Cultivation policy had received close attention. The modern method of encouraging selected forms of natural undergrowths which tended to improve the condition of the soil was being developed on both Labu and Glendale. The Visiting Agent stated that Labu was in first-class order; standards of work continued to be maintained at a high level and the quality of the finished product was excellent. The Visiting Agent for Glendale reported that though wintering was proceeding when he visited in February, the Estate presented a very pleasing appearance of dark green, healthy foliage. New growths were evident in all areas. The 1930 and 1931 plantings particularly appeared to have made rapid advance.

The report and accounts were unanimously adopted.

MR J. G. HAY ON HIS VISIT

Mr J. G. Hay, speaking at the meeting of Cheviot Rubber, Limited, which was held subsequently, referred to his recent visit to the Labu and Cheviot properties. He said that the restricted crop since last October had been taken in the main from their old estates, Labu and Cheviot, and that had had the advantage that they were only under obligation to take a small crop off each of their new properties, Middleton and Glendale. They had availed themselves of that opportunity not only to tap a small area but also to tap that area somewhat lightly, because they had no certain knowledge of what was the best method of tapping budded rubber, and so they were availing themselves of the opportunity that had been given to them of doing a certain amount of experimental tapping, hoping by that means to find a technique best adapted to dealing with rubber of that kind.

On the older properties the outstanding feature was the fact that Labu was still producing rubber at a very high rate per acre. On Cheviot there was evidence of greater deterioration in some part of the areas, but on neither was it anything like so marked as he had seen on other estates. Therefore, their problems of replanting were not nearly so acute on those old properties as on the average property in other parts of the country.

In reply to a question with regard to the recent increase in the amount of rubber permitted to be exported, Mr Hay said that the committee had at its disposal a large number of facts which could not be at the disposal of any individual. It was not concerned with the immediate effect on the stock market or on speculators. Its first—and almost sole—responsibility was to administer the scheme with respect to the long-term interests of the industry, and it must perform its duty on that basis to the very best of its ability, and in making its decisions it did so.

He was not at liberty, nor would it become him, to endeavour to go into the reasons which led the committee to its decision, the shareholders could accept his assurance that in coming to the decision they had taken into account all the relevant facts and that they had before them the views of the rubber producing industry.

The report and accounts were unanimously adopted and a dividend of 10 per cent. for the year was approved. Mr Hay was re-elected and the proposition for a vote of thanks to the staff in

Branches & Agencies throughout the World

Established 1836

ROYAL LONDON MUTUAL INSURANCE SOCIETY,
LIMITED

YEAR OF SUBSTANTIAL PROGRESS.

The seventy-fifth annual general meeting of this Society was held, on the 28th ultimo, in London.

Mr Alfred Skeggs, F.C.I.L., the chairman and managing director, in the course of his speech said:—The general revenue account for 1935 shows a total income from all sources of £7,912,719, being an increase of £248,063 over the previous year. The combined premium income of all branches (including consideration for annuities granted) was £6,420,993, an increase of £168,466. Total claims amounted to £2,948,683.

In the ordinary life branch new policies were issued for over £5,500,000, an increase of more than £500,000 compared with 1934, and a record in the history of the Society.

In the industrial life branch the premium income showed an increase of £61,000 over 1934, though in that year the weekly premiums were collected for 53 weeks, as against 52 weeks for 1935. In the fire and the accident and general branches, there were increases in premium income for the year under review, and in both branches the reserves represented a high ratio to the premium income, thus providing a high degree of security to prospective insurers.

There was a substantial excess in the market value of the Society's securities over the values shown in the balance sheet. As the rate of interest might eventually rise again, this excess was being held in reserve against any fall in values which might then ensue.

In the ordinary life branch the rate of interest earned was £4 4s. 7d. per cent., after deduction of income tax, compared with £4 8s. per cent. in the previous year. In the industrial life branch the net rate of interest, after deduction of income tax, was £4 16s. 2d. per cent., as against £4 16s. 11d. for 1934.

The nation was to-day much under-insured, especially in comparison with other countries. Though we were under-insured, the dimensions of the business showed that insurance was essential to the life of the nation. Last year, for example, the industrial offices paid out £20,000,000 in death benefits alone, thus providing the means in thousands of small homes of tiding over the period of emergency following the death of the breadwinner or some other member of the family.

Industrial insurance has shown remarkable progress in recent years. It provides a regular bonus system, and those who discontinue their policies receive free policies, or, in some cases, surrender values. Industrial policyholders have on the whole equal benefits and privileges with ordinary policyholders and in addition they have the great advantage of having the premiums collected week by week at their homes.

Referring to the quinquennial valuation, which has just taken place, in the ordinary life branch, the new sums assured during the years 1931-35 exceeded £22,800,000, which was more than double the figure for the period 1921-25. The surplus in the life branches, which ten years ago was £1,248,000, had now risen to £4,980,000, a highly gratifying position.

Following the quinquennial valuation, a reversionary bonus of £1 per cent. for each of the five years was now declared in the industrial life branch on qualifying policies which had been in force for five years or more. In the ordinary life branch there was declared a reversionary bonus of £2 per cent. for each year since the last valuation on fully participating policies.

The report and accounts were unanimously adopted.

RIO TINTO COMPANY, LIMITED

DEFINITE IMPROVEMENT—BETTER PROSPECTS

The sixty-third ordinary general meeting of the Rio Tinto Company, Limited, was held, on the 24th ultimo, at Southern House, London.

The Rt. Hon. Sir Auckland Geddes, G.C.M.G. (the Chairman), said that the profit for the year, subject to deduction of £72,500 for debenture redemption, amounted to £246,780, as against £111,717 for 1934, and as a result of Rhokana Corporation paying its initial dividend the dividend and interest income rose to £91,000.

In turning to their principal trading activities he was able to report that they had fully maintained, and in some instances had been able to improve upon, the performances of the preceding year.

With regard to Pyrites, the company's deliveries in 1935 were 1,178,000 metric tons, as compared with 1,160,000 metric tons in

1934. There had been no expansion in consumption of Pyrites, and they had been able fully to maintain their position in the Pyrites market. The contracts which fell due for renewal during the past twelve months were successfully negotiated, and thanks to an improvement in the heavy industries they were able to secure the benefit of the higher prices paid for the residues remaining after the extraction of sulphur from the ores.

Copper once again had taken its place as a contributor to the company's profits. Their brimstone deliveries were greater by over 7,000 tons than the amount shipped in 1934, and this increase would have been still greater but for the operation of French Customs Regulations introduced in July last year.

A year ago he expressed the hope that they would receive at no distant date a return on their investment in Rhokana Corporation. In October that Corporation declared a dividend of 12½ per cent. on the ordinary and "A" shares. Minerals Separation, Limited, in which the company was substantially interested, had paid an increased dividend.

In the past year, therefore, all the company's interests showed definite improvement, and the prospects for all of them, except those in Spain, were bright.

The report was unanimously adopted.

EX-LANDS NIGERIA, LIMITED

DIVIDEND AND BONUS OF 20 PER CENT.

The twenty-fourth ordinary general meeting of the Ex-Lands Nigeria, Limited, was held, on the 29th ultimo, at the Institute of Chartered Accountants, London. Mr H. G. Latilla (chairman and managing director) presided.

The Chairman, in the course of his speech, said:—The accounts show we actually earned for the year little more than was necessary to pay the 15 per cent. dividend, but as we were carrying forward £14,000 we felt shareholders should receive the full benefits of our results, and therefore we are proposing the 5 per cent. bonus dividend. Provided the price of tin remains in the neighbourhood of the existing price, and we do not suffer from very extensive renewed cuts in our quota, there would not appear to be any reason to doubt that we shall be able to maintain our dividend payments.

Our production was 473 tons of concentrates, as against 470 tons for the preceding year, and the profit rose by nearly £9,000, in spite of the fact that the average price realised for our tin during the year was nearly £10 per ton less than during the preceding period. So far, during the current year, the price has remained fairly steady, and the output authorised to June next is on a larger scale than last year.

As regards the company's property, everything is in very good condition; all plant is maintained in full working condition, and we are in a position to immediately take advantage of any increase in quota which may be granted and thus receive the immediate benefit therefrom. We are, as stated in previous years, committed under contract to take a certain amount of power per month, and in order to utilise this we have in the past stripped a considerable amount of ground in advance of production. We have, for the June quarter, been able to acquire from other producers a certain amount of additional quota. We are unable to say whether this can be continued, but shareholders will be glad to learn that a fair profit per ton will accrue from this source.

I referred last year in my speech to the fact that we had sent out a prospecting party to investigate an area where reports had been received that gold existed, but that owing to the serious illness of the European in charge of the prospecting, work was delayed. Prospecting was, however, recommenced at the end of the rainy season, and areas covering approximately seven square miles have been pegged. The results obtained to date warrant a continuance of this work.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY

VERY SATISFACTORY RESULTS

The one hundred and fifth annual general meeting was held in the Society's Offices in Edinburgh, on April 30, 1936; the Right Honourable The Earl of Stair, D.S.O., president of the society, in the chair.

In submitting the report and balance sheet the chairman of the board of directors, Colonel the Honourable David Bruce, stated that the results of the financial year completed on March 1st last had been very satisfactory.

Claims by death were less than in any year since 1928. The premiums paid amounted to £757,172 and expenses and commission to £107,845, or £14 4s. per cent. of the premium income.

INTEREST YIELD MAINTAINED

Interest yield on the whole of the funds was £4 3s. 9d. per cent. net after deduction of income tax calculated by the usual method, or £4 6s. 10d. per cent. after allowing for reserve and carry forward from the last quinquennial valuation. The maintenance of the rate of interest was a cause for satisfaction.

There had been a very considerable reduction in the policies surrendered, due no doubt in large measure to the improvement which has taken place in economic conditions. The funds had increased during the year by £319,357.

THE INVESTMENTS

The more important changes in the investment portfolio during the year included an increase in loans on property of about £230,000, British Government securities showed a reduction of £345,000, while increases had been shown in debentures and debenture stocks £246,000, preference and guaranteed stocks £234,000 and ordinary stocks and shares £215,000. There had been a further increase in the market value of Stock Exchange securities as compared with the balance sheet figures and the margin formed a very substantial buffer should there be a set-back in prices at a future date.

The amount of the society's new business was again increased—the gross and net figures of sums assured amounting to £2,084,263 and £1,917,843 respectively.

TAX EVASION

The Chancellor of the Exchequer in his Budget speech had referred to schemes for evasion of income tax, and the chairman stated that the society had neither devised nor encouraged any plan of this sort and had never used such methods to increase the new business.

The chairman concluded his speech with a tribute to the manager, Mr Murray, and staff. The adoption of the report was seconded by Mr Howard Bowser and carried unanimously.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended April 25, 1936 amounted to £9,399,000, against ordinary expenditure of £7,779,000. After allowing for a decrease in Exchequer Balances of £285,468, the operations for the week, as shown below, decreased the gross National Debt by £1,906,000 to approximately £7,923 millions.*

GOLD MARKET

Messrs. Samuel Montagu and Company write on April 29, 1936, as follows:

The Bank of England gold reserve against notes amounted to £202,143,995 on the 22nd instant, as compared with £201,629,685 on the previous Wednesday. Purchases of bar gold announced by the Bank during the week amounted to £590,270. In the open market about £1,360,000 of bar gold was disposed of at the daily fixing. The premium over franc parity included in the price has shown little change, but to-day's quotation of 140s. 9½d. was fixed on parity with the dollar for the first time since the end of December last.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
April 23	140s. 0½d.	12s. 0.56d.
" 24	140s. 1½d.	12s. 0.65d.
" 25	140s. 1½d.	12s. 0.69d.
" 26	140s. 1½d.	12s. 0.73d.
" 27	140s. 1½d.	12s. 0.73d.
" 28	140s. 1½d.	12s. 0.73d.
" 29	140s. 9½d.	12s. 0.82d.
Average	140s. 10.92d.	12s. 0.70d.
April 30	140s. 9½d.	12s. 0.82d.

The s.s. "Malaja," which sailed from Bombay on the 25th instant, carries gold to the value of about £409,000.

SILVER MARKET

by the Indian Bazaars and hesitation on the slight recovery in prices, 20½d. being quoted subsequently the tendency became easier, and being made more freely, and by to-day new features, selling on China account and still being the principal factors, but the operations both ways.

The tone is quieter, and whilst there is no indication of any important change, the market appears sufficiently high at the present level, the maintenance of which depends on the continued support of the Indian Bazaars.

Quotations during the week:—

IN LONDON			IN NEW YORK		
Bar silver	per oz. std.		Bar silver	per oz. std.	
Cash	Two Months		Cash	Two Months	
delivery	delivery		delivery	delivery	
April 23	20½d.	20½d.	April 22	45½

don't work company, Ltd., by resolution passed at an extraordinary general meeting of the company on April 20, 1936, and the certificate of the registrar of companies has now been received.

SPILLERS, LTD.—Messrs Spillers, Ltd., announce that they have purchased the whole of the issued share capital of E. C. Robson and Sons, Ltd., flour millers, Sunderland. It is the intention that the acquired business shall be carried on as a separate company as at present with the same personnel and under the same management.

LANCASHIRE COTTON CORPORATION (PURCHASE OF MODERN MILL AT SHAW).—The Lancashire Cotton Corporation has purchased the Trent mill at Shaw, one of the most modern and best equipped mills in the Lancashire cotton industry. It contains 120,864 mule spindles and is capable of producing both coarse and medium yarns. It is the corporation's intention to close the Duke mill, which was built over fifty years ago, and transfer the labour to the Trent mill. The Duke mill will then be scrapped.

EBBW VALE STEEL ASSETS (DEAL WITH RICHARD THOMAS AND COMPANY COMPLETED).—The directors of the Ebbw Vale Steel, Iron and Coal Company, in a circular to the 6 per cent. debenture holders, announce that the sale of certain of the company's assets to Richard Thomas and Company, as sanctioned in December last, has now been completed. Out of the proceeds, after discharge and cancellation of all outstanding prior lien debenture stock, £514,596 has been paid to the trustees for the debenture holders. It is proposed to distribute among the debenture holders registered on April 24th £57 7s. 9d. per £100 nominal. This will require £514,593. Payment will be made on May 2nd. The amount of the debentures outstanding will be £382,106.

GENERAL AIRCRAFT COMPANY.—The first accounts of General Aircraft—for the period from September 1, 1934, to December 31, 1935—show that trading resulted in a loss of £35,573. After adding interest and including a credit of £7,209 from estate account, the net loss was £29,987, including trading prior to incorporation. This amount has been carried to the balance sheet. Against this there was a capital profit of £22,832, resulting from the sale of the engine rights to Aero Engines, Ltd. Of this, £15,000 has been utilised to write down the value of patents, drawings, etc., leaving a balance of £7,232. To this has been added £2,501 from share premiums, making a total of £9,733 in a capital reserve.

AVIATION TRUST JOINS FIXED TRUST ASSOCIATION.—It has been officially announced that Aviation and Universal Investment Trust, which specialises in the aviation and allied industries investment field, has been elected a member of the Association of Fixed Trust Managers.

YEREBO, LTD.—Profits amounted to £440,920 in the thirteen months to December 31, 1935, after including a profit of £35,990 on the sale of investments. This compares with £371,964 in the previous year, when there was a gain of £14,733 on the sale of investments. Tax again absorbs £85,000, leaving net earnings of £356,920. The dividend is maintained at 40 per cent. on the basis of £106,452. The dividend is maintained at 40 per cent. on the basis of £106,452.

GOLD. It is also proposed to distribute a capital bonus by capitalising £250,000 of the reserve fund. The dividend is maintained at 40 per cent. on the basis of £106,452. The dividend is maintained at 40 per cent. on the basis of £106,452.

ANNOUNCEMENTS. Movement April 24, 1936, to April 30, 1936. Movement during year 1935. Movement during 1936 (January 1 to April 30, 1936, marked % or Stated). Movement April 29, 1925, to April 30, 1936, marked % or Stated. Movement September 21, 1931 (gold standard) in Cash. 1936 (inclusive) div. * Final div.

holders registered as at April 15, 1936, at rate of 6.5866d. net per sub-unit, on May 15th. In May last holders received payment at the rate of 12.4868d.

THE EVER READY COMPANY (GREAT BRITAIN), LTD.—The directors of the Ever Ready Company (Great Britain), Ltd., announce that they are recommending at the forthcoming annual general meeting the payment of the following final dividends for the year ended March 31, 1936: On the preference stock 5 per cent., less tax, making the maximum of 10 per cent., less tax, for the year; on the ordinary stock 25 per cent., less tax, making 35 per cent., less tax, for the year, payable June 5, 1936. Accounts will be issued on May 12, 1936, and show, subject to completion of audit, net profits

of £482,781 compared with £449,579 last year (which included profit on investments, £19,899); reserves and carry forward, £1,464,152, compared with last year.

THE HOME AND FOREIGN INVESTMENT TRUST, LTD.—A balance the preference stock for the half-year to March 31st last at the rate of 5 per cent., will be paid, less income tax at 4s. 7½d. per £, and a dividend of 2 p on the ordinary stock for the year to March 31, 1936, less income tax at 4s. 7½d. Warrants will be posted on May 11th and the transfer books will be closed 2nd to 11th inclusive.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

In general, business on the principal commodity markets was not very active during the past week. The outstanding event, discussed in a Note of the Week, was the decision of the International Rubber Regulation Committee to increase export quotas from 60 per cent. to 65 per cent. of the standard tonnages during the second half of this year. The decision was unexpected and caused a temporary setback in quotations.

Business in iron and steel materials was less active owing to seasonal influences, but the lull appears to have been accentuated by the anticipation of an increase in the prices of a number of materials in the near future. Meanwhile the industry remains as active as ever and the scarcity of certain materials continued to prevail. Business in coal continued patchy. The markets in the principal non-ferrous metals did not undergo any significant change. Business in vegetable oils and oilseeds was not very active.

Among textile raw materials, cotton declined slightly, partly on better weather reports from the United States. Business in Lancashire goods was dull, being confined to small transactions. Wool prices, on the other hand, remained firm, though the lull in trade in Bradford continued in the past week. Quotations for raw jute registered a small advance.

The improvement of wheat prices was not maintained, partly owing to better crop reports from North America. The market in raw sugar lacked support. The Mincing Lane tea auctions revealed a good demand for common and low-medium teas, a development which was to be expected from the increase in the duty. The market in provisions was not very active, and quotations for English beef and mutton at Smithfield were marked down a little.

The upward trend of the prices of the principal primary products in the United States came to an end this week, after a duration of only a fortnight. Thus Moody's index of the dollar prices of staple commodities stood at 169.3 on Wednesday, against 172.0 a week earlier, 169.9 a month ago and 157.4 on the corresponding day last year.

COAL

NEWCASTLE-ON-TYNE.—Tyne coal shipments this year are down 39,000 tons, compared with the corresponding period of last year, which is not so heavy as might be expected in view of the cessation of trade with Italy. Whilst export trade has been quiet and gives no indication of improvement, shipments for consumption in the home market have improved. Apart from a good demand for screened and sized steam coals, the market is quiet, there being abundant supplies of gas, coking coal and bunkers. Coke of all descriptions is very firm, and export business is restricted by the lack of supplies.

Current f.o.b. prices for export.—**NORTHUMBERLAND.**—D.C.B. screened, 16s.; smalls, 13s.; Howards, Bentinck, Newbiggin screened, 15s. 6d.; smalls, 13s.; Tyne Prime large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main large, 14s. 9d.; smalls, 12s. 6d. **DURHAM.**—Lambton, South Hetton screened steam, 15s.; smalls, 13s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-class gas, 13s. 6d.; coking, unscreened and/or smalls, 13s. 3d.; Prime unscreened bunkers, 15s.; second-class unscreened bunkers, 14s.; prime foundry coke, 24s.; Newcastle and District gas coke, 24s.

GLASGOW.—A strong market rules for most grades of washed nuts, supplies being restricted owing to the smaller demand for large coal, while demand all round remains brisk. In most districts only small tonnages are available for prompt business. Large coal generally shows an easier tendency. Land sale business has fallen off to some extent, and foreign business remains dull.

Current export prices, f.o.b. district ports.—**LANARKSHIRE.**—Ell best, 17s. 6d.; splint best, 18s. 6d.—19s.; splint second, 16s. 6d.—17s.; navigation, screened, 15s.—15s. 6d.; navigation, unscreened, 14s.—14s. 6d.; steam, 15s.; trebles, 15s. 6d.—16s.; doubles, 15s. 6d.; singles, 15s. 6d.—16s.; pearls, 14s.—14s. 6d.; dross, 12s. 6d. **FIFE.**—Best unscreened navigation, 13s. 3d.; unscreened navigation, 13s.; first-class steam, 14s. 9d.—15s.; third-class steam, 13s. 9d.—14s.; trebles, 15s.—16s.; doubles, 14s. 6d.—14s. 9d.; singles, 14s. 9d.—15s.; pearls, 13s. 6d.—14s. **LOTHIANS.**—Best splint, 14s.; prime steam, 13s.—14s.; secondary steam, 12s.—12s. 6d.; unscreened

navigation, 13s.—13s. 6d.; trebles, 15s. 6d.; doubles, 15s. 6d.; pearls, 14s. **AYRSHIRE.**—Best unscreened navigation—16s.; steam, 13s.—13s. 6d.; trebles, 15s. 6d.; doubles, 15s. nominal; pearls, nominal; dross, nominal.

CARDIFF.—There has been little, if any, improvement this week in the condition of the South Wales coal trade. There have been comparatively few fresh inquiries, and, with the settlement of wages dispute in the French coalfields, the anticipation of abn shipments to France has been disappointed. There is a glut of large coal, and, with production declining, smalls and sized coals are becoming still more scarce, and their prices are very high. With shipowners taking more large grades for bunkering purposes through coals are also a relatively strong feature. Coke is firm, with foundry prices ruling up to 47s. 6d. per ton and fu grades up to 25s. Patent fuel and pitwood are unchanged. Dements in the cargo and coastwise trades last week totalled 32 tons, compared with 436,200 tons in the corresponding week year. The tonnage position continues unsatisfactory and little any, increase in the volume of trade is likely this week. The G. Western Railway Company have announced their intention closing down temporarily the Penarth Dock. It is estimated the economies from this decision will amount to between £20 and £21,000 per annum, but the action of the company has provoked considerable local resentment, and representations on the subject have been made to the Government.

Current approximate quotations:—Best Admiralties, 19s. seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 6d.; Black V. 18s. 3d.; Western Valleys, 17s. 6d. to 17s. 9d.; Eastern Vail 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. 14s. 6d.; seconds, 13s. to 14s.; coking smalls, 14s. 3d. to 14s. anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 2 machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 5 stove nuts, 34s. to 50s. 9d.; rubbly culm, 11s. 6d. to 12s.; spe foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21 pitwood, ex ship, French, 24s. 3d.; Portuguese, 21s. to 21s. 6d.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that a quieter tone has developed in steel markets. But this is a seasonal movement and have become slightly accentuated this year owing to the fact that prices of some descriptions will be raised in the near future. All departments of the industry are busily engaged in making cations against contracts are reaching the work. In the pig iron department the difficulty of finding makers find it impossible to keep pace with the demand. In the pig iron department the difficulty of finding makers find it impossible to keep pace with the demand. For several weeks demand has outrun supplies in some districts are exhausted.

The situation in the semi-finished iron and steel capital bonus 50 per cent. somewhat alleviated as a result of the fact that imports of foreign materials by the Iron and Steel Federation. All the departments of the industry are busily engaged in making cations against contracts are reaching the work. In the pig iron department the difficulty of finding makers find it impossible to keep pace with the demand. In the pig iron department the difficulty of finding makers find it impossible to keep pace with the demand. For several weeks demand has outrun supplies in some districts are exhausted.

WOOL.—Bradford.—The past fortnight has not been a very active period in Bradford, but merino top prices have remained firm, and makers have endeavoured to keep their quotations in line with replacement cost. The only wool sales to be held in Australia between now and the end of June are those at which the remnants of the old clip and a little of the new clip will be offered. A small series has been held in Brisbane this week, and Bradford importers state that the clean cost of 64-70's wool was 29d., delivered here. Many of the lots were of mixed quality, but the cost given was barely sufficient to buy warp wool. The estimated cost in the top of good 64's was around 34d. This price is not realisable here, though some makers of the best standard tops have asked that figure this week. Since Easter there has been a little improvement in the output of tops from the combs, and importing topmakers who run their own machinery are still very busy. These regard the outlook optimistically. They expect a little squeeze in merino wool before the next Australian clip comes forward. Demand for crossbred tops is fairly good, and there is a large consumption. Slips and other crossbred wool sold to the United States has been re-offered to Bradford, but the prices are often not competitive and it is not likely that any harm will be done to crossbreds at the series of London sales which will commence on May 5th. The total quantity of wool available is 91,300 bales, and includes about 24,000 bales from Australia, 48,900 bales from New Zealand, 800 bales from South Africa, and 16,800 bales from South America. Fully firm prices are expected for all descriptions, though the home trade will not go much beyond prices at the last sales unless forced by foreign buyers. There is very little merino wool in Bradford which is not sold in the top, and whilst crossbred wool is still a speculative proposition, consumption has been good all this year. Spinners and manufacturers are impressed by the improvement in wool prices. The latter are taking up their botany yarn contracts quite well, and coating firms desire quick delivery. Spinners of coloured yarn are pressed for delivery. Demand for crossbred yarn is mostly from home trade manufacturers. Wholesale piece goods houses are waiting delivery of suiting and other cloths for men's wear, but so far retail business has been delayed by the cold weather.

GRAIN MARKETS

WHEAT.—The strength of the market, noted a week ago, has not been maintained. The easier tone which has been in evidence this week is principally due to the news of more favourable weather in the growing areas of North America. Liverpool and London have reacted in sympathy with Chicago and Winnipeg.

On Wednesday last, "May" futures were quoted in Chicago at 97½ cents per bushel, against 101½ cents the week before and 96½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 33s. to 33s. 6d. per 496 lbs., against 33s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 32s. 6d. to 33s., against 33s. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 896,000 quarters, against 811,000 in the previous week and 1,029,000 quarters in the corresponding week a year ago.

FLOUR.—The market remains about steady at last week's quotations. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 29s. 6d. per 280 lbs., against 29s. 6d. a week ago; delivered inner London, 29s., as compared with 29s. a week ago. Manitoba patents, ex store, 26s. 3d. to 28s., against 26s. 6d. to 28s. 3d. a week ago. Australian, ex store, 22s. 6d. to 23s., against 22s. to 23s. a week ago.

BARLEY.—The tone of the market in imported barley has been steady. Samples of English barley now on offer show a poor average quality and low prices are general. "May" futures were quoted at 37½ cents per bushel in Winnipeg on Wednesday, against 38½ cents a week ago and 38½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 22s. 6d., as against 22s. 6d. a week ago; "English Malting" at farm, 25s. to 40s., against 25s. to 40s. a week ago.

OATS.—Prices in this country remain unchanged. On Wednesday, "May" futures were quoted at 25½ cents per bushel in Chicago, against 27½ cents a week ago and 25½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 18s. to 19s. per 336 lbs., against 18s. to 19s. a week ago; "English White" at farm, 18s. to 19s., against 18s. to 19s. a week earlier.

MAIZE.—Prices for spot and near positions have risen somewhat during the past week, but distant positions have gain less. Adverse weather conditions have further delayed the picking and conditioning of the Argentine crop, and the moderate shipments have been readily cleared. "May" futures were quoted on Wednesday at 63 cents per bushel in Chicago, against 64½ cents a week ago, and 60½ cents last month. Quotations in London, Wednesday: "Plate," landed, 19s. 9d. per 480 lbs., compared with 19s. 6d. a week ago; "Plate," ex ship, 19s., as against 18s. 9d. a week ago; "Plate," "April," 18s. 9d., as against 18s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at £5 5s. to £5 7s. 6d. per ton, as against £5 7s. 6d. last week.

SALES: PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to April 25	107,014	154,474	170,539	156,163
34 weeks to April 25	7,638,296	9,499,405	11,563,167	11,634,314
Average price of English wheat per cwt.	s. d. 5 2	s. d. 4 5	s. d. 5 1	s. d. 6 7

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Apr. 23, 1932	Cwts. 121,632	Cwts. 27,186	Cwts. 25,794	s. d. 6 0	s. d. 7 10	s. d. 7 6
Apr. 22, 1933	107,014	50,729	33,031	5 2	6 1	5 8
Apr. 23, 1934	154,474	34,343	26,882	4 5	7 11	6 1
Apr. 27, 1935	170,539	55,576	28,402	5 1	7 2	7 0
Apr. 18, 1936	154,083	28,964	25,206	6 6	6 11	5 11
Apr. 25, 1936	156,168	28,876	22,415	6 7	7 4	5 11

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934.

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	May 1, 1935	Dec. 31, 1935	Apr. 22, 1936	Apr. 29, 1936
Winnipeg (No. 1 Manitoba) Cents per 60 lb.	65½	82½	88½	84½	82½	79½
Chicago (No. 2 Winter) Cents per 60 lb.	84½	98½	97½	101½	101½	97½

The visible supply of wheat in Canada amounts to 103,871,000 bushels, against 111,378,000 bushels last week, and 106,117,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—Demand has improved at the lower level of quotations and the market has had a firm tone this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 88s. to 88s.; Canadian, 80s.; Danish, 92s., as against 84s. to 88s., 80s. and 92s., respectively, a week ago. Arrivals in London last week included Danish, 12,338 bales; Canadian, 4,397; Dutch, 2,450; Lithuanian, 1,768; and Polish, 2,795, as against 13,666, 3,774, 2,849, 1,726 and 2,960, respectively, in the previous week.

BUTTER.—Quotations for Empire butter have remained about steady during the period under review, but Danish is a shade easier this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 88s.; Australian, choicest salted, 87s.; Danish, 102s.; compared with 87s. to 88s., 87s. and 103s., respectively, a week ago.

CHEESE.—Business remains moderate and the market has ruled generally steady this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 80s. to 86s.; Canadian, finest coloured, 64s.; and New Zealand, finest coloured, 53s. 6d. to 54s.; against 80s. to 86s., 63s. to 64s. and 53s. to 53s. 6d., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. Meanwhile, in London, Accra cocoa remains a firm market. On Wednesday last, good fermented new crop, "May-June," was quoted 24s. 3d. per 250 kilos, c.i.f. Continent, against 24s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 14,828 bags; delivered, for home consumption, 5,147 bags; exported, 86 bags; stocks, 166,387 bags, against 194,779 bags a year ago.

COFFEE.—The London spot market ruled steady on Monday. At Tuesday's public auctions Costa Rica, London and foreign cleaned, ruled fully steady to occasionally dearer, but Kenya and East India descriptions were of poor quality and met with little demand. The New York market has been quiet, with prices unchanged. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 4 cwt.; delivered, for home consumption, 63 cwt.; exported, nil; stocks, 11,460 cwt., against 18,431 bags a year ago. Central and other South American, landed, 8,331 cwt.; delivered, for home consumption, 3,776 cwt.; exported, 1,162 cwt.; stocks, 120,945 cwt., against 106,443 packages last year. Other kinds, landed, 11,838 cwt.; delivered, for home consumption, 3,543 cwt.; exported, 326 cwt.; stocks, 178,985 cwt., against 126,427 packages last year.

EGGS.—At Tooley Street on Monday prices became firmer. There was still a good demand, especially for unstamped eggs and for the cheaper varieties such as Polish and Yugoslavian. At Smithfield

on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 10s. to 10s. 6d. per 120, as against 9s. 3d. to 9s. 6d. last week, while Danish (15½ lb.) made 8s. 6d. to 8s. 9d. per 120, against 8s. 6d. to 8s. 9d. last week.

EGG MARKETING SCHEME.—The county branches of the National Farmers Union and the constituent bodies of the National Poultry Council are considering proposals for an egg marketing scheme, drafted by a joint committee of these two bodies. They are asked to say whether they favour the communication of these proposals to the Minister of Agriculture as an indication of the kind of scheme which could be submitted formally later on, when the Government's policy for the industry has been announced. A producers' board is proposed, to administer a compulsory scheme under the Agricultural Marketing Acts, the country being divided into areas with one packing station for each. Producers would sell their eggs to the area packing station, where they would be candled and graded, the Board fixing minimum prices at which the different grades of eggs should be sold to the public.

FRUIT.—Business at Covent Garden has been well maintained, fruit of all kinds clearing well, states *The Fruitgrower*. A steady demand has been experienced for all new season apples and quotations are a point firmer for most varieties. Small supplies of British Columbian were, however, offered at somewhat lower rates. Nova Scotian barrel apples have now finished and American have mostly been cleared. Pears continue to enjoy a steady sale. South African grapes are also in active demand at good rates, while Australian black grapes are turning out well. With the milder weather, demand has improved for peaches and for English forced strawberries, prices for which are steady. Oranges continue to sell well, all reliable parcels being firm in price. Lemons remain short and dear, while business in grapefruit shows some improvement.

MEAT.—After a moderate opening on Monday, business became dull, and supplies were not cleared. On Wednesday last Argentine chilled hindquarters were quoted at 3s. 8d. to 4s. per 8 lbs., as compared with 3s. 8d. to 4s. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,448 tons, a decrease of 1,457 tons on the corresponding week last year. Beef and veal accounted for 5,057 tons, mutton and lamb 2,733 tons, and pork and bacon 1,194 tons, as compared with 4,011, 2,707, and 814 tons, respectively, in the same week of 1935.

MILK.—With the object of transferring to the local authorities the duty of granting licences to producers of certain grades of milk and of improving and simplifying the special designations of milk, the Minister of Health has made a new Milk (Special Designations) Order (S.R.O. 1936, No. 356) to come into force on June 1, 1936. The Order reduces the number of special grades of milk to three, as follows: (a) *Tuberculin Tested* will be the only designation for raw milk from tuberculin tested cows; (b) *Accredited* will apply to raw milk from cows regularly inspected by a veterinary surgeon, but not tuberculin tested; (c) *Pasteurised* will describe milk which has been held at a temperature of 145°-150° F. for 30 minutes. "Tuberculin Tested" milk may also be pasteurised, in which case it must be sold as *Tuberculin Tested Milk Pasteurised*. Moreover, when tuberculin tested milk is bottled on the farm, the Order will permit it to be described as *Tuberculin Tested Milk (Certified)*.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 24 tons; delivered, 6 tons; stocks, 1,717 tons, against 2,220 tons a year ago. White, landed, nil; delivered, 35 tons; stocks, 12,457 tons, against 19,817 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. per cwt. ex warehouse on Wednesday, as compared with 8s. 6d. per cwt. a week ago. "April-May" in singles to Continent and U.K., was quoted at 8s. per cwt., against 8s. per cwt. a week ago. Movements in London during the past week were as follows: Landed, 141 tons; delivered, 179 tons; stocks, 939 tons, against 1,434 tons a year ago.

SUGAR.—The London market has been quiet this week, with prices a shade easier. In New York, the spot market has exhibited a steady tendency, prices remaining unchanged. The spot price in New York on Wednesday was 3.75 cents per lb., as compared with 3.75 cents per lb. last week and 3.75 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "May delivery" at 4s. 10d. to 4s. 10½d., against 5s. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 1,841 tons, against 23,357 tons last week and 3,569 tons in the same week of last year; deliveries, 17,367 tons, against 14,370 tons last week and 14,556 tons last year; stocks, 215,050 tons, against 230,576 tons last week and 161,442 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Avenue in recent weeks.

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Apr. 16, 1935	d. 11-66	d. 14-22	d. 16-41	d. Nil	d. Nil	d. 10-24	d. 13-78
Mar. 19, 1936	d. 12-96	d. 13-75	d. 14-90	d. 11-15	d. 10-77	d. 11-97	d. 13-34
Mar. 26, "	d. 12-97	d. 14-05	d. 15-45	d. 11-06	d. 10-73	d. 12-04	d. 13-49
Apr. 2, "	d. 12-91	d. 13-33	d. 15-84	d. 10-86	d. 10-47	d. 11-98	d. 13-43
Apr. 7, "	d. 12-73	d. 14-74	d. 15-95	d. Nil	d. Nil	d. 11-78	d. 14-30
Apr. 23, "	d. 12-67	d. 14-00	d. 15-99	d. 11-00	d. 10-47	d. 11-95	d. 13-41

This week's offerings at the public auctions in Mincing Lane comprised 53,743 packages of Indian and 22,137 packages of Ceylon tea. The tone of the market in Indian teas was brisk, low price and medium kinds being in particularly active demand. A similar tendency was evident at Tuesday's Ceylon auctions, when medium teas advanced in price on strong competition. Leaf grades, however, were irregularly easier.

VEGETABLES.—Tomatoes have received more attention, following the break in the cold weather, says *The Fruitgrower's* Covent Garden report, but only moderate quantities are yet to hand. Demand for cucumbers has also improved, but increasing supplies have caused prices to ease somewhat. House-grown beans and peas remain in demand, and mushrooms are firmer; rhubarb sells well, and forced marrows are now more in evidence. All kitchen green-stuff remains very short and dear. Egyptian onions are firmer, and old carrots have also risen on short supplies; turnips are steady. New potatoes have enjoyed a better sale, Mataros being quoted at 19s. to 20s. per cwt. at the Borough Market on Tuesday. The sustained demand for old potatoes, coupled with shorter supplies, led to an all-round advance in price this week. Best siltland King Edward made from 8s. 6d. to 9s. 6d. at the Borough on Tuesday, against 8s. to 8s. 8d. last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Trade in both oilseeds and their products continues quiet, and is confined to immediate requirements. There is no disposition to do business for forward delivery owing to the unsettled international outlook and unstable economic conditions. Consequently, linseed is in only small demand, and mainly in near positions. So far as British crushers are concerned, Plate is neglected, but is receiving support from the Continent. A little trade in Indian descriptions is reported. Smaller shipments and fair arrivals have reduced the quantity of linseed afloat for Europe to 127,300 tons (including 34,700 tons from India), or 22,600 tons less than a week ago. Shipments of Plate seed are now being made to Canada. Shipments from Argentina and India in the aggregate to date form practically the same percentage of the total world's supplies as a year ago. Cottonseed is firmly held, but only a small trade in black Egyptians has been effected at ½d. 17s. 6d., May-June. For new crop ½d. 7s. 6d. was accepted, but ½d. 10s. is now asked for October-December.

Trade in linseed oil is of a hand-to-mouth character, but prices remain steady and without material change. Raw oil ex Hull mill for May-August delivery is now quoted at ½d. 26 5s, and September-December at ½d. 26 7s. 6d. per ton, naked. Export demand for cotton oil has fallen off, though heavy shipments under old contracts continue to be made from Hull to the United States. Crude Egyptian ex Hull is offered at ½d. 24 5s., and refined at ½d. 26 15s.; but demand is negligible. Oilcakes, however, are steady and in fair request.

FURS.—On Thursday and Friday of last week a sale of Australian furs was held by Messrs Lampson and Company and Messrs Anning and Cobb, the well-known London fur-auction houses. The collection on offer was relatively small, and the tendency at the sales was firm. The prices realised showed little change compared with those ruling in January and February of this year. The general Spring series opened in London on Monday last, with the sale of the Hudson's Bay Company. The attendance was quite good, all European importing countries, except Italy, being represented. Leipzig buyers were numerous, but the number of Paris merchants was smaller than in January and February. Visitors from the United States were, however, more numerous than at the previous sales. Supplies on offer were again rather scarce; moreover, a considerable proportion of the skins were withdrawn in anticipation of higher prices. The principal price changes, compared with the January sales, were as follows: Beaver, 25 per cent. higher; musquash (a small and unrepresentative collection), 7.5 per cent. higher; otter, 15 per cent. higher; fisher unchanged to 5 per cent. lower.

RUBBER.—The International Rubber Regulation Committee sprung a surprise on the market by deciding, at their Tuesday meeting, to raise the quotas for the second half of the year from 60 per cent. to 65 per cent. of the basic tonnages. The market expressed its disappointment by reducing prices; there was, however, little liquidation and the offers forthcoming were readily absorbed, partly by short covering and partly by trade orders. The change in the quota is discussed in a Note of the Week.

The spot price in New York on Wednesday was 15½ cents per lb., compared with 15½ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., against 7½d. last week. In forward positions, business has been done at 7½d. to 7½d. for July-September shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 141,354 tons, against 143,337 tons a week earlier. A year ago stocks amounted to 165,272 tons.

TIMBER.—Imports of building and joinery woods from European and Canadian sources in March were a little above the corresponding period of 1935. Stocks on the London and provincial markets, on

the other hand, are considerably less. Spot prices are firming up, largely in response to shippers' optimistic views of the forward market. But there is still a margin between shippers' and British importers' ideas, and instances are quoted of some of the latter buying parcels from their trade competitors here in preference to ordering from abroad. Buying has been principally for spring and summer delivery. British orders for Russian timber for this year have been almost wholly placed, so that the lull in further large commitments is giving time for importers to distribute their wholesale purchases and thereby judge whether shippers' rates are justified. Demand for softwoods should continue active.

Hardwoods also continue firm in price at shipping centres generally, but on the spot sellers find it difficult to dispose of stocks a replacement values. American shippers are especially optimistic but there are such good supplies here of U.S.A., Canadian, Polish and Japanese woods that first-hand purchasers need not hasten to buy until the high forward rates have been well tried out. Small available stocks at shipping centres and increasing demand cause steep prices to be firm. There is little change in mahogany 10; prices over the past month, and demand still centres on the better qualities. Imports of plywood are heavy, but demand remains good.

WHOLESALE COMMODITY PRICES

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader
Page of THE FINANCIAL NEWS are as follows:

MONDAY, MAY 4—ARMAMENT METAL COMPANIES (concluded).
This article outlines the position and prospects in the markets
for MANGANESE and VANADIUM—two leading armament and
engineering steel alloy metals—and investigates the various Com-
panies producing them.

Important Notice

This issue will include a Special 36-page Supplement on
BELGIUM,

which will be presented gratis. This fully illustrated Supplement
contains a full review of Belgium's economic experience in every
section of her industrial and financial life since the van Zeeland
Government took the step of devaluing the Belga just over a year
ago.

TUESDAY, MAY 5—PROSPECTS IN THE KAFFIR MARKET. Our
Special Mining Correspondent "MINOTAUR" this week returns,
after a considerable interval, to review the prospects in the Kaffir
Market in the light of new factors of recent origin—the new tax-
ation basis, the French election scare and the European political
uncertainties.

WEDNESDAY, THURSDAY and FRIDAY, MAY 6, 7 and 8—COM-
PANIES AND THEIR PROFIT-EARNING CAPACITY: No. 14
Continued. THE AUTOMOBILE INDUSTRY (Articles 4 and 6).

Following our general survey of the Motor Industry during the
present week, we now turn to examine the position and prospects
of the individual Companies, starting next week with the accessory
manufacturers. These will be covered as follows:—

Wednesday, May 6—GENERAL EQUIPMENT

including J. Lucas
Simms Motor Units and
S. Smith (M.A.)

Thursday, May 7—BODIES—RADIATORS—GLASS

including Briggs Bodies
Sereck Radiators
Triplex
Splintex

Friday, May 8—TYRES

including Dunlop
Goodyear
Avon

THE END OF A CHAPTER

The flight of the Emperor of Ethiopia from his capital brings not only Abyssinia, but all Europe and the world, to the end of a chapter. Haile Selassie had no other alternatives than exile or a futile death. His long resistance, inadequately equipped, had proved fruitless; Italian gas and Italian bombs did their work only too well; and thousands of black men—Ethiopians and Askaris alike—have been butchered to make a Roman holiday.

Yet Signor Mussolini's victory is no mere triumph over Ethiopia. It is a triumph over the League of Nations—or rather over the fifty Governments which compose it. Especially is it a triumph over the British and French Governments, which between them have either rendered the League's system of security impotent, or allowed it to become so. If Waterloo was won on the playing-fields of Eton, Addis Ababa has been lost between London and Paris.

But if this is the note on which a lamentable chapter of post-war history ends, it is not the end of the story. For another chapter must now open. Let us, then, appraise the present state of affairs.

First, the Emperor of Ethiopia has not abdicated his sovereign rights. Secondly, the League Council is to meet next Monday, when it must not only take cognizance of the Italian military successes, but also consider its attitude to the *fait accompli* which, Signor Mussolini has said, now faces it. The Italian dictator has openly declared that he will annex Abyssinia in defiance alike of the League and of pre-war treaties. The various Governments which compose the "sanctions front" are thus faced with the complete failure of their concerted, if half-hearted, measures to prevent the rape of Abyssinia. Now these Governments are the League in action; consequently upon them rests the responsibility for deciding not only their attitude to Italy, but also, therewith, whether the League can ever hope to prove effective in despoiling the aggressor of ill-gotten gains. To this end the Governments of the "sanctions" Powers should demand such procedure and terms for peace as will be compatible with the League's principles. If Signor Mussolini, in the flush of victory, sticks to his proclamation that Abyssinia is now Italian territory, the

British Government must surely follow the advice of General Smuts and General Hertzog this week, and invite its colleagues not only to keep on sanctions, "for years if necessary," but to intensify them. Only so can the fundamental principles of the League be saved from complete stultification. The "sanctions" Powers should demand that the Emperor be allowed to put forward his case at Geneva, in person if he so desires; that the League be satisfied, by its own inquiry, of the credentials of any provisional Abyssinian Government; and that it should approve any terms of peace.

It is only on some such conditions that the League Powers can honourably agree to Italy's remaining a League Member. It is the League which has been defeated in Abyssinia; and, if the League is to continue to hold out guarantees of international conduct, and to command the adherence of the Powers, it cannot passively acquiesce, by lifting sanctions, in the rape of a small by a big State-Member. If it does so, the revulsion of feeling produced in this country by such a moral *débâcle* will be immediate and overwhelming. The British people will scarcely be restrained from consigning the Continent to its doom at the hands of any violent aggressor. Only two of the European Great Powers fall under this suspicion: Italy and Germany. Their aims and ambitions may clash in Central Europe; or they may put their heads together. But the British people will not connive (even if France and other Powers connive) at Italy's violent annexation of Ethiopia merely to secure Italian support for the purely European interests of League Powers—and still less for Italy's own interests in Central Europe. The "Stresa Front" can command no moral allegiance from the British people to-day.

Only one melancholy compensation remains for the failure of the League to save Abyssinia from conquest. It has forced this country to review its attitude towards a system which is an element in our own vital security. As Sir Archibald Sinclair, Dr. Dalton and Mr Geoffrey Mander have pointed out in the Commons this week, the League's failure was mainly due to the British Government's avowed unwillingness to incur the risk of war in

DOMINION OF CANADA

defence of League principles. We are now faced with the necessity of choosing one of three possible foreign policies: isolation; more effective co-operation in enabling the League to restrain an aggressor; and specific alliances.

What Italy and Germany have already succeeded in doing proves that, sooner or later, the isolation policy will end in a clash between our own interests and those of either or both of these countries. We may then have a war thrust upon us. It is significant that no one in the debate on Wednesday was found to advocate a policy of thoroughgoing isolation.

As to the second of these policies, the failure of the League Powers to prevent the annexation of Manchuria by Japan and of Abyssinia by Italy—both within the space of four years—has emphasised the crucial weakness of the League: namely, that its clear commitments have no correspondingly clear provisions for their execution in particular cases. If the League Council fails on Monday either to command respect for its principles from Signor Mussolini or to agree on measures to compel that respect, we have only these alternatives: to recognise the need to refashion the League, or to withdraw from it. Our vital interests no less than the moral sense of the nation demand that we at least attempt the former.

This refashioning must not—as some desire—limit commitments and turn the League into a debating society. It must strengthen the League by giving it both the law and the power to enforce it. If this is impossible of achievement—if, in short, facts prove that the world is unripe for collective security—it were better to cut our loss and leave the League. For an association which makes a pretence of affording security, but does not, is a positive danger—a snare to those who most believe in it, and a device which weights the scales in favour of the unjust rather than the just. Its evident feebleness would be likely to increase rather than to diminish the risk of a Continental war.

Indeed, an emasculated League would have no advantage over a system of specific alliances. And it would certainly give rise to such a system. Indeed, in Wednesday's debate Sir Austen Chamberlain, who urged the lifting of sanctions on the ground that their continuance might lead to war at a moment when we need Italy's help in Europe, frankly proposed a system of "regional pacts of guarantee" in substitution for the general League guarantee which has failed so disastrously over Abyssinia; while Mr Bernays advocated the creation of a Channel State consisting of Holland, Belgium, France and ourselves. Many other speakers in the last few weeks, both inside and outside Parliament, have also urged specific alliances and clear-cut undertakings of military action by this country.

These proposals have only one merit. Britain, Europe and the world would be clear—as they were not clear before the war, and as the League has not been clear since—over the issues upon which this country would definitely be prepared to fight. But if they are all that is left, they leave Europe ranged in rival camps, with nothing to arrest the steady drift into war which such a grouping must tend to set in motion. There is only one way in which this drift can be arrested, and that is by the alternative which quite clearly commands the majority opinion of Great Britain—namely, a strengthened League. Into its framework must be fitted the regional agreements of which Sir Austen and Mr Bernays spoke,—provided they are supplementary to, and not in substitution for, general obligations to assist in enforcing respect for the League's principles. Only to the extent that regional agreements can be adjusted to the framework of the League—on the model of Locarno—can they prove one of its most valuable weapons.

Restoration of the League's authority will be immeasurably more difficult if the League Members cravenly profess impotence to influence the ultimate outcome of this, the greatest of the League's test cases. The change of Government in France, no less than the striking evidences of support from other countries of Europe and from the Dominions, show that, if His Majesty's Government make a stand, this final humiliation may yet be averted. It is imperative that Mr Eden should be instructed to invite the Council on Monday to stand firm. He should not be told to leave the initiative to others. This country is in no mind to see Britain's foreign policy allowed to drift before whatever may happen to be the prevailing wind.

FRANCE'S NEW RULERS

WITH the announcement of the results of the second ballot which was taken last Sunday, the meaning of the General Election which has just been held in France is beginning to appear. Already two plain facts stand out. In the first place, the electors have voted as much on foreign as on domestic issues; in the second place, the extremists have gained—and this at both ends of the political gamut—at the expense of the middle parties.

On the extreme Left wing, the most sensational gain, in absolute numbers of seats and *a fortiori* in proportion to strength in the last Chamber, has been that of the Communists. From 10, their numbers have risen to 72. At the same time, the Socialists have advanced from 97 seats to 146, which makes them the strongest single party in the new Chamber. When we add the Dissident Communists, who are now ten strong instead of eleven, we find that the Marxists now hold, between them, 228 seats in all (instead of only 118) out of a total of 615. Meanwhile, on the extreme right, the Independent Conservatives have risen from six to eleven, and M. Marin's Republican and Democratic Union from 76 to 88; while their hardly less reactionary friends, who rejoice in the name of "Popular Democrats," have held their own at 23; so that the total forces of the extreme right stand to-day at 122 (against a previous figure of 105). On the other hand, the Right Centre has shrunk from 164 to 115, and the Left Centre (i.e. the Socialist-Radicals and Independent Socialists, together with M. Paul-Boncour's Socialist and Republican Union) has shrunk from 224 to 150. In particular, the Socialist-Radicals have suffered the largest loss of any single party. Their numbers have fallen from 158 to 115, and they have forfeited the position of being the strongest single party to the Socialists.

What do these changes tell us about the mind of the French electorate? It looks as though the electors had been intending to protest, through their votes on this occasion, against the riling experience—to which they have been treated so often, and especially during the last four years—of voting for the Left and then being governed by the Right, as a result of the Centre's vacillations towards the Right. This time, the French elector has shown a marked predilection not only for the straight Left but also for the straight Right, in preference to Centre parties of either complexion. And it is the Left Centre, still more than the Right Centre, that has felt the elector's displeasure. This was to be expected; for after all, it is neither unnatural nor shocking that the Right Centre should play into the hands of the Right. It is the policy of the Left Centre, and particularly of the Socialist-Radicals, in the last Chamber which has been most open to the charge of being a betrayal of the electoral mandate. Again and again they have played the Right's game, and this from unheroic motives of *bourgeois* timidity. Above all it is the successive Budgetary cuts, culminating in M. Laval's "*décrets de misère*," which have stirred popular resentment. The electorate has shown its disapproval of the Radicals' conduct by meting out to them a rather severe punishment; but it remains to be seen whether, after all, the strength of the Socialist-Radicals has now been reduced to a point at which it will be impossible for them to play their old game again. Even as the second largest, instead of the largest, single party in the Chamber, they may still find themselves holding the key position, especially if they work closely together with the two smaller parties to the left of them and to the right of the Socialists.

The position is this: the Socialists have decided to break with their old tradition by taking office at last—even in a Chamber in which they themselves do not command an absolute majority. This decision means, in the circumstances, a readiness to go into coalition. But the Socialists cannot coalesce with the Communists because the Communists have now taken up the policy, which the Socialists have just dropped, of not taking office. The Socialists, therefore, must look to the Left Centre for partners; and the Left Centre, with their 150 seats against the Socialists' 146, can bargain with the Socialists on equal terms. Together, they may form a Government on a Marxist-Radical compromise policy; but even with their united forces of 296,

they will not command a majority in a Chamber of 615 deputies. They will therefore have to obtain the support of some group outside the coalition; and this support can be solicited alternatively either from the 82 Communists or from the 115 deputies of the Right Centre. Either of these arrangements will necessitate compromising still further a policy that will already have been compromised; and at this point the question arises whether the Socialists can find a working basis for co-operation with the Right Centre, or the Radical-Socialists a working basis for co-operation with the Communists.

Which, then, is the more probable? A Socialist-Left Centre coalition leaning on the Communists? Or a Left Centre-Socialist coalition leaning on the Right Centre? The answer to this question turns on the temper and attitude of the Communists. Will they scare and alienate the Radical-Socialists, or will they discreetly make up to them? We fancy that the Communists will take the latter of these two alternative courses, and this for two reasons: their exotic Russian political affiliations are forcing them to go patriotic, while their native French social heritage is inclining them to go *bourgeois*.

The *bourgeois* vein in the French Communists, which has come out during the recent election campaign, will hardly have surprised British observers who are familiar with the history of the labour movement in this country. In countries like France and Great Britain, in which the *bourgeois* tradition springs from the local soil, it is an extraordinarily tenacious social plant, and it is next to impossible for younger growths to escape from its shadow. The French Communists, in fact, appear to be as *Bourgeois-Republican* as the British Labour Party is *Bourgeois-Royalist*; and they are being spared any painful tug-of-war between this native tendency and the admonitions of their Muscovite pontiffs. For the last thing that Moscow wants, in the present international situation, is to goad the French Communists into revolutionary courses. To-day the Soviet Union treasures France, not as an arena for revolution, but as a military ally; and the French Communists, after the first shock of surprise at Moscow's disconcertingly realist attitude, have thankfully accepted the permission to present themselves as both patriots and *bourgeois* to their fellow-countrymen. Waving the tricolour and singing the Marseillaise, the French Communists, if they chose, might almost force a gate-crashing entry into the exclusive enclosure of the "Popular Democrats." *A fortiori*, if they direct their fraternal salute towards the Socialist-Radicals, M. Herriot and his friends can hardly refuse to return it.

On the home front, the policy of such a Left coalition Government is likely to be almost as moderate as that of the Labour Party in Great Britain in 1924. A Front Populaire regime will nationalise the armaments industry, but not the iron and steel industry as a whole; and they will not "nationalise" the Banque de France, but will certainly reform its constitution. Nor will they voluntarily devalue the franc, since the French public is still against it. Instead they will probably hope for an enforced devaluation before the Chamber meets at the beginning of June. (The economic situation in France is discussed on page 310.)

And what about foreign policy? For ourselves and for all other foreign onlookers, this is, of course, the principal question; and in a world in so grievous a plight—a plight in which we are catching at straws—we are tempted to hope for the millennium from a change of Government in France. Such hopes should be soberly kept in check if we wish to avoid being grievously disappointed. On the other hand, a Front Populaire regime in France is likely to depart from its predecessor's policy of making the Italo-French entente the keystone of French foreign policy, since Signor Mussolini, being the patron saint of the French Extreme Right, is *persona ingratis* to the Left. The new French Government may also be expected to set about repairing the damage that M. Laval has done to French relations with Great Britain; and it will naturally seek to strengthen French relations with Russia (which M. Herriot is keen on, as well as the Socialists and the Communists)—but without prejudice to a serious attempt to come to an understanding with Hitler. All this is to the good. The auguries for the future of Europe have certainly been improved by the results of the French elections.

CHRISTIANIA BANK OG KREDITKASSE OSLO

Established 1848

Paid-up Capital and Reserve Funds,
Kr. 40.000.000.—.

Oldest Norwegian Private Joint Stock Bank.
Direct correspondents throughout the country.

THE ANATOMY OF EMPLOYMENT—I

A LITTLE good may be the offspring of a great evil, and the enduring calamity of widespread British unemployment has at least given this country the most detailed returns of workers by hand or brain of any nation in the world. We take a census of population only every ten years and a complete census of industrial production every five. But the Ministry of Labour conducts a census of all workers between 16 and 64 registered under the Unemployment Insurance Act regularly every year and a census of unemployed workers every month. No extenuation can be pleaded, therefore, for ignorance on the part of statesmen, legislators or industrialists of the anatomy of our gravest social problem.

The measurement of employment is a somewhat more difficult statistical operation than the ascertainment of monthly unemployment percentages. The latter are the resultant of two distinct factors—the progress of industry and the increase in the working population. The admirable wealth of detail, again, with which the Ministry of Labour presents its figures is itself a handicap to those who would see the wood rather than the trees. In the following article—in which are set out the results of a comprehensive inquiry into changes in employment (as distinct from unemployment) during the last six eventful years—we have combined the hundred industrial groups of the *Ministry of Labour Gazette* into 43 larger categories. We have obtained figures of the employed population by subtracting the numbers unemployed from the total insured workers in July—the only month for which accurate data under the latter heading are available—in three "key" years; namely 1929, the period of maximum industrial activity before the great depression; 1932, when national prosperity reached its nadir; and 1935, when recovery had made considerable headway. Although certain legislative and administrative changes (e.g. the introduction of the "Means Test" in 1931) may have affected the comparability of the official returns to some extent, the broad conclusions which they suggest can be regarded as reasonably accurate for general purposes.

Between July, 1929, and July, 1935, the number of insured workers employed in Great Britain increased by 150,000 (or 1½ per cent.), from 10,916,000 to 11,066,000. This figure, however, was the net result of a rise of 842,000 (13½ per cent.) in the workers employed in 25 out of 43 industrial groups, and a decline of 692,000 (nearly 15 per cent.) in the remaining 18 groups. The "progressive" trades accounted for 57 per cent. of the total employed workers in 1929 and 64 per cent. in 1935. The "recessionary" trades were responsible for 43 per cent. and 36 per cent. in the two periods, respectively.

Which of the "expanding" industries registered the largest net increases in employed workers? The answer is

suggested by the following table:—

LARGEST GAINS BETWEEN 1929 AND 1935

Industrial Groups	No. of Insured Workers in Employment (thousands)		Per cent. Inc.	Industrial Groups	No. of Insured Workers in Employment (thousands)		Per cent. Inc.
	1929	1935			1929	1935	
Electrical Trades	186.5	201.7	33.8	Distributive trades	1587.9	1806.2	13.7
Recreative industries	391.2	489.6	25.1	Building (skilled)	376.7	422.7	12.1
Professional services	118.1	145.6	23.3	Commerce and finance	223.0	249.6	11.9
Gas, water, electricity	153.3	180.0	17.5	National & local government	364.2	404.8	11.2
Non-ferrous metals	239.0	276.4	15.6	Trades ancillary to building	172.2	191.1	10.9
Laundries and dry cleaning	130.1	149.9	15.2	Paper	115.1	127.7	10.9
Road transport	314.5	362.2	15.2				
Public works contracting	133.3	152.2	14.2	All industries showing increases*	6236.4	7078.4	13.5
Motors, cycles and aircraft	227.8	259.3	13.8				

* Including following groups with less than 10 per cent. increases in numbers employed: Building (unskilled), constructional engineering, food, fishing, furnishing trades, minor textiles, silk, and rayon, leather, glass, printing and publishing.

Fifteen groups, it will be seen, increased their employed labour force by 10 per cent. or more between 1929 and 1935. The great majority were "consumption" trades—recreative industries, the distributive trades, professional and governmental services, etc. If to these we add industries ministering, perhaps less directly, but no less effectually, to popular demand for a higher standard of living—such as building and trades ancillary thereto, gas, water and electricity, laundries, and, possibly, the electrical trades, road transport and paper—we have accounted for almost the entire list. The extent to which the expansion in employment has been due to increased "spending power" by the mass of the people is one of the most striking features of the industrial recovery of 1933-35. But what is the reverse of the picture? Which industries have lost more than 10 per cent. of their insured workers since 1929:—

LARGEST LOSSES BETWEEN 1929 AND 1935

Industrial Groups	No. of Insured Workers in Employment (thousands)		Per cent. Dec.	Industrial Groups	No. of Insured Workers in Employment (thousands)		Per cent. Dec.
	1929	1935			1929	1935	
Shipbuilding and marine engineering	210.8	123.8	41.2	General engineering	534.3	461.7	13.6
Cotton textile	474.6	342.6	27.9	Iron and steel	298.4	261.0	12.5
Linen, jute, hemp, rope and twine	119.1	82.2	26.6	Tobacco	44.3	39.2	11.4
Coal-mining	871.7	644.7	26.0	Shipping & docks	239.0	212.5	11.0
Textile bleaching and finishing	97.8	84.1	14.0	All industries showing decreases*	4680.1	3987.7	14.8

* Including following with less than 10 per cent. decreases in numbers employed: Rubber, pottery and earthenware, woodworking, chemicals, etc., wool textile, railway services, drink industries, clothing (total), and miscellaneous.

At the head of the list is shipbuilding and marine engineering, with a decrease of more than 41 per cent. in its employed labour force. The largest declines, throughout, have occurred in the "capital" and the "export" industries—coal mining, iron and steel, engineering, shipping, cotton and some of the older textiles. Certain "capital" trades, including steel and engineering, have taken on additional workers since these returns were compiled. Our figures, nevertheless, remain an eloquent explanation of the existence of Britain's "depressed areas."

Thus far, we have compared results in a year of well-established recovery with those of the best pre-depression year. In the meantime, industry has passed through the furnace of depression. Which trades showed the greatest reduction in employment between 1929 and 1932? Which have subsequently revealed most impressive powers of revival? The table in the next column includes all groups which lost more than 10 per cent. of their employed workers between 1929 and 1932.

Of the 25 groups which employed more workers in 1935 than 1929, only 8 suffered a decline of more than 10 per cent. in employment between 1929 and the worst year of depression. But out of 18 groups which employed fewer workers last year than in 1929 as many as 12 lost more than 10 per cent., and 6 lost more than 25 per cent. of their insured workers between 1929 and 1932.

INDUSTRIES WITH WIDEST FLUCTUATIONS BETWEEN PROSPERITY AND DEPRESSION (1929 = 100)

More Workers Employed in 1935 than 1929	Total Employment		Fewer Workers Employed in 1935 than 1929	Total Employment	
	1932	1935		1932	1935
Building (unskilled)	81.4	110.9	Shipbuilding and marine engineering	41.9	58.8
Trades ancillary to building	83.7	111.0	Linen, jute, hemp, rope and twine	55.2	69.0
Building (skilled)	83.8	112.2	Iron and steel	64.3	87.5
Silk and rayon	83.8	104.2	Coal mining	70.4	74.0
Constructional engineering	85.2	108.9	General engineering	72.1	86.4
Motors, cycles and aircraft	86.2	113.9	Cotton textile	73.2	72.2
Glass	87.2	102.5	Pottery and earthenware	76.8	82.5
Non-ferrous metals	87.4	115.5	Textile bleaching and finishing	82.2	86.0
			Wool textile	84.5	94.7
			Railway service	85.5	97.1
			Woodworking	86.0	93.8
			Rubber	86.2	90.5

So much for fluctuations in total numbers employed. How far has industry been able to cope with the flow of new recruits to active service during the last six years? We propose to discuss this question in a subsequent article.

GERMANY'S INDUSTRIAL PROBLEMS

It is often remarked that, in the Germany of the Weimar Republic, a temporary national prosperity had been kindled on the unstable basis of enormous debts. Now, three years after the advent of the Nazis to power, their rapid re-armament programme on public funds and mortgaged revenue expectancies has led to a serious financial crisis, not unconnected with recent events; and the whole structure of German industrial production has been distorted.

According to the German Institute for Trade Research, industrial production in Germany during 1935 almost reached the 1928 peak, the figure being only 4.5 per cent. lower. But within the two main divisions of industrial production an important tendency was noticeable. Whereas the manufacture of producers' goods has increased by 26 per cent. as compared with 1934, that of consumers' goods has further decreased by more than 2 per cent. Compared with the "low" of the crisis year—in 1932—the output of producers' goods has doubled, while that of consumers' goods has only increased by one-quarter. This wide divergence between the two branches of industrial production deserves special attention; for it is characteristic of Nazi economic and re-armament policy.

A more rapid increase in the output of producers' goods is not in itself a danger in a steadily developing economic unit. It is even a normal factor in recovery. But the situation is critical when the discrepancy between the volumes of the two branches of production becomes too great or, if due to other factors, consumption decreases. The production machine then becomes choked; the capital invested in it becomes more "barren" as demand contracts. The section of production which does not and is not meant to follow the usual process from manufacturer to consumer must be taken into account—investment by public bodies in non-reproductive schemes, and in particular, military expenditure. For that reason it has been repeatedly demanded that such expenditure should be financed out of income, i.e. through taxation, and not by means of loans, since armaments, being non-reproductive investments, do not in themselves yield a return.

If we examine the industrial "prosperity" in Germany on these standards, it would seem that the Nazi Government's programme has led finance and industry into an impasse. The Institute for Trade Research recently published the following figures:—

CAPITAL INVESTMENTS IN GERMANY (000 millions of Marks)

1928	13.8	1932	3.9
1929	13.3	1933	5.3
1930	10.4	1934	8.4
1931	6.3	1935	14.0

The increase during the last two years is extraordinary; and it should be noted that a fall in prices since the time before the depression makes this picture inexact. The Institute for Trade Research therefore states that the volume of investments during the past year reached the 1928 level—perhaps even exceeded it. That the bulk of the increase in investments must be in the manufacture of producers' goods is evident from the facts described earlier; and the Institute itself issues an instructive report on the distribution of investments between the different branches of production. It gives the following figures:—

PERCENTAGE OF TOTAL INVESTMENT

	1928	1933	1934
In Industry	19.1	10.2	11.5
„ Electricity, gas and water supply	7.4	3.9	2.7
„ Transportation	14.6	15.5	13.7
„ Agriculture, forestry, dairies, horticulture, farming, settlement, building	6.9	11.7	8.8
„ Residential building	20.5	18.2	18.1
„ Public administration	19.3	27.8	35.7
„ Other economic groups	12.2	12.7	9.5
	100.0	100.0	100.0

In the period up to 1934 a definite change can be noted: the share of industry is reduced by almost 50 per cent., the share of public bodies nearly doubled. The year 1935 is not included in this table, but the Institute gives an estimate which covers various types of goods comprising nine-tenths of total investments. It gives the following particulars for 1935: In machinery, 24 per cent.; vehicles, 7 per cent.; housing, 14 per cent.; industrial construction, 7.8 per cent.; and public, 48 per cent. About half the investments of last year were placed in what is called "Public Construction." This includes, besides motor roads and the vast Air Ministry, barracks and aerodromes, fortifications and labour camps, which are all economically unproductive. To this figure an unknown percentage of the items "Machinery" and "Vehicles" which were required for the equipment of these buildings must be added. The actual value of this expenditure as well as the proportion can be directly deduced. For the Institute estimates the total value of investment for 1935 at 11,000 million marks; so at least 5,000 millions have been invested in "Public Construction."

Moreover, as a necessary consequence, there must have been a quite inadequate replacement of production machinery in private industry, extending even to replacement of wear and tear. The Institute's report states that, even in 1934, there was not sufficient investment in industry to cover normal depreciation; and expansion had therefore not taken place. For 1935 only a very limited amount of new plant could be expected. The Institute estimates the capital still required for replacement of depreciation in German industry during recent years at about Rm. 4,000 millions. This sum would therefore just suffice to repair the wear and tear of the productive machine during the three years of the Nazi regime.

Originally, public works—"work creation"—were meant to give an impulse to business. This *Initialzündung* was then to pass on to private enterprise, and thus, later, to replace the commercial activities of public bodies. Instead events have taken quite a different course. During January the *Frankfurter Zeitung* commented on this change in several articles. The paper suggested that though individual enterprise had been repeatedly appealed to, a certain dilemma had arisen because State interference to some extent created hindrances to the scheme. The dilemma had vanished as the State became stronger, though in the opposite sense to that expected. "The State is forced by its high stakes to claim for itself, as far as possible, all capital resources, together with the margin for additional credit." Surely, in plain language, that means that the dream of *Initialzündung* is over. By direct or indirect appropriation, investment capital is forced into State activity, i.e. re-armament. In addition to the method of forced loans, two "brakes on private enterprise," as the *Frankfurter Zeitung* calls them, serve this purpose: the issue ban (*Emissionssperre*) on the capital market, which prevents the issue of new shares; and the new investment ban, which now extends to 29 branches of

trade. The *Frankfurter Zeitung* also shows, with several examples, how the effects of this investment ban spread far beyond the industries immediately concerned. Thus, the ban on the printing trade has been very disagreeably felt in the manufacture of printing machinery and paper machinery. "The different degrees of activity in the engineering trade—many branches have only half the average amount of work, others have considerably more than the average—are certainly partly due to the investment bans." The efforts of the German Government's trade department to obtain available capital by means of laws and bans have not been completely successful, as "they were opposed by the desire for distribution of risk, and, above all, by the enterprise of the industrialists even where no attractive chances could be seen in their own sphere."

If one day this State enterprise, artificially extended by inflationary means, should be curtailed, it will leave industry with very insufficient reserves. The Institute laconically says: "There will be no lack of investment possibilities in the future." Certainly not of possibilities; but probably of means. For this State-capitalist prosperity has been achieved by piling up an enormous burden of debt, a burden which has fallen on liquid capital in savings bank deposits and insurance policies, whether in the form of forced loans, Treasury Certificates, or so-called Employment Creation Bills complete with coupons for their 15- or 20-fold prolongation. To financial indebtedness has been added industrial distortion. Weakened by arbitrary and often misplaced investment, industry will be unprepared to face the time when sham prosperity will no longer be created by re-armament and State enterprise. In these circumstances it is scarcely imaginable that foreign capital will allow itself to be drawn in. It is evident that in Germany itself the dangers of such a credit inflation are being more and more persistently canvassed. The conflict between the Nazi Party and Dr. Schacht, which has just been outwardly settled by the appointment of General Göring as supreme arbiter over foreign exchange and raw material imports, lends point to a situation, the critical nature of which cannot be disguised. The moral should not be lost upon British observers of this vast experiment in financing armaments out of loans.

BUYING WITHOUT TEARS—I

(BY A CORRESPONDENT)

WHEN a manufacturer wants oil for a turbine plant, salt-glaze pipes for a new factory extension, paints for an extensive scheme of re-decoration, electrical synchronous clocks, or a host of other materials and industrial products, he knows that he can order them safely without further research if he can get a good specification and a guarantee that the goods will conform to it. To buy a clock whose essential description is merely BSS 472/1932 may indeed deflate high pressure salesmanship and the adjectival school of advertisers, but it nevertheless saves the buyer a good deal of time and money. There are now several hundred other different specifications of the British Standards Institution, a co-operative organisation supported by British Industry for its own needs. Buying by specification is, in fact, a commonplace of industrial management; and nobody is surprised that large-scale businesses employ trained experts, whose job it is to see that their firms get every ounce of value in quality and quantity for the money spent on materials and goods required in the process of production. No one, however, seems to have considered whether there is any means of extending these methods, which big business finds so necessary, to the vast numbers of individual consumers

BRITANNIC ASSURANCE COMPANY LIMITED

Funds : : : : £25,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

whose aggregate purchases far exceed those made by industry itself.

Although accurate figures are not available, it has been estimated that something of the order of £2,000 millions annually is spent in British shops and that probably three-quarters of this spending is done by women. Yet a housewife cannot buy on specifications. Rarely can she obtain any reliable information about the comparative performances of the different articles of everyday use in the home. Of what should a good soap consist, and what is the cheapest soap on the market conforming to that standard? What is a reasonable life of a vacuum cleaner? Does the fact that there are several different designs on the market mean that some are more efficient than others, and, if so, which is the best at a given price range or for a given purpose? What does an independent chemical expert think is the best and cheapest method of making hard water soft? Are some makes of electrical appliances—toasters, irons, heating stoves, etc.—more wasteful of current than others? Are any of them likely, owing to faults in construction, to give the user a possibly fatal electric shock? It is possible to obtain lubricating oil for a car at almost any price from 13s. 6d. to 37s. 6d. for a five-gallon drum. What are the things a lubricating oil should do? And is it, in fact, an economy always to buy the more expensive oil? What is it that makes a good paint? How can one be sure that shoddy stuff is not sold as a high quality product?

These questions must be at the back of the minds of hundreds of puzzled householders. None is a question which it is in any way presumptuous or impertinent to ask. None requires an impossibly elaborate amount of scientific and technical knowledge to answer. Yet everyone knows well enough that the average householder has no means whatever of getting an answer to such questions. Consequently, purchases involving millions of pounds are being made on no better criteria than those resulting from chance conversations, advertisements, probably quite irrelevant judgments about price and style, and, finally, the opinions of retail dealers. But the dealers must often, by the nature of the case, be almost as much in the dark as their clients, apart from the fact that they have their own living to earn and cannot blind themselves to the size of their trade discounts.

This is merely one aspect of the inefficiency of the present system of distribution of the products of industry. This inefficiency is already suspect in more than one quarter, and is, in fact, one of the problems lying at the roots of our current economic disorders. It is, however, a problem with more than a merely economic significance. Important though it is to make the family budget stretch further, more important still is the ultimate problem of health and welfare, and it is largely on grounds of health and welfare that better guidance for consumers is so necessary to-day. Control of the food supply in the consumer's interest has both a negative or regulatory aspect and a positive or educative side. Laws against the adulteration of tea and coffee date from the early eighteenth century in England. Although they may not have been very effective, their presence on the statute book attests the recognition by Parliament of some form of duty to prevent those who have sent its members to Westminster from being poisoned by a food supply generously dosed (as it used to be) with red lead, white lead, copper arsenite, sand, plaster of paris, clay, copper carbonate, and other chemicals.

To be sure, the Bread Acts of 1822 and 1836, which still contain the last word in the legal definition of bread, are elastic enough to rank potatoes, rye, buckwheat, peas, beans and rice with the cereal which is normally thought of as the staff of life. Indeed, the statutory restrictions on the food industry are not very onerous to-day, and a great deal depends on the common honesty of the food trades. Fortunately, this dependence is safe enough to trust as far as serious damage to health is concerned; but the consumer still has his grievances. Some are shown up every year when extracts from the reports of the Ministry of Health's inspectors are published: "double cream cheese" containing about 5 per cent., teas said to be free from tannin containing about 14 per cent. of tannin, tea adulterated with iron filings, etc. The price of security is eternal vigilance.

Has our vigilance in this sphere flagged a little since the Sale of Food and Drugs Act of 1875? To judge by America and the British Dominions it certainly has. When the United States Government tells food manufacturers that their labels must conform to the facts of medical science and actual laboratory tests it strikes not only at pseudo-scientific sales talk about vitamins but also at descriptions of various patent domestic foods, such as "cream" or "creamy" custard powder made of a coloured cereal starch; toffee said to be "made of pure butter only" which nevertheless was 50 per cent. pure coconut oil; and "home-made jam" which was really dyed preserved pulp. Proceedings against this form of swindling in England are at present almost hopeless, partly because there are no legal standards for the majority of foodstuffs, and partly because it is necessary to prove "wilful" guilt, always difficult at law, to bring these practices before a Court.

Active guidance about food is an urgent need of consumers, now that the new science of nutrition no longer makes it possible to dismiss the question of human starvation by pointing to the fact that everybody gets enough to eat. To-day new standards reign. They are, as all standards of human achievement should be, based not on averages of present attainment but on possible attainment. An impressive body of scientific evidence now declares that if human beings are given natural fresh foods, as far as possible containing sufficient vitamins and mineral salts, the standard of human health will soon reach far higher levels.

This knowledge is, of course, leaking out. But apart from the missionary zeal of a few scientific pioneers, it is being disclosed mainly by commercial manufacturers of foodstuffs and beverages who use it, or as much of it as suits them, in their publicity. So far so good; but should not the average consumer know more? When nearly half the population is declared by an expert investigation to be suffering from an inadequate and ill-balanced diet, it is no time to leave health standards to competitive warfare by the food processors. Equally unsatisfactory is the extent to which ill-health and disease are commercially exploited for private profit. Although the patent medicine trade is by no means built on the poor man's earnings alone, he, at any rate, most needs increased information about it. The sort of information he requires was carefully put together by a House of Commons Committee, who made many analyses and investigations with the help of expert advisers, and hopefully presented their report to the House. It bore the date, August 4, 1914. The smoke-screen which was then placed between the patent medicine trade and the public has not yet been blown away. Products roundly condemned in 1914 still flourish in 1936.

Such progress as has been made in protecting the consumer has mostly gone on behind the scenes and without his knowledge. The newspaper press and the advertising professions have co-operated to try to keep the evil within bounds. Lavish claims to provide cheap and rapid cures for Bright's disease, diabetes, tuberculosis, cancer and complaints which at present baffle medical science are excluded from many journals; although it is to be feared that people, unscrupulous enough to make them, still find subterranean methods of reaching their victims. Four times since the War efforts have been made to revive the demand for greater State control, but each has failed. The last attempt was made six weeks ago, on Friday, March 27, 1936, on more modest lines than those recommended in 1914. It led to a debate in the House of Commons which, after lasting for two hours and ten minutes, suddenly terminated when it was found that a quorum of 40 members was not present.

In Great Britain the State offers no protection against the patent medicine traffic. It takes from it, instead, a tax of about three quarters of a million annually. The situation is different overseas. In one other country at least, the home of liberty and rugged individualism, significant steps have already been taken by government, professional and private agencies to offer consumers—and not merely consumers of pills and potions—considerable help in tackling the kind of questions raised in this discussion. A brief review of some of these developments may not be out of place in a subsequent article.

NOTES OF THE WEEK

The Budget Leakage.—Mr Chamberlain's announcement of a judicial tribunal to inquire into the Budget leakage has had a mixed reception. He told the House on Tuesday that investigations by the chairman of Lloyd's had established a *prima facie* case for an inquiry, and that the Government had decided in favour of a judicial tribunal consisting of a High Court judge and two eminent members of the Bar. The appointment of Mr Justice Porter, Mr Gavin Simonds, K.C., and Mr Roland Oliver, K.C., was subsequently announced. The tribunal will have powers equal to those of the High Court, and its terms of reference are contained in the following resolution:—

That it is expedient that a tribunal be established for inquiring into a definite matter of urgent public importance, that is to say, whether, and, if so, in what circumstances and by what persons, any unauthorised disclosure was made of information relating to the Budget for the present year or any use made of such information for the purpose of private gain.

Despite the width of these terms of reference, however, the Labour Opposition persisted in its demand for a Select Committee of the House. It was urged, first, that the honour of the House was at stake; and, secondly, that a judicial tribunal might not be able to elucidate all the facts. Mr Chamberlain and Sir John Simon replied that in so very controversial a matter a judicial tribunal was preferable, and the Liberal Opposition in the main supported them. There are, of course, precedents for both methods, though the Select Committee has been the more usual. The Parnell forgeries, the Jameson Raid and the Marconi scandal of 1912 were all investigated by Select Committees. But the precedent of at least the last of these inquiries is not very encouraging, and the position has been somewhat changed by the Tribunals of Inquiry Act of 1921. Under the terms of that Act the proposed tribunal can have as wide powers to take evidence on oath, compel the attendance of witnesses and production of documents as the House itself. In any case the essential thing is that the truth should be discovered somehow. If the tribunal in question fails to discover it, the matter could scarcely end there.

* * *

Foreign Loans and Politics.—Rumours which have lately been circulating in the City, suggesting efforts to prepare the ground for loans to Germany or Italy, have been intensified this week by the visit to London of Signor Pirelli, who is said to be canvassing the prospects of an Italian loan. Perhaps, when the world is really settling down to peaceful recovery, the time may come when both of these projects may materialise; but at the moment they are utterly impracticable. On commercial grounds the risk is in neither case a good one; but political considerations are the final bar. It is true that, apart from an appeal to the public, ways might be found by which substantial sums would be made available for either Germany or Italy if the Government so desired. But any such step would be deplorable not merely because loans of this kind are apt to hamper subsequent freedom of political action, but because in this case they would be in glaring contradiction to the purposes of British diplomacy. The country would be profoundly scandalised by loans which would indirectly, if not directly, assist Germany's re-armament. A loan to Italy—to repair damage to her economic situation, which we have deliberately sought to bring about—would be universally regarded as a condonation of her act of aggression. Any Government which encouraged either plan would tie a millstone round its neck which would sink it to the bottom of the electoral sea. Moreover, in this matter, public instinct is right. Experience during the past decade in Europe has shown that it is unwise to lend money in the hope that economic and political relations will straighten themselves out with the help of a little cash. Common sense and political feeling alike dictate that financial help should be the last, and not the first, step in the process of appeasement.

* * *

The End of the War.—The flight of the Emperor from Addis Ababa was dictated by the complete disintegration of Abyssinian morale. He had tried desperately to rally his forces to defend the capital; but they melted away, and his Council of Ministers apparently showed a majority in favour of surrender. The rapid advance of the Italian mobile columns was rendered possible by the energetic labour battalions who made up the roads from Dessie only so recently broken by the retiring Abyssinians. The advance on Addis Ababa from Dessie took only ten days, and was accomplished on foot by the native Askaris, supported from the rear by white troops in lorries. They encamped about 15 miles outside Addis Ababa on Saturday; and on Tuesday Marshal Badoglio entered the capital. General Graziani's forces in the south are still held up by rains and the difficulty of the terrain; but it is expected that, following the withdrawal and dispersion of the Ethiopian army, the Italian southern army will occupy Harrar immediately and march on Addis Ababa to join the main Italian forces. While there still remains the task of "pacifying" turbulent guerilla leaders and their levies, there is no doubt that effective Ethiopian resistance is crushed. Thus the campaign has been successful in seven months—even less than the time allotted for it by Signor Mussolini, and *a fortiori* less than that prophesied by military experts, Italian as well as foreign. Two factors have greatly contributed to this speedy military success: the use of gas and aerial bombing against defenceless native levies; and the technical skill and unremitting energy of the Italian labour corps, who have displayed a constructive

real worthy of a nobler cause, and so enabled the well-equipped mobile Italian forces to surprise the ill-equipped defenders of Ethiopia. Now begins the really critical stage of Signor Mussolini's war: the provisioning of the large forces he must maintain in Ethiopia (he has, indeed, "promised" that the white troops shall remain as a nucleus of settlers and administrators), the organisation of a country which has been forced back into anarchy, and the continuous financial drain necessitated by these tasks. The reason for lifting sanctions has certainly not yet been established.

* * *

Haile Selassie.—Last Saturday the Emperor Haile Selassie left Abyssinia, with his family and a suite of Ministers and generals. Travelling by the French-owned railway from Addis Ababa to the French territory of Jibuti, he was taken on board a British warship and conveyed to Haifa, in response to his request that he should be allowed to find asylum at Jerusalem. Evidently he found at the last moment that to retreat, fighting, until he and his remaining forces crossed into British Sudan or Kenya was physically impossible, because the morale of his troops was broken (and no wonder!) by tanks, bombs, gas and, perhaps above all, by the continued failure of Abyssinia's fellow States-members of the League to do their plighted duty by her. In these tragic circumstances, an Ethiopian King of Kings of the old school would perhaps have done what Theodore did in 1868 when Lord Napier's storming parties were at the gates of Magdala. On the other hand, a Negus who had become thoroughly imbued with the basic commercial principles of our Western civilisation would no doubt have sold out his political stock in Ethiopian sovereignty to Mussolini at least twelve months ago, and would have purchased, from a ready Italian seller, a comfortable political sinecure at the expense of the Abyssinian people's independence. But Haile Selassie is neither a Leonidas nor a Chinese war lord. Fate cast him, instead, for that most difficult of all political rôles: a mediator between things new and old. Haile Selassie's mission was to save the immemorially old independence of a backward African Christian country by bringing it up to the level (such as that now appears) of our Christendom in Europe. Everything indicates that he would have succeeded if one European Christian Power had not planned a crime, and if the rest of Christian Europe had not flinched from its duty of bringing the criminal to book. If we call the roll of the statesmen concerned in the international tragedy of the past twelve months and compare their performances, the fallen Emperor of Abyssinia stands out, in moral stature, head and shoulders above the Mussolinis and Lavals and Hoares and Baldwins. And his last message to the world as a reigning sovereign ought to cut us to the heart. "I must still hold on," he said to *The Times* correspondent in Addis Ababa as lately as April 29th, "until my tardy allies appear. And if they never come, then I say, prophetically and without bitterness: 'The West will perish.' " Haile Selassie may live to witness the Apocalypse from Jerusalem.

* * *

The Position of Egypt.—The constitutional crisis in Egypt, which was brought on by the international crisis in the Levant, has been accentuated by the death of King Fuad. The place of a skilful, experienced and (as far as he could manage to be) autocratic sovereign will now be taken by a Council of Regency which at best will be colourless and at worst will be a football kicked about between the Wafd on the one side and the British Residency on the other. Meanwhile, the law officers of the Egyptian Crown have found that Egypt at present is without a constitution, since the reactionary constitution of 1930 has been abolished, while the late King's rescript of December, 1935, restoring the ultra-democratic constitution of 1923, becomes operative only after the new Parliament has met. So who is to open the late King's political testament, and when? And who is to nominate the nominable two-fifths of the Senate, pending the election of the elective three-fifths on May 16th? Meanwhile, the elections for the Chamber have given the Wafd the sweeping majority that was expected.

While there will have to be a second ballot in 15 constituencies, the results to hand show that the Wafd has won 163 seats and the Opposition 40, while there are 14 Independents on whom the Wafd can probably count for support. It is clear that, in spite of King Fuad's adroit manoeuvres for diminishing the Wafd's influence, this party has retained the hold over the country which it secured immediately after coming into existence at the time of the Peace Conference of Paris. Thus Egypt may look forward to having a strong and representative Government to back the delegation which is at present conducting, with the British Residency at Cairo, the preliminary negotiations for placing *Anglo-Egyptian relations on a freely-agreed treaty basis*. To-day this question of Egypt's relations with Great Britain is overshadowed by a menace from Italy, just as the question of the Philippines' relations with the United States is overshadowed by a menace from Japan. Are the Egyptians to think twice before jumping out of an English frying-pan into an Italian fire? Egypt is, indeed, in an unenviable position which she did not bring upon herself but from which, by the same token, she cannot escape by her own unaided efforts. If Italy now entrenches herself in Abyssinia, Egypt will be caught between two Italian fires (just as the Philippines will be caught between two Japanese fires if and when Japan conquers the Dutch East Indies). These questions are as vital for Great Britain as they are for Egypt.

* * *

Britain, Germany and the Locarno Powers.—On May Day, Herr Hitler addressed a crowd of close on one million people in the Lustgarten in Berlin. While at the same time Mr Baldwin was interpreting British foreign policy in terms of the "external" principles of British Conservatism, Herr Hitler had clear, interesting and forceful things to say. "I do not," he said, shrewdly cutting at his Italian prototype, "hold it necessary to win the respect of my people by any act of renown which leaves millions of dead behind it—I have it without that. I do not need to lead millions to the slaughter-house in order that other millions may perhaps believe in me." He went on to make a telling point when he said "We have done nothing in these three years that could bring suffering to any other nation. . . . We have not stretched out a hand to take what does not belong to us; we have stayed within our frontiers." There was every sign of feeling in Herr Hitler's reference to his peace plan, and particularly, it seemed, in the tone of indignation with which he rejected the accusation that he was planning, all the time, to fall upon Austria and Czechoslovakia. It is all to the good that the question of Herr Hitler's policy towards Germany's eastern and southern neighbours is on the point of being broached in a friendly inquiry on the part of Mr Eden. But German public opinion is clearly encouraged by another dictator's defeat of the League; and Mr Eden will certainly find himself in a difficult and invidious position if he has to sit down with the Italian representative in the conference of the Locarno Powers at Geneva next week.

* * *

American Primaries.—Several States have now held their primary elections for appointment of delegates to the party conventions where party candidates for the Presidential elections will be nominated. The results of primaries are notoriously difficult to interpret, but already certain general conclusions may be drawn. The outstanding feature is the ease with which President Roosevelt is sweeping the board for the Democratic nomination and the increasing probability of his re-election for a further term. Opposition Democrats, represented by Colonel Henry Breckenridge, were defeated by 20 to 1 in Pennsylvania and 5½ to 1 in Maryland. These majorities effectively destroy Democratic opposition, although the Republicans in Pennsylvania profess encouragement with the unexpectedly large anti-Roosevelt vote in his own party. Their rejoicing is based upon the argument that, for re-election, the President must carry at least one of the Eastern industrial States. Any sign of stronger opposition than was anticipated in any Eastern State, therefore, is seized upon as a Republican straw in the wind. There is every prospect of a long-drawn-out struggle at the Republican Con-

vention on June 6th. Governor Landon, of Kansas, seems to lead the field; but he has failed to secure the crucial support of the uninstructed delegates for California. His supporters, however, profess themselves pleased at the relative success of Mr Borah in some of the primaries, on the ground that the latter has no chance of the nomination, and that his delegates will turn for second choice to Landon, a relatively Liberal Western candidate, rather than to any Eastern Conservative. The Republican Party managers seem to be convinced that no Eastern candidate has the remotest chance of securing nomination, let alone election. Some Eastern support is essential, nevertheless; and Landon is treading delicately, saying nothing to undermine his vicarious reputation as a Liberal, and nothing to alienate support of the Conservative East. Colonel Knox has succeeded in gaining the majority of Illinois Republican votes. Most of his support, however, came from Chicago itself, and Mr Borah's strength in the rural districts of Illinois is considered effectively to have eliminated any prospects for the Colonel. Senator Vandenberg, of Michigan, is still in the running. His list of delegates is less impressive than Landon's or Borah's, but he remains among the possibles, along with other dark horses at present unknown.

* * *

Trade Agreements.—The more important of Mr Runciman's Trade Agreements are now nearing the end of their appointed term. The Danish Agreement expires on June 20, 1936, and the Argentine Agreement in November, 1936, unless they are permitted to continue by the decision of neither party to give notice of termination. Mr Runciman announced on Thursday, however, that the British and Argentine Governments had agreed to reserve the right to terminate the latter Agreement in November. By the Danish Agreement, which came into effect in June, 1933, Great Britain guaranteed free entry to certain Danish agricultural products, except in so far as quota restriction might be necessary to assist the British marketing schemes; and Denmark, in return, gave certain concessions to British exports. In fact there has been a large reduction of British imports of Danish bacon during the period of the Agreement. Total trade between the two countries has developed as follows:—

	(£'000)	1929	1933	1934	1935
British imports from Denmark	56,211	35,429	32,886	32,043	
British exports to Denmark	10,678	11,799	13,360	13,766	

It will be seen that Denmark's imports from this country have been steadily rising during the period of the Agreement, while British imports from Denmark have been steadily falling. Actually our sales to Denmark, by value, are now nearly 30 per cent. above the 1929 level; our purchases nearly 50 per cent. below. The Argentine Agreement, which came into force in November, 1933, provided that British imports of certain Argentine agricultural products should not fall below certain levels; and in return special exchange concessions were made to this country by Argentina. Here again, however, the agreement has been followed by a large reduction in meat imports into this country. The total trade figures have been as follows:—

	(£'000)	1929	1933	1934	1935
British imports from Argentina	82,447	41,687	47,030	43,995	
British exports to Argentina	29,074	13,073	14,655	15,263	

British sales have increased, while British purchases have remained the same. It is clear from these two sets of figures that the Trade Agreements cannot be represented as having tended to increase British imports rather than British exports. Indeed, if the Agreements are to be amended they ought to be liberalised rather than tightened; so that Argentine and Denmark, by selling more to this country, may be enabled either to buy more or to pay increased services on British investments.

* * *

Ten Years Ago.—Ten years ago this week the *Economist* was issued in the form of three mimeograph sheets for the first and, we hope, the last time in its history. The General Strike came into force on May 4, 1926, and lasted for nearly nine days. Ten years later it is possible to see it in its true perspective as the first resistance of

EXPORT

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped for transit abroad, is the subject-matter of *A Brief Survey of the Financial Machinery of Exports and Imports*, copies of which may be had by asking at any local branch of the Westminster Bank

41 LOTHBURY, LONDON, E.C.2

organised trade unionism against the deflation necessitated by the re-establishment a year earlier of the pre-war gold parity of the pound. The pressure fell first on the miners, but the trade union movement as a whole felt its interests to be affected. In the immediate event the strike failed, and the money wages of the miners were reduced. In the light of ten years' experience, however, and of greater familiarity with the phenomenon of an over-valued currency, we can see that the ill-judged gesture of 1926 was not wholly without effect, though the principle of holding a pistol to the head of the community was, in itself, indefensible. In the long battle between the gold parity of the pound and the level of money wages, it was the gold parity that gave way in the end. And as a result our whole attitude to the problem of monetary "stabilisation" has undergone a profound change.

* * *

A Supplementary Naval Estimate.—A Supplementary Naval estimate for expenditure on the Navy in the current financial year—the first estimate for this year's increment of naval re-armament as envisaged in the Government's White Paper of March 3rd—was published too late to permit of comment in last week's *Economist*. The Government's proposed New Construction Programme is to cost £2,881,500 in the current year, and comprises preparations for two capital ships, five cruisers (two "Southampton" type and three of a smaller type), nine destroyers, one aircraft carrier, four submarines, six sloops, and various smaller vessels. The continuation of the "special measures" attendant on the Mediterranean situation is to cost another £2,117,000; and "Other services" receive £5,371,000, making a gross total Supplementary of £10,369,500, or £10,300,000 after deducting appropriations-in-aid. Interest attaches not so much to the increment on account of the New Construction Programme as to that for "Other services." These include £506,000 more for the Fleet Air Arm, £741,100 for dockyard personnel abroad, £953,500 for metals and £1,315,500 for scientific instruments and electrical apparatus (only part of these two items is for the new ships), £886,000 for fuel and lubricants, £455,500 for new fuelling vessels and £1,298,950 for small arms, ammunition and torpedoes. Another £1,826,000 is to be spent on the Singapore base (of which only £41,500 falls in 1936-37), which, together with other minor increases for Singapore, raises the total estimate for the work from £8,693,000 to £10,661,000. A new boys' training establishment is to be set up at a cost of £750,000 (of which only £1,000 falls in 1936-37); dock widening and oil fuelling accommodation at Gibraltar is to cost £405,500 more (of which £6,400 falls in 1936-37); and the widening and improvement of home naval dockyards and stations is to take another £793,500. Three of the four cruisers of the "Hawkins" class, with 7.5-in. guns, scheduled to be scrapped under the Washington Treaty by December 31st

next, are to be retained, re-equipped with guns of less than 6.1-in. calibre, as part of our future "Cruiser (b)" strength, and an equivalent amount of old "Cruiser (b)" tonnage is to be scrapped; the other is to become a demilitarised training ship. This Naval Supplementary, together with the £10 millions which the Chancellor estimated as the probable Supplementary for the Air Force this year, adds more than £20 millions to the already greatly increased Budget allocation for national defence, which itself showed an increase of £21 millions over last year's defence expenditure.

The Commons and the Navy.—On Monday a debate took place on the new Naval Estimate summarised above. Lord Stanley, in introducing the Supplementary Estimate, claimed that the major part of the expenditure was for repairing deficiencies in reserves and personnel. Almost at the outset Mr Winston Churchill intervened to inquire why the Government were demanding money for two new capital ships before they had the report of the Committee, presided over by the Minister for the Co-ordination of Defence, on the vulnerability of capital ships to aerial attack. Sir Francis Acland intervened to ask if the House would be committed to construction of the two capital ships if the committee later reported that capital ships, in their opinion and as a result of the current experiments, were vulnerable to air attack. Mr A. V. Alexander then asked why the money should be voted if the Government had, as yet, no definite battleship policy. Lord Stanley was forced to admit that the Government would take no steps to build the ships till the committee reported; but that they had accepted the Admiralty's view "that it is absolutely essential to start rebuilding our battle fleet at the earliest possible moment." "Every other country has done so," said Lord Stanley, "and we believe that it is the right policy." This equivocal Government attitude set the tone of the debate. Mr Churchill emerged as the most damaging, yet constructive, critic of the Government's naval policy. He suggested the re-establishment of a section of the Royal Fleet Reserve for immediate mobilisation; attacked the Government for ignoring what he claimed to be a shortage of destroyers; and tried, in vain, to elicit from the Government or the Minister for Co-ordination of Defence some indication when the report of the sub-committee of the Committee of Imperial Defence would be ready, so that the House might know on what grounds they were voting £428,000 for the two battleships. He also strongly advocated the bringing up-to-date of the Fleet Air Arm, the transference of responsibility for this arm to the Admiralty, and the establishment of a Ministry of Supply. Mr Geoffrey Mander opposed the handing over of the Fleet Air Arm to the Admiralty, on the ground that control of our Air Defences should be unitary. The debate gave the impression that it is more reasonable to hope for a naval policy from the Government's critics than from the Government itself.

Milk Prices.—The Committee of Investigation set up last autumn to settle the dispute between the Milk Marketing Board and the distributors has at last published its report. In September the Board raised the average wholesale price of milk for the year 1935-36, from 15s. 1d. to 15s. 6d. for twelve gallons, but left the minimum retail price unchanged; so that the retailers' margin was reduced. The Central Milk Distributive Committee and the Co-operative Congress Committee demanded that the price should be left at 15s. 1d., in order that any reduction in the retail margin might be used to stimulate consumption by a reduction in the retail price of liquid milk rather than increase the producers' profits. The Committee has compromised by recommending that the wholesale price be reduced to 15s. 3d. (in 1933-34 it was 13s. 9d.) for twelve gallons and the minimum retail price be left unchanged. It has also recommended a change in the formula for the calculation of the price of milk for manufacture into butter which will result in a reduction of about ½d. to 1d. per gallon in the price, compared with a reduction of 1½d. per gallon suggested by the Distributors' Committee. These compromises may bring peace in the industry until

next autumn, when the Board once more has to determine the contract prices for the coming years. But they do not solve the main question how an increasing supply of milk, stimulated by a rise in producers' prices, can be sold if the retail price cannot be lowered because distributors refuse to take a smaller profit and because the wholesale price is high. The committee found, indeed, that the majority of private distributors could not operate on a smaller margin than at present. This, of course, may be due to the duplication of services among small concerns and is not necessarily a reason for subsidising such uneconomic units. The Committee also found that average costs of production in England and Wales amounted to 9½d. per gallon and that with interest on capital and a reasonable remuneration the farmer should receive on an average 13.83d. per gallon. The average pool price in 1934-35 was 11.99d. and the present increase would raise it only to 12.26d. Unfortunately the committee does not give details of variations in costs of production in different parts of the country or between different types of producer. It is only on the basis of costs of efficient producers and distributors that a satisfactory solution can be found to the milk problem.

