 28s. to 29s. a week ago; "English malting" (new), at farm, 34s. to 50s., against 34s. to 50s. last week; Californian (new), ex ship, 47s. to 58s., against 47s. to 58s. last week; Chilean, brewing, ex ship, 36s. 6d. to 42s., against 36s. 6d. to 42s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 45½ cents a bushel in Chicago, against 45 cents a week ago and 41½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 20s. to 21s. per 336 lbs., against 21s. to 22s. a week ago; "English White" (new), at farm, 20s. to 21s., against 21s. to 22s. a week earlier; mixed Canadian feed (Vancouver), landed, 21s. 6d. per 320 lbs., compared with 20s. 3d. last week.

MAIZE.—Trading has been rather quiet, but prices have been well maintained. "December" futures were quoted on Wednesday at 105½ cents per bushel in Chicago, against 105½ cents a week ago and 95½ cents last month. Quotations in London, Wednesday: "Plate," landed, 22s. 6d. per 480 lbs., compared with 22s. 9d. a week ago; "Plate," ex ship, 21s. 6d., as against 21s. 9d. a week ago; "Plate," "November," 21s. 9d., as against 22s. 3d. a week ago; yellow maize meal, ex wharf, was quoted at £6 2s. 6d. to £6 7s. 6d. per ton, as against £6 2s. 6d. to £6 7s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURES	Jan. 3, 1934	Jan. 2, 1935	Nov. 27, 1935	Dec. 31, 1935	Nov. 18, 1936	Nov. 25, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	86½	84½	106½	105½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	97½	75½	117½	117½

The visible supply of wheat in Canada amounts to 79,611,000 bushels, against 82,039,000 bushels last week, and 142,164,000 bushels in the corresponding week last year.

November 14, 1936...	321,348	457,081	62,098	8 8	9 11	6 10
November 21, 1936...	293,522	456,238	61,821	8 6	9 8	6 10

OTHER FOODS

BACON.—English and Irish have been a rather irregular market this week, but other kinds have been steady. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 88s. to 90s.; Canadian, 80s.; Danish, 90s.; as against 88s. to 90s., 80s. and 90s. last week. Arrivals in London last week included Danish, 12,085 bales; Canadian, 7,408; Dutch, 2,232; Lithuanian, 1,350; and Polish, 2,277; as against 12,147, 6,839, 1,998, 1,494 and 2,728 bales, respectively, in the previous week.

BUTTER.—Quiet conditions have prevailed and the easier tendency of quotations noted a week ago has continued. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 107s.; Australian, choicest salted, 106s.; Danish, 118s. to 120s., compared with 108s. to 109s., 107s. to 108s., and 122s., respectively, a week ago.

CHEESE.—Apart from New Zealand, which was easier this week, the tone of the market has been steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 82s. to 88s.; Canadian, finest coloured, 72s. to 73s.; and New Zealand, finest coloured, 70s., against 82s. to 88s., 71s. to 72s., and 71s. to 72s., respectively, a week ago.

COCOA.—The steep upward movement of quotations has continued this week. The spot quotation in New York on Wednesday was 10½ cents per lb., as against 9½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "November-January," was quoted 45s. per 250 kilos, c.i.f. Continent, against 41s. 3d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 1,410 bags; delivered, for home consumption, 4,508 bags; exported, 561 bags; stocks, 111,250 bags, against 122,607 bags a year ago.

COFFEE.—The New York market has been steady to firm, with prices showing a rise. In London quiet conditions prevailed. On Wednesday, Rio No. 7 (cash) was quoted at 8½ cents per lb. in New York, as compared with 8½ cents per lb. last week and 8½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 206 cwt.; delivered, for home consumption, 56 cwt.; exports, nil; stocks, 9,462 cwt., against 12,531 a year ago. Central and South American, landed, 1,169 cwt.; delivered, for home consumption, 1,629 cwt.; exported, 1,121 cwt.; stocks, 55,225 cwt., against 78,095 last year. Other kinds: landed, 2,112 cwt.; delivered, for home consumption, 3,975 cwt.; exported, 2,580 cwt.; stocks, 87,028 cwt., against 107,400 last year.

EGGS.—The market has been rather slow, with prices irregular. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 18s. 6d. to 19s. 6d. per 120, as against 18s. 6d. to 19s. 6d. last week, while Danish (15½ lb.) made 15s. 3d. to 15s. 6d., as against 15s. 9d. to 16s. last week.

FRUIT.—At Covent Garden market, according to *The Fruitgrower's* report, business has been generally quiet, though still rather above normal for the time of year. The demand for apples remains steady and the best grades are gradually hardening in price. Pears also continue to sell well. Hothouse grapes are now in shorter supply and prices of English are firmer. English cabbages remain at 5s. 6d. to 6s. per dozen lbs., but English walnuts have finished. Italian and French chestnuts are now a prominent item. Oranges are an active trade, but grapefruit are slow. Lemons remain at a low figure, but are expected to recover in price shortly.

MEAT.—Demand for beef at Smithfield has been fairly good this week, but mutton has been a slow item. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 10d. to 4s. 4d. per 8 lbs., as compared with 3s. 8d. to 4s. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 1,781 tons, an increase of 93 tons on the corresponding week last year. Beef and veal accounted for 5,098 tons, mutton and lamb 2,515 tons, and pork and bacon 1,159 tons, as compared with 4,878, 2,719 and 1,213 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 1d. per lb., against 2½d. a week ago. Movements of pepper in London

during the past week were as follows: Black, landed, nil tons; delivered 12 tons; stocks, 1,781 tons, against 1,450 tons a year ago. White, landed, 18 tons; delivered, 53 tons; stocks, 11,785 tons, against 14,454 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 9s. per cwt., ex warehouse, on Wednesday, as compared with 9s. per cwt. a week ago. "January-February" in singles to Continent and U.K. was quoted at 8s. 3d. per cwt., against 8s. 1½d. last week. Movements in London during the past week were as follows: Landed, 54 tons; delivered, 116 tons; stocks, 1,953 tons, against 6,490 tons a year ago.

SUGAR.—The tone of the London market has been quiet this week, with quotations rather easier. The New York spot market has been steady at unchanged rates. The spot price in New York on Tuesday was 3-65 cents per lb., as compared with 3-65 cents per lb. last week and 3-39 cents per lb. a month ago. Wednesday's sales of raw sugar in London included December delivery at from 4s. 8½d., against 4s. 10d. to 4s. 10½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 22,047 tons, against 32,284 tons last week, and 31,493 tons in the same week of last year; deliveries 15,837 tons, against 15,442 tons last week and 14,796 tons last year; stocks, 139,876 tons, against 133,666 tons last week and 202,533 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Nov. 21, 1935.....	d. 12-98	d. 12-21	d. 13-88	d. 12-91	d. 10-49	d. 11-59	d. 13-01
Oct. 15, 1936.....	13-18	12-00	13-87	11-06	10-11	11-30	13-12
Oct. 22, ".....	13-24	12-08	13-96	11-32	10-07	11-59	13-22
Oct. 29, ".....	12-99	12-12	14-61	11-61	10-03	11-62	13-24
Nov. 5, ".....	13-03	12-51	14-95	11-53	10-12	11-97	13-40
Nov. 12, ".....	12-80	12-21	14-92	11-79	9-75	12-07	13-30
Nov. 19, ".....	12-69	12-27	14-72	11-58	10-24	12-07	13-12

The quantities catalogued for the public auctions in Mincing Lane this week comprised 52,130 packages of Indian and 19,741 packages of Ceylon tea. Indian grades met an active demand and quotations were firm. Despite a certain irregularity at Tuesday's Ceylon sales, prices were a shade higher in some instances.

VEGETABLES.—A few English and Guernsey tomatoes are still arriving at Covent Garden market, says *The Fruitgrower*, while Canary Island are showing better form. Cucumbers are limited and dear. House-grown beans are selling at higher rates; but cabbage and savoy are in abundant supply and are consequently cheap. Sprouts are also plentiful, while cauliflowers are selling better. Onions are cheap, and parsnips, carrots and turnips are all at a moderate level. Meanwhile, potato prices at London markets are showing a hardening tendency, and at the Borough on Tuesday, best siltland King Edward realised from 9s. to 9s. 6d. per cwt., against 8s. 6d. to 9s. 6d. last week. Hence the Potato Marketing Board have decided that the riddle of one and five-eighths inches hitherto in use for white varieties shall be lowered to one and a-half inches. This means that until the Board otherwise determine the minimum riddle in operation will be one and a-half inches for all varieties. The "seconds" scheme as previously announced will continue in operation.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—The market in oilseeds has been steady but quiet. Linseed has become scarce on spot and in near positions and is at a premium over forward delivery. Crushers, however, appear to have covered immediate requirements and are already interested in the new Plate crop, though trade is hampered by the uncertainty concerning the intentions of the Argentine Government in regard to the minimum price guaranteed to growers. Crop reports from Argentina remain favourable. In the northern districts harvesting has begun. Given a or over seem likely to be realised. Meanwhile, shipments of old crop are proceeding and the surplus available for export has been reduced to below 100,000 tons which, with 25,000 tons expected to be available from India, constitutes world supplies until the new Plate seed comes on the market. Prices remain firm for old crop. For new Plate seed January-February loading £10 17s. 6d. is indicated.

Cottonseed continues to rise in price and black Egyptian, December and January-February to Hull, has changed hands at £4-17 18s. 9d. and unchanged on the week at £25 per ton, naked, ex Hull mill crude is held for £27 and refined for £29 10s., prompt ex Hull. Demand for oilcakes continues to improve and prices are firmer.

FURS.—The number of silver foxes on Norwegian farms, according to the Norwegian Central Statistical Bureau, was 301,500 in 1935, against 214,063 in 1934, and only 29,857 in 1929. This increase establishes Norway as the premier silver fox breeding country in the world. Exports from that country last year totalled 138,707 skins, but offerings this year have shown a substantial rise, and Norwegian exports may aggregate from 250,000 to 275,000 skins in 1936. In Canada, the only other breeding country for which statistics are available, the number of silver foxes (according to the Dominion Bureau of Statistics) rose from 97,190 in 1929 to 125,577 at the end of 1934; figures for 1935 are not available. For many years past, exports from Canada have exceeded those of Norway, for the latter country has been steadily increasing its breeding and stock. Since silver fox furs have recently suffered a loss of popularity, this rapid expansion of production in Norway may have a depressing effect upon the market before long.

TIMBER.—Larger quantities of European building and joinery woods than usual came forward in October, and it seems that arrivals this month will also be very heavy. London dock deliveries in October did not show any corresponding active movement, but private yards and wharves were well filled, and orders must have kept up from these sources. Spot prices have been rising, but not up to North of Europe shippers' rates for their modest unsold balances. Within the past week or so, however, the extra weight of wood on the U.K. market has created some nervousness on the part of importers, for the worst of weather is still in front of the building trade, and there is much purchased wood to come forward from Northern Europe before ice sets in, from mid-Europe, unaffected by ice, and from Canada—especially British Columbia, open to navigation the year round.

Comparatively large quantities of Finnish and Swedish woods for f.o.w. 1937 shipment have been sold to the U.K., but the recent heavy arrivals, much of which has gone into stock, have made U.K. importers shy, at least for a time, of too much further business. Teak, rosewood, mahogany of best qualities and sizes are in good demand at firm rates. So, too, is sawn

oak, American, mid-European and Japanese. Canadian woods are being well called for, but arrivals have not been so heavy this year. Generally all woods are firm in price, especially the better qualities. Plywood imports in October were heavy, and for the ten months exceptionally high, amounting to some 11.8 million cubic feet.

POTASH.—According to private advices from Spain, the three leading Spanish potash concerns have just resumed production. It will be recalled that the Spanish quota has been produced by other members of the cartel since the beginning of the Spanish civil war. The resumption of activity in Spain is therefore unlikely to affect the world market in potash since French and German output will be reduced *pari passu*. Meanwhile, it is interesting to note that the Spanish mines are at present under the control of workers' committees, on the basis of the recent Catalan law regarding socialisation of industrial enterprises. It is improbable, however,

that this state of affairs will continue, even if Catalonia should be established as an independent State, for the three largest potash concerns in Spain are controlled by foreign capital.

RUBBER.—Mainly owing to the uncertainties of the international political situation, the market in rubber has been rather dull this week. Prices show little alteration. The spot price in New York on Wednesday was 18½ cents per lb. compared with 18½ cents per lb. a week ago and 16½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8½d. per lb., as against 8½d. on the corresponding day last week. In forward positions, business has been done at 8½d. to 8½d. for "January-March" shipment, as against 8½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 91,568 tons, against 93,188 tons a week earlier. A year ago stocks amounted to 166,492 tons.

REPORT BY THE COURT OF DIRECTORS OF

The ROYAL BANK of SCOTLAND

To the ANNUAL GENERAL COURT OF PROPRIETORS, on Wednesday, 25th November, 1936

The Directors now submit to the Proprietors the annexed Abstract Statement of the Affairs of the Bank at the Second Saturday of October, 1936, with relative Profit and Loss Account, certified by the Auditors.

The net profits of the year, after providing for Income Tax and all bad and doubtful debts, amounted to

Dividend for half-year paid at Midsummer at the rate of 17 per cent. per annum, required ... £321,316 6 5 ... £632,035 4 3

Less Income Tax ... 76,312 12 6 ... £245,003 13 11

It is now proposed to pay a Dividend at Christmas for the second half-year at the rate of 17 per cent. per annum, which will require ... £321,316 6 5

Less Income Tax ... 76,312 12 6 ... £245,003 13 11

There has been written off expenditure on Bank Buildings and Heritable Property ... £245,003 13 11

Carried to Pension Reserve Fund ... £25,000 0 0

And added to Rest, the Balance of ... 30,000 0 0

87,027 16 5 ... £632,035 4 3

All the Bank's Investments are valued in the annexed State of Affairs at or under the prices ruling at the date of the Balance.

The Governor, the Deputy-Governor, the Extraordinary Directors, and the Senior Ordinary Director (Mr Herbert William Haldane) all retire at this time, and are eligible for re-election.

Auditors also fall to be appointed for the ensuing year, and Mr J. Maxtone Graham, C.A., and Mr George James Gregor, C.A., offer themselves for re-election.

By Order of the Court of Directors,

WILLIAM WHYTE,
Clerk and General Manager.

ABSTRACT STATE OF AFFAIRS, at 10th October, 1936.**LIABILITIES.**

1. Deposits with accrued Interest and other Credit Balances	£66,800,985 1 1
2. Notes in circulation	2,929,938 0 0
3. Drafts Outstanding	606,456 6 8
4. Acceptances and Indorsements of Foreign Bills and other Obligations	3,533,849 18 4
5. Capital	£3,780,192 0 8
6. Rest	3,944,171 10 9
7. Proposed Half-year's Dividend payable at Christmas (less Income Tax)	245,003 13 11
Total Liabilities	£81,840,596 10 4

ASSETS.

1. Gold and Silver Coin, Bank of England Notes, Notes of other Banks, and Cash with Bank of England and other London Bankers	£7,258,312 8 8

3. British Government Securities and Securities guaranteed by British Government	28,975,312 12 11
4. Indian and Colonial Government Securities, Bank of England Stock and Corporation Stocks	2,284,477 19 1
5. Other Securities	398,227 4 0
6. Bankers' Industrial Development Company Ltd., One "A" Ordinary Share of £100,000 (£100 paid)	£100 0 0
7. Williams Deacon's Bank Ltd. Shares—1,562,500 "A" Shares of £5 each, £1 paid, and 312,500 "B" Shares of £1 each fully paid	3,093,750 0 0
8. Bills discounted (of which £2,035,000 British Government Treasury Bills)	4,114,747 7 11
9. Advances on Cash Credit and Current Accounts	22,411,506 12 2
10. Loans on Stocks and Securities	921,568 19 8
11. Banking Correspondents and other Customers for Acceptances and Indorsements and other Obligations, <i>per contra</i>	3,533,849 18 4
12. Bank Buildings (partly yielding rent)	403,160 18 0
13. Property yielding rent	181,178 4 11
14. Freehold Properties in London (partly occupied by Bank and partly yielding rent)	585,000 0 0
Total Assets	£81,840,596 10 4

PROFIT AND LOSS ACCOUNT.

To Expenditure on Bank Buildings and Property written off	£25,000 0 0	By Rest at 12th October, 1935	£3,857,143 14 4
" Pension Reserve Fund	30,000 0 0	" Net Profits after deducting expenses of Management at Head Office and 254 Branch Establishments, allowing for rebate on Bills Current and providing for Income Tax and all bad and doubtful debts	632,035 4 3
" Dividend for half-year, paid at Midsummer, less Income Tax	245,003 13 11		
" Dividend for second half-year, to be paid at Christmas, less Income Tax	245,003 13 11		
" Balance, being free Rest or undivided Profits, carried forward	3,944,171 10 9		
	£4,489,178 18 7		

D. SPEED, Chief Accountant.

AUDITORS' REPORT

As Auditors appointed by the Proprietors of THE ROYAL BANK OF SCOTLAND, we have checked the Cash on hand at Head Office, Glasgow and London (City Office), verified the cash with London Bankers, the Securities for money at call and short notice, the Government Securities and other Investments, and examined the details of the other Assets and of the Liabilities set forth in the foregoing Abstract State of Affairs; and we now certify that in our opinion said Abstract State is a full and fair Balance Sheet, properly drawn up, and exhibits a true and correct view of the state of the Bank's Affairs, as shown by the books, at 10th October, 1936.

EDINBURGH, 13th November, 1936.

J. MAXTONE GRAHAM, C.A., Auditor.
GEO. JAMES GREGOR, C.A., Auditor.

THE KING

A CONSTITUTIONAL dispute has arisen between the King and his Ministers. That this should have happened so soon after his accession to the throne, must be deplored, not only in this country but also in the Dominions and throughout the Empire. It is particularly to be regretted that it should have arisen over a matter relating to the King's personal life. The crisis has even been accompanied by talk of the resignation of the entire Cabinet on the one hand, or of the King's abdication on the other. The state of affairs in this country and the world is not such as to enable Englishmen to view with equanimity an acute domestic crisis—above all, one that touches the institution which is the supreme symbol of Imperial unity.

The point at issue is the King's right to choose his wife. For months past the American and Continental newspapers have been associating the King's name with that of Mrs Simpson, a lady of American birth, and more recently they openly suggested that the King intended to marry her. This lady has been twice married; and her second marriage was recently dissolved *nisi* at the Ipswich Assizes.

It is, we think, the general opinion of the British people that kings, like other men, should marry whom they wish. We do not imagine that many British people would cavil at a King of England marrying an American citizen. But there are many who would consider it seriously out of keeping with the traditions of the monarchy as established by King George that a lady who had been twice in the divorce court—even though she was petitioner in both cases—should be exalted to the rank of Queen of England.

The King of England has the constitutional right to choose his own wife, provided only that she is not a Roman Catholic. He is not restricted, as are many of the remaining monarchs in the world, to the choice of a partner with blood royal in her veins. But the British Constitution also contains a principle of the highest importance—namely, that if advice is tendered to the Sovereign by a Ministry which has the confidence of the House of Commons, that

advice must be followed. This principle is the very foundation of British democracy. It is the ultimate safeguard of the British people against personal rule. Furthermore, it applies even to matters which the Sovereign may consider to be of private concern only to himself.

The immediate task before King, Cabinet, Parliament and people is to find some way of reconciling these two Constitutional principles—the King's right to marry whom he will, and his duty to follow advice tendered to him by the Cabinet. Whether a constitutionally practicable solution can be found; whether, when found, it would be acceptable to the King or to the public; whether it would be in accordance with the interests of the Kingdom and the Empire, we do not know. Indeed, we doubt whether anybody, from the highest to the lowest in the land, can make up his mind on these grave issues in all the stress and heat of this sudden crisis.

There are, of course, disadvantages in delay, and it is perhaps necessary to utter the warning that a domestic anxiety of this nature should not be taken by any foreign adventurer as the signal for a fresh disturbance of the peace. Any attempt by any foreign Power to take advantage of the British public's constitutional preoccupations would unite Britain as nothing else could do. The Constitutional issue would be forgotten overnight, just as the Irish crisis vanished in a flash in 1914.

The possible advantages of a pause for reflection, however, vastly outweigh the disadvantages. Only when every possibility of a solution which would avoid damage both to the King's legitimate desires, and also to his position on the throne, has been thoroughly explored and rejected will the time have come to face the King with the blunt alternative of abandoning either his project of marriage or his throne. We hope profoundly that that time will never come. If it does, we cannot think that the King will act in any way that is repugnant either to the high office he has been called to fill, or to the manifest desires of his people and their representatives.

CONTROLLING THE BOOM

If there is any truth in the notorious popular tradition that economic experts never agree, the symposium on British monetary policy contributed to our columns in recent weeks must be accounted remarkable. Although our contributors represented such widely different viewpoints as those of the City, the universities, and the Civil Service, their conception of the kind of monetary and economic policy which this country ought now to pursue was in most fundamental respects similar. There were, of course, divergences of detail and emphasis. But on almost all the main issues the views expressed were in accord; and they were also broadly in accord with the suggestions we ourselves put forward after the devaluation of the gold *bloc* two months ago.

The greatest measure of agreement among our contributors was on the interpretation of the existing situation, and on the proper attitude towards interest rates, tariffs and prices, and public works. On the Budget there was rather less agreement and on exchange policy a fairly wide disagreement. At the present moment, it was generally felt, the British economy is on the verge of, rather than actually in, a "boom." The rise in prices, that is to say, has so far been only sufficient to cure the previously existing cyclical unemployment; and has not yet become inflationary. But it was agreed that building activity is likely to slacken from now onwards, and that the maintenance of employment will thus become dangerously dependent on re-armament. There was perhaps a tendency among all our contributors to ignore the existence of the depressed areas (i.e. the areas with considerably more than normal unemployment), or to assume that if the unemployed in those areas are to be re-employed at all, they must be re-employed in the export trades. Though this is doubtless true in the short run of most of those unemployed it must be remembered that unemployed are being transferred out of the Special Areas in England and Wales alone at the rate of about 40,000 a year, and probably out of the depressed areas as a whole at a rate of about 100,000 a year. This surplus of labour must be taken into account in framing policy for the whole country, even if a quick cure is only possible through a revival of exports.

On interest rates our contributors were unanimous in thinking that no change of policy was necessary at present. A rise in interest rates, Mr H. D. Henderson pointed out, would not retard re-armament; it would merely accelerate the decline of building activity, and this would benefit nobody. On tariffs and prices, again, there was complete agreement that for two cogent reasons this country ought forthwith to take the lead in promoting a general low-tariff agreement. The first reason is that food prices and costs are rising and so threatening a possible inflationary "spiral"; and the second, that the unemployed are now almost wholly concentrated in the export trades. Sir Arthur Salter suggested that the first tariffs and quotas to be eased should be those affecting British industrial costs and those necessary to promote low-tariff agreements. Similarly on public works it was agreed that the need is not so much for further expansion now as for the preparation of a reserve of schemes for adoption if and when a recession is threatened a few years hence.

On the delicate question of balancing the Budget, Sir Arthur Salter, Mr Henderson, Professor Robbins and Professor Gregory all declared that taxation rather than loans should finance re-armament; though they did not specify whether the whole Budget should be balanced by taxation. Sir Henry Strakosch was willing to cover at least a part of the cost of re-armament by loans. There was a greater divergence of opinion about exchange policy. Mr Henderson stated categorically that we should not "allow policy in regard to interest rates to be affected by considerations of the foreign exchanges"; Professor Gregory, equally categorically, that we ought to "announce our determination to defend the existing parities, and not to alter them without the consent of the signatories of the Tripartite Agreement." A middle view was taken by the other contributors on this point.

Perhaps the most interesting feature of the symposium has been the general acceptance of two contentions which

we do not think would have won such general acceptance in the last prosperity period of 1927-29. These contentions are: First, that this country is now in a period of cyclical prosperity which is unlikely to last, or at least unlikely to last of its own accord; secondly, that so far from spending, borrowing and expanding now on the ground that we can "afford" it, and "economising" later on the ground that we cannot, we ought to tax ourselves and reduce debt now, and so prepare for freer public spending and investment later, when and if private spending begins to fall. The acceptance of this thesis is a significant and hopeful fact; and we trust that it may permeate opinion, both official and unofficial, more and more thoroughly. One important inference from it is that the non-recurrent volume of re-armament is no justification whatever for a loan Budget at the present time. There are, of course, two extremist schools of thought, one of which holds that the trade cycle has been exorcised by the abandonment of gold, and the other that depressions descend periodically from heaven and cannot be influenced by any act of man. We would beg the advocates of the first of these theories to reflect on the undeniable probability of considerable unemployment in the building and constructional trades two years hence, and the advocates of the second to consider whether something might not then be done to absorb this labour in useful public works.

Several practical morals seem thus to emerge from the points on which our contributors are agreed. First, bank rate should for the moment be left where it is; and no action be taken to expand or contract the volume of credit by open-market operations. Secondly, there should be an increase in direct taxation sufficient, or nearly sufficient, to cover the prospective deficit. To raise further money by indirect taxation would be undesirable, both because of the increasingly regressive character of our tax system in the last few years, and because of the urgent necessity to lower tariffs and prevent a further rise in costs. A rise in income tax, surtax and death duties is thus plainly indicated; and Sir Arthur Salter suggests that this should be supplemented by a scheme for additional excess profits taxation. There is a very strong case, both on economic and social grounds, for a special tax in the next two years on profits abnormally swollen as a result of exceptional Government expenditure.

Another plain practical need is an examination of the administrative possibility of preparing in some form or another a reserve of public investment schemes. How far do administrative difficulties, the relations of central and local authorities, and so forth, forbid such a plan? Already it has been suggested that a second instalment of building to remedy overcrowding is suitable for such preparation in advance; other projects, such as the Severn Bridge and Charing Cross Bridge schemes, are known to be in various stages of gestation; road development is always susceptible to a certain degree of acceleration or restraint; and main line railway electrification has long been on the verge of profitability. Those with administrative experience might well be asked to consider, in the present breathing space, whether there is the material here for developing a public works strategy to supplement ordinary monetary policy. And in this connection there might well be preliminary study of the best practical machinery for using the Bank's gold profit as a reflationary weapon at a later date.

The more immediate problem of tariffs, quotas and exchange policy remain. All our contributors agree that there should be some easing of tariffs and quotas; and those which should go first are plainly those which affect the price of food or industrial costs. There is thus an overwhelming case for the suppression of the beef and bacon quotas, and the reduction of the steel tariff. Such a policy would restrain the rise in British costs, and provide us at the same time with a bargaining weapon for securing an increase in exports.

Tariff policy and exchange policy are inevitably interdependent; and in return for a far-reaching, multilateral low-tariff agreement, this country might well be prepared to accept a measure of provisional exchange stabilisation within reasonably wide limits. Until such an agreement is realised, however, it seems hardly worth committing ourselves to a greater curtailment of freedom than that

involved in the present Tripartite Agreement. To preserve, at any rate during the next year, the existing short-term stability and the existing reasonably natural exchange rates seems at the moment the wisest policy. For no great strain on the present sterling-dollar rate seems probable in the immediate future. The sterling area's balance of payments is probably less adverse than has been supposed. And American costs seem likely to rise certainly as rapidly as British costs in the coming months; for the rise in American money wages has only recently become rapid and substantial.

Much future trouble might, however, be avoided if the authorities in all the countries signatory to the Tripartite Agreement were to "exchange information" not only on day-to-day policy, but on the general movement of prices expected and designed by each. Divergences of price movements within the *bloc* may require further exchange adjustments. And these could be made more harmoniously if the policy of each were clearly understood by all.

THE FASCIST OFFENSIVE

THE consequences of the democratic Powers' abdication from their once-commanding position in the world are now descending upon us thick and fast. How incredulous we should have been in 1919 if we had been told then what the situation was to be to-day. The respective positions of those actors on the international stage are now completely reversed. The two then prostrate giants, Germany and Russia, have now risen to their feet and girt themselves to contend with one another for the mastery of the world. Italy and Japan, who in 1919 were semi-democratic camp-followers in the train of the Western Big Three, are now hand in glove with Germany as her confederates in a new Fascist Triple Alliance. And the three democracies are drawing in their skirts and standing on tip-toe in the hope that this uncomfortable and undignified attitude may save them from being swept away by the gathering flood. The United States, with a broad ocean on either side of her, is taking counsel with her fellow American States to make a common sanctuary of the New World. The United Kingdom, Belgium and France, with no natural barrier to insulate them from a Fascist-Communist conflict, are clinging desperately to one another in the hope that some miracle may come as a heaven-sent reward for their renunciation of any active attempt to salvage themselves.

This was the meaning of the speeches exchanged between Mr Eden and M. van Zeeland in London on Friday of last week; of M. Blum's speech about the military strength of France; and of M. Delbos's announcement that France intended to reciprocate Great Britain's pledge of armed support in the case of her neighbour being made the victim of an act of unprovoked aggression. England supports Belgium and France against an aggressor; and they her. The words—Mr Eden's and M. Blum's in particular—were brave enough; but a close reading of them suggests that the two democratic statesmen took some care to limit their promises about acting as mighty men of valour to just those hypothetical cases which are the least likely to arise. For if the West European democracies are conquered, it will not be by a direct attack on their national territories. They will be conquered in Spain and Czechoslovakia and the Ukraine and the East Indies, and they will not be called upon to stand and deliver their great possessions until the Fascist Powers have acquired an irresistibly superior strength through the conquest of those third parties whom the English and French are now throwing to the wolves. The only circumstances in which France and Great Britain can hope to arrest the Fascist offensive before it is too late are those in which they have already practically given notice that they actually intend to do nothing. If we are to stop the Fascist Powers, we must prevent their preliminary acts of aggression against our weaker neighbours.

The extraordinary thing about recent diplomatic manoeuvres is that the aggressors harvesting these spectacular successes are inwardly almost, if not quite, as uncertain of themselves as their adversaries, who are giving ground before them with all the outward manifestations of

7, CHANCERY LANE, LONDON

abject terror. Day by day, it becomes more apparent that the Fascist Powers, for all their stirring parade, have no stomach at all for a war with other Powers of their own calibre. This first became apparent in the case of Japan, when, having culled her cheap victory over China, she hung back from attacking Russia and thereby gave the Russians time to make themselves immensely more formidable to an aggressor in the Far East than they would have been in 1932. In this context, it is noteworthy that the new Japanese-German anti-Communist Pact has evoked in Japan a wave of criticism which must have taken the Japanese militarists by surprise. The civilians have not made such a stand as this against the fighting services at any time since the Japanese Army ran amok in the autumn of 1931; and the spur that is stimulating them to beard their own militarists over this issue is the dread of a really big war. What the Fascist Powers want is a perpetual supply of "little wars" with weak countries on whose behalf the other great Powers of the world will be unwilling to fight. Such birds are rare. Manchuria and Abyssinia were perhaps the solitary representatives of the species, and there is not one single sparrow whom Germany can make sure of being able to devour with impunity, since any German attack upon the Czechoslovakias and Lithuanias might bring more powerful neighbours into action.

The situation seems to be that the small supply of easy wars has been used up, and that the large choice of arduous wars which lies open to the Fascist Powers is not an option that appeals to them. But if this is so, why is it that the Fascist Powers are forcing the pace instead of slowing down to a halt? When they are fast approaching a stage in their pursuit of the democratic Powers at which the latter may be driven, in sheer desperation, to stand at bay, would not the pursuers be better advised to slacken the pace? The answer to this question—and it is a gloomy one—was given by President Roosevelt on Tuesday to his Pan-American audience at Buenos Aires.

"We know," he said, "that vast armaments are rising on every side, and that the work of creating them employs men and women by millions. It is natural, however, for us to conclude that such employment is false employment, that it builds no permanent structures and creates no consumers' goods for the maintenance of lasting prosperity. We know that nations guilty of these follies inevitably face the day either when their weapons of destruction must be used against their neighbours or when an unsound economy, like a house of cards, will fall apart."

The truth is that the dictators have wantonly placed themselves, their own peoples, and the rest of us in a dilemma from which the dictators themselves can now find no way out. In their ever more frantic efforts to prevent the house of cards from collapsing, they are being pushed ever nearer to an abyss from which they shrink as fearfully as we. The landing of some thousands of German "volunteers" in Spain this week is another long step in this terrible progress. It looks as though Hitler cannot be sure of carrying his own people through another winter without an internal catastrophe, unless he succeeds in keeping his

series of external triumphs unbroken by a defeat of Fascism in the Spanish arena. In order to keep up this indispensable illusion of invincibility he has to strike one blow after another at a structure of peace which, with half his heart, he wishes to preserve.

How far the Fascist Powers can go without provoking the democracies into making a stand it is still impossible to say. But they have also to deal with the Soviet Union; and there are increasing signs that Russia may lose patience sooner than this country or France. Russia may be a match for the members of the new Triple Alliance. It is a totalitarian state which can mobilise its people, if it chooses, for an "ideological crusade." The Russians are not spoiling for a fight because, for one thing, they are not under the pressure to which the Fascist dictators have subjected themselves. It is manifest that Stalin would greatly prefer to be let alone in order to cultivate his own enormous garden, which can provide him with quite enough "stunts" for any dictator's purpose. At the same time, the Russians have long believed the Soviet Union to be the target of a Fascist conspiracy; and in his speech of the 29th of last month, M. Litvinov directly accused the Germans and Japanese of having supplemented their Anti-Communist Pact with a secret military agreement directed against Russia. Europe is concentrating its energies on one increasing purpose—the sowing of dragon's teeth. The Far East has now been brought into the European picture. We have seen what use the dictatorships have made of their initiative. It is for those whom President Roosevelt has called "the peace-loving ninety per cent." of the world's people to make the next move.

FILMS AND FANS

Nobody seriously expected that the Special Committee appointed last March by the Board of Trade to investigate the present position of British films, whose report was issued last week-end, would do otherwise than recommend that the main provisions of the Act of 1927 should be continued for a further term. Even the most hostile critics of that measure do not deny that, despite its defects, it substantially achieved the purpose for which it was put on the Statute Book. The dying embers of an industry which had become almost extinct in 1926 were fanned into flame by the application of a strong blast of protection, and the value of the present output—estimated at near £5,000,000 last year—is probably nearly twenty times as large as ten years ago. In 1926 the depressing story was repeatedly shouted from the house-tops that scarcely more than 2 per cent. of the films shown on British screens were British made. In the last quota year this proportion exceeded 25 per cent.

The credit for this achievement is materially enhanced by the difficulties, altogether unexpected when the Act was passed, with which the industry was confronted at the end of the 'twenties. It has now successfully overcome them. Most important of these difficulties was the advent of "sound films," which, coming with the suddenness of the proverbial thief in the night, threatened the British trade with a catastrophe. At first the mewling and puking noises which accompanied the screening of the "all-talking" pictures were not recognised as the mere ululations of a new-born infant, but were mistaken for the strident cacophony of a full-grown man. The belief was widespread that the talking-picture would have only a nine-days-wonder value and that the trade would surely revert to the standard of silent pictures. Meanwhile, the hesitation induced by these first impressions led to a period of chaos, and valuable time was lost in re-equipping and adapting studios and cinemas for the "new dimension." Many enterprises went under in the struggle against these overwhelming forces; and only those which were strong financially and controlled with great courage emerged successfully from the ordeal. From then onwards the progress in every branch of the industry has been continuous. The British film industry is now second only to that of Hollywood.

Hopes were entertained in some quarters that when the existing Act came to an end in 1938, further protection

might be unnecessary. Such hopes found no place, however, in any important section of the trade itself; and the conclusion reached by the Committee is that there still exists an "absolute necessity for legislative action to maintain and establish the industry." The Committee add the opinion "that continued protection is required even if the industry is to be maintained merely in the position it has now reached" and "that a steadily increasing protection is . . . a *sine qua non*." Following on this positive conclusion they propose that, subject to certain amendments and modifications of its provisions, the present Act should be continued for a further ten years.

We are unable to follow the Committee in all the ratio-cinative processes by which they have achieved the most important of these recommendations. Beginning the new period with a "British film quota" of 20 per cent. for distributors and 15 per cent. for exhibitors, the hope is expressed that both percentages should ultimately reach as high a figure as 50. Unless the Committee are fully satisfied that their hope can be realised, more harm than good can only result from setting up an unattainable goal. To achieve equality in screen time between foreign and British films—for that is what a 50 per cent. British film quota means—implies an industry of an importance at least as great as, and possibly greater than, that of America, both in number of pictures and in entertainment quality. To believe in this possibility would be to encourage new enterprises and new investment, of which too many company promoters would be ready to take advantage; with results that would be as unfortunate for the public as those of 1928 and 1929. It is hard to believe that in so short a space as ten years—in the face of such competition as the American industry never had to meet—the size of our own production industry could be increased more than ten-fold, and the British producers' average earnings from individual pictures about four-fold. Yet this is what, according to the evidence, equality means.

Undoubtedly, the primary objective of the Board of Trade in appointing the Committee was the complete extirpation of the "quota quickie." This is the name given to the class of subject, made principally to the order of the American distributing companies operating here, which, while complying with the technical requirements of the Act, evoked only derision and contempt for the British industry. The many excellent pictures which British companies have produced in recent years, comparable in technical excellence and in entertainment value with the best from Hollywood, are completely ignored in this connection; and the public here and abroad are inclined to estimate British pictures by the "quickie" standard. A solution to this problem had to be found; but we are far from convinced that the method recommended by the Committee is not more likely to create new and worse difficulties than those which it will overcome. The Committee considered and rejected a suggestion, which had considerable support from many trade authorities, to require a minimum of expenditure on every picture before it could qualify for "quota." Admittedly, cost is no criterion of value; and bad pictures can be produced with "tons of money." Nevertheless, the standard was a definite and practical one, and under it the number of really bad pictures must have been considerably reduced. Instead the Committee recommend the appointment of a kind of tribunal who, after any picture has been completed, would view it and decide whether its entertainment quality justified its registration as a British quota picture. There is, we feel, ground for the apprehension felt in the trade that under such a regime pictures will not be submitted because they will not be made. Given the hazards already associated with picture production, finance is bound to fight shy of the additional hazard of satisfying the varying tastes of a body of men and women—in these days we presume the members would not be all of one sex—which would be united only in their dissimilarity to those of the "fans" of Wigan, Oswaldtwistle and Llanfairfechan. A censorship of quality—for that is what such an institution must become—is the most objectionable of all types of censorship, and Parliament is likely to give short shrift to any such proposal.

Particular interest attaches to the Committee's unexpected recommendation in favour of creating a Film

Commission to control, guide and direct the activities of the film industry. The trade has received the suggestion frigidly, and it is doubtful if, should it reach the draft legislative stage, Parliament would regard it with any greater cordiality. Nevertheless, the proposal may, in the present circumstances of the film trade, deserve serious consideration. It might help to remove the quarrels which are so frequent among the different sections of the trade, and unite them in the common purpose which they profess to be anxious to serve. The most violent quarrels in recent months have arisen in connection with the alleged over-building of new cinemas; the action of the renters in combining to withhold a supply of films to any combine of theatres not tied by a substantial cash nexus; the soaring prices which exhibitors are compelled to pay for their film programmes. In some of these cases exhibitors have sought relief by asking the Board of Trade to intervene, and it may prove that the independent body which the Committee now recommend can be shaped to remove these and many other similar difficulties. Perhaps the Committee have not realised, however, how difficult would be the task of selecting the members of such a Commission. The industry is, perhaps, more complex and more intricate than any known to our economic life. Unless the members appointed have considerable experience of the trade and its multitudinous problems, the Commission will not inspire that confidence in the trade and the public which is essential if it is to realise the good intentions of its sponsors.

CAN BRITAIN FEED HERSELF?

THE appointment of Mr H. L. French as director of a new Food (Defence Plans) Department forcibly directs national attention to the problem of food supplies in time of war. One of the acknowledged objectives of the Government's agricultural policy has been to lessen Britain's dependence upon imported foodstuffs. What progress has been made since 1931?

For a brief and convenient epitome of available facts we would direct our readers to the accompanying table. In it we show, side by side, the total imports of various foodstuffs and estimates of home production, based, in many instances, on the invaluable publications of the Imperial Economic Committee.

UNITED KINGDOM—FOOD SUPPLIES
(000's omitted)

	1931	1932	1933	1934	1935
Wheat—Home production	Cwts. 20,280	Cwts. 23,360	Cwts. 33,440	Cwts. 37,380	Cwts. 34,890
Imports	119,419	105,637	112,375	102,625	101,226
Maize—Retained imports	51,000	50,115	49,604	59,344	57,638
Beef and veal—Home production	12,161	11,713	12,210	13,474	14,434
Imports	13,136	12,175	12,212	12,812	12,692
Mutton and lamb—Home production	5,058	5,731	6,214	5,776	5,452
Imports	7,132	6,934	6,696	6,491	6,752
Pigmeat—Home production	6,510	7,454	7,692	8,004	9,187
Imports	13,291	13,237	11,117	10,032	9,064
Butter—Home production	950	950	950	950	950
Imports	8,060	8,364	8,832	9,695	9,609
Cheese—Home production	1,000	1,000	1,000	1,002	1,142
Imports	2,866	3,003	3,040	2,989	2,713
Fish—British taking	19,847	19,554	18,745	18,657	19,884
Sugar—Home production	5,035	6,606	9,261	12,296	9,746
Retained imports	34,519	41,474	34,002	32,271	32,759
Tea—Retained imports	Lbs. 445,425	Lbs. 487,722	Lbs. 422,983	Lbs. 442,530	Lbs. 403,638
Eggs—Home production	Gt. Hds. 34,500	Gt. Hds. 37,500	Gt. Hds. 39,500	Gt. Hds. 39,500	Gt. Hds. 38,500
Imports	25,925	19,995	18,373	18,734	19,779

The Wheat Act of 1932 has brought about a substantial increase in wheat production, partly at the expense of other grains. Domestic output is now sufficient to satisfy about one-quarter of the demand, against only 15 per cent. in 1931. Moreover, as we showed in a leading article on November 7th last, there is no reason to suppose that home

production has reached its limit. For the present, however, imports to the value of about £30 millions are made annually, of which over one-half comes from the Empire. Canada, Argentina and Australia are the principal sources (in that order), and together account for the bulk of our imports. Among other cereals, maize is an important feeding-stuff of livestock and poultry, and here we are entirely dependent upon overseas supplies. Imports are valued at about £12 millions annually, with Argentina's contribution far and away the most important.

Consumption of meat in the United Kingdom is heavy, and our dependence upon overseas sources is still considerable. Home production of beef, however, has been encouraged by the fat cattle subsidy, and foreign imports have been restricted under the Ottawa Agreements. British production, consequently, is now sufficient to meet over one-half of the demand, the remainder being supplied mainly by Argentina. Last year Argentine shipments were valued at £14,480,000 out of a total of £21,760,000. Home production of mutton and lamb, which has not been subject to Government intervention, has declined slightly in recent years and is insufficient to satisfy even one-half of total domestic consumption. The United Kingdom takes practically the whole of the mutton and lamb entering into international trade, imports being worth about £18 millions annually. Over 50 per cent. of our imports come from New Zealand, with Australia a lagging second.

The supply position of pigmeat (pork and bacon) has been greatly modified by the Pigs and Bacon Marketing Schemes. As our table shows, home production has considerably expanded since 1931, while imports have been cut down by quotas. Home production provided only 33 per cent. of total supplies in 1931, but is now sufficient to satisfy about 50 per cent. of our needs. Denmark is still by far the most important source of overseas supplies, but shipments from Canada have shown an extraordinary increase in consequence of very favourable treatment under the Ottawa Agreements. There is no doubt that British production of meat could be still further extended if necessary—but only at the expense of importing increasing quantities of fodder. And the shipping space occupied by a ton of meat is substantially less than that occupied by the feeding-stuffs necessary to produce the same quantity of meat on British soil.

When we turn to dairy produce, we find a still greater dependence upon imports. British production of butter is estimated by the Imperial Economic Committee to have remained stationary in recent years at around 950,000 cwts. Imports, which are ten times as great as home production, have tended to expand and are now worth about £40 millions annually. Among overseas sources of supply, New Zealand, Australia and Denmark are roughly of equal importance, and together supply about 70 per cent. of our total imports. In cheese we are more nearly self-sufficient, our home supplies having risen from about one-fourth to one-third of the total demand. Imports come principally from New Zealand and total about £7

millions a year. The Milk Marketing Schemes have caused a change-over from farm to factory production of butter and cheese, but have had little effect upon total production. It is most unlikely that Great Britain could ever make herself self-sufficient in these essential items of food. On the other hand, it is possible to envisage self-sufficiency in eggs at no very distant date if foreign supplies are entirely shut out. Imports of eggs from Denmark and other countries have already been restricted by "gentlemen's agreement." Home production has been on a steadily expanding scale since the war, and now satisfies about two-thirds of the total demand.

Fish is one important item of food which can be provided entirely from British sources. British takings are actually in excess of home demand, and a balance is available for export. In time of peace, Britain's fishing industry could no doubt expand its output still further, but in war time it would probably be exceedingly difficult to maintain the present level of production.

Sugar and tea cannot be strictly described as essential foodstuffs, but they rank high on the list of conventional necessities. Even the most ardent advocate of self-sufficiency is hardly likely to suggest the planting of tea gardens in temperate latitudes. Willy-nilly we must continue to rely upon imported supplies, which come principally from Empire countries—mainly India and Ceylon—and are valued at about £26 millions annually. Our need of sugar was until recently satisfied from foreign sources, but the supply position of this commodity has been modified by the Government's policy. From very small beginnings in the immediate post-war years, British production has been fostered by means of the subsidy, and is now able to meet about one-quarter of total demand. Imports to the value of about £13 millions annually come from a considerable number of countries, of which Cuba is the most important.

Mention may be made, finally, of fruit and vegetables—a group of foodstuffs whose importance has been widely recognised in recent years. Imports, which fluctuate from year to year with the variations in the home crop, may be valued at some £40 millions a year. The United Kingdom is the world's largest importer of fresh fruit, about three-quarters of total supplies coming from sources overseas. The principal imported vegetables in value terms are tomatoes, potatoes and onions. But imports of potatoes are very small compared with domestic production, while entries of other vegetables have been drastically reduced since 1931 by British tariff policy.

The conclusion suggested by these figures is that in response to Government intervention British agriculture has undoubtedly furnished increasing supplies of foodstuffs in recent years. This result has, however, been achieved at a cost which must become progressively more heavy with every advance towards self-sufficiency. For a high proportion of the foodstuffs necessary for our well-being we are still dependent upon imported supplies, and it is inconceivable that we shall be able to dispense with them by any foreseeable future date. Moreover, although the Ottawa Agreements have been followed by a proportionate increase in our purchases in Empire markets, such foreign countries as Argentina and Denmark are still indispensable

to us. In time of war, their greater proximity to the British market would render the latter—to say nothing of the Irish Free State—more accessible as warehouses and granaries than Australia and New Zealand. The grudging attitude of His Majesty's Government towards trade with these countries is calculated to impair rather than to enhance the security of the nation's food supplies in time of war.

ORGANISING THE MILK MARKET

In the last three years, almost unbeknown to the man in the street, a vast experiment in the control of a complicated and individualistic market has been in progress. Over 160,000 dairy farmers have been marketing their milk through the agency of four Milk Marketing Boards, one for England and Wales, one for the greater part of Scotland, one for the Aberdeen district, and one for the North of Scotland. These Boards are easily the most important that have been set up under the authority of the Agricultural Marketing Acts—the most important either to the farmer or to the community—and the policy embodied in those Acts must stand or fall, in large measure, by the success or failure of the milk schemes.

Moreover, there has been another important development since 1933. Three years ago, the blessed word nutrition was barely heard outside specialist circles. To-day, the whole nation has been awakened to the twin facts that proper (and not merely sufficient) food is of vital importance to the health of the people, and that the food consumed by a very large section of the population is neither adequate nor appropriate for the maintenance of health. No food is more necessary, especially for children, than milk; and no food is more woefully deficient in our national dietary.

The Reorganisation Commission, which was appointed last year to examine the progress of the Milk Marketing schemes and has just reported*, was therefore asked to determine not merely whether the schemes have fulfilled the hopes of their original sponsors, but also whether they meet the somewhat wider requirements for a system of organising the milk market which would correspond to the awakened public conscience on the vital necessity of proper nutrition.

The Commission's Report (which was briefly noticed in last week's *Economist*) is a long and illuminating document which deserves the attention of many who are not directly concerned with any phase of milk production or distribution. The first two sections of the Report are a review of the history and effects of the marketing schemes. Those schemes are founded upon three main principles. In the first place, a rigid distinction is drawn between the market for milk for liquid consumption and the market for milk to be manufactured into butter, cheese or other products. It is the same milk which goes into the two markets, but in one it fetches a price more than three times as high as in the other. But, secondly, the receipts from these two markets are pooled within each of the eleven regions (in England and Wales) and each producer receives a share in the pool irrespective of whether his milk has gone to the liquid or the manufacturing market. And, thirdly, the scheme is administered by a Board which is elected by, and therefore representative of, the producers of milk alone. In spite of this narrow basis of representation, the Board has very considerable powers of prescribing prices not merely for the first sale of milk but also for its re-sale to consumers.

This organisation has worked as might have been expected. The producers have gained, thanks to a steady market and to receipts higher than they were before the scheme and considerably higher than they would have been without the scheme. Distributors have gained through assurance of supplies and legal enforcement of favourable margins. Manufacturers have gained through an increase of turnover and prices calculated to secure remunerative working. The best test of the success of the scheme from this point of view is the enormous increase in the volume of milk handled. It increased from 939 million

* "Milk: Report of Reorganisation Commission for Great Britain." Ministry of Agriculture and Fisheries, Economic Series No. 44. H.M. Stationery Office. 1s. net.

gallons in the first year to 1,107 million gallons in the second year, and there has been a further increase in the third year. Contrary to the general belief, there has been very little increase in the production of milk. But less of the total production is now being used on the farm and more sent for sale. There has been no corresponding increase in the liquid consumption of milk, and the extra offering have gone to swell the surplus in the manufacturing market. The pool price received by the farmer being a weighted average of the liquid and manufacturing prices, the effect of a growing surplus has been to widen the margin between the liquid price and the pool price. The Milk Marketing Board has reacted to this situation as any producers' organisation always will react; that is, rather than suffer a diminution of the pool price received by its constituents, it has pushed up the price of liquid milk. And to secure the consent of the distributors to this, it has agreed to increase, and to enforce with its legal powers, a higher margin for them. The consumer, caught on both sides, has paid for all the benefits extracted from the scheme by the other parties.

Now, this is clearly an intolerable position—that the one interest to be damaged should be the one which public opinion and public policy alike rank highest. It is to the credit of the Reorganisation Commission that they recognise this. With the other aspects of the scheme they have relatively little fault to find. They approve the continuance of the present rigid separation of markets with differential prices. They approve in effect the pooling of receipts and their distribution among producers in accordance with their production, irrespective of use. They recommend, however, that the producer should not in future receive a share in a *post facto* distribution of realised proceeds, but that he should be guaranteed a price, fixed annually, region by region, "at a level estimated to call forth the quantity of milk required."

Their major proposals are intended to protect the consumer. In the first place they recommend that prices shall be fixed, not by a producers' Board, but by an appointed Milk Commission of five members from whose decisions there would be no appeal. Secondly, they propose that it shall no longer be permissible to prescribe *minimum* retail prices or distributors' margins, so that competition shall be free to resume its influence on the cost of distribution. Thirdly, they propose that the wholesale price of liquid milk shall no longer bear the cost of subsidising the sales of manufacturing milk at unremunerative prices. The liquid milk market can fairly be asked to bear the loss caused by the disposal of the reserve necessary to ensure adequate supplies at all times (which is defined as equal to 20 per cent. of the liquid consumption). But the loss on the remainder of the surplus must be borne by the Government, since the alternative policy of reducing production to the requirements of the liquid market is adjudged to be politically impracticable. Finally, the Government is asked to provide further sums to subsidise experiments in the supply of milk at "assisted" prices

to those who, through age or poverty, are unable to buy adequate supplies. There is an ominous hint that the cost of these subsidies approximately equals the yield that could be expected from a "moderate levy" on imports of butter and cheese.

There are many points in this Report with which fault can easily be found. One may, for example, doubt the practicability, while welcoming the theory, of prices calculated twelve months in advance to produce a given effect. One may regret the acceptance by the Commission of the necessity for continuing to subsidise the production of milk which can only be sold at a loss. One might wish for a very great deal more emphasis upon the urgent need for rapid improvement in the cleanliness of milk. One might have looked for an exposure of the inefficiencies of the system of distributing milk. But against these defects must be set the great gain that at last an official Commission has placed the interests of public health and nutrition above those of any particular sectional body, and has framed a set of proposals for the deliberate protection of the consumer. There has been a howl of almost insolent rage from the National Farmers' Union at the suggestion that the monopolistic powers of the producers' Board in fixing prices, or those of the N.F.U. itself in filling the Board, should be abridged. But we are confident that public opinion will agree with the Commission when they say that "the necessity for ensuring to the consuming public an ample supply of clean, safe milk at a reasonable price must be the overriding consideration." From this point of view the history of the last three years has been one of retrogression rather than progress. The Report is to be welcomed as a first attempt to reverse the trend and change the objective of milk marketing.

NOTES OF THE WEEK

English Ships and Spain.—The House of Commons had a lively debate on Tuesday, when the Government's hurried expedient to stop carriage of arms to Spain in British bottoms—the Merchant Shipping (Carriage of Munitions to Spain) Bill—was passed through all its stages at one sitting. Mr Runciman, President of the Board of Trade, gave it a poor introduction; he seemed unwilling to admit that the Dominion Governments had not been consulted; but finally confessed that the Navy would not have the right to stop and search Dominion vessels, as they would be able to stop British ships. Mr Noel Baker, on behalf of Labour, said the Bill was unprecedented; it did not apply to carriage of arms to the ports of countries bordering on Spain; and it left to the Fascist countries a free opportunity to assist General Franco in imposing a blockade of the ports open to the Spanish Government. Sir Archibald Sinclair, for the Liberal Opposition, wanted

the Government to make entry of the Act into force dependent on other Powers stopping their supplies to General Franco. He thought the Government's step

was merely a reply to the piratical threats of General Franco to interfere with foreign shipping. . . . If General Franco wanted to run the risk of bringing Great Britain into the war and thought he had something to gain, there was nothing in the Bill to stop him.

Mr Eden, in reply, observed that, in answer to General Franco's threat of a blockade, the Bill would allow the British Navy, and not General Franco, to see that no British ship carried arms to Spain. The Bill was necessary because the Government would not recognise the rebels' belligerent rights. Dominion ships could count on the British Navy to defend them. Mr Eden called the Bill "a necessary part, though a small part" of the Government's work in preventing the Spanish conflict from

spreading. The Leader of the Opposition refused to consider it as a measure to stop a gap in the law; for, he pointed out, the gap had been made by General Franco's threats; and if we succumbed to them, the Fascist countries would have free play. A Conservative Member, Wing-Commander James, fresh from his visit to Spain in company with other Members, made a most impressive speech, in which he warned the Cabinet that "extremely brave decisions would have to be taken, and the sooner the better." As the Bill only prohibits carriage of arms and munitions deftired in a long list, it is to be feared that incidents which it is concerned to avoid may none the less be aroused—if General Franco and his friends desire it.

* * *

A European Arena.—It is becoming ominously clear that Spain is cast for the role of an international arena; a bull-ring without a bull, in which Europe's matadors, picadors, and toreros will be at each other's throats in what has aptly been termed "a war of ideologies." Last week-end it was announced that 2,000 German volunteers had disembarked at Cadiz and gone to Seville. On Thursday it was reported that this number had been swollen by many thousands. These men are not, presumably, sent by the German State; but, as has been pointed out in the British Press, totalitarian States dispose of the lives of all their citizens—as we learned once more this week, from a new German decree on which we comment below. They are Party-States under Party-dictatorships. Accordingly, though Germany, Italy, Russia and Portugal are all members of the Non-Intervention Committee in London, they can dissociate themselves from acts by their citizens who go to Spain as "volunteers" on one side or the other. The Committee have this week agreed to propose international supervision of Spanish frontiers to both sides in Spain. But the Portuguese representative has declared that Portugal will abstain from any joint action by the States-members to supervise the Spanish frontiers and to prevent supplies of men and material to either side. This would leave Portugal's frontiers open to abuse; for, even if both sides in Spain agreed to the proposal—and General Franco certainly would evade it, since he urgently needs external assistance—the rebels have control of the Spanish side of the Portuguese frontier. Indeed, this week's news from Spain shows clearly that General Franco is hard pressed. The Government forces have taken the offensive in the north; Saragossa is threatened; so is Burgos, the headquarters of the rebel Junta; and on the Talavera sector the Government have pressed the rear of General Franco's attacking force outside Madrid. The rebel communications are endangered in many places. It becomes increasingly clear that Germany's and Italy's recognition of the rebel Junta as the Government of Spain were dictated by General Franco's critical position, as emphasised by his brother, Ramon Franco, in Rome.

* * *

A Spanish Appeal to the League.—On Friday of last week, the Spanish Government made a formal request for a meeting of the League Council to examine, under Article XI of the Covenant, acts of intervention on behalf of the Spanish insurgents, with which Italy and Germany are charged. The Council has been duly convened for next Thursday. No one could deny that Italo-German intervention is "a circumstance affecting international relations which threatens to disturb international peace or the good understanding on which peace depends." Nor can the Spanish Government be found technically out of order. It is undoubtedly the legitimate Government of Spain; and in that capacity it is free to make its appeal and present its case at the Council meeting without being called upon to produce credentials. It is only natural that the Spanish Government should have made this move. It is an opportunity, which cannot be denied to it, of launching a powerful indictment of Germany and Italy with the utmost publicity. Nor can the Germans and Italians, even if they wish, very easily use the same platform for hurling a *tu quoque* at the Russians. For the League, unlike the Non-Intervention Committee, will have to proceed strictly according to international law; and in international law Italy and Germany would be committing acts of war against the lawful Spanish Government on Spanish

territory, whereas Russia is exercising its undoubted right to give a friendly Power assistance in asserting its authority against a gang of rebels. In law, the Soviet Government is acting no less correctly to-day *vis-à-vis* Spain than the Imperial Russian Government acted in 1849, when the Czar Nicholas I sent his troops into Hungary to help his neighbour the Emperor Francis Joseph to stamp out the insurrection of the Magyars. The fact that the Russians, as well as the Germans and Italians, are breaking an *ad hoc* Non-Intervention Agreement does not constitute a violation of the Covenant and is therefore not a fact of which the League Council can officially take cognisance. But in the present circumstances it is to be feared that the Spanish appeal may merely rub in the League's virtual impotence without opening the way to any effective action for good in the Spanish field. It is noteworthy that the Russian Government, as well as the French and British Governments, has made it clear that it has no relish for this meeting at Geneva.

* * *

The Argentine Trade Agreement.—We reported in last week's *Economist* that a new Trade Agreement had been signed between the British and Argentine Governments to replace the Roca-Runciman Agreement of 1933, which, after two prolongations, expired on November 20th. This week we publish in a special Supplement the full text of the Agreement, as issued in London on Wednesday. As is inevitable with an Agreement of this nature, the text is lengthy and complicated. But the results of the long and, it is rumoured, difficult negotiations can be very briefly indicated. In 1933, Argentina gave substantial concessions to British trade and finance and acquiesced in a large measure of restriction of her exports to the British market, in return for continued assured possession of the remainder of her market in this country, which is vital to her national economy. This year the process has been carried a little further. Argentina has made further concessions, both in enlarging the Argentine market for British goods and in assenting to a contraction of the British market for Argentine products, in return for another three years' security for the rest of her market. As we ventured to predict last week, Mr Runciman has driven an even harder bargain in 1936 than in 1933. It is true that the concessions on either side are far smaller this time than last, and that the Argentine Government is disposed to make the best of the bargain it has struck. But we are moved to inquire whether, at every three-year period, another ounce of flesh is to be exacted from Argentina. As is demonstrated in the Introduction to our Supplement, every penny by which Argentina's sales are reduced is a penny less for some British exporter or investor. But even if this were not so directly and arithmetically exact, is it really wise to drive an ever harder bargain with a country than whom we have no better customer anywhere in the world? It will be seen from these comments that we are not enamoured of the new Agreement. But it is vastly better than it might have been. The agrarian party in Parliament and the Press have long been taking the attitude that the only thing to do with Anglo-Argentine trade is to suppress it. In these circumstances, it is no small mercy to have an Agreement which limits the duties which can be imposed on beef and wheat, sets bounds to quantitative restriction of all kinds of meat, prohibits quantitative restriction of wheat and maize, and places maize on the free list. The Agreement is probably the best that the New Economics can devise. As such it will be accepted.

* * *

Holidays With Pay.—The recent legislation in France and Belgium providing for compulsory holidays with pay has made this country appear rather behindhand in this aspect of social reform. It is not surprising, therefore, that a private Member's Bill should have been introduced into Parliament seeking to make it obligatory on employers to give every employed person an annual holiday of eight days with pay. Mr Rowson (Labour), in moving the second reading last Friday, argued that the charge on industry would be infinitesimal. He also pointed out that 75 per cent. of the working population of this country are still without paid holidays. The rejection of the Bill was moved and seconded by two Conservative Members, who

objected to the introduction of compulsion; but it was supported by Mr Geoffrey Mander (Liberal) and Miss Cazalet (Conservative). Another Conservative (Mr Robinson, of Blackpool) said that the Bill was "not Socialism but enlightened and sensible capitalism." Lieut.-Colonel Muirhead, replying for the Government, expressed doubt of the necessity for the Bill. The second reading was carried, none the less, and the debate left little doubt that a Bill embodying the principle of paid holidays would meet with general support if the Government's opposition were modified. Whether the hardest-pressed British industries can afford paid holidays at this time, is a moot question. But the popularity of the movement, and the amount which can be done by voluntary effort, was illustrated by Lord Nuffield's benefaction to his staff announced two days after the debate in the Commons. Lord Nuffield is handing over £2,125,000 in Morris ordinary shares to trustees to be used as a fund for the benefit of his employees. Out of this fund will be paid holiday wages, as well as actual dividends. The project is much more attractive and generous than most profit-sharing schemes; for it starts with a huge fund, and will apparently guarantee the payment of holiday wages. This further splendid benefaction of Lord Nuffield's, embodying as it does the idea of paid holidays for employees, will probably catch the public's imagination even more than his recent gift of £2,000,000 to Oxford University.

* * *

The Crystal Palace.—Fire broke out mysteriously at the Crystal Palace on Monday evening; and by dawn next day little was left of the uncouth but familiar landmark that had dominated South London for over 80 years. The spectacle of the Palace's collapse seems to have attracted a larger crowd of sightseers than it had ever attracted in its lifetime. Indeed, the heights surrounding London were covered by crowds rather similar to those which watched the burning Zeppelins crashing during the War. How many of these crowds, one may wonder, reflected on the origin of the Palace, and the politico-economic ideas which it represented nearly a century ago? For the success of the Great Exhibition which it housed in Hyde Park in 1851—after much bitter controversy in which the Prince Consort was involved—was taken as a symbol of the coming triumph of those ideals of free trade, democracy and peace for which Liberal England stood. The sponsors of the Exhibition spoke of that "noble competition" in trade which would benefit all men in all countries; and Tennyson celebrated the opening of a venture—

"Where science, art and labour have outpoured
Their myriad horns of plenty at our feet."

In the end, the Crystal Palace outlived the Poet Laureate, outlived the Queen, and outlived the system of absolute free trade that had triumphed just before its birth. Now it lies in ruins, a financial if not an aesthetic loss to the nation; and some will doubtless see in these ruins the symbol of the final collapse of the ideas of 1851. They may be right. Or it may be that the fears of to-day will prove as false as the hopes of prince and poet 80 years ago.

* * *

By-Election Lessons.—Both the week's by-elections results belied the best-informed expectations. At Preston the Government won where they expected to lose; and at Greenock they lost where they equally expected to win. The Government's majority at Preston was 1,605 (on a total vote of over 60,000), compared with a 5,000 majority at the General Election; and the Labour majority at Greenock was 2,604, compared with a Government majority of 3,354 at the General Election. Both by-elections were complicated by personal considerations. At Preston an independent woman candidate, standing on the sole issue of pensions for spinsters, secured 3,000 votes; and it was generally believed that more of these came from potential Labour than potential Government supporters. At Greenock the personal influence of Sir Godfrey Collins, the late member, had long been great; so that it was natural that a less eminent Government candidate should poll a smaller vote. If one allows for these disturbing elements, the Preston and Greenock results seem to indicate a general passivity of public opinion. The Government's record does

not inspire enthusiasm, but the dissensions within the Labour Party are apparently preventing any swing of unattached opinion in its direction. The regularly attached voters, however, are not swerving from their traditional allegiance, or even abstaining from voting. The Labour and Conservative votes, and the total votes polled, remain remarkably steady. If the electorate is perplexed by current events, its rooted opinions appear to be as yet unshaken.

* * *

Roosevelt at Buenos Aires.—President Roosevelt goes, deservedly, from strength to strength. His recent triumph in his own country has now been capped by the ovation he received at Buenos Aires on Tuesday at the opening of the Pan-American Conference. It looks as though during his second term of office at Washington he may come to occupy a position of leadership in all the Americas which has never before been attained by any President of the United States. The change in the relations between the United States and the Latin-American republics during the last few years is as remarkable as it is satisfactory. A few years ago the natural gulf produced by a marked diversity of culture and incompatibility of temperament was being unnecessarily deepened by a widespread fear in Latin-American minds that the United States might misuse her superiority of strength over her American neighbours for imperialistic ends. This fear originated in the spectacle of "dollar diplomacy" being practised by the United States Government, on behalf of its own nationals, in Mexico, Central America and the Antilles. The fear was reinforced by an *amour-propre* which is characteristic of adolescents—whether nations or individuals. The result was a misunderstanding between the United States and Latin-America in which Argentina stood forth as the self-constituted champion of the Latin cause. It is the more significant that the present festival of Pan-American reconciliation should have been held in the capital of the Argentine Republic. The immense change for the better in inter-American relations can be traced back to several causes. There was a conscious change of orientation at Washington which had set in before Mr Roosevelt's first accession to office and which had already found a brilliant exponent in the late United States Ambassador in Mexico, Mr Dwight Morrow. Another factor is the personality of President Roosevelt himself. A third and still more potent factor is the present situation in the Old World; for this situation, as seen through any American eyes, is so fraught with menace as to compel all Americans—Latins and Anglo-Saxons, Democrats and Fascists—to come together in some kind of defensive union. This was the theme of President Roosevelt's speech at Buenos Aires on Tuesday. He reverted once again to his indictment of the dictatorships that seek to dictate to all peoples of the world, and expressed his belief that the New World could help the Old to avert a catastrophe. But the bulk of the American leader's speech was devoted to the discussion of ways and means for keeping the Americas at peace within themselves, shielded from the Old World's impending fate.

* * *

Tension in Germany.—The world is becoming almost habituated to the issue of decree-laws in Germany which shock the public opinion of countries where freedom still prevails. By comparison with some such decrees, the recent decree forbidding all criticism of works of art or

letters seems mild, if incomprehensible, as an Act of State. What useful State purpose can be served by ordering all critics to desert their posts and to indulge in "analysis or description"? Far more drastic, however, and far more repugnant to good sense abroad, is the decree last week-end, which makes it an offence punishable by death for a German to move property away from Germany, or even to move property existing outside Germany to another place without declaring its whereabouts. It is hard to resist the conclusion that the rulers of Germany are in dire straits, both economically and also in domestic social matters. That the former is the case we well know; for General Goering has been haranguing the peasants, urging them not to withhold supplies from the State food organisation; and his colleague, Dr. Goebbels, Minister of Propaganda, as well as banning art criticism, has been haranguing the workers, telling them that the coming hard winter will necessitate new sacrifices on behalf of German self-sufficiency under the new Four-Year Plan, of which General Goering is supreme chief. Meanwhile, Dr. Schacht's system of exchange and trade controls is encountering new obstacles; which may make Dr. Schacht thankful that General Goering has been placed over him, both for the control of the exchanges and for the execution of the Four-Year Plan. This week the German authorities have announced to Roumania that they are compelled to default on their current commitments, and that they can only liquidate their current trade debt to Roumania, caused by heavy German imports, by offering armaments in exchange. This kind of commercial procedure, as we have recently observed, is becoming too painfully familiar to Germany's smaller clients; and the announcement this week of the award of a £3,000,000 contract for a new State iron and steel works by the Turkish Government to an English concern, in the teeth of keen competition from Krupps, may be more than a mere straw in the wind. Evidently the economic tension in Germany has reached a point where the pressure of sacrifices is making Germany's rulers apprehensive. Consequently the hand of the Nazi State is convulsively stiffening over the German people. After the developments of the last three and a half years in Germany it is not surprising. But it is alarming, none the less. For a desperate diversion becomes therewith more attractive to the Nazi authorities. The question we must all ask is: Will the diversion be inside or outside Germany?

Poland and European Security.—The visit to Warsaw last week-end of M. Antonescu, Roumanian Foreign Minister, carries a stage further the improvement of relations between Roumania and Poland. Both States have little desire to become sleeping partners in any German-Russian conflict; and naturally their Governments are taking steps to concert measures for armed neutrality. While this renders a German diplomatic success in Warsaw or Bucharest less likely, it raises anew the question of Poland's foreign policy. There appears to be sound reason for the claim that the Polish Foreign Minister's, Colonel Beck's, visit to London a fortnight ago was a success. Our Warsaw correspondent emphasises the inclusion in the Polish Foreign Office statement of November 11 of the words: "Means would require to be found to respect Poland's legitimate interests in the matter of the proposed Western Treaty." This recognition is made doubly important by the recent Russo-German conflict of vituperation and by the intimations conveyed to the Polish Press by Berlin correspondents that the German Government is disposed to accept Poland's "legitimate interests" in the contemplated security system for Western Europe—but without modifying Germany's refusal to accept Soviet Russia in the proposed system. If Germany, to meet British or French insistence, had either to accept the French alliance with Poland or the Franco-Soviet Pact in order to connect security in the East with security in the West, she would naturally accept the Franco-Polish alliance—the more so as Germany has already nominally guaranteed Polish security for ten years through the pact of non-aggression of January, 1934. Inclusion in a Western security system, however, would not be a success for Poland—at least, not for the policy of the late Marshal Pilsudski—if she were then

manœuvred into "taking a position" against Soviet Russia and the Franco-Soviet Pact. The question is now being asked in Warsaw whether the understanding reached between Mr Eden and Colonel Beck in London—that "nothing would be more fatal to the hopes of European appeasement than the division, apparent or real, of Europe into opposing blocs"—does not, in fact, mean that Great Britain and Poland are gravitating towards an anti-Soviet bloc. The visit to Poland of M. Antonescu may go a long way towards answering it. While official attention is concentrated on maintaining a balance between Russia and Germany, Polish interest in Czechoslovakia can scarcely exceed that of Great Britain and France. Poland can hardly go to the assistance of Czechoslovakia, in case of unprovoked or concealed aggression on her by Germany, unless Great Britain and France do so. Public opinion in Poland would recoil from accepting territorial gains for Poland if Czechoslovakia were dismembered. But while Polish opinion understands quite well that the dismemberment of Czechoslovakia would be followed in due course by the dismemberment of Poland (and other countries as well), it would no doubt be forced to recognise the futility of Poland's trying to oppose German expansion through Central Europe and the Balkans, if France and Great Britain simply treat it as another case for a meaningless non-intervention formula.

Two Steps Forward in India.—At a time when the international horizon is so heavily overcast, it is comforting to notice and record rare gleams of light. This week we can report two steps forward in the progress of India toward the goal of full Dominion status within the British Commonwealth. One of these steps is the appointment of a distinguished English barrister, Sir Maurice Gwyer, to be the first Chief Justice of India as from October 1, 1937, the date approved by the Parliament at Westminster for the constitution of the Indian Federal Court. The other step is the despatch on circuit through the Indian States of emissaries of the Viceroy who are to consult each of the rulers about his individual problems on the question of federation. Constitutionally, the Indian States are their own masters in deciding whether they shall exchange their existing treaty-relationship with the British Crown for the status of membership in an Indian Federation. Practically, their policy is likely to be determined by factors which they cannot eliminate and which they can only ignore at their peril. The first of these pertinent considerations is that a policy of holding aloof would entail automatic and grave penalties. The Federation will be there as a widely ramifying body politic in which even the largest of the States will be mere enclaves; and in renouncing all voice in the control of the Federal Government a local prince would in effect be condemning himself to have no say in the settlement of All-Indian economic and fiscal and social questions which are bound to be of capital importance for his own principality. An even more pressing consideration is the possibility that a prince's desire to retain his own local sovereignty might be opposed and overborne by his subjects' will to merge themselves in an All-Indian body politic. The artificial and accidental boundaries between the States and the Provinces may have divided two sharply different political regimes, but they have never partitioned India into water-tight mental compartments. Again, this week we know that Pandit Nehru is now assured of the leadership of the Indian Congress Party. On this showing, the part of wisdom for the princes lies in moving voluntarily with the tide that is now flowing towards the consummation of an All-Indian nationhood, rather than in digging their toes into the sand until the current sweeps them away.

France and British Coal.—The doubling of France's December import quota for British coal, announced last week-end, is an event of great importance. It is at once one of the fruits of devaluation, a sign of economic recovery in France, and a proof that the adjustment of false exchange parities may be the surest means to freer trade. On the other hand, coupled with the resumption of British coal

exports to Italy, the doubling of the French quota should bring appreciable alleviation to our hardest pressed export industry—particularly in South Wales, which supplies 60 per cent. of the French demand. In the deflationary period of 1932-36 France was forced by falling internal demand to make successive cuts in British coal imports in order to prevent the complete ruin of her own industry. As a result the volume of British coal exports to France has been as follows in recent years:—

1929	1933	First Nine Months of			1936
		1934	1935	(thousand tons)	
9,334	6,426	5,770	5,255	5,143	

It will be seen from these figures that if the doubling of the quota is continued in the coming months, and if it results in the doubling of the 1936 figure, it would raise our coal exports to France slightly above the pre-depression level. Moreover, both in 1929 and 1936, our coal exports to France were about 20 per cent. of our total coal exports; so that the doubling of France's annual purchases would mean an increase in our total coal exports of 20 per cent. It is thus apparent that the French Government, aided by their new economic policy, have already made a substantial contribution to the ideal of economic co-operation among the democratic nations. What, one may ask, is Great Britain going to do in return?

Cotton Trade Wages.—At the end of last week there was some surprise in cotton trade circles when an unexpected quick decision was reached on the demand of the operative weavers for an advance in wages. The original application (our cotton correspondent writes) was for a rise of 15 per cent. with a minimum wage of 7½d. per hour. At the close of the second day's meeting of the Conciliation Committee it was announced that a settlement had been reached by agreement between the two sides. The employers had offered, and the trade union had accepted, an advance of 7.3 per cent., with further increases for the weavers of certain kinds of cloth. The new wage rates are somewhat complicated, but the settlement means that the operatives will receive advances varying from 1s. 6d. to 3s. a week. The employers very firmly refused to consent to a minimum wage. The settlement gave considerable satisfaction to Lancashire. On the other hand, there is some anxiety about a possible crisis arising out of the wages dispute in the spinning mills. As anticipated, the members of the Operative Spinners' and Cardroom Workers' Amalgamations have voted strongly in favour of a strike to enforce their demand for an advance of 14 per cent. on standard lists. The Executive Committees of the two trade unions have been given power to strike if necessary. Notices to cease work will be given next week, and, failing a settlement, the mills will close down on December 19th. The position was considered at a meeting of the Wages Committee of the Master Spinners' Federation in Manchester in Thursday. The employers contend that the spinners are not justified in pressing for a rise in wages; but it is admitted that the earnings of piecers are somewhat low. It will be exceedingly difficult, however, to adjust matters, as the spinners control the trade union. It is recognised that a stoppage of work in view of the recent trade revival would be disastrous for Lancashire and the country. In trade circles the opinion is held that as a result of a resumption of negotiations between the employers and the operatives a strike will be avoided by the grant of some concession to the workpeople.

Tea Quota Decision.—Tea is among the few commodities which has not yet been caught in the upward movement of the prices of primary products which has taken place this year. Tea production, it will be remembered, failed to decline with the fall in consumption after the onset of the depression. The average price of all tea sold in London consequently fell from 16.25d. per lb. in 1929 to 9.45d. per lb. in 1932. The three leading exporting countries—India, Ceylon and the Dutch East Indies—sought salvation in a five-year restriction plan which came into operation on April 1, 1933, with the sanction of the

The MERCANTILE BANK of INDIA

LIMITED.

Branches and Agencies throughout the East.

BILLS OF EXCHANGE accepted for collection or advance.

Enquiries from merchants regarding shipments to the East and the special facilities available are invited.

respective Governments. During the first regulation year the three countries were permitted to export 85 per cent. of their maximum shipments in any of the three years between 1929 and 1932. After an increase to 87½ per cent. during the year ended March, 1935, the export quota was reduced in the following year to 82½ per cent. of maximum exports in 1929-32. As the average price of all tea sold in London had risen to about 13d. per lb. in 1935, no change was made in the quota for 1936-37. The average price realised during January-November this year, at 13.08d. per lb., showed an increase of only 0.17d. per lb. over the corresponding period in 1935. Nevertheless, the decision of the International Tea Committee to leave quotas unchanged at 82½ per cent. of shipments in the basis period during the year ended March, 1938, was wise; for the industry is likely to benefit more from an increase in consumption than from a short-lived spurt in prices. To some extent, the reasonable price policy of the International Tea Committee was dictated by circumstances. To begin with, the restriction scheme is by no means comprehensive; for it excludes a number of important exporting countries, such as China, Japan and Formosa. A marked increase in prices, therefore, would probably stimulate shipments from non-restricting countries. Moreover, an appreciable rise in prices might well arrest the gradual increase in consumption. In any case, the current level of quotations is not unprofitable for efficient plantations, and stocks of tea in this country are now well below those of recent years.

Increase in Gas Consumption.—Despite the rapid growth of the demand for electricity, the gas industry shows remarkable vitality. The output of gas in 1935, for example, exceeded the pre-depression level, and the quantity of coal carbonised by the industry last year was actually somewhat smaller than in 1929. The manufacturers of gas have striven hard to increase their efficiency:—

AUTHORISED GAS UNDERTAKINGS IN GREAT BRITAIN.

Year	Production of Gas	Sales of Gas	No. of Consumers		Length of Gas Mains
			Total	Pre-payment Consumers	
	Thou. mill. cu. ft.	Thou. mill. cu. ft.	Thousands	Thousands	Miles
1924	279.7	256.9	7,984	4,341	41,985
1929	316.4	292.6	9,138	5,165	48,546
1932	309.3	287.0	9,773	5,783	53,156
1933	309.6	286.1	10,012	6,017	54,916
1934	313.5	290.7 (a)	10,277	6,313	56,928
1935	319.3	295.9 (a)	10,517	6,559	59,010

(a) Including gas supplied separately for industrial purposes only.

As nearly three-quarters of the output of gas by authorised undertakings is used for domestic purposes, the industry has benefited from the building boom. But it will be observed from the table that the increase in production during recent years has been much less marked than the increase in the number of consumers and in the length of gas mains. Between 1929 and 1935 the length of gas mains was increased by 21½ per cent. and the number of consumers rose by 15 per cent.; but the output of gas last year was only 0.9 per cent. higher than in 1929. The decline in consumption per consumer is largely due, no doubt, to the increased efficiency of gas appliances. But the figures also indicate that the return on development expenditure is decreasing.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

SUCCESS OF REFLATION POLICY

LORD MACAULAY'S famous aphorism of eighty years ago on the American Constitution—that it was "all sail and no anchor"—is not commonly quoted by those who now regard it as all anchor and no sail. But it is an apt description of American monetary legislation in recent years. With a single exception (the empowering of the Reserve Board to increase the cash reserve requirements of the member banks) the monetary legislation has been expansionist. The policy has included open-market purchases by the Reserve Banks, monetisation of silver and the issue of silver certificates, monetisation of all gold imports and partial utilisation of the Stabilisation Fund, and the authorisation for the Reserve Banks to make direct commercial loans—but this last power has been used sparingly.

In addition, there are enormous unutilised powers still vested in the Treasury—some derived from the Thomas Amendment of the Agricultural Adjustment Act of 1933, others from the Act of January 30, 1934, which created the Stabilisation Fund. These powers were specifically designed to enable the Treasury to pursue expansionist policies, even over the opposition of the Reserve Board; and in the aggregate they made the Board, in the last analysis, no more than an agency of the Treasury. All were designed to increase member bank cash reserves. As a complementary policy, the deficit financing, largely absorbed by the banks, became the mechanism by which these cash reserves could be translated into bank deposits during a period when the commercial and industrial demand for credit was small; and this was coupled with the partial Government guarantee of Federal Housing Administration loans for home renovation. The combination of these numerous and diverse legislative and administrative programmes may be described as the reflation policy.

It was, of course, natural that decisions taken under the stimulus of the vivid recollections of a great deflation should be "all sail and no anchor." As was said above, the only monetary anchor created was the authority of the Board to raise member bank reserve requirements; but there was one restraint added under the Security Exchange Control Act, which empowered the Board to ration credit in the security markets by designating the amount which might be loaned on Stock Exchange collateral. As an instance of political psychology this should be noted. In spite of the "inflationary" atmosphere which surrounded the legislation of 1933 and 1934, those recollecting the inflation of stock market credit in the late 20's insisted upon closing that particular channel of "reflation," which historically is one of the fastest and surest methods of expanding credit.

Quantitatively, the reflation programme has been completely successful. Total loans and investments of the reporting member banks and demand deposits have been restored approximately to the pre-deflation level. The currency in circulation is much greater, for reasons not entirely clear. And this reflation has taken place without any expansion of speculation credit in the security markets. But with the success of the reflation programme, fundamental thinking about credit has gradually changed, and with it the emphasis upon the general question of credit. This is illustrated in two different ways:—

(1) The principal device of reflation was the Federal deficit, financed through the banks. It now appears that the Budget to be submitted in January will be in complete contrast with those of recent years. The emergency expenditures will probably be lower and anticipated revenues higher. It is conceivable that the Budget will be at least tentatively balanced. At all events, it is highly probable that the projected increase in the public debt in the fiscal

year 1938 will be comparatively small. Of course, under the American system, the Executive Budget is by no means final. In the past year, for example, Congress added a \$2,000 million soldiers' bonus, and it is not impossible that ingenious statesmen will think of supplementary appropriations in the 75th Congress. But, by and large, the deficit is no longer an integral part of a credit expansion programme.

(2) It is, and has been for months, clear that the Washington authorities, the Treasury and the Federal Reserve Board, have been concerned over the absence of an "anchor," in the form of a mechanism for the effective control of member bank cash reserves. Various attempts have been made in the past twelve months to gain some degree of control; but those attempts must be credited with scant success. Whilst it is true that the available mechanisms have not been used fully, the fact is that the existing devices—another increase in reserve requirements and open-market sales by the Reserve Boards, or a shifting of Treasury balances—are not well designed to meet a continuous gold influx averaging not far from \$100 millions a month for now nearly three years and with no clearly indicated limits. An expansion of member bank cash and deposits was an integral part of a programme of vigorous reflation; but except as a reflationary device they are a real embarrassment of riches. Whereas the legislative and administrative emphasis has hitherto been on expansion, the present emphasis is on control.

PROSPERITY AND BOOM

The reason is obvious. The United States' economy is now highly prosperous—more prosperous perhaps than is generally appreciated because of the rapidity of the rise. After all, as late as September, 1934, we were still in the depths of depression. The phenomena of the present quarter are rising prices, rising wages, increased dividends, forward buying, etc. While it is reasonable to suppose that economic activity could be lifted further without being intrinsically insecure, many persons are of the opinion that the symptoms of a boom are developing; meaning by boom a feverish activity implying a severe reversal. There is abundant evidence that the increasing concern of Washington is to conserve a high level of activity by preventing prosperity from degenerating into boom; and that this concern is centring on the improvement of the facilities of credit control.

In short, however appropriate a monetary policy of "all sail and no anchor" may have been in the throes of depression, a different policy is indicated now that we are in the throes of prosperity. There have been no precise intimations of proximate action; there is some discussion of the possibility of another increase in member bank reserve requirements or of open-market operations by the Reserve Banks. By some, intensified activity of the Securities Exchange Control is interpreted in this way; but so far the recent proposals of that agency have been limited in scope—chiefly relating to the segregation of broker-trader activities and the restriction of trading by exchange members in their own name. That is, they relate more to the organisation of the market as such than to any apparent scheme of economic control. By the way, Stock Exchange memberships have fallen almost to their 1932 low.

For the first time for years a semi-official dispatch from Washington recently intimated that the President was considering the Inter-Allied War Debts. It will be remembered that this subject was awakened from its long hibernation by the Republican platform, but it did not figure in the campaign. Except for the Hull Agreements, the first Roosevelt Administration was almost exclusively concerned with national problems. The second opens with the Pan-American Conference and a sort of trial balloon on the war debts; and (with a little post-dating) the Stability Agree-

ment of September 25, 1936. Combining these, one might infer that the second term would be marked by a more active international policy than Washington has followed for a long time.

The maritime strike drags on its weary length from day to day. On the Pacific Coast it is completely effective, including the Hawaiian Islands and Alaska, where the general population has been put to considerable inconvenience. On the Atlantic seaboard it is only partially effective; for here it takes the form of an inter-union conflict. The International Seamen's Union is in general still adhering or attempting to adhere to its contract, while the strike originates among the longshoremen and members of rival seamen's organisations. It is now complicated by a threatened strike of masters and mates for higher wages. In its own way it is the counterpart of the struggle between Mr Green of the American Federation of Labour and Mr Lewis of the Committee for Industrial Organisations.

NEW YORK, November 23.

FRANCE

POPULAR FRONT DISSENSIONS?

SOME further signs of dissension have appeared within the Popular Front: the rather aggressive attack by M. Daladier, the Minister of War, on what he called "Asiatic barbarism"; the refusal of other Radical-Socialist ministers to attend certain demonstrations of the Popular Front; the representations of the Radical-Socialists to M. Blum about the Communists' demonstrations against them on the subject of "non-intervention"; an unexpected visit by certain senators to the President of the Republic; the observation of M. Thorez, the Communist leader, that the Popular Front might survive a fall of the present Cabinet; and the categorical answer of the Socialist organ that a vote against M. Blum would signify a vote against his Party and a decision to break up the Popular Front. And after a bad week the Stock Exchange greeted the failure of the Socialists in the Geneva State elections by an unexpected—but not confirmed—rise in French Government stocks. In existing political circumstances the agreement of the Moderates and Radical-Socialists (Flandin-Daladier) to the constitution of a new Cabinet is certain. The essential problem, however, is the attitude of the Socialists, who appear more and more perturbed by the "unfair" competition of their Left-Wing allies in certain local elections; while in the trade unions Socialist leaders are being pressed by their Communist followers.

The current week offers the Popular Front the chance to show their cohesion on three issues: (1) The reform of the Press; (2) compulsory arbitration in industrial disputes; and (3) foreign policy. On the first issue an agreement should be easily reached, all the more so because the Press reform proposed is moderate. The arbitration measure has been quickly voted by 468 votes to 113. On foreign policy there may be opposition from the Communists.

STRIKES AND BUSINESS REVIVAL

There are still a few strikes in progress, but they are of minor importance. "Strikes are not a toy," said M. Jouhaux, President of the Trade Unions, recently to the metallurgical unions. Meanwhile an agreement has been reached in the textile industry on the basis of an increase of 10 per cent. in wages.

The continued advance in economic activity is being confirmed by the declarations of many industrial and business leaders at their annual meetings. The second biggest store of Paris records that its turnover increased by 15 or 20 per cent. between June and August 15th. It then fell until the devaluation to below the figure for 1935. After devaluation there was an increase of 60 per cent. in the first week, 25 per cent. in the second, and 15 or 20 per cent. in the third. Since then the advance has been maintained. In this atmosphere of Stock Exchange recovery and business revival, public opinion is attaching smaller importance to political conflicts, though the rise in the cost of living may awaken new difficulties. The introduction of industrial arbitration has been accelerated

THE NATIONAL CITY BANK
OF NEW YORK

*Incorporated with limited liability under the National Bank Act
of the U.S.A.*

Founded 1812

36 BISHOPSGATE, E.C.2. 11 WATERLOO PLACE, S.W.1

by the Government in order to forestall the new conflicts which might be provoked by a rise in prices or by the problem of "authority" in the factories. Hence the proposal for compulsory arbitration.

After strenuous efforts to work out an agreement on a system of conciliation, the General Confederation of Employers refused to agree, on the ground that no agreement was possible since the workers were continuing to violate former agreements and the Government was proving unable to keep its promises to prevent "stay-in strikes." The employees said they would not take the responsibility for an agreement which would not entail sanctions against both parties—that is the prohibition of strikes or lock-outs—since the Government is not able to prohibit them as is the Italian Government.

The text of the new Bill lays down that if conciliation fails, a national committee should determine the main circumstances of the dispute and invite the parties to choose an arbitrator. The chief arbitrator would be chosen by both parties, or appointed by the Prime Minister from a list prepared by the parties. If one of the parties refused to choose an arbitrator, he would be appointed by the Minister of Labour. Sanctions are not provided.

How far has the rise of prices and wages gone? The expert advisers of the Government believe that a rise of nominal wages of 20 per cent. (equal to the 20 per cent. rise in the cost of living) will entail a new increase in the cost of living by 10 per cent. only; so that the final increase in real wages will be stabilised when there has been an 80 per cent. increase in wages and a 40 per cent. increase in the cost of living. These last figures are of course hypothetical, since technical progress should entail a 20 or 30 per cent. reduction in costs. A special committee for the reorganisation, rationalisation and standardisation of French industry has just been created by the Government.

Wholesale prices continue to rise, as the following table shows:—

	May 2	Sept. 26	Oct. 31	Nov. 30
General index	376	404	452	473
National products	415	451	486	504
Foreign products	304	319	391	418
Foodstuffs	397	441	473	483
Vegetables.....	396	474	513	520
Meat	402	412	439	444
Sugar, coffee, cocoa	385	434	459	486
Industrial materials.....	358	372	434	466
Minerals and metals	352	382	457	511
Textiles	289	288	371	395
Various	403	416	457	481

The production of coal in the French mines during October totalled 4,265,682 tons in 27 working days, against 3,567,000 tons in September (26 working days) and 4,230,407 tons in October, 1935 (27 working days). The number of men employed was 226,369 at the end of October, against 222,875 at the end of September and 222,694 at the end of October, 1935. The production of coke in the coke plants of the coal mines was 328,333 tons in October, against 314,020 tons in September and 326,372

tons in October, 1935. A supplementary coal import quota of 1,100,000 tons, which brings the total quota for December up to 1,800,000 tons, has been authorised by the Administration, in order to offset the fall in production resulting from the application of the 40-hour week in the mines.

PARIS, December 3.

GERMANY

A COUNTRY "MISERABLE AND UNDERFED"

THE economic tension and general discomfort among the people, which have been increasing since the Nazi Party took office, have of late become acute. The causes of this deterioration are various. Unquestionably one cause, as a contributor to the *Economist* recently remarked, is that Germany is attempting too much. But this criticism need not be confined to the excessive re-armament activity, public construction and production for special aims. Germany is also attempting too much in her zeal to counteract the evil of attempting too much. Every week a new misfortune has to be met by official measures, and thereby usually a new misfortune is created. Simultaneously with the great national armaments and expansion effort, the Nazi Party has pursued its ideal of creating satisfactory eternally static conditions for different classes of the population whose interests naturally clash. In this no success at all has been attained. The result has been merely to "ration" the inanition, which means that instead of some classes being satisfied and others dissatisfied, all classes are dissatisfied. In general, it may be said, manufacturers complain a little, farmers considerably, and traders and consumers bitterly. The Party ideal is pursued by means of an unending flood of laws, ordinances, regulations, restrictions, prohibitions and menaces. But the Reich is farther than ever away from the absolute unchanging condition of reasonable equal contentment which its theorists thought attainable.

In many respects present conditions resemble those of the inflation period of 1919-23. That period witnessed intense activity. Then, as now, employment was satisfactory (the official unemployed total fell to 20,000). But the population then, as now, was underfed and in general miserable. The vast production availed little. The country was in a state of economic siege. The similarity of present-day conditions would be expressly denied by the Government. Yet it is implicitly admitted. While the supposed favourable contrast between 1936 and the "system" years under democracy is officially painted in radiant colours, the official spokesmen habitually represent their Third Reich as being engaged in a last struggle for existence; and declare that only by desperate courage and heroic self-denial and privation is survival possible.

DEATH PENALTY FOR "ECONOMIC SABOTEURS"

Propaganda seeks to divert public attention from the real causes of the evil, pointing to obscure and malign enemies. Consistent with this policy are the daily complaints of an international conspiracy to subvert the Reich economically. But in a country where nearly the whole population is represented to be devotedly attached to the Government it is not consistent to point to internal enemies as the chief offenders. Yet a persistent official campaign is being waged against domestic "pests, parasites, speculators and saboteurs." Even the once-favoured class of farmers does not escape.

In Russia a similar propaganda was backed by the putting of "speculators" to death. Germany has now embarked on the same policy; and against precisely the same class of speculators, that is those who violate the foreign currency laws. To-day there appeared a Law against Economic Sabotage which enjoins capital punishment for persons who, in violation of the exchange regulations, leave their property abroad or transfer it to abroad. Judgment will be pronounced by the People's Courts, which were expressly created for combating anti-Nazi activities. The new law is more symptomatic of the present tendency towards repression than it is practical;

for violations of this part of the exchange law are rare. But the view that extermination is an efficient and reasonable way of remedying economic evils has now won further official support.

The trouble with Nazi Germany is that no class feels that it has a fair share in the enormous production. This condition is inevitable; for a great part of the production is by its nature not distributable, being pure waste like re-armament, or being economically valueless for a long time to come, like the public constructions now under way. The Government cannot remove the causes of discontent. It can repress, and it can also regulate everything, re-regulating daily even its own abortive regulations. The whole food marketing system, already a masterpiece of over-regulation, is to be re-regulated. The first step is to stop the rise in prices, which is a consequence of the lack of goods. A decree of this week imposes an absolute veto on rises in prices above the level of October 18th. This applies to goods and services without any qualification.

"IDEOLOGICAL" AGRICULTURE

At the Goslar Farmers' Congress last week radical changes in the Reich Nutrition Estate were foreshadowed. The original market regulation of foodstuffs was in the main "ideological," that is designed to protect agriculture, as supposedly the healthiest, most useful, and most reactionary national element. It was too easily assumed that if only the farms were kept going the other food interests, traders and consumers, might look after themselves. Owing to the impossible position of traders and consumers to-day, the "ideological" standpoint has been abandoned. The type of marketing for nearly all foodstuffs is apparently to be that chosen three years ago for the milk trade only. Every farmer was then linked with a particular dairy and was compelled to deliver up his whole milk production. The trade in milk was regulated by concessions, wholesale trade was entirely eliminated, and prices and profit margins rigidly fixed. This system was called "complete canalisation." From the statements made at Goslar it seems that "canalisation" of foodstuffs is to be widely, if not universally, introduced. Producers will be entirely dissociated from the market by special organisations, to which both the collection of food and the regulation of prices will be entrusted. There will be a general obligation on producers to offer goods (so-called *Andienungspflicht*) such as already exists for grain, potatoes and some other commodities. Every transaction will have to be recorded on paper; and without a "certificate" no food will enter the market. The reason officially given for this scheme is that the food shortage is expected to continue, and that disparities in local supply must as far as possible be eliminated.

The condition of the winter crops is not satisfactory. The wheat crop is given as 3.0, against 2.5 in November, 1935 (3.0 is mediocre and 2 good). The consumption of wheat and rye for brandy production has been prohibited. There are other signs that an insufficient supply of breadstuffs is feared. Butter is to be locally rationed, and retail dealers are being required to reduce their sales to customers.

Some 72.5 per cent. of all working places in industry were occupied in October, as against 72.4 per cent. in September. The most occupied industries are the heavy metals with 96.6 and machinery production with 90.0 per cent. In reality both trades are occupied to full capacity. The rise in steel production has ceased. The October output of 1,704,600 tons was lower than that of September; the decline per day worked was 5 per cent. Coal production in the first ten months of 1936 was 129,829,300 tons, against 116,808,900 tons in the same months of 1935. Of this increase 2,000,000 tons is due to the incorporation of the Saar.

Reich revenue from taxation in the first seven months of the financial year was Rm. 6,494 millions, against Rm. 5,421 millions in the same months of 1935. Of this increase Rm. 974 millions was in direct taxes and taxes on business. The funded home debt on September 30th is returned at Rm. 10,960 millions, showing an increase of approximately Rm. 1,000 million during the third quarter of the year. The funded foreign debt is Rm. 1,655 millions, and has slightly declined. An official report implies that

the Reich may alienate more of its industrial and other undertakings in order to obtain cash for extraordinary expenditure. Certain Reich holdings acquired during the 1931 crisis have already been sold; but there remain valuable industrial participations of war or early post-war origin.

The money market has been affected by subscriptions to the new Reich loan. This week cash is plentiful, and the day loan rate declined to 2½-3½ per cent. The October bank balance sheets show an increase in liquidity. Deposits in the five chief Berlin banks rose by Rm. 101 millions.

BERLIN, December 2.

POLAND

THE FRENCH ARMS CREDITS

SOME of the effectiveness of the French arms credits—which are expected to amount to about £25 millions—tentatively agreed upon three months ago has been lost through the delay in concluding the technical discussions. Internal political problems in France, and the devaluation of the franc, are understandable excuses for a certain amount of delay; but once the decision had been reached to strengthen the Franco-Polish alliance by providing the Polish forces with modern mechanised equipment, the operation to be fully effective should have been started immediately. To be fully effective, these credits must serve a political and economic as well as a military purpose. Instead of making part of the credits effective at once, three precious months have been wasted over the discussion of technical details that could just as well have been discussed concurrently with the installation of factories in Poland for the manufacture of modern war materials and such other economic activities as the credits are intended to cover.

The promotion on November 10th of General Smigly-Rydz to Marshal Smigly-Rydz makes him in name, as well as in effect, the successor to Marshal Pilsudski. The new Marshal himself, however, would be the last to pretend that he is another Pilsudski or that he is ever likely to exercise the same dynamic influence on national affairs as his predecessor. Except for his visit to France at the end of August, which was an extremely popular move, Marshal Smigly-Rydz is still virtually unknown on the political side.

MILITARY CONTROL

He begins his "reign" at a very difficult moment, with the tide of political unrest and economic distress still rising, and with many indications—not the least significant being the growing anti-Semitic manifestations—that it will continue to rise. There were many who felt after Pilsudski's death eighteen months ago that Poland should retrace her steps towards a more liberal political regime; but there has been such a marked deterioration in the general European situation that, even if they were so disposed, the leaders of Poland dare not to-day relax the close control which the military now exercises over national affairs—the more so as Germany is clearly bent on exploiting for her own ends internal unrest in other countries. While the advancement of Marshal Smigly-Rydz solves none of the basic problems that some day will have to be solved, it at least increases the authority of the Government and army at a time when a few fools and madmen have made it incumbent on every European nation to subordinate all other considerations to the strengthening of national defence.

Polish imports in the first ten months rose from 706 million zloty in 1935 to 820 millions in 1936, while exports increased from 756 million zloty to 835 million zloty. The export surplus thus declined from 50 million zloty to 15 million zloty. The impact of bilateral "compensation" agreements is now being increasingly felt on the export surplus; and industrial leaders are beginning to be seriously concerned over the problem of obtaining sufficient foreign exchange for the import of essential raw materials like cotton, rubber, wool and minerals which can be obtained by barter trade—if at all—only on terms that add

GIVE HER AN INCOME FOR LIFE

The Widow's Pension Policy provides an income in the event of your death before or after retirement age. If you provide your widow with an Income by means of this policy you can say with certainty that the financial future of your family is secure. To provide an adequate income by means of the interest on a capital sum would require a greater amount than the average man can accumulate, but by means of the Widow's Pension Policy you can assure quite a substantial Income for a moderate outlay. If at 60 or 65 you feel the protection is no longer required you are assured of the return of the greater part of your premiums. Here is a simple means whereby you can make sure that your widow will never want. Obtain a detailed illustration showing benefits and cost applicable to your own case by quoting your age next birthday to the

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Head Office: 10 Fleet Street, London, E.C.4.

General Manager: W. A. WORKMAN, F.I.A.

Established 1836.

Assets exceed £36,000,000

greatly to manufacturing costs. The foreign exchange situation has been eased recently by the suspension of transfers for debt service to countries with which Poland has an import surplus or an adverse balance of payments; but as most creditor countries will take Polish goods in lieu of cash the effect will be to diminish, if not to eliminate entirely, the export surplus.

The foreign trade figures for the leading countries in the first nine months are as follows:—

	1935		1936	
	Imports into Poland	Exports from Poland	Imports into Poland	Exports from Poland
	(In millions of zloty)			
United Kingdom.....	84.4	131.7	100.6	170.0
Germany	92.1	101.7	104.4	103.1
United States	90.2	34.3	93.6	44.6
France	30.1	23.0	34.5	30.0
Belgium	18.8	31.0	36.6	60.6
Austria	29.5	39.8	31.6	40.9
Czechoslovakia	25.8	38.4	25.7	35.6
Soviet Russia	8.4	10.6	9.9	7.4

When the commercial treaty with Germany was concluded a year ago, it was estimated that trade on both sides would amount to about 170 million zloty a year. But this figure is far from being attained, partly because the fixing of the rate of the mark at the gold parity of 2.13 zloty has made German manufactured goods much too expensive in competition with similar goods from the United Kingdom or the United States, although the "gold" rate benefits Polish exporters of agricultural produce. The trade agreement with Germany ran out on October 31st, but it was prolonged for two months during which time a new agreement is being negotiated. The agreement concluded in March last for the monthly payment in cash for German railway traffic across the "Corridor" also expires at the end of this year, and the negotiations for the renewal of this and the trade agreement are now a subject of hard bargaining, in which politics and Danzig also have a part.

WARSAW, December 1.

FINLAND

RECORD TRADE FIGURES

Tax yields are increasing. For the period January to August total revenues were 2,196 million marks, against 1,898 millions in the same period last year. Expenditure also increased, though not quite so much.

Foreign trade is expanding rapidly:—

	Imports Mill. mks.	Exports Mill. mks.	Export Surplus Mill. mks.
July–September			
1936	1,695	2,295	600
1935	1,412	2,037	625
1934	1,253	2,129	876
1933	1,117	1,835	718

The volume of both imports and exports is larger than in any previous year. The large increase in exports is principally due to heavier shipments of chemical pulp and paper and to higher prices for timber. Meanwhile the increase in imports is a result of heavier imports of both consumers' and producers' goods. The price index for Finnish exports rose from 73 in September, 1935, to 92 in September, 1936; while the corresponding index for imported goods only rose from 85 to 89.

The index of industrial production for the third quarter of 1936 (1926 = 100) was as follows:—

Year	Volume	Value
1936	165	147
1935	146	120
1934	143	124
1933	119	102

The increase in volume since 1933 has thus been about 39 per cent. The increase was largest in the case of building materials (96 per cent.), the metal and machinery industry (59 per cent.) and the leather and footwear industry (57 per cent.). The improvement in the British timber market is, of course, an important cause of the favourable position in Finland.

The harvest this autumn has been satisfactory. In the case of spring wheat, barley, oats, potatoes and hay the crop exceeded last year's; but the crop of rye, autumn wheat, swedes and other root vegetables was smaller. Owing to a rise in the price of several important agricultural products, it is estimated that the value of the harvest will amount to over 5,800 million marks, in comparison with not quite 4,900 millions last year.

HELSINKI, November 27.

PALESTINE

A BUDGET SURPLUS

Now that the Arab strike, which lasted more than half a year, has come to an end, and peace and order have been rapidly restored, it is opportune to consider the effect upon the country's economic life of the prolonged period of strain.

There has naturally been a marked decline in foreign trade. In comparison with the figures for the first half of 1936, the peak year, imports fell from a value of 8½ to 6½ million pounds and exports from 3½ to 2½ million pounds. The main item in the reduction of imports was that of manufactured goods. Exports of manufactured goods actually rose. Another adverse feature of the strike period was the temporary rise in the cost of living. During the period May to September, the rise was calculated by a Jewish authority at over 20 per cent. The Government estimate puts the rise at only 7 per cent., because different items are included in the Government's standard. There can be no doubt, however, that temporarily there was a considerable increase in retail costs. This tendency has already been corrected.

The Government Budget has not yet felt the full effect of the strike and disorder, or of the military measures which

have had to be taken. During the nine months of this year revenue has again exceeded expenditure, though not, of course, in the same degree as during the previous two years, when the surplus went bounding up. But the Government has not yet been called upon to pay its share of the military expenditure which, if it is to cover the cost of transport of the troops as well as the additional cost incurred by their being stationed in Palestine, will make a formidable sum. Still, there is a surplus of some six and a half million pounds; and even if the Government adheres to its policy of retaining a sum equal to a whole year's revenue as a precaution against a crisis, it should still have funds available for the extended programme of public works which it contemplated before the troubles.

Several items of revenue show considerable decline, particularly customs duties; and the gross revenue of the railways dropped by 11½ per cent., while working expenses were 5 per cent. higher compared with the figures for the first half of 1935. In view of the serious interruption of railway transport during the last six months, when every train has had to have a military escort, it is remarkable that more passengers were carried between January and June, 1936, than in the corresponding period of 1935. The revenue of the Post Office has advanced considerably above any previous figures.

JEWISH IMMIGRATION CONTINUING

Immigration has not been suspended; and, in fact, during the latest months immigrants have been flowing steadily into Palestine. Young Jews from Germany and Poland who have prepared themselves for life in the national home have in no way been deterred by the unrest and outrages in the country; and in the first six months of 1936 the Jewish population increased by over 15,000. The larger part of that increase, of course, was due to immigration; during the same period the Arab increase, almost entirely by births, amounted to over 12,000.

One of the immediate results of the Arab strike in the port of Jaffa was to induce the Jews in Tel-Aviv to build a jetty and landing-stage at the northern end of their township. The work was carried out with such eagerness that by October it was possible to land there a considerable part of the merchandise consigned to Tel-Aviv.

The official figures of partnerships, companies and co-operative societies which were registered during the half-year are also striking. There were 310 new partnerships, of which 278 were entirely Jewish and 18 were Arab. Nearly half of them were for businesses in Tel-Aviv. During the same period 76 co-operative societies were registered, of which one was Arab, for the marketing of produce.

The most serious economic problem of Palestine, perhaps, is that of finding fresh markets for citrus fruit. It is calculated that this year there will be an export of between 8½ and 9 million boxes, as against an export last year of 6½ million boxes. So far it has been possible for the Jewish and Arab associations in Palestine to find markets which absorb the rapidly growing product; and it is expected that this year the disturbance in Spain may give fresh opportunity to Palestine fruit in European markets.

JERUSALEM, November 25.

JAPAN

TAX REFORM AND MONETARY STRINGENCY

MONETARY conditions have become somewhat more tight, and to this is attributed the fall of the Three-and-a-half per cent. Funding Loan below its issue price. This is causing some anxiety to the monetary authorities. Commenting on the situation, the Governor of the Bank of Japan recently observed that money exhibited a stringency in September owing mainly to over-purchases of Government securities on the part of joint stock banks, as well as an unusually large seasonal demand for funds. The monetary stringency, the Governor pointed out, has persisted since then, for

abnormally heavy calls on capital by industrial companies have offset the easing influences of such factors as a setback in the movements of commodity prices, the prevailing recession in the stock markets, and an improvement in the balance of trade. But if the Government diverts more funds, and the tax reform issue is settled, the position of the money market will improve, and the sale of national bonds will increase.

An anomaly has developed in the capital market primarily as a result of the publication of the taxation programme a month or so ago. Capital issues of all kinds, except capital increases by existing companies, have been virtually suspended; for the proposed changes in the assessment of income-tax have made it difficult to fix terms and conditions of new issues until further details are known. While the volume of public bonds and debentures is much below that of recent months, capital increases in October totalled 266 million yen, an increase of 196 million yen upon September and of 226 million yen upon October, 1935.

EXPORTS STILL INCREASING

Although the recent tendency for imports to increase faster than exports is once more apparent in the trade returns for October, imports, at 186,533,000 yen, were the lowest recorded in any month this year; but, compared with October last year, they show an increase of 11,855,000 yen or 6.8 per cent. Exports, at 245,781,000 yen, were the highest this year, and 9,435,000 yen or 4 per cent. more than in the corresponding month a year ago. The increase in imports is again mainly accounted for by raw cotton, but noteworthy increases occurred in imports of crude oil and iron and steel.

Exports of cotton piece-goods in October amounted to 34,891,000 square yards, valued at 43,631,000 yen, an increase of 6.2 per cent. in volume and of 8.3 per cent. in value upon October, 1935, according to the statistics compiled by the Federation of Cotton Trade. But in the first ten months of this year cotton exports totalled 2,224,532,000 square yards, at 392,157,000 yen, a decline of 3.5 per cent. in volume and 7 per cent. in value, as compared with the corresponding period of last year. Sales to Africa, Europe, Manchukuo, Kwantung Province, the United States and Ceylon show a considerable increase, while those to Egypt, British India, the Philippines, China, Iran, Iraq, and Latin America decreased substantially.

The general level of commodity prices, after several months of advance, fell back in October, and cereals prices declined sharply. The Bank of Japan's wholesale index number for October fell 0.3 per cent. on the month. The stock markets have also experienced a recession in recent weeks. The aggregate value of all shares listed on the Tokyo Stock Exchange on November 1st was down by 75,025,000 yen or a little over 1 per cent. as against a month earlier. On the other hand, industrial production was well maintained. Output of cotton yarn in October totalled 119,354,000 lbs., an increase of 3,180,000 lbs. over September, and rayon production during last month amounted to 23,789,000 lbs., or 869,000 lbs. larger than in September.

The Japanese shipbuilding industry is so prosperous that it could almost be described as booming.

TOKYO, November 14.

INDIA

VALUE OF IRRIGATION SCHEMES

THE Viceroy, speaking recently at the opening of the seventh annual meeting of the Central Board of Irrigation, said that the total amount so far expended on irrigation works approximated to 150 crores of rupees (about £115 millions). The area served by the works on which that sum has been spent over a period of 80 years raises crops annually to the value of Rs. 100 crores; and, taking into account the value of those crops, every 18 months sees the repayment of the capital expenditure. The Viceroy stated that the investigations now being carried on by the departments concerned with agricultural research would doubtless result in an increase in the productivity of the

land, but that if food resources were to keep pace with the increase in population, means must be found for bringing large tracts of country, still unproductive, under fruitful cultivation; and there was no way in which this could so effectively be done as by extending facilities for irrigation. A recent development, and one of the greatest importance, was that of hydro-electric generating schemes on irrigation canals by the utilisation of the power available at canal falls.

STATE ASSISTANCE TO INDUSTRY

A review of the efforts of Governments to stimulate the industries of India has been compiled by Mr N. Mahadeva Ayyar, I.C.S., and takes the form of a report on "State Action in Respect of Industries." It covers the years 1928-35. The review points out that at the beginning of this eight years the Central Government, though deprived of the responsibility for industrial development under the reformed constitution, had, broadly speaking, obtained through tariffs extensive powers for assisting industries. The Provinces, on the other hand, had in theory almost unlimited powers to assist industries, but their financial resources, their technical equipment and the difficulty of dealing with industries of All-India importance on a provincial scale tended to confine their activities largely to the less organised industries. Despite the growth of provincial self-consciousness, there was a swing back to the desire for central co-ordination. This led in 1933 to the resumption—at the request of Provincial Governments—of the Industries Conference. In addition, industries themselves tended more and more to look to the Government for assistance. During the period under review, every industry of any importance and a great number of minor industries approached the Government (and generally the Central Government) for legislative measures of one kind or another, and in most cases assistance was given.

On the subject of textiles, the report states that the extent and importance of the hand-loom industry in India is not generally appreciated. The consumption of cotton yarns by hand-loom weavers in the Presidency of Madras from April to October, 1933, was about 42.7 million pounds, while the value of the annual production of the Benares weavers alone is estimated at Rs. 1½ crores.

Following the conclusion of the Indian Tariff Board in 1932 that the position of the hand-loom weaver had deteriorated because of the removal of the cotton excise duty and the imposition of a protective duty, the Government of India decided to spend about Rs. 5 lakhs every year for five years in developing the industry. Similar action was taken by the Government in order to assist the silk industry, a grant of Rs. 1 lakh a year for five years from 1935-40 being made. All the approved schemes are now in operation, and allotments have been made to Madras, Bengal, Bihar, Orissa, Assam and Burma. More recently the Government has taken an important step to aid the cottage and small-scale woollen industries by making a special grant of Rs. 5 lakhs to be spread over five years; and a Woollen Industry Committee has been set up to advise the Government on the question of allotments.

BOMBAY, November 20.

LETTERS TO THE EDITOR

POLITICS AND LIBEL

TO THE EDITOR OF THE ECONOMIST

SIR,—On page 236 of your issue of May 2, 1936, you published an article inspired by the Kilmaine Case, in which a member of the House of Lords was awarded £2,000 for damages against a daily newspaper in an action for libel arising out of the latter's editorial comments on a Parliamentary speech. Taking these comments as a standard, you set out "to estimate the damages-value . . . of the ordinary small change of political controversy," and reproduced: (1) *The Times* attack on Lord Brougham a hundred years ago; (2) Mr Winston Churchill's criticism (in "The World Crisis") of General Monro; and (3) Mr D. C. Somervell's remarks on Mr Lloyd George in his "Reign of King George the Fifth."

Your article has stirred up a lively discussion among lawyers. In the recent Master of Law Examination of London University, examinees were asked to comment on your conclusion that: "The plain truth is that judges and juries with their fantastic attitude to libel are setting up a new censorship which, if developed, will kill that freedom of discussion which is vital to democracy."

If I may be permitted to make my own "comment" on the main thesis of your article, I should like to begin by emphasising the distinction between a statement of facts and mere comments, which is one of the great contributions of the Common Law to the jurisprudence of all nations. Democracy is based on the freedom to comment on undisputed facts, and not on the liberty to publish facts regardless of whether they are true or not. Democracy, indeed, is only possible if and when the electorate can fairly and reasonably rely on the truth of the published facts. Comment, on the other hand, may be wrong, or may be grossly exaggerated, but in the interest of democracy no liability exists unless, in very exceptional cases, malicious conduct can be proved.

In practice, it is very often difficult to say whether a publication goes beyond the limit of fair comment. In libel, as elsewhere, two different views may (fortunately for lawyers) be held *optima fide* on the same facts. In the case which was the subject of your article, the publication complained of comprised, *inter alia*, the following: "To take a charitable view, we must assume him (the plaintiff) to be only the unwitting tool of others who needed a not too sophisticated agent for their ends."

Is it really necessary for a free discussion to say that an opponent is a tool in the hands of others who dare not come forward, either unwittingly or for a somewhat darker motive? I think that such a statement has only little to do with the arguments of the case—which may be good or bad—although they were brought forward by an agent. Whoever makes such a statement must prove the truth of his facts, so far as is reasonably possible. It is one of the essential conditions of democracy that the person of an opponent should not be attacked unless necessary, and certainly not by statements of fact which cannot be authenticated.

I do not want to dwell on the intricacies of the Law of Defamation, but I may mention that Mr Churchill's remarks on General Monro are from the beginning to the end statements of fact which, if true, are no libel. Mr Somervell's views on Mr Lloyd George's qualities would probably have been defamatory in a short article. But in a long book, where all the facts of major importance are discussed, they tend to be comment on such facts only, although this may be doubtful.

But all that is unimportant. What matters is that there is a healthy tradition among English statesmen of all parties to refrain from suing in libel unless there is a very urgent reason—as has recently been stated in Court by Mr Lansbury. There is a big difference between the legal question whether a remedy exists or not, and the problem whether it is in good taste or whether it pays ultimately to make use of it. Immunity seems to have been

granted to certain well-known cartoonists "to bring into ridicule" all politicians of distinction. But there are cases where it is not only right to sue from a legal but also from a political point of view, and there are reasons which tend to suggest that Lord Kilmaine's case may have been one of them.

Yours faithfully,
PAUL WEIDENBAUM,
LL.D. (Frankfurt), LL.M. (London).

49 York Street,
London, W.1.

["Comment" may be defined as interpretation of fact. It is not too much to assume that Lord Kilmaine took advice before speaking, and the *Morning Post* interpreted that fact by the use of the word "tool," which is, after all, only a metaphor. If a caricaturist depicts a statesman as a three-card sharper, is he (a) making a false statement that the man is a sharper or (b) commenting? The *Morning Post* use of the word "tool" seems to be comparable to the caricature.—Ed. Econ.]