Idle Shipping.—Contrary to the experience of the past three years, the volume of laid-up mercantile shipping, recorded by the Chamber of Shipping, rose from 426,000 million tons at the beginning of January to 474,000 million tons at the beginning of last month:—

NUMBER AND TONNAGE LAID-UP			
No. Net tons of ships (000's)		No. Net tons of ships (000's)	
Jan. 1, 1933 ...	760 1,971	Oct. 1, 1934 ...	330 818
April 1, " ...	760 1,864	Jan. 1, 1935 ...	323 878
July 1, " ...	793 1,958	April 1, " ...	322 706
Oct. 1, " ...	612 1,589	July 1, " ...	250 586
Jan. 1, 1934 ...	482 1,239	Oct. 1, " ...	224 502
April 1, " ...	453 1,079	Jan. 1, 1936 ...	186 426
July 1, " ...	421 1,042	April 1, " ...	231 474

During the first quarter of 1936 there was an increase of 72,000 gross in the tonnage on the United Kingdom Register. Since laid-up tonnage increased by 63,000 gross during this period, the tonnage employed must have risen by about 9,000 gross. Apart from the addition of the "Queen Mary" (80,774 gross tons) to the Register, gross tonnage on commission shows a reduction of 72,000 tons.

The Belga and the Franc.—The progress made by Belgium since the devaluation a year ago is examined in two special supplements just published, one by the *Financial News* and the other by *L'Europe Nouvelle*. The outline of Belgium's general economic recovery, the fall in unemployment, and the restoration of exchange and banking stability are already well known. The *Financial News*, however, gives full and illuminating details in a series of well-informed articles. Particularly interesting are the articles on "The Evolution of Belgian Banks," by M. Fernand Baudhuin, and that on "Public Works and the Campaign against Unemployment," by M. Henri de Man, the Minister of Public Works. The supplement as a whole shows how Belgium's recovery has extended to agriculture as well as industry, and how, in particular, the Belgian Congo has experienced a remarkable revival. One may, perhaps, hope that the whole of this most instructive series of articles may be brought to the notice of those responsible for France's monetary policy. The *L'Europe Nouvelle* supplement also contains contributions from M. de Man, M. Baudhuin, M. Charles Roger and others; and M. Roger Auboin writes an editorial conclusion. M. Roger admits that some of the conclusions of the recent *L'Europe Nouvelle* supplement on devaluation (reviewed in the *Economist* of December 28th) must now be revised in the light of the Belgian experiment. The moral he draws for France, however, is not so much that devaluation is necessary as that either devaluation or deflation is inevitable. It remains, as he says, for the French people to decide which they prefer. And M. Auboin would probably agree that in the recent election—held since the publication of his supplement—the French people have voted emphatically against deflation.

OVERSEAS CORRESPONDENCE

From our Correspondents in each Centre

UNITED STATES

"BUSINESS EXCELLENT"

WITH few exceptions, current production and trade can be rated as excellent. While the exceptions are not numerous, they are important; although it is possible that they are over-emphasised in the indices. For example, non-residential building is depressed, and it figures heavily in the indices. On the other hand, every form of amusement is booming, and the amusement business, which is enormous in the aggregate, hardly finds even an indirect reflection in the indices. One can quite properly say that the business of providing amusements has become one of the most considerable types of enterprise, and one almost wholly omitted from statistical compilations; partly because of its comparatively recent growth. Such statistical indices as those of the Federal Reserve Board are valuable for their continuity; but that same continuity exposes them to defects in an economy which has decidedly shifted its emphasis from producers' goods in the 20's to consumers' goods in the 30's.

The March indices of the Federal Reserve Board are as follows:—

BUSINESS INDICES			
1923-5=100. Adjusted for Seasonal Variation			
	Mar., 1935	Feb., 1936	Mar., 1936
Industrial production (total)	88	94	94
Manufactures	86	92	94
Minerals	97	110	94
Construction contracts	26	52	47
Residential	16	25	25
All other	35	73	64
Factory employment	82.7	83.9	84.3
Factory payrolls	70.8	72.3	75.7
Freight car loadings	65	70	66
Department store sales	82	80	88

The somewhat negative appearance of the changes from February to March is partly attributable to the rather heavy seasonal correction. The late winter which persisted through March was adverse to open-air undertakings. April also, by the way, has been rather colder than usual, but probably not enough to count as an adverse seasonal factor.

The unadjusted figures of the elements of the index of manufactures for March give a clearer picture.

MANUFACTURES		
	Mar., 1935	Mar., 1936
Iron and steel	81	94
Textiles	100	102
Food products	75	86
Automobiles	130	125
Leather and shoes	113	109
Cement	34	42
Petroleum refining	153	172 (Feb.)
Tobacco manufactures	124	132

The food products index is damped by its heavy weight of meat and the omission of items which form a larger part of the present American diet; textiles are understated by the omission of rayon. But the figures above are sufficient to support the assertion that the consumers' goods industries (and they are by far the more numerous) are in a condition of prosperity, if not of actual boom. The earnings statements of the first quarter were generally more than satisfactory. A great majority of corporations so far reporting have shown substantially larger earnings than in the first quarter of 1935. There is some reason to believe that the Bonus influence is beginning to be felt. While the Bonus Bonds cannot be hypothecated even after receipt, the prospect of a windfall cash payment of \$500 (approximate average for about 3,500,000 individuals) on or about June 15th can be anticipated in a variety of ways.

A tax bill has been reported, and will probably pass the House in its present form. It is subject to amendment in the Senate. The bill does not closely follow the usual interpretation of the President's message on the subject. It sub-

stitutes a complicated system of taxation for a relatively simple system (the bill runs to 236 pages); and the additional revenue to be obtained under the altered taxes is problematical; none of the forecasts reaches the figure of \$620 millions additional revenue set by the President. The salient feature of the bill is the special taxation imposed on holding companies, which in instances would be so high as to be destructive.

The foreign trade figures for March continued the recent trends.

MERCHANDISE TRADE (\$000,000)				
Exports				
	1933	1934	1935	1936
	\$	\$	\$	\$
January	121	172	176	198
February	102	163	163	182
March	95	158	185	195
	318	493	524	575
Imports				
January	96	136	167	187
February	84	153	152	193
March	95	158	177	200
	275	447	496	580

This table shows two facts: that American foreign trade has approximately doubled since the first quarter of 1933, and that imports have risen rather more than exports. This tendency was noticeable a year ago.

The gold movement for the month was negligible; exports were \$2 millions and imports \$8 millions. For the quarter the net import was \$35 millions, compared with \$272 millions in the first quarter of 1935. The silver imports shrank to \$8 millions for March, but at \$83 millions net for the quarter they were double the gold imports. With the merchandise balance almost even, and only a nominal movement of the precious metals, the visible balance is more nearly in equilibrium than for a long time.

The sudden drying-up of the gold flow in the first quarter coincided with a marked reduction in foreign interest in the American stock markets. All through 1935, Wall Street talked of the heavy demand from England for American securities; there has been an absence of such comment for the past three months.

CONTROL OF THE STOCK EXCHANGE

The activity of the Securities Exchange Commission in controlling the stock market through its margin requirements is worth some attention. The S.E.C. recently raised the margin requirement on customers' loans from 45 per cent. to 55 per cent. When the equity in the account is less than 55 per cent. the account is immobilised, but is not necessarily called. The Stock Exchange authorises its members to carry accounts down to 30 per cent. of the debit balance or 23 per cent. of the total cost; at that point more margin may be demanded or the account sold. Under the original rulings, there was no stated limitation of the amount of margin required from brokers in their borrowing from banks on the customers' account; but a recent ruling prescribed that after May 1st, no bank could lend a broker more than 60 per cent. of the value of collateral deposited to cover a street loan. Following this, the Stock Exchange ruled that members might employ their own capital in carrying customers whose accounts were too weak to provide the margin required by the banks, but were still within the limit of the Stock Exchange regulation. The 55 per cent. margin requirement is of too recent application to have demonstrated its effects, but it goes far towards discouraging margin trading.

The Legislature of New Jersey, after an unsuccessful attempt to devise State taxes to meet its relief charges, recently adjourned, leaving the burden of relief to the municipalities. In instances the municipalities declined to accept the responsibility. Thereupon a band of some 200 unemployed, calling themselves the Army of Unoccupation, seized the State Capitol in Trenton, and have since camped

in it. As a result, the Governor has been obliged to call a special session of the Legislature, and meanwhile the group in Trenton is being reinforced by marchers from neighbouring cities. The episode is reminiscent of the Bonus Marchers who invaded Washington in 1932 and were finally expelled with some violence. In some States, the entire cost of relief is borne by the Federal Treasury; in others (as New Jersey) the States have made large contributions. State taxes in New Jersey are not light and the reluctance of the Legislature to increase them reflects both that fact and a degree of resentment over the handling of the relief problem.

NEW YORK, April 28.

FRANCE

THE NEW GOVERNMENT'S INTENTIONS

THE second ballot in the Election largely confirmed the results of the first. The Communists and the Socialists have triumphed in the Election—principally because there has been added to the number of their normal supporters a multitude of people who had been hit by the deflation of the past two years. The Conservatives have maintained their position remarkably, and it is the Radicals who have lost ground. They have paid the penalty for their incapacity to obtain from the Conservatives, with whom in the past they were allied in the "Union Nationale" Governments, the reforms which the crisis rendered indispensable. As a result the Radicals are no more the strongest party in the Chamber, and the Socialists, who have succeeded to this position, are expecting power.

But what will be their programme? The "Popular Front" went to the election with the "Rassemblement Populaire" as their programme. This is a minimum programme, and is really a statement of aims rather than a programme of Government. These aims consist of:—

(1) The revival of purchasing power, reduced during the crisis, by the creation of a national relief fund, the reduction of working hours, the creation of a pension fund for old workers, the expansion of public works, the revalorisation of agricultural prices, the reduction of the cost of living, a "humanisation" of certain of the Laval decree-laws, etc.

(2) The reform of the credit system by means of a new control of banking, an improvement of the public returns made by banks and commercial companies, and a reform of the Bank of France through the suppression of the "Régents," the nomination of a council representing producers (agriculture, industry and trade), and the creation of new Bank of France stock.

(3) Financial reorganisation and fiscal reform, with an alleviation of taxes which should aid the revival of business.

The task is now to translate these aims into a practical programme. This will necessitate hard bargaining between the political leaders of the next Government, both among themselves and between them and the officials of the Bank of France, whose co-operation is necessary for the application of the new economic plan. Such contact, however, is rendered even more urgent by the precarious situation of the Treasury, the large efflux of capital, the withdrawals of deposits from the public savings banks and private banks, and the hoarding of gold, dollars and pounds.

THE FRANC PROBLEM

This being the case, there seem to be two immediate difficulties facing the new Government. First, it may try, at least for a time, to continue the monetary policy of its predecessor, with minor modifications. This policy implies fidelity to the present parity of the franc and guarantees for capital in order to stop the efflux of gold and to enable the Treasury to launch loans. The difficulty here, however, for the Left leaders is to obtain the assent of their victorious troops, since the election has just declared the popular wish for something new. The other main difficulty is that the French economic situation seems very unlikely to show rapid recovery on its own account, while audacious methods would be criticised even by the mass of small owners who have voted for a party of doctrine rather than the parties of property—because they were afraid of being altogether

dispossessed by the crisis. These Communists of to-day would turn immediately to the Right if the actions of the Popular Front Government should menace their liberties or their property.

Radical measures thus seem to be improbable, unless a financial panic should necessitate them. The alternative would thus appear to be:—

(A) To copy the English or American model, to impose an embargo on gold, but to maintain contact with external prices: this system would mean devaluation, which has been rejected by all political parties, the Popular Front included.

(B) To embark on the authoritarian path of the German and Italian economies, which would lead first to a suppression of political liberties and probably a still greater financial panic, since it would at once wound French political sentiment and the French economic system.

Accordingly, the present efforts of the "Front Populaire" leaders, of the existing Government, of private bankers, and even of the Conservative Press, are concentrated on the attempt to calm public opinion. The Government has announced that in conformity with law and custom it will remain in office until June 1st, when the new Chamber of Deputies meets. M. Régnier, the Finance Minister, declares that it is not necessary to take exceptional measures to control the outflow of gold, since the Bank of France possesses a sufficient margin of gold reserves and of technical resources to defend the franc. "As long as I am in office" (says M. Régnier) "no steps will be taken with regard to the imposition of a gold embargo." Finally, the financial Press is taking great pains to select from the former utterances of such Socialist leaders as M. Auriol, the probable next Minister of Finance, certain sentences which the most orthodox economists would not disavow. And M. Auriol is taking pains not to retract them.

PARIS, May 7.

GERMANY

THE SCHACHT CRISIS

THE Schacht crisis continued last week, and according to report will not be settled before the end of this week. Although this event is the most important in domestic politics since the massacre of June 30, 1934, and may have even more important consequences, the Press has not been allowed to refer to it. The secrecy, however, did not prevent financiers who knew a little and conjectured a great deal from turning the matter to account. Assuming that the future of the Reichsmark is the most important issue involved, they bought as "real values" industrial shares and city houses. The prices of both rose; for sellers of the latter significantly refused to allow part of the purchase money to remain on mortgage, as is normally done.

If Dr. Schacht goes, some of his policies will certainly be abandoned, though perhaps not as quickly as his enemies hope. Devaluation, for instance, could not be put through summarily. A relatively simple matter in countries which maintain free foreign payments and freedom to import, it would here be very complicated, would involve numerous domestic business questions, and would require a revision of the foreign debt and commercial settlements.

It now seems certain that Dr. Schacht himself initiated the transfer to General Göring of final authority over questions of raw materials and foreign exchange; and that before the transfer was announced an informal committee for these matters existed, with General Göring as chairman. Dr. Schacht's initiative obviously implied that his policies were to be maintained. This meant that General Göring would merely be an executor, who would enforce against Dr. Schacht's party enemies, and against rival interests, the measures which Dr. Schacht, acting alone, might have been unable to enforce. The first Bourse view, that Dr. Schacht had been strengthened, not weakened, was therefore plausible.

But immediately afterwards it became known that Dr. Schacht was dissatisfied; and it seems that he threatened, or demanded to be allowed, to resign, and later submitted

conditions for remaining which were not at once conceded. According to one account, the authority given to General Göring (in Dr. Schacht's absence from Berlin) was not in all respects the authority which had been expected; according to another account, Dr. Schacht was incensed by the wording of the official announcement, which implied that he had been shorn of power in important matters. The laconic announcement concealed the fact that the more efficient execution of Dr. Schacht's system was the real aim. Many persons therefore believed that Dr. Schacht's policy had been repudiated, and the man in the street assumed that Dr. Schacht had been humiliated. The suspicion arose that the announcement had been prepared by Dr. Schacht's enemies, who, having failed in their intrigue to get rid of him, had resolved to gain at least a newspaper victory. The rumour that one of Dr. Schacht's conditions for remaining was the issue of a new and truthful announcement was therefore believed.

TALK OF DEVALUATION

Independently of the general Schacht crisis, the question of devaluation was bound to arise soon. The Göring arrangement had nothing to do with this. If there was to be no devaluation, Dr. Schacht would have to find means for the future subsidising of exports. For this there is no known means except a renewal of the so-called "self-help" for industry, secretly initiated at the beginning of 1935. This measure is supposed to have brought Rm. 600 millions, which is apparently exhausted, and a sum of Rm. 800 to Rm. 1,000 millions is mentioned as now necessary. In big industry the opinion predominates that devaluation is preferable to recurring subsidy levies. A confidential manufacturers' meeting in March and another this month, pronounced, though not unanimously, in this sense. Probably the desire of a part of industry for the reduction of the mark's nominal value derives from pleasant memories of the great extinction of debenture and mortgage debts by the depreciation of 1919-23. This liberation from debt, however, took the form of a rise in money prices. With the mark to-day a mere internal currency, and prices already excessively high, it is hard to foresee the effect on prices of a moderate devaluation. In Berlin prices of certain non-regulated foodstuffs, in particular, vegetables, have risen so much that they are already beyond the means of even fairly well-to-do citizens.

Industry in March was occupied to 65.4 per cent. of potential working places, against 63.3 per cent. in February; the production-goods trades were occupied to 68.5 per cent. of capacity, against 65.3 per cent.; and the consumption-goods trades to 61.1 per cent., against 60.6 per cent. With the exception of building, which improved from 47.1 to 60.5 per cent., no individual industry showed any great improvement in March. Coal output in the first quarter of the year was 39,175,000 tons. The trade Press writes favourably on the prospects of an international coal agreement. Ingot steel output in March was 1,557,800 tons, against 1,489,600 tons in February. The *per diem* output, as in all recent months, was little changed; but output in the first quarter of the year, at 4,632,200 tons, was 22 per cent. above that of the same quarter of 1935.

The engineering and machine-manufacturing trades are well occupied with both home and foreign orders. Exports of machinery have lately been around 20 per cent. above the lowest level of 1935. The motor-car branch is active, and exports are rapidly rising. There has been an increase in exports of cars to Belgium, Spain, Holland, Denmark, Hungary, South Africa, Brazil and Argentina.

Further results of the wages inquiry of December, 1935, have been published. The average gross hourly wage in the metal-consuming manufactured trades (in selected concerns employing 552,000 men) was 83.8 pfennig, the average gross weekly earning Rm. 41.15 pfennig, and the average weekly deduction for taxes and social insurance Rm. 5.70 pfennig. For skilled workers the gross average hourly wage was 96.4 pfennig, and the earned weekly wages Rm. 47.81 pfennig. In building (116,400 workers) the average gross hourly wage was 72.4 pfennig. In building the average wage has of late risen considerably, a consequence of pressure to complete buildings in a hurry.

The money market situation at the month-end was normal. The day-loan rate rose to 3½-3¾ per cent., but

early this week was ½ per cent. lower. Month-end pressure on the Reichsbank, however, was heavy; credits and investments increased by Rm. 563 millions, as against Rm. 360 in the same week of 1935. The notes of the Bavarian State Bank, the Bank of Saxony, and the Württemberg Bank of Issue (so-called private note banks) were withdrawn from circulation on April 2nd. The gold of these banks, some Rm. 70 millions, which is also the amount of the Reichsbank's own gold reserve, is provisionally held by the Gold Discount Bank as trustees.

BERLIN, May 5.

DENMARK

REFORMING THE NATIONAL BANK

THE Rigsdag has passed a Government Bill putting an end to the serious lock-out which has lasted since February 22nd and affected more than 100,000 workers. All the wage disputes in question have been referred to compulsory arbitration.

Before the finish of the Rigsdag session the Minister of Finance was empowered to negotiate for a foreign long-term loan with a maximum of 65 million kroner. It is expected that the loan will be raised in Sweden, the only country at present where there are no hindrances to such a loan. The bonds will be of the 4 per cent. type and repaid in the course of 20 to 25 years. No issue price has been fixed yet. The important question of the transformation of the note-issuing bank into a self-governing institution was also settled by a Bill passed by the Rigsdag just before the end of the session. The change will take place as from May 1st, and the name of the bank will henceforth be "Denmark's Nationalbank." The minimum gold-cover of the note circulation will only be 25 per cent., and up to 5 per cent. of the note circulation may be covered by balances held in foreign centres. Eight members of the Rigsdag—two from each of the leading

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

political parties—have been elected to the Board of the new bank.

The latest published balance sheet of the Nationalbank shows that the foreign exchange position has improved considerably in the past year. As at March 31, 1936, liabilities to foreign customers were only 51.3 million kroner, against 105.1 million kroner at the same date of 1935.

A GIGANTIC BRIDGE SCHEME

After the success of the Little Belt bridge a gigantic scheme to span the Oeresund between Sweden and Copenhagen and the Great Belt between the islands of Zealand and Funen is being sponsored by the three leading constructional engineering firms of this country. Connecting motor roads would be built. The total cost of bridges and roads is at present calculated at 565 million kroner, and the construction and building of roads and bridges would provide work for 12,000 men during a decade. The scheme would be financed by various loans and taxes and by the road fund. If the whole scheme is carried out, it will provide direct connection by road between the Scandinavian countries and the rest of the European continent. At present there is some probability that the bridge spanning the Great Belt may be begun in the not too distant future.

The foreign trade figures for the month of March show an export surplus of 13.1 million kroner. For the first quarter of the year the following comparison may be made with 1935:—

	1935 Million kr.	1936 Million kr.
Total imports	332	329.9
Total exports (of Danish produce)	285.3	310.7

The new trade treaty with Germany has increased trade with this country; and a considerable export of horses, cattle and live pigs from Denmark is going on. Trade with Great Britain has also grown considerably, as the following figures show:—

	First quarter of 1935 1936	
	Million kr.	Million kr.
Total imports from:		
Great Britain	118.2	126.3
Germany	67.5	76.3
Total exports to:		
Great Britain	169.5	178.6
Germany	56.0	64.9

The flight from the franc is having certain repercussions on the Copenhagen Stock Exchange; international shares quoted there are steadily rising owing to buying on French account. The number of unemployed as at April 17th was 103,182. This is 1.6 per cent. above the figure of the corresponding date last year.

COPENHAGEN, May 1.

SWITZERLAND

A RECOVERY IN EXPORTS

Swiss foreign trade returns for the first quarter of 1936, though showing a smaller total than in the corresponding period of 1935, are better than was forecast. During the first quarter this year imports totalled 268,501,649 francs, compared with 293,162,507 francs last year, a drop which was partly due to import quotas and partly to reduced purchases of raw materials and manufactured products. Exports totalled 192,406,925 francs, compared with 200,045,951 francs in 1935. But while exports in January and February, 1936, were 7,003,610 francs and 2,953,957 francs respectively lower than during the corresponding months of 1935, in March they were 2,316,816 francs higher. The watchmaking industry is continuing slowly but steadily to improve, and its exports are now greater than in 1935. There has also been a small improvement in the machine industry. The import surplus, which was 93,116,553 in the first quarter of 1935, was this year only 76,094,721 francs.

Trade with Great Britain was satisfactory. Imports from Great Britain at 17,474,705 francs were 1,364,735 francs less than in the first quarter of 1935; and exports were 19,773,969 francs, or 3,007,450 francs more than in 1935. Trade with the principal countries was as follows (in

millions of francs) during the first quarter of each year:—

	Imports from		Exports to	
	1935	1936	1935	1936
Germany	74.4	70.3	48.8	40.6
France	50.0	43.3	26.3	26.0
Great Britain	18.7	17.3	16.6	19.7
Italy	22.3	13.0	21.2	14.1
U.S.A.	15.7	15.1	10.6	11.2

Great Britain has thus secured—both in imports and exports—the third place, formerly held by Italy, whose imports and exports have been reduced by about 42 and 33 per cent. respectively owing to the application of sanctions.

Banking has been more active as a result of renewed activity in the Swiss Bourses and of a new influx of foreign capital—mostly French—into the banks. Since January last the average value of twelve Federal Government securities has risen by nearly 2 per cent., while that of ninety industrial, transport and banking securities has risen by about 7 per cent.

The number of unemployed, which was 124,000 in January, fell to 119,700 in February and to 98,362 in March, and there was a further drop in April, another sign that economic conditions are improving.

RE-ARMAMENT IN THE RHINELAND

The reoccupation by Germany of the Rhine demilitarised zone is causing much concern in Switzerland. On the one hand, it suggests that the value of treaties—and the neutrality and existence of Switzerland are based on treaties—is very small; on the other hand, the presence of German troops on the Swiss frontier and the building of fortifications constitute a direct menace to Switzerland. It is for that reason that the Federal Government has decided to hasten the completion of the re-armament scheme adopted last year, which involves an expenditure of 85 million francs, mainly devoted to the re-equipment of the artillery, the development of aviation and the erection of fortifications along the northern frontier. One part of the programme has already been completed, but the fortifications will not be terminated before the end of the year. But, in present circumstances, the programme is regarded as insufficient, and the Government is now contemplating a complete reorganisation and modernisation of national defence involving an expenditure of 235 million francs.

The Government intends to spend a further 25 million francs on fortifications, while the remaining 110 million francs are to be expended on armaments. As the Swiss Constitution does not allow the creation of permanent army units, a new organisation will be created to man the fortifications at once in case of danger. At the same time, light units armed with light artillery and machine guns will be formed for the defence of the frontier. Anti-aircraft and anti-gas defence are to be developed.

The 235 million francs needed for this purpose are to be obtained by means of a State loan at 2½ per cent. Some 176 millions francs out of the 235 million francs are to be spent in Switzerland and will benefit home industries and help in combating unemployment. The Swiss trade unions and many sections of the Socialist Party are supporting the scheme, as they have now pronounced themselves in favour of stronger defences; although last year they opposed the Bill for the reorganisation of the Army and re-armament. They will propose that the loan be increased up to 500 million francs. The remaining 265 million francs would then be devoted to public works. It is accordingly certain that in its next session Parliament will adopt the Government's proposal, though the sacrifice will be heavy for a country whose population hardly exceeds 4,000,000.

GENEVA, May 1.

ROUMANIA

AN INCREASE IN REVENUE

It is now fairly certain that the public revenue under the Ordinary Budget of the financial year ending on March 31st last will exceed the estimates of 20,686.8 million lei. In fact, the Treasury receipts from ordinary sources are expected to reach the total of 19,583.7 million lei. Special revenues of 800 million lei were obtained from the issue of

new metallic currency, and an amount of 700 million lei was appropriated from the Extraordinary Budget. This brings the total income under the Ordinary Budget up to 21,083.7 million lei. Expenditure amounted to 20,967.8 million lei. A surplus of about 100 million lei appears therefore assured for the first time for several years. Compared with the previous year the ordinary revenue increased by 8.1 per cent. This result is partly attributed to improved methods of tax collection, but it also reflects the better economic conditions prevailing in the country. On the other hand, Customs revenue dropped by about 28 per cent. owing to the restrictions imposed on foreign trade. Revenue during 1935-36 for the separate National Defence Budget is valued, in the absence of definite figures for the last month, at 1,912.6 million lei, which is 87 million lei below the estimates.

Under the Extraordinary Budget for 1935-36, which deals with the arrears both in income and expenditure from previous years, total revenues are expected to reach 3,049 million lei; the total outstanding amount indicated in the Budget was 14,278 million lei, subsequently corrected to 11,817 million lei. Some 700 million lei of the revenues were appropriated for the Ordinary Budget as shown above, whilst 2,346.2 million lei was utilised for payment of old debts. A further part of the old debts, about 1,600 million lei, was liquidated by compensations and adjustments, and 5,643.5 million lei was paid by the issue of the 3 per cent. Consolidated Loan bonds authorised last summer for this purpose. A sum of 991 million lei is yet to be liquidated by similar bonds. The total issue will therefore be for the moment 6,634.5 million lei, out of a total of 8,000 million lei for which provision has been made.

Special attention has been directed by the Minister of Finance to the liquidation of the large floating debt, given as 19,990 million lei, outstanding at the beginning of the financial year. A reduction of 15,890 million lei has actually been effected. The funded debt of the State on April 1, 1936, amounted to: External, 79,389,226,348 lei; internal, 28,653,308,617 lei; total, 108,042,534,065 lei. The increase in the internal debt is to a large extent due to the consolidation of the floating debt.

The practice of establishing a separate Budget for the arrears from previous years has been dropped in drawing up the Budget for the current financial year beginning on April 1, 1936, which was placed before Parliament and passed at the end of last month. On the other hand, the separate Budget for National Defence has been retained. The estimates of the latter amount to 2,600 million lei, an increase of 600 million lei over last year's estimates and of about 700 million lei over the actual receipts during last year. The General Budget for the current year is balanced at 22,972,419,500 lei.

POSSIBLE FURTHER EXCHANGE DEPRECIATION

The payment agreement with France concluded in February last is not yet in operation, as the negotiations for the sale of petroleum royalties appear to be meeting with obstacles. With Great Britain negotiations are said to be proceedings and a new delegation from the Board of Trade is expected here. Meanwhile, hardly any transfers for the payment of commercial arrears due to England under the old agreement are coming through, and grants of remittances for current debts are very few and far between. It is only under certain special "compensation" contracts that the supply of some essential raw material can be obtained. The transfer of blocked lei has lately engaged the attention of some enterprising firms and is actually being effected by means of surplus exports, but at rates which mean heavy loss to the owners of the lei. German marks, Italian lire, Austrian schillings, Hungarian pengös and Czech crowns are allowed to be negotiated in the open market, provided they result from exports and are bought for approved commercial transactions. The considerable reduction in imports, however, has brought about a substantial drop in the rates ruling in the so-called "black market." There are reports that the authorities are considering the advisability of raising the premium paid on foreign exchange by the National Bank, at present 38 per cent., so as to kill the "black market" entirely and further encourage exports.

BUDAPEST, May 1.

JAPAN

NEW CHEAP MONEY POLICY

TOKYO is still under martial law and it is not known when it will be lifted. But business is being conducted as usual, and the general economic trend has not appreciably changed. Output of cotton yarn in March totalled 117,470,000 lbs., or a decrease of 690,000 lbs. over February, while rayon yarn production in March recorded the highest monthly total at 20,010,000 lbs., or 1,592,000 lbs. more than in the preceding month. The Bank of Japan's wholesale index number for March registered a further slight fall of 0.15 per cent. on the month. Security prices, on the other hand, have reacted very unfavourably on the fears of heavy increases in taxation and of stricter and wider State control over industry and finance.

The new Government's cheap money policy was launched on April 7th by the reduction in the Bank of Japan's official minimum to 3.28 per cent. from 3.65 per cent., at which it had stood since July 3, 1933. The following day the Government announced a scheme for converting the 5 per cent. Loan amounting to 381 million yen on May 1st to the reduced rate of 3½ per cent. The Tokyo and Osaka clearing banks followed the lead of the central bank and lowered, as from April 10th, the deposit rate from 3.7 per cent. to 3.3 per cent. in the case of big banks and from 4 per cent. to 3.5 per cent. in the case of lesser banks.

LARGE INCREASE IN IMPORTS

Reversing the trend in recent months, imports during March show a considerable increase over last year, due principally to larger imports of textile materials. The total of imports, 282,446,000 yen, compares with 220,195,000 yen for March, 1935, an increase of 62,251,000 yen, or 28.3 per cent. Exports, at 218,501,000 yen, rose by only 4,712,000 yen, or 2.2 per cent. The growth in lesser exports was largely offset by the substantial decline in cotton manufactures and other textile goods. For the first three months imports show an increase of 68,197,000 yen, or 9.6 per cent., to 779,224,000 yen over the corresponding quarter of 1935, and exports a rise of 26,076,000 yen, or 4.6 per cent., to 587,438,000 yen. Thus the import surplus amounted to 191,786,000 yen, against 149,664,000 yen.

The gross operating receipts of the Imperial Government Railway for the fiscal year ended on March 31st show that passenger train receipts were 299.3 million yen and goods train receipts 221.9 million yen, making a total of 521.2 million yen. This was the largest total ever recorded and 25.7 million yen larger than the actual receipts of the preceding year. The South Manchuria Railway also reported considerably larger earnings for 1935-36, and its gross income totalled 136.5 million yen, against 131 million yen in 1934-35.

According to Mitsui Gomei Kaisha's half-yearly analysis of the profit and loss accounts of Japanese joint-stock banks and industrial undertakings, aggregate net profits of 250 banks for the second half of 1935 totalled 80,052,000 yen, a decrease of 810,000 yen upon the first half of the year. The total net earnings of 1,000 industrial companies for the December half-year amounted to 415,415,000 yen, representing an increase of 19,523,000 yen over those earned by the same concerns in the preceding half-year. The great majority of trades, particularly shipbuilding, machinery and tools, mining, chemicals, trading companies, electricity supply, and railways and tramways, show substantial increases in profits; but textiles, breweries, iron and steel, rubber and warehouses disclose smaller earnings. The following table gives the comparison for profits in the last three half-years:—

	No. of Co.'s	(In thousand yen)		First half-year 1935	Second half-year 1935
		Second half-year 1934	First half-year 1935		
Banks	250	81,272	80,863		
Industrial companies ...	1,000	373,526	395,892		
Total	1,250	454,798	476,755		

Out of the total, fifty-six industrial companies reported a loss for the December half-year, and aggregate net losses amounted to 2,150,000 yen; compared with fifty-five companies having the combined loss of 2,315,000 yen in the June half-year.

TOKYO, April 10.

NEW ZEALAND

BETTER TRADE AND RISING PRICES

INTERNAL trade, stimulated by the higher receipts for exports, continues to improve. Sales tax receipts achieved new high records for each of the four months ending with January, 1936; and bank debits, railway revenue, building permits, mortgage business, and land transfers are all appreciably higher than a year ago. Unemployment shows more than the normal seasonal decline. The season has been exceptionally wet. The rainfall in February, usually a dry month, beat all previous records, and heavy floods occurred in many districts. This rain has helped the pastoral industries by stimulating the growth of grass later in the season than usual; but it has done much damage to crops, and both milling wheat and potatoes may fall short of requirements.

Ruling prices for butter and wool have been well above those of last season, though meat prices are slightly lower. For the seven months ended in January, compared with the same period a year ago, butter exports were 6 per cent. higher in quantity and 46 per cent. higher in value, and cheese exports lower by 18 per cent. in quantity and 8½ per cent. lower in value. Exports of lamb declined by 16 per cent. in volume and 17 per cent. in value. Up to the end of February 448,752 bales of wool, yielding £N.Z.6,052,111 and averaging 9½d. per lb., had been sold at the local auctions, against 259,149 bales, yielding £N.Z.2,781,051, or 6½d. a lb., for the same period a year earlier. The market appears to be steadily improving, and it is estimated that total realisations for wool over the full season will be about £N.Z.11,000,000, or nearly £N.Z.4,000,000 more than last year. Imports continue to respond to the improvement in internal business, and for the year ending January last amounted to £36,287,544, compared with £N.Z.31,707,149 in the preceding year. The trade balance has been decidedly favourable since the export season opened, and in consequence overseas funds held by New Zealand banks increased from £N.Z.33,976,157 on October 28th last to £N.Z.38,369,539 on January 27th.

THE LABOUR GOVERNMENT AND THE CENTRAL BANK

The new Cabinet has been busy since the election preparing for the parliamentary session, which opened on March 25th. The recent Government removed certain public activities, including the administration of the railways, of transport, and of Government advances to settlers, out of State control, and appointed boards of control with wide powers. Now these departments are to be brought under ministerial control again. The Reserve Bank, which is governed by directors appointed partly by the State and partly by shareholders, is to be made a State bank, probably by Government appointment of all the directors and Government purchases of the £500,000 shares held by

shareholders. Dairy farmers are also promised guaranteed prices for next season, and though nothing definite is known, it is anticipated that the Government will purchase the produce at standard prices in New Zealand, and will undertake the task of marketing it abroad, meeting the loss when overseas prices are low, and making a gain when market prices are higher than the standard adopted. Critics consider such a plan will last only as long as market prices remain above standard prices.

Since the amendment to the Arbitration and Conciliation Act in 1931 it has been compulsory to take labour disputes to the Conciliation Councils, but optional whether matters still in dispute should go to the Arbitration Court. The Government now promises to restore compulsory arbitration. The 40-hour week is also likely to be introduced in some occupations, and the Government expects that shorter hours, combined with increased activity in public works, will reduce unemployment substantially.

CHRISTCHURCH, April 15.

LETTER TO THE EDITOR

ROAD ACCIDENTS AND PETROL CONSUMPTION

TO THE EDITOR OF THE ECONOMIST

SIR,—In the House of Commons Mr Neville Chamberlain suggested recently that there was a direct ratio between the roads constructed, the number of mechanical vehicles upon them and the number of fatal and non-fatal accidents.

We are perhaps not entitled to expect imagination from our Chancellors of the Exchequer, but at least we should be able to look for some respect for the significance of figures and for the accurate use of them.

The following table shows the relation between the numbers of killed and injured on the roads, those killed and the total petrol consumption, which is an accurate enough guide to the amount of motor traffic on the road, standardised on the year 1928:—

Killed and Injured on the Roads and Total Petrol Consumption				
		Killed and Injured	Killed	Petrol Consumption
1928	..	..	100	100
1929	..	..	103.9	109.1
1930	..	..	108.3	119
1931	..	..	122.1	127
1932	..	..	124.6	133
1933	..	..	130.7	139
1934	..	..	139.8	150
1935	..	..	131.8	161

These figures show how far from the truth is the assumption behind Mr Chamberlain's statement.

Yours faithfully,

H. E. CRAWFORD.

BOOKS AND PUBLICATIONS

INTERNATIONAL CAPITAL MOVEMENTS

THESE are the first two books to treat the theory of international capital movements comprehensively as a separate subject. Up till now it has been included in books on international trade. Each author naturally draws upon former theories, but while Herr Nurkse contents himself with quotations, Mr Iversen gives a systematic and complete exposition of practically all theories on international capital movements. Both volumes, however, are constructed clearly and systematically; and they both incline towards the modern theory according to which international transfers of purchasing power are of primary im-

* "Internationale Kapitalbewegungen." By Regnar Nurkse. Publications of the Austrian Institute for Trade Research. Julius Springer, Vienna. 247 pages. Rm. 7.80.

* "Aspects of the Theory of International Capital Movements," by Carl Iversen. Levin and Munksgaard, Copenhagen; Oxford University Press, London. 536 pages. 15s. 6d.

portance as a causal factor in the adjustment of international accounts.

Herr Nurkse, who is a member of the League Secretariat, works out his analysis rather independently of other authors. His interest is primarily focussed upon the phenomena of real transfer, i.e. of the movements of goods and services initiated by international capital movements and their effects upon prices and production. Mr Iversen examines rather closely the phenomena of monetary transfer that occur when short-run credit movements interrupt long-run tendencies, and adjustments are consequently postponed until serious frictions or even a breakdown of the international monetary system ensues. Mr Iversen also reviews the controversy over the Reparations transfer problem.

Together, the two books bring out clearly the defects of the classical and neo-classical theories. According to these accounts, whenever international capital movements take place under the gold standard, movements of gold will result, and, either directly or indirectly, through their

effects on the credit structure, will produce changes in the comparative price levels of the lending and the borrowing countries, which will turn the terms of trade against the former and in favour of the latter. The defects of this theory are its neglect of the immediate effects of the transfer of purchasing power and its assumption that an increase of exports is impossible unless prices and costs are depressed in the lending country relatively to the borrowing country. Accordingly, the more modern theory brings out clearly the fact, which is also more in accordance with practical experience, that the borrowing country can buy more at the same prices and the lending country supply the additional exports needed for the "real" transfer of the loan. How exactly the adjustment of international payments will be effected, must of course depend on the actual conditions of supply and demand.

The modern theory also throws much greater light on conditions in non-gold countries. Mr Iversen shows, for instance, that complementary short-term credit movements facilitate the transfer process in the case of managed currencies just as much as in the case of gold currencies. Herr Nurkse is reluctant to admit this, though at the end of his book he mentions the operation of the Exchange Equalisation Fund—which is a case in point. Herr Nurkse rightly points out the dangers arising from the differences which may prevail between the forms taken by internationally moving funds and the real economic transaction they represent. He points out the difficulties experienced by borrowing countries when short-term credits are used for long-term investment, and the import of capital fluctuates violently, while the borrowing country is obliged to make payments at a fixed rate and irrespectively of changes in the business cycle.

Neither Mr Iversen nor Herr Nurkse seem to investigate quite adequately the conditions under which the repayment of loans takes place. Both assume that these conditions are practically the same as in the case of the original export of capital. Here again the modern theory may prove illuminating on several points. The most important of these seem to be that the borrowing country often meets difficulties in putting at the disposal of the original creditor country purchasing power which can be as easily transferred as the original capital sum. One might almost say that the modern theory of capital movements applies more accurately to the original lending operation and the neo-classical theory to the process of interest payment and amortisation.

SHORTER NOTICES

"Raw Materials and Colonies." Information Department Papers. No. 18. The Royal Institute of International Affairs. 68 pages. 2s. 6d.

To the series of pamphlets recently published on the problem of raw materials and Colonies, Chatham House here adds another and most valuable contribution. It does not attempt to reach practical conclusions, but it is perhaps the most comprehensive survey available of the relevant facts and figures. A whole series of statistical tables tells us virtually all we need to know about the production and trade in raw materials, the exports of industrial countries to Colonies, the tariff policies followed in Colonial Empires, the various schemes for restriction of production, and the principal remedies proposed by responsible authorities.

The factual survey first shows that, "apart from rubber and tin, there are no important raw materials which are even preponderantly produced in colonial areas." The political unit most nearly self-sufficient in raw materials is the United States, followed by the British Empire (if it is a political unit) and the U.S.S.R.—which is rapidly coming to the front as a leading world producer of raw materials. British Malaya and the Netherlands East Indies are the only colonies of first-class importance as producers of raw materials; and the only raw material of which African Colonies have a quasi-monopoly is palm oil. The African Mandated Territories are unimportant. "In fact, the problem of access could never be solved by transfer unless whole continents were transferred: the only real possibility of improvement lies in a greater freedom of trade."

"Planning Under Capitalism. The Problem of Planning in Great Britain." By A. W. Rathen, B.Sc. (Econ.). (London) P. S. King and Son, Ltd. 199 pages. 9s.

Mr Rathen has had the praiseworthy idea of combining in one book a theoretical defence of "planning" and a description of some of its manifestations in Great Britain. The result is a book of very unequal merits. The theoretical part is excellently done. The chapter which lists the reasons why it has become essential to superimpose some degree of "purposive direction" upon the free economy is particularly clear and thoughtful. The factors which Mr Rathen discusses are, on the side of the demand for goods, the advent of a stationary population, changes in the distribution of income, and the growing instability of demand following upon a rising standard of living. On the supply side, there are the rising productivity of industry, the loss of plasticity in wage rates and the growth of mass production, with its corollary of high overhead costs. Not everybody will agree with the precise degree of importance that Mr Rathen attaches to each of these factors, but they make a formidable array and provide a complete answer to those who are puzzled why an economic system which worked tolerably well until a couple of decades ago should suddenly start working badly. This line of argument does not, as Mr Rathen tends to assume, exclude either the Socialist explanation or, still less, the Socialist solution. But it does at least provide an alternative explanation.

Whether "capitalist planning" also provides an alternative cure, is the inquiry which occupies the second half of the book. Unfortunately, Mr Rathen is too indiscriminating a critic to inspire a great deal of confidence in his thesis. He describes in turn the legislative attempts to reorganise the coal, electricity and agricultural industries. But he relies too closely on purely official sources; he is inclined to accept any form of "control" as economically beneficial; and he is far too quick to take a vague expression of legislative intention as a precise accomplished fact.

MONEY AND BANKING

THE FRANC IN EXTREMIS

THIS week the life of the franc has been hanging by a hair. On Tuesday it looked as if the hair would snap and that exchange restrictions would be imposed of a kind that would put an end to the life of the franc, on the free gold standard, as the world has known it for the past eight years. For the moment the franc has been preserved; and the French authorities are trying one more application of the orthodox remedy of raising the Bank rate. Yet in spite of the Finance Minister's declaration on Tuesday evening that there was no question of imposing any measures of exchange control, few will be found to-day to believe that a mere raising of the Bank rate from 5 to 6 per cent. can save the franc.

For more than a year the disease has pursued a familiar course. The root cause is over-valuation, leading to enforced deflation—with its concomitant of depressed trade, employment and purchasing power—in a vain effort to restore equilibrium. Budget revenues have dwindled and the Treasury has for many months been virtually empty. The London credit for Frs. 3,000 millions, arranged last February, and the subsequent internal issue of Frs. 6,000 millions of Treasury bills, taken by the Banque de France, were only emergency measures which advertised the desperate need of the authorities. For a considerable period money has been flowing out of the banks into private hoards at home and abroad, and the Banque de France has been simultaneously losing gold, and re-discounting for the commercial banks, and latterly in effect for the Government. This two-way pressure on the central bank is graphically illustrated by the following table:—

	BANQUE DE FRANCE		
	Frs. millions		
	March 22, 1935	March 20, 1936	April 23, 1936
Gold	82,597	65,700	61,937
Rediscounts	3,998	11,114	14,568
Note circulation	81,490	82,681	82,557
Private deposits	16,876	7,843	7,751
Reserve ratio	80.8%	70.2%	66.8%

These returns, both for the year to March 20th last and for the subsequent weeks of crisis up to April 23rd, are sufficiently eloquent. It remains to add that the slight recovery in French trade and prices, which began at the end of last summer, was itself an indication that France was seeking relief from her pains through the drug of concealed inflation, and that this relief was purchased at the cost of a more intensified over-valuation of the franc.

At this stage the elections intervened. As we show in a leading article on page 294, they have returned the Left to power, but swung the centre of gravity of both the Left and Right groups of parties towards the extremes. Even the results of the first ballot on April 26th had an unfavourable effect on the franc. During the week ended April 30th the Banque de France's gold stocks fell to Frs. 60,678 millions, while its rediscounts rose to Frs. 15,020 millions. The note circulation rose to a new high record of Frs. 84,138 millions. The result of the second ballot last Sunday finally established the victory of the Left. Last Monday the Banque de France lost, it is estimated, Frs. 560 millions of gold and on Tuesday the best part of Frs. 800 millions. The spot rate for sterling was barely held by the British Control at just under Frs. 75½, while one month's francs went to Frs. 2½ discount and three months' francs to Frs. 4½ discount. These forward rates, respectively, corresponded to 44 and 25 per cent. per annum! Meanwhile the New York-Paris rate went to Frs. 15.19, and a new gold rush to the United States began. Shipments by the "Normandie" alone are estimated at over Frs. 225 millions, and the insurance premium on these shipments rose as high as 38.4d. per cent. Continual shipments are also being made to Brussels at very low cost by every means available, so far as the French banks feel at liberty to ship gold at all. Gold has been quoted in the London bullion market at a premium of 1s. 2d. on the franc parity price, and

much of this gold is being bought on French account for shipment to Brussels.

The position is even more serious than is superficially apparent. Hitherto, the flight of funds from France has been confined to foreign money, to naked speculation, and to the liquid balances of large French interests with international relations and commitments. A few weeks ago it was confidently said that all this money had already taken flight, and that provided the *petit bourgeois*, the owner of the small bank balance, held his ground, there was little money left to go. This week, however, there is evidence that the panic has spread to the small man, and that numbers of small bank balances are being transferred to London or Brussels. Neither the Banque de France's gold reserves nor the resources of the commercial and saving banks could stand such a drain indefinitely. Already the Banque's gold must be under Frs. 60,000 millions, of which some 4,000 millions must be regarded as ear-marked against the London credit and smaller loans lately raised in Brussels and Amsterdam. Both the peculiar character of the French banking and monetary system—with its reliance on currency as the chief medium of exchange—and also the present international political situation lend support to the view, which has been widely, though unofficially, put forward, that the French regard Frs. 55,000 millions of gold as the irreducible minimum.

The truth is that the elections and the French Constitution between them have left France with no effective Government until the new Chamber meets on June 2nd. The position of the United States just before President Roosevelt assumed power in March, 1933, presents an ominous parallel. M. Sarraut, at the end of his term of office, shows pardonable reluctance to take the plunge and devalue the franc. If he did, he and his supporters would obtain all the odium, while the Left would come in to reap the fruits of the recovery that assuredly would follow devaluation. M. Sarraut's simplest course, therefore, is to sit tight, and M. Régnier's declaration indicates that he has decided to do so. But is this practicable? Can the franc hold out till June 2nd? At best, it can only do so if the gold reserves are allowed to fall below Frs. 55,000 millions. Even this possibility might be upset by a general and prolonged flight of the *petit bourgeois* from the franc.

M. Sarraut's first alternative is to resign at once. That would impose upon France a virtual interregnum for the best part of a month. Once more a suggestive parallel can be found, for just over a year ago Belgium was faced with an interregnum of a week at a time when the belga was in a parlous plight. It is a matter of history that when M. van Zeeland took over the reins of office at the end of that week his first act was to devalue the belga—and Belgium has since never looked back. Is this experience to be repeated in France this month?

Another possibility is that M. Sarraut may decide to summon the old Chamber at once and invite it to dissolve itself. This is constitutionally possible, and, if it were done, the new Chamber could meet next week. This course would shift the whole onus of dealing with the crisis on to the shoulders of the new Chamber and the new Government, and would obviate the danger of an interregnum. It would give the Left the kicks as well as the ha'pence of devaluation or any other drastic change in monetary policy.

Meanwhile, what of the franc itself? There are several possibilities, any one of which may materialise without warning. First, restrictions on the exportation of capital may be imposed. This is now less likely than it seemed to be on Tuesday, and the Government, the Treasury and the Banque de France are all believed to be opposed to this step. Next, France may decide only to part with gold to those countries which freely ship gold to France—that is to the other members of the gold bloc and to the United States. This would at once prevent the transfer of ear-

marked gold to the British Exchange Equalisation Account. In that event the Account (which operates with the taxpayers' money and would hesitate to take the risk of buying and holding francs), would apparently be compelled either to cease its intervention and allow the pound to rise to Frs. 80, Frs. 85, or wherever the market took it, or, as a *pis aller*, to buy dollars. The latter alternative could not possibly save the franc, for the dollar would remain at a high premium against the franc, and the gold rush from France to the United States would attain prodigious dimensions. In any case, there might be a radical change in the exchange rates between the pound, the franc and the dollar, while the Banque de France's gold losses would at the best be slowed down and would also take the form of physical shipments, especially to Belgium, and so be plain to all, day by day.

Altogether, the odds against the franc are heavy indeed. If we are on the threshold of a new situation in international economics, what should our own policy be? This contingency was examined in an article in the *Economist* of January 25th, p. 171. Certain conclusions appear relevant. First, it may be urged, we should again make it perfectly clear that in no circumstances will we use the Exchange Equalisation Account for the competitive depreciation of sterling. France and other countries may legitimately ask for categorical reassurance on this point before they are committed to any decisive step. Next, we ought to hold immediate, brief and informal discussions with France on the question of the best and most equitable relation between the pound and the franc. A full-dress conference is the last thing desirable, but, if time permitted, American participation would be useful. Next, we must be ready for all eventualities in the inevitable period of world-wide economic re-adjustment. Finally, if the franc goes, Germany may well seize the opportunity for a revaluation of the mark. Dr. Schacht can hardly be left out of account, and may have to be brought into the discussion. The next few weeks may be a turning-point for the world, both politically and economically. The opportunity should be used to promote world re-adjustment and freedom, and not fresh restriction and chaos.

FINANCIAL NOTES

The Bank Return.—This week the note circulation has risen by £5.7 millions. This is rather a large increase for this time of year, and is almost certainly due to French hoarding. It is known that there has been active bidding in Paris for pound and dollar notes, and there is some evidence in London that last week there was an increase in the issue of notes of the larger denominations.

	BANK OF ENGLAND				
	May 8, 1935	Apr. 15, 1936	Apr. 22, 1936	Apr. 29, 1936	May 6, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	192.6	201.6	202.1	202.7	203.7
Note circulation	394.2	421.9	415.4	416.9	422.6
Banking Department :—					
Reserve	59.0	40.5	47.4	46.6	41.8
Public deposits	7.2	9.9	13.2	7.4	9.2
Bankers' deposits	104.6	104.9	93.1	104.7	88.3
Other deposits	38.0	36.6	38.1	39.0	36.7
Government securities ...	92.5	106.7	93.2	101.3	88.8

Other securities	10.3	13.2	13.9	12.6	11.9
Proportion	39.3%	26.7%	32.8%	30.8%	31.1%

In the banking department the heavy payments for Treasury bills made on May 1st have enabled the Government to repay the money borrowed from the Bank at the end of April, and have also depleted bankers' deposits. The latter have also been reduced by the expansion in the note circulation. Hence the contractions of £12.5 millions in Government securities and £16.4 millions in bankers' deposits.

The Money Market.—The clearing banks have experienced a fair demand for day-to-day money, and at least two of the clearing banks called moderate amounts

Crowns, Fmk. Zlotys.

during the week. As the Bank return shows, the heavy Treasury bill payments made on May 1st have reduced the supply of bank cash, while the total tender issue of Treasury bills continues to increase by £10 millions a week. The banks have bought June and July Treasury bills at ½ per cent., and have been very willing to take them.

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

A fair amount of French money has been seeking employment in the London discount market. There have been many inquiries for bills and also for rates at which London houses will take money on deposit. These inquiries have come both from the London offices of French banks and also direct from Paris, and were particularly in evidence on Thursday. There is no great eagerness, however, to accept French balances, as money of this kind is extremely volatile, and it is difficult both to keep it liquid and employ it profitably.

The Foreign Exchanges.—For reasons discussed in the leading article on the previous page, the London market has been dominated by the franc. There have been heavy offerings of spot and forward francs on every day of this week, and although the British Control has bought heavily on the spot market, it had to let the spot rate on Thursday rise to a fraction over Frs. 75½. There has been practically no demand for forward francs, and by Thursday afternoon one month's francs had depreciated to Frs. 2½ discount, or 40 per cent., and three months' francs to Frs. 5½ discount, or nearly 28 per cent. per annum. It is ominous that the greater discount is now on the nearer position. The Dutch and Swiss exchanges have been steady, but belgas have risen in Paris to Frs. 258.35 per 100 belgas, or to well beyond the gold export point of about Frs. 256.75. A fair amount of gold has gone from Paris to Brussels, but the French banks are not too anxious to ship openly, and a fair amount of gold has been bought in the London bullion market and shipped to Belgium. The heavy discount on the franc against the belga makes this profitable even though the London price of gold is 1s. 2d. per ounce above the franc parity price. It would also pay to ship gold from Paris for sale in London, but French banks are again being discouraged from doing so. Dollars have depreciated in London to \$4.97½, but this is purely an arbitrage movement in sympathy with the franc. The Paris-New York cross-rate is up to Frs. 15.19, or

above the export gold point, and one American bank at least is shipping gold heavily. British gold movements reported during the week ended May 7th included imports of £1,296,000 from France and exports of £1,220,000 to the United States and £335,000 to Belgium; £170,000 in sovereigns was also shipped to France, and a small quantity of other coin and bullion.

INSURANCE NOTES

Scottish Union and National.—New life business showed further substantial expansion in increasing from £3,144,000 to £3,604,000, but annuity consideration money fell from £139,000 to £88,000. The net rate of interest on the funds was 6d. per cent. smaller at £3 19s. per cent. Death claims fell by no less than £105,000 to £358,000. Fire premium income was practically unchanged at £1,012,000, but the underwriting profit increased from £89,000 to £133,000. This very satisfactory result is no doubt attributable in large measure to favourable conditions in the U.S.A. In the other branches premium income was on the aggregate greater than in 1934. It is the practice of this office to hold a reserve for unexpired risks of 50 per cent. of the premium income, but in arriving at the figures given below 40 per cent. has been taken, in accordance with our usual practice:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	88,937	8.9	133,348	13.2
Accident	1,154	3.9	1,715	6.1
Employers' liability	3,651	6.8	4,472	8.0
Miscellaneous	11,381	5.9	6,270	2.8
Marine	40,000		30,000	
	137,821		166,861	
Less items debited to profit and loss	80,196		84,031	
	57,625		82,830	

The total assets at £16,805,000 are £404,000 greater. There was some redistribution of the investments. Loans of all kinds were smaller by £217,000. British Government securities, however, increased by £164,000, and foreign and colonial government securities by more than £400,000. Debentures fell from £4,085,000 to £3,831,000, but preference and ordinary shares were greater. The dividend is again at the rate of 65 per cent. and costs £151,000 compared with interest earnings of £146,000.

British and Foreign Marine.—The activities of this company, which is a subsidiary of the Royal, are almost entirely confined to marine insurance, the transaction of which has met with consistent success. The figures relating to the last five closed years are as follows:—

	Premium Income	Transferred to Profit and Loss
1930	455,000	51,000
1931	482,000	38,000
1932	431,000	33,000
1933	372,000	6,000
1934	389,000	28,000

Premium income last year was £398,000, compared with £389,000 in 1934; first year claims, however, were £3,000 smaller at £101,000. There is also a small fire insurance branch, in which the premiums last year amounted to £25,000; the profit of £3,800 emerging has been retained in the fire account. Total assets amount to £3,439,000, and in addition to underwriting reserves, there is a reserve fund of £1,000,000 and a general contingency fund of £233,000.

Caledonian Insurance.—New life business was considerably larger at £1,686,000, and annuity consideration moneys increased from £63,000 to £122,000. Interest

earnings were practically unchanged, with the result that the net rate of interest earned on the mean funds fell by 1s. 11d. per cent. to £3 18s. 10d. per cent. Death claims were much smaller at £207,000, compared with £255,000 in 1934. In the fire and miscellaneous branches total premium income was £1,303,000, or practically the same as in the previous year. The underwriting results of the last two years are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	40,295	5.3	82,499	11.3
Accident	1,241	12.4	731	7.8
Employers' liability	1,759	4.6	638	1.6
General	9,573	8.5	2,549	2.2
Motor	20,054	6.8	13,396	4.2
Marine	18,886	19.4	9,086	10.5
Life	72,662		108,899	
Less items debited to profit and loss account	55,793*		81,853*	
	16,869		27,046	

* Including transfer of £25,000 to general reserve.

Total assets in the life balance sheet increased from £7,608,000 to £7,861,000; there were no special changes in the classification of the investments. In the general balance sheet assets increased from £3,067,000 to £3,184,000, while the general reserve was raised from £525,000 to £550,000. In the fire account, in addition to the usual reserve of 40 per cent. of the premium income for unexpired risks, there is a reserve of £500,000, equal to a further 68 per cent. of the 1935 premiums. The market values of the Stock Exchange securities appear to be considerably in excess of the book values. The dividend is again at the rate of 75 per cent., and absorbs £90,000, contrasted with available interest earnings of £80,000.

Friends' Provident and Century.—New Life Assurances in 1935 were £2,276,000, compared with £2,301,000 in 1934 and £1,888,000 in 1933, while annuity consideration moneys increased in the year by £152,000 to the very large sum of £931,000. The company has for some years accepted deposits for fixed terms of years, the rates of interest varying with the term, and the continued popularity of this business—which is treated as part of the sinking fund account—is evidenced in an increase of £78,000 in the outstanding amount of single premiums received on the previous year's total to £704,000. Death claims fell by the substantial amount of £81,000 to £199,000. The net rate of interest earned, which increased in 1934 from £4 7s. 9d. per cent. to £4 18s. 3d. per cent., fell last year to £4 4s. 6d. per cent.; the peak figure in 1934 was due to the exceptional dividend paid in that year on the Century shares, namely £108,500, against £37,500 in 1933 and £46,500 last year. Total premiums in the fire and miscellaneous branches were somewhat greater than in 1934, but the net interest earnings fell from £48,000 to £45,000. The results of the past two years are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Life	18,903	...	...	...
Fire	10,293	3.3	24,329	7.3
Accident	1,398	8.5	1,555	8.8
Motor	4,680	4.3	3,488	3.3
General	3,473	5.1	7,035	9.9
Employers' liability	5,935	11.8	7,932	13.6
Marine	12,181		5,060	
	56,863		46,289	
Less miscellaneous profit and loss items	25,938		9,285	
	30,925		37,004	

Total assets increased from £11,404,000 to £12,560,000, and in addition the funds of the Century amount to £5,249,000. The Century shares appear in the balance sheet as before at £1,000,000, which includes a considerable sum for goodwill.

THE STOCK EXCHANGE

ARE ORDINARY SHARES TOO HIGH?

As a catalyst of opinion in the City of London, Mr J. M. Keynes has no rival. It may be pure coincidence, but the fact remains on record that the *Financial News* ordinary share index reached its peak for 1936 on the very day, February 19th, when Mr Keynes addressed the hundred and sixth annual general meeting of the National Mutual Life Assurance Society, and protested that the prices of ordinary shares were too high. Undoubtedly, this view ran counter to contemporary Stock Exchange opinion, which was—and still is—concerned more with the “recovery” possibilities of equity shares than with their relationship to gilt-edged values, or to any other yardstick. Mr Keynes, broadly, would seem to believe that the current rate of interest is not low enough to induce the volume of new construction work—presumably other than on armaments—which is necessary to bear out the present earnings expectations of investors. Who is right, the market or the critic?

Mr Keynes's assertion may be studied against the background of the annexed chart. This shows the yield on the

tended, on balance, to fall slightly. But the prices of ordinary shares, after lagging behind increased dividends at the beginning of last year, have since risen sufficiently to take up the whole of “recovery” and to leave the yield figure more or less where it stood at the end of 1934.

Ordinary shares, clearly, are higher to-day, relatively to gilt-edged, than they were sixteen months or three years ago. Are they unduly high? The contraction of the yield margin is not, in itself, conclusive either way. For unless gilt-edged and industrial shares have exactly the same cycle, with identical timing of changes, their relationship can scarcely be expected to be constant over a long period. It would seem that, at bottom, the market and Mr Keynes are not at one in their outlook on future possibilities. The market thinks, instinctively, in terms of a cycle, in which interest rates will gradually harden as industrial revival reaches its more advanced stages. There is no suggestion of cyclical factors in Mr Keynes's contention. If, for the sake of argument, we took the market's view, is there anything to be learned from a study of past records? The movements of fixed interest and industrial share prices (according to indices recently compiled for the London and Cambridge Economic Service) in the last comparable period of low interest rates—the ‘nineties of last century, are shown in the first of the two charts which follow:—

COURSE OF FIXED INTEREST AND INDUSTRIAL ORDINARY SHARE PRICES: 1890-1904, AND 1928 ONWARDS

(London and Cambridge Index)

(Annual Averages, except for 1935 and 1936, where quarterly quotations are used)

mixed bag of industrial ordinary securities included in the Actuaries' Index, in juxtaposition with the long-term interest rate, as exemplified by the yield on 2½ per cent. “Consols.” The yields in every case are based on market prices at the end of each quarter from December, 1932, when the completion of the 5 per cent. War Loan conversion operation ushered in the present regime of low interest rates. At that time the yield on “Consols” was 3.39 per cent. and on industrial ordinary shares 4.38 per cent. At the end of April, 1936, the corresponding figures were 2.94 per cent. and 3.64 per cent. Thus the margin between the two sets of figures had narrowed from practically 1 per cent. to 0.7 per cent. It is true that, at the end of 1933, the margin was less than 0.1 per cent. That, however, was in the earliest stage of industrial recovery, when ordinary share values were, quite legitimately, discounting increased dividend prospects which do not necessarily hold good, to the same degree, to-day. A year later, at the end of 1934, when gilt-edged prices were practically at their peak, “Consols” yielded 2.70 per cent. and ordinary shares 3.67 per cent. Thus the margin had widened to 0.97 per cent. Subsequently, gilt-edged values have

Between 1890 and 1893, a period of industrial depression, fixed interest securities rose and industrial shares declined in value. In the three succeeding years—the first phase of recovery—both indices moved upwards. In 1895, indeed, both showed an almost identical net rise of 11½ per cent. since 1890. But the advance of industrial shares, once initiated, was much more rapid than that of fixed interest stocks. In 1896, when the fixed interest index reached its zenith, with a net rise of 16 per cent., the ordinary share index had achieved a total gain of as much as 35 per cent. Thereafter the price of fixed interest securities fell steadily, while industrial share values continued to rise and remained “high” for another four years. It was not until

1899-1900 that ordinary shares passed their peak. Thereafter both indices declined, the fall in ordinary shares being appreciably more rapid than that in fixed interest securities. The indices suggest, therefore, that in the last epoch of low interest rates, ordinary shares actually moved in the same direction as fixed interest securities, but with (a) a time lag of something like three to four years; and (b) a much wider "swing" between high and low.

How far has history repeated itself on the present occasion? We have previously (see the *Economist*, April 21, 1934, page 880) pointed out many points of similarity between the year 1928 and succeeding years in the current sequence, and the year 1890 and its successors in the earlier low-interest period. If the two indices used in the preceding table are carried on, and shown for recent years on the basis 1928 = 100, we have the results shown in the second of the two charts on the preceding page.

Fixed-interest securities were slower in beginning their rise, in the present cycle, than in the 'nineties. Already they have risen more than in the whole of that period. They started, however, from a higher yield level, and interest rates have not reached the low points of the 'nineties, when the yield on "Consols" actually fell to 2½ per cent. Ordinary shares began by falling much more considerably, on the present occasion, but have made an impressive recovery. There has been, as in the 'nineties, a time-lag between the advance in industrials and in fixed-interest securities, but it has been much shorter. Industrial shares, in fact, touched bottom, and began to revive very soon after the establishment of cheap money. Fixed-interest security values for the last fifteen or sixteen months have been fluctuating around a mean level slightly below the peak reached in January, 1935. Meanwhile, the upward movement in ordinary shares has, on the whole, more than maintained its velocity. Equity prices have risen much less, on balance, in the eight years since 1928 than in the period between 1890 and 1898. The increase from the lowest point reached during depression, however, has been comparable in its absolute dimensions with that of the corresponding period of the 'nineties.

Are the two epochs, however, really comparable? It is here that Mr Keynes joins issue with those who argue in terms of any earlier interest "cycle." In the 'nineties Great Britain was on the gold standard, and sterling was, to all intents and purposes, an international currency. Effective rates of interest in the London market were far more powerfully affected by international considerations than they are to-day, when sterling is a "managed" currency and London an insulated financial centre. Britain is no longer a large foreign lender, and the defence of the Bank of England's gold reserve is no longer the ultimate arbiter of currency and credit policy. Is there any necessary reason why interest rates should rise and gilt-edged prices fall, in the next few years, on anything like the scale of the period after 1896-97? On the contrary, if managed interest rates are a corollary of a managed currency, may not cyclical conceptions be entirely irrelevant? That assumption appears fundamental to Mr Keynes' argument.

There is, in fact, a growing body of market opinion which holds to a *via media*. It believes that while there will still be ups and downs in industrial activity, employment, prices, interest rates and security values, these may be much less extensive in the near future than in the recent past. On this assumption we may expect a harder tendency in basic interest rates, but not a return to the levels of the years preceding 1932. In other words, the yield on "Consols" may conceivably rise above 3 per cent., but will scarcely go to or over 4 per cent.

If this be so, the way appears fairly clear for an answer to the question: "Are ordinary shares too high?" The price of every ordinary share is a compound of two distinct elements—an "interest" factor and an "equity" factor. It reflects a number of years' purchase of a supposed minimum dividend and an allowance (plus or minus) for the possibility that the rate of dividend may change. But the two elements are present in different shares in varying degrees. Generalisations may be dangerous when applied equally, say, to bank shares and to aircraft shares. In a concluding article, therefore, we propose to examine the actual prices of, and yields on, leading groups of ordinary shares in the light of the considerations discussed above.

INVESTMENT NOTES

Better Markets.—The behaviour of the leading Stock Exchanges this week has suggested that, in markets predisposed towards a favourable interpretation of their problems—in other words, rising markets—bad news often ceases to be bad when it ceases to be news. Wall Street, last week, lost its nerve when the first results of the French elections were received, in the middle of a reactionary movement due mainly to domestic and technical causes. By Thursday of last week, many quotations were below the opening level of this year. Despite the assurance, however, of a victory for the parties of the Left in France, made doubly sure by the results of last Sunday's elections, the market made quite a satisfactory recovery this week. In London, the tone, similarly, was more confident after a hesitant start. The gilt-edged market, on the whole, regained its stride in advance of the industrial sections, where speculative interest was still lacking. The general impression, however, was that adverse external factors—particularly the franc and an Italian Abyssinia—had been weighed in the balance, and appeared less significant, after all, than those domestic forces—cheap money and industrial recovery—which had sustained the market for so long. Paris, necessarily, was a law to itself. For the most part, prices registered the normal features of a flight from a currency—weakness in Government securities, cautious re-investment in equities, and brisk dealings in gold-mining shares. In the middle of the week, when the Bank of France raised its discount rate, conditions, though still unstable, showed less of panic than of dullness. It remains to be seen how far the consequences of franc devaluation have been discounted, as distinct from the probable act of devaluation itself. Clearly, however, there is sufficient underlying support in most stock markets, at the moment, to prevent any recessionary movement from attaining really dangerous momentum.

Fixed Trust Developments.—By this time the use of the term "fixed trust" is a concession to familiarity and short-lived "tradition." It has, like all trade marks, begun to date, and accuracy now demands resort to the multiple description "fixed and flexible trusts." This circumlocution was adopted in our recent Survey, and has been adopted by the newly-formed Association of Fixed and Flexible Trust Managers. The latter is the successor of the Association of Fixed Trust Managers, whose constitution was outlined in the *Economist* of March 7th, page 532. Since that time, certain existing members have introduced flexible trusts, and two of the recruited groups, "Transport" and "Aviation," each control flexible trusts. The "Dawnay Day" and "Selective" groups have entered the Association, which consists of eleven management groups, controlling 52 out of 63 trusts now in existence. Its rules of management, incorporated in the constitution of the Association, follow the earlier precedent fairly closely. The inclusion of flexible trusts appears to have effected only slight changes. All trusts, after an opening clause of definition, are referred to as fixed trusts—a terminological dilemma which might have been surmounted by the adoption of some such term as "unit trusts." The managers of flexible trusts, in effect, undertake to publish a statement of investments, although its contents are not defined. It is clearly desirable that a percentage distribution of individual securities should be given, although this has not always been provided hitherto. Some provisions are left in somewhat indefinite form as, for example, the basis of the proportion of initial loading charge to be set aside in escrow; this may apparently be varied by the Association from time to time. In the last resort, the new Code, including its sound proposals and certain inevitable compromises, is subject to the possibility of legislation when the Board of Trade Committee has reported.

The Newest Trust.—If only to solve the problem of duplication of fixed trust holdings, some higher authority appears increasingly necessary. The chairman of Spillers

stated last week that nearly 10 per cent. of the ordinary capital of the company was known to be held by fixed trusts. Nominee holdings might raise the figure towards our 17½ per cent. estimated holding if all the trusts were "full." Meanwhile, a further flexible trust has been created under the title "Capital Securities Trust," whose avowed objective is large capital appreciation over the next five years. The descriptive booklet, in fact, makes no reference to income yield expectations, and the unit price has been calculated as low as 8s. 6d. Emphasis on the speculative character of the portfolio is called for, and the initial service charge of 4½ per cent., plus a half-yearly charge of ¼th of one per cent. on the value of the fund, appears high in relation to the five-year life of the trust. This is by no means the first flexible trust to appeal to prospects of capital appreciation, and there may be a danger that, in future formations, proper investment discrimination and reasonable yield prospects may tend to take second place.

* * *

Railway Rating.—The Railway and Canal Commission on Tuesday dismissed the application for a revision of the rating assessment of the Southern Railway, whose hearings were described in the *Economist* of April 25th, page 191. Mr Justice Mackinnon emphatically declined the invitation to go back upon the Court's earlier judgment, a year and 131 days after the beginning of its hearing of evidence and a year and 75 days after the delivery of its previous judgment. His Lordship pointed out that counsel had put in an entirely new argument, on behalf of those responsible for the application, fortified by an elaborate tabular statement which the other side had had only a limited opportunity of examining. Into these figures, also, his Lordship refrained from entering. He declared, however, his own feeling that if counsel for the assessment authority had from the beginning accepted, instead of contesting, the principle which the House of Lords had subsequently held to be correct, and had applied that principle to the figures, the Commission might possibly have reached a conclusion more favourable to his clients. Thus, after many weary months of litigation, the Southern Railway's revised assessment thus becomes "firm." Presumably, the *nil* assessment previously reached by the authority in the London and North-Eastern's case now stands and, by analogy, the London, Midland and Scottish is likely to be awarded a very small, and the Great Western a much reduced assessment. If the assessments for the new quinquennium, which begins this year, are framed on the same lines, it is possible that three of the four railways may be assessed at *nil*, and the Southern at only a small amount. It would be well, however, if, after litigation had had its long and expensive innings, an opportunity were found for more conciliatory procedure. If the railways were asked what, waiving their legal rights, they might be prepared to pay, in a friendly way, it is unlikely that they would insist on complete immunity from any rating burden. Agreed settlements are by no means uncommon in rating practice. It has even been unofficially reported that the London and North-Eastern might have been prepared to envisage such a possibility when the authority fixed its assessment at *nil* last year. At that time the basic question of principle had not been decided in the highest Court, and the opportunity was not forthcoming. The sooner finality is reached in the matter the better for all concerned. It is in the general interest that there should be no avoidable delay in settling the thorny practical problems which will still remain—such as the fate of the apparently bankrupt Rebates Fund and the best means of financing the return to the railways of the large amounts due to them for past "over-payments."

* * *

Trend of Railway Receipts.—Meanwhile, it is evident that the recent trend of railway traffics has been, on the whole, a little more encouraging than was expected a few weeks ago. At the moment, comparison with last year's figures be, vitiated by the fact that the latter reflected the abnormal traffic induced by the Silver Jubilee celebrations.

THE ASSOCIATION OF FIXED AND FLEXIBLE TRUST MANAGERS

PRESIDENT:
The Rt. Hon. Lord Rankeillour, P.C.
CHAIRMAN:
Sir Stanford London, C.B.E.
DEPUTY CHAIRMAN:
Sir H. Cassie Holden, Bt.

This Association, formed by the Managers of the following Fixed and Flexible Trust Groups, ensures the continuance of a uniform high standard in the management of such Trusts by the establishment of rules to be observed by members of the Association.

MEMBERS OF THE ASSOCIATION

- National Group*
 - NATIONAL FIXED INVESTMENT TRUST LTD.
 - COMMERCIAL FIXED TRUST LTD.
 - AMALGAMATED FIXED TRUST LTD.
- Keystone Group*
 - GOLD PRODUCERS FIXED TRUST LTD.
 - RAND FIXED TRUST LTD.
 - GROUP UNITS INVESTMENT TRUST LTD.
 - BRITISH KEYSTONE SECURITIES TRUST LTD.
 - SECOND KEYSTONE FIXED TRUST LTD.
- British Empire Group*
 - FIXED TRUST INVESTMENTS LTD.
- 15 Moorgate Group*
 - INVESTORS SPECIALIZED FIXED TRUSTS LTD.

- Aviation Group*
 - AVIATION TRUST MANAGERS LTD.

Only Members of the Association add the words 'Member of the Association of Fixed and Flexible Trust Managers' after their names; thereby giving Investors and the Public an additional assurance as to the sound management of the Trust concerned.

ISSUED BY THE ASSOCIATION OF FIXED AND
FLEXIBLE TRUST MANAGERS, 18 AUSTIN FRIARS, E.C.2

If, however, the returns for both years are expressed as percentages of the average figures for the pre-depression years 1927-30, a slight but perceptible improvement in trend is revealed:—

COURSE OF RAILWAY GROSS RECEIPTS

(Four Railways Combined: Per Cent. of Average, 1927-30)

Cumulative Figures for	First 4 Weeks	First 8 Weeks	First 12 Weeks	First 16 Weeks*	First 18 Weeks
Passengers—					
1935	82.5	83.8	83.7	84.7	86.1
1936	83.3	84.4	84.4	86.2	86.2
Merchandise—					
1935	78.2	76.8	76.4	77.1	76.2
1936	79.1	77.6	78.6	79.3	79.4
Coal and Coke—					
1935	87.9	87.4	87.9	89.2	87.6
1936	95.4	93.4	92.8	91.6	91.6
Total—					
1935	82.2	81.9	81.7	82.7	82.4
1936	84.5	84.1	84.0	84.7	84.7

* Affected by varying incidence of Easter.

All the main categories of traffic, it will be seen, are running ahead of last year. Although a return to the receipts of the pre-depression years appears a far-distant goal, it is encouraging that the combined passenger receipts of the four railways, which at the end of the first eight weeks of this year were only 84.4 per cent. of "normal," registered a percentage of 86.2 at the end of eighteen weeks. Similarly, the figures for general merchandise—the railway "recovery index"—had risen from 77.6 at the end of eight weeks to 79.4 at the end of eighteen. The returns for coal and coke alone appear to have a downward trend. The receipts of the early part of the year, however, were swollen by the threat of a coal stoppage, and subsequent experience has been more favourable than was expected. The position of each railway at the end of eighteen weeks is set out below:—

RECEIPTS FOR EIGHTEEN WEEKS

(Amounts in £000)

	London, Midland & Scottish	London & N. Eastern	Great Western	Southern	Total—Four Railways
Passengers:—					
Total, 1936	7,256	4,797	3,040	4,581	19,674
Compared 1935	+ 18	+ 11	— 7	+ 17	+ 39
% of 1927-30	84.4	88.9	79.7	91.1	86.2
Merchandise:—					
Total, 1936	8,391	5,805	3,315	1,066	18,577
Compared 1935	+ 382	+ 243	+ 115	— 4	+ 735
% of 1927-30	81.0	75.8	83.5	75.1	79.4
Coal and Coke:—					
Total, 1936	4,757	4,427	1,933	638	11,755
Compared 1935	+ 216	+ 269	+ 68	+ 55	+ 539
% of 1927-30	91.3	92.2	86.9	107.1	91.6
Total Traffic:—					
Total, 1936	20,404	15,019	8,288	6,285	49,996
Compared 1935	+ 616	+ 454	+ 176	+ 68	+ 1,314
% of 1927-30	84.4	84.3	82.9	89.2	84.7

The Southern is nearest the pre-depression level of traffic, but the London, Midland and Scottish, on the whole, appears to be making most headway at the moment. In contradistinction to the railways' experience a few months ago, goods traffic is making most of the running, and net gains in passenger traffic are, so far, of small account. Heavy seasonal demand on the passenger side, however, has yet to begin; and Easter was, meteorologically, an unfavourable railway festival. Taken all in all, an eighteen weeks' total gain of £1,314,000 (2.7 per cent.), by comparison with last year, is not to be despised.

Capital Issues in April.—Our computations of new capital issues, on the revised basis outlined in the *Economist* of January 4th (page 29), show the effect of an active month. The April total amounted to £25.6 millions, compared with nearly £20 millions in March, and only £10½ millions in April last year. The following table gives a com-

parison of the totals, on the old and new basis, for the first four months of this year and last:—

(000's omitted) Excluding Conversions

Monthly average (Old Basis)	United Kingdom	British Possessions	Foreign Countries	Total	
	£	£	£	£	
1932	13,589	2,129	24	15,742

It is early to judge the effect of the revised basis on the trend of the figures, but it apparently provides a closer indication of the effective raising of new capital during the present phase of increased resort to indirect methods of obtaining resources. To forecast the serious decline of the public issue would, of course, be premature, but it is remarkable that the average industrial issue in recent months has been on the small side. It should, perhaps, be mentioned that the resumption of corporation borrowing has not affected the April total, since all four issues were for conversion purposes.

Actuaries Investment Index.—The general uncertainty which characterised the markets during the week is reflected in all sections of the Actuaries' Investment Index. The combined index for 178 industrial equities calculated on Tuesday's prices was 0.9 points lower on a week ago, at 83.0, compared with 83.9 for April 28th and 83.6 for a month ago. This is the first drop in the index since the end of March. The average yields work out at 3.68 per cent. this week, 3.64 per cent. last week and 3.63 per cent. a month ago. The following table shows movements in various sub-groups:—

Group (and No. of Companies)	Price (Dec. 31, 1928=100)			Yield (%)		
	Month Ago (Apr. 7, 1936)	Week Ago (Apr. 28, 1936)	This Week (May 5, 1936)	Month Ago (Apr. 7, 1936)	Week Ago (Apr. 28, 1936)	This Week (May 5, 1936)
Building Materials (5)	101.0	101.7	99.9	4.77	4.75	4.82
Gas (7)	132.2	132.3	132.2	4.46	4.45	4.46
Motors (5)	57.8	59.1	56.9	4.03	3.99	4.16
Oil (5)	82.8	84.8	83.3	2.65	2.61	2.61
Home Rails (4)	71.5	72.9	71.5	1.55	1.57	1.59
Stores and Catering (20)	86.0	87.4	86.4	3.43	3.55	3.59
Breweries and Distilleries (21)	144.1	146.2	144.8	3.98	3.94	3.97

The gas companies group shows only a fractional decline, while at the other end of the scale the motors group shows a drop of 2.2 points in the week.

COMPANY NOTES

Commercial Motor Companies.—In investment characteristics, commercial motor shares have relatively little in common with private motor shares. Both trades are similar in selling a product of high unit cost, a factor which diminishes the stable ingredients in "goodwill" since each purchase is a matter of individual consideration and not solely of repeat ordering. Both, moreover, are engaged in a business where technical development is rapid,

and necessitates frequent (and expensive) adjustments to design and tools. But there most of the similarity ends. The purchaser of a commercial motor chassis is little concerned with those fashion movements which produce such wide and unpredictable fluctuations in profits of private motor manufacturers. Indeed, where a fleet of vehicles is maintained, the experience of the operator's mechanics working on one make of commercial vehicle may weigh with the management in continuing with that make. The fluctuations in commercial motor profits which are shown in the accompanying table, though as wide as many in the private motor business, arise from different causes. Up to approximately 1929 the commercial motor market was expanding rapidly enough to produce good profits for a number of firms both large and small, and to make room for the steady rise of Associated Equipment to the foremost rank. After 1929, conditions changed suddenly and drastically. The rush to establish new bus routes (before the introduction of the Road Traffic Act of 1930) ceased overnight. Passenger transport undertakings were then equipped with a fleet of low average age which required less than average replacement for a number of years ahead.

The lack of a second-hand market for commercial vehicles, it may be noted, results in a less even "spread" in renewal demand than in the private car market. Concurrently the depression severely hampered an industry which is practically a capital goods producer, while the approach of the problems which culminated in the Road and Rail Traffic Act of 1933 caused renewed hesitation among buyers. Yet a third disturbing factor was the rise of the compression ignition engine, which necessitated expensive re-designing and re-planning on the part of the producer, and provided the consumer with an additional motive for deferring his purchase. Thus, while the market was rapidly narrowed, new manufacturers in the "Diesel" class were added to the number of producers. Finally, a new tendency (assisted but not originated by the new taxation provisions) favouring the smaller vehicle at the expense of the larger, provided openings in the existing commercial market for the van and light lorry departments of the private car manufacturers. Such a concentration of unfavourable influences severely reduced the profits of the leading concerns, and involved the smaller manufacturers in a series of losses. The A.E.C. maintained

a greater stability than the rest owing to its special connections with London Transport. The profits of the leading companies have recovered during the last two years owing to the revival in demand and the waning influence of dislocation of output and design caused by the introduction of the Diesel engine. While profit margins have probably been permanently reduced by the difficulties of 1929-33, it is unlikely that such a concentration of unfavourable influences will recur. Commercial motor concerns experience—in slightly exaggerated fashion—the phases of normal trade cycle, but they should remain relatively immune from the unpredictable fashion cycles of the private car market. Even in the depression phase of a normal cycle they should not suffer seriously as in the exceptional circumstances of 1930-34. The leading shares offer openings for active investors but are unsuited to static investment lists.

★ ★ ★

Marks and Spencer Progress.—The market's initial response to the excellent Marks and Spencer preliminary figures was grudging. Net profits rose from £1,086,598 to £1,264,406 and earnings for the ordinary capital from £811,392 to £981,697. The 21 per cent. increase in equity earnings well maintains the characteristic rate of progress for the undertaking, and prophets of the ultimate saturation point must revise their estimates for yet another year. The new record has provided a suitable occasion for an increase in the cash dividends to 40 per cent., after four years of stabilised payments of 35 per cent., while the 10 per cent. capital bonus is maintained. Earnings for the past year were equivalent to 76.5 per cent., after making increased provision for depreciation. The maintenance of earnings on this scale, on a capital which grows at a compound rate by regular share bonuses, cannot be postulated indefinitely, but there is no immediate factor to suggest an interruption to the recent trend. The latest profits provide sufficient surplus for £50,000 to properties reserve, a net increase of £200,000 in general reserve, and

Since recent extensions have not yet reached the full profit-earning stage, a further increase in profits is universally expected. Like all concerns operating on narrow profit-margins, Marks and Spencer would be affected by any rise in the wholesale prices of its wares, but the consequences of a gradual rise, as in the past year, could hardly be serious. The proper valuation of a share on which regular scrip bonuses are made has never been satisfactorily elucidated, but the fact that the 5s. ordinary shares stand at 96s. 3d.—affording a cash return of little over 2 per cent.—is sufficient indication of their attraction for the super tax payer.

Stewarts and Lloyds Accounts.—The market has recovered from its first depression on the publication of the Stewarts and Lloyds' dividend and profits (discussed in the *Economist*, April 11th, page 88), but there is little in the full accounts which justifies the subsequent rise in quotations. The total profit has been reduced from £1,088,504 to £917,535—a fall of 16 per cent. for a year in which the steel industry reached a new peak. The weak position in the international tube market, following the collapse of the Cartel, is the factor responsible, and there are no short-term pointers in the report which support the prospect of immediate improvement. The full figures, analysed below, reveal that earnings for the deferred capital fell from £461,907 to £389,773, but this reduced level leaves a satisfactory defensive margin over the 5 per cent. dividend:—

	Years to December 31st

† Special reserve for contingencies. ‡ After charging £82,126 issue expenses.

It is the balance sheet, however, which shows the most striking changes. Interests in subsidiaries reveal an unexplained reduction from £1,780,906 to £905,845. Most of this arises from the fall in amounts due from subsidiaries from £673,601 to £14,570. Accompanying changes in the other assets—a rise of £520,000 in property and plant, £400,000 in stocks, and £370,000 in debtors present more

than the counterpart to this reduction, without, however, explaining its significance. Difficult conditions in the export markets may test the technical mettle of the concern, but should not impose an intolerable strain. Shareholders may expect to hear on Tuesday how satisfactorily the Corby plant is fulfilling expectations. For the time, this remains the company's sole weapon against market conditions abroad. The organisation in this country will be further strengthened by the formation of a new public company to acquire the share capital of British Mannesmann Tube, in which Baldwins has hitherto been substantially interested. Full particulars were not available as we went to press, but it is understood that the new company, United Tube (Holdings), will have a nominal capital of £532,000, comprising 455,000 4 per cent cumulative preference shares of £1 3s. 4d. (jointly guaranteed by Stewarts and Lloyds and Tube Investments) and 1,000 ordinary shares of the same denomination. The objective is evidently to extend the working arrangements already subsisting between Stewarts and Lloyds and Tube Investments to include the group's principal competitor. Strengthened relations between the tube industry in this country should ease some of the export difficulties. On immediate prospects, however, the deferred shares of Stewarts and Lloyds appear fully valued at 33s. 3d., for they offer no more than 3 per cent.

C. P. R. Outlook.—Sir Edward Beatty's speech at the meeting of Canadian Pacific shareholders in Montreal on Wednesday, was distinctly more encouraging than his statements in recent years, although his frank discussion of Canadian transport problems lent caution to the prospects of improvement. From the stockholders' immediate point of view, the President's statement of dividend policy is certainly most interesting. The general improvement in business and western agricultural conditions encouraged hope that a resumption of dividends "at least in respect of the preference shares" will be possible in the near future. Further, the directors will re-establish the preference payments in whole or part at the earliest date consistent with prudent administration. This statement evoked an 8 point jump in the preference shares on Thursday. Working expenses last year were swollen by maintenance work undertaken before due time to provide increased employment, and by the partial restoration of pay cuts in April, 1935. Industrial traffics provided the full increase in traffics; receipts from agricultural products were less than in any year since 1914, and contributed little more than one-fifth of the operating revenue. It is expected that the total grain movement will be considerably larger this year, if export demand continues active. The fall in passenger receipts, as the President realises, has no clear cut remedy, but experimental lower rates will be introduced in June, following the policy of the British lines, which has at least maintained their passenger receipts. In a recent discussion of Canadian Pacific prospects (see the *Economist*, March 28th, page 718) attention was drawn to "skeletons in the cupboard," consisting principally of line abandonments and assistance to controlled United States lines. The President has now made it clear that the former will not affect dividend policy; the provision of substantial amounts from "surplus," in fact, is regarded favourably on balance, since operating losses are avoided on the retired property. Different considerations are said to apply to provision for the American lines, which last year cost \$4,000,000. Detailed examination of the lines involved suggests that future assistance should be reduced, and that past assistance, in some cases, may be recouped. But the "Soo" line has large bond maturities in 1938 which affect the C.P.R. under its guarantees. While the directors regard the appropriations as properly chargeable against the accumulated profits, the further advances which this line may require cannot be ignored in determining dividend policy. Shareholders will be disappointed—though not surprised—that the general railway situation in Canada has not materially changed during the year. Sir Edward Beatty remains a convinced sponsor of unified management of the two systems, and he put the facts of road and water competition in arresting

fashion. But with an overhanging 10 per cent. wages cut, in addition to these long-standing operating problems, the preference shareholder's prospect of full-blooded recovery is still to seek.

"Liverpool Shares"—An Addition.—It has been suggested that the list of Liverpool shares in our Note of April 25th was incomplete without the inclusion of "Liverpool Daily Post and Echo"—an omission which we readily admit. The company has a record of quite remarkable stability during the depression, its earnings having fallen only from 39.1 per cent. in 1929 to 34.2 per cent. in 1930, from which year recovery of profits began. The dividend was 25 per cent. throughout. Such a record is further evidence of the prosperity which Liverpool has enjoyed, despite its large connection with such depressed trades as cotton and shipping.

Newspaper Company Results.—The latest newspaper company results in a recovery year confirm the expectation of rising earnings without providing improvements of a highly-gear order. Cautious investors have realised, for some time, that under contemporary conditions newspaper revenues are slow to expand. The drive for circulation—which is the key factor in advertisement rates—is still acute and costly. Other costs have remained fairly stable, apart from a slight advance in Canadian newsprint quotations recently. Advertising revenue has continued to improve, especially financial advertising, which remains the remunerative prerogative of the Press. A certain modesty of recovery, however, is characteristic of the companies tabulated below:—

Company (and Date of Accounts)	Total Revenue	Earned for Ordinary		Ord. Div.	Ord. Share Quotation	Yield (%)

† In addition, tax free distribution of 7½ per cent. and 10 per cent. in 1935 and 1936, paid in instalments, from realised profits from investments. Yield calculated on 15 per cent. dividend only.

‡ After charging provision in respect of subsidiary companies.

§ Earned for preference dividend. None paid since 1929. Quotation for 7½ per cent. cumulative (1 preference shares).

¶ After paying 2½ years' second preference dividend. Earned rate shown after paying one year's second preference dividend. Controlled by United Newspapers. Quotation and yield on 7 per cent. first preference shares.

Allied Newspapers shows a relatively greater expansion of ordinary earnings during the past year than other concerns, although the comparison of total profits over the three years is affected by changes in internal financial arrangements during 1933. The ordinary dividend has been raised for the fourth successive year, to 8 per cent. *Daily Mirror* and its associate, *Sunday Pictorial*, have slightly improved their profits during the past year, and the results are not significant pointers to the Associated Newspaper profits. *Odham's Press*, whose publications range from "Debrett" to the "Feathered World," has earned over £20,000 more total profits, but after providing £55,000 as reserve against subsidiaries, compared with £35,158 required for similar purposes in the previous year, the amount available for ordinary dividends is lower at £200,771. The accounts could usefully be supplemented by a consolidated balance sheet and profits statement, for the position of the *Daily Herald* (1929) subsidiary is not easy to establish. This

company, up to March last year, capitalised certain expenditure to development account, and since that date development expenditure has been provided for in the accounts of Odham's Press. The *Provincial Newspapers* report shows that the second preference arrears have been paid off, leaving the way open for ordinary dividends, subject to the need for strengthening the internal position. Ordinary dividends on the scale of the normal earnings indicated would cover the preference dividend of *United Newspapers*, which carry six years' arrears, but investors may have to wait some time for payments. The accompanying table indicates several apparently generous yields, but the market has always valued this group on a speculative basis.

General Mining Report.—A summary of the 1935 results of this concern was published some six weeks ago, and discussed in the *Economist* of April 4th, page 24. The full text of the report, however, includes certain observations by the directors on other points. A year ago the announcement was made in general terms that, in addition to the company's well-known Kaffir holdings, various interests had been acquired in new ventures which had recently been floated, whose prospects were regarded as promising. It is now noted that the corporation has "important interests in other Rand mining companies, including Crown Mines, West Witwatersrand Areas and Vogelstruisbult Gold—in the case of the two latter as participants in the original issues of capital." These acquisitions are doubtless reflected in the increase of £80,900 to £1,710,700 in the portfolio, whose market value is stated to be largely in excess of this sum. Cash, debtors and other liquid credits slightly exceed the current liabilities, including deposits. Last year's earnings, as already reported, fell somewhat below those of the preceding period. Once again general reserve receives £100,000, raising the total to £400,000; and after payment of a total of 20 per cent., as before, the carry forward is slightly lower at £115,300. Last week the ordinary shares touched the record price of £5.

Other Company Results.—The profits of 81 additional companies will be found in our usual table on page 342. The total is swollen by the large number of rubber and tea plantation reports for 1935. Several important industrial reports, however, are included. *British Oxygen* profits are over £90,000 higher at £449,828, and while the ordinary dividend rate is maintained, it is paid on a capital increased by the issue of July last year, while the final dividend accrues on the bonus issue of last month. Interests in subsidiaries have been substantially increased, and the subsidiary companies themselves have carried forward or reserved considerable profits for development. Extensive plant additions explain the increased reserve provisions in the parent company's books. *Eno Proprietaries'* accounts show a profit of £158,404. Precise comparison with the previous year is impossible, but the subsidiaries' operating profits, at £219,879, were in excess of those for the previous year, although lower, it would seem, than in 1933. *W. T. Henley's Telegraph* net profits, for the nine months to December last, compare favourably, at £186,672, with the same proportion of the preceding year's profits of £156,734. The former figure apparently includes certain receipts on a full year's basis, but trading conditions are evidently still very active. The results of *Smith's Potato Crisps* are disappointingly static at £107,549, owing to high costs of raw materials and difficulties in establishing a place in the prepared cereals industry. The *Goodlass Wall* report suggests the maintenance of moderately favourable conditions,

with increased turnover offsetting high raw materials prices. Profits are slightly higher at £184,107, and the dividend is maintained at 6 per cent. *Goodyear Tyre and Rubber* reports somewhat increased profits at £151,595, while *British Match* profits are almost unchanged at £463,942, although the dividend is revised to 7½ per cent. gross, compared with 6 per cent., tax free, a year earlier. The *Calcutta Electric* report gives evidence of steady expansion, although net profits are slightly lower owing to reduced domestic rates and distribution expenses. The 12 per cent., tax free, dividend is maintained. One of the rare exceptions in the record of reduced rubber profits is *Dunlop Plantations*. For the rubber ordinary share investor, however, the reduction in profits and dividends of such companies as *Pelmadulla*, *Bikam* and *Djember* is none the more pleasant because it was expected, and hopes are now centred upon the current year's results. Tea companies maintain an irregular profits record. There are few concerns, like *Galaha Ceylon*, which have added 50 per cent. to their profits and dividend, but *Lanuva, Ceylon Proprietary*, and *Scottish Ceylon* have fared better. In the textile group, *Dunlop Cotton* and *English Sewing Cotton* have experienced falling profits, but *Hield Brothers* report a sharp rise in profits and dividend. Trust revenues continue their recent expansion.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—*Union Bank of Scotland*, *Friends' Provident* and *Century Life Office*, *Gresham Life Assurance Society*, *Licenses and General Insurance*, *London and Lancashire Insurance*, *North British and Mercantile Insurance*, *Scottish Union and National Insurance*, *English and Caledonian Investment*, *London Electric Wire and Smiths*, *Golden Hope Rubber Estate*, *London Asiatic Rubber and Produce*, *Malacca Rubber Plantations*, *Spillers*, *Ideal Building and Land Development*, *Johnson and Phillips*, *Barry and Staines Linoleum*, *Odhams Press*, *Rand Mines*, and *Golden Hope Rubber Estates*. The chairman of the *Union Bank of Scotland* stated that liquid assets represented some 24 per cent. of deposits, and attacked what he called wild statements regarding the creation of credit by banks. Sir Frederick P. Rutter at the *London and Lancashire Insurance Company* criticised the effects of nationalist economic policies. During the past year life and endowment policies increased in number by over 1,000. Lord Ernest Hamilton, at the meeting of *Licenses and General Insurance*, drew attention to the improved results of the motor accident department. The chairman of *Friends' Provident and Century Life Office* was gratified to find a persistence in the large proportion, namely 60 per cent., which life assurance bears to the total. *Scottish Union and National Insurance Company* reports continued improvement in the results of the fire account. Sir Malcolm A. Robertson, at the *Spillers* meeting, commented on the increasing degree of control exercised by Governments in the wheat market. Mr J. S. Elias commended the increasing revenue of the *Daily Herald* from advertisements and reviewed new acquisitions during the past year by *Odhams Press*. The chairman of *London Asiatic Rubber and Produce Company* hoped for better results in 1936. *Ideal Building and Land Development Company* is no longer confining itself to developments within 12 miles of Charing Cross, and has secured land on the coast. The chairman of *Barry and Staines Linoleum* reported increased export trade, in spite of trade restrictions. *Malacca Rubber Plantations* has decided upon replanting 500 acres of new trees. Viscount Wakefield, at the *North British and Mercantile* meeting, referred with satisfaction to the low fire loss ratio and to record figures in the life department. At the *Gresham Life* meeting it was disclosed that the net rate of interest on the Society's funds fell by only 1s. 3d. to £4 8s. 9d. per cent. The chairman of *London Electric Wire* disclosed that tonnage output during the past year was a record, and export sales had been maintained. The chairman of *Johnson and Phillips* attributed the past year's progress to a larger number of orders and not from higher values of individual orders. Mr John Martin, at the *Rand Mines* meeting, discussed the place of the mining industry in the South African economy, stressing the need for investors and the Government to take account

of amortisation. The chairman of *Barry and Staines* referred to the continued benefits of new housing on the company's business. Mr E. S. Arliss reviewed the percentage distributions of the *English and Caledonian Investment Company's* portfolio. Mr Eric Macfadyen disclosed that the additional release of 5 per cent. of the quota from July next was equivalent to an increase of one-third of a penny on realised prices for *Golden Hope Rubber*.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET MAY 19	ACCOUNT MAY 21
------------------	-------------------

In a week of political and economic confusion heralded by the Abyssinian collapse and by the victory of the Left at the French polls, the London Stock Exchange, initially little moved, has subsequently become slightly firmer. The latest franc scare had been the signal for some refugee share purchases, though not on an extensive scale. Paris was, however, an active buyer of mining and oil favourites for most of the week and brought some business to the gilt-edged market. The Abyssinian débâcle was not a market factor of first importance, but it suggested immediate hopes to the speculative operator that the abandonment of sanctions would follow in due course. Thursday's heavy settlement, however, occupied most of his attention. Coupled with moderately favourable industrial news, these influences were sufficient to encourage a mild recovery of sentiment in most sections of the market, which spread to the international group as a result of the recovery in Wall Street.

The gilt-edged market opened in quiet fashion, tempered by the surrounding uncertainty, but a firmer tendency developed from Tuesday. French support accounted for some of the rise in Old Consols, which closed ¼ higher on Wednesday. The remainder of the list made the typically modest advances of ¼ for a couple of days, and while business remained quiet a further advance was recorded on Thursday. The announcement of further Corporation issues restrained support for these issues, although the evident popularity of the new terms below par was reflected in fair activity in the new scrips at significant premiums.

The improvement was reflected in the foreign bond market, after one of the most depressed weeks for some time. Price advances were not spectacular, but the general nature of the advance was heartening. Japanese issues led the way on Monday, and continued in good investment demand, reflecting occasional limelight on the Chinese group, where Honan Railway bonds advanced on the offer to resume service on a 2½ per cent. basis. Other railway issues improved in sympathy. European bonds improved on hopeful political interpretations of the end of the Abyssinian war, Austrian bonds being prominent, while German bonds and other Central European issues improved. French rentes opened weaker on the election results, but found comfort in the mid-week respite for the franc. South American issues made some recovery after a weak opening, but business was not generous.

The Railway and Canal Commission's judgment (discussed on page 315) and the small fall in the traffics compared with last year's "Jubilee" figures came to the rescue of the home rail market. Southern stocks set the pace, with Great Western in second place. Conditions in the foreign market continued idle, until slight mid-week support put prices higher. American issues showed a partial recovery after the recent fall, and Canadian Pacific preference responded with an eight-point jump to the chairman's statement of dividend policy, discussed on page 318.

Relatively quiet conditions have obtained in the industrial markets during the first part of the current week. In mid-week there was a slightly more confident tone with better news from Wall Street, and with the ending of the conquest phase of the Abyssinian campaign. Iron and steel issues were slightly firmer at the end of last week, weakened slightly early this week, and made a modest recovery later. United Steel shares improved on the new issue announcement, but weakened later, and the registration of United Tube (Holdings) had little influence on shares of *Stewarts and Lloyds* and *Tube Investments*, who are interested in

the new company, as explained on page 318. Early in the week *Handley Page* participating preference shares were a feature in the aviation group, but interest declined later. *Standard Motor* have been prominent among motor issues, on news of good trading, and *Raleigh Cycle* gained in expectation of a higher interim dividend. Hordens were prominent in the coal group.

Crompton Parkinson recovered from their weakness at the end of last week, but the electrical equipment group as a whole was easy until mid-week brought an improvement, led by *Henley's*. Weakness in the textile group was most marked on Tuesday, as in other sections, and in the later improvement *Coats* were in particular demand. In the stores group, *Woolworth's* reached a new high record, on dividend hopes. Early weakness in the brewery section was similarly overcome later in the week, although price changes were not significant. Tobacco issues have been comparatively steady throughout the week, although at times the volume of business was negligible.

Business in the miscellaneous industrials section had the same general features as the rest of the market; a slight improvement at the end of last week, followed by an irregular opening to the new account which led to firmer conditions in mid-week. Cement shares were prominent in the upward movement, with interest maintained most steadily for *Alpha Cement*. Other building material issues to improve were *Wall Paper* deferred and *British Plaster Board*. *Turner and Newall* also made a substantial improvement.

The oil share market rallied well at the end of last week, with business centred on the *Eagle* issues, and with substantial Continental support for *Shell* and *Royal Dutch* issues. This firmness continued at the opening on Monday, but weakened later in the day. Interest was revived once more when the *Trinidad Leaseholds* increased interim dividend was announced and news from America became more encouraging. The volume of business slackened off later, but *Burmah* issues improved in anticipation of higher dividends.

The general mid-week improvement was not reflected to any marked extent in the rubber share market. The pace is being set by the commodity price, and prospects of devaluation of the guilder make any immediate improvement improbable. Business in the tea share market was at very low ebb, although prices were fairly steady.

The Kaffir market has enjoyed the maximum benefits of the run on the franc, coupled with favourable development news, and the prices of many shares have reached new high records. Apart from French support, interest has been increased as a result of what is taken to be the close of the Abyssinian war, and speculative commitments have increased. In mid-week there was a certain amount of profit-taking which resulted in lower quotations for some leading issues. Business was more or less concentrated on Far Western issues, and on West Witwatersrand and *Klerksdorp* in particular. West African issues also benefited from a revival of interest, and *Taquaah* and *Abosso* issues outpaced *Ashanti Goldfields* and *Bibiani* in the rise. Among Rhodesian copper issues *Roan Antelope* and *Rhokana* were firm. Tin shares have declined in sympathy with the falling price of the commodity.

FOREIGN STOCK EXCHANGES

NEW YORK

THE past week has seen a halt in the Wall Street reaction, although it is not yet sufficiently pronounced to mark a return to the strong upward swing of the past year. Most of the causes to which the setback of the last two weeks was attributed are still in existence, but for indefinable reasons the market seems to be less pessimistic about their development. One reason advanced for the recent fall in prices was the new margin requirements which, in the opinion of the President of the Stock Exchange, Mr Gay, will practically prevent members from trading on their own accounts. The Federal Reserve Board, however, is determined to continue the regulations for further experience. Fears of a fall of the franc are temporarily lulled, but no confidence can long be maintained in its invulnerability. Paradoxically enough, after prices had been marked down for fear of devaluation, the market took it into its head this week to anticipate inflationary effects from devaluation, and reversed its policy. Steel shares have made some headway, although there was a temporary decline on estimates that steel mill activity had passed its peak; *Iron Age*, for example, gives activity this week at 68 per cent. of capacity, compared with 69 per cent. last week. In mid-week, General Motors improved after payment of an extra dividend, and rails recovered from recent weakness. Treasury issues made a similar recovery, although speculative bonds were still rather easy. Business news continues to be satisfactory, although it is expected that a seasonal recession of uncertain duration will soon be apparent. Power output is 13.2 per cent. higher than for the corresponding week of last year, and automobile output increased for the tenth week in succession; freight car loadings were 23,500 higher on the week. Company results continue to improve, and the National City Bank compilation of the profits of some 245 companies shows a 42 per cent. advance on last year's figures.

* Two-hour session.

PARIS

At the end of last week there was a good improvement in conditions on the Bourse, and, after an active session, most prices closed at their best on Friday. Rentes gained up to one point, and there was a fairly steady demand for industrial issues. Transatlantic issues were supported on news of the end-of-the-week recovery on Wall Street, and there was good speculative demand for Royal Dutch shares. But this week found the market upset by the final results of Sunday's second ballot in the General Election, and the flight from the franc produced very unsettled conditions. On Monday, rentes fell from 67.05 to 65.45, and recovered to 66.95. International issues improved, but closed below the highest prices. Gold-mining issues were the centre of attraction on the Coudisse. Later in the week the traditional "energetic measures" in defence of the franc allayed the market's anxiety to some extent, but dealings continue to be very erratic. The effect of the 6 per cent. Bank rate, and M. Regnier's repudiation of a gold embargo, shows no sign of being permanent. Industrials were well supported, but Royal Dutch was marked down after its recent upward burst. To add to the nervousness of the market came forecasts by the victorious Communists of heavy increases of taxation on large incomes, and on Thursday there was a sizeable flight into international securities. The market feels that its troubles are by no means over.

BERLIN

There were heavy purchases of standard industrial and foreign currency shares last week, and prices rose sharply. Banking and potash shares, however experienced but little change. Leaders in the upward movement were steel shares, in particular Mannesmann and Stahlverein lignites, Farbenindustrie and I.G. Chemie among chemical issues, Schubert und Salzer and Orenstein und Koppel in the machinery manufacturing group, and Vereinigte Glanzstoffe, the latter gaining 11 points. The new week opened with a profit-taking reaction, and Tuesday witnessed a further decline, which was attributed to the uncertain currency outlook in France. Reichsmark bonds were again almost unchanged; but certificated dollars were very

firm, Dawes certificates rising temporarily to 84, or 10 points above the price in early April. Profit-taking continued on Wednesday, with a consequent setback in most sections.

AMSTERDAM

There was a marked recovery on the Bourse at the end of last week, induced in part by hopes that sanctions are dead. Rubber issues were in demand, and Royal Dutch were a particularly good feature, with support from Paris. The election results in France provoked a more unsettled condition this week, and rubber issues were chief sufferers in the liquidation movement. Royal Dutch attracted keen demand, but reacted slightly in midweek. Shell Union and shipping issues were strongly supported, but rubber issues were irregular.

CANADA

Although the end-March recession was halted at the beginning of April, the Canadian markets remained hesitant and speculative operators still remained aloof. The confused political situation in Europe and apprehensions that an abandonment of the gold standard by France would create general financial trouble have been bearish factors. At home, the comparatively disappointing business results for the first quarter dampened enthusiasm for industrial and other stocks. Liquor stocks have been particularly affected by the threats to curtail Canadian exports to the United States, while textile issues have reflected anticipations of reduced tariffs as the Budget approached. Newsprint and utility stocks have also lost ground but construction issues have in some cases made progress, discounting the Government's extensive construction programme for the relief of unemployment. Newsprint and other preferred stocks now in default remain in demand on improving prospects. The bond market has been relatively firm and the Bureau's index for the yield of long-term Dominion bonds reached its lowest point for the year on March 26th at 69.2, but rose by April 18th to 69.9. The mining market has been rather reactionary but several gold stocks have been strong on encouraging reports. The Bureau's "Investors' Index for the week ending April 16th was 123.3, as compared with 125.5, 123.1 and 123.0 for the weeks ended March 26th, April 2nd and April 9th respectively.

CAPITAL ISSUES

The past three weeks have done much to release the "log-jam" in the corporation loan market. The new terms—3 per cent. stocks, 1956-58, at 99—are apparently obtaining satisfactory response for they have been adopted for the Rochdale and South Shields issues, which were made together on Friday of this week. During the period over £11 millions stock has been offered at this rate, and the queue of borrowers has been sensibly reduced. Five

further borrowers, however, are reported to be seeking opportunities in the near future. The list of industrial borrowers, which has recently included many small concerns of limited interest to the general investor, is strengthened this week by the County of London Electric 3½ per cent. debenture issue. Its terms of redemption—optionally from 1952 and finally in 1972—are designed to appeal to the long-term investor who is less affected by changes in capital values in the interim. The stock is in the highest class of utility debentures. The remaining industrial issues largely consists of small concerns acquiring existing businesses. The mixed issues of Evans Bellhouse and Waterworth Bros. are typical examples. Both offer 6 per cent. £1 preference shares at a moderate premium and lower denominational ordinary shares at higher premiums. The former, a timber merchanting and joinery concern, has total assets of £190,432, of which £73,663 represents stock and £48,507 debtors. The former figure is apparently seasonally high. Profits have been stable according to the figures shown, but the record extends backward only 2½ years. The profits of Waterworth Bros. showed a reduction during 1935, and a fluctuating tendency earlier. A surplus of £30,882 over the value of net assets amounting to £76,618 is included in the purchase price, and preliminary expenses are estimated at £11,560. Both issues offer high equity earnings on the existing profits basis, but for the general investor who requires ready marketability they have limited attractions. This consideration applies with more force to the 6 per cent. preference shares of H. Lass. Their dividend cover is more generous than the assets cover, but the issue is too small to command a wide market. The 5s. ordinary shares of Nuro (Biggleswade) must be treated as frankly speculative at this stage. The Company has developed a secret photographic film base process, but no commercial operating results have been achieved, nor is any estimate of sales, costs and potential profits given in the prospectus. Presumably the secrecy of the process has restrained the sponsors of the issue from seeking an independent scientific report, on the lines of the Chancellor's statement some months ago. Consolidated Sisal Estates of East Africa acquires sisal estates covering 27,380 acres in Tanganyika which will be further developed. The company starts operations after a rapid improvement in sisal prices, and would appear to have reasonable speculative prospects. Statements for information only have been published by Cheltenham Corporation, which has placed the maximum £250,000 in 3 per cent. stock at 98½, less 1½ per cent. commission—the slightly less favourable terms reflect the lack of trustee status at present—by British Northrop Loom and by Wickams (C. Barker).

ISSUES OF THE WEEK

January 1 to May 2, 1936, including conversions, Old Basis, £131,548,783.	
January 1 to May 2, 1936, excluding conversions, Old Basis, £72,160,632.	
January 1 to May 2, 1936, including conversions, New Basis, £179,611,450.	
January 1 to May 2, 1936, excluding conversions, New Basis, £120,323,298.

PUBLIC OFFERS

Rochdale Corporation.—Issue of 3 per cent. stock at 99 per cent., to be redeemed at par July 1, 1958, or after July 1, 1956, on three months' notice. Proceeds will be used to repay short-term loans. Population at last census, 90,278; estimated population October 1, 1933, 94,100. Rateable value, £551,466. General rate, year 1936-1937, 13s. 3d. Net debt, March 31, 1936, £5,157,321; £2,660,432 for productive undertakings; £1,701,624 for housing; £795,265 for non-productive purposes.

South Shields Corporation.—Issue of £500,000 3 per cent. stock at 99 per cent., to be redeemed at par March 15, 1958, or after March 15, 1956, on three months' notice. Proceeds will be used to replace short-term loans and for housing schemes, education, etc. Population last census, 113,455. Rateable value, £534,653. Rate in £, 14s. 6d. Surplus of assets over liabilities, March 31, 1935, £2,299,493. Net debt, March 31, 1936, £2,868,000; £495,000 for reproductive undertakings and £1,340,000 for housing.

County of London Electric Supply Company, Ltd.—Issue of £2,500,000 3½ per cent. debenture stock, 1952-72, at par. Secured by first floating charge on the undertaking. Proceeds of issue to repay bank loans and for development. Incorporated 1891, and supplies electricity to consumers and in bulk in London and home counties, subject within Administrative County of London and Barking to provisions of London Electricity (No. 1) Act, 1925. Net assets, £23,622,865. Profits, after depreciation: 1933, £1,215,103; 1934, £1,219,492; 1935, £1,227,697. Stock ranks *pari passu* with existing £5,500,000 5 per cent. debenture stock. List closed 10 a.m. May 5th. Oversubscribed.

Consolidated Sisal Estates of East Africa, Ltd.—Issue of 224,000 £1 ordinary shares at 22s. 6d. Incorporated 1936 to acquire three sisal estates in Tanganyika for £181,600. Total area 11,085 hectares, of which 4,625 (approx.) planted. Estimated profits: 1936 (8 months), £12,000; 1937, £38,500; 1938, £42,000, based on prices of forward sales already effected, and assuming balance of estimated crops sold at same prices and costs estimated by independent expert. 120,000 shares applied for on underwriting terms and allotted in full. Lists closed at 9.5 a.m. May 7th.

Waterworth Bros., Ltd.—Issue of 50,000 6 per cent. cumulative £1 preference shares at 21s. 3d., and 160,000 5s. ordinary shares at 6s. 9d. Formed to acquire fruit distributors' businesses of similar name, founded 1886 and 1899. Net assets, valued £76,618, acquired for £107,500, of which £67,500 cash and balance in ordinary shares. Profits: Waterworth Bros., years to early February: 1933, £2,567; 1934, £4,156; 1935, £5,163; John Waterworth, years to end March: 1933, £14,340; 1934, £16,626; 1935, £20,396. Lists closed 10.45 a.m. May 5th. Oversubscribed.

H. Lass, Ltd.—Issue of 75,000 6 per cent. cumulative £1 preference shares at 21s. Formed to acquire clothing manufacturers' businesses established 1905. Assets acquired, £107,848 (including £40,660 debtors guaranteed by vendor company) for £130,000, of which £55,000 cash and balance in 375,000 4s. ordinary shares. Profits of businesses acquired:

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

BY STOCK EXCHANGE INTRODUCTION

Cheltenham Corporation.—Issue of £250,000 3 per cent. stock to be redeemed at par March 1, 1936. Proceeds to repay mortgages amounting to £140,094 and £109,906 for new capital purposes. Population last census 49,418; now estimated at 52,000. Rateable value, £428,160. Rate in £, 10s. 6d. Net debt, March 31, 1936, £1,357,732, of which £560,864 was for housing, £566,088 for reproductive purposes, and £230,800 for other public services. Messrs Cohen, Laming, Hoare have purchased the stock at 98½, less commission 1½ per cent., and pay all expenses of the issue, including stamp duty.

British Northrop Loom Company, Ltd.—Issued capital, 500,000 10s. ordinary shares, of which 100,000 new shares were recently offered to shareholders at par. Formed July, 1902, to acquire rights to manufacture the Northrop automatic loom in the United Kingdom and elsewhere, except in the United States, Canada and Mexico. Total assets, October 26, 1935, £352,010. Profits, after depreciation but before providing for income tax, years: 1933, £21,564; 1934, £15,632; 1935, £15,752. Net dividends on ordinary shares: 1933, 7 per cent.; 1934, 7 per cent.; 1935, 7 per cent.

Wickhams (C. Barker), Ltd.—Issued capital, 420,000 5s. ordinary shares and 100,000 6 per cent. cumulative £1 preference shares. General draper's business incorporated as private company in 1919. Total assets, January 31, 1936, £260,399; properties, £209,500. Profits, before depreciation, years to January 31st: 1934, £25,064; 1935, £29,422; 1936, £27,051. Ordinary dividends: 1934-5, 7½ per cent.; 1935-6, 12½ per cent. During the last two years 50,000 preference and 80,000 ordinary shares have been issued at par and 40,000 5s. ordinary shares issued as fully-paid in capitalisation of reserves.

PRIVATE PLACINGS

British Celanese.—The issue by British Celanese of 500,000 7 per cent. 1st cumulative preference shares of £1 has been placed privately at 23s. 6d. each.

General Investors.—General Investors and Trustees has placed privately £50,000 3½ per cent. redeemable debenture stock, 1955-85.

BY TENDER

Dunstable Gas and Water.—Dunstable Gas and Water Company is offering for sale by tender 2,575 5 per cent. preference shares of £10 each. The offer is divided into 1,425 shares in the gas undertaking, of which the minimum price of issue is £11 15s. per share, at which the yield is £4 5s. 1d., and 1,150 shares in the water undertaking, of which the minimum price is £12 18s. per share, at which the yield is £3 17s. 6d. Tenders for both issues must be received at 658 Lordship Lane, N.22, by noon on May 25th.

CONVERSIONS AND REPAYMENTS

E.D. Realisation.—The company's 4 per cent. debenture stock having been repaid and certain of its capital assets having been realised, 60 per cent. of every holding of the 5 per cent. income debenture stock will be redeemed at 110 per cent. on June 3, 1936.

Ebbw Vale Steel, Iron and Coal.—There was distributed on May 2nd to the 6 per cent. debenture-holders the sum of £57 7s. 9d., together with accrued interest from April 1st to May 2, 1936, in respect of each debenture of £100 held by them on April 24th.

Ellerman Lines.—An extraordinary general meeting is called for May 25th to consider resolutions that: (1) Each of the existing shares of £4 be divided into four shares of £1; (2) the issued 400,000 4½ per cent. guaranteed preference shares of £1, 480,000 5½ per cent. preference shares of £1, 500,000 preferred ordinary shares of £1 and 800,000 deferred ordinary shares of £1 be converted into stock, transferable in multiples of £1; and (3) the articles of association be amended.

John Lewis and Company, Ltd.—The 4 per cent. first mortgage debenture stock will be redeemed at £105 for every £100 of stock on August 4, 1936.

Lance and Lance, Ltd.—The 4½ per cent. debenture stock will be redeemed at £105 on November 3, 1936.

New Zealand Government.—Holders of New Zealand Government £6 per cent. inscribed stock, 1936-1951, are reminded that the list of applications for conversion into New Zealand Government £3 per cent. inscribed stock, 1952-1955, will be closed on Monday evening, May 11th.

FORTHCOMING ISSUES

United Steel Companies.—The capital of United Steel Companies is to be raised from £6,650,000 to £10,000,000 by the creation of 3,350,000 shares of £1. Of these new shares, about 2,200,000 will be offered at 25s. each to holders on the register to-day, in the proportion of one share for every £3 of stock now held. The new shares will not be entitled to participate in any dividend declared in respect of the year ending June 30, 1936. The meeting to consider the capital increase proposals will be held at 21 Tothill Street, S.W.1, on May 12th, at noon.

South African Torbanite Mining and Refining Company, Ltd.—A meeting will be held on June 22nd at Johannesburg to consider increasing the capital and the raising of an additional £221,250, which the directors consider will prove productive in the near future.

Birkenhead Corporation.—Birkenhead is expected to make an issue of 3 per cent. stock. This corporation has in issue £993,175 6 per cent. redeemable stock, 1936-51, which is to be repaid. Holders will be invited to convert into the new issue.

John Lewis Properties Ltd.—This company will make an issue of £1,000,000 3½ per cent. first mortgage debenture stock at 95 per cent. on May 13th. Debenture holders of the 4 per cent. first mortgage debenture stock of John Lewis and Company Ltd., and debenture holders of the 4½ per cent. debenture stock of Lance and Lance, Ltd., are reminded that if they wish to exercise their rights to exchange the old stock for the stock now to be issued they must lodge their applications on or before 10 o'clock Wednesday, May 13th, at National Provincial Bank Ltd., 15 Bishopsgate, London, E.C.2.

Nottingham Corporation.—The Nottingham Corporation has decided to give notice to redeem on September 1st the outstanding £999,700 6 per cent. redeemable stock, 1936-51. The Finance Committee has been instructed to arrange for an issue of stock to replace the maturing issue. About £1,000,000 of 3 per cent. stock is expected to be offered, with conversion rights to 6 per cent. holders.

CALLS DUE MAY 11 TO MAY 16, 1936

The grand total of calls in May, 1936, is £11,271,054, which compares with £5,893,415 in May, 1935.

COMPANY MEETINGS, &c.

LONDON AND LANCASHIRE INSURANCE COMPANY, LIMITED

ANOTHER YEAR OF PROGRESS—INCREASED PROFIT

SIR FREDERICK PASCOE RUTTER'S REVIEW

The seventy-fourth annual meeting of shareholders of The London and Lancashire Insurance Company, Limited, was held, on the 6th instant, at the Head Offices, London.

Sir Frederick Pascoe Rutter (governor and chairman) presided over a full attendance of shareholders.

Sir Frederick, in proposing the adoption of the report and accounts, said:—As you will have read in the report, we have lost three of our most valuable and esteemed directors. Mr John Barber I had known even before he became a director in Liverpool thirty years ago. Mr R. J. Hose came to us just after the war. Typical Englishmen of the highest integrity, they could always be relied upon for perfect loyalty and support. And Lord Reading was unique. We had the great advantage of his collaboration for just ten years. His interest and intensity in our proceedings were quite in keeping with his reputation outside. Nothing escaped him, and when an emergency arose he was always ready with his wise, sound counsel and his cautious advice.

Dealing with the chief vacancy, we at once decided to appoint our esteemed director, Sir Peter Rylands, to the deputy-chairmanship. Then, you had probably seen the announcement that the Earl of Cromer, who had for many years been a director of "The Marine," had joined the board. And, now, Sir Harry McGowan has just been appointed one of our colleagues. Lord Cromer's distinction and the commanding position of Sir Harry McGowan in the great industrial world are well known to you, and I have the utmost confidence that these gentlemen will be of great strength to our board.

RESULTS

May I now direct your attention to the report and accounts which you have received, and which indicate pretty eloquently that we have done well, and evidence both progress and increased profit.

In the fire account, although the premiums show a slight reduction, due to the United States, we have reaped a profit of £443,789, or 15.78 per cent.

In the accident department, with an increase in the premiums of £160,000, the profit is £72,716, or 3.32 per cent.

The marine account must have gratified you, for the premium income has been rather more than maintained, indicating a real steadiness, and even improvement, in overseas trading, and the profit of our two companies was £185,509, or 17.82 per cent.

This is not only due to the welcome absence of serious losses in 1935, but it is also strong testimony to the capacity and acumen of our underwriters of the "Standard Marine" and "The Marine." You can quite understand that it is a matter of personal gratification to me that these two companies, which I was instrumental in acquiring respectively in the years 1907 and 1917, have, since they became associated with us, earned a net underwriting profit, after deducting all taxation, of well over £2,000,000.

You may possibly have noticed that, at the annual meeting of "The Marine," over which I presided last week, reference was made to the centenary this year of that fine old company.

Summarising, therefore, the three departments together, you will find that the premium income has increased by £148,021, making a total of £6,042,094; that the expense ratio fell from 40.92 per cent. to 40.01 per cent.; and that the net resultant profit before deducting British income tax was £702,014, or 11.62 per cent., as compared with £599,703, or 10.17 per cent., in 1934.

You will thus note that the actual underwriting, the working of the business of this company and its subsidiaries, has, during the year under review, proved highly satisfactory.

is £12 1. CONDITIONS AT HOME AND IN THE DOMINIONS

by noon on 1 in this, our home country, has done well. The small advance, and we hope to further benefit

CONVE of commercial and industrial activity.

E.D. Realisation.—indications of progress and a steady stock having been rep-iously been disturbing. All this has having been realised, 60-ns from these valuable Dominions. 5 per cent. income debenture cent. on June 3, 1936.

Speaking generally, the year has been without particular incident except perhaps as regards the conduct of workmen's compensation business, which has become more and more difficult, and which, in the case of Australia, has had a detrimental effect upon our accident results.

This is, of course, another example of the old alternative of the practicability of increased rates or of cutting liabilities, which delicate problem so often arises during the course of our operations.

But the gratifying and dominant characteristics of our 1935 account are, first, that our premium income has again reached the six million mark, and, secondly, that the underwriting profit is the largest since 1929.

DIVIDEND AND RESERVES

You will see from the account that we have resolved to transfer to the reserve fund from the balance of profit and loss account a sum of £500,000, which will make that general reserve fund the round sum of two millions.

The final dividend proposed is the same as for 1934, namely, 10s. per share less income tax, making 20s. per share less income tax for the full year.

The total reserve funds, after providing for this dividend, will now amount to £11,426,475 against £10,949,318.

There is one further pleasing feature of the accounts to which I have drawn your attention in past years, and that is the appreciation in the value of our investments.

When I addressed you two years ago this appreciation was a little over a million pounds sterling. Last year it had increased by another million. That increase has been maintained, and slightly improved, largely due to the fact that our United States investments, which at the end of 1933 showed a depreciation, have, during the past two years, revealed a substantial advance, which advance has been continued during the four months of 1936.

EFFECTS OF NATIONALISM

By degrees the growth of Nationalism—each country keen to protect its own interests—has led to a plethora of erratic exchanges, restrictive economic regulations, embargoes and other barriers to free trading, creating cumulatively an artificial condition of things which hampers us all at present, but which cannot last, because experience has taught us that ingenious expedients for restricting trade nearly always break down in the long run.

Such a situation is harmful to our own country particularly, for Great Britain's prosperity is patently dependent upon its freedom of intercourse with the Dominions and elsewhere.

All this, then, is prejudicial to our insurance business. For we have not only our own Dominions and Dependencies to consider, but we have valuable organisations and agencies in the rest of the world. We must, therefore, be thankful that on the Continent of Europe we continue to have a valuable business, predominating, of course, in those countries which may be regarded as still free.

IMPROVED CONDITIONS AT HOME

And so, contemplating the picture abroad, it is refreshing to turn to our home field and study introspectively what has happened and been done during the past three or four years. We all know that Great Britain, and indeed the British Empire, has, almost exceptionally, demonstrated positive recovery. The trade figures for both imports and exports are definite illustrations of this recovery. But, in addition, you have these two or three important facts.

• Comparing 1932 with 1935—that is to say, the history of three years—the number of unemployed in this country fell from 2,829,000 to 2,027,000, and the latest returns indicate that now the number is less than 1,900,000. The Post Office Savings Bank deposits have increased from 305 millions to 390 millions. Further—and something to which I attach considerable importance, having brought it to your notice on more than one occasion in the

past—there is the substantial increase in our invisible exports. You will, of course, bear in mind that it is precisely these invisible exports which indicate the productiveness of our business activities abroad, and which are so necessary to enable us to balance our national accounts. You may remember that the collapse of this essential source of revenue was a serious factor in precipitating the crisis of 1931.

RECOVERY IN INVISIBLE EXPORTS

Invisible exports may be understood to cover interest on foreign investments, and the proceeds from shipping, banking and insurance. It was, therefore, a matter of real concern that these invisible exports should have dropped from 414 millions in 1930 to 236 millions in 1932. Now, in 1935, they have recovered to 298 millions. Further recovery is, of course, dependent upon the progress of our overseas trade and commercial activities, but we can confidently trust that—in the absence of any great international convulsion—the recovery which we have made will be steadily, if slowly, enhanced.

INTERNATIONAL

You will kindly appreciate that I continue, thus, to give you my thoughts, for what they are worth, upon the broad wide-world political situation, because I cannot divest myself from the knowledge that we, as a company—although our stake is relatively small—run *pari passu* with the world's happenings.

We have in the course of years built up a business which has its tentacles in almost every country, in contact with almost every type of nationality, and I cannot—speaking personally—go anywhere without realising how we seem to be in touch with everybody and have the advantage of gleaning their views.

THE UNITED STATES

And now I come to the United States. The restoration of confidence in the United States was the first important thing to be accomplished if any sound reconstruction were to take place. Opinions differ as to whether the reconstruction has been sound, and many competent business men believe that the revival would have come about in any case without incurring such a heavy cost. But the fact remains that the country is now in a very much more prosperous condition than it was three years ago.

It is gratifying that, notwithstanding the political vagaries which have been so evident, the results of insurance business in the United States during 1935 may be regarded as distinctly satisfactory. For the companies generally, casualty business, although yielding but a bare profit, was better than in 1934. And the fire business was exceptionally good—in fact more lucrative than for many years past.

We, as a company, are accustomed, as you know, to make a 10 per cent. profit, sometimes even more, on our fire business; but it has scarcely ever happened that the United States has come up to this standard. In fact, we must go back sixteen years, to 1919, to find a better fire record than that of 1935. Such a result therefore has been very welcome.

The enormous developments which have taken place in the scope of insurance business involve not only strenuous work but greater responsibilities, and it will encourage those in charge to know that they have not only my, but your, implicit confidence.

COMPANY'S HUGE BUSINESS THROUGHOUT THE WORLD

In weighing up those responsibilities you will bear in mind that the aggregate income to which I have referred, although large, does not, of course, give you any definite clue as to the liabilities involved by our widespread obligations throughout the world.

It happens that some months ago this question was put to me, and I therefore had a rough calculation made as to the consequent sums insured for which the company is liable. You will appreciate that our transactions cover not only fire business, where the rates on the average are the lowest, but also casualty and marine business, where the hazard is often much greater.

Briefly, I have come to the conclusion that our total liabilities in all parts of the world and over all classes of business approximate to something just over £2,000,000,000.

If this bald statement causes any of our shareholders the loss of a little sleep I may just remark that, having regard to the past, and to the probabilities based thereon, it will not cause me personally a moment of insomnia! On the contrary, I wish those sums insured were much greater; and, if you present, and those absent, can manage to increase our liabilities by tapping any new sources of business which we can then exploit, we shall much appreciate your support.

The report and accounts were unanimously adopted.

FRIENDS' PROVIDENT AND CENTURY LIFE OFFICE

AGGREGATE FUNDS EXCEED £15,500,000

MR HAROLD J. MORLAND'S SPEECH

The annual general meeting of the Friends' Provident and Century Life Office was held, on the 6th instant, in London.

Mr Harold J. Morland, M.A., J.P., F.C.A. (the chairman), said: We have no changes to report in the directorate during the past year, but, as from to-day, we are losing Mr Alfred Moorhouse as actuary and secretary after a service of just over 50 years, since 1904 as actuary, and since 1924 as secretary. I hope that later in the meeting you will elect Mr Moorhouse to the board.

NEW ASSURANCES

The new life assurances amounted to £2,436,000, a figure only slightly in excess of the total for 1934, put comparing with £2,095,000 for the first year (1930) of the previous quinquennium. It is gratifying to find a persistence in the large proportion which life assurances, mainly whole of life, bear to the total—namely, 60 per cent.—as compared with 40 per cent. endowments and endowment assurances. The member is not restricted in his choice of tables when wishful of converting from the whole life non-profit assurance. He may change over to the same table with profits, or he may arrange to have his premiums limited in number, or he may convert to an endowment assurance so as to have the sum assured plus bonuses payable to himself should he survive to a certain age. The Friends' Provident and Century Life Policy is, therefore, one of the most advantageous "option policies" obtainable.

LIFE AND ANNUITY REVENUE ACCOUNT

The life premium income advanced by £88,000, of which £18,000 was in annual premiums, and the other £70,000 represented a larger volume of single premiums.

The interest rate yielded by the funds was at the satisfactory rate of £4 4s. 6d. per cent. after deduction of tax.

In 1934 the downward trend of premiums in the fire and accident accounts was checked; in 1935 there was a welcome advancement in most sections.

CENTURY PROFITS AND DIVIDEND

After providing for all outgoings, including £10,000 for income tax, the net profits, including interest, for 1935 amounted to £82,000; £10,000 has been added to the additional reserve in the fire account, making it up to £100,000; a dividend of 15 per cent. on the paid-up capital, costing £46,500, has been paid, and £123,000 will be carried forward, an increase of £25,000.

INVESTMENTS

The directorial and accountancy control of the investments of the Friends' Provident and the companies associated with it has been centralised since the beginning of 1934, and it is therefore appropriate for the investments to be reviewed as a whole. There was a moderate fall during 1935 in the values of British Government and other "Gilt-edged" holdings, which was more than made good by the rise in debentures and in ordinary shares, so that on balance the margin of market values over book values for the Friends' Provident and for the Century was improved. During the past two years the capital of the Century Insurance Trust, the wholly owned subsidiary of the Century, has been increased by £200,000 and is now £500,000. Advantage has been taken of the present low interest rates to issue debentures for nearly the full authorised sum of £500,000.

During 1935 the aggregate funds once more showed a substantial advance of about £2,000,000, and now exceed £15,500,000, of which £11,500,000 relates to the Friends' Provident.

SYSTEMATIC ASSURANCE PROVISION

In the Friends' Provident we provide by means of life assurance for the certainty of the ultimate termination of life and the contingency that death may occur early, before normal savings can accumulate to a satisfactory sum.

Mr Robert H. Marsh, F.C.A., seconded the adoption of the report, which was carried unanimously.

The elections of directors and appointment of auditors were made.

GRESHAM LIFE ASSURANCE SOCIETY, LIMITED

CONTINUED DEVELOPMENT AT HOME AND ABROAD

STRONG FINANCIAL POSITION

The eighty-seventh ordinary general meeting of the Gresham Life Assurance Society, Limited, was held, on the 7th inst., at the Chief Office of the Society, 188-190, Fleet Street, London, E.C.4.

The Hon. W. B. L. Barrington, Chairman, presided, and in the course of his speech said: The report and accounts which it is my privilege to present to you to-day are in respect of the first year of a new quinquennium, and I am happy to say that the figures provide ample evidence not only of the continued prosperity of the Society, but also of the progressive nature of its operations both at home and abroad.

During the twelve months under review the Society issued 7,487 life and endowment policies, assuring the sum of £3,369,803. This is a net figure after deduction of reassurances, and an increase over the previous year of no less than 1,031 policies and of £766,602 in sums assured, and it is gratifying to be able to record that all sections of the Society's business—home, foreign, and Dominion—have again contributed to the progress made. The continued development at home is a highly satisfactory feature.

The new premiums after deducting reassurances amounted to £159,982, including single premiums of £6,878. The corresponding figure for 1934 was £133,070, including single premiums of £10,793.

Forty leasehold policies were issued, assuring a sum of £49,565. The amount received as consideration for annuities granted was £145,530.

The total net premium income is now approaching the million mark, the actual amount received in 1935 being £997,836, representing an increase of £63,061 over that of the preceding year.

The total income of the Society from premiums, interest, dividends and rents was £1,438,822.

FAVOURABLE MORTALITY EXPERIENCE

Death claims amounted to £249,697; the mortality experience was again extremely favourable.

The assets of the Society show a total of £10,187,162.

VALUATION OF ASSETS

Turning now to the assets, I am glad to report that on the basis of our usual valuation as at December 31st their value was again substantially in excess of the book values appearing in the balance sheet, thus providing us with a satisfactory reserve against any reaction which may occur in the future. The investment of the Society's funds, extending as it does to the numerous foreign currencies in which the Society transacts its business, presents problems of particular interest and difficulty, and these engage the constant attention of the directors. During the year conversion operations to a lower yield basis have continued both at home and abroad, and there has been little change in the unremunerative yield prevailing on fresh investments. I trust therefore that you will regard the rate of £4 8s. 9d. per cent. which was realised on the society's funds as quite satisfactory, representing as it does a fall of only 1s. 3d. per cent. on the yield earned in the previous year. This is a net rate; that is, after deduction of income tax.

During the year the manager and secretary, accompanied by the superintendent of foreign branches, visited our branches in France and Spain, and our business in these countries has been reorganised with very satisfactory results. It is especially pleasing to see the manner in which the French business has developed, and our congratulations must be extended to M. Renflet, the manager, and to M. de Font-Réaulx, the assistant manager, on the remarkable success which has attended their efforts.

The superintendent of foreign branches, Mr Highton, has recently returned from an extended tour to India, Burma and Ceylon, where the society transacts a considerable business, and his visit will, we hope, prove of the greatest value to the society in the improvement and development of its interests in those territories.

Notwithstanding the prevailing unsettled state of world conditions we have made progress even in those countries where by reason of political events our business might have been adversely affected, and reviewing the year as a whole I think we have every reason to congratulate ourselves on the results attained.

For this success we have largely to thank the officials and staff, and I would like to take this opportunity of congratulating and

offering our thanks to our manager and secretary, Mr Stebbing, our chief officials, and all the other members of our staff who have so ably assisted him. In this expression I particularly desire once again to include all our branch managers and agency representatives and connections at home and abroad, whose services are greatly appreciated and to whose loyal co-operation and support we are much indebted.

As regards our managing director—Mr Workman—I can only say that the qualities which he possesses, coupled with his great experience, make him invaluable to your society in these difficult times.

The report and accounts were unanimously adopted.

LICENSES AND GENERAL INSURANCE COMPANY, LIMITED

FURTHER PROGRESS

The forty-sixth ordinary general meeting of the Licenses and General Insurance Company, Limited, was held, on the 6th instant, at 24, 26 and 28 Moorgate, London.

Lord Ernest Hamilton (the chairman), in the course of his speech, said: The progress of the company this year is a reflection of the improved trading conditions which have been evident throughout the country these past months. Our company has shown response to prevailing conditions during 1935. This enables us to see the total income again over the half million mark, from which it unfortunately receded during the years of depression.

On the former occasion when we touched this limit we had then come to the conclusion that the percentage of reinsurance was too high. You will also remember we rigidly set ourselves the task of pruning in the expectation that income thus surrendered would be replaced by direct business. Our hopes have been fulfilled, and the premium income, or portfolio of risks, is now in a much sounder and healthier condition, while the connections of the company have been improved and enhanced. Further, without being in any way over-confident, I think I am justified in saying that the feel of the business—its buoyancy, its general outlook—is such as to lead us to anticipate that the forward movement will go on.

In the fire department the income has not registered any great change. If anything, it is a little down, but producing a not unhealthy record of claims at 54 per cent. finds us able to transfer to profit and loss a sum of £4,021.

The personal accident department last year affected us adversely. On this occasion there is an improvement, and while the income has not advanced there is, however, a change in the final position, enabling a transfer to be made to profit and loss of £1,078.

Employers' liability tells a similar tale to that of former years. Here we have a quiet account of selected business, with no peaks of a hazardous nature, and it is not, therefore, surprising that the profit realised each year should remain on a fairly constant level.

Then we come to the motor account, and I am more than pleased to call your attention to the difference which is apparent in this particular section. The income has advanced and there is a drop in the claims ratio of a good thirteen points, which is also to the good. Generally, I view the account in a happier vein than formerly. The business is better spread, and although the major part of this year is to come, and there is always a chance that the later months may not continue so happily, for the moment 1936 has opened quite favourably.

The marine account once more releases a profit—this time £2,736 8s. 11d. It is not a very large sum annually, but as in the case of employers' liability account for a good many years past now, we have been accustomed to see a contribution of this nature.

In the profit and loss account, out of an available balance of £35,920 15s. 11d., we have placed an additional £5,000 to the general reserve fund, bringing it up to a total sum of £125,000, and after providing for the final dividend we are able to carry forward a sum of £19,781 19s. 5d. This you will appreciate is practically 25 per cent. in excess of the full year's dividend requirements, and, as such, forms in some respects a dividend reserve fund.

In the new life department, we were able to commence business rather more than a month ago. The flow of business which is coming to us would seem to be of such a character as would appear to warrant the venture. I have every hope that when next year's report is before you, you will see concrete evidence of an initial success.

The report and accounts were unanimously adopted.

THE UNION BANK OF SCOTLAND, LIMITED

IMPROVED TRADE IN SCOTLAND

The annual meeting of shareholders of The Union Bank of Scotland, Limited, was held, on the 6th instant, in Glasgow, Sir A. Steven Bilsland, Bt., M.C. (chairman of the bank) presiding.

The Chairman, in submitting the directors' report, drew attention to the increase of fully £2,000,000 in deposits as compared with last year. The large rise of £1,450,000 in acceptances, guarantees, etc., was mainly due to temporary guarantees on behalf of clients, although the much more profitable item of acceptances also showed an increase. Notes in circulation continued the upward trend shown in recent years, no doubt due to improving trade with more money circulating in the form of wages.

On the assets side, cash and money available immediately or within a few days showed an increase of £600,000, at £7,611,000. This represented 24 per cent. of deposits and 22 per cent. of the liability on deposits plus notes in circulation—a very liquid position. Loans and overdrafts had been fully £500,000 under the average for the previous year. The decline in advances over the past few years was a very practical reply to the wild statements regarding the creation of credit which had been made in recent times. A demand for facilities could not be created by the banks but must come from outside.

The profit for the year, at £316,620, showed a modest increase of £3,000. The usual allocations had been made, but on this occasion £25,000 only had been placed to contingencies. A similar sum had been set aside to extend the benefits of the staff superannuation scheme.

Scotland was showing signs of emerging from the depression which had hit her harder than most other parts of the country. A stranger would gain a false impression of Scotland during the past 10 years unless he took into account two of the principal causes for the intensity of the depression here in comparison with the more fortunate areas in England. These causes were that we depended mainly on those heavy industries which everywhere had felt the depression most, and that they had always depended more, proportionately, on the export market than had England. In the West of Scotland the centre of gravity had been chiefly in shipbuilding, with a large number of smaller industries relying on the shipyards for their orders. Their error had been to have too many eggs in one basket and, partly for that reason, they had missed the development of the new and lighter industries.

But while they expected their heavy industries to benefit both from the renewed activity in naval orders and from the increase and some redistribution of manufacture for the air services, it was essential that they should also turn their initiative and skill to the development of those lighter industries for which, geographically, they were best suited. There was evidence that some progress along this direction was being made and he did not doubt that they had the initiative to extend it. Scotland had justified a reputation for initiative and it would be absurd to suggest that the whole character of the nation had altered in a single generation. Against any disadvantages of geographical position they could claim the cheapest coal in Britain, efficient and cheap services of electric power and water, and a reservoir of labour of a quality which compared very favourably with any in the United Kingdom. While these advantages might well attract enterprise from beyond their borders, he hoped that facilities would soon be available of the character provided in industrial estates which Scotland had so far lacked, to aid Scottish enterprise to develop new Scottish industries.

The Chairman dealt briefly with statements made during the past year on behalf of a body calling itself the Scottish Bankers' Association, which purported to deal with the "deplorable conditions of employment" of Scottish bank clerks, and which had received some currency in the Press. The Union Bank did not recognise the Scottish Bankers' Association as having any right to speak for its staff. There was complete harmony between the board, the management and the staff, and the last-mentioned had at all times free access to the appropriate officials to whom they could express their views regarding any grievance. It was essential that the board should hold the balance between the public interest and the interest of the staff and the shareholders. The fact that the interest of the staff had not suffered would be realised when it was pointed out that, although the rate of purely banking profit was almost half that earned in immediately pre-war years, the amount expended by the bank last year in respect of salaries and allowances was nearly three times what it was in 1914.

The report was unanimously adopted and a dividend at the rate of 18 per cent. per annum declared.

ENGLISH AND CALEDONIAN INVESTMENT COMPANY, LIMITED

IMPROVED POSITION

MR EDWARD S. ARLISS'S REVIEW

The ninth annual general meeting of English and Caledonian Investment Company, Limited, was held, on the 7th instant, at the Registered Office, 23, Blomfield Street, London, E.C.

Mr Edward S. Arliss (Chairman of the company) said: The task of submitting the accounts is a pleasant one in that they show a substantial improvement in the capital position and an appreciable increase in revenue, both indicative of the better conditions experienced in industry and trade during the past twelve months.

The investments held at March 31st last stand at a book figure of £891,691, an increase of about £50,000 on the figure at March 31, 1935. This increase is explained largely by the net increase in the borrowings during the year. The value of the investments at March 31st last was £867,162, which falls short of the book figure by £24,529, a depreciation of 2.75 per cent. This contrasts with a depreciation of 13.65 per cent., computed on a similar basis, at March 31st, 1935. The improvement in the capital position is perhaps indicated more clearly when its effect is shown on the break-up value of the ordinary stock. A year ago the break-up value of the ordinary stock, after paying the preference dividend for the full year, was £51 12s. 4d. per £100 of stock, whereas, on a similar basis, the break-up value of the ordinary stock at March 31, 1936, was £98 12s. 1d. per £100 of stock.

CLASSIFICATION OF INVESTMENTS

The number of investments held in the company's portfolio has increased during the year from 192, of an average book value of £4,700, to 208, of an average book value of £4,300. The classification of the investments as regards security is as follows:—British Government and India stocks, 7.80 per cent.; debentures, bonds and foreign government stocks, 11.92 per cent.; preference shares, 24.87 per cent.; and ordinary shares, 55.41 per cent.

Of the invested capital 70 per cent. is within the British Empire, and it is interesting to note that on the investments held within the Empire there is a net appreciation of 2.45 per cent., compared with an over-all depreciation of 2.75 per cent.

On the liabilities side the first item calling for comment is the 3½ per cent. redeemable debenture stock, of which £100,000 nominal was issued at par during the year. As a portion of this stock was not placed until late in the company's year the accounts now before you do not reflect the full benefit of the use of this additional money. The general reserve has been increased to £12,500 by the appropriation of £2,500 from revenue.

The total income for the year is £40,928, an increase of approximately £3,400 over the income for the previous year. This increase is for the most part explained by the increase in the invested capital, although improvements in the return on certain of our investments have contributed to this result.

After deducting the several charges appearing in the profit and loss account, including debenture interest, which is higher by £2,400 on account of the issue of 3½ per cent. debenture stock the net profit for the year under review is £24,393, against £23,335 for the previous year. After allowing for income tax requiring £4,426, and a full year's preference dividend, requiring £11,813, there remains available a sum of £8,154, which is equivalent to rather more than 5 per cent. (less tax) on the ordinary stock. Last year 4.28 per cent. (less tax) was earned on the ordinary stock.

CONSERVATIVE DIVIDEND POLICY

The sum of £5,654 now remains available, and the directors propose that a dividend of 3½ per cent. be paid on the ordinary stock, requiring, less tax, £5,469, thus leaving a balance of £3,86 to be carried forward, against £3,678 brought forward from last year.

As regards the prospects for this year, I think it may reasonably be hoped that in the absence of unfavourable political developments in the international sphere, we shall be able to report further improvement in the company's affairs at our next annual meeting.

The report and accounts were unanimously adopted.

BARRY AND STAINES LINOLEUM, LIMITED

SUCCESSFUL YEAR—INCREASED DIVIDEND

The annual general meeting of Barry and Staines Linoleum, Limited, was held, on the 5th instant, at Winchester House, Old Broad Street, London, Mr William Sutton, J.P. (the chairman), presiding.

The Chairman, in the course of his speech, said:—During the period covered by the report and accounts now before you we have had the full advantage of the increased prices which came into operation in May, 1934, and the success of this year's trading is shown by the very satisfactory figures to which I will later make reference.

The combined turnover of the Kirkcaldy and Staines companies shows a substantial increase, due to the all-round improvement in the general home trade and the continuance of the extensive schemes, both municipal and private, for the provision of better housing. In many of our foreign markets, however, vexatious import and currency restrictions continue to hamper our efforts, but I am glad to say that although much lost ground has still to be recovered, our total export trade has shown a satisfactory increase.

THE ACCOUNTS

If you look at the profit and loss account, you will see that the sum described as "dividends received from subsidiary companies" and "amounts charged to these companies in respect of management expenses" amounts this year to £216,726, an increase over last year's figure of £23,251; while the balance carried to the balance sheet at £212,337 is £25,716 in excess of the comparative figure of last year. This increase in profits enables the board, after transferring to special reserve the same amounts as last year, £25,000, to recommend the payment of a dividend of 12½ per cent., less tax, as against 10 per cent., less tax, paid last year.

I will now refer you to the figures in the consolidated balance sheet. On the debit side you will see that the figure representing reserves and profit and loss balances stands at £1,464,252, as against last year's figure of £1,334,000. Of this increase of £130,252 nearly £30,000 represents the re-transfer to reserves of provisions in respect of the Canadian business which are no longer required. Notwithstanding the transfer of this sum to reserves you will observe that "creditors and credit balances, accrued charges and provisions" stands at £306,476, £24,813 in excess of last year. This is accounted for in part by the provision of a further substantial amount to meet the liability for income tax upon the increased profits of this year.

Passing to the credit side of the consolidated balance sheet, you will see that our credit position at the banks has been greatly strengthened inasmuch as the amount £271,201 is £153,635 larger than the same item last year.

Investments have been increased during the year by £34,822, of which nearly £20,000 is in Government securities.

Debtors and debit balances show a decrease of £28,554, and stock-in-trade is also down by £64,000. Both of these decreases I think may be attributed to the better financial position of industry in general.

Freehold and leasehold land and buildings is up by some £47,000 consequent upon reconstruction of buildings and the additional accommodation already referred to; while plant and machinery is, notwithstanding substantial additional expenditure made during the year, down by nearly £12,000, due to some special depreciation written off.

I am confident that the shareholders will be gratified by the figures now presented to them, showing as they do an increased dividend and the further strengthening of the financial position of the company, as evidenced by the figures which I have just referred to.

At the beginning of another year the general international situation is again unsettled, making more than ever advisable the adoption of a cautious attitude in making a forecast for the current year, and, in addition, certain of our markets have been affected by increased import duties.

CONFIDENCE IN THE FUTURE

With the improvement in the heavy industries and in general trade there is every reason to expect that the linoleum industry should benefit by the increased purchasing power of the people, and our companies can confidently look forward to obtaining their share of any such increase of trade. Unless serious trouble affecting business takes place, we have reason to anticipate placing a satisfactory statement before you at our next annual meeting.

The report and accounts were adopted.

MALACCA RUBBER PLANTATIONS, LIMITED

ENCOURAGING PROSPECTS

The thirtieth annual general meeting of this company was held, on the 5th instant, at 19 Fenchurch Street, London.

Mr Charles Emerson (the chairman), in the course of his speech, said that the profit and loss account showed a trading profit for the year of £44,842, but of that £6,202 was absorbed by debenture interest, an incubus from which they would now be clear. They recommended the payment of the 7½ per cent. preference dividend and a dividend of 2½ per cent. on the ordinary shares.

For the year now in progress prospects appeared to be encouraging. The market for the raw material was firm and there seemed no reason why it should fall away to any marked extent. The scheme for the regulation of supplies was now working satisfactorily and, despite the fevered condition of international politics at the moment and the consequent deplorable dislocation of trade, stocks were shortening at a satisfactory rate. It was not unreasonable, therefore, to hope for some increase in their ordinary profits, and they knew that whatever revenue they might receive from their investments would no longer be swallowed up by debenture interest but would be available to swell their disposable balance at the next account.

As to the properties, the company had a total acreage of 25,612, of which 21,842 was under rubber, 20,642 being mature. Their par capitalisation was considerably less than when the company commenced its career.

The time being now ripe, and the financial side of the company's structure being sound, they had decided on a larger operation and proposed during the current year to cut out and replant some 500 acres. Replanting would be done with the advantage of the experience that the industry had acquired of recent years, and definite lines had been laid down. It would appear to be reasonably certain that the replanted areas would, when in bearing, produce considerably heavier crops than those which they replaced. For the rest, they were making every possible effort to prolong the effective life of the trees on the plantations by methods of manuring and cultivation. That was a matter which was specially important now that extensions were forbidden, and it was receiving unremitting attention.

The report and accounts were unanimously adopted.

LONDON ASIATIC RUBBER AND PRODUCE COMPANY, LIMITED

DIVIDEND OF 7 PER CENT.—IMPROVED OUTLOOK

The twenty-eighth ordinary general meeting of this company was held, on the 4th instant, at 19 Fenchurch Street, London.

Mr H. J. Welch (the chairman), in the course of his speech, said that the company's surplus liquid assets on December 31st amounted to £2 18s. per planted acre, and the net cost at which their 29,224 acres of planted areas and the buildings, machinery and equipment stood in the balance sheet was only £26 5s. per planted acre.

The trading results for 1935 of rubber companies in general were less favourable than those for the year 1934. The average London price of rubber during 1935 was below, but that obtained by this company a little above, the average for 1934 as a whole, including the early months of that year during which prices were depressed. Expenditure also was on a higher level, but they were able to effect some further economies in other directions, so that in the result the net increase in the f.o.b. cost was just under ½d. per pound. In the circumstances he thought they might congratulate themselves that the credit balance shown by the profit and loss account for 1935 stood at £55,449, against £69,837 for 1934. The directors were pleased to be able to recommend a dividend of 7 per cent. for the year.

There was at present every reason to expect that the results for 1936 would be better than those for 1935. They estimated to produce their restricted crop at a slightly lower cost than last year. Prices of the last few months showed improvement, and the world's surplus stocks of rubber had declined and were declining.

The company's permissible exports under the exportable percentage fixed for this year amounted to about 7,362,500 lbs. Each 1d. per pound upon these exports was equal to over 3½ per cent. upon the issued capital.

They had forward sales for 1936 of 361 tons and for 1937 of 120 tons. Of these 231 tons for 1936 had been sold at an average price equivalent to 7.8d. per pound London landed terms. The balance of 130 tons for 1936 and the whole of the 120 tons for 1937 had been sold for local consumption without export licences at varying prices below, but depending upon, the London average prices of each month prior to delivery.

The report and accounts were unanimously adopted.

NORTH BRITISH AND MERCANTILE INSURANCE COMPANY, LIMITED

PROGRESS IN ALL DEPARTMENTS

The one hundred and twenty-sixth annual general meeting of the North British and Mercantile Insurance Company, Limited, was held, on the 7th instant, in Edinburgh.

The Rt. Hon. the Viscount Wakefield of Hythe (the chairman), in the course of his speech, said:—Last year I referred to the wide recovery which had taken place in the domestic trade and industry of this country during the year 1934. I also indicated that the prospects for 1935 were bright but that the improvement was likely to be largely in respect of our home trade. These anticipations were realised in the year now under review. While the continued recovery has been mainly in the home market, there was also a fair revival in external trade during 1935.

FIRE DEPARTMENT

In the Fire Department, so far as premiums go, we record an increase of £16,734 over the previous year and register for 1935 an income of £3,382,866. The improvement is slight in relation to our total premium income, but in these difficult days we are happy to see movement in the upward direction, and we welcome the improvement even although it may not represent a large percentage.

Our experience in regard to fire losses was in 1934 extremely favourable, as these were barely 39.40 per cent. of the premiums for that year. The figures for 1935 show a further reduction of fire loss ratio to 37.32 per cent., and it is the lowest ratio of fire losses the company has experienced since 1862, the year when the "North British" of Edinburgh joined forces with the "Mercantile" of London and so fused became the "North British and Mercantile" of to-day.

We have increased our fire business and, notwithstanding that the expense rate has risen, our profit, after providing for the increased reserve necessary, is £461,648, as against £457,904 for 1934. Having regard to the difficulties and problems which confront us, we can regard our results as being eminently satisfactory.

ACCIDENT AND MARINE

The accounts of the Railway Passengers Company, which constitutes our Accident or Casualty Department, once more provide pleasant reading. The premiums for the past year amounted to £1,212,227, showing an increase of £87,602 over the 1934 figure. The underwriting profit was £148,209, while the net interest income from investments was £102,171, the combined figure being therefore £250,380. These results are distinctly cheering, especially as both premium income and underwriting profit are in excess of the corresponding figures for the previous year. The premiums are the highest on record in the history of the company, while the underwriting profit has only been exceeded upon one occasion.

Ocean Marine Insurance Company, Limited: Our marine premiums show some increase for 1935 as compared with the previous year. These were helped during the last few months of the year by a small amount of additional premium charged for the risks of war and strikes. The amounts we have placed to reserves for winding up of the year 1933 and previous years have proved to be quite adequate. For 1934 we still carried forward the whole balance of the account.

We have transferred to profit and loss account the sum of £40,000, as we are satisfied that the reserves we have in hand are ample to meet any liabilities we may have.

The Fine Art and General Insurance Company, Limited, has again produced a satisfactory account, the combined profits and interest totalling £95,291, against the previous year's figure of £92,688.

RECORD LIFE FIGURES

In the Life Department, the end of the year 1935 also marked the end of another quinquennial period, and an investigation has accordingly been made by the actuary into the result of those five years' operations and the position as at December 31st last. The life business transacted during the period has been the largest in any quinquennium in the company's history, the new sums assured amounting to no less than £23,206,366. The figure for 1935 alone was £5,506,835, which is a record for any single year. A compound reversionary bonus is declared of £1 16s. per cent.

per annum. It is reassuring to know that while the valuation basis has been materially strengthened and a satisfactory rate of bonus declared, there has been no weakening of any of our other usual reserves, while the sum carried forward, at £169,000, exceeds the amount brought forward from the previous valuation.

Our accounts for the past year might truly be described as the best ever produced by the "North British and Mercantile." We propose to pay a dividend of 6s. 3d. on the new share capital in respect of 1935. This dividend would represent a rate of 25s. per share on the ordinary capital as it was before the sub-division was brought into effect, and compares with 24s. per share as paid for 1933 and 1934.

The dividend will be payable as to 3s. 2d. per share on May 15th and 3s. 1d. on November 11th. The amount, less tax, required for this dividend and the preference dividend will take approximately £585,277, while the net interest of our various companies amounts to £582,558. The company continues to pursue an active and successful policy in all departments of its business, and we are fortunate in being shareholders in such a magnificent concern. The report was adopted.

GOLDEN HOPE RUBBER ESTATE, LIMITED

ENCOURAGING OUTLOOK

At the annual general meeting of the Golden Hope Rubber Estate, Limited, held on May 7th, the Chairman, Mr Eric Macfadyen, said that world stocks of rubber, after remaining stationary during the first half of 1935, had since then been declining at about 20,000 tons a month. At the end of February they were about 560,000 tons, or seven months' supply, against 10½ months' supply at the worst point of the slump. The world's annual absorption of rubber might well exceed 1,000,000 tons, for the first time, in 1936, and the International Agreement, which controlled 95 per cent. of the supply, was working smoothly. The decision to release an additional 5 per cent. of quotas as from July next was an encouraging indication of the outlook. For this particular company, at present, that release meant about as much as a third of a penny per lb. on the price realised.

He had visited the estates last autumn. Since his previous visit in 1929 the company's planted area had grown from 5,404 to 9,701 acres, and its issued capital from £230,000 to £364,490. During this expansion it had notably improved the proportion of young modern rubber, much of it budgrafted. Of the planted area, 12 per cent. was not more than seven years old, and the earliest budgrafts to come into bearing were fully answering expectations. A plantation was a slowly wasting asset, for which the right form of amortisation, especially during the opportunity afforded by the present regime, was to replant obsolescent areas, and the company had made a beginning of such replanting, including 88 acres in 1935. Great progress had been made in the development of a suitable green cover for the soil, by means of natural and introduced cover plants, to maintain a soil temperature and other conditions favourable to the soil micro-organisms and accumulation of humus: a system which demands considerable botanical knowledge from the planters and makes their work harder than it was formerly, apart from the great increase in the areas which they are now required to superintend.

The company's financial position fully justified payment of the 3 per cent. dividend recommended.

The motions for the adoption of the accounts and payment of the dividend were passed *nem. con.*

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. SCOTTISH UNION AND NATIONAL INSURANCE COMPANY

RECORD NEW LIFE BUSINESS

PROGRESS IN OTHER DEPARTMENTS

Mr William Carnegie (chairman) presided at the 111th annual general meeting of the shareholders of the Scottish Union and National Insurance Company, held at Edinburgh on the 6th instant.

In moving the adoption of the report and accounts for the year 1935 he stated:—

Our company has secured its full share in the high tide of life assurance business. In 1935 4,342 new policies were issued—a larger number than in any preceding year. The gross new sums assured of £4,011,700 and the corresponding net figure of £3,604,000 both again constitute a record in the history of the company. The net life premiums of £805,000 also show a high-water mark. It is satisfactory to think that the public is realising more and more that life assurance—free as it is from the dangers of depreciation—is an ideal method of making provision for dependants. May I suggest that fuller advantage might be taken of the scheme under which, while the policy monies are payable on death, the premiums are limited to the working period of life. Statisticians tell us that the average lifetime is longer than it used to be, but a limited-payment policy restricts the premiums to a definite number. In these days of high death duties the provision of the amount by an annual payment year by year under a life assurance policy, without the risk of having to sell investments at a loss, is almost a necessity.

FIRE ACCOUNT

I have now pleasure in turning to the fire account. A year ago my predecessor in the chair announced a turn in the tide after several years of diminishing premiums and heavy losses. He expressed the hope that the flow would continue in the right direction for years to come. I am in the position, happily, of reporting further improvement. It is true that the fire premium income is practically the same as a year ago, but the claims' experience is much better, being 39.49 per cent. against 41.93 per cent. in the previous year, a saving here of nearly £25,000. The profit transferred to the profit and loss account is £193,000, or nearly £52,000 more than was transferred a year ago. These fine results in the fire account are mainly due to the satisfactory experience secured on our business in the territory controlled by our United States branch.

ACCIDENT, EMPLOYERS' LIABILITY AND MISCELLANEOUS ACCOUNTS

The accident, employers' liability and miscellaneous accounts together show premiums amounting to over £312,000, being an increase of £37,000 over the previous year's figures. The combined results of these three accounts enable a transfer of £6,500 to be made to the profit and loss account, notwithstanding the loss of £3,300 which, unfortunately, has been experienced in the employers' liability account. Once again it has to be recorded that the profit of the miscellaneous account would have been greater but for the continued unsatisfactory experience of the motor department. The directors considered it advisable to strengthen the special reserve in the miscellaneous account, and a sum of £30,000 was transferred from the profit and loss account for this purpose, bringing the special reserve up to £50,000.

The marine account shows an increase in the premiums of over £5,600, but the profit transferred to profit and loss account is £30,000, which is £10,000 less than the amount transferred a year ago.

PROFIT AND DIVIDEND

Turning now to the profit and loss account, the interest, dividends and rents appearing therein at £79,300 are some £650 less than last year. The profits realised total £233,000, but require to be reduced by the transfer of £3,300 to the employers' liability insurance account. The resultant figure of £229,700 compares with £194,000 a year ago, or an improvement of nearly £36,000. A sum of £100,000 is taken back into profit and loss account from the contingency fund. This sum represents 50 per cent. of the contingency fund which was set up some four or five years ago at a time when exchange difficulties were more prominent than they are to-day.

It is proposed to pay the same rate of dividend as was paid last year. This will absorb £151,125, leaving a carry-forward of

£514,000—an increase of £144,000. The carry-forward will fall to be adjusted in next year's account owing to the increase in the rate of income tax. The total net interest appearing in the accounts (other than life and annuity and sinking fund interest) is £146,100, being £600 higher than 1934 and only £4,960 short of the amount required to pay the dividend.

BALANCE SHEET

Looking now at the balance sheet, you will observe that the total assets of the company amount to £16,805,000, which is more than £400,000 greater than a year ago. It will be a matter of gratification to the shareholders to note the steady advancement of the company. The market value of the Stock Exchange securities as at December 31, 1935, is, in the aggregate, substantially in excess of the balance-sheet figures.

In conclusion, I would wish to express the directors' appreciation of the services rendered to the company by our general manager and the other officials at head office, London office and branches. Mr Nicoll's energy and ability are applied to the utmost in the best interests of the company and its expansion and success prove the efficiency of his management. We also highly appreciate the good work and the loyalty of all our staff, agents and other representatives at home and abroad.

The report and accounts were adopted.

SPILLERS, LIMITED

ANOTHER SATISFACTORY YEAR

SIR MALCOLM ROBERTSON ON WHEAT MARKET PROBLEMS

The Rt. Hon. Sir Malcolm A. Robertson, chairman of Spillers, Limited, presided at the annual general meeting of the company, held on Saturday, 2nd instant, at Cardiff.

He preceded his remarks on the balance sheet by extending a cordial welcome on behalf of the stockholders to Mr Forbes, on his first attendance at a general meeting of the company since taking his seat on the board. Having explained the increase in the Co-partnership capital required in respect of the bonus for the last financial year, he referred to the fact that the small number of the 5½ per cent. Ten-year Sinking Fund Notes outstanding at January 31, 1935, had been redeemed, and that item accordingly disappeared from the balance sheet. There was a slight alteration in the layout on the assets side of the balance sheet, where the interests in subsidiary companies had been grouped separately from the general investments of the company. At the date of the balance sheet there was a call outstanding, but not due, on a British Government security amounting to £930,000. That item was accordingly shown separately under the heading investments. The call had since been met and the security in question was now fully paid. Freehold and leasehold properties were slightly less than last year, which was due to the fact that the expenditure on capital account during the year was less than the annual depreciation written off together with the £50,000 appropriated from profits as an additional provision for obsolescence.

WHEAT MARKET PROBLEMS

The wheat market during the year had presented the usual, as well as a few new problems. There had been sharp fluctuations, but owing to the succession of poor crops in North America, accompanied by a crop failure in the Argentine, the general price level at the end of the company's financial year was substantially higher than that twelve months earlier. With regard to the comment he made the previous year, that Canada had been holding her wheat above the world level of prices, the position was now altered. Manitoba wheat during the year rose only 2s. per quarter, compared with over 8s. for European and Australian wheats, and as much as 11s. 6d. for Plate. As a result, Canada was now regaining her place as an exporter of wheat to Europe, and her carry-over should be substantially reduced from the formidable figure at which it had stood for the past few years.

GOVERNMENT CONTROL

The feature of the wheat market which merited the most serious consideration was the increasing degree of control being exercised by Governments of the countries of origin. At the present time, in addition to Canada and the Argentine, and, of course, Russia, the Governments of most of the Principal European growing countries were exercising a degree of control—in some cases complete control—over the marketing of crops, which rendered the

accurate forecasting of world markets even more difficult than it was before those conditions obtained. Meanwhile, the policy of the company remained unchanged. Wheat was bought according to requirements, and thus the element of speculation was reduced to a minimum.

EMERGENCY FOOD SUPPLY

Various statements had been made both in Parliament and in the Press regarding the food supply of the country in time of emergency. It had been alleged, for instance, that the total stock of wheat in port granaries on March 1st amounted to about ten days' to a fortnight's supply of flour. That figure, however, referred only to stocks of wheat in port granaries, no account being taken of wheat and flour held by millers, importers and bakers. With those stocks added, a more reliable estimate would be about three months' supply. It was to be presumed that that question would be a matter for consideration by the new Minister of Defence. Should it be proposed to take any steps to insure a margin of safety in the event of emergency, it was to be hoped that the appropriate Minister would consult the milling industry.

During the year, the company had acquired the whole of the issued share capital of S. and T. Trounson, Limited, of Redruth, Truro and Falmouth, who operated grist plants and distributed grain and provender in Cornwall. In addition, negotiations were concluded, immediately after the issue of the report to the stockholders, which led to the acquisition by the company of the issued share capital of E. C. Robson and Sons, Limited, flour millers, of Sunderland.

PROGRESS IN ANIMAL AND POULTRY FOODS DEPARTMENT

The company's animal and poultry foods department again showed satisfactory progress, record deliveries having been achieved in all sections. A large number of successes had been achieved by users of the company's foods at the principal agricultural and other shows throughout the country. The company's animal foods advisory department continued to play an important part in connection with the expansion of the company's trade. Spillers' Dog Foods were never more popular, and sales had established a new high record during the past year.

THE MILLS

With regard to the building of the new mill at Newcastle, a large part of the piling had been completed, and everything was going forward according to plan. The new mill would be in operation, it was hoped, within two years. In addition, a vigorous policy was being pursued of keeping the whole of the company's mills and factories efficient and up to date.

Mr Walter Allen had retired from the board of the company at the end of January last, following the completion of fifty years' service to the company, including twenty years as a director. His outstanding abilities as a practical miller, and his unrivalled experience, had rendered his services invaluable.

Sir John Meadows Frost, a director of the company from 1920 to 1927 had, to the greatest regret of his former colleagues, died during the year under review. His long experience in the milling trade had rendered his counsel of the utmost value to his co-directors.

The report and accounts were adopted.

LONDON ELECTRIC WIRE COMPANY AND SMITHS, LIMITED

RECORD OUTPUT

The twenty-seventh annual general meeting of this company was held, on the 7th instant, at Hotel Victoria, London.

Mr W. J. Terry (chairman and joint managing director) said that the profit for the year 1935 amounted to £108,335, which was an improvement of £31,920 as compared with 1934. The price of their raw materials during 1935 had shown a rising tendency, which was to be expected with improved trade. The price of copper, in which they were mainly interested, had been approximately 20 per cent. higher at the end of the year than at the end of the previous year. However, if the price of copper fluctuated only within narrow limits of its present level, there should be no slackening of demand. During the whole of last year improved trading conditions had continued and their sales had shown a steady improvement throughout the year. Their tonnage output had created a new record for the company and, had there not been intensive competition in respect of a number of their manufactures, the directors would have been in the happy position of being able to report a record profit as well as a record output.

The company had fully maintained its reputation for the high standard of its products and efficient service. As to the future, if normal conditions continued and the recent improvement in trade was maintained, substantial benefit should accrue to all sections of the electrical industry.

In the opinion of the directors, the result of the year ended December 31, 1935, warranted an increased dividend on the ordinary shares. They therefore recommended that the final ordinary dividend be raised to 5 per cent., less tax, making a dividend at the rate of 6¼ per cent. for the year under review, against 5 per cent. for the previous year, and leaving an amount of £40,391 to be carried forward. It was the intention of the directors this year to raise the interim ordinary dividend, usually paid at the end of June, to 2 per cent. instead of 1½ per cent. as in recent years. In making that announcement, they did not want it to be inferred that there would be any increase in the total ordinary dividend for the current year.

The report was unanimously adopted.

ODHAMS PRESS, LIMITED

CONTINUED PROGRESS

The sixteenth annual general meeting of Odhams Press Limited was held, on the 5th instant, at the Connaught Rooms, London, W.C.

Mr J. S. Elias, chairman and managing director, said that the net profit for the year, after deducting debenture and other interest, together with adequate provision for depreciation, amounted to £349,403. The general reserve after taking into account the £65,000 set aside out of the profits for 1934, amounted to £385,000. It was proposed to set aside £65,000 from the earnings of 1935, bringing the general reserve up to the substantial total of £450,000. It was the policy of the board to keep the plant in the highest state of efficiency, and he had no hesitation in saying that the company's equipment was among the most up-to-date of any newspaper and general printing works in the country.

The shareholders would remember that he reported last year that the company had secured the exclusive rights for the British Isles of a new printing process known as the Speedry Alco-Gravure method of colour printing. The directors finally decided that the best method of dealing with that new acquisition was to form a subsidiary company, with the result that Odhams (Watford), Limited, was incorporated, and an issue of £450,000 of capital was successfully launched during the year under review.

The company had acquired during the year the whole of the share capital in English Newspapers, Limited, which owned the copyrights of the periodicals *Film Weekly* and *Woman's Fair*.

With regard to the *Daily Herald*, he was pleased to be able to say that in spite of intensive competition, that newspaper still maintained a net sale considerably in excess of 2,000,000 copies a day, a sale which had been maintained now for nearly three years. That newspaper also continued to gain favour with the great national advertisers, and its revenue from that source was substantially increasing. Both *The People* and *John Bull* had also maintained their circulation and influence. The company's other publications and properties were well maintained, and its general business was satisfactory.

The report was unanimously adopted, and a final dividend of 10 per cent., making 15 per cent. for the year, was declared.

RAND MINES, LIMITED

A SUCCESSFUL YEAR

MR JOHN MARTIN'S ADDRESS

The forty-first ordinary general meeting of the Rand Mines, Limited, was held, on the 7th instant, at the Corner House, Johannesburg.

Mr John Martin (the chairman) said that the report and accounts disclosed a satisfactory position. They had had a successful year. Dividend distributions were the highest for twenty years; the financial and investment basis of the company was exceptionally strong and the outlook for the future was good.

The profit for the year was £900,499 without including profits derived from the sale of investments, which amounted to £232,972. The market value of their gold-mining interests at the end of 1935 represented 87.5 per cent. of the market value of their total investments at that date, while of their gold-mining interests 86.5 per cent. were dividend-producing. The company was largely interested in various gold-mining companies that had not yet reached the stage of production.

EXPANSION OF THE INDUSTRY

The expansion of the gold-mining industry had continued satisfactorily during 1935. The extent of that expansion was perhaps not fully realised, but the fact that 23 main vertical shafts were being sunk in new mines and 13 in producing mines was evidence of the huge development taking place. There had been a significant increase in the tonnage crushed by the industry, and the fact that, compared with 1932, the tonnage milled in 1935 had increased by nearly 9,500,000, or more than 26 per cent., was abundant evidence of the practical effect given by the industry to its enunciation in January, 1933, of a mining policy aiming at the fullest exploitation of low-grade ore and the utmost acceleration of development.

The Government mining engineer had stated that on a conservative estimate the lives of the mines existing in 1932 had, in consequence of the changed conditions, been increased on the average by well over 150 per cent. It was undoubted that the prospective lives of the producing mines had been materially extended, but it was nevertheless necessary to bear in mind that they were wasting assets, that there was a period to the lives of every one of them, and that the amortisation factor must not be ignored or discounted by the public, the investor or the Government.

The present prosperity of the industry seemed to have raised a presumption that additional burdens could be placed upon it, or well-merited relief denied to it, with impunity. The consequences which followed were often deferred or obscured, but they were, nevertheless, inevitable, and, as past experience had shown, they were dearly paid for.

He was an optimist in visualising the future of the gold-mining industry, but there was clear need for prudence in dealing with all its affairs. There rested upon the mines the need and the responsibility for securing a continuance of that level of working efficiency and economy that had established so good a standard in the past. There was need that investors should guard against entertaining extravagant expectations. There was upon Parliament and the Government an essential need for recognising that the very dependence of South Africa on the industry demanded that a limit should be set to the direct and indirect contributions to the State—already unprecedently heavy—that were periodically imposed upon the mines. Otherwise a process of economic erosion would be set in motion.

It was gratifying to observe from the recent Budget speech by the Minister of Finance how clearly it was recognised by the Government that, in the words of Mr Havenga, the mining industry "is now, and must be for many years, the mainstay of our economic system" and how fully the value of low-grade ore resources and potentialities was appreciated.

The new mining taxation proposals were an improvement on the old system. The new system was coherent, intelligible and comparatively straightforward, and would undoubtedly eliminate the worst of the anomalies previously produced.

THE OUTLOOK

He might be expected to express some opinion on the prospects of the metal of which their companies were such important producers. It was difficult in the present state of the world to make a forecast as to the future price of gold or the future position of gold in the monetary systems of the world. The year 1935 had been a year of progress in spite of serious financial and political developments. There had been progress towards stability of currencies. The progress in world recovery, shown by the progress of industry and trade in the face of wars and rumours of wars had

been surprising and encouraging. In that recovery South Africa might almost be said to have led the way. Happy in the possession of an industry in which the most timid investor was at all times ready to invest, South Africa had become busy as industry in other countries flagged. The very lack of confidence in the future which had led to depression and crisis in other countries had actually diverted capital and enterprise into their industry. Their activity had been of benefit to others. South Africa's imports, especially of machinery and other stores for the gold-mining industry, had given an impulse and an aid to recovery in the depressed industries of the United Kingdom. That, in turn, had reacted on British purchasing power and had made the United Kingdom a better market for other South African produce.

BENEFIT OF BETTER POLITICAL CONDITIONS

In their recovery they had been helped by the stability and security of political conditions in both South Africa and the United Kingdom. No recovery could take place when business men and investors were nervous of the future and uncertain as to the form of Government under which their enterprise would be conducted. They had been fortunate in that respect. He coupled the United Kingdom with South Africa not only because the general link between the two communities was so close, but because while South Africa was the chief producer, London was the market for gold, and the political stability and prudent finance of the British Government had preserved confidence in the free and efficient working of that market.

With the world emerging from the depression into which it had begun to decline in 1929, the gold-mining industry would lose some of its exceptional importance. With greater stability they could not expect, nor would they welcome, any further sensational rise in the price of gold and they would be spared the attentions of the more speculative types of investors, but with more general prosperity and a greater approach to stability in monetary conditions, they might look forward with confidence.

During the course of his address the chairman gave details of the results of operations of the Witwatersrand producing mines of the Central Mining-Rand Mines group, pointing out that the working revenue of the mines of the group had increased by £722,929 to £25,864,815.

The report was adopted.

JOHNSON AND PHILLIPS, LIMITED

FURTHER ADVANCEMENT

The thirty-first annual general meeting of Johnson & Phillips, Limited, was held, on the 7th instant, at Winchester House, London.

Mr G. Leslie Wates, J.P. (the chairman), said that the progress which they had noticed at annual meetings since 1933 had continued, and the profit figure had risen from £118,000 in 1934 to £144,000 in 1935. With the exception of the boom year, 1929, that was the highest figure of profit which the company had earned since 1925, a matter of congratulation to everyone concerned. Their turnover for the year under review had considerably increased, and it arose from the substantially larger number of orders which had been booked and not from the higher values of individual orders. Comparing the figures of 1935 with those of 1932, the year in which they had suffered most from the recent depression, they found that the value and the number of orders booked had both increased by 63 per cent. The average value in money of individual orders booked from 1932 to 1935 inclusive did not vary by more than £1, a remarkable tribute to the steadiness of their business and eloquent testimony of their goodwill. Prices, however, were still very low, and in many cases actually unremunerative.

After stating that they recommended a final dividend of 5 per cent., making 10 per cent. for the year, he went on to say that the transformer and switchgear departments had substantially increased their turnover. The water-heaters had steadily progressed. The condenser department continued to make good progress, sales during 1935 being more than three times those of 1934. Many leading industrial consumers of electricity had installed their condensers during the year, both at home and abroad.

Their subsidiary company which manufactured Permel enamelled wire had continued to make progress and had increased its turnover during the year. That industry suffered from subsidised foreign competition and was only assisted by a relatively small tariff of 20 per cent. They felt that that was essentially a product which was entitled to adequate tariff protection from such unfair subsidised competition.

The report was unanimously adopted.

IDEAL BUILDING AND LAND DEVELOPMENT COMPANY, LIMITED

MEDIUM-PRICED HOUSES STILL WANTED

The meeting of the Ideal Building and Land Development Company, Limited, was held, on the 5th instant, in London.

Sir Thomas Keens, D.L., the chairman, said that the deposits of the company with the building societies had increased during the year by £61,833 to a total, with interest, of £242,440. Some of the building societies had agreed to lend back to the company their own money on mortgage of freehold properties free of interest. In conformity with that arrangement the board had decided to lay out an estate of the company at Welling, known as Broadwood, as a self-contained estate of about 300 houses, of which about 200 had now been erected. Experience had shown that there was a brisk demand for houses to let at reasonable rentals to persons who would not in any circumstances buy. The effect of the scheme would be to increase the return on the money very materially.

With the great extension of the London suburbs, the company was no longer confining itself in the purchase of new land to the area of 12 miles from Charing Cross, but was going further afield. In one case they had left the London neighbourhood altogether, and had secured land on the outskirts of a thriving seaport. The company's estates at present numbered 28, upon which building operations were being carried on.

As to the future, indications did not suggest any immediate and considerable general decline in the volume of house-building. Although there were indications that the peak of the demand had been reached in certain areas, on the other hand there were numerous areas where there was no evidence of any falling off. Provided there were no international complications, they could confidently look forward to a steady demand for modern medium-priced houses for some years to come.

After the chairman had replied to questions, the report and accounts were adopted with only one dissentient, and the retiring directors and auditors were unanimously re-elected.

At the special general meeting of preference shareholders which followed the resolution varying the company's borrowing powers was passed with only one dissentient.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended May 2, 1936, amounted to £10,262,000, against ordinary expenditure of £27,958,000. After allowing for an increase in Exchequer Balances of £73,703, the operations for the week, as shown below, increased the gross National Debt by £17,994,000 to approximately £7,941 millions.*

(000's omitted)			
Treasury Bills	+ 7,563	National Savings Certificates	— 50
Public Department Advances	+ 10,110	N. Atlantic Shipping Issues	— 20
Land Settlement Advances	+ 10	British Shipping Issues	— 19
	+ 18,683		— 89

* Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt at March 31, 1936, appeared in the *Economist* for April 4, 1936.

* Includes £5,000, the proceeds of which were not carried to the Exchequer within the period of the Account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £45,000,000 Treasury bills were opened on May 1, 1936, and the total amount applied for was £73,510,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 17s. 4d., about 60 per cent and above in full; Saturday, at £99 17s. 5d., and above in full. The average rate per cent. was 10s. 6-00d. The amount allotted was £45,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1934	£	£	£	£ s. d.
January 5	35,000,000	78,280,000	30,000,000	9 18 11.5

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period May 1st to 10th at 139.38 per cent. The previous rate was fixed as from April 21st at 139.30 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	"Export" market selling rate fixed at 50 bolivianos per £ as from April 1, 1936.
Colombia.*	Sight rate, 175 1/2 pesos per 100 United States dollars on April 14, 1936. This rate applies to holders of permits buying in the "open" market.
Ecuador.	Sight selling rate on New York was maintained in March at 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
Salvador.	Sight rate on March 31, 1936, 2.50 1/2 colones per United States dollar.
Venezuela.	Sight rate on New York, 3.91 bolivares per United States dollar, on April 17, 1936.

* Exchange controls are operative in these countries.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

In general, the trend of the prices of commodities subject to international arbitrage was somewhat irregular during the past week. The improvement in what prices was not maintained, partly as a result of better crop prospects in the United States. Raw sugar prices also showed a sagging tendency. At the Mincing Lane tea auctions, on the other hand, demand for common and low medium grades was quite good at firm prices. At Smithfield market the prices of beef and imported mutton were marked down, but there was little change in the market in provisions. Eggs were slightly dearer than a week ago.

Quotations for raw cotton, which now fluctuates with reports of the progress of the United States crop, were slightly lower. There was no improvement in the demand for Lancashire goods, and many spinners and manufacturers complained of the contraction of orders on hand. Raw jute prices declined slightly. Meanwhile, business in jute goods, as well as prices, remained at a low level, for no progress was made in recent weeks towards a settlement of the dispute between the Indian Jute Mills Association and the "outside" mills. There was little change in the market in other textile fibres.

In contrast to the general trend, prices of iron and steel materials remained firm, but the volume of new business was limited owing to the inability of steelmakers to accept new orders. The stringency in the pig-iron market continued, but the scarcity of semi-finished materials, though still acute, was somewhat relieved by heavy imports of Continental steel. Business in coal was quiet in Cardiff and Sheffield, but slightly more active in Glasgow. Home demand for industrial fuel, especially coke, continued active. At the London Metal Exchange, lead, spelter and tin were marked down, the latter in anticipation of larger shipments from Bolivia. Quotations for copper remained unchanged. The market in vegetable oils and oilseeds was quiet, and the price of rubber tended to sag on the belief that devaluation in France would have an adverse effect on the market.

In the United States the prices of the principal primary products continued their downward trend. Thus Moody's index of the dollar prices of staple commodities stood at 167.0 on Wednesday, against 169.3 a week earlier, 168.8 a month ago and 156.4 on the corresponding day last year.

COAL

SHEFFIELD.—Business in the export coal market continues to be rather quiet, although inquiries for forward delivery are somewhat more numerous. Prices, however, are such that it is difficult to arrange business. Supplies of best large coal are fairly plentiful, but singles and smalls are less easily procurable. Prices of all qualities are fully maintained. In the inland market there is a moderate demand for industrial coal, but orders for households are scanty. The coke market continues very strong, with supplies below demand.

Export prices are: South Yorkshire Hards Association, 19s.-19s. 6d.; washed steam and washed gas doubles, 17s. 6d.-18s.; washed smalls, 14s. 6d.-15s.; screened gas, 19s.-20s. 6d.; Derbyshire and Notts top hards and cobbles, 18s. 3d.-18s. 9d.; washed doubles, 16s. 9d.-17s. Inland quotations at pits: South Yorkshire best, 23s.-25s.; seconds, 20s.-21s.; Derbyshire best house, 22s.-23s.; kitchen, 16s. 6d.-19s. 6d.; best screened nuts, 19s.-20s.; coke, furnace qualities, around 17s. 6d. per ton on rail at ovens.

NEWCASTLE-ON-TYNE.—Shipments from the Tyne last week amounted to 230,670 tons, a decrease of 34,979 tons compared with the same period of last year. The restrictions imposed on Italy are mainly responsible for this decline, although exports generally are dull in Durham gas and coking coal. Northumberland steam collieries are comfortably placed, screened steam being firm under a good demand from Scandinavia, whilst sized coals have a steady sale in the home shipment trade. Patent oven coke of all descriptions continues to be a very firm market, home trade being particularly active.

Current f.o.b. prices for export: **NORTHUMBERLAND.**—D.C.B. screened, 15s.; smalls, 12s. 6d.; Howards, Bentinck, Newbiggin, screened, 14s. 9d.; smalls, 12s.; Tyne Prime, large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main, large, 14s. 9d.; smalls, 12s. 6d.

GLASGOW.—Export business has been brisker during the week, while home-sale and coastwise trade is keeping up. There are still only limited supplies of most sizes of nuts, prices of which remain nominal in some cases. Screened coal prices show little change, but the tendency is easier.

CAR.—In the South Wales coal trade this week interest has centred chiefly on the problem of the distribution of the coal trade of the country under the centralised selling schemes that are to become operative from August 1st next. In view of the serious loss in its export trade, and its hitherto relatively small (between 8 per cent. and 9 per cent.) share of the inland market, the South Wales Executive Board is applying for the inclusion in the scheme of the

Central Council of a provision to the effect that district supply allocations should be on the basis of fixed district percentages of the total trade (inland and export) of the country. This proposal has so far failed to obtain the requisite support of 85 per cent. (in terms of output) of the industry, and this week the Secretary for Mines has been in consultation with the representatives of the inland and exporting districts with a view to ascertaining if their differences can be reconciled without any further statutory intervention.

Business has continued very quiet, with large coals in abundant supply and smalls, particularly sized and washed grades, relatively scarce. Prices are nominally unchanged. The prices tendered for the Egyptian State Railways contract by Germany and Poland are, as usual, lower than those quoted by South Wales owners, but it is anticipated that these orders, aggregating over 320,000 metric tons, will eventually be placed in Wales. Coke is very firm, patent fuel steady, and pitwood unaltered.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 6d.; Black Veins, 18s. 3d.; Western Valleys, 17s. 6d. to 17s. 9d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s. 6d.; seconds, 13s. to 14s.; coking smalls, 14s. 3d. to 14s. 6d.; anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s. 9d.; special foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship, French 24s. 3d., Portuguese 21s. to 21s. 6d.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that business in the iron and steel markets is limited to a great extent by the inability of the steelmakers to accept fresh orders. No increases in the prices of heavy steel will take place before the end of June and, except in special cases, manufacturers are confining their quotations to delivery before that date. In some instances, however, producers are sold well into the third quarter of the year.

In the pig-iron department little relief has been experienced from the stringency which has ruled for so many weeks. Producers are behind with deliveries and practically all the works are operating at capacity. Many consumers are well covered, but there is a strong demand for additional parcels, which in the aggregate reaches a considerable tonnage.

Similar conditions rule in the semi-finished steel industry, where some relief has been experienced by large imports of Continental steel. In this department also works are sold out for many weeks to come, and it is difficult to place orders for some descriptions of British steel.

Business in finished material has been quiet, although there has been no slackening of the pressure to obtain deliveries against contracts.

MIDDLESBROUGH.—Demand for pig-iron for home use is reflected in the shipments which were made from the Tees during April, the total quantity being 1,983 tons, of which only 596 tons went to foreign destinations. The total quantity of manufactured steel shipped from the Tees during the last month was 37,527 tons, of which 24,637 tons went abroad. Actual business in iron and steel is limited by the fact that producers are very heavily booked for some time to come.

No foundry iron is being produced in this area, but it is hoped to get a furnace started by the end of this month. It is understood that foundry pig-iron prices will be increased by 5s. per ton after June 30th. Hematite pig-iron is now in such good demand that makers are having difficulty in meeting requirements. The price for delivery to the end of July is based on the fixed minimum of 77s. per ton for No. 1 grade for deliveries up to July 31st. The price of basic pig-iron has been increased in all districts by 2s. 6d. per ton, but actually the whole of the basic iron produced in this area is being used in the makers' own steelworks. It is understood that, owing to the present heavy requirements, arrangements have been made for substantial quantities of Indian and Russian pig-iron to be imported into this country.

Steel production continues to expand, and the demand for all classes of structural, shipbuilding, and railway material is maintained. Prices of heavy steel are to remain unchanged until June 30th. Heavy steel melting scrap continues in good demand with buyers willing to pay 57s. 6d. per ton delivered.

SHEFFIELD.—The iron and steel market maintains its strength, with business at a high level. Producers of pig-iron are fully booked for some months ahead, and are not prepared substantially to add to their commitments. Demand for foundry iron leads the way, and an increase of 2s. 6d. per ton in the quotation for basic pig iron has not eased the pressure for this material. Forge iron is in good request. Both East and West Coast hematite is in active demand but makers have not much to offer. Common bar iron is a far better market than that for marked and crown bars, although the former is making some progress. The Steel Manufacturers' Association have decided not to revise prices for the present, although there appears every likelihood that quotations for heavy steel will move up at the end of the first half of the year, and in consequence users are endeavouring to purchase for delivery before June 30th. Manufacturers are not, however, anxious to add substantially to their commitments. Basic billets continue in very heavy demand, and acid billets are making good headway. Iron and steel scrap business is good, although the recent imports have eased the pressure on demand to some extent.

Current prices include:—Iron: Derbyshire and Lincolnshire forge 68s. 6d.; foundry, 72s. 6d.; basic, 75s.; Cleveland (Derbyshire zone), 68s. 6d.; East Coast hematite (mixed numbers), 82s. 6d.; West Coast, 90s. Steel: Basic billets, £7 to £8 12½d.; acid carbon billets, £8 10s. to £8 15s.; soft wire rods, £9 8s. 6d.; hard ditto, £12 17s.

GLASGOW.—In most branches of the iron and steel trades the situation is unchanged. Plants are exceedingly busy and still have much work on order books. Exceptionally, the tube makers, while keeping a fair proportion of plant in operation, are not so well placed as other branches in regard to work still on hand. Manufacturers are also fully employed, but are having difficulty in securing prompt delivery of adequate supplies of their materials. At the Clyde ship-repairing yards there is much work on hand at the moment, several extensive repairs both to ships and machinery being in progress.

CARDIFF.—Quiet conditions have been ruling in the tinplate trade during the past week. On the Swansea Metal Exchange on Tuesday there were complaints that Germany was undercutting other members of the International Cartel, and it is stated that these would be considered together with Germany's application for an increased export quota at a meeting to be held in Paris this month. Local prices were unchanged on the basis of 18s. 9d. f.o.b. per basis box. Shipments of tinplates at Swansea last week were exceptionally large and totalled 98,733 boxes, compared with 49,127 boxes the previous week, and 67,509 boxes a year ago. Deliveries to warehouses, however, were also heavy, and stocks were only about 1,000 boxes less than a week earlier. Galvanized sheets were quiet and prices were unaltered at £11 15s. per ton. Steel sheet and inplate bars were unchanged at £5 15s. to £6 per ton.

OTHER METALS

COPPER.—This market is at present overshadowed by the uncertain political and economic outlook; prices show little change, although the statistical position continues to improve. Demand seems likely to be well maintained in the near future. Producers are sold out for many weeks ahead, and home warehouse stocks continue their downward movement; these stocks are now about 20,000 tons smaller than at the end of 1935.

Sales on the London Metal Exchange: 1,500 tons on Monday, against 400 tons last week; 750 tons on Tuesday, against 1,375 tons last week; 1,500 tons on Wednesday, against 1,800 last week. Domestic spot was quoted at 8-97½ cents per lb. in New York on Wednesday, against 8-92½ cents a week ago and 8-87½ cents a month ago. Wednesday's official closing price for standard, cash in London, was £37 to £37 1s. 3d., compared with £37 to £37 1s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 61,438 tons, show a decrease of 711 tons, while stocks of rough copper, at 5,867 tons, show a decrease of 500 tons on the week.

LEAD AND SPELTER.—Both metals were easier this week, in response to the general uncertainty. Demand for lead remains good, and world production fell to 128,700 short tons in March, against 131,968 short tons in February and 139,393 short tons in January—in consequence of a smaller output in countries outside the United States. Since 1934 consumption of lead has increased by at least 20 per cent., while production remained practically unchanged; the statistical position, therefore, has improved.

Lead is now £1 per ton dearer than spelter. Meanwhile, spelter suffers from the lack of definite news concerning the Cartel negotiations. Demand remains rather dull, and production is rising. According to the American Bureau of Metal Statistics, world spelter output rose from 119,823 short tons in February to 132,484 short tons in March, about half of this increase being accounted for by the United States, which, however, is not much interested in the European market.

Sales of lead on the London Metal Exchange: 700 tons on Monday, against 850 tons last week; 400 tons on Tuesday, against 650 tons last week; 500 tons on Wednesday, against 350 last week. The New York quotation on Wednesday was 4-60 cents per lb., against 4-60 cents a week ago and 4-60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 17s. 6d. per ton, compared with £16 5s. a week ago.

Sales of spelter on the London Metal Exchange: 200 tons on Monday, against 375 tons last week; 50 tons on Tuesday, against 200 tons last week; 200 tons on Wednesday, against 850 last week. Wednesday's quotation in East St. Louis was 4-90 cents per lb., against 4-90 cents the week before and 4-90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 17s. 6d. per ton, against £15 last week.

TIN.—Prices eased this week and, for the first time since February, the three-months quotation fell below £200 per ton. This fall is surprising in view of the sharp reduction of 1,512 tons in visible supplies in April, which amounted to 15,110 tons at the end of last month, according to Messrs A. Strauss and Company; home warehouse stocks also fell last week. The conviction is, however, gaining ground in market circles that Bolivian supplies will now come in more freely. Bolivia is, of course, anxious to prevent the International Committee from relaxing the quotas, at its meeting on May 26th, and since large quantities of tin are believed to have been held back in anticipation of the recent devaluation in Bolivia, shipments from that source may show a rise in the near future. According to the Metallgesellschaft, however, the output of Bolivia's tin mines sank to a new low level of 1,460 metric tons in March, against 1,721 metric tons in February, and a monthly average production of 2,117 metric tons in 1935, when the quota was smaller. The figures indicate that Bolivia's labour troubles have been increasing in recent months. In view of the length of time required to acclimatise workers to the difficult atmospheric conditions which prevail in the regions of the Andes where the Bolivian mines are situated, it cannot be assumed that these labour difficulties have yet been solved.

Sales of tin on the London Metal Exchange: 225 tons on Monday, against 75 tons last week; 135 tons on Tuesday, against 85 tons last week; 80 tons on Wednesday, against 205 last week. The New York quotation on Wednesday was 46-75 cents per lb., against 46-62½ cents a week ago and 47-12½ cents a month ago. Wednesday's official closing quotation in London for standard cash

GENERAL MINING AND FINANCE CORPORATION, LIMITED

(Incorporated in the Union of South Africa)

ABRIDGED REPORT OF THE DIRECTORS FOR THE YEAR 1935. To be submitted at the Annual General Meeting to be held in Johannesburg on 9th June, 1936

Working profit for the twelve months ended 31st December, 1935, after deducting administration expenses, amounted to	£361,387	3	0
Unappropriated balance brought forward from 1934 was	116,846	4	9
Making the total available profit	£478,233	7	9
Which has been dealt with as follows:—			
Interim Dividend No. 19 of 7½ per cent., equal to 1s. 6d. per share, paid to all shareholders registered on the 21st September, 1935	£94,843	8	6
Final Dividend No. 20 of 12½ per cent. (making a total of 20 per cent. or 4s. per share for the year)	158,072	7	6
Amount provided for taxation	10,000	0	0
Amount placed to General Reserve	100,000	0	0
Leaving a balance of unappropriated profit to be carried forward of	£115,317	11	9

It will be seen from the Balance Sheet that the amount of £1,710,694 shown under the heading of Stocks and Shares, British, South African and other Government and Municipal Securities, including Participations, exceeds last year's figure by £80,935, representing additional investments made during the year, mainly in gold mining shares. All the Corporation's investments have again been taken into the Balance Sheet at or under market prices as at 31st December, 1935, the margin between the Balance Sheet Valuation and actual market value being very considerable.

After provision had been made for a total of 20 per cent. in dividends, for taxation, and for addition to General Reserve, an amount of £115,317 remained to be carried forward to next year's accounts. It will be seen that while the dividends have been maintained, the General Reserve has been increased by a further £100,000 to a total of £400,000.

The principal interests of the Corporation are in the following companies: Van Ryn Gold Mines Estate Ltd., West Rand Consolidated Mines Ltd., East Rand Proprietary Mines Ltd., Durban Roodepoort Deep Ltd., Phoenix Oil and Transport Co. Ltd., and Metral Traders Ltd. In addition to the above, the Corporation has important interests in other Rand gold mining companies, including Crown Mines Ltd., West Witwatersrand Areas Ltd., and Vogelstruisbult Gold Mining Areas Ltd.; in the case of the two latter as participants in the original issues of capital. The Corporation also holds various mining properties, real estate and leasehold property, &c.

Dr.	BALANCE SHEET at 31st DECEMBER, 1935.		Cr.
To Capital—			
Registered :			
1,500,000 Shares of £1 each	£1,500,000	0	0
In Reserve :

Copies of the full Report and Accounts can be obtained at the London Office of the Corporation, Winchester House, Old Broad Street, E.C.2.

was £205 to £205 10s. per ton, compared with £207 15s. to £208 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 711 tons, a decrease of 200 tons on the week.

TEXTILES

COTTON.—Manchester.—There has been less activity in the cotton industry during the past week and more complaints have been received from spinners and manufacturers regarding the manner in which order lists are running down. The export section remains particularly disappointing. Business for most of the markets has been of a restricted character, and there are certainly no indications at the moment of any improvement in turnover. Many buyers appear to fear a downward movement in raw-cotton prices. Wider fluctuations are probable in the near future, especially as the American crop will very soon be approaching the critical stage in its growth. It is generally realised, however, that the Washington Government is controlling supplies and the Government holding is being marketed in an orderly fashion.

Following the success of the price agreement for coarse American yarns, attempts are now being made by spinners of medium yarns to formulate a similar agreement. This section of the industry comprises the bulk of the mills, but the committee, under the chairmanship of Mr. Frank Platt, the managing director of the Lancashire Cotton Corporation, is confident that progress can be made and that spinners will band together to prevent price cutting. There has certainly been a greater readiness to form a price-fixing agreement, especially as producers are now able to see the beneficial effects of the agreement covering coarse yarns.

JUTE.—Dundee.—No further progress has been made towards a settlement on the question of working hours in Indian jute mills. It is understood that the Indian Mills' Association is leaving the door open for the "outside" mills to comply with the terms of the association. The feeling in India is that when the "outside" mills find that, owing to the depression of prices through increased production, long hours do not necessarily ensure profits by the associated mills, they will be more ready to fall in with the policy of the association. The mills in the association, with their large stocks of jute bought at cheap prices, seem to have the advantage over their competitors, who are compelled to pay the present comparatively higher rates for their raw material and sell goods at the low level of prices to which these have fallen.