BOMBERS AND BATTLESHIPS

TO THE EDITOR OF THE ECONOMIST

SIR,—My attention has been drawn to a paragraph in your issue dated November 14th in which you summarise the Report of the Committee of Imperial Defence's sub-committee on the vulnerability of capital ships to air attack. I find that you include a statement to this effect: "The cost of one capital ship is given as equivalent to that of 43 medium bombers."

As this reading of the Committee's report has given rise to so much misunderstanding, I should like to call your attention to the actual wording, which is as follows: "The Admiralty and Air Ministry have collaborated in this investigation and have given us an agreed figure of 43 twin-engined medium bombers of one capital ship, taking into account all those overhead, maintenance and replacement and similar charges which should be included to make an effective comparison during the life of the capital ship."

Subsequently, Lord Swinton, Secretary of State for Air, clarified the position in the House of Lords. On November 17th he said:—

"I pause for a moment to deal with . . . the calculation respecting medium bombers and battleships in paragraph 44 of the Report. There is a figure taken of 43 medium bombers. Of course, that does not mean for a moment that you can buy a battleship for the same amount as you can buy 43 bombers. Obviously you can buy hundreds of very satisfactory bombers for the price of a battleship. But this particular calculation, to which I must say neither the General Staffs nor the Committee on which my noble friend sat would wish to attach any importance as basing their calculations upon it, was a very complicated calculation based on the assumption that you would have to build a station for three squadrons, that you would have to maintain the whole of that station, that you that your bomber squadrons would constantly be replaced by new types, whereas the battleship has a long life."

You will realise that the equivalence referred to is not exactly what might be imagined by the reader of the *Economist* who had not had access to the full text of the sub-committee's Report.

Yours faithfully,
E. C. BOWYER,

Chief of Information Department.

BOOKS AND PUBLICATIONS

IS IT PEACE?*

THIS searching book is an attempt to floodlight the darkness immediately ahead of us in the autumn of 1936, in the hope that the shape of the future may loom out as the light catches this or that surface or angle. Mr Hutton's method is to focus on his target a vast number of converging beams, and he has been wonderfully deft in the placing of his searchlights. In dealing with a problem of this magnitude, within a book of this compass, selection is of the essence of the undertaking; and it is here that Mr Hutton gives his first proof of his mastery of his subject; for his searchlight emplacements have been extraordinarily well chosen.

In the middle, and longest, of the three parts of the book, the arrangement is geographical, and the author looks at his problem from a number of different local standpoints, ranging from the Far East, through the different provinces

* "Is It Peace?" A Study in Foreign Affairs. By Graham Hutton. Duckworth. 356 pages. 12s. 6d. net.

of Europe, to the British Commonwealth. But the searchlights are not only thus disposed at different points of space; they are also echeloned at different time-removes from the impending year 1937, and Mr Hutton does not hesitate to take his stand as far back in the past as may be necessary in each particular case in order to train his beam upon its object. At one point, a sufficient time-depth may be obtained by going back to 1918 or 1914; at another point—for example, in the throwing of light upon the present relations between France and Germany—the observer may have to start a thousand years back, from the break-up of the Carolingian Empire. Mr Hutton shows great judgment in always drawing upon past history as much as he needs, without any irrelevance or redundancy.

It would, however, give an inadequate idea of the book to describe it merely as a concentration of particular lights upon a general problem; for there are aspects of the problem which can only be treated in a general way, and Mr Hutton deals with these in Part Three, which is in some

ways the core, as it is certainly the climax, of his argument. Here he is dealing with the present crisis of Western civilisation, and he rightly digs down below the economic surface, through the political sub-soil, to the spiritual depths. In this part he is really asking his own countrymen to look at themselves in the light in which they are shown up by their foreign policy—or lack of foreign policy—since the last war, and particularly during the five years that have passed since the Japanese struck the first resounding blow at the frail structure of our post-war peace by opening fire in Manchuria.

The truth which Mr Hutton brings out—and it is a truth that needs to be proclaimed from the house-tops—is that you cannot escape either responsibility or catastrophe by being passive or negative. The observer's eye is naturally caught by the flagrant and sensational sins of commission which are being perpetrated by the Japans and Germanys and Italys; for to be on the war-path is to be in violent motion, and liveliness is more conspicuous than torpidity. The good observer, however, will not be misled into overlooking the sins of omission of the sated, senile-minded Powers like England and France; and if the answer to the title of this book is eventually given in the negative, it is already certain that France and England will not be let off lightly by the verdict of history.

The picture which Mr Hutton paints of the present state of mind of the people of this country—or at any rate of their present rulers—is as terrifying as it is convincing. He shows us a people which has repudiated, with panicky indignation, its mission of taking the lead in bringing order into world affairs, and which is yet obstinately refusing to renounce one crumb of its own great possessions which are the envy of all the unchastised brigands; a people which is proclaiming its horror of war yet has been inviting attack by a fiscal policy which aims at converting those great possessions into a close preserve for itself; a people which declares that, though it will not fight to vindicate collective security, it will certainly fight to defend every square yard of British territory—in wilful blindness to the obvious fact that British territory is not the limit of British interests, and that the British Empire can be conquered in Sumatra or Czechoslovakia as effectively as in London or Singapore. In analysing this present British state of mind, Mr Hutton points out that it is only one of many manifestations of the spiritual bankruptcy of the Western World in this age. This book is bitter medicine, but it is just what we need.

SHORTER NOTICES

"The Coal Problem. A Survey, 1910-1936." By J. P. Dickie. Methuen. 368 pages. 5s. net.

The coal industry, never far in the background, has once more come into the limelight with the Government's plans for unification of royalties and their revised measures for facilitating amalgamations. This work by Mr Dickie, therefore, comes at an opportune moment; for it will give the careful reader the facts on which to base his judgment of the proposed legislation. The word "careful" must be emphasised; for "The Coal Problem," as its author would probably be the first to admit, is controversial and indeed polemical. Mr Dickie has represented Consent in the House of Commons as a Liberal National member, and he here renews his battle with the miners' members, with the Mineworkers' Federation, and in particular with the President of that Federation, Mr Joseph Jones, whose book, "The Coal Scuttle," is subjected to severe criticism on the ground that it evades issues and that its arithmetic is slipshod. In taking up this stand, Mr Dickie asserts his undeniable interest in the welfare of the workers—Codlin's their friend, not Short, he tells them—and in one matter, at least, the inequity and iniquity of the royalty system, he goes almost as far as any of the miners' leaders.

Mr Dickie has attempted to give, in substance, a history of British coal-mining during the late reign, though after the period of the 1921 and 1926 strikes the historical character of the narrative becomes blurred. The remaining chapters may best be looked on as a series of studies of coal problems: the nature of the complicated wage agreements, the working of the 1930 Act, the argument for amalgamations and the work of the Reorganisation Commission, royalties, the integration of mining with other industries, the organisation of sales of coal, and the men's and owners' associations. Two points stand out especially. Mr Dickie condemns the 1930 Act for combining two contradictory

principles—the spreading of work in Part I and the concentration of output in Part II.

The other point which Mr Dickie emphasises is that concentration must mean a further reduction of output. He calculates that any policy of reorganisation involving full-time occupation and concentration of production at the best pits would mean a reduction of at least 134,000 workers. Combined with a reduction of hours to six per shift, this would have the effect of reducing the numbers employed by 10,000.

"1936 on the Continent." Edited by Eugene Fodor. W. Aldor. 1,020 pages. 6s. 6d.

This book manages, on the whole, to justify its sub-title "The entertaining travel annual." It has been written by 26 Continental contributors, but the reader is spared any native partiality, since in most cases they write on countries other than their own. The approach adopted throughout the 26 sections is that the visitor is interested first in the customs, habits and outlook of foreign people. "Sights," it is true, are not entirely neglected, but no Alpine altitudes are given nor any hotels starred.

For the most part, the description is easy going and light-hearted. One may discern the character of the Paris governess, the Madrid shoeblack, the Danish cyclist. Occasionally, a certain *naïveté* is found, due, perhaps, to somewhat hurried editing. Again, the artifice of almost one-sided conversation or completely one-sided correspondence as a medium for conveying information becomes distinctly laborious where it is continuously used. For the price, this is a good and not unimaginative production; the traveller in particular districts may still require his sign-posted guide, with its familiar abbreviations, but this book will give him a clearer insight into social, economic and political habits, and some good travelling tips in addition.

MONEY AND BANKING

INSURANCE AND WAR RISKS

(BY A. CORRESPONDENT)

IN the past twelve months the statesmen of the world, among their other and greater achievements, have managed to give a cold bath to the insurance market, the effect of which is likely for a long time to be felt by merchants of every kind and country. Steps have already been taken by certain sections of the market to get rid of what is now regarded as an intolerable burden, and probably before long other precautions will be announced to relieve both underwriters and insurance companies of risks which, in future, will have either to be borne by the trading community uninsured or accepted on terms by the Government. When the anticipated changes come about, both merchants and bankers will be closely affected by them, and it may be of help to sketch the history of war and civil commotion insurance in recent years.

In the matter of war risks, the tradition of marine insurance differs so widely from that of the other departments that the subject must needs be dealt with in watertight sections, marine and non-marine. The marine underwriter has always regarded capture, seizure and detention as risks that he ought to be ready to cover. His colleague on the non-marine side of the business, however, has usually declared that the results of war are beyond the capacity of insurance to make good, and ought not to be accepted in any insurance policy. Let us deal first with the marine underwriter.

From the time—now far distant—when the marine policy was first drafted perils of the sea and perils of capture by an enemy went together. The earliest copies of Lloyd's List testify to the enormously heavy risks that underwriters ran, in the eighteenth century, from the action of privateers and war vessels, and in the Napoleonic wars, great fortunes were made (and others were probably lost) at Lloyd's out of the capture risk. Throughout the nineteenth century, the market was always ready to give cover when required, the business usually being profitable to the underwriters who took it. But for some years before the Great War underwriters had their doubts of the wisdom of accepting these risks. Values had grown so big and weapons of destruction so deadly that the traditional attitude of the market changed. The famous f.c. and s. clause—expanded later into the f.c. and s.r. and c.c. clause—was introduced into the marine policy, freeing underwriters from liability for the results of war, the results of riots and the results of civil commotions.

When the war broke out, therefore, underwriters were for the most part comfortably placed. Certain very heavy shipments of gold which, exceptionally, were insured against war risks, brought a fresh tinge of grey into some underwriting heads, but generally the market came to the war with clean books and could shape its policy day by day to the varying fortunes of the war at sea. But it could not carry the whole burden; and the Government, with its scheme of war insurance, was forced to take whatever surplus the marine underwriters did not want or could not accept. That two-legged arrangement carried the country's trade through the dangers of those four years, but with the coming of peace there came another change in the attitude of marine underwriters. It may have been that the market was too hungry for business to resist the pressure of merchants, or it may have been that in 1919 another war within our lifetime seemed too mad to be contemplated. But for one reason or the other underwriters began to include war risks at request, without additional premium, throwing in the extra cover with the easy grace of the grocer who wraps up a parcel and sends it to his customer's house without making any charge for the additional service. Now and again some underwriter would complain of the dangerous habit into which he and his fellows had slipped; but the habit remained and seemed likely to continue. It became, indeed, not less but more dangerous

because of the growing habit of including on a marine policy a considerable risk on land after the cargo had been discharged.

Then came the Abyssinian adventure, and the market sat up. Here, at last, said underwriters, we must take a stand and insist on a premium for the war risk when we cover it. They therefore formed a committee which arranges the rate for war risks on all sorts of different voyages, and has been a good deal more successful than most committees in getting its orders observed. Everything, in fact, has conspired to smooth its path—Spain, the new Triple Alliance, re-armament, the regularity with which certain European statesmen beat each other's records for international bad manners and abuse. All these things have helped to fix underwriters' gaze on the clouds of war, and there has been very little disposition to break away from the committee's scales of rates. On the contrary, the market is ready for further measures, and whatever developments are announced by marine underwriters in the near future, will not make for easier conditions of war insurance.

The insurance of war and civil commotion on land is a more complicated business than marine war risk, and is at this moment of even greater concern to the insurance industry. Tariff companies have always set their face against the insurance of war risks on land. They have justified their attitude by the very proper arguments that it is beyond the power of insurance to protect mankind against the destruction of war, and that it would be dishonest of insurers to accept liabilities which, in the day of trouble, they could not hope to meet. They have not, however, taken the same view of insurance against riots and civil commotions. In many countries of the world they have been ready to give cover against the destruction of property by civil disturbances and managers have probably regarded this limited cover without much apprehension. Recent events in Spain, however, have given them an unpleasant shock, and the problems which need to be solved before the trouble is cleared up must be considerable. What exactly do the policies cover? If they include "civil commotions" do those words embrace the present war? Must an insurer make good under them all the damage that Madrid is suffering to-day? In simple English, the problem is difficult enough. But translate the policy into a foreign tongue, leave it to be construed by a foreign judge, in a foreign court, and what is the result likely to be?

Outside the tariff offices cover against war risks on land has been obtainable and a not inconsiderable amount of business has been placed both in Great Britain and in foreign countries against destruction by combatants and foreign enemies, as well as against destruction by riots and civil commotions. In the last war the business in this country, at any rate, was highly profitable, and even the British Government wound up its aircraft account with a balance on the right side. But the danger of arguing from the war of 1914 to the war of 19— is now too obvious to be overlooked. Lloyd's underwriters have already published their decision not to undertake any further insurances against damage done by war to property in Britain and merchants, manufacturers, and owners of property in England who are at present insured against this risk must reconcile themselves to the fact that their policies will not be renewed. In future, the only cover they will be able to secure from private enterprise will be such as may arise from riots, labour disturbances and civil commotions.

The lesson which the commercial community and the rulers of the world must digest is that modern warfare takes us right outside the rules and measures of ordinary business, and private enterprise cannot, except within com-

paratively narrow limits, indemnify against the destructive power of an armed force. How far the State will be able to shoulder the burden, and what arrangements are in train to provide a national scheme of insurance, are not known, but the merchant, the property owner, the mortgagee and the banker—in Great Britain or in any foreign country—have no certainty that they will, when the hour strikes, find any kind of market in which to cover their land risks. If Europe is moving towards another war it is approaching a disaster so vast as to outsoar all the protections on which we have been accustomed to rely. Inter arma silent leges. Inter arma silet insurance.

FINANCIAL NOTES

Argentine Exchange Outlook.—This week the rate for free pesos has fallen to Pes. 17.10 to the pound, or practically to the official import rate of Pes. 17. This movement is due not so much to the conclusion of the new Anglo-Argentine Trade Agreement as to the marked improvement in the Argentine trade balance which has occurred since the summer. There have recently been very heavy shipments of maize, while it is now known that the wheat, linseed and oats harvests, shortly coming on the market, will be good. Argentina's export surplus for the first ten months of 1936 was equal to her surplus for the whole of 1935. Hence there are strong rumours that all official control over foreign exchange dealings will disappear, together with the official import and export rates of Pes. 17 and Pes. 15, respectively. The profit margin between the two rates was originally used as a subsidy to agriculture, but the subsequent recovery in prices has by now removed the need for any subsidy. Also the central bank has now accumulated large foreign exchange reserves, which, again, reduces the need for any continuance of control. On the other hand, the new Anglo-Argentine Agreement continues the exchange precedence granted to Great Britain under the Roca Agreement, and so there may be a feeling that the immediate removal of exchange control might contravene the spirit of the Agreement. In our view this fear possesses no substance at all, for any step to free exchange would be to our advantage. Besides, if necessary, Argentina could still maintain the 20 per cent. surcharge which now operates against most countries, except England, Holland and Belgium. The concession of a special remittance rate to the railways at 5 per cent. above the official rate expires at the New Year, so that does not complicate the position. Every proposal to remove exchange "controls" deserves to be welcomed as a stage on the road to freer international trade relations.

Foreign Capital in the United States.—President Roosevelt's anxieties regarding foreign "hot money" have been responsible for the compilation of a valuable official report on the nature and extent of foreign investments in the United States. Cabled extracts from this report have so far not been entirely consistent, but so far as can be told the following statement summarises the ebb and flow of foreign funds during 1935, and the first nine months of 1936:—

	1935	1936 (9 months)	Total 21 months
\$ Millions			
Net inflow of short money:			
(a) Banking funds	(a)	(a)	1,353
(b) Brokers' balances	(a)	(a)	23
Foreign purchases of securities ...	1,964	2,391	4,355
Foreign sales of securities	1,522	1,927	3,449
Net purchases of securities	442	464	906
Total net inflow of foreign funds	1,411	870	2,281

(a) Not shown separately.

The United Kingdom was the largest dealer in securities in Wall Street, having bought \$1,055 millions and sold \$1,397 millions, leaving a net sale of \$342 millions for the whole period. Canada came second, with purchases and sales which approximately balanced at \$1,100 millions. There are two chief points of interest in these statistics. The first is the preponderance of transfers of short money over net purchases of securities; and this suggests that fear was the main motive behind the flight of European funds to New York. The other point is that the net investment of European money in Wall Street is really the margin arising out of a much larger turnover of sales and purchases. From the foreign exchange point of view the lesson of this is that at any moment there may be a large temporary preponderance of sales or purchases which can easily become a main influence on the exchanges. Recent movements of the dollar have established the truth of this lesson, and President Roosevelt's recent actions have shown how clearly he appreciates it.

The Foreign Exchanges.—Dollars have been offered all the week, and at one time the rate for sterling rose to \$4.91½. On Thursday morning it slipped back to \$4.90½, in spite of fairly large sales of dollars at that time, the main cause of this relapse of sterling being the reports of British constitutional difficulties. Later in the day the pound recovered to \$4.90½. There have been fair sales of dollars to cover Continental liquidation in Wall Street, while guilders have also been bought against dollars to cover open forward positions dating from the weeks preceding the Dutch suspension of the gold standard. Both spot and forward guilders have been firm. The spot rate is now Fl. 9.01½, with steady bidding for guilders against official sales by the Netherlands Bank. The opinion is that without the Dutch control the spot rate would by now have fallen to Fl. 8.50. This week's reduction in the Dutch Bank rate from 2½ to 2 per cent. has kept three months' guilders very firm at only 2½ cents discount, and the rate may soon go to par. The spot Paris rate has been firm at a pegged rate of Frs. 105.15, but the French authorities have had to continue buying francs. Forward rates have been irregular, the latest rate for three months' francs being Frs. 1½ discount. There has been some demand for forward belgas at a three months' rate of 7-6 cents premium.

The Money Market.—Up to the evening of December 1st the disbursement of about £35 millions of War Loan dividend had had very little effect, largely because it was neutralised by the payment of a heavy call on the new Funding Loan. Money has been fairly plentiful, but there has been some clearing bank calling on every day of this week. The banks are only buying bills sparingly now, partly because they are anticipating heavy Christmas currency withdrawals, but one of the banks bought lines of February Treasury bills from the market at ½ per cent.

	Nov. 12, 1936	Nov. 19, 1936	Nov. 26, 1936	Dec. 3, 1936
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	½	½	½	½
Short loan rate:—				
Clearing banks	½-1*	½-1*	½-1*	½-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	1-1½	1	1	1
Three months' bank bills ...	1	1	1	1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

At last week's tender, at which the average rate was 11s. 5.29d. per cent., there was an unusually small demand for Treasury bills, applications amounting to £65 millions against allotments of £50 millions. As the market obtained most of the bills it had applied for, there has been some selling pressure all this week, and on Thursday bills were being sold at 1½ per cent., or a rate which yielded practi-

cally no profit. There was a general expectation on that day of a higher tender rate on December 4th, and a possible rate of $\frac{1}{16}$ or even $\frac{1}{8}$ per cent. were suggested.

* * *

The Bank Return.—The Christmas expansion in the note circulation has now begun. Last week's increase was £6.0 millions, compared with £4.2 millions in the corresponding week a year ago, so that it looks as if the banks have some justification for their view that this year's expansion may be heavier. The reserve is reduced by £6.2 millions.

	BANK OF ENGLAND				
	Dec. 4, 1935	Nov. 11, 1935	Nov. 18, 1935	Nov. 25, 1935	Dec. 2, 1935
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	198.4	248.7	248.7	248.7	248.7
Note circulation	405.6	446.6	444.9	445.6	451.6
Banking Department:—					
Reserve	53.6	62.9	64.6	63.8	57.6
Public deposits	7.1	14.9	14.1	12.1	10.6
Bankers' deposits	103.7	98.0	96.1	97.6	99.1
Other deposits	37.5	41.6	44.7	41.7	41.1
Government securities	89.4	80.4	79.0	74.2	82.4
Discounts and advances	10.7	8.6	7.4	6.8	8.5
Other securities	12.5	20.3	21.7	20.4	20.2
Proportion	36.1%	40.7%	41.7%	42.1%	38.1%

The War Loan dividend has been largely neutralised by the payment of the Funding Loan call, so that only minor changes have occurred in the banking department. Public deposits are reduced by £1.5 millions, while Government securities have risen by £4.2 millions. Owing to currency withdrawals, very little of this money has reached bankers' deposits, which have only risen by £1.5 millions.

* * *

Bank of London and South America.—The current accounts, summarised below, are the first published since the absorption last July of the Anglo-South American Bank. This operation has doubled the assets and liabilities of the Bank of London and South America, and so the accounts for this year and last are not comparable. Nor do this year's profits reveal the full results of the amalgamation. To mention no other reason, they cover a year which was already far advanced when the amalgamation took place. For the full effects to become apparent we must wait at least until next year.

	September 30th 1935	September 30th 1936
Liabilities:—	£'000	£'000
Capital	3,540	4,040
Reserve	2,000	2,000
Current and deposit accounts	28,289	55,403
Bills payable	661	1,168
Acceptances	1,719	2,605
Bills for collection	6,350	8,953
Assets:—		
Cash in hand and at call	7,144	13,521
British Government Securities	956	2,420
Foreign Government and other securities	219	2,929
Bills receivable	6,026	10,118
Advances	18,651	29,727
Premises	1,914	2,853
Net profits	210	253
Dividend	3%	3%

At the time of the amalgamation there was no doubt that the less sound assets of the Anglo-South American Bank would either be drastically written down or else eradicated, and the new balance sheet of the London Bank shows a very strong position. Cash has increased almost in proportion to deposits, and investments have expanded in far greater proportion. On the other hand, the increase in advances is proportionately less. It is difficult to say how much of the year's expansion in the various items represents an accretion of new business. All that can be deduced is that British banking in South America now rests on a thoroughly sound and liquid basis.

* * *

Barclays Bank (D.C. and O.).—This bank is this year celebrating the centenary of its forerunner, the Colonial Bank, and appropriately enough its resources

have risen to above £100 millions. A special centenary bonus has been paid to staff and pensioners. Business has improved in most of the countries where the bank operates. Its mainstay, of course, is the prevailing activity in South Africa, but in spite of the troubles there has lately been some improvement in Palestine, while there has also been the recent marked advance in the prices of West African produce. Trade in Egypt is better, and while West Indian sugar prices are disappointing crops are good, and there has also been an expansion in tourist traffic. Thus it is not surprising that the bank's latest balance sheet shows a strong and liquid position:—

	Sept. 30, 1935	Sept. 30, 1936	Change
	£ mill.	£ mill.	
Deposit	87.8	97.0	+ 9.2
Cash	24.4	25.5	+ 1.1
Discounts	12.5	13.1	+ 0.6
Investments	23.4	27.8	+ 4.4
Advances	29.2	32.2	+ 3.0

Net profits last year were £473,400, subject to an appropriation of £120,000 for income tax, making a final net figure of £353,400. This year they are £401,200, after providing for income tax, so that there has been a noticeable improvement. There is no change in the dividend of $5\frac{1}{2}$ per cent. on the "A" and "B" shares.

* * *

British Overseas Bank.—Already the largest of the banks founded after the war, this institution further increased its size by taking over in March of this year the business of Fredk. Huth and Company. This absorption makes it difficult to compare the past two years' accounts.

	October 31st 1935	October 31st 1936
Liabilities:—	£'000	£'000
Capital	2,000	2,000
Reserves	250	250
Deposits	2,638	3,983
Acceptances	2,989	4,078
Assets:—		
Cash	247	256
Money at call and short notice	869	1,260
Balances with banks abroad	208	457
Bills discounted	554	973
Government Securities	371	446
Other investments	538	535
Advances	1,783	1,957
Net profit	60	62
Dividend	6%	6%

Among the bank's assets the greatest proportionate increase is in discounts. Net profits are £62,376, compared with £60,131 last year. As far as can be ascertained, the bank has not suffered very serious direct losses as a result of the Spanish war, for its Spanish connections form only a small proportion of its total business, but what the indirect effects may be are, of course, impossible to estimate.

* * *

Canada's Tourist Trade.—Sir Robert Borden in his presidential address to the annual general meeting of Barclays Bank (Canada), held in Montreal on November 17th, called attention to an important phase of Canada's economic activity. Tourist trade, he explained, was essentially a post-war development, which was acutely sensible to the ebb and flow of the trade cycle. Nevertheless, as an invisible export it now ranked ahead of any one of Canada's commodity exports, not even excepting wheat and newsprint, and had become the largest single item in maintaining Canada's balance of payments. From \$117 millions in 1933, the lowest point in a decade, it had recovered to \$202 millions in 1935, and would probably be \$250 millions in 1936. The expenditure of Canadian tourists abroad was also rising, from \$51 millions in 1933 to a probable figure of \$80 millions for 1936. This, we may add, raises the net surplus from \$66 millions in 1933 to \$170 millions in 1936—a figure which may be about half Canada's commodity export surplus for the current year. This last fact alone illustrates the importance of Canada's tourist trade. Generally speaking, both the president and the general manager had an encouraging tale to tell. Canadian business is expanding and Barclays Bank (Canada) is winning its share of the fruits of recovery.

THE STOCK EXCHANGE

THE SMALL INVESTOR

THE Board of Trade has appointed a Committee "to consider the operations commonly known as share-pushing and share-hawking and similar activities." Its personnel is eminently representative. A body which includes the Deputy-Chairman of the Stock Exchange, the President of the Council of Associated Stock Exchanges, the Senior Official Receiver and a former Director of Public Prosecutions is well qualified to discuss every aspect of bucket-shop activity from cradle to grave. Its appointment, following the Government's decision to legislate on the findings of the Committee on Fixed Trusts and the establishment of a London Stock Exchange register of country brokers, affords welcome confirmation of the authorities' care for the interests of a member of the community whose economic status has increased progressively with the post-war growth of taxation—namely, the small investor. We may, accordingly, devote the present article to an analysis of the soil in which bucket-shops, like ill-weeds, take root and thrive.

At the outset, it is evident that small investors are a numerous company, whose membership cuts across most distinctions of politics and creed. Lord Mottistone, Chairman of the National Savings Committee (whose work in promoting thrift is beyond all praise), knows one kind of small investor. Every branch bank manager knows another. Every stockbroker whose clientèle is at all extensive knows a third kind of small investor, and every bucket-shop proprietor knows, too well, a fourth category. There are 46 million inhabitants of Great Britain, of whom only 81,562 were assessed to surtax in 1933-34, and only 3½ millions were chargeable with income tax in 1934-35. Many of the lower grades of income-tax payers are certainly not large investors. We may not be far wrong, therefore, in concluding that something over 90 per cent. of the total population and, say, over two-thirds of the recipients of separate incomes, are potential small investors.

Various computations have been made of the total accumulated resources whose ownership may be attributed to the small investor. The most recent was published by Lord Mottistone last October. It totals nearly £3,000 millions, and is analysed in the accompanying table. The figures are the more striking because, great as they are, they admittedly do not tell the full story for any single one of the sub-headings under which we have grouped Lord Mottistone's figures. They are, in fact, almost entirely confined to figures whose accuracy can be checked from official records. The total of £674 millions in savings banks, for example, does not include deposits

in the independent Scottish savings banks, in the Yorkshire Penny Bank, or in the special savings departments of the great joint-stock banks. The £709½ millions of Government security holdings excludes all gilt-edged stocks purchased for the small investor, directly or by trustees, by way of the normal Stock Exchange channels. No attempt is made to evaluate the small investor's share of ordinary (as distinct from industrial) life assurance funds. This share was estimated by Mr Walter Runciman at £340 millions in 1926, and it may be as high as £500 millions to-day. The building society figures have increased more rapidly than any other item in the list, during the last decade. But they show, not the extent of house ownership, but the amount still unpaid on comparatively recent purchases. Above all, the figures given above completely ignore the small investor's holdings in the securities of British railways, public utility concerns and the whole gamut of industrial companies.

In fact, the figures are as a mixed bag of samples of such holdings as happen, for legislative or other reasons, to be statistically recorded by Government agencies. They are the *visible balance* of small investment, and it may be as misleading to omit "invisible" items from consideration in this context as in the national balance of payments. The investment character of certain of the "visible" items is itself debatable. The accumulations of the friendly societies

and trade unions (and, possibly, also the national health and industrial assurance funds) are the product, not so much of conscious saving, as of desire to escape the worst evils of being poor. "Investments" of this kind should diminish as the social services of the State are extended. Bucket-shops do not find many clients among unskilled labourers. The multitudinous streams which daily coalesce at the share-pusher's letter box flow rather from the "foreman class" of wage-earner, the local shopkeeper, the black-coated worker, the doctor, dentist and professional man generally (who is earning a competence, but living, as a rule, up to his means), the clergyman, the schoolmaster and the small industrialist. All these recipients of moderate but fairly regular income endeavour to save something, partly from insurance motives—to obtain the wherewithal for marriage, the education of a family, and protection against sickness, old age and the proverbial "rainy day"—and partly to obtain increased income during their lifetime and transmit the principal to their heirs. Their "reserves" may be free or earmarked, or both, but they normally seek investment, not through savings bank channels, but through the medium of Stock Exchange securities.

It is well known that the average shareholding, even in the largest British companies, is relatively small. There are, for example, over 800,000 names on the registers of the four main railway companies, and the average individual holding is under £1,400 nominal (with a much lower market value to-day). It was recently stated that 23 representative industrial concerns had an average shareholding of as little as £315. These figures, however, are difficult to interpret, partly because the number and incidence of very large holdings may affect the average considerably; and partly because large, as well as small, investors were aware of the advantage of spreading their resources over a large number of companies, long before unit trust managers discovered its publicity value.

It is possible, however, to speak with somewhat greater confidence of the wide diffusion of capital ownership in the light of a private inquiry into the distribution of actual shareholdings in ten leading British industrial companies, some of the results of which appeared in the *Economist* four years ago. The table at the foot of the preceding page, which is based on that research, shows (a) the effect of large holdings on the average, and (b) the percentage of shareholders in each company who are small holders.

Reference to the table shows that the exclusion of the very large shareholdings tends to reduce the average very considerably. Of still greater significance is the fact that over 40 per cent. of the shareholders in these companies have less than 100 shares each; that over two-thirds hold under 200 shares, and that nearly 90 per cent. hold less than 500 shares. There is strong *prima facie* evidence that most holdings of under 100 shares, and many of under 200 shares, belong to the small investor in the sense we have just described. Sub-division of total individual investments into what are, for Stock Exchange purposes, "odd-lot" holdings is uneconomic for the really wealthy investor. It is significant that, broadly, the largest companies in the table, whose shares have the widest market, have the greatest proportion of small holdings.

It is a safe hazard that the clientèle of the bucket shop is drawn largely from the type of small investor thus represented, who is free from immediate anxiety over his economic position, but has no very considerable total income derived from his securities and is tempted by the possibility of obtaining a spectacular return. The bucket-shop hook is baited more frequently with the prospect of handsome capital profits than of higher income. Bucket shops flourish notoriously when markets are rising, and speculative "deals" are the order of the day.

The most formidable problem, therefore, with which a reformist legislature may have to cope may be not so much the activity of the bucket shop as the receptivity of the small investor himself. It may be desirable to keep him from temptation by curbing the activities of the fraudulent share pusher, and, as far as possible, by publicly differentiating the more from the less reputable share dealer. But in the long run the best remedy may be the more liberal education of the small investor in the theory and practice of investment.

INVESTMENT NOTES

Course of Share Values.—If a market can be defined in terms of its distracting rather than its dominant factors, then the term "political markets" is applicable to last month's events on the Stock Exchanges of London and New York alike. As our customary monthly chart shows, equity share prices in both centres reached a new recovery peak in the first part of November, and receded from it in the latter part of the month. In New York, prices were left with a net gain; in London, they finished more or less where they started. Both centres, indeed, were ripe for a technical reaction. But the fact that New York suffered rather less than London, although the gradient of the preceding rise in values had been steeper on the west of the Atlantic, suggested that proximity to the scene of doctrinal battle in Europe was the main consideration. This week, the curtain was raised to reveal the threat of a British constitutional crisis. The markets for gilt-edged and

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS

equity stocks alike were much depressed and even more dismayed. How far such an issue might carry the markets, if anxiety over its outcome were prolonged, cannot be even approximately estimated, for it has had no precedent in Great Britain for generations. Apart, however, from dynastic problems, the attitude of investors and Stock Exchange operators towards the boom has become perceptibly more cynical. That some of the foundations of present activity cannot be enduring has become more widely admitted, in proportion as the centre of gravity of prosperity has moved from recovery to re-armament. Meanwhile, the Actuaries' Index of 178 ordinary shares (December 31, 1928 = 100) now stands at 90.6, against 91.2 a week ago and 90.7 a month ago, the corresponding percentages of average yield being 3.64, 3.57 and 3.54, respectively. Indices for a number of constituent groups are given below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month ago (Nov. 3)	Week ago (Nov. 24)	This week (Dec. 1)	Month ago (Nov. 3)	Week ago (Nov. 24)	This week (Dec. 1)

The groups which fared best last month were those, like coal and cotton, which have been among the last to feel recovery's kindly urge.

Argentina and the British Investor.—Investors will do well to examine the terms of the Anglo-Argentine Trade Agreement (published as a Supplement with this issue) with some care. They can hardly escape the conclusion that the British Government has driven a hard bargain, to fit the requirements of its beef policy. Wednesday's debate showed that Mr Morrison had succeeded to the mantle of Mr Elliot so completely that the duty on beef imports from the Argentine must now be regarded as a permanent feature in the economic relations of the two countries. But assistance for the British beef grazier, under the Pact, is clearly more apparent than any corresponding benefit for the British investor in the Argentine. The beef levy, whose cost is put at about £3 millions per annum, represents nearly 7 per cent. of the value of Argentina's exports to this country, and over 20 per cent. of the total value of British imports of Argentine beef. It must be wholly paid by the Argentine grazier or shared with the British consumer. In either event, it must necessarily reduce the net income of Argentine beef producers, and must, *pro tanto*, reduce the sums available in sterling exchange which are to be earmarked, as before, for meeting current remittances from the Republic to this country. For the railways, it may well mean some loss of cattle freights, or pressure to reduce the traffic rates. The Agreement suggests no reason why the high ranking accorded to Argentine Government loans should be modified in any way. The prior claim of these obligations cannot be materially affected under the new Pact. On the railways, other considerations arise. They are protected by the "benevolent treatment" clause, but this is wholly non-specific, and conditional upon the Government's ability to act "within their constitutional sphere." They already enjoy preferential exchange arrangements, but these expire at the end of the present year. Will they be renewed, and on what terms? There is no official indication on this point, but there is reason to hope that, if exchange control is maintained (a problem discussed on page 473), the railways' special exchange arrangements may be renewed on broadly similar lines next year. But their general operating problems are not appeased by any undertaking in the Pact. National Transport Co-ordination is still an open question, and if railway experience the world over is a reliable guide, the prospect of "recovery traffics" during the next half of the railways' year may be accompanied by forward-looking labour demands. Both issues, indeed, may be affected by local political reactions in the Argentine, and no Government could guarantee "benevolent treatment" without reserving considerations of this sort. In short, the outlook for Argentine rail stocks over the long-period cannot confidently be regarded as clarified by the Agreement.

Proxies and Minorities.—The scheme of amalgamation of National Provincial Cinemas, Oxford and Berkshire Cinemas and the Union Cinema Company, whose terms we recently criticised in the *Economist*, were unanimously approved, without question or comment, at separate class meetings of shareholders on Friday, November 27. The shareholders concerned have expressed their opinion in a perfectly regular manner. But that at least one shareholder in the Oxford and Berkshire Company found himself in opposition to the terms proposed is evident from a letter sent to him by the company, which has been reproduced in a newspaper:—

We duly received your letter of the 23rd instant requesting us to record your vote against the proposed amalgamation scheme, but we would point out that in order that your vote may be effective you must either attend in person or appoint some other shareholder as your proxy to vote for you. It will not be possible for you to use the proxy cards which have been sent to you, and a new proxy in a similar form appointing some other person to vote for you will be necessary.

It will appear, first, that the nominees appointed to vote by the proxy forms were only those in favour of the scheme; secondly, that shareholders living at a distance from London, or unable for other reasons to attend the meetings in person, were unable to record a vote against

the scheme unless they could find some other shareholders to serve as their deputies, and to compose and complete a legal document in a specified form; and, thirdly, that in this particular case, either the shareholder concerned changed his mind before the meeting, or was unable to find a fellow shareholder willing to undertake the duty, and to provide him with the required form. In the species of referendum which an extraordinary shareholders' resolution implies, it is obvious that, under the law as it stands, it is more difficult to say "No" than "Aye." The law, in fact, admits its own bias, for it expressly allows affirmative votes to be obtained at a company's expense, while shareholders who wish to record a negative opinion must do so at their own charge. The underlying assumption that shareholders should give the most careful consideration to the views expressed by their directors, and should not lightly or frivolously vote against them, is obviously sound. But the ultimate test of any democratic system is its treatment of minority opinion. And in the present state of company law, the balance seems to be tilted more to the side of expediency than abstract justice.

Re-armament's Nemesis.—Mr Arthur Chamberlain invariably takes a wide viewpoint in his speeches to the shareholders of Tube Investments. Twelve months ago he delivered a pungent criticism of company accounts before inviting shareholders to approve those of his company (which, incidentally, lack only a consolidated earnings statement to complete the excellent group balance sheet). His theme on Wednesday was the reaction of defence activity upon the normal channels of industry and trade. The expansion of the group's turnover during 1936 has coincided most opportunely with the reorganisation of the undertaking; orders have been promptly executed, and the increased volume of work has enabled the company to keep price increases down to the minimum. Nor have the past year's profits been "swollen with

defence windfalls." There is evidently great pressure on the company's capacity from customers engaged in the defence programme, but the windfalls will accrue, "if at all," in 1937 and 1938. Mr Chamberlain, in fact, is not enamoured of the defence programme. In his view it comes at a time when the country's manufacturing capacity is already "fully occupied with honest business," which increases the wealth of the country, and he foresees a period when raw materials and labour will be diverted to defence requirements, at the expense of general industry. When the armament boom is over, he fears that increased taxation will coincide with a reduced volume of trade from which to meet the bill. And he drew two conclusions, first that the profits of 1937-38 would not satisfy contemporary optimists, and secondly that prudent businesses would retain any surpluses to meet the day of reckoning. These are frank words which deserve the attention of all thoughtful investors, for they can be suitably translated to meet the circumstances of the majority of industrial concerns. The range of direct benefit from the defence programme is much narrower than the market has been inclined to acknowledge, and if Mr Chamberlain's warnings regarding rising costs prove true, there may be more concerns than his which regard the long-term implications of re-armament with misgiving. Nor do his views in this matter depend upon his plain reading of international affairs. Some investors may prefer to dissent from his doubts regarding the necessity for a large defence programme, but that is a question which is wholly different from the economic issues which are raised by it.

* * *

Foreign Bond Movements.—A further rise in the foreign bond market is reflected in the "Municipal and General" index for November. The average level of the 113 bonds now represented—reduced from 114 owing to the repayment of the Belgian 7 per cent. loan—has advanced from 102.5 to 103.9 (January-June, 1934 = 100). Our

usual table below shows the movements of the component series:—

Month	AVERAGE JAN.-JUNE, 1934 = 100							Com- plete Index	Un- de- faulted	De- faulted
	Europe	Near & Far East	Egypt	South and C. America						
	(31)	(31)	(4)	State	Prov. Govt.	Total	(113)	(591)	(541)	
1935										
Nov.	92.0	101.7	99.5	91.9	76.6	88.1	93.1	101.0	84.6	
Dec.	91.6	102.2	99.8	93.6	78.5	89.9	93.9	102.0	85.2	
1936										
Jan.	96.2	100.1	98.9	102.9	85.4	98.6	98.8	103.4	99.5	
Feb.	96.4	107.7	98.8	103.5	86.5	99.3	100.7	104.1	96.8	
March	95.1	109.9	99.2	100.2	85.9	96.7	100.0	103.7	95.3	
April	97.6	110.0	98.7	101.3	87.9	98.0	100.8	104.7	96.5	
May	96.1	106.5	99.2	101.3	88.6	98.1	99.8	104.3	95.0	
June	96.3	104.4	99.4	100.2	89.2	97.5	99.1	102.8	95.1	
July	94.7	110.6	100.9	99.1	89.2	96.7	98.8	104.4	95.0	
August	95.1	113.2	100.7	99.3	89.8	97.0	100.7	105.7	95.8	
Sept.	94.7	110.7	99.9	98.8	89.0	96.4	99.7	104.3	94.8	
Oct.	95.2	111.7	99.7	105.3	93.0	102.3	102.6	104.3	100.6	
Nov.	95.4	110.6	99.6	107.2	101.0	105.7	103.9	104.5	103.2	

† These are current totals. From August, 1935, to April, 1936, 82 defaulted, 52 defaulted bonds.

South and Central American issues have recorded a major rise, the Provincial Government issues providing a strong feature. In part, this rapid improvement may be attributed to their depressed levels throughout the base period, but it does, in fact, reflect a real improvement in the position of "commodity bonds" owing to the rising tendency of world prices. The one significant fall has occurred in the Far Eastern group, where political troubles have affected Japanese issues. It will be seen that, since the end of last year, defaulted bonds have risen by 21 per cent., compared with an appreciation of less than 2½ per cent. for issues whose coupons are regularly met.

COMPANY NOTES

P. and O. Report.—The report of the Peninsular and Oriental Steam Navigation Company to September 30th, like that of other shipping companies, shows a substantial—if not a spectacular—recovery in voyage receipts compared with the previous year. Interest in the report, however, will inevitably be concentrated on certain spectacular balance sheet changes. Revenue for the past year has hardly expanded so sharply as the 4 per cent. deferred dividend declaration suggested. Net voyage receipts are up by £230,000, and total current income by £322,000. These figures mean that P. and O. has enjoyed its best year since 1932. But comparison of the actual revenue position is complicated by the absence of exceptional income transfers last year, and by the reduction of depreciation provision to £885,000. The latest accounts, therefore, show a "true earnings" position for the first time in five years. The analysis below reveals that the deferred stock dividend was short-earned to the extent of £6,791:—

	Years to September 30th		
	1934	1935	1936
Net voyage receipts.....	1,202,079	1,054,862	1,284,923

Carried forward

† Includes profit on investments sold, transfers from debenture reserve and income tax refunds. ‡ Includes £385,085 from investment profits and £550,000 transferred from debenture reserve. § Includes £450,000 transferred from debenture reserve. The precise significance of the latest earnings figures, in fact, depends upon the treatment of the depreciation provision. For 1934-35, a total of £1,313,944 was charged, of which £863,944 was derived from revenue and £450,000

from debenture redemption reserve. Broadly similar provisions were made for normal depreciation in the two previous years, and the balance sheet at September 30, 1935, showed that the accumulated depreciation funds exceeded the 5 per cent. per annum rate by £84,000. At that date, the debenture reserve, which had been regularly used to supplement the depreciation charged against revenue, was exhausted. The reduction of approximately £400,000 in depreciation is due to the exceptional charges referred to. The ultimate intentions of the company will doubtless be explained by Mr Shaw next week.

* * *

Important Balance-Sheet Changes.—The low figure of depreciation in the present accounts is made possible by a substantial balance-sheet revision. One subsidiary has been wound up, and its assets have realised a surplus. Another has made a distribution from its reserves. Arising from these arrangements, the parent company has created a Special Reserve of £6,481,434, of which the major part—£5,931,434—has been applied in writing down the book value of the fleet. The transaction has produced the following major balance-sheet changes:—

	P. & O. Balance Sheet			Consolidated Balance Sheet	
	1935	Sept. 30, 1936		1935	Sept. 30, 1936
Deposits and loans from subsidiaries	8,751,206	£ 9,334,597	General and contingency reserves	16,703,891	£ 15,504,642
Cost of steamers in service	27,141,852	22,626,294	Profit and loss credit balance...	3,049,274	691,495
Amounts written off steamers.....	14,538,981	16,931,184	Cost of steamers in service.....	82,716,055	80,777,069
			Amounts written off steamers.....	55,786,595	58,602,670

The transfer of £5.9 millions seems to have been utilised, in large part, for providing against a loss on the disposal of four steamers in the Australian branch service. The parent company's fleet, valued last year at £12,602,872 after depreciation, now stands at £5,695,109, excluding £1,731,133 paid on account of tonnage under construction. The amount written off exceeds an accumulated depreciation fund at 5 per cent. by £4.3 millions. It would seem, therefore, that the burden of annual depreciation may be

permanently reduced. This immediately raises the issue whether 5 per cent. on the written-down value of the tonnage is adequate under present conditions. Thanks to past prudence, the company finds itself generously equipped with reserves, and with liquid assets to finance new construction, and the utilisation of group resources has put the parent company's assets position on a sounder basis. Stockholders will look forward with interest to a fuller explanation at next week's meeting of the resources from which this specific reserve has been created. Last year the chairman showed, in his speech, that the extinction of a large part of the annual depreciation charge would still leave the company to provide for the replacement of tonnage, and that this provision could only be made from earnings. If, instead, it is to be provided, in large measure, from past "group" earnings, a consolidated profits statement would seem to be the logical corollary, in order that stockholders may know what group earnings amount to.

* * *

Dorman Long Accounts.—The market has been well satisfied by the Dorman Long accounts. The incidence of increasing costs has been less severe than investors had feared, and trading profit has increased by 25½ per cent., an advance more rapid than that of steel output in the North-East region during the period. The expansion of trading profits, coupled with greatly increased dividends from subsidiaries (particularly from Redpath Brown, the constructional engineers) results in a total profit of £1,128,916, compared with £839,969 in 1934-35. After paying debenture interest, making a very adequate allowance for depreciation, and meeting other charges, the board has allocated £113,235 to general reserve, in order to compensate the loss of liquid assets in the redemption of bank debt. This figure appears to represent debt redemption chargeable to profits for the year, in accordance with the formula agreed in the reconstruction scheme, and it therefore ranks as a charge on earnings. After paying full preference dividends, 24.7 per cent. and 16.7 per cent. are earned, and 14

An ancient land where enchantment lingers, mingling with modern sports and pastimes in a unique manner. Landmarks as old as time look down upon Horse Racing, Motoring, Golf, Tennis, Grand Opera and 20th Century Hotels—to mention a few of the season's highlights. * Maintenance of idle works. † Not actually paid.
‡ Cancelled in reorganisation. § Only first preference dividend paid.

This spectacular recovery has been accompanied by a considerable renewal of equipment. The new coking plant at the Cleveland works has been completed, and further works will come to fruition this year. The balance sheet, however, still shows a somewhat illiquid position. The bank debt has been reduced from £1,553,552 to £913,670, partly from profits and partly from the sale of certain investments—particularly the interest in Horden Collieries. But this process has depleted the cash resources, and if new development is to be financed and further bank debt redeemed, more capital may be necessary. On the possibility of an issue of ordinary shares on bonus terms Dorman Long ordinary shares have touched 56s. this week, and even at the lower level of 53s. 9d. xd. they appear fairly adequately to discount all reasonable prospects both of capital bonuses and dividends. The company is at present in a very strong industrial position, but the record demand for structural steel will not be maintained indefinitely, and the company has relatively little direct interest in the re-armament programme.

BUSINESS DIARIES FOR 1937

EFFICIENCY IS THE KEYNOTE!

THE CALENDARY — With Perpetual Calendar on Cover
"The Date at your elbow!" Here is the solution to your date problem, the day's date on your diary cover for quick reference, and changed with a touch of the finger. Made in 2 sizes, strong cloth binding. Diary of high quality, ruled feint with cash columns. Also valuable information. Foolscap from 6/6, Quarto from 6/6. Postage 6d. extra.

THE EIGHTEEN MONTHS POCKET DIARY FOR PUBLIC SPEAKERS. Directors, Secretaries, and all people making forward appointments. A week-in-an-opening Diary, and at the end an additional six months, January to June, 1938, with seven days to a page, for recording forward appointments. Made in two sizes for the pocket, bound in leather, at 2/6, 3/- and 3/6.

Obtainable at all Stationers and Stores, or from
LETTS QUIKREF DIARIES LTD. 140 Shaftesbury Avenue LONDON, W.C.2

Carreras Profits.—The substantial advance in the profits of Carreras, Ltd., coupled with the capital bonus announcement, has produced one of this week's liveliest share movements. On Tuesday, the "A" shares closed $\frac{1}{2}$ higher at 11, and they made further progress in mid-week dealings to 11 $\frac{1}{4}$. The net profits, in fact, are a record, having advanced from £942,007 to £1,234,833, after provision for depreciation. In terms of ordinary earnings, the advance is from 48.6 per cent. to 66.0 per cent. and in dividends from 40 per cent. to 45 per cent. A comparison of recent earnings levels is given below:—

	YEARS TO OCTOBER 31st	1934	1935	1936
Total profits	£	853,318	992,389	1,234,833
Depreciation	£	47,395	49,382	70,666

Carried forward	1,264,512	1,282,834

† Plus capital bonus of 16 "B" ordinary shares for every five ordinary and/or "A" ordinary shares, and two "B" ordinary shares for every five "B" ordinary shares held on January 4th next, costing £708,626 from the balance carried forward.

This remarkable rate of progress, which, incidentally, proves the wisdom of recent buying of tobacco shares, is accompanied by the expected capital bonus in "B" ordinary shares, at the rate of 40 per cent. on each of the three classes of ordinary capital. On the earnings shown in the latest year the company would still be able to maintain the existing rate of dividend, although it might be expecting too much of the directors to anticipate a division of earnings on the new capital almost up to the hilt. The market's appetite for "melons" has been catered for within recent weeks by Woolworth and Carreras, but it is a taste which could never be fully satisfied. It is odd that a change which makes no contribution to earning power should be invariably received with enthusiasm. Experience shows, however, that the sur-tax payer appreciates the saving which bonus issues provide, while the humbler investor reflects that the total cash distribution on the increased capital is normally increased after a bonus. Only the Chancellor's unceasing activity in safeguarding the revenue can affect the former advantage (which, both in "melons" and regular share bonuses, is now becoming considerable), and considerable technical difficulties would first require solution. The second condition, in the case of Carreras at least, should be comfortably fulfilled during the coming year.

This Week's Recovery Reports.—The company results published this week cover trades ranging from catering to agricultural machinery, but all share in common improvement, if varying degree, as the selection of results given in the accompanying table reveals. A satisfactory increase from £223,835 to £234,935 in A.B.C. profits gives no obvious indication of rising costs. The forward development policy continues, for property has increased by some £150,000, while the general reserve of £110,000 has been taken over for obsolescence. The progress of *Timothy Whites* and *Taylor's* is fairly satisfactory. Profits have increased from £278,146 to £314,001, a windfall of £125,000 from the sale of certain assets of a subsidiary being transferred to general reserve. It would appear that the full economies from the amalgamation with *Taylor's* (Cash Chemists) have not yet been realised. The excellent results shown in the *Raleigh Cycle Holdings* preliminary statement are confirmed by the full accounts of the holding and operating companies, the latter's trading profits having risen from £428,915 to £514,125. The undertaking is now

to concentrate on cycles and cycle parts only, but a special section of the works is being organised to deal with "certain Government orders." Although a collapse of the cycle boom seems remote on these results, the comparatively high yield of £5 19s. 6d. reflects the company's dependence on the permanence or otherwise of a new social habit. *J. Brockhouse and Company* have celebrated their jubilee by almost doubling profits—£95,071, against £50,397. The balance sheet shows the expansion resulting from the recent share issue, which brought in

<i>R. A. Lister</i> (Sept. 30):						
1935	117,135	51,877	17.9	10	78 3	4 6 6
1936	170,998	80,053	21.5	16	(£1)	

* Ordinary capital: 1935, £1,000,000; 1936, £250,000. † After deducting upkeep of plant, etc.: 1935, £36,886; 1936, £42,706. ‡ Or 16.9 per cent. after charging one year's preference dividend.

over £260,000 cash. Land, plant, stock and interests in subsidiaries are all appreciably higher. Although *Crittall Manufacturing Company* are resuming ordinary dividends with 20 per cent. on the reorganised capital, the improvement of only £11,593 in the profits of £292,097 is disappointing. Increased cost of both materials and labour has presumably affected profit margins. The excellent *R. A. Lister* results show an increase in profits from £117,135 to £170,996. An important change in the balance sheet is the sharp rise in interests in subsidiaries, which amount in all to £343,292, against £142,875.

Commercial Motor Results.—Recent results of commercial motor makers have made a good impression on the market. The progress of *Dennis Brothers*, perhaps, is steady rather than spectacular, and did not entirely satisfy some go-ahead market operators. But an increase in profits from £137,918 to £151,714 at least demonstrates that the company can make headway against the kind of competition discussed by Sir Raymond Dennis at the annual meeting. Sir Raymond, who pointed out, incidentally, that the 11

Years to Sept. 20th	A.E.C.			Dennis Bros.

* After providing £15,000 reserve against loan on mortgage. † Also 50 per cent. tax free distribution from *White and Poppe* surplus realisation account.

per cent. increase in profits had been unconnected with re-armament, explained that, quite apart from increasing foreign imports, the field of competition was tending to become narrower; attention was being concentrated more and more upon vehicles weighing under 50 cwt., which are allowed a higher speed limit. The accompanying table shows that the higher profits and dividend have not in-

volved much change in other directions. The excess of earnings over dividend payments is more generous, and the carry-forward is nearly £8,000 higher. No allocation is made to general reserve, but this account certainly appears to need no reinforcement, as it stands at £650,000. Associated Equipment, whose undertaking is to some extent sheltered under the wing of London Transport, has provided the market with an agreeable surprise. The comparatively modest increase in dividend from 8½ to 9½ certainly did not suggest the sharp rise in profits from £209,535 to £340,180 which the report discloses. It is evident, however, that distribution policy is still deliberately cautious, and the market loves dividends and only admires earnings. An increase of no less than £60,000 is made in the reserve allocation, while depreciation has been raised from £48,074 to £69,578. Neither balance sheet shows important change. *Dennis Brothers'* cash holdings have been reduced from £267,784 to £132,397, and the *White and Poppe* surplus realisation now stands at £31,325, against £97,772. In the A.E.C. accounts the chief movement is a rise from £1,190,929 to £1,402,840 in total current assets. The long-term prospects of the latter company's shares are already discounted at the present price of 50s. to yield £3 18s. 6d. per cent. *Dennis* 1s. shares yield £4 9s. at the present level of 37s. 6d.

The Hawker Merger.—Criticism has been directed, this week, against the terms on which the *Hawker Siddeley Aircraft Company*, which at present holds 50 per cent. of the capital of *Hawker Aircraft*, proposes to acquire the remaining 50 per cent. The boards have taken the opinion of Sir William McLintock regarding the respective values of the ordinary shares of the two companies, and he has come to the conclusion that the terms offered—four 5s. shares in *Hawker Siddeley* for every five ordinary and/or "A" ordinary shares in *Hawker Aircraft*—accurately reflect contemporary values, and the future prospects of the respective groups. Sir William, presumably, has had access to information which is denied to the shareholder—such, for example, as the earnings of the *Armstrong Siddeley Development* subsidiaries, from which *Hawker Siddeley* derives the major part of its income. In any case, his opinion, backed by his position as adviser to the aircraft industry, is the only independent evidence in favour of the terms. On last year's profits, however (adjusting the figures for the *Hawker Siddeley* bonus), there seems little to choose between the respective earnings positions of the two concerns. The stress which the directors place on the prospects of *Hawker Siddeley*, with its wider base of activities in motors and civil aircraft manufacture, compared with the concentration of the *Hawker Aircraft* upon military aircraft only, may be justifiable. The profits of the concern should increase, and its operations are to a greater extent relieved of dependence upon the defence programme. But hitherto the earnings of military aircraft manufacturers have been "sub-normal" in relation to the expansion of air defence, and the *Hawker Aircraft* undertaking, which has been considerably expanded, may equally be expected to increase its earnings in the future. The measure of potential progress of the two concerns can only be determined by those with knowledge of current business and profit expectations. But we may finally note

SECURITY FIRST

Head Offices:
LIVERPOOL North John St. LONDON Lombard St.

that the terms now offered are less generous than those accepted when Hawker Siddeley was formed last year. A full exposition of the earnings prospects of Hawker Aircraft appears essential if the interests of the general body of shareholders in that concern are to be safeguarded.

Crompton Parkinson Progress.—This vigorous electrical equipment concern has again produced an excellent report. During the past year total profits have increased by 41 per cent., and over the last two years by no less than 158 per cent. The company's prosperity, in fact, is exceeded only by the market's readiness to discount it, and the distribution announcements were succeeded by a reaction in the shares. The results are summarised below:

	Years to September 30th,		
	1934	1935	1936
Trading profit and dividends from subsidiaries, after provision for tax and contingencies	149,326	272,244	384,608
Depreciation	14,475	25,184	25,000
Fees, benevolent fund, etc.	3,042	13,250	12,750
Preference dividends	43,658	43,658	43,658
Ordinary and "A" Ordinary shares:			
Earned	88,151	190,152	303,200
Paid	26,224	29,656	62,435
Earned (%)	60.6	99.8	75.8
Paid (%)	12½	12½	12½

General reserve 55,234 154,377 224,963
Carried forward 57,311 63,430 79,232
† Capital bonuses declared as follows: 1933-34, 7 per cent., costing £15,234; 1934-35, 7 per cent.; and 100 per cent. to "broaden base of company's equity capital," costing £258,184; 1935-36, 7 per cent., costing £34,963.

Investors will not stint their praise for the able management who have produced this record profit. Even for a period of active capital construction, the company has done extremely well. The chairman's speech, which forms part of the report, indicates sound progress at home, and is not forgetful of trading opportunities in overseas markets. But investors may still be inclined to ask whether, at current levels, the shares do not adequately value the future march of progress. At the present price of 76s. 9d. (they were 83s. before the publication of the report) the corresponding "ex-all" price is 67s. 9d., after adjusting for the "normal" capital bonus and the cash issue of one in ten at 30s. Presuming a maintenance of the latest earnings and dividend, the respective yields at this price would be 5.6 per cent. and under 1 per cent. This calculation, however, assumes two things: first, that the "geometricity" of earnings, which is essential to the maintenance of regular capital bonuses, is maintained; and, secondly, that the higher valuation which the market applies to a share which adopts this surtax-saving device is inherently reasonable. But is Crompton Parkinson—or, rather, the industry in which it earns its profits—quite independent of the trade cycle? Is the company's bonus-receiving ordinary capital still highly geared? To value the company's equity on the basis of an indefinite expectation of capital bonuses is surely to replace mere admiration by a discounting of thaumaturgy.

Other Company Results.—Our usual table on page 500 summarises the reports of some 40 concerns which are not discussed in the preceding notes. Among further brewery results, *Wolverhampton and Dudley* has achieved an increase in profits from £230,486 to £250,135, and the 15 per cent. dividend has been comfortably covered by earnings. The full report of *P. Phipps and Company* reveals comparable progress, while *Cheltenham Original* and *J. W. Green* have done very well. Among industrial

reports, *Vactric* shows a moderate increase in profits and dividends, but *Tarran Industries*, a road material concern, shows an advance from £16,501 to £26,898. Several companies which have recently become public concerns have published their first reports. Of these, *Barton and Sons* (1935) has earned £19,891 and pays 7½ per cent. *Aero Engines*, on the other hand, has suffered a loss of £11,851 during its first trading period. The report shows that a distinctly unusual procedure has been followed in writing up the value of the factory and contents. They show a surplus on revaluation of no less than £247,000 over the purchase price. From this sum, £60,000 has been written off stocks, and the remainder placed to reserve. This policy should receive fuller explanation at the meeting. In the oil group, *Anglo-Ecuadorian* has earned £168,520 against £129,570, while *British Burmah* has converted a loss of £56,754 into a profit of £47,079.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—*Tube Investments*, *Bowater's Paper Mills*, *London Australian and General Exploration*, *New Goldfields of Venezuela*, *Consolidated Gold Fields of South Africa*, *Strand Hotel*, *Elswick-Hopper Cycle and Motor Company*, *Charterhouse Investment Trust*, *Trust of Insurance Shares and Van Emden (Dutch Guiana) Gold Mines*. Mr Arthur Chamberlain's speech at the Tube Investments meeting is referred to in a Note on page 477. At the Bowater's Paper Mills meeting, Mr Eric Bowater explained the purposes of the new share and debenture issues, and commented on the affairs of the associated companies. Captain Moreing, at the London Australian and General Exploration meeting, after referring to the recovery in base metals, gave an account of the company's gold interests in East Africa and the Union, particularly the Rosterman mine. At the New Goldfields of Venezuela meeting, the chairman spoke of the benefits expected from a new flotation plant for the treatment of sulphide ore. Mr Fred Hopper, at the Elswick-Hopper Cycle and Motor meeting, explained that the increased amount due from a subsidiary arose from the policy of extending the finance of sales on the easy-payment system. At the Trust of Insurance Shares meeting, the chairman emphasised that the company would continue to limit its operations to insurance and bank shares and trustee securities. Mr A. L. Jupp, at the Van Emden (Dutch Guiana) Gold Mines meeting, said it was felt that the expenditure on machinery and an experimental driller for the reefs was fully justified. At the Charterhouse Investment Trust meeting, Sir Arthur Marshall estimated that 4½ per cent. could be earned on the £615,000 of new money being raised. Mr J. A. Agnew, at the Consolidated Gold Fields meeting, appealed for more lenient taxation on the South African gold-mining industry. Major Gluckstein referred to the improvement in hotel accommodation which the Strand Hotel group has introduced.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS	
TICKET	ACCOUNT
DECEMBER 15	DECEMBER 17

For the greater part of two years, markets have shown their power of resistance to political developments abroad. This week, however, they have been reduced to a state of acute uneasiness owing to the constitutional crisis. It would be false to assume that the inevitable reaction to disquieting reports—a widening of prices and even, on Wednesday evening, a considerable reluctance to make quotations—betokened merely a reflex action to unwelcome news. Certainly, the sales from foreign holders, particularly in gilt-edged, were considerable, and the fears that the crisis might have an unwelcome effect on the market situation, at a time when speculative positions, both of straw and substance, are still open on a substantial scale, were sensibly translated into action.

On Thursday, however, the atmosphere was calmer. After a spell of nominal prices, jobbers found that lower—but much

wider—prices were attracting some modest support, and a moderate rally set in. Fundamentally, however, the market remained in waiting mood, convinced of the essential order of our constitutional forms, but still apprehensive of foreign and Imperial repercussions, and concerned over the possible reactions of a wide constitutional breach on the domestic economic situation. Again, the position in Spain, although removed from the headlines, remained threatening. Little business, therefore, was transacted, although the appearance of the market was better.

The chief falls in the Gilt-edged market occurred in War Loan, which was sold from abroad, and in Old Consols. These stocks, together with Conversion 3½ per cent., lost up to 1½ on Wednesday, but regained a point on Thursday. Other investment issues were lowered, without any substantial selling.

In the foreign bond market, Brazilian issues responded to the improvement in the coffee position, and substantial gains were recorded on Monday and Tuesday. Chinese bonds, particularly the rail issues, were well supported. Hukuang rose 1½ against the general trend on Wednesday, and comparable gains were shown by other issues. German bonds reflected the full impact of the deterioration of the international situation.

Home rails stocks—ordinaries and prior charges—opened in poor style, in expectation of adverse traffics. These discounted, a further fall in sympathy with the general trend was recorded on Wednesday. Argentine rails opened convincingly, but lost their firmness. The mid-week reaction was not accompanied by selling, but the market made no response to the signing of the Argentine trade agreement.

Industrial shares opened well with the new account and remained firm until the news concerning the King burst into the open, and produced a disturbed reaction on security prices. Quotations were generally marked down in mid-week, but later the prompt appearance of bargain hunters put prices back to near their previous levels. The iron and steel section saw good business at first, on general trade news, and Dorman Long in particular were favoured on the higher profits for the past year. Richard Thomas gained on the news that smelting starts at the Bryngwyn Steel Works early next year. The section recovered quickly from the marking down of prices on Thursday. Motor shares were firm at first, but prices suffered with the rest of the market in mid-week. In

the aircraft section, Hawker were weak on the terms of the merger, and prices generally were easier throughout. Electrical equipment issues put up a good performance, although Crompton-Parkinson were subjected to profit-taking on the year's figures. Henley shares resisted the decline which set in later in the week.

Brewery shares moved irregularly, and were duller on the lower October output. Carreras were prominent in the tobacco section, and the results for the year put these shares and the section generally higher in the depressed market of mid-week. Woolworth attracted a good demand when dealings opened ex-bonus, but weakened later. Textile issues were uncertain at first, and fell later. Price changes in the miscellaneous industrial section were unimportant at first, but most prices gave way in mid-week. Crittalls' dividend was found disappointing, but the shares recovered. Building material shares were generally lower.

The Oil market began the week in good fettle. Mexican Eagles were better on the news that both sides to the labour dispute had agreed to confer, and that the promotion of industrial peace would be in the Government's interest, if the suggested New York loan was secured upon taxation of the petroleum industry. The payment by Shell Corporation preferred stock arrears brought a good demand for Shell and Royal Dutch, based on the hope that both concerns would declare interim dividends in January. Prices fell sharply on Wednesday, but out of proportion to the nervous selling. A distinct recovery was staged on Thursday in Eagle issues and the investment leaders.

Rubber share prices on Monday were generally firm, but quieter conditions supervened, although with a good undertone. This section could not escape the anxiety affecting all markets in mid-week, but it proved a little more resistant. Tea shares were no more exciting than they have been for some time past. The announcement of the 82½ per cent. quota for 1937 was expected, and produced only a slight and short-lived stiffening in prices.

The progress of the Mining market during the week was from dull to duller, and then duller. The general marking down of prices on Wednesday and Thursday was not expected, and it followed two sessions characterised more by inactivity than by falling quotations. Among Kafirs, an early demand for West Witwatersrand was not maintained, and the various November returns left the market unmoved. Rhodesian

copper shares moved similarly, though the week opened in a brighter mood. West Africans and Australians alike suffered from a very small volume of trade, the fall in prices again being entirely due to general and not special causes.

FOREIGN STOCK EXCHANGES NEW YORK

WALL Street's Thanksgiving turkey put the market in good humour at the end of last week, and even utility shares were found palatable. Rail, and rail equipment, oil and rubber shares were in considerable demand, and outstanding individual issues were International Paper preferred and Baldwin Locomotive preferred. Utilities may have benefited from the cracks which appeared recently in the front of opposition to the registration law. The companies on strike have not been barred the use of the mail services for security issues, and have been obliged to pay more for loans than would otherwise have been the case. The need for renovations and additions to machinery is becoming more and more urgent, and the triumphal return of Roosevelt has made repeal of the law less likely. The type of regulation imposed by the Securities and Exchange Commission is also softening the opposition of previously fearful companies. This week prices have drifted lower almost without interruption. Extra dividends are still flowing, but their peculiar nature is becoming more apparent, and there are signs of growing efforts by Labour to secure better conditions, pay, and powers. In mid-week there was a slight revival of interest in low-priced shares, but the market remained dull on the whole. There was a small amount of selling by foreigners. Business reports are still good; *Iron Age* estimates steel mill activity at 76 per cent. of capacity, against 74.5 per cent. for last week. Output is now at the highest level of the year. Power output for the week ending November 28th was 13.7 per cent. higher than a year ago.

ADVICE ON AMERICAN STOCKS

Recognising the demand of both private investors and financial institutions in Europe for first-hand advice regarding American securities and the cyclical trend of the American Stock Market, Major L. L. B. Angus of 301 Park Avenue, New York City, who is now established as Investment Counsel in America, is prepared to accept enquiries regarding this service.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date and are included in the list on the basis of the yield on redemption, the yield is calculated on the basis of the yield on redemption at the date when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

BONUS ISSUES

Crompton Parkinson.—In addition to the continuance of the same dividend and bonus distribution as last year, the directors are recommending a special bonus issue. This is in the proportion of one new "A" ordinary share at 30s. for every ten ordinary and "A" ordinary shares held.

Robinson (E. S. and A.).—The directors propose to distribute one free ordinary £1 share for every two held on November 30th. For this purpose £326,376 of the reserves are to be capitalised.

Carreras, Ltd.—The directors propose to distribute bonus shares in proportion of 16 "B" ordinary for every five ordinary and "A" ordinary and two "B" ordinary for every five "B" ordinary held by shareholders on January 4, 1937.

ISSUES TO SHAREHOLDERS ONLY

East of Scotland Trust.—10,000 new shares of £10 are offered at par to stockholders registered November 9th in the proportion of one new share for every £50 of ordinary or preference stock held.

Maratti High Speed Circular Knitting Machines.—200,000 6 per cent. preferred ordinary shares 4s. are offered to ordinary shareholders registered on November 20th at par in the proportion of two new shares for every three shares held.

CONVERSIONS AND REPAYMENTS

Amalgamated Press, Ltd.—The directors have decided to redeem the whole of the £2,423,312 outstanding 4½ per cent. first mortgage debenture stock at 103½ per cent. on March 1, 1937. The company proposes to issue at £99 per cent. £1,500,000 3½ per cent. first mortgage debenture stock, and the proceeds will be applied towards redemption of the existing stock. The balance of the money required is being provided out of the company's resources.

Thos. Firth and John Brown, Ltd.—Issue of £500,000 3½ per cent. debenture stock at par, to be redeemed at par December 31, 1961, or at 103 if redeemed before end of 1941, or at 102 if redeemed before repay £137,580 4½ per cent. debenture stock and £248,000 4 per cent. debenture stock. Holders of 6 per cent. cumulative preference shares of existing debenture stocks, can apply in cash for as much

of the £500,000 3½ per cent. debenture stock as is not taken on conversion terms. Holders of existing debenture stocks can, up to December 14, 1936, convert their stocks into new stock, at £100 new for £100 existing stock, also a cash payment or adjustment of £1 15s. 6d. per £100 4 per cent. stock converted and £2 4s. 4d. per £100 4½ per cent. stock converted.

COMPANY MEETINGS

TUBE INVESTMENTS, LIMITED

INCREASED DIVIDEND—ISSUE ON BONUS TERMS

MR A. CHAMBERLAIN'S SPEECH

The seventeenth ordinary general meeting of Tube Investments, Limited, was held, on the 2nd instant, at Birmingham, Mr Arthur Chamberlain (chairman) presiding.

The Chairman said that for the most part all their factories were fully employed during the whole of the year under review. Tube Investments was originally conceived for the purpose of rationalising the precision tube trade, and the subsequent amalgamations and liaisons necessarily antecedent to such an overhaul were completed some years ago. The planned reorganisation had been put through step by step with the consolidation of the trade under one control.

The year 1936 found them, therefore, with all their trading groups rearranged and placed as favourably to meet the demands to be made on them as their forethought and capital resources ensured. Consequently the growth in British prosperity had taken place most happily for them. As the trade increased so did their manufacturing facilities, and as their manufacturing facilities increased so did their production costs decrease. The result had been that few, if any, trades had been able to execute the increased volume of work more promptly, and none, he thought, had had to ask for so little increase in price from their customers despite the serious increase in the cost of labour and raw materials. They still had a considerable margin of manufacturing capacity for some of their standard lines; the pressure was only great on departments catering for demands of customers engaged on the Government's new defence programme. There the pressure on the country was extreme, and he feared it would grow greater as 1936 gave place to 1937 and 1938.

They showed a larger profit this year than last and, in fact, earned a larger profit, but for an intelligent comprehension of their position shareholders must study the combined statement of assets and liabilities rather than the balance sheet. They endeavoured to found their whole policy on looking five or ten years ahead, and amongst other things they thought the time must come when the market would again be a buyers' market. When that happened they wanted buyers to have a kindly recollection of having been well treated by the company when it was a sellers' market, and a very sincere desire to deal fairly by the company when it was the buyer's turn to call the tune.

PROFITS NOT YET AFFECTED BY DEFENCE PROGRAMME

The profits shown were not swollen with defence programme windfalls. Those would only accrue—if at all—in 1937 and 1938. Investors should remember that the Government's large defence requirements had come at a moment when the country's manufacturing capacity was already fully occupied with honest business which went to increase the wealth of the country and indirectly, therefore, of the world. He was sure it was impossible for the country to turn out all that was required for honest trade as well as that required by the Government. The result, seeing that the Government's claim must come first, would be wholly bad for the country.

When the defence programme really got under way there would be neither raw material nor labour to satisfy all demands. An unseemly struggle for both commodities was bound to take place, with honest trade always the loser. In the end the cost of production, both of honest trade and defence trade, would have been unduly raised, and a large amount of honest trade would have been necessarily conceded to the foreigner. The country would have handed over trade that increased prosperity and taken in its place trade that sapped it.

Finally, when the armament boom was over, we should be faced with taxation to pay for it and with a depleted honest trade from which to earn the taxation. Two conclusions might reasonably be drawn, first that the profits of 1937 and 1938 would not be as nice as some people seemed to expect, and secondly that if there was any surplus the prudent businesses would retain most of it against the inevitable day of reckoning.

BONUS AND DIVIDEND

The need to support the Government had entailed a great acceleration of their development programme, making it unwise to follow their usual course of paying for additions out of profits. They therefore issued new capital on bonus terms meaning for

shareholders a paper or cash profit, whichever they preferred, equal to some 12s. a share, free of tax. Next, the need for such heavy appropriations for obsolescence and contingencies had become unnecessary, so much so that they considered it would no longer be justifiable to withhold quite such large sums for those purposes. They had therefore raised the dividend from 10 per cent. to 17½ per cent. and paid a portion of it as an interim. He saw no reason to take a gloomy view as to their ability and willingness to maintain it at that level during the immediate future. He did not even dismiss the possibility that he was taking too gloomy a view of the effect of the armaments expenditure on the country and themselves.

BLOW TO PROSPERITY

He had the gravest doubts as to the necessity for such a large defence programme, nor had he the least faith that when it was all over we should be one bit more removed from the danger of war than we were to-day. He would cheerfully welcome it, even in its exaggerated form, if he thought that coincident with this blow to our prosperity steps were being taken that would make war impossible and this expenditure a weapon to that end. Everything that had happened since the war had not only shown war was preventable but had shown what were the steps which should be taken to make it preventable. Mr. Chamberlain went on to maintain that no nation was strangled by not having the control of the countries where its raw materials were produced. There was hardly a known instance, he said, where the producer of raw material had not sold wherever he could get the best price. Ownership of raw materials did not prevent countries suffering from the trade slump and the lack of them did not prevent other countries from recovering.

Some people were blaming the Government for having cut down their defence expenditure. Possibly no action of theirs had had a greater influence in bringing about our trade recovery than that reduction. If Germany, Italy and France would only look at what was happening all round them dispassionately, instead of through a mist of hate, of braggadocio and of fear, they would realise the truth of what he was saying. If they were willing to join with others in reducing tariffs, quotas and currency restrictions our answer must be clear, immediate and ungrudging. We must tender whatever financial credit might be necessary to enable them to buy their raw material and feed and clothe their unemployed, and we must make arrangements to enable them to exchange their productions for ours.

LEAGUE OF NATIONS PARLIAMENT ADVOCATED

Mr Chamberlain went on to advocate a League of Nations Parliament, backed by an International Court of Law, to interpret its laws and control such armed forces as it might deem expedient to see that its laws were carried out. A little more courage, a little more imagination, a little more faith and Italy would have been held to her troth, proving even to the sceptic that we had found the way to suppress war. The League idea had been temporarily discredited. Possibly it might be as well to start next time with two Leagues, an Old World League and a New World League, instead of a League of All Nations. Nor was it in the least necessary that all nations should join the League. Having got so close to stopping war, despite the numerous and obvious failings short of existing League arrangements, it must be only a question of time before it was taken up again. The League, if it was to work, must be the sole arbiter of what was right or wrong, and the sole voice as to what should be done when wrong had been attempted, and it must be backed by the whole resources of its members in men, in money and in material: Home Rule for all, in fact, at home and International Rule abroad. We were not likely to meet more injustice at the hands of the majority of a League of Nations than we were as individuals at the hands of a majority of our countrymen. What unfairnesses or fancied unfairnesses arose would be as nothing compared with the loss of ten million lives and countless millions of pounds of property that a world war would inflict on victor and vanquished alike.

Mr J. Herbert Aston seconded, and the report was adopted.

BOWATER'S PAPER MILLS, LIMITED

ANOTHER YEAR OF PROGRESS

The annual general meeting of Bowater's Paper Mills, Limited, was held, on the 1st instant, at Southern House, Cannon Street, London.

Mr Eric V. Bowater (the chairman) presided, and after welcoming the new vice-chairman, Mr Percy Denson, said: The year under review has again been one of progress for your company and its associates. The demand for our products continues to grow.

The profits of your company for the year amounted to the satisfactory sum of £202,163. There is an available balance of £194,361, and the directors now recommend a final dividend of 5 per cent. on ordinary shares numbered one to 500,000, making 9 per cent. for the year, as a consequence of which a participating dividend of 16s. 8d. per cent. becomes payable on the 7½ per cent. cumulative preference shares numbered one to 300,000, leaving £62,549. Of this, the directors propose to allocate £20,000 to the general reserve, leaving £42,549 to be carried forward. Reserves now amount to the substantial sum of £680,000, to which has to be added the proposed allocation of £20,000. In addition to acquiring the whole of the original ordinary capital in the Edward Lloyd Investment Company, Limited, your company also subscribed for a further 1,000,000 new ordinary shares in that company at a premium of 4s. 6d. per share, and now owns the whole of the £2,000,000 authorised and issued ordinary shares in the "investment" company, which, in turn, owns the whole of the ordinary capital in Edward Lloyd, Limited.

For the purpose of repaying the temporary loans from our bankers, and to complete the finance in connection with the important acquisition of "Lloyds," your directors have decided to issue 300,000 out of the additional 500,000 6½ per cent. cumulative preference shares at 28s. 6d. per share. The right to subscribe for them will be confined to your company's shareholders, and a circular offering these shares will be posted to them on Thursday, preferential consideration on allotment being given to the existing 6½ per cent. preference shareholders.

The directors have determined to exercise the right to repay the outstanding £1,000,000 4½ per cent. debenture stock of your company and to substitute therefor a similar amount of debenture stock bearing interest at the rate of 3½ per cent. The directors of Bowater's Mersey Paper Mills have also decided to repay the £800,000 4½ per cent. debenture stock of that company, issuing a like amount of 3½ per cent. stock in its stead. The conversion operations will result in the saving to your company and the Mersey company of £18,000 per annum.

SUCCESS OF ASSOCIATED COMPANIES

I now propose to deal briefly with the affairs of our associated companies. The production of the Mersey company's mills reached the highest level so far attained and its earnings were again substantially increased, profits amounting to £170,471. The balance sheet discloses a position of considerable strength. During the year the authorised capital of the Mersey company was increased to £2,000,000 by the creation of 1,000,000 additional shares, of which 150,000 were subscribed for by W. V. Bowater and Sons for cash at par in the form of ordinary shares. The Mersey Mills are particularly favourably situated for the distribution of their products. There is a growing market in Manchester and in the industrial North generally.

W. V. Bowater and Sons, Limited, again recorded increased profits amounting after charging depreciation and all expenses to £60,601—the highest so far attained. In respect of the year under review dividends were declared by that company of 10 per cent. on both its preferred ordinary capital and on the increased ordinary capital, together with a cash bonus on the latter of 6d. a share. Its balance sheet also discloses a strong and liquid position. The business of Edward Lloyd, Limited, has continued to make progress and the results for its current financial year should show an increase.

From my remarks you will have gathered that the financial and trading position of your associated companies in which we hold such important interests may be regarded as entirely satisfactory. The entire estimated production of all the mills now controlled by your company has been disposed of for the coming year at prices substantially similar to those now prevailing.

I may say we look forward to the future with confidence. It is our belief that we are fortunate in being engaged in an industry the products of which are in ever-increasing demand. We hold a pre-eminent position in the industry at home and abroad, and your company now ranks amongst the largest industrial undertakings in this country.

The report was adopted.

LONDON, AUSTRALIAN AND GENERAL EXPLORATION COMPANY, LIMITED

INVESTMENTS WELL DIVERSIFIED

The twenty-seventh annual general meeting of this company was held, on the 30th ultimo, in London, Captain A. H. Moreing (chairman and managing director) presiding.

The Chairman, in the course of his speech, said that there were one or two items to which he wished to draw their attention consequent upon the policy adopted by their board.

If they would look at the appropriation account they would see that £3,425 had been transferred from investment reserve to enable certain investments to be written off. The object with which that reserve had been created was to strengthen the balance sheet and it was the intention of their board to increase that reserve whenever possible. At the same time, there could be no purpose in creating a reserve unless it was to be used, and their board felt that it was not fair to shareholders to make appropriations out of profits in good years for that purpose, unless losses were met from the reserve.

The amount of the carry-forward had been maintained at a substantial figure, and it was the aim of the directors to avoid allowing that figure to drop below an amount equal to a penny dividend. The reason for doing that was that they wished to be in a position to commence paying interim dividends when circumstances permitted.

BRIGHT OUTLOOK FOR BASE METALS

The company was largely interested in the base metal mining industry, and whilst in recent years they had suffered from the low prices ruling, with consequent adverse results upon their revenues, the position to-day was certainly encouraging. Prices had risen sharply in recent months and the outlook was bright. They could congratulate themselves on possessing substantial holdings in sound producing mines. It was true that at one time their interests were almost entirely confined to this side of mining, but they now had a portfolio which was well diversified and enabled them to share not only in the prosperity which the gold-mining industry was enjoying, but ensured that they would participate in the good prices now ruling for base metals.

Their lead interest was in the Central European Mines, Limited, whose property was situated in Meica in Yugoslavia. The mine and plant had been maintained in a state of the highest efficiency during the economic depression, and the prices now ruling for lead and the strong position of the lead market gave them good reason to believe they would soon be receiving revenue from this source. Their zinc interest was the Raibl mine in Italy, their partners in this business being the New Consolidated Goldfields and the Zinc Corporation. Here, again, they were benefiting from the better prices now ruling for zinc and lead. Their tin interest was the East Pool mine in Cornwall. The mine, in recent months, had responded well to the intensive programme of development which had been initiated, and was in better shape underground than for many years past.

GOLD INTERESTS

Referring to their gold interests, he said they were interested in the Rosterman gold mine in Kenya, through their substantial holding in the Tanami Gold Mining Syndicate, Limited. This mine started up its mill in June, and the results were reported monthly in the Press. It had been suggested on more than one occasion that the reefs in Kenya might not live in depth, but Dr. William R. Jones, of the Royal School of Mines, who reported on the property in 1933, and who again visited the mine in August of this year, was of the opinion that this contention did not apply to the Rosterman mine. To prove the accuracy of the views formed by him, it was only necessary to say that the widths and values in the deepest part of the mine, over 900 ft. on the dip of the Horst reef, were of a very encouraging nature. The Tanami syndicate had also acquired an exclusive prospecting licence on an area in Uganda, which was also reported upon by Dr. Jones during his recent visit, and in his opinion this was a promising area. In addition to these East African holdings they were largely interested in the gold mining industry in the Union of South Africa. They had greatly increased their holding in Klerksdorp Consolidated Goldfields, Limited, which acquired rights over a very large area on the western extension of the Rand. The Klerksdorp Company had floated its first subsidiary—Dominion Reefs (Klerksdorp) Limited, and that company had started a trial run of its reduction plant and would begin production early in the New Year. They had acquired a substantial interest in this first subsidiary company.

The report and accounts were unanimously adopted and a dividend of 1d. per share, less income tax, was declared.

NEW GOLDFIELDS OF VENEZUELA, LIMITED

SATISFACTORY RESULTS

MR JOHN A. AGNEW'S SPEECH

The ninth annual ordinary general meeting of this company was held, on the 27th ultimo, at 20 Aldermanbury, London.

Mr John A. Agnew (the chairman) said that operations at the property throughout the year had been of a very satisfactory nature, a total of 157,578 tons of ore having been treated for a recovery of 61,853 ounces of gold, valued at £435,056, the resulting profit amounting to £100,199.

If it were not for the fact that there was a very good reason for some the slight falling off in the tonnage of ore reserves for this year might call for some explanation. The amount of development work carried out during the year was to some extent restricted owing to the lack of sufficient power for additional machine drills. The latter deficiency was being made good, and they anticipated no difficulty whatever in maintaining the ore reserve position on a perfectly sound basis. It was interesting to note that the ore taken from reserves had been above average grade, while that remaining was equal in grade to the estimate of a year ago. The maintenance of the values in the present ore reserves was due to the slightly higher gold content in the lower levels of the Laguna Mine and the cleaner mining there combined with the higher grade shoots found in the Union Mine, which had raised the average of the deliveries during the past year without reducing the average grade of the remaining ore.

PROPOSED FLOTATION PLANT

As the result of an intensive study of the metallurgical position, it had been decided to erect a flotation plant for the treatment of sulphide ore. Exhaustive tests had indicated that a better recovery could thereby be obtained at a lower cost. Another important effect of the adoption of this process would be that the present plant would be able to deal still more efficiently with the oxidised ore and the total monthly output of the mill would be increased to something over 20,000 tons per month. Concurrent with the erection of this plant an additional power unit and compressor would be installed. It was anticipated that the whole of this plant would be in operation by the end of April next.

The outlook regarding exchange appeared to be reasonably satisfactory, though this was a factor on which the operations of this company could exercise no influence. It was hoped, however, that as the result of negotiations which had been proceeding for sometime between the Government and the oil companies operating in Venezuela, exchange between Venezuelan and United States currencies would be established on a definite basis and at a rate more advantageous to this company than that now in force.

In declaring a small initial dividend the directors were actuated by a desire to indicate very clearly their belief that so far as difficulties inherent in the property itself were concerned such had been overcome, and that they could look forward to a continuance of reasonably good profits on an increasing scale. On matters which were outside the control of the board or management they could, of course, speak with less certainty, but, as he had indicated, in the absence of any serious troubles from an outside source, they approached the future with a good deal of confidence.

TRIBUTE TO OFFICIALS AND STAFF

The general manager, Mr A. J. Anderson, was present that day, and he was glad to have this opportunity of expressing to him personally the great appreciation of the board, and he was sure he might add, of the shareholders, of the manner in which Mr Anderson had persevered, working at times under very great difficulties, in his efforts to bring the property to its present position. He had on former occasions expressed the great confidence the board had felt in Mr Anderson's management, and it afforded them great satisfaction to realise to-day that their confidence was not misplaced. He would ask Mr Anderson to convey to his staff the thanks of the shareholders and of the directors for the loyal support they had accorded to him in his efforts.

To Dr McCann, Mr McCluskey and Mr Lindberg thanks were also due for the great interest taken by them at all times in the affairs of the company and for the encouragement and assistance they had rendered to the management.

Mr Lindberg was also present, and he took the opportunity of expressing to him on behalf of the board, and he was sure he might add of the shareholders, their personal appreciation of the very great help he and his colleagues in New York, but especially Mr Lindberg, had rendered to the company over the last five years. (Applause.)

The report and accounts were unanimously adopted.

CONSOLIDATED GOLD FIELDS OF SOUTH AFRICA, LIMITED

INCREASED REVENUE FROM DIVIDENDS

The ordinary general meeting of the Consolidated Gold Fields of South Africa, Limited, was held, on the 3rd instant, at 20 Aldermanbury, London.

Mr J. A. Agnew (the chairman) said that the profit and loss account of New Consolidated Gold Fields, Limited, the operating company, showed that the item dividends, profit, etc., amounted to £1,306,453, against £1,515,494 last year, a reduction of £207,000. For the third consecutive year the revenue from dividends on investments showed an increase, but profits on sales were lower. The latter feature might at first sight appear strange when it was known that a substantial rise took place during the year in a number of their investments, thus affording an opportunity for disposing of a considerable proportion of their holding at a good profit.

He had explained on a previous occasion that it was not the desire of the board to dispose of certain interests where they had every reason to believe the intrinsic value of such investments was considerably in excess of prices which could at any given moment be obtained for them. The greater number of the holdings he had in mind were in properties under their own administration, and, that being the case, they might be expected to be able to form a much better opinion as to their real value than was the average investor. If any proof were needed as to the soundness of their policy in that direction, it was to be found in the very greatly increased appreciation that had taken place in some of their holdings since the close of the financial year.

They had transferred to general reserve £300,000, bringing the total of that account up to £1,300,000. With the balance brought forward of £320,549, they had an available profit of £751,478, compared with last year's figure of £675,473, from which a dividend of 2s. 9d. per share (equal to 13½ per cent.), less tax, had been declared by New Consolidated Gold Fields, Limited, making, with the interim dividend of 1s. 3d. paid on June 18th last, 4s. per share (or 20 per cent.). That would leave £365,917 to be carried forward. The distribution mentioned would enable the parent company to pay a similar dividend.

The balance sheet showed investments at £6,706,785, a decrease of £702,000, mainly due to the increase in the amount of depreciation reserve, which had been deducted from that figure. The decrease was also partly accounted for by a reduction of British Government securities amounting to £400,000. Those securities were sold prior to the receipt of the cash from the issue of the new shares, and since the date of the accounts surplus funds had been reinvested in Government securities to an extent greater than the amount referred to. At the date of the accounts 75 per cent. of the value of the share investments was represented by gold shares.

Last year he had referred to the injustice suffered by some companies which, relying on the allowance of all approved underground capital expenditure as a charge against profits, had embarked on a large capital programme, only to find that the allowance had been restricted under the 1935 Act. In the new Act the injustice had been aggravated as the allowance was no longer provided for. It was unfortunate that the Government did not seem able to appreciate that the value of the mining industry to the country should not be measured only by the amount that could be extorted from it by taxation. It was probably no exaggeration to say that, without its gold mines, South Africa would sink to a position of comparative insignificance. The difficulties of the Union Government in respect of certain industries were fully appreciated, and they could readily subscribe to the principle that the gold producers should bear some of that burden; it was when they found that they were called upon to carry almost the whole of it that they felt it necessary to protest.

In the course of an exhaustive review of the company's holdings, he said that their South African interests now represented a much higher proportion of their investments than had been the case for a number of years past. They had received a moderate amount of criticism from shareholders who felt that the reserve shares issued in June last should have been offered in the first place to shareholders of Consolidated Gold Fields of South Africa, but the *pro rata* basis would have been almost negligible, since their rights of subscription would have amounted to only about one share for every 13 shares held. To have been able to place almost a quarter of a million shares at a price of £4 2s. 6d. per share when the market quotation was £4 6s. 3d. seemed to him an achievement calling for commendation rather than adverse criticism.

The report and accounts were unanimously adopted.

THE STRAND HOTEL, LIMITED

FURTHER IMPROVEMENTS

The twenty-ninth ordinary general meeting of this company was held, on the 3rd instant, at the Trocadero Restaurant.

Major M. Gluckstein (the Chairman), in the course of his speech, said: I am pleased to tell you that the revenue for the year, both from the letting of bedrooms and from the restaurant side of the business, shows some increase over that of the previous year. We may fairly conclude that part of this increase arises as a result of the extensive renovations that have recently been made in various parts of the hotels. The Strand and Regent Palace Hotels are an integral part of London's everyday life, but this position can be retained only so long as they continue to enjoy the goodwill of our clientele, whose point of view is our constant concern.

There was a time when flowing hot and cold water in a bedroom was considered the last word in luxury—when the free bath and inclusive breakfast were features unheard of. Only ten years ago the hotel as understood to-day was in its infancy, and great as had been the changes wrought in previous decades, the amenities of 1926 included little of the lavishness that has since come to be regarded as necessary. Through the years have been added successively the telephone, the pocketed-spring bed, the fitted wardrobe; and now at the Regent and Strand Palace Hotels electric fires have been installed in each bedroom from which heat is supplied without charge.

But always paramount in our minds are the ever increasing demands of progress, and in our quest of the perfect hotel we are busy exploring the resources of science and engineering, that our visitors may enjoy the latest advantages that these branches of knowledge have to confer. Thus, a system of perfected air is being introduced in the Regent Palace Hotel restaurant. There, regardless of prevailing weather conditions, the atmosphere will—throughout the year—resemble that of a pleasant spring morning. The restaurant is also being redecorated and re-equipped, and will presently emerge as an example of up-to-date hotel-craft. Later, we shall turn our attention to others of the public rooms.

Meanwhile, we have been effecting improvements at the Strand Palace Hotel, where also, later on, perfected air will be introduced. The report was unanimously adopted.

CHARTERHOUSE INVESTMENT TRUST, LIMITED

LARGER PROFIT—INCREASE OF CAPITAL

The eleventh annual general meeting of the Charterhouse Investment Trust, Limited, was held, on the 2nd instant, at Southern House, Cannon Street, London, Sir Arthur H. Marshall, K.B.E. (the chairman) presiding.

The Chairman, in the course of his speech, said that the board had sincere pleasure in submitting accounts disclosing a substantial increase in profits.

As to their profit and loss account, the gross profit of £245,754 was £87,496 greater, and the net profit showed an increase of £72,787 at £192,698, which was equivalent to just over 19 per cent. on the capital as it now stood. If the company's capital had happened to be equally divided into £500,000 4½ per cent. preference and £500,000 ordinary stock, those profits would have covered the preference dividend between eight and nine times and left the equivalent of 34 per cent. on the ordinary stock. The proposed dividend of 10 per cent. would absorb £100,000 and would have provided a dividend of 15½ per cent. on the ordinary stock had the capital been divided as he had just mentioned. The reason which had decided the board to ask agreement to an increase of the capital of the trust, and to its immediate issue, was that they believed they could profitably employ additional capital.

Summing up the proposed position, the new issue provided the company with £625,000 of new money, which might conservatively be expected to earn 4½ per cent., or an addition of £28,125 per annum. This amount, added to the £100,000 for which the present dividend of 10 per cent. called, would be sufficient, after providing the dividend on the £750,000 preference stock, to pay just over 12½ per cent. on the £750,000 ordinary stock. On the new basis an additional 1 per cent. on the ordinary stock would require only £7,500 instead of £10,000 as at present.

As to the future, they had started the new year with substantial business in hand. If economic and political conditions remained reasonably stable, the board should be able to render satisfactory accounts next year.

The report was adopted, and at a subsequent extraordinary general meeting the proposed increase of the capital from £1,000,000 to £1,500,000 by the creation of 500,000 ordinary shares of £1 was approved.

ELSWICK-HOPPER CYCLE AND MOTOR COMPANY, LIMITED

IMPROVED OUTLOOK

The annual general meeting of the Elswick-Hopper Cycle and Motor Company, Limited, was held, on the 30th ultimo, at Barton-on-Humber, Mr Fred Hopper (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the balance sheet showed the company to be in an exceptionally strong financial position. Floating assets amounted to £172,369, as against trade creditors of £31,607, showing a surplus of £140,762, or approximately the full ordinary and preference share capital of the company. The amount due from the subsidiary company had increased from £28,373 to £42,971, which was in pursuance of their policy of extending the finance of the sale of cycles manufactured by the company and sold on the easy-payment system. Their policy with regard to the subsidiary company was to build up reserves against any bad debts that might be made, but up to the present time their experience had been very satisfactory in regard to their easy-payment system.

The trading profit for the year amounted to £29,262, and after providing for the preference dividend there remained £21,411. It was proposed to pay a dividend of 15 per cent., less tax, for the year, as against 10 per cent. last year, but shareholders should take into account that the dividend was payable on about two and a-half times the ordinary capital of last year, and that the company had only had the benefit of the money for a short time.

Dealing with the general outlook of the cycle trade, he said that the number of cycles used continued to increase, and the improvement in the roads would, in his opinion, tend further to increase their use. The Cycle Show at Olympia recently held was a great success, and he thought he was correct in saying that never in the history of the country had there been a greater demand for that form of locomotion. He saw no reason why the sale of cycles should not continue to increase in volume. Their selling organisation was efficient, and with the additional capital facilities which they had obtained, it was hoped that they would be able further to extend their easy-payment department as well as enlarge the export trade which his father, the founder of the company, was one of the first cycle manufacturers in this country to develop.

The report and accounts were unanimously adopted.

VAN EMDEN (DUTCH GUIANA) GOLD MINES, LIMITED

PROPOSED CAPITAL ISSUE

The annual meeting of this company was held, on the 30th ultimo, in London.

Mr A. L. Jupp (the chairman) said that they had started as a small company to win alluvial gold, but had been advised by Mr J. C. Templeton that their alluvial gold was, in fact, reef gold, and their engineers had confirmed his geophysical survey and were urging the board to send machinery to develop and prove the reefs. The considerable amount of machinery now arriving on the property should very shortly place them in the position of having such considerable reserves of ore blocked out as to make it possible to proceed with the flotation of their first subsidiary company.

The purchase of machinery and the sending out of an experienced driller had eaten a very large hole in their slender resources, but they felt that the expenditure was amply justified. They proposed to make a further issue, possibly within a week or two, of not exceeding 50,000 or 60,000 shares, and every shareholder would be entitled to an allotment.

Mr A. R. Clements (managing director) said that reef development so far carried out pointed definitely to lateral continuity and to regularity. Diamond drilling would prove rapidly the persistence of their great deposits at depth. The values were not spectacular, but spectacular values did not make a mine so much as large quantities of ore of an economic value.

Mr James C. Templeton (consulting geologist and geophysicist) said that with the conclusion of the geophysical prospecting work on the Kilometer 94 area active mining work employing the most up-to-date equipment had now commenced. Diamond drilling operations were starting. This was the first instance, he thought, in the history of mining exploration in which geophysical methods of investigation had been applied over such a large area from the very outset. The procedure and results to date meant that before even commencing true mining operations a fairly complete knowledge of reef possibilities of the area as a whole was available. By that means mining operations were concentrated at the localities and along the zones offering the maximum prospects for gold production.

The report was unanimously adopted.

TRUST OF INSURANCE SHARES, LIMITED

GROWTH OF RESERVES

INCREASE OF CAPITAL—NEW DIRECTOR

The second annual general meeting of the Trust of Insurance Shares, Limited, was held, on the 1st instant, at the registered office, 30 Cornhill, London, E.C.3.

The Rt. Hon. Charles A. McCurdy, K.C., chairman, presided. The Chairman said: The policy of the directors for the last two years has been to restrict the business of the company to the creation of unit trusts made up of insurance shares, bank shares and trustee securities, and we shall continue to limit our operations to investments of this class, in which the first objective is complete safety of capital with good prospects of capital appreciation rather than an initial high rate of interest.

The three trusts created by the company are: Trust of Bank Shares, of which the Equity and Law Life Assurance Society are trustees; the Trust of Bank and Insurance Shares, of which the Midland Bank Executor and Trustee Department are trustees; and the Trust of Insurance Shares, of which Williams Deacon's Bank, Limited, the trustees; and they have enabled thousands of small investors to acquire an interest, free from personal liability, in the two great financial industries of Great Britain. The demand for units in these trusts by stockbrokers on behalf of the investing public continues to increase.

In consultation and agreement with the respective trustees and auditors, the company has now placed to reserves in accordance with the recommendations of the Board of Trade Report on Unit Trusts, and, to ensure continuity of management, sums amounting to £111,725. The balance standing to the credit of the profit and loss accounts now amounts to £10,354 17s. 7d.

The company has now taken the necessary steps to increase its capital, which at present consists of £100,000 in £1 shares, all of which were issued for cash and are fully paid, to £200,000 by the creation of a further 100,000 £1 shares.

In view of the growth of the company's business the directors have accepted a favourable offer of additional accommodation on the ground floor at 30 Cornhill, E.C.3.

The company is fortunate in securing the services as a director of Sir Bernard Bircham, K.C.V.O., deputy-chairman of the Equity and Law Life Assurance Society, who will be a great acquisition to the board.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended November 28, 1936, amounted to £8,793,500, against ordinary expenditure of £9,550,000. After allowing for an increase in Exchequer Balances of £173,381, the operations for the week, as shown below, increased the gross National Debt by £930,000 to approximately £8,005 millions.†

THE BANK OF LONDON AND SOUTH AMERICA, LTD., has received telegraphic advice from the Valencia Branch that the gold surcharge for payment of Spanish Customs duties has been fixed for the period December 1st to 10th at 143.63 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE BANK OF LONDON AND SOUTH AMERICA, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	"Official" commercial rate fixed at 50.00 bolivianos per £ as from October 16, 1936.
Colombia.*	Sight rate 175 pesos per 100 United States dollars on November 5, 1936. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	Sight selling rate on New York was maintained in October at 10.50 sucres per United States dollar.
Guatemala.*	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was 110 cordobas per 100 United States dollars on November 5th. Open market rate for 70 per cent. of exchange accruing from exports was 175 cordobas per 100 United States dollars, at same date.
Salvador.*	Sight rate on November 11, 1936, was 2.50 colones per United States dollar.
Venezuela.	Sight rate on New York was 3.91 bolívares per United States dollar on November 4, 1936.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company write on December 2, 1936:—The Bank of England gold reserve against notes amounted to £248,660,346 on November 25th, showing no change as compared with November 18th. In the open market about £1,350,000 of bar gold was disposed of at the daily fixing and was partly taken for New York. Prices continued to be fixed at about dollar parity and showed a decline on the week in sympathy with the weaker tendency of the dollar against sterling. The s.s. "Viceroy of India," which sailed from Bombay on November 28th, carries gold to the value of about £518,000. The Southern Rhodesian gold output for October, 1936, amounted to 64,935 fine ounces as compared with 67,040 fine ounces for September, 1936, and 68,484 fine ounces for October, 1935.

SILVER MARKET

During the past week prices had varied only between 21½d. and 21d. until December 2nd, when increased Indian buying and bear covering orders, possibly stimulated by an advance in the New York silver price, raised quotations to 21½d. for both deliveries. The market responds the more readily to any demand as offerings continue to be moderate, although China sales have been rather more in evidence. The present level seems sufficiently high, but at the same time there is as yet no indication of any selling pressure sufficient to bring about an important decline.

Quotations for gold and silver are shown below:—

1936	Price of Gold per Fine Ounce		Equivalent Value of £ sterling		Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce .999 fine	
	s. d.	s. d.	d.	d.	Cash	Two Months	Nov. 25	Cents
Nov. 26	141 11½	11 11-63	21	21			Nov. 25	45½
" 27	141 11½	11 11-63	21	21			" 26	Closed
" 28	142 0	11 11-63	21	21			" 27	45½
" 30	141 11	11 11-58	21½	21½			" 28	Closed
Dec. 1	141 7	11 11-67	21½	21½			" 30	45½
Dec. 2	141 8½	11 11-88	21½	21½			Dec. 1	46½
Average	141 10-25	11 11-73	21-083	21-083				
Dec. 3	141 9½	11 11-79	21½	21½				

The highest rate of exchange on New York recorded during the period from November 26th to December 2nd was \$4-91½ and the lowest \$4-89½.

Statistics for the month of November:—

	Bar Silver per oz. std. Cash delivery	Two months' delivery	Bar Gold per oz. fine
Highest price	22½d.	22½d.	142s. 8½d.
Lowest price	20d.	20½d.	141s. 10½d.
Average	21-0500d.	21-0525d.	142s. 3-20d.

COMPANY NEWS

REPORTS AND NOTICES

BANKS

BANK OF MONTREAL.—The statement, dated October 31, 1936, shows total assets \$805,000,000, compared with \$792,000,000 a year ago. Liquid assets amount to \$608,000,000, equal to 83 per cent. of liabilities to the public. Total deposits have increased from \$676,000,000 to \$691,000,000. Profits for the year, after full provision made for bad and doubtful debts, \$3,181,000, compared with \$3,005,000 last year, and equal 4.18 per cent. on capital, surplus and undivided profits. Dividends total \$2,880,000 and \$200,000 is written off bank premises, leaving a balance of \$101,000, which is added to the balance from previous year, making \$2,036,000. From this \$1,000,000 has been transferred to rest account, which now amounts to \$39,000,000, leaving a balance of profit and loss \$1,036,000.

BANCO DE CHILE.—The board of directors has resolved to close the London agency, 94 Gracechurch Street, E.C.3, on December 31, 1936, years. It is requested that customers will close their accounts and withdraw their securities before the date mentioned. The agency will be prepared to carry out the instructions of customers in this connection.

MISCELLANEOUS

VAN DEN BERGHS, LTD.—Meeting at Unilever House, Blackfriars, London, E.C.4, on December 21, 1936, at 12 o'clock noon, to consider resolution "That with a view to the acquisition of the whole or part of the undertaking of Jurgens, Ltd., the capital of the company be increased to £6,637,500 by the creation of 4,500,000 ordinary shares of £1 each ranking *pari passu* in all respects with the existing ordinary capital of the company, and that the name of the company be changed to 'Van den Berghs and Jurgens, Ltd.'"

UNION CINEMA GROUP.—At various class meetings the resolutions submitted were unanimously approved. For technical reasons the extraordinary general meetings of the Union Cinema Company, Ltd., and the National Provincial Cinemas, Ltd., were adjourned until December 16th, and the date for which the extraordinary company meeting of the Oxford and Berkshire Cinemas, Ltd., has been called.

SINGER AND COMPANY, LTD.—The scheme of arrangement and reconstruction dated November 12, 1936, has been approved by overwhelming majorities.

TRUST OF INSURANCE SHARES, LTD.—Sir Bernard Edward Halsey Bircham, K.C.V.O., has been appointed director of Trust of Insurance Shares, Ltd. The appointment was made to fill the vacancy occasioned by the death of Sir James Cooper, K.B.E.

THE BRITISH RAILWAY STOCKHOLDERS UNION, LTD.—The fourth annual general meeting will be held in the Caxton Hall, Westminster at 11.30 a.m. on December 9th. Several matters of importance to stockholders will come up for discussion. The membership of the Union has shown some further expansion amounting to about 4 per cent.

THE EVER READY COMPANY (GREAT BRITAIN), LTD.—The Ever Ready Company (Great Britain), Ltd., offer the preference stockholders of Lissen, Ltd., four Ever Ready ordinary shares of 5s. (to be converted in due course into stock units) equal to a market value £6, for five Lissen preference stock units of £1, equal to a market value £5. Fractions of Ever Ready shares to which Lissen holders become entitled will be paid for in cash on the basis of an Ever Ready ordinary share being worth 30s. The offer is subject to the acceptance by the holders of not less than 90 per cent. in value of the Lissen preference stock, or such lesser amount as the Ever Ready Company (Great Britain), Ltd., may decide to accept. The boards of both Lissen, Ltd., and this company have given the most careful consideration to the transaction, and are satisfied that it is desirable and in the best interests of the businesses.

BRITISH INDIA STEAM NAVIGATION.—The report for year to September 30, 1936, shows net profit £172,036, which compares with £144,855 for preceding year. This profit is, after allowing for £810,000, as compared with £412,000, for depreciation of steamers, and debenture interest, £74,574, as before. The ordinary shareholders are to receive a 2½ per cent. dividend against nothing a year ago. This dividend absorbs £23,930. Carry-forward, £49,841, compared with £46,736 brought on. Fixed assets amount to £7,154,767, compared with £7,784,804. Floating assets stand at £2,263,862, compared with £2,096,212. Current liabilities have been reduced from £1,310,433 to £821,242. Reserve account remains at £1,650,000, and the insurance account at £1,500,000.

ORIENT STEAM NAVIGATION.—Report for year to June 30, 1936, shows operating profit, after charging income tax, was £216,555, compared with £342,223 for preceding year. Profit on sale of investments amounted to £58,057, compared with £191,755. The sum of £200,000 is transferred from general reserve. For preceding year £150,000 was put to general reserve. The sum of £256,629, compared with £219,811, is utilised for depreciation. Special expenditure on "Orontes," "Orford" and "Orama" absorbed £156,383 in the latest accounts against nothing in preceding year. The ordinary dividend is again 5 per cent., free of income tax. Carry forward, £40,461, against £115,166 brought in. Cash reduced from £158,321 to £138,469. Investments in Government and other securities at cost, £1,831,632, against £2,450,166. Total assets, £5,723,682 against £5,913,333.

UNIT TRUSTS ASSOCIATION.—It has been decided that this shall be the new title of The Association of Fixed and Flexible Trust Managers.

PEASE AND PARTNERS, LTD. (New Capital Scheme).—A scheme has been submitted to shareholders to eliminate all fixed charges except the company's perpetual debenture stock and interest upon and redemption of the 5 per cent. debenture stock issue "A" which it is proposed will in future carry interest at 4 per cent. per annum. If the scheme is adopted, these two stocks will involve an annual charge of £39,885 as against a maximum of £148,260, which under the 1932 scheme would be payable in 1939-40. In order to carry out the new proposals, the company intends to create 1,250,000 5 per cent. cumulative £1 preference shares to be issued when the scheme becomes effective.

BORNEO COMPANY.—Capital of Borneo Company will be reduced by £360,000 by cutting 8s. off each £1 ordinary. Preference share arrears will be cancelled. Preference shares will be converted to ordinary holders receiving additional ordinary shares as compensation for cancellation of preferential rights.

that while the new ordinary shares issued in July last rank for dividend as from January 1, 1936, including the interim dividend now declared, the new capital can only provide a partial contribution to the earnings of the current year, the effect of which in relation to the total dividend payable for the year 1936 can be more conveniently considered in connection with the final dividend.

THE LIMITED INVESTMENT FUND.—The distribution for the half-year ended November 27, 1936, is 3.80d. per unit, free of tax. The first distribution was 3.80d.,

the total for 51 weeks being equivalent to a gross yield of 4 2s. 6d. per cent. per annum, which figure is arrived at after allowing for all expenses and amortisation of wasting assets.

UNITED STATES STEEL CORPORATION.—United States Steel Corporation has declared a dividend of 7¢ on account of the arrears on the 7 per cent. cumulative preferred stock. The payment will total \$25,219,877 (£5,043,935 at current rates). It will be paid on December 24th to shareholders of record on December 1st.

THE BRITISH OVERSEAS BANK, LIMITED.

ESTABLISHED 1919

Report by the Board of Directors to the SEVENTEENTH ANNUAL GENERAL MEETING of SHAREHOLDERS to be held in the BANK PREMISES, 33 GRACECHURCH STREET (LOMBARD COURT), LONDON, E.C.3, on Tuesday, the EIGHTH day of DECEMBER, 1936, at 12 noon.

The Directors submit to the Shareholders the Balance Sheet of the Bank, as at 31st October, 1936, and Profit and Loss Account, together with copy of the Auditors' Certificate.

The Profit, after allowing rebate of interest and providing for all bad and doubtful debts (other than provided for out of Contingencies Account), for the year ended 31st October, 1936, amounts to £62,376 9 7.

Balance available from last account £66,770 1 6.

Making a total of £129,146 11 1.

which has been appropriated as follows:—

In payment of a Dividend on the "A" Ordinary Shares at the rate of Six per cent. per annum (less Income Tax) for the year ended 31st October, 1936, which together with Income Tax thereon amounts to £60,000 0 0.

Leaving a Net balance to be carried forward to next year of £69,146 11 1.

During the year, as already announced, the Bank incorporated the business of Messrs. Fredk. Huth and Company, established in 1899. Your Directors are of the opinion that this connection, with the experience and tradition of many years behind it, is bound to be advantageous to our own institution. Consequently they are glad to report that two former Partners of Messrs. Fredk. Huth and Company have become associated with the Bank; Mr. Lewis Huth Walters, as an Advisory Director, and Mr. Louis Ernest Meinertzhagen as a Member of the Board. A number of the staff have also entered our service.

The term of office of Sir James Caird, Bart., as Deputy Chairman having expired on 31st October, 1936, the Right Hon. Lord Aberconway, C.B.E., has been appointed to succeed him for the current financial year.

The Directors retiring by rotation are The Right Hon. Lord Aberconway, C.B.E. and Mr. Dudley Ward, C.B.E., who, being eligible, offer themselves for re-election. In accordance with Article 91, Mr. Meinertzhagen's appointment requires confirmation by the Shareholders. The Auditors, Messrs. George A. Touche & Company, and Messrs. McClelland, Ker & Company, also retire, and, being eligible, offer themselves for re-appointment.

By Order of the Board, A. E. THORNE, Secretary.

London, E.C. 30th November, 1936.

BALANCE SHEET, 31st October, 1936.

 ABERCONWAY, Deputy Chairman.
 NIGEL L. CAMPBELL, Director.

A. E. THORNE, Secretary.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

ALTHOUGH the general tendency of commodity prices in this country remains upwards, individual movements have been somewhat irregular this week.

After a period of quietude, wheat quotations steadily advanced in response to strong Italian buying and the anticipation—for which there is no official confirmation—that the new Food (Defence Plans) Department will proceed to accumulate stocks of this cereal. Flour and other grains advanced in sympathy. The firmer tone of the market in oilseeds and their products was well maintained, and prices scored a renewed advance. Textile fibres, too, were frequently dearer, although a recovery in American cotton was counterbalanced by a sharp drop in Egyptian sakel.

The market in base metals was rather reactionary. Copper fell back owing to liquidation by weak bulls, while lead eased in response to profit-taking. Tin fluctuated heavily and closed well below the week's best owing to disappointing November statistics. Rubber, however, was a more active market, and prices were a shade higher in consequence of a good demand; attention in this market is now concentrated on the meeting of the International Committee to be held on December 15th, when it is commonly expected that a further increase in production quotas will be recommended. Meanwhile, coal is an improving market, and iron and steel are as active as ever.

The decision of the International Tea Committee, upon which we comment in a Note of the Week, to leave the export quotas for the 1937-38 season unchanged, at 82½ per cent. of standard, had little effect in Mincing Lane. The steep rise in the price of cocoa continued, but coffee and sugar showed little change. On the London Provision Exchange, butter and cheese were cheaper, but bacon quotations remained unaltered. Egg prices showed a tendency to sag.

In the United States, the tendency of prices was strongly upward. Thus, Moody's index (December 31, 1931 = 100) rose to 194.7 on Wednesday, against 189.7 a week earlier, 181.3 a month ago, and 166.8 on the same day last year.

COAL

SHEFFIELD.—There is a steady home demand for industrial fuels and the colder weather has improved the demand for household coal. Small coal continues in short supply and there is an active demand for gas coal. Coke works are working as fully as supplies of coking coal permit and quotations are strong all round. Export business is rather quieter and there is a fair supply of all classes of coal.

NEWCASTLE-ON-TYNE.—The increase in the French coal import quota for December and the news of the quantities of Durham coal to be supplied to Italy under the trading agreement has further increased the strength of the market in all classes of coal in this area. Durham is to supply 300,000 tons of gas and coking coal in equal quantities to Italy during January/March, and whilst the gas coal may not be so difficult to obtain, production of coking coal will have to be increased. The current position of all classes is very firm and there is little free coal available this year.

GLASGOW.—The collieries in shipping areas are well booked until well after the turn of the year, and are mainly concerned with delivery problems. Tonnage is now in rather better supply, but still short of requirements. An expanding tendency continues in the home market, with industrial, public utility and household demands brisk. On occasion collieries are still rendered idle by wagon shortage, but this position is also improving. Prices all round are firm.

CARDIFF.—Although the South Wales coalfield joint audit for the three months ended October showed a debit balance of £1,944, it was the most favourable for the past nine months. Compared with the previous quarter, there was an increase of nearly 3d. per ton in the average pithead proceeds, and an increase of 6½d. per ton compared with the corresponding period in 1935; costs of production were about 2½d. per ton less than in the previous quarter, but 4d. per ton more than a year ago, mainly as a result of the wages increase last January. The economic wage certified by the auditors was 5.03 per cent. above the standard, but under the present agreement the workmen are entitled to a minimum wage of 25 per cent. above the standard, and this remains in operation for the next three months.