After a spell of unfavourable weather for sowings, jute crop reports are quite satisfactory again. This gives rise to the belief that the new crop will be considerably larger than last year's. Last year's crop, as far as can be estimated at present, probably amounted to about eight million bales. On the other hand, it is stated that crop restriction is being pursued amongst the growers with as much vigour as last year and that the likelihood is that the outturn of next season's crop will be considerably below world requirements. Under the new system of working and the steady increase in consumption of jute cloth, world consumption of raw jute will probably reach approximately eleven million bales.

Yarns have ruled very quiet, but buyers are finding spinners very firm in their terms. The lowest rate for common 8-lb. cops is 2s. and for 8-lb. spools 2s. 1d. Twist is selling at 3 1/2d. for 3-ply 8-lb., and sacking yarns are also unchanged at 2 1/2d. for 24-lb. weft and 3 1/2d. for 8-lb. chains. Rove rules at £20 for 48-lb. and £16 for 200-lb., and the finer yarns are slow, but unaltered notably.

Only small lots of jute cloth are being bought as a rule. Manufacturers, however, cannot afford to reduce their terms and 2 1/2d. continues lowest for 10-oz. 40-in. hessians and 2d. for 8-oz.

Calcutta goods have been more or less maintained, with slight fluctuations from day to day.

GRAIN MARKETS

WHEAT.—The trend of wheat "futures" was slightly downward during the past week, partly owing to reports of improved prospects of the winter wheat crop in the United States. Business was not on a large scale, but shipments by exporting countries registered an increase last week. Crop reports are likely to exert considerable influence on the trend of wheat prices during the next few months.

On Wednesday last, "May" futures were quoted in Chicago at 96 1/2 cents per bushel, against 97 1/2 cents the week before and 94 1/2 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 32s. 6d. per 496 lbs., against 33s. to 33s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 32s. 1 1/2d., against 32s. 6d. to 33s. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,237,000 quarters, against 896,000 in the previous week and 1,130,000 quarters in the corresponding week a year ago.

FLOUR.—Business in home-milled flour continued quiet, and quotations for Canadian flour were marked down a little. Wednesday's London quotations (excluding quota payments) were: Straight

run, delivered Home Counties, 29s. per 280 lbs., against 29s. 6d. a week ago; delivered inner London, 28s. 6d., as compared with 29s. a week ago. Manitoba patents, ex store, 26s. to 27s. 9d., against 26s. 3d. to 28s. a week ago. Australian, ex store, 22s. 6d. to 23s., against 22s. 6d. to 23s. a week ago.

BARLEY.—Following a decline in the price of Canadian barley, business in this country showed some improvement. Supplies from other exporting countries are now limited. "May" futures were quoted at 37 1/2 cents per bushel in Winnipeg on Wednesday, against 37 1/2 cents a week ago and 38 1/2 cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 22s. 6d., as against 22s. 6d. a week ago; "English Malting" at farm, 25s. to 40s., against 25s. to 40s. a week ago.

OATS.—The market in oats remained quiet, and prices in this country are unchanged on the week. On Wednesday, "May" futures were quoted at 26 1/2 cents per bushel in Chicago, against 25 1/2 cents a week ago and 26 1/2 cents last month. Quotations in London, Wednesday: "English Black," at farm, 18s. to 19s. per 336 lbs., against 18s. to 19s. a week ago; "English White" at farm, 18s. to 19s., against 18s. to 19s. a week earlier.

MAIZE.—Owing to the persistent demand for Argentine maize, last week's improvement in prices has been maintained. "May" futures were quoted on Wednesday at 62 1/2 cents per bushel in Chicago, against 63 cents a week ago, and 59 1/2 cents last month. Quotations in London, Wednesday: "Plate," landed, 20s. per 480 lbs., compared with 19s. 9d. a week ago; "Plate," ex ship, 19s., as against 19s. a week ago; "Plate," "May," 18s. 6d., as against 18s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £5 7s. 6d. per ton, as against £5 5s. to £5 7s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to May 2	104,449	148,199	181,232	213,392
35 weeks to May 2	7,742,745	9,647,604	11,744,399	11,847,706
Average price of English wheat per cwt.	s. d. 5 3	s. d. 4 5	s. d. 5 3	s. d. 6 8

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Apr. 30, 1932	Cwts. 123,779	Cwts. 16,908	Cwts. 29,350	s. d. 6 0	s. d. 7 5	s. d. 7 7
Apr. 29, 1933	104,449	29,960	17,566	5 3	6 5	5 8
May 5, 1934	148,199	23,207	23,514	4 5	7 8	6 0
May 4, 1935	181,232	34,778	27,962	5 3	7 1	7 0
Apr. 25, 1936	156,168	28,876	22,415	6 7	7 4	5 11
May 2, 1936	213,392	28,177	31,324	6 8	7 4	6 1

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	May 8, 1935	Dec. 31, 1935	Apr. 29, 1936	May 6, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	85 1/2	82 1/2	86 1/2	84 1/2	79 1/2	78 1/2
Chicago (No. 2 Winter) —Cents per 60 lb.	84 1/2	88 1/2	75 1/2	75 1/2	97 1/2	96 1/2

The visible supply of wheat in Canada amounts to 109,107,000 bushels, against 108,871,000 bushels last week, and 108,263,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—The market has been steady to firm this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 88s.; Canadian, 83s.; Danish, 92s.; as against 85s. to 88s., 80s. and 92s., respectively, a week ago. Arrivals in London last week included Danish, 12,956 bales; Canadian, 4,248; Dutch, 2,726; Lithuanian, 1,797; and Polish, 2,669, as against 12,338, 4,397, 2,450, 1,768 and 2,795, respectively, in the previous week.

BASIC PIG PRICE.—The Pigs Marketing Board announced this week that, in accordance with the provisions of the present contract, the ascertained price of green Wiltshire style bacon is 89s. 8d. per cwt. and the ascertained value of offals is 9s. 10d. The ascertained cost of feeding stuffs, as certified by the Ministry of Agriculture and Fisheries, is 7s. 8 1/2d. per cwt. In accordance with the price schedule embodied in the contract, the price of the Class I, grade C pig, for the month of May is 11s. 4d. per score, against 11s. 7d. in April and 10s. 11d. in the same month of last year. The curers will also pay to the Pigs Marketing Board 2d. per score on every pig delivered and accepted during this year, to form a pool out of which will be paid the bonus on pigs delivered during the first four months of the year, in accordance with the 1936 Bonus Scheme.

BUTTER.—Demand was rather quiet this week. Colonial descriptions were about steady in price, but Danish was again rather easier. Quotations (per cwt.) on the London Provision Exchange

on Wednesday were: New Zealand, finest salted, 88s.; Australian, choicest salted, 88s.; Danish, 100s.; compared with 88s., 87s. and 102s., respectively, a week ago.

CHEESE.—The market has had a firm tone this week. Colonial makes having risen in price. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 80s. to 86s.; Canadian, finest coloured, 64s. to 66s.; and New Zealand, finest coloured, 55s.; against 80s. to 86s., 64s., and 53s. 6d. to 54s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 5 1/2 cents per lb., as against 5 1/2 cents per lb. last week. The strength of the London market in Accra cocoa continues, and prices show a further rise this week. On Wednesday last, good fermented new crop, "May-June," was quoted 24s. 10 1/2d. per 250 kilos., c.i.f. Continent, against 24s. 3d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 8,294 bags; delivered, for home consumption, 9,227 bags; exported, 726 bags; stocks, 164,728 bags, against 195,196 bags a year ago.

COFFEE.—The London spot market was quiet on Monday. At Tuesday's public auctions Costa Rica descriptions met a moderate demand at steady prices. Kenya and East India sorts, however, encountered a slow sale. The New York market has had a steady tone this week. On Wednesday, Rio No. 7 (cash) was quoted at 6 1/2 cents per lb., as compared with 6 1/2 cents per lb. last week and 6 1/2 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 159 cwt.; delivered, for home consumption, 110 cwt.; exported, nil; stocks, 11,509 cwt., against 17,732 bags a year ago. Central and other South American, landed, 8,142 cwt.; delivered, for home consumption, 2,160 cwt.; exported, 1,454 cwt.; stocks, 125,473 cwt., against 108,727 packages last year. Other kinds, landed, 7,870 cwt.; delivered, for home consumption, 3,937 cwt.; exported, 1,095 cwt.; stocks, 181,823 cwt., against 128,913 packages last year.

EGGS.—With smaller supplies and an active demand, prices of eggs have risen slightly during the past week. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15 1/2 lb.) realised 10s. 6d. to 11s. per 120, as against 10s. to 10s. 6d. last week, while Danish (15 1/2 lb.) made 8s. 9d. to 9s. per 120, against 8s. 6d. to 8s. 9d. last week.

FRUIT.—Business at Covent Garden has been satisfactorily maintained, arrivals generally clearing well. According to *The Fruitgrower's* report, there has been a steady inquiry for all new season apples, quotations being only slightly easier notwithstanding the heavier arrivals. Pears are not moving quite so well, but maintain their price. Grapes, however, continue to sell freely, while peaches are a little more prominent. Forced strawberries are now in increasing supply and encounter a fair inquiry. Grapefruit sell rather better, with the improvement in the weather, and all good parcels of oranges meet an active demand. South African summer season oranges will be arriving next week. Lemons remain in short supply and are still dear, although trade is not so good as has recently been the case.

MEAT.—After a fair trade on Monday, the tone of the market turned very slow and prices showed a sagging tendency. On Wednesday last Argentine chilled hindquarters were quoted at 3s. 2d. to 3s. 8d. per 8 lbs., as compared with 3s. 8d. to 4s. a week ago. New Zealand frozen mutton was 3s. 4d. to 3s. 10d. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,728 tons, a decrease of 2,012 tons on the corresponding week last year. Beef and veal accounted for 4,627 tons, mutton and lamb 2,693 tons, and pork and bacon 835 tons, as compared with 5,483, 3,686 and 1,065 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampong (in bond) was 2 1/2d. per lb., against 2 1/2d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 9 tons; delivered, 22 tons; stocks, 1,704 tons, against 2,213 tons a year ago. White, landed, nil; delivered, 60 tons; stocks, 12,397 tons, against 19,689 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. per cwt. ex warehouse on Wednesday, as compared with 9s. per cwt. a week ago. "May-June," in singles to Continent and U.K., was quoted at 7s. 10 1/2d. per cwt., against 8s. per cwt. for "April-May" last week. Movements in London during the past week were as follows: Landed, 676 tons; delivered, 329 tons; stocks, 1,286 tons, against 3,034 tons a year ago.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks.

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
May 2, 1935	d. 11-93	d. 14-26	d. 16-42	d. 10-28	d. 8-91	d. 10-51	d. 13-04
Mar. 26, 1936	12-97	14-05	15-45	11-06	10-73	12-04	13-49
Apr. 2, "	12-91	13-33	15-84	10-36	10-47	11-98	13-43
Apr. 7, "	12-73	14-74	15-95	Nil	Nil	11-78	14-30
Apr. 23, "	12-67	14-00	15-99	11-00	10-47	11-95	13-41
Apr. 30, "	12-79	13-66	16-05	10-94	10-49	11-99	13-48

This week's offerings at the public auctions in Mincing Lane comprised 51,524 packages of Indian and 24,428 packages of Ceylon tea. The low-priced Indian teas remained firm, while medium grades occasionally scored a slight advance. At Tuesday's Ceylon auctions, however, the market was quieter than of late. Teas up to 1s. 2d. per lb. were fully firm, but above this price the market was irregular and easier, especially for light liquoring broken Orange Pekoes. Fannings met a strong market, while export demand for flavoured Pekoe remained good.

SUGAR.—An easier tendency has been in evidence this week prices, both in London and New York, having declined. The spot price in New York on Wednesday was 3.72 cents per lb., as compared with 3.75 cents per lb. last week and 3.75 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "May delivery" at 4s. 9d., against 4s. 10d. to 4s. 10 1/2d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 8,701 tons, against 1,841 tons last week and 14,333 tons in the same week of last year; deliveries, 19,258 tons, against 17,367 tons last week and 19,600 tons last year; stocks, 204,493 tons, against 215,050 tons last week and 156,175 tons last year.

VEGETABLES.—The leading lines of vegetables generally maintain their recent level of prices, states *The Fruitgrower's* Covent Garden report. Worcestershire asparagus has been prominent this week and arrivals are expected to increase daily. House-grown beans and green peas are inclined easier. Demand for tomatoes is improving, but increasing supplies have been accompanied by a drop in quotations. Cucumbers are doing better, but lettuce is much cheaper, on heavier Continental arrivals. Kitchen greenstuff was again firm last week-end. Outdoor rhubarb is now more plentiful and cheaper. Demand for new potatoes is well maintained, but Spanish are now rather easier; some arrivals from Jersey are expected next week. At the London Borough Market on Tuesday, Spanish Mataros were quoted at 18s. a cwt., against 19s. to 20s. last week, while best siltland King Edward, old potatoes, made from 8s. 6d. to 9s. per cwt., compared with 8s. 6d. to 9s. 6d. on the same day last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Extremely quiet conditions prevail in oilseeds and their products. In no direction is there any disposition to buy more than needed for immediate requirements, and these are small. So far as English crushers are concerned, Plate linseed is neglected and out of line with Indian, which is now pressed for sale in near positions, and is cheaper. Continental demand has fallen off. Shipments from the River Plate are rather heavier, and there has been some increase in the quantity afloat for Europe, the total of 133,900 tons, including 37,300 tons from India. To the end of April Argentina had exported 567,000 tons, against 792,000 tons a year ago, and India 78,200 tons against 14,000 tons. The quantity destined for Europe was 511,400 tons, or 86,000 tons less, and for the United States 112,500 tons, or 60,000 tons less, than during the same period last year. The estimated balance available from Argentina and India is 900,000 tons, as against 1,200,000 tons actually shipped in the remainder of 1935. Cottonseed is in poor demand, but is steady. For new black Egyptian, October-November shipment, £6 7s. 6d. is quoted.

Trade in all vegetable oils is slow, and prices have an easier tendency. Linseed oil has declined to £25 10s., ex Hull, May delivery, and June-August. Cotton oil is dull in the absence of export demand. Egyptian crude, ex Hull, is offered freely at £24, and refined at £26 10s. Edible oils are affected by supplies of cheap butter. Demand for oilcakes is falling off.

POTASH.—In recent weeks potash prices have become slightly firmer, and price-cutting has ceased. With the exception of Russia, all the important producers are now co-operating in the international cartel; and Russia has ceased to cut prices, because she fears that the continuance of this practice would lead to reprisals in the shape of higher import duties and more rigid quotas in certain countries. According to a statement by Dr. Korte, at the meeting of the well-known German potash concern, Burbach-Kaliwerke A.G., German potash sales amounted to 6.7 million quintals of K₂O during the first four months of 1936, showing no change compared with the corresponding period of last year. On the other hand, the Polish potash industry—which is co-operating with the cartel—increased its total sales by 20 per cent., compared with the first four months of 1935.

RUBBER.—Despite the steady improvement in the statistical position of rubber, which is not likely to be arrested by the increase of quotas during the second half of 1936, quotations tended to sag during the past week. The weak tendency of the market is generally ascribed to the fear of a devaluation of the franc which, it is believed, might have a depressing effect on commodity markets.

The spot price in New York on Wednesday was 15½ cents per lb., compared with 15½ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., against 7½d. last week. In forward positions, business has been done at 7½d. for July-September shipment, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 139,750 tons, against 141,354 tons a week earlier. A year ago stocks amounted to 166,626 tons.

FURS.—The London Spring auction series continued to attract buyers this week, but offerings remained below normal, owing to

the general scarcity of supplies. Owing to last year's drought, American supplies are particularly scarce and United States purchasers were the most active of all visitors; but considerable quantities were also bought by France, Germany and the home trade. In some cases, however, a large proportion of the skins on offer was withdrawn in anticipation of higher prices. The new Polish exchange control caused much reserve in some circles, since Poland is one of the chief fur-importing countries. But this reserve was partly counterbalanced by hedging purchases in connection with French currency fears. The chief price gains compared with the January and February sales were as follows:—Fine grey wolf, 50 per cent.; prairie wolf, 45 per cent.; wolverine, 12½ per cent.; wild mink, 27½ per cent.; ranch mink, 15 per cent.; cross foxes, 25 per cent.; white foxes, 22½ per cent.; blue foxes, up to 15 per cent.; Canadian lynx, 35 per cent.; Siberian lynx, 10 per cent.; Persian lamb, 5 per cent. most of the Indian lambs were withdrawn, and Baum marten fell by some 12½ per cent.

HIS MAJESTY'S GOVERNMENT

SELDOM in this country can the immediate political future have been more difficult to predict than at present, and seldom can the public have been more confused about issues and personalities at once. Two successive shocks to public confidence have been the cause of this confusion: the Hoare-Laval episode last December and the sudden collapse of the Abyssinian armies a few weeks ago. The first struck a most damaging blow at Mr Baldwin's reputation and weakened the average man's belief in the sincerity of the Government's foreign policy. The second provoked the widespread suspicion that the British Government, at a time of severe crisis, had shown itself not only disingenuous but incompetent.

The second shock has probably gone deeper than the first. To be disappointed over men is bad enough. But to be deceived over facts and policies is worse. Last December the public confidently believed that it knew what the right policy was: an uncompromising defence of treaties and of the Abyssinian people; and it believed that the influence and resources of the League and the British Empire were sufficient to carry it out. When, therefore, Mr Baldwin and Sir Samuel Hoare swerved from this policy, it was Mr Baldwin and Sir Samuel Hoare who suffered. Sir Samuel Hoare went, and Mr Baldwin—so it was understood—had changed his mind.

Of the loss of reputation involved in this apparent double-somersault by the Prime Minister there can now be little doubt. The public's picture of Mr Baldwin has at long last changed. The simple country gentleman, who had replaced the professional politicians and brilliant opportunists of the war period; the spokesman of the nation's prejudices, who espoused theorists and showed a genius for convenient compromise; the non-politically-minded lover of life and the countryside, who had somehow or other become the leader of the Conservative Party and three times Minister—could it be that he had acquiesced in M. Laval's discreditable manoeuvre,

misled the House of Commons, and even thrown overboard his friend? This seemed altogether incredible. And the only alternative was to think of Mr Baldwin as a leader who had lost grip, who knew neither what ought to be done nor what could be done, who was drifting ineffectively unwilling either to act or to resign.

This impression of indecision has in no way been removed by the statements made by Mr Baldwin since the news of the Emperor's flight was flashed from Ethiopia. Though "deeply humiliated," he stoutly maintained that his supporters at the Albert Hall on Thursday that he "did not intend to accept blame for what had happened." He told his audience that if we were to pursue a policy of collective security, military sanctions might in the long run be unavoidable. Was this his opinion when he embarked on sanctions policy last autumn?

Naturally, as this new and disillusioning picture of Prime Minister has gradually taken possession of the public mind, a general discontent with the present conduct of the nation's affairs has begun to appear. Great Britain's conduct on the international scene. This discontent, in fact, has not been diminished by the affair of the "leakage"—is by this time unmistakable. But it is not yet taken the form of a concrete demand for an alternative Government, or an alternative policy. It is a general feeling that the Government, or an alternative policy, is not doing what ought to be done next.

Of attempts by rival political groups to exploit Baldwin's decline there have, of course, been plenty. They hardly look like succeeding. The Labour Party led the attack on the Government's foreign policy, but a persistent hope that Mr Eden might prevail in the Cabinet has kept the Labour Party

reluctant to degrade so supremely important an issue to the level of party controversy. Mr Attlee has gained in reputation both in the House and the country. The recent Peckham by-election, however, shows that, though Labour would probably do better to-day than last November, the public is as yet far from thinking of it as a possible alternative Government. So widely is this admitted that even supporters of the Labour Party have begun to discuss the possibility of forming a "Popular Front" in this country.

In these circumstances Conservative ex-Cabinet Ministers have naturally been found among Mr Baldwin's critics. Sir Samuel Hoare has done his best to preserve a decorous silence. But Sir Austen Chamberlain and Mr Winston Churchill have repeatedly attacked Mr Baldwin; and the political gossip, recalling the fall of Mr Asquith in 1916 and of Mr Lloyd George in 1922, have played knowingly with the names of Sir Robert Horne, Lord Eustace Percy and even Lord Hewart. It is doubtful whether the public—outside the lobbies and clubs—is much excited by these alleged manoeuvres. Least of all does Sir Austen Chamberlain impress. For though Sir Austen's vacillations in recent months may have been more dignified than Mr Baldwin's, they have certainly been no less frequent. When the Peace Ballot was first organised, Sir Austen vehemently opposed it. Last autumn, on the other hand, when the invasion of Abyssinia began, Sir Austen was all for sanctions. He opposed the Hoare-Laval plan and attacked Mr Baldwin soon afterwards. Yet last week, when the flight of the Emperor was announced, he precipitately declared for abandoning the struggle and calling off sanctions at once.

Nor does Mr Winston Churchill command very much more confidence. He has succeeded in creating the impression that if he were Prime Minister he would pursue some definite policy with determination and courage; but what that policy would be, he has unfortunately not yet made clear. If a point had been reached in international affairs where some specific and undisputed policy had to be carried out, the country might turn to Mr Churchill. But that point has not been reached; and until it has been, the country is no more likely to repose confidence in Mr Churchill, whom it slightly mistrusts, than in Sir Samuel Hoare, in whom it is disappointed, or Sir Robert Horne, whom it has forgotten.

Up till a few weeks ago the political group which would have won widest support would probably have been Mr Eden and his Left-wing Conservative supporters, Mr Ormsby-Gore, Mr Elliot, Mr Duff-Cooper and others—conceivably led by Mr Neville Chamberlain. For such a group seemed the most likely to win support for the policy on which the country's heart was set: the defence of the League against Italian aggression. Now, however, the flight of the Emperor has provoked doubts whether such a policy is any longer possible. Nevertheless, if these doubts could be allayed, and if it could be shown that a resolute sanctions policy might save the situation, the statesmen or statesmen that advocated it would clear away confusion and win almost unanimous support.

But the truth is that a Government can only be overruled if there is both an alternative group of men and an alternative policy that command general allegiance. A mere collection of picturesque personalities, bound together by no name or principle, is not enough. Mr Lloyd George led Mr Asquith in 1916 because there was a general and unmistakable demand for a ruthless prosecution of the war. Mr Bonar Law succeeded Mr Lloyd George in 1922 because there was an equally general demand for a return to "normalcy" and tranquillity. With these Mr Lloyd George and Mr Bonar Law respectively were easily identified. To-day, the Conservative Government who have held high office are a hazy and ill-defined group; but it is only necessary to look at Sir Samuel Hoare, Mr Winston Churchill, Lord Eustace Percy, and even Mr Baldwin himself, to see that there is no answer that has any idea.

Then, it is believed, how still stands for the forward League policy which the country endorsed in 1922. If, therefore, the Cabinet could even now find a common ground, except that policy wholeheartedly, and in the certainty of its practicability, the reputation of the Government and even of Mr Baldwin himself, would be otherwise the prevailing confusion. B. G. (rest) Santos No. 10. Confounded.

MUSSOLINI'S PEACE?

IN the course of the past week Signor Mussolini has deliberately and decisively made it impossible for the sanction-taking States-members of the League to become his accessories after the event, unless they are prepared to drink the cup of dishonour and humiliation to the dregs. We may be grateful to him, even though our admission of the debt is virtually a confession of the fear that, if he had left us even the smallest hole to squeeze our way through without patent loss of face, we might have been tempted to make a "get-away" from the scene of our present diplomatic and moral reverse.

But so far from building us a bridge (if possible, crowned with a triumphal arch) for evacuating the battlefield on which he momentarily has the advantage over us, he has presented us with the choice between standing our ground or passing under the yoke through which the Samnites made the Romans pass when they let them out of the Caudine Forks. It is possible, of course, that within the next few weeks Signor Mussolini may succeed in forcing upon us this extremity of disgrace. But it is also possible that the worm may turn, and that Signor Mussolini may yet live to regret that, at this momentous hour, he refused to stoop to Bismarckian arts. With your virtuoso in the Machiavellian game, it is a fundamental principle never to humiliate or embitter a defeated opponent beyond the measure strictly necessary for the attainment of one's own aims. The hardest fight in Bismarck's life was his fight on this issue with the Prussian General Staff after the overthrow of France in 1871. And Bismarck was right; for the Caudine Forks are never the last chapter in the story. In the classic case, the trial of strength was promptly resumed; and when the story did reach its *dénouement*, the sorely humiliated Romans emerged the victors.

It is in this light that we should view Signor Mussolini's action last Saturday night, when, from the balcony of the Palazzo Venezia, he announced to the crowd in the Piazza the passage of a law declaring that the territories and the peoples that had belonged to the Empire of Abyssinia were now placed under the full and entire sovereignty of the Kingdom of Italy, and that the King of Italy had assumed the title of Emperor, for himself and his successors. On Thursday, the Chamber of Deputies approved the annexation decree.

The most significant result of this step was its effect in France, where it gave a shock to public opinion of all shades, not excluding the extreme Right, whose Fascist proclivities have hitherto been reflected in a strong sympathy for the Italian creator of the Fascist idea. To English minds, it may seem a matter of trivial importance whether Signor Mussolini calls the totalitarian possession of Abyssinia, which he unquestionably means to have, by the name of "sovereignty," or "protectorate," or what not. But to French minds the legal formula manifestly makes a difference. The "brutality" of this outright annexation seems at last to have produced an impression in France which was not produced by bombs or breaches of treaty or clouds of poison gas. This may prove to be a serious matter for Signor Mussolini; since French complacency, more than any other single factor, has been the cause of his victory over the League of Nations up to date.

The French Government seem to have entreated him earnestly not to take this extreme and perhaps irrevocable step. Now that he has taken it, the teeth of their appeal for moderation, they have retorted more sharply than at any previous stage of the conflict. They have quickly informed the Italian Government that France maintains all reservations in regard to this would-be judicial *fait accompli*, and that she continues to recognise the status of the Abyssinian Minister in Paris. If this be the attitude of the outgoing French Government we may look forward to a distinctly firmer line when M. Blum takes the reins of power. It was not for nothing that Mr Attlee paid him a visit last week. In his speech last Sunday at the meeting of the National Council of the French Socialist Party, the French Prime Minister of to-morrow declared that in the foreign field there were many wounds to bind up and much damage to repair, and that the task of the new regime in France would be to restore the peace-loving confidence of Europe, re-create international co-operation, and revive the early hopes of the League.

If Mr Eden has the personal strength, and the backing from his colleagues, which he needs if he is effectively to grasp the French hand that is thus at last being held out to him; there is still a prospect that an Anglo-French co-operation, even at this late hour, for the frustration of the aggressor, may reap its proper reward in the shape of a rally of the smaller European Powers.

The Latin-American States-members of the League, who live under the aegis of the Monroe Doctrine, can perhaps afford to yield to a natural irritation at the present ineffectiveness of the League and play with the idea of giving it up as a bad job. But this cannot be the last word or gesture of the small States in Europe, who are as little capable as the Latin-Americans are of defending themselves by their own unaided strength, and who at the same time have no alternative umbrella if Signor Mussolini rips up the League Covenant.

On the eve of the meeting of the Council this week the several groups of European small States—Balkan Entente, Little Entente, Baltic Entente and ex-Neutrals—all held consultations. Of these, the meeting of the Foreign Ministers of the ex-Neutral States at Geneva last week-end was the most significant—partly because this group of States carries greater moral weight than the rest on account of the high level of civilisation for which it stands, and partly because these ex-Neutrals will have been more grossly cheated than the Central and East European post-war successor States if collective security under the Covenant irretrievably breaks down. They will have been cheated because, in subscribing to the Covenant, they abandoned the alternative form of security which they had previously found in a studious cultivation of neutrality. And though this neutrality policy had not been an entirely sure shield against attack (as witness the experiences of Denmark in 1864 and of Belgium in 1914), it could hardly be less effective than the Covenant has been for the protection of Abyssinia in 1935-36. It at any rate did not involve the former Neutrals in an obligation to take part in sanctions, which might draw down upon them the wrath of an aggressor against a third party whom the sanctions were failing to protect.

However, with the possible exception of Switzerland, the European ex-Neutrals are still in favour of persevering with our present economic sanctions against Italy, for the purpose of compelling her, eventually, to disgorge her prey. For the present, at any rate, this policy has happily prevailed at Geneva. For on Monday the Council once more called M. Wolde Mariam to the Council table and then passed (with Chile alone abstaining) a resolution postponing further action until June 15th. M. Blum will then be in the saddle in Paris. Meanwhile the existing sanctions are left in operation.

Vis inertiae, which told so heavily in Mussolini's favour while there was a hope that sanctions might enable the Emperor Haile Selassie to repulse the Italian aggressor, is beginning to tell in favour of the League now that the act of military aggression has been consummated. It will evidently be easier to leave sanctions in being than to

bring the Council to the point of recognising Italy's defiance; and no Italian military victory in Africa can invalidate the calculation that, in time, European sanctions, if strenuously maintained, would ultimately bring Italy to heel.

But have we time? Is the sanctions front going to hold until the existing sanctions have done their work? Or will it only hold on condition that the *tempo* is keyed up by giving the screw another sharp turn? These are the questions which we have to answer for ourselves before June 15th arrives. Meanwhile, Signor Mussolini's abrupt recall of the Italian delegation from Geneva shows that he does not regard the continuation of sanctions with indifference. Signor Mussolini is eager to close the Recording Angel's book, and this gives the League its cue. We must keep the account open and allow Italy's debit balance to go on mounting up.

PUBLIC AND PRIVATE TRANSPORT

INTERFERENCE with the consumer's freedom of choice has become the keystone of the official attitude to transport in practically every country in the world. The growth of motor transport has brought a certain amount of new traffic to the railways, and has increased the total demand for transport in numerous ways, not all of which have been adverse to the railways. On balance, nevertheless, it has certainly tended to divert a good deal of traffic to the roads which was previously rail-borne. As industrial activity has not been expanding rapidly enough to compensate the railways for this loss, Governments throughout the world have been constrained to step in and hold the balance. This intervention has gone furthest where the railways are State-owned. In Great Britain such measures as have been taken have been designed mainly to stabilise the position between the railways and the agencies providing public transport facilities on the roads.

The Road Traffic Act of 1930, in fact, has been markedly successful in achieving stabilisation in public passenger transport by restricting and regulating omnibus and coach services, fares and time tables. The industry has been virtually closed to new entrants, and as reductions in fares have been discouraged and operating costs have fallen, existing operators have benefited considerably, while the railways have ceased to lose passenger traffic to public road transport.

The Road and Rail Traffic Act of 1933 made it virtually impossible for new concerns to enter the road haulage industry and limited the fleets of existing concerns to their size before the passing of the Act, except where a good proof could be adduced of increased business and of the suitability of other operators or means of transport for undertaking the work. The Act, indeed, attempted to establish an equilibrium between the railways and the haulage industry, similar to that established in passenger transport. It is impossible, as yet, to say how

policy has attained its objective, partly because no official figures are yet available of road traffic, and partly because the full effects of the Act have not yet been experienced.

The Act established the Traffic Commissioners as the licensing authorities for goods vehicles. It gave them power, at the end of the initial licensing period (which expires this year), to reconsider the position. If they received objections from competitive operators, or from those who provided alternative forms of transport, they might refuse to renew hauliers' licences where renewal would render "suitable transport facilities," in given districts or between particular places, "in excess of requirements." The general opinion of road haulage operators is that, since the licensing system came into operation, there has been, on balance, no further diversion of traffic from the railways to public road hauliers, though there may have been some transfer to ancillary users' own vehicles.

There is, altogether, a good deal of evidence that the effect of "stabilising" the position of the providers of public transport facilities has been directly to encourage the private ownership and operation of instruments of transport. The evidence is conclusive so far as passenger transport is concerned; on the goods side it is necessarily less conclusive in the absence of official statistics, but a good deal of indirect evidence supports that view. Broadly, it would seem that, although the "travel habit" has increased considerably during the past few years, practically the whole of the increase has been taken up by private cars and pedal cycles. The providers of public transport facilities have held their ground absolutely, but have undoubtedly lost ground relatively to privately-owned instruments of transport. On the goods side, the ancillary user, who is in a position comparable to that of the private motorist in passenger transport, is unquestionably increasing in importance. It is not unlikely that limitation and control of public goods transport is encouraging him to carry more of his own traffic in his own vehicles.

Complete figures relating to public passenger transport, from 1931 to 1934, are now available, and are given in a table on page 401 of this issue. Receipts for all public passenger transport are shown as being £143.6 millions in 1931 and £141.9 millions in 1934. Public road vehicles carried 85.6 of the total passengers in both years, and obtained 58.1 per cent. of the total receipts in 1934, against 57.5 per cent. in 1931. Total road vehicle miles were 1,703 millions in the earlier and 1,710 millions in the later year; while passenger train miles were 280.7 millions and 297.6 millions in the two years, respectively.

Something must be allowed for economic depression in 1931-32, and slow recovery in 1933-34; but the figures nevertheless suggest a condition of stability amounting almost to stagnation in public passenger transport, both as regards volume of traffic and division between road and rail. During the same period, however, a remarkable increase occurred in privately owned vehicles. The number of private cars increased from 1,083,457 in 1931 to 1,308,425 in 1934 and to 1,477,378 in 1935. The number of pedal bicycles has been unofficially estimated to have increased from some 6,000,000 in 1929 to 10,000,000 in 1935. In fact, while total road deaths increased, between 1930 and 1934, by only 38, from 7,305 in 1930 to 7,343 in 1934, the number of cyclists killed on the roads increased by 49, from 887 to 1,536 over the same period. The dispersion of urban populations over the countryside outside the large towns has contributed to the growth of private transport, wherever public transport facilities, based on the more concentrated conditions of earlier years, have shown insufficient flexibility to cope with the rapid changes in the distribution of population.

Among public road vehicles, trams have recently tended to be replaced by trolley-buses and omnibuses. This group accounts for about half the increase in omnibus haulage shown in 1934, compared with 1933 (which has collectively benefited the local authorities), the other half being due to the London Passenger Transport Board. Then, it is omnibus operators," which account for rather forward Lea half the total bus receipts, include both big firms, such as the Tilling and B.A.T. and Scottish firms—and a large number of small operators.

Though the group, as a whole, has barely held its own, recently, the share of the "combine" companies has increased and that of the small operators has declined, mainly as a result of the absorption of independent undertakings by the large concerns.

The results of the London Passenger Transport Board stand out in sharp contrast, as the following tables show:—

LONDON PASSENGER TRANSPORT BOARD					
PASSENGER RECEIPTS (MILLION £'s)					
Year ended June	Omnibus	Tram	Trolley Bus	Tube Railway	Total
1934	14.6	5.9	0.16	17.0	37.7
1935	15.8	5.9	0.16	17.8	39.7

PASSENGER JOURNEYS (MILLIONS)					
Year ended June	Omnibus	Tram	Trolley Bus	Tube Railway	Total
1934	1,950.5	1,002.4	27.2	415.9	3,396.0
1935	2,094.7	1,013.4	28.3	445.9	3,582.3

SERVICE PASSENGER CAR MILES (MILLIONS)					
Year ended June	Omnibus	Tram	Trolley Bus	Tube Railway	Total
1934	258.2	102.0	2.7	151.7	514.6
1935	274.6	101.6	2.7	154.9	533.8

Though the London area has, of course, benefited from the "Drift to the South," it may be doubted whether this fully explains the discrepancy. An additional explanation may well be that common ownership of all public passenger transport facilities in the London area, and the pooling arrangements for local traffic with the main-line railways, have enabled the Board to adopt a policy of relative flexibility in the provision of traffic facilities. Within the London Passenger Transport area, also, the Board is exempt from the greater part of the restrictions imposed by the Traffic Commissioners in other areas. London, in short, may have gained, as a result of the Board's formation, in more ways than were foreseen either by the supporters or the opponents of the Act.

THE ANATOMY OF EMPLOYMENT—II

BETWEEN July 1929, and July, 1932 (as we showed in an article last week) the number of insured workers employed in the United Kingdom declined by 1,029,000, from 10,916,000 to 9,887,000. Between July, 1932, and July, 1935, the total rose by 1,179,000 to 11,066,000. Thus, for every worker who lost his employment in the depression, somebody found a job in the first three years of recovery—and 150,000 besides. Between 1929 and 1935, however, few of the 43 groups (into which we have compressed the 100 groups of the *Ministry of Labour Gazette*) succeeded in avoiding a rise in their unemployment percentage, though as many as 30 groups employed more workers in the latter than in the former year.

The explanation of this paradox is significant, both socially and financially. Even in the most active industries, new recruits have come in faster, on balance, than places have been found for them. Altogether, the total insured workers increased, between the two years, by 964,000 (8.0 per cent.), while the number for whom new jobs were found was only 149,646 (1.4 per cent.). As many as 30 industrial groups showed increases totalling 1,416,030 in the number of their insured workers, while 13 registered decreases to a total of 452,030. The fact that the Public Works Contracting industry headed the list of increases with a net rise of 68.6 per cent. in its insured total suggests that many displaced manual workers in other trades sought refuge in an industry where picks and shovels are still widely used. A rise of nearly 19,000 in the number employed in this industry, consequently, was accompanied by an increase in its unemployment percentage from 19.0 to as much as 45.2.

The inability of industry to absorb its quota of new workers during the past six years as a whole is well brought out by the following table. This shows separate figures for 16 groups of trades, each of which added 20,000 or more to its insured workers between 1929 and 1935, but returned a higher unemployment percentage in the latter year

INDUSTRIES WHICH INCREASED RECRUITMENT FASTER THAN EMPLOYMENT

(i.e. larger numbers employed in 1935 than 1929, but higher unemployment percentage)

Group	Increase, 1935, compared 1929, in numbers (thousands)		Unemployment Percentages	
	Insured	Employed	1929	1935
Distributive trades	328.2	218.3	5.4	10.0
Recreative industries	144.9	98.5	6.9	13.4
Public works contracting ...	112.9	18.9	19.0	45.2
National and local government	92.4	40.6	7.3	16.6
Building, unskilled	86.0	36.9	13.3	19.5
Electrical trades	76.0	62.9	4.4	7.7
Road transport	67.6	47.8	6.8	10.5
Building, skilled	64.8	45.9	5.2	8.5
Non-ferrous metals	46.3	37.3	8.0	9.7
Food trades	44.5	27.4	7.1	10.6
Motors, cycles and aircraft...	39.4	31.5	7.2	9.3
Gas, water, electricity	37.6	26.8	5.4	9.8
Commerce and finance	32.1	26.6	2.5	4.3
Trades ancillary to building	31.0	18.9	7.5	12.0
Professional services	31.0	27.5	3.0	4.7
Laundries and dry cleaning	24.5	19.8	3.7	6.1
Nine other groups*	92.5	45.6	...	...

* Comprising the following, which had less than 20,000 increase in insured workers between 1929 and 1935: Furnishing, minor textiles, paper, printing, publishing and bookbinding, constructional engineering, silk and rayon, leather and leather goods, and glass.

The sixteen groups shown separately in this table include fourteen which recorded the largest percentage increase in employment of any trades between 1929 and 1935. Not one of them, however, was able fully to absorb all the workers which came "on its strength" during this period. More recently the process of taking up the slack has proceeded apace; the Ministry of Labour estimates that 371,000 more workers were employed in April, 1936, than a year earlier. But the depression has still left industry behind its timetable.

How far have these notable changes, which we have so far discussed in detail, tended, generally, to shift the centre of gravity of the employed population? To obtain an approximate answer to this question, we have segregated the figures for all industrial groups under a number of reciprocal classifications—home and export industries, prosperous and depressed trades (according to their condition in the last pre-depression year), expanding and contracting industries (according to their experience since 1929), and, finally, capital and consumption trades. The results of these successive re-shufflings of the pack are shown below:—

INDUSTRIAL VICISSITUDES SINCE 1929						
	Change in Numbers Employed (thousands)		Numbers Registered (1929=100)		Numbers Employed (1929=100)	
	Between 1929 and 1932	Between 1932 and 1935	1932	1935	1932	1935
"Home" industries	— 173	+ 864	110	116	98	109
"Export" industries	— 856	+ 315	98	92	75	84
"Prosperous" in 1929*	— 172	+ 831	109	114	98	109
"Depressed" in 1929*	— 858	+ 348	101	97	76	86
Expanded since 1929†	+ 31	+ 801	112	120	100	113
Contracted since 1929†	— 1,060	+ 378	98	93	77	85
"Capital" trades ...	— 568	+ 615	105	110	81	101
"Consumption" trades	— 461	+ 564	106	107	94	101
All industries	— 1,029	+ 1,179	106	108	91	101

* Industries with less or more than 10 per cent. of unemployment, respectively, in 1929.
† More or fewer workers employed, respectively, in 1935 than in 1929.

The allocations are necessarily approximate in many cases. Many "home" industries, for example, export a measurable proportion of their output and every "export" trade sells a significant part of its output at home. Broadly, we have included under the latter heading those trades whose prosperity, in 1929, was liable to be perceptibly affected by changes in the value of their sales abroad. Similarly, the boundary between "capital" and "consumption" trades has necessarily been arbitrarily

drawn in some cases. Delimitation in the remaining instances, however, has been "automatic," on the lines shown in the footnotes to our table. In view of this fact, the correspondence revealed between the results shown for the first three classifications is most significant. Broadly, the industries which have expanded since 1929 were those which catered mainly for the home market, and were relatively prosperous, before the Great Depression started. The trades which have fared worst since 1929 have been the export industries, which were already depressed in 1929, a year of general prosperity. The "good" industries, on the average, lost not more than about 2 per cent. of their employed workers during the years of depression, and by the middle of last year were employing roughly 10 per cent. more labour than in 1929. The "bad" industries lost about 25 per cent. of their workers in the worst period, and last year were still employing about 15 per cent. fewer workers than in 1929. During the years of depression there was little transfer of insured workers, on balance, from the one to the other. The total registered workers fell very slightly in the "bad" industries between 1929 and 1932. Practically all the new recruits to industry went into the "good" trades, which increased their registered total; during that period by about 10 per cent. Subsequently, the rate of departure from the "bad" trades has been slightly accelerated, while the "good" trades have continued to gain new recruits. In other words, a certain tendency to transference from the one to the other has been in evidence during the period of general industrial recovery; but the "bad" trades still harbour, on the average, more than 90 per cent. of the number of registered workers that they had in 1929. This tendency holds, even in the most depressed trades, where many workers have clung to their industry long after their employment has gone. Coal mining is one example. Between 1929 and 1935 the number of its employed workers declined by 26.0 per cent., but its insured total fell by only 12.6 per cent. In shipbuilding and marine engineering "employed" declined by 41.2 per cent. and "insured" by only 22.8 per cent. In cotton, finally, the corresponding figures were 27.9 and 20.3.

The conclusion is only too plain. "New" workers have gone largely into the more prosperous industries, while many of those displaced from the depressed trades have failed to find employment elsewhere. Moreover, our figures suggest that the distinction between "prosperous" and "depressed" trades is not, primarily, that between "capital" and "consumption" industries. The former suffered the greater recession in employment between 1929 and 1932, as in all cyclical trade depressions. By 1935, however, both had re-absorbed their 1929 quota of workers, with a little to spare.

Our survey, altogether, leaves a strong impression that the antecedents of the main changes in employment during the last six years go back to the period before 1929. Those changes in the centre of gravity of British industry, which have left us, *inter alia*, with our depressed areas, have been due more to the decline of our export trades than to any dissimilarity in growth between "capital" and "consumption" trades.

BUYING WITHOUT TEARS—II

(BY A CORRESPONDENT)

THAT consumers ought to be better informed about the things they buy (as was argued in an article in last week's *Economist*, page 297) is a proposition likely to appeal in the abstract to many people. On the ways and means of providing the necessary knowledge, however, few people agree. It is easy to condemn a system under which suggestive advertisements lure consumers into the purchase of nondescript products at inflated prices. But it is rather thing to frame measures of regulation, or any other service.

America has moved further than Great Britain in the realm of administrative control. For several years the Federal Trade Commission has been trying to stop practices which can still be carried out on this side. Informed luggage manufacturers that they are not made of trunks "Nuhide" when they are not made

Typewriter ribbons may not be marketed under a trade name "Silk cloth" when they are not made of silk; neither may the word "velvet" be used for anything but silk.

"Orange crush," even when substantially made of orange juice, must bear conspicuously the names of any other ingredients it may contain. There is no such Trade Commission here in Great Britain. The Committee on Trusts in 1919, indeed, recommended that the Board of Trade should be given similar powers, but this was not the only vision of a better world which disappeared in the general demobilisation after the war.

The American Medical Association, further, has taken a liberal view of its responsibilities to the public. It has waged unceasing warfare against the worst forms of exploitation practised by the patent food and medicine industry. Before the war the British Medical Association published two books, "Secret Remedies, what they cost and what they contain" and "More Secret Remedies." They are now out of date and have never been re-issued. The American Medical Association, on the other hand, has maintained an active publicity campaign, with telling effect upon manufacturers, Press and public. The American Dental Association has supported it by efforts to establish a sound public appraisal of the claims made for tooth-paste and powders. It has refused its "seal of acceptance" to some of the tooth-pastes which persistent advertising has made household words, and the Federal Trade Commission has also given assistance in this direction. One firm is stated to have agreed, after representations by the Commission, to cease to advertise, *inter alia*, that its products necessarily and infallibly remove tartar from teeth. The American Medical and Dental Associations have not statutory powers, but the more reputable manufacturers may well hesitate before seeking to market products likely to arouse the hostility of impartial and expert advisers who are trusted by the public.

Of even greater immediate practical value to American consumers, however, is the voluntary organisation "Consumers' Research, Inc." founded in 1929. For a low annual subscription members are supplied with a general handbook on buying, and with periodical bulletins keeping the work up to date. This literature ranges over the whole field of goods and services on which consumers are likely to spend their money. The organisation undertakes or commissions investigations into the quality and price of consumers' goods. The results are frequently surprising. It was found, for instance, that a brand of typewriter ribbons selling at 20 cents was three times as good as another brand selling for a dollar. The list of investiga-

tions already extends from tinned peaches to winter overcoats, electrical appliances, endowment assurance, encyclopædias, antiseptics, and a host of other products. The more outspoken remarks on individual brands and makes of goods appear in a series of confidential bulletins issued only on a written guarantee that the contents will not be divulged. Comment upon the less favoured goods is candid and caustic as only Americans know how to make it, but the good faith and integrity of the organisation wins general acceptance for its findings. Its membership, small at first, is steadily growing. A total membership of 50,000 to 60,000 is not large in relation to the population of the United States, but it represents no mean force of informed consumers.

It would be difficult for the State to favour, let alone to organise, any such band of militant consumers in Great Britain. The aim of such a body as the Department of Scientific and Industrial Research certainly is to make industry more efficient. It does not necessarily follow, however, that consumers are always equal beneficiaries. Nothing, for instance, which would greatly increase the life of a given product would in itself make a very strong appeal to producers. If one could make safety razor blades to last a year, gramophone records to play three times as long, electric light lamps with double and treble their present life, their immediate appeal might be much more obvious to consumers than to manufacturers. Nor has the consumers' cause been noticeably advanced by the consumers' committees which have been tacked on to the new Marketing Boards established by the Minister of Agriculture. The latter, so far, have gone some way to vindicate the American finding that while consumers' interests can be organised, the consumer cannot be effectively "represented." No better evidence is needed than the number of consumers' problems remaining unsolved, despite the fact that consumers have been sending representatives to Westminster for generations.

In seeking to organise the consumers' interests, therefore, Consumers' Research, Inc., has blazed a trail which many people may well begin to follow, in the difficult task of spending their incomes to the best advantage. In the process they may learn something of their rights and powers, which may, in time, have far-reaching reactions on political machinery for planning tariffs and facilitating the growth of trusts and monopolies. In the present stage of political development an advance in the problems which have been briefly discussed in these two articles must come mainly from the gradual rise of a more enlightened public opinion.

NOTES OF THE WEEK

The British Questionnaire.—The questionnaire which was presented by Sir Eric Phipps to Baron Neurath in Berlin on May 7th was published in London as a White Paper on the following day. The document, which is couched in the form of instructions to the Ambassador from the Secretary of State, turns out to be an able piece of work, in which the probe and lancet are handled in the most gentle—and gentlemanly—way. Undoubtedly the crucial questions have been put, and in a form at which Herr Hitler cannot reasonably take offence. The document considers the proposals put forward by Herr Hitler himself for a permanent settlement of Europe. It is here that the pertinent questions begin. Does Germany regard herself as being in a position to conclude "genuine treaties"? Has the military reoccupation of the Rhineland placed Germany in a position once again in Herr Hitler's view? And his view about the remaining operative provisions of the Treaty of Versailles, or about other collective agreements which might be regarded as having any origin in the provisions of the Versailles Treaty? In short, the remains of the Versailles Treaty is mainly the part and the corollaries of it, the first question being: If a second: Does Germany now consider that a position has been reached at which she can signify that she intends to respect, the existing territorial

and political status of Europe (*sic*, no question is yet asked about Africa or Oceania) except in so far as this might be subsequently modified by free negotiation and agreement? This question is raised by a passage in Herr Hitler's memorandum of March 31st, in which he claims to have received a mandate from the German *Volk* to represent the *Reich* and the *Nation* and to provide in all circumstances for their freedom, independence and equality of status. In Herr Hitler's terminology, does the German nation include populations outside the present frontiers of the Reich (e.g. the Austrians, Sudetenlanders, Danzigers, Memellanders, Southern Tyrolese, Hungarian Swabians, Transylvanian "Saxons," etc.)? This second question has a bearing on Herr Hitler's offer to conclude non-aggression pacts with the eastern and southern neighbours of the Reich. His Majesty's Government politely suggests that the general settlement would be very greatly facilitated if the German Government could see their way to interpret their own words so as to cover at least also the Soviet Union, Latvia and Estonia, as well as the States actually contiguous to Germany. In a different field, Herr Hitler is asked whether he really considers the possibility of a West-European regional air limitation pact (as a supplement to a West-European air mutual assistance pact) has been ruled out by the ratification of the Franco-Russian pact.

The German Reception.—The British Government asked for, and obtained, the German Government's assent to publication of the questionnaire a few hours after the act of presentation had taken place; and the first crop of German press comments on the published text has unfortunately been less favourable than the first German official description of the questionnaire as being "polite but complicated." The promptness of the publication does not appear to give any serious ground for ill-feeling, especially as the German Government had not demurred. It is therefore to be feared that the unmistakable tone of annoyance which these German press comments strike is a tribute to the pertinency of the British inquiries. It is, no doubt, a very serious decision that Herr Hitler has to take. If he means peace, he must be in earnest about the political stabilisation of Europe. And this can hardly be procured on terms that will give him achievements to show to his people on a scale commensurate with the sacrifices and privations which he has already obtained from them for the sake of Germany's rearmament. We also wonder what Hitler is thinking about Mussolini. Will he prudently wait to see the final outcome of the Italian adventure; or will he be tempted to conclude, on the strength of Act I, that it is the method of the *coup de main* that brings successes in the international arena? And then there is the question of the colonies, which Mussolini has raised by his action, however studiously the British Government may have ignored this matter in drafting their questionnaire. By force of arms, Mussolini has—for the moment, at any rate—succeeded in conquering a great African empire that did not belong to him. Can Hitler let this pass without insisting upon the restoration to Germany of those colonial territories that once were lawfully hers?

The Little Entente Draws Closer.—The meeting of the Little Entente Powers in Belgrade from May 6th to 8th must have disappointed those who affected to see in the recent German-Yugoslav Trade Treaty the beginnings of Little Entente disintegration. It was the first meeting at which Dr. Benesh, the architect of the Little Entente and now the President of Czechoslovakia, had not been present. The *communiqué* after the meeting was pointed and precise: the three States are "indissolubly bound" in "deep and complete unity over their entire international policy" *vis-à-vis* their big neighbours. It is notable that this time the "unity of policy" refers also to Soviet Russia, towards which hitherto only Prague and Bucharest have been friendly. The Yugoslav Prime Minister has taken the opportunity to declare that Yugoslavia's closer commercial relations with Germany are natural; they are to unfreeze Yugoslav "blocked marks" by imports of machinery and armaments equipment; and they are not in any way to be taken as indications of a Yugoslav defection from the solidarity of Little Entente policy. It remains true, however, that Yugoslav industry is becoming increasingly dependent on German equipment and contracts. The *communiqué* has also made it clear that all three Little Entente States have adopted a unitary opposition to the *Anschluss*, to a Habsburg restoration, and to territorial revision. The Belgrade meeting has clearly drawn the Little Entente closer together. This will have duly impressed Mr Eden who, on Wednesday, exchanged views for some time with M. Titulescu. At the same time he consulted representatives of the Balkan Entente, which links the Little Entente to Greece and Turkey by the membership of Roumania and Yugoslavia. The solidarity of the Little and Balkan Ententes is bound to exercise a potent influence for good, not only in Central Europe but also in the East Mediterranean. Doubtless this latter point, too, has not escaped British observation.

Show-Down in Austria.—For two years the Catholic leaders in Austria, and Chancellor Schuschnigg in particular, have been maintained in power by an uneasy association with the Heimwehr—the Fascist bodyguard of the Vice-Chancellor, the Italianophil young Prince Starhemberg. Fascism, the suppression of Social-Democracy in Vienna, and a corporate State on the Italian model were

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

£5,500,000

Total Assurances in force at November 15th, 1935, in Great Britain and Ireland

£69,500,000

H. O. LEACH (General Manager), 2, 3 & 4 COCKSPUR ST., LONDON, S.W.

the constitutional *tantièmes* which ill-fated Chancellor Dollfuss had to pay for the armed support of the Heimwehr against the swollen cohorts of Nazis. And ever since the fatal February of 1934, when Prince Starhemberg, on Italian instructions, launched the Heimwehr against the Social-Democrats of Vienna, the new Catholic Constitution of Austria has only been preserved by reliance on a Fascist movement as anathema to Austrian workers as Nazism itself. Meanwhile, however, Chancellor Schuschnigg, the Catholic successor of Dr. Dollfuss, has slowly been strengthening his hold on Austria and Vienna. First he increased the Heimwehr representation. Then he included a "liberal," Dr. Dobretsberger, Minister for Social Welfare, who strongly favoured an entente with the Austrian workers. He had dropped Major Fey, the leader of the Vienna Heimwehr, whose ambitions were resented by Prince Starhemberg, and whose rôle during the 1934 Nazi revolt had rendered him suspect of Nazi proclivities. Finally, Dr. Schuschnigg, as commander-in-chief of the Catholic bodyguard, the *Ostmärkische Sturmscharen*, strengthened Dr. Dollfuss's *Vaterländischer Front*, and proceeded to co-ordinate all the military forces of Austria under his own direction. Only a few weeks ago he announced an open contravention of the St. Germain Treaty by introducing conscription and calling up men for the regular army. These developments were not lost on Prince Starhemberg, who, at Horn on the 26th of last month, announced that the Heimwehr would only be disbanded or merged under regular army control "over my dead body." We said of this speech at the time (page 238): "It may well bring to a head the inevitable conflict of wills between, on the one hand, a Chancellor and his supporters who want to see Mgr. Seipel's dream of a tolerant Austria realised, and, on the other, a young Prince who sees himself and his henchmen as the paladins of Austrian Fascism." The show-down has come quickly; and Prince Starhemberg has brought it about.

Chancellor v. Vice-Chancellor.—On Sunday a big Catholic procession in Vienna, which included the Chancellor himself, was disgracefully received by organised Heimwehr booging, and even by assault, at a certain point on the route. ("By mere chance," as he said, Major Fey was standing on a balcony observing the scene.) And on Tuesday Prince Starhemberg, after protesting his innocence of complicity, independently sent a fulsome telegram of congratulation, in the name of Austrian Fascism, to Signor Mussolini on his defeat of "democratic insincerity and hypocrisy." He also arranged to visit Rome next week. The Chancellor evidently decided that he must rule or be ruled. He went to President Miksa and resigned, receiving a charge to form a new government, which he promptly did—but *minus* Prince Starhemberg. A *communiqué* stated that the Prince was not participating owing to differences with the Chancellor of a non-

nature. Thus Prince Starhemberg passes from a place very far "up-stage" on the Austrian scene. It is evident that the crucial point has now been reached in Austria; for, though the Heimwehr's subsidies from Italy have dwindled, and the Chancellor can control the allocations from the State's finances, Prince Starhemberg and Major Fey are now two baulked, energetic and disgruntled men—with followers. Will they go Nazi? Will the Chancellor try to forestall them by coming to terms with Austria's Nazis? A more strongly Catholic Cabinet can scarcely do that. A more likely outcome is a gradual disintegration of the Heimwehr, if the Chancellor's new forces gather strength. The "liberal" Dr. Dobretsberger has been replaced by Dr. Resch, who is also favourable to the workers' cause; and although the Ministers of Finance, Justice and Interior are moderate Heimwehr men, the new Government of France and the British Government should support the Austrian Chancellor's efforts to render an independent Austria more liberal.

The Budget Inquiry.—The Tribunal of Inquiry into the alleged unauthorised disclosure of Budget secrets opened on Monday. Mr Justice Porter presided, and with him were Mr Gavin Simonds, K.C., and Mr Roland Oliver, K.C. The Attorney-General, Sir Donald Somervell, in making an initial statement, said that the final decision of the Chancellor of the Exchequer on the Budget was communicated to the Cabinet on April 9th. Sir Alfred Butt, M.P., an underwriter at Lloyd's, had accepted Budget risks before Budget day, but on Budget day he had effected "a number of insurances the other way against a rise." The next group of insurances, the Attorney-General said, were taken out on behalf of Mr Alfred Bates. Some of these were placed on the instructions of Mr L. M. Thomas, a partner in Belisha and Company, stockbrokers, a son of Mr J. H. Thomas, the Secretary of State for the Colonies, and, like his father, an "old friend" of Mr Bates. Both Mr Bates and young Mr Thomas saw Mr J. H. Thomas on Good Friday or in Easter week or both, but no reference had been made about what might happen in the Budget. Colonel Roynance, deputy-chairman of Lloyd's, was called as witness, and stated that there was very general comment in the "Room" at the flood of orders at the last moment before the Budget, when a normal premium of 15 to 20 guineas rose to 40 guineas. Mr L. M. Thomas, called later, said that he saw his father at Ferring on Good Friday and also Mr Bates. Questioned whether anything was said with regard to the Budget, Mr Thomas replied, "Nothing that I can remember." Further questioned, he said that he had had "not the slightest" information from his father at any time about the Budget, and that he had "no recollection of discussing the Budget with him." Sir Maurice Hankey, Secretary to the Cabinet, called as a witness on Tuesday, said that at the meeting of the Cabinet on April 9th there were present only the members of the Cabinet (except the Foreign Secretary, the Minister of Labour and the Lord Privy Seal) and himself. Mr Alfred Bates, in giving evidence, said that he formed the opinion on general grounds before the Budget that an increase in taxation was likely. The only business transaction he ever had with Mr J. H. Thomas was the grant of £20,000 for the exclusive literary rights in Mr Thomas's autobiography. Questioned whether he had any information about the contents of the Budget before the Budget speech, Mr Bates replied: Certainly not. Mr J. H. Thomas gave evidence on Thursday, and stated that he had "never disclosed one word to anybody" about the contents of the Budget.

The Tithe Bill.—The House on Wednesday passed the second reading of the Government's Tithe Bill, which embodies—not, however, without significant alterations—the Report of the Royal Commission on Tithe. The Report was summarised on p. 520 of the *Economist* of May 7th. The Government have increased the period of amortisation of the £70 millions of Government stock to be given to tithe-owners, and to be amortised by the tithe-payers, from the forty years recommended by the Commission to sixty years. This elicited strong criticism

from the Opposition, who saw in it a capitulation by the Government to the land-owning interest at the expense of the (more or less) defenceless ecclesiastical tithe-owning community. Mr Denman, a National Labour member, called it "a dole for Dukes." And the Bill as a whole came in for a trenchant attack on the Government by Lord Hugh Cecil, who roundly asserted that the main body of tithe-payers could well afford to pay even the 1925 scales of tithe, let alone the tithe rates as now greatly reduced in the Bill at the expense of the Church and the tithe-owning academic institutions, e.g. the older University Colleges. Why, asked Lord Hugh Cecil, should not the tithe-payers have been relieved, if they had to be relieved, out of the common purse—which in any case is risking the advance of £70 millions to wipe out tithe and to transmute it into a liability of tithe-payers to the State—and not out of the pockets of a small and unorganised section of a deserving and hard-working minority of society? On these grounds he characterised the Bill as actuated by "the morals of the American underworld." Mr Elliot, on behalf of the Government, could only plead in aid of the number of tithe litigants, the need for tithe-owners to share in the fall of agricultural prices, and the necessity of spreading the losses of tithe-owners over sixty rather than forty years to avoid hardship. The Bill is not the most equitable that could have been devised; and the Government has shown traditional fondness for its land-owning supporters; but the Bill will remove a source of continuous litigation.

Overcrowding and Slum Clearance.—Signs of a falling-off in the private housing boom make it all the more imperative that the slum-clearance and overcrowding programmes should be pushed on with all possible energy. The March figures for slum clearance show that the recent pace of activity is at least being maintained; though considerable acceleration will soon be necessary if the five-year programme is to be completed to schedule. The active attack on overcrowding has meanwhile been brought nearer by the fixing of the date after which overcrowding, as defined in the 1935 Act, is to be illegal. The operation of the Act, however, will at first be confined to areas where overcrowding is infrequent, though areas with more severe overcrowding will be included if the local authority desires. For really bad areas a later date is contemplated. In all areas, however, a survey has been conducted in the last nine months and has in general made good progress. The Minister of Health has accordingly asked local authorities to submit to him general rehousing proposals by August 1st and to supply more detailed plans later. The sum actually provided for expenditure under the 1935 Act in the present Budget year was only £100,000. Though some time must necessarily elapse before the new overcrowding policy comes into effect, this sum seems almost infinitesimal in comparison with the year's defence estimates. It may consequently be hoped that Sir Kingsley Wood will have the contemplated rehousing programme well in motion during next year. Nothing is more necessary, from the point of view both of general recovery and of social needs.

The Finance Bill.—Apart from provisions giving statutory effect to the increased tea duty, the new "safeguarding" duties, the new duty on foreign lager beer, and the increased standard rate of income tax, the Finance Bill, published on Wednesday, contains in Part II the Chancellor's measures to restrain evasion of liability to income tax. "Individuals" (evidently not all legal persons) ordinarily resident in the United Kingdom, who transfer their assets in such a way that income from these assets becomes payable to "persons" resident or domiciled out of the United Kingdom, and who therewith acquire power to enjoy ("forthwith or in the future") any of the income of the foreign "person," are to be taxed on that income—as long as it would have been taxable had it been "received" in the United Kingdom. Exemption can be claimed if the individual satisfies the Special Commissioners that the transfer, and any associated operations, were effected "mainly for some purpose other than the purpose of avoiding liability to taxation." A long and exhaustive set of definitions of "power to enjoy income of a person

resident or domiciled out of the United Kingdom" shows that the net of the Inland Revenue is in future to be cast over a wide field. It is the "substantial result and effect of the transfer and any associated operations, and all benefits which may at any time accrue to the individual as a result" which is to be the criterion of liability. Exhaustive definitions are given of companies under the control of not more than five persons, so as to bring small "family" companies under Section 21 of the Finance Act, 1922; and such "family" and "personal" companies whose income "consists mainly of investment income" (now termed "investment companies") are also brought within the purview of that Act. Income paid under a settlement to unmarried infants of a settlor for their benefit is to rank in 1936-37 as the taxable income of the settlor—except where such sums are deductible as income-tax allowances. The definitions of "child," "settlor" and "settlement" are also widely drawn. Drastic penalties are provided for the withholding of information. The Finance Bill also renders estates abroad of persons dying domiciled in the United Kingdom liable to death duties, unless they are to pass to persons domiciled outside the kingdom, or are "immovable property" by the law of the country in which they are situated. Powers are taken to borrow for statutory sinking funds; fixed contribution of the Post Office to the Exchequer is placed again at £10,750,000; and statutory provision is made for incorporation of the Road Fund in the National Accounts and for transferring motor licence revenue direct to the Exchequer for the Ministry of Transport.

Railway Wages.—Against the recommendation of its leaders, a delegate conference of the National Union of Railwaymen decided, on Wednesday, not to accept the offer of a remission, from July 1st next, of half the remaining 2½ per cent. of the 5 per cent. wage "cut" of 1931. What is more, two conference delegates will accompany the negotiating committee when it reopens discussion with the companies. The conference may well have been influenced, directly or indirectly, by the result of recent railway rating litigation. Under this year's judgments the railways may secure a saving in annual rating expenditure of something over £3,000,000, plus arrears of overpayments amounting, possibly, to £15,000,000, with a prospect of still further savings in the coming quinquennium. Why, it may have been argued, should not the fortunate recipients of so handsome a "windfall" spare a little more for their workers than the £1,200,000 a year represented by their latest wage offer? To the claim that wages should at least be restored to the 1930 level, the railways may reply that even if gross receipts maintained their recent upward trend to the end of this year, they would still be £18 millions below the level of 1930. This argument, however, has not stood in the way of earlier partial remissions of the 1931 "cut," in advance of anticipated recovery. The present dispute is thus a matter of degree rather than of principle; for the unions were shrewdly credited with the intention of pressing for the restoration of the 1930 wage standard next year, in any case. So far, the workers have utilised their tactical opportunities with moderation. In a sense, they are competitors with the junior stockholders for the fruits of recovery. That railway gross receipts, even now, are greater than in 1913, though only one of the four railways is paying dividends on its equity stock, is due largely to the changed distribution of receipts which the unions, backed by considerable public sympathy, have secured since the war. To-day, when the two largest railways have lost their trustee status, there is no longer the same incentive to pay any given level of dividends as in the past. Railway preference stocks are non-cumulative and stockholders cannot strike. There is, further, a sincere desire among all the railway managements to maintain helpfully co-operative relations with their workers. Although the London and North Eastern, for example, has steadily maintained that its earnings have not justified any increase whatever in wage costs, it has acquiesced in all the concessions offered jointly by the railways. In this atmosphere, it may be hoped that a settlement of the latest difficulty will be secured by direct agreement; and, in any case, the

admirable negotiating machinery, devised after the breakdown of the National Wages Board, remains available for both parties.

Egypt and Arabia.—At the invitation of the Egyptian Regency Council, Nahas Pasha formed his new Government last Sunday. It is naturally an all-Wafd Ministry; and its hold upon the Government will be increased by the creation of the new Cabinet office (Minister of the Palace to take the place of the former Chief of the Royal Cabinet. The incumbent of the suppressed office was the nominee and agent of the Crown; and, when that crown was won by the late King Fuad, the king's minion was always the potential nucleus for a counter government, in case the constitutional Government of the day should be in difficulties. With the crown on the head of a minor, and the office of Chief of the Royal Cabinet no longer in existence, the Government of Egypt—as far as it lies in Egyptian hands—will be unified at last. It has been divided, in fact if not in theory, throughout the period of nearly twenty years that has elapsed since the almost simultaneous emergence of King Fuad and Zaghlul Pasha above the Egyptian political horizon in the latter years of the war. The unification of the Egyptian Government should tell in favour of success in our difficult common task of placing Anglo-Egyptian relations upon a treaty basis by means of free negotiation on a footing of equality. Meanwhile, the outgoing Egyptian Government of Ali Pasha Maher may be congratulated upon having signalled its last days of office by the successful conclusion of a treaty which, for Egypt, may prove to be only second in importance to the hoped-for treaty with Great Britain. This is the Saudi-Egyptian treaty which was signed in Cairo on May 7th and accepted on May 8th by King Abdul Aziz. This new instrument provides for the opening of normal diplomatic relations between Saudi Arabia and Egypt; for the treatment of Egyptian pilgrims to the Hedjaz on a most-favoured-nation basis; and for the spending—on public works in the Hedjaz for the pilgrims' benefit—of the revenues from Egyptian *awqaf* [religious endowments], earmarked for the benefit of the Holy Cities, which have been withheld by the Egyptian Government ever since the rupture of 1926. Thus to-day we see a rally of all the Arabic-speaking States of the Middle East (the Yemen, Transjordan, Iraq and now Egypt) round Saudi Arabia as the leader in a defensive combination to withstand the gathering menace in the East Mediterranean.

Tension in Spain.—Sr. Azaña has now been duly elected President of Spain, and Sr. Casares Quiroga, a Left Wing leader with a reputation for energy and ruthlessness, has succeeded him as Prime Minister. But, as our Madrid correspondent points out in his letter on page 362, the circumstances of Sr. Azaña's election have not been too encouraging, while Sr. Quiroga is as yet lacking in his predecessor's national prestige. The situation is extremely tense. The Popular Front Government has not yet effectively tackled the grave unemployment and distress that exist in Spain; and already the anarcho-syndicalist labour movement, which believes in violence, is increasing its activity. If the present democratic regime is to justify itself, it must lose no further time in relieving the poverty which the world crisis and the misgovernment of the Gil Robles Cabinet have left behind them. It is fast becoming clear that the Spanish workers and peasants will demand either reform or revolution without much further delay.

The Irish Free State Budget.—The Irish Free State Budget, which was introduced on Tuesday, contained no surprises, pleasant or unpleasant. Both revenue and expenditure in the financial year ending March 31st exceeded the estimate, and, provided that one-half of the bounties and subsidies are charged to borrowing, a surplus of £1,092,000 can be claimed to have been realised. The surplus would have been used for the reduction of unemployment, for which an elaborate programme of works costing £2,500,000 is to be instituted in the

financial year. Contributions by local authorities, a moderate amount of borrowing, and savings in respect of other expenditure on unemployment relief, reduce the net burden of this new programme on the Exchequer to dimensions sufficient to allow of many minor reductions in direct and indirect taxation. In favour of the Budget it must be said that it reduces several taxes and raises very few, that the standard rate of income tax is once again, after an interval of many years, lower than the British rate, and that the amount of new borrowing is small. It must be remembered, however, that there is much concealed taxation in the Free State, which is not shown in the Budget, but results from artificial price-fixing schemes; that expenditure has grown continuously in recent years; and that, apparently, public works are to form a permanent feature of public policy in future. So long as the revenue remains buoyant, all will no doubt be well. It is questionable, however, whether the present buoyancy of the revenue can be expected to continue indefinitely, as it is mainly a reflection of the recovery in Great Britain, as a result of which dividends on British investments have risen and the demand for Irish food products has increased. If these tendencies were to be reversed, the level of public expenditure in the Free State would be difficult to maintain without considerable additional borrowing.

Volume of Overseas Trade.—The latest quarterly returns of changes in the volume of our overseas trade, published in last week's *Board of Trade Journal*, indicate that the expansion of exports was arrested in the first quarter of the current year. Partly as a result of the application of sanctions against Italy, the volume of our exports of domestic produce in January-March, 1936, was no greater than during the corresponding quarter of 1935. Retained imports, on the other hand, showed an increase of 8.4 per cent. in volume—a reflection of the expansion of business activity in this country:—

VOLUME AND VALUE OF IMPORTS AND EXPORTS

Period	Retained Imports				Exports of Domestic Produce			
	Declared Values	Index of Average Values	Values in terms of 1930 Values	Index of Volume	Declared Values	Index of Average Values	Values in terms of 1930 Values	Index of Volume
	£ Million	1930 = 100	£ Million	1930 = 100	£ Million	1930 = 100	£ Million	1930 = 100
1924	1,137	135.0	842	88.0	801	120.8	663	116.2
1930	957	100.0	957	100.0	571	100.0	571	100.0
1931	797	81.0	984	102.8	391	89.4	437	76.5
1932	652	75.3	867	90.3	365	83.3	433	76.8
1933	627	71.3	878	91.7	367	81.9	447	78.7
1934	681	73.3	929	96.9	396	82.2	482	84.4
1935	702	75.0	936	97.8	426	81.8	521	91.2
1934								
1st quarter	168.9	72.4	233.4	97.6	94.7	82.1	115.4	80.9
2nd "	164.2	72.4	227.0	94.9	95.0	82.6	115.0	80.6
3rd "	163.9	73.0	224.6	93.9	99.3	82.2	120.9	84.7
4th "	184.1	75.4	244.2	101.3	107.1	82.0	130.5	91.4
1935								
1st quarter	164.4	74.1	221.4	92.8	105.5	81.6	129.2	90.6
2nd "	166.1	73.2	227.0	94.9	101.0	81.2	124.4	87.2
3rd "	168.4	74.5	226.0	94.5	105.3	82.1	128.3	89.9
4th "	201.6	77.5	259.7	109.3	110.0	82.2	134.8	97.3
1936								
1st quarter	184.5	76.6	240.7	100.6	106.1	82.1	129.2	90.5

The increase in the volume of imports, compared with a year ago, was most marked in the case of raw and mainly manufactured materials, which showed a rise of 13.6 per cent. The volume of retained imports of food, drink, tobacco and wholly or mainly manufactured articles rose during this period by 6.0 per cent. and by 7.0 per cent. respectively. With the exception of living animals for food, beverages and cocoa preparations, all foodstuffs suffered a rise in price. There was an appreciable fall, however, in the average value of retained tobacco. The general trend of the prices of raw materials and partly manufactured articles was also upwards with a few exceptions such as timber, paper-making materials and cotton. Prices of iron and steel fell by 11.2 per cent. in volume, and by 8.7 per cent. in average value, compared with the quarter of 1935. The volume of British exports of mainly manufactured articles was the same as in the quarter of 1935. The halt in the improvement in the volume of exports is millioning, and at the moment there are no signs of expansion.

Overseas Trade in April.—The feature of the preliminary trade returns for April is the continued stagnation of exports. The increase compared with last year is negligible, and the figures are certainly not encouraging, even after allowance for the operation of sanctions against Italy. If allowance be made for exports to Italy at the average rate of the opening months of the past three years, the total export figure shows an increase of about 3.6 per cent. compared with last year. Re-exports show further expansion, both in raw materials and manufactured goods. Imports of all classes of goods increased in April by a further £6.8 millions compared with 1935, and the import surplus in the first four months of the year has risen by over £24 millions. The following tables give details for the past three years:—

OVERSEAS TRADE IN APRIL (000's omitted)					
	1934	1935	1936	Change between 1935 and 1936	%
Total imports	56,326	59,872	66,666	+ 6,794	+ 11.3
British exports	30,100	33,010	33,427	+ 417	+ 1.3
Re-exports	5,019	4,203	5,922	+ 1,719	+ 41.0
Total exports	35,119	37,213	39,349	+ 2,136	+ 5.7
Excess of imports over exports	21,207	22,659	27,317	+ 4,658	+ 20.5
Transshipments under bond	1,873	2,058	1,964	- 794	- 4.6

OVERSEAS TRADE IN FIRST FOUR MONTHS (000's omitted)					
	1934	1935	1936	Change between 1935 and 1936	%
Total imports	239,871	237,866	266,691	+ 28,825	+ 12.1
British exports	124,813	138,498	139,483	+ 985	+ 0.7
Re-exports	19,923	18,089	21,780	+ 3,691	+ 20.4
Total exports	144,735	156,587	161,263	+ 4,676	+ 3.0
Excess of imports over exports	95,136	81,279	105,428	+ 24,149	+ 29.6
Transshipments under bond	8,293	7,796	8,662	+ 866	+ 11.1

The April figures, in fact, continue the trend of the last few months. The percentage changes in the two tables are very similar, except in the case of re-exports, which are always an irregular item, influenced by changes in conditions relating to individual commodities or countries. The increasing demand for goods for home consumption, stimulated by the re-armament programme, is reflected in the expansion of imports.

Shipping Freight Index.—As measured by our monthly index the general level of whole cargo shipping freights rose by 0.1 per cent. during April, following a fall of 0.9 per cent. in March. The current figure of 89.9 compares with 83.4 in April, 1935, and 83.3 in April, 1934. Details of the index number are as follows:—

	Average, 1913	April, 1935	February, 1936	March, 1936	April, 1936
European waters	110.0	89.1	88.3	85.8	86.1
North America	113.1	82.2	89.0	90.4	90.9
South America	123.4	79.6	85.1	85.4	87.5
India	106.3	90.8	99.7	97.0	95.0
Far East and Pacific	117.4	80.1	90.9	87.9	87.3
Australia	127.9	78.3	90.8	92.6	92.6
Total	116.3	83.4	90.6	89.8	89.9

Business has on the whole been quiet during March. A Hull rates continue weak. Liverpool has received inquiries from Montreal and the West Indies-sugar ports, but otherwise conditions are dull. Southampton shows some improvement, and figures for the quarter are above those for last year. At Cardiff, Newport and Swansea there has been very little demand for tonnage, the Mediterranean being particularly weak. At Glasgow there has been some inquiry for coal loadings to the Baltic, but in other sections rates are very unsteady. Movements of the various sections are as follows:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	77.8	-1.6	South America:—		
Pay-outwards	104.6	+3.7	Outwards	65.9	+4.2
Pay-Homewards	90.3	+3.2	Homewards	109.1	...
Mediterranean:—			India—Outwards	78.6	-1.4
Outwards	78.1	+0.1	India—Homewards	111.5	-2.5
Homewards	87.7	-1.9	Far East, etc.	87.3	-0.6
North America	90.9	+0.5	Australia	92.6	...

Expressed as a percentage of the average for 1913, the complete figure of our index number for April is 77.3, compared with 77.2 for March and 71.6 for April, 1935.

Shipping Development.—Commenting on the above figures, our shipping correspondent states that although a net improvement of 0.1 per cent. is not in itself cause for much satisfaction to shipowners, at least it marks a change from the persistent fall this year. The Canadian season has started under much better conditions than last year. The demand for Canadian wheat has been sharply stimulated by the deficiency in the Argentine supply, and tonnage has been taken up briskly at full minimum schedule rates. The South American improvement is mainly due to better shipments of maize from the River Plate. That market, however, is now suffering from a glut of unfixed tonnage, and the Tramp Shipping Administrative Committee has placed a ban on further sailings in ballast to that destination for loading before August 1st. In European waters, the Baltic and International Maritime Conference has been working hard to maintain the schedule of minimum timber freights and has met with some success, in spite of the opposition from Soviet wood shippers. The latter are employing an increasing number of State-owned ships, at their own rates and freight, to the exclusion of outside tonnage. A promising feature elsewhere is the activity which is developing in oil tanker chartering.

Employment in April.—The figures of employment recently published by the Ministry of Labour show a marked improvement in all branches of industry except coal, iron and steel, and textiles. The total number of insured persons aged 16-64 in employment in Great Britain was estimated at 10,712,000 on April 27th—82,000 more than a month earlier. Some increase always occurs at this time of the year, but this year's movement is more than seasonal, and reflects a general expansion of activity for domestic markets. The number of unemployed on the registers fell by over 50,000 during the month, in spite of an increase of 12,666 in the number of juveniles registered. The total of 1,831,230 consists of 1,435,045 men, 274,416 women and 121,769 boys and girls under 18. The number of juveniles out of work has increased by some 12,000 compared with the April figure last year; the 1935 return was taken before the end of the school Easter term, and therefore did not include the school-leavers. Even so, unemployment among juveniles, unlike that of men and women, shows no decline compared with a year ago. The following table gives the number of unemployed in different industries:—

	NUMBER OF INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN		
	Apr. 15, 1935	Mar. 23, 1936	Apr. 27, 1936
Coal mining	229,857	203,258	218,477
Iron and steel manufacturing	41,490	32,124	32,745
Engineering	95,314	68,980	65,908
Metal goods manufacture	70,991	63,515	61,667
Shipbuilding and repairing	65,964	52,755	49,742
Motor vehicles, cycles, and aircraft	20,306	18,186	16,781
Cotton	100,086	73,733	74,073
Woollen and worsted	33,246	18,909	21,380
Hosiery	18,414	11,413	13,168
Tailoring	15,589	17,270	14,271

All persons registered 2,044,460 1,881,531 1,831,230
The improvement in building and public works contracting is largely seasonal, and the favourable comparison with last year may be partly due to the later date of the return. Activity in the distributive trades recorded a substantial increase. The rise in unemployment in the coal industry is considerably more marked than last year, chiefly because the peak winter employment last year was reached in February, and this year only in March. The position in the cotton, woollen and hosiery trades also deteriorated last month, but in all cases was still better than in April.

1935. The only large geographical division which failed to register a fall in unemployment during the month was the North-Eastern district.

Sterling and International Prices.—The past fortnight has witnessed a moderate decline in British and American wholesale prices. The *Economist* complete British index number has fallen by 0.5 per cent., while the primary products index has fallen by 1.4 per cent. In the United States, the complete Irving Fisher index number has declined by 0.7 per cent. and primary products by 1.0 per cent. French and German wholesale prices are unchanged.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	Apr. 15, 1936	Apr. 29, 1936	May 13, 1936
Cereals and meat	64.5	73.1	73.3	73.4
Other foods	62.2	59.5	59.0	58.9
Textiles	43.7	59.9	59.6	59.2
Minerals	67.4	83.1	83.1	81.7
Miscellaneous	65.8	78.6	78.1	77.8
Complete index	60.4	71.1	70.9	70.5
1913 = 100	83.1	97.8	97.5	97.0
1924 = 100	52.2	61.4	61.2	60.9

Grain prices were irregular. Canadian wheat, flour and rice were cheaper, but other grain prices advanced. English meat was dearer, but both Argentine beef and New Zealand mutton declined. Textiles prices all declined, with the exception of wool tops, but there was no large movement in the minerals group house coal was cheaper, and there was a general fall in non-ferrous metal prices.

Iron and Steel Production.—Stimulated by the ever-increasing home demand for iron and steel material, production of steel in this country is establishing new records each month. A year ago the output of steel ingots and castings declined from 841,900 tons in March to 808,700 tons in April. This year production rose from 980,100 in March to 991,500 in the past month, an increase of 23 per cent. over the figure for April, 1935. The output of pig iron (a continuous process) fell slightly from 633,600 tons in March to 629,800 tons in April, owing to the smaller number of working days in the month, but showed, nevertheless, an increase of 20 per cent. over April, 1935. Despite remarkable expansion of production, accompanied by an increase in imports, the steeling trades, iron and steel, manufactured steel persists, and steel exports available for the home market are fairly generous. The net export for the half-year is predicted.

UNITED STATES

A DEFICIT OF \$6,000 MILLIONS

THE announcement of the Secretary of the Treasury, Mr. Morgenthau, that the deficit for the current fiscal year would be just under \$6,000 millions did not clarify the fiscal position, although it appears to have startled the public. More than one-third of this sum is attributable to the Bonus; but the remainder is larger than had been realised. The element of surprise derives from the fact that there is, strictly speaking, no longer a Budget. An incomplete Budget is presented in January; but this is subject to supplements initiated both by the President and by Congress, and commonly these are not totalled until the end of the fiscal year. For example, the "supplementary" relief Budget for 1937 has now reached a figure of \$2,300 millions; and Congress has added between \$100 millions and \$200 millions to the "regular Budget" in the period since March 1st, when the President proposed additional taxes to cover the then existing deficit in the regular Budget. Exclusive of the Bonus, the general tendency is for the expenditures under the regular Budget to increase from year to year, and for the emergency expenditures to remain with discouraging persistence at about \$3,500 millions.

The question of the burden of individual taxation in the United States, particularly for purposes of comparison, is extremely difficult to resolve. The *Survey*, published by the Guaranty Trust Company, has estimated that in New York a family of four, with an income of \$2,500 (i.e. below the income-tax line) would pay about 9 per cent. of its income in "traceable taxes" if it owned a car. Without the car, the rate would be considerably lower. The percentage in "untraceable taxes" is beyond computation. On the other hand, taxes in New York State are substantially higher than in most other States. As the question has presented itself to the American family in recent years, it has consisted of an effort to adjust a fixed or reduced income to a sharp increase in taxes, especially local taxes.

THE SENATE AND THE NEW TAXES

The Federal Tax Bill is now in the hands of the Senate. Four diverse arguments are urged against it:—(1) That the formulæ applied for computing the taxes are needlessly complicated; (2) that it will produce less revenue than is required to balance the regular Budget; (3) that it discriminates against new and growing concerns; and (4) that it is essentially not a revenue measure, but a regulatory measure. There is enough validity in each of these objections to suggest the probability that it will be changed by the Senate—just how, nobody will predict.

The capital issue markets have enjoyed a recovery in activity in recent months even exceeding the anticipations of those who expected much from the modification of the Securities Exchange Commission regulations. In the first quarter of 1936, the registrations amounted to \$1,071 millions—exceeding \$1,000 millions for the third successive quarter—this figure contrasts with the \$178 millions registered in the first quarter of 1935. Two facts are developed from these registration figures:—(1) Only 5 per cent. represented newly organised concerns, and (2) almost 77 per cent. was re-issuing and 11 per cent. for the purpose of purchasing securities. Only 3 per cent. was for the purchase of physical property or other equipment. These data cover only corporate issues. For the month of April the average of the first quarter was far surpassed, and it is estimated that in the first quarter of 1936, \$1,000 millions of corporate, State and municipal securities were offered to the public. This total would compare with any month of the pre-1930 "New Era."

The report of the Department of Commerce on the Payments for 1935 centres on the gold influx of \$1,000 millions. Manufactured goods showed an export of \$234 million in the first quarter, an increase of \$23 million on the corresponding quarter of 1935. Imports of \$336 million, an increase of \$23 million on the corresponding quarter of 1935. The gold imports to be

accounted for among the invisible items. The Department estimates the net influx of short-term funds at \$970 millions, of which perhaps two-thirds represented an increase in foreign cash balances in this country. On security account, it is estimated that the net influx of capital funds was \$442 millions, mostly foreign investments in American securities, but including some repatriation of foreign dollar bonds. Expenditures of American tourists are put at \$393 millions, and of foreign tourists in this country at \$129 millions—both items showing a large increase over 1934. Immigrant remittances fell below \$100 millions for the first time since the figures have been compiled. Interest and dividend receipts on foreign investments are given as \$426 millions, a small decline from 1934; and interest and dividend payments as \$140 millions. On this computation, the United States is still a creditor nation, but the margin is shrinking. After tabulating calculable receipts, there is still an incoming balance of almost \$400 millions unaccounted for. These figures emphasise the opinion of 1935, that the gold shipped here resulted either in the accumulation of unused foreign balances, or in investment in our securities. The comparative absence of gold and silver imports in the first four months of 1936 may be construed as evidence of a cessation of the accumulation of dollar balances and of slackened European interest in Wall Street.

The business news continues excellent. Steel operations are around 70 per cent. of capacity, against about 42 per cent. a year ago; which is remarkable since so far this year there is almost no private heavy construction and small railroad buying. Automobile output in April was about 500,000 cars, or approximately the 1929 level, when that rate of output was sustained for four months. Timely rains, however, have reduced grain prices from their recent high levels.

There are now two areas of the United States economy which are distinctly booming, and both are obvious reflections of the Government's cheap-money policy. Notwithstanding a Budget deficit of \$6,000 millions in the current year and the usual heavy demands by State and local Governments, likewise operating on deficits of one sort or another, the activity of the issue market at what are historically very high prices, is at or near the 1929 level. As these new issues are almost exclusively for refinancing, only the Government operations require new capital. But the combination of the two at current interest rates is proof of the extraordinary state of the capital market.

Second, while the general level of incomes is by no means what it was in the boom years of the twenties, the demand for motor cars approximates to the heyday of the New Era, and all sorts of comparable items of household equipment find a similar demand—in instances, an unprecedented demand. These articles are sold on consumer credit, which is more abundant and cheaper than in the New Era. It is in these three phenomena—the facility of the refunding market, the facility with which Governmental units can increase their already large debts, and the facility of consumer credit—that the so-called "reflation" policy is now manifesting itself most vigorously.

NEW YORK, May 5.

FRANCE

M. BLUM AND THE FRANC

THE first official word of M. Léon Blum, the presumed Prime Minister of to-morrow, has been to declare himself "resolutely opposed to devaluation," as M. Marcel Régnier, M. Germain-Martin and M. Poincaré had done before him. If he could talk in full privacy, M. Blum would perhaps agree to discuss the pros and cons of devaluation. But he is not alone. He is the leader of the "Popular Front" and thus allied with the Communists on his Left, who declare that they will vote with all their might against devaluation, on the ground that it has been

condemned by the French people. Eight days after the general election, M. Blum cannot break with the Communists and dislocate the Popular Front. Moreover, if the Communists are staunch supporters of the franc, they are also for heavy taxation on large fortunes. Thus M. Blum may fear that devaluation might not after all be followed by a large-scale repatriation of exported capital as happened in Belgium.

Last but not least, M. Blum may consider that it is his political game to repudiate devaluation in case M. Sarraut should be obliged to decide to impose an embargo on gold exports before M. Blum takes the helm. If, on the contrary, the franc recovers, he can argue that this is the result of his own intervention. For the time being, however, M. Blum's first aim has been to stop the panic among small capitalists who had begun to sell their Government securities and other French stocks in order to purchase gold, dollars and pounds. His effort was successful—all the more so because the banks have been instructed not to sell gold or foreign notes to the public, except when absolutely justified. These restrictions can only be evaded by the rich. One may now assume, however, that most big fortunes have already taken refuge abroad. In general the public, tranquillized by the promises of M. Blum "to create and stimulate business . . . to reform the tax system . . . and to organise large scale public works," will decide to wait and see.

A Socialist Government will thus take office on June 3rd. It will have the support, but not the participation, of the Communists. The Radicals will probably participate as the Union Républicaine Socialiste. No doubt the intention of M. Blum will be to go slowly in order to avoid a "crisis of confidence," which would render impossible the execution of an expansionist financial programme, and to place dependable men at the head of the main departments. But the tactics of the other parties must be reckoned with. The Communists may urge revolutionary measures and the Radicals may support the pressure of the Communists in order to defeat the Senate.

CHANCES OF A RESPITE

If M. Blum is aided by a rise in wheat prices, by the coming of the usual good revenue receipts in the summer, he may reach the summer recess without trouble and so have time to develop his policy. If not, will he be forced to decide on a gold embargo and to follow the paths of the American experiment—but without devaluation—or of the German one—but with 60,000 million francs of gold?

The sentence in M. Blum's speech in which he declared that he intended to "apply State intervention to the nerve centres of the body economic" was not, perhaps, emphasised as much as it ought to have been—in a press which is anxious above all to suppress anything the least likely to disturb the financial markets.

The *Statistique Générale de la France* has just published its monthly figures of industrial production: (1913 = 100.)

	March, 1935	January, 1936	February, 1936	March, 1936
General index	93	97	99	100
Engineering	96	97	99	100
Iron and steel	76	83	84	86
Textiles	59	71	71	70
Mines	98	101	101	101
Building (adjusted figures)	76	67	69	69
Leather	87	91	93	97
Paper	133	123	135	144
Rubber	759	909	970	997
Motors	400	422	453	459

In the motor industry, 15,624 cars and 1,925 lorries were put on the road in March, compared with 12,328 cars and 1,417 lorries in February.

The figures for the cotton industry are as follows:—

	Dec., 1935	Jan., 1936	Feb., 1936	March, 1936
Spinning (average per spindle in kilograms):—				
Production	1,617	1,748	1,601	1,768
Deliveries	1,667	1,794	1,681	1,788
Stocks	1,809	1,802	1,798	1,788
Unfulfilled orders	5,025	5,330	5,412	5,356

BANKERS TRUST COMPANY
NEW YORKIncorporated with
Limited Liability
in the U.S.A.London Office:
26 OLD BROAD STREET, E.C.2.

Weaving (average per loom, in pieces of 100 metres):—	Dec., 1935	Jan., 1936	Feb., 1936	March, 1936
Production	5.19	5.44	5.14	5.58
Deliveries	5.36	5.47	5.15	5.62
Stocks	8.12	8.16	8.09	7.87
Unfulfilled orders	19.72	20.78	22.47	24.97

The total of bankruptcies in April, 1936, was 721, compared with 822 in March, and 857 in February. PARIS, May 14.

GERMANY

THE BRITISH "QUESTIONS" AND ABYSSINIA

THE questionnaire submitted by the British Government to Berlin has been published here almost without public comment as far as the contents are concerned. Not being told what to say about the contents, the Press has said nothing. But even in the Press there are signs of displeasure at the British Government's decision on the date of publication; and it is assumed that publication was decided on in London in order to divert international attention from Abyssinia. If this was London's aim, it failed. For Locarno and Herr Hitler's peace proposals are already half-dead, and cannot be fully revived; but Abyssinia, which London would like to kill, refuses to be killed.

To Germans the Abyssinian and European questions are one, though not in the Italian, French or British sense. Germans have all along objected, with good reason, to the use which influential groups and individuals in the three countries responsible for the Abyssinian scandal have made of the Reich's alleged exceptional position as a threat to peace in Europe. It is no mere accident, they remark, that those countries whose hands are really clean in the Abyssinian question do not find it necessary to talk about any German peril. This German complaint does not, however, mean that the Abyssinian and general European questions can really be divorced. The most important of all general European issues is whether Germany will return to the League, as she has conditionally offered to do. From this viewpoint Germans hold that it is both improper and incongruous to put schoolmasterly questions about the practice of virtue by them in future.

The number of unemployed at the end of April is returned at 1,763,000, which is 174,000 fewer than at the end of March, nearly half a million fewer than in April, 1935, and only some 50,000 higher than the best figure of last summer. Insolvencies in April numbered 181, against 258 in April, 1935. Consumption of electricity in March was 15 per cent. above that of March, 1935; and retail turnover in March 9 per cent. over that of March, 1935. The total income from wages and salaries of workmen, clerical employees and officials in 1935 is returned at Rm. 31,901 millions, against Rm. 29,262 millions in 1934 and 25,960 millions in 1933.

Reports from industry are mostly favourable. In April the home demand for almost all kinds of steel increased. The most active consumers were the machine manufacturing, shipbuilding and building trades. Foreign steel declined, but actual steel exports in the month increased and imports decreased. The net export

iron and steel, which in 1934 fell to an average monthly value of Rm. 33 millions, has lately been around Rm. 60 millions. The average export price has risen somewhat. The Ruhr Coal Syndicate has raised its per ton assessment for April from Rm. 3.78 to Rm. 3.93. This is a consequence of the increased proportion of sales to "contested" districts. The engineering and machine-tool manufacturing trades are very active, as well as the pulp and paper mills; and exports of paper have risen sharply. Textile reports are irregular, and the leather industries are still depressed.

INCREASE IN TAX RECEIPTS

Gross receipts from Reich taxes in March totalled Rm. 904 millions, against Rm. 748 millions in March, 1935. Receipts in the whole financial year 1935-36, ending March, 1936, were Rm. 9,650 millions, against Rm. 8,205 millions in 1934, Rm. 6,846 millions in 1935, and Rm. 6,647 millions in 1932. Direct taxes and taxes on business in 1935-36 yielded Rm. 6,176 millions, and Customs and Excise Rm. 3,474 millions. Of the increase in total receipts, Rm. 1,219 millions was in receipts from direct taxes and taxes on business. The two railway traffic taxes also yielded more, and the company tax and motor-car tax less. Customs and Excise, taken together, yielded Rm. 226 millions more. The total increase, as compared with 1934, is therefore Rm. 1,445 millions, or, if readjusted to changes in taxation methods or rates Rm. 1,261 millions.

An exact comparison with tax revenue in the pre-depression years is not possible. Certain emergency taxes, in particular the crisis income tax and the supplement to income tax, which were meant to be temporary, have since been merged in the regular income tax; the sales tax rate has been increased; and numerous minor changes have been made. The Secretary of State at the Finance Ministry, Herr Reinhardt, predicts a further increase of Rm. 1,000 millions in tax revenue in the new financial year. All the above figures are gross. After deducting the shares of the States and providing for past deficits, and for debts incurred as a result of "advance financing" for the business recovery, insufficient money, Herr Reinhardt says, will be available for new Reich undertakings, including re-armament.

The index of the conditions of crops for May 1st shows wheat the same as in May, 1935, and rye slightly better. Spring sowing has been retarded by rain and cold.

Money became cheaper last week, and this week was so abundant that Gold Discount Bank promissory notes were bought for the lack of other short-term paper. At the end of April the circulation of these notes had risen to Rm. 862 millions, against Rm. 750 millions at the end of March.

BERLIN, May 13.

SPAIN

A NEW PRESIDENT AND A NEW PRIME MINISTER

SPAIN'S Republicans can now feel that the Presidency is in the hands of an outstanding personality of proven loyalty to the new regime. But against this advantage gained by the elevation of Don Manuel Azaña to be Head of the State must be set certain drawbacks. Sr. Azaña was not only leader of Izquierda Republicana, but virtually also the chief of Union Republicana as a result of the election to the post of Speaker of Don Diego Martinez Barrio. Not only are these parties left leaderless; but there is no figure in sight with the prestige and personality of Sr. Azaña, which spread far beyond party frontiers, to take up this leadership and to fill the difficult and delicate task of the Premiership.

The circumstances under which Sr. Azaña has been elected leave almost everything to be desired from a democratic point of view. The manner in which Sr. Alcalá Zamora was abruptly ousted, the holding of elections with civil guarantees suspended and a censorship in force, the slight attention paid to the views expressed by the representatives elected to participate in the presidential election at various party assemblies, the use of the censorship by Sr. Azaña's Government on articles and editorials concerning his election—the whole procedure—has in the past set undesirable precedents. It is not surprising, therefore, that the new Government is disappointed, and shows signs of a marked expansion.

The official explanation, to the effect that Sr. Azaña was chosen as the only candidate who would receive the votes of the various fractions of the United Front, is not accepted entirely in well-informed circles. It is asserted that Sr. Azaña was anxious to leave the Premiership, an assertion which has not been denied and which implies the existence of a highly unsatisfactory state of affairs. The Spanish situation is not good. There is a revolutionary fervour and a bitter class hatred such as has never existed here. It seemed logical that Sr. Azaña and his friends would undertake a rapid and radical scheme of reforms to check this revolutionary wave. Nearly three months have passed since the elections, and little has been done. Now the leader and inspirer of Left Republicanism abandons active politics and leaves the Republicans leaderless. This is an unpleasant state of affairs. Sr. Casares Quiroga, the new Prime Minister, is an active and capable figure, but his prestige and capacity have, so far at any rate, not equalled those of Sr. Azaña. However, next to Sr. Azaña he is the person with most chance of holding together the United Front, and it remains to be seen whether he will try to make up for the valuable time trifled away in petty politics in the last three months.

"ANARCHO-SYNDICALIST" ACTIVITY

The congress in Saragossa of the Confederación Nacional del Trabajo, the Anarcho-Syndicalist labour movement, has received much attention both in Spain and abroad. Spain is virtually the only nation left where the theories of Bakunin and Sorel continue to sway large masses; a situation due almost entirely to the high rate of illiteracy. The C.N.T., as it is known in Spain, decided in favour of the formation of regional alliances with the Socialist and Communist unions, but on condition that the latter abandoned all political activity and promised to use violence only. Doubtless this somewhat infantile pretension will not be accepted by the congress of the Socialists to be held in Madrid on June 10; but this is not to say that the alliances will fall through. Some kind of compromise will doubtless be reached after the forthcoming congress.

The Anarcho-Syndicalist movement is a peculiar mixture of idealists, *agents provocateurs* and terrorists. It has no outstanding leaders, but it still has a name and a tradition in Catalonia and in Andalusia. Union with the other labour forces would give enormous strength to the workers. The ideals of individual freedom embodied in anarchism continue to have a decided but lessening attraction for Spanish workers, and the vague programme of a State which would be nothing more than a conglomeration of independent municipalities has lost its appeal for Spanish youth.

The slow payment of foreign currency owed to firms abroad shows no sign of speeding up. Whether the change in the Cabinet will alter the course of events cannot be said; but on the whole it is more likely that no attempt will be made to deal with the serious problem in energetic fashion for the time being. Devaluation of the franc would affect the peseta. A Bill has been presented to the Cortes for the spending of about £27,000,000 on public works, which should relieve the position of the 800,000 unemployed. How far piecemeal plans of this kind actually help matters, is difficult to say. In financial circles the election of Sr. Azaña has been well received. This attitude is based a good deal on the hope that from his new post he will support a policy tending to check the advance of Socialism and Communism.

MADRID, May 12.

POLAND

THE FAILURE OF DEFLATION

It may reasonably be assumed that the introduction by Presidential Decree on April 27th of "temporary control" by the Bank of Poland over the purchase and sale of gold and foreign exchange is the forerunner to devaluation of the zloty—the time and extent of the devaluation to be determined by the course of events. One of these events will be a Cabinet reconstruction, with the probable elimination of "the Colonels' group" (except Colonel Beck, the Foreign Minister), which is held responsible for the deflationary programme and the recent disorders for which in turn the programme is held responsible.

tionary programme and the recent disorders for which in turn the programme is held responsible.

The Man in the Street, however, has not taken the view that he has been the unwilling victim of another noble experiment, but rather that the Government, more or less with public approval, and at the cost of a standard of living which has always been much below the Western European level, has made an earnest attempt for the last five years to be honest and straightforward in its financial and economic dealings while so many other countries have been openly practising selfishness, trickery and subterfuge. Probably no other country has made as great a sacrifice as Poland since 1928 to prove that the classical conceptions of a free gold standard will not work under post-war conditions. In a world of *saute qui peut* Poland has made the fundamental mistake of sticking to rigid orthodoxy. Fortunately (perhaps) she did not make the same mistake in international politics, which was because Marshal Pilsudski—who died just one year ago—was a skilful political and military leader but was not well versed in financial-economic affairs.

The protest against continued deflation came after grave unemployed riots and looting in Cracow and Lwow during which the authorities showed a willingness to prove with bullets that financial orthodoxy could be made to work. It was only then that the public said "enough." The method of saying it was a flight from the zloty into gold and foreign currencies, and during the ten days between the Lwow riots and the promulgation of the "control" decree the banks lost more than 50 million zlotys of gold and *devisen*. Only a few days before the flight began M. Kwiatkowski, the Minister of Finance, had been able to announce the "triumph" of deflation by publication of the Budget figures for the month of March (revenue 199,661,000 zlotys and expenditure 199,034,000 zlotys), showing a surplus for the first time since November, 1930. The figures for the month of April also show a surplus, with revenue given at 175,450,000 zlotys and expenditure as 175,000,000 zlotys. The Koscialkowski-Kwiatkowski Cabinet took office last October for the avowed purpose of "balancing the Budget and the country's economic life," but their programme had been prepared beforehand by "the Colonels."

It is not expected that the present policy of the Government of holding the zloty at the gold parity which has been in force since October, 1927, will have to contend with external pressure. Foreign holdings of zlotys are limited to a few millions, except for the Free City of Danzig, where there was a flight to the zloty a year ago when the gulden "went off." These zlotys, estimated to amount to about 25 millions, have remained, mostly hoarded, in the Free City, and they are now the subject of negotiations between the Polish and Danzig authorities.

RELIEF WORK PLANS

The rise of from 15 to 25 per cent. in the prices of leading industrial shares, accompanied by a marked improvement in the price of land and buildings since the introduction of exchange "control," indicates the expectation of reflation. The spending of 400 million zlotys on public works for relieving unemployment during the fiscal year which began on April 1st is now being mentioned, and it is significant that an increase in banknote circulation of a similar amount is also being discussed.

The amount of paper currency outstanding at the end of April, after an increase of 68 million zlotys in the last ten days of the month, was 1,010 million zlotys, for which a "cover" of 30 per cent. is required by law. The "cover" at the end of April was 36.82 per cent. The circulation of metallic currency, which is issued by the Treasury, is also increasing, but this does not affect the "cover" shown by the Bank of Poland.

There is almost no limit to the public works that could with great advantage be undertaken in Poland—such as the building and improvement of roads, schools, hydro-electric developments, the draining of extensive swamps in the East, improvement of waterways, etc. Despite the presence of more than one million unemployed eager to find work of any kind, the economic development of a backward country has been at a standstill for years because of the lack of "capital." The coming "New Deal," it is assumed, will

take care of this situation by discouraging zloty hoarding and expanding currency circulation. The Government has not yet called in private hoardings of gold and foreign currencies, nor for the registration of foreign securities owned by Polish nationals—which may amount to a total value of between 800 and 1,000 million zlotys. But strict precautions are being taken to prevent their escape from Poland.

From January 1st to April 30th the gold and foreign exchange holdings of the Bank of Poland declined from 471.3 to 395.8 million zlotys. Assuming, however, the whole of the latter amount to be available for use, the Bank should have no difficulty in providing all the foreign exchange required for the legitimate needs of business and travellers—the more so as the foreign trade balance is still "active," and the German railways are now paying 1,500,000 gold marks (or 3,200,000 zlotys) a month to meet current charges for transit traffic across the Polish Corridor.

The foreign trade figures are as follows:—

	1934	First Three Months 1935 (Millions of zlotys)	1936
Exports	237.2	221.8	241.9
Imports	194.1	195.6	232.1
Export surplus ...	43.1	26.2	9.8

It has been officially stated, since the establishment of exchange control, that "Poland is not, at present, so much endeavouring to achieve a highly favourable balance of trade as trying to expand the total volume." This evidently foreshadows an increase in "compensation" trade, especially with Germany.

WARSAW, May 10.

GREECE

RE-ARMAMENT AND RE-MILITARISATION

WITH normal political conditions restored, the attention of the authorities is being concentrated on the problem of re-organisation and completion of the defence forces of the country. Following an agreement between the Government and the leaders of the political parties on the programme to be adopted, General Metaxas, the Premier, announced that, by the end of 1937, the defence forces of the country would be adequately equipped and reorganised. To this effect, a total expenditure of some 6,000 million drachmas will be required. Large quantities of war material will be imported from Germany in order to liquidate the frozen balance of over Rm. 30 millions standing to the credit of the Bank of Greece from Greek exports to Germany. On the other hand, it has been decided in principle to give the order for the construction of four destroyers to British shipyards.

On the subject of re-militarising the Dardanelles, the Greek Government gave a favourable reply to the Turkish Government; and it seems probable that Greece will also claim in due course, for the same reasons as Turkey, the right to fortify certain Greek Islands in the Aegean Sea. This seems the more reasonable after the failure of the League of Nations to prevent or even to stop the Italo-Abyssinian war—a failure which has shattered confidence in the power of the League—and, incidentally, of Great Britain—to protect effectively the small nations from unprovoked aggression by larger States.

If, as it is hoped, General Metaxas' Government secures a vote of confidence from the Chamber, the Finance Minister, accompanied by the sub-governor of the Bank of Greece, will proceed shortly to London to negotiate with the representatives of the foreign bondholders about the service of the Greek foreign debt. The Greek Government intends to propose a definite arrangement of the debt on the basis of the present financial conditions of Greece and its transfer capacity. If the bondholders refuse such a settlement, a provisional agreement, valid for two years, will be suggested. In such a case it seems that the Government will not offer, at best, more than 35 per cent. of the service; that is, the same percentage as was provided for in the last agreement with the bondholders.

It seems probable that, to protect the declining foreign exchange reserves of the Bank of Greece, new restrictions, especially on imports of goods from abroad, will shortly have to be enforced. For the import surplus for the first two months of this year showed an increase of Drs. 454 millions against that of the corresponding period of 1935, which, in its turn, was higher by Drs. 200 millions than in the corresponding period of 1933. In fact, though exports have increased in value since 1933, imports have been increasing faster; so that the import surplus has steadily risen from Drs. 3,197 millions in 1933 to Drs. 3,318 millions in 1934 and Drs. 3,580 millions in 1935. On the other hand, invisible exports declined in 1934 and in 1935. Accordingly, the gold and foreign exchange reserves of the Bank of Greece have shrunk from Drs. 4,156 millions on June 30, 1934, to Drs. 3,068.5 millions on March 31st last.

GERMAN PENETRATION IN THE NEAR EAST

The direction of the foreign trade of Greece—and it seems that of the other Balkan States—should seriously attract the attention of responsible persons in the United Kingdom. Thanks to the monetary and commercial policies of the German Government, exports to Germany from Greece and other Balkan countries have steadily increased in recent years. Owing, however, to the compensation and exchange clearing agreements regulating trade between Germany and these countries, this increase has resulted in a large expansion of German exports to the Balkans—an expansion made to the detriment of British trade and rendered necessary for disposing of the otherwise huge frozen balances of blocked marks in Germany. Consequently, in the case of this country at least, Germany now heads the list, both of exporters and importers. It should not be forgotten, moreover, that economic interests create bonds among nations and may even have serious political consequences. In the face of growing German economic and non-economic penetration, British interest in this part of Europe should, therefore, be adequately and duly protected by the adoption of policies tending to maintain and expand the economic and cultural relations of Great Britain with Greece, as well as with the remaining countries of the Near East.

ATHENS, May 2.

ARGENTINA

FALL IN EXPORTS.

FROM the following figures it will be seen that exports, for the first quarter of 1936, are considerably lower both in value and volume than for the same period of 1935:—

EXPORTS FOR FIRST QUARTER				
	1935	1936	1935	1936
	Tons		Value	
Livestock products	326,287	353,414	\$	\$
Agricultural products	3,806,086	2,937,916	151,912,593	185,113,404
Total (all exports)	4,265,000	3,413,000	266,676,999	205,723,757
	Value		Value	
Livestock products	151,912,593	185,113,404	437,928,000	409,835,000
Agricultural products	266,676,999	205,723,757		
Total (all exports)	437,928,000	409,835,000		

GRAIN EXPORTED DURING FIRST QUARTER OF 1935 AND 1936

	1935	1936	1935	1936
	Quantity		Value	
	Tons		\$	
Wheat	1,414,284	357,917	90,210,824	36,012,827
Maize	910,844	1,780,661	48,769,002	78,569,889
Linseed	630,558	454,475	76,644,479	63,872,184
Oats	227,015	44,087	11,815,389	2,628,775
Barley	282,579	68,399	16,679,739	3,522,045

Exports for March, 1936, although lower in volume, were higher in value than in March, 1935, owing to an increase in prices of cereals.

The full figures of foreign trade in the first quarters of 1935 and 1936 were as follows:—

	1935	1936
	\$	
Imports	286,481,581	289,451,011
Exports	437,928,129	409,834,856
Export Surplus	151,446,548	120,383,845

Farming conditions in the South and South-West, which in the early part of April were really serious because of the drought, have now greatly improved owing to the copious and timely rains which have fallen practically throughout the central agricultural zone.

THE ROCA AGREEMENT.

The Argentine Ministry of Finance has published a long and detailed statement, summarised below, in reply to allegations which had appeared in a section of the British press that Argentina had not fulfilled the obligations imposed by the Anglo-Argentine Trade Treaty of 1933.

The Ministry states that in spite of baseless accusations the Argentine Government had maintained silence, being content to inform the officials of the British Government of the true state of affairs through its accredited representatives abroad. But the news published on April 30th, according to which a committee representing the Parliamentary majority of the British House of Commons affirmed that "Argentina must radically reduce purchases of merchandise from the United States, which, according to information, are paid with pounds sterling derived from British purchases of Argentine goods," and that Argentina "employs only 25 per cent. of her pounds sterling to acquire British goods and to pay for services, while 75 per cent. is allegedly used for purchases abroad, chiefly in the United States," obliged the Finance Department to publish the present information which proved such accusations to be totally unfounded. As laid down in the Runciman-Roca agreement, so long as a system of exchange control exists in Argentina, the total exchange derived from sales of Argentine produce to Great Britain must be allotted to current remittances to that country after deduction of a reasonable amount—which must not exceed £3,000,000—for the payment of the foreign public debt in other countries. The order of priority in which the available exchange should be distributed shall be:—

- Public debt.
- Import of goods.
- Freights.
- Interest on debentures and other loans.
- Private British remittances.
- Payment of dividends on preferred and ordinary shares of British companies operating in Argentina.

The fulfilment of this clause by the Argentine Government is fully proved by the fact that during the operation of the Treaty the total exchange derived from Argentine sales to the United Kingdom has been applied to transfers to that country except a small balance of about £1,500,000. This balance was not distributed owing to lack of applications within the terms agreed with the British Government. It will be rapidly absorbed, however, by transfers to be authorised during the current year. Then comes the following table:—

ADJUSTMENT OF EXCHANGE AFFECTING GREAT BRITAIN DURING THE YEARS 1933, 1934, AND 1935

	1933	1934	1935
	(May to December)		
	In thousands of pesos		
Exchange available:—	273,235	543,572	493,760
Value of visible exports			
Exchange applied:—			
Reserve for payment of debts in other countries	25,622	45,000	45,000
Drawn	236,355	462,371	444,377
Total applied	261,977	507,371	489,377
Balance in favour of Great Britain	11,258	36,201	4,383
Granted in 1934	10,515	...	...
Granted in 1935	795	20,268	...
Balance pending at date	2,190	15,933	...

The total exchange sold for Great Britain amounted in 1933 to 33.7 per cent. of the general total, and in 1934 and 1935 it was 40.7 and 39.7 per cent. respectively.

EXCHANGE GRANTED TO GREAT BRITAIN

	1933	1934	1935	Percentage 1935 over 1933
	(In thousands of pesos at the buying rate)			
Import of goods	215,220	247,780	278,976	+ 29.6
Public debt	74,371	73,418	42,980	- 42.2
Remittances public utility cos.	55,597	141,332	138,074	+ 148.3
Remittances of private persons	11,553	1,796	...	...
Other transfers	7,518	8,552	4,307	- 42.7
	364,259	472,878	464,337	+ 27.5

The amounts of exchange drawn shown in the first table

do not agree with the totals of the second table because there is a difference between the date of earmarking and the date of granting. There is, of course, no comparison between the two tables for 1933, since the first table only covers the eight months of the year during which the Treaty was operating, while the second table gives 1933 for the full twelve months.

The report concludes: "It is thus proved that with the concession of official exchange for its merchandise without restrictions, British industry has received an obvious benefit, thus giving it an advantage over the other countries with which no agreement has been signed, and whose imports without prior exchange permits must support a surcharge of up to 20 per cent. in virtue of Law No. 12,160. If imports of British origin have not been greater, this cannot be attributed to the system of compensation established by the agreement nor to the Argentine Government."

In view of the discussions on the Roca Agreement now proceeding, this statement is of considerable importance.

BUENOS AIRES, May 1.

SOUTH AFRICA

THE MARKETING BILL AND THE COST OF LIVING

THE Marketing Bill, designed to benefit the farmers by regulating the conditions of distribution and sale of their products, has aroused so much opposition that it now appears unlikely that it will be proceeded with—at any rate during the present session. The Chamber of Mines took a foremost part in this opposition. In the course of a statement embodying the views of the industry the Gold Producers' Committee contended that the Bill "offers no permanent solution of the agricultural problem and will simply aggravate the maladjustments which at present exist." It also alleged that the Bill would tend to increase production costs, raise the already high cost of living in South Africa and incidentally the costs of the gold-mining industry.

Mr G. H. Beatty, joint general manager and consulting engineer of the Johannesburg Consolidated Investment Company, Limited, who was last month elected president of the Chamber of Mines, has just made the high cost of living the subject of a significant speech. High railway rates he put among the principal causes of the excessive level of rents, which represented here 25 per cent. of the wage-earner's budget. High railage is also held responsible for the recent increase in the cost of petrol on the Rand, now 2s. 2d. per gallon. In response to widespread protest, which the Government evidently regard as having possible political significance, the Minister of Railways is calling a conference jointly representative of the petrol importers and distributors, the Motor Traders' Association and his own department to see if all-round reductions can be arranged.

Preliminary preparations by the South African Reserve Bank for loan redemption operations in London are reflected in recent statements of the Bank. The latest return shows that the total gold holding of the Bank was reduced to below £23 millions, a reduction of over £6,713,500 in the month. The loans to be redeemed in London in the near future total £18,500,000; while stock domiciled in South Africa, representing a further £12,600,000, is also being redeemed. For these redemptions a local loan for £31 millions was issued early in the month.

GOLD-MINING PROSPECTS

From the returns of the Transvaal Chamber of Mines for the first quarter of the year and the gold producers' reports for the same period, it is possible to arrive at an approximate estimate of the prospects of the gold-mining industry for the current year. Gold, it must be remembered, has realised an average of £7 os. 6d. per fine ounce this year, as compared with an average realisation value of £7 3s. for the first quarter of 1935. If one takes account of the lower realisation value, it is possible to make a comparison between the gold producers' operations in the two years.

The comparison may be summarised as follows:—

	First Quarter's Gold Production	
	1935	1936
Tons milled	10,432,900	11,769,250
Yield (fine ounces)	2,594,430	2,752,481
Yield (dwts. per ton)	4.876	4.584
Working revenue	£18,221,860	£18,988,592
Working revenue (per ton)	34/11	32/3
Working costs	£10,082,441	£11,026,432
Working costs (per ton)	19/4	18/9
Est. working profit	£8,139,419	£7,962,160
Est. working profit (per ton)	15/7	13/6

It is not yet possible to assess accurately the effects on the industry as a whole of the new taxation recently proposed. Only four of the six groups controlling the principal gold producers of the Witwatersrand have included in their quarter's reports details of the provision made in respect of taxation calculated for the first three months' operations on the basis of the proposals announced by Mr Havenga. But the figures put forward by these four groups are illuminating. They are as follows:—

	Quarter's Profits	Taxation
Rand Mines Group (12 producing companies)	2,340,174	827,527
Johannesburg Cons. Investment (6 companies)	2,037,857	1,044,549†
Union Corporation (3 producing companies)	806,150	322,000†
New Cons. Gold Fields (4 producing companies)	939,694	340,019

† Including Government's share of profits under lease.

From these figures it will be seen that, in respect of the first quarter of the year, the Government is receiving well over £2,500,000 from only 25 out of the 35 gold-producing companies. But these direct contributions do not represent anything like the benefits the country derives from the gold-mining industry. Quite apart from the very heavy contributions the mining companies make to the State railways and other public services, it has to be remembered that nearly two-thirds of the stores consumed by the mines are purchased within South Africa—the actual figures for 1935 are now available and show that South African products to the value of £16,047,414 were purchased, as compared with imports valued at £10,550,166. Moreover, salaries and wages paid by the gold-mining industry last year totalled £21,604,000. So that in addition to the £14,378,000 taken by the Union Government in share of profits and taxation last year, there was spent in this country (apart from dividends distributed to South African shareholders) no less than £37,650,000.

JOHANNESBURG, May 1.

LETTER TO THE EDITOR

GOODWILL AND SHARE CAPITAL

TO THE EDITOR OF THE ECONOMIST

SIR,—In an article which appeared in a recent number of the *Economist* in connection with the Imperial Chemical Industries judgment (which has later been confirmed on appeal), you commented on some points raised in a recent lecture by me on "Inflation, Industrial Share Capital" (now published in pamphlet form by Gee and Company (Publishers), Ltd., price 6d.) and you asked the question, Should "goodwill" be capitalised at all?

I think the right answer to the question is that its value should never be included in the fixed share capital of an industrial company, the amount of which should, by the statutory exclusion of the value of intangibles, be strictly confined to the going-concern value of real capital, i.e., tangible things and rights to such things, after deducting liabilities.

For example, take the case of an individual trader owning land, buildings, plant, stock-in-trade, book debts, etc., having a going-concern value—after deducting liabilities—of £100,000. This man owns £100,000 of real capital, and no more, even although his business may be regularly earning, and likely to continue to earn, a yearly profit of as much as £20,000. But, if this business is sold to a company, the fixed share capital may very likely, under our present method of company finance, be stated at not less than £200,000, although the real capital in the business has not been increased by selling it to a company.

One vital objection to this unfortunate method is that it severely handicaps the proper practice of industrial accounting, which is naturally concerned with tangible things. A clear

line can be drawn between tangible and intangible assets, and it is well known that the going-concern value at any time of actually existing things can be computed on the appropriate basis, without much room for serious differences of opinion, with the aid of simple and logical accounting rules and the use of suitable accounting equipment. But this is not so with intangibles like goodwill, the ever-changing value of which does not represent anything which exists, nor is it amenable to any possible accounting or other logical rules; and, moreover, it does not concern in any way the measurement of annual profits and losses. For these weighty reasons, the value of goodwill and the like should, I think, be wholly eliminated from company balance sheets.

This could, of course, have been easily effected, in the case quoted, by the issue of the company shares at a premium of £1 per share; but some alternative method is plainly needed, and intangible assets of this nature would often be more conveniently represented by an appropriate issue of shares of no par value entitled to a stated proportion of the expected super-profit; the issue would naturally, of course, be made at the price the shares of no par value would fetch, and simultaneously with the issue of the shares of fixed amount. Unfortunately, shares of no par value are not at present permitted by English company law.

It is common knowledge that shares of no par value are widely used in America, Canada, and elsewhere, but we must not look for guidance to the practice in other countries, because such shares are now very generally issued indifferently against the value of both tangible and intangible assets without any discrimination, although, according to my correspondents, this was not always so. I am told that on the introduction of shares of no par value they were naturally regarded both in America and Canada as representing goodwill, trade marks, patents, etc., whilst shares of fixed amount were considered to represent tangible assets, i.e. real capital.

It is mainly owing to the mistaken and unnecessary custom of including, in fixed share capital, the estimated value of the future earning power of a business at the time of sale to a company, that company accounts, as issued to shareholders, have become of little practical use. They are now too often apt to present a mere mass of meaningless figures, instead of an approximately accurate record of annual profits and losses, and of the real capital of a going concern in its then existing state of investment.

Yours faithfully,

London, E.C.4.

P. D. LEAKE.

BOOKS AND PUBLICATIONS

THE CONTROL OF RAW MATERIALS

THE first of these two books considers the political aspect of the regulation of raw material supplies, and the second the economics of individual regulation schemes. Mr Greaves starts by saying that political intervention in trade and production is a fact that no realist policy can afford to overlook. And Mr Greaves is right. Political intervention, he says, attempts to make secure both the supply of raw materials necessary for industry and the foreign markets for home produce. Colonial expansion, commercial treaties and producers' agreements of one kind or another are the chief instruments used; tariffs and quotas are secondary weapons. Governments which are dissatisfied with their success in this field will continue the struggle whether by military conquest or by economic penetration. That, Mr Greaves thinks, means political and economic war between the "satiated" and "unsatiated" powers. He finds the solution of these problems in international economic "planning," and he discerns a tendency in that direction both among industrial manufacturers and producers of primary products.

The major part of Mr Greaves's book is taken up with a description of a group of regulation schemes which have actually been in operation. Unfortunately, however, his account of individual schemes is not very satisfactory and frequently betrays a certain lack of knowledge of conditions in these industries.

The lesson he draws from his investigation is that order must replace chaos, and that co-operation should be substituted for competition. His solution is as follows. Free access to raw materials and services should be established, and an executive board should be instituted with control over each commodity and service enjoying a world market. An economic council should also be set up with supervisory and co-ordinating authority; and a whole series of internationally organised industries and services should be contemplated, each under the control of committees or boards subordinate to the economic council. Mr Greaves realises, however, that nothing can be hoped from international organisation without the abdication of national sovereignty. He has written a stimulating book. But the chances of the adoption of his solution in the near future do not appear very bright.

Mr Rowe's volume is less ambitious. But it contains an excellent account of the various schemes for the regulation of primary products. The book is based on a series of wireless talks given by Mr Jewkes and Mr Rowe under the title of "Markets and Men." Mr Rowe begins by

tracing the origin and growth of control schemes in this field. The Great War had two very different effects. It made artificial control of supplies, in Mr Rowe's view, more desirable, because of the tremendous dislocations of all kinds which resulted from it. Production was greatly diminished in some countries and stimulated in others. The second effect of the War was to make direct Government intervention or control appear much more practicable. Governments not only did things which would previously have been considered an unwarrantable interference with business, but they did things which had hitherto been deemed virtually impossible for any single man or committee. What Governments could enforce upon an industry in the form of artificial control of production, stock, prices or markets, could obviously be done by the industry itself.

Mr Rowe then gives a detailed and admirable account of regulation in coffee, wheat, sugar, American cotton, rubber and tin; and concludes with an examination of the economics of restriction schemes during periods of prosperity and depression. As he himself wisely remarks, however, we do not yet know clearly enough how control schemes work out in the long run. A final and comprehensive judgment must consequently await the verdict of time.

SHORTER NOTICES

"Farewell to Revolution." By Everett Dean Martin. Routledge. 380 pages. 12s. 6d.

"The purpose of this study," says Mr Martin, "is to examine history in the light of social psychology." As early as 1920 Mr Martin wrote a book called "The Behaviour of Crowds," and has since published several other works of a similar character. This seems to be his first historical work. It does not lead us to hope that history will in future be written by social psychologists. The traditional record of the crimes, follies and misfortunes of mankind is more illuminating than this analysis of the paranoiac symptoms of revolution and their facile attribution to the revolutionary cycles which Mr Martin discovers in history. His analysis of crowd psychology is interesting. So is his study of Herr Hitler's mentality. But his failure to add anything substantial to our understanding either of the past or the present is summed up in the sentence: "the true explanation of Nazism will be found in the psychology of the crowd." What the explanation of the psychology of the crowd is, he does not tell.

His historical analysis is as superficial. He divides the history of Europe into three great revolutionary cycles. The first began with Solon and resulted in the dictatorship of the Empire and its overthrow by the barbarians. The second began with the reforms of Hildebrand and resulted in the Protestant Church, the rise of nation states and the Great War. The last originated among the English puritans, was corrupted in its 18th century liberalism by Rousseau, and led to the dictatorships of the 19th and 20th centuries. From

a chapter headed "What is Revolution?" it is almost impossible, from the wealth of definitions offered, to find out what Mr Martin means by revolution; but in a later chapter it transpires that he is using it in the sense of "a sudden, violent seizure of power by a faction."

Mr Martin believes that it is not to revolution but to liberalism that men owe the freedom which they possess, and his chapter on liberalism is certainly the best in the book. In general his case is a good one, but he argues it with rather uncritical complacency.

"The Socialisation of Iron and Steel." By "Ingot." Gollancz. 174 pages. 5s.

Three-quarters of this book has nothing to do with Socialism. It simply describes, ably and opportunely, the present state of the steel industry. As a brief technical outline, and as a survey of raw material sources and the location of firms, the study is excellent. About the financial structure, costs of production and profitability of the industry the book is a little sketchy—the material available on costs is scarce, and published financial results need very assiduous weeding. About the demand for steel, the industry itself unfortunately knows hardly more than that before the war ship-building took a third of its output, and that now someone else is taking most of that third. "Ingot," juggling with this figure and an intelligent guess by the motor industry, manages to suggest that he knows the destination of almost the whole ten million tons a year. About the politics of steel the book is only a few months out of date—which is high praise—and not embarrassingly critical, since a broad vein of realism mellows its Socialist ideology.

The case for Socialism is not based on the inefficiency of the industry under capitalism. The author recognises the technical progress made in recent years. He does claim, however, that an industry bolstered up by protection and international agreements should not be exposed even to the temptation to exploit its position as a politically irresponsible monopoly.

The Socialist plan is outlined in the last thirty pages of the book. The hierarchy of committees proposed appears not unmanageable in comparison with the 100 odd associations now meeting periodically to determine prices. The Central Board would have as chairman the Minister of Heavy Industries and as members a co-ordinating Government official, four workers, two "well-known Socialists," and three men of the general manager type. The author is a little uneasy about thus placing the industry under direct political control. It would not be "difficult for the eggs of the Socialist omelet to be replaced in their shells" by a Conservative Government. However, the moral and pecuniary returns to the workers as partners in a public enterprise are expected to militate against future capitalist Governments.

"The Rationale of Central Banking." By Vera C. Smith. P. S. King. 186 pages. 9s. net.

One might have thought that the controversy between "free banking" and "central banking" was dead. Yet here is a plea—and a very able plea, too—for a greater measure of freedom, for a partial release of the banks from the control of the Bank of England.

Dr Smith examines the reasons why the system of central banking came to be adopted in preference to a system permitting of competition among the banks. Her thesis is that the reasons, overwhelming in the nineteenth century, are not so conclusive as modern practice seems to indicate. Dr Smith has been indefatigable in exploring the authorities, old and new; and she has presented the gist of their contentions in a most readable form.

We cannot accept her view, however, that increased freedom for private banks is desirable. The importance of the volume and velocity of a country's bank deposits becomes more apparent every day. Monetary policy is a dominant influence on the economic life of nations; and there is no good reason to believe that completely unregulated banking would produce anything but monetary chaos.

"Planning Potatoes and Plundering the Public." By Alfred Beesly. The Liberal Free Trade Committee. 16 pages. 2d.

Mr Beesly has some scathing things to say about a scheme which "enabled 66,000 growers to enforce their will upon the 40 million consumers whose interest was to buy their potatoes as cheaply as possible." He attacks the dictatorial methods used by the Board in its price-raising activities, and ridicules the costly experiment at Bishop Auckland by which the Board convinced themselves that a reduction of prices would increase the consumption of potatoes.

"Capitalism and the Consumer." By Fred Henderson. Allen and Unwin. 156 pages. 4s. 6d.

Thinking in terms of money rather than "real" production and consumption is perhaps more conducive to economic fallacies than anything else. But to rush to the other extreme and interpret "real" production as simply the physical output of goods, is almost equally disastrous. Mr Henderson's new book is a remarkable illustration of this latter danger. He sees that the "advancing" of "credit" in the form of wages to induce workers to produce does not alter the fact that the goods these workers consume have to be consumed now. But he quite forgets that the act of saving which enables the "advances" to be made represents a transfer of currently existing consumption goods from one set of persons to another—in return for a transfer back of subsequently produced consumption goods.

The confusion between "real" "physical" processes has led Mr Henderson to forget that saving is thus a double transfer and also that an economic system has not merely to produce goods but to decide which should be produced and in what quantities. Unfortunately, the whole of the rest of the book is marred by this confusion, and Mr Henderson's observations on power production and his refutation of Major Douglas consequently lose what cogency they might have had.

MONEY AND BANKING

SOCIAL versus NATIONAL CREDIT

CANADIAN conditions to-day present a curious anomaly. In recent months internal industrial activity has expanded, mining output has achieved a new high record and surplus wheat stocks have been greatly reduced. The value of Canada's external trade for the fiscal year 1935-36 was 12 per cent. greater than in the previous year, and the country has an active balance of payments. Yet Mr Dunning, the Finance Minister, when opening the Federal Budget on May 1st, had no pleasant task. It fell to him to announce that while ordinary revenue for 1935-36 was \$372 millions, expenditure had been swollen by special items, including unemployment relief, to a grand total of \$534 millions. Despite certain proposed increases in taxation, the utmost the Government could hope to achieve was to keep the deficit for 1936-37 below \$100 millions.

Mr Dunning was gravely exercised, further, over the financial position of the Provincial Governments. Federal advances to the Provinces already totalled \$116.5 millions, and both the revival of business confidence and the healthy functioning of the capital markets, he declared, were being retarded by uncertainty in this connection. He announced the Federal Government's decision to proceed with a measure to amend the British North America Act so as to secure authority for measures necessary to the readjustment of Provincial finances. What is the background of this most significant decision? A review of Canadian Provincial finances must necessarily begin with the current position of Alberta, where the accession to power of the Social Credit Party, under the leadership of Mr Aberhart, has been followed by default in the meeting of a maturing debt obligation. Although Mr Aberhart's Government has made no practical progress towards the promised distribution of social credit dividends, it has, at least, achieved the decision to reject Mr Dunning's scheme for a Loan Council for Alberta. In consequence (writes our Canadian correspondent) Mr Dunning, with the approval of the Federal Cabinet, refused to advance from the Federal Treasury the funds necessary to supplement the \$600,000 which was all that the Aberhart Ministry had available in its coffers to meet a Provincial bond issue of \$3,200,000 maturing on April 1st. The Imperial Bank of Canada was willing to provide the necessary funds with the backing of a Federal guarantee, but this also was refused. Accordingly, Mr Aberhart made the curt announcement: "We haven't the money. I'm sorry, but we must default." Thus Alberta achieved the distinction of being the first Canadian Province to default upon its obligations.

The Aberhart Ministry proceeded to pass through the Legislature a measure authorising the conversion of Alberta's outstanding bond issues, which total roughly \$160 millions and bear an average rate of 5 per cent. interest, into new issues which will bear interest at not less than 2½ per cent., but certainly at not more than 3 per cent. The intimation that this forced conversion scheme is for the time being to be limited to some \$67 millions of bonds maturing in the near future brings cold comfort to the bondholders. Mr Aberhart, however, promises that his Government will pay the principal value of his obligations "dollar for dollar," and insists that the bondholders ought to acquiesce cheerfully in his conversion plan because they will keep their principal intact. If some drastic readjustment were not made, he argues, the bondholders would probably find themselves within five years bereft of both principal and interest.

The Alberta Legislature, further, has also passed a "Cities Refunding Act," which authorises Edmonton, Calgary and other cities to coerce bondholders into accepting lower rates of interest. Naturally such proceedings have caused profound dismay in banking and financial circles. So far, however, Alberta's creditors have taken no action to frustrate the operation of the refunding legislation. But the unfortunate consequences for Canada's credit in the British and American money markets remain undiminished. Disquietude in financial circles has been

increased by the suggestion that the city council of Montreal is following Alberta's lead and spreading the infection to Eastern Canada.

Final proof of the determination of the Alberta Ministry to blaze a new financial trail came in the closing days of the Legislature's session, when that body passed a resolution authorising the Government to proceed "as soon as may be convenient" with the establishment of a Provincial bank under the necessary Federal charter. This resolution received the unexpected support of the Liberals and Conservatives. Both Mr Cockroft, the Provincial Treasurer, who moved the resolution, and Mr Aberhart, who seconded, declared that the bank was a necessary means of ensuring that Alberta should "hold control over credit."

The Province of Ontario already operates a Provincial savings bank, and Manitoba also formerly possessed one, now defunct. These institutions, however, from the outset confined their activities to the receipt of deposits, which they invested in gilt-edged securities. A bank of a much more ambitious character is obviously contemplated by the Aberhart Ministry. For the acquisition of a bank charter an Act of the Federal Parliament is necessary. Any Bill incorporating the projected bank would be referred to the Banking and Commerce Committee of the Federal House of Commons. It would then have to run the gauntlet of both Houses of Parliament. Important issues would be raised, since the Canadian Bank Act is based upon the principles of private ownership of chartered banks and takes no cognisance of the problems which would be created by a Government-owned bank. Even if the Bill of incorporation survived the strenuous opposition which would certainly be forthcoming, a minimum capital of \$500,000 in cash would have to be subscribed before the charter could become operative. As a Province so hard pressed as Alberta could scarcely raise a larger sum, the note issue of the projected bank would be limited to 95 per cent. of the value of this capital. Such an amount would not go far to free the people of Alberta from dependence upon the chartered banks. Moreover, the Provincial bank would be subject to the inspection regulations and other provisions of the Bank Act, and in such circumstances it could not be made an effective instrument for the application of a Social Credit scheme. All this, however, is hardly of practical interest, for there is little prospect that the present Federal Parliament will conform to Mr Aberhart's desire for a State-owned Provincial bank.

Another measure passed by the Aberhart Ministry, which is being interpreted as a preliminary move towards Social Credit, sets up an elaborate code for the regulation of the retail trade in the Province. Its fundamental objective is to control the spreads between producers' and consumers' prices. The Government proposes to administer it with the help of a permanent advisory committee of experienced retail merchants. The Bill, however, is unpalatable to most of the 8,000 retailers who will come under its provisions, and it may be difficult to secure a satisfactory committee.

Alberta, with all her financial fantasies, typifies in an extreme form the difficulties of Provincial Governments in a Dominion still suffering the aftermath of severe depression. There is urgent need for closer co-ordination of Dominion and Provincial finances, for, by general admission, the burdens left behind by the depression are unequally distributed. It will be widely regretted, however, in quarters not confined to Canada, that Alberta, in pursuit of a chimæra, has deliberately rejected the Federal Government's proposals for assistance. Her action, which threatens to be imitated, in whole or in part, outside her own borders, has clearly complicated the Dominion Government's task of finding a practicable solution for an intolerable situation. And Mr Dunning's Budget speech has shown plainly that the Dominion authorities, with other problems, like the railway debt burden, pressing upon them, have quite enough on their hands.

FINANCIAL NOTES

The Paris Exchange.—So far as the world's foreign exchange markets are concerned, the pressure on the franc has this week been relaxed. Very little official intervention by the British Control was traceable, while the New York-Paris cross-rate has come back to Frs. 15-16½, or to within the export gold point. Spot sterling was quoted at Frs. 75.15, with the three-months' rate at Frs. 4½ discount. The big premium on spot belgas has now disappeared, largely because this week the Dutch authorities recognised that Belgium was on the gold standard and that therefore gold shipments from Holland to Belgium became permissible. This gave scope for arbitrage operations in belgas, francs and guilders, and in actual fact no gold has been shipped from Holland. The stronger tendency of the franc is mainly because last week there were heavy sales of francs in anticipation of a monetary crisis. When M. Blum made it clear at the week-end that he was not in favour of devaluation, the opinion was formed that no immediate crisis was likely, and this week certain interests who had over-sold francs decided to cover. The informal restrictions imposed by the French banks have also had a steadying influence, for during most of the week all dealings in forward exchange were suspended, while dealings in spot exchange were confined to genuine commercial transactions. A few banks are now believed to have resumed forward business, but no doubt they are discriminating. There has been no embargo upon exports of currency, and there has been a fair efflux of French currency into London banks. As expected, the Banque de France's return for May 8th revealed an accentuation of the tension. Gold losses for the week amounted to Frs. 2,738 millions, reducing the Bank's stocks to Frs. 58,029 millions; while rediscounts increased by Frs. 2,201 millions to Frs. 17,222 millions. There was acute stringency in the Paris money market over the week-end. The informal exchange restrictions immobilised funds seriously, while the week's heavy withdrawals of deposits from the banks added to the general shortage of cash. It is believed that one or two leading banks had to break their usual custom and apply to the Banque de France for accommodation. The Treasury's position remains difficult, but the general feeling this week was that no monetary crisis will now occur until the end of the month.

Politics and the Franc.—The general impression now is that politics rather than financial and monetary difficulties hold the centre of the French stage. In view of the severe *crise de confiance* caused by the result of the French elections, M. Blum had no option but to declare himself opposed to devaluation. Otherwise he was unable to commit himself at all, especially as the Communists are refusing to join the Government and are seeking to acquire power behind the scenes without any responsibility. This move is arousing general resentment, because it is regarded as an anti-Parliamentary move, and as some sections of the extreme Right are also anti-Parliamentary, the train is being laid for a possible political explosion. This makes the future of the franc most uncertain, and unfortunately it is beginning to appear that if the franc goes, there will be at least a transition period of legal, not informal, exchange restriction. Such a development in imitation of the German precedent would neither enable conversion of the French Debt, nor advance the cause of world economic reconstruction; and it is to be hoped that the new French Government will recognise the need for the devaluation of the franc, and will carry it out as quickly and smoothly as possible. The co-operation of the British Government would be most helpful, for a declaration that the devaluation of the franc would not be followed by the competitive depreciation of sterling might easily make all the difference. Had such a declaration been forthcoming last autumn, the Banque de France and the French Government of the day might have been ready to devalue forthwith. The position of the Banque de France to-day is also uncertain. There is a general feeling that a change in the Governorship is imminent, but opinion differs on the question of M. Tannery's

successor. This, like other matters, depends upon the composition of the new Government and on the character and extent of its support in the Chamber. The only hope for France lies in a common economic and political programme of the Left Parties.

* * *

The Bank for International Settlements.—The sixth annual report of the B.I.S., covering the year to March 31, 1936, contains a large quantity of useful information, some of which we hope to discuss in the near future. After an introductory section, it analyses exchange rates, price movements and foreign trade. This section contains a brief account of the operation of the British and foreign Exchange Funds, and also reaches the conclusion that during 1935 the relative levels of costs and prices in France, Great Britain and the United States, became on the whole better adjusted to each other. At first sight this conclusion appears rather sweeping, and the data upon which it is based merits further examination. The next section discusses the supply of movements of gold, and in the course of it, it is calculated that since September, 1931, approximately Sw. Frs. 5,000 millions of gold had "disappeared" into Government Exchange Funds or into private hoards. During 1935 itself, gold to the value of Sw. Frs. 2,000 millions of £130 millions so disappeared, and the B.I.S. report states that "a large amount must have been taken by government exchange funds and especially the British Exchange Equalisation Account." Other sections of the report deal with international short term indebtedness, the trend of short and long term interest rates and recent developments in central and commercial banking. The net profits of the B.I.S. amounted to Sw. Frs. 9,193,671. These were dealt with in accordance with the Bank's statutes, the dividend amounting to 6 per cent. All departments of the bank showed a remarkable revival of activity during the past financial year, compared with the preceding year.

* * *

Anglo-Roumanian Payments Agreement.—A new Payments Agreement has been signed with Roumania, to supersede the Agreement of August 3, 1935, and to come into force on June 1st next. The principle that the sterling proceeds of Roumanian exports to England must be paid into a special account at the Bank of England is maintained, but there are some changes in the allocation of the proceeds. The proportion allotted to the service of the Roumanian Public Debt and similar securities held on British account is raised from 30 to 35 per cent., but this item now includes the amounts payable to the Caisse Commune of the pre-war Austro-Hungarian Debts. Outstanding bank debts are now to receive 5 per cent., in place of nothing specific, while 5 per cent. is also allotted for the first time to interest, rent, insurance, royalties, commission and other payments for services. The allocation to the National Bank of Roumania, for its free disposal, is reduced from 15 per cent. in 1935 to 5 per cent. plus £2,500 a month (the latter to come out of the 35 per cent. Public Debt allocation). Current imports were allotted 50 per cent. in 1935 and 5 per cent. was allotted for the liquidation of outstanding trade debts. Under the new Agreement 50 per cent. is allotted for the settlement of current trade debts and outstanding trade debts taken together, the dividing date between "current" and "outstanding" being July 31, 1935. During the year ending June 9, 1937, £400,000 is to be allotted to outstanding trade debts; 5 per cent. of this amount is to be taken from the allotment of 50 per cent. specified above, and the remainder is to be liquidated by investment, at the creditor's desire, in Roumanian enterprises up to a limit of £75,000 a year; by means of "special" exports; by any surplus arising out of the sum allotted to the discharge of bank debts; and if necessary by further drafts upon the 50 per cent. allotted to current and outstanding trade debts. Import licences are to be granted for the import of British goods up to the amount of sterling available for the settlement of "current trade debts." It remains to be seen how the new Agreement works in practice, but so far as can be

told there should be enough sterling to cover British exports to Roumania at last year's attenuated level!

April Clearing Bank Averages.—The opening of the new financial year, with the cessation of the period of heavy revenue collection, has been accompanied by the usual expansion in clearing bank resources. Cash has risen by £10.6 millions and deposits by £44.7 millions. Among the banks' earning assets, discounts have increased by £16.3 millions and advances by £15.2 millions, but investments have risen by only £1.7 millions:—

(In £ millions)						
	Apr., 1935 (a)	Mar., 1936 (a)	Apr., 1936 (a)	Feb., 1936 (b)	Mar., 1936 (b)	Apr., 1936 (b)
Capital and reserves	125.7	125.8	125.8	131.8	131.8	131.7
Acceptances, etc.	120.4	100.2	99.1	105.9	105.1	104.3
Deposits (including undivided profits, etc.)	1,902.4	2,001.6	2,045.0	2,085.2	2,071.6	2,116.3
Total liabilities	2,148.5	2,227.6	2,269.9	2,322.9	2,308.5	2,352.3
Cash	214.1	206.3	216.9	225.3	213.5	224.1
Cheques, balances and items in transit	53.8	56.3	58.9	54.0	58.1	61.2
Money at call	132.7	150.1	148.7	152.5	157.7	155.4
Discounts	197.8	247.0	262.4	292.9	250.4	266.7
Investments	601.1	590.0	262.4	613.7	619.8	621.5
Loans and advances	759.5	809.3	823.6	808.7	834.0	849.2
Investments in affiliated banks	25.2	25.1	25.1	25.1	25.1	25.1
Cover for acceptances, pre-mises, etc.	164.3	143.5	142.3	150.7	149.9	149.1
Total assets	2,148.5	2,227.6	2,269.9	2,322.9	2,308.5	2,352.3

(a) Excludes District Bank.

(b) Includes District Bank.

The increase in discounts appears large, as there was little net increase in the total of Treasury bills tender issues between March and April. Also, as the clearing banks do not buy hot Treasuries, a better comparison is between February and March, when the tender issue was contracting. The tender issue is now expanding steadily, so that discounts may show a sharp rise in June. The expansion in advances is very gratifying. Borrowing for the purpose of paying taxes must now have ceased, while, unlike the March returns, April advances were unaffected by the French London credit. This movement therefore represents a genuine increase in the normal business demand for accommodation.

The Money Market.—The Bank return records a further contraction in bankers' deposits, and while this may be fortuitous, money has not been quite so plentiful as usual. The clearing banks have had each afternoon a good demand for loans at $\frac{1}{2}$ per cent. against eligible bills, while one or two clearing banks called small amounts from the market on each of the first four days of the week.

	Apr. 23, 1936	Apr. 30, 1936	May 7, 1936	May 14, 1936
Bank rate	2%	2%	2%	2%
Clearing banks' deposit rate ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate:—				
Clearing banks	$\frac{1}{2}$ – $\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$ – $\frac{1}{2}$
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

The position in the discount market is unchanged. The clearing banks have been buying July and early August Treasury bills at $\frac{1}{2}$ per cent. The tender issue has now risen to £538 millions, against £493 millions in early April. The recent heavy operations of the Exchange Equalisation account are reflected in a reduction of £13 millions in the total tap issue of Treasury bills since April 18th, but this last movement is no doubt affected by other operations as well.

The Bank Return.—This week the note circulation has risen by £2.2 millions. This is a smaller increase than last week, but it is equally abnormal. Part of it at least is due to foreign, particularly French, hoarding of British

currency. During the week the Bank bought some more gold, but the Reserve is, nevertheless, reduced to £40.3 millions.

BANK OF ENGLAND					
	May 15, 1935	Apr. 22, 1936	Apr. 29, 1936	May 6, 1936	May 13, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	192.6	202.1	202.7	203.7	204.3
Note circulation	390.3	415.4	416.9	422.6	424.8
Banking Department:—					
Reserve	63.0	47.4	46.6	41.8	40.3
Public deposits	7.4	13.2	7.4	9.2	13.3
Bankers' deposits	103.0	93.1	104.7	88.3	83.2
Other deposits	38.5	38.1	39.0	36.7	37.0
Government securities ...	86.9	93.2	101.3	88.8	89.9
Discounts and advances ...	5.7	7.5	8.3	9.4	8.8
Other securities	11.0	13.9	12.6	11.9	12.3
Proportion	42.3%	32.8%	30.8%	31.1%	30.1%

Currency withdrawals explain part of the reduction in bankers' deposits, but a further cause is the week's increase of £4.1 millions in public deposits. This last movement probably represents the week's discrepancies between Treasury bill daily payments and maturities, and so possesses little significance.

New York Money Rates.—This week the New York banks raised their rates for call money from $\frac{3}{4}$ to 1 per cent. and their rates for time loans from 1 to $1\frac{1}{4}$ per cent. The banks say that this change does not indicate that the trend of interest rates in general is beginning to turn upwards, but is due entirely to the difficulties the banks find in covering their working costs. The low yields obtainable upon many kinds of bank assets have for a long time been a serious problem, and the banks now complain that the stricter margin rules recently imposed by the Federal Reserve authorities with the object of checking speculation have reduced the total volume of bank loans against securities. This reason is not entirely convincing, for while bank loans may not have increased as much as they might have done if the margin requirements had not been tightened, they are certainly not diminishing. Comparing March, 1935 and 1936, brokers' loans rose from \$700 millions to \$1,000 millions, and the latest return is \$1,048 millions. Loans to others against securities are well maintained. It therefore looks as if the new margin regulations have done no more than deprive the banks of fresh income, and have not reduced existing income. This is hardly a sufficient justification for an increase in rates, and it looks as if the banks now feel that the market will stand the higher rates. Still, no one can say that a call rate of 1 per cent. is excessive or even that this increase of $\frac{1}{4}$ per cent. is necessarily the presage of dearer money.

INSURANCE NOTES

Alliance Assurance.—In the life department new sums assured in 1935, at £3,580,000, were practically the same as in 1934, but annuity consideration moneys increased from £211,000 to £268,000. The net rate of interest fell by 9d. per cent. to £3 18s. 3d. per cent. In 1934 the mortality experience was very favourable, and actual claims, it was reported at the annual meeting last year, were only 80 per cent. of the amount expected by the A1924-29 table; last year the amount paid in death claims actually fell from £907,000 to £889,000, so that the experience was probably even better. Surrender values were also smaller at £148,000, against £237,000 in 1934. Fire premiums increased from £2,057,000 to £2,103,000, and excellent underwriting results were obtained; a further £100,000 has been added to the departmental reserves, which now amount to £2,300,000 in addition to the usual 40 per cent. of premium income for unexpired risk. Accident premiums were up by £40,000 at £1,245,000, and the results here were also satisfactory; the departmental reserves now exceed 99 per cent. of the premium income. At £333,000, marine premium income was almost

stationary. The results of the last two years are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	408,144	19.8	404,531	19.2
Miscellaneous	133,596	11.1	143,067	11.5
Marine	54,146	16.2	24,179	7.3
Life	55,961		55,961	
Transfer fees	14,096		18,539	
To reserve	665,943		646,277	
	150,000		150,000	
	515,943		496,277	
Less items debited to profit and loss	261,841		274,504	
	254,102		221,773	

Total assets increased from £37,345,000 to £38,609,000. For the ninth successive year the dividend is 18s. per share; the cost is £489,000, contrasted with interest earnings of £347,000.

Guardian Assurance.—In the life department new business at £1,585,000 showed a small increase of £16,000, in spite of the fact that 1935 was the first year of the valuation quinquennium, when new business normally has a tendency to recede from the previous year's total. Annuity consideration moneys increased substantially from £77,000 to £126,000. There was an increase of 1s. 8d. per cent. to £3 19s. 10d. per cent. in the net rate of interest. New fire premium income was practically unchanged at £1,110,000 but accident premium income increased from £1,091,000 to £1,128,000 and marine premium income from £245,000 to £253,000. The reserve for unexpired risks in the fire department is equal to 50 per cent. and in the accident department to 45 per cent. of the premium income, but in accordance with our custom we have assumed 40 per cent. in both cases. The results are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	189,332	17.1	149,743	13.5
Accident	74,952	6.9	49,021	4.3
Marine	5,751		8,560	
Life	23,801		18,545	
	293,836		225,869	
Less items debited to profit and loss	122,010		99,471	
	171,826		126,398	

* Including transfer to investment reserve of ... 50,764 50,000

Separate balance sheets are made up for each branch, and total assets increased from £15,245,000 to £15,500,000. The Guardian life assets alone increased from £7,648,000 to £8,188,000. The main movement in investments consisted in a decrease of some £270,000 in British Government securities and increases of about £200,000 each in preference and ordinary stocks. The dividend is again at the rate of 100 per cent., and costs £174,000, compared with available net interest earnings of £147,000. In the fire department an additional reserve is held of £1,100,000, contrasted with 1935 premium income of £1,110,000, while in the accident department the additional reserve amounts to £420,000, which is equal to 37 per cent. of last year's premiums. The marine fund amounts to £471,000, which—including the suspense account of £574,000—is equivalent to 226 per cent. of the current premium income.

North British and Mercantile Valuation.—The 1935 report marks the close of another quinquennium in the life department. The basis of the valuation of the life assurance contracts was strengthened by the use of the A1924/29 mortality table in conjunction with interest at $2\frac{3}{4}$ per cent. instead of, as in 1930, 3 per cent. In the annuity department the basis is unaltered. In considering the following table it should be borne in mind that the trading surplus shown in respect of the past quinquennium is

arrived at after making provision for the increased stringency of the valuation:—

	1926–30	1931–36
Trading surplus earned during valuation period	3,205,479	3,054,467
Investment profits brought into account	26,436	366,575
Brought forward	54,880	125,514
	3,286,795	3,546,556
Allocations:—		
To Bonuses to policyholders	2,739,235	3,035,704
„ Shareholders	422,046	337,300
„ Carried forward	125,514	173,552
	3,286,795	3,546,556

The rate of bonus is reduced from 40s. per cent. per annum to 36s. per cent., calculated on the sum assured and existing bonuses. In 1931, the first year of the quinquennium, £300,000 and £55,000 were transferred to investment reserve from the life and annuity funds respectively, owing to the depreciation then suffered; last year these entries were reversed. In addition, credit was taken in 1935 in the life account for £373,000 for realised profits on investments.

—And Results for 1935.—New assurances increased from £5,286,000 to £5,507,000, but annuity consideration moneys fell from £1,031,000 to £701,000. The net rate of interest was £3 15s. per cent. against £3 19s. 6d. per cent. Death claims showed considerable reduction from £1,218,000 to £1,007,000. In the fire department premiums were somewhat larger at £3,383,000 and the results were very satisfactory. Claims amounted to only 37.3 per cent. of the premium income, and, it is understood, this is the lowest rate experienced for considerably more than half a century; the ratio of profits to premiums at 13.6 per cent. is the best for a quarter of a century. The exceptionally good results of the past two years were doubtless assisted by the favourable experience in the United States of America. The accident department is represented by the Railway Passengers' Assurance Company—the pioneer of accident assurance and the oldest accident assurance company in the world. Here also results were very good. Marine premium income (Ocean Marine Insurance Company) increased from £324,000 to £333,000. The results are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	457,904	13.6	461,648	13.6
Railway passengers	143,134	12.7	148,209	12.2
Fine art and general	41,055	12.7	42,646	12.8
Ocean marine	30,000	14.1	40,000	18.4
Profit on investments ..	40,020		67,460	
Life	...		759,963	
	712,113		759,963	
Less items debited to profit and loss account	177,025		59,958	
Net trading surplus	535,088		819,921	

In the general balance sheet, which includes the figures of the life, annuity and sinking fund branches, and also associated companies, total assets increased from £50,890,000 to £53,200,000, of which the life assurance, annuity and sinking fund assets accounted for £31,494,000, £7,371,000 and £478,000 respectively. In the fire department there is a reserve of £2,000,000 in addition to the usual 40 per cent. of premium income of £3,383,000 for unexpired risk. Stock Exchange securities are taken at or under cost, but no comparison is given with market values; at the annual meeting, however, the chairman mentioned that the "appreciation" or book values amounts to a very considerable sum. There is a contingency fund of £1,000,000, and the profit and loss balance after payment of the dividend is £2,746,000. A transfer of £1,031,000 has been made from profit and loss to form a reserve for the purpose of paying up uncalled capital made in January of this year (an account of the adjustment of capital was given in our issue of November 9th of last year). A special dividend was credited to the North British and Mercantile profit and loss account of £100,000 from the Railway Passengers. The dividend is 25 per cent. and costs £539,000, compared with available interest earnings of £527,000.

THE STOCK EXCHANGE

WHICH ORDINARY SHARES ARE TOO HIGH?

In last week's *Economist* we discussed Mr J. M. Keynes's famous protest, three months ago, that existing prices of ordinary shares were excessive. We showed that every ordinary share quotation was a compound of two distinct elements: a number of years' purchase of a supposed minimum dividend, and an allowance (plus or minus) for the possibility that the rate might change. We outlined the case for the view that general interest rates might harden during the next few years, but that their return to the levels of the nineteen-twenties was improbable. What are the possibilities on the "recovery" side?

Since British industry touched bottom, in 1932, the *Economist's* business activity index has risen by 25 per cent. Industrial ordinary shares, according to the Actuaries' index, have appreciated by 90 per cent. Ordinary shares were at their lowest in June, 1932, while the business activity index took the turn in August, 1932, two months later. In this respect the market ran true to form, for movements in share values tend almost invariably to precede changes, favourable or otherwise, in industry. Adjustments in dividends come last in sequence, for periods of several months normally elapse between the placing of orders, their execution, the receipt of the proceeds, and the publication of annual accounts based on the resulting profits. In the *Economist* of April 18th last (page 118) we showed that it was only in the first quarter of 1934 that a representative sample of about 550 British companies issued reports showing even a modest recovery in earnings.

The tempo of British industry is still *accelerando*, and investors may assume that company reports will continue to disclose higher profits and dividends for some months to come. Investors, however, may expect a turn in the market for ordinary shares, whenever it occurs, to come in advance of a turn in profits. Ordinary shares moved steadily downwards seven years ago, from February, 1929 onwards, though many companies continued to report increased profits until the early months of 1930. If industrial activity were checked, for any reason, past experience suggests that such a development might be discounted by a fall in ordinary share values a few months before its occurrence was reflected in our business activity index, and, possibly, a year or more before the generality of dividends began to decline. What is the outlook in this direction?

"Recovery," by general recognition, is no longer in its first stages. Economic advisers in touch with the Government expressed the view, some months ago, that the country might be faced with a falling-off in industrial activity in 1937 or thereabouts. This opinion was based

on the crucial part played in the present revival by the stimulus given to popular purchasing power by cheap food, unaccompanied by a proportionate fall in money wages, and by the extraordinary activity of the building trades. If a decline in building occurred before the end of 1936 and became substantial in 1937, its effect on the economic position in general would be correspondingly powerful. Since this view was first mooted, however, the Government has come forward with its re-armament proposals, and the expenditure of considerable sums of money on this form of "public works" may have a perceptibly lengthening effect on the duration of recovery. On the other hand, any tendency (such as has recently been in evidence) for the prices of industrial raw materials and, possibly, wages, to rise more substantially than those of manufactured articles would, *pro tanto*, tend to slow down the rate of increase in industrial profits. On the whole, while there is no check to recovery in the near future, "on guard" may be the appropriate stance for prudent investors in ordinary shares from, say, the late summer or early autumn of this year onwards.

So much, then, for prospects in relation to the two elements in ordinary share values—"interest" and "recovery." It remains to apply our conclusions to contemporary prices of different share groups. No two shares, any more than two human faces, have exactly the same lineaments, but there are, broadly, three categories into which, for investment purposes, the great majority fall. The first group includes all ordinary shares which are valued in the market mainly for the *stability* of their dividends, either because, like J. Lyons, their profits for the last ten years or more have never varied by more than a small amount from a "constant mean," or because, like Imperial Chemical Industries, a plain directorial ruling has been given that dividends are not to be significantly raised in the near future. On the border-line are shares like Distillers, United Dairies and International Tea, whose equity, though substantial and impressive, is distinctly of a long range character. The second group comprises those shares which have participated in the fruits of industrial recovery during the last three years, and may still have increased profits to harvest, but whose prospects, having been within the market's cognisance for some considerable time, have been well discounted. Some of these shares may even have a "negative equity," in so far as they may be vulnerable to any future downturn in industry. The shares of companies serving the building trades are a case in point. Thirdly, we have those shares to which recovery came late in the day, particularly those of various steel,

engineering, naval shipbuilding and aircraft manufacturing concerns whose profits and dividends, in the near future, will be intimately affected by the Government's re-armament programme. Outside these main categories a number of minor groups may be distinguished. These include "depressed ordinaries" in industries like cotton textiles, shipping and railway transport, which have little or no earnings capacity behind them at the moment. At the other extreme are shares whose *cash* yield is of slight importance since they are held mainly on account of the ability and willingness of directors to translate "geometric" earnings into regular capital bonuses which even Mr Neville Chamberlain's grasping hand has been unable, so far, to capture for supertax purposes. The table on the preceding page shows (a) the extent of the rise since 1932 and (b) the present price and yield of representative ordinary shares in all these classes. The examples are confined to shares in well-established companies, and exclude all "new" or exotic shares—the *demi-monde* of every rising market.

The first feature revealed by our table is the wide range—or, as statisticians would say, the dispersion—of yields in all the main groups. In the "long equity" category the yields on the securities we have cited vary from £2 11s. per cent. on Boots Pure Drug to £4 12s. per cent. on International Tea. In the "recovery" group the range is from £2 11s. per cent. on General Electric to £6 per cent. on London Brick. In the "re-armament" class it extends (in the examples given) from nil to over 3 per cent. In the second place, there is little difference between the average yield in the "long equity" and "recovery" classes. The mean figures for the shares selected are about £3 15s. and £4 2s. per cent., respectively. In the "re-armament" group the current return is definitely lower, at approximately £1 17s. 6d. per cent. for the companies cited. It is with these three groups that investors are mainly concerned. The valuation of "doubtful" shares is anybody's guess, while "supertax" shares, as the chairman of British Electric Traction has aptly pointed out, are not so much dividend-paying securities as a species of savings bank.

Are "re-armament" shares over-valued? Here the "interest element" counts for little and the "equity element" for a great deal. Certainly, all the conditions making for potential over-valuation are present, including (1) an immense speculative following which has been attracted by widespread publicity; (2) uncertainty over the future extent of Government orders, their allocation between different firms, and the rate of profit which will be secured; (3) the initiation of the armaments boom when markets were already active; and (4) the possibility that capital raised to finance extensions of plant may earn a reduced return when the Government's programme has been completed. Sound investment quarters would undoubtedly hesitate to follow any new spectacular rise in quotations in this section of the market.

We come, then, to the basic valuation of the "long equity" and "recovery" shares. These are the great market leaders, found in the portfolio of every substantial private investor, every investment trust, most insurance companies, and in fixed trust portfolios, *passim*. If holders cannot look forward to a greatly increased yield in the near future, what income should these shares offer at a time when "Consols" are yielding just under 3 per cent? Clearly, the strongest ordinary share should yield substantially more than a gilt-edged security. Not for one moment can investors rate the security behind the best junior industrial share on a par with that behind a British Government stock which, in effect, is charged on the entire national income. For an entirely "stable dividend" share it may be suggested that a "yield margin" of only $\frac{1}{2}$ per cent. over the Consols yield is narrow, and that something that is nearer to $1\frac{1}{2}$ per cent. (i.e. about $4\frac{1}{2}$ per cent. in all) would be more appropriate. A couple of years ago, investors might cheerfully have accepted a return of $3\frac{1}{2}$ per cent. on a "recovery" share, on the well-founded expectation that they would be receiving $4\frac{1}{2}$ per cent., $5\frac{1}{2}$ per cent., or even more, within a relatively short period. That expectation, however, does not hold equally good to-day.

We reach the conclusion, therefore, that, though the progress of industrial expansion is under no immediate threat, the process of discounting its further benefits may have reached a stage at which holders of ordinary shares which have already increased their dividends, and/or are unlikely to raise them very significantly in the near future, should at least hesitate to follow any new and pronounced upward market movement. Such shares have a dual vulnerability. If interest rates harden, their price will certainly be affected. If economic revival reaches a stage where increased profits are more difficult to achieve (either because raw material costs are rising or because enhanced output requires new capital equipment), investors may demand a wider "yield margin" over that obtainable on gilt-edged stocks.

INVESTMENT NOTES

The Work of the Stock Exchange.—The Stock Exchange Committee must be one of the hardest-worked voluntary bodies in existence. According to its report for the year ended March 24, 1936, the main committee held 69 meetings and the various sub-committees 348 meetings during the year. Thus, a Committee member who sat also, say, on the sub-committees, on new issues and official quotations, disputes, and introductions would have had, on the average, four meetings to attend every week of the year. In a characteristically dignified and conservative way, the report bears eloquent witness to the thoroughness with which the unending administrative responsibilities of a great institution are carried out. Some 2,907,108 items were cleared through the Settlement Department last year—a slight decline from the 3,043,328 of the preceding year—while the Share and Loan Department certified 296,334 transfers, compared with 292,990. The number of members continues slowly to rise, thanks to a steady increase in the number of members without "nominations." In 1905, after the rules relating to nominations and qualification shares had first been introduced, the total membership was 5,471. In 1926 it had fallen to 3,892. Subsequently, with the turn of the tide, the number of members has risen by 160, and the total population on the floor of the "House" (including authorised and unauthorised non-member clerks) has increased by 426, from 5,776 to 6,202. There are now some 5,974 securities, to a nominal total of £18,523,041,451, in the Official List, and, additionally, 48,680,463 shares of no-par value. The total amount declined by nearly £78½ millions last year, but this reduction was "nominal" in a dual sense. If a reduction of £17½ millions under the heading "British Funds, etc." (including the redemption of 2 per cent. Treasury bonds), be omitted from calculation, it appears that a net addition of 92 securities was effected, to a total value of £93½ millions. Applications for permission to deal were considered i. 1,582 and granted in 1,571 instances. Consideration was postponed in 10 cases and refused in one. The percentage of successful candidates is high, but the salutary control which the Committee exercises can only be measured in terms of propositions which never reach the sub-committee room, and waste their sweetness on the desert air.

The New Issue Market.—It is remarkable that a depression which provoked important theoretical conclusions concerning the part played by savings and investment in the different phases of the trade cycle has been followed by a recovery in which the new issue market has provided relatively limited sums for new investment, in an economic sense. Certain large-scale industrial issues, in the iron and steel, electricity supply and engineering industries, have been made in recent months for plant extensions, but activity in the public new issue market has been more frequently associated with the transfer of existing business to the new owners subscribing for the shares. Many of these, in the last few weeks, have been relatively small undertakings, making their public offering with high-denomination preference and low-denomination ordinary

† Free of income tax

shares at fairly high premiums. This procedure, though it has not been carried to the extremes of the 1928 issue boom, may be criticised on the ground that a dual capitalisation for a small company limits the marketability of both issues of shares, involves a high "gearing" element in the ordinary shares, and is frequently devised to leave the vendors with voting control despite their small residual stake in the undertaking. Such issues do not contribute directly to the volume of new investment, although the vendors, or their bankers, or the persons from whom the vendors may purchase other securities for investment, may ultimately find an avenue for new investment in the technical sense. Existing public concerns, however, have undoubtedly financed much of their recovery development from internal sources, and in addition considerable sums have been raised from existing shareholders from new issues on bonus terms. The secondary effects of new mining issues, moreover, are important, for the Rand boom has brought much business to manufacturers of mining equipment in this country. It is, nevertheless, significant that two of the largest issues destined for new investment—the London Transport and Railways loans—have been floated with Government guarantee. There is, as Herr Leo Grebler has pointed out in a recent paper in "Index," a tendency for State and public institutions to be responsible for an increasing share of total investment, involving new methods of financing, and reducing the part played by profit motives in investment. Further, an increasing resort to indirect investment has been obvious since the war. The sinews of the building boom have been provided by the building societies; the increase in life assurance has implied corresponding support for the gilt-edged market; and the small investor has been attracted to the fixed and flexible trusts. At the same time, private avenues for new investment have increased, particularly affecting mortgage and hire-purchase transactions. The public issue market appears to have suffered a relative decline as a consequence, and a significant area in the market is now subject to informal control. For the investor, these changes are already significant, and they might involve considerable adjustments of investment policy if they became permanent.

Industrial Profits in April.—At this stage of recovery two factors are suggested by the results of our industrial profits calculations, and these have an intimate bearing on the ordinary share outlook, discussed in a leading article on page 372. The percentage advance over the results of the previous trading year is tending to decline, although this is clearly compatible with a very satisfactory increase in total profits. The nature of the monthly figures, however, is apparently affected by the fairly regular inclusion of individual companies in the results of given months. While the changes in the number of companies rob the results of the same month in succeeding years of precise comparability, the influence of a substantial block of reports which are regularly published from year to year gives a rather marked character to each month's results. This is evident in comparing the percentage advances in February and March for this year and last. Both factors may partially explain the comparative modesty of the increase of 9.66 per cent. increase for April. Figures for recent months are set out below:—

* After payment of debenture interest.

The reports for the month disclose net profits of £38,660,148, compared with £35,255,579 in the preceding year. Analysis by industries discloses that the motor and

aviation and shipping groups combined more or less equally to provide approximately half the month's increase. Twelve iron and steel reports showed a rise in net profits from £986,255 to £1,088,090, and the companies in the electrical equipment group recorded a 46 per cent. increase at £533,540. The year 1935 did not favour rubber companies, and some 75 concerns report a fall in profits from £778,748 to £515,364.

Actuaries' Investment Index.—As a result of divergent price changes in the component groups the Actuaries' Investment Index for 178 industrial equities is only slightly changed at 83.1, compared with 83.0 a week ago and 83.6 a month ago (December 31, 1928 = 100). The yield is unchanged on the week at 3.68 per cent. compared with 3.63 per cent. a month ago. Movements in various groups are tabulated below:—

Group (and No. of Companies)	Price (Dec. 31, 1928 = 100)			Yield (%)		
	Month ago (Apr. 14, 1936)	Week ago (May 5, 1936)	This week (May 12, 1936)	Month ago (Apr. 14, 1936)	Week ago (May 5, 1936)	This week (May 12, 1936)
Higher This Week:						
Building materials (5)	102.0	99.9	100.7	4.73	4.82	4.79
Oil (5)	83.7	83.3	84.3	2.61	2.61	2.56
Home rails (4)	72.1	71.5	73.0	1.84	1.59	1.56
Breweries and distilleries (21)	145.2	144.8	145.7	3.96	3.97	3.95
Lower This Week:						
Coal (7)	98.8	97.2	96.5	4.12	4.16	4.21
Iron and steel (12)	71.7	70.6	69.7	3.15	3.17	3.19
Motors (5)	57.9	56.9	56.5	4.02	4.16	4.19

The most marked declines are in coal, iron and steel and motor shares. The home rail index, calculated on Tuesday's prices, reflects the previous week's traffics, and was unaffected by the later N.U.R. decision.

COMPANY NOTES

Motor Accessory Companies.—In an earlier Note on motor accessory companies (October 27, 1934, page 788) we pointed out that the industry had been fortunate in that the depression had affected the sale of private motor cars in slighter degree than the majority of businesses, and had coincided with an increase in the number of accessories normally carried per car sold. The fact that the accessory makers had, nevertheless, been unable to achieve more than a modest increase in earnings clearly indicated the strength of competition in the trade. More than one liquidation among accessory companies pointed the same way. We therefore concluded that, in a highly competitive period, the leaders had established themselves more firmly than before, but with reduced profit margins. The leading shares, therefore, appeared to carry sound prospects, without the buoyancy of earnings, which, at first sight, might be expected to accompany the great increase in private car sales. The subsequent 18 months have confirmed these conclusions. It is evident that, though the leading concerns have now established their costs on a mass-production basis and are relatively safe from attack by small undertakings, the profit expectations of the motor industry as a whole directly govern price conditions in the accessory business. The manufacturer of popular private cars (which are quantitatively much the largest market for the accessory maker) is operating in a market keenly sensitive to prices. Being compelled to allocate a higher proportion of his total costs to accessory equipment, he can only afford the minimum profit margin on the accessories he buys from the specialists. The latter, in turn, must govern their price policy so that the motor manufacturer will not be tempted to manufacture accessories for himself. Moreover, competition in accessories is predominantly price competition, since many accessories are already longer lived than the chassis to which they are attached, and quality competition is therefore irrelevant in many respects. These conditions are likely to continue—

the chairman of S. Smith (Motor Accessories) warned shareholders in his last speech that increasing turnover was likely to be accompanied by reduced profit margins. There remains, however, an opening for new invention of useful accessories, of which examples in recent years are provided by the screen wiper, the "trafficator," the hydraulic fixed jack, and, on a larger scale, the pressed steel body. Apart from such unpredictable factors, however, the profit prospect, though sound and progressive, remains slow

moving. Such companies as S. Smith, Triplex, and Pressed Steel are developing lines outside the accessory business proper. These may, in time, yield useful contributions. In addition, the aircraft instrument business of S. Smith is capable of special benefit from the present special demand for aircraft, though here again profit margins are low. The evolution of the industry suggests that the coachbuilt body business of Mulliners may have to adjust itself to the adoption of standard pressed steel bodies even on the more expensive types of car.

Stewarts and Lloyds Meeting.—Mr A. C. Macdiarmid's speech to Stewarts and Lloyds shareholders on Tuesday was devoted to a full review of the special factors which reduced the company's earning power in a year of record output in the steel industry. The chairman's anticipations at last year's meeting have proved right in the event. Extreme competition in the export market has followed the breakdown of the tube cartel, and the company was forced to meet its effects as far as possible by the economies realised at Corby. Exports during the year were in fact largely increased over the 1934 level, and were maintained at nearly 50 per cent. of total production. But for Corby, the chairman estimated that the apparent reduction in profits due to lower export prices might have amounted to £600,000 to £700,000, and these advantages do not, apparently, exhaust the total benefits of the new plant. The balance sheet changes, to which reference was made in last week's *Economist*, page 318, relate to the assets of three subsidiary companies which have been taken into the parent company's books. The balance of the increase in the land, buildings and plant item is attributable to capital expenditure at Corby, less depreciation. Advances to subsidiaries are lower owing to repayments made to the parent company, while the other principal changes in the

balance sheet are mainly due to the greater volume of turnover and diversification of trade. It may, therefore, be presumed that the substantial increase in stocks from £1,695,000 to £2,090,000 falls under the latter heading. Dealing with future developments, the chairman disclosed that important extensions were planned at Corby, involving the installation of new coke ovens and rolling mills, which are expected to reduce steel production costs and to employ the full steel ingot capacity. Temporary finance for these extensions has been arranged with the company's bankers. Despite the further deterioration in the export tube markets during recent months, it is suggested that the company can hold its own without any further reduction in profits. At home, greater co-ordination has been achieved and will be further strengthened by the British Mannesman Tube arrangement announced recently. In the export market no improvement in prices can be expected unless and until the cartel is reformed, and although conversations are taking place, negotiations are proving difficult. Deferred shareholders may be inclined to question whether the present price and yield—no more than 3 per cent.—does not generously value the long-term prospects and the ultimate possibility of a reformed tube cartel. There is limited prospect, it would seem, of any immediate recovery in earnings.

Union-Castle Accounts.—The results of the Union-Castle for 1935 show little discernible change in the trading position. Investment income has offset a slight fall in voyage profits, and total profits have increased from £458,012 to £462,445. Depreciation of the fleet has been provided on the usual 5 per cent. basis. The distributable profits, at £329,914, would have covered almost the full amount required to bring the 6 per cent. "A" preference share dividends up to date. Shareholders, however, are aware of two factors affecting the Union-Castle dividend position. There is, firstly, a serious disparity between the book value of the investments (standing in the balance sheet at £2,687,381 net) and their actual value. Moreover, extensive fleet renewals are in progress. Both factors have affected this year's policy. After paying one year's dividend on the "A" preference shares, bringing the payments up to June, 1934, the sum of £240,000 is reserved for depreciation of investments. This transfer reduces the credit balance to £47,444, as the following table shows:—

	Years to December 31,		
	1933	1934	1935
Profits on voyages, after providing for depreciation	350,768	367,849	351,119

General interest	25,593	5,589	27,531
Debtenture interest	113,549	100,000	100,000
Fees	4,524	5,000	5,000
Earned for dividends	278,063	347,423	329,914
Preference dividends	127,270	127,526	124,620†
Reserve account	200,000	250,000	240,000§
Carried forward	112,252†	82,149	47,444

† Includes £2,144 profit on investments realised, less £31,477 debenture issue expenses. § Reserve for depreciation of investments. ‡ 4½ per cent. preference dividend for year 1935; 6 per cent. "A" preference dividend for year to June 30, 1934.

Fleet renewals are fully described in the directors' report. The "Stirling Castle" was delivered in January last, and the "Athlone Castle" is expected to be ready for commission during the present month. Another mail vessel has been ordered in this class, and several existing vessels will require alteration to enable the mail fleet to provide a fourteen-day service to the Cape from the end of 1938. Satisfactory arrangements have been made for financing the new mail vessel and two new cargo vessels. The company's mail contract with the Union Government has been extended for ten years from January, 1937. Following the indefinite adjournment of the litigation regarding the validity of the grant of permanent voting rights to the preference shareholders, stockholders of R.M. and E.D. Realisation will have a closer interest in the indicated earnings of 7½ per cent. on the Union-Castle ordinary stock, before provision for preference arrears and investments. That they must curb their estimates of the value of this holding, however, is apparent, for the present policy of Union-Castle is intended to strengthen the internal position of the company.

Hudson's Bay Company.—The accounts of the Company of Adventurers of England trading into Hudson's Bay invariably provide a general reflection of Canadian economic conditions. An advance of £110,000 in net trading profits to £321,058 must be regarded as reasonably satisfactory, for the report makes it clear that, while Canadian conditions continued to improve, the purchasing power of the Western farmers, on which the prosperity of the company's stores largely depends, was affected considerably by the smaller prairie crop and the reduced yield of higher grade wheat. The improvement in the stores results, therefore, must be attributed as much to increased efficiency of management as to the irregular recovery which Canada as a whole experienced last year. The fur collections were satisfactory and realised somewhat higher prices, although sales remain affected by exchange and trade restrictions. An analysis of the results of the past three years follows:—

	Years to January 31,		
	1934	1935	1936

* After charging administration and other expenses in Canada and London.

† Six years' dividend to June, 1936, or 30s. of each preference share to be repaid.

‡ Including taxes, capital reserve fund, etc.

After providing the usual sum of £199,382 for depreciation of buildings, the available profit amounts to £144,717. The Governor and Committee have decided to recommend repayment of 30s. of each £5 cumulative preference share, under the powers given in the 1912 Charter. Arrears on this repaid proportion, which date from June, 1930, will be paid at the 5 per cent. rate. The capital repayment will be £600,000, and since gilt-edged investments appear on the balance sheet at £1,866,386, the advantages of this at a time of low interest rates, are evident. The reserve fund now amounts to £661,101, so that further opportunities for substantial capital repayments may not arise for some time. Under present conditions the 5 preference shares at 5½ are difficult to value, since this price includes six years' arrears of dividends and the capital repayment due in July. Taking arrears on a gross basis, the value of the resulting £3 10s. shares cum arrears would be approximately 3½, carrying dividend arrears equivalent to approximately 2½. The latest earnings would cover two years' preference dividends, and a high cash return

would be obtained, on an ex arrears basis, if repayments of arrears were effected and normal dividends resumed in the course of the next few years. Such calculations, however, are subject to the immediate possibility of a refunding scheme and to the ultimate possibility of further capital repayments. The £1 ordinary shares, at 22s. 3d., appear adequately valued, for no dividend has been received since 1930, and their recovery equity is still deferred.

Cable and Wireless (Holding) Accounts.—Stockholders who had anticipated the publication, with the report, of a scheme for dealing with the preference arrears of Cable and Wireless (Holding) have now to postpone their hopes until the meeting next Friday. The accounts show that total income rose during 1935 from £1,080,393 to £1,120,234. After charging administration expenses (£69,122) and providing £25,071 for brokerage in connection with the capital reduction scheme—a slight increase on corresponding charges in 1934—the disposable balance is increased from £986,901 to £1,026,041. The net revenue covers a full year's preference dividend to March, 1934, with £104,000 to spare, of which £64,534 is required for interest on assented preference stock from June, 1935 to the date of repayment at the end of November. The accounts, therefore, confirm earlier estimates that a full year's preference dividend was earned last year with little to spare. Special dividends received from the Eastern and Western Telegraph undertakings have been applied to eliminate formation expenses (£500,000) and to reduce the book value of these shareholdings, the latter by as much as £8½ millions. The consolidated balance sheet reflects the sale of investments to Cables Investment Trust, the total having fallen from £17.6 millions to £11.4 millions.

J. and P. Coats Setback.—The market was unpleasantly surprised by the J. and P. Coats results on Thursday. Profits fell by the substantial sum of £456,987 to £2,006,340. Quarterly dividends totalling 10 per cent. had already been paid in respect of 1935, but since no additional bonus is declared, the total distribution is at the same low level as that of 1931, compared with 13½ per cent. for 1934. Exchange differences reserve requires £250,000, against £100,000 in 1934, and the balance carried forward is reduced from £388,025 to £339,365. On these disappointing results, the £1 ordinary units dropped abruptly from 63s. to 53s. 9d. and closed little better around 55s. 6d. On a 10 per cent. dividend basis, they yield only £3 12s. 9d. per cent. Pending the issue of the full accounts, investors will doubtless adopt a cautious attitude, on the lines suggested in the leading article on page 372.

Other Company Results.—Our usual table of Company profits on page 402 includes the results of 81 companies, the total including a number of plantation concerns. The *Buchanan-Dewar* increased profits and dividend, coupled with the results of other Distillers' concerns, have attracted market interest in the latter stock, although the prospective increase in distillers' profits resulting from the *Buchanan-Dewar* and *John Walker* dividends is well under one per cent. Two property companies, *London County Freehold* and *Metropolitan Housing*, report increased profits, the net earnings of the former having increased from £297,236 to £350,056. Dividends are in each case unchanged. *Armstrong-Whitworth Securities* report improved results. Following the debenture redemption scheme adopted last year certain assets have been transferred to a new subsidiary and the redemption effected by loans against these assets. In the oil group, *Venezuelan Oil Concessions* report an advance in net profits from £1,182,935 to £1,236,009, the dividend being raised from 11½ to 18½ per cent. Although deliveries of crude oil rose appreciably during the year, exchange difficulties were only slightly less adverse. *British Borneo Petroleum*, which has a substantial holding in Apex (Trinidad), has increased its profits, and pays 17½ against 15 per cent. *Salts (Saltire)* have achieved a considerable increase in earnings from £151,548 to £241,777, and the dividends on the high-gear equity issues have been substantially raised. Among the general industrial

companies, *Ever Ready (Great Britain)* has achieved higher profits through a 9½ per cent. increase in sales, and a reduction in costs which offset lower selling prices. Expenditure from the special advertising reserve greatly assisted the increase in sales. Several concerns in the Beechams Pills, including *Pritchard and Constance*, *Veno Drug*, and *Yeast-Vite* report increased profits and dividends. *Marconi's Wireless Telegraph* experienced an adverse trading year, marked by a reduction in the ordinary dividend to 4½ per cent. The full report, however, shows that revenue from investments—largely owing to a special Cable and Wireless dividend—accounted for an increase in total profits from £225,733 to £259,806. Eleven trust reports show relatively small changes in earnings, not all in the upward direction. The general trend in recent rubber profits is maintained. *Straits Rubber* (£23,576, against £44,592), and *Rembau Jelei* and *Changkat Salak*, with more moderate falls in profits, are representative; but *Chersonese (F.M.S.)* records increased profits. In the tea group, *Eastern Produce and Estates* profits have increased sharply from £19,915 to £49,719. The preliminary profits statement of *James Finlay* discloses a fall of £36,795 in profits at £186,233, and the ordinary dividend is reduced from 7½ to 6 per cent. *International Nickel* reports earnings of 54 cents per share for the first quarter. A number of interim dividends, including those of *Bass*, *Ratcliff and Gretton*, *London Brick*, *Woolworth* and *Associated Equipment* are unchanged. *United Molasses* has resumed ordinary dividends with a 4 per cent. payment. The final dividend of *Burmah Oil*, at 16½ per cent., brings the total distribution to 20 per cent., against 15 per cent. The market had discounted this result and the shares declined slightly. Total profits of the *Wiggins Teape* group increased from £375,756 to £442,055, and the total distribution is 9 per cent.

Central Mining.—A month or two ago the mining market was inclined to look for an increase in both the profits and dividend of this leading Rand finance concern. More recently, the expectation was modified to an increase in earnings without an advance in the rate of dividend. This view is confirmed by the accounts, which show an expansion of £36,000 in net profits. The total dividend payments are increased, since the preference issue made in the middle of 1934 ranks for a full year's interest. Reserve and income tax appropriations—especially the former—are larger, and a somewhat reduced balance is carried forward. In the following table we summarise the results for the past three years, on the present occasion setting out the gilt-edged holdings separately from the shares, investments and interests:—

	1933	1934	1935
Shares, investments, etc.	4,050,711	5,051,550	5,405,000
Gilt-edged securities	1,767,403	2,117,080	2,146,230

For income tax	75,000	50,000	60,000
Brought forward	168,970	167,049	182,380
Carried forward†	167,040	182,380	177,560
* On ordinary capital.			
† After deduction of directors' percentage.			

The statistics relating to the producing gold-mining companies of the group show record aggregate earnings, despite a reduction of approximately 8 per cent. in the grade of ore treated. Increased dividends were paid by the Transvaal Consolidated and Trinidad Leaseholds, but the position of the Spanish railway interests shows no improvement. Reference is made to the company's interest in the New Witwatersrand Gold Exploration; the recent strike on this

property, it will be recalled, renewed market interest in West Witwatersrand. Additional particulars are now given of the company's holdings—in conjunction with Selection Trust—in Kopaonik and other base metal properties in Yugoslavia. On the basis of the dividends for the past two years, Central Mining £8 shares at current quotation at around £25 show a yield of approximately 4 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Hambros Bank, Alliance Assurance, Guardian Assurance, Yorkshire Insurance, San Paulo (Brazilian) Railway, Scottish Mortgage and Trust, Southern Areas Electric Corporation, Oriental Telephone and Electric, Calcutta Electric Supply, South-Eastern Gas Corporation, Calcutta Tramways, Rubber Plantations Investment Trust, Anglo-American Debenture Corporation, Pataling Rubber Estates, Dunlop Rubber, Indian Copper Corporation, British Match Corporation, Smith's Potato Crisps, Marston Valley Brick, Spaarwater Gold Mining, Crown Mines, and City Deep. Shareholders in Hambros Bank learned that the Bank had extended its issue department for British industrial finance. At the Guardian Assurance meeting Colonel Lionel H. Hanbury disclosed that the investment valuation showed a surplus of £1,439,790 over the book values, and that no investment appeared in the books at a value exceeding its redemption price or its market value at December 31st last. Mr Lionel N. de Rothschild discussed the effect of falling interest rates on the Alliance Assurance bonus position, and anticipated a satisfactory rate after the 1938 valuation had been made. Lord Middleton reported substantial increase in business done by the Yorkshire Insurance Company compared with the previous year. At the San Paulo (Brazilian) Railway meeting the chairman described conditions which had obliged the company to apply for higher tariffs on goods carried. Southern Areas Electric Corporation secured an increase in gross receipts of £12,799 over the previous year, with average price per unit of 2.38d., compared with 2.77d. The chairman

of Oriental Telephone and Electric Company reviewed progress in the company's overseas undertakings. Sir David Milne-Watson, at the South-Eastern Gas meeting, discussed the necessity for centralised control of sales organisations. Sir Geoffrey R. Clarke gave figures of passengers carried and mileage run by the Calcutta Tramways, showing a continued and sustained improvement. Lord Meston discussed agitation in Calcutta against the domestic tariff of the Calcutta Electric Supply Corporation. Sir Eric Geddes, at the Dunlop Rubber Company meeting, reviewed the various activities of the company, and pointed out that since June, 1932, the price of rubber had increased fourfold. Mr C. L. Read described development work of the City Deep Company, and reported a new record of tonnage milled. At the Indian Copper Corporation meeting the chairman reported an improvement in prices obtained for the company's products for the first time for several years. Mr Clarence E. Bartholomew, of the British Match Corporation, criticised sales prices of Russian matches. The chairman of Marston Valley Brick Company reported an increase in the output of Fletton bricks in the last 30 years from 2½ per cent. of the country's output to 32½ per cent. Mr W. A. Mackenzie described development work undertaken by the Spaarwater Gold Mining Company. Mr. John Martin said that the ore milled and the working revenue of Crown Mines during 1935 were the highest in the company's history. Mr Maxtone Graham discussed the conditions for a resumption of foreign lending at the Scottish Mortgage and Trust meeting. His views accorded closely with those of Mr Richard Guinness at the Anglo-American Debenture Corporation meeting. The chairman of Smith's Potato Crisps referred to the recent acquisition of the Nocton estate to safeguard potato supplies. Mr H. J. Welch referred to the desirability of prolonging the rubber and tea restriction schemes, at the Rubber Plantations meeting, with safeguards for termination when their objects had been secured. Mr Eric Miller informed Pataling Rubber shareholders that a substantial reduction in visible stocks was indicated during 1936.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

TICKET MAY 19 | ACCOUNT MAY 21

THE second week of the account has run its course with even less general market interest than in the first. This week there was no mid-week recovery, and after Monday's post-bag had been cleared the general dullness was the more pronounced. Markets were at first in easier mind about the immediate prospects for the franc, but distinctly nervous later in the week regarding the European situation. The lack of response among leading industrial shares to the April unemployment figures and to the record motor registrations illustrates the market's present mood. Without short-term speculative openings, either for rise or fall, and conscious of the mere postponement of all the important political issues which have been raised from March 7th, investors are not unwise in adopting a temporising attitude.

The gilt-edged market opened firmly, but failed to recruit further support, and when conditions became quieter quotations were barely maintained. War Loan, which fact, lost ¼ on Tuesday and Wednesday. The New and scrip opened at ½ discount, and found little support at this level. Home Corporation scrips reacted on the rewriting of the Sheffield loan. The Birmingham loan was portably maintained most of its significant premium, but the more recent issues were dealt in at steadily widening discounts.

In the foreign bond market, European issues were depressed by the prospect of a month's uncertainty from Geneva and by the Austrian Cabinet reshuffle. German bonds lost their earlier gains, and Central European issues reacted without exception. Chinese Customs loans reacted sharply to Sir Frederick Maze's statement that smuggling in North China, at the rate suggested by the April returns, might be put as high as one-third of the total annual

Customs revenue. Fears that the issue might develop into an international question prompted a sudden wave of selling of Japanese issues, which had previously been well supported. Greek issues were weaker on sustained reports that the Government were still unable to provide more than 35 per cent. of the service. South American issues followed the general trend.

The rejection by the N.U.R. Conference of the companies' offer to restore half the wage cut (discussed on page 357) was followed by moderate selling of home rail stocks. Southern issues were sentimentally affected by a poor traffic comparison with last year's exceptional week, and other stocks closed ½ to ¾ lower on Wednesday, with further falls on Thursday when L.N.E.R. 2nd preference closed one point lower at 26½. Argentine rail ordinary stocks were maintained for a time, but the poor traffics were marked by renewed falls. Prior charges were conspicuously dull throughout an idle week.

Conditions in the industrial shares market have been very dull throughout the week, and prices have moved irregularly. Interest has been damped down by the continued stagnation of Wall Street, by the political uncertainties, and also by the greater attractions of the oil and mining sections. Iron and steel shares have suffered most, although the volume of business has been small. The recent boom in armament issues has left the market rather jaded, and not easily stimulated by such humdrum affairs as satisfactory trading reports. Exceptions to this dullness were, however, provided by United Steel, Tube Investments, and by Whiteheads. Stewarts and Lloyds deferred reacted slightly to the chairman's speech, which is discussed on page 375. Aviation issues were similarly dull, Handley Page participating preference being affected by strike news. Hawkers were initially supported in anticipation of good dividend results, but lost ground later. With few exceptions, motor shares were dull, despite the March registrations. Holders of A.E.C. shares were disappointed by the maintained dividend, but Leyland and Rover issues were slightly firmer. Bolsover shares continued to improve in the coal group.

Electrical equipment shares were firm at the beginning of the week, but became easier later. Ever Ready shares remained firm on the report. Woolworth reached a new high level among stores, in hope of a bonus distribution. Among provision and catering issues, Unilever were in demand by Amsterdam buyers, and J. Lyons reflected anticipations of a good report. On the sharp rise in profits, Salts (Saltaire) issues were active. Brewery and distillery shares were firm, Distillers being in active demand on the subsidiaries' results. South African Breweries, and Marston Thompson were also prominent. Godfrey Phillips improved on the increased dividend announced by Abdulla, but in mid-week there was a slight reaction among the leading tobacco shares.

In the miscellaneous industrials section the tone was easy throughout the week, and price movements were small and irregular. Alpha Cement issues were in demand following their acquisition of Metropolitan Cement, but the building materials group were generally dull. Boots Drug shares were sold following publication of the preliminary results, and Valor issues lost ground. London Brick shares were easier on the maintained interim dividend.

Interest in the oil shares market was again concentrated on the Eagle issues. Activity revived this week, and Mexican Eagles passed the 25s. mark. Considerable selective buying of shares likely to benefit from imminent dividend announcements was reported, together with some support for the more speculative issues. The Burmah dividend announcement was followed by considerable activity in the shares. In the rubber share market business followed its recent dull course, but the mid-week recovery in the commodity to 7½d. led to a firmer tendency. Tea shares were more depressed than of late at the beginning of the week, and professional buyers were more reluctant to absorb public sales.

The Kaffir market was generally active, with West Witwatersrand issues in the lead on expectations of good results from a new borehole, whose benefits should extend to other companies in the region, notably Western Reefs. Much attention was paid to the finance company issues, particularly Anglo-American, and Goldfields. Speculative

buying seems to be playing a more important part in the market than of late. Activity in West Africans declined, and prices were inclined to ease. Rhodesian copper issues were neglected, and tin issues were inclined to weaken on the lower commodity price.

NEW YORK

ANOTHER week of dullness has shown that Wall Street is unable to shake off its concern over the position of the franc. In conditions of continued idleness, prices moved erratically, although there were signs of a slight improvement in midweek, particularly in chemical and liquor shares. There is, moreover, some evidence of renewed buying for investment, but speculative operations are hanging fire pending a settlement of political uncertainties at home and abroad. On Monday the call money rate was increased to 1 per cent. and the time money rate to 1½ per cent., but the bond market recovered from last week's dullness and quotations strengthened generally, French issues showing a distinct improvement. Business circles are hoping for considerable modification of the tax programme before it becomes law, and the President is apparently willing to accept a compromise. The defeat of the Frazier-Lemke Farm Mortgage Bill found similar approval, and talk of possible further devaluation of the dollar does not seem to be justified by any successes for the inflationary bloc in Congress. Business reports remain fairly good. Steel mill activity is slightly lower than last week, but automobile output is still increasing.

* Two-hour session.

PARIS

Last week the Bourse closed under the Communist threat of heavy taxation on large incomes, and was still depressed by the continued franc crisis. On Friday rentes closed irregularly, and Banque de France shares lost 450 francs to 5,250. Conditions improved somewhat this week, thanks to M. Blum's renunciation of devaluation, and Banque de France shares recovered to 6,210. Industrials advanced, and internationals, which last week were in demand as a refuge from domestic issues, again lost favour. Suez Canal shares declined by 415 francs, and diamond, copper and Kaffir issues were lower. A reaction was provoked, however, by the withdrawal of the Italian delegation from Geneva, and rentes gave way. Banque de France shares, however, continued to improve in the expectation that M. Blum will advocate not nationalisation of the Banque, but merely reform. Industrials were once more depressed, while internationals returned to favour. Technical conditions accounted for a slight improvement as the end of the account approached, and buying orders in several departments led to a rise in prices.

BERLIN

After reacting in the early part of last week, the share market became firmer, and on the whole week closed with a slight average advance. In addition to the standard heavy industrials, the main improvements were recorded by lignite, rubber, linoleum and brewery issues, and Bemberg and Aku shares among rayons. Shipping issues were steady, potash shares irregular. Foreign currency shares were bought. The new week opened with a further advance, but

TEN PER CENT.

Block of Service Flats in West End, fully let, will be sold for £15,500 to show 10 per cent. net, after providing for management by well-known Estate Agents, who would continue to act, if required, thus making the investment

TROUBLE FREE

Write Box 165, Economist Newspaper, Ltd., 8 Boulevard St., Fleet St., E.C.4

on Tuesday prices were irregular with sharp advances shown by electric cable shares, and Westdeutscher Kaufhof (Tietz) issues. Reichsmark loans were little changed, certificated dollar State and bank bonds weaker, and other dollar bonds irregular. On Wednesday political uncertainties led to an opening setback, but the tone improved somewhat toward the close of business. The official shares index (1924-26 = 100) for April was 96.22, as against 93.31 for March; bonds index 95.34, against 95.32.

AMSTERDAM

There was a sharp rise in many share prices at the end of last week, in anticipation of devaluation. Royal Dutch touched a new high at 257½, rubber, sugar and industrial shares gained, and bonds were naturally inclined to be easier. Following M. Blum's declaration of orthodox intentions toward the franc, prices fell throughout the market on Monday, and became irregular later in the week. Business is still very quiet, but the tone of the market tends to be a little firmer.

CAPITAL ISSUES

THIS week's issues cater exclusively for the fixed interest investor. The *Sheffield* loan, on identical terms with its six forerunners since Birmingham set the queue moving three weeks ago, appears under less auspicious market conditions, for after Birmingham's resounding success—on generous terms—the decreasing cordiality of the market's reception to later corporation issues has been matched by the dwindling of opening premiums to slight discounts. The *Sheffield* prospectus gives full information regarding the profits of the trading undertakings, which account for a significant part of the City's debt. It may be asked, on general grounds, whether the small but distinct differences between the credit-ranking of the borrowers of the last three weeks should not be recognised, at least in the redemption terms. The *Lloyd's Building* prospectus relating to the issue of 3 per cent. first mortgage debenture stock at 95½ discloses that Royal Mail House changed hands for £800,000, a figure considerably less than market report at that time. The stock has a maximum life of 37 years, and its service is well secured on the lease rental payable by the Corporation of Lloyd's. The 3½ per cent. stock of *John Lewis Properties*, issued at 95, with final redemption in 1971, or optionally from 1940, gives the borrower a wide repayment option. The rent charges are satisfactorily covered by the latest profits of the trading concern, but the difference in terms reflects the presence of a certain trading risk. *Kellner-Partington Paper Pulp* 4½ per cent. debenture stock is guaranteed by a Norwegian company which operates the company's mills in Norway and Austria. The guarantor's profits have been relatively stable during the past three years and provide satisfactory cover for the service. The issue may be regarded as a valuable industrial debenture. *Meesons Limited* provide a somewhat unusual type of dual issue, of 4½ per cent. debenture stock, and 5½ per cent. redeemable preference shares, both at par, the equity being retained by the vendors. The fixed assets provide a cover of little over twice the amount of the debentures, but the income cover is larger. Income cover for the preference shares calculated in the prospectus at more than three times by the “prior deductions” method, works out at two and a quarter times by the “cumulative requirements” method. Statements “for information only” have been published

on behalf of *Franco Signs*, *Heatrae*, and *Aircrow Company*.

NORTH-EASTERN ELECTRIC SUPPLY Co. Ltd.
 Carlisle House, NEWCASTLE-UPON-TYNE
 Apply to above address for particulars of Sites for Works

Central Wagon Company.—Issue of 100,000 new £1 shares to the shareholders at par, in the proportion of one new share for every four shares held.

Champion Reef Gold Mines of India.—Shareholders registered on April 24th are entitled to apply for an issue of 130,000 10s. shares at 35s. per share, in the proportion of one new for every four old shares held.

City Deep.—259,000 £1 shares are offered to shareholders at £1 7s. 6d. per share.

J. Compton Sons & Webb, Ltd.—Issue of 280,000 of these new shares to existing ordinary shareholders at 5s. 6d. per share on the basis of one new share for every five.