The coal market has been strengthened by the doubling of the French import quota and the resumption of trade with Italy, and shipments are likely to show improvement during the next few months. Exports in the foreign and coastwise trades last week totalled 366,700 tons, compared with 431,200 tons the previous week, and 405,378 tons in the corresponding week of 1935. Prices of practically all classes of small coals are firmer, and coking coals are now quoted up to 16s. dry nuts up to 27s., and washed dry duff up to 14s. 6d. per ton. Furnace coke has also slightly hardened to 25s. 6d., and the ex-ship price of Portuguese pitwood has increased from 22s. 6d. to 24s. 9d. per ton. It is estimated that the Government's Railway Freight Rebates Bill will add something between £250,000 and £300,000 to transport and shipment costs in the South Wales coal export trade. Among the inquiries in the market are 250,000 tons of large and 40,000 tons of small coal for the French State Railways, 20,000 tons for the Paris-Orleans Railways, and 50,000 tons of bunker coals for a Portuguese shipping company.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that there has been no relaxation of activity in the iron and steel markets; the problem with which producers in all departments are faced is to meet the requirements of their customers. It is difficult to find firms able to accept fresh business for several descriptions of iron and steel owing to the congested state of their order books, and there is a general tendency to extend the periods required for delivery.

The stringency which has ruled in the pig iron market for some time shows no signs of relaxing, although it is expected that more furnaces will be put into blast shortly if the outlook regarding supplies of fuel and ore

make this course practicable. The price of foundry iron has been increased by 5s.-6s. per ton, and it is expected that a rise in quotations for other descriptions will be announced in the near future.

In the semi-finished steel department it is not easy to place orders for home-manufactured material, but some relief has been afforded by increased imports of foreign steel. Many producing works have retired from the market for the time being, as they have sold their output as far forward as they care to commit themselves.

Demand for finished steel continues in excess of the capacity of the producing works, although the rationing system has helped to alleviate the difficulties.

SHEFFIELD.—Business in the iron and steel market continues brisk. The increase of 6s. per ton in the official price of forge, foundry and basic pig iron has not come as a surprise, though it was felt that a change would be unlikely until the close of the year. The increase has in no way affected the volume of business, and any small parcels are taken up at the new prices. Derbyshire production has increased with the starting of 2 modernised blast-furnace at Staveley which has an output of 1,500 tons per week. This will relieve the pressure to some extent, but will not allow for the building up of stocks at furnaces. Lincolnshire makers continue to be off the market in this district. The new quotations, delivered Sheffield, are: Lincolnshire and Derbyshire forge, £3 18s. 6d. to £4 0s. 6d.; foundry, £4 3s. 6d.; basic, £4 3s. 6d. per ton. There is no easing in the demand for East and West Coast hematite, and rationing is in operation. So far there has been no rise in prices. Premiums are being paid for parcels for early delivery, but on the whole makers are not anxious to add to their commitments. In finished iron the increased business is maintained. Demand for crown bars is on the upward grade, and common and best bars show good bookings. The demand for acid and basic steel billets continues unabated. Basic billets are in such request that users' requirements cannot be fully met. The position in acid billets is easier than that in basic billets. Wire rods and strip business is good. Structural steel is in active request and stainless steel sheets remain firm. Colliery steel prices have been advanced by 10s. per ton in the case of arches and roofing bars, and by 7s. 6d. per ton in the case of rails. The price of foundry cast-iron scrap is moving up in sympathy with the higher price of pig iron, and the quotation is now around 70s. per ton delivered.

GLASGOW.—The position in the West of Scotland shows little change. Every branch of the industry is working at capacity and all are expecting a long spell of activity, provided supplies of their raw materials are available. Demand for shipbuilding material is on a very large scale. Structural material is in heavy request, both for steel structures and for steel frames of various kinds, which are largely manufactured in Glasgow. Tube makers are exceptionally busy and all plant in this district is now in operation. Sheet makers are working at capacity, and there is a decided improvement in the amount of export business now coming forward. Jobbing galvanisers have secured some fair contracts recently and work on hand should ensure regular employment for several weeks at least. At the moment the outlook for the industry in the West of Scotland is particularly encouraging.

MIDDLESBROUGH.—Statistics of shipments of iron and steel from the Tees during November show an increase of 3,525 tons over the previous month. The total quantity of pig iron, manufactured iron and manu-factured steel shipped during November was 43,150 tons, including pig 34,558 tons. The total quantity of pig iron shipped during November went coastwise, chiefly to Scotland, and 2,134 tons to foreign destinations. Of the month's steel shipped, 14,238 tons went coastwise, and 20,320 tons to overseas destinations.

The price of Cleveland foundry pig iron was advanced towards the end of last week, but owing to the fact that makers had sold their output ahead, they will not reap the benefit of this advance in price for three or four months. For delivery locally, the increase in price is 6s. per ton, making the minimum for No. 3 quality 81s. per ton, delivered in this district. The ruling being 84s. per ton Scotland is 9s. per ton, the minimum price now destination.

Very little business is passing in East Coast hematite pig iron. Makers are well sold ahead, and before they enter into further commitments, it is expected that the price will be increased by about 10s. per ton. It is 85s. per ton, delivered locally.

Pressure is being exercised by customers to get early deliveries of constructional steel, shipbuilding material, etc. Manufacturers are doing their utmost to meet requirements, but in view of rising costs, they are not only two cargoes of ore have arrived from Spain during November, several months, making the total quantity imported during November 191,986 tons, compared with 153,736 tons during October. Blast furnace coke 24s. 6d. per ton, delivered furnaces here. Heavy steel melting scrap is readily taken up at 60s. per ton, with merchants inclined to hold for more.

CARDIFF.—Firm conditions continue to prevail in the South Wales iron and steel trade. Although schedule prices of tinplates are nominally unchanged, makers are obtaining from 9d. to 1s. premium on new contracts, while quotations for galvanised sheets have been increased by 5s. per ton to £12 15s. Exports of tinplates, although not quite as heavy as in the previous week, were 44,500 boxes more than in the corresponding period last year, while there was also a good inland demand. Quotations for steel bars are unchanged, but they are likely to be increased early in the new year.

OTHER METALS

COPPER.—After an early improvement, prices again showed a reactionary tendency, the standard cash quotation closing on Wednesday at £43 6s. 3d. per ton, a loss of 10s. on the week. Liquidation by weak bulls was the main factor involved, but it is not expected that such sales show the usual end-of-the-year quietude. The market is, however, expected to prevail in the United States—a development which was to be expected, in view of the volume of purchases in recent weeks.

Sales on the London Metal Exchange: 800 tons on Monday, against 650 tons last week; 3,800 tons on Tuesday, against 1,275 tons last week; 2,100 tons on Wednesday, against 900 tons last week. Domestic spot was quoted at 10.47½ cents per lb. in New York on Wednesday, against 10.45 cents a week ago and 10.40 cents a month ago. Wednesday's official closing price for standard cash in London was £43 6s. 3d., £43 7s. 6d., compared with £43 16s. 3d. to £43 18s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 44,732 tons, show a decrease of 577 tons, while stocks of rough copper, at 767 tons, show a decrease of 191 tons.

LEAD AND SPELTER.—Following last week's improvement, a natural reaction occurred this week. Despite a fair home demand for spelter, the margin between the price of this metal and that of lead still amounted on Wednesday to £6 10s. per ton in favour of lead. Formerly it was normal for spelter to be the dearer of the two.

Sales of lead on the London Metal Exchange: 1,000 tons on Monday, against 4,350 tons last week; 1,550 tons on Tuesday, against 3,000 tons last week; 2,000 tons on Wednesday, against 1,900 tons last week. The New York quotation on Wednesday was 5.20 cents per lb., against 5.20 cents a week ago and 4.90 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £22 15s. per ton, compared with £23 3s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 1,400 tons on Monday, against 2,750 tons last week; 2,300 tons on Tuesday, against 2,600 tons last week; 1,650 tons on Wednesday, against 4,200 tons last week. Wednesday's quotation in East St. Louis was 5.05 cents per lb., against 5.05 cents the week before and 4.85 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £16 5s. per ton, against £16 17s. 6d. last week.

TIN.—After wide fluctuations, the cash price closed on Wednesday £2 per ton lower on the week, mainly in consequence of disappointing November statistics. The visible supply last month, according to Messrs A. Strauss and Company, showed a surprisingly large increase of 4,181 tons to 21,133 tons. This was mainly due to larger new supplies, which rose from 9,020 tons in October to 13,708 tons in November. At 9,896 tons, Straits shipments showed an increase of no less than 3,692 tons; while deliveries, at 8,374 tons were only 404 tons up on the month. United States shipments, which had been expected to register an increase, were actually 660 tons below the October level.

Meanwhile, the October tin mines production figure, published by the Metallgesellschaft, rose by 2,218 metric tons to 16,891 metric tons, a figure which is, however, still 232 tons below the level of October, 1935. The rise was due to enhanced production in Malaya, the Dutch East Indies and Siam, output in Bolivia and Nigeria having fallen considerably. Since the British market is mainly dependent on tin from the two latter countries, new supplies in London during the next six weeks—when the ore mined in October will appear as metal—will not be too abundant.

Sales of tin on the London Metal Exchange: 225 tons on Monday, against 275 tons last week; 350 tons on Tuesday, against 190 tons last week; 275 tons on Wednesday, against 375 tons last week. The New York quotation on Wednesday was 51.25 cents per lb., against 52.50 cents a week ago and 47.40 cents a month ago. Wednesday's official closing quotation in London for standard cash was £231 5s. to £231 15s. per ton, compared with £233 5s. to £233 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 1,273 tons, an increase of 10 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £14 5s. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £56 per ton ex warehouse, the same as last week. Chinese wolfram for "December-January" shipment was quoted at 31s. 6d. to 32s. 6d. per unit, c.i.f., as against 29s. 6d. to 30s. 6d. per unit for "November-December" last week. Refined platinum at £9 15s. per ounce remains unchanged.

TEXTILES

COTTON.—Manchester. The market continues more cheerful. After a short period of quieter business, partly due to higher prices, demand has shown signs of reviving again and some producers have had an encouraging week as regards sales. Business has been stimulated by the upward movement of raw cotton prices. Consumption of raw cotton continues on a large scale, especially in the United States. There is some uncertainty concerning the policy of the United States Government with regard to crop control during the next season, and the disposal of loan cotton. It is not anticipated that the next Government estimate of the yield, due to be published on Tuesday next, will show much change, compared with the 12,400,000 bales forecast at the beginning of November. The Egyptian Sakel futures market in Liverpool has been excited, there being wide fluctuations in the price of the November position.

Without there being any general buying movement in American yarns, a fair amount of business has been done, chiefly in coarse counts. Egyptian spinners have held firmly to the higher quotations, and on the whole a steady trade has taken place.

A fairly encouraging turnover has again taken place in piece goods. Quotations have tended to go against buyers, partly owing to the wages advance granted to the operatives. Inquiry for India has improved somewhat, a few more sales being put through in light goods and fancies. Very little support has come from China, but printed and dyed goods have again moved off freely for Java and Singapore. Quite a number of useful lines have been booked in split printers and sateens for South America. A steady business has been done in printed and coloured goods for West Africa. Heavy and fine fabrics have been sold for the Continent and the Dominions. The turnover for the home trade has been encouraging, some substantial contracts being reported in sheetings, pillow-case cloths and poplins, while Government contracts have been arranged in aeroplane and tent materials.

JUTE.—Dundee. Business continues quite satisfactorily, though the uncertain movements of raw jute tend to make buyers more cautious. Prices of all jute goods are being maintained at recent levels, with the raw material fluctuating within narrow limits. The Indian Jute Mills are able to dispose of their greatly increased production, and stocks in Calcutta are not accumulating, being approximately at the level at which they stood

before the mills extended their working hours from 40 to 54 per week. It is reported that some of the outside mills are being compelled to restrict their output because they cannot afford to accept the low prices which the Associated Mills are taking, the latter having bought their raw material more cheaply. Some mills were caught by the recent advance in raw jute, and losses are being made. Nevertheless, there is still no news of any fresh move towards a settlement of the working hours question between the Indian Jute Mills' Association and the "outside" mills. The current consumption of raw jute is much greater than a year ago. At least 1½ million more bales, or a total of about 11 million bales, will be required to meet the needs of the world this season, yet the forecast of last September indicated a crop of only 8,711,000 bales. Much depends upon the accuracy of these forecasts, and, though stocks in consumers' hands are large, the general desire is to maintain these at a fairly high level.

The market in raw jute has been quiet, with a firm undertone. Daisee ½ fell to £18 15s. per ton for the full group, but quickly recovered to £18 17s. 6d., and single marks are offered at from £19 5s., with fours at from £17 10s., Toosa ½ at from £19 12s. 6d., and fours at £18 17s. 6d. per ton, December-January. Good First Marks dropped to £21 17s. 6d., but are firm again at £22 and good Lightnings are offered at £19 17s. 6d., and Hearts at £18 17s. 6d., December-January.

Little business is being done in jute yarns, but prices are very firmly held at 2s. 1½d. for common 8 lb. cops and 2½d. for 8 lb. spools. Twist is firm at 3½d. to 3½d. for 3-ply 8 lb., and sacking yarns are unchanged at 2½d. for 24 lb. web and 3½d. for 8 lb. chains. Rove is usually quoted at £20 10s. for 48 lb. and £16 10s. for 200 lb., and quotations for Rio yarns are well maintained. Carpet yarns are firm at 3½d. for 14 lb. warp.

A good inquiry prevails for jute cloth, but business is mostly confined to small lots. Orders for these, however, are quite numerous, and prices are firm at from 2½d. for 10 oz. 40 in. and 2½d. for 8 oz. Linoleum hessians are very firm, makers being well supplied with orders, and heavy goods are in quiet but steady demand.

Calcutta hessians are quoted at 17s. 2d. for 10 oz. 40 in. December, and at 17s. January-June, with 8 oz. at 15s. 7d. December-June.

GRAIN MARKETS

WHEAT.—After a period of quietude, the market has presented a much more active appearance and prices have steadily advanced. Two factors have been mainly responsible for this movement. On the one hand, Italy has again been an active buyer of new crop Southern Hemisphere wheat and, on the other, the market reacted bullishly to the announcement that a new Food (Defence Plans) Department is to be constituted. But the expectation that the new department will proceed to create a reserve of wheat is without official confirmation.

On Wednesday last, "December" futures were quoted in Chicago at 12½ cents per bushel, against 11½ cents the week before and 11½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 46s. 6d. per 496 lbs., against 43s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 46s., against 43s. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,416,000 quarters, against 1,124,000 in the previous week and 1,268,000 quarters in the corresponding week a year ago.

FLOUR.—Prices have risen in sympathy with wheat. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 37s. per 280 lbs., against 36s. a week ago; delivered inner London, 36s. 6d., as compared with 35s. 6d. a week ago. Manitoba patents, ex store, 34s. 6d. to 36s., against 33s. to 34s. 6d. a week ago. Australian, ex store, 32s. to 32s. 6d., against 31s. 6d. to 32s. a week ago.

BARLEY.—Barley has advanced in common with other grains. "December" futures were quoted at 64½ cents per bushel in Winnipeg on Wednesday, against 62½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" (new), at farm, 28s. to 29s., as against 28s. to 29s. a week ago; "English malting" (new), at farm, 34s. to 35s., against 34s. to 35s. a week ago; Californian (new), ex ship, 48s. to 58s., against 47s. to 58s. last week; Chilean, brewing, ex ship, 37s. to 42s. 6d., against 36s. 6d. to 42s. a week ago.

OATS.—On Wednesday, "December" futures were quoted at 46 cents a bushel in Chicago, against 45½ cents a week ago and 41½ cents last month. Quotations in London, Wednesday: "English Black" (new), at farm, 21s. to 22s., per 336 lbs., against 20s. to 21s. a week ago; "English White" (new), at farm, 21s. to 22s., against 20s. to 21s. a week earlier; mixed Canadian feed (Vancouver), landed, 22s. 3d. per 320 lbs., compared with 21s. 6d. last week.

MAIZE.—The market has been firm throughout the period under review and prices are higher. "December" futures were quoted on Wednesday at 108½ cents per bushel in Chicago, against 105½ cents a week ago and 95½ cents last month. Quotations in London, Wednesday: "Plate," landed, 24s. per 480 lbs., compared with 22s. 6d. a week ago; "Plate," ex ship, 23s., as against 21s. 6d. a week ago; "Plate," "December," 23s., as against 22s. a week ago; yellow maize meal, ex wharf, was quoted at £6 5s. to £6 7s. 6d. per ton, as against £6 2s. 6d. to £6 7s. 6d. last week.

BARCLAYS BANK

LIMITED

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1934-36:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Dec. 4, 1935	Dec. 31, 1935	Nov. 25, 1936	Dec. 2, 1936
Winnipeg (No. 1, Manitoba)	85½	82½	84½	84½	105½	115½
Chicago (No. 2, Winter)	84½	88½	96	75½	117½	124½

The visible supply of wheat in Canada amounts to 73,454,000 bushels, against 79,611,000 bushels last week, and 142,073,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home-grown wheat—				
1 week to November 28	283,375	331,556	348,293	274,372
13 weeks to November 28	4,843,404	5,853,532	5,807,465	4,153,563
Average price of English wheat per cwt.	s. d. 4 7	s. d. 4 11	s. d. 5 8	s. d. 8 5

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
November 26, 1932...	Cwts. 302,111	Cwts. 427,915	Cwts. 47,352	s. d. 5 5	s. d. 7 2	s. d. 5 10
November 25, 1933...	283,375	367,848	47,957	4 7	9 2	5 3
December 1, 1934...	331,556	363,718	54,291	4 11	8 10	6 9
November 30, 1935...	348,293	399,343	50,283	5 8	8 4	6 1
November 21, 1936...	293,522	456,238	61,621	8 6	9 8	6 10
November 28, 1936...	274,372	534,339	53,814	8 5	9 8	6 10

OTHER FOODS

BACON.—Demand has been quiet for English, slow for Irish and fairly steady for other descriptions. Prices remained unchanged this week. The official quotations (per cwt. for No. 1, Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 88s. to 90s.; Canadian, 80s.; Danish, 90s.; as against 88s. to 90s., 80s. and 90s. last week. Arrivals in London last week included Danish, 11,618 bales; Canadian, 7,546; Dutch, 1,994; Lithuanian, 1,427; and Polish, 2,589; as against 12,085, 7,408, 2,232, 1,350 and 2,277 bales, respectively, in the previous week.

BUTTER.—Butter has been in quiet demand this week, with prices showing an easier tendency. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 104s.; Australian, choicest salted, 102s. to 103s.; Danish, 118s., compared with 107s., 106s. and 118s. to 120s., respectively, a week ago.

BASIC PIG PRICES.—The Pigs Marketing Board announces that, in accordance with the provisions of the present contract between feeders and curers, the ascertained price of green Wiltshire style bacon is 90s. 2d. per cwt., the ascertained value of offals is 9s. 6d., and the ascertained cost of feeding stuffs 9s. 1d. per cwt. In accordance therefore with the price schedule embodied in the contract, the price of the Class I, grade C pig for the month of December is 12s. 1d. per score. The curers will also pay to the Board 2d. per score on every pig delivered and accepted this year, to form a pool out of which will be paid the bonus on pigs delivered during the first four months of the year, in accordance with the 1936 Bonus Scheme. Fluctuations in the basic price (per score lbs.) during the past two years have been as follows:—

	1935	1936
January.....	s. d. 11 3	s. d. 9 11
February.....	11 5	10 8
March.....	11 11	11 5
April.....	11 0	11 7
May.....	10 11	11 4
June.....	11 5	11 0
July.....	11 9	11 4
August.....	11 4	11 6
September.....	11 0	11 11
October.....	10 2	12 0
November.....	11 4	12 2
December.....	10 2	12 1

Meanwhile, the response to the 1937 contract, the terms of which were discussed in a Note of the Week in *The Economist* of November 7th last, has disappointed the Board. It has therefore decided to extend the date for the receipt of contracts until Monday, December 14th, 1936. A minimum of 400,000 more pigs is required to bring the total under contract up to 2,200,000. If this number is not forthcoming, the Bacon Marketing Board has power to pass a resolution declaring the contract for 1937 void. The Pigs and Bacon Marketing Schemes would then come to an end.

CHEESE.—Although English remained a firm market this week, other descriptions have been in quiet demand. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 82s. to 88s.; Canadian, finest coloured, 70s. to 72s.; and New Zealand, finest coloured, 63s. to 64s., against 82s. to 88s., 72s. to 73s., and 70s., respectively, a week ago.

COCOA.—The rise in prices has continued unabated this week. The spot quotation in New York on Wednesday was 11½ cents per lb., as against 10½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "December-January," was quoted 48s. 9d. per 250 kilos., c.i.f. Continent, against 45s. 1½d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 853 bags; delivered, for home consumption, 5,681 bags; exported, 344 bags; stocks, 106,078 bags, against 121,984 bags a year ago.

COFFEE.—After a week of firm trading, prices in New York show no change. The London spot market has been quietly steady. On Wednesday,

Rio No. 7 (cash) was quoted at 8½ cents per lb. in New York, as compared with 8½ cents per lb. last week and 8½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 146 cwt.; delivered, for home consumption, 134 cwt.; exports, nil; stocks, 9,474 cwt., against 12,258 a year ago. Central and South American, landed, 2,709 cwt.; delivered, for home consumption, 2,013 cwt.; exported, 933 cwt.; stocks, 54,988 cwt.; against 74,856 last year. Other kinds: landed, 8,641 cwt.; delivered, for home consumption, 3,474 cwt.; exported, 1,110 cwt.; stocks, 91,085 cwt., against 109,586 last year.

EGGS.—With abundant supplies and a rather quiet demand, all varieties except English were rather easy this week. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 19s. to 20s. per 120, as against 18s. 6d. to 19s. 6d. last week, while Danish (15½ lb.) made 15s. 3d. to 15s. 6d.; as against 15s. 3d. to 15s. 6d. last week.

FRUIT.—Business at Covent Garden has shown a slight improvement with the passing of November, and demand is expected to improve from now until Christmas. According to *The Fruitgrower*, a steady demand for apples has been in evidence, with prices showing a firmer tendency. Pears also continue a consistent trade. With a better inquiry in evidence, hot-house grapes are a point firmer in price. The South African deciduous fruits now to hand, says this authority, are earlier than usual and are rather immature. Oranges enjoy a steady sale, with prices showing little alteration; but supplies from Valencia have been interrupted by the Spanish civil war and prices may accordingly show some increase for the Christmas trade. Meanwhile, grapefruit remains a dull item, but lemons have firmed up a little.

MEAT.—Supplies at Smithfield were slightly reduced in consequence of a strike among the shophmen and prices were consequently marked up in some instances. On Wednesday last, Argentine chilled hindquarters were quoted at 4s. to 4s. 4d. per 8 lbs., as compared with 3s. 10d. to 4s. a week ago. New Zealand frozen mutton was 3s. 2d. to 3s. 10d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,870 tons, an increase of 71 tons on the corresponding week last year. Beef and veal bacon 1,119 tons, as compared with 5,098, 2,515 and 1,159 tons, respectively in the same week of 1935.

PEPPER.—Wednesday's spot price for Black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 40 tons; delivered 5 tons; stocks, 1,817 tons, against 1,457 tons a year ago. White, landed, 95 tons; delivered, 40 tons; stocks, 11,840 tons, against 14,207 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 9s. per cwt., ex warehouse, on Wednesday, as compared with 9s. per cwt. a week ago, at 8s. 4½d. per cwt., against 8s. 3d. last week. Movements in London during the past week were as follows: Landed, 12 tons; delivered, 146 tons; stocks, 1,819 tons, against 5,957 tons a year ago.

SUGAR.—After a period of steadiness, the New York market abruptly showed a firmer tendency on Wednesday and the spot price was marked showing little change. The London spot market again had a quiet tone, with quotations cents per lb., as compared with 3-65 cents per lb. last week and 3-50 cents per lb. a month ago. Wednesday's sales of raw sugar in London included 40 tons. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 22,197 tons, against 22,047 tons last week, and 3,291 tons in the same week of last year; deliveries 15,947 tons, against 15,837 tons last week and 15,456 tons last year; stocks, 146,126 tons, against 139,876 tons last week and 190,368 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Nov. 28, 1935.....	12-74	12-40	13-71	12-77	10-04	11-70	12-93
Oct. 22, 1936.....	13-24	12-08	13-98	11-32	10-07	11-59	12-93
Oct. 29, ".....	12-99	12-12	14-61	11-61	10-03	11-62	13-24
Nov. 5, ".....	13-03	12-51	14-85	11-93	10-12	11-97	13-40
Nov. 12, ".....	12-80	12-21	14-92	11-79	9-75	12-07	13-30
Nov. 19, ".....	12-69	12-27	14-72	11-58	10-24	12-07	13-12
Nov. 26, ".....	12-87	13-44	14-70	11-85	10-13	11-77	13-09

The quantities catalogued for the public auctions in Mincing Lane this week comprised 52,122 packages of Indian and 20,826 packages of Ceylon tea. The Indian grades encountered a good general demand and a firm tone prevailed, with low mediums showing a slight upward tendency. On the other hand, common Ceylon sorts were firm, but plain mediums national Tea Committee fixed the export quotas for the 1936-37 season (commencing April 1st next) at 82½ per cent. of standard, the same as at present. We comment upon this decision in a Note of the Week.

VEGETABLES.—The Covent Garden Market has shown few new features this week. According to *The Fruitgrower's* report, a few English tomatoes are still arriving, but trade now is with Canary Islands. The few now arriving from the West of England, while supplies are also being received from Argentina. House grown and Madeira beans are firmer. Cauliflowers and sprouts are doing better, but cabbage and savoy remain plentiful and cheap. Celery is in steady demand and onions show a slight advance. Meanwhile, following the alteration in the middle regulations, with prices inclined easier. At the Borough on Tuesday, however, best market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—The improved tone in the market for oilseeds is maintained. Linseed is again firm and active on a renewed demand for early shipment, but business in new crop Plate is restricted owing to uncertainty regarding the continuance of the guarantee price to growers. Interest, however, is mainly centred on Indian varieties. Reports concerning harvesting conditions in Argentina continue favourable and a yield of at least two million tons is confidently expected. The quantity remaining available for export is stated by the Argentine Board of Agriculture to

have been 132,000 tons on November 28th, which is much more than the market had been led to expect. The United States is taking fair quantities to supplement short domestic supplies, and is expected to continue to rely upon outside sources for some time to come. The quantity afloat for Europe has increased to 134,700 tons, including 14,300 tons from India. The market in linseed oil remains steady, but not very active. The current quotations for delivery forward to August next year is around £25 5s. per ton, naked, ex Hull.

Forward conditions for Egyptian cottonseed have continued with a good demand for black at constantly rising prices, £8 10s. now being quoted for shipment to April. Cotton oil is firm, but export demand is poor. Refined oil, ex Hull, has now advanced to £30 10s. per ton, prompt. Oilcakes are in improved demand and are generally firm.

RUBBER.—The market has been steady to firm and prices are slightly higher on the week. Meanwhile, with the continued decline in United Kingdom stocks, it is considered probable that the International Committee will recommend a further increase in the quotas at its meeting on December 15th. The spot price in New York on Wednesday was 18½ cents per lb., compared with 18½ cents per lb. a week ago and 17½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 8½d. per lb., as against 8½d. on the corresponding day last week. In forward positions, business has been done at 8½d. for "January-March" shipment, as against 8½d. to 8½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 89,228 tons, against 91,568 tons a week earlier. A year ago stocks amounted to 166,396 tons.

MONARCHY AND PEOPLE

ENGLISH history can furnish no precedent to the events of the past fortnight. The climax came with the message which King Edward sent to Parliament on Thursday and with the Prime Minister's statement that followed—both of which will be found on later pages of this issue. Never, even in the most stirring days of war or revolution, has the House of Commons witnessed a more historic scene. Kings of England have been forced off the throne in the past, and Parliament has always played some part. But never before has a King of England voluntarily renounced his Crown when the overwhelming majority of both Parliament and people wanted him to stay. Even for an involuntary abdication it is necessary to go back to the troubled days of the fourteenth century.

The crisis arose, as the whole world now knows, from the King's wish to marry Mrs Ernest Simpson, a lady of American birth, who obtained a decree *nisi* of divorce from her second husband at Ipswich Assizes as recently as last October. The King told the Prime Minister in November of his intention to marry. But, presumably recognising that the opinion of his people would prevent him from making her his Queen (as would automatically follow from his marriage in the present state of the law of England), he subsequently asked his Ministers for advice on the possibility of introducing legislation to permit him to contract a morganatic marriage. In accordance with the recently, but none the less firmly, established constitutional practice of the British Commonwealth of Nations, any such legislation would have to be enacted not only by the Parliament at Westminster, but also by the Parliaments of Canada, Australia, New Zealand, South Africa and the Irish Free State. These issues are discussed in a succeeding article.

His Majesty's request was considered by the British and Dominion Governments, and, as a result of these deliberations and consultations, Mr Baldwin informed the King

that the Governments were not prepared to introduce legislation of this character. A somewhat unusual request for advice had been made, in due constitutional form, by the King; and the Cabinet, in accordance with their responsibility, had given their advice. This question was the only one on which the Cabinet were asked for advice, or have expressed it. But when the King received a negative answer to the compromise proposal he had put forward, only two possibilities remained to him: either to abandon the proposed marriage or to abdicate.

At this moment the British Press, which had hitherto refrained from reproducing the stories that were filling the columns of American and other foreign newspapers, broke its self-imposed silence. The King had, therefore, to take his fateful decision in the full glare of the world's insistent attention. It cannot be doubted that this tremendous publicity hastened his decision and may even have influenced the side on which the balance of his decision fell.

Faced with the cruel dilemma of choosing between his affections and the Crown, Edward VIII hesitated for many days. In the end his "final and irrevocable decision" was to abdicate. The necessary legislation is before Parliament as we write; and before the week is out the Throne will have passed to the Duke of York.

Our regrets, though due as a tribute to a man who has been faced with a painful choice and has decided bravely, cannot alter the issue. The die is cast; and nobody will wish to look backward. King Edward VIII has gone into history. His going has been in no sense forced. On the contrary, Mrs Simpson herself offered to withdraw; and the whole Empire showed in an unmistakable way that it would have preferred King Edward to remain. But, in deciding to abdicate, the King may well have thought not only of his personal happiness but also that his departure would enable his people and his successor to forget the

slander and insinuations levelled at himself, and so to re-establish the prestige of the Crown.

We are far too close to the events to anticipate the verdict of history upon them. King Edward's abdication will clearly go down to history as an unparalleled act of renunciation for the sake of love. But we believe that the future historian, if he is not blinded by the romantic aspects of the affair, will also judge that, in abdicating, King Edward acted wisely.

What, then, may we say of the position that faces the new King? One thing is clear: the constitutional position of the Monarch is entirely unaffected by what has occurred. Indeed, there has been no constitutional crisis. That could only have arisen if King Edward had shown any indication of an intention to reject his Ministers' advice or to bring about a change of Government and a dissolution of Parliament on a non-political matter purely personal to himself. There was a certain amount of ill-advised talk of a party of "King's friends." There were certain tentative gestures by extremist politicians towards an agitation in the supposed interests of the King. But Mr Baldwin told Parliament that King Edward himself never gave the slightest countenance to these movements; and, in any case, the attachment of the British people to the democratic doctrine of ministerial responsibility is so firm that they could not possibly have succeeded.

On the more personal side of the Monarch's position, it is very difficult as yet to say how much has been changed by the events of the past two weeks. For many decades the attachment of the British people to the institution of monarchy has had a much larger element of realism in it than has usually been appreciated outside the Empire. A great deal of sentimental affection has, it is true, adhered to the person of the Monarch, but no more than is paid in other countries to a flag or to a constitution. The mystical element has long ago entirely disappeared; there are no vestiges of Divine Right left in the accepted political philosophy of the British peoples. Fundamentally, the British attitude has been that hereditary monarchy, with all its defects, will hold the field until some better method of symbolising the State is evolved. That in the last four reigns the monarchy has also been extremely popular has been almost entirely due to the varied personalities of the monarchs who have occupied the throne. King George V personified the kindly, tolerant father of a family. He became a vivid personality through the very completeness of his self-effacement. King Edward VIII was popular, as no King before has been on the day of his accession, because of his simplicity, his directness, his very clearly-shown knowledge of, and sympathy with, the least fortunate of his subjects. The popularity of the Throne now rests with the new King and with his Queen. Their task is not easy, for their every movement will henceforth be in the public eye, and they will be deprived even of the opportunity to explain or excuse their mistakes. The British people will be their judges; but they should also be their advocates, for the national unity a popular King inspires is an asset which Britain cannot afford to forego.

Nor can it yet be said what effects King Edward's abdication has had upon the links between the different British countries. It is frequently declared that the King is the only remaining link between the Mother Country and the Dominions. But that is hardly true. The King is the only remaining visible symbol of unity in the Empire. But the unity he symbolises is something far more real. The countries of the British Commonwealth of Nations remain in close association with each other because they each find advantages in the association. So long as those advantages remain, changes in the symbol will not affect the underlying reality. Indeed, the crisis has shown the new Commonwealth Constitution, as set up by the Statute of Westminster, working as a reality in its first test.

For a fortnight the crisis has filled the British people with anxiety. But in the end it becomes again what it was in the beginning, a personal matter. Sympathy with the departing King, and a welcome to the new King, will not obscure the relief felt on every hand at the knowledge that it has been possible to avert the danger of a serious conflict of loyalties where only unity should reign.

THE WESTERN FRONT

THE aggressiveness of the three Fascist Powers is beginning to produce unintended results in unexpected quarters. Perhaps this is what usually happens when reckless people take to swinging sledge-hammers about. Last week we were listening to the din of the blows which our three harmonious blacksmiths were raining upon the devoted frame of Communism; and we do not suppose that they will be discouraged by their failure to make any visible dent in the carapace of that armour-plated leviathan. We suspect that their first concern is to make a cheerful noise in the ears of their own subjects in order to distract attention from the hardships of a totalitarian winter.

Yet a hammer which fails to break one object into pieces may succeed in welding other objects together. At the moment it looks as though the antics of the German, Italian and Japanese propaganda departments were having the unlooked-for effect of consolidating the links between Great Britain, France and Belgium. While the three Fascist Powers may not mind the ineffectiveness of their gestures towards Russia, Germany, at any rate—and perhaps Italy, too—will not be best pleased if the only concrete result of her present handiwork is to consolidate in the West a *bloc* of democratic countries which will be a match for her if she means mischief.

This now rapid process of consolidation on the Fascist Powers' Western front was notably advanced by the declaration which was made in the French Chamber by the Foreign Minister on December 4th:—

"I wish to state," said M. Delbos on this occasion, "that all the forces of France by land, sea and air would be spontaneously and immediately used for the defence of Great Britain against an unprovoked aggression."

No statement could have been more welcome to British ears or more timely in the cause of peace.

Indeed, M. Delbos' statement is manifestly so important that we cannot be content to remain uncertain of its scope. In seeking light on this, we note at a later point in his speech the French Foreign Minister went on to state that the guarantees which he had just given to Great Britain held good for Belgium, too. With this cue to help us, we perceive M. Delbos was phrasing his guarantee in the terms used by Mr Eden on November 27th when, in M. van Zeeland's presence, the British Foreign Secretary re-affirmed that the independence and integrity of Belgium were a vital interest for this nation and that Belgium could count upon our help were she ever the victim of unprovoked aggression.

The striking feature which is common to Mr Eden's guarantee to Belgium and to M. Delbos' guarantee to Great Britain is that their scope is very wide indeed, at any rate to the layman's eye. At first sight, the guarantee is apparently absolute; unconditional either upon renewal of the Locarno Pact or upon prolongation of the present provisional British guarantee to Belgium and France pending an attempt to revive the Locarno Pact on a new basis. Secondly, the guarantee apparently applies to aggression from any quarter, and not merely to aggression on the part of Germany. In the third place, there is no express geographical limitation of the guarantee to the special case of aggression in Europe, as there was at Locarno.

For our part we hope that both Mr Eden's pledge of November 27th and M. Delbos' of December 4th are to be taken as being independent of Locarno, and also as differing from Locarno in being free from any geographical limitation. In concrete terms, we hope that we have bound ourselves to go to Belgium's help if German "volunteers" were to land one day in the Belgian Congo as they have lately been landing in Spain. Similarly we hope that the French have bound themselves to come to our help if Hong-kong were to be bombarded by the Japanese, just as surely as if London were to be bombed by the Germans.

But these declarations arouse several misgivings in our minds. For, as we have repeatedly observed in recent weeks, the European peace to-day is fragile; and no declarations, even if they amount to alliances, can restore to a disintegrating continent the vital cement of a comprehensive

system of collective security against aggression. We see in Spain, we have seen in Abyssinia, a projection of the fate which may be in store for Europe. The only real safeguard against that fate is a system which we all thought the League would provide. The democratic Great Powers of the League have failed to arrest militant dictatorships; and the League has consequently failed as a repository of security. Now come these unilateral declarations, like last-minute expedients before an inevitable catastrophe. It is not "carping criticism" to remark that, if war engulfs Europe—as it surely will in the long run, once it is tolerated, in default of a collective system of resistance to aggression—these declarations will scarcely amount to more than partial military arrangements for the conduct of a war which could not be prevented. That is the supreme danger which faces the three Western democracies to-day. Their solidarity does nothing to prevent war.

Even that solidarity is not equally shared. Belgium's position is anomalous. While it is possible that Great Britain and France may now be going beyond the terms of the Locarno Pact in their commitments to assist one another and also to assist Belgium, it is certain that Belgium will insist on diminishing the commitments by which she is at present bound. At present, Belgium is bound, by the provisional continuation of the Locarno obligations as between Belgium, France and Great Britain, to come to the assistance of France if France were to be the victim of unprovoked aggression on Germany's part. The Belgian Prime Minister, M. van Zeeland, speaking in the Chamber on December 2nd, declared that Belgium would scrupulously fulfil all her obligations under both the Locarno Pact and the League Covenant. But he at once proceeded to limit these obligations in a drastic way. In regard to the Covenant he said that from now onwards, until the terms of the Covenant had been defined and limited, particularly in the matter of Article 16, the Belgians would not accept any interpretation save that which they proposed, in the plenitude of their sovereignty, to give to the Covenant themselves. In regard to Locarno, he pointed out that the present continuation of it on the original terms was only provisional; and he announced that, when a new permanent arrangement came to be negotiated, Belgium would no longer give either to France or to Germany the guarantee to which the Locarno Pact had committed her. Thus, while France is now prepared to give a reciprocal guarantee to Great Britain in exchange for the British guarantee to France, Belgium is only willing to receive French and British guarantees without giving any Belgian counter-guarantee to her own guarantors. This is scarcely a reassuring innovation for Western security. It is a long lapse from the League idea.

Meanwhile, Germany has brought France and Great Britain, at any rate, more closely together to-day than they have been at any date since November 11, 1918. The prospects of Anglo-French solidarity are made still brighter by M. Blum's proven firmness in the saddle. In the division in the French Chamber on December 5th, M. Blum's

foreign policy was approved by 350 votes to 171. While the 72 Communist members of the Popular Front abstained from voting as a protest against the results of the policy of non-intervention in Spain, some 40 members of the Opposition, led by M. Flandin, voted in M. Blum's favour. After the Prime Minister had announced that he was not going to resign, the Communists came to heel. M. Blum's duration in office, together with President Roosevelt's re-election, has given our Western democracy a new chance of showing its mettle. But it has still a long road to travel.

POLICY IN THE STEEL INDUSTRY

TARIFFS, trade recovery and re-armament have jointly effected a spectacular transformation in the fortunes of the British iron and steel industry during the past four years. Lord Greenwood informed the shareholders of Dorman Long last Tuesday that their company had increased its output, in the year to September 30, 1936, as compared with 1932, by 127 per cent. in pig iron, 137 per cent. in steel ingots and 128 per cent. in rolled steel. These figures are reasonably representative of progress in the industry as a whole. If comparison be made, not with the depth of depression but with the relatively prosperous year 1929, the industry's record is still impressive. The total British output of pig iron has this year fully regained its pre-depression level. Production of steel ingots and castings has exceeded the 1929 figure by 19 per cent., and production of finished steel products by 8 per cent. Consumption of finished steel has been as much as 26 per cent. greater than in 1929.

The following table epitomises the changes in the industry during recent momentous years:—

BRITISH IRON AND STEEL TRADE

(Monthly averages in 000's tons)

	1929	1931	1932	1933	1934	1935	1936
Production—							
Pig iron	632.4	314.4	297.8	344.6	497.4	535.5	633.0**
Steel ingots and castings	803.0	435.5	438.5	585.3	737.5	820.2	957.5**
Finished steel products*	635.4	390.1	369.0	433.2	536.5	586.3	685.4*
Imports—							
Pig iron and ferro-alloys	12.8	25.5	12.7	10.1	13.6	10.7	24.2
Semi-products†	82.6	104.2	61.6	26.2	37.9	130.5	52.8†
Finished steel products‡	118.9	91.3	52.8	39.3	56.9	49.2	49.9
Total iron and steel imports§	235.2	237.1	132.8	80.9	113.9	96.0	133.2
Exports—							
Finished steel products¶	277.7	127.6	130.2	124.5	143.5	149.6	135.1
Total iron and steel exports	365.0	164.9	157.3	160.2	187.5	196.8	179.2
Apparent consumption—							
Finished steel products§§	476.6	353.8	291.6	348.0	449.9	485.9	600.2
Index (1929 = 100).....	100	74.3	61.2	73.1	94.5	102.0	126.0

* Excludes tubes, but includes tube strip. † Partly estimated. ‡ Bloms, billets and slabs, sheet and tinplate bars. § Iron bars, rods and angles, steel angles, shapes and sections, wire rods, castings and forgings, girders, beams, joists and pillars, hoop and strip, tubes, pipes and fittings, railway material, plates and sheets, galvanised sheets, tinplates, wire. || Includes also certain other products, such as wire manufacture, screws and bolts, hollowware, etc. ** January-September. †† January-June.

The most striking conclusion suggested by even a cursory glance at these figures is that recovery in home production and consumption has been unaccompanied by any proportionate revival in foreign trade. The industry's total activity to-day is appreciably greater than in 1929, but the volume of total imports and exports remains at about one-half of the pre-depression level. The contemporary boom in British steel is decidedly a domestic phenomenon. Can concentration on home demand be carried to excessive lengths? Should the industry neglect the recent exhortation of the President of the Board of Trade not to overlook its export markets in a rush for home orders? In plain terms, is there a point at which the maintenance of exports of finished products is of greater moment to the industry than the exclusion of imports of semi-finished products?

The importance of these questions can best be appreciated by recapitulating the recent history of the relations between the British steel industry and the International Steel Cartel, of which, last August, Great Britain became a full member for four years after having been a provisional member from August, 1935. The Cartel (whose membership includes the great European steel producers, but not the United States of America) is an export organisation which does not endeavour to regulate production in any way. Its members undertake, in effect, not to compete in each other's home markets imports into which are either regulated by quota or prohibited altogether. The exports of the member countries are regulated by general quotas, sub-divided into special quotas for particular products, which, in turn, are buttressed by separate international syndicates for each product.

Under the original agreement, which was confirmed this year, imports into Great Britain from Cartel countries were limited to 670,000 tons in the year ended August 7, 1936, and to 525,000 tons in each of the four subsequent years. Within a few months of concluding the agreement, the British industry found itself unable to supply a rapidly expanding home market. As early as November, 1935, an extra import quota of 10,000 tons a month was allowed for six months, followed by a temporary increase of 33,000 tons a month last February. These extra import quotas were allowed without even a request for any compensating increase in Great Britain's export quotas in overseas markets. Indeed, the strength of home demand has been such that the industry has not been able to maintain its exports even at the level of 1935.

What reply can the industry make to the charge that, in its relations with the Cartel, it has stressed its home monopoly too much and its export interests too little? It has been urged, in the first place, that the advantages of modern steel-making technique are realisable only when production from pig iron to finished product is fully integrated. Important economies are secured, for example, when coke oven gas, obtained as a by-product of the coke used in making pig iron, is used for heating steel mill furnaces; or when cooling and re-heating is avoided in the intermediate stages between the production of pig iron and steel ingots and of steel ingots and semi-finished or finished products. The scope for such economies, it is argued, may be seriously reduced if imports of raw and semi-finished materials are allowed to come in on a large scale. In the second place, the industry is notoriously subject to cyclical fluctuations. It may be argued that its determination to secure as large a share of the home market as possible is no more than an insurance policy against a crushing increase in the burden of overhead costs, whenever total demand falls off in the future.

These arguments, however, entirely overlook the interest of the consumer, who is already being unfavourably affected by difficulty in obtaining prompt delivery of essential supplies. In some instances—structural steel, for example—delivery is frequently unobtainable in less than six months. Now industrial and commercial developments, consequently, are being retarded; and in some cases consumers are being driven to the use of alternative building materials—such as reinforced concrete—for building in place of steel. How far the Government's re-armament programme has contributed to the present situation is a moot point, though available evidence suggests both that

its effect has so far been less than the public has generally assumed and that it may be much greater in a few months' time when the naval shipbuilding programme, for example, is more fully under way. What is beyond argument, however, is that the quota system, built upon the Cartel agreement, is preventing the occurrence of such a substantial increase in imports as would normally have relieved the present tightness in the domestic market.

There has been, further, an appreciable rise in prices during recent months. Between December, 1933, and October, 1936, the North-East Coast quotations for representative finished steel products have shown the following changes:—

	%
Ship Plates, $\frac{3}{8}$ " and over	+ 7.15
Sheets, $\frac{1}{8}$ " and under (basis)	+18.20
Boiler Plates	+ 9.70
Angles and Sections	+ 7.50
Joists	+ 7.15
Rounds, Squares and Hexagons	+ 6.70
Rails, 60 lbs. and over	No change
Hoops (basis)	- 3.8

The effective rise may have been greater, in some cases, than these figures suggest, since special rebates, granted in earlier years, are less frequently obtainable to-day. Even so, it may be admitted that recent price increases have not been excessive in relation to raw material costs. Iron ore prices, for example, have increased by nearly 25 per cent. and blast-furnace coke has risen even more. It is true that a large part of the coke used for pig-iron manufacture is produced by "mixed" iron and steel concerns. But its increased price is itself largely due to higher coal prices and increased costs generally.

The industry as a whole may therefore claim, with some justice, that its price policy has shown far-sighted moderation. The rise in finished steel prices, however, has not affected all consumers equally. The motor manufacturers, for instance, have loudly protested that by far the largest percentage increase has occurred in thin sheets, from which car bodies are made. They have not been slow to point out that their American competitors are obtaining supplies at substantially lower prices, and they have pertinently inquired whether British steel producers are using their present prosperity as an opportunity to bring their equipment up to the highest possible standard. It is common knowledge that some British mills have been running for twenty to thirty years, and that in certain processes—such as the continuous rolling of wide strip—American practice is still substantially in advance of our own. Many British producers, large and small, are certainly taking advantage of their contemporary ability to raise new capital in ordinary shares, on favourable terms, to extend and modernise their works. But while the most efficient British plant may challenge comparison with anything in America or on the Continent, the same cannot yet be said of British plant as a whole.

It is for the industry itself to consider whether, in its own long-term interests, a rise in exports from their present attenuated level is not desirable. It is for the Government and Parliament, however, to decide whether the case for a relaxation of the present iron and steel tariff arrangements ought not to be examined. Under the arrangements which came into force last month, imports unaccompanied by a quota certificate pay a rate of duty which is, and is meant to be, onerous. But an increase in imports from Cartel countries, at the lower rate of duty, could well be coupled with a claim for corresponding export "concessions," and in this respect the Import Duties Advisory Committee could bring effective pressure to bear on the industry. On March 31st last the Council of the Iron and Steel Federation promised the Board of Trade to use their best endeavours to provide adequate supplies of suitable steel for the reasonable requirements of British consumers, and to make arrangements, if circumstances so required, for the importation of such additional tonnages as the Import Duties Advisory Committee might think necessary. Does the Committee consider that no further increase in supplies is called for? It is hard to resist the conclusion that, at the moment, the consumer rather than the producer has the best claim to "protection."

THE STATE OF RETAIL TRADE

THE Christmas shopping season is now at its height. Shops and department stores are gaily decorated and brightly lighted, though it remains to be seen whether there is still time for business to recover from the damping effect of the constitutional crisis and to realise earlier hopes of a record turnover for any year since 1929. Still, the season is opportunity for a peep behind the counter, to trace the direction of present tendencies in retail trade and their connection with general business activity.

The volume of business in the capital equipment industries fluctuates widely in periods of good and bad trade, but consumption goods industries are much more stable. Most people, having become accustomed to a particular mode of living, are loath to change it. When trade begins to decline and income to fall, they tend to save less, and sometimes even to draw on past savings, rather than to reduce their standard of living. Conversely, during periods of increasing prosperity, they save a larger proportion of their incomes.

Unfortunately, there is little statistical evidence of these changes in the relationship between expenditure on capital and consumption goods. Although the Censuses of Distribution, held in the United States and elsewhere, have yielded valuable information, an investigation in this country, though urged repeatedly, has not yet been undertaken. The proportion of the total national expenditure which passes "over the counter" is undoubtedly very large. In 1933, for example, when the total national income was put at £3,750 millions, estimates of the expenditure on consumption goods varied between £1,500 millions and £2,400 millions. It would seem, therefore, that in that year at least half of the national income was spent on consumption goods.

A broad idea of the relationship between retail trade and general business activity may be derived from a comparison of the *Economist's* index of general business activity with the index of retail trade published by the *Board of Trade Journal*. But since the index of retail trade is not available before 1932, it is impossible to compare the relative movements of retail trade and general business activity during the period of recession from 1929 to 1932. Moreover, while the *Economist's* index measures changes in the volume of general business, the retail index relates to the value of sales. Although the value per unit of retail sales shows marked stability, the absence of a volume index does vitiate comparison over a long period:—

	<i>Economist</i> Index of Business Activity (1935 = 100)	Index of Retail Trade (1935 = 100)
1929	109	...
1930	112	...
1931	96½	...
1932	86½	93
1933	88	92
1934	96	94½
1935	100	100
Jan.-Oct. { 1935	98½	96
{ 1936	105½	103

A comparison of the movements of the two indices yields interesting results. In the first place, recovery of general business activity began in 1932, when the value of retail turnover was still declining. The time-lag between the recovery in general business activity and retail turnover cannot be explained by any single factor. Some time must necessarily elapse before an increase of business activity is reflected in the purchasing power of the public. While part of any rise in expenditure becomes available almost immediately in the form of wage payments, most companies compile their accounts and declare their dividends only at annual intervals. Secondly, many individuals require to be convinced that improvement is not merely a flash in the pan before they are prepared even moderately to increase their expenditure on consumption goods.

Moreover, the improvement in general business activity since 1932 has been somewhat more marked than the rise in retail turnover, especially in the early stages of recovery. If the trend of retail trade is compared with that in the capital equipment industries above, the divergence of the

FOREIGN TRADE

THE DOCUMENTARY CREDIT, whereby the Exporter is assured that he will receive payment immediately his goods are shipped for transit abroad, is the subject-matter of

copies of which may be had by asking at any local branch of the Westminster Bank

WESTMINSTER BANK
LIMITED
41 LOTHBURY, LONDON, E.C.2

movement is much more striking; for general business includes the consumption goods trades. More recently, however, the index of retail trade has risen more rapidly, an indication of increasing employment and general prosperity. To some extent the faster pace in the upward movement of retail turnover is due to the rising trend of prices; but, in the absence of an index of the volume of sales, it is difficult to assess the importance of the price factor.

Further light on changes in the relationship between general business activity and retail trade is obtainable from a comparison of the trend of profits in recent years. These are shown in the next table, which is based on the *Economist's* analysis of industrial profits, covering more than 2,000 public companies. But while the *Economist's* analyses of industrial profits represent a large section of the national economy, they are not comprehensive. For example, the number of shops in this country is about 850,000, whereas the profit analysis includes only about 80 companies, though some of these operate chains of stores. In point of turnover, however, the sample, being based on the larger (and, presumably, the most efficient) concerns, represents a substantial proportion of retail trade:—

INDICES OF GENERAL AND RETAIL BUSINESS PROFITS

Reports published in year ended June 30th	No. of Companies	Total Profits*		Retail Companies "Chain Index" (Year ended June 30, 1930 = 100)	All Companies "Chain Index" (Year ended June 30, 1930 = 100)
		Current Year's Reports	Same Companies, Preceding Year

* After debenture interest.

The indices of general and retail business profits follow the same long-term trend. Between 1924 and 1929, the earnings of retail undertakings tended to increase faster than those of industrial companies in general. Both indices reached their pre-depression peak and their lowest level in the same years. As was to be expected, the fall in retail profits was less marked than the decline in general business profits. This may be ascribed partly to the increased stability of total retail turnover and partly to the movement of prices. During a downward movement of business activity, when prices are declining, profit margins do not necessarily fall proportionately. But during the upward

phase of the trade cycle, when prices are rising, retail establishments frequently find it difficult to pass on to the consumer the increase in cost, especially in the case of "fixed price" goods. The same narrower movement from "low" to "high" is shown in retail trade profits, compared with general industrial profits, as was suggested by our earlier comparison of the value of retail trade with the index of total business activity.

In recent months, the trend of both retail trade and general business activity has been strongly upwards. But the disparity between the increase of activity in the capital equipment and in the consumers' goods trades has widened this year. And the chairmen of many of the larger department and chain store companies continue to complain of the tendency for decreased "margins" to offset the benefits of increased turnover.

INDIA TO-DAY

ALMOST two years have passed since the *Economist* published a special review of the Government's proposed Constitution for the Indian Empire.* Those proposals duly became law in the Government of India Act last year; and within the next four months the first part of the great constitutional reform in the governance of India—autonomous government in the Provinces of British India—will enter into force. Already another step in the constitutional progress of India has been taken; for last week Sir Maurice Gwyer was appointed the first Chief Justice of the new Indian Federal Court, as from next October 1st, the appointed day for the constitution of that Court. Last week, too, special emissaries of the Viceroy started on circuit throughout the Indian States to consult the royal rulers of what is technically non-British India on these Princes' particular problems affecting their accession to the new Federation of India.

Thus, on the threshold of the year 1937, Indians and Englishmen may reckon, in the probable absence of any untoward contingencies, with a swifter functioning of the complete constitutional scheme than they perhaps anticipated when the Government of India Bill became law at Westminster eighteen months ago. It is opportune, therefore, to examine India's problems in their Indian setting on the eve of these great changes; and to that informative purpose we dedicate the "Survey of India To-day" which appears with this issue of the *Economist*.

The reader of that Survey cannot fail to be impressed by several features of India's national structure. First, the vastness of territory and population, on the one hand; on the other, the predominance of agriculture, which supports almost three-quarters of the people. Secondly, despite the striking economic development of Indian communications and domestic industries during the last fifty years, the country's economic potentialities have as yet been scantily realised, both in action and in the imagination of Indians and Englishmen alike. Thirdly, as a by-product of the foregoing facts, the potential demand of India's 350 million inhabitants for better equipment and a higher standard of living is well-nigh illimitable; for the vast majority of these millions live at extremely low standards of living. Again, the country's own resources and its position in the world's markets have enabled it to weather the Great Depression better than many leading countries in the trading world, and far better than smaller countries. Finally, it may well be a good augury for India's future that, despite the size of the country, its great population, and its extremes of climate, economic development, and social composition, it enters upon the year of promise, 1937, with its national finances and balance of payments in good order, healthy foreign trade, unimpeachable credit, and with less domestic tension than for many years past.

Like those British Dominions towards whose status India now makes her biggest stride, India enjoys fiscal autonomy, and, as in the Dominions, fiscal autonomy in India since its advent in 1921 has meant tariff

* February 2, 1935.

protection of domestic industries. This process can be purchased at high costs when the bulk of the people stand in need of even the barest necessities of life. It has also been developed during the period of Great Britain's post-war industrial difficulties and of Japan's industrial advance into world markets. India stands between the West and the Far East. To the former she owes the annual services of her State and commercial debt, and from it she must continue to seek fresh capital to develop her great economic resources for the welfare of her patient millions. From the East she cannot get capital, but she can get the amazingly cheap products of highly organised Japanese capital and labour. Here is a kind of watershed of Indian interests, which is charted in our Survey.

Again, largely owing to the poverty of India's people, the Central Budget has to depend either on the indirect taxes in the customs tariff or else on excise duties for the bulk of its revenue; and the Provincial Budgets have to depend on land tax or other indirect taxes. The conflicting economic and social interests so aroused are discussed at length in the Survey. Moreover, agriculture, the mainstay of most of the population, is extremely primitive, lacking adequate modern equipment, and handicapped by insufficient water supplies—another fruitful field for Western capital and the industrial products it can place at the Indian agriculturist's, or agricultural co-operative's, disposal. Thus, India's agricultural, industrial, and foreign trade problems are narrowly linked with those of her national finances, social structure, and domestic economic development.

By dint of wise and able financial counsel from successive Finance Members, India's Central Budgets have been virtually balanced throughout the depression, which reduced the values of India's primary products exports as much as those of any primary-producing country. The Budget has shown a surplus in many years, and shows one to-day. But this happy result has only been obtained by removing from the purview of the Central Budget an extremely vexatious problem, and one common to many countries, whether highly industrialised or not: that of the railways' finances. The contributions which the national railways should have made to the Budget have had to be loaned ever since the trough of depression was reached; and these loans now overhang the future of both the national finances and of the railways themselves. Moreover, India, like other countries, now finds competition with the railways developing in the Provinces, where road services are progressing. This problem has occupied Indian and English special commissioners for some years; and, as we show in our Survey, is on the way to a solution. Nevertheless, and apart from the railway revenue, the Budget has other problems: e.g. the search for yields other than those which of necessity, either through customs or excise, must press upon the vast mass of a poor population. Moreover, as much as 50 per cent. of Central expenditure must go to maintain the armed forces in so extensive a territory; and, after this is increased by expenditure on railways, debt service, and civil service, barely a sixth remains for ameliorative social services and civil works. These and allied problems are fully discussed throughout our review.

The new Indian Constitution will be inaugurated at a time when world commodity prices are rising, when the leading currencies seem to have been co-operatively placed on a basis promising a certain stability in the future, when the Ottawa Agreements are about to come up for detailed examination, and when—as President Roosevelt and Mr Secretary Cordell Hull reminded us last week—the trading world stands in need of reductions in the barriers to trade erected in the depression, and of an increased volume of international commerce. If, as is suggested in our Survey, the gold efflux from India may soon come to an end, India will have to expand her foreign trade to maintain her balance of international payments.