General Refractories.—Issue of 70,000 new shares in the proportion of one share to every ten held, at 26s. 6d. each.

Palmietkuil Gold Mining Company.—Shareholders are invited to subscribe at par to 1,400,000 10s. shares in order to provide the further working capital now required.

Robinson Deep “B” Shares.—Issue of 152,479 “B” shares of 7s. 6d. at 40s. each. The offer is to “B” shareholders on the register at the close of business on May 13th in the proportion of one new for every 12 held. The lists will close on June 10th.

South Wanarajah Tea Estates.—Issue of 3,200 ordinary shares of £1 at 30s. per share.

United Steel Companies, Ltd.—At an extraordinary general meeting held May 12th, it was decided to increase the authorised capital of the company to £10,000,000 by the creation of 3,350,000 shares of £1 each. The chairman intimated that approximately 2,200,000 shares would be offered at a premium of 5s. per share to members of the company in the proportion of one new share for each £3 stock held (excluding fractions). Applications must be lodged by first post on May 28th accompanied by a payment of 10s. per share. The balance of 15s. per share will be payable on or before July 20th.

CONVERSIONS AND REPAYMENTS

State of Parana 7 per Cent. Consolidated Bonds.—The State of Parana has accepted all tenders both of 7 per cent. sterling and dollar bonds made at the prices at or below 28 per cent. of the nominal value.

Kellner-Partington Paper Pulp Company, Ltd.—Issue of £1,100,000 4½ per cent. guaranteed mortgage debenture stock at par. Redeemable at par October 1, 1961, or after October 1, 1946, at 101 per cent., on three months' notice. Proceeds of issue to repay £1,111,900 outstanding 6 per cent. debenture stock. Company incorporated 1889. Owns pulp and paper mills in Norway and Austria operated by Aktieselskapet Borregaard, who guarantee interest and principal unconditionally. Consolidated profits of guarantor group, after depreciation: 1933, £248,069; 1934, £230,663; 1935, £253,994. Total net assets December 31, 1935, £3,138,486.

FORTHCOMING ISSUES

Consett Iron.—The company's £2,500,000 6 per cent. debenture stock is being repaid at 9½ per cent. premium. An issue of £1,500,000 of 4½ per cent. debenture stock is being made. Holders of each £10 of 6 per cent. stock will have the right to subscribe for £6 of 4½ per cent. stock at par and six ordinary shares of 6s. 8d. at 8s. 6d. each. Holders of the 3,000,000 ordinary shares of 6s. 8d. will have the right to subscribe for seven shares of 6s. 8d. at 8s. 6d. each in respect of every six shares held.

Preston Breweries, Ltd.—We are now informed that arrangements have been completed for the issue in a few days of 165,000 5½ per cent. cumulative preference shares 10s. each at par and 165,000 ordinary shares 4s. each at 5s. per share.

Southern Areas Electric.—It is understood that the new issue to be made in the course of the next few weeks by this corporation will be in 450,000 new ordinary shares of £1 each at the price of 21s. per share. Public subscriptions will be invited for these new shares, but preferential consideration in allotment will be given to the company's existing shareholders and consumers.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

of quality, 86 per cent. of world racing records were achieved on Dunlop tyres.

The growth of motoring—both pleasure car and commercial vehicle—is a favourable factor, and our reputation for quality, coupled with the activity of our sales force and the goodwill value of the name Dunlop, ensures our share of the business.

Dividends, however, depend on the maintenance of reasonable price levels, and our energies are strenuously employed to that end.

SUBSIDIARY DIVISIONS

The assimilation of the varied businesses carried on by the Chas. Macintosh group of companies is now completed, and no major problem of consolidation remains. What we call our subsidiary divisions now represent a harmonious community of specialised interests.

Most of the businesses involved are subject to seasonal conditions. A poor year in one division may be more or less compensated by a record year in another.

Bearing this fact in mind, it is extremely pleasing to report that the 1935 profits, taken as a whole, show a satisfactory improvement over those for the previous year.

These results have been achieved in spite of the fact that selling prices have not kept pace with the increased cost of raw material.

A second turnover of general rubber goods was reached and a profit was made. Here again the increase in selling prices did not meet the increased cost of materials.

The productions of the footwear division continue to be regarded as first-class in every way. The demand for winter rubber footwear, assisted by weather conditions, was quite remarkable, and a satisfactory profit was made. There is no doubt that the popularity of rubber footwear with the people of this country is greatly increasing, but we still lag behind certain other countries in this respect.

We could have given still greater employment at our factory at Liverpool, which specialises in the production of rubber footwear, if the competition from Hongkong had not continued. It is to be hoped that our Government will not continue wedded to a policy which must result in reducing employment in the United Kingdom, or, alternatively, in reducing the standard of life enjoyed by our operatives, which it has been the endeavour of the company to raise.

I informed you that in 1934 the garment division had not reached the profit-bearing stage. I am very glad to say that greatly improved results were obtained in 1935. We turned the corner and a profit was made. The policy we adopted of offering only the best quality in material, style and finish has justified itself.

Turning to the sports division, we continue to develop satisfactorily. It will be found that for the 1936 season our golf balls, our tennis balls and our rackets have again been greatly improved, particularly in this so in the case of our golf balls.

MANUFACTURE FROM LATEX

I would like to add a word with regard to the use of Latex in our factories. The introduction of this material called for a new technique. At Fort Dunlop we have a special research staff engaged in considering the application of Latex in general terms. At others of our works we have equally well qualified staffs applying Latex to specific purposes. An example is the Latex Boot, which is quite a scientific achievement, and places at the disposal of the public a much improved article.

Latex is, of course, also the basis for Dunlopillo cushioning. You will remember that at the annual general meeting in 1932 you saw a display of this material. You will be glad to hear that it is making remarkable progress. Dunlopillo seating is in great and increasing favour in all types of public service vehicles. It is gradually winning a position for itself in steamship equipment, as mattresses and upholstery. It is appearing on railroads in Europe and in America. In domestic use, for furniture and bedding, the qualities of the material are being recognised to an increasing extent.

During the year Dunlopillo underlay for carpets was introduced, and this has been so successful that, in spite of constant additions to our plant, we have been unable to keep pace with orders. It is not only luxurious under foot, but under proper conditions very economical.

OVERSEAS FACTORIES

The year was a much more difficult one for all commercial undertakings in France than even 1934 had been, and the fact that the French Dunlop factory increased its turnover and showed

an improved profit position in spite of an unsatisfactory price situation, speaks well for the efficiency of the organisation.

In Germany, conditions still continued quite abnormal. Sales of almost all products showed substantial increases on 1934, assisted by the policy of the Government in developing the motor industry, and prices were well maintained. Unfortunately, it is, as I have said, still impossible for us to obtain remittances.

In America, you will remember, 1934 showed improvement, and the price position seemed at the end of the year, likely to become more stable, but once more we were disappointed, and conditions unfortunately deteriorated substantially in 1935. In consequence, a substantial loss was incurred. With only a small and stable increase in prices the American Corporation would be turning from a loss to a profit, and our advice to the American Board is to persevere.

Canada followed the course of events in the U.S.A.. In spite of the rise in raw material prices, there was a general reduction in tyre prices.

Our Toronto factory increased its quantity sales for most of its products, and continued progress was made in the efficiency of the plant, thus reducing conversion cost. Promising progress was also made with Dunlopillo upholstery. Results of the company's operations, in spite of the fall in prices and increased cost of raw materials, were better than 1934, though a profit was not earned.

In Japan, an increase in tyre prices was effected in March, 1935, but this did not make up for the increase in raw material prices. There were other difficulties in the domestic market, and the Dunlop Company did well to improve its net turnover by a small amount, and to make a satisfactory profit, which, however, was less than that for 1934.

In Ireland, the factory established at Cork is progressing well and is now producing giant, car and bicycle tyres, rubber footwear and tennis balls. The profit results for 1935 were satisfactory, and the Irish plant promises to be a most useful addition to Dunlop resources.

Production of tyres by our new South African factory began in January of last year, and was rapidly expanded. The company operated at a profit for the last half of the year, but, as was anticipated, the preliminary expenses and the inevitably high costs during the initial stages of production prevented the year showing a profit as a whole. Prospects for 1936 are good.

The volume of our export business has been reduced by these developments and by the closing, in whole or in part, of important territories on the Continent and in Latin America, brought about by high tariffs, quotas and exchange difficulties. The result has been a reduction of profits from the export division. We can, however, look with confidence to the profits of the new overseas factories improving the position in the reasonable near future.

PROSPECTS

You will have gathered from what I have said that the degree of our future prosperity is largely dependent on three factors. The prices of our raw materials; the prices of our finished products and the restoration of international trade. The last of these is a matter beyond our control; it depends upon the commercial policy of other nations and upon currency stabilisation, of which there seems as yet to be no indication. The price of our principal raw material is dependent on artificial regulation. Prices of our manufactures are, of course, subject to competition. You may be sure that whatever our own organisation can do to influence these very difficult factors will be done, particularly in stabilising market conditions and mitigating the worst effects of reckless competition. So far as that organisation is concerned, your board is more than satisfied.

Our relations with staff and operatives have never been better. Equally satisfactory are our relations with our customers of every class. As to our goodwill with the public, I think you will realise yourselves from Press comment and the many other means through which public opinion finds expression, that few companies are in a happier position in this respect.

We must not forget that Dunlop activities and commitments are not confined to the comparatively safe markets of our own country and Empire, but extend to all parts of a world which is to-day distracted with every kind of economic and political difficulty; that we are engaged in a highly competitive industry, and that within a comparatively short time the price of our principal raw material has been increased over fourfold.

The excellent state of our organisation, the high quality of our products, the goodwill value of the Dunlop name, the soundness of our balance-sheet position, and the good profit which we are able to show to-day, justify a feeling of optimism, but a policy of caution is still essentially necessary.

The report and accounts were unanimously adopted.

ALLIANCE ASSURANCE COMPANY, LIMITED

ANOTHER SUCCESSFUL YEAR

MR LIONEL N. DE ROTHSCHILD'S REVIEW

The annual general court of the Alliance Assurance Company, Limited, was held, on the 13th instant, at the Head Office, Bartholomew Lane, London, E.C.

Mr Lionel N. de Rothschild, O.B.E. (the chairman), said that the new life business amounted to £3,579,859. Although that was some £10,000 less than in the year 1934, it was still largely in excess of the amount completed in any other previous year in the company's history. The recent revision in the rates in consequence of the changes in the rates of mortality had probably retarded the expansion in their new life business.

The continued fall in the rate of interest that could be earned on new money was bound to affect the profits that could be earned in the life funds in the future. If the fall in interest rates persisted profits must diminish, and it was for that reason that they had instructed their branch managers and agents to refuse absolutely to make any estimates of future bonuses. It appeared to them that in a time of uncertainty such as the present, it was especially undesirable that persons effecting life policies should be given figures, however, carefully guarded, which might lead them to suppose that bonuses on any specified scale could be absolutely guaranteed. Nevertheless, they were confident that unless some serious financial disturbance occurred they would be able to declare a satisfactory rate of bonus when the results of the valuation at the end of 1938 were announced.

SATISFACTORY FIRE BUSINESS

Their fire business during the year had been, as usual, very satisfactory. There had been a modest increase in the premium income, and loss ratio showed only a very small increase. The transfer to profit and loss on the fire account, including interest on the fund, exceeded £435,000. Their home business was, of course, the principal source of profit in that department, but during the past year a substantial profit had been derived from foreign fire business.

In the marine account the premium income was very little below that of the previous year. For several years he had been reporting a continual shrinkage in the income, and they had now reached a comparatively low figure. Unfortunately, market conditions remained unfavourable; competition was even more keen, the values of ships for insurance purposes were being constantly reduced, and rates were being similarly reduced. Unless conditions improved, it might not be possible to maintain their income even at its present level. The marine fund was exceptionally strong, being more than three times the premium income. Unless some unexpected disaster occurred, they could look forward to a satisfactory surplus at the end of 1936.

ACCIDENT DEPARTMENT

In the accident department there was an increase in the premium income, and the results were again satisfactory. It was especially gratifying to report that premiums in the workmen's compensation section showed an increase, because that was largely a reflection of the improvement which had taken place in the trade and industry of the country. Compared with 1933 the income in that section of their business had increased by over 17 per cent.

The motor business showed only a slender margin of profit and that had not been achieved without the greatest care and attention. Shareholders would have noticed in the Press reports of very large damages awarded to persons injured by motor accidents, and the tendency seemed to be for those awards to increase. The result of that was, of course, very serious. That increase in the cost of claims gave additional point to the remarks he had made last year with regard to the very heavy liabilities which motorists might incur in the event of a serious accident. It was essential that when effecting insurance they should look for absolute security. Such security could, of course, be obtained from the larger companies like the Alliance, and it was false economy on the part of a motorist, for the sake of a slight saving in premium, to place his insurance in a quarter where the same security was not available.

Summarising the position generally, after paying their usual dividend and making full provision for all liabilities they had increased their reserves by £284,000 as the result of the year's operations—a satisfactory result.

The report and accounts were unanimously adopted.

HAMBROS BANK LIMITED

IMPROVING ECONOMIC CONDITIONS

The twenty-fourth annual ordinary general meeting of Hambros Bank, Limited, was held, on the 14th instant, in London.

Mr G. L. d'Abo (a managing director) presided in the absence through indisposition of the chairman and managing director, Mr R. Olaf Hambro, and read his speech, which stated:—There has been a very decided trend towards improvement in the economic conditions throughout Europe during the year in spite of what one might call the almost frenzied bickerings among the political parties in all countries.

In the countries remaining on a true gold basis, France, Holland and Switzerland, the commercial improvement has of course been hampered by the periodic scares regarding their currencies, with the result that their Bank rates have been moved rapidly up and down, which was bound to prohibit new capital expansion.

In Italy, which is the one exception in the general trend, for all practical purposes our commercial relations have almost ceased. This we hope is a passing phase.

At home the steady improvement has been very marked; nearly every day our daily papers contain some reference to the reports of our various industrial and commercial companies, and the tale is, with but few exceptions, one of increased prosperity. We have enjoyed cheap money, which has enabled fixed capital charges to be reduced all round, industries have been able to obtain new moneys on very reasonable terms, and thereby increased their productive capacities, and has so largely been instrumental in giving more employment, and this may be said to be true of the Scandinavian countries and Finland.

The profit and loss account speaks for itself. All branches of the business have been able to earn slightly increased profits in spite of the low rate for money and the various difficulties and complications which surround all international business. I stress the word "international," because our business is and has always been that, and we have not made any special effort to cultivate the inland acceptance.

On the other hand, we have been able to extend our issue department in the field of British industrial finance, where we hope to be able to increase our activities in the future.

The report was adopted.

YORKSHIRE INSURANCE COMPANY, LIMITED

STRONG POSITION

The annual general meeting of the Yorkshire Insurance Company, Limited, was held, on the 12th instant, at York, Lord Middleton (chairman of the company) presiding.

The Chairman, in moving the adoption of the report and accounts, said that the result of the year's trading had been good.

Turning to the departmental accounts, Lord Middleton pointed out that the net new life sums assured amounted to £2,430,353, as against £2,579,543 for 1934.

It was satisfactory to report that the new business so far for the current year showed a substantial increase over that for the same period of last year.

The outgo in respect of claims by death was notably less at £180,495 than the same item of £221,107 for 1934, and was below the average amount for the last valuation period.

It was pleasing to note that the amount for which policies had been surrendered was well below the previous year's figure—an indication, he thought, of lessened financial strain among their policyholders.

Although there was a slight reduction in the premiums on fire account at £912,503, against £916,740, the amount carried to profit and loss account was £128,461, as compared with £118,484.

The accident and general account had shown a marked improvement, certain unprofitable sections having been eliminated. Though this had had the effect of reducing the premium income, the amount carried to profit and loss had risen from £13,218 to £62,578.

Having announced that the directors recommended that the dividends be at the rate of 9s. 6d. per share on the fully-paid £1 shares, 4s. 9d. per share on the £2 10s. (10s. paid) shares, and 2s. 4½d. on the fully paid 5s. shares, free of tax, Lord Middleton emphasised that the financial position of the company and the security which it offered to its assured had been fully maintained.

All the departments had substantial reserves in excess of the necessary provision for the unexpired liability. There was also the general reserve of £1,134,553, while the market value of the Stock Exchange securities as at December 31st exceeded the balance-sheet values by over £500,000.

The report and accounts were unanimously adopted.

SCOTTISH MORTGAGE AND TRUST COMPANY, LIMITED

SUCCESSFUL RESULTS—GOOD PROSPECTS

MR J. MAXTONE GRAHAM'S REVIEW

The twenty-seventh ordinary general meeting of the Scottish Mortgage and Trust Company, Limited, was held, on the 14th instant, within the registered office, No. 3, Glenfinias Street, Edinburgh.

Mr J. Maxtone Graham, C.A. (the chairman), presided.

The notice calling the meeting and the auditors' report having been read by a representative of Messrs. Baillie, Gifford and Company, the managers and secretaries,

The Chairman said:—

The year which has just closed has been of unusual importance in the history of the company. In the first place, on the capital side of our accounts you will observe a new entry of 40s. preference stock amounting to £75,000, and our ordinary stock has also been increased by that amount, and now stands at £825,000. To correspond with these additions, we made an issue during the year of 3½ per cent. debenture stock of £150,000, with the result that the total of each side of the balance sheet now amounts to £4,070,000, as compared with £3,736,000 last year. The issue of new ordinary and preference capital was made in July and August of last year, and the debenture stock was placed in the autumn.

SATISFACTORY YIELD FOR ORDINARY SHARES

The ordinary shares were offered to stockholders in proportion to their holdings of ordinary stock at 32s. for each £1 share, at which price, on the basis of the previous year's dividend of 8½ per cent., they give a return of £5 6s. per cent., thus affording remunerative investment to those stockholders who took up the shares, while those who did not wish to take them were able to sell them at a satisfactory premium, and thus in effect to obtain a bonus. The offering of £75,000 4 per cent. preference shares was also made to our stockholders and was much oversubscribed, as was natural, looking to the good security and the fair rate of interest. The debenture stock was placed without difficulty in the ordinary way with investors who require that type of investment.

You will observe from the report how the premium received on the ordinary shares has been dealt with. We have increased our reserve fund to £550,000 and the balance of £27,685 has been used to strengthen our inner reserves. I am satisfied that the issue was made at a favourable time for investment, and that the company, as a whole, has benefited by this increase of capital.

VALUE OF INVESTMENTS

You will see from the report that we are able to say that, on a valuation made at the close of the year, it appears that the investments the company holds are of a value in excess of the figure at which they stand in the balance sheet. The surplus of value is substantial, and I am satisfied that the improvement in our capital position has been accelerated by the new issue of capital which we made last year.

While I am dealing with the capital side of the accounts, I think it would be convenient to give you a statement showing the distribution of our investments on the basis of cost. The statement is as follows, per cent.: Great Britain, 38.96; Dominions, 8.86; Europe, 9.98; United States, 28.81; Latin-America, 10.04; Asia, 2.95; Africa, 0.40—100.00.

From this you will see that the percentage of our investments in Great Britain is practically the same as a year ago, but that there have been diminutions of 2 per cent. in the amount invested in the Dominions, of 3½ per cent. in the amount invested in Europe, and of 1 per cent. in the amount in Latin-America. We have only a small percentage in Asia and Africa, and the changes in these figures are trifling. On the other hand, we have increased the percentage of our funds invested in the United States of America from 21.74 per cent. to 28.81 per cent. up to date. That has certainly been a prudent movement of our funds. You will not expect me to say that in a year in which the Presidential election takes place the outlook in U.S.A. is a settled one, but I think there can be little doubt that during the past year confidence in the immediate future of the United States has steadily increased, and the record of profits earned and dividends distributed during and in respect of 1935 is undoubtedly encouraging.

I see that a year ago I referred to some of the factors which caused nervousness in the United States and in particular to recent silver legislation and to the prominence of such people as Huey Long and Father Coughlin. To-day, of these factors one has disappeared, and the others are much less prominent and disturbing, and it is difficult to point to anything at the present time which causes anxiety comparable to what was caused by them twelve months ago.

CONDITIONS IN BRITAIN

Conditions continue to be favourable in Great Britain for industry and commerce. For the rest of the world, confidence in our investments abroad would have increased owing to improving commercial conditions, were it not for current anxiety about politics and peace. Personally, I am not greatly perturbed at the International outlook at present so far as it affects our investments, nor do the scare headlines which appear from time to time in some of our newspapers discompose me; time only will tell whether or not I am unduly optimistic, but I feel confident that there is a strong undercurrent of commonsense among most European nations which causes them to realise the futility of war, and the fact that conquest can be too dearly bought.

There is one consideration with regard to our investments abroad to which, as chairman of an investment trust company, I ought to refer. There is, I think, far too strong a tendency on the part of the uninstructed to regard British investments abroad as deserving little consideration from our Government and Legislature, and as being almost harmful to our industrial interests. I would take the opportunity to remind you that our investments abroad represent the profitable exports made by our industries in bygone years, and that the interest and sinking fund payments, which ought to be made at the present time, but which are often omitted and hindered, are merely the deferred payments to this country for the goods supplied to foreign countries in the past. There is little hope for enduring revival of our export industries producing capital goods unless there can first be revival of confidence in lending to foreign countries. Foreign countries will not be able to purchase capital goods in Great Britain unless they can also borrow in Great Britain the means with which to pay for them. In the first instance, borrowing here will not be possible unless there has been a fairly full resumption of regular payments by former borrowers of interest and sinking fund on their existing obligations. The amounts received from such payments form a very important part of the country's annual balance sheet, and go a long way to provide this country with the higher standard of living it possesses, which is so marked in comparison with almost all other European countries.

EXCHANGE REMITTANCES

It is important that these facts should be realised, otherwise there is a constant danger of the efforts of foreign countries to transmit exchange with which to meet their obligations being hindered, or of failure to put pressure when trade agreements are being arranged upon recalcitrant countries. The interests of this company in this matter are obviously great and justify my referring to it at some length.

On the revenue side of our accounts, although the new capital has probably not been fully productive during the year just closed, our gross revenue has risen from £194,000 to £216,400 and the percentage earned on the ordinary stock, including the new issue has risen from 9.36 per cent. to 11.05 per cent. We recommend that the rate of dividend paid last year be repeated for this year, namely 8½ per cent., and this allows us to resume our pre-depression practice of carrying a substantial sum from revenue account to strengthen the position of the company. We have transferred £15,000 to reduce the book cost of our investments. The result is that the balance carried forward shows a small increase at £18,200.

These are, I think, good results, and it is natural that, in these circumstances, our debenture holders continue to have a first-class security. The interest paid and accrued on borrowed money

CITY DEEP, LIMITED

FURTHER IMPROVEMENT

Mr C. L. Read, presiding at the annual meeting of City Deep, Ltd., held in Johannesburg on May 6, said that the directors' report and audited accounts reflected the further improvement in the company's position. Payment of dividends had been resumed, and notwithstanding the setback caused by the serious overwind at Number One Vertical Shaft at the end of October the year had closed with an improved cash balance and a total unappropriated balance of £140,767. Reviewing the company's operations, the Chairman pointed out that a fresh record in tonnage milled had been established last year. Working costs were higher by 1s. 1d. per ton milled, two chief causes of increase being the larger amount of mine development achieved and the accident at Number One Shaft.

Reviewing the progress of the mine, the Chairman said that the development footage accomplished during the past year amounted to 67,132 ft., an increase of 10,496 ft., or 18.5 per cent., on that accomplished in 1934, payable ore developed was estimated at 855,800 tons of an average value of 4.9 dwt. per ton. Direct expenditure on development charged to working costs was £180,528, or 2s. 11.1d. per ton milled, an increase of 5.4d. per ton milled on the previous year's figure. Ore reserve, as recalculated at the end of 1935, comprised 3,624,400 tons of an average value of 5.38 dwt. per ton over an estimated stoping width of 50.7 in.

Available reserve, which exceeded that of the previous year by 121,800 tons with value lower by 0.21 dwt., was made up of 2,287,800 tons of main reef leader, averaging 5.53 dwt. over 49.3 in., and 745,800 tons of south reef, averaging 4.03 dwt. over 62 in. The south reef development in the upper levels of the mine gave promise of exposing further considerable tonnages of profitable, although mainly low-grade, ore.

SATISFACTORY DEVELOPMENT

He went on to say: In the lower levels of the mine the main reef leader development west of No. 4 shaft continues to give satisfactory exposures; east of No. 4 shaft some slight favourable indications have been encountered since the close of the year, but the area both east and west of No. 1 (a sub-incline shaft) continues unfavourable. East of No. 1 C sub-incline shaft development results are distinctly encouraging.

The eastern section of the mine connects with the surface through the No. 1 shaft system, on which it depends for ventilation and travelling ways. Present advance faces are some 1½ miles distant from the No. 1 shaft system, and it can readily be understood that in such circumstances ventilation is poor, and much time is occupied in transporting men and materials between the surface and working places. Hence the prospects of exploring and working this attractive eastern section laterally and in depth in satisfactory and efficient manner are extremely remote with the existing shaft facilities.

Owing to the disappointing development results in the central section of the mine, it is advisable to proceed with further exploitation of the eastern section sooner than would otherwise have been required.

The most effective method of dealing with the eastern section has been a matter of careful consideration by our technical advisers, and, as shareholders were informed by means of a circular issued on March 12th last, they have recommended that a rectangular five-compartment vertical shaft be sunk to a depth of approximately 5,875 ft. The shaft will be sunk to the twenty-seventh level. A connection will be made with a shaft at the nineteenth level on its attaining that depth, and immediate benefit to ventilation should then accrue.

Estimated expenditure directly connected with the new shaft is £370,000. Capital expenditure commitments at December 31st last under authorised votes amounted to £86,554, and additional estimated requirements of a capital nature during the period 1936 to 1940 bring the total to £650,350. The main items of the additional capital expenditure are power cables, ventilation equipment, winding and haulage equipment, air conditioning plant, and additional native compound accommodation.

Of the total of £650,350 estimated to be required, £412,000 will be provided by a proposed issue of 300,000 shares, and a further sum of £65,000 will be available if and when options to the underwriters of the issue are exercised.

The report and accounts were adopted unanimously.

At a subsequent extraordinary general meeting the shareholders approved an increase of capital in the terms of the circular of March 12th.

during the year was £53,000, to meet which there was a net revenue of £154,000. After deducting the debenture interest there remained £101,000 with which to meet the preference dividend of £32,000.

As to the current year, I am hopeful that we shall at least maintain as good earnings as in the year under review. Though we shall have to pay out slightly larger sums in respect of preference and debenture interest, but, in the absence of some unforeseen catastrophe, I am hopeful that we shall be able to maintain our dividend and still further to strengthen the company's position.

A resolution authorising the increase of the company's nominal capital to £2,000,000 by the creation of 175,000 cumulative preference shares and 175,000 ordinary shares, all of £1 each, was passed, the Chairman explaining that no immediate issue of shares was under consideration.

The remainder of the business was formal.

CALCUTTA ELECTRIC SUPPLY CORPORATION, LIMITED

CONTINUED PROGRESS

Lord Meston (chairman of the company), presiding over the annual meeting of the Calcutta Electric Supply Corporation, Limited, held, on the 11th instant, at Victoria House, London, W.C., said that, although the difficulties of the jute trade continued acute, the turn of the tide towards general prosperity was perceptible, and the company sold 183 million units for high tension power in 1935, against 155 millions in 1934. Improvement in low tension power was also satisfactory; but the increase in domestic consumption from 44 to 46 million units was a somewhat disappointing response to the reduction in the flat rate from 2½ to 2½ annas per unit in January. This gift to the consumer was, however, more than counterbalanced in July, by the new Government tax of half an anna per unit which had to be added. The betterment in total receipts was £69,000. Working expenses were £87,000 higher, the chief addition being £35,000 for Indian taxation on a heavy increase in their assessment. The same dividend was declared on the ordinary shares as last year, 12 per cent., free of income tax, £50,000 added to general reserve and £7,000 to retiring gratuity fund. They had secured, while money was cheap, a very substantial part of capital for their extensive development programme.

A subject of great importance was the result of a certain amount of agitation which had been simmering for some years in Calcutta against their domestic tariff. When the agitation came to a head in the Legislative Council the Government of Bengal appointed in July last a Committee of Inquiry into the whole subject. It had submitted its report to the Government and the company had been favoured with a copy to enable them to send out a representation with their views upon it. Nothing on their part was left undone to place the company's case fully and forcibly before the committee. The committee's report was, in many respects, a gratifying document. It spoke in high terms of the technical efficiency of the company's business and dismissed nearly all the irresponsible and ill-founded allegations made; but it recommended reductions in the tariff which would mean a serious loss of revenue.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"

8 Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

SOUTHERN AREAS ELECTRIC CORPORATION

IMPROVED RESULTS AND PROSPECTS

The third annual general meeting of the Southern Areas Electric Corporation, Limited, was held, on the 8th instant, at Winchester House, London, the Rt. Hon. Viscount Elibank (chairman of the company) presiding.

The Chairman, in the course of his address, said: We have to record dividends receivable from all our subsidiary companies amounting to £23,850 4s. 1d., as compared with £9,788 11s. 9d. in respect of the previous year, an increase of £14,062 12s. 4d.

Before arriving at their dividends for the year, our subsidiary electricity supply companies had set aside in the aggregate the sum of £14,095 for depreciation, an increase of £2,039 over the previous year's allocations. A further sum of £2,408 has been provided for depreciation in the accounts of Mawdsley's, Limited, making the aggregate sum for depreciation of £16,503 mentioned in the directors' report. In addition, a commencement has now been made in writing off the cost of changing over from direct to alternating current—and of assets discarded in consequence.

Adding these sums to the other reserves in the accounts of your holding company and its subsidiaries, our combined depreciation and reserve accounts at December 31, 1935, totalled £125,867, as compared with £79,020 a year ago, a satisfactory increase.

PROGRESS OF THE YEAR

In the year under review we are able to report a further increase of 37 per cent. in units sold.

We have connected up an additional 1,542 consumers, bringing the total connections to 10,816. The gross receipts of our electric supply undertakings from the sales of electricity aggregated £85,388, an increase of £12,799 over the previous year. The average price received per unit fell from 2.77d. to 2.38d., which means a reduction to our consumers of no less than £13,570 during the year 1935. Here I think we may reasonably claim that we have recognised in a practical manner our obligations to our consumers as operators of public utility undertakings.

The amount due on December 31, 1935, to our bankers stood at £416,918. This has since increased to £430,000. As the bank were good enough to agree to meet our requirements on favourable terms until such date as we made a public issue, some time during 1936, it was not necessary to make this issue last year authorised under the increase in capital to £850,000, which you sanctioned a year ago. For this and other reasons we deferred the issue, but we have it in mind to make it a few weeks hence—assuming market conditions to be then favourable—and to give shareholders and consumers in our subsidiary companies preferential allotment.

Turning now to the profit and loss account, you will see that the gross profits for the year were £21,604 12s. 4d., which compares with £8,471 15s. 4d. last year. We now propose to declare a final dividend of 2½ per cent., less tax, making 4 per cent. for the year, which will absorb £6,357 0s. 9d., and to carry forward to the next account the balance of £2,692 4s. 7d.

After we assumed the management of all our subsidiary undertakings in July last, we were able to decide upon and to effect certain economies which are only partially noticeable in the accounts I have been reviewing. We shall, I hope, reap greater advantages therefrom in the current and subsequent years, and also from the more rapid development which should result from the reorganisation carried out and from the greater drive for new business now being applied.

BURDEN OF LOCAL RATES

Once more, as last year, I have to refer to the custom now generally pursued by local authorities of augmenting their revenues by continually increasing the rates payable by electricity supply undertakings. On the one hand, the consumers are constantly demanding lower charges, while those representing them in their capacity as ratepayers—for probably most consumers of electricity are as well—are piling on the rates. The two processes are incompatible, as higher rates on electricity undertakings must affect the capacity to reduce charges.

It seems to me that as this custom is becoming so insistent, the time has arrived when the Minister of Transport, who is responsible to Parliament for the well-being of electricity supply in this country, should institute a public inquiry with a view to putting this matter on an equitable and more satisfactory basis. This appears to be a question which the associations who represent the interests of the electric supply undertakings might very well take up with the Minister of Transport, and I venture to make this suggestion.

The report and accounts were unanimously adopted.

ORIENTAL TELEPHONE AND ELECTRIC COMPANY, LIMITED

GOOD PROGRESS

The forty-second ordinary general meeting of this company was held, on the 12th instant, in London, Sir A. Henry McMahon, G.C.M.G., G.C.V.O., K.C.I.E., C.S.I. (chairman of the company), presiding.

The Chairman, in the course of his speech, said:—I am glad to be able to say that, on the whole, good progress has taken place during the past year. But to take, first of all, the balance sheet, there are one or two departures from last year's figures which call for comment and explanation.

On the debit side the item "sundry creditors" is up by some £23,000, which is due to the fact that, whereas in 1934 income tax was paid in advance under discount, no such payment was made in 1935, and consequently the company was still indebted to the revenue to that extent. The increase in the "subsidiary company deposit" represents additional surplus funds accumulated by the China and Japan Company, which have been placed on deposit with this company, while the general reserve is augmented by the amount appropriated for that purpose last year.

On the credit side the book value of the shares in the subsidiary and associated companies shows a reduction of £42,170. This is due to the sale of part of this company's shareholding in some of those undertakings, the proceeds of which have been credited to this account.

In the case of "sundry debtors" the increase of £7,075 is accounted for mainly by advances to the Bombay Telephone Company and to an increase in the amount of refund due from the Indian income-tax authorities.

IMPORTANCE OF SUBSTANTIAL RESOURCES

The item "British Government securities," however, shows an increase of £41,827, representing the cost of War Loan and Conversion Loan purchased during the year. You will remember that I have, from time to time, emphasised the necessity for an undertaking of this nature to be in a position to meet any demands which may be made upon its resources, whether for its own requirements or to afford temporary assistance to its subsidiary and associated companies.

During the year the Bombay Telephone Company has informed me of its intention to embark upon an extensive scheme of capital expenditure necessitated by the expansion of its business, and also by the need for modernising portions of its existing equipment. The cost of this is estimated, so far as can be foreseen at present, at about 34 lacs of rupees. Part can be furnished out of the Bombay Company's own resources, but as to the remainder, your directors have undertaken to finance them to the extent of £60,000, and they may possibly require even more.

In Singapore, an important contract is expected to mature shortly, which will require a very substantial outlay in addition to our normal expenditure on capital account, while, as you may have observed in the Press, notice has been given to our debenture stockholders of the company's intention to redeem the outstanding debenture stock next October. This latter alone will absorb, in addition to securities held on account of the sinking fund and the unapplied balance now due to the fund, a round sum of about £100,000.

There is also an obligation in respect of the partly paid shares in the Hongkong Telephone Company, the calls on which, if and when they are made, will have to be financed to a great extent by this company, although we do not anticipate that this will be the case for some considerable time to come.

The item "cash at bankers" shows an increase of £61,000, which is represented in part by the proceeds of the sale of the shares to which I have alluded previously, and in part by the income tax still payable, to which I have also made reference.

PROFIT AND LOSS ACCOUNT

Turning now to the "profit and loss account," there are but few variations from last year's figures which call for comment.

On the credit side the revenue from subscriptions, rentals, etc., is up by £7,477, while dividends from subsidiary and associated companies also show an increase of £3,318, the net result being a balance carried down of £101,625, as against £97,433 last year.

The Chairman then dealt at length with the two branches at Singapore and Mauritius, and the associated companies in India, Burma and Hongkong.

The report and accounts were unanimously adopted, and a final dividend of 8 per cent. (free of income tax) on the ordinary shares was approved.

RUBBER PLANTATIONS INVESTMENT TRUST LIMITED

TEA AND RUBBER POSITION

MR H. J. WELCH ON RESTRICTION

The annual general meeting of the Rubber Plantations Investment Trust, Limited, was held, on the 14th inst., at 19 Fenchurch Street, London, E.C.

Mr H. J. Welch (the chairman), in the course of his speech, said that the outstanding feature of the income account for the year was the decrease in the profits derived from their tea estates foreshadowed in his speech last year. That decrease, however, was fortunately counterbalanced by an increase of over £22,000 in their income from investments. The tea estates continued to work under the serious disadvantage of adverse exchange rates, which, when compared with the par rate of exchange for the guilder, represented a difference of over £55,000 for the past year. That amount was equal to about 2½ per cent. upon their issued capital.

PROFIT AND DIVIDEND

The total profit, before charging income tax, amounted to £99,027. It showed a small increase over 1934. They added to that £10,000 from the dividend equalisation account, and, after charging income tax and making a provision of £2,000 as a special staff contingency reserve, there remained an available balance of £175,323. They proposed to pay a dividend of 5 per cent. for the year, to carry forward £85,792 and to leave £30,000 to the credit of the Dividend Equalisation Account.

The estates, buildings and machinery were all reported to be in a satisfactory condition. Full attention continued to be given to the supply or replacement with new plants of the somewhat large percentage of vacancies or low-yielding bushes.

As regarded the outlook for the current year, it was difficult to make a forecast. It was improbable that the income from investments would be higher, and it might be lower, as the bulk of increased dividends likely to be earned by rubber and tea companies, arising from the recently improved prices, would not be receivable by the Trust until next year. If the improvement in the tea market continued, they hoped that a larger profit than last year would be realised from their estates, and such profit would be further increased if Holland abandoned the gold standard or devalued the guilder.

REGULATION SCHEMES

Discussion had already commenced as to the advisability of renewing the tea and rubber regulation schemes at the end of their present terms. As the schemes were now in being and had not yet fully achieved their purpose, it seemed likely that it would be considered advisable and necessary that they should be prolonged, but he hoped they would not be renewed for long periods, or, if long periods were agreed upon, that some reasonable provision would be included for their earlier termination immediately it appeared that they had attained their main object and that the industries could again stand upon unrestricted and competitive foundations.

With reference to the rubber industry, he welcomed the recent decision of the Governments concerned and the International Committee to raise the exportable percentage of rubber for the second half of this year. The permanent interests of the Trust and of all investors were bound up with those of the industry, and in his opinion it was of the utmost importance that the price of rubber should not be allowed to run away, and it was far healthier under restriction for it to be too high than too low. It was estimated that by the end of this month the total visible stocks would have been reduced to about 520,000 tons, and it seemed certain that they would be further substantially reduced during the remainder of the year. The outlook for absorption continued to be favourable.

THE INCREASED TEA DUTY

Only deep regret could be felt that the Government had recently deemed it advisable to increase the duty on tea imported into this country at a time when the industry was battling with grave difficulties. It was to be hoped that relief might be given to the industry at the earliest opportunity. The lack of the marked differentiation existing before the world depression between the prices given for "high-grade and good medium" teas, and "low-grade and low medium" teas was still a feature of the markets, and it was believed that the increased duty would further favour the poorer at the expense of the better teas. Unfortunately, consumers did not realise that the better blends gave greater value and were the most economical in use.

The report and accounts were unanimously adopted.

INDIAN COPPER CORPORATION, LIMITED

SATISFACTORY RESULTS—INCREASED PROFITS

SIR GODFREY FELL'S REVIEW

The twelfth ordinary general meeting of the Indian Copper Corporation, Limited, was held, on the 11th instant, in London, Sir Godfrey Fell, K.C.I.E., C.S.I. (the chairman), presiding.

The Chairman, in the course of his speech, said: Net proceeds of sales and adjustment of stocks on hand increased by no less than £81,000. With the much increased production, it is natural that the expenditure on ore extraction and treatment should be higher, but we have no cause to complain of the average cost per ton extracted or per ton treated, as compared with the costs in previous years. The balance carried down is £154,612, a gratifying increase of £47,000 on the figure for 1934.

We recommend a final dividend of 6 per cent., less income tax, making 10 per cent. for the year. It would, of course, be possible to recommend a more generous distribution, but several considerations have weighed with us in regard to this matter.

Firstly, we think it very desirable to begin to make provision for the repayment in due course of the debentures, and we have set aside for this object £20,000 out of our available resources. Secondly, we have thought it prudent to place £12,000 to general reserve to cover expenditure on development. We are left with £15,550 10s., which we propose to carry forward. This is more than double the sum brought forward from the previous year.

Some shareholders may think our proposals unduly conservative, and would prefer to see a more generous distribution of the available profits. I would, however, remind them that the Indian Copper Corporation is not solely a mining company; it is also an important industrial concern, manufacturing a finished product. Industrial concerns require adequate resources, not only to enable them to carry normal stocks and to purchase raw materials, such as coal and zinc in our case, but also to see them through abnormal times when trade is bad.

ADVANCE IN PRICES

For the first time for several years we can record an improvement in the prices obtained for our products. The increases are small, having regard to the fact that the world price of copper rose from £28 2s. 2d. in January to £35 2s. 8d. in December. Many of our sales, however, are forward sales, and we did not, therefore, get the full benefit of the rise in world prices.

The scheme under which the principal copper-producing companies agreed to curtail production by 240,000 tons a year became effective on June 1, 1935. It is reported that both stocks and prices have responded. World stocks have fallen by over 100,000 tons, and as the agreement has recently been extended to July 1, 1938, we may hope, long before then, to see a position of equilibrium reached between production and consumption. But I think we may safely anticipate that the resultant stabilisation of price will be at a much lower level than prevailed up to 1930. Given a satisfactory increase in world consumption which ought to follow upon the overdue improvement in international trade, coupled with a reasonable price for the red metal, the position of the copper-producing industry should be much healthier than it was before the slump.

THE CURRENT YEAR

During the current financial year, operations both at the mine and the mill continue to be satisfactory. The grade of mill heads so far shows an improvement on the last year's average. The output of copper for the first quarter has been at an average monthly rate of 635 tons, as compared with an average monthly rate of 575 tons in 1935. The production of yellow metal sheets and circles has been slightly lower than last year's average, but there will be no difficulty in increasing it if demand revives. Costs in each case are lower; in fact, the costs for February were the lowest yet recorded. We only need to see a brisker demand for our products, so that our sales may reach at least the figures of 1935. Recent speeches by the Finance Member of the Government of India and by the chairmen of important banks doing business in India give grounds for hoping that the worst of the economic slump, which has affected India in common with most other countries during recent years, is now over, and that we may look for a general recovery. Such recovery would mean an increase in the purchasing power of India's teeming millions, and could not fail to have its due effect on the demand for our yellow metal.

The report and accounts were unanimously adopted.

BRITISH MATCH CORPORATION, LIMITED

SUCCESSFUL YEAR

The ninth ordinary general meeting of the British Match Corporation, Limited, was held, on the 13th instant, at River Plate House, London.

Mr Clarence E. Bartholomew, O.B.E. (chairman and managing director), said that they proposed to continue the policy of writing down the goodwill, rights, etc., and hoped eventually to eliminate them altogether from the balance sheet. The amount owing by a subsidiary company showed further reduction. There had been two amounts last year, one of which had been paid off. The remainder related to their Brazilian business, which had for several years been largely financed by advances both from Bryant and May, Limited, and from the British Match Corporation. As shareholders had been informed on former occasions, their investment in Brazil had been a cause of anxiety by reason of the serious fall in the exchange and the difficulties in making remittances from that country. Matches were still so heavily taxed in Brazil as to restrict their consumption to a serious extent, but trading there had been fairly satisfactory last year when reckoned in milreis. The low exchange value of the milreis, however, limited the return in sterling to a very modest percentage.

The revenue account showed a slight saving in the cost of administration, and, on the opposite side, an increase in the revenue from their shareholdings. Of those, the most important in amount were the dividends from Bryant and May, Limited, and from J. John Masters and Company, Limited, which were at the same rate as in the previous year. The volume of business in the best classes of matches in the home trade had been well maintained. The sales of the famous "Swan Vestas" constituted a record once again, while discriminating buyers of the familiar penny box had shown that, if they must pay a penny, they wanted the best quality for their money. It was one of the little peculiarities of the trade that there were still consumers in London, and a few other places, who would accept in exchange for a perfectly good penny matches which were of less certain value.

COMPETITION FROM SOVIET RUSSIA

The market for the cheaper grades of imported matches had been seriously disturbed for some time past by the importation into this country of large quantities of matches from Soviet Russia. Most of those had been sold—though "sold" was hardly the proper word—thrown on the market at prices which bore no kind of relation to commercial values, or to costs of production and distribution. The prices had often been less than half the bare cost of raw material. The boxes were marked only "Foreign made." Those were almost the only matches which were not marked with the country of origin, and it was significant that their Russian origin was thus concealed from the ordinary buyer. There had always been a market here for imported matches, and so long as those were sold on a fair commercial basis they would know how to hold their own, as they had done in the past, but this was a development which could scarcely have been foreseen when the Trade Agreement between the United Kingdom and Soviet Russia had been negotiated.

The returns from their businesses within the Empire had continued steady and satisfactory, though they could wish that the "good old times" would return when an Australian or a New Zealand pound was worth 20 English shillings.

He was glad to be able to inform them that all the factories in which they were interested were in good order, and were being kept up to date. They were constantly devising improved methods and machinery, and were continuing everywhere the policy of producing only matches of the highest possible quality.

Those did, of course, vary very largely in the different countries where they had to cater for different requirements, and where widely differing qualities of raw material had necessarily to be used.

The alteration in the method of paying their dividends, less tax, instead of free of tax, yielded a fractional increase in the ordinary shareholder as compared with last year. In spite of the recently increased rate of tax, for, owing to the Dominion tax on some of their investments, the company had to deduct from the final dividend was only 10 per cent. in the £.

They had, as shareholders would have gathered, experienced another good year, for which they might well be grateful in times when international political uncertainty made it almost impossible to take any long view in commerce and industry. They would continue to mind their own business according to the best of their ability and judgment, and trusted they would continue to achieve results which merited the approval of their shareholders.

The report was unanimously adopted.

SMITH'S POTATO CRISPS (1929), LIMITED

CONTINUED SUCCESS OF COMPANY

CAPITAL BONUS AND INCREASED DIVIDEND

The seventh ordinary general meeting of Smith's Potato Crisps (1929), Limited, was held, on the 14th instant, at the Holborn Restaurant, London, W.C.

Sir Herbert E. Morgan, K.B.E. (the chairman) said that the report proved the continued success of the company, the net profit of £137,759 showing an increase of £1,597. This increase in profit did not represent the real progress made by the business in the last twelve months, as during that period their trade had expanded, thousands of new customers had been obtained and the turnover had increased by no less than 25 per cent. That advantage, however, had been offset by the fact that during some months of the year the prices of certain of their raw materials were considerably higher than they had known for some years. In the case of potatoes they had taken special steps which should alleviate the situation for the future by the purchase of the Nocton Estate. In the case of other materials of which they were large consumers, the high prices, due in part to the international situation, were only temporarily maintained, and they were now easier. It was a cause for congratulation that the company had been able to meet these rises in prices and still maintain its profit. The turnover for the first few weeks of the current year was in excess of their records of last year.

WIDESPREAD DISTRIBUTION OF PRODUCTS

They were fortunate in having so many sources of distribution for their commodities, and he could claim with confidence that hardly any other company had such an enormous number of retailers interested in its articles. Wherever foods were sold Smith's Potato Crisps could be obtained. Practically the whole of the 55,000 licensed houses in Great Britain supplied Smith's Potato Crisps, and with each succeeding year the domestic trade of the company through grocers had increased so that now practically all of them stocked the company's goods. Other sources from which the public obtained supplies were ham and beef shops, fishmongers, clubs, roadside cafés and seaside kiosks. The board were satisfied, however, that there still remained great opportunities for expansion. Development of flat life was creating a demand for prepared food from which they substantially benefited. Their crisps were sold at a very much lower cost in time, trouble and money than the housewife could prepare them for herself. The company enjoyed its present prosperity because it was giving great value and the quality of their products was always strictly maintained.

The cash dividend for the year was being increased to a total distribution of 20 per cent., against 15 per cent. for the preceding two years, and, following the policy of the past two years, a share bonus distribution of 5 per cent. was recommended. Even with the increased cash dividend, only approximately half the net profits were being distributed, but he was sure that the policy of providing capital for developments out of profits and capitalising the same was one which would appeal to shareholders. That policy would be continued so long as the situation warranted it, and when it was discontinued the board would consider the distribution, by way of cash dividend, of a larger proportion of the company's earnings.

SMITH'S CORN FLAKES

With regard to Smith's Corn Flakes, Limited, they had met with strong competition in the development of this new business, but progress was being made, and there were signs that the public and the retailer were beginning to appreciate that the company was producing an all-British product which was the finest on the market.

Smith's Potato Estates, Limited, had been formed to acquire the Nocton Estate Farm for the purpose of safeguarding their supplies from violent market fluctuation and ensuring supplies of the right quality. The purchase had mainly been financed by an issue of £350,000 4 per cent. debenture stock of the estates company guaranteed by the parent company. The annual charge for interest would amount to £14,000, and during the past three years, including the current year, the profits from the estate were estimated to average £24,500 per annum.

As to their old and close allies, the licensees, the trade was still harassed by meddlesome legislation and absurd inequality in hours of closing. The company was always prepared to do its share in rendering the trade its assistance.

The report was unanimously adopted, and the dividend and capital bonus proposals were approved.

SAN PAULO (BRAZILIAN) RAILWAY COMPANY

RESULTS OF A DIFFICULT YEAR

The ordinary general meeting of the San Paulo (Brazilian) Railway Company, Limited, was held, on the 12th instant, in London.

Mr Oliver R. H. Bury, M.I.C.E. (the chairman), said that the year under review was one of special difficulty for the company. The average rate of remittances was only 2.89d., the lowest rate they had ever experienced, compared with 3.90d. in the previous year.

An increase in rates came into force on January 1, 1935, but notwithstanding rigid economy in expenditure and an encouraging increase in goods carried, it very soon became evident that with the falling value of the milreis these new tariffs would prove quite insufficient for the realisation of a return of the 7 per cent. on the recognised capital, which was the minimum return contemplated in the company's contract with the Federal Government. So clearly did this deficiency take shape as the year went on that they found themselves obliged to make application for a further increase in tariffs. Their efforts received the sympathetic consideration of the Government, and, as a result, from January 1, 1936, a further increase of 15 per cent. on all classifications, with the exception of coffee, had been put in force.

There was a net profit of £287,548, as compared with £299,832 in the previous year, and the Board recommended a dividend on the ordinary stock for the year of 2½ per cent., free of income tax, carrying forward £20,869, against £30,057 brought in. The results at first glance appeared disappointing, but in the previous year they had a special credit of £91,000 in respect of freights of former years collected in 1934 and interest. In spite of this credit and the serious fall in exchange, the net profit was only some £12,000 less than the previous year.

With regard to the prospects for the current year, the traffic receipts to May 31 were 41,040 contos, compared with 33,489 contos for the same period last year. The comparison in sterling was £513,000, compared with £393,356 in 1935. He hoped that the greater tonnage and the increased rates which came into force on January 1st last might bring them more nearly to their statutory minimum return on the recognised capital without the aid of a rise in the average rate of exchange.

The report was unanimously adopted.

CALCUTTA TRAMWAYS COMPANY, LIMITED

INCREASED TRAFFIC RECEIPTS

The ordinary general meeting of this company was held, on the 12th instant, at 1 Queen Victoria Street, London, Sir Geoffrey R. Clarke, C.S.I., O.B.E. (chairman of the company), presiding.

The Chairman, in the course of his speech, said:—The traffic receipts show the satisfactory increase of £15,602, and working expenditure has increased by £5,290.

The balance on the revenue account is £118,147, representing an increase of £9,253 over the corresponding figure for 1934. The net revenue available is £78,324, and we are now recommending the payment of a final dividend of 5½ per cent., making a total dividend of 9 per cent. for the year, less income tax, which will take £38,500, and to carry forward to next account the balance of £15,324.

Some idea of the steady growth and magnitude of our public service may be gathered from the numbers of passengers carried and the mileage run for the last five years, which are as follows:—

	Passengers carried.	Mileage run.
1931	83,200,000	8,900,000
1932	89,200,000	9,400,000
1933	94,100,000	9,200,000
1934	98,300,000	9,400,000
1935	101,500,000	9,800,000

When you remember that this is quite a small system, I think we are working it for all it is possibly worth.

Following the refusal of the Corporation to sanction the laying down of a tramway on a certain new route we have applied for the right to run trolley-buses, and if sanction is given it will be necessary to get an amendment of the company's Tramway Act so as to allow the word "Tramway" to cover trolley-buses. Under the company's agreement with the Corporation, the Corporation has the right to purchase the undertaking at the end of every seven years. This condition prevents any appreciable expansion of the undertaking, and it is hoped it will be possible to come to some arrangement with the Corporation whereby the company's tenure is secured over a reasonable period of years.

The report and accounts were unanimously adopted.

PATALLING RUBBER ESTATES, LIMITED

DIVIDEND OF 7 PER CENT.

The annual general meeting of this company was held, on the 15th instant, at 19 Fenchurch Street, London, E.C.

Mr H. Eric Miller (the chairman) said:—The net result of the year's operations was a profit of £19,108, which can, I think, be regarded as not unsatisfactory. Recalling the deplorable position of the industry a few years ago, under the circumstances, that it is quite creditable to be able to pay a dividend of 7 per cent., for which mercy we have to thank the international regulation of rubber exports.

During the twelve months ended May 1934 (the year immediately preceding the introduction of regulation), over 1,050,000 tons of rubber were turned out by producing countries. In the following twelve months (the first complete year of the operation of the scheme) 875,000 tons came out, and in the twelve months ending May, 1936, the corresponding figure will be in the neighbourhood of 810,000 tons. The apparent absorption during these three periods was respectively 900,000 tons, 920,000 tons and 950,000 tons, but the real absorption was probably less than 900,000 tons in the first period and will be greater than 950,000 tons in the third period.

Visible stocks, which were already excessive, increased by no less than 150,000 tons in the twelve months ended May, 1934. During the first two years of the regulation scheme they will have been reduced by over 180,000 tons, the contraction in the nine months September, 1935, to May, 1936, inclusive being upwards of 140,000 tons. During the remainder of 1936 a further substantial reduction in stocks is indicated.

The recent rapid contraction in stocks has been reflected in the price of the commodity, which increased steadily to 7½d. in April. The decision of the International Committee at their last meeting to increase the exportable percentage to 65 during the second half of 1936, the political unsettlement of Europe and rumours of labour trouble in the United States have caused a slight reaction, but the undertone is sound, and we look forward to presenting satisfactory accounts to you a year hence.

Mr Eric Macfadyen gave an account of his visit to the estates in 1935.

The report and accounts were unanimously adopted.

MARSTON VALLEY BRICK COMPANY, LIMITED

CONTINUED GROWTH

The seventh annual ordinary general meeting of the Marston Valley Brick Company, Limited, was held, on the 11th instant, at Winchester House, London, E.C.

Mr A. W. Allard, who presided, said that the trading profits of £135,471 showed an increase on last year of £30,653, and there was a profit on realisation of investments of £25,200. After allowing for reserves for income tax in respect of the year ending March 31, 1937, and depreciation amounting to £28,573, there remained a net profit of £123,368, of which £98,152 was from trading, an increase on last year of £26,439. That followed an increase of £23,456 in 1934-35 over 1933-34, and, therefore, in the two years there had been an increase in the net profit from trading of nearly £50,000. Cash amounted to £101,740, an increase of nearly £80,000; investments, £9,992, an increase of £6,000; and debtors, £50,502, an increase of over £24,000.

During the year every brick produced at their works had been sold, and the demand for Fletton bricks was still increasing. The Fletton brick was by far the cheapest brick produced in this country. Bricks were delivered to building sites within 60 miles radius of the works, and, as every ton of bricks during the course of manufacture and delivery had to be man-handled four or five times, shareholders would agree that the price of 21s. per ton for Fletton bricks delivered to building sites was a modest one.

Three years ago the company had started producing a cheap facing brick at the rate of 50 tons per day. To-day the company was manufacturing 250 tons per day and still had difficulty in coping with the demand for that class of brick. Thirty years ago the tonnage of Fletton bricks produced had been equivalent to 2½ per cent. of the whole tonnage of bricks produced in this country. To-day the percentage had increased to 32½ per cent.

The Ridgmont Fletton Brick Company, formed early last year with the object of erecting works about four miles from the Marston works, was now producing large quantities of bricks which were being easily disposed of. The directors considered it would be advisable to amalgamate the two businesses on equitable terms, and with that in view a scheme was being prepared.

The report was unanimously adopted and a final dividend of 12½ per cent., making 20 per cent. for the year, was declared.

CROWN MINES, LIMITED

RECORD TONNAGE MILLED

MR JOHN MARTIN'S REVIEW

Mr John Martin, presiding at the annual meeting of the Crown Mines, Limited, held in Johannesburg on May 6th, in the course of his speech, said it was worth noting that the tonnage milled and the working revenue in 1935 were the highest in the company's history. Tonnage milled, at 4,003,000 tons, was 445,000 tons more than the ore crushed in 1934.

The yield showed a decline of 0.728 dwt. per ton milled to an average of 4.902 dwt., but working costs were also reduced by rs. 4d. per ton milled and working profit amounted to £3,262,037, this being £153,252 less than the working profit earned in the previous year.

The total footage of development, excluding vertical shaft sinking, amounted to 141,557 ft., or nearly 27 miles.

Development results on the main reef leader were on the whole satisfactory, but in the extreme western area exposures continued to be disappointing, though there was reason to hope that as these workings extended to the west more favourable conditions would be encountered.

On the south reef larger development footage was accomplished, and the tonnage opened up and added to reserve showed a considerable increase. The total ore developed and classed as payable amounted to 4,449,776 tons, with an average value of 4.9 dwt. per ton. The value of ore developed showed a decrease of 0.9 dwt. per ton compared with the previous year, largely due to the increase in the proportion of low-grade south reef ore. The available ore reserve, re-estimated at the end of last year on the basis of current working costs and the price of gold, and excluding 5,086,400 tons of an average value of 6.21 dwt. in the shaft and safety pillars not at present available for stoping, was 19,817,125 tons of an average value of 5.07 dwt. over a stoping width of 50.6 in.

"Compared with the previous year," said Mr Martin, "the available reserve shows an increase of 2,482,205 tons, its average value being lower by 0.63 dwt. An available ore reserve of practically 20,000,000 tons represents an exceptionally strong and satisfactory position."

Mr Martin went on to discuss the problem of mining at great depth in relation to the extended life of the gold industry, drawing attention to the fact that in the Turf section of the Robinson Deep development was proceeding at a depth of 8,500 ft. vertical, and stoping at over 7,500 ft.

He believed that Crown Mines, thanks to the foresight and wisdom of those responsible for its technical and financial structure, would in course of time be able, as perhaps nowhere else, to demonstrate what was possible on a large-scale basis in the direction of mining at maximum depths.

On the Crown Mines there were four vertical shaft systems placed more than a mile apart, serving an area in which the main reef series lying below a vertical depth of 4,000 ft. extended east and west over a distance of nearly five miles. These shafts would play a vital part in the programme of great-depth mining.

Four of the major problems in layout and development at great depths, particularly on a mine of the size of the Crown Mines, were:—

1. Loss of working time and energy in travelling to working places must be reduced to a minimum.
2. Good facilities must be supplied for the transport of stores and materials into the mine.
3. The handling of ore must be assisted by good underground haulage ways.
4. Adequate ventilation must be provided.

Crown Mines lowered daily some 18,000 natives through its shafts on the day shift, 1,800 natives on other shifts, and 1,800 Europeans.

Expenditure on underground by Europeans was limited to 48½ hours, any delay in hoisting arrangements, or loss of time in descending underground, resulted in a serious decrease in the output of the whole labour force.

The need for good ventilation was evident when it was considered that at 9,500 ft. in depth rock temperature was approximately 101 degrees Fahrenheit, and increased by 2½ degrees for every additional 500 ft. in depth.

Four vertical shaft systems which enabled Crown Mines effectively to cope with these requirements ranged from vertical depths of 6,500 ft. to 8,500 ft. They were connected by large underground haulages, equipped with overhead electric trolley wires and locomotives, for transporting ore in trains of 10 trucks. The first of the haulages was situated at a vertical depth of 3,100 ft.,

and connected with Number five shaft, the main rock hoisting shaft, which had an average daily hoisting capacity of 12,000 tons.

Below this there were six similar haulage levels, the lowest being at a vertical depth of 7,500 ft. The total underground haulage footage already developed and equipped for transporting ore and material by electric power was 173,000 ft. equal to 32.8 miles.

The total quantity of air eventually required to be delivered through the four vertical shaft systems for ventilation would be not less than 1,400,000 cu. ft. per minute. Ample upcast shafts were needed for that large volume of air, and in this connection the sinking of Number 18 shaft was completed at the beginning of the current year. A fan was now being erected at the collar of Number 18 shaft which would be capable of drawing out of the mine, direct from the vertical depth of 4,000 ft., 500,000 cu. ft. of air per minute.

There were five other upcast shafts, and the total quantity of air upcasted in these five shafts was 1,200,000 cu. ft. per minute.

Capital expenditure upon four vertical shaft systems, which had been financed out of profits, had amounted to over £3,000,000. This was the outlay already incurred for obtaining access to ore lying at great depth, and was supplementary to the large capital expenditures in the past upon general structure and equipment of property and thus afforded further illustration of the magnitude and variety of problems that accompanied the policy of mining at great depth and seeking to mine on a large scale at an even greater depth.

Some conception of the scope of the activities of Crown Mines as a whole might be obtained from an appreciation of the fact that the tonnage milled by Crown Mines in 1935 was equivalent to 9 per cent. of the total tonnage milled by all mines on Witwatersrand, and gold won was equivalent to 9.3 per cent. of the total output.

The working profit at £3,262,037 was 10 per cent. of the total working profit of the industry; on the other hand, payments made in respect of (1) normal tax and (2) excess profits duty and surtax were approximately 13 per cent. and 16 per cent. respectively of the total payments made under these headings by all Witwatersrand mines.

For the year 1935 the amount provided for Union and provincial taxation came to the huge sum of £1,412,568. The new system of mining taxation, which represented a change for the better, was therefore to be welcomed, notwithstanding that the scale of taxation remained very high and, Mr Martin suggested, unnecessarily high.

In a recent quarterly report an estimate had been given of the taxation liability of Crown Mines for the first three months of this year on the basis of the new mining taxation proposals, the amount being £313,251.

The report and accounts were adopted unanimously.

ANGLO-AMERICAN DEBENTURE CORPORATION, LIMITED

INCREASED DIVIDEND

The forty-sixth ordinary general meeting of this corporation was held, on the 14th instant, at Winchester House, London.

Mr Richard S. Guinness (the chairman) said it was a matter of satisfaction to the board that the results of the past year enabled them to recommend an increase in the dividend from 10 per cent. to 11 per cent. The net revenue available for the ordinary stock showed an earning power of 14.5 per cent., which compared with 12.3 per cent. in 1935.

With regard to the capital position, the value of their investments at the date of the balance sheet was £2,790,392. The value in excess of the book costs was £370,654, as against £88,672 last year; in addition, the reserve account amounted to £335,000, and the amount of undivided revenue was £50,744.

With regard to their investments in Europe, amounting in book value to approximately £258,000, when they made these investments they did so in the belief that after the horrors of war and the errors of peace the time must come when wise statesmanship would encourage the nations to readjust their political and economic affairs and stage in peace and amity a recovery from the ravages of war. Unfortunately, instead of wise statesmanship they had seen a succession of blunders—political and economic—which had led to the present sorry position in Europe. To-day, however, they had the picture of eminent politicians peering down the penitential road to Canossa and reconsidering the doctrines they had so long preached with such unhappy results. It was to be hoped that this was the first sign of a world-wide return to sanity. If so, they might hope that the day was not too far distant when European peace and stability were at hand; then and only then would it be possible to stabilise currencies, reopen

trade and reorganise international indebtedness so that all European countries should, proportionately to their credit standing, benefit from the fall in interest rates and be entitled to refund their foreign and internal liabilities upon a basis both equitable to the lender and within the paying capacity of the borrower whose prosperity was in process of restoration instead of destruction. The report and accounts were unanimously adopted.

SPAARWATER GOLD MINING COMPANY, LIMITED

HIGHLY SATISFACTORY DEVELOPMENT

The first annual general meeting was held on May 11th at Johannesburg. Mr W. A. Mackenzie presided and said:—

The authorised capital of the company stands at £2,000,000 in 8,000,000 shares of 5s. each. At December 31st last 4,806,657 shares had been issued, the balance of 3,193,343 shares being held in reserve to cover options. I would remind shareholders that these options are issued to bearer and entitle the holder to exchange them for an equivalent number of shares of the nominal value of 5s. on payment of 10s. per share. These options may be exercised up to and including December 31st next, after which date they cease to exist. The receipts and expenditure to December 31st last are summarised in the directors' report, and at that date the balance of cash in hand, after allowing for current liabilities, amounted to £839,541. In addition the options if and when exercised will provide further funds to the extent of £1,596,671 10s.

The report of the joint consulting engineers gives a complete survey of the progress of the company. The Sub Nigel, Limited, carried out preliminary development prior to formation of the company and supervised all operations, including the sinking of No. 1 shaft, during the period under review. Development work consists of three haulages which are being advanced into the Spaarwater property from Sub Nigel and the 19 Drive West in the Droogebult area acquired from Sub Nigel, which recently intersected the reef to the west of a known fault. The total footage advanced in the Spaarwater area, including subsidiary development, to the end of last month amounted to 12,510 ft. The total footage sampled was 5,600 ft., of which 2,950 ft., or 52.7 per cent., proved payable, having an average value of 22.8 dwts. over a reef width of 13.1 ft., or 10.1 dwts. over a calculated stoping width of 29.6 in.

As I mentioned at the statutory meeting last year, it was decided to commence subsidiary development from the 21st and 28th haulages in order to develop stretches of payable ore disclosed by the main haulages. This decision was taken in view of the fact that faulted ground was being encountered in all the main haulages necessitating a considerable footage being driven off reef. The footage advanced to April 30th last in respect of this subsidiary development was 3,874 ft., and of this 2,740 ft. was sampled, and 2,160 ft., or equal to 78.8 per cent., proved payable, averaging 23.8 dwts. over a reef width of 14.1 in. or 11.2 dwts. over a stoping width of 29.9 in.

In order further to accelerate the opening up of the large area held by your company with a view to reaching the production stage earlier than would otherwise be possible, steps were taken during the period under review to decide upon the most favourable site for shaft sinking, and with this object in view preliminary geophysical work was carried out. Following upon the selection of the shaft site sinking operations commenced in June, 1935, and at the end of last month, the shaft had reached a depth of 1,871 ft. A reinforced collar sett was installed to a depth of 87 ft. and timbering has been completed to a depth of 1,845 ft. It is estimated from the information at the disposal of the company's technical advisers that the main reef should be intersected at a depth of approximately 3,000 ft. During sinking operations a number of conglomerate bands of low gold content, a chamber was cut at 1,111 ft.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

GUARDIAN Assurance Company Ltd.

ANNUAL GENERAL MEETING—
11th MAY, 1936

Extracts from

COLONEL LIONEL H. HANBURY'S Speech

LIFE DEPARTMENT

New life assurances were completed during 1935 for a net amount of £1,584,760, which exceeded by £15,699 the new business secured in 1934.

The net single premiums received for annuities amounted to £115,544, as compared with £70,476 in the previous year.

FIRE DEPARTMENT

The experience of the year was very favourable. The net premium income was £1,110,463 and underwriting profit amounted to £149,653, representing 13.5 per cent. of the net premiums. The sum of £152,122 has been transferred to the Profit and Loss Account, and £52,406 to the department's general reserve, which now stands at £1,100,000.

ACCIDENT, BURGLARY AND GENERAL DEPARTMENTS

The net premium income of the year was £1,128,485, being £37,171 greater than for the previous year. The sum of £17,292 has been added to the department's general reserve, bringing it to £420,000, and £95,201 transferred to the Profit and Loss Account.

MARINE DEPARTMENT

The premium income for the year amounted to £253,488, a slight increase on that for the previous year. The fund at the end of the year was £470,743, after transferring the sum of £27,810 to the Profit and Loss Account.

VALUE OF INVESTMENTS

There was at the end of the year the very satisfactory surplus of £1,439,790 in the aggregate market value of the Stock Exchange investments over the values at which they appear in the Balance Sheet. No such investment appears therein at a figure in excess of its redemption price or its market value at 31st December last.

PROFIT AND LOSS ACCOUNT AND APPROPRIATION

The balance on this Account was £159,482 after transferring £20,000 to Staff Pension Fund and £50,000 to Investment Reserve and Contingency Fund.

A dividend at the same rate as last year was declared, namely 10s. on each Ordinary and Staff Share, leaving a balance to be carried forward of £72,574, as compared with £45,912 at the end of the previous year.

SOUTH-EASTERN GAS CORPORATION, LIMITED

YEAR OF STEADY PROGRESS

The meeting of the South-Eastern Gas Corporation, Limited, was held, on the 13th instant, in London, Sir David Milne-Watson, LL.D., D.L. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said that the balance to net revenue account for the year was £93,051 as against £87,014. The directors recommended a final dividend of 3 per cent. on the ordinary shares, making 6 per cent. for the year.

The directors hoped to give special attention in the early future to the question of sales organisation. The guiding principle would be that co-ordination and rationalisation could be applied to the sales side of a group of companies with as beneficial results as they could to purchasing and manufacture. The board would take care to leave to the individual companies proper opportunities for the exercise of individual initiative, but there was no doubt that a measure of guidance and inspiration from a central source, ensuring a degree of uniformity in the main lines of sales and publicity work, would be of great advantage. They had already seen that exemplified in a measure in the gas refrigerator campaign now in full swing, and there was no doubt that not merely in the refrigeration market but in other great fields that required either further exploitation or vigilant defence—the fields of space heating, water heating and cooking—the adoption for the industry as a whole of co-ordinated selling and advertising policies would be of enormous assistance.

The board had actually made reductions in the price of gas in five of their companies, and would probably have done more if it had not been for the general increase in the price of coal. The Government had just introduced a new Coal Mines Bill. The object of Part I of the Coal Mines Act of 1930, the operation of which was to be continued, was to permit of coal marketing schemes being introduced, but unfortunately there were very grave defects. It contained no safeguard for consumers, and it was strongly to be hoped that the Government would amend existing legislation so that consumers should be protected against any arbitrary fixing of prices or refusal to supply coal of the quality demanded.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended May 9, 1936, amounted to £10,330,500, against ordinary expenditure of £9,021,000. After allowing for an increase in Exchequer Balances of £222,739, the operations for the week, as shown below, decreased the gross National Debt by £1,087,000 to approximately £7,940 millions.*

(000's omitted)	
Treasury Bills.....	+ 3,743
Public Department Advances	— 4,600
National Savings Certificates	— 150
N. Atlantic Shipping Issues	— 10

The aggregate revenue from April 1 to May 9, 1936, is shown below:—

(000's omitted)	
Expenditure	91,689
Increase in balances	152
Revenue	61,138
Gross borrowing	£31,221
Less:	
New Sinking Fund*	518
Net borrowing	30,703
	91,841

* Authority will be sought in the Finance Bill to meet the Statutory Sinking Funds in 1936 by borrowing.

POSITION OF THE FLOATING DEBT

Ways and Means Advances Outstanding—		May 11, 1935	May 9, 1936	May 9, 1936
Advances by Bank of England		5,000,000	—	7,500,000
Advances by Public Departments		19,310,000	28,910,000	+ 2,900,000
Treasury Bills outstanding		842,860,000	756,475,000*	+ 3,740,000
Total Floating Debt		867,170,000	785,385,000	— 860,000

* Includes £2,000, the proceeds of which were not carried to the Exchequer within the period of the Account.

TREASURY BILLS BY PUBLIC TENDER

Tenders for £45,000,000 Treasury bills were opened on May 8, 1936, and the total amount applied for was £75,180,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 17s. 4d., about 56 per cent and above in full; Saturday, at £99 17s. 5d., and above in full. The average rate per cent. was 10s. 5-91d. The amount allotted was £45,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1934				
January 5	35,000,000	78,260,000	30,000,000	0 18 11-5
April 6	40,000,000	80,390,000	38,000,000	0 17 9-01

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period May 11th to 20th at 139.71 per cent. The previous rate was fixed as from May 1st at 139.38 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	"Export" market selling rate fixed at 50 bolivianos per £ as from April 1, 1936.
Colombia.*	Sight rate, 176 pesos per 100 United States dollars on April 28, 1936. This rate applies to holders of permits buying in the "open" market.
Ecuador.	Sight selling rate on New York was maintained in March at 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on March 31st, 1936.
Salvador.	Sight rate on May 9, 1936, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York, 3.91 bolívares per United States dollar, on April 17, 1936.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company wrote on May 13, 1936, as follows:—

The Bank of England gold reserve against notes amounted to £203,660,401 on the 6th instant, as compared with £202,734,272 on the previous Wednesday. Purchases of bar gold as announced by the Bank during the week amounted to £630,341. Business in the open market has been active and a large amount of bar gold, namely about £2,890,000, changed hands at the daily fixing. There was a good demand from the Continent, nervousness regarding the franc persisting and prices showed a large premium over the parity of that exchange. However, reassuring statements by French statesmen made over the week-end had their effect, and the situation, though still uncertain, became easier; as a consequence the premium over gold parities subsequently tended to decrease.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
May 7	140s. 8½d.	12s. 0.90d.
" 8	140s. 5½d.	12s. 1.16d.
" 9	140s. 2½d.	12s. 1.42d.
" 11	140s. 6d.	12s. 1.12d.
" 12	140s. 2½d.	12s. 1.42d.
" 13	140s. 0d.	12s. 1.64d.
Average	140s. 4.17d.	12s. 1.28d.
May 14	140s. 3d.	12s. 1.38d.

The s.s. "Strathaird," which sailed from Bombay on the 9th instant, carries gold to the value of about £272,000 consigned to London.

SILVER MARKET

After declining to 20½d. for cash and 20¾d. for two months' delivery by May 9th, prices recovered ½d. on May 11th, the next working day, when 20½d. and 20¾d. were fixed for the respective deliveries. The rise was due mainly to China speculative forward buying, possibly influenced by a report from Washington that some agreement on monetary affairs was believed to have been reached at the conversations between the United States Treasury and Chinese Bankers.

The Indian Bazaars have bought, but the demand for shipment eased somewhat owing to the reduced offtake in Bombay; with more inquiry for forward delivery, the two months' quotation moved to a premium of ½d. as compared with that for cash.

Sales on China account were again forthcoming, offerings being made more freely at the advance, and there was also some re-selling by the Indian Bazaars and speculators.

Quotations remained unchanged yesterday, but to-day, as sellers were inclined to hold back, both prices advanced ½d. to 20½d. for cash and 20¾d. for two months' delivery.

The market is rather uncertain, and the present level may be difficult to maintain should there be hesitation on the part of the Indian Bazaars.

Quotations during the week:—

	IN LONDON	IN NEW YORK
Bar Silver per oz. std.		
Cash	20½d.	20½d.
Two Months' delivery	20¾d.	20¾d.
May 7	20½d.	20½d.
" 8	20½d.	20½d.
" 9	20½d.	20½d.
" 11	20½d.	20½d.
" 12	20½d.	20½d.
" 13	20½d.	20½d.
Average	20½d.	20¾d.
May 14	20½d.	20¾d.

The highest rate of exchange on New York recorded during the period from the 7th instant to the 13th instant was \$4.99½, and the lowest \$4.95½.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

The general tendency of the prices of primary products subject to International arbitrage was again irregular, a reflection of the feeling of uncertainty created by International political developments and by the possibility of currency devaluation by the gold bloc countries. Wheat prices eased under the influence of Canadian selling pressure. The market in raw sugar failed to improve and competition at the Mincing Lane tea auctions was less keen. Imported beef and mutton were again cheaper, while bacon prices remained generally unchanged. English eggs were marked down following an increase a week ago, but butter and cheese were slightly higher. The market in rubber was not very active, prices showing a sagging tendency. Vegetable oils and oilseeds were

(a) 5 per cent. paid free of income tax. (b) Also bonus of 10 per cent. in fully paid £1 deferred shares.

PENINSULAR AND ORIENTAL STEAM NAVIGATION COMPANY.—The directors have declared an interim dividend on cumulative preferred stock for half-year to March 31, 1936, at rate of 5 per cent. per annum, payable, less tax, on May 14, 1936. The directors regret that they are unable to declare an interim dividend on the deferred stock.

THE MEXICAN EAGLE OIL COMPANY, LTD.—(7 per cent. 1st preference shares).—With regard to the dividend on these shares payable May 7, 1936, in accordance with Mexican law a deduction of 2 per cent. from the gross amount of this dividend must be made in respect of Mexican absentee tax which has been paid by the company to the Mexican Government. United Kingdom income tax at the rate of 4s. 9d. in the £ will be deducted from the net amount of the dividend.

BRITISH INDUSTRIES FIXED TRUSTS (THIRD PORTFOLIO).—The Midland Bank and Executor Trustee Company, Ltd., announces a first income distribution of 4 1/2 pence per sub-unit, free of income tax, representing income received during 24 weeks ended April 10, 1936. Income warrants will be posted on May 9 to certificate holders registered as at April 10, 1936. There is a balance carried forward to the next half-year equivalent to 0.15898 pence per sub-unit, free of income tax.

BEECHAMS PILLS, LTD.—The directors recommend payment of a final dividend on the deferred shares of 25 per cent. actual, less tax, making with the interim dividends already paid, 50 per cent., less tax, for the year ended March 31, 1936. They are also recommending a capital bonus of one deferred share for every 20 deferred shares held. They also recommend the payment of the usual participating dividend of 2 per cent. per annum, less tax, on the cumulative participating preferred shares.

BRITISH-BORNEO PETROLEUM.—Net profits of the British-Borneo Petroleum Syndicate have increased from £66,735 to £71,597. There is to be a final dividend of 5 per cent., maintaining the total at 10 per cent. The bonus is to be raised from 5 per cent. to 7 1/2 per cent. General reserve receives £20,000, against £17,689, and the carry-forward will be £42,106, against £36,447.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY, LTD.—The board of directors with the concurrence of the stockholders' committee have resolved that a payment of one year's arrears of interest to December 31, 1935, should be made on the 4 1/2 per cent. second debenture stock of the Buenos Ayres and Pacific Railway Company, Ltd., on June 6th next (together with interest at the rate of 5 per cent. per annum on the arrears—amounting to £1 10s. 6d. per £100 stock—as provided by the scheme of arrangement of July 15, 1935). The payment will be made, less income tax at 4s. 9d. in the £, to all holders on the register at the close of business on May 6, 1936. The Argentine Great Western Railway Company, Ltd., will be handed a sum sufficient to enable that company to distribute arrears of interest for the same period on its 4 per cent. second debenture stock, together with 5 per cent. per annum interest on arrears.

BOOTS PURE DRUG.—The directors announce, subject to audit, net profits for the year ended March 31, 1936, amounted to £770,889. This compares with £750,037 for the preceding year—a rise of over £20,800. In addition to the four interim dividends already paid, amounting to 24 per cent., less tax, a bonus of 3d. a share (or 5 per cent.), tax free, will be paid to shareholders registered on May 8.

JAMES FINLAY AND COMPANY, LTD.—Profit for 1935, £186,233, or £36,795 less than for the previous year. The final ordinary dividend is reduced from 7 1/2 per cent. to 6 per cent., making the total for the year 10 per cent., compared with 12 1/2 per cent.

J. LYONS AND COMPANY, LTD.—The directors of J. Lyons & Company, Ltd., propose a final dividend of 2s. 10d. per share on the ordinary and "A" ordinary share capital and one-fifth of this amount (6.8d.) per share on the proportional profit and "B" proportional profit share capital, for the year ended March 31, 1936. The balance sheet will be issued about the end of May and the meeting will take place early in June.

COAL

SHEFFIELD.—There is still a strong demand for industrial coal, and owing to increased quotas, deliveries of steam coal have considerably improved. Prices remain firm and business is good. The shortage of coking smalls is not now so heavy. Requirements or inland trade are brisk. Export trade is relatively quieter and enquiries for forward delivery are not so active. The high price of blast-furnace coke is maintained and demand exceeds supply. Export prices: South Yorks hards, 19s.-19s. 6d.; South Yorks washed trebles, 17s. 6d.-18s.; South Yorks washed steam doubles, 7s. 6d.-18s.; Derbyshire top hards, 18s. 3d.-18s. 9d.; Derbyshire obbles, 18s. 3d.-18s. 9d. Inland: South Yorks best, 23s.-25s.; Derbyshire best house, 22s.-23s.; best screened nuts, 19s.-20s.; nutty slacks, 10s.-11s.; Derbyshire hards, 19s. 6d.-20s.

NEWCASTLE-ON-TYNE.—Collieries producing steam coals are not lacking in trade, screened qualities being in keen demand from Scandinavia and the Irish Free State. Sizing team coals also have a steady sale in the same direction. In the south of the Durham coalfield coking and manufacturing coals are in much better demand, due mainly to active conditions in the local iron and steel trade. In the north-west of the coalfield, where coking and gas collieries have always depended upon export trade, idle time is frequent. Prime bunkers are better placed under a more active "bunker only" trade.

Current f.o.b. prices for export: NORTHUMBERLAND.—D.C.B. screened, 15s.; smalls, 12s. 6d.; Howards, Bentinck, Newbiggin, screened, 14s. 9d.; smalls, 12s.; Tyne Prime, large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main, large, 14s. 9d.; smalls, 12s. 6d. DURHAM.—Lambton, South Hetton, screened steam, 15s. 9d.; smalls, 13s.; Wear Special Gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-class gas, 13s. 6d.; coking, unscreened and/or smalls, 13s. 3d.; Prime unscreened bunkers, 15s.; second-class unscreened bunkers, 14s.; Prime foundry coke, 26s.; Newcastle and District gas coke, 28s.

CARDIFF.—The general position on the Cardiff coal market is unchanged. There has been little, if any, alleviation of the glut of large coal, and, with production curtailed, the scarcity of small and sized classes has been accentuated. Export business continues very depressed and reports are prevalent of a possible further restriction of imports by France next month. Interest at the moment is centred mainly on the fight of the South Wales Executive Board for a larger share of the inland trade. At the meeting last week with the Secretary for Mines and the Central Council it was found impossible to remove the deadlock which has been reached in the discussion over the terms of the amended scheme of the Central Council to meet the conditions of centralised selling, mainly because of the persistence of South Wales in its demand for a percentage share of the total trade of the country instead only of the home market. The matter is to be considered further at an adjourned meeting of the Central Council this week.

Prices are nominally unchanged, current quotations being: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 6d.; Black Veins, 18s. 3d.; Western Valleys, 17s. 6d. to 17s. 9d.; Eastern Valleys, 17s. 3d. to 17s. 7 1/2d.; best small steams (washed), 13s. 6d. to 14s. 6d.; seconds, 13s. to 14s.; coking smalls, 14s. 3d. to 14s. 6d.; anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s. 9d.; rubby culm, 11s. 6d. to 12s.; special foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship, French 24s. 3d., Portuguese 21s. to 21s. 6d.

During the week ended May 10th shipments in the foreign and coastwise trades totalled only 287,200 tons, compared with 341,200 tons the previous week, and 309,500 tons in the corresponding (Jubilee) week last year, and for the current year to date total exports show a decrease of 910,000 tons, or over 13 per cent., compared with the corresponding period a year ago.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that business continues active. Many departments of the industry are well supplied with orders for delivery into the third quarter of the year. For the past week or two the volume of new business reaching manufacturers has been rather light; but this is regarded as a natural consequence of the previous heavy buying.

In the pig iron market an acute stringency continues, and some brands of foundry pig iron are practically unobtainable for delivery before the second half of the year. The requirements of consumers are heavy, and difficulty has been experienced in obtaining adequate supplies. The steelworks also are using large quantities of basic iron, and supplies in this department are none too plentiful.

Recent imports of semi-finished material from the Continent afforded some relief to the tightness which has ruled for so long in this section, but consumers are not finding it easy to obtain all the steel they need. Producing works have sold their output for a long time to come, and in many cases are behind hand with deliveries.

Business in finished steel has been rather quiet, but specifications are reaching the works at a satisfactory rate and a heavy tonnage is passing into consumption. The requirements of the consuming trades have been well maintained, and it seems probable that the present heavy output will be continued.

MIDDLESBROUGH.—Business in pig iron is less active, but the market continues quite firm. Production is readily taken up, but until another furnace is started on the manufacture of Cleveland foundry pig iron in this district consumers have to satisfy their requirements partly from other districts. East Coast hematite iron is now difficult to secure. It is interesting to note that a parcel of about 1,000 tons has been shipped to the United States. Home users are prepared to place contracts for delivery during the second

London: 5 Walbrook, E.C.4, and 45 Pall Mall, S.W.1

half of this year, but actual business is small owing to the fact that prices are expected to rise after July 31st.

The steel departments are increasing their output, and demand for all classes of steel continues strong. Only odd transactions are taking place in foreign ore, but most works are well covered for the remainder of the year. Good Durham blast-furnace coke is now realising 25s. per ton delivered at works. Whilst the importation of heavy steel scrap from abroad continues, buyers are only prepared to pay 57s. 6d. per ton for British material delivered at the works.

SHEFFIELD.—With producers of pig iron booked well into the last quarter of the year, they are not anxious to enter into further commitments and there has not been much change in the market this week. Although the output of Derbyshire iron is steadily increasing, it is impossible to accumulate much stock at furnaces owing to heavy deliveries under contract. There is a distinct shortage of hematites, and users are ready to place much more business than can be accepted. In finished iron, demand for marked bars is still on the upgrade, and common bars are in active request. Business in crown iron remains poor. Prices throughout the market are unaltered. All sections of the steel market continue their high level of activity. Basic billet demand is extremely heavy, and acid qualities are in good request. Steel strip is in ever-increasing demand and business in wire rods is active. It is regarded as certain that prices will rise in the near future. Makers are not seeking orders or guaranteeing immediate delivery. Special steels are in good demand.

Iron and steel scrap business remains good. Mixed wrought iron and steel for basic furnaces is quieter at 54s. 6d. Light basic steel is in fair demand at around 45s. For heavy basic steel for melting, steel manufacturers offer 55s. delivered, but 57s. 6d. is being asked for large consignments. About 41s. is the highest price for best heavy steel turnings.

GLASGOW.—Activity continues at a high level, and steelmakers and others have sufficient work already on their books to ensure regular employment for several months. The increased activity in structural business within recent months is making heavy demands on local steel producers. Makers of semis are particularly busy, and consumers are finding difficulty in securing adequate supplies. Home users are still absorbing the greater part of the sheet mill output, but just recently export demand has shown improvement and business is coming forward from several overseas markets. Tube makers in this district are only moderately busy. It is announced this week that Messrs Harland and Wolff of Glasgow have been entrusted with the reconditioning of the passenger liner "Ceramic." It is understood that this important contract will give employment for three months to about 1,000 workers.

CARDIFF.—Production in the tinplate industry is being steadily maintained at a higher level than in the corresponding period last year, and last week's shipments at Swansea totalled 99,573 boxes as against 64,487 boxes a year ago. It is not yet known what decisions have been reached at Paris this week in regard to the application of Germany for an increase in its export quota, but the results of the proceedings of the International Tinplate Association are awaited with considerable, if not also anxious, interest. The f.o.b. prices of tinplates are unaltered, and quotations for sheets and steel bars are also unchanged. Quotations for iron and steel scrap, however, are showing an easier tendency. The heavier branches of the industry continue busy, and imports of iron ore are heavier than they have been for some years.

OTHER METALS

COPPER.—Prices were considerably easier, closing on Wednesday at the week's lowest. The uncertainties of the political and economic outlook were again mainly responsible. The statistical position remains sound and, since there are no weak bulls, prices should recover when the outlook becomes more clear.

Sales on the London Metal Exchange: 650 tons on Monday, against 1,500 tons last week; 550 tons on Tuesday, against 750 tons last week; 1,600 tons on Wednesday, against 1,500 last week. Domestic spot was quoted at 8-8 7/8 cents per lb. in New York on Wednesday, against 8-9 7/8 cents a week ago and 8-9 7/8 cents a month ago. Wednesday's official closing price for standard, cash in London, was £36 11s. 3d. to £36 12s. 6d., compared with £37 to £37 1s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 61,185 tons, show a decrease of 253 tons, while stocks of rough copper, at 5,842 tons, show a decrease of 25 tons on the week.

LEAD AND SVELTER.—After an early decline, traceable to the general uncertainty, spelter prices scored some recovery. According to the Metallgesellschaft, no less than 121,521 metric tons of zinc were produced in March, against 109,227 in February and a monthly average of 111,422 metric tons last year. The unfavourable effect of these figures was, however, partially offset by the news that Continental zinc producers are in London to continue the Cartel negotiations. Lead prices suffered a sharp setback, which can only be attributed to the unfavourable international situation. The basic market position remains excellent, so that some recovery in prices may be expected to follow a clarification of the international outlook.

Sales of lead on the London Metal Exchange: 650 tons on Monday, against 700 tons last week; 500 tons on Tuesday, against 400 tons last week; 550 tons on Wednesday, against 500 last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 2s. 6d. per ton, compared with £15 17s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 475 tons on Monday, against 200 tons last week; 450 tons on Tuesday, against 50 tons last week; 850 tons on Wednesday, against 200 last week. Wednesday's quotation in East St. Louis was 4.90 cents per lb., against 4.90 cents the week before and 4.90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipments during the current month was £14 7s. 6d. per ton, against £14 17s. 6d. last week.

TIN.—Since consumers are holding back in anticipation of a decision by the International Committee on May 26th to increase the quotas, business has been restricted and prices have eased. Bolivian shipments last month are reported to have totalled only 1,840 tons, against 1,662 tons in the previous month, and a monthly quota of some 3,300 tons. Bolivia is thus still unable to make use of her quota, and it is commonly believed that the International Committee will decide upon some relaxation of restriction at its forthcoming meeting. But forecasts are difficult at this stage, in view of the complications caused by Bolivian arrears.

Sales of tin on the London Metal Exchange: 145 tons on Monday, against 225 tons last week; 125 tons on Tuesday, against 135 tons last week; 225 tons on Wednesday, against 80 last week. The New York quotation on Wednesday was 46.87½ cents per lb., against 46.75 cents a week ago and 47.00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £203 15s. to £204 5s. per ton, compared with £205 to £205 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 577 tons, a decrease of 134 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was again quoted at £12 7s. 6d. per flask of 76 lbs. Chinese antimony was quoted at £59 to £60 per ton ex warehouse, duty paid, against £60 last week. Chinese wolfram for April/May shipment was quoted at 33s. 3d. to 33s. 9d. per unit, c.i.f., compared with 33s. 6d. to 34s. a week earlier. Platinum (refined) was maintained at £7 per ounce.

TEXTILES

COTTON.—Manchester.—Inquiry in the market has shown some improvement. Very few contracts, however, have been for more than small lots and some orders have been secured as a result of sellers being more prepared to meet buyers.

There has been practically no change in the level of raw cotton prices. Speculative interest in the futures market remains dormant, but there continues an active demand for actual cotton and world consumption tends to increase. The United States Government is achieving success in disposing of "loan" cotton, and it is estimated that 1,000,000 bales will have been released by the end of this month. Cloth inquiry has been rather more encouraging. Although numerous offers have been too low, some manufacturers have sold slightly more freely. Dealers in India have sent more bids. Rather larger quantities of mulls have been sold for Madras. Some fair lots of dhooties and light whites have been put through for Calcutta and steady buying has occurred in fancies for Bombay and the up-country markets. Bleached shirtings have attracted attention for Colombo. Transactions for China have been quite isolated, but special cloths have been booked for the Straits Settlements. Shirtings and prints have moved off fairly well for West Africa. More encouraging advices have been received from the home trade. Spring and summer goods are moving off more freely and increased buying has been reported in autumn styles.

The yarn market has also met with more inquiry, but business has not been of any weight. Here and there spinners have been more prepared to grant price concessions to obtain contracts.

COTTON TRADE AGES.—The Central Committee of the Cotton Spinners' and Manufacturers' Association, which is the employers' organisation in the weaving section of the Lancashire cotton industry, has decided to refer the increased wages demand of the operatives to the District Associations for their consideration. It is understood the Central Committee will consider the replies before the

further joint meeting between the employers and the trade union officials is held in Manchester on May 27th. The Operative Weavers' Amalgamation have applied for an increase of 15 per cent. on current earnings and a minimum wage of 7½d. an hour or 30s. a week. Owing to the depression which continues in the cotton industry, employers as a body are against making any concession to the workpeople. The Weavers' Amalgamation and the Cotton Manufacturers' Association recently took a census of the wages earned by weavers in a particular week and the results do not show much difference. During the last few years there has been no incentive for young people to enter the mills and even at the present time there is a shortage of labour in certain districts. It is held that should trade improve, numerous employers would be severely handicapped owing to the shortage of efficient operatives.

WOOL.—Bradford.—There has not been a big turnover in tops or yarns in Bradford during the past fortnight. But quotations are quite steady and have stood the shock of the ease in raw wool prices at the commencement of the third series of London sales remarkably well. The uncertain European political situation made home trade buyers more cautious, and as there was very little Continental competition, Yorkshire had the field very largely to itself. Owners also adopted an attitude which was not conducive to the ready sale of the offerings, for their reserve prices were too high. Apparently they were not influenced by opinion in the City regarding the possible effect in financial circles of the change in the French Government. If selling brokers had been given a free hand, they would probably have gone a little way to meet the market, but there was no small measure of confidence among them, and the shrewdness of their policy has since been revealed in the fact that withdrawn wool has been sold privately without any less having to be taken, while re-offered lots have even realised 1d. per lb. more than was bid the first time in the saleroom. The Sydney sales have also helped the tone in Bradford. Even after the London sales commenced, prices there were quite firm, and although some buyers have reported this week that they have been able to buy a good weight on slightly lower limits, the clean cost delivered Bradford is no less. Merino tops have been sold here and there at a slight concession, but as the price at the opening of the wool sales was above Bradford, and has since slightly increased, topmakers see no reason for selling standard average 64's at less than 32½d. They have large orders on their books and spinners are taking up their contracts very well. Export business in crossbred tops is rather disappointing, but prices are kept firm by home trade demand and consumption. Large weights of fine and medium crossbred tops are going into yarns for men's suitings, and low qualities for the bunting which is being made in preparation for the King's Coronation. Having bought big weights of yarn, manufacturers are disposed to await developments. Woollen and worsted machinery is much busier than a year ago.

GRAIN MARKETS

WHEAT.—The smallness of shipments to the United Kingdom was offset by continued pressure of Canadian in near positions, and prices have eased generally. At the lower level, however, a large volume of business was transacted in Canadian wheat.

On Wednesday last, "May" futures were quoted in Chicago at 93 cents per bushel, against 96½ cents the week before and 98 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 32s. to 32s. 9d. per 496 lbs., against 32s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 31s. 3d., against 32s. 1½d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,331,000 quarters, against 1,237,000 in the previous week and 1,583,000 quarters in the corresponding week a year ago.

FLOUR.—The market has been quiet at unchanged rates. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 29s. per 280 lbs., against 29s. a week ago; delivered inner London, 28s. 6d., as compared with 28s. 6d. a week ago. Manitoba patents, ex store, 25s. 6d. to 27s. 3d., against 26s. to 27s. 9d. a week ago. Australian, ex store, 22s. 6d. to 23s., against 22s. 6d. to 23s. a week ago.

BARLEY.—Imported feeding barley was a shade easier, while brewing barley was steady. "May" futures were quoted at 37½ cents per bushel in Winnipeg on Wednesday, against 37½ cents a week ago and 38½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 22s. 6d., as against 22s. 6d. a week ago; "English Malting" at farm, 25s. to 40s., against 25s. to 40s. a week ago.

OATS.—English and Scotch oats have been steady on a better inquiry. Demand for imported oats improved. On Wednesday, "May" futures were quoted at 26 cents a bushel in Chicago, against 26½ cents a week ago and 27 cents last month. Quotations in London, Wednesday: "English Black," at farm, 18s. to 19s. per 336 lbs., against 18s. to 19s. a week ago; "English White," at farm, 18s. to 19s., against 18s. to 19s. a week earlier.

MAIZE.—Demand suffered a contraction this week, but prices showed little change. "May" futures were quoted on Wednesday at 62½ cents per bushel in Chicago, against 62½ cents a week ago, and 61 cents last month. Quotations in London, Wednesday: "Plate," landed, 20s. per 480 lbs., compared with 20s. a week ago; "Plate," ex ship, 19s., as against 19s. a week ago; "Plate," "May," 18s. 6d., as against 18s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £5 7s. 6d. per ton, as against £5 7s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36.

BUTTER.—Butter has been in demand at firm rates. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 92s.; Australian, choicest salted, 92s.; Danish, 100s. to 101s.; compared with 88s., 88s. and 100s. respectively, a week ago.

CHEESE.—All descriptions were steady in price. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 80s. to 86s.; Canadian, finest coloured, 65s. to 66s.; and New Zealand, finest coloured, 55s. 6d.; against 80s. to 86s., 64s. to 66s., and 55s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 5½ cents per lb., as against 5¼ cents per lb. last week. In London on Wednesday last, good fermented new crop, "May-June," was quoted 25s. per 250 kilos., c.i.f. Continent, against 24s. 10½d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 3,859 bags; delivered, for home consumption, 4,604 bags; exported, 169 bags; stocks, 163,814 bags, against 196,898 bags a year ago.

COFFEE.—Demand in London has been quiet to steady this week. The New York spot market has had a steady tone. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6¼ cents per lb. last week and 6¼ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 10 cwt.; delivered, for home consumption, 103 cwt.; exported, 1 cwt.; stocks, 11,415 cwt., against 17,708 bags a year ago. Central and other South American, landed, 5,762 cwt.; delivered, for home consumption, 3,013 cwt.; exported, 939 cwt.; stocks, 127,283 cwt., against 109,638 packages last year. Other kinds, landed, 4,405 cwt.; delivered, for home consumption, 4,575 cwt.; exported, 738 cwt.; stocks, 180,915 cwt., against 128,078 packages last year.

EGGS.—Demand for English was less active and prices eased. Imported descriptions were generally steady. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 9s. 9d. to 10s. 3d. per 120, as against 10s. 6d. to 11s. last week, while Danish (15½ lb.) made 8s. 9d. to 9s. per 120, against 8s. 9d. to 9s. last week.

FRUIT.—At Covent Garden, states *The Fruitgrower*, English Bramley's hold their price, but imported apples have eased, on heavier arrivals. A good showing of pears encountered a moderate demand at unchanged rates; grapes continued to sell well. English peaches, in excellent form, made good prices, but strawberries were generally inclined easier. Except for Brazilian, oranges were a firm market, while grapefruit prices were well maintained. Lemons have not done so well this week. Some gooseberries put in an appearance and there was a moderate showing of French cherries.

MILK.—Information relative to the operation of the Milk Marketing Scheme during April, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	April, 1935	Jan., 1936	Feb., 1936	March, 1936	April, 1936
Regional pool prices* (per gallon)	d.	d.	d.	d.	d.
Northern	12½	13½	14½	12½	11½
North-Western	12	13½	14½	12½	11½
Eastern	12½	13½	14½	13½	11½
East Midland	12	13½	14½	13½	11½
West Midland	11½	13½	14½	12½	11½
North Wales	11½	13½	14½	12½	11½
South Wales	12½	13½	14½	12½	11½
Southern	12½	13½	14½	12½	11½
Mid-Western	11½	13½	14½	12½	11½
Far Western	12½	13½	14½	12½	11½
South Eastern	12½	14	15	13½	12½
Liquid milk price (per gallon, all regions)	16	17	17	17	16
Manufacturing price (per gallon, average)	5.20	5.947	5.942	5.793	4.885
Total sales under contract	75.87	67.23	65.22	74.05	77.03
For liquid consumption	45.78	46.12	44.71	47.54	45.44
For manufacturing	30.09	21.11	20.51	26.51	31.59

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries and for Grade "A" or special services are paid to the producers concerned in addition to the pool price. Transport charges are payable by individual producers and are deducted from accounts.

MUTTON.—Trade was again slow at easier rates. On Wednesday last Argentine chilled hindquarters were quoted at 3s. to 3s. 6d. per 8 lbs. as compared with 3s. 2d. to 3s. 8d. a week ago. New Zealand frozen mutton was 3s. 2d. to 3s. 8d. per 8 lbs., against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,506 tons, an increase of 571 tons on the corresponding week last year. Beef and veal accounted for 4,808 tons, mutton and lamb 2,462 tons, and pork and bacon 797 tons, as compared with 4,292, 2,636, and 813 tons respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed,

27 tons; delivered, 14 tons; stocks, 1,717 tons, against 2,301 tons a year ago. White, landed, 2 tons; delivered, 60 tons; stocks, 12,397 tons, against 19,689 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 9s. per cwt. ex warehouse on Wednesday, as compared with 9s. per cwt. a week ago. "May-June," in singles to Continent and U.K., was quoted at 7s. 10½d. per cwt., against 7s. 10½d. per cwt. last week. Movements in London during the past week were as follows: Landed, 140 tons; delivered, 210 tons; stocks, 1,216 tons, against 3,761 tons a year ago.

SUGAR.—The markets have been quietly steady. The spot price in New York on Wednesday was 3.72 cents per lb., as compared with 3.72 cents per lb. last week and 3.75 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 9½d. to 4s. 10½d., against 4s. 9½d. to 4s. 10d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 6,591 tons, against 8,701 tons last week and 5,952 tons in the same week of last year; deliveries, 17,669 tons, against 19,258 tons last week and 12,852 tons last year; stocks, 193,415 tons, against 204,493 tons last week and 149,275 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks.

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
May 9, 1935	d. 12.01	d. 14.71	d. 15.95	d. 10.35	d. 9.04	d. 10.48	d. 13.36
Apr. 2, 1936	d. 12.91	d. 13.33	d. 15.84	d. 10.86	d. 10.47	d. 11.98	d. 13.43
Apr. 7, "	d. 12.73	d. 14.74	d. 15.95	d. Nil	d. Nil	d. 11.78	d. 14.30
Apr. 23, "	d. 12.67	d. 14.00	d. 15.99	d. 11.00	d. 10.47	d. 11.95	d. 13.41
Apr. 30, "	d. 12.79	d. 13.66	d. 16.05	d. 10.94	d. 10.49	d. 11.99	d. 13.48
May 7, "	d. 12.79	d. 14.09	d. 15.67	d. 11.02	d. 10.54	d. 11.69	d. 13.55

This week's offerings at the public auctions in Mincing Lane comprised 54,231 packages of Indian and 25,101 packages of Ceylon tea. Demand for Indian grades was rather quiet and prices barely steady. At the Ceylon auctions quality showed a distinct falling-off and an easier tone was general.

VEGETABLES.—Asparagus is now arriving at Covent Garden in quantity, reports *The Fruitgrower*, and has sold well this week. Greenstuff and beans and peas are cheaper, while tomatoes and cucumbers have also eased. Business was generally rather slow. As regards potatoes, interest this week has centred mainly on imported new, with old potatoes in moderate demand. At the London Borough Market on Tuesday Spanish Matros were quoted 19s. to 20s., compared with 18s. a week earlier, while best siltland King Edward, old potatoes, made 8s. 6d. to 9s. 6d., against 8s. 6d. to 9s. last week.

MISCELLANEOUS COMMODITIES

FURS.—The following is a list of some of the chief price ranges recorded at the Hudson's Bay Company's spring fur sales of the last three years. All prices are quoted in shillings and pence per skin (raw):—

	Spring Sale, 1934	Spring Sale, 1935	Spring Sale, 1936
Beaver, Mackenzie-River (Canada) Ex. Ex. Large	Unsold	58/-	73/- to 74/-
Ermine, York Fort (Canada) Ex. Ex. Large	5/6	4/2-4/4	5/7 to 6/1
Ermine, Scandin. Ex. Ex. Large	Unsold	3/8	4/8 to 5/-
Fisher, York Fort, etc., 1 and No. 2	240/- to 440/-	195/- to 310/-	170/- to 370/-
Fitch (European)	Up to 6/-	Up to 7/6	41/- to 56/-
Fox, Bastard, York Fort 1 and 2	70/-	38/- to 56/-	110/- to 135/-
Fox, Blue Arctic, Dark	145/- to 350/-	140/-	165/- to 195/-
Fox, Cross, York Fort No. 1 Medium	175/-	130/- to 145/-	72/- to 79/-
Fox, Red, York Fort Medium No. 1	75/-	72/- to 75/-	38/- to 46/-
Fox, Red, Lapland 1 and No. 2 Pale	62/- to 88/-	41/- to 49/-	200/- to 202/-
Fox, White, Western Arctic No. 1	200/- to 230/-	160/-	160/-
Lynx, York Fort, etc., 1 Ex. Large	Unsold	160/-	110/-
Marten, Mackenzie River 1 Pale	88/-	80/-	110/-
Mink, York Fort Ex. Large 1 and 2	55/- to 57/6	49/- to 49/6	69/- to 71/-
Musquash, Black United States	7/11 to 8/-	4/9 to 8/-	7/-
Otter, Canad. etc., 1 and No. 2 Ex.	200/- to 205/-	Unsold	166/-
Sable, Tobolski (Siberia)	75/-	60/- to 115/-	145/- to 290/-
Sable, Kamchatka (Siberia)	80/- to 140/-	Not offered	7/1 to 8/-

Squirrel, Lapland	Unsold	1/1	3/- to 65/-
Wolf, York Fort Extra Large 1	58/- to 67/6	25/- to 55/-	40/- to 65/-
Wolverine York Fort 1 Dark	37/6	52/-	42/-

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions rule for oilseeds and their products. Linseed is in demand only afloat and in near positions, and business generally is of a hand-to-mouth character both here and on the Continent. Prices of Plate and Indian varieties have given way, but this has not stimulated demand. Although there is a 25 per cent. reduction in supplies this year, demand seems to have accommodated itself to the situation as consumption, gauged by the quantity shipped, is 20 per cent. below a year ago. Plate shipments are again substantial. The quantity now afloat for Europe is 139,800 tons (including 41,600 tons from India) or 6,000 tons more than last week. Cottonseed is neglected and has developed an easier tone. Trade in soya beans is quiet, the market not yet having adjusted itself to the trade agreement between Germany and Manchuria, by which the former undertakes

to buy soya beans of a value of six million sterling in twelve months commencing June 1st. The Reichsbank is to pay 75 per cent. in cash, the balance being met by exports of German products. Germany reserves the right to re-export the beans, and has the option to increase the payments in kind.

Fair deliveries of linseed oil are being made to consumers but the market is quiet and prices of raw oil have dropped 10s. per ton on the week. The current price ex Hull mill for May-August delivery is around £25 per ton, naked. Cotton oil is dull. Crude Egyptian is offered at £24 and refined at £26 10s. ex Hull. Demand for oilcake is declining owing to the open weather.

RUBBER.—The market has had a dull tone and prices have eased. The fall is attributed to nervousness concerning the future of the

gold bloc currencies—especially to the fear of devaluation in Holland. But, in view of the improvement in the stock position, some hardening of quotations might be expected to follow a clarification of the outlook.

The spot price in New York on Wednesday was 15½ cents per lb., compared with 15½ cents per lb. a week ago and 16 cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., against 7½d. last week. In forward positions, business has been done at 7½d. for July-September shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 136,696 tons, against 139,750 tons a week earlier. A year ago stocks amounted to 166,732 tons.

WHOLESALE COMMODITY PRICES UNITED KINGDOM

The prices in the following are revised with the assistance of an eminent firm in each department.

CEREALS AND MEAT				POTATOES—				WOOL—				INDIGO—

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader
Page of THE FINANCIAL NEWS are as follows:

MONDAY, MAY 18—CHINA SINCE DEVALUATION. China has suffered more than one violent change in her economic fortunes during the last few years as a result of dramatic developments in the Silver market. This article shows the trend of China's financial and economic affairs since she devalued the tael and severed her exchange link with Silver.

TUESDAY, MAY 19—EAST RAND PROPS. This is the first of the big producing mines which our Special Mining Correspondent, "MINOTAUR," has chosen for individual discussion since the major change in the Rand Taxation System.

WEDNESDAY, THURSDAY and FRIDAY, MAY 20, 21 and 22—COMPANIES AND THEIR PROFIT-EARNING CAPACITY, No. 12 (Continued)—THE AUTOMOBILE INDUSTRY. Continuing our analysis of the position of the individual Manufacturing Companies in the Automobile Industry, we deal this week with nine further companies and their earnings outlook from the Investor's viewpoint.

Wednesday, May 20—RILEY, ROVER and JOWETT
Thursday, May 21—ROLLS ROYCE, ALVIS, B.S.A. and HUMBER.

Friday, May 22—A.E.C. and LEYLAND.

COMMERCE AND TRADE 466

A NEW DEAL IN WORLD TRADE

IN the economic, as in the political sphere, the world may be on the eve of great decisions. Since Great Britain abandoned the gold standard, four-and-a-half years ago, the world has divided itself into three economic groups: countries with depreciated currencies and no exchange restrictions; countries whose currencies are maintained at their old gold parities by free dealings in gold; and countries whose currencies have developed differing internal and external values according to the uses to which they have officially been put. In all these compartments—though least in the gold bloc—there has been a perceptible domestic recovery. But international trade has shown no comparable revival. Both in volume and value it remains well below the level of six or seven years ago.

Recovery has been accompanied by a rising tendency in prices in every country with a depreciated currency, and the disparity between wholesale prices inside and outside the gold bloc is consequently smaller to-day than two or three years ago. A species of watershed has been reached in the conduct of economic affairs, not only in France, the United States and the "on-gold" countries generally, but also in Great Britain, the Dominions, Scandinavia, and Japan. The prospects before the authoritarian regimes of Germany and Italy are more obscure than ever. The question which faces the authorities in all countries is the same: Must they intensify their efforts to stimulate purely national recovery by such measures as expenditure on public works and armaments, and the maintenance of cheap money? If so, for how long?

The year 1936, indeed, promises to be one in which fateful decisions will need to be taken. The new Socialist Government of France may either devalue the franc outright, or attempt a solution by imposing drastic exchange restrictions, in the hope that they could secure both continued convertibility of the franc internally, and the depreciation of the external value of the franc to about Frs. 100 to the £1, perhaps by means of an Exchange Fund. The latter "solution," which would create a situation that could not possibly be lasting, would inevitably

tend to give France a "closed economy" and postpone all hopes of a more ordered state of international currency and commercial relations after the depreciation of the franc. It is extremely doubtful, moreover, whether Holland and Switzerland would elect to follow a French experiment of such a kind.

On the other side of the Atlantic, the approach of the American Presidential Election in November is being heralded by conflicting counsels. The agrarian South and the Middle-West are looking once more towards the world markets for wheat and cotton, and are inclined to pay increasing heed to Mr Secretary Wallace's reminders of the importance of international trade. And the Supreme Court's disallowance of one after another of President Roosevelt's "relief" and "compensation" schemes is making the future of the American national economy more obscure.

In Canada, the Federal Budget is in serious deficit. The Prairie Provinces cannot be sheltered by high tariffs from the incidence of world depression, like their sister Provinces in the East. This week it is announced that Mr Dunning, the Federal Minister of Finance, is to visit London. The Prime Minister of New South Wales is already here, and is urging Australia's need of capital and skilled labour for industrial and agricultural development. The Finance Minister of New Zealand is also coming to England. Meanwhile, arrangements have been agreed upon for the termination of the Anglo-Argentine Trade Agreement. Negotiations for the renewal of the Anglo-Danish Agreement are being drawn out, to the accompaniment of special pleading both by British exporters and farmers. Our other Scandinavian and Baltic bilateral Agreements, and the Dutch Agreement also, are rapidly approaching their renewal dates. To complete this picture of current tendencies, M. Léon Blum, Premier-designate of France, has now emphasised the importance of freeing and expanding international trade, and has expressed the hope that increasing world trade may lead to a settlement of the French-American War Debt.

In Great Britain these problems are beginning to attract renewed attention. Mr Beaumont Pease, president of the British Bankers' Association, has lately urged that the Government should go forward with a positive policy for the expansion of international trade. Mr Maxtone Graham, chairman of the Scottish Mortgage and Trust Company, emphasising the importance of our overseas investments, has advocated the resumption of foreign lending as a condition precedent to the revival of our export industries. We still have 1,831,230 unemployed, many of which are located in our "distressed" exporting areas. Meanwhile, the economic advisers to the Statutory Committee on Unemployment Insurance have envisaged the possibility of a check to internal recovery after the middle of 1937, subject to the effects of the Government's re-armament programme.

Is there, then, an opportunity to-day for a new economic initiative? And, if so, what form should it take? In the first place, there is little doubt but that uncertainty over the future exchange-value of the world's leading currencies is preventing any concerted attack upon "crisis tariffs" and their accompaniment of import quotas. That was the unanimous conclusion of leading European economists at Antwerp last July, and it is equally true to-day. Would not the British Government, therefore, be well advised to do all in its power to enable M. Blum and his associates to effect "devaluation without tears"? The introduction of exchange control of the franc after the Schacht precedent would give France neither the benefits of clear-cut devaluation, nor the public confidence in the future of the franc upon which the release of hoarded gold and notes depends. Cheap money is essential to France as much for conversion of her crushing national debt as for any scheme of new public works. But neither France, nor Great Britain, nor the United States would derive any advantage if a fresh outbreak of competitive currency depreciation were to let loose a wave of increased tariffs and intensified import quotas. Is there any reason why the British Government should not forthwith make to the French authorities an offer couched in the terms suggested in our article on "The Franc" of January 25th last—terms which, so M. Germain-Martin informed readers of *Le Capital* last week, he would have gladly accepted when he was Finance Minister? Such an offer would promise the employment of the British Exchange Fund to support sterling (and therefore the franc rate) as soon as a moderate devaluation of the franc was announced, coupled with an assurance that sterling would not be deliberately depreciated. The British authorities would need to be satisfied that the extent of the proposed French devaluation was no more than sufficient to attain economic equilibrium, nor so great as to evoke reactions beyond the control of the French and British authorities acting in concert.

But more than a provisional currency agreement is needed if the chief trading countries of the world are not to commit themselves irrevocably to autarky; and a provisional currency agreement between London and Paris would usefully set the stage for negotiations to establish the pound-dollar-franc triangle on a sounder footing. On that basis, the French and British Governments—each conditioning, to a large extent, the commercial policies of a host of other countries and territories—might at last proceed to form a comprehensive association of countries who were prepared to increase the volume of their own foreign trade. Such a group of free-trading nations, with currencies pegged within defined limits, at least for limited periods, might gradually abolish quotas and, *pari passu*, to reduce, on the lines of the Ouchy Agreement of 1933 between France and the Belgo-Luxemburg Customs Union. Within such a group substantial opportunities might well arise for the revival of the export trades, of international lending, and emigration and immigration, to compensate for any *rallentando* in trades dependent on the home market, and to obviate concentration on merely domestic stimulants to prosperity. Such an arrangement, finally, would alleviate currency and transfer problems and ease the burdens of foreign indebtedness.

The international banging of once "open doors" cannot proceed indefinitely without grave economic and political results. It is certainly not in the interests of the British Commonwealth to live in a world of bad clients and worse neighbours.

AUSTRIA AND EUROPE

BETWEEN Wednesday and Friday of last week, May 13-15, a trial of strength between Herr von Schuschnigg, Chancellor of Austria, and Prince Starhemberg, the leader of the Heimwehr, took place. So far, the result is a victory for the Chancellor. The Government was reconstructed, while Prince Starhemberg went off on a visit (arranged before this crisis) to Rome. The Heimwehr are to be disarmed; and, if this measure is carried through while at the same time the new Austrian conscript army is built up under Herr von Schuschnigg's control, the leader of the Austrian Catholics will have succeeded in making himself sole master of the Austrian State. He is not that yet.

Meanwhile, Prince Starhemberg returned to Vienna on Wednesday; and on Thursday he conducted private consultations with the two Heimwehr members of the new Cabinet, Herr Baar von Baarenfels and Dr. Draxler, the Finance Minister. At the week-end these consultations are to be succeeded by a conference of all the Austrian regional commandants of the Heimwehr. The situation is evidently still critical.

As lately as a few months ago it would have been taken for granted by observers, both outside and inside Austria, that any disturbance of the precarious balance of power in Austria, as maintained since the death of Dr. Dollfuss, would be followed by the outbreak of a civil war in the country, which might in turn precipitate general war in Europe. This catastrophe has not happened in the present case, and seems less likely to happen with every day that passes. This is noteworthy, since the Catholic-Heimwehr alliance could not have been disturbed more deeply than it has been by a "show-down" in which the clerical dictator has dismissed his Fascist co-dictator from the partnership, and taken both reins into his own hand.

The change, however, has been executed by methods of compromise that are characteristic of Austria—or England—in contrast to the way in which such things are done in the Fascist countries beyond Austria's frontiers. The Heimwehr members of the Cabinet have not been completely eliminated; they have simply been reduced in numbers from four to two. And this drawing in of the skirts of the regime away from the extreme Right has been balanced by a symmetrical shrinkage from the Left; for two Ministers of a liberal complexion, Dr. Dobretsberger and Herr Strobl, who were particularly obnoxious to the Heimwehr, have been simultaneously dropped.

Herr von Schuschnigg's reconstructed Austrian Government is thus a Catholic dictatorship which has parted from the Heimwehr without breaking with them, and is inclining towards the Democrats and the Socialists without committing itself to them. This policy is evidently the Austrian Catholics' own, since it is sharply divergent from the policy of the Vatican as indicated in the Pope's utterance of a few days ago. On that occasion the Pope—breaking with the Vatican tradition of aloofness from the ephemeral politics of the secular Powers—painted a picture of a world divided between holy Fascists on the one hand and unholy Communists and Nazis on the other. He manifestly indicated that he himself was on the Fascist side when he spoke of "the triumphal happiness of a great and good people." Prince Starhemberg said hardly more than this in substance—though he spoke in more abusive terms of democratic countries—in the telegram of congratulation to Signor Mussolini which cost him his office. Evidently Herr von Schuschnigg and the politically organised Catholics of Austria do not agree with the Pope in thinking that the time has come for the Catholic Church to take its stand in the political arena shoulder to shoulder with Fascism, against whoever the adversaries of Fascism may be.

Prince Starhemberg has, in fact, fallen because Herr von Schuschnigg is unwilling to carry Austria's allegiance to Italy to the length of breaking with the West European democracies. But he has taken care at the same time to reaffirm to Signor Mussolini his own loyalty to the Rome protocols; and if the Heimwehr cherished any hopes that Italy might be prepared to intervene in order to restore the balance in Austria in their favour, they have been quickly undeceived. Signor Mussolini has made it plain that he will be content with an Austria under the new Schuschnigg regime. The French and British Governments—more and more anxious as they are not to burn their fingers in Central

Europe—will certainly not quarrel with a change which has brought Austria a point or two nearer to the democratic position. The Czechoslovaks will share this Franco-British view. And the Heimwehr will have to be more deeply embittered against the *Freiheitsbund* than Herr von Schuschnigg intends to allow them to be, before they eat their own brave words by turning Nazi. On the whole, it looks as though Herr von Schuschnigg has some prospect of being able to carry on with Heimwehr indulgence, unless some stroke is delivered by Herr Hitler.

The German Chancellor's attitude and intentions are, of course, a formidable unknown quantity. In the last resort, his foreign policy is determined by the exigencies of his home front; and when a crisis on the home front requires him to perform another foreign "stunt," there is no knowing whether Austria may not be judged to offer the line of least resistance for the next German outbreak. At the moment, however, it does not look as though Herr Hitler were working up for an attempt at a *fait accompli* in the Austrian direction. The truth seems to be that Herr Hitler has been as much surprised and impressed—and perhaps almost as much put out—as the States-members of the League have been by the rapidity of Italy's military success in East Africa. Probably he looked forward to a long-drawn-out war which would weaken Italy to a point at which she would react feebly, if at all, to a German occupation of Austria. Possibly, Herr Hitler's original calculations may even now be not so wide of the mark; for we have still to see the end of Signor Mussolini's African adventure. But for the moment, at any rate, the flight of the Emperor Haile Selassie and the arrival of the Italian Army at Addis Ababa seem to have made two impressions on Herr Hitler's mind: first, that Signor Mussolini's shock tactics are the secret of political success in the world as it is; and, secondly, that a move in the Austrian direction, which would mean crossing Italy's path, is not the most profitable next move for the Third Reich to make.

If Hitler entered Austria it would be difficult for the founder of a new Roman Empire not to take up the challenge. And if that happened, the Western democracies and the Central European Successor-States and the Soviet Union might all sit back and watch the spectacle of two dictatorships making the world safe for international law and order again by pulverising each other. On the other hand, if Hitler could afford to wait in Austria, as he is affording to wait in Poland, he might, in co-operation with Mussolini, give the *coup de grâce* to the collective system. If two predatory creatures go fishing together in troubled waters the shark can surely count on doing better business than the pike. If the post-war attempt at establishing an international order is frustrated, so that anarchy reigns once more in international affairs, then it is not the weakest but the strongest that stands to come out the winner. In an anarchic Europe it would be Germany that would establish, to her own profit, a peace based on a victor's military ascendancy. Europe would then be doomed to a Pax Germanica, not to a Pax Romana.

Two questions present themselves: Can Hitler afford to accept the *status quo* in Austria for another few years? And can Mussolini afford to go into partnership with so preponderant a partner as Hitler would be, even if Hitler does pay the price of temporarily foregoing the *Anschluss*? The answer to the former question is probably in the affirmative. Hitler believes that Austria is bound to unite with the Third Reich sooner or later because, as a German country with a great past, she will not submit for ever to being made the football in an endless series of European diplomatic matches. Break up the collective system; assert Germany's military supremacy in Europe; and then Austria will be one of many prizes that will fall into Germany's lap, while Italy, Poland and other confederates of Germany will have to accept the German *Diktat* as meekly as the discomfited Czechoslovaks and Lithuanians. But what about Signor Mussolini? Does he not see these later moves in the game? No doubt he does; and no doubt he would prefer to avert the danger of a German hegemony by restoring the Stresa Front. His sudden recall of Marshall Badoglio may be not unconnected with his preoccupations about Austria and Central Europe. But Signor Mussolini cannot qualify for re-enlistment as a European policeman unless he disgorges his African loot. That is his dilemma; and we see no reason to release him from it.

7, CHANCERY LANE, LONDON

WHO WILL OPPOSE ROOSEVELT?

The probability that Mr Roosevelt will have no effective opposition to his nomination at the forthcoming Democratic Convention, and the strong support for his candidature revealed in the result, now being published, of various "primaries," make the Republican Party's task of choosing a candidate to oppose him increasingly difficult. In the following article, written a fortnight ago, our special correspondent discusses the prospects of potential competitors for the Republican nomination.

THE basic problem of the Republicans, as the presidential campaign nears, is to choose, not a set of principles on which to establish an ultimate Republican regime, but the line of attack best calculated to win the November election. The difference is characteristic of the American political system. It would be infinitely healthier, politically, if Republicans and Democrats were permanently distinguishable in fundamental theory. The Republicans might remain in the opposition, educating the people to a different approach to public problems, and they might count on the rhythm in popular feeling bringing them, in time, back to office. But under the four-year election system, a political party cannot consider defeat as a matter of secondary importance. The Republicans read the temperature of the country and adapt their doctrines to it. Since America to-day, on the whole, is mildly Liberal, the Republicans, to stand a chance of winning, must become mildly Liberal. Since President Roosevelt personifies the leadership desired, he must be opposed by someone sufficiently like him to challenge his monopoly of Liberal leadership.

For that reason Governor Landon is ahead in the pre-convention race for the Republican candidature. He is an alternative to Roosevelt, in the sense that he has a similar social attitude toward national problems, and he promises to be more proficient and less erratic. Under Governor Landon the Republicans would offer the country a New Deal (under another disguise, of course), but would guarantee that it would be without waste, muddle or unbalanced budgets.

Governor Landon's weakness in this rôle has been the support of Mr William Randolph Hearst, the most illiberal of American publishers. This support came to him unasked, and his friends testify that it has been unendingly embarrassing. But what could Governor Landon do? A candidate does not care to be churlish to enthusiastic supporters. The Liberal weekly, *The Nation*, begged him to repudiate Hearst. Teachers' organisations, frightened by Hearst's attacks on academic freedom, sent similar pleas. Governor Landon was told that "the support of Hearst is the kiss of death." But though he pointed to his record in defence of academic freedom, he felt it impolitic to say more, and Left-wing Liberals now disown him.

Then Hearst landed his favourite in his first defeat, the California primary, and paradoxically may have cleansed him of the Hearst stain. For it was quite clear that the defeat in California was not aimed at Landon. The situation there has been confused. It is Hoover's home State,

and while Landon was more popular there than the ex-President, it seemed better to preserve harmony by giving the State's delegates no instructions. Hearst, however, wanted to become a Warwick. He had "discovered" Landon; he intended to drive his band-wagon. Governor Merriam joined him. At once other factions in the Republican Party had something to unite against. Landon could hardly repudiate the Hearst ticket, but he did not endorse it. And some of the Landon leaders in California worked openly against it. The election became one simply of dealing with the ambitions of Hearst, and he was beaten. It was, perhaps, a costly defeat for Landon; for the Republican Party in California is now rent with dissension, and has little promise of carrying the State in November. But Landon also gained. For now Hearst is eliminated as a dominant campaign personality. He cannot demand a voice at the Cleveland convention. And Liberals can support Landon without feeling they are helping a Hearstling.

Landon's nomination is by no means a foregone conclusion. But the defeat of the Eastern Republicans appears to be, unless they can masquerade behind some westerner who will be their man as the innocuous Harding was in 1920. Such a one may be Senator Steiwer, of Oregon, chosen to make the keynote speech of the convention. He voted for many New Deal measures in 1933, but was one of the first Republican senators to turn against Roosevelt. He is the most popular of all possible candidates with the American Legion. He is a good platform speaker. But his political affiliations in Oregon are not Liberal, and he is himself ideally indeterminate for the purposes of Eastern Republicans. Representative Snell, an authentic Conservative, has been chosen permanent chairman of the convention, and both choices demonstrate that the Eastern Wing of the Party still owns the machinery. The East, as well as the West, will want a Liberal-appearing candidate, but it must have still more a man whom it can control. Senator Borah, of course, is out of the question because he has never been controlled, not even by the minor master of consistency. Landon, one hears, has a will of his own, and the Eastern machine would prefer someone else. Vandenberg, of Michigan, might also be too independent. Steiwer or Dickinson of Iowa are the dark horses in the Eastern stable. Unless they can be chosen, the control of the party passes beyond the Alleghenies.

Landon's utterances so far have been vague rather than ambiguous. Only those who have talked with him personally are sure that he is ready to be explicit when the time comes. An interview over the wireless showed that he may attack the President on the ground that the New Deal has delayed recovery, that politics and waste have sullied the administration of relief, and that the essential social programme, such as the Social Security Act, has been rushed through without enough thought. If he were a better demagogue, and if the great majority of the country were only a fraction as angry with Mr Roosevelt as the well-to-do, he might have a chance. But nothing as yet suggests that the President is going to be defeated in November.

BRITAIN'S OVERSEA MARKETS

WHILE business activity in this country continues steadily to expand, there has been no proportionate revival in international commerce. Our overseas trade returns bring out the deficiency very clearly. The absorption of increased quantities of raw materials finds reflection in a growth of imports. In the total value of our imports during the first three months of this year as compared with last, but the rise in the value of total exports, during the same period, has been only of the order of 3 per cent. An examination of recent changes in the direction of our overseas trade may help to explain this indifferent showing.

The charts in the next column show how the value of our trade with the British Empire, Europe and other foreign countries, respectively, has varied, quarter by quarter, during the last seven eventful years.

The value of our total overseas trade is still appreciably lower than in the pre-depression year. The decline has

been least marked in the case of the Empire and most in the case of foreign countries outside Europe. During recent months, however, certain new and significant features have been superimposed on the main trend. For example, in the first three months of this year, as compared with last, an increase of 9.9 per cent. in our imports from Europe was accompanied by a decline of no less than 10.4 per cent. in exports to European countries, partly owing to the application of sanctions to Italy. Our trade with individual

Continental countries is set out below for the first quarters of 1929, 1933, 1935 and 1936:—

TRADE WITH EUROPEAN COUNTRIES
January to March
(000's omitted)

* Including Dependencies.

We are steadily buying more from almost every European country except Latvia, Holland, Italy and Greece. On the other hand, our exports this year have declined in the case of nine out of nineteen European countries of destina-

tion. This decline was most marked in our exports to Germany, though our imports from that country showed an appreciable increase. Our shipments to the majority of "sterling" countries showed some improvement, and, among the "gold bloc," France, Holland and Poland purchased more from us.

Our trade with foreign countries outside Europe showed an appreciable improvement in the first quarter of this year, the percentage increase in imports and exports amounting to 9.7 and 9.3 per cent. respectively:—

† Formerly Persia.

British exports to these countries are still less than half of our imports from them. Of the sixteen countries enumerated, all but six sold more to us, but as many as eight bought less from us in the first quarter of 1936 than in 1935. Trade with the United States showed a further improvement, as America's recovery made fresh headway. Some of our increased exports to Egypt were probably "consumed" by our defensive forces in that country. Argentina purchased more from us, and we, again, bought less from her—largely owing to the working of our restrictions on meat imports. Our imports from Japan continue to increase, and in the first quarter of 1936 they exceeded even the corresponding figure for 1929. British exports to Japan, on the other hand, continue their downward course, and are now only 28 per cent. of their 1929 value. Our trade with Brazil is contracting, and our trade with Uruguay increasing. Our purchases from China continue to increase, and exports, no less steadily, to decline.

Our balance of trade with the Empire is still moving in the latter's favour. An increase of £11.3 millions (16.2 per cent.) in the latest returns of British imports from the Empire is offset by a rise on the export side to the extent of only £2.6 millions (5.3 per cent):—

Exports of imported merchandise continue their upward trend, but are still little more than half their 1929 value. All the countries which are separately enumerated in the table, except Germany and Holland, have taken more from us in re-exports so far this year than last. The commodities concerned are largely primary products, and, in view of the growing tendency for foreign countries to buy raw material supplies direct from the producing areas, the comparative stagnation of our entrepôt trade is readily explainable.

On the whole, our survey suggests that the obstacles in the way of an expansion of British exports remain distressingly formidable. The position has certainly improved since 1933. In contrast to the striking recovery which has occurred in the meantime in domestic trade activity, the headway we have made in foreign markets, particularly in the last twelve months, is meagre and disappointing. We discuss the cause and cure of this commercial anæmia in an earlier article in this issue.

LIBEL IN FRANCE

(BY A CORRESPONDENT)

Of late years English Courts of Law have adopted an excessively severe attitude towards defendants in libel actions. The difficulties thus put in the way of vigorous and healthy criticism are to be deplored. Why should we not be free to call a fool a fool, without having first to satisfy ourselves that he cannot claim that he should have been called a prig? But the imperfections of our legal system should not blind us to the disadvantages of an exactly opposite view.

In France the attitude of the courts towards the plaintiff in a libel action closely parallels that of our own courts towards the defendant. It is indeed the attitude of the court that counts, for the French have a perfectly adequate law of libel. They sub-divide libel into three heads, which may be broadly described as general invective, specific libel and blackmail. For general invective, one can be fined 300 francs and/or be sent to prison for not more than three months. For specific libel, the penalty is imprisonment for not more than one year and/or a fine. Blackmail, which consists in the extortion of money by a threat that defamatory accusations will be published, is punishable by imprisonment from one to five years, and by a fine of up to 3,000 francs. In addition, civil damages can be claimed by the plaintiff and are supposed to be awarded in accordance with the material and moral harm suffered. The penalties for general invective and specific libel, set out above, are, it is true, maximum penalties, for offences against a Court, the Army, the Navy, a Government department, etc.; and offences against private individuals have appreciably lower maximum penalties. Nevertheless, taken in conjunction with the right to claim damages, they would appear, on paper, to provide substantial protection against unfair attack.

In practice, this protection is frequently worthless. The reasons for this are various, but can be roughly tabulated. In the first place, French judges believe in freedom of speech and recognise that, if it is to be preserved, considerable latitude must be allowed to critics. They themselves receive small salaries, and their ideas of damages are proportionate to their incomes. Instead of £2,000 a plaintiff may be awarded 2,000 francs (about £26), and may find even this small sum impossible to collect. In an action against any French newspaper, damages are almost uncollectable; in an action against the type of paper that specialises in libel and blackmail, they are not worth the paper on which the Court records its order. Unless the publication complained of is against public interest and morals, there is no recourse against the printer. Unless the article is signed, there is no recourse against its writer. There remains the newspaper itself. French newspapers need have no particular legal form, nor any specific capital. The usual practice is to have a manager (called the *gérant*), whose name must be printed somewhere in every edition. Action lies against him alone. As a man of straw, he may be sent to prison, but will certainly be unable to pay any damages. Consequently, plaintiffs will think twice before launching an action. They must also bear in mind that the Press in France, being by experience careless of libel charges, will probably come energetically to the rescue of any paper attacked in the courts. A libel action may well result in a campaign, far more damaging than the original libel, in the columns of other newspapers.

The French are realists, who see no merit in martyrdom. The Press has, therefore, come to be virtually free to say what it pleases. The system, as it works at present, is not an unmixed blessing. It may be unobjectionable (and even

entertaining) to read that politicians are sewer rats, that individual industrialists are traitors to their country, and that Monsieur X, the banker, is, once again, trying to rob the widow and the orphan. The most violent outpourings of *L'Action Française* can always be offset by reading the equally trenchant comments of *L'Oeuvre* or *L'Humanité*. A more serious result, however, must be considered. People will not indefinitely remain exposed to libellous attacks without attempting to defend themselves. Defence in the courts having proved useless, other methods have been resorted to. "The liberty to criticise" has been countered by the purchase of "the right to be praised."

Without adequate protection from the law, French business men have sought to safeguard their interests by entering into agreements with the Press. Almost any French bank, or sizable industrial concern or municipal undertaking, will have what is known as a *Budget de Silence*. A publicity agent in their employ will receive the money apportioned under this head on the specific understanding that he will prevent unfavourable comment on their normal activities from appearing in the Press. The sums involved are considerable, amounting, in the case of leading companies, to several million francs per annum. They achieve their object, but at a cost to the country as a whole that cannot be estimated. It does not need to be argued in these columns that an incorrupt and independent Press is vital to the healthy life of a community. Those who have a real knowledge of France would equally admit that the corruption at present rampant in the Press is one of the gravest factors in French life. The French attitude towards the offences of libel and blackmail has certainly been responsible, to a large extent, for the situation that now exists. Those who regard it as normal to take money for not saying what they would otherwise have said, or to extract payments by threatening to say what others would wish unsaid, corrupt not only themselves but those with whom they are dealing.

The French Press, of course, is certainly not uniformly corrupt. It is a disturbing comment on its integrity, however, that it should have recently been necessary for the British Government to call attention to the prevalence of extreme pro-Italian and anti-British propaganda in the columns of certain by no means influential newspapers. Nor is this the first occasion in recent years when informed observers have believed that the methods forced on business men by French Law Courts have been successfully adopted by foreign governments. It may seem a far cry from the law of libel to the corruption of the Press, but those who advocate complete freedom for criticism should remember that they may be opening the door to a much more sinister visitor than Liberty. Our courts may be exaggerated in their estimate of the damages caused to a citizen by a wholesomely outspoken rebuke, but are they, perhaps, erring on the side of grace? It may be irritating and ridiculous that a paper should be unable to risk calling Mr Z. a rogue. But it would be indisputably worse if he were able, as in France, to arrange to be proclaimed a saint.

NOTES OF THE WEEK

Chamberlain on the Outlook.—Mr Chamberlain's on the Finance Bill on Wednesday was disquieting ways than one. He warned the country that public debt was heavy and increasing. Automatic increases in social service expenditure would take place even if there were no new concessions. Meanwhile armament expenditure would rise, at least for a time, and a hardening of money rates might raise the national debt charge. "The only big item on which economies would be possible would be the social services." And "economies," Mr Chamberlain implied, could only be avoided as long as further trade recovery continued to afford expanding revenues. He then expressed qualified dissent from the Beveridge Committee's predictions of a cessation of recovery during the next eighteen months. The trade cycle, he agreed,

would continue to operate; but other factors had to be considered.

For example, if conditions continue perfectly normal, there will, after a time, be a slowing down of the rate of building that might in the ordinary way lead to considerable unemployment in the building trade, but do not let us forget the enormous defence programme which the Government are going to launch, and which will occupy all the available labour in the building trade.

It is true, as Mr Chamberlain says, that the diminution of private house-building, now beginning to be apparent, may be offset by increased activity of other kinds. But we think it extremely dangerous to imagine that the re-armament programme—unless very much larger and costlier than anything as yet divulged—will effectively achieve this end

by itself. If the depressing effects of a decline in private house-building are to be avoided, the remedy must be found rather in an intensification of the Government's slum-clearance and overcrowding policy and in a maintenance of cheap money designed to expand commercial building.

* * *

The Coal Mines Bill.—The amendments to the new Coal Mines Bill announced by Mr Runciman in the House on Monday can only be described as a lamentable capitulation. If ever there was a chance for the Government to fulfil its claim to be "National," it was here. The necessity for the closing down of redundant coal mines has been admitted by all sections of public opinion since the Sankey Report of 1919; and the practical impossibility of getting them closed down without compulsory action has also been admitted by all, at least since the Samuel Commission of 1926. The coalowners were given the four years between 1926 and 1930 to carry out amalgamations by their own unaided efforts. Then by the 1930 Act a Commission was set up which was to try to induce voluntary amalgamation, and only when this failed to use coercion. As a result of pressure from the coalowners in the House of Lords, however, the Commission's coercive powers were rendered unworkable; and from 1930 to 1936 few voluntary and no compulsory amalgamations were effected. In the words of Mr Runciman himself in the House on Monday, "the successful obstruction of the Commission's work had begun to breed increasing discouragement among progressive elements in the industry itself, to whom alone it would be possible to look for reorganisation from within." At long last, therefore, a month ago a Bill was introduced giving the Reorganisation Commission powers of compulsion. Even this Bill provided for revision of schemes by the Board of Trade and the House of Commons, and for appeal to the House of Lords; and it allowed voluntary schemes to be produced at any time up to the actual passing of a compulsory scheme. It was consequently with amazement and indignation that the House heard Mr Runciman announce on Monday afternoon the introduction of amendments which completely emasculated the Bill. By these amendments, the grant of compulsory powers to the Commission would be deferred till July 1, 1938; a further "independent and impartial" body would be set up to approve compulsory schemes; and "ancillary undertakings" would be exempted from the working of the Bill.

* * *

Mr Runciman's Apologia.—The best comments on amendments are the statements made by Mr Runciman himself on the original Bill in the early part of the same speech:—

The Reorganisation Commission (Mr Runciman said), subject to the approval of the Board of Trade and of Parliament, is the proper authority to determine what amalgamations are in the national interest. . . . The Government has been left with no alternative but to introduce effective machinery for carrying out the intentions of Parliament expressed in the 1930 Act. . . . In the Government's view, the new machinery [in the new Bill] is well calculated first to give effect to the original intentions of Parliament, and, secondly, at the same time to safeguard the interests of the individuals and undertakings concerned.

We entirely endorse these sentiments of Mr Runciman; and we shall consequently not be surprised if the public regards the amendments subsequently introduced as a deplorable surrender to an interested sectional agitation. The Government appears to have announced first what they thought ought to be done, and later to have explained that vested interests would not permit them to do it. After the experience of last winter, when the mineowners were only induced to grant a long-overdue rise in wages by the willingness of the general public to bear the whole burden, we do not think public opinion is disposed to give way to the coalowners once again. The Government's reputation will sustain a further and most damaging blow if they obey the voice of vested interests in this matter and not the clearly expressed will of almost all sections of opinion. We can only hope that the reported decision to postpone the second reading of the Bill until the autumn will not turn out to be well-founded.

The Presidency.—As the year of the American Presidential Election progresses, all events tend to be interpreted in terms of their effect on the prospects of the candidates for Party nomination and for election. Four recent items stand out prominently. The President's "painless" taxation scheme for taxing undistributed company surpluses, thus combining increased revenue with forced distribution of earnings and a rise in share prices, has met increasing criticism inside Congress, and is on the point of considerable modification. The President has intimated his willingness to compromise, and with his usual political skill may succeed in turning the edge of damaging criticism. The House of Representatives has voted appropriations of \$1,425 millions for the Works Progress Administration, \$458,631,860 for social security measures, \$358 millions for the Civilian Conservation Corps, \$38 millions for the Tennessee Valley Authority, and \$63,350,000 for Public Works. The Relief Administrator, Mr Hopkins, has repeated that this relief appropriation will not be adequate without a marked business recovery during the present year. But, clearly, expenditure will continue on a large scale until election time. Thirdly, in the political field, the Ohio "primary elections" have emphasised the verdict of previous "primaries" by giving President Roosevelt a 13 to 1 majority over the opposition Constitutional Democratic candidate, Colonel Breckenridge, and a 25 per cent. majority over the successful Republican candidate, Mr Robert Taft, who defeated Mr Borah. The tide is flowing strongly for the President. Most significant of all, however, is the support promised to the President by Mr John L. Lewis, head of the United Mine Workers and of the Committee for Industrial Organisation. Mr Lewis is an ardent advocate of industrial unionism, as opposed to the conservative, non-political, craft unionism of the American Federation of Labour. He attempted to gain control of the Federation; but he resigned from its executive when the 1935 convention voted against industrial unionism, and formed a rival organisation which may well prove to be the beginning of a trade union movement of the English type with similar political developments. In January of this year the Federation ordered the Committee for Industrial Organisation to dissolve. Its fiat was promptly ignored. Mr Lewis assisted in the formation of the Non-partisan League, supported, it is estimated, by 40,000 labour leaders throughout the country, all directed to work for the return of President Roosevelt. On the Republican side of the campaign, the first direct contest between Candidates Landon and Borah has taken place in New Jersey, and produced a decided victory for the former, who is thus confirmed as by far the most likely candidate for Republican nomination.

* * *

America's Constitution.—A fatal six to three vote of the Supreme Court of the United States of America has again decided against a major act in the New Deal programme. The general powers of the N.R.A. were ruled unconstitutional in the Schechter case, and the specific powers of the Guffey Bituminous Coal Act have now been found to be an unenforceable attempt by the Federal Government to stabilise the coal industry by regulation of prices and labour conditions. This decision was reached despite the fact that 80 per cent. of the industry supported the system, and seven States petitioned the court in its favour on the ground that they were incapable individually of exercising the powers which had been delegated to the Federal Government. The majority verdict was that the labour provisions of the Act had already been disposed of in the Schechter case; and, further, that the power of the Federal Government to regulate commerce between the States did not cover regulation of coal-mining, since mining was "production" and not "commerce." This distinction may be quite clearly defensible both legally and economically. But with the vast extension of productive processes and the increasingly wide scope of economic relationships, it has undoubtedly become an anachronism. But for the present the Supreme Court decision is that the opponents of Federal Regulation have won a victory. The economic precepts read into the Constitution by the Supreme Court have been

reinforced by this week's decision of the Court of Appeals of the District of Columbia. The Court has ruled that the Resettlement Administration had no right to establish a "model community" in the township of Franklin, New Jersey; and, further, that the whole Relief Act (of which the Resettlement Administration was but a small part) attempted to do things for which the Constitution gave the Federal Government no powers. To the outside world, as to an increasing number of Americans, it is more than ever apparent that, whatever the rights and wrongs of the economic policies of the New Deal, the economic ideas of 1800, even when enshrined in a heaven-sent constitution, are by no means suitable guides to those who are grappling with the complex problems of the twentieth century. But the Constitution has become a symbol of American nationality throughout all the States, and every test of public opinion has shown the absence of a majority, even among supporters of the New Deal, for constitutional revision. It is probable, therefore, that the President will continue to avoid the direct issue, until public opinion is more prepared for what must surely be an inevitable revision. The issue, however, may be forced upon him by the disgruntled Labour leaders, who will endeavour to persuade the Democratic National Convention at Philadelphia, next month, to include constitutional amendment as one of the planks in the official party programme.

* * *

And Russia's Constitution.—Last Saturday saw the completion of the work of a commission which, under M. Stalin's chairmanship, has been preparing the draft of a new constitution for the Soviet Union. There are to be three main changes, all in the direction of parliamentary democracy. First, elections are to be by secret ballot instead of by show of hands. Secondly, there is to be equality of franchise between the two principal classes of the population—the urban workers and the peasants—instead of the present weighting of the franchise to the urban workers' advantage. (At present, the urban workers elect one delegate for every 25,000 voters, and the peasants one for every 125,000.) Finally, election is to be direct instead of indirect. Thus, on paper, the Soviet system is to be changed into a democratic constitution of the French or English type. As a gesture towards the West-European Powers, these changes in Russia may be of some psychological, and therefore political, importance in the international arena. It is more questionable whether they are likely to make any appreciable difference to the way in which Russia is governed. We may remind ourselves that the secret ballot is always employed in the Third Reich in plebiscites—in favour of Herr Hitler. And as for the second point, we may expect to see the urban voters in Russia still dominate the rural voters, even when they are reduced to an equality of voting power per head; for the urban voters will still enjoy a superiority in education and organisation which will outweigh their inferiority in numbers. We may go on to ask ourselves whether, in the Soviet Union, the primary elector has ever been under the Soviet system—or ever will be under the parliamentary democratic system—the true source of political power. Surely, in the Soviet Union, the real power resides, not in the general electorate, but in the Communist Party. It is the constitution of the Party, and not that of the State, that is the really vital constitutional question in the Soviet Union to-day. And since there is no report of any innovation in the way in which the Party conducts its affairs, we shall be slow to believe that the new announced are going to have any very profound effect upon the fortunes either of Russia or the world.

* * *

The Iron Hand of Italy.—The Roman Peace which Signor Mussolini boasts of bringing to Ethiopia is running true to type. The Italian Army of occupation is carrying out mass execution at Addis Ababa after military trials which seem to have been as sketchy as those which preceded the shooting of the fugitives from Caporetto. But soon a veil will fall over this grisly scene, for Marshal Badoglio is quickly telling all the foreign journalists whom he found on the spot, and is only retaining those whom he

brought in his entourage, and who have therefore presumably been proved sufficiently tame for Italian convenience. There is also an exodus of other foreigners; and it is already evident that, in "Italian Ethiopia," it will not be easy for any but Italian subjects to live and work and earn their keep. It remains to be seen what effect this ruthless use of force is going to have upon the Amharas. Will it break what remains of the spirit of a people which till yesterday was an imperial race? Or will it drive them into an underground opposition? Have the Amharas sufficient education to be apt at the difficult art of passive resistance. And what of the rising generation? The Italians are evidently making a dead set against the small band of Western-educated young men whom the Emperor Haile Selassie had been training for the Herculean task of assisting him in the modernisation of the Ethiopian Empire. On the other hand, they are reported to have already made a beginning with an organisation of selected Amharan children on Fascist lines, by a method which, so they claim, has proved successful in Libya. This last news opens up long vistas. Supposing that the people of tropical Africa were successfully indoctrinated with our post-war European political fanaticism, is it not likely that, sooner or later, this new dynamic force in native Africa's life would be turned against the outsiders who had introduced it by violence? Semi-esoteric societies for terroristic purposes have been a traditional feature of African life. It is not impossible that Fascism may be a weed which will ramble into luxuriant growths on tropical African soil. Mussolini's action has set forces in motion in Africa which may eventually discharge themselves in catastrophic fashion.

* * *

A Royal Commission for Palestine.—In the House of Commons on Monday, Mr Thomas announced two Government decisions on Palestine. First, order is to be re-established; secondly, after order has been restored, a Royal Commission is to be appointed which, without bringing into question the terms of the mandate, would inquire into the causes of unrest and the alleged grievances of both Arabs and Jews. In these days, no doubt, we must count it a mercy if His Majesty's Government takes any action at all. But we confess we do not see how either of the two present decisions about Palestine is likely to lead to any constructive result. So long as His Majesty's Government are responsible for the administration of Palestine they must show that they are the masters and that, in the last resort, they can crush sedition by force. This is well within their power. Yet simply to meet force by superior force in Palestine does not solve the British problem, or even the Zionist problem, in a country where the Arabs are the native population and are still in a numerical majority. The problem is not just to suppress Arab violence by superior force, but to bring the Arabs to a state of mind in which, for whatever reason, they will cease to resist British policy in Palestine in this violent way. "The one thing you cannot do with bayonets is to sit on them"; and, *a fortiori*, you cannot build up a Jewish national home in Palestine behind a screen of tanks. The mere repression of Arab violence will not solve our problem unless it is followed by a conversion of Arab hearts. And how are the Arabs to be converted? When the Arabs say that the Jewish immigration is ruining them economically, it is not difficult to refute their argument. For the number of Arabs who have been driven off the land as a result of Jewish land-purchase and land-settlement has been proved to be insignificant; and the Arab population is notably better off to-day in the towns and in the lowlands, upon which the Jewish immigration has been concentrated, than it is in the hill-country which the Jewish colonisation movement has scarcely touched. But these facts simply show that the Arab's grievance is political, and that what he objects to is the mandate itself. He is not content with the guarantee that "nothing shall be done which may prejudice the civil and religious rights of existing non-Jewish communities." This is not a problem which can be dealt with by a Royal Commission which is prohibited, *a priori*, from questioning the terms of the mandate.

The House Asserts Itself.—In Tuesday's debate on the Government's financial resolution for the Tithe Bill, a welcome spectacle was presented: members of all Parties—and of all shades of political opinion—combined in support of Mr Michael Beaumont's motion to report progress, as a protest against what was felt to be a "steam-roller" method of procedure on financial resolutions. In a letter in *The Times* on Monday, Sir Bryan Fell, "a long-time servant of the House of Commons," pointed out that from 1713 to 1922 (when the new Standing Order 69, passed in 1919, entered into force) the people's representatives first moved a resolution (drafted in the Bill Office) that they would at a future date debate a financial resolution, drafted under Standing Order 68 in general terms and with the Crown's recommendation. Thus, any Member was free to propose an increase in the suggested charge on the people. The House was left to decide "the amount of that charge and the precise objects on which the money should be spent." As Sir Bryan puts it: "Under the modern practice (since 1922, under S.O. 69) the King's recommendation is given to the financial resolution itself (there is no 'setting up' resolution) and therefore an amendment to increase the charge cannot be moved even in Committee on the resolution. The executive Government comes to the House and says 'take it or leave it.' That is how Mr Elliot was forced, under S.O. 69, to come to the House on Tuesday with his very detailed and controversial financial resolution for the Tithe Bill; and an impressive phalanx of indignant Members—led by Mr Michael Beaumont, and including Earl Winterton, Mr Atlee, Mr A. V. Alexander, Sir Francis Acland, Mr Turton and Mr Aneurin Bevan—put Sir John Simon's suave legalism to the test. Their efforts to get the Government to revise the procedure, so as to permit discussion of important amendments to the resolution, were unsuccessful. But we have certainly not heard the last of this matter; and it is refreshing to see some signs of life in the Commons.

* * *

A Subsidy to Capital?—The Commons on Tuesday debated another financial resolution—that which, as the essential basis of Clauses 1 and 2 of the Government's Air Navigation Bill, authorises the payment of subsidies for civil air transport not exceeding £1,500,000 in any financial year, up to December 31, 1953. Sir Philip Sassoon, the Under-Secretary for Air, made it clear that the Air Ministry allocates subsidies in the light of recommendations from the inter-departmental committee presided over by Sir Warren Fisher (the "Fisher" Committee), comprising representatives of the Treasury, Air Ministry, Foreign Office, Dominions Office, Colonial Office, Board of Trade, India Office, Post Office and Admiralty. He pointed out that, apart from the subsidies to Imperial Airways and British Airways for European traffic, the only major contract at present under detailed discussion with Imperial Airways is for the Empire routes other than the North Atlantic. That contract is expected to absorb an estimated average figure of £600,000 over the 15-year period as a whole. This compares with £570,000 which they received two years ago. Sir Philip said that Imperial Airways were greatly accelerating their Empire services, and expanding their fleet; and that they therefore needed "some security of tenure" before they could raise the necessary extra £2,000,000 of capital from the public. The Government would get 50 per cent. of profits over a stipulated (but unspecified) figure. The Opposition, led by Mr Johnston, made much of the 15 years' duration of the subsidy; and of the principle of subsidising a private corporation to this extent. Why, it was asked, should this be done simply to enable a company to raise £2,000,000 of new capital from the public at a cheap rate—and perhaps at a substantial premium—when no one had any idea at what level profits would be limited, and what the level of subsidy would be at the beginning of the 15-year period? (It was observed that the subsidy, if it was to average £600,000 per annum during 15 years, might well start off at £1,500,000 minus whatever was given to British Airways.) The Government could not even control the company's finances or dividend policy. Imperial Airways received an annual subsidy almost equivalent to its paid-up capital; and it had absorbed the whole of its last full

The Budget Inquiry.—The opening stages of the Budget inquiry were reported in last week's *Economist*, (page 356). Mr James Matheson, recalled to give evidence on Friday, stated that he rang up Sir Alfred Butt at about 10.45 a.m. on April 20th, the day before Budget day. Sir Alfred then said that he did not think there was any chance of an increase in income tax. He agreed to accept insurances against such an increase at 10 guineas. On Tuesday morning (Budget day) at about 10.45 a.m., he accepted an offer of £1,000 at £15. About ten minutes or a quarter of an hour later, Mr. Matheson said, Sir Alfred Butt rang up and was "frightfully annoyed." He said that he would not accept the risk he had agreed to take that morning. Evidence was also given on Friday by Mr B. D. Davis, a member of the Stock Exchange. Mr Davis said that he received a message from Sir Alfred Butt at about 11.45 or 12.15 on Budget day, asking him to sell various shares. He also met him at lunch that day, and Sir Alfred was quite firmly of the opinion that income tax was going up. Sir Alfred Butt then gave evidence. He said that he had been in the House of Commons since 1922, and "during the whole of that time had never asked or received from any Cabinet Minister, including Mr J. H. Thomas, any information regarding the Budget, or any other confidential matter of Government." After telephoning to Mr Matheson at about 10.45 a.m. on the morning of Budget day, he had rung up his son, who expressed the view that Sir Alfred had "backed the wrong horse" in accepting insurance against the Budget. He then rang up Mr Matheson, placed the insurances the other way, and later rang up Mr. Davis and asked him to sell shares. Sir Alfred said he next went to the House of Commons at about 11.45 a.m. to book a seat for the Budget. He then called on Mr Thomas at the Colonial Office, at about 11.50 or 12. They discussed the Derby, and other racing topics. "Nothing whatsoever" was said about the Budget. In reply to Mr Justice Porter, Sir Alfred Butt said that he decided to insure against Budget risks on his own behalf "just round about lunch-time" on Budget day. He had formed the opinion that there would be a rise in income tax partly as the result of reading an article in the *Economist*. Sir Alfred also stated that he had omitted to mention his visit to Mr J. H. Thomas in his first statement to the Treasury Solicitor because he thought it of no importance. Mr Kenneth Butt, giving evidence on Tuesday, said that the reason why he left out his father's name in his statement about the insurances to Mr W D'Ambrumenil, his principal, was that he had been instructed by his father to effect them in the name of Mr A. E. Harrison.

On Wednesday, the last day of the inquiry, after Mr J. H. Thomas had denied any knowledge of Dr Hearn and other gentlemen whose names had been mentioned in that connection, Mr J. W. Morris, K.C., Counsel for Mr J. H. Thomas, addressed the Tribunal. He said that there was no evidence against Mr Thomas, and that he was entitled to be cleared of all imputation. He also contended that Mr Leslie Thomas had no information, and was as completely innocent as his father. Mr Walter Monckton, K.C., representing Mr Alfred Bates, submitted that no leakage of information could be shown to have taken place. And Mr Walter Frampton, K.C., for Sir Alfred Butt, said that Sir Alfred had concealed nothing, and that there was no evidence to warrant the Tribunal in rejecting his oath. The public sittings of the Tribunal were concluded soon afterwards, and it is understood that its report will be presented early next week.

Oversea Trade in April.—The complete trade returns for April show that the expansion in the value of imports noted last week was spread over practically all classes of commodities. The only significant exceptions were meat and rubber. The largest increases were recorded in grain and flour (mostly maize), non-ferrous metals, raw cotton, machinery, iron and steel manufactures and vegetable oils. The volume of imports of various commodities is given in the following table:—

RETAINED IMPORTS			
Month of April			
Item and Measure	1934	1935	1936
Wheat	9,156	8,054	8,282
Beef and veal	976	974	1,033
Mutton and lamb	717	880	602
Sugar (unrefined)	2,890	2,308	3,037
Iron ore and scrap	425	429	633
Raw cotton	954	785	1,186
Sheep's and lambs' wool	565	963	741
Flax, hemp and jute	28,870	24,744	21,963
Crude petroleum	57,557	40,516	38,215
Hides, wet and dry	88	112	147
Wood pulp	172	163	204
Rubber	224	259	— 47
Unwrought copper	19,554	30,937	20,813
Pig lead	24,813	29,579	29,970
Tin			
Ore and concentrates	3,921	3,282	4,760
Blocks, ingots, slabs and bars	133	540	1,867
Iron and steel manufactures	125	63	119
Machinery	4,228	5,922	9,973

* Total imports.

The above figures reflect a rising demand from all metal-using industries. Even the fall in imports of copper has been accompanied by an increase in value, and although imports of iron and steel manufactures were lower than in April, 1934, the total figures for the first four months of the year are higher than two years ago. Our increased imports of tin have come mostly from British Malaya, our copper and nickel mostly from Canada and machinery from Germany and the United States. Imports of textiles other than cotton are not so satisfactory, even though the value of raw wool imported was higher than in 1935:—

BRITISH EXPORTS			
Month of April			
Item and Measure	1934	1935	1936
Coal	2,931	2,873	2,537
Iron and steel scrap	26,435	12,641	8,833
Pig iron and ferro alloys	15,080	20,175	9,810
Iron and steel manufactures	3,344	7,637	18,131
Wool	164	204	178
Woolen manufactures	6,393	5,281	4,031
Woolen goods	25,911	32,181	30,807
Woolen goods	10,739	11,462	11,636
Woolen goods	154	159	141
Woolen goods	3,827	4,234	4,338
Woolen goods	2,732	2,269	2,302
Woolen goods	4,538	4,549	5,174
Woolen goods	2,310	2,461	2,372
Woolen goods	7,474	8,215	7,271
Woolen goods	38,579	33,285	25,954
Woolen goods	12,887	20,442	21,249
Woolen goods	313	286	304
Woolen goods	378	661	632
Woolen goods	4,722	5,451	6,145

There was very little increase in any exports except woollen goods, railway materials and vehicles—in all cases mostly to West Africa and the British Dominions. India was largely responsible for the slump in cotton exports and also took less iron and steel manufactures than last year.

Exports of cotton goods to most European countries, on the other hand, increased. The general position is one of stagnation; for although nearly half the items given above show an increase, several are merely making good the losses of last spring. Moreover, the expansion is limited to the products of a very few industries.

Rayon Week.—Ten of the leading producers in the artificial silk industry have co-operated to make this week a National Rayon Week, with the double object of bringing this comparatively young textile to public notice and of popularising the name "rayon." The term "artificial silk" is felt to be slightly derogatory, and in any case is inexact, since rayon fabrics may have as much in common with satins, and even with linens, as with silk. This cadet of the textile family has shown remarkable expansion since the war. In 1924, production in this country amounted to 24.7 million lbs. By 1933 it had risen to 84.1 millions, and by 1935 to 123.8 millions. Figures for the early months of this year show a further increase. The chief reasons for the enormous growth in demand, particularly in the last few years, have been the great improvement in quality and the low price policy pursued by Messrs Courtaulds, the largest producers. Prices are now at about half the 1928 level. A Spartan price policy has eliminated many of the smaller firms, but has simultaneously brought rayon goods within the reach of the smallest incomes. Silk stockings and dainty underwear are no longer the privilege of the wealthy. Nor is the development of this new industry necessarily a blow to the older textile trades; for many Lancashire firms are turning successfully to the production of rayon or rayon mixture fabrics. At present about £50 millions are invested in firms making rayon yarns alone, and 36,000 men and 42,000 women are employed in the manufacture of rayon yarn and in weaving. There is every chance that this industry will show further expansion in coming years; for demand is still rising.

Iron and Steel Production.—Last month's figures afford striking testimony to the vitality of domestic demand for iron and steel materials. Production of iron and steel in April was substantially higher than a year ago; imports were nearly twice as heavy as in April, 1935, but exports were well below last year's figure:—

(In thousands of tons)				
Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929	632.4	803.0	235.2	364.9
1932	297.8	438.5	132.7	157.4
1933	344.7	585.3	80.9	160.2
1934	498.2	738.3	113.9	187.8
1935	535.5	820.2	96.0	197.7
1935—March	554.2	841.9	126.0	173.7
April	526.3	808.7	62.7	204.3
May	558.9	853.3	86.4	213.9
June	529.3	770.0	98.2	195.1
July	547.3	803.3	90.2	205.7
August	543.4	759.9	74.3	202.5
September	529.6	855.9	89.3	187.2
October	544.3	907.3	101.2	224.0
November	529.5	903.3	77.0	215.8
December	559.3	811.5	113.0	190.3
1936—January	595.5	911.7	119.9	164.8
February	584.7	938.5	123.2	167.8
March	633.6	980.1	130.3	163.4
April	629.8	991.5	120.8	177.5

Supplies of pig iron and semi-finished materials remain below demand at current prices. The analysis of the production of finished steel, given in the latest Statistical Bulletin of the British Iron and Steel Federation, provides some indication of the purposes for which increased supplies are being required. But the output of structural steel (comprising, among other things, sections, girders, joists, beams and rounds) rose from 174,400 tons in February, 1935, to 230,100 tons in February, 1936. The production of plates of a thickness of $\frac{1}{4}$ inch and over increased during the same period from 78,600 tons to 101,500 tons and that of tin, terne and blackplates from 54,600 tons to 64,900 tons. Little or no expansion occurred, however, in the production of general forgings and galvanised sheets. There are no indications that increased demand has yet reached its limit.

UNITED STATES

THE BUSINESS OUTLOOK

By the middle of May, it is usual to consider that the peak of spring activity has passed, and to expect some seasonal recession into midsummer. Ordinarily, these seasonal fluctuations would scarcely be worth notice, but the violence of the short-term swings of recent years has made American observers extremely sensitive to the movements of weekly statistical series. There has been widespread comment on the probability of the usual seasonal movement this year, but so far it is supported by only a shadow of evidence. Probably the most convincing is the recession of steel activity from its end of April rate of 70 per cent. to last week's 68 per cent., especially as this has been accompanied by weakness in the scrap metal market.

There are several reasons for disputing the seasonal expectation this year. The United States' economy remains a consumer goods economy amplified by the liberal use of consumer credit. The bonus payments are expected after June 15th, and it may be supposed that many veterans will not merely spend their Bonus money, but will use it as the "down payment" on some item to be paid for in instalments. It is therefore easy to visualise this payment as setting in motion forces quite strong enough to offset seasonal influences.

There is more reason to express disappointment over the failure of building to realise earlier hopes. The sluggishness of building could be explained through March by adverse weather, but this explanation is not now valid. Non-residential building (except on Government account) has not materialised; and residential building, although as good as or better than last year, has not shown the increase for which many well-informed persons had hoped. The result is that business continues to run on a level similar to the last half of 1935, without showing decided gains.

Since the end of March, the Reserve System has reversed its previous policy, and has been rebuilding the reserve balances of the member banks.

FEDERAL RESERVE BANKS ITEMS

	(\$000,000)		
	March 25	May 6	Change
Gold stock	10,177	10,248	+ 71
Gold certificates	7,666	7,703	+ 37
Treasury balances	1,147	622	- 525
Member Bank reserves	5,059	5,532	+ 473
Money in circulation	5,837	5,912	+ 75

Gold imports, which were negligible in February and March, were resumed in April; but the principal augmentation of member bank balances has come from the release of Treasury balances impounded in March. The continued increase in the note circulation may be remarked in passing; it is now \$416 million above last year, and except for the period just before the bank holiday, at an unusually high level—much above the average of the 20's. Probably the simplest explanations are most nearly correct—that it is the consequence of larger pay-rolls and employment; but it is believed that a substantial amount of American currency has been taken to Europe for hoarding.

The Congressional Session slowly drags on to its adjournment. Compared to sessions of recent years it has been uneventful, except for the Bonus, and the Farm Act (Soil Conservation Act). The tax bill has encountered the expected and diverse difficulties in the Senate, after passing the House without debate; but the Senate opposition has developed only one argument not obvious on the first glance. This is to the effect that while the new taxes would produce little more revenue than the existing schedules, given the expected increase in business, the

old schedules might produce the required additional revenue. The only other item on the calendar is the supplementary relief appropriation, which will probably go through with only nominal opposition. As the Republican National Convention will convene on June 9th, it is expected that Congress will have adjourned by that date.

The Presidential primaries have so far aroused only local interest, if any. As a rule, the President has been unopposed in the Democratic primaries; while Governor Landon of Kansas is leading in the Republican, without, however, receiving enough delegates as yet to insure his nomination. Betting odds, which in elections are taken very seriously in Wall Street, heavily favour Mr Roosevelt's re-election.

LESS THAN 2,000,000 INDUSTRIAL UNEMPLOYED

From present indications, it would appear that unemployment would occupy in the campaign the dominant place held by farm distress in the campaign of 1932. The Farm Programme may be, in its present form, only an expedient—Mr Wallace himself hardly gives it a higher rating; but there can be no doubt that the so-called farm problem is quieter now than it has been for many years. On the other hand, urban unemployment, which was given a decidedly minor emphasis in 1932, is now a burning question. Yet no dependable figures of unemployment exist; nor are the relief figures of much help. Some of the larger relief rolls are to be found in non-industrial areas; and in some States the present numbers of persons employed in industry appear to be at peak levels, with the relief rolls recruited from ex-agricultural, or casual labour. The *New York Evening Sun* has conducted a survey, on the basis of 51,000,000 estimated employables, of whom about 30,100,000 would be included under trades other than agriculture, domestic service and the professions. Of these 30,100,000, only about 16,600,000 would, it is estimated, be employed in industry, even in conditions of "full" employment. The actual computed figure of industrial employment at the moment is about 14,900,000. On this basis, the number of industrial unemployed is put at less than 2,000,000. Unemployment in transport alone is estimated to be actually almost as great, and proportionately much greater. As the unemployment problem is analysed, the alleged paradox of the contrast between the production index and the relief rolls completely disappears, and with it goes the convenient allegation that men have been replaced by machines.

The Census Bureau has published an interim estimate of the population, giving a figure of 127,500,000 as on July 1, 1935. This would represent an increase of under 5,000,000 in five years, or of 3.9 per cent. The rapid decline in the rate of population growth from the long-time assumed "normal" of 3 per cent. a year, to about $\frac{1}{2}$ per cent. a year, has been accompanied by remarkable shifts of population. It is believed that some eleven States have actually lost population—Arizona, California, Kansas, Michigan, Mississippi, Montana, Nebraska, New Mexico, Rhode Island, South Dakota, and Wisconsin. There is a seeming significance in this grouping. Arizona, New Mexico, Kansas, Nebraska, Montana and South Dakota have been affected by the sustained succession of droughts during the period, and in passing, it may be remarked that drought again in the south-west this year has materially reduced earlier expectations of the wheat crop. The greatest increase was, of course, shown by the District of Columbia—22 per cent. But Georgia and South Carolina both indicate gains of about 15 per cent., probably reflecting the industrialisation of those States—and perhaps forming the counterpart to Rhode Island's loss of population. New York, the most populous State, was credited with 12,889,000, a nominal increase; and Pennsylvania, next, with 10,066,000.

NEW YORK, May 12.

FRANCE

M. BLUM AND M. HERRIOT

THE task of M. Léon Blum is not easy. As soon as the General Election was over, it became apparent that the "Popular Front's" platform was no Governmental programme. The Radicals will participate in the new Cabinet, but will act as a brake; while the driving power will be the Communists and the Confédération Générale du Travail, both of whom refuse to take any responsibility by accepting a portfolio in the Cabinet.

M. Blum is perhaps really in favour of devaluation, but he will go forward as a staunch supporter of the present parity of the franc, because the Communists declare that the "defence of the franc" is the defence of the working classes. But the maintenance of the present gold parity necessitates confidence, all the more so as the "Popular Front" promise to launch large-scale public works to be financed by the State. "We will act in the frame of the capitalist system," M. Blum says. But the Communists are still calling for heavy taxation on the rich, and the C.G.T. contends that it is possible to obtain money by public loans. The C.G.T. wants an immediate loan from the Bank of France. It also desires to nationalise the armaments, insurance and banking industries to begin with, and to demand a 40-hour week without a reduction of wages. The franc and French securities are, consequently, again falling.

But in so far as these demands of the revolutionaries are provoking uneasiness among the rentier classes, M. Blum will be forced to decide on a gold embargo or on the control of the exchanges, which implies the control of the banks, of foreign trade, etc. But the difficulty then will be that the Radicals, the party of political and economic Liberalism, and even the Left-Wing Radicals, who since the crisis have been supporting a so-called "managed economy," are declaring themselves against any copy of German or Italian methods. "No autarky, no exceptional tax on capital, no systematic nationalisation," says M. Daladier, who will represent the Radical-Socialist Party in the Cabinet. And M. Blum, in his speech before the American Club, emphasised his hope of contributing to the removal of Customs and quota restrictions, of international monetary disorder, etc.

The Radicals declare that they will not go beyond the platform of the "Réassemblément Populaire," which was the minimum programme on which the country voted. M. Daladier is already putting on the brake, and M. Herriot, the leader of the Right-Wing Radicals, pressed by M. Blum to accept the Ministry of Foreign Affairs, is very reluctant. M. Herriot would certainly be pleased with this portfolio; his participation in the Cabinet would appear to capitalists as a welcome safeguard; and he would have the full support of the Communists. For M. Herriot is the principal architect of the Franco-Soviet Pact. But he is afraid to enter an anti-deflationist Cabinet, which would inscribe in its programme the full suppression of the Laval decree-laws, which he defended in former Cabinets and more recently during his electoral campaign.

CONFLICTS ON THE LEFT

Information of the Blum Cabinet is thus provoking a conflict: one, between the trade unions and the Left parties; and another between the believers in "peace" and the supporters of restrictionist measures. This disorder is already stirring among the leaders of the "Popular Front," while the Conservatives are flattering M. Blum, and M. Sarraut's Government is doing its best, with the aid of private financial interests, to maintain the markets against panic and speculation.

The great dilemma between autarky or freer trade emerges at a time when the French economy is at the cross-roads. On the one hand is the road of devaluation and the chance of freer international trade opened up by the conclusion of the Franco-American Commercial Treaty; and on the other hand is the road to autarky, which the internal

rise of prices and the increasing import surplus might necessitate if the gold parity of the franc is to be maintained.

At the moment, however, the rise in prices is stimulating an increase in fiscal receipts, in particular of the turnover tax, which produced 540 million francs in April, or 43 millions more than in April, 1935, and 15 millions more than the estimates. But rising prices are simultaneously leading to an increase in imports and the import surplus. Imports in April were nearly 1,000 millions higher than exports; and exports are steadily decreasing in value, if increasing in volume:—

	First four months of 1935	First four months of 1936 ('000 francs)	Change
Imports:			
Foodstuffs.....	2,091,026	2,452,912	+ 361,886
Raw materials	3,768,831	4,479,055	+ 710,224
Manufactured goods.....	1,247,592	1,222,523	— 25,069
Total	7,107,449	8,154,490	+1,047,041
Exports:			
Foodstuffs.....	828,943	738,427	— 90,516
Raw materials	1,493,807	1,375,620	— 118,187
Manufactured goods.....	3,074,954	2,757,146	— 317,808
Total	5,397,704	4,871,193	— 526,511
Import surplus	1,709,745	3,283,297	+1,573,552

How will the Blum Cabinet reconcile the maintenance of the present parity of the franc with the suppression of the decree-laws and the launching of large-scale public works? And how will it reconcile the trend towards an internal revival of business with the needs of the export industries?

PARIS, May 21.

GERMANY

DR. SCHACHT AND DEVALUATION

THE intrigues against Dr. Schacht seem for the moment to have failed. Apparently the Minister of War, General Blomberg, who is one of the major claimants for foreign exchange, was invoked as an intermediary either by General Göring or by Dr. Schacht himself; and the anti-Schacht campaign has been suspended on the ground of re-armament exigencies and, because, as the word goes round, no scandal or conflict is desirable until after the Olympic Games. Dr. Schacht, however, is believed not to have been entirely satisfied; and his friends continue to circulate stories of his enemies' pin-pricks and usurpations, affirming that one party magnate who is prominent in Herr Hitler's entourage has for months past been arbitrarily describing himself as Commissioner for Raw Materials. In particular, Herr Keppler, who is one of Herr Hitler's intimates, and Dr. Schacht, seem to have nothing in common, except the conviction that each is destined to save Germany; a point on which well-informed persons mostly side with Dr. Schacht.

The subsiding of the quarrel did not check the purchase of industrial shares as (supposedly) devaluation-proof investments, but it seems to have been the cause of the very active buying of loans and bonds witnessed last week for the first time for many months. Some authorities think that the "flight into real values," which the boom in industrial shares represents, has been too hasty, and that Reichsmark devaluation, though certain if Dr. Schacht falls, and probable if ever international exchange stabilisation is achieved, is not imminent. The present system of exchange regulation makes involuntary automatic depreciation of the currency impossible. The mark's present nominal stability at full gold value in no wise depends upon the dimensions of the Reichsbank's reserves. The small reserve which is nevertheless necessary for covering temporary payment deficits can easily be maintained by applying the New Plan to reduce imports. This export subsidy system, it follows, must be continued, though the funds for it are not yet visible. Intentional devaluation of the mark, which the public sometimes confuses with involuntary depreciation, could not be put through summarily and easily, as it has been in countries with free international movement of

SWEDEN

PUBLIC OPINION AND THE LEAGUE.

THE final collapse of the Ethiopian defence and the failure of the League to protect one of its member States against unprovoked attack by a militarily superior power have given rise in Sweden to an agitation in favour of abandoning the League. The conviction is growing that the League is incapable of being any substantial help should Sweden become the victim of an aggression; but that, on the other hand, the League might force Sweden some day into a policy contrary to her traditional neutrality. A referendum for and against Sweden's adherence to the League, organised by a big Conservative Swedish newspaper, gave a 95 per cent. majority in favour of withdrawal. Although it is not probable that at the present moment the Swedish Government would undertake such a step unless the other northern countries did the same, the feeling against the League is certainly growing in strength. The British Government's attitude towards possible changes in the status of the League will certainly influence the Scandinavian countries' decision.

A group of Swedish export industries, among them particularly the Ball Bearing S.K.F. and the General Electric A.S.E.A., have lately tried to obtain promises for a 60 per cent. State guarantee for export credits to Soviet Russia to an amount of Kr. 30 millions. Though the Labour Government would certainly not have been disinclined in principle to submit a proposition to that end to the Riksdag, general sentiment has proved in advance to be adverse to such a State interference in favour of a few industries which are already working to full capacity; and it does not seem probable that the Government will take the risk of a refusal in the Riksdag.

LOANS TO DENMARK AND NORWAY

During recent weeks two large foreign loans have been floated in Sweden: a 3½ per cent. bond loan of Kr. 20 millions for the Norwegian Royal Mortgage Bank guaranteed by the State of Norway, and a *tranche* of Kr. 20 millions in a 4 per cent. Danish State Loan. The Svenska Handelsbanken, which headed the inter-Scandinavian banking group that issued the Danish loan, has granted, together with the Skandinaviska Kreditaktiebolaget, a short-term credit of Kr. 15 millions to the Danish Government. Whereas the Norwegian loan has not yet been fully placed, the Danish loan was subscribed in a few hours.

Despite these loans, the money market still continues easy, and public deposits at the joint-stock banks have further increased during March from Kr. 3,723 millions to Kr. 3,764 millions. In connection with the prevailing liveliness in industry and trade, advances and bills discounted have also increased. Total advances at the end of March amounted to Kr. 3,882 millions, compared with Kr. 3,845 millions at the end of February. The Bank of Sweden's and the joint-stock banks' total holdings of foreign currencies and gold amounted on March 31st to Kr. 1,360.1 millions, compared with Kr. 1,554.8 millions on February 29th.

Foreign trade in March was again at a high level. Imports were valued at Kr. 126 millions, compared with Kr. 111 millions in March, 1935, and exports at Kr. 94 millions, compared with Kr. 82 millions in March, 1935. The increase in imports was largely due to an increase in imports of raw materials, particularly for the textile industry. Owing to improved conditions in Swedish agriculture, imports of fertilisers have also increased. Sales of pulp were brisk during March, but timber sales did not maintain the firmness of the first two months of the year.

ids and free foreign trade. Obstacles and causes of delay in the debt service and clearing agreements, the system of port regulation, the internal control of raw materials, and, most of all, price conditions; for the present State regulation of prices would be dislocated by devaluation.

The steel syndicates' reports for April are, in general, favourable, and refer to increasing export orders. The trade press expresses scepticism about the success of the reported British attempt to bring the United States into the International Steel Cartel. Pig-iron output in April was 210,800 tons against 1,250,600 tons in March, the *per ton* output being practically unchanged. The textiles industry is somewhat livelier; but there are continued complaints about inferior and expensive cotton bought from some of the exporting countries which have partly supplanted the United States under the New Plan.

SHIPPING RATIONALISATION

The Viag (Vereinigte Industrie-Unternehmungen A.G., Berlin), the Reich's holding concern for nineteen industrial, raw material and banking companies, has declared an unchanged dividend of 6 per cent., and reports that its industrial companies were last year almost fully occupied. The Hamburg-America and North-German Lloyd companies have issued reports and balance sheets showing their position after the administrative and financial reorganisations. The former consisted essentially in loosening the dual-concern structure and eliminating certain services and anticipations, e.g. the transfer of the services to the east coast of South America to the Hamburg-South America Company and the African services to the African companies, as well as the establishment of the independence of the relevant services. The financial reconstruction has involved reduction of the debts of Hapag by Rm. 92 millions and of North-German by Rm. 65 millions. The new capitalisation is in each case Rm. 45 millions. Although the new reserves are in part specially designed for the contingency of further operating losses, the reconstructed companies are believed to have chances of paying their way in future.

The export surplus declined in April to Rm. 5 millions, compared with an export surplus of Rm. 24 millions in March and an import surplus of Rm. 19 millions in April, 1935. As compared with March, imports increased, while exports, under seasonal influences, declined.

	March	April	Jan.-Apr.
	Millions of marks		
<i>Imports</i>

Total	378.9	365.5	1,499.7

The Financial Secretary of State, Herr Reinhardt, states that tax revenue in 1936-37 must increase by at least Rm. 1,000 millions, and he expects a still greater increase. A debt return for all municipalities with over 10,000 inhabitants (not including the Hansa cities) for September 30, 1935, shows a total of Rm. 9,819 millions, as against Rm. 9,876 millions on March 31, 1935. Their foreign debts declined from Rm. 423 to Rm. 405 millions. Money has been very plentiful this week. The market discount rate has been reduced by ½ to 2½ per cent., and there have been heavy sales of Gold Discount Bank promissory notes.

BERLIN, May 20.

Employment further improved in March; and the number of unemployed decreased from 58,000 at the end of February to 53,000 at the end of March, compared with 83,000 in March, 1935. There was a growing demand for agricultural workers, as well as for skilled workers in the metal and machine industries.

STOCKHOLM, May 19.

AUSTRIA

THE FALL IN UNEMPLOYMENT

AN accurate survey of the development of the Austrian labour market cannot be confined to a comparison of the number of unemployed receiving benefit; for various administrative changes affect the figures. When, as lately, 282,000 unemployed were reported as receiving benefit, against 298,000 last year, the mere fact of an improvement was beyond doubt, but not the extent of the improvement. To illustrate this, one may give the following figures, recently published:—

	1935	1936
Insured against unemployment	678,000	719,000
Applicants for work	422,000	416,000
Applicants for work in Vienna	197,000	194,000
Old-age pensioners	89,000	92,000
Applicants per 100 vacant positions	231	192
Registered unemployed in:—		
Building	104,000	108,000
Metal industry	3,900	3,600
Ironware	32,000	28,000
Machine industry	17,000	14,000
Electricity industry	6,100	6,200
Timber industry	24,800	24,000
Clothing industry	28,000	26,000
Printing trade	7,600	7,200
Chemical industry	7,600	7,400
Commerce	23,000	22,000

In fact, the number of employed has increased to a greater extent than unemployment has decreased. Apart from the building trade, there is no marked decline in activity. Moreover, recent statements made by the Federal Chancellor promise increased activity in building.

The timber industry, however, is still depressed. Timber is the most important Austrian export, but, except in the case of Italy, sales turnovers have nowhere improved. The preference agreement, which was arranged with France after great effort, has brought practically no result. As timber is the principal commodity in the economy of the Austrian Alpine countries, every effort towards agreements designed to promote Austrian economic conditions is necessarily concerned with the marketing of Austrian timber.

Foreign trade is expanding steadily; and efforts are not being confined to expanding exports. The principal stress is being laid upon stimulating the general volume of foreign trade. Imports in March amounted to 113 million schillings, against 96 millions last year; and exports rose from 82 million schillings to 90 million schillings. It is said, however, that a list of import prohibitions will shortly be prepared, among which certain kinds of yarn will figure prominently, and that several increases in Customs duties will be decreed.

BETTER BUDGET POSITION

At its recent session in Geneva the Financial Committee of the League commended Austria's financial and currency policy. Since the Budgetary reform of December, 1935, the Austrian State finances have been greatly consolidated, thanks not only to measures of retrenchment and other fiscal changes, but in a still greater degree to economic recovery, which has at last led to a marked increase in tax revenues.

The February figures of the public revenue showed the following increases:—

(Million schillings)	1935	1936
Total revenue from Federal taxes	79	93
Yield of tax on earnings	1.71	1.96
Yield of employers' income tax	2.35	3.20
Customs revenue	14.2	13.9

The rise in the total of tax revenue is very considerable, and from reliable estimates it appears that State revenue in March and April was also higher than last year. The rise is due almost exclusively to better yields, since there has been no increase of taxation rates since last year. Customs revenue, however, has gone down, apparently owing to reductions in tariffs. Efforts to keep prices steady and to compensate possible rises in world markets mean that from time to time import quotas are modified (especially in the case of grain).

Austria has won praise not only from the Financial Committee of the League of Nations, but also from the Bank for International Settlements. In the report of the B.I.S. it was pointed out that Austria is marching at the head of those countries which have largely removed restrictions on international capital movements. The stability of the devalued Austrian schilling is beyond question. Holdings of foreign assets at the Austrian National Bank, which at the beginning of the year were diminished by 38 million schillings on account of payments connected with the live claims of the Credit-Anstalt, have again gone up from 73 million schillings to 84 million schillings.

VIENNA, May 20.

INDIA

LORD LINLITHGOW AND THE RYOT

IMMEDIATELY on his arrival in India Lord Linlithgow struck a note that will be the chief one during his whole term of office, namely consideration for the lot of the ryot. Shortly after his arrival in Delhi he announced the purchase of two bulls of the best breed, which he was going to maintain at his own expense and which would be available to the farmers round Delhi for breeding purposes. Lord Linlithgow has asked that Indian gentlemen should follow his example and maintain bulls throughout India.

It has long been a practice among Hindus to purchase bulls of good quality and set them at large for breeding. But continuous check over the breeding is not maintained; so that the stock soon deteriorates, not only for that reason but also because of excessive in-breeding. There are, accordingly, in India herds of cattle quite useless either for work at the plough or for milking. Under the Viceroy's plan records will be kept of cattle and their progeny.

A Select Committee of the Legislative Assembly is to examine the voluminous amendment of the Indian Companies Act introduced by the Government. An amendment of the Act has been demanded for many years, particularly because of the abuses that have crept into the managing agency system, which is peculiar in India. One of these abuses is the investment of surplus funds of one concern in another concern which is in a weak condition. There have also been cases where agents have turned their loan to the company into debentures so that the shareholders have lost their capital and the concerns have passed as their own property into the agents' hands. The methods of remuneration of managing agents have also varied. Sometimes they are paid by a commission on production, sometimes by a commission on sales and sometimes by a commission on profits. The last is, of course, the only satisfactory method.

One of the vital amendments of the Companies Act states that the remuneration of a managing agent shall be a sum based on a fixed percentage of the net annual profits of the company, with provision for a minimum payment in the absence of profits. The doubtful methods by which those profits have in some instances been calculated in managing agency agreements justify the definition of net profits in the new Bill. Some agency agreements are virtually interminable, no matter how unsatisfactory the agency conduct of the business may be. The new Bill states that no managing agent after the passing of the amended Act shall be appointed to hold office for more than twenty years at a time. In the case of managing agencies existing prior to the passing of the amended Act, the agents shall cease to hold office for twenty years subsequently.

DESCENDANTS OF THE THUGS

The Deputy Inspector-General of Police in the Central Provinces has recently produced a small monograph on criminal tribes of the Provinces which gives interesting details of their methods of operation. All these tribes take professional pride in the efficient conduct of their misdeeds. The Baoris, perhaps the most numerous of the criminal tribes, specialise in the following exploits: dacoity, robbery, burglary, the removal of ornaments from the persons of sleeping women and children, thefts from bungalows, carts and tents, and sheep-lifting. Their ostensible occupations are begging, selling indigenous drugs and medicines, and snaring birds and deer.

The ancestors of the present criminal tribes in the Central Provinces were the Pindaris and Thugs. The former were gangs of nomadic marauders who swept over Central India and the Deccan from 1700 onwards, and the second were professional murderers who used the typical roomal or handkerchief to strangle their victims. Thuggee was finally stamped out as late as 1848 after a concerted military and police campaign. But its aftermath is to be found in the existence of these criminal tribes, although not all of them are descendants of the Thugs. Dr. Hutton in his *Census Report* of 1931 hazards the theory that the tribes have taken to their predatory mode of life in regions where conditions have been unsettled for centuries and thus unfavourable to peaceable avocations.

BOMBAY, May 1.

AUSTRALIA

NEW LOANS FROM LONDON?

REPORTS from London about the possibility of floating an Australian loan there have met with an unfavourable reception. In view of the results of the former policy of borrowing and spending by Governments, a resumption of external borrowing would simply be calculated to lead to fresh difficulty in the future. The public debts are already heavy. The total at December 31, 1935, for the Commonwealth and States was £1,255,154,470, or an increase of £151,126,348 in the 6½ years since June 30, 1929. The conversions in London, the suspension of interest and sinking fund payments to the British Government, and the 1931 reduction of interest on internal debts have assisted in the improvement in Australian finances; but two influences in the opposite direction are, first, the effect of the depreciation of the currency in increasing the amount (in Australian currency) required for the external debt service, and, secondly, the increase in the annual interest on internal debt caused by continued fresh local borrowing.

The growth of the debts and the weight of taxation, in addition to the recent hardening of interest rates, are affecting business anticipations about the terms of the new internal loan to be considered at the early meeting of the Loan Council. In addition, the competition of Governments against private enterprise for available supplies of money is felt in a greater degree than before the revival in trade.

There is a certain agitation among some taxpayers in favour of a reduction of taxation, especially of those forms which were imposed as emergency taxes a few years ago. The reply of the Commonwealth Government in the first place is that there is no room for reducing taxation in view of the scale of expenditure. This reply provokes much criticism, and the Government has intimated that some reduction may be possible in 1936-37. Against this, however, an increase in defence expenditure has since been foreshadowed, and the outlook for the taxpayers is still uncertain. The Labour Party is opposed to any reduction in taxation, and is in favour of maintaining expenditure.

The quarterly average returns to March 31st of the trading banks show advances within Australia as £258,563,887, or an increase of £9,167,477 as compared with a year ago, against an increase of only £425,158 in Australian deposits, which are now £293,401,192. The latter item includes

NATIONAL BANK OF GREECE

time deposits at £178,865,782, which show a decrease of £8,168,472. Current accounts show an increase of £8,593,630.

MELBOURNE, May 1.

LETTER TO THE EDITOR

A MYTH ABOUT ITALY

TO THE EDITOR OF THE ECONOMIST

SIR,—A curious myth about Italy has arisen in this country and got into a certain degree of circulation: that the population of Italy is "rapidly increasing." Possibly this is intended as condoning or excusing the attack on Abyssinia.

A brief reference to the current issue of the "Statesman's Year Book" gives details of births in Italy for five years. Analysed by the Index Number—a modern Bed of Procrustes—these figures would work out as follows:—

ITALY, 1930-1934

LEGITIMATE LIVE BIRTHS (1,037,988 = 100)

1930	100.0
1931	98.8
1932	90.5
1933	91.1
1934	80.2

How the population of any specified area with such a record could possibly be rapidly increasing might well—I would submit—puzzle the experts at Washington. But, after all five years is a comparatively short period in the history of a nation.

Let us then go back for five years and start with 1881 (This would comfortably include Adowa, Caporetto, the subsequent Spanish influenza, and the rise of Fascism. As regards this island, the losses in the E. and the epidemic of influenza would be included.)

Comparing the Peninsula of many attractions with Great Britain, one finds that in 1881 the population of the two areas was approximately equal, but Italy has increased its total by about 53 per cent. and this country has increased by about 50 per cent. Now, no intelligent person who has examined the Preliminary Report of the recent census of England and Wales could say much about a rapid increase, except in some very limited area and for a much restricted period of time.

Might I now look at the problem from a different angle and consider that the Index Numbers above represent the gross receipts of a large trading concern with fifty or sixty branches? In such an awkward situation one could easily think of a shareholder murmuring to himself or his friends "How much better it would have been if Mr Manager had overhauled some of the less profitable branches instead of launching forth into adventure overseas and actually negotiating for a costly estate in the Balearic Islands. This more especially as we do not seem to have very definite information about what produce we might import from that quarter that would be of advantage in our business at home."

Your obedient servant,

LONDON, W.1

NE PLUS ULTRA.

BOOKS AND PUBLICATIONS

THE ROLE OF THE STATE*

Thirty years ago liberty was still regarded as the main goal of political and social activity. Since then ideas have so changed that in the twentieth century security has come to be emphasised more strongly even than liberty. This book is an admirable description of the main causes of this change. The author takes as her starting point the social changes of the 'eighties and 'nineties, when the seeds of the early twentieth century social legislation were being sown. The origins of the various reform movements are well summarised in the first chapter.

The next three chapters describe legislation affecting old age, low wages, accidents, sickness and orphanhood. Looking back over the period, one is most forcibly impressed by the remarkable change in ideas about the relation of the individual to society. How little is heard to-day of the moral advantages of "self help" in the sense used by the Charity Organisation Society? And yet it is well to remember that thirty years ago it was often the most "charitable" persons who were the most reactionary. The section on trade boards and the regulation of sweating is particularly interesting, though one has the feeling that the author has carried her optimism a little too far. Homework in the tailoring and millinery trades has undoubtedly been reduced; but is it correct to say that in the latter "the miserable sweated worker has disappeared"? Even to-day employers can force their workers to work eight or more hours a day *plus* overtime, and in addition make them take home further work. Nevertheless, even in these trades there has been a remarkable improvement.

About unemployment ideas have undergone an even more significant change. The author expresses this aptly: "For the nineteenth century the problem was not that of unemployment but of the 'unemployed.'" The modern attitude is illustrated by the common distinction between public works as a corrective of the trade cycle and pure relief works. The latter are based on the recognition that unemployment is in some degree a social phenomenon; but the former go even further, since they imply the possibility of conscious social control over economic forces.

The history of unemployment legislation is told very fully by the author, and this part of the book will be especially valuable. The conclusions are moderate and well-balanced; and full weight is given to the feelings and emotions of the workers themselves, which are so often neglected in the findings of Royal Commissions. Thus one of the reasons given for the opposition to the Means Test is that the poor are not regarded as equals by members of public assistance committees. So long as this feeling remains, the fear of the stigma of pauperism is likely to continue.

In the last chapter some tentative estimates are given of the addition to wages made by the social services. In 1930 national and local expenditures on social services amounted to 18 per cent. of the total wages bill. On the other hand, indirect taxation falls heavily on the working classes; so that the net result is not as favourable to them as is commonly supposed. In fact, once again the author's optimism has carried her too far. The recent decrease in expenditure on social services (due partly to the decrease in unemployment) and the increase in indirect taxation has made the position to-day differ considerably from that of 1931, when redistributive taxation reached its peak. Public opinion is more concerned now than ever before with the standard of life of the people; but when one looks at this year's Budget, the outlook is not too encouraging.

SHORTER NOTICES

"The History of Milk Prices." By Ruth Cohen. Agricultural Economics Research Institute, Oxford. 205 pages. 5s.

Miss Cohen is to be commended for this extremely thorough study of the factors determining supplies and prices of milk and its principal derivatives. The four main sections of the work correspond to the main changes in the organisation of the industry—pre-war individualism, war-time control, partial organisation in post-war years and, finally, the period of organised marketing since 1933.

"The State and the Standard of Living." By Gertrude Lams. P. S. King and Son, Ltd. 354 pages. 12s. 6d.

"Economic Control. The Experiment of Belgium." By Charles Roger. With a Preface by Paul van Zeeland. The Catholic Social Guild. 80 pages. 1s.

"Planned Socialism. The plan du travail of the Belgian Labour Party." Drawn up and Explained by Henry de Man. Translated and Edited by G. D. H. Cole. New Fabian Research Bureau and Gollancz. 40 pages. 1s.

To-morrow Belgium will vote its approval or disapproval of the notable economic experiment carried out by the van Zeeland Government in the past year. This experiment is described and discussed in M. Roger's excellent pamphlet. M. Roger shows how Belgium, like Holland and France to-day, was faced throughout 1934 with the dilemma of adhering to a deflationary gold *bloc* which only covers 20 per cent. of world trade, or of joining the sterling *bloc* which covers 80 per cent. of world trade. And he records the remarkable recovery which Belgium has experienced since the devaluation of March, 1935, as well as the simultaneous persistence of the depression in Holland and France. M. Roger admits that the devaluation policy necessitated a certain extension of Government control over finance and industry, but he argues that M. van Zeeland's policy, unlike President Roosevelt's, only adopted "planning" in so far as it was necessary to execute a rational monetary policy.

M. Roger, in fact, writing from the Catholic point of view, only wishes to "plan" monetary policy and not the whole economic mechanism. M. de Man, the Socialist leader, on the other hand, in the second of these pamphlets, advocates a far-reaching control of prices and profits, as well as the nationalisation of certain key industries. M. du Man's "plan" was originally devised in 1934 as a method of curing the depression, and not merely correcting inequalities of income. There is much force in M. Roger's claim that the first of these aims has actually been achieved by M. van Zeeland's policy of controlled devaluation and limited "planning." At any rate, the Belgian Labour Party, in joining the van Zeeland Government, clearly performed a great service to the working classes in Belgium. For since that time unemployment has been reduced by over 40 per cent.

BOOKS RECEIVED

Monetary Policy and Crises. A Study of Swedish Experience. By Brinley Thomas. Preface by Dr Hugh Dalton. (London). G. Routledge and Sons. 247 pages. 7s. 6d. net.

An American Experiment. By Hugh Jones and E. A. Radice. (London) H. Milford. 296 pages. 6s. net.

Le Finanze dei Comuni, delle Provincie e degli Enti Corporativi. By F. A. Rëpaci. (Turin) Giulio Einaudi, Editore. 331 pages. L. 40.

This is a complementary volume to Professor Rëpaci's former volume on Italian finance on the two decades 1913 to 1932, comprising a study of the finances of the communes, provinces and corporative bodies of Italy.

L'Option de Change et l'Option de Place. By F. Seignol. (Paris) Recueil Sirey. 332 pages. 30 frs.

MONEY AND BANKING

BRITAIN'S GOLD RESERVE

FOR nearly five years the pound sterling has been divorced from gold. The Bank of England's obligation to sell gold is suspended, and the Bank is bound to buy gold only at a price which to-day no sane person would accept. Gold movements designed to correct exchange fluctuations no longer take place automatically, but solely on the initiative of the British authorities. Such movements no longer directly affect the Bank of England's monetary gold stocks. Instead they pass into or out of the Exchange Equalisation Account, and each fresh influx of foreign funds into the British banking system is offset not by a rise in bank cash, but by an increase in bank short loans and discounts. No longer do we think in terms of gold, but in terms of sterling; and "gold" prices of commodities, a favourite term on the Continent, has no obvious meaning for us.

We cannot, however, be wholly indifferent to changes either in the total supply or the distribution of the world's monetary gold, for these changes intimately affect the fortunes of countries with whom we are in the closest contact. The French gold losses of the past year are an obvious case in point. A fact less well known but equally true is the close connection between the huge gold stocks of the United States and the excess reserves of her member banks—for it is gold, and not Government securities, which has called these reserves into existence. Thus the section of the sixth report of the Bank for International Settlements (issued this month), which deals with world supplies and movements of gold, is of primary interest to Great Britain as well as to those countries still on the gold standard.

In 1935 the world's gold production reached a new high record of 30.7 million ounces, valued by the B.I.S. at 3,287 million Swiss francs (Sw.Frs.15 = £1 approximately). South Africa, with 10.8 million ounces, comes first, but Russia has taken second place with 7.4 million ounces, while Canada, with 3.3 million ounces, has nearly caught the United States (3.6 million ounces). Other countries account for 7.4 million ounces. Disharding by India and the Far East accounted in 1935 for only Sw.Frs.572 millions, i.e. considerably less than the Sw.Frs.1,191 millions of 1932 and the Sw.Frs.830 millions of 1933 and 1934. Altogether, allowing for an industrial consumption of about Sw.Frs.160 millions, newly mined and disharded gold together added Sw.Frs.3,700 millions to the world's available monetary stocks last year.

Where has this gold gone? About Sw.Frs.1,700 millions has passed into the visible stocks of central banks and Treasuries. Its distribution, however, as the following table shows, has been most irregular, and some countries, in fact, have been heavy losers:—

GOLD RESERVES IN CENTRAL BANKS AND TREASURIES
(In millions of Swiss francs)

	End 1934	End 1935	March 31, 1936	Gain (+) or Loss (—)	
				During 1935	During 1st quarter 1936
France.....	16,675	13,455	12,978	— 3,220	— 477
Italy.....	1,585	826	—	— 759	—
Switzerland.....	1,910	1,389	1,509	— 521	+ 120
Holland.....	1,754	1,340	1,487	— 414	+ 147
Belgium.....	1,837	1,857	1,733	— 20	— 124
Poland.....	283	258	248	— 35	— 10
United Kingdom.....	4,850	5,046	5,066	+ 196	+ 20
United States.....	25,216	30,992	31,176	+ 5,776	+ 184
Other Countries.....	13,180	13,837	12,277	+ 657	— 1,560
Total.....	67,300	69,000	67,300	+ 1,700	— 1,700

* Undisclosed

Both in 1935 and the first quarter of 1936, the main loser was France, and the chief gainer was the United States. The Swiss and Dutch authorities recovered during the first quarter of 1936 part of their 1935 gold losses. The 1935 change in the holdings of other countries was insignificant. The sharp decline in the total during 1936 ("other countries") arises from a redistribution of Russia's gold

stocks on the revaluation of the rouble. The explanation probably lies in a transfer from the State Bank's visible stocks to the Finance Commissariat's stocks, which are undisclosed.