Finally, a word remains to be said on the political prospects attendant on the introduction of the new Constitution. The Congress Party, which has just re-elected Pandit Jawaharlal Nehru its leader, is pledged to enter the Provincial electoral lists; and it is to be hoped that its members will co-operate from the outset in proving Indians capable of shouldering the responsibilities now offered to

them, without engaging in tactics born of mistrust. On the other hand, the Princes have yet to accede before Federation comes into sight; and upon them, too, rests a responsibility for the future of their country and its people which they can assume with goodwill. Finally, upon British shoulders—in Whitehall, but much more so in the Provinces and at the refashioned Centre—rests a great responsibility: that of showing steady tact and a patient wisdom in negotiating the shoals and narrows through which India's new statecraft must pass during 1937. Behind them, in reserve, they still have a residue of plenary power; but they must be cautious and slow in drawing upon it at the outset of a delicate mission. If these three constitutional partners in a great new enterprise co-operate with vigour and efficacy, the India of to-morrow may look back with gratitude, from a more prosperous future, on the work of her own people to-day and on the labours of those who, for two centuries, have played no small part in her social and economic progress.

KING AND CONSTITUTION

THE King's decision to abdicate raises a new and tangled set of constitutional problems which claim urgent attention. It is, therefore, important to review the constitutional events that led up to that decision; for the future of the British Commonwealth and of democratic monarchy may turn on the lessons to be drawn from them. Edward VIII has not abdicated on constitutional advice from his Ministers, nor because any formal obstruction had yet been placed in the way of his marrying as he wished. Concerning the King's marriage, the bare law seems to be simple: unlike other members of the Royal Family, he is subject only to the ordinary law of the land, except that he may not marry a Papist. There can, however, be no doubt that King Edward came to his decision because he realised the ultimate implications of the Cabinet's advice against the introduction of the legislation he desired.

There is no established constitutional limit to the right of Ministers to advise the King on any action or proposed action of his which they consider of public importance. Clearly, the King's marriage is of public importance, not only because his bride necessarily becomes Queen Consort, but also because of the far-reaching example set by his attitude towards what many of his subjects regard as a sacrament. Then, is the King bound to accept the Government's advice? Some of the conventions and precedents on the relations between Crown and Ministers are too recent for a categorical answer. What is beyond doubt is that if a Government has its advice rejected by the King it may (and will, if it has faith in itself) resign office, throwing upon others the responsibility for advising the King differently and for meeting Parliament or country in defence of their policy. In that event the King must summon other advisers. He is conventionally bound to ask the Leader of the Opposition or (if the Government has not lost parliamentary confidence) a person designated by the outgoing Prime Minister to form a Government. If these choices fail, he may go elsewhere for his Prime Minister. But whoever forms the Government must run the gauntlet of parliamentary vote, or else demand a dissolution and appeal to the country. If in the end the Government cannot command a majority in Parliament, there is no course open to the King but to comply with the original advice, or possibly abdicate. In brief, the authority of an elected Parliament is in the last resort supreme, no matter what the bare law may be concerning the Royal prerogative.

The King was presumably aware of the grave hazards, both to his own position and to the status of the monarchy, that would be involved in marrying the woman of his choice and making her Queen. In that sense, no constitutional clash actually arose between King and Cabinet. In his formal approach to the Prime Minister, His Majesty did not go beyond seeking—and accepting—advice on his own suggestion to bar his proposed partner from the queenly throne and any issue of the marriage from the royal succession. Here another set of

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

considerations came into play, namely the equal status of the Dominions with the United Kingdom. The Statute of Westminster, the charter of Dominion status, declared the Crown to be "the symbol of the free association of the members of the British Commonwealth of Nations." They own the institution of the Crown equally and severally. Their Governments are entitled to give direct and independent advice to the King on matters affecting them, and he is just as much bound to accept that advice as if it came from United Kingdom Ministers with regard to United Kingdom affairs. What happens if conflicting advice is given to the King by his different Governments on a matter concerning them all is a problem for which no legal solution was propounded by the Statute of Westminster. Briefly, the alternatives would seem to be: compromise, if the question at issue allowed it; or submission of the minority of Commonwealth Governments to the will of the majority; or a veto on any positive action; or secession of the dissentient or dissentients from the Commonwealth.

Concerning one set of issues, however, the Statute of Westminster, or rather the preamble to the Statute, made it clear which of those alternatives was to hold. "Any alteration of the law touching the Succession to the Throne or the Royal Style and Titles shall hereafter require the assent as well of the Parliaments of all of the Dominions as of the Parliament of the United Kingdom." The rule is not, therefore, that any such alteration holds good only in those self-governing parts of the Commonwealth which adopt it, but that it holds good *nowhere* in the Commonwealth till all the self-governing members have unanimously concurred in it.

Thus, even if the United Kingdom Government had been willing to accept His Majesty's suggestion of a morganatic marriage, this Commonwealth convention would have prevented the necessary alteration of the law from going through had even a single Dominion objected. It is true that from the strictly legal point of view the convention is not impregnable. The preamble to an Act has not the force of law. All that the actual text of the Statute of Westminster says to the point is that no Act of Parliament of the United Kingdom shall be law in any Dominion unless the measure itself expressly declares that that Dominion has requested and consented to its enactment. This section does not apply to Australia or New Zealand, who have not yet adopted the Statute, although they could do so on their own motion at any time.

This legalistic argument, however, is only a loop-hole, not a back-door of escape. For how could the succession to the Commonwealth Throne be different in one part of His Majesty's Dominions from the rest? To insist on passing legislation affecting the Crown over the positive objection of a Dominion, even if it would not be good law in that Dominion, would be tantamount to inviting it to secede from the Commonwealth. In such circumstances a repeal of the Statute of Westminster, which is another theoretical loop-hole open, would have an equally damaging effect. In the event the Bill introduced into the Imperial

Parliament on Thursday evening to give effect to King Edward's abdication records in its preamble that the Dominions of Canada, Australia, New Zealand and South Africa have "requested and consented." As for the Irish Free State, Mr de Valera is reported to have stated that the abdication will not take effect in that Dominion until legislation has been enacted by Dail Eireann. But might not the Irish Free State Government refuse to assume responsibility for such legislation on the ground that it would be a positive acknowledgment of the sovereignty of the King in Southern Ireland? In that case, the terms of the Statute of Westminster would prevent the legislation from applying to the Irish Free State (i.e. Edward VIII would still be King there), but the lawyers would probably agree that the will of the rest of the Commonwealth would not be thus frustrated. The effect, on the other hand, would virtually be to detach the Free State from the common allegiance, and therefore from the Commonwealth connection.

Speculation on such possibilities as these, however, is premature. It is more relevant to enquire what will be the nature of the legislation required to give effect to the new

regime. In the first place, the Act of Settlement must be amended so as to rule out the possibility that Edward VIII might at some future date put forward a claim to the succession which might be deemed to be still valid despite his Deed of Abdication. Secondly, measures will be necessary to ensure that the children of the new King, rather than those of the outgoing monarch, are heirs to the throne. It may not even be clear, in the absence of special legislation, whether King Edward is even now in a position to carry out the marriage which he contemplates. *Prima facie*, the right to approve the marriage will rest with the new monarch; but there is no reason to presume that this consent will be withheld. Finally, certain consequential legislation of a financial character will be required, in view of the fact that King Edward VIII will no longer enjoy the Civil List allocation to the Crown; nor can he claim under the present Civil List any specific appropriation. He has renounced the revenues of the Duchy of Cornwall with that Dukedom, which, as the new King has no son, now vests in the Crown. Accordingly, it will be for Parliament to decide what funds shall be appropriated for King Edward's use.

NOTES OF THE WEEK

King Edward's Abdication Message.—The following message from King Edward VIII was read by the Speaker in the House of Commons shortly before four o'clock on Thursday, December 10th:—

After long and anxious consideration I have determined to renounce the Throne to which I succeeded on the death of My Father, and I am now communicating this, My final and irrevocable decision.

Realising as I do the gravity of this step, I can only hope that I shall have the understanding of My peoples in the decision I have taken and the reasons which have led Me to take it.

I will not enter now into My private feelings, but I would beg that it should be remembered that the burden which constantly rests upon the shoulders of a Sovereign is so heavy that it can only be borne in circumstances different from those in which I now find Myself.

I conceive that I am not overlooking the duty that rests on Me to place in the forefront the public interest, when I declare that I am conscious that I can no longer discharge this heavy task with efficiency or with satisfaction to Myself.

I have accordingly this morning executed an Instrument of Abdication in the terms following:

"I, Edward the Eighth of Great Britain, Ireland and the Dominions beyond the Seas, King, Emperor of India, do hereby declare My irrevocable determination to renounce the Throne for Myself and for My descendants, and My desire that effect should be given to this Instrument of Abdication immediately.

"In token whereof I have hereunto set My hand this tenth day of December, nineteen hundred and thirty-six, in the presence of the witnesses whose signatures are subscribed.—
(Signed) EDWARD R.I."

My execution of this Instrument has been witnessed by My three brothers, Their Royal Highnesses The Duke of York, the Duke of Gloucester and the Duke of Kent.

I deeply appreciate the spirit which has actuated the appeals which have been made to Me to take a different decision, and I have, before reaching My final determination, most fully pondered over them.

But My mind is made up. Moreover, further delay cannot but be most injurious to the peoples whom I have tried to serve as Prince of Wales and as King and whose future happiness and prosperity are the constant wish of My heart.

I take My leave of them in the confident hope that the course which I have thought it right to follow is that which is best for the stability of the Throne and Empire, and the happiness of My peoples.

I am deeply sensible of the consideration which they have always extended to Me, both before and after My accession to the Throne, and which I know they will extend in full measure to My successor.

I am most anxious that there should be no delay of any kind in giving effect to the Instrument which I have executed and that all necessary steps should be taken immediately to secure that My lawful successor, My brother, His Royal Highness the Duke of York, should ascend the Throne.

EDWARD R.I.

Mr Baldwin's Speech.—Immediately after the reading of King Edward's message, Mr Baldwin, on a motion for its consideration by the House, described the series of conversations between the King and himself which had preceded His Majesty's decision. On Tuesday, October 20th, the Prime Minister, disturbed by a perusal of articles in the overseas press, obtained, on his own initiative and without prior consultation with his Ministerial colleagues, an interview with the King. As a trusted personal friend, he dwelt upon the indispensability of maintaining the integrity of the Crown—"the last link of Empire"—and the danger of its impairment if publicity, following the divorce proceedings then pending, produced factional dissensions among the King's subjects. Mr Baldwin subsequently reported the substance of this interview to "about four" of his "senior colleagues." A second interview took place on November 16th, after Mrs Simpson had obtained her decree nisi. The Prime Minister declared his conviction that a marriage with that lady would be "impracticable," but the King maintained his firm determination in the words (quoted by Mr Baldwin on Thursday, with the King's authority): "I am going to marry Mrs. Simpson and I am prepared to go." On the same evening, the King informed Queen Mary of his decision, and in the course of the next three days he conveyed his intention, similarly, to his three brothers. On November 28th, the King again sent for Mr Baldwin, and asked for his formal examination of the suggestion that the King should marry and that Parliament should pass an Act enabling the lady to be the King's wife without the position of Queen. By December 2nd, the Prime Minister's discussions with the Cabinet and with the Dominions had gone so far that, at an interview arranged at the King's request, Mr Baldwin was able to assure the King that there was no prospect of acceptance of the proposed legislation. The King, thus left with the choice between abandoning marriage, or accepting the inevitable implications of the proposed marriage, had made the decision communicated to the House that day.

The Dominions and the Monarchy.—The reactions of the various Dominion Governments and elected representatives to the monarchical problem have been almost identical. King Edward VIII was popular in the Dominions. The King is King of each Dominion separately; and their Governments have the right to approach him directly. It is noteworthy, however, that the Dominions' High Commissioners in London, representing their Governments, have not approached the King directly. They have been in consultation only with the English Cabinet leaders; while these latter have been in frequent communication, ever since the outbreak of the difference between the

English Cabinet and the Monarch, with the Prime Ministers of the Dominions. In all of the Dominions, the opinion of the people has been against a royal marriage which would automatically make Mrs Simpson Queen. But as the King asked that legislation should be introduced specially to deprive his Consort of the title and appurtenances of Queen, the political will of Dominion peoples, Cabinets and Parliaments became involved. Up to last week-end there was a certain body of Dominion opinion—in all save Ireland—in favour of allowing the King to marry the woman he liked, at whatever legislative and even constitutional cost. But on and after last Friday, the gravity of the implications of this course began to be examined and described in Dominion journals of all shades of political opinion. In Ireland, very naturally, the crisis was taken as a Heaven-sent opportunity not to comply with the Crown's wishes, or else not to recognise a new monarch if abdication were decided. (In that case, Ireland alone might veto in every Dominion the new Bill to alter the succession!) These aspects are discussed in our special article on the constitutional aspects on page 513. As to the other Dominions, the Australian Prime Minister, Mr Lyons, convened Parliament for Wednesday of this week, and informed Mr Baldwin on Sunday that the Australian Government would fully support the British Cabinet in its actions. The Australian Parliament duly met, and, after a short speech from the Prime Minister on the lines of Mr Baldwin's statement on Monday, the leader of the Opposition, Mr Curtin, in a striking speech, said that he and his colleagues believed that the King should be left free to choose his Consort, but that the Opposition objected to either King or Parliament conferring on the woman of his choice a status lower than that of Queen. "The King must accept the full responsibility to his conscience and the Empire . . . We will not interfere with him, but we will not convenience him." He ended with professions of loyalty to King Edward, and expressed the desire that he would remain on the throne. The Lang faction of Labour attempted to stage a demonstration in favour of a King whom they said was "staunch to the masses"; but it failed miserably. In Canada and South Africa no statements have been made; but the Press is wholly against Government legislation for the marriage.

The Special Areas.—A further reluctant step forward has now been taken by the Government in its efforts to alleviate the distress in the Special Areas. The existing Special Areas Act had been included in the Expiring Laws Continuance Bill, and the passing of the Bill in this form would have implied the continuation of the Government's present admittedly inadequate policy. The Labour Party consequently wished to exclude the Special Areas Act from the Bill altogether, and Lord Wolmer (Conservative) moved another amendment limiting the continuance of the Act to May 31, 1937. This amendment was accepted by the Government. A pledge was also given by Mr Ernest Brown that an amended Act would be introduced soon after Christmas, but no indication was given what the Act would contain. It may be hoped that this time a really effective programme will be adopted. For after Mr Malcolm Stewart's report there is no longer the slightest doubt either of the necessity for a new policy or of the form it should take. Three main changes are necessary: first, the grant of substantial financial concessions to firms coming to the Special Areas; secondly, the removal of some of the administrative restrictions on the Commissioner; thirdly, the initiation of certain major public works schemes closely associated with the areas, such as the Severn Bridge scheme. There is no valid reason why a comprehensive Bill of this kind should not be introduced as soon as the House re-assembles after Christmas.

The Franco-British Mediation Move.—As we go to press, the Spanish Government's indictment of Italy and Germany for taking hostile action against a legitimate Government with whom they are nominally still at peace, is coming before the Council of the League of Nations at Geneva. But, through no fault of the League itself, what happens there is likely to be less important than the suc-

cess or failure of simultaneous moves in other fields. The most important of these other moves is the joint approach which (as we now know) was made as far back as December 4th, by the French and British Governments to the Italian, German, Portuguese and Russian Governments to ask for their co-operation in bringing the Spanish civil war to an end. There are two separate items in this attempt at mediation. First, the four totalitarian Governments are requested to join with the two democratic Governments

in declaring their absolute determination to renounce strictly all direct or indirect action which might be calculated to lead to foreign intervention in the conflict, and, as a consequence, to address to their representatives on the London Committee appropriate instructions with a view to the organisation of a fully effective control.

This is a negative duty which rests directly upon the shoulders of all members of the Non-Intervention Committee. The second request is more positive and constructive. Perhaps for that very reason, it may be even more difficult to obtain genuine compliance with it. It is that the four Powers should join the two "in an endeavour to put an end to the armed conflict in Spain by means of an offer of mediation with the object of enabling Spain to give united expression to its national will." This Franco-British move for a truce and a plebiscite in Spain may be taken to mean that the French and British Governments are at last becoming more seriously concerned to see that the professed purpose of the Non-Intervention Committee is really achieved. We may suspect that, when they first organised the Committee, their main object was neither to end the civil war nor even to stop intervention, but merely to take care that, if intervention did continue, it should only produce results in the unfortunate country that was already being torn to pieces by native factions, and should not, whatever happened, result in a general war between the intervening Powers. The cynicism of this original Franco-British policy is now threatening to defeat itself, as all the critics predicted. The two Governments are now tardily seeking to act up to their professions for fear that worse may befall. What chance have they of succeeding? There is perhaps a faint gleam of hope in the action taken by the London Committee on Wednesday. The representatives of the three Fascist Powers were then induced to go at any rate to the length of forwarding to their respective Governments (without prejudice) a report submitted by the British Chairman on the question of indirect intervention with special reference to volunteers. Russia has already signified her will to agree if the Fascist Powers will do so, and if the isolation of the Spanish conflict can really be made effective. This does represent a certain concession on the Fascist Powers' part, since, for military reasons which we discuss in the following note, the Fascists do not now want to stop the flow of volunteers to Spain.

European War in Spain.—By the time this issue of the *Economist* is published, General Franco's supreme effort to take Madrid by assault will probably be in full swing. His latest reinforcements of German and Italian "volunteers" have now had time to reach the Madrid front; and the successful pressure of the legitimists' diversions on other fronts—particularly their thrust from the north toward Burgos—is forcing Franco to seek an early decision. Indeed, if he consumes all his existing strength in this supreme effort, his position may become not only serious but even desperate. Apart from the Government forces' rapid approach to the rear of his northern headquarters, he is threatened with a breach in his long and tenuous line of communication between the Madrid front and Seville. In fact, a reverse on the Madrid front now might involve Franco and Mola and Queipo de Llano in 1936 in the fate that overtook Denikin, Kolchak and Wrangel in 1920. The Russian precedent is unfortunately by no means conclusive in the present Spanish case. The main reason why the reactionary minded French and British Governments gave up the game in Russia in 1920 was that they were no longer able to cajole two war-weary democracies into waging a war after the war for the purpose of setting the Russian Humpty-Dumpty up on his wall again and keeping him there. But the

German and Italian Governments, which are backing Franco in Spain, have not to reckon with any democratic opposition on the home front. They can dispose as they choose of subjects who have been either cowed or fanaticised into doing and dying without asking the reason why. These subjects, so far from being war-weary, are more inclined to be peace-weary under the burden of a dictatorial peace which is imposing the worst privations of war-time upon the civilian population without one laurel or one thrill to console them. Perhaps these propaganda considerations would not be decisive if the strategical situation were not so singularly favourable to Italy and Germany and unfavourable to Russia. To grasp this situation, we must look far beyond Madrid and Burgos and Talavera; for the Spanish war-zone really embraces the whole of Europe. The essential fact is that, owing to their naval command of the Mediterranean and the Baltic respectively, the Germans and Italians can stop the Russians sending men and supplies to the Spanish Government, while they themselves can go on sending men and supplies to Franco without the Russians being able to interfere. In the Italo-German war against Russia in Spain, geography is not on Russia's side.

* * *

Disaster at Croydon.—The worst flying fatality in England occurred on Wednesday morning. Within a few seconds of leaving the aerodrome in thick mist, a Dutch (K.L.M.) passenger machine, with thirteen passengers and a crew of four, crashed into the houses of a road a mile from the aerodrome, appropriately named Hillcrest Road. Twelve passengers, including Señor Don Juan de la Cierva, inventor of the autogiro, Admiral Lindman, former Prime Minister of Sweden, and Baron Meyern-Hohenburg, an Austrian, perished in the crash and the fire, which immediately enveloped the machine and the last house it struck. The pilot and mechanic were also killed; and only one passenger, the stewardess and wireless operator have survived. The disaster was not due to fog alone; for it is now normal practice to leave the aerodrome in thick fog—as all machines can do on the Continent and in America wherever wireless "beam" directional apparatus is installed. If a machine leaves in fog without this aid, the locality round the aerodrome should be such as to allow sufficient margin for slight deviations in flight, due to wind or compass deviation, while the necessary height is being gained by a heavily loaded commercial machine. In the present case, the American Douglas machine was sound; neither motor failed; a good take-off was made; and the machine was flying normally. Why, then, the disaster? It seems that the topography of Croydon, coupled with the absence of wireless blind-flying apparatus, was the cause. If the latter had been available, the pilot could not have deviated from the wireless beam's direction without an automatic warning to correct his course. The Westerham-Chatham-Croydon sector is marred with a long trail of fatal crashes in recent years, most of which have occurred in mist or rainy weather. But, secondly, this disaster emphasises the risks of using Croydon aerodrome for aerial navigation, save in the clearest of weather, or else with complete equipment of machines and ground service for blind-flying. Many pilots dislike using Croydon; on a clear day the approaches are difficult, because of the segmented valleys and hill-ranges of the North Downs; on a misty day it is really hard to find. In the present instance, there was no wind into which the pilot would normally have taken off. The "white line" for direction was accordingly put into position; but, owing to fog, the pilot was probably unable to pick the line up again after an initial slight deviation. The locality of the aerodrome then defeated him. The rise from the dangerous side of the aerodrome to the houses on Purley Hills was too steep to enable him to gain adequate height without the extra "lift" which a wind would have provided. This is the second fatal crash in England, within a few weeks, which might have been averted if blind-flying apparatus had been in use; but it is hard to resist the conclusion that the site of Croydon aerodrome involves undeniable risks.

M. Blum's Progress.—Despite some shocks M. Blum and his Cabinet have, if anything, increased their prestige during the past week. A brush with the Communists over foreign policy was followed by the successful passing of the Press Bill with a very large majority. For a few moments on Saturday night it seemed that M. Blum might resign. He had explicitly made the vote on Spanish policy a matter of confidence; and the Communists, whose opposition to the "non-intervention" policy is unabated, refrained from voting. To avoid a political crisis, however, which would create "perplexity and confusion," M. Blum decided to remain in office. It was clear from the debate, and from the subsequent speech of M. Joubaux, the trade union leader, that very great uneasiness about the "non-intervention" policy, defended by M. Blum as necessary to preserve peace, prevails throughout the French Left. After making their protest, however, the Communists have again shown a keen desire to preserve the Popular Front; and on home policy they remain at one with the Government. The Press Bill, therefore, which penalises the publication of false news, compels publicity for newspaper accounts, and strengthens the effectiveness of the libel law, was passed by the Chamber on Tuesday with a majority of 359 votes to 193. Undoubtedly M. Blum showed wisdom in refusing to resign after the foreign policy debate. Most of the vital reforms desired by the Popular Front are now passed; devaluation has been successfully achieved; and economic recovery is well on the way. Even the Budget problem, M. Blum's next hurdle, is now no longer insoluble, thanks to devaluation and incipient recovery. Europe stands much in need of a demonstration that democratic Governments can give first reform and then stability. If M. Blum now sticks relentlessly to his post he ought to be able to give it.

* * *

The New Soviet Constitution.—The new Soviet Constitution was adopted article by article by acclamation, and without dissent, by an extra-ordinary congress of Soviets at Moscow. The document nominally affects the lives of 160 million people; it has therefore to be taken seriously. Yet Russia is notoriously a country in which legal theory throws little light on political practice; and this is one of several salient features of the Russian social tradition that has been handed down intact from the Czars to the Communist Party (even under Czarism there was no official death penalty in the penal code!). Perhaps the dominant motive in M. Stalin's mind is a desire to convince the democracies of the Western World that the Soviet Union is now becoming a "normal" country with which it will be possible for the Western peoples to enter into friendly relations without laying themselves under the reproach of supping with the Devil. In other words, the promulgation of the new Soviet Constitution is a kind of counter-propaganda to the German-Japanese campaign for selling (in the American sense) the Bolshevik bogey to the Western World. And no doubt this counter-propaganda, like most propaganda, has a certain basis in fact. There is an accumulating mass of evidence which goes to show that the Soviet Union is now passing out of a revolutionary into a more conservative phase. Nevertheless, there is no sign of a drift towards "democracy" or the *bourgeoisie*, in our sense of those words. It is reported that, on Sunday, the Congress listened in unfriendly silence to the recitation of the articles guaranteeing freedom of conscience, freedom of religion, worship, inviolability of the person and the home, and secrecy of correspondence, while they applauded the articles making certain provisions for social service. Russia is thus still travelling her own peculiar road. Of the few amendments that were made on Sunday before the draft was adopted, the most important was an amendment to Article 49, which lays down the conditions under which the Presidium of the Supreme Council (i.e. the Cabinet of the new Soviet Parliament) is to declare war. The first draft read "in the event of an armed attack on the U.S.S.R."; and this has now been supplemented with the words: "or in case of the necessity arising to fulfil her international obligations for common defence against aggression." The addition is indeed important.

Business and the Crisis.—The upward movement of the trade cycle has reached a phase during which confidence in the future is easily upset by any untoward event and when any serious development might easily give rise to a recession. Thus, the uncertainty over the constitutional issue last week caused a fairly sharp decline in quotations on the Stock Exchange. This, in turn, has led to a noticeable reduction in retail purchases of high-class goods. But as uncertainty has now been removed with the accession of the Duke of York to the Throne, confidence is expected to recover. If the Coronation takes place around the date originally indicated, the damage done to trade is likely to be relatively small, though manufacturers may sustain losses on specific goods, particularly the many articles prepared for the Coronation bearing King Edward's name and likeness. But the sale of impersonal articles, such as flags and bunting, are not likely to be affected. Similarly, there are no grounds for expecting that the great influx into London anticipated next year will not take place. In fact, there is no reason why business should not resume its previous trend.

* * *

The Price of Bacon.—Our plea a fortnight ago for the relaxation of the restrictions on the importation of bacon is reinforced this week in a report by the Food Council to the President of the Board of Trade. Examining the effects of the Pigs and Bacon Marketing Schemes on the consumer, the Council mention complaints by retailers against the high level of wholesale prices resulting from the operation of the import quota. They also point out that the quota restrictions have tended to increase the proportion of higher grades imported; and are apparently aware of the obvious corollary that those who can afford only the cheapest bacon have frequently had to go without altogether. Nevertheless, the Council reach the surprising conclusion that "from the consumer's point of view the retail prices do not appear to be unreasonable." To us the quota restrictions, with their burden on the consumer, appear to be demonstrably unreasonable at the present time; for the pig producers in this country are now having to be cajoled and bullied into supporting their own marketing scheme. Although the terms of the 1937 contract are appreciably more favourable to the farmer than those of previous years, the whole structure of the Pigs and Bacon Marketing Schemes is in danger of collapse because the farmers cannot be induced to offer sufficient pigs on contract for 1937. At a specially convened meeting on December 2nd, the Pigs Board decided to extend the date for receipt of contracts until Monday next, in the hope than an additional 400,000 pigs, required to bring the total contracts up to 2,200,000, will be forthcoming. If the producers do not respond to this appeal, the Bacon Board may pass a resolution declaring the contract void. We have therefore arrived at the farcical situation in which the consumers' interests are being damaged by the restriction of imports, undertaken to bolster up a marketing scheme which the producers will not support. Surely Alice in all her adventures in Wonderland found few situations more ridiculous than this?

* * *

Shipping in the Pacific.—Last June the Imperial Shipping Committee was asked to report on the condition of existing and proposed shipping services for passengers and cargo between Western Canada and Australia-New Zealand. It had been claimed that British services were being crowded off the Pacific by foreign subsidised ships, and that if the Empire were to maintain its status it too must give subsidies. The Committee's report has just been published. Existing trans-Pacific services are run by the Canadian-Australian Line, Ltd. (a subsidiary of the Canadian Pacific Railway Company, and at one remove of the Peninsular and Oriental Company), the Union Royal Mail Line, and the Matson Line, an American company. Since 1900 non-American ships have been excluded from the coastwise trade between Hawaii and the United States, and the Matson Line has therefore been given a lead over its competitors, and has also had the benefit of Government

assistance in building two new ships in 1932, and of a Government subsidy for carrying mail. Prior to 1931 the old Matson vessels carried less than one-fifth of the through passenger traffic, while the new ships carry three-fifths. Passenger traffic has seasonal one-way peaks, north in the northern summer, south in the southern; cargo traffic is very heavily one way in all seasons, since Canadian exports to Australia and New Zealand are treble the imports, and since a very large part of the imports travel *via* the Panama. The Committee review the proposal to build two new fast ships, able if necessary to improve on the standards of service set by the Americans. These new ships would replace the four ships of the two Empire lines now in operation. The Committee are of the opinion that there is sufficient improvement in traffic in sight to make it possible to run such ships at an operating profit, granted the existing mail revenue, but "think it unlikely that the earnings of the proposed new ships could cover their operating and capital costs." It is to be surmised therefore that before long we shall find the relevant Governments being pressed to give financial aid for building the ships. Subsidy calleth unto subsidy!

* * *

Increased Demand for Shipping.—As the world's mercantile shipping tonnage was considerably reduced during the depression, the increasing demand for carrying space this year has been reflected in a sharp upward movement of freight rates. Our index of shipping freights for November shows a rise of no less than 17½ per cent. over the corresponding figure a year ago. The improvement this year has been so rapid that our index has practically recovered to the 1929 level. In view of the shortage of tonnage in early positions, the past month has witnessed a further sharp increase in rates. The current position, moreover, indicates that the rise in freight rates may continue. The persistence of the shipping strike in the United States, however, is causing some dislocation:—

(1898-1913 = 100)

	Average 1913	Nov., 1935	Sept., 1936	Oct., 1936	Nov., 1936
European waters.....	110.0	103.2	102.2	113.0	126.1
North America	113.1	87.7	95.0	96.8	100.1
South America	123.4	86.4	93.4	102.6	102.9
India	106.3	109.7	108.3	110.6	123.1
Far East and Pacific	117.4	94.9	104.0	109.1	113.5
Australia	127.9	91.7	98.8	103.6	108.6
Total	116.3	95.6	100.3	105.9	112.4
1913 = 100	100.0	82.2	86.2	91.1	96.6

As the next table shows, the rise in freight rates during November has been very great on a number of routes.

the Pact should not entail interferences in French internal policy. A new Cabinet of this sort might possibly obtain results, all the more so as it would reconsider certain unhappy measures, such as the tax on gold "profits," which hampers the return of capital. It might also combine a maintenance of the social laws with more "authority" in factories. Such a Cabinet is a probability for the day after to-morrow. Is it also for to-morrow? That is less sure.

After the abstention of the Communists, M. Blum pointed out that he had not been overthrown by the Chamber, and that the majority in the Chamber had to be considered before other objectives such as the cohesion of the Popular Front. He therefore decided that the existing grave international situation made it a duty to remain in office. Moreover, the Communists afterwards declared that "all was well with the Popular Front," and the trade unions re-affirmed their fidelity to the Cabinet. A conference of Communist and Socialist delegates was also concluded with a new declaration of co-operation for the application of the Rassemblement Populaire programme.

These events have great political significance. The Communists, after having been disarmed by the social laws, did not dare to make a stand on the unpopular issue of intervention in Spain. After having launched their troops on this field, however, they had at least to abstain from voting. They were beaten by the shift of the Government majority, and also by the decision of M. Blum to play the parliamentary game by remaining in office. But the necessity for the Communists to maintain their troops will induce them to seek another battlefield. Much will depend on the wisdom of the Opposition, and also on the success of the measures which the Minister of Finance is to take to aid business recovery.

SLOW RETURN OF CAPITAL

The next task of Parliament will be the voting of the Budget. This might still be achieved in due time—i.e. before the end of the year—if the Chamber adopts an emergency procedure: the voting of the credits by Ministries. It is possible, moreover, that other important decisions will be taken in the interests of the Treasury. The money market has already become easier since devaluation as a result of the rise in prices and the increase of activity on the markets. But dishoarding, as well as the return of exported capital, has been hampered by the tax on gold and certain measures of an inquisitorial character, which have rendered the public very suspicious about the banks. The "Rentés" are almost at the same levels as before devaluation. This is serious for a Government which has to issue loans at a rate of about 2,500 million francs a month after January 1st, particularly during the first six months of low fiscal receipts. These circumstances undoubtedly explain the persistent rumours on the market that the Government intends to accept the 4,000 million francs of "Baby Bonds" (which were issued on the eve of the devaluation) and perhaps also the gold certificates (which were delivered to dishoarders of gold by the Bank of France the day after the devaluation) at their full value in "Poincaré francs" in subscription to a new loan. There is also the long-proposed reform of credit machinery and the planned introduction of an open-market policy designed to nurse the market for Rentés.

Meanwhile, an agreement has been signed between the Government and the Crédit Foncier—the big land bank—in order to lower the rate of interest on existing loans to local authorities and on advances on private property. A sum of 3,000 million francs has been taken out of the profit on the revaluation of the gold stock of the Bank of France and advanced at 2 per cent. to the Crédit Foncier. Of this, 2,500 million francs will be applied to loans to local authorities, in order to accelerate the public works programme. The remaining 500 million francs is to be lent on mortgage to small owners. It is, however, too small, if compared to the great amount of mortgaged property (many thousands of millions), to have a serious effect on the building industry.

The social legislation has entailed two important new decisions this week. The forty-hour week law (which entered into force on November 1st in the coal and potash industry, and on December 1st in the metal industries) will

be applied to the building industry from December 21st and the textile industry from January 1, 1937.

The latest statistics show that the output of the steel industry reached in November the highest level for five years, with 623,000 tons, against 545,000 tons in September and 557,000 tons in October, 1935. The output of pig iron was 551,000 tons in November, the highest for three years, with the exception of May last. This increase of production results partly from demand for armaments and public works orders, but also from orders by private manufacturers who expect a new rise in prices.

PARIS, December 10.

GERMANY

NAZI ATTACK ON CAPITALISM

THE Reich's 4½ per cent. Treasury bond issue was over-subscribed, and in consequence the total of the loan has been raised from the originally announced Rm. 500 millions to Rm. 600 millions. This satisfactory result is considered to indicate an improvement in the capital market and an increase in public confidence.

The official and Party attitude towards capital and property, however, remains ambiguous. The director of the Nazi Commission for Economic Policy, Herr Köhler, has made a sharp attack on capitalism, declaring that there could be no worse, no more disadvantageous, system. Capitalism, said Herr Köhler, does not conduce to the increase of national wealth. He added that the demand for capital for the Four-Year Plan would be smaller than many persons believed. The Government had a system of "popular-economic" reckoning which was superior to the capitalistic. It seems, from other Party utterances, that while unqualified capitalism is vicious there is a "true Capitalism" which is desirable; but this seems to be a matter of definition. Herr Köhler complains that Germany has been a victim of "monstrous exploitation" by foreigners. This view is now heard daily, and appears even in supposedly objective reports on economic conditions. Even the Reich Finance Minister finds that foreign "unreason" is responsible for the present troubles.

The position of capitalists is not altogether pleasant. Last week the property of thirty-nine citizens was confiscated on political grounds. Under a new decree property can be sequestrated and put under a sort of bankruptcy receivership, if suspicion arises that the owner designs to remove it from the Reich. Grounds for suspicion would lie if considerable assets were suddenly realised for cash. The business undertakings of suspects are to be conducted under control, and their monetary receipts paid into blocked accounts. Suspected persons may also be restricted in their choice of residence.

The German national income in 1936 is officially estimated at between Rm. 61,000 millions and Rm. 62,000 millions, as against Rm. 57,300 millions in 1935 and Rm. 46,500 millions in 1933. For 1936 no details have been issued. The separate sources of income in 1935 were (in million Rm.): salaries and wages, 32,230; agriculture, 5,600; industry and trade, 7,425; unearned income, 2,523; rents from real estate, 810; and pensions, etc., 7,670. Much the greatest percentage increase since the depression has been in agriculture, the income of which in 1932 was only Rm. 3,858 millions. Wages and salaries in 1932 totalled Rm. 25,711 millions. The increases of rents and of unearned income have been small, and the item pensions, etc., has fallen from Rm. 9,282 millions in 1932.

After suspension for two years, official figures of the balance of foreign payments for the years 1934 and 1935 have been issued. The new figures, being mere tables without the customary textual comments, reveal very little. Some of the separate figures (e.g. the foreign trade payments) differ substantially from official data already published. The tables show that on current account (that is, foreign trade, shipping and services, and service of debt) in-payments in 1935 fell below out-payments by Rm. 102 millions, as against a shortage of Rm. 534 millions in 1934 and a surplus of Rm. 132 millions in 1933. These results naturally accord roughly with the foreign-trade account,

which was active in 1933, passive in 1934, and again active in 1935 (for some unknown reason the new balance shows a small import surplus in 1935). The development of shipping and services was, on the whole, satisfactory; the net active balance was Rm. 451 millions in 1935 and Rm. 464 millions in 1934, as against Rm. 313 millions in 1933. The greatest improvement is under Travel (excluding shipping), the net receipt from which rose fourfold between 1933 and 1935, when it reached nearly Rm. 200 millions.

Without the debt-service payments the current payments accounts would of course have shown surpluses in all three years. Why, even with the debt-service payments, there was a deficit of Rm. 102 millions in 1935, is not clear. According to official figures published earlier this year the debt-service payments proper in 1935 totalled Rm. 250 millions. In the new balances of payments (contrary to rule) the debt-service payments are not separately shown. Instead, there appears for 1935 the large item of Rm. 650 millions as out-payments for "interest, dividends, etc." This item contains not only the Rm. 250 millions debt payments, but also Rm. 400 millions of recurring payments for other purposes. What this last sum consisted of, is not clear either. The movements of the Reichsbank's reserves and of capital and credits are also returned in an inexplicable way. The sums shown as lost to the Reichsbank's reserves in both 1935 and 1934 considerably exceed the figures given in the Reichsbank's own returns (indeed the return for 1935 shows a slight increase in the reserves).

Equilibrium on the whole account is shown as having been attained by means of an increase in the short-term debt. After declining by Rm. 747 millions in 1933, this debt rose in 1934 by Rm. 510 millions, and in 1935 by Rm. 260 millions. The new short-term indebtedness in the main represents advance payments for German goods, and must therefore have been considerably reduced out of this year's substantial export surplus. The biggest active item in the whole account during the last two years was shipping and Services, net in-takings from which were 50 per cent. higher than in the pre-crisis years 1927 and 1928.

RIISING PRICES AND FAT SHORTAGE

The wholesale price index for December 2 was 104.7 and showed sharp rises for agricultural products and industrial raw materials. The general veto on price advances above the level of October 18th has naturally proved impracticable. The first exceptions made are for metals and imported goods. It is now explained that price-stabilisation is not a dogma but merely a principle. The Government has itself sharply raised the prices of liquid fuels by increasing the import duties and the internal tax. Tank prices will be raised by about 9 per cent. The official Press warns the public that the new substitute materials will be considerably dearer than those imported, and that a shortage of necessities will prevail. For fats a virtual ration-card system has been introduced, or rather extended. This method of rationing was instituted two years back by allowing the poorer classes of consumers to purchase State-subsidised margarine. The price reduction was 25 pfennings per metric pound. The ration of such State-subsidised margarine has been raised from 12 to 20 pounds a year; and a new class of consumers, who are not quite so poor, will be entitled to purchase 14 pounds. Without a card margarine may not be purchased by anyone. Butter retail purchases have been cut down all round by 20 per cent.

In connection with the Four-Year Plan a law has been issued compelling persons with mining and mineral rights or licences to exploit them and in case of suspension to resume exploitation. Mining operations already under way may not be suspended without official permission.

The industrial position has changed little. Christmas trade seems to be better than last year. The steel syndicates report that "in addition to the heavy internal demand there is a noticeable increase in the direct and indirect export of nearly all products." In view of the home shortage, which it has been necessary to counter by postponing certain classes of constructions, the increase in steel exports can only be explained by currency considerations. In October gross exports were the highest for several years,

and owing to the stagnation of imports net exports were just double those of 1934. Machine-tool exports rose by nearly 80 per cent.

The Minister of Communications announces that the privately-owned railways will be taken over gradually by the Reich Railways Company. These private railways have a total length of some 4,500 kilometres. The Minister of Economy declares that gold clauses, hitherto inserted in loan and other contracts in order to ensure against loss from currency depreciation, are henceforth superfluous. Money rates fell after the turn of the month, but this week there was a new stiffening in connection with the income-tax demand. The circulation of Gold Discount Bank promissory notes rose in November from Rm. 406 millions to Rm. 463 millions, which is less than was expected.

BERLIN, December 9.

HOLLAND

BENEFICIAL EFFECTS OF DEVALUATION

THE effects of the devaluation of the guilder are already showing themselves very distinctly. The consequences so far perceptible are all favourable, and detrimental effects such as advancing retail prices and an enhanced cost of living have not appeared. The index of wholesale prices advanced from 62.6 for September to 68.2 for October (1926-30 = 100); but retail prices, and especially those of food, remained practically unchanged. In these circumstances, social unrest and strikes need not be feared.

There is also a decided increase in the port traffic at Rotterdam and Amsterdam. Devaluation has been of great influence on port charges, and in some cases the rates for the port of Rotterdam now work out lower than those applying in Antwerp:—

	Rotterdam		Antwerp	
	Number of Ships	Net Tonnage	Number of Ships	Net Tonnage
September, 1936	927	1,575,491	1,017	2,002,009
October, 1936	970	1,680,841	1,027	2,005,473
November, 1936	1,007	1,715,215	957	1,991,343
Total since January 1, 1936	10,485	18,107,406	10,463	20,995,447

The figures for Antwerp give the net tonnage calculated by the Belgian method. To make these comparable with the Rotterdam figures, they should be reduced by 18 per cent., which would make the total traffic for Antwerp 17,216,267 tons.

In the large towns such as Amsterdam and Rotterdam there has even been a drop in the number of unemployed, although the normal seasonal trend is upward. Unemployment in the towns has moved as follows:—

Places of:	End August		End September		End October	
	August	September	October	August	September	October
More than 100,000 inhabitants ...	164,113	167,505	163,697	164,113	167,505	163,697
50,000 to 100,000 inhabitants ...	51,733	53,549	52,093	51,733	53,549	52,093

This decline in the number of unemployed in the towns is contrary to the movement last year, when the figure at the end of October was higher than at the end of September.

Aggregate unemployment throughout the country actually shows a further seasonal increase, according to the official returns of the Central Statistical Bureau, but the increase is very slight in comparison with previous years, as will be seen from the following table.

BRITANNIC ASSURANCE COMPANY LIMITED

(Established 1866)
 Annual Income : : : : £6,200,000
 Funds : : : : £26,000,000
 All classes of Life, Fire, Accident, Motor and General Insurances transacted
 Chief Office: BROAD STREET CORNER, BIRMINGHAM

UNEMPLOYMENT IN HOLLAND

	1934	1935	1936
End August	302,100	353,100	381,427
End September	309,600	366,000	390,091
End October	328,900	381,900	394,444

From these figures it is obvious that there has been a decided change for the better.

The foreign trade returns also make a satisfactory showing. Both in weight and value, imports and exports increased in October. Imports increased from 1,750,000 tons (value 81,845,000 guilders) in September to 1,894,000 tons (value 92,288,000 guilders) in October; and exports from 1,111,000 tons (value 17,796,000 guilders) in September to 1,354,000 tons (75,375,000 guilders) in October. Imports thus rose to a greater extent than exports in value; but the rise is by no means as large as might have been expected in view of the depreciation of the currency. In September and October Dutch imports usually rise by several million guilders:—

(Excluding gold and silver)						
	IMPORTS			EXPORTS		
	(In million guilders)					
	1934	1935	1936	1934	1935	1936
January	100	76	79	56	55	50
February	81	70	74	51	51	50
March	94	80	79	61	54	55
April	85	78	81	54	50	57
May	87	78	76	57	58	53
June	89	73	77	57	51	53
July	86	76	80	58	54	60
August	87	76	82	69	61	63
September ...	78	76	82	69	59	72
October	87	95	93	62	70	75
November ...	88	86		60	80	
December ...	75	73		56	52	

The Government has announced its intention of modifying and augmenting existing commercial legislation. There is no question of the mere abolition of quota restrictions. The responsible Minister made the following statement in the Second Chamber a few days ago:—

The object of the Government's commercial policy is to provide means of protection and defence for imports and exports. Up to 1933 we were committed to most-favoured-nation agreements, but now we have the weapon of quota restrictions, although admittedly it is not a powerful weapon. Import duties are more useful for the protection of industry than for negotiation purposes. Judging by the present state of affairs, it will not be possible for the time to withdraw any quota restrictions. If it is necessary, an aggressive commercial policy will be pursued.

The Government has also decided to prohibit all imports of foreign sugar, and Java sugar is to be imported instead.

In the financial markets the beneficial consequence of devaluation are just as apparent. Holland is maintaining a "floating" currency, tied neither to sterling nor gold. This does not mean that she is averse to international currency stabilisation. On the contrary, so soon as England decides to revert to gold, Holland will certainly not lag behind.

The liquidity of the Amsterdam money market is still increasing, owing to the operations of the Equalisation Fund, which is supporting the sterling rate. In consequence, the guilder rate is fluctuating within very narrow limits, despite the extensive repatriation of capital. Private discount rates have already declined to $\frac{3}{4}$ per cent., call money to $\frac{1}{2}$ per cent. and the prolongation rate to $1\frac{1}{2}$ per cent. On December 3rd Bank rate was reduced to 2 per cent.

Activity on the new issue market has also been brisk. Numerous conversion loans are being launched, but the issue of several 3 $\frac{1}{2}$ per cent. municipal loans failed to attract much attention. The 3 per cent. 20-year State loan of 100 million guilders at 9 $\frac{5}{8}$ was issued with great success. Interest on mortgage bonds has improved, too, and is gradually falling to 3 $\frac{1}{4}$ per cent., so that mortgage rates should follow automatically. In November, 1936, the amount actually placed on the new issue market was 130,535,000 guilders (consisting entirely of bonds and debentures), against 48,546,000 guilders in October, 1936.

ROTTERDAM, December 3.

U.S.S.R.

THE GERMAN-JAPANESE PACT

THE special Congress of Soviets, convened ostensibly to ratify the new constitution, served chiefly to outline the internal and external position of Soviet Russia. The constitution became incidental, after M. Stalin had disposed of it in an opening speech. He abruptly dismissed most of the 14,000 proposed revisions of the published draft, and approved only two noteworthy changes: the direct election of the Council of Nationalities, the second chamber of the Supreme Council, which somewhat resembles Western Parliaments; and the creation of a new commissariat of Defence Industry (armaments).

The three-cornered German-Japanese-Italian agreements occupied first attention. M. Litvinov and M. Molotov, chairman of the Council of Commissars, made it clear that Moscow interprets these agreements as military alliances designed to facilitate territorial changes in Europe and Asia. They declared that the Soviet will continue to co-operate with all countries desiring peace, through the League of Nations or otherwise. But M. Molotov added: "To tell the honest truth, we believe only in our own forces to defend the interests of peace and of our own peaceful labour."

The Japanese already have lost something by the new alliance and it is difficult to see what they have gained. The Soviet Government had initialled a fisheries agreement very favourable to the Japanese, but refused to sign it after the German agreement had been disclosed. They are unlikely to sign it in its present form, despite renewed Japanese pressure in the form of "border incidents" along the Manchurian frontiers. These are actually pitched battles in which the Japanese apparently have fared none too well.

The Bolsheviks, themselves adepts in devising formulæ, recognise the cleverness of the "common front against the Communist International," for which Moscow always has disclaimed responsibility. M. Molotov may have been thinking of the Comintern when he said: "We are completely absorbed in our internal affairs. We are steadfastly pursuing the policy of non-interference in the internal affairs of other states." M. Litvinov explained at greater length that Fascism, rather than Communism, now seeks to implant itself forcibly in other countries. In Spain, he declared, "we have the first considerable sally of Fascism beyond its borders." The Spanish conflict, he said, represents an attempt to "force upon the Spanish people from without a Fascist Government." If this attempt were to succeed, he added, there would be no guarantees against its repetition on a wider scale in relation to other States.

"PATRIOTISM VERGING ON CHAUVINISM"

Patriotism verging upon chauvinism marked many speeches at the Congress. The delegates cheered themselves hoarse at references to the power of the Red Army, the Fleet and the Air Force. The latter was officially declared to have more than 7,000 planes, and to be the "finest in the world in quantity, quality and spirit." Cossacks and Tartars, Mongolians, Koreans and Arctic tribesmen, aroused the delegates to frenzy by their declarations that they would "fight to the last drop of their blood" in defence of the "Socialist Fatherland." The delegates were assured that their country "undoubtedly is now the most powerful in the world."

M. Stalin, making his first full-length formal speech in four years, avoided such appeals to emotion, and talked with a poise uncommon among modern dictators. Millions gathered in factories, offices and clubs to hear broadcasts of his speech. In simple language he traced the course of political and economic evolution in Russia since 1924, when the first Union constitution was adopted. In these 12 years, he explained, individual ownership of the "means of production and distribution" had been abolished, with the exception of 1,980,000 individual peasant plots, which represent three per cent. of the agricultural economy. By removing the economic basis for "exploitation of man by man," M. Stalin concluded, the Soviets had achieved Karl Marx's "first phase of Communism," or Socialism, and are now in a position to drive ahead toward full Communism, under which it will be possible to apply the formula: From

each according to his ability, to each according to his need. Stalin's right-hand man at Leningrad, M. Zhdanov, ventured the opinion that the present generation would live to see full Communism achieved in Russia.

The success of the cotton harvest in Central Asia is considered a major triumph for 1936; the yield exceeded 2,000,000 tons, compared with 900,000 tons in 1933. Soviet Russia has become practically self-sufficient in raw cotton. The quality of the yield also is said to be much improved. To attain the record harvest, the Government "nationalised" raw cotton in Uzbekistan. Individual possession of raw cotton after the harvest became a criminal offence; a decree stated that "every gramme of cotton must be delivered to the State." This drastic action practically wiped out the Central Asian cotton handicraft industry.

The Commissar of Agriculture, M. Chernov, has published interesting figures of average land-holdings. More than 80 per cent. of the arable land is cultivated by 250,000 collective farms, covering 288,750,000 acres. The average collective, holding 1,155 acres and 70 households, provides individual shares of 16.5 acres, as compared with 11.5 acres for the remaining individual peasant household. With the land thus distributed, it is apparent that "levelling" has become more of a reality among peasants than among urban workers. The best-paid among the latter receive 100 or even 200 times as much as the poorest-paid. The most prosperous peasants, with the land so well distributed, are not likely to receive three or four times more than those with poorer land.

MOSCOW, December 1.

CHINA

CO-OPERATION BETWEEN CANTON AND HONGKONG

THE Entente Cordiale between Canton and Hongkong has now been consolidated. The call paid in Canton by the Governor of Hongkong on Generalissimo Chiang Kai-Shek during October was returned early this month by the chairman of the Kwangtung Provincial Council, General Huang Mu Sang, and the Mayor of Canton, Mr Tseng Yang Fu, who, accompanied by three colleagues, spent two days in Hongkong. They were joined on the second day by a party of eighteen representatives of commercial and banking associations of Canton, and an extensive series of functions was arranged in their honour. There was, of course, a considerable amount of speech-making, with "co-operation" as the main theme, but, as Sir Andrew Caldecott pointed out, "you cannot have co-operation without mutual understanding."

The general impression is that the visit has done immense good in bringing face to face the leaders of the two interdependent commercial centres of South China. From the British point of view it is encouraging to find that General Huang is no War Lord. He was a contemporary of Chiang Kai-Shek at the Imperial Military College, Tokyo. But he has the advantage over his distinguished leader in having travelled widely, and besides making tours through America, England and Germany, he served as China's principal delegate at the Disarmament Conference in Geneva.

The Mayor, Mr Tseng, is a comparatively young man. He is a graduate of Pittsburgh University, and after holding various administrative posts under the Nanking Government, was Vice-Minister of Railways and Communications before assuming his present office. In the course of the recent festivities Mr Tseng emphasised the need for foreign assistance in carrying out his ideas for the economic development of Canton and the Province of Kwangtung; and he invited foreign investment, particularly from Hongkong. He also referred to the scheme for developing the port of Whampoa, a scheme which has seized the imagination of many of his predecessors but without attracting the serious consideration of foreign investors. Although the Mayor believes that the creation of a deep-sea port at Whampoa will be of great advantage to South China, the

general opinion is that the cost of dredging a silt-laden river will be enormous, and that nature has provided at Hongkong all that South China requires in the way of a port of transshipment for ocean-going vessels. Mr Tseng appeared to speak with feeling in acknowledging China's indebtedness to Great Britain for support of the currency stabilisation scheme and the promise of assistance from the export credits guarantee scheme.

STEADY BUSINESS IMPROVEMENT

The Hongkong trade statistics for the first nine months of 1936 reflect a steady improvement in business, and although the equivalent values in sterling are well below the level of 1935 there is no doubt that lost ground is being recovered. The following tables compare the Hongkong trade figures for the first nine months of this year with those of the three preceding years:—

	IMPORTS			
	1933	1934	1935	1936
	(\$ millions)			
Merchandise.....	381	302	271	319
Treasure	26	48	28	25
Total	407	350	299	344
EXPORTS				
Merchandise.....	307	237	199	245
Treasure	103	86	129	132
Total	410	323	328	377

An aeroplane mail service was inaugurated on November 5th between Canton, Hongkong and Shanghai. The machines are owned by the Chinese National Airways Corporation and call here three times a week in each direction. Communication with Shanghai and the Northern ports is now a matter of hours instead of days, and the facilities provide connection with all the various air routes over China as well as with French Indo-China.

The opening of the through railway service between Hankow and Canton seems to have been premature, as insufficient time has been allowed for the settlement of the track; and the line has been blocked on several occasions. Unfortunately the movement of troops has practically monopolised the new railway, and serious accidents have occurred as a result of overloading rolling stock. However, it is to be hoped that military demands will be ended as soon as the armies concerned have returned to their usual headquarters, and the railway administration may then be able to finish off the new track and organise a normal service.

HONGKONG, November 20.

CANADA

BALANCED BUDGET IN SIGHT

JANUARY 14th has been fixed as the date for the reopening of the Federal Parliament, and in announcing it Mr Mackenzie King declared that he saw no reason why its work should not be completed in three and a half months in time to permit a representative delegation of the Cabinet and both Houses to attend the Coronation ceremonies. This intimation is interpreted as indicating that the sessional programme will contain little controversial legislation. But, if the Cabinet, which has been lately devoting a good deal of time to the proposals for the revision of the Anglo-Canadian fiscal agreement, manages to complete a bargain with the British Government, the resulting tariff changes will almost certainly have to be included in the coming Budget; and it is highly unlikely that they will please everybody.

In his Budget speech, however, the Minister of Finance will have a much more cheerful tale to unfold; as in the first seven months of the present fiscal year, revenue, at \$267,614,147, is up by \$40 $\frac{1}{2}$ millions and expenditures down by \$5 $\frac{1}{2}$ millions. This means that the net improvement in the Budget position is already \$45 $\frac{1}{2}$ millions; and the Minister of National Revenue proclaims that a balanced Budget is now in sight.

Ministers are expected in the coming session to produce

some sort of special defence programme; and considerable controversy has developed about it between two schools of thought. One wants to confine any plans to measures affecting solely the defence of Canada's coasts, and the other favours a more ambitious programme which would enable Canada to co-operate overseas with the other partners of the Commonwealth. There has been heavy speculation in the stocks of companies which would profit by a large armament programme or by orders for munitions from Great Britain.

The Dominion Government has decided on a reorganisation of the Governmental machinery for regulating the transportation activities of the Dominion. The existing Federal Railway Commission is to be abolished, and there is to be created a New Transport Commission, equipped with very wide powers, which will exercise supervision not merely over railways, telegraph and telephone services, now regulated by the Railway Commission, but over civil aviation, canals and possibly road transport.

TEXTILE INDUSTRY SCANDALS

Mr Justice Turgeon, who with the authority of a Royal Commission has been investigating the textile industry of Canada, is nearing the completion of his hearings. The textile companies must be bitterly regretting the action of one of their number, which by closing down a rayon plant last year as a protest against the terms of the settlement of the trade war with Japan, impelled the Government to launch the present investigation. The evidence, dragged reluctantly at the hearings out of the executives of the textile companies by counsel for the Commission, is a long tale of hidden reserves, of stock splits to obscure the actuality of earnings, of tax evasions, of deplorably low wages for many workers, and of large, or at least comfortable, profits being made at periods when the manufacturers were lamenting that the protection given them was grossly inadequate. In the case of one prominent company, Canadian Cottons, Ltd., evidence forwarded by Mr Justice Turgeon to the Department of National Revenue has resulted in a summary demand for the payment of about half a million dollars of income tax, whose evasion had been achieved by a subtle plan of marking down inventories to create a secret reserve. Altogether the inquiry has shown the textile companies in a very unfavourable light; and the report which will follow is expected to put a formidable weapon in the hands of the advocates of lower tariffs.

The level of business operations has been rising in very encouraging fashion; and the general economic index of the Bureau of Statistics, which stood at 109.4 on October 31st, had climbed to 111.8 for the week ending November 14th:—

Week ending—	Car-loadings	Wholesale Prices	Bank Clearings	Economic Index
November 16, 1935	67.4	72.6	77.7	97.8
October 31, 1936	74.9	76.8	93.9	109.4
November 7, 1936	73.5	76.8	94.0	110.7
November 14, 1936	73.4	76.8	90.4	111.8

The sharp rise has been partly due to a brisk stock market boom which has caused the indices concerned with stocks to mount. But both manufacturers and merchants report a satisfactory inflow of orders, and the level of retail trade is estimated to be about 10 per cent. higher than it was a year ago. Following the example set in the United States, there have been increases of wages and dividends by various corporations, and storekeepers are making preparations for the heaviest Christmas trade for some years. The increased purchasing power of the rural communities, even in the prairie country, is now becoming manifest; and business is only backward in Alberta, where it is suffering from the uncertainties created by the financial and other policies of the Social Credit Ministry. In the West the wheat crop is being rapidly marketed, although prices have for the time being ceased to rise. On November 20th visible stocks of Canadian wheat had been reduced to 135,925,525 bushels, compared with 265,086,891 bushels recorded on the parallel date in 1935.

In the industrial field most firms are well supplied with orders for the winter. Although the textile companies are nervous about the disclosures of the Turgeon Commission, they are evidently not expecting any immediate curtail-

ment of business, as their imports of raw materials have been increasing; for example, imports of raw cotton in October amounted to 16,542,791 lbs., compared with 9,262,674 lbs. in September and 10,770,453 lbs. in October, 1935. The prosperity and expansion of the mining industry is unchecked, and the rise in the price of base metals is greatly helping the mines. In the first ten months of 1936 the gold mines of Ontario alone had an output valued at \$66,213,602, compared with a value of \$61,178,172 in the parallel period of 1935. The rises in the stock market value of the shares of some mines has been phenomenal; in June the stock of the O'Brien mine (\$1 par) was selling around 50 cents, and yesterday it sold at \$13.

Further moves have lately been made affecting the fortunes of Price Bros., the well-known newsprint corporation, which has been in liquidation for some years. Until recently it looked as if Pacona, Ltd., a company formed by the Duke Mellon and Lehmann interests of the United States, which had acquired possession of practically all the outstanding first bonds, would come into possession of all the properties of the company; but now it is announced that a syndicate headed by the Royal Securities Corporation of Montreal, and including Kitcat Aitken and Company, of London, W. C. Pitfield and Company, of Montreal, and Wood Gundy and Company, of Toronto, have underwritten an issue of \$20,000,000 worth of new bonds and \$4,268,000 worth of 20-year convertible 4 per cent. debentures. The object of the new scheme is to enable the junior security holders to preserve their equities.

OTTAWA, December 1.

LETTER TO THE EDITOR

BRITISH MONETARY POLICY

TO THE EDITOR OF THE ECONOMIST

SIR,—It was with great interest that I read the symposium on "British Monetary Policy" in recent numbers of the *Economist*. I think that it is not only the British people who have to be grateful to you for having arranged this inquiry among prominent British economists, but that all other countries are interested in this discussion as well. It seems to me that although your questions were put in a most appropriate way, the problem has not been fully covered.

I am of the opinion that in solving the problem which an eventual boom will constitute, the political and not the economic factors will determine the action of the responsible authorities. There seems to be ample reason to believe that a Government, facing the necessity to stop a menacing boom, will lack not only the courage but the political power to act according to the rules of modern economic theory. Furthermore, it is to be feared that even if the boom should be checked deliberately, the Government would soon be compelled to fight against the following unavoidable deflation by organising public works on such a large scale that not merely would the designed re-adjustment not be attained, but a new inflationary movement would be started. A large part of public works undertaken to ease unemployment does not concern self-supporting enterprises. They therefore add little to the wealth of a nation, nor does rearmament, which necessarily does not enrich a country but impoverishes it. If the national wealth is reduced by spending money in this way, the ultimate consequences must injure the currency.

The answers received from the economists you have consulted show clearly that a real boom must arise in the long run if money rates are kept low. It seems that the views of Mr Keynes are governing British monetary policy more than those of any other English economist. For the moment the danger of a boom may seem somewhat remote; but the problem will not be facilitated by the inclination of the British Government to finance at least part of re-armament by loans, contrary to the advice given by the five economists. Public works, too, will probably be kept to the necessary extent; and although international trade is rising, I do not think that exports will in the near future absorb the remaining unemployment. On the contrary, if prices and costs of living are rising, the opportunities before British exporters must diminish. Therefore, the internal character of the trade cycle will unfortunately be preserved. On the other hand, there is little hope of offsetting the effects of an eventual internal deflation by reinforcing exports.

Further, the British trade balance shows a growing deficit, since the internal recovery surpasses by far the recovery of world trade. This deficit is actually being met by invisible exports and revenue from overseas investment. But is there not a danger that sterling will not stand the combined strain of the trade balance on the one side and the undervalued dollar on

the other? What will happen when the trade balance deteriorates further in the middle of a real boom. No doubt, the present flow of capital to the United States will cease some time, even in the near future, if Mr Roosevelt succeeds in keeping his country clear of further "hot money," or if a sudden break occurs on the New York Stock Exchange, which would induce foreign capital to withdraw. But is such a development in sight? It seems, on the contrary, that our political uncertainties are still a powerful factor in swelling this flow of European capital, British included. Now is the British Government prepared to meet a further outflow of capital, attracted to the United States by the hope of gainful investment and better political security, by raising money rates which would mean an interruption of recovery even before a boom occurs?

I am of the opinion that the "shoulds" and "oughts" which were expressed in the symposium by the five economists will not prove to be practicable to the necessary extent, owing to political and social reasons as well as circumstances which are not under the control, at least not to their full extent, of the will of the British Government. This does not mean that I am thoroughly pessimistic about the possibilities of combating a boom; also no boom will continue endlessly. The opinion of Mr Keynes to-day still lacks confirmation by events. But I think there is to-day no Government which would not do all it could to avoid a new deflation; the only alternative is a new devaluation which would ignore the claims that wage-earners are not willing to give up deliberately. For by devaluing the currency purchasing power would be reduced in order that the trade balance might come into equilibrium again.

There is ample reason to believe that the present unfavourable British trade balance will not endanger the stability of sterling

now or in the near future, at least as long as the outflow of money to the United States does not grow. But the danger will be imminent as soon as a real boom occurs. The strain on sterling then arising cannot, as I believe, be eased by deflation; on the contrary a more or less deliberate devaluation must follow. This may be the concern of a rather remote future; but I fear that when such grave decisions are called for there is little chance that the measures which the five eminent economists prescribe will be followed.

There remains one further question: the present strain on sterling exerted by the undervalued dollar. I am of the opinion that it should be the task not of British monetary policy but of the monetary policy of the United States to ease this pressure; for the present flow of money into the United States must be considered as a proof of the undervaluation of the dollar. This undervaluation could be corrected by a new devaluation of sterling and all currencies linked to it; but nobody seriously proposes such a possibility, since it would disturb the whole world. Another much simpler solution would be so to revalue the dollar as to bring dollar and sterling into effective equilibrium. The task of the currency authorities in all other countries would be thus made easier.

Unfortunately, these considerations are of only theoretical value, as there is little prospect that the Government of the United States will act in this way. Moreover, there seems to be no danger, or at least not an imminent one, either for sterling or for any other of the principal currencies, provided that the present flow of capital to the United States is not accentuated sharply.

Zurich.

Yours faithfully,
WERNER BÄR.

BOOKS AND PUBLICATIONS

REALISTIC ECONOMICS*

MR MEADE'S object in this book is to set out in intelligible form the main body of assured economic principles, as it has emerged from the experience and discussion of the last ten years. He succeeds in a very remarkable, and in some respects unique, degree. If there is any book from which the interested layman or amateur economist can easily and enjoyably assimilate the more important and concrete conclusions of modern economic reasoning, it is assuredly this. Mr. Meade has not only a thorough understanding of the more recent and abstruse economic controversies, but also—which is rare, indeed, among academic writers—a conspicuous talent for lucid and unambiguous exposition.

To read Mr Meade's book is to realise the terrible extent to which economic text-books have suffered in the past from two unrealistic assumptions: first the assumption that all the available resources of production are normally fully employed; and secondly the assumption that "perfect competition" prevails throughout the greater part of the real business world. Mr Meade, in accordance with the recent trend of economics, makes neither of these assumptions. Indeed, he specifically assumes that unemployment or under-employment of labour and capital, and a greater or lesser degree of "imperfect competition," actually predominates in the real world. This at once gives his book a realistic atmosphere which will dispel the feeling experienced by the layman in reading most economic text-books that what he is reading about has no ascertainable connection with any visible world.

Mr Meade starts with the assumption that general unemployment exists throughout the economic system. This brings him at once to the problems of over-capacity and of deficiencies in purchasing power, and to the various familiar perplexities raised by Major C. H. Douglas and others. He clears up, simply and intelligibly, the controversy about divergences between saving and investment, and he discusses with admirable balance the parts to be played by banking policy, public works, and direct Governmental control of investment and consumption in the task of combating depressions and maintaining full employment.

Next Mr Meade explains the meaning of "perfect competition," analyses its advantages and disadvantages, and proceeds to a similar estimate of the significance of imperfect competition. Here, Mr Meade writes with quite

exceptional clarity: and those who wish to appreciate the important new developments of economic theory that have followed the recent work of Mrs Robinson and others should at least read this part of Mr Meade's book. They will conclude from reading it that economic theory has been brought into far closer relation with the facts of the business world by the discussions of recent years.

Finally, Mr Meade considers the distribution of income, the possibilities of re-distributive taxation, the supply of the primary factors of production, and the whole group of international economic problems connected with the gold standard and the international movement of trade and capital. On this last group of problems he has perhaps less to say that is new to the instructed layman; but he writes none the less with consistent clarity and good sense.

One can but hope that Mr Meade's book will have a wide circulation, and that our future rulers will begin the study of economics by reading and inwardly digesting it.

BUSINESS DIARIES

FOR 1937

EFFICIENCY IS
THE KEYNOTE!

THE CALENDIARY — With Perpetual Calendar on Cover
"The Date at your elbow!" Here is the solution to your date problem, the day's date on your diary cover for quick reference, and changed with a touch of the finger. Made in 2 sizes, strong cloth binding. Diary of high quality, ruled faint with cash columns. Also valuable information. Fools-cap from 6/6, Quarto from 6/6. Postage 6d. extra.

The EIGHTEEN MONTHS POCKET DIARY FOR PUBLIC SPEAKERS, Directors, Secretaries, and all people making forward appointments. A week-in-an-opening Diary, and at the end an additional six months, January to June, 1938, with seven days to a page, for recording forward appointments. Made in two sizes for the pocket, bound in leather, at 2/6, 3/- and 3/6

Obtainable at all Stationers and Stores, or from

LETTS QUIKREF DIARIES LTD. 160 Shaftesbury Avenue LONDON W.C.2

* "An Introduction to Economic Analysis and Policy." By J. E. Meade. 388 pages. 10s.

SHORTER NOTICES

"Alternative to Re-armament." By Jonathan Griffin. London: Macmillan. 215 pages. 6s.

Mr Jonathan Griffin has written a careful, well-documented, stimulating little book. He is concerned to devise an alternative to unilateral re-armament as a defence policy for this country; but an alternative which will not prove provocative to potential aggressors, and which will both permit of co-ordinated international limitation of armaments and a high degree of collective security from any wanton aggressor. Mr Griffin shows convincingly that British defence policy confined to Western Europe (Locarno region) is now out of date and dangerous; it does not save the West in the long run; it stimulates war preparations in other parts of Europe; these react on British, French, Belgian policies, armaments, etc.; and in the end the spiral of armaments goes on rising.

His solution is that advocated by him in an earlier book: an international air force of bombers, maintained at a superior level to the combined forces of all countries outside a collective defence agreement. This agreement must be virtually all-European; national contributions of machines and finance will need to be co-ordinated; the international force would be split and stationed at many points. Mr Griffin surely underestimates the strategical dangers attending the force itself: it would be an invitation to the aggressor; control of the whole force would in itself be a kind of League Council—surely no General Staff; and there might be very little arms limitation for a long time! But his book bears the imprint of thoughtful anxiety over this country's desperate recourse to mere unilateral re-armament. It should be read.

"Karl Marx: Man and Fighter." By Boris Nicolaievsky and Otto Maenchen-Helfen. Methuen. 391 pages. 12s. 6d.

This book shows us Marx as a man of action. The last quarter of the book is the best; and the chapter on Bakunin is, in fact, better than anything on Marx. But the test of biographies of Marx is their treatment of the year 1848; and this book, unfortunately, makes that year appear dull and uninteresting. The chapters on Germany after 1848-9 are particularly chaotic, and the whole 1849-62 period is unnecessarily confused. Moreover, the book records whole trains of events without any apparent consciousness that there are problems to solve: such as the problem why Marx and Engels calmly assassinated the First International at The Hague in 1872.

The authors claim to have handled many first-hand and trustworthy new documents. They have certainly made two historical discoveries: (1) that it was as a result of representations by the Russian Government that the *Rheinische Zeitung* was prohibited in 1843; and (2) that Engels had a carefully thought-out plan of British intervention to help the First French Republic. But apart from these points—which, though interesting, are not of revolutionary importance—there is little that is new, save a few minor details. Further, it is irritating to find nothing said about the contents of the Lassalle-Bismarck letters, since their discovery in 1927 is so much emphasised. However, the book has some merits, and at least communicates a sense of the activity of Marx's life.

"Introduction to Corporate Finance." By John C. Baker and Deane W. Malott. McGraw-Hill. 382 pages. 18s.

The Harvard "Problem Books" have no counterpart in this country. They are designed, primarily, to confront the university student or post-graduate with facts arising from actual business situations, for his analysis and decision. The "case book" method is particularly useful in anticipating the experience which the student of business administration and finance must eventually acquire in negotiation round the table.

The present volume departs from the accepted pattern by including a series of paragraphs introductory to the various sections, which are intended to assist the elementary student. In fact, the cases themselves cover a wide range of problems, and present a necessary degree of analytical difficulty. No one should come to this book expecting a system of settled conclusions. It poses problems, but avoids specific solutions. And the value of the examples does suffer a significant sea change in their journey across the Atlantic. Nevertheless, investment experts on this side and those who find the fascination of a financial problem as irresistible as the output of the professional puzzle devisers, will find material here for sharpening their wits and enlarging their experience.

"La Monnaie Française Depuis la Guerre, 1914-1936." By Gaston Pirou: Librairie du Recueil Sirey, Paris.

This short book on the monetary problem in France (naturally written before devaluation) is the production of an

expert; for the author is a young and eminent professor of political economy at the University of Paris. M. Pirou observes that France's recent difficulties were a consequence of war. War was financed in Great Britain by a credit inflation and in France by a fiduciary inflation. The inflation was provisionally liquidated by the amputation of the franc by four-fifths of its former gold value; and the franc was stabilised by the law of 1928 on a new gold parity.

M. Pirou rehearses the arguments for and against devaluation as they presented themselves to an impartial observer last summer. He concludes that after a period of "autarky" and New Deal, devaluation must come. He also hopes to see it accompanied by important economic reforms. Events seem to be proving him right.

MONEY AND BANKING

THE WESTMINSTER BANK'S CENTENARY

THIS year is the centenary of two of the leading British joint-stock banks. Ten months ago the Midland Bank published its biography, under the title of "A Hundred Years of Joint-Stock Banking," and we reviewed this book in our issue of February 22nd. We have now received the Westminster Bank's official biography, written by Professor Gregory, and entitled "The Westminster Bank Through a Century."* The work, which is excellently printed by the Curwen Press, contains reproductions of several old prints, together with portraits of leading bankers who were connected with the Westminster. The historical chapters are well documented, and Professor Gregory has completed a capable, conscientious and authoritative work with biographies of such well-known figures as Vincent Stuckey, Lord Overstone, Gilbert, Bagehot and Walter Leaf. Bagehot's inclusion may come as a surprise to some of our readers. In his early days, however, that famous editor of the *Economist* was connected with Stuckey's Bank, which is now an important constituent of the Westminster Bank.

The biographers of the Midland Bank described it as having sprung from "a small bank in a provincial town, jostling in keen competition with several already established institutions." The London and Westminster Bank had a very different birth. The Bank Charter Act of 1833 definitely established the right of any body politic or corporate, or society, or company, or partnership, although consisting of more than six persons to carry on banking business in London, or within sixty-five miles thereof, provided that it did not, in effect, issue notes. The Bank of England and the private bankers retained their right of note issue within this radius, but the joint-stock companies were enabled to carry out all other forms of banking.

The passage of the Act coincided with a period of rapid industrial expansion, when business was beginning to pass into the hands of the joint-stock companies. In 1833 the idea was first mooted of the establishment of a joint-stock bank in London. The project rapidly bore fruit, and in spite of strenuous opposition of the Bank of England (which still regarded itself as a commercial bank), the London and Westminster Bank was born. For many years it fought, as a sole pioneer, the battles of the joint-stock banks. It had to win its place in London; to obtain the right to sue and be sued as a company, to accept bills, to maintain a drawing account at the Bank of England, and to take its seat in the Bankers' Clearing House. These rights were secured only after a protracted struggle, and the last defences of the opposition were not carried before 1854. Thus for nearly twenty years the London and Westminster Bank would rightly regard itself as the protagonist of British joint-stock banking.

In 1854 it entered upon a more mature existence, ably described by Professor Gregory in a chapter headed "Factors of Change," in which the burning question of "limited" versus "unlimited" liability for shareholders is discussed. But the London and Westminster Bank was only one of the constituents of the Westminster Bank of to-day, and we must now turn to the history of the London and County Bank and Parr's Bank.

The London and County Bank was originally founded in 1836 under the name of the Surrey, Kent and Sussex Banking Company. Its early history was distinctly chequered. It survived a chairman who committed suicide after serious defalcations and at least two general managers whose appointments were terminated either through irregularities or through a quarrel with the board. Gradually it passed through its growing pains and developed into a "country bank." It established an important network of branches

in London and in the small towns and agricultural districts of the Home Counties. Inevitably it had to meet the charge that it drained the agricultural counties of funds for employment in London. It made the effective reply that it used as much of its funds as it could for financing both farmers themselves and also the important local industries of such towns as Reading and Luton. Only the surplus, for which there was no demand, gravitated to London.

Parr's Bank was an old-established private banking company of Warrington, which became a joint-stock bank in 1865. Originally confined to Lancashire, it rapidly expanded by means of numerous absorptions. Its earliest amalgamations were confined to Lancashire and the neighbouring counties, but in 1891 its absorption of the London house of Fuller, Banbury, Nix and Company gave it a London office and a seat in the Bankers' Clearing House. A year later it absorbed the Alliance Bank, originally founded as the Alliance Bank of London and Liverpool, Ltd. This bank had passed through many vicissitudes in its time, in the course of which its Liverpool business had been taken over by the National Bank of Liverpool. The London section of the Alliance Bank had also to be reconstructed, but during the latter part of the century it made steady progress, which continued up to the date of its absorption by Parr's Bank. Parr's Bank also took over, in 1895, another London institution, the Consolidated Bank, which had had various troubles—including an abortive attempt in 1866 to absorb the Bank of London, then in low water as a result of that year's financial crisis. The Consolidated Bank, however, succeeded in re-establishing itself, and from 1870 onwards shared in the general progress of the British joint-stock banks. Its absorption gave Parr's Bank its Threadneedle Street office, after its head office had become established in Bartholomew Lane, at the premises of the old Alliance Bank. The London and Westminster Bank was then in Lothbury on the site of the present head office of the Westminster Bank, while the London and County Bank was in Lombard Street.

Such was the position in the early years of this century, immediately before the period of the big banking amalgamations. The first step was a merger of the London and County and the London and Westminster Banks in 1909, the terms of which are fully described by Professor Gregory. Meanwhile, Parr's Bank had made two very important absorptions in the country. In 1908 it took over Stuckey's Banking Company, Ltd., thus making a very important acquisition in the West of England. In 1913 it absorbed Crompton and Evans' Union Bank, Ltd., the largest and most famous of the Derbyshire banks. Thus, when the war broke out, Parr's Bank was well established in Lancashire, London, the Midlands and the West of England, whereas the London, County and Westminster Bank was active in London and the Home Counties. Geographically, these institutions were complementary to each other, and the union of their forces could not fail to add to the strength of both. This took place in 1918, the new combine being described as the London, County, Westminster and Parr's Bank, Ltd.—shortened a few years later, by common consent, to Westminster Bank, Ltd. Even then, the process of amalgamation was not quite complete, and in 1921 the absorption of Messrs Beckett and Company gave the bank an important Yorkshire business and its present chairman.

Such, briefly, is the Westminster Bank's history. It is a story not only of banking but of personalities, from Gilbert to Walter Leaf. Parr's Bank has made its contribution, for in John Dun it had, at the end of last century, one of the most famous bankers of the time as its general manager. Nor should the personal contributions of the country banks be overlooked. Stuckey's Bank produced first Vincent Stuckey and later Walter Bagehot. Crompton and Evans' Union Bank gave the Westminster Bank a

*"The Westminster Bank Through a Century." T. E. Gregory. Oxford University Press. Two volumes. 30s. net.

successor to Walter Leaf, in the person of Mr R. H. Tennant, who, by a sad coincidence, died a few days ago, almost on the date of the publication of the bank's centenary volume. A final personal reminiscence, brought to light in this book for the first time, is that Lord Overstone, that great private banker, ultimately brought himself to support the absorption of his own business by the London and Westminster Bank. In so doing he recognised the fact, only too evident to the older generation of the middle of last century, that the day of the private banker was passing, while that of the big joint-stock bank was near at hand.

During post-war years the Westminster Bank has had a reputation for taking the best of the business which was offering and leaving the remainder to others. Though it is not the largest of the Big Five, the high quality of its business is universally recognised. In the days immediately following the war it refused to join in the race to establish the greatest number of new branches. Walter Leaf, in his text-book on banking published in 1926, emphasised the number of years necessary before a new bank became a source of profit instead of loss, and there is abundant evidence that the board of management of the Westminster Bank appreciated this advice. Yet in paying due respect to conservatism and prudence (which, after all, is the hall-mark of British banking to-day) let us not forget the pioneer struggles of the old London and Westminster Bank or the growing pains of its contemporaries. In those years British banking built up its character as well as its strength. The unique stability of the present system is no more than the legacy of those difficult years.

FINANCIAL NOTES

Lombard Street and the Crisis.—The anxieties and developments of the past week had little effect in Lombard Street. There was never any suggestion of raising Bank rate and early in the week there was no serious pressure for funds. On Thursday, however, money did become rather scarce. None of the clearing banks were free lenders, and in only one case was there a definite reason, namely a previous purchase of bills. The shortage was partly due to continued expansion in the note circulation, but there was also an increase in public deposits, which took cash out of the banks. Still there was no definite explanation, and there was a feeling that several of the banks were keeping cash in hand in case of eventualities. Bill brokers had difficulty in meeting their needs, and while some were able to renew loans at the normal rates of $\frac{1}{2}$, $\frac{3}{4}$ and 1 per cent., others had to pay $\frac{1}{4}$ per cent. extra on all three classes of loans. There was no borrowing at the Bank, but the authorities had to assist the market by buying early March bills at $\frac{3}{8}$ per cent.:

	Nov. 19, 1936	Nov. 26, 1936	Dec. 3, 1936	Dec. 10, 1936
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate:—				
Clearing banks	$\frac{1}{2}$ – $\frac{1}{2}$ *	$\frac{1}{2}$ – $\frac{1}{2}$ *	$\frac{1}{2}$ – $\frac{1}{2}$ *	$\frac{1}{2}$ – $\frac{1}{2}$ *
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

† This week's rates were $\frac{1}{2}$; $\frac{1}{2}$ – $\frac{1}{2}$; and 1– $\frac{1}{2}$ per cent., for the three classes of loans, respectively.

Last week's Treasury bill tender rate was 15s. 9.73d. per cent., or over $\frac{3}{8}$ per cent. The preceding week's rate was 11s. 5.20d. per cent., or just over $\frac{1}{8}$ per cent., but the intervening advance is seasonal, as the banks do not buy many bills while the Christmas currency is going out. Since early November the tender issue of Treasury bills has risen from £603 millions to £617 millions, owing to a drop in the Departments' floating assets from £266 millions to £232 millions. This last may be due either to the French gold shipments or to departmental subscriptions to the new Funding Loan.

The Bank Return.—This week's increase of £7.3 millions in the note circulation came as a pleasant surprise to some people who were afraid that the crisis was checking Christmas trade. This last increase is well up to normal, and makes the total expansion to date £14 millions:—

	BANK OF ENGLAND				
	Dec. 11, 1935	Nov. 18, 1935	Nov. 25, 1935	Dec. 2, 1935	Dec. 9, 1935
Issue Department:—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	199.4	248.7	248.7	248.7	248.7
Note circulation	410.9	444.9	445.6	451.6	458.9
Banking Department:—					
Reserve	49.1	64.6	63.8	57.6	50.5
Public deposits	6.8	14.1	12.1	10.6	17.5
Bankers' deposits	94.4	96.1	97.6	99.1	87.0
Other deposits	37.2	44.7	41.7	41.1	38.9
Government securities ...	84.2	79.0	78.2	82.4	81.7
Discounts and advances ..	10.1	7.4	6.8	8.5	8.1
Other securities	12.9	21.7	20.4	20.2	20.9
Proportion	35.4%	41.7%	42.1%	38.1%	35.2%

Currency withdrawals have reduced both the Reserve and bankers' deposits, and the latter have been further depleted by an increase in public deposits. This sharp drop in bankers' deposits came at a time when the banks naturally desired to have a good cash margin in hand, and this explains the greater stringency in the money market.

The Foreign Exchanges.—Sterling has stood up well during the crisis, but like the Stock Exchange the foreign exchange market was naturally susceptible to the sequence of rumours and events. On Thursday morning the spot New York rate weakened from \$4.90 $\frac{1}{2}$ to \$4.89 $\frac{1}{2}$, but as the situation clarified sterling recovered to \$4.90 $\frac{1}{2}$, which is a higher rate than was current in early November. Forward dollars were bid for more freely at slightly wider premiums. The franc has remained pegged in Paris at Frs. 105.15, but on Tuesday it was firmer, as some operators found that they had over-bought sterling and dollars. Subsequent French sales of dollars helped to support the pound in New York. The repayment of the French credit is discussed in the following note. There is still need of a relaxation of the penal taxation on French gold profits, and it is believed that the French Government is coming to realise that this taxation is preventing the repatriation of funds. Swiss francs remain steady. There has been a continuous demand for guilders, which is only met by sales by the Dutch Control. The Dutch policy is to keep the spot rate at Fl. 9.00–9.03, or a depreciation against the dollar of about 20 per cent., but the Dutch Exchange Fund must now be so full of foreign exchange that it must soon either be enlarged or cease operating. In the latter event the spot rate will fall to Fl. 8.50. Forward guilders are also firmer.

The French Credit and Gold.—During the past three weeks £23.0 millions of gold have been imported into England from France, and it has been generally assumed that these shipments were made to cover the repayment of the French credit of £40 millions. Up to and including December 11th £28 millions had been repaid. This view is now confirmed by the latest return of the Banque de France, dated December 4th:—

	Nov. 27	Dec. 4	Change
Gold	64,359	60,359	– 4,000
Provisional advances to State	12,298	12,998	+ 700
Note circulation	86,651	87,273	+ 622
Reserve ratio	63.2%	61.6%	...

Taking the sterling exchange at Frs. 100, the authorities have taken gold up to the full amount of the sum due to London out of the Banque de France and have presumably transferred it to the French Exchange Fund, which is shipping it over to London as the successive instalments on the French credit fall due. Details of deposits at the Banque de France were not available when we went to press, but total liabilities were reduced by Frs. 3,776 millions. As the note circulation has risen, there must have been a substantial reduction in Treasury deposits at the Banque in addition to the increase in provisional advances. On

arrival in London the gold may have been taken over by the British Exchange Equalisation Account, as the Bank of England's gold is unchanged. This may explain part of the recent drop of £30 millions in the floating assets of the Departments.

Argentine Exchange Alteration.—On Thursday it was announced that the official import rate had been reduced from Pes. 17 to Pes. 16 to the pound sterling. The official export rate remains unchanged at Pes. 15 to the pound, so that the immediate effect is that the Government sacrifices half its profit on official exchange dealings. This loss is rendered less serious by the recent rise in the prices of agricultural produce beyond the point where they qualify for subsidy from exchange profits. As we pointed out last week, Argentina's foreign exchange position had improved so much as to bring the "free" rate practically down to the official import rate. Last week-end it fell below the official import rate, and to correct this anomaly the authorities were forced to reduce the latter rate. The free rate at once fell to Pes. 16.30, so that even the official rate of 16 pesos may not be tenable. Last season's maize exports were a record, and next season's promise well. The fine cereal crops are also very promising. A good average wheat harvest is assured, and will begin to come on the market before the end of this year. It is significant that the new Anglo-Argentine Agreement only extends preferential exchange treatment to Great Britain "so long as any system of exchange control remains in Argentina." The Argentine Government may well have felt precluded from removing exchange control immediately after the signature of the new Agreement, and may also be waiting for the end of the year, when the arrangement extending a preferential remittance rate of 16 pesos to the railway companies expires. The railway preference has now disappeared with the reduction in the import rate, and it looks as if the whole system of exchange control may be shortly removed. Possibly the existing 20 per cent. surcharge may be continued in the form of a preferential tariff on imports from countries with whom Argentina has an active trade balance. In any case Argentina need not fear that the removal of exchange control will be unwelcome to England.

November Clearing Bank Averages.—Thanks to the release of funds from public deposits early in November, the clearing banks have been able to replenish their cash. The latest returns of the ten English clearing banks show that cash has risen by exactly £6 millions, which is a little greater than the expansion in their deposits. The result is that their cash ratio has risen from 9.95 per cent. in October to 10.2 per cent. last month and so is once more above the traditional minimum of 10 per cent.:

	(In £ millions)					
	Nov., 1935	Oct., 1936	Nov., 1936	Sept., 1936	Oct., 1936	Nov., 1936

(a) Excludes District Bank.

(b) Includes District Bank.

Lately the banks have reduced their bill purchases, so as to strengthen their cash position in readiness for the Christmas currency withdrawals and the New Year balance sheets. This has forced the discount market to take up more bills, and so it is not surprising to see the drop in the banks' discounts offset by an increase in their call and short loans. The expansion of £2.4 millions in advances

possesses a concealed significance, for it masks the repayment of the first £16 millions of the French credit, part of which had been advanced by the joint-stock banks. After allowing for the effect of this upon the banks' average advances for the whole month, there may really have been an increase of some six or seven millions in advances. Thus the demand for bank credit is growing.

The National Bank of Scotland.—The latest accounts of this bank provide further evidence of the year's expansion in Scottish banking resources. Last year's drop in deposits has now been reversed, and deposits are now higher than they were two years ago. There has been an expansion in the note circulation, which is now nearly 16 per cent. higher than it was two years ago:—

	October 31st		
	1934	1935	1936
Liabilities:—	£'000	£'000	£'000
Capital	1,100	1,100	1,100
Reserve fund	1,550	1,550	1,600
Note circulation	2,354	2,596	2,720
Deposits	35,724	35,213	36,532
Acceptances	734	728	1,078
Endorsements, etc.	1,155	1,327	1,125
Assets:—			
Cash	3,194	3,201	3,129
Balances and cheques	1,810	1,649	1,646
Call and short money	5,114	4,641	5,006
Investments	17,248	18,688	19,241
Discounts	1,756	1,014	1,303
Advances	11,215	10,902	11,276
Net profits	272	270	272
Dividend	16%	16%	16%

Among assets, cash is slightly lower than last year, but there has been a big expansion in call and short loans. These changes are probably due to the general position of the money market at the end of last October, which was commented upon by us at the time, and so does not represent any alteration in the policy of the bank. The rise in advances appears small, but an increase of £407,000 in ordinary advances was partly offset by a drop of £33,000 in loans on stocks and other securities. In actual fact the total volume of ordinary advances has risen since last year by 4.3 per cent. Net profits have returned to their 1933–34 level, and this year £50,000 is being allocated to the reserve fund, the appropriation for heritable property being reduced from £80,000 to £30,000. Allocations to pensions and widows' fund are the same as last year.

The Discount Market "Syndicate."—From time to time, the Saturday morning report on the preceding day's Treasury bill tender alludes to the fate of the "syndicate." At one time it may transpire that "the syndicate partially missed the tender," while another week the syndicate may be successful. Like most technical terms, this expression suggests rather more than it means. In days now past and gone, a limited number of the larger houses used to consult informally on Friday morning and more or less agree upon a rate at which they would all tender for Treasury bills. During the last few years, however, it has been patent to all that as a rule the tender rate will usually be only a matter of pence above $\frac{1}{2}$ per cent., and so no applicant for Treasury bills has very much latitude. The result is that a new and much looser syndicate has come into being, which now comprises most discount houses, but excludes the clearing banks and merchant bankers. This new syndicate naturally discusses the likely tender rate on Friday morning, and by the time the tender opens most members have a fairly close idea of the best rate at which to tender. Occasionally a "lone wolf" in the form of some foreign bank or British insurance company or financial institution may come in unexpectedly and outbid the market, and then "the syndicate misses the tender." While the system saves the authorities from the trouble of having to deal with widely divergent applications, there is no official attempt to influence in advance the syndicate's rate. Instead, the authorities can manipulate the rate, if desirable, either by open-market operations or more simply by "cutting the top off the tender"—that is, by not allotting all the bills offered. As we have suggested, the term "syndicate" suggests far more mystery than really exists.

THE STOCK EXCHANGE

CONTROLLING WALL STREET

The following analysis and appreciation of the rôle of America's Securities and Exchange Commission has been contributed by Mr A. Wilfred May, a financial economist and former Special Economic Expert of the Commission.

THE Securities and Exchange Commission is an integral part of the machinery of America's New Deal. Its historical background explains and even excuses many features which at first sight may appear extreme and anomalous to British observers. From Wall Street's earliest days, when share transactions took place under a button-wood tree, up to quite recently, American securities law was a spasmodic hotch potch of civil and criminal statutes, enacted separately by individual States of the Union. The public attitude was one of complacent unconcern, until the devastating collapse of the boom of the nineteen-twenties brought the nation's entire credit, banking and business structures to the verge of catastrophe. Evolution thereupon became revolution, and from 1933 onwards the Federal Government assumed affirmative, full, and continuing control of security business. This control, it is generally admitted, has come to stay. Even if the Republican party had been returned to power at last month's elections, federal security regulation might have been curtailed, but would undoubtedly have remained.

The Federal Government's control has been embodied in three successively enacted laws. The Securities Act of 1933 (the so-called "Truth in Securities Act") has the fundamental purpose of enabling the public to make an intelligent appraisal of newly offered issues. It seeks to achieve this purpose by requiring initial full disclosure of corporate information. Both a "registration statement" and a full prospectus are demanded from those who issue new securities. The former must include a specified mass of information, must be signed by a majority of the issuer's Board of Directors, and must be filed with the Securities and Exchange Commission. Every offer for sale made thereafter by an issuer, underwriter or dealer must be accompanied by an unabridged and voluminous prospectus, whose sheer bulk has been said by a London banker to rival that of the Telephone Directory. Criminal and civil liability attaches to issuers, directors, and all officers, accountants and underwriters who sign the document if it contains a materially untrue statement, or omits a prescribed piece of information, or is guilty of any other material omission. In short, *caveat venditor* has definitely replaced *caveat emptor*. In practically every heading this statute is far more stringent than the corresponding British or Continental laws.

The second law, in which the Government's policy has found expression, is the Securities Exchange Act of 1934, which has three spearheads of attack. The first is the regulation of speculative credit; the second is the compulsion of continuing disclosure of company information and the abolition of "corporate" abuses; and the third, the regulation of market and trading practices. Its loan provisions are designed to prevent a recurrence of the situation in the last decade, when the nation's banking system threatened to become engulfed in the speculative maelstrom. These borrowing restrictions, which are administered by the Federal Reserve Board, limit the credit which may be extended on "margin" both to clients and to brokers and dealers. For margin borrowing, the minimum ratio of collateral is now 55 per cent. of market value; and since last May this limit has been applied uniformly to loans on securities made both by brokers and by all commercial banks. This part of the Act has been bitterly criticised by brokers and investment houses who contend that the restrictions have punitively curtailed the volume of trading, "frozen the market," and expelled business to London. The Act also requires the periodic filing of detailed corporate balance sheets and income statements. It regulates proxy solicitation and insiders' per-

sonal security trading. Its market trading provisions deal broadly with all exchange activities. They bar manipulative devices such as "wash sales," "matched orders," market "rigging" and "jiggling," and the dissemination of market tips with misleading statements.

The third pillar in the edifice of control is the Public Utility Act of 1935. This Act assumes drastic federal jurisdiction over utility holding companies. The latter are defined as units owning more than 10 per cent. of the voting stock of a gas or electric company, and they comprise, in effect, the major segment of the industry, with its \$13,000 millions of capital. This law is the outgrowth of a system of frenzied promotional finance which had previously juggled with operating companies like so many stock jobbing pawns, and had pyramided them in layers, sometimes a dozen deep. It regulates, *inter alia*, all financial activities within the different groups, and seeks to prevent the "milking" of underlying assets. The highly controversial "death sentence" clause in the Act provides for the (possibly) forced dissolution after 1938 of all companies beyond the "second degree," except those whose properties form a geographically and economically integrated system. The companies affected are, at present, refusing compliance with the Act's registration provisions and certain other of its affirmative stipulations, pending a bitter challenge of its Constitutional validity in the Federal Courts.

The form taken by all of this legislation reflects the formidable difficulties imposed by the United States Constitution. England and the leading European nations enjoy central control over all company matters. They can, by passing national laws, exercise any necessary regulation uniformly, inclusively and by direct mandate. Under the present status of the American Constitution, however, federal control is barred, except over activities which are directly and demonstrably concerned with inter-state commerce, the postal system and taxation. The draftsmen of the Acts which have been described have consequently had resort, in some instances, to legal artifice and circumvention, and those administering their provisions have been similarly handicapped. For example, regulation of cardinal matters (such as current balance sheets, earnings and salary information, proxy solicitation, and market trading by "insiders") can—except when new capital is sought—be enforced only at the focal point of inter-state commerce which the Stock Exchange provides. But Stock Exchange listing facilities are not so indispensable as in England. The "sanctions" of the law, again, are not applicable to certain companies whose shares were traded on the Exchanges before the Acts were passed—the so-called "issues admitted to unlisted trading privileges." Legal difficulties have similarly limited administrative control of "over-the-counter" business outside the Exchanges, and have involved the Government in a bitter struggle in the Courts over its power to enforce the public utility holding company legislation. If control is to be extended in the future to investment trusts, some new constitutionally justified point of contact will need to be found, for the trusts do not usually desire facilities for dealing on the Stock Exchange.

Another fundamental departure in current American practice is the broad delegation of administrative responsibility and discretionary power to an executive Commission. In England, supervision by the registration authorities of the Board of Trade, at Bush House, is largely mechanical. In France, direct reliance is placed on formal penal provisions. In Germany, the somewhat lax supervision of conformity is effected by the Commercial Registrar Judge. By contrast, the United States Securities and Exchange Commission, which, with its staff of 750 employees, works in combination with the Federal Reserve Board, provides a

highly flexible instrument of supervision and control. In the absence of such a continuing administrative body, capable of dealing with individual and varied phenomena, it may well be argued that wide, searching and insistent regulation cannot possibly be enforced. Indeed, the chief objection to it, as revealed by America's brief experience, may be the creation in the public mind of a false assurance of security. But America seems to be increasingly willing to accept this disadvantage as well as the danger of power delegation, as the price of efficiency and flexibility in control.

The extent of the power which has been delegated to the Securities and Exchange Commission may be appreciated by a brief recital of the Commission's powers under the various Acts. By virtue of the Securities Act of 1933 the Commission may (subject to review by the Federal Courts) issue stop orders against new offerings; investigate violations and conduct elaborate hearings; and promulgate all manner of rules and regulations applying to registration statements and prospectuses. The Commission prescribes the form in which corporate information is to be given. It specifies the detailed items to be shown in balance sheets and earnings statements, and even the methods to be followed in the preparation of accounts. It takes no responsibility, however, for the investment merits of the securities, or the prices at which they are offered.

In administering the Securities Exchange Act, the Commission licenses the Stock Exchanges and supervises their administration. It has broad powers to list and de-list issues. It keeps exchange trading and ticker "quotations" under continual surveillance and investigates price movements when any suggestion of manipulation is present. It has already proceeded formally against several firms and leading operators, including the far-famed Mike Meehan. The Commission has imposed sixteen important rules upon the Stock Exchanges, which are designed to bring trading under its direct control. It has direct jurisdiction over the operations of floor specialists and member firms—including their credit arrangements. It is about to limit professional floor-dealing activities as part of a broad long-term programme to divest the trading market of its speculative and manipulative elements.

Its powers in the domain of company accounting are similarly wide. It lays down, in detail, the way in which balance sheets and income data are to be drawn up, and it may even, on occasion, prescribe the method by which depreciation is to be calculated. It has jurisdiction over proxy solicitation. Within its absolute discretion, it may insist on the public disclosure of directors' and executives' salaries, "insiders' " personal transactions, and current commercial data. It issues licences to over-the-counter brokers and dealers, and is engaged on a codification of the principles of fair practice according to which they must function. Over and above all this, the Commission is given general "blanket" authority in making additional rules.

Finally, under the Public Utility Act all acquisitions of securities and properties by holding companies and their subsidiaries, and all service contracts and borrowings between parent companies and subsidiaries, are made subject to the Commission's approval. As the Commission also administers the vital "death sentence" clause, the decisive nature of its powers needs no further emphasis.

At present, the Commission is studying a number of controversial and complex questions which were left open at the time of its formation. Among these may be mentioned the activities of protective and reorganisation committees (including the practices of trustees and foreign Government bond committees); the practices of investment trusts; and the possibility of complete segregation of broker and dealer functions. Finally, in furtherance of its key policy of limiting speculative stimulation of market activity, the Commission keeps a close watch on the ratio of professional transactions to total Stock Exchange volume—which is now about 19 per cent.

Inevitably, the net effect of recent security legislation is the subject of spirited controversy. "Wall Street," naturally, is bitterly resentful. In addition to complaining of the damage done to its business (reflected in the low price of Stock Exchange memberships), the financial community contends that the law has hindered capital financing, and

SECURITY : STABILITY : STRENGTH

that trading and margin restrictions have needlessly reduced activity and market liquidity. At the other extreme, complaints are heard that the teeth have been drawn from legislation which was originally drafted in more stringent terms, and that the S.E.C. is really acting "in cahoots" with the brokers and bankers. It is the present writer's opinion, however, that the social and economic benefits secured by the new law far outweigh its incidental disadvantages. Broadly, the "Truth-in-Securities" Act makes *seller* rather than *buyer* beware, it compels directors to direct, and it makes pertinent financial facts available to the investor. The results of the Holding Company legislation are somewhat obscured by its continued immersion in litigation and its possible emasculation. But the results of the Securities Exchange Act are more clear. Restriction of credit seems to provide the most effective check on speculative excesses by quantitatively controlling its main stimulating source. The "margins" already imposed have undoubtedly changed the basic structure of the stock market by reducing its so-called liquidity and widening the spread of quotations. But this former "liquidity" was largely mythical, and its alleged benefits were attained at a high cost of artificial gambling activity. The *investment* quality of the market has been thus accentuated, at the expense of its speculative forces. Even more important, a flexible means has thus been provided for preventing the nation's banking and credit system from becoming again dually involved in a stock market boom.

Unfortunately, the effectiveness of stock loan regulation has been vitiated by the antithetical fiscal policies which the Government has pursued. The enormously expanded credit supply, the Government's deficit financing and inflation of bank deposits, the artificial reduction of interest rates, and—above all—the capital gains and undistributed earnings taxes, have combined as an overpowering inflationary force on security prices. The result may well be that the investor will eventually lose his money on a "cash" rather than on a "credit" basis. But these factors only add to the importance of the Securities Exchange Commission. Without its restraining influence, the inflationary damage would be immeasurably more injurious. In the long run, the Acts may go far in combating the abuses inherent in the large-scale concentration of American wealth and the concomitant diversion of corporate ownership from control. That process, however, must, in the nature of things, be evolutionary.

INVESTMENT NOTES

The Crisis and the Stock Exchange.—The loyalty of the Stock Exchange has a basis far deeper than any considerations of financial interest. Although its members were not unaware of the way events were shaping, the first public intimation of the crisis, on Wednesday, December 2nd, came as a severe shock to sentiment. Selling, like the news which preceded it, came originally from the provinces. Next day, after the morning newspapers throughout Great Britain had "carried" the full story, there was a unanimous marking down of prices and a fair amount of selling. By the evening of Thursday, December 3rd, however, it was clear that an immediate Royal decision would not be forthcoming. On Friday, therefore, the markets adopted the attitude of defensive passivity which, on earlier occasions, had served them well during temporary emergencies whose outcome lay outside their control. Neither sellers nor bargain hunters were wholly inactive, but dealings for the most part became "frozen" rather than depressed. The week-end's adjournment brought, on the one hand, a realisation of the growing unlikelihood of a solution of the crisis which, from the viewpoint of the investor, could be called favourable, and on the other, a broader understanding of the constitutional as distinct from the personal issues at stake. The result was a further moderate, but still tentative, lowering of prices on Monday. Next day saw an appreciable recovery in

sentiment on the disclosure of Mrs Simpson's willingness to withdraw. But before the markets had closed on Wednesday it was clear that these hopes were worse than premature, and the whole of Tuesday's recovery in prices was relinquished. But on Thursday morning the newspaper placards bore a message whose significance could not be mistaken. Before the King's message had been revealed to the House of Commons the Stock Exchange had already made its customary response to the end of suspense, although it could not fail to regret the source of its relief. The course of prices during the past eventful ten days is best epitomised by the *Financial News* indices, given below:—

"FINANCIAL NEWS" INDICES		
	20 Fixed Interest (1928 = 100)	30 Ordinary Shares (July 1, 1935 = 100)
Published Figures:—		
Tuesday, December 1st	137.5	122.3
Thursday, December 10th	120.9	136.8
No. of Points Change, compared with preceding day:—		
Wednesday, December 2nd	— 0.6	— 2.3
Thursday, December 3rd	Unchanged	— 0.3
Friday, December 4th	Unchanged	+ 0.3
Monday, December 7th	— 0.3	— 0.9
Tuesday, December 8th	+ 0.1	+ 1.6
Wednesday, December 9th	— 0.1	— 1.6
Thursday, December 10th	+ 0.2	+ 1.8

Ordinary shares, naturally, have been most vulnerable. But the day-to-day changes are very much narrower than might have been expected. Great credit is due to all concerned for self-control in a trying period.

Effect On Prices.—The changing impact of the crisis on individual stocks and shares may be inferred from the following table:—

	Tuesday, Dec. 1	Wednesday, Dec. 2	Friday, Dec. 4	Monday, Dec. 7	Thursday, Dec. 10	"Crisis" Change
2½ per cent. Consols.....	85	83½	83½	83	84½	— ½

Turner & Newall (£1)	109/9	107/-	107/6	104/6	106/-	— 1/9
Woolworth (5s.)	4½	4½	4½	4½	4½	— ½
Royal Dutch	44½	42½	43½	44	44½	+ ½
Shell Transport (£1)	5½	5½	5½	5½	5½	—
Rubber Trust (£1)	38/3	37/9	39/-	39/6	39/10½	+ 1/7½
United Siam Betong (£1)	3½	3½	3½	3½	3½	—
Central Mining (£8)	26½	26½	26½	26½	26½	—
Crown Mines (10s.)	15½	15½	15½	15½	15½	—
Rand Mines (5s.)	9½	9	9	9	9½	+ ½

The figures are an eloquent record of the unceasing alternation of hope and fear. At the outset, gilt-edged inevitably suffered more than most, and 2½ per cent. Consols most of all. The subsequent recovery was not impressive, for whereas gilt-edged stocks had fallen by points, they rose only by fractions. Market leaders, in the ordinary share groups, lost, as a rule, anything from 1s. to 3s. when the crisis first became known. The extent of the decline varied partly with the interest of individual companies in factors such as the "Coronation risk" and partly with the extent of the open market position. On Friday about a third of the decline was recovered, but Monday's further selling brought new low levels. The best resistance came from shares like Dorman Long (supported by correct anticipations of a satisfactory chairman's speech), primary producers' shares (which benefited from the continued rise in commodity prices), and gold mining issues (which were awaiting the publication of favourable December dividends). Up to Thursday morning the recession in prices as a whole had not gone further than in

any one of the various "temporary reactions" which have penetrated the main upward movement in the last 3½ years. Thursday's rally was of relief rather than of conviction concerning an immediate re-awakening of the market. Led by gilt-edged, however, almost every section of the market improved after a precautionary lowering of prices.

Future Market Prospects.—It is obviously difficult, at this stage, to put the events of the last ten days in their due perspective. The Actuaries' Index of the prices of representative ordinary shares (December 31, 1928=100), calculated last Tuesday, was still as high as 89.3, against 90.6 a week earlier and 91.3 a month earlier, the corresponding yield figures being 3.70, 3.64 and 3.52 per cent. The effect of the crisis on equities in various home industrial groups has been fairly uniform, as the following table suggests:—

Group (and No. of Companies)	Prices (December 31, 1928 = 100)			Yield (%)		
	Month ago (Nov. 10, 1936)	Week ago (Dec. 1, 1936)	This week (Dec. 8, 1936)	Month ago (Nov. 10, 1936)	Week ago (Dec. 1, 1936)	This week (Dec. 8, 1936)
Banks and Discount Companies (12)	125.8	125.7	124.1	3.83	3.83	3.88
Building materials (5)	106.0	104.4	103.0	4.74	4.83	4.88
Cotton (6)	46.1	48.4	46.7	1.99	1.98	2.00
Electric Light and Power (16)	133.3	132.2	130.5	3.83	3.88	3.93
Iron and steel (12)	85.8	84.1	82.3	3.57	3.69	3.77
Home Rails (4)	85.5	84.4	80.9	1.29	1.24	1.28
Breweries and Distilleries (21)	160.2	159.7	156.9	3.70	3.83	4.02

The outcome seems now to depend on the extent to which inevitable psychological reactions are reinforced by cyclical factors. The news has come after industrial activity and share prices have both had a long rise. In the absence of disturbing constitutional factors, the upward movement would probably have still had some way—though not an unlimited way—to go. But re-armament has already begun to count for more, and general trade recovery for less in the boom equation, than they did a few months ago; and general industry can scarcely be unaffected by events which have touched the nation very deeply. On the whole, therefore, there is much to be said for a cautious attitude towards immediate market prospects. Many shareholders now have considerable "paper" profits, and recent events have diminished the likelihood that these profits will be substantially increased. Some investors may be apt to draw the moral.

Points from Preference Share Schemes.—While controversy continues to centre upon the London Tin-Anglo-Oriental amalgamation scheme, and its treatment of preference claims, the investor can extract some interesting implications from other recent proposals. The scheme which the directors of Waxed-Papers Limited have submitted in order to clear away 5 years' dividend arrears on the 7½ per cent. preference capital, is interesting in principle rather than important in substance. At present, some £125,000 of preference capital is in issue, and £100,700 of ordinary capital. The arrears, after deducting income-tax, are equivalent to 5s. 8½d. on each preference share. It is proposed to divide each £1 ordinary share into four 5s. shares, of which one share should be surrendered and re-allotted to existing preference shareholders in the form of further 7½ per cent. cumulative preference shares. The ordinary shareholders, it is stated, would then "retain the whole of the equity." By this means, the arrears will be settled in full, assuming that the new preference shares are worth 24s. On the estimated profits for the current year, the whole preference dividend obligations would be covered more than twice, and the assumption is not unreasonable. No one will deny that this treatment is satisfactory to the preference shareholders. Is it not, indeed, too generous? It hardly leaves the equity unimpaired, for the capital "gearing" is increased from 1.24:1, to 1.54:1, in perpetuity. To allot new preference capital, instead, say, of funding certificates redeemable over a short period of years, permanently capitalises a purely revenue obligation at a relatively high rate of interest. The re-issue of the

surrendered ordinary shares, indeed, in the form of preference shares, goes beyond the maxim that, if preference rights are surrendered in perpetuity, they should be rewarded by a share in the equity. In this case, no rights are surrendered, and dividends will be payable, year in, year out, on the accumulated arrears of five years only. The offer by Ever-Ready to holders of 8 per cent. preference capital of Lissen, Ltd., for exchange into four Ever-Ready ordinary shares for every five preference stock units held, involves no special matters of principle, although a preference shareholder, presumably, attaches value to his preferential rights, which an ordinary share cannot afford. In this case, however, the cash value of the exchange, assuming that the present price of Ever-Ready ordinary is appropriate, is broadly equivalent to the original issue price. Future consideration of the place of preference shares in the realm of investment, it would seem, might well be devoted to the question of their appropriateness to different industries. Cases in which a *corpus* of fixed charges, including the contingent rights of preference shares, can be economically justified are, in fact, more limited than many companies assume. The Borneo Company provides an example of this sort, for the depression uncovered the preference dividend, and recovery is only now slowly appearing. The scheme which has been submitted will leave the existing preference shareholders with 69.95 per cent. of the new straight equity capital, and the ordinary shareholders with 30.05 per cent. This proposal seems reasonable and fair.

New Issues in November.—New issue business has not been exempt from the doubts and hesitations that have assailed markets generally during the latter half of November. The actual figures are, of course, swelled beyond ordinary proportions by the 2½ per cent. Funding Loan, but if the estimated £61.3 millions of "new money" absorbed by that loan are deducted from our total figures, it would seem that general new issue activity, measured

If the pace has become less hot, however, the quality of the average industrial issue has not shown any marked improvement. Issues have been well diversified, with a number of small placings by general industrial companies. Corporation borrowing has made way for the Funding Loan, but the Dewsbury result has not been forgotten. More attractive terms will presumably be provided when the queue moves forward again.

COMPANY NOTES

P. and O. Meeting.—In last week's *Economist* the balance-sheet changes in the Peninsular and Oriental Steam Navigation accounts were discussed at some length. They were further elucidated by the Hon. Alexander Shaw at the meeting on Wednesday. It is clear, first, that as a result of these changes the company will now be able to

Branch Office: 3 Laurence Pountney Hill, LONDON, E.C.4.

standardise its annual depreciation provision for "a few years to come" at about £880,000. Little further light, however, is thrown on the nature of the financial arrangements. The deposits which were advanced by subsidiaries to the parent concern have become, in effect, part of its capital, and the liquidation surplus and special dividends received from two subsidiaries have merely cancelled out part of these deposits, and have provided the special reserve for covering the loss on four steamers sold, and for special writing-down of the fleet. This, fundamentally, is an inter-group transaction which merely rearranges the presentation of the group's assets and liabilities, without changing the earning power of the physical assets in any way. The chairman referred, very justifiably, to the group's strong liquid position, from which the requirements of new tonnage construction will be met. On future dividend prospects Mr Shaw was far from sharing the recent optimism of the market. "I tell you quite frankly that they (the Board) can see no prospect whatever of a return to the larger distributions which were at one time made." And he proceeded to disclose that the figures for the current year are, so far, not so good as those of last year. Again, restored pay cuts and salary revisions will increase the current year's costs. The company continues, with wisdom and courage, to build more efficient tonnage, but against the effect of subsidised competition such measures can do little more than stabilise its earning power, rather than promote a sharp advance. The chairman's lengthy treatment of this problem in the India-Japan trade may be read in the light of a special article in our Indian Supplement this week. The reduced Suez Canal dues from next April, on which the market has been allowing its fancy to roam, would mean a saving of £80,000 per annum, equivalent to 1½ per cent. for the deferred stock. But as the voyage results to June are employed in the company's accounts, only one-quarter of this saving will accrue during the current year. There seems, indeed, no warrant for the present level of 30s. 6d. for the £1 deferred stock units.

Gaumont-British Finances.—Nearly six weeks ago, the shareholders of Gaumont-British Picture Corporation succeeded in adjourning the general meeting until the long-promised consolidated balance sheet was published. Its publication this week has put an end to conjecture, and the cautionary presumptions which were expressed in the *Economist* of October 31st, when the parent company's accounts were examined, have been fully substantiated. Before examining the group statement (printed on page 562) in detail, shareholders will first re-affirm the absolute necessity for its publication. No less than 75½ per cent. of the parent company's assets (£14,219,752), at March 31st this year, were represented by interests in subsidiary companies. The group balance sheet, which consolidates the assets and liabilities of the parent concern and 64 subsidiary companies, totals £21,724,357, of which exactly 75 per cent. is represented by freehold and leasehold theatre and studio properties, plant and equipment. The bulk of these assets are taken at a recent valuation, and the general investor can hardly express any judgment on these figures, except to remark that valuations on a "going concern" basis almost invariably include an element akin to goodwill. But the current assets position plainly indicates an unliquid state of affairs, which is analysed below:—

CURRENT LIABILITIES		CURRENT ASSETS	
Bank overdraft	1,577,431	Cash	431,424
Creditors and dividends	1,048,758	Debtors	374,514
		Investments	11,029
		Films, completed, in production, and expenditure on future productions	1,378,908
		Excess of current liabilities	430,314
			£2,628,189

A deficiency of £430,314 in current assets to meet outstanding liabilities is conclusive evidence of the group's stringent position. And this figure itself is struck after giving full weight to the item for films, although the ultimate value of unreleased productions and, especially, of "expenditure carried forward in respect of future productions" is contingent to a degree. There are, in fact, no external net assets on which the group can call, and

after taking the fixed assets at valuation, there results an intangible asset representing the excess cost of the subsidiary interests over the parent company's share in their net assets. The statement, further, provides a clue to group distribution policy. The excess of subsidiary earnings, together with other earnings of the Corporation, over the amounts appropriated by the Corporation, totalled £218,982 for the year to March last. Gaumont-British net profits, after meeting the preference dividend, amounted to £196,756, and this sum included a doubled dividend from one subsidiary. It is to be presumed, therefore, that the parent accounts have reflected a generous division of subsidiary earnings. The passing of the ordinary dividend was clearly inevitable in the light of the group's position. The present price of 9s. 7½d. for the 10s. ordinary shares appears to bear little direct relation to the facts disclosed by the consolidated statement.

Dorman Long Meeting.—The recent history of Dorman Long provides material for a powerful sermon on the mutability of financial affairs. Between 1927 and 1930, earnings were insufficient to yield any return on the inflated equity capital, and provided a mere £50,000 for depreciation. From 1931 began the accumulation of bank debt, profits fell as low as £166,473 in 1932, and at the end of 1934 a scheme was passed which reduced the debenture capital, cancelled interest arrears, varied the preference rights and decimated the ordinary capital. Less than two years later, profits have achieved heights previously inconceivable, and the company can invite its preferred and ordinary shareholders to subscribe new ordinary capital, to pay off the bank debt, at a substantial premium on bonus terms. In these circumstances, Lord Greenwood's speech on Wednesday could hardly be other than cheerful. He recorded an increase of nearly 50 per cent. in the company's employees between 1932 and 1936. The total is now 36,109, and it continues to expand. Increases in the company's production over the four years are even more impressive, as the following statement shows:—

	Increase, 1936 over 1932	
	Tons	Per cent.
Coal	1,280,000	64
Coke	365,000	68
Pig iron	583,000	127
Steel ingots	741,000	137
Rolled steel	567,000	128

This scale of progress is a social document of the improved welfare of the whole population of the North-East Coast. For the investor, too, there are clear indications that further advances will be made, although they can hardly maintain the very high-gear rate of improvement recorded since 1933. Costs, indeed, are rising, not only for labour, but also for rail and seaborne freights. These same factors, indeed, were stressed by the chairman of South Durham Steel and Iron at the company's meeting on Wednesday. The new Dorman Long equipment, particularly the coke-ovens at Cleveland, will yield significant economies, and the coal mines now enjoy a regulated market which clearly benefits such an integrated concern. If the generous fiscal treatment of the steel industry and the construction boom has been primarily responsible for the company's recovery, it can hardly be gainsaid that, both technically and financially, the board has seized the opportunities which have been sent to them. Nor would any reasonable investor deny the wisdom of their cautious distribution policy. The outlook, in short, remains favourable. Whether the present price of the ordinary shares is justified depends on the terms of the new issue and the earnings prospect. They stand at 62s. 6d., a rather formidable height for any investor who is subject to vertigo.

Ind Coope and Other Breweries.—Widespread recovery is the keynote of recent brewery results, for out of eight reports this week only *Wenlock Brewery* shows a quite trifling setback. Other companies, mostly medium-sized, show moderate or very satisfactory progress. Pride of place, however, must go to *Ind Coope and Allsopp*, both for its rate of advance, indicated by an increase of 26 per cent. in profits, and for its importance. In a comment on

the preliminary figures in the *Economist* of November 28th, it was shown that the recent acquisition of Nalder and Collyer prevents an exact comparison of profits, but Ind Coope and Allsopp now ranks among the millionaire profit earners. Over £200,000 of the increase shown in the accompanying table is in trading profit, while £18,500 arises from higher interest and dividends. The rise in general expenses is mainly due to an increase from £98,199 to £173,331 in compensation fund and taxes.

	Years ended Sept. 30th,		
	1934	1935	1936
Total profit	626,673	842,049	1,061,650

* 7½ per cent. interim on £1,475,698; final on £1,745,698.

The dividend represents a similar proportion of the amount earned, and consequently the general reserve allocation is comfortably doubled at £100,000, while property reserve provision is only slightly lower at £57,901. The balance sheet is no less eloquent of the growth of the undertaking. Fixed assets at £6,887,790 have increased by more than £900,000 and shares in subsidiary companies are nearly £100,000 higher at £1,374,423. The £1 ordinary shares, standing at 126s. 3d., yield £4 7s. per cent. and still

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

carry an equity in the fruits of recent amalgamations. Other companies which record the satisfactory improvement of 15 per cent. in profits include *Cobbold and Company*, who have earned £72,957 against £63,342, and distribute the greater part of the increase; *Robert Deuchar's*, whose profits are £114,237 against £97,890, and who pay the double dividend of 20 per cent., tax free, and yet have an earnings margin of 34.3 per cent. to place to reserve; and *Hewitt Brothers* whose profits have increased from £128,481 to £147,423, but are content to raise the dividend by 1 per cent. to 15 per cent., and to place as much as £17,000 to reserves. Moderate improvement is shown by *Bentley's Yorkshire Breweries*, who put most of the increase of £14,609 in profits to property improvements reserve. The regular progress of *Warwick's and Richardsons* in earnings and dividends continues, and although *Officers Brewery* profits of £84,210 show an increase of only £2,989, the dividend is raised by 2½ per cent. to 27½ per cent.—an increase which is readily afforded when 58.8 per cent. is earned for the equity.

United Molasses Report.—This concern, which presents its shareholders with a well-devised statement of combined group results, together with a consolidated balance sheet, still finds the molasses market difficult. The full report confirms our interpretation of the preliminary statement, a fortnight ago, but it records that profits on molasses were over £100,000 lower than in 1934-35, and that the increase in trading profits of over £60,000 is solely attributable to increased tanker earnings. Consequently, the jump of 10 per cent. in earnings to 21.7 per cent. is due to the greatly reduced amount expended on the redemption of the remaining 4 per cent. debenture stock. Our table below shows that the usual one-third margin between earnings and cash dividends has again been approximately preserved:—

	Years to September 30		
	1934	1935	1936
Trading profit	605,049	652,384	716,186
Total revenue	705,433	774,202	831,586
General expenses, fees, and interest	84,218	83,610	84,220
Depreciation	253,490	270,000	262,000
Taxation	...	...	30,000
Staff fund	4,000	8,000	20,000
Debenture interest and redemption	191,003	178,965	56,298
Preference dividends	57,188	58,125	57,656
Ordinary shares:—			
Earned	115,534	175,502	321,412
Paid	75,194	120,311	207,148
Earned %	9.2	11.7	21.7
Paid %	6	8	14
Reserve	...	80,000	110,000
Carried forward	70,025	45,216	49,480

The report underlines two points affecting profits and dividends. First, it is again emphasised that the prevailing rate of depreciation for the group's fleet—which cost £303,678, compared with £297,608 for 1934-35—will suffice to write off the fleet to scrap value in about six years, although the nineteen tank vessels, with their average age of 7½ years, are fit for another twelve years' economic working. The directors, however, intend to maintain the present rate while profits remain at their present level. Secondly, the conditions of the molasses market faced the company with a dilemma last year. Cuban production

from surplus cane relieved the threatened shortage of supplies, but owing to its higher distillation qualities, and to keen competition, profit margins have remained small. The new source of supply has removed the fear of market shortage—an important matter for United Molasses, whose real profits are derived from transport of the commodity—but the reduction in profits will apparently continue during the current year, though offset in other directions. Investors must therefore inquire whether the major advance in freight rates has not already occurred. This factor, above all, will regulate the company's earnings during the current year. The 6s. 8d. ordinary shares stand at 23s. 9d. to yield £3 18s. 6d. per cent.

Railway Wages and Costs.—The Associated Society of Locomotive Engineers and Firemen, which did not accept the award of the National Railway Wages Tribunal of last August, is now pursuing its independent claim for a six-hour day, a standard week of 36 hours, abolition of "spread-over" turns, additional Sunday pay, and two weeks' paid holiday. This week's proceedings before the Railway Staff National Tribunal have been more enlightening regarding the cost of these proposals than upon the wisdom of claiming revisions of service conditions estimated to cost £9,704,000 in a full year. The case submitted on behalf of the companies was that this claim could hardly be treated seriously, since the total traffic increase for 1936 would cover little more than half that sum. Interesting light, however, was thrown upon other elements of costs which are tending to increase. Expenditure on coal and raw materials, for example, is rising rapidly owing to the expiration of earlier contracts, and the 1935 quantities at present prices would involve an additional expenditure of £2 millions. In relation to the earnings possibilities for the year which is now closing, investors can attempt a rough computation of gross increases saved "net." Increased traffics and costs broadly cancelled out during the first half of the year. Since then, the increase in traffics has been of the order of £2½ millions, and might be £3 millions by the end of the year. Increased wages, however, will have required between £500,000 and £600,000, while the increase in coal and materials costs was estimated at this week's hearings to amount to £366,000 for the half-year. On present indications, indeed, it would seem improbable that more than 1½ per cent. can be earned on L.M.S. ordinary, or more than one-half of one per cent. on Southern deferred. Great Western 3 per cent. dividend, very probably, may be short earned to the extent of ½-1 per cent., while "Berwick" second preference will have difficulty in earning more than 1 per cent. These estimates, with only three weeks of the railways' year still to elapse, can hardly be significantly affected by the traffics still to come. But with an increase of £2 millions in coal and materials costs, and the possibility of pressure from the Unions next year, the investor cannot be satisfied that full-blooded recovery is yet in sight.

Aircraft Results.—The narrow basis of yester-year's speculative boom in aircraft shares is now being revealed. Apart from the Hawker and Handley Page results, the industry has made a poor profits exhibition during recent weeks, which has not been improved, this week, by the Westland Aircraft and Pobjoy Airmotors' results. The former report has covered a fifteen months' period, and shows net profits of merely £4,258, of which £1,008 was earned before the business was incorporated. In relation to prospectus statements, this result is unsatisfactory, for the company took over an established works and had already achieved success with its prototypes. There was, accordingly, every prospect of satisfactory profits. Pending the chairman's explanation next Tuesday, investors may consider two features. First, the Air Ministry's contract officers may have dealt hardly with the company, or the new Army co-operation machine, which was developed during the year, may have required heavy expenditure. Secondly, are the results likely to affect the course or the terms of the merger which has been market gossip for some weeks? Compared with Westland,

the Pobjoy results have no portentous significance. The first trading period of eighteen months has borne the cost of the change-over from civil to military engine sub-contract work. The report is eloquent regarding the turn-over of the current year, and states that the factory "is now working on a profitable basis." Since incorporation, the company has discharged the liabilities of the vendor company, but these exceeded the amount warranted by that company. Pobjoy still shows a relatively satisfactory net assets position, if the substantial stocks are included, but any increase in turnover, it would appear, may require some further resources. These results give special importance to next week's meetings and justify the semi-chastened share levels which now prevail.

Tin Companies' Prosperity.—Both *Malayan Tin Dredging* and its associate, *Southern Malayan*, fared particularly well in the year to June last. Indeed, with the recently announced final distribution of 22½ per cent., the former company increased its dividend to the record total of 80 per cent. These results were due to the treatment of an increased yardage of higher grade material, even though the tin ore realised £133 per ton against £141. The sum of £20,670 is written off fixed assets, compared with only £1,940 for the previous year, leaving the increased balance of £74,000 to go forward. Of the company's area of 2,239 acres, 1,290 acres have been dredged out. Sales of investments have reduced the total from £325,380 to £259,870, and are reflected in increased cash holdings of £155,150 against £24,890. On the basis of last year's dividend, the shares, now quoted at 45s. 6d. cum 1s. 9d. dividend, show a yield of fully 9 per cent. The Southern Malayan results for the past two years are not really comparable, since the company has absorbed Southern Perak during the period. As a result of this transaction, the issued capital has been increased from £365,000 to £432,500, and some £82,450 received as premiums on the new shares was written off property and plant. In addition, £20,388 was charged

against working costs, and a further £32,000 was transferred from profit and loss. Thus the property and plant of the amalgamated undertaking now stands in the balance sheet at no higher than £200,000, having been reduced by £33,000. Last year's dividends total 45 per cent., and the shares now yield 7½ per cent., only 920 acres having been dredged out of approximately 4,887 acres owned. *Tronoh* has declared a further interim dividend of 12½ per cent., bringing the total distribution to 40 per cent., while *Southern Tronoh*, with a 7½ per cent. payment, has distributed 15 per cent. to date. The *Kamunting* report discloses reduced profits, owing to rising costs and reduced valuation per ton of ore. This company, like *Pattani*, was able to maintain its dividend, and the current year's prospect is considerably improved.

Rand December Dividends.—The revised South African mining taxation has worked to the advantage of the majority of the companies, although in one or two cases—for example, New Modderfontein and Van Ryn Deep—the burden has fallen more heavily than before. Although the average gold price has been lower than in 1935, the companies have aimed, where practicable, at maintaining or increasing their profits by expansion of the scale of operations rather than by the treatment of higher-grade ore—although the latter policy was, in fact, somewhat encouraged by the new taxation. Consequently, the dividend declarations so far available make an irregular showing. The final rate on Robinson Deep "B" shares exceeds market expectations, although the capital now ranking is higher than that of six months ago. An accident on the Simmer and Jack property towards the end of the June half-year reduced the profits and necessitated a cut in the already rather small distribution. Conditions have since become normal, and the year's total shows little change. It is satisfactory that the Sub Nigel has been able to maintain the increased rate paid in respect of the first half of the current year. The incidence of taxation

The Problem of the Foreign Exchanges

by L. L. B. ANGAS

This book goes right to the heart of one of the most crucial economic questions confronting the business-men and statesmen of our day.

Financial News: "Mr. Angas has written the most clear and searching criticism of the gold standard which I have ever read."
Journal of the British Institute of Bankers: "His summing up of the pre-requisites of a successful functioning of a free gold standard is masterly."
Macmillan & Co., St. Martin's Street, W.C.2. Price £1 net.

upon Luipaards Vlei is evident in the dividend distribution. In the "Johnnies" group, Government Areas, Langlaagte and Van Ryn Deep have repeated the reduced dividends of six months ago. Taking the two half-years together, the decline, as compared with the 1935 total, looks appreciable. The general expectation that Randfontein would raise its December rate, if only to the extent of 3d. per share, has been disappointed. Nevertheless, the year's total of 5s. compares with 4s. for the previous year. The payments are set out in the following table:—

	Dec., 1935	Total, 1935	June, 1936	Dec., 1936	Total, 1936
Gold Fields Group					
Luipaards Vlei	-/3	-/9	-/6	-/6	1/-
Robinson Deep "B"	1/6	2/9	2/-	2/6	4/6
Simmer and Jack	-/3	-/6	-/1½	-/4	-/5½
Sub Nigel	8/-	16/-	9/-	9/-	18/-
"Johnnies" Group					
Government G.M. Areas	3/-	6/-	2/9	2/9	5/6
Langlaagte Estate	2/-	4/-	1/6	1/6	3/-
New State Areas	2/6	5/-	3/-	3/-	6/-
Randfontein	2/-	4/-	2/6	2/6	5/-
Van Ryn Deep	3/-	6/-	2/6	2/6	5/-
Witwatersrand Gold	2/-	4/-	2/-	2/6	4/6
General Mining Group					
Van Ryn Gold	2/-	4/-	2/-	1/6	3/6
West Rand Cons. ord.	1/6	2/6	1/-	1/6	2/6
Do, deferred	...	...	£2/5/9	£4/5/-	£6/10/9

As expected, the increased earnings of the West Rand permit the company to maintain its dividend on the ordinary, and the deferred shares now rank for their first year's dividend. The distributions of the Anglo-American group for the past half-year are broadly maintained. Brakpan pays rs. 6d. as before, while Daggafontein is to distribute rs. 3d. on the 5s. shares—the same as the comparable rate on the former £1 shares. Springs pays rs. 5½d. against rs. 6d., and West Springs maintains its rate of rs. per share. The Anglo-American dividend, however, is raised from 2s. to 3s. per share, while Anglo-American Investment pays a first dividend of rs.

Other Company Results.—The reports of 63 other companies are analysed on page 561. Substantially better conditions in Australia are reflected in the increase from £13,217 to £47,244 in the profits of *Australian Pastoral Company* and in the conversion of a loss of £62,031 made the previous year by *Scottish Australian Company* into a profit of £25,451. *Glass Houghton and Castleford Collieries*, who made an issue of capital some months ago, have earned well over twice the profits for the previous nine-month period. The ten rubber company results published this week include considerable improvements by *Rubber Estates of Malaya, Sembilan Estates and Stoughton (Perak)*. The full report of *Harrods (Buenos Aires)* confirms the preliminary statement made recently. Trust companies continue to make only modest progress. *London Scottish American*, for instance, have earned £54,598 against £51,184, and *North American Trust* £109,552, as compared with £106,109. *Avon India Rubber*, whose profits amount to £38,948 against £51,976, have experienced this setback despite increasing sales. This the directors attribute to fluctuating raw material prices unfavourably affecting the forward bought position. *Booker Brothers McConnell* are raising their dividend from 10 per cent. to 15 per cent., having earned £77,146 against £55,380. The amount earned for the equity of *Coventry Gauge and Tool* is practically unchanged at £13,976, but the 7½ per cent. dividend is the first for some years. The

report refers to a 58 per cent. increase in total sales. Moderate improvement is recorded by *R. Hood, Haggie and Company*, with profits of £64,467, and a small increase of just over £1,000 by *Ilford, Ltd.*, who repeat their 7 per cent. dividend. *India Rubber Gutta-percha* have earned £66,137 against £51,186; the directors in their report allude to the progress of the Silvertown building. The £350,296 profits of *Manbré and Garton* show a moderate improvement on the £321,736 earned in the previous year. Considerable progress has been made by *Sussex Brick*, and by *Waterlow and Sons*, who pay the same dividends of 18 per cent. and 5 per cent. respectively.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—British Overseas Bank, Commercial Bank of Scotland, Barclays Bank (Dominion, Colonial and Overseas), Peninsular and Oriental Steam Navigation, Ansell's Brewery, Associated Equipment, Timothy Whites and Taylors, J. Brockhouse and Company, Barton and Sons (1935), British Tyre and Rubber, Tobacco Securities Trust, Great Boulder Mining and Finance, New Zealand Loan and Mercantile Agency, Willoughby's Consolidated, Gold Coast Selection Trust, Marlu Gold Mining Areas, Rhodesian Corporation, Anglo-Ecuadorian Oilfields, British Burmah Petroleum and Anglo-Transvaal Consolidated Investment. At the British Overseas Bank meeting, Mr Arthur Gairdner discussed the problems created for the banker by State interference with business. The Hon. Alexander Shaw's comments at the Peninsular and Oriental Steam Navigation meeting are considered in a Note on page 534. At the Ansell's Brewery meeting the chairman enumerated some of the developments in progress. Mr C. W. Reeve, at the Associated Equipment meeting, said that higher trading profits were due to the increased sales but considered the amount of profit per unit as being still too small. Mr Philip E. Hill, addressing Timothy Whites and Taylors shareholders, commented on the adverse effect of the poor summer season on their seaside branches. At the British Tyre and Rubber meeting the chairman expressed regret that no measure of agreement on a voluntary limitation of tyre output had yet been achieved within the industry. At the J. P. Brockhouse and Company meeting, Mr J. T. Brockhouse emphasised that the firm had no wish to rest on its laurels, but on the contrary felt it appropriate further to extend the scope of the company's enterprise. Attention was being turned towards still further expansion, order books to-day showing better prospects than ever before. Mr J. E. Hodgkin at the first Barton and Sons (1935) meeting explained the company's work of co-ordinating its various activities, and in reporting the acquisition of interests in two companies, said that the wisdom of purchasing works at Netherton had already been proved. At the Rhodesian Corporation meeting, the chairman referred to the Fred mine, which, in spite of a decreased profit, was now giving better values at the lower levels. Mr Claude de Bernales summarised the progress of certain of the Great Boulder Mining and Finance interests, and referred in particular to the Yellowdine mine. The chairman of British Burmah Petroleum declared that the company had reached a turning-point in its career. At an extraordinary meeting of Willoughby's Consolidated, the chairman explained that the purpose of the meeting was to authorise a cash return to shareholders of a portion of the capital. Mr H. E. R. Williamson, at the Anglo-Ecuadorian Oilfields meeting, referred with satisfaction to the great strides made by consumption in spite of higher prices and increased output. At the Commercial Bank of Scotland meeting, the Governor warned shareholders that the defence programme temporarily obscured the need for developing overseas trade outlets. Mr H. L. Melville Tritton, at the Barclays Bank (D. C. O.) meeting, pointed to the evidence of faith in gold, which recent currency difficulties had strengthened rather than weakened. Lord Catto, at the Tobacco Securities Trust meeting, discussed the difficulties arising from the activities of a sub-subsidiary. At the Anglo-Transvaal Consolidated Investment meeting, the chairman referred to activity in trying to discover extensions of the Witwatersrand series in new areas. Mr H. G. Latilla, at the Gold Coast Selection Trust meeting, discussed the Bremang Gold Dredging Company, recently incor-

porated as a separate unit. At the Marlu Gold Mining Areas meeting, he described the progress of the programme for laying down four units of the treatment plant. Mr Harold G. Brown, at the New Zealand Loan and Mercantile Agency meeting, expressed satisfaction that the company could begin to clear up preference dividend arrears.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

TICKET DECEMBER 15 | **ACCOUNT** DECEMBER 17
SETTLING DAYS

THE market's reactions, this week, have again proved that the settlement of the crisis, no matter how regrettable its nature, is a tonic after prolonged uncertainty. A foretaste of Thursday's rally was experienced on Tuesday, when a settlement of another sort was canvassed. But the "House," prepared by Thursday's press for an Act of Abdication, showed that it maintains a good deal of its "spring," and after some hesitating marking down of prices, the bargain hunters were again abroad.

The general trend of markets during the eight days of crisis is analysed in Notes on pages 532 and 533. Conditions have, necessarily, fluctuated—a weak opening, followed by partial recovery, a mid-week relapse, and, on Thursday, a general rally on momentous news which yet put an end to uncertainty. These see-saw movements have been evident in every section of the market. Gilt-edged, for example, opened ½ to ¾ lower, picked up well on Tuesday (when Old Consols were a full point higher), lost fractions up to ¼ of a point in mid-week and recovered most of this setback on Thursday.

In the foreign market, Brazilian bonds enjoyed some early support, with the Funding issues prominent, but there was considerable mid-week profit-taking. European issues were steady, a rally in German bonds being held fairly well. Japanese bonds staged a mid-week rise, but the recent interest in Chinese issues had evaporated.

Home rails opened with no spirit, and were unable to find any. The market was inclined to treat the locomotive men's demands (discussed on page 536) with some seriousness, and the only recovery in Tuesday's rather brighter market was in L.M.S. ordinary. The response to quite fair traffic was only temporary, for the market gradually lost colour on Wednesday. Foreign rails remained firm, although Wednesday's closing prices were not at the best. The fractional falls, however, did not extinguish the whole of the previous rise in the leading Argentine stocks.

Business in the industrials market has followed the fortunes of other sections, under the general influence of the constitutional crisis. Eyes have been turned more to the comings and goings between London and Fort Belvedere than to the markets. The iron and steel group was easier at the beginning of the week, with Dorman Long a bright exception in anticipation of the meeting. A slightly brighter condition prevailed on Tuesday, but there was no substantial improvement until Thursday afternoon. Dorman Long continued to improve after the meeting on the new issue forecast. Aircraft issues were a little firmer on Tuesday than on other days, and similar conditions prevailed in the motor group, although movements in all cases were small. Crompton-Parkinson led the way downward among electrical equipment issues at the beginning of the week. Electricity supply shares gained on the figures for electricity output in November.

Other sections of the market moved in the same fluctuating fashion, and there were very few features of special importance. P. and O. deferred gained on news of the impending reduction in Suez Canal dues. International Combustion were strong on the increased distribution, and there were one or two small improvements in mid-week in the miscellaneous industrials section.

The oil market opened the week firmly, largely owing to the hope that the chief companies would follow the lead of a few of the independent producers in America in raising crude oil prices. The disappointment of this hope and the consequent dulness in New York did not react upon London, the possibility of future action not being dismissed. There was considerable activity in Trinidad Leaseholds, and firm prices in most Venezuelan issues. By mid-week, prices fell generally but not seriously, the immediate cause being that Continental buyers turned sellers.

Among rubbers, the response to the rise of the commodity to over 9d. per lb. was not overwhelming, the thoughts of operators, like those in other markets, being elsewhere. Pre-occupation, however, could not hold the market down entirely, and prices went ahead calmly under the stimulus of discriminating buying. Later the market was a little more willing to let itself go: demand broadened, and the air of respectability and prudence that has lately hung around rubber share investment was less noticeable. By mid-week,

the general uneasiness did not leave prices untouched, but liquidation was not appreciable. Nothing happened to arouse the tea shares market from its state of coma.

Somewhat heavy conditions continued in the mining market, which like all others had to endure the period of waiting as best it could. Its morale came reasonably well out of the test, it apparently being safe enough to do nothing. Tuesday brought a noticeably better sentiment, many prices ending up slightly higher, but there was no real public demand to take advantage of the market's brighter mood. Rhodesians were more active than of late, and some good West African reports proved a stimulus, short-lived but noticeable while it lasted. Wednesday started fairly well, but the feeling of suspense became more oppressive, and prices were allowed to sag by degrees. De Beers preferred fell in spite of the announcement of the payment of arrears.

The tone on the Paris Bourse was dull, though prices resisted the effects of political uncertainties fairly well. Business in Berlin and Amsterdam was unusually quiet, an exception in the latter centre being rubber share quotations, which on Monday responded to the increasing commodity price.

NEW YORK STOCK EXCHANGE

THOROUGHLY quiet conditions prevailed on Wall Street during the first half of the present week, as during last week, and only in mid-week were there signs of any life. Among the reasons for the lull were the much discussed labour troubles present or expected, the end of the dividend season, and perhaps more particularly the fear of various actions by the authorities to restrain speculation. Coming at the end of the year, when adjustments are being made by investors with an eye to their capital profits tax liabilities, suggestion of restraints may be as effective as the restraints themselves. Business news is as good as ever, as is evidenced by the *Iron Age* estimate that steel mill activity for the current week was 76.5 per cent. of capacity, and by an increase of 13.9 per cent. in electricity output over the corresponding week of last year. For a moment at the end of last week an increase in crude oil prices led to hopes of an increase in oil security prices, but interest died away this week. Opening of preliminary hearings on extension of the emergency rail surcharges led to a good recovery in railroad securities in mid-week, when motor and metal issues were also lively.

CAPITAL ISSUES

No fewer than ten prospectuses have made their appearance this week, but the number of substantial public issues is a matter for a finger or two, rather than both hands. The largest issue is of 4½ per cent. first debenture stock of *Associated British Properties*. This concern acquires from Associated Cinema Properties 53 cinema properties recently built or acquired for the development of Associated British Picture Corporation's business. The latter concern will rent these properties on terms which cover the debenture service 1½ times, and will pay all management expenses. In short, this is a "subsidiary" debenture, whose holders must look towards the profits of the parent concern for their security. At current levels, these earnings are sufficient to provide satisfactory cover, but the past record company, in fact, must be regarded as a vehicle specifically designed for marketing the debenture stock, and the latter is of a more speculative character than a seasoned industrial issue. Similar conditions of security attach to the guaranteed debentures and notes of *Simpson (Piccadilly)* whose service is guaranteed for the next three years by S. Simpson, Ltd., a wholesale clothing concern in North London. The current earnings level of the guarantor covers the debenture and note service less than three times. There are risks in the successful establishment of new West End stores, however, and for the present the speculative elements in two issues warrant the relatively high rates of interest which they carry. *Badenoch Rubber Estate* is the first rubber concern to be floated for a considerable period. The earnings prospects of the ordinary shares under present conditions, are in accord with confidently, but not extravagantly, valued shares of existing companies. A further South African concern, *Dunswart Iron and Steel*, makes a mixed offer of 5½ per cent. preference shares and 1 ordinary shares, the latter at 41s. 6d. per share sterling. The business is now in process of expansion, and consequently the difference between the 8½ per cent. earnings yield on past profits and 13½ per cent. on anticipated earnings must be recognised as contingent. The British investor, moreover, is already fairly extensively interested in the prospects of South African recovery. *Regional Properties* is a property-holding concern of conventional type, with mixed assets of office buildings, flats, and dwelling-houses. Intending subscribers could have made more use of the profits estimate if a fuller indication had been given regarding the state of lettings on the various properties, for it is framed, like the valuation of the properties, on a "fully-let" basis. There remain, finally, four prospectuses on behalf of companies whose capitals range between £50,000 and £75,000. Of these, *General Engineering*

Company (Radcliffe), Pages, Ltd. (to be dealt in on the Manchester Exchange), and *J. Berry and Sons* offer their ordinary shares at premiums varying between 50 and 100 per cent., and on earnings yield bases of 10 to 14½ per cent. All are typical "recovery" businesses, and their very limitation of size may involve difficulties of dealing and provide a limited buffer during times of falling profits. *Dinnor Quarries* is of interest largely to Liverpool investors and the undertakings acquired have an indifferent profits record. A conversion offer of 4 per cent. debenture stock, due 1957, has been made at par to holders of *Atlantic and Northwest Railway* 5 per cent. guaranteed mortgage bonds. Statements "for information only" have been published this week by *E. G. Brown and Company, A. E. Jenks and Cattell, Grand Union Canal Carrying, and Cortonwood Collieries, and Vitacream, Ltd.*

ISSUES OF THE WEEK

January 1 to December 5, 1936, including conversions, Old Basis, £459,511,421.
January 1 to December 5, 1936, excluding conversions, Old Basis, £233,878,960.

(Continued from page 541)

Keen and Gardner take issue at 102 and expenses, for 2½ per cent. commission. Secured on leasehold property (79 years unexpired).

Vitacream, Ltd.—Capital 500,000 2s. shares. Manufacturers of artificial cream, etc. Formed 1929. Profits, after depreciation, years to June 30: 1934, £12,343; 1935, £20,262; 1936, £22,314. Total assets, £68,112. (Acquisition, etc., of secret processes, etc., £16,192). Leadenhall Securities Corporation take 175,000 shares at 6s. 1½d. and expenses (say 2½d. per share).

ISSUES TO SHAREHOLDERS ONLY

Bowater's Paper Mills, Ltd.—Issue of 300,000 6½ per cent. cumulative £1 preference shares at 28s. 6d. each.

Charterhouse Investment Trust.—Shareholders are being offered 500,000 £1 ordinary shares at 25s. each in the proportion of one for every £2 of ordinary stock held on November 18th.

Rand Leases (Vogelstruifontein).—The company has made an issue 5 per cent. debentures £900,000 at par in the proportion of £30 of debentures for every 100 shares held on December 31st.

Ismay Industries.—Issue of 408,000 ordinary 5s. shares at 7s. 6d. per share in the ratio of one new share for every five held.

Gopeng (Perak) Rubber.—Issue of 1,100,000 2s. shares at 2s. 1½d. each at rank for dividend as from January 1, 1937.

Tarran Industries.—Issue of 500,000 ordinary shares of 2s. to ordinary shareholders at 2s. 6d. per share in the proportion of one new ordinary share for every three ordinary shares held on November 23rd. The new shares will rank *pari passu* in all respects with the existing ordinary shares, but will not participate in the dividend payable on December 8th.

D. Smith and Sons, Ltd.—A further capital bonus distribution of one ordinary share for every 15 shares, ranking for dividend as from September 1, 1936. Issue of 200,000 1s. ordinary shares at 6s. per share to shareholders registered on December 18, 1936, in the proportion of one new share to four existing shares, to rank for dividend as from January 1, 1937.

Hewitt Brothers, Ltd.—Issue of 50,000 ordinary shares to ordinary shareholders in the ratio of one share for every six held at bonus price of 55s. per share.

CONVERSIONS AND REPAYMENTS

Atlantic and Northwest Railway.—Offer of conversion at par of £1,300,000 5 per cent. bonds 1937 into 4 per cent. first mortgage redeemable debenture stock due 1957, at par. Secured on part of system leased to Canadian Pacific Railway, who guarantee repayment of stock in 1957. Or redeemable on three months' notice at 102 from 1947 to 1951, or at 101 thereafter.

Bowater's Marney Paper Mills, Ltd.—Issue of £800,000 3½ per cent. first mortgage debenture stock at 97½ per cent. Any stock not previously redeemed will be paid off at par on September 1, 1961. Purpose of issue to repay £800,000 4½ per cent. first mortgage debenture stock on March 5, 1937, at 103 per cent.

Bowater's Paper Mills, Ltd.—The directors will repay on March 5, 1937, £1,000,000 4½ per cent. first mortgage debenture stock at 102 per cent. For this purpose an issue is being made of £1,000,000 new 3½ per cent. first mortgage debenture stock at 98½ per cent. Stock not redeemed to be paid off at par on July 31, 1961.

Indian Iron and Steel Company, Ltd.—Issue of £1,500,000 4 per cent. first mortgage debentures at 98 per cent. to repay on July 1, 1937, £485,950 7½ per cent. first mortgage debentures of Indian Iron and Steel Company at 105 per cent., also £837,850 7 per cent. first mortgage debentures of Bengal Iron Company at 105 per cent. on January 13, 1937. The company is also issuing 731,464 ordinary Rs. 10 shares at par (15s. per share).

Baldwins, Ltd.—The amount required to redeem the three outstanding debentures is £2,254,857, and to provide the necessary funds it is proposed that 1,500,000 4½ per cent. cumulative first preference shares £1 should be created by converting 7,500,000 unissued ordinary shares of 4s. each, to be consolidated into 1,500,000 £1 shares. The balance would be obtained by issue of 2,078,947 ordinary shares of 4s. each to the present ordinary stock-holders at 8s. per share in the proportion of one new share for every five units of stock now held.

BONUS ISSUES

Monotype Corporation.—The directors recommend distribution of a scrip bonus to ordinary shareholders in proportion of one in three shares held. This is to be effected by the capitalisation of £124,634 of the reserve. The new shares will be entitled to dividends as from October 1, 1936.

BY TENDER

Mid-Southern Utility.—Sale by tender £50,000 4 per cent. consolidated preference stock at a minimum price of £105 per £100 of stock. Tenders will close at noon on 15th December. The issue is being made to finance developments.

REPORTS AND NOTICES

Messrs. Thomas Skinner and Company, announce that "The Bankers' Almanac and Year Book," 1936-37, will be published on December 23rd.

BANKS

BANK OF MONTREAL.—Mr W. A. Bog had intimated to directors desire to retire as general manager effective December 7th, and at subsequent meeting of Board he was elected a vice-president and member executive committee. To fill vacancy Mr G. W. Spinney appointed joint general manager. Joint general managers now: Mr Jackson Dodds and Mr G. W. Spinney.

ITALO-BELGIAN BANK.—Accounts for year to June 30, 1936, show profits of Frs. 10,029,799, an increase of Frs. 910,887. Dividend is unchanged at 8 per cent., free of Belgian tax, and Frs. 100,000 against Frs. 400,000, is provided for taxes. Reserves receive Frs. 9,997,000, against nil, and a balance of Frs. 1,616,067 is carried forward, compared with Frs. 10,287,203 brought in. Deposits at June 30, 1936, amounted to Frs. 395,404,704, and bills held as collateral and for collection on account of customers to Frs. 325,006,713. Cash in hand and with bankers is Frs. 199,989,316.

INSURANCE

THE EQUITABLE LIFE ASSURANCE SOCIETY.—Mr H. T. Adlard, F.I.A., the assistant actuary, and Mr C. P. Waters, the chief clerk will retire after 42 and 47 years' service, respectively, at the end of this year. The directors have appointed Mr H. J. Tappenden, F.I.A., as deputy manager as from January 1st next, and he will retain his appointment as Reversionary Interest Society, Mr M. E. Ogborn, F.I.A., has been appointed assistant actuary. Mr H. D. Beavers, A.C.I.I., chief clerk, and Mr K. Ostler.

THE STANDARD LIFE ASSURANCE COMPANY (Declaration of Bonus and New Business Figures).—The Standard Life Assurance Company has declared an annual compound reversionary bonus at the rate of 42s. per cent. for the year ended November 15, 1936. This high rate has now been declared by the company each year for the last ten years. In 1936 the sum assured. The new business figures show that the total ordinary life assurance business (after deduction of re-assurances) written by the company during the year ended November 15, 1936, was £7,520 policies for £4,071,396. This exceeds the corresponding total for 1935 by £160,788 and is the largest total in any one year in the history of the company, whose ordinary life new business has now surpassed all previous records in each of the last four years. In addition, the company issued group life policies assuring £502,030 (as against £468,672 in 1935) and leasehold life policies for £541,900. Deferred annuities were written securing £84,404 per annum under ordinary policies and £219,740 per annum under group pension policies, and £215,280 was secured in single payments under immediate annuity bonds.

COMPANY MEETINGS

THE BRITISH OVERSEAS BANK, LIMITED

A YEAR OF GREATER ACTIVITY

BANKING AND POLITICS

THE COLLAPSE OF THE GOLD BLOC

BUSINESS IN SPAIN

MR A. C. D. GAIRDNER'S ADDRESS

The seventeenth annual general meeting of the British Overseas Bank, Limited, was held, on the 8th instant, at the bank's premises, No. 33 Gracechurch Street (Lombard Court), London, E.C.3.

Mr Arthur C. D. Gairdner (chairman of the company) presided. The Secretary (Mr A. E. Thorne) said: Mr Chairman, we have received apologies for absence from Mr Nigel L. Campbell, one of our directors, and Mr R. T. Hindley, an advisory director.

The Secretary then read the notice convening the meeting and the report of the auditors.

The Chairman said: Gentlemen,—Reference has been made on several occasions at these meetings to the difficulty of discussing general conditions. This difficulty was never more acute than it is at the present time, and it occurs to me that possibly it may not be unprofitable to dwell for a few moments on the reasons for this. It is an established banking principle that it is undesirable for bankers to enter into political controversy, and the observance of this principle makes it almost impossible to comment on the general situation as it exists to-day. Politics dominate all other factors at the present time, and it is the relationship of banking to politics to which I would turn for a few moments.

STATE INTERFERENCE WITH BUSINESS

State interference in business has been on the increase for decades, but in the special conditions of the period since the war, and particularly of the last few years, it has taken peculiar and exaggerated forms. Economic and political discontent has afforded a forcing ground for extremist theories in many countries, and the result has been very nearly a landslide of democracy in favour of dictatorships. Fundamental changes in the principles followed by the Government of any country are brought about not so much through the merits of the new ideals themselves but as a revolt from the unsatisfactory situation created by the immediately preceding Government.

Whether these changes come as a reaction against internal weakness or from outside pressure, or through a combination of both, the result has almost always been an autocratic system. This is so whether the new regime is in the name of the Fascist or the Communist ideal. Every form of Government, however—the new extreme types just as much as the older and looser democracies—requires a workable banking system, and the banker has to conduct his business against a political background which he cannot control and with which, as a banker, he must not interfere. His duty is to make the system adopted by his country work, but the technical problems of finance and credit are not made easier by this preoccupation, exaggerated as it is to-day, with political theories.

If, as should be the case, he is consulted by the authorities as to the financial effects of their measures, it is his part to advise, to point out any difficulties, and to recommend a solution for them. This is a professional duty which does not imply responsibility or even approval for the policy and decisions of the Government, although I do not mean that he should have no opinion of his own on the broader issues. His duty, however, once a course of national action has been decided upon, is to carry out the Government policy to the best of his ability, and this is often a matter of considerable difficulty when policies based on political prejudice have to be applied to the practical questions of the day.

THE BANKER'S PROBLEMS

This line of conduct governs the banker's relations with his own Government, but it must also be followed when he does

business abroad and comes into contact with foreign Powers. In such cases he has the further problem of providing a liaison between his own and a foreign country and reconciling divergent political principles when expressed in concrete business proposals. It is with these practical questions that a banker has to deal, and circumstances may easily arise when he realises that Government decisions on actual questions will not bring about the results desired.

It is then necessary for the banker to point this out, and it may be necessary for him to take up a very strong position in the interests of his own or any Government that consults him. If he were to approach such problems in a partisan spirit, his opinion would no longer be regarded as a professional one and would lose weight accordingly. In our experience we can say that, however unpalatable the views we have expressed may be thought at the moment, we have never found that the resentment caused has endured. It has been realised that our opinion, right or wrong in itself, is a professional one arrived at for reasons that can be clearly and definitely stated. It is for considerations such as these that a banker should not become involved in political controversy but should devote himself wholeheartedly to the field in which he may be of some real benefit to the community, and it is in this field that the British Overseas Bank has a place.

I must apologise for this digression and return to the matters more directly affecting banking, and our own bank in particular, during the last twelve months. The principal matter of general interest has been the collapse of the gold bloc. Last year we suggested this was essential before any comprehensive understanding amongst the nations could be tackled. The effect of this collapse has, however, been partially obscured by the indecision with which the French and Dutch Governments have dealt with the new situation. This indecision is also to be found in Poland. The consequence is that to-day reconstruction has hardly begun, although signs are not wanting in certain directions as to the lines of thought that are being pursued.

INCORPORATION WITH FREDK. HUTH AND COMPANY

Turning to more intimate matters, the most important incident of the year has been the incorporation of Messrs Fredk. Huth and Company with the British Overseas Bank. This firm had its roots deep in the traditions of London banking, and its name was a byword for all that was best in that profession. Recent years and the difficulties they brought made a change desirable, and we are glad to feel that the new relationship has been established with ourselves. In order that this should be maintained to the fullest extent, Mr Huth Walters became an advisory director of this bank and Mr Meinertzhagen joined the board. We were also able to retain the services of a number of the staff.

We have since our foundation had a strong desire to establish ourselves as merchant bankers, but owing to the difficulty of making a start in a completely new field we delayed doing so until an opportunity occurred which would facilitate the initial steps. This we found in Messrs Fredk. Huth and Company, who when they began business in London were known, under the term in use at that time, as "merchant adventurers." From that day to this they have maintained an active merchant business, which in recent times has been developed through the medium of companies with a nominal capital in place of the earlier method of specialised departments. These companies we have taken over and continue to operate. Little time has, of course, elapsed, but we are satisfied that the step we took was wise and will lead to good results.

SITUATION IN SPAIN

Spain has perhaps presented us with the most difficult problem with which we have been faced in the past year. Our business with that country since we absorbed the London and Liverpool Bank of Commerce has been large and important. This was thrown into complete confusion by the hastily and ill-conceived clearing arrangement entered into at the beginning of the year. A certain degree of order had barely been established when the civil war broke out, but even in such conditions it has been surprising how contracts have been observed. The integrity of no debtor stands higher than that of the honourable Spaniard. The confusion of the moment, however, is such that you will not expect me to refer to it in detail.

The system we inaugurated a few years ago under which members of the board become deputy-chairmen for twelve months has proved highly satisfactory, and in continuation of this arrangement Sir James Caird has vacated the office and Lord Aberconway has succeeded him for the ensuing twelve months.

BALANCE SHEET FIGURES

The figures in our balance sheet are very much what might be expected from the circumstances I have described. Current, deposit and other accounts are approximately £1,300,000 higher than a year ago. This has been brought about by a number of clients of Messrs. Fredk. Huth and Company transferring their accounts to us, and also by the greater activity in our own business which we have experienced during the latter months of the period under review. A large percentage of the increase, however, comes from foreign clients, who find London a convenient place in which to maintain their liquid resources. The increase in our acceptances is also accounted for by the incorporation of Messrs. Fredk. Huth and Company and the recent greater activity in our own business.

On the other side of the account there does not appear to be any item specially calling for comment, beyond possibly the extent of our cash resources. Obviously, in the circumstances I have mentioned, it is necessary that these should be larger than would be the case under more settled conditions, although they cannot be considered as a profitable method of employing the resources of the bank. Some people may be inclined to criticise the extent of the balance carried forward in the profit and loss account of £69,146 11s. 1d., but the board consider that the same reasons apply in this case as in that of our cash resources, and the balance carried forward is, in the circumstances, a more desirable destination for any surplus profits than is to be found by crediting them to definite reserve accounts.

I now move the following resolution:—"That the report and accounts for the year ended October 31, 1936, as audited and certified by your auditors, now before the meeting, be approved and adopted: that the dividend of 6 per cent. for the year recommended on the 'A' ordinary shares be approved and paid to shareholders on the register of members at the closing of the books on November 24, 1936."

I now ask Lord Aberconway to second the resolution, and after that I shall be glad to answer any questions which any shareholder may like to ask.

The Rt. Hon. Lord Aberconway, C.B.E. (Deputy-Chairman): Mr Chairman and Gentlemen, I beg to second the resolution which has been proposed to you by the Chairman.

QUESTION OF INTERIM DIVIDENDS

Mr W. Starling: Mr Chairman, may I just ask a question? I should like to know whether there is any intention to make an early resumption of the payment of interim dividends on the "A" ordinary shares. I put that question because on the first occasion when you failed to pay an interim dividend on these shares their value dropped very materially on the Stock Exchange, and it does not seem the right thing in the interests of the bank to find what is practically a preference share quoted at such a very big discount as the "A" share has been, and I think that the resumption of interim dividends, if I may say so, would largely tend to remove that disadvantage. You are carrying forward more than sufficient to pay the whole year's dividend, so that it does not seem to be a very risky proceeding to pay an interim dividend, but, of course, I am not conversant with all the figures of the bank and you are much better informed. I should like to have an idea, however, as to whether there is a possibility of the board reconsidering its decision about interim dividends.

Mr George C. Morgan: Mr Chairman, with regard to what my friend there has just said, I think that the price at which the shares stand on the Stock Exchange is a matter of much less

moment than the safety of the bank, and I should like to endorse the policy of the board in this matter.

Mr Starling: May I just make a further remark? The question of safety does not seem to be at all imperilled by such a payment, and surely in order to encourage confidence in your clients and friends it is worth while running the risk of paying an interim dividend even if there is a possibility of not meeting the full dividend at the end of the year.

THE CHAIRMAN'S REPLY

The Chairman: Well, I am sure that the board are very glad to feel that they have among the shareholders one who is so optimistic as our friend Mr Starling. I am sure that the board would be glad to take the question of the resumption of the payment of interim dividends into account as soon as they thought that it was desirable to do so from the point of view of which Mr Morgan spoke. At the moment, however, I think I can speak for the whole board when I say that we do not contemplate making any change in our procedure adopted some years ago, because the conditions in the world are very uncertain. In fact, we are extremely glad to get to the end of the year and be in a position to pay a dividend for the whole of it. I think that is the view of the board to-day, but we will take note of what has been said, and you may be sure that it will receive careful consideration.

Mr Starling: I submit to your better judgment, of course, sir. The Chairman: If there are no more questions, I now put the resolution to the meeting. Please signify your approval in the usual way; those against; that is carried unanimously. I will now ask Mr Hird to move the next resolution.

RE-ELECTION OF DIRECTORS

Mr Norman L. Hird (Advisory Director): Mr Chairman and Gentlemen, I have the honour to move the following resolution:—"That the directors retiring by rotation, The Right Hon. Lord Aberconway, C.B.E., and Mr Dudley Ward, C.B.E., be re-elected and that Mr Louis E. Meinertzhagen's appointment to the board be confirmed." In doing so, it is scarcely necessary for me to say very much about the two directors who are retiring by rotation. You all know both Lord Aberconway and Mr Dudley Ward. I would just remind you that Lord Aberconway is a man of many interests and activities. When we think of him, it is probably natural that we should remember that he is head of John Brown and Company, and it is particularly gratifying that on this occasion we can congratulate him on the fact that his wonderful company has effected another great achievement in the success of the "Queen Mary" since we were here last.

With regard to Mr Dudley Ward, who is absent abroad to-day on business, I need only remind you that he had been with the British Overseas Bank from its earliest days. He, of course, is a whole-time director, and we are very much indebted to him for all the work he has done here. Then, during the year there has been an addition to the board in the person of Mr Meinertzhagen. He comes from an old banking family with all the advantages of tradition. Mr Meinertzhagen is of great value to the British Overseas Bank by reason of his knowledge of merchant banking. I do not think it is necessary for me to say anything more, and I have very great pleasure in commending to you the motion which I have already read. (Applause.)

Sir James Caird, Bart (Director): I have very much pleasure in seconding that motion.

The Chairman: I beg to put the motion to the meeting. Those in favour; those against; carried unanimously.

THE CHAIRMAN'S DISTINCTION

Lord Aberconway: Mr Chairman and Gentlemen, I beg to thank you for the honour which you have done me in re-electing me a member of so able and distinguished a board. I had intended to say in seconding the resolution for the adoption of the report and accounts how pleased the board were on learning that our chairman, Mr Gairdner, had received the distinction of being presented with the Cross with Star of the Order of the Eagle by the Estonian Government. I am sure that all the shareholders as well as the board desire to congratulate him on the distinction which has been conferred upon him. (Applause.)

The Chairman: I will now call upon a shareholder to move the next resolution.

Mr Morgan: Mr Chairman, I beg to move: "That the retiring auditors, Messrs. George A. Touche and Company, and Messrs. McClelland, Ker and Company, be reappointed as auditors of the company for the current year at the same remuneration, namely, a collective fee of seven hundred and fifty pounds."

Mr Starling: I have much pleasure in seconding that resolution.

The Chairman: I put that resolution to the meeting. Those in favour please show their approval in the usual way; those against; carried unanimously. Well, gentlemen, that is all the business, and I can only thank you very much for your attendance here to-day.

VOTE OF THANKS

Mr Walter Scott: Gentlemen, once again I have the pleasure—and I regard it as an especial honour this time—of asking you to pass a very hearty vote of thanks to the chairman and directors. I am sure that during the last few months times have been most difficult for you and your board and, in all the circumstances, we must all be very pleased to receive the balance sheet which you have put before us to-day. I can only add, sir, that all the shareholders, including those who are absent from the meeting, will be highly pleased to learn of the distinction which has been granted to you. I have not very much more to say except to express my congratulations and to offer to you and the board a most hearty vote of thanks. (Applause.) I will put that to the meeting. All those in favour; that is carried unanimously, sir.

The Chairman: Mr Scott and gentlemen, I thank you very much for those kind remarks and for the way in which you received Mr Scott's all too flattering statements. There is one point on which I can assure him that he has not been mistaken. The balance sheet which we submit to you to-day represents more hard work on the part of the board, and especially on the part of the management, than any balance sheet, I think, which you have ever had put before you. In the turmoil existing all over the world the carrying through of the simplest operation requires a great deal more care and knowledge than ever before, and it is only by the most careful attention to the routine of business—or what ought to be the routine of business—that things can be carried through successfully, and you all owe—we all owe—what success we have achieved to the management and to every member of the staff, whose efforts have enabled us to present the results which we have placed before you to-day. (Applause.)

Mr Walter Scott: In the resolution of thanks which I proposed I unfortunately forgot to mention the staff. May I once again, on behalf of all the shareholders, convey our most grateful thanks to every member of the staff? (Applause.)

The proceedings then terminated.

NEW ZEALAND LOAN AND MERCANTILE AGENCY COMPANY, LIMITED

LARGELY INCREASED PROFIT

The forty-second annual general meeting of this company was held, on the 10th instant, in London.

Mr Harold G. Brown (the chairman) said that the profit was £156,000, compared with £85,045 in the previous year. This was arrived at after providing nearly £45,000 for exchange losses on transfers to London, or some £2,500 more than last year. The directors recommended the payment of one and a half year's dividend on the first preference stock, and were glad thus to be able to make a start in clearing up the arrears.

With regard to Australia, there had been a satisfactory improvement in their business in both Victoria and New South Wales, but in Queensland the returns were not so good as last year owing to the after-effects of the drought and the very heavy losses of stock due thereto and to subsequent unseasonable rains. However, the greater part of Queensland was now in very much better shape than it had been for several years past, and, given a continuance of reasonable rainfall, they might look forward to a steady improvement. Conditions generally in Australia might be regarded as fairly satisfactory.

There had been a marked improvement in the company's business in New Zealand. The expansion was attributed not only to higher values and improved trading conditions generally, but to increased efficiency. Recent legislation in New Zealand, however, had seriously increased the burden of the already high taxation which they had had to bear on their profits there. They were doing all they could to economise and to improve their efficiency, but were advised that, in spite of every saving, their extra costs this year would be something like £25,000 or £30,000, thus still further reducing their already inadequate remuneration for the important work they did.

The outlook for the current year was fairly encouraging. The prices of commodities with which they were mainly concerned had risen steadily to a point at which they gave a fair, if not very handsome, return to the producer, and at which the company should be able to get a reasonable return on their capital were it not for the unavoidable loss they made in remitting their profit.

The report was unanimously adopted.

GREAT BOULDER MINING AND FINANCE, LIMITED

SATISFACTORY PROGRESS

MR CLAUDE DE BERNALES' STATEMENT

The meeting of Great Boulder Mining and Finance, Limited, was held, on the 7th instant, in London.

Mr Claude de Bernales, the Chairman, said: The Revenue Account shows a deficit on the year of £138 4s. 10d., explained by the fact that a substantial proportion of the company's investments consist of shareholdings in subsidiary companies still in the development stage, and in other companies not yet on a dividend-paying basis.

At the date of the accounts the cash available was £225,216 12s. 3d., and in addition we held marketable securities to the extent of £191,292 10s. 3d. Our ready financial resources were therefore £416,509 2s. 6d., which can only be considered as most satisfactory.

I will now refer to our most important holdings and interests. Whether viewed from the results obtained from work carried out to date, or from the historical angle, the prospects of the Gladiator developing into a mine of magnitude and importance must be regarded as very sound, and in time we can reasonably hope to see the Gladiator mine transformed into an active and profitable gold-producing concern.

The history of the Lochinvar mine follows closely that of the Gladiator, and there is also a strong resemblance between the heartening events which have taken place since the property passed into our control. The three other mines directly under our control, namely, the Woolgar, Bindah and Black Range mines, are being intelligently prospected, although evidence of success here cannot yet be said to be as concrete as it is in the two mines just discussed. It is probable that one or more valuable mines will emerge from amongst them, each mine has a good past production record and has been the subject of favourable reports.

The Crescent and Jupiter mines both have undeniable possibilities and information gathered so far has encouraged us to secure a further period of six months during which our option over them may be exercised.

Our principal investments in gold mines, other than completely owned by us, are represented in our considerable shareholdings in the Yellowdine, Great Boulder Proprietary, Comet and Carmen Valley mines.

THE YELLOWDINE MINE

This remarkable mine is expected to be able to declare in a few months a dividend which will be equivalent to the whole of the invested capital to the several companies which originally purchased the property. The mine is expected by the end of January next to be making a net profit of £27,000 (Australian currency) per month. Our company hold nearly a one-sixth interest in the Yellowdine property, and the possibilities appear excellent.

With regard to Great Boulder Proprietary Mine, the completion of the scheme for increasing production will be reflected in the payment of a higher dividend rate, and a consequent appreciation of our invested capital. This mine is likely to prove a most satisfactory investment. Since the date of the accounts we have acquired a fourth-ninth interest in the Comet Gold Mines, Limited, a company registered in Western Australia.

News just received informs us that the east shaft in the Comet Mines is now down to a vertical depth of 27 ft. from the present collar of the shaft, and that sulphide ore is showing in the bottom of the shaft carrying high values.

Our company held a one-third interest in Carmen Valley Mines, United States of Colombia, South America. The mine has an excellent record for gold production, and there are sound mining reasons why certain specified development work should be immediately proceeded with.

GOOD PROSPECTS

In conclusion, we have every reason to be satisfied with the progress made during the year under review. Our cash resources are sound and we possess a good list of share investments, most with a ready cash market on the London Stock Exchange. I look forward to better news next year. You can rest assured that I and my co-directors will do everything possible to further the interests of the company.

The report and accounts were adopted and the meeting closed with a vote of thanks to the chairman.

THE COMMERCIAL BANK OF SCOTLAND, LIMITED

SUCCESSFUL YEAR—INCREASED PROFIT

FURTHER IMPROVEMENT IN TRADING CONDITIONS AT HOME

EARL OF MAR AND KELLIE'S ADDRESS

The annual meeting of the shareholders of The Commercial Bank of Scotland, Limited, was held at Edinburgh, on the 10th instant, the Earl of Mar and Kellie, Governor of the Bank, presiding.

In submitting the report the Governor said:—

Before commencing the business of the meeting I have to refer to the loss we sustained during the year through the death of Sir Archibald Denny, Baronet, who, since our last meeting, was appointed by the Board to be an extraordinary director. Sir Archibald took much interest in the welfare of the Bank and was the third member of his family to hold office. We greatly regret that his official relationship with us continued for so short a period.

It gives me pleasure to meet you again to-day and be in the position to submit for your approval a report which I consider gives further evidence of that vitality and strength which have long been associated with this institution.

TRADING CONDITIONS

A year ago I was able to refer to a steadily improving tendency in trading conditions at home, and I am pleased to say that we have still evidence of that tendency. In almost all fields of enterprise improvement can be observed, and it is only when the position in the international field is considered that we find little to encourage optimism. Although that is so and in many directions the extreme Nationalistic outlook, which has been the outstanding feature of the post-war world, is still as pronounced as before, there are signs that a recognition of the fundamental need of trade between the nations, unfettered by exchange complications and artificial barriers, is again dawning. In this connection the recent devaluation of the gold *bloc* currencies and the agreement between the United States of America, France and this country, entered into in a spirit of understanding and goodwill, were events of outstanding importance.

IMPORTANCE OF DEVELOPMENT OF INTERNATIONAL TRADE

It appears to me to be of the utmost importance at the present time that manufacturers should recognise that the greatly improved conditions recently experienced in the home market may not continue indefinitely, and that every avenue for the development of international trade should be explored. In so far as the added stimulus given by the defence programme of the Government tends temporarily to obscure the need for the development of overseas outlets, the position is to be regretted, and it will be well that we keep clearly in mind that in the last resort extending overseas markets are what we shall require when saturation point is again approached in the home field. It is symptomatic of restored confidence that a Scottish exhibition should be within the bounds of practical politics. The response which the promoters have so far received to the Guarantee Fund must be most encouraging to them, and I take this opportunity of wishing success to an undertaking which should do much to focus attention upon Scotland and Scottish products at a most opportune time.

BALANCE-SHEET ITEMS

Turning now to the report, you will observe that the directors have applied to the Reserve Fund out of the year's profits the sum of £50,000, which makes the Fund £3,050,000. That is a large sum, but your directors are satisfied that a large reserve employed in the business offers the best safeguard against fluctuating dividends in times of uncertainty, falling interest rates and increasing charges such as we are experiencing.

NOTES IN CIRCULATION

Notes in circulation at the date of the balance amounted to £3,628,810, or £277,000 more than a year ago. Our note circulation throughout the year has remained consistently in excess of the previous year's figure, which provides a very satisfactory indication of the increased spending capacity of the public at the present time.

Deposits and other credit balances at £42,017,265 are more by £1,233,000, and it is worthy of mention as further evidence of the

improved conditions in which we are participating that the major part of the increase in deposits is represented by current account balances.

Acceptances and engagements on account of customers, etc., show an increase of over £1,000,000, which is an indication of the development of our foreign department, which is now very favourably placed to provide for the foreign and colonial currency requirements of our customers.

ASSETS

Turning to the assets side of the balance sheet, coin, bank balances and money at call and short notice provide an immediately available fund of over £10,500,000, which exceeds last year's figure by over £600,000.

British Government Securities amount to over £25,000,000, which is approximately £1,000,000 more than last year's total. Our holdings are carefully selected with due regard to dates of maturity. Outside of the British Government list investments amount to only £225,515, of which our holding of Bank of England stock is the chief item. The market value of the investments is greater than the amount appearing in the balance sheet.

Adding the amount of the investments to the preceding cash items, you will observe the total is almost £36,000,000, or over 78 per cent. of our liabilities to the public by way of deposits and notes in circulation.

Bills discounted amount to £1,143,545, or about £10,000 more than last year. These are bills discounted to customers in the ordinary course of business and do not include any Treasury bills at this time.

LOANS AND ADVANCES

With regard to loans and advances amounting to £13,101,000, there is a relatively small reduction of £146,000 at the date of the balance, but without further explanation no proper conclusion as to the state of trade can be drawn from this reduction. As a matter of interest I might mention that the average monthly figure of advances during the past year was in excess of £14,000,000, and although cheap money conditions have facilitated the issuing of loans and capital on a permanent basis and the consequent repayment of bank advances, there has been a welcome amount of well-spread new lending which has filled the gap which would otherwise have appeared. I venture to think that this tendency and the repayment of the less liquid type of advance which improved conditions have made possible, are satisfactory factors in the situation, which without explanation might escape notice. It is, I think, also worthy of remark that loans against marketable securities are substantially less than they were twelve months ago, and that of our total advances an amount in excess of £3,000,000 represents advances without specific security.

Our policy of gradually but steadily improving our properties has continued with advantage both to our customers and the staff, who are in most cases now working under greatly improved conditions. As you will observe, the properties appear in the balance sheet at £920,000, at which figure they are very moderately valued.