More recent returns reveal a partial continuation of the first quarter's movements:—

	Sw. Frs. millions	
	Latest Stocks	Change since March 31, 1936
France (May 8th).....	11,800	— 1,178
Switzerland (May 7th).....	1,516	+ 7
Holland (May 11th).....	1,452	+ 35
Belgium (May 7th).....	1,820	+ 87
Poland (April 30th).....	221	— 27
United Kingdom (May 13th)....	5,170	+ 104
United States (May 13th).....	31,800	+ 624

Belgium has been gaining and Holland losing gold. The flow of the metal to the United States has become intensified. In comparison with the end of 1934 France holds a smaller proportion, and the United States an even more disproportionate amount of the world's gold supply than before.

If the 1935 figures be re-examined, it will be found that out of the total of Sw.Frs.3,700 millions of gold which became available, only Sw.Frs.1,700 millions passed into disclosed monetary stocks. What happened to the remaining Sw.Frs.2,000 millions? The B.I.S. report calls this "disappeared" gold, and points out that total "disappearances" since 1931 amount to just over Sw.Frs.5,000 millions, or £330 millions sterling. "Disappearances" during 1935 alone amounted to £130 millions sterling. There is no secret, of course, about the fate of this gold. It has passed into private hoards or into Government-controlled Exchange Funds—notably, the B.I.S. says, the British Exchange Equalisation Account.

The report gives some informative cross-bearings upon the 1935 gold additions to the British Exchange Equalisation Account. Net imports of gold into Great Britain were valued at £70 millions sterling. Part of this was for foreign hoards in London, but (according to the Board of Trade) on a smaller scale than in 1933 and 1934. The Bank of England took £13 millions sterling (valued at the London market price during the year, and not the Bank's statutory price). At a very rough guess this would leave something like £20 or £30 millions for the Exchange Account out of the gold actually imported into England. It is common knowledge, however, that most of the Exchange Account's 1935 acquisitions are lying under its earmark in Paris, and so the British import returns provide a very imperfect guide to the Account's total acquisitions.

A second cross-bearing is afforded by the £130 millions sterling of gold which "disappeared" during 1935. Here the B.I.S. report is very explicit. "Part of this gold" it says, "was absorbed by fresh private hoarding, and part went into the holdings of central banks outside reported reserves, but a large amount must have been taken by Government exchange funds, and especially the British Exchange Equalisation Account." We may add another cross-bearing of our own. During 1935 the floating assets of the Public Departments (i.e. tap issues of Treasury bills and Ways and Means advances) were reduced by £143 millions. As an off-set, during December, 1935, when the Banque de France's gold losses were negligible, but large British Government issues called for official support in London, floating assets were reduced by £37 millions. It is probable that this latter reduction had nothing whatever to do with the Exchange Account's operations, so that the effective reduction in floating assets during 1935 was just over £103 millions. If all these data be combined, it would appear unlikely that the Exchange Equalisation Account's gold acquisitions during 1935 exceeded £100 millions all told, though they may not have been far from that total. During 1936, so far, floating assets have shrunk by another £95 millions. Allowing for absorptions of Funding Loan by the Departments, the Exchange Account's gold acquisi-

tions so far this year may well be of the order of £50 millions sterling. In other words, they may have represented the best part of £150 millions during less than eighteen months. The only reason that suggests that this may be an over-estimate is that it accounts for Sw.Frs.3,750 millions, or for rather a large proportion of the total gold disappearance since 1931 of Sw.Frs.5,000 millions.

There is no reason to believe that the Exchange Equalisation Account is congested with gold to the point of discomfort. The Account, however, has a statutory limit of £375 millions, plus its accrued profits to date, and at the present rate of progress that limit might be reached at no very distant date. As matters stand, our total gold holdings, including those of the Bank and the Exchange Account must be nearly Sw.Frs.9,000 millions, and this makes us easily the third largest holders of gold in the world. Compared with the United States' holding of over Sw.Frs.30,000 millions, our total looks meagre, but we are not so very far below France's Sw.Frs.13,000 millions—though we may claim that, to some extent, we hold our gold for the sterling area as well as for ourselves.

The B.I.S. rightly touches on a possible "inflation on gold," if and when general stabilisation supervenes and the world's central banks revalue their gold stocks according to the new parities. This problem is not yet pressing, and much depends upon the gold standard of the future and upon how far monetary gold stocks are allowed to expand the internal supply of bank cash and credit. In England, at the moment, segregation in the Exchange Equalisation Account provides a complete mechanism of control. In the meantime the problem of maldistribution remains unsolved, and, indeed, has become accentuated, as the United States, with her swollen bank reserves, is finding to her cost. This is the main impression left by the B.I.S. report. It is a question of economic as well as monetary import, but it cannot be solved without a lead from the largest holder of all, namely, the United States.

FINANCIAL NOTES

A Respite for the Franc.—The London Market has been very quiet this week, largely because all business in Paris was entirely closed down from Wednesday mid-day to Friday morning for the Ascension-day holiday. There has been less pressure on the franc, and dealers now feel that M. Sarraut will remain in office until June 1st, and that there will be no devaluation at least until that date. In consequence, the franc has needed very little support from the British Control this week, nor has any gold actually been lost to the United States. Three months' franc, however, after improving at the week-end to Frs. 4½ discount, have since relapsed to Frs. 5½ discount, or 28 per cent. per annum, while the Paris-New York cross-rate stands at Frs. 15.18½ to the dollar, or right up at the export gold point. The New York-Amsterdam exchange is also at the export gold point, and a quiet drain of funds from Holland is now becoming noticeable. The French banks are now doing a little forward exchange business in special cases, so that the prohibition of forward business is not absolute. It is becoming more difficult than ever to take even a short view of the franc. The French authorities are to-day absolutely opposed to devaluation. Yet M. Blum realises that he cannot expect co-operation from unionists, while this week's declaration by the *Confédération Générale de Travail*, calling for a huge public works programme, will add to the difficulties of a Government which cannot borrow enough to meet its existing daily needs, let alone those of a new public works scheme. M. Blum's dilemma is that exchange restrictions will frighten away and will not attract spare capital, and if he imposes restrictions, public works will have to be financed out of inflationary borrowings, such as special short-term bills and the Frs. 500 millions credit from the Banque de France suggested by the C.G.T. It is thus not impossible that M. Blum will decide to devalue suddenly, in order to set free both the franc and the long-term capital market. All

this is pure surmise, but it would not be surprising if the drain of funds from France began again after the present holidays. There is little doubt that it was at the request of the French authorities that the Bank of England has requested the bullion market not to deal in gold coin at a price above their fine gold content valued at the London market price for fine gold. It is understood that a similar request is being addressed to the banks and accepting houses. It is not likely that this unofficial restriction will do much to help the franc, and while it is of very minor importance, it is not wholly desirable that yet another unofficial control should be imposed upon the City.

Sir Felix Schuster.—One by one the bankers who carried through the big consolidation movement of the early part of this century are departing, and the death last week of Sir Felix Schuster leaves yet another notable gap in their ranks. Unlike some of his contemporaries, who began as country bankers, Sir Felix spent practically all his life in the City. He was at first a partner in the family firm of Schuster, Son and Company, then a director of the Union Bank, and later governor of the Union Bank from 1895 to 1918. These were the years of the first important amalgamations, for the Union Bank combined with Smith, Payne and Smiths and later with the London and Yorkshire Bank and Prescott, Dimsdale and Company. The final stage was reached in 1918, with the amalgamation with the National Provincial Bank, and the new combine has since ranked as one of the "Big Five." Sir Felix joined the board of the National Provincial Bank and until recent years played a prominent part, but already a wider field was beginning to claim his attention. From 1906 until 1916 he was a Member of Council in India, and during that period acted as Finance Member. Immediately after the war he took with the late Mr Walter Leaf a leading part in the formation of the International Chamber of Commerce, and the early activities of that body were largely instrumental in the appointment of the Dawes Committee. At home, Sir Felix, like Mr Leaf, belonged to the "hard money" school, which worked for and welcomed our return to gold. Sir Felix also served his turn as chairman of the leading bank organisations, such as the Institute of Bankers, the Bankers' Clearing House and the British Bankers' Association. Amidst all this public work he found time for his love of music and art. In his earlier years he took a prominent share in the activities of the Alpine Club, and only a short time ago had the rare distinction of being invited to rejoin the committee at the age of 80. To some he may lately have seemed to belong to an older generation, whose work was beginning to pass into history. Yet the record of his life shows how much the country owes to those who laid the foundations of our modern banking system.

British Credits to Germany.—All unwittingly the Bank for International Settlements has constructed a complete snare for the diversion of the British House of Commons. Rumours have for some time been going about that the City of London was either extending or contemplating the extension of fresh credits to Germany, and on May 11th Mr Beaumont Pease, presiding at the annual dinner of the British Bankers' Association, felt it necessary to say categorically that "no such credits had been given by any of the clearing banks." By a curious chance there was published on the same day the annual report of the Bank for International Settlements, which stated that although total English credit lines to Germany under the Standstill Agreement had been reduced, the amount utilised had actually increased; and an adjoining table gave the amount of the increase as *Rm.* 28 millions. Early this week the Joint Committee of British Short-Term Creditors issued a statement, pointing out that the apparent increase, amounting in sterling to £2,132,000, in British credits was due mainly to a transfer of £1,800,000 from the German Municipal Standstill to the main standstill. Also certain credits granted by British banks but formerly included in the returns of other countries were in 1935 transferred to the British returns. Finally a sum of less than £200,000 represented re-availments during 1935 of credit lines not in use at the beginning of the year. Before this

statement appeared a question had been put down, but it only came up in the House on the day after the publication of the statement. Mr Chamberlain therefore found no difficulty in disposing of the whole mare's-nest by simply referring to the short-term creditors' statement, and in answer to supplementaries he pertinently alluded to some members who were determined to believe that British bankers had increased their credits with Germany, and who only shifted their ground when these allegations were proved incorrect. The fact is that while foreign bankers have been taking registered marks and cutting their losses, British bankers have stood their ground. If ever the world becomes sane again, so that international trade and exchange can revive, the British banks will reap the benefit of their tenacity.

Another Silver Deal.—This week the news has emerged of another deal in silver between China and the United States. The story began at the week-end with an official Chinese announcement to the effect that it was proposed to strengthen the gold and foreign exchange portion of the reserve behind the note issue, but that the silver portion would be maintained at at least 25 per cent. Silver token coins of 50 cents and \$1 were to be issued, while the regulation that silver of more than 30 per cent. fineness must not be used by industry and the arts was withdrawn. This news clearly indicated that something was in the wind, and on Monday evening of this week Mr Morgenthau, the Secretary to the Treasury, admitted that the United States Government had agreed to buy large quantities of silver from China and to provide her in return with dollar exchange. Thus Mr Morgenthau has been able to develop still further his present plan of buying silver direct from the original vendors instead of in the world's markets, while at the same time he has in effect obtained an assurance that China will retain a proportion of her existing silver reserves and will not throw them on the market and depress the world price. China, however, is by no means a loser, for she obtains fresh supplies of foreign exchange. Furthermore, there is no doubt that last autumn's break-away from silver has brought China considerable relief. Wholesale prices are rising, and the trade balance is improving. The main doubts about this week's news, which is no more than a logical continuation of previous Chinese and American policy, are that it brings the Chinese dollar more under the domination of the United States; and that it canalises still further world dealings in silver, thereby narrowing the London and other markets. Silver, however, has held up well since last December's collapse of prices to a lower level, and this week's news did not have much effect. So there is no need for us to feel much anxiety; and in any case it is a matter between China and the United States.

The Money Market.—The further drop in bankers' deposits to their lowest of this year has made money again a little less easy than usual, and one of the clearing banks was calling a small amount on practically every day of this week. The banks were also reluctant buyers of Treasury bills, while, conversely, the market, which had received heavy allotments of Treasuries maturing on August 1st, was anxious to sell bills of that date. Rates, however, remained unaltered.

	Apr. 30, 1936	May 7, 1936	May 14, 1936	May 21, 1936

Others	1	1	1	1
Discount rates :—				
Treasury bills	1	1	1	1
Three months' bank bills	1-1	1-1	1-1	1-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Between April 4th and May 16th tender issues of Treasury bills have risen from £493 to £548 millions, and there will be a further increase of £10 millions this week. The "floating assets" of the Public Departments are practically

unchanged over the whole period, but since April 18th they have fallen from £260 to £238 millions. This last movement gives some indication of the operations of the Exchange Equalisation Account during the recent period of heavy pressure upon the franc.

The Bank Return.—This week there has been a slight drop in the note circulation, so that French currency hoarding is for the moment less intense. The Bank has also added £1.1 millions to its gold, so that the Reserve is £2.8 millions higher.

	BANK OF ENGLAND				
	May 22, 1935	Apr. 29, 1936	May 6, 1936	May 13, 1936	May 20, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	192.6	202.7	203.7	204.3	205.4

Bankers' deposits	100.8	104.7	88.3	83.2	80.1
Other deposits.....	35.6	39.0	36.7	37.0	36.8
Government securities ...	85.5	101.3	88.8	89.9	91.2
Discounts and advances	5.4	8.3	9.4	8.8	7.1
Other securities	11.8	12.6	11.9	12.3	14.3
Proportion	43.6%	30.8%	31.1%	30.1%	31.2%

In spite of the reduction in the note circulation, there has been a further reduction of £3.1 millions in bankers' deposits, which are now at their lowest point for the year. This is due to an increase in public deposits to £21 millions. The half-year's War Loan dividend is due in ten days, and so the authorities may be accumulating funds in readiness. This week's total is also swollen by the usual excise duty payments which reach the Exchequer in the middle of each month.

INSURANCE NOTES

London and Manchester Valuation.—The London and Manchester Assurance Company has made its usual annual valuation of liabilities. The results are given below :—

	Year to March 24, 1935	1936
Ordinary Branch—		
Surplus earned in year	362,685	394,954
Brought forward from preceding year ...	200,716	230,580
	563,401	625,534
Allocations—		
To Bonuses to policyholders	302,821	327,540
" Shareholders' account.....	10,000	15,000
" Staff pension fund	20,000	20,000
" Carried forward to next year	230,580	262,994
	563,401	625,534
Industrial Branch—		
Surplus earned in year	269,655	272,574
Brought forward from preceding year	129,389	130,023
	399,044	402,597
Allocations—		
To Bonuses to policyholders	105,523	112,950
" Staff pension fund	30,000	30,000
" Staff benefit fund	20,000	20,000
" Shareholders' account.....	113,498	108,528
" Carried forward to next year	130,023	131,119
	399,044	402,597

The rate of bonus is once more 44s. per cent., calculated on the sum assured, and is amply covered by the trading profits. The distribution to the industrial branch policyholders is also on the same basis as in the previous year. Total assets increased from £15,559,000 to £16,657,000 and compare with £6,389,000 ten years ago. Some reduction took place during the year in loans, but British Government and Municipal securities showed considerable expansion. Debentures, preference and ordinary stocks also increased. The dividend is again 50 per cent. free of tax and costs £123,498.

London and Manchester Results.—The Company was formed in 1869 to transact industrial assurance. Later it extended its activities to ordinary life assurance. In recent years the amount of new business has expanded rapidly and continuously in both branches. For the year ended March 24th of this year the new sums assured in the ordinary branch were £4,690,000, against £4,460,000 in the previous year and £1,665,000 ten years ago; the corresponding figures for the industrial branch are £6,796,000, £6,528,000 and £4,528. The industrial branch premium income last year rose from £1,688,000 to £1,750,000. Net rates of interest earned were £4 9s. per cent. and £4 6s. 10d. per cent. in the ordinary and industrial branches respectively, against £4 11s. 10d. per cent. and £4 4s. 10d. per cent. in 1934. Quite exceptionally, this office consistently earns a higher rate of interest in the ordinary branch than in the industrial branch; and as only one balance sheet is given, the manner of apportioning the interest income is not clear. Further, it will be noticed that while the net rate of interest rose last year in the ordinary branch it fell in the industrial branch. The auditors, in their remarks at the foot of the balance sheet, state that they are satisfied as to the "propriety of the apportionment," and while this is, of course, not surprising, some more informative details from the chairman would be welcomed on general grounds. The expense ratio in the industrial branch showed a further reduction from 40.2 per cent. to 39.6 per cent. of the premium income. This ratio is not altogether comparable with the ratio of some other industrial offices, as the whole of the premiums are payable weekly; all monthly premium policies—which of course involve smaller collection expenses—are included in the ordinary branch.

Sea Insurance Company.—Total premium income fell from £729,000 to £705,000, of which £452,000 was derived from the marine branch, the results of which have always been very satisfactory. The experiences of the last two years is given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	6,405	4.2	4,804	3.3
Accident	975	1.0	3,158	3.0
Marine	53,210		38,464	
	60,590		40,110	
Less items debited to profit and loss account	28,223		20,662	
Net trading surplus	32,367		19,444	

The dividend is at the rate of 17½ per cent., and its cost is practically met by the interest earnings. Total assets amount to £2,252,000. The financial position is strong; there is a general reserve of £650,000, investment reserve of £100,000, and a profit and loss balance of £166,000.

Scottish Equitable Life.—New business for the year ended March 1, 1936, increased from £1,880,000 to £1,918,000. The rate of interest on the life assurance fund was 5d. per cent. higher at £4 5s. 9d. per cent. Claims by death were the smallest since 1928, and at £309,000 are £70,000 less than in 1934. Surrenders also fell, from £77,000 to £49,000. Total assets increased by £363,000 to £11,306,000, and apart from a reserve fund of £250,000, book values of the investments appear to be appreciably smaller than the market values. Loans in- from £2,975,000 to £3,104,000, but British Govern- securities fell from £1,931,000 to £1,585,000. Deben- ture stocks at £2,973,000 were £235,000 greater, while preference and ordinary stocks increased from £614,000 to £848,000 and £604,000 to £819,000.

Northern Assurance Valuation.—The quinquennial valuation of the Northern took place as at December 31st last. The policyholders take the whole of the profits of the participation life account. The shareholders, however, are entitled to the whole of the profits emerging in the non-participation account and the annuity account, and the

sum of £110,000 shown below was the amount transferred from these accounts to profit and loss. In each of the funds the valuation is on a stringent basis.

	1926-1930	1931-1935
Trading surplus earned during valuation period:—		
With profits fund	717,878	676,222
Non-profits fund	125,448	124,301
Annuity fund	53,097	44,251
Investment profits taken credit for during valuation period:—		
With profits fund	17,960	26,610
Non-profits fund	7,281	6,431
Annuity fund		
Brought forward	87,280	178,402
	1,008,944	1,056,217
Allocations:—		
To bonuses to policyholders	665,542	672,270
Shareholders:—		
From non-profits fund	100,000	90,000
From annuity fund	25,000	20,000
Investment reserve:—		
Non-profits fund	25,000	25,000
Annuity fund	15,000	15,000
Carried forward	178,402	233,947
	1,008,944	1,056,217

The bonus declared is at the rate of 45s. per cent. per annum, calculated on the sum assured, compared with 50s. per cent. per annum in 1930.

Northern Assurance Results for 1935.—New assurances were issued by the Northern Assurance, last year, for £1,545,000, compared with £1,272,000 in 1934; the net rate of interest rose by 2s. per cent. to £4 4s. 8d. per cent. Fire premium income was slightly smaller at £1,936,000, but underwriting profits were very satisfactory and much the best for many years. In the accident department premium income was £72,000 greater at £1,672,000, and again profits showed considerable expansion over those of 1934. Marine premium income was £631,000, against £683,000, and for the fourth year in succession £25,000 was transferred to profit and loss. In the fire and accident accounts the reserve for unexpired risks is 50 per cent. of the premium income, but in accordance with our practice 40 per cent. has been taken in arriving at the results below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	132,335	6.8	202,913	10.4
Accident	100,236	6.3	142,236	8.5
Marine	25,000	3.6	25,000	4.0
Life	—	—	115,000	—
	257,571		485,149	
Less items debited to profit and loss account	97,149		124,483	
Net trading surplus	160,422		360,666	

Apart from the items of profit and loss included above, £25,000 was transferred to contingency reserve in 1934 and £83,777 was written off the goodwill of acquired companies; last year £100,000 went to contingency reserve and £100,000 was applied in writing off the balance of the goodwill account in respect of acquired companies. The assets of the Northern increased from £15,633,000 to £15,972,000, of which investments accounted for £9,007,000; these appear to be taken in the aggregate at considerably below market values. Total assets, including those of associated companies, amount to £23,795,000, of which £4,698,000 refers to the London and Scottish life department, and the general reserve remains unaltered at £2,000,000. In addition there is a free profit and loss balance of £856,000. The dividend is 75 per cent. and in addition a special dividend of 5 per cent. has been declared to mark the centenary of the company. The total cost of the dividend is £252,000, compared with interest earnings of £178,000.

Yorkshire Insurance.—New life assurances receded from £2,580,000 to £2,430,000, but annuity consideration moneys increased by £50,000 to £246,000. Death claims showed a decrease from £221,000 to £180,000, while the rate of interest fell by 1s. 4d. per cent. to £4 6s. 10d. per

cent. In the miscellaneous branches fire, accident and marine premium income showed decreases of £4,000, £12,000 and £26,000 respectively to £913,000, £1,259,000 and £350,000 respectively. The results of the last two years are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	93,526	10.2	103,585	11.3
Accident and general	11,873	0.9	36,633	2.9
Marine	31,708		9,985	
Life	13,570		13,570	
Profits from reversion	8,000		8,000	
	134,931		171,773	
To general reserve	10,000		30,000	
	124,931		141,773	
Less items debited to profit and loss account	90,109		105,475	
	34,822		36,298	

The total assets of the Yorkshire increased from £14,329,000 to £15,091,000, and total general and investment reserves were increased from £1,191,000 to £1,235,000. In addition to the usual 40 per cent. of premium income for unexpired risks additional reserves are held in the fire and accident departments of £320,000 and £220,000 respectively, contrasted with premium income of £913,000 and £1,259,000; the marine fund amounts to 173 per cent. of last year's premiums. The dividend is unchanged at 47½ per cent. free of tax, and costs £138,000 against interest earnings of £102,000.

Commercial Union.—In the life department new sums assured last year amounted to £5,120,000 against £4,631,000 in 1934, but annuity consideration moneys dropped from £664,000 to £477,000. In 1934, death claims totalled £523,000, a figure which was stated at last year's meeting to be about 90 per cent. of the expected claims by the A 1924-29 tables. Last year's death claims declined sharply to £417,000, and it is a safe inference that the mortality profit earned was extremely satisfactory. The rate of interest was practically unchanged at £4 3s. per cent. The new business of British General, the shares of which are held by Commercial Union, increased from £660,000 to £760,000. In the fire branch the Commercial Union premium income was £5,266,000 against £5,375,000, but underwriting profits showed a further large increase. In the accident department, premiums increased by £184,000 to £7,609,000, and trading results were very much improved, owing, doubtless, for the most part to better results in the United States. Premiums in the marine branch increased by £42,000 to £585,000, but the amount transferred to profit and loss has been reduced from £150,000 to £100,000. The marine fund at £1,180,000 is equal to 202 per cent. of the 1935 premium income, against the comparable figure of 214 per cent. in 1934. In addition to 40 per cent. of the premium income for unexpired risks, additional reserves are held in the fire and accident branches amounting to 92 per cent. and 33 per cent. of the year's premium income. The results of the last two years are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	442,305	8.2	602,063	11.4
Accident	9,140	0.1	258,630	3.4
Marine	150,000		100,000	
Life:—				
Commercial Union	35,449		35,449	
Union Life Fund	5,000		5,000	
Hand-in-Hand Fund	45,000		45,000	
British General	2,491		3,463	
Sinking Fund	4,800		4,800	
	694,185		1,054,405	
Less Items debited to Profit and Loss	199,890		217,682	
To General Reserve	250,000		300,000	
	244,295		536,723	

The total assets, including subsidiaries, increased from £61,609,000 to £62,867,000. The aggregate market values

of Stock Exchange securities are stated to be in excess of book values without taking into account the general reserve, which stands at £3,822,000 compared with £3,862,000. Total life assets, excluding the assets of subsidiary life companies, are £24,163,000, an increase of £1,128,000 in the year. Loans of all kinds at £6,405,000 were practically unchanged in amount, but British Government securities decreased from £7,536,000 to £7,236,000. On the other hand, British municipal securities increased from £1,978,000 to £2,491,000 and debenture stocks from £3,199,000 to £3,685,000, while combined preference and ordinary stocks increased by £516,000. The dividend is at the same rate as was declared last year, namely 40 per cent., and costs £1,118,000 contrasted with available interest earnings of £721,000.

Liverpool and London and Globe Centenary.—The one hundredth annual report of this company records a year of very satisfactory trading results, and is accompanied by a series of arresting statistical comparisons between the office now and in 1836. Then, business was restricted to this country and there was a staff of two and no agents. The premium income was £10,850, spread over two classes of insurance, and at the close of the first year, after paying claims of £1,080 and expenses, total funds amounted to £9,400. Now, the company operates in one hundred countries involving contracts in one or other of sixteen languages, and maintains 120 branch offices with a staff of over 5,000, in addition to more than 100,000 agents. Over one hundred different classes of insurance are transacted by the group, and last year total claims exceeded £5,000,000. In 1935 new life business was £2,461,000 against £2,359,000 and constituted the sixth successive record production. The net rate of interest on the life and annuity funds was practically unchanged at £3 19s. 3d. per cent. Death claims fell by the substantial amount of £112,000 to £601,000. Fire premium income at £3,961,000 was practically the same as in 1934. Accident premium income was £190,000 less at £4,293,000 and marine premium income increased by £8,000 to £290,000. In the fire department there is a reserve in addition to the usual reserve for unexpired risks of £1,775,000, equivalent to 45 per cent. of the 1935 premium income. In the accident department a similar additional reserve of £650,000 at the end of 1934 has been increased to £1,000,000 by a transfer of £350,000 from profit and loss. The marine fund amounts to 144 per cent. of the premium income.

—And the Latest Results.—The results of the Liverpool and London and Globe for the last two years are given in the table which follows:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	414,695	10.5	482,741	12.2
Accident	46,538	1.1	133,809	3.1
Marine	20,155		21,289	
Life	26,000		26,000	
	507,388		663,839	
Less Items debited to profit and loss account	207,234		216,255	
Net trading surplus	300,154		447,584	

Total assets in the general balance sheet are nearly £31 millions and the contingency fund and profit and loss balance together amount to £2,855,000. Mortgages account for £1,567,000, compared with £1,504,000 in 1934, but British Government securities have fallen by £252,000 to £6,056,000. Colonial Government securities were some £202,000 smaller at £1,541,000, but foreign Government securities increased from £5,352,000 to £6,469,000. Some reduction in debentures was more than compensated by an increase in preference and ordinary shares. The rate of dividend on the share capital (which is held by the Royal) is 67½ per cent. for the sixth successive year. The cost of the dividend is £556,000, compared with £560,000 in the previous year, while there was an increase from £411,000 to £414,000 in the available net interest earnings.

THE STOCK EXCHANGE

OUTLOOK FOR OIL SHARES

INVESTORS who purchased the leading oil shares a little over a year ago, before various dividend increases and the advance in petrol evoked a strong buying wave, now enjoy a capital appreciation of over 40 per cent. Those who entered the market on the top of the rise in May last year have been rewarded with market appreciation of only 10 per cent. In the oil share market the moral can never be outworn. Fluctuations in prices are often severe, and the statistical position of the American oil industry, which largely decides its "tone," can change rapidly for better or worse.

The American oil situation did, in fact, deteriorate rapidly between May and September last year, with the significant consequence that September 30th marked the 1935 "low" for the *Investors' Chronicle* index of oil share prices. The breakdown in May—by the decision of the Supreme Court—of the Federal Government's attempt to regulate American oil production, was followed by a sharp increase in the production of crude oil in California, and the Standard Oil Company of California felt obliged to cut the crude price by 50 per cent. at the end of August. Two months later, however, it restored the cuts, and in January this year the statistical position of the industry had so far improved that the price of Mid-Continent crude oil was raised from \$1.00, at which it had been "pegged" for over three years, to \$1.10 per barrel, and that of East Texas crude oil from \$1.00 to \$1.15 per barrel. Between September, 1935, and the end of January this year, the oil share index of the *Investors' Chronicle* recorded a rise of over 32 per cent. The further appreciation which has occurred this year reflects the market's hope that the improvement in the American oil industry will be maintained, and its anticipation of satisfactory dividend increases for 1935 from the leading companies.

The continued rise in the American output of crude oil this year is no doubt causing some concern. It has now reached 3,008,000 barrels a day—the highest daily output ever recorded—higher even than in 1929, before the great slump. All the major producing States have greatly increased their output, the control of which has now passed out of Federal into State hands. The Connolly Act merely provides that oil produced in violation of State restriction orders is prohibited from entering into inter-State commerce. This may have killed the illegal traffic in "hot oil"—the output of "hot oil" in East Texas is now estimated at only 15,000 barrels a day as compared with 60,000 barrels a day in March, 1935—but it cannot prevent an increase in State output if the State authorities refuse to enforce their restriction orders. The following table shows the extent to which producing States are exceeding the outputs recommended by the U.S. Bureau of Mines:—

	Daily output for week ended May 16	Daily output Recommended for May	Excess per day over Recommendation
	Barrels	Barrels	Barrels
Oklahoma	560,500	538,300	22,200
Texas	1,070,750	1,132,500	61,750
Louisiana	226,800	160,500	66,300
California	579,800	544,000	35,800
Total U.S.	3,008,000	2,826,300	181,700

The remarkable increase in the output of Louisiana is due mainly to the development of the new Rodessa field, situated on the borders of Louisiana and Texas. This field was discovered last year, and its daily output is now in excess of 50,000 barrels. Fortunately, some of the large companies, notably Socony-Vacuum, have acquired interests, so that the danger of too rapid development through the competition of small independent concerns has been averted. Nevertheless, the Rodessa output can rise further—May to over 100,000 barrels a day. While it should

not be regarded as a "market breaker," the new field adds its quota to the already excessive production of crude oil in the other States. The vital question for the investor is whether the increase in consumption can take care of this disconcertingly large increase in crude oil production. Broadly, the conclusion may be reached that there is, as yet, no serious threat to the recovery in the American oil industry, but that the market must now undergo a "corrective" period before the upward trend in oil prices can be resumed. A rise in the price of British petrol must be ruled out as a present possibility.

With this conclusion in mind, we may examine the present market valuation of the leading oil shares quoted in London. Substantially higher dividends were already discounted in view of the increase in consumption last year and the advance of 1d. per gallon in the price of British petrol last May. That earnings for 1935 may show a fairly large increase is suggested by the following table, which sets out the earnings in 1934 and 1935 of 43 representative American oil companies. The discouraging feature of the table is that the total amount of dividends paid last year was actually less than in 1934:—

	43 American Companies	1934	1935	Change
		\$	\$	\$
Net earnings	147,038,075	223,562,177	+76,524,102 (+52%)	
Common dividends paid	134,291,405	131,376,966	-2,914,439 (-2.17%)	

Burmah Oil and Venezuelan Oil Concessions were first among the British companies to announce their 1935 results. The increase in the Burmah Oil dividend (from 15 per cent. to 20 per cent.) fulfilled market expectations. The preliminary figures disclosed extra earnings of 6½ per cent., net profits having risen from £1,657,218 to £2,276,913. Actually, the Company must have received last year in dividends an extra £50,000 net from its holdings of 1,000,000 "Shell" Transport ordinary shares and £138,000 more from its holding of £3,561,990 Anglo-Iranian ordinary stock, a total increase in investment income of £188,000, which is equivalent to 2 per cent. on its ordinary stock. Some 4½ per cent. of the extra earnings must, therefore, be attributed to better trading in India. The earnings of Venezuelan Oil Concessions, however, showed a decline in 1935, yet the dividend rate was increased. The 1934 dividend of 11½ per cent. on the old £1 shares was equivalent to 16.9 per cent. on the new shares of 13s. 4d. but 18½ per cent. was paid for 1935. The decline in earnings is attributed to exchange losses arising from the premium on the bolivar, in which currency wages and salaries have to be paid. The alteration of the rate from 3 bolivar to 3.9 bolivar to the \$ will relieve this exchange strain, and the 15 per cent. increase in output this year may have encouraged the directors to view the outlook more hopefully.

The market was well satisfied by the dividends announced by the "Shell" Transport and Royal Dutch companies this week. The "Shell" dividend of 17½ per cent. tax free, against 12½ per cent. tax free for the preceding year, accorded with contemporary expectation. The increase in the Royal Dutch payment, however, from 7½ per cent. to 10½ per cent., exceeded the majority of prognostications, which had not envisaged a payment of more than 9 per cent. gross. However, in the light of cash distributions in the past, the 17½ per cent. tax free dividend of "Shell" Transport would not be out of relationship with a gold dividend of slightly over 10 per cent. by Royal Dutch. The revenues which accrue to the Royal Dutch—"Shell" group in dollars, sterling, and a variety of depreciated currencies must necessarily purchase a smaller amount of old gold florins than of new paper pounds. The 60 per cent. of the "pool" which accrues to Royal Dutch should, therefore, have given that company a relatively smaller increase in

earnings than the remaining 40 per cent. of the "pool" has given the shareholders of "Shell" Transport. The total "pool" has undoubtedly increased, and the conditions which have governed the directors' decisions may be more apparent when the full reports are published.

Meanwhile, the Anglo-Iranian company is expected to increase its dividends from 12½ per cent. to 20 per cent. In this case the company has eliminated debenture service costing £275,000 per annum, and is deriving full advantage from its joint marketing arrangements with the Royal Dutch—"Shell" group. With perhaps the cheapest production of crude oil in the world, the company benefits to the full from any rise in the price of petrol. On the basis of an annual consumption of 1,350 million gallons of petrol in this country, an extra penny per gallon on petrol is probably worth an extra 7½ per cent. to Anglo-Iranian ordinary shareholders. Trinidad Leaseholds, which is now marketing its petrol direct through its own distributing organisation, also derives direct benefit from increased petrol prices. The market is anticipating a total distribution for the year ending June 30th of 25 per cent. against 17½ per cent. in 1934-35.

The following table records the prices of the shares of these companies, the 1933 and 1934 dividends, the 1935 dividends estimated or actual, and the prospective dividend yields:—

Company	Ord. Stock or Shares			Dividends			Gross Yield % on Actual or Estimated Dividend
	1935		Present Price	1933			
	Low.	High.		1933	1934	1935	
Anglo Iranian £1	41/10½	71/3	95/-	7½	12½	20(0)	4 4 3

† Equivalent gross, after allowing for tax at 3s. 1d. in £. Actual yield. ‡ Actual yield (a) Exchange at Fl. 7.34½ to £. § To June of succeeding calendar year. * And capital bonus of 33½%. † Paid on £1 shares. (c) Estimated. (s) On gross basis.

Speculative interest in the oil share market has recently been concentrated on Mexican Eagle. These shares of 4 pesos (8s.) which were as low as 3s. 1½d. last year rose from 9s. to 15s. on rumours that the Mexican difficulties were about to be settled. The rumours proved to be true, and the settlement involved a payment of some £660,000. The announcement was followed by a meteoric rise in the price of the shares, and bursts of speculative purchasing have carried the price by rapid jumps as high as 27s. 6d. It is pointed out that the output of the company increased last year by 20 per cent., and so far this year by a further 30 per cent. As the oil reserves are now greater than at any time in its history, the Mexican Eagle output might well be doubled. Nevertheless, it is exceedingly dangerous to speculate upon 1936 earnings at this early stage. For 1935 it is possible that earnings of 1s. per share may be shown, but the present price of 25s. 6d. for these 8s. shares discounts earnings this year at least double those of 1935. The wise investor will doubtless wait for the 1935 accounts and the directors' report which will be published next month.

It may also be mentioned that although Canadian Eagle ordinary shares have enjoyed a considerable rise in the wake of Mexican Eagle—from a low level of 3s. 3d. last year to the present price of 16s. 3d., there is no direct relationship between the earnings of Mexican Eagle and those of Canadian Eagle. The Canadian Eagle owns the tanker company which ships Mexican oil to Great Britain: it also refines the crude oil of Venezuelan Oil Concessions and distributes the refined products in South America and elsewhere. Its earnings, therefore, are not related to those of Mexican Eagle to any appreciable extent.

The oil share market in the immediate future must take its cue from the forthcoming reports. We do not anticipate that their record will be unsatisfactory, but when they have been digested the market can hardly make fresh headway until the American oil outlook has been clarified. Some allowance for this factor seems called for in assessing expected dividend yields, which, on present indications, do not appear excessive.

INVESTMENT NOTES

Corporation Borrowing.—The market's apprehension of some recent home corporation issues through the authorities with a delicate problem. It is clear that the present issue prices, there is a limit to the amount of gilt-edged stocks that can be absorbed. Either the authorities must be willing to halt the queue of would-be borrowers, at the risk of traffic dislocation in Threadneedle Street, or they must "shade their price list" and then confess that the rate of interest has moved against them. This is a dilemma which sooner or later confronts administrators of restriction schemes, who find it less easy to control the demand than the supply side of the equation. In fact, there has already been a significant "shading" of prices. Last January a borough of Smethwick was offering 20-22 year 3 per cent. a fact which in May an exemplary borrower like Sheffield, whose prospectus is a model of detailed and helpful publicity, on a similar stock at 99 and has nearly half of it left with underwriters. Conditions in the last month, particularly, have become increasingly unfavourable, as the following table suggests:—

Cash Lists Open	Borrower	Amount	Approximate basis of Allotment	Opening Price	Present Price
April 20	Birmingham	4,882,700	10% cash apps.	100 pm.	100 pm.
" 24	Croydon	1,500,000	25% large apps.	100 pm.	100 pm.
" 28	Bradford	1,744,440	35% over £2,000	100 pm.	100 pm.
" 28	Cardiff	1,439,500	64% over £5,000	100 pm.	100 pm.
May 8	Rochdale	1,000,000	In full	100 pm.	100 pm.
" 8	South Shields	500,000	73% over £15,000	100 pm.	100 pm.
" 14	Sheffield	2,500,000	Underwriters left with 48%	100 pm.	100 pm.
" 19	Huddersfield	1,000,000	47% cash apps.	100 pm.	100 pm.

A month ago 3 per cent. issues at 99 were being over-subscribed and large cash subscribers were receiving only a fraction of their total applications. Before the end of April, however, the phenomenon of opening discounts appeared. Recently, opening discounts have become larger and the price of certain issues has receded further in subsequent market dealings. There is, in other words, a growing amount of undigested stock. On the whole, it would seem preferable that the authorities (to use the familiar terminology of restriction) should lower their pivotal price if they wish to market an increased quota. Their technique has, indeed, been rudimentary in character. They appear to have recognised no subtle nuances in the credit-rating of different corporations. Nor have they endeavoured to vary the "lives" of loans on behalf of different borrowers, to ensure that future maturities will not fall, in large numbers, on or about the same time. Their policy has been rather that of Procrustes, who, having but a single bed, lopped off the limbs of all his guests until they fitted it exactly. This method, applied to a market which in the past has prided itself on sensitivity and delicacy of adjustment, appears somewhat crude.

News from the Seven Seas.—This week has brought further news for bondholders from all corners of the world—much of it disconcerting and some of it frankly depressing. The Chinese Customs loans have been severely affected by Sir Frederick Maze's disclosure of the serious effect of smuggling on the North China revenues, a consequence of the disarming of the Customs cutters on the Hopei Coast and of the ineffective co-operation with the railway authorities. The Tientsin revenues, naturally, are gravely affected, and the collections have fallen by 23 per cent. during the past four months. This port has usually provided about \$41 millions towards the annual collection, which last year amounted to \$315,520,000. Protests to the Japanese authorities have elicited the reply that high Chinese tariffs and administrative inefficiency are responsible. The market, it would appear, has somewhat enlarged the consequences of even the total failure of the Tientsin revenues, which need hardly be contemplated at this stage. The Customs Administration has during recent years maintained the collections at a reasonably high level, and assuming that no deterioration occurs,

South, the Customs Loans and Indemnities, which are a first charge on the revenues, can be regarded as well secured. Last year these charges amounted to \$66.4 millions, and after meeting the service on American Loans (\$12.7 millions) and on internal loans (\$137.3 millions), a balance of \$99 millions was available from the revenue for the Government. The market appeared to find rather more hope in the situation in mid-week, although Monday's fall was not regained. But it was again depressed by the record arms budget approved last week in Tokio. Nearer home, Greek loans have continued depressed on the continued delay in debt negotiations. The refusal of the bondholders' organisation to consider a renewal of the 35 per cent. offer from the debtor is now of long standing, but the Greek authorities have so far remained obdurate. Informal conversations have taken place, and the Governor of the Bank of Greece is proceeding to London to discuss the position with the Council of Foreign Bondholders. From South America, in mildly refreshing contrast, come reports of progress in the Presidential messages delivered to the Argentine and Chilean Congresses. In the former, stress was laid upon the reduction of the floating debt and the achievement of a surplus during the past financial year of 27 million pesos. The adversities of provincial finance have been relieved by the unification of internal taxes, and provincial credit has consequently improved. The message to the Chilean Congress dwelt at length on the working of the new arrangements for the service of the external debt, which under Law No. 5580 is earmarked from the Government's share of the nitrate and copper revenues. Holders of more than 72 per cent. of the bonds issued by Messrs. Rothschild and Sons have accepted this form of payment. Nitrate output during 1935 was 49.23 per cent. higher, and the moiety of the revenue assigned to debt service—the remainder being applied to redemption—amounted to \$2,064,125, representing a return of 4.75 per mille. Even the purist is forced to recognise that this unorthodox arrangement brings him some small return.

Actuaries' Investment Index.—The continued dullness of market conditions is reflected in a moderate fall in the Actuaries' Investment Index for 178 industrial equities to 82.6, compared with 83.1 last week and 83.7 a month ago (December 31, 1928 = 100). The yield this week works out at 3.72 per cent., compared with 3.68 per cent. last week and 3.65 per cent. a month ago. Movements in some component groups are shown below:—

Group (and No. of Companies)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month Ago (Apr. 21, 1936)	Week Ago (May 12, 1936)	This Week (May 19, 1936)	Month Ago (Apr. 21, 1936)	Week Ago (May 12, 1936)	This Week (May 19, 1936)
Coal (7).....	97.8	96.5	93.0	4.17	4.21	4.43
Cotton (6).....	41.1	40.0	37.0	2.19	2.24	2.14
Iron and Steel (12).....	70.6	69.7	68.7	3.18	3.19	3.25
Oil (5).....	85.2	84.3	83.8	2.54	2.56	2.78
Electric Supplies (10).....	135.8	137.3	135.4	3.68	3.61	3.81
Stores and Catering (20).....	87.0	86.2	86.5	3.57	3.58	3.58
Breweries and Distilleries (21).....	145.6	145.7	146.5	3.96	3.95	3.95

The most extreme movements are a drop of 3 points in the cotton group price index, and a simultaneous drop in following the passing of the J. and P. Coats' bonus. A rise of 5.5 points in the oil group, however, reflects the market's active discounting of this week's dividend announcements. Smaller increases are shown by the Stores and Catering, and Breweries and Distilleries groups.

COMPANY NOTES

Aircraft Companies.—The conditions at present ruling in the aircraft industry are so fresh in investors' minds as to need little description. In July, 1934, the Government announced that the home defence force was to be raised to 840 first line machines (which implies about twice that number in reserve) by March, 1937. In commenting

on the subsequent Air Estimates (1935-6), the Under-Secretary for Air put the number of machines to be ordered in 1935-6 at "over 1,000," or "nearly 100 per cent. more machines than were budgeted for in 1934-5." Subsequently, in May, 1935, the programme was accelerated to provide 1,500 first line machines by March, 1937, involving a substantial extra demand on the industry; and urgent arrangements had to be put in hand for the manufacture of selected models by other makers whose current work was less pressing. Finally, the White Paper of March 4th last announced that a further 250 first line machines were to be added to home defence strength, and 150 to overseas squadrons. The normal characteristics of the industry are thus temporarily overwhelmed with the pressure of R.A.F. expansion. A successful model is not the price for assurance of work; "licensed" manufacture of selected models is providing work for all. Moreover, the long period between the original designing of a new type and its ultimate acceptance for R.A.F. purposes has been greatly shortened and its expenses reduced. The 1935 profits of Rolls-Royce show that for a leading manufacturer (of engines, in this case) the wider spread of profits

need not prevent substantially higher earnings for the individual concern. But we have pointed out in earlier notes that the profit margin per machine must have been substantial in the old conditions; and even at the outset of the expansion movement, the Government was willing to allow considerable profits as an inducement to rapid output. But now that productive capacity is so much greater, its attitude appears less generous. Manufacturers have felt some doubt whether "instructions to proceed" assure more than modest profits in cases where full contracts have not been concluded. Moreover, the chairman of Rolls-Royce warned his shareholders a fortnight ago, the present programme could not last more than three years, after which there would be a heavy reduction in demand, and "difficulties would have to be met." No doubt maintenance of the enlarged forces will maintain a substantially greater volume of production than any known before rearmament began. It is possible, moreover, that demand for commercial aircraft may begin to develop on a large scale just when military demand is declining. But even at best the medium-range outlook is speculative. It seems likely that a few disappointing results might have a considerable effect in bringing that fact home to the public and causing a downward adjustment of the present high level of prices. The accompanying table of profits covers only the better known and established companies, since the many recently introduced concerns have too brief a record as public companies for their profit movement to be significant.

Cable and Wireless Accounts.—The financial complexities of the Cable and Wireless group are not especially forbidding but, to the lay investor, analysis of the comprehensive accounts issued by the group is apt to be hampered by various changes in the organisation since 1929. Holders of Cable and Wireless (Holding) stocks have now become accustomed to the new name adopted by the operating concern—Cable and Wireless, Limited—in 1934. They must now take into account the repayment of £6,453,407 preference stock of the Holding concern, which has involved important balance sheet changes. The earnings of the Holding company were outlined in last week's *Economist* on page 376. In the following table are analysed the profits of the operating concern and of the group (including income of the four telegraph concerns directly held by the Holding concern, in respect of manufacturing and investments) and finally the allocation of the Holding company's income:—

‡ Less £56,830 balance of a subsidiary liquidated during year.
§ After writing off £25,000 formation expenses in 1934 and £25,071 expenses on capital reduction scheme in 1935.
** After deducting debenture interest of subsidiary companies.
†† Subject to £64,534 interest on assented preference stock to November, 1934, and reserve provision of £405,093.

The communications company's message receipts are approximately 2½ per cent. higher at £4,902,755, an improvement which may be compared with a rise in the average monthly traffic index from 72½ to 73½ last year. Station working expenses, after steadily falling for some years, are slightly higher, and the chief economies, in round figures, are £50,000 in administration and £100,000 in pensions and retirements. Many of the cost items, however, are of a relatively fixed character, and the prospect for the operating company becomes more intimately associated with the traffics trend. The fall in the April traffic is distinctly severe, and is not comforting after the stolid course of receipts during the past four months.

—**and Earnings Prospects.**—It is in the balance sheet of Cable and Wireless (Holding) that this year's spectacular changes have occurred. Shareholdings in the four telegraph companies have been reduced from £52,745,267 to £44,005,383. This change is linked with the reduction in capital, but the accountancy procedure is of interest. Special dividends, it is stated, have been paid by the Eastern Extension and Western Telegraph concerns "out of their general reserves." They have been applied to writing down the book value of the Holding company's interest in the two concerns and to eliminating the item of £500,000 for the Holding company's formation expenses. In all, therefore, a special sum of £9½ millions has been

BANISH this ANXIETY FROM YOUR MIND

WHEN all is said and done, the professional man is so very much dependent upon himself. There is nobody to take his place. His background, his "goodwill" is vested in himself and his personal skill, not in an organisation capable of continuing without his presence. Professional men, therefore, have a particular anxiety of their own—what will become of family and self if anything should happen to prevent him from carrying on. You can banish this anxiety from your mind by the "Triple Income" Plan.

It is imperative for professional people to protect themselves and their families against the unfortunate position that might arise—that almost certainly would arise—in the event of ill-health or death. To furnish adequate means of providing the security so necessary is the purpose of the "Triple Income" Plan.

This Plan provides:

INCOME ON RETIREMENT INCOME FOR DEPENDANTS INCOME DURING DISABLEMENT

The "Triple Income" Plan gives 100% security, and compared with the capital required in the ordinary way to produce similar protection the annual cost is trifling. Send for particulars and you will see that you cannot afford to be without this new security.

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

The Office for Lawyers

Head Office: 10 FLEET STREET, LONDON, E.C.4.
Established 1836. Assets exceed £33,000,000
General Manager: W. A. Workman, F.I.A.

found from general reserves. At the end of 1934 no entry was recorded in the consolidated balance sheet for general reserves, but a new item of £3,228,708 is entered in the latest accounts. On the other side, the group's investment holdings have been reduced from £17,615,361 to £11,376,184, and the equity interest in Cables Investment Trust, formed last year, appears at £1,085,000. These accounting changes may have been responsible for the market's rather cool reception of the report a week ago. The text of the Governor's speech, which is invariably illuminating, was not available as we went to press. The preference stock may now be regarded as fully covered, under present trading conditions, but there is little in the accounts or the recent traffics trend to suggest a rapid overhaul of arrears. Assuming that satisfactory arrangements are made to deal with £9 12s. 6d. of gross arrears, the stock, at the present price of 9½, yields its nominal rate on a net basis. The valuation appears reasonable, having regard to the present static position.

Chain Store Results.—The full accounts of Marks and Spencer and Great Universal Stores bring the record of "chain" retailing profits up to March 31st. As in previous years, the record is impressive. Only *Great Universal* has produced rather disappointing results, for in this instance profits have actually fallen. Since they are struck, however, after providing for certain expenses incurred in the development of two new subsidiaries, the fall in trading profits from £332,410 to £306,197 has a veiled significance. The disclosure of the specific figure would greatly assist investors in assessing the prospects of the latest recruit to the chain store group. The company's retail store business has been transferred to a separate subsidiary, and all expenses, apart from capital expenditure, have been charged against the profits of the parent concern. The latest results, therefore, leave the question of geometricity of earnings quite open. Earnings

£190,960 do not, in fact, provide the handsome cover usually associated with regular cash dividends and share bonuses. The Marks and Spencer full accounts confirm the impressive profits figures announced recently (see the *Economist*, May 9th, page 317). The striking geometric expansion of earnings progresses unchecked, and has even been strengthened. The profits and distributions of these concerns, and of their two competitors, are analysed in the following table:—

Company and Date of Accounts	Total Profits	Earned for Ordinary	Ordinary Shares				Yield
			Cash Div.	Capital Bonus	Price		
Marks & Spencer (Mar. 31):—							
1934	1,258,256	688,899	81.8	35	12½	(5/-) 92/6	2 3 2
1935	1,389,431	811,392	74.1	35	11		
1936	1,612,388	981,697	77.3	40	10		
Great Universal (Mar. 31):—							
1934	303,939	207,134	89.1	45	10	(5/-) 51/9	4 17 0
1935	332,951	258,216	111.1	50	10		
1936	310,213	190,960	74.8	50	10		
F. W. Woolworth (Dec. 31):—							
1933	4,734,221	3,172,949	112.8	80	...	(5/-) 129/9sd	3 17 0

1935	5,548,451	3,939,459	135.3	100	...		
British Home Stores (Dec. 31):—							
1933	90,020	...	70.2†	Nil	...	(1/-) 43/7½	...
1934	124,736	37,865	131.1	Nil	50		
1935	154,359	51,814	111.4	Nil	50		

† After charging one year's preference dividend.

Perhaps the most convincing evidence of Marks and Spencer's development is to be found in the Company's latest balance sheet. Between March 1934, and 1936, net current assets rapidly accumulated from £123,000 to £756,000; freehold properties advanced from £2,878,000 to £4,180,000; and leasehold properties were £430,000 higher at £2,202,000. Apart from an increase of £727,000 in mortgage loans, the whole of this expansion has been financed from within the business. And despite the hot pace which is being set in chain retailing—evidenced by a startling similarity of red and gilt exteriors in many shopping centres—Marks and Spencer appear to have continued scope for expansion. In relation to F. W. Woolworth, whose stores now approach 650, Marks and Spencer's chain of about 230 stores appears modest. Whereas new extensions in the Woolworth chain must now be made in new housing communities—involving a somewhat smaller type of store—Marks and Spencer is a name still unfamiliar to many sizeable localities. The most eligible sites, however, are rapidly dwindling in number, and a term may ultimately be set to the expansion of chain store organisations by this factor, rather than by any decline in administrative efficiency. British Home Stores, for example, opened ten stores in 1935, and has plans for a similar number this year, bringing the total to about fifty. In the more immediate future, chain store investors may have to face the implications of rising wholesale prices on profit margins. There is growing evidence of increased costs, and on some lines, at any rate, the stores may find it difficult to maintain their present margins. The main points which interest the investor, in sum, may be summarised as (1) Marks and Spencer's attraction for the investor; (2) Woolworth's high cash dividends and of further increases; (3) the high value at which it is capitalising the management of British Home Stores, which has yet to recommend a cash dividend; and (4) the ability, which has still to be demonstrated, of Great Universal to secure, at this stage, a geometric increase in earnings.

New York Central.—For the first time since 1931, the New York Central Railroad produced a small surplus over fixed charges last year. Freight traffic, and in particular bituminous coal, lumber, iron ore, steel and scrap and automobiles, provided most of the increase in revenue. Net operating revenue increased by \$15.1 millions, of which \$1 million was attributable to freight. Some

\$13 millions of this increase was absorbed by increased operating expenses, increased transportation expenses accounting for \$7.4 millions. Restoration of rates of pay and increased cost of fuel are cited as major factors responsible for the increased operating expenses. Net operating revenue was therefore \$2,082,403 higher at \$72,995,525. A reduction of some \$5½ millions in taxation and rentals, partially offset by a slight reduction in non-operating income produces a comparatively impressive rise in gross income from \$52,577,535 to \$59,441,181, and after providing for rents for leased roads, bond interest and other fixed charges, a credit balance of \$115,045 remains on net income account, compared with a deficit of \$7,682,335 for 1934. The company is thus within sight of significant earnings on the common stock. For the first quarter, net operating income amounted to \$8,776,000, compared with \$7,604,000 for the same period in 1935. This scale of improvement has carried the stock from last year's low point of 12¼ to a present quotation of 34½, after 42 earlier this year. For a stock which appears to be running on a \$1 per share earnings basis, this is evidently a "recovery" valuation. The tenor of business reports from the United States suggests, however, that industry refuses to follow a disconsolate Wall Street, and the long-term outlook suggests prospects of a further improvement in railway earnings.

Whitehead Iron Results.—Steel shares have been a poor market this week, and Whitehead Iron, despite the excellent preliminary figures, have suffered with the rest. The indicated profits and dividend are well up to expectations. Trading profit has increased by about £50,000 to around £285,000, while net profits have advanced from £185,973 to about £250,000. A dividend of 35 per cent. is to be paid, as against last year's dividend of 30 per cent. on a smaller capital. Compared with the interim profit statement published last November, the figures show that the rate of profit has been very well maintained during the second half of the financial year. The following table shows approximate comparative results during the last three years:—

	Years to March 31,		
	1934	1935	1936*
Net profit.....	73,796	185,973	250,000
Ordinary shares—

Carried forward.....	11,160†	18,813†	23,531

* Approximate. † After bringing in £1,473 profit on the sale of an investment. ‡ After writing off £707 issue expenses. § At 25 per cent. capital bonus.

The company's production and profits have been increased this year by the double-shift operation of the Whitehead Thomas Strip and Bar Company's plant, and also, presumably, by the completion of the extensions put in hand in 1933. No further increase in capacity is at present projected, and since the company is probably now working at maximum efficiency, the period of sensational profit advances may be at an end. The company, however, should derive substantial dividends from the subsidiary, Whitehead, Hill and Company. Moreover, benefit may be derived from the expected rise in finished steel prices, for the company obtains its raw material on a long-term contract from Richard Thomas. The increase in steel production costs, which are clearly reflected in the failure of Park Gate Iron and Steel to increase its profit by more than £1,475, may not therefore seriously impair Whitehead's profit-earning capacity. The shares at 7½ cum dividend yield 4½ per cent., and are one of the best holdings in the iron and steel group.

Wiggins, Teape.—The accounts of Wiggins, Teape and Company for the year to December 31st last, are gratifying to shareholders, for they disclose an increase of 12 per cent. in the consolidated trading profit of the company and its subsidiaries, and recommend an increase in the parent

company's ordinary dividend from 8 per cent. to 9 per cent. They are even more gratifying to supporters of the "better balance-sheet" movement, for they prove conclusively that the publication of a wealth of financial detail—including consolidated profits, a group balance sheet, a list of "internal" reserves, and regular quarterly estimates of net profits—clearly does not prejudice a well-managed company in a competitive world. The following table traces the last three years' results, step by step, from the consolidated trading profit down to the dividend appropriations of the parent company:—

	Years to December 31,		
	1933	1934	1935
CONSOLIDATED FIGURES

† Including £15,000 Special Obsolescence.

‡ Includes £10,000 to income tax equalisation reserve.

The advance in earning power reflects, in part, an increased volume of trade both in home and export markets and, in part, the improved results of some of the company's new ventures. The Greaseproof Paper Mills at Dartford, for instance, have not yet reached a profit-making stage, but their trading losses in 1935 were much less than in 1934. Meanwhile, the group, out of its own resources, is continuing to expend considerable sums on additions and improvements to the equipment of its mills. In the first quarter of 1936 earning power was broadly maintained at the level of the same months of last year. The £1 ordinary shares (which, with the £1 preference shares, are to be converted into stock) stand at 41s. 3d. to yield £4 7s. 3d. per cent. on a 9 per cent. dividend and £6 7s. per cent. on earnings of 13.1 per cent. They may be regarded as a well-covered investment in the "long-equity" group, and are reasonably valued by present standards.

Coats and the Fixed Trusts.—The J. and P. Coats preliminary figures and "ex bonus" dividend (on which we commented last week, page 376) came as an unexpected blow to the market. J. and P. Coats ordinary stock has always been a popular holding for investors, large and small, and its dividend record and impressive marketability put it in the first rank of industrial ordinary shares. The fixed trusts, doubtless for similar reasons, have made the stock one of their established favourites. An analysis of "duplicated securities" in our recent Fixed and Flexible Trust survey showed that J. and P. Coats ordinary stock actually came first on the list, and was held by as many as twenty trusts with a rigid portfolio, out of forty-eight trusts existing at the end of 1935. Further duplication may be involved if the managers of certain flexible trusts have exercised their power to invest in the stock. According to the estimates given on page 40 of the Survey, the twenty fixed trusts, if they had sold all their "available" units, would hold some £377,000 of the

LONDON INDUSTRIAL FINANCE TRUST LIMITED

FARLEIGH HOUSE · LAWRENCE LANE
CHEAPSIDE · LONDON · E.C.2
TELEPHONE NATIONAL 1171

stock. This is a maximum figure, which has not, in fact, been reached. If holdings, however, had attained such a level, the passing of the bonus would have involved a loss of income to the trusts of some £14,100. I.C. Gas, whose stock is held by seventeen trusts, has been compelled to reduce its dividend from 12 per cent. to 10 per cent. In view, however, of the relatively small proportion represented by the "investment" industrials in fixed trusts portfolios, it may be expected that these adversities may be offset in forthcoming distributions by higher dividends from the larger "recovery" holdings.

Other Company Results.—A large number of reports are again included in our usual table of company profits which appears on page 463. The results of 70 additional companies will be found, and each section is well represented. Recent property company results are augmented by those of City of London Real Property and City and West End, which show a slight decline in earnings, and by Hesketh Estates, whose profits and dividends are increased. Imperial Continental Gas net profits have fallen sharply from £523,093 to £437,770, but the reduction of the dividend to 10 per cent. was not unexpected in view of the reduced interim dividend and the continued difficulties of the gold bloc countries. Pease and Partners report an increase in profits from £123,815 to £145,294. Yorkshire Amalgamated Collieries have enjoyed a better year, reflected in an increase of profits from £50,273 to £108,505 and a doubled ordinary dividend of 4 per cent., while Wilsons and Clyde Coal have declared an increased dividend of 5 per cent. out of higher profits. Ocean Coal and Wilsons, however, have suffered a severe fall in profits from £173,266 to £67,915, and the ordinary dividend—2 per cent. in the previous year—has been passed. The Singer results disclose a loss which is unexpectedly severe, amounting to as much as £203,449. The difficult working conditions during 1935, coupled with shortage of working capital and dislocation, have apparently been responsible, and the report discloses that the creditors have granted a moratorium until December next. In the brighter textile group, the Fine Cotton Spinners result is more encouraging, and the profit of £117,204 reduces the debit balance carried forward to £434,880. British Cotton and Wool Dyers have also experienced better trading, reflected in the increased dividend of 6½ per cent. Illingworth Morris record an impressive recovery in profits, from £1,707 to £79,924, and Porritt and Spencer have earned higher profits. This general improvement in the textile industry last year is reflected in improved earnings for Tweedales and Smalley, whose dividend is raised from 10 to 12 per cent. Among the miscellaneous companies, Beechams Pills reports a sharp rise in earnings from £213,484 to £330,651, the dividend being raised from 2½ to 50 per cent. The Fisher and Ludlow report illustrates the prosperity of the light engineering and metal stamping trades, for profits have increased from £59,988 to £114,383, while shareholders receive 17½ against 12½ per cent. B. Laporte appear to have gained advantage from the modest recovery in agricultural spending power. The net income of Whitehall Electric Securities has been reduced from £214,472 to £191,767 owing to Greek Exchange difficulties. A con-

servative policy is adopted by the directors of *Chloride Electrical Storage*, whose dividend is maintained at 15 per cent., while profits increased by £48,000 to £389,237. Increased dividends have been announced this week by *Suez Canal*, *Raleigh Cycle* and *Vactric*. *Griffiths Hughes Proprietaries* have maintained the total distribution of 17½ per cent.; the operating company earned £5,466 less at £456,678.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company and professional meetings:—Society of Incorporated Accountants and Auditors, Union-Castle Mail Steamship, Commercial Union Assurance, Equitable Life Assurance Society, Liverpool and London and Globe Insurance, London and Manchester Assurance, London County Freehold and Leasehold Properties, Mid-European Corporation, British Shareholders Trust, Selection Trust, Lunuva (Ceylon) Tea and Rubber Estates, Bangawan Estates, Kasintoe Rubber Estates, British Borneo Petroleum Syndicate, Stephany (Furniture Trades), and James W. Cook. The chairman of Equitable Life Assurance discussed the rate of bonus declared as a result of the recent valuation, and stated his expectation that the rate would be maintained. Mr Herbert Lewis, discussing the progress of Commercial Union Assurance, disclosed that the first three years of the current quinquennium pointed to a good valuation. Mr A. E. Pattinson, at the Liverpool and London and Globe meeting, referred to the record underwriting profits achieved during the past year, which amounted to £637,839. Reflections on the inadequacy of insurance for dependants occupied an interesting part of Mr Walter H. Brown's address to London and Manchester Assurance shareholders. At the Union-Castle meeting, Mr Robertson F. Gibb outlined the result of negotiations regarding control of the company. At the fifty-first annual meeting of the Society of Incorporated Accountants and Auditors, Mr R. Wilson Bartlett dealt with the income tax provisions in the Finance Bill, and with the services available in the profession for dealing with tax matters. Sir William J. M. Burton disclosed a number of interesting features associated with the management of the London County Freehold and Leasehold Properties, and it was stated that earnings of 15 per cent. should be available in the current year. The chairman of British Shareholders Trust announced results which justified bringing the dividend up to 100 per cent. Mr Norman Holden said that Mid-European Corporation, Ltd., had been able in the last twelve months to reduce the percentage of investments in Germany from 24.80 per cent. to 18.94 per cent. The chairman of British-Borneo Petroleum Syndicate discussed diversification of the syndicate's investments, and said that of investments having market quotations, 43 per cent. were in oil, 16 per cent. in home railways, 5 per cent. in electrical supply companies. The chairman of Selection Trust discussed the company's investments in American Metal Company, in Yugoslavian mines, and in Consolidated African Selection Trust. Mr W. J. Clarke, at the meeting of James W. Cook and Company, proposed the writing-off of the balance of goodwill on this company's accounts. The chairman of Stephany (Furniture Trades), Ltd., discussed advances to subsidiaries to finance their increasing business. Mr Eric Macfadyen referred at the Kasintoe Rubber Estates meeting to exchange difficulties. Mr James Fairman at the Bangawan Estates meeting referred to unfair treatment of British North Borneo by the International Regulation scheme for restricting rubber production. The chairman of Lunuva (Ceylon) referred hopefully to the prospects for 1936.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
JUNE 9ACCOUNT
JUNE 11

market has entered the three-week holiday account the very minimum of relish. The knowledge that the quarter's industrial production reached an all-time high is one of the confirmatory facts which proves that

the market was right in the past without giving it any decisive pointer for the future. Last week's J. and P. Coats results still appear to cast their shadow, despite the considerable number of smaller companies which show a satisfactory earnings improvement. Previous history, however, suggests that a succession of discounted dividends may do little to alleviate a market in which the basic factors suggest a cautious appraisal both of the political and economic possibilities. Oil shares, in fact, have virtually monopolised speculative interest.

The gilt-edged market has experienced a dull week. Support was lacking from the start, and although the Huddersfield loan "success" helped matters on Tuesday, the persistent liquidation on a small scale had its inevitable corollary in fractional declines throughout the list. Conditions in the home corporation market responded only momentarily to the early closing of the Huddersfield lists, and the news of further issues in store, although no secret, depressed an already leaden market.

The feature in the foreign bond market was provided by Chinese bonds, which suffered a heavy fall on the disclosure of the extent of losses from smuggling in North China (described on page 433), and somewhat exaggerated fears that the Shanghai revenues might be threatened. The Customs issues fluctuated considerably on later days, as sentiment swung to the more favourable view that the prior charges on the collections could be regarded as reasonably secure. Japanese issues were affected by the record armaments budget. European bonds were still favoured with meagre support. Brazilian bonds had a poor record, although Argentine issues were maintained.

The wages question now overhangs the home rail market, and business throughout the week has been on a restricted scale. The traffics were satisfactory but not exciting, and were insufficient to stem the small losses which set in on Tuesday. In the foreign rail market Cordoba first debentures were again active, but the ordinary stocks of the principal lines, although not lower on the traffics, derived no encouragement from them.

General dullness has spread over the industrial markets, and there have been no decisive movements in the past week strong enough to break the monotony. Relief has been found only in a few individual issues which have responded to specific causes. Cable and Wireless preference stock, which greeted the accounts with a certain aloofness, were distinctly easier on the traffic index. Iron and steel issues, which were irregular at the end of last week, have made no progress. The Whitehead results were considered fairly satisfactory, but were followed by slight selling, and in mid-week most iron and steel prices declined. Publication of record iron and steel production figures left the markets unmoved. Business was generally dull in the motor and aviation share groups, the principal points being the weakness of Singers' shares on the surprisingly poor results and the recovery in mid-week of Thos. Tilling issues.

Among electrical equipment shares, Crompton Parkinson were supported at the end of last week, but no particular interest was shown this week. The textile group was affected by the lower profits and the omission of the J. and P. Coats bonus, although from time to time there were occasional improvements in other issues on better company reports. The stores group was one of the brighter features in the market, although Woolworth, which touched a record level at the end of last week, showed slight easiness this week. Tobacco shares remained quiet, although Gallaher were stronger in mid-week.

The miscellaneous industrials section offered a few outstanding features against a generally uninteresting background. Henry Meadows shares were in steady demand throughout the week, and prices were buoyed up by hopes of a bonus. Other small engineering shares were also well maintained, but the building materials group was rather weak. Beechams deferred provided a brighter spot and recovered quickly from the dividend deduction.

The oil shares market has continued its firework display. Eagle issues betrayed no signs of market difficulty at the carry-over. But the main stimulus has been derived from the "Shell" dividend, which was up to expectation, and Royal Dutch dividend, which were better than the market's most optimistic estimates. Interest was by no means confined

to these issues, and Trinidad Leaseholds provided a particularly good feature. Mexican Eagles became erratic in mid-week. Hopes of resumed dividends led to a demand for Phoenix issues. Rubber shares have reflected movements in the commodity price; a rise at the end of last week produced cheerfulness, but a recession this week reinforced the dullness borrowed from the rest of the market. Tea shares improved slightly in mid-week.

Conditions in the Kaffir market were inclined to be a little quieter, and for want of continued support many prices were lower in mid-week. West Witwatersrand, however, continued to improve, and Randfontein were in demand in hopes of an increased dividend. There was a similar quietness in the West African department, and prices tended to move downward in mid-week. Rhodesian copper issues were irregular, and tin shares reacted in sympathy with the commodity, which touched the lowest price of the year.

FOREIGN STOCK EXCHANGES

NEW YORK

Two political events were behind the main market movements this week. The defeat, in the House of Representatives, of the Frazier-Lemke Farm Mortgage Bill, closely following the Senate's strong opposition to the Tax Bill handed up by the House of Representatives, was followed by an active day, and leading issues rose up to 4 points. A short lull at the end of last week was expected to give way again to a renewed bullish movement when the Supreme Court handed down its decision on the Guffey Coal Act, but, contrary to expectation, which was based upon the experience of the market after the N.R.A. reversal, the coal decision did not herald a boom. Disappointed professionals became bearish, and on Tuesday prices fell fairly rapidly on a relatively small volume of trading. A slight recovery later was not sufficiently marked to induce hopes that Wall Street had shaken off its political fears and was willing to pay more attention to the business news, which continues good. Oil shares advanced on the adjustment of the Pelican Company's production on the new Rodessa field, and a number of consumption goods shares improved on good retail trading reports. Company reports have been satisfactory. The Iron Age estimate of steel mill activity at 68.5 per cent. has improved slightly on last week. Power output is 15.4 per

cent. over the corresponding week of last year. Dealings in a number of foreign securities have been suspended because regulations of the Securities and Exchange Commission have not been satisfied.

* Two-hour session.

PARIS

The outlook for the Paris speculator has been, in his own eyes at any rate, that of a shorn lamb shivering before the Socialist wind. But M. Blum's reassurances seem to have sheltered the wind, and the investor is hoping that his lambs may not even be shorn. At the end of last week nervousness died away and rentes recovered slightly. Industrials were in favour, and internationals able to hold.

(Continued from page 439)

their own, though most improvements were marked by restraint rather than enthusiasm. A modicum of profit-taking at the beginning of this week was converted to small-scale nervous selling following demands from the C.G.T. for large-scale public works, and the selling had a more pronounced result as the week progressed. In mid-week rentes lost up to a franc, and Banque de France shares were down to 6010. Internationals suffered from Wall Street's weakness, and industrials were equally depressed. Speculators are once more nervously fingering their wool, keeping an eye on the wind.

BERLIN

The share market was very firm almost all last week, and it was notable that activity was revived in fixed-interest securities, many of which registered moderate advances. Gains in the share market last week were substantial, some specialities rising eight to ten points. Favourites among standard industrials were Farbenindustrie, Siemens and Halske, Mannesmann, Felten und Guillaume, Ilse Lignite, Stolberg Zinc, and Schultheiss Brewery. Banks shares were strong, the leading commercials rising some five points and Reichsbank seven points. The new week opened firmly, but weakened on Tuesday. Dollar bonds were irregular, with many slight declines. There was no improvement on Wednesday.

AMSTERDAM

A firm close, with a restricted volume of business, to last week's operations gave way at the opening of the new week to indifference, with certain outstanding exceptions, particularly rubber issues, which were encouraged by the good American consumption figures. This idle condition has prevailed throughout the week, and rubber shares have joined the general trend. Royal Dutch improved slightly on the dividend announcement, but industrials were dull, with Unilever N.V. 2 points down in mid-week.

CAPITAL ISSUES

THE ebbing conditions in the ordinary share markets this week have left the home corporations with a free hand—if that description can be properly applied to a queue which moves only to informal but effective direction. The terms inaugurated by Birmingham some weeks ago have been maintained, despite the result of the Sheffield issue at the end of last week. The Huddersfield loan of £1,000,000, funded by cash applications for half of the total issue, is largely a conversion operation of a 3 per cent. stock into a 3 1/2 per cent. stock. Stockton-on-Tees comes to the market for £900,000, of which some £226,063 is repaid by converting existing debt and £524,037 for funding short-term mortgages. Both authorities have a high proportion of reproductive to total debt, and Huddersfield continues the helpful practice, inaugurated by Sheffield last week, of setting out the trading profits of each department. We discuss the position in the municipal loan market in a Note on page 433. The remaining supply of new securities this week are provided by smaller concerns, on whose behalf statements are published "for information only." These include the 4 1/2 per cent. debenture stock of James Grant, purchased by Prudential Assurance at 99 per cent.

net, and an issue of 3 1/2 per cent. stock placed at 98 1/2 by Home and Foreign Investment. Particulars relating to Willowbrook, Perfecta Motor Equipments, Trojan (Holdings) and I. Grieve all disclose a rising trend of profits.

ISSUES OF THE WEEK

Profits of vendors, after depreciation, years ended August 31: 1933, £4,182; 1934, £20,141; 1935, £23,741; half year to February 29, 1936, £15,782. The Standard Industrial Trust purchases 80,000 10s. preference shares at par and 162,500 4s. ordinary shares at approximately 6s. 2d. per share.

PRIVATE PLACING

Greene King and Sons.—Greene King and Sons has placed privately 25,000 ordinary shares of £1 at £4 each.

ISSUES TO SHAREHOLDERS ONLY

Hevea (Burma) Company.—125,000 convertible preferred ordinary shares of 2s. are offered for subscription at par. The preferred ordinary shares are entitled to a cumulative dividend of 6 per cent. and to priority for capital and arrears of dividend and are convertible into ordinary shares not later than March 31, 1941.

Kenya Gold Mining.—The directors have decided to issue the unissued 56,000 shares of 5s. at 7s. 6d. per share. Shareholders registered at the close of business on May 7th are entitled to apply for new shares in the proportion of one share for every three shares held. The new shares will, when allotted, rank *pari passu* in all respects with the 144,000 shares already issued.

Short Brothers (Rochester and Bedford), Ltd.—An arrangement has recently been concluded with Messrs Harland and Wolff, Ltd., of Belfast, whereby this company and Messrs Harland and Wolff, Ltd., will co-operate in the formation of a new company for the purpose of constructing aircraft of both land and marine types at Belfast. The new company will have an authorised share capital of £450,000, of which £250,000 will be issued all in ordinary shares of £1 each. In order to facilitate the subscription by the old company of shares in the new company, 120,000 new ordinary shares are to be offered to existing shareholders in the proportion of one new share for every five at present held, at 27s. 6d. per share.

CONVERSIONS AND REPAYMENTS

Birkenhead Corporation 6 per cent. Redeemable Stock, 1936-51.—This stock will be repaid at par on September 1, 1936.

Nottingham Corporation 6 per cent. Redeemable Stock, 1936-51.—This stock will be redeemed at par on September 1, 1936.

Stockton-on-Tees Corporation 3 1/2 per cent. Redeemable Stock, 1928-68.—This stock will be repaid on December 1, 1936.

OFFER ABROAD

Australian Loan.—A 3 1/2 per cent. Australian loan for £9,000,000, issue price 98 1/2, is now being made in the Commonwealth market.

FORTHCOMING ISSUES

Alpha Cement.—A meeting of shareholders to approve of the terms of new issues of capital is to be held May 25.

Elephant Trading (South Africa) Holdings, Ltd.—Arrangements have been completed for an offer for sale by M. Samuel and Company of 300,000 5 1/2 per cent. cumulative preference shares at 21s. 6d. each and 600,000 5s. ordinary shares at 7s. each in Elephant Trading (South Africa) Holdings, Ltd.

Hartley (William P.).—An offer for sale will be made on May 25th by Charterhouse Investment Trust of 500,000 5 per cent. cumulative preference shares of £1 each at 21s. 6d. per share, and 500,000 ordinary shares of 5s. each at 8s. per share, of Wm. P. Hartley.

OTHER RESULTS OF ISSUES

Borax Consolidated, Ltd.—The issue by Borax Consolidated of 150,000 deferred ordinary shares to the preferred ordinary and deferred ordinary shareholders of the company was substantially over-subscribed.

Kellner-Partington Paper Pulp Company.—Cash subscription lists for the issue at par of £1,000,000 4 1/2 per cent. guaranteed mortgage debenture stock were closed at 9.2 a.m. May 15th owing to over-subscription. Conversion lists will close May 25th.

Lloyd's Building.—The list of applications for the issue at 95 1/2 of £600,000 3 per cent. first mortgage debenture stock was closed at 9.5 a.m. May 15th. The issue was heavily over-subscribed.

Sheffield 3 per cent. Stock.—Conversion lists for the issue at 99 of £2,500,000 3 per cent. debenture stock, 1956-58, were closed at the end of banking hours May 15th. Cash lists were opened and closed on May 14th. The underwriters have been left with 48 per cent.

Tea Corporation.—The new issue of £40,000 4 1/2 per cent. first mortgage debenture stock at par has been fully subscribed.

CALLS DUE MAY 25 TO MAY 30, 1936

The grand total of calls in May, 1936, is £11,271,054, which compares with £5,893,415 in May, 1935.

THE REPUBLIC OF CHILE

PRESIDENT'S MESSAGE TO CONGRESS

His Excellency Senor Don Arturo Alessandri, President of the Republic of Chile, delivered his Message to Congress on 21st May, in which he dealt fully with the financial and economic position of the Country.

The following is a translation of extracts from the Message:—

After recapitulating in general terms the difficulties which had to be faced when his Government took power, and stating that these difficulties had been satisfactorily dealt with, President Alessandri said:—

If it was my pleasing duty last year to place on record that the financial year of 1934 had closed with a surplus, how much greater is now my satisfaction to be able to inform you that the financial year of 1935 has given us a surplus amounting to the sum of \$117,689,223.93.

The actual yield from the different sources of national revenue has exceeded all expectations as laid down in the estimates for 1935, among which attention should be drawn to the greater revenue derived from import duties which exceeded the estimate by \$140,000,000.

This is explained by the boom in exports which has given us a larger number of instruments of exchange, on which the importation of those articles necessary for the development of the normal activities of the country depends.

The actual figures of the 1935 Budget are as follows:—

Revenue	\$1,408,644,392.18
Expenditure	\$1,290,955,168.25
Surplus	\$117,689,223.93

Economic recovery is, therefore, an incontrovertible fact, seeing that this cannot take place if there is not a real equilibrium in the public estimates, as I have pointed out on other occasions.

The three financial years of my administration have each closed with a surplus: in 1933, with \$1,831,654.27, in 1934 with \$68,108,253.73, and in 1935, with \$117,689,223.93.

The well-ordered system of taxation and the impulse given by the Government to productive activities by direct and indirect measures, have, therefore, permitted us to count on the resources indispensable for the normal development of the administration and unforeseen necessities, which is a factor of paramount importance for the well-being of the country.

OUTSTANDING ACCOUNTS

During the year 1935, the accounts outstanding from previous administrations have continued to be settled. These, as I informed you on another occasion, amounted to the large sum of 376 million pesos.

The authorisation contained in Law No. 5408 for the settlement of these commitments had not a wide enough scope, and in order to complete the task initiated, and to free the Treasury from outstanding commitments, payable at sight, I was compelled to ask to supplement the aforesaid law by 85 million pesos, which was passed on February 1, 1935, as Law No. 5585 of the same year.

In my Message of last year I explained to you the necessity for modifying the Organic Law of Estimates, so as to establish regulations which shall fill up the blanks in the existing regulations and avoid, as far as is possible, the future accumulation of unpaid accounts, such as those which it has been necessary to deal with in the laws already mentioned, and which shall impede the fictitious financing of the ordinary Estimates of the Nation. For this purpose and so as to give the character of fixed expenditure to the commitments of the State in relation to the Cajas de Prevision (Sinking Funds) Beneficencia Publica (Public Charities Administration) and

other quotas for special services, which according to the existing laws constitute commitments of the Exchequer, your approval has been requested for a Bill which introduces certain modifications in Law No. 4520, the passing of which is pending your consideration. I have to insist in pointing out to you the extraordinary importance I attach to the approval of this Bill, which I commend to your special consideration.

EXTERNAL DEBT

Payment having been effected of the outstanding accounts, which my Government inherited from previous administrations to the tune of the enormous sum already indicated, and arrangements satisfactory to the country having been made for the payment of the floating debt in the terms expressed in my Message of the year 1935, the Government considered that the moment had arrived to recover its credit lost by the suspension of the service of the External Debt, and making as many sacrifices for this purpose as possible, within the maximum permissible by economic realities, and on the initiative of the Government, the National Congress approved during the year 1935, Law No. 5580, which prescribes the renewal of the service of External Debts, direct and indirect, both of the State and of the Municipalities of the Republic.

For this purpose, in the first place, part of the revenue accruing to the Treasury from the nitrate industry was earmarked in replacement of the export duty which a previous Government had relinquished in favour of the producers and creditors of the nitrate industry. This revenue the present Government has recovered for the State. In addition, the revenue derived from the income tax on copper producers was earmarked for the same purpose.

It is my pleasing duty to inform you that this important law, destined to re-establish the country's credit abroad, is being applied by the Caja de Amortizacion in its entirety, and with undeniable success.

As you well know, this law assigns half of the revenue derived by the state from the nitrate and copper industries for paying interest on the total amount of the debt, and the remainder after deducting expenditure entailed by the application of the law, is assigned to the amortisation of the debt, by purchasing the bonds on the market, while these are quoted below par, and by drawings at par, should the bonds be at a higher price than their nominal value.

During the past year, the Caja de Amortizacion (Amortization Fund) has by use of the faculty indicated, redeemed bonds to the nominal value of 14,674,500 dollars and £14,020.

In this way, the total debt, service for which is prescribed in Law No. 5580, has been reduced from a total equal to \$449,109,338 at which it stood on December 31, 1934, to \$434,365,677, on the same date in 1935. This reduction, therefore, represents \$14,743,661 and a decrease of 3.3 per cent. of the value of the debt.

The portion of the revenue which the law assigned to the service of interest amounted to a total of 2,064,125.80 dollars during 1935, which, distributed over the debt aforementioned represents an interest of 4.75 dollars for each one thousand dollars of capital.

The Caja de Amortizacion has been able to make arrangements both in England and on the European Continent, for the banks who place the loans to continue handling the payment of coupons for the sums permitted by Law No. 5580. In London, the payment of coupons was initiated on February 10th of the current year and Messrs Rothschild and Sons, traditional bankers of the Chilean Government in England, have reported that in the period of less than three months of payment, or say, up to April 30th last, the holders of more than 72 per cent. of the bonds issued through their intermediary have adhered to the form of payment laid down by Law No. 5580.

In France, Switzerland and Germany, the payment of coupons commenced in the month of March, and the U.S.A. payment commenced on April 24th last through the correspondents of the Caja de Amortizacion in New York, the Schroder Trust Company.

I am pleased, therefore, to be able to confirm that Law No. 5580 is being fully applied, and the great percentage of bond-holders in England who have adhered to the Chilean plan permits us to hope that within a reasonable period, the proportion of bond-holders who will adhere to the plan of the U.S.A., and in the countries of the Continent of Europe, will reach a figure near to that already obtained in London.

In order to make compliance with the law efficacious and to convince the creditor markets that Chile was doing its utmost and making great sacrifices to settle its obligations, the Government and the Caja de Amortizacion appointed a Commission which carried out its duties in a very satisfactory manner, in spite of the grave difficulties encountered. Happily these difficulties were over to a great extent, principally in England, where the Mission, composed of Messrs. Puga, Hamel and Mardones, was able to secure explicit acceptance of the plan contained in Law No. 5580.

PUBLIC WORKS

As the State took over the entire service of the External Debt from the Caja de Credito Hipotecario, the State Railways and Municipalities, it was necessary to promulgate a law establishing the relations which should exist between the Government and the old debtors of such obligations.

For this purpose, also on the initiative of the Executive, Law No. 5601 was promulgated. This law satisfies the purpose previously indicated and allowed the Government to receive from the old debtors a sum in national currency of over 90 millions of pesos in the year 1935. The whole of this sum was earmarked, by virtue of the different laws, to financing the Institutes of Mineral and Industrial Development of Tarapaca and Antofagasta and to several other important Public Works, such as the hospital and jail construction schemes, the survey and establishment of the air line to Magallanes, etc.

In this way, with the plan already mentioned, there has also been secured a very important advantage of an internal character, the importance of which is undeniable, seeing that it has been possible to commence these works, which would not have been very easily financed in any other way.

LONG-TERM INTERNAL DEBT

The increase of \$146,095,798.23, which the long-term Internal Debt of the State shows during the year 1935, is due entirely to the cancellation or consolidation of exigible debts contracted by Administrations previous to the present one. The only issue of a different nature is that effected in order to hand over funds for complying with Colonisation Law No. 5420, and which amounts to a total of \$10,636,914.43, a lesser sum than the amortisations of the internal debt effected during the same year.

Actually, the issues carried out during the year 1935 were the following:—

Law No. 5408, for the payment of accounts pending owed by the State previous to the year 1933	\$136,319,356.42
Law No. 4532, payments to cash for balances not covered in the plan of Public Works of the years 1930 and 1931	642,000.00
Law No. 4386 issued for the redemption of bonds bearing greater interest than 7 per cent.	2,730,000.00
Law No. 5601, issued in order to cancel part of a bank advance of 8,000,000 dollars owing since 1930 by the Caja de Creditos Hipotecarios. This advance was declared to be of the responsibility of the State by Law No. 5601, in exchange for the waiving by the Banks of the State's responsibility in regard to the sum of 15,000,000 dollars for bonds deposited as a guarantee of the aforementioned advance	6,868,576.32
Law No. 5127. This law, promulgated on May 20, 1932, declared the State to be responsible for the loans which the Municipality of Santiago had contracted for the construction of Barrio Oivico. In order to carry out the said operation and to pay part of the bank advance contracted by the Municipality of Santiago, it was necessary to issue bonds for the sum of	8,050,000.00

Total of the foregoing, which as we have said, represents compliance with engagements entered into by previous Administrations

In addition, bonds have been issued for compliance with Law No. 5420, relating to colonisation of properties situate in the zone of the Law regarding Austral Property, to the sum of

And annuities have been redeemed in the State coffers, in accordance with Laws of September 24, 1865, and of August 11, 1869, for

Total issued \$168,460,916.53
And ordinary and extraordinary amortisations have been effected for 22,365,118.12

Increase in the Debt \$146,095,798.23

As may be seen, the increase in the Debt is lower than the value of the bonds which it was necessary to issue for compliance with the exigible engagements contracted by Governments previous to the present one.

It is with great satisfaction that I declare also, that during the course of the present year, in relation to the consolidated Internal Debt of the State, the only issue to be recorded is that of \$33,334,000, which was employed for increasing the capital of the Institute of Commercial Credits, in accordance with Law No. 5687, of September 16, 1935, and that these bonds bear 6 per cent. interest and are held in portfolio by the Institute itself, so that they in no way affect the bond market.

BANK ADVANCES

I am pleased to be able to place on record that during the year 1935 the arrangement regarding the short-term debts in foreign currency was concluded. These obligations, which had reached maturity in 1931 and 1932, were extended in the same advantageous conditions pointed out in my Message of last year, that is to say, with interest of 1 per cent. and amortisation of 2 per cent. and 2½ per cent. per annum.

Extensions were also secured on the same advantageous conditions for the three obligations for which the State was declared to be responsible by Laws Nos. 5127 and 5601, of May 20, 1932, and February 14, 1935, respectively.

The Government has entrusted the "Caja Autonoma de Amortizacion de la Deuda Publica" with the service of all these obligations. It is in this organisation that the service of all financial obligations of the State has been centralised.

NITRATE INDUSTRY

Law No. 5350, dealing with the reorganisation of the Nitrate Industry has continued to be applied with very satisfactory results and without disturbing in any way the development of the activities of the Nitrate and Iodine Sales Corporation.

In the year 1935 there were nineteen nitrate "oficinas" in operation, and the output of nitrate was 49.23 per cent. higher than in the year 1934. The average number of men maintained in work by the industry during 1935 was 21,672, and the number of employees 2,779. Total wages were \$100,925,000, a figure which makes a favourable comparison with the total of \$74,400,000 paid in the year 1934.

With the number of "oficinas" that are operating at the present time, the unemployment problem has ceased to exist in the North, and all employable workers have been absorbed in the establishments which are producing, and as before June 30th next three further "oficinas" which have been shut down will be opened—"Cecilia" in Antofagasta, and "Aguada" and "Canina" in Tarapaca—the number of men in work will show an even further appreciable increase, and there will be a greater demand for nitrate workers during the course of the present year.

The working population of the "pampa" stands to-day at the figure of 53,143, and, as will be understood, this population is of enormous importance to commerce in the ports of the North and exercises a powerful influence on the development of our mercantile marine.

The population indicated is made up of the families of the 22,000 men now working in the nitrate "oficinas," and the activities of these workers are well-ordered, thanks to the harmonious relations existing between the industrialists and their operatives, which not only permits the work in progress to be correctly developed, but also facilitates the policy of perfecting the industry which is striving particularly to improve the quality and presentation of the nitrate, in order to compete in more favourable conditions with its rivals in all markets.

to divert our thought and energies into more profitable channels; and I hope that, when the time comes, you will show, by your endorsement of the necessary changes, that you share our own conviction that the settlement represents, from the point of view of the interests of this company as a whole, a completely satisfactory and honourable solution of this unfortunate internal controversy.

PROFIT AND LOSS ACCOUNT

I will now turn to matters more immediately before this meeting and commence by referring to the accounts.

As you will doubtless have observed, the profit on voyages for the year under review, after making provision for depreciation on ships, property and plant, for loss in respect of a subsidiary company, taxation, administration and other expenses, amounted to £351,119, which is about £16,700 less than for the previous year. This decrease is more than offset, however, by the increase of £21,000 in our income from investments and properties.

On the debit side of the account, it will be noticed that the amount paid out in interest has increased, owing to further advances received in connection with the financing of the construction of new vessels. After this amount and the amounts required for the payment of directors' fees and the interest on the debenture stock have been taken into account, there remains, with the sum brought forward from 1934, a balance available of £412,063.

Out of this sum a full year's dividend on the preference shares of the company has been paid and £240,000 has been transferred to the reserve for depreciation of investments, thus leaving a balance of £47,443, which it is proposed to carry forward.

CONSERVATIVE DIVIDEND POLICY STILL NECESSARY

Mention of the preference dividends leads me to repeat what I stated last year, that while the board sees no prospect of these dividends falling further into arrear, it is still necessary to continue to conserve our financial resources for two reasons, namely:

First, as you will notice, the auditors again qualify their report with the remark that "the book value of the investments, after deducting the reserve for depreciation of investments, is considerably in excess of their present value." Until this position is rectified, it is considered wise and prudent at present to refrain from paying off these arrears—a policy which I feel sure will commend itself to our shareholders.

The second reason for a cautious policy in regard to dividends is the paramount necessity for bringing our fleet up to present-day requirements, so as to render it capable of maintaining the company's position in the various trades in which it is engaged. When last I addressed you, after referring to the two mail, two intermediate and two refrigerated cargo ships which had been ordered during the previous year, I said "it will be indispensable for the company, at no distant date, to contemplate still further new tonnage if it is to keep fully abreast of the requirements of the trade." Such further tonnage has been ordered and other improvements in our fleet put in hand. I shall refer later to what has been done in this direction, but this very substantial building programme has required financing, and this, in turn, necessitates a conservative policy on the part of your directors.

BALANCE SHEET

Turning now to the balance sheet, you will see that there is no change in the capital of the company, the reserve account remains at the same figure as last year (£450,000), whilst the insurance reserves have increased by £46,772, and now amount to £776,807.

During the year under review we have repaid £150,000 on account of an advance we received some years ago under the Loans Guarantee Act of Northern Ireland, thus reducing the amount outstanding to £160,000. This is all that now remains of the very extensive financial commitments entered into under the previous regime in respect of shipbuilding and otherwise with which the present board has had to deal during the past few years.

I will refer later to our further liabilities in respect of shipbuilding.

VALUATION OF THE ASSETS

On the assets side of the balance sheet, the fleet has been substantially written down, depreciation having been regularly provided for on the usual five per cent. basis. The book value of our property, furniture and plant has also been well written down, and, in view of the rapid increase in the value of property in South Africa recently, the figure at which many of our South African properties stand in our books is probably considerably less than their present actual value.

I have already referred to the overvaluation of our investments, the circumstances attaching to which are so well known to you that it is not necessary for me to refer to them again to-day, and the time is rapidly approaching when it will be necessary to write off some of our largest investments completely.

Some of our investments, of course, are not overvalued and, as you will have gathered from the increase in our return from investments generally, some of our smaller subsidiary companies have made substantial profits, whilst only one made a loss last year. This was not a trading loss but a book loss on the sale of a property bought many years ago.

Your directors have taken advantage of every opportunity which has presented itself to dispose of certain of our investments in other companies which once formed part of the Royal Mail Group, and I am glad to say that, in some instances, the amounts received by us have been rather more than at one time we anticipated.

I do not think there are any other matters in the accounts which call for special comment.

Our services were operated regularly and efficiently throughout the year and were carried on without any serious accident.

EFFICIENCY OF THE FLEET

During the whole of the year under review the fleet has been maintained at its usual high standard of efficiency, and at December 31st last it comprised 33 sea-going vessels, including four vessels under construction, with a total tonnage of 370,683 tons, if small craft are also taken into account.

Of the six vessels which were under construction a year ago, three, namely, the "Roslin Castle," "Rothesay Castle," and "Stirling Castle" have already entered our service, whilst the fourth, the "Athlone Castle," is due to commence her maiden voyage to-morrow, after completing satisfactory trials and making a successful trip round from Belfast to Southampton. The remaining two ships, the "Dunnottar Castle" and the "Dunvegan Castle" will be placed into commission very shortly.

The "Roslin Castle" and "Rothesay Castle" have now made several voyages from South Africa with cargoes of fruit and other perishables, and they have proved very useful in enabling us to fulfil our obligations to the South African Government in this respect.

MAIL CONTRACT AND ACCELERATION OF MAIL SERVICE

As I mentioned to you last year, the question of acceleration of our services has been in the minds of the directors for some time past, but, as regards the mail service, the matter, as you know, under the terms of our mail contract, is one for mutual arrangement between the Government of South Africa and the company. I am pleased to be able to tell you that, whilst I was in South Africa early this year, I conducted negotiations with the Government of the Union, as the result of which an agreement was concluded between the company and the Government whereby our Ocean Mail Contract is extended for a period of ten years commencing January 1, 1937. As from the beginning of 1939, the length of the voyage of all our mail vessels between Southampton and Capetown will be reduced to not more than fourteen days—that is, about three days less than at present.

The conclusion of this agreement marks a noteworthy development in the history of the company, and the accelerated service, when it comes into operation, should prove of great benefit not only to the company itself, but also to the Union of South Africa. This faster service should be of especial value to the fruit exporting industry, and the announcement of its inauguration has, in fact, given general satisfaction to all who are connected with the shipping of perishable produce from the Union.

The "Stirling Castle" and "Athlone Castle" will commence the accelerated voyage this autumn, but they alone of our existing vessels are capable, at present, of maintaining the speed necessary to ensure that the contract time is regularly adhered to. It has therefore been necessary for us to arrange for the re-powering of five of our other mail vessels and the construction of a sister-ship to the "Stirling Castle" and "Athlone Castle." Needless to say, this will involve heavy expenditure.

SHIPBUILDING PROGRAMME

Further to this extensive building and reconstruction programme, your directors have also considered it imperative to order two more refrigerated cargo ships of the "Roslin Castle" type to assist further in carrying out our obligations under the terms of the freight contract which we entered into with the South African Government at the beginning of 1934.

The citrus and deciduous fruit industries of the Union are continuing to develop, and it is estimated that, by the time these two additional vessels are ready for service, the exports will have reached such proportions as to enable them to be employed regularly for the greater part of the year.

We have, in addition, ordered a small vessel for our Continental cargo service.

I am glad to be able to inform you that it has been possible to make satisfactory financial arrangements in connection with our shipbuilding programme.

PASSENGER TRAFFIC WELL MAINTAINED

Generally speaking, our passenger traffic was well maintained throughout the year, and the total number of passengers carried was somewhat higher than for 1934, although the earnings were rather less.

The special facilities we offer in the form of holiday tours to and from South Africa, round Africa, and to Madeira, the Canary Islands, the Continent and the Mediterranean have continued to prove very popular.

As our new tonnage comes into commission the amount of accommodation available for passengers will be increased, and we are thus well prepared for any expansion that may take place in the near future in the volume of passenger traffic between this country and South and East Africa.

An Empire Exhibition is to be held at Johannesburg for four months commencing September 15th next, and it is possible that his attraction, added to the many already afforded to those desirous of escaping the northern winter, will result in rather more passengers than usual visiting the Union during the coming season.

The number of classes in our smaller mail vessels has been reduced from three to two, and in our two new mail vessels we are carrying first and cabin class passengers only, cabin class being, in regard to standard of accommodation and fare, between second and tourist class. This eliminates the necessity for having three separate sets of public rooms and permits of a better distribution of the available space. The cabin class accommodation we are providing is excellent value, being, in fact, superior to the first class of a few years ago, and I feel sure that, when it becomes generally known, it will be particularly popular.

CARGO TRAFFIC

The increase in the volume of our outward cargo traffic to which I referred last year has, I am glad to say, been more than maintained, but, owing partly to the fact that many of the rates of freight have been reduced and partly to our having carried larger quantities of low-rated cargo, our earnings from this source were slightly less.

On the other hand, there was a welcome increase in the volume of homeward cargo and in homeward freight earnings.

Our East African service received rather better support, both outwards and homewards, and produced a somewhat higher revenue.

There has been a considerable amount of competition from lines outside the Conference in the trade between the United States of America and South Africa, with the result that not only were our carryings reduced as compared with the previous year, but, owing to the lower rates of freight which were charged, our earnings in this trade fell very considerably.

TRIBUTE TO THE STAFF

Once again I wish to express on behalf of my colleagues and myself our complete satisfaction with the services of our staff at home, abroad and afloat. I feel sure that they all do their best to further the interests of the company, and it is upon their continued co-operation and diligence that the success of the company must in no small measure depend.

CHAIRMAN'S VISIT TO SOUTH AFRICA

I have already referred briefly to my recent visit to South Africa, during which I should like to say our Deputy-Chairman and my co-Managing Director, Sir Vernon Thomson, devoted his time and energy unremittingly to the company's affairs, as he always does.

During the course of my stay in the Union, I took advantage of the many opportunities afforded me of renewing my personal acquaintance with most of the Cabinet Ministers, whilst both in South Africa and in Portuguese East Africa I met a large number

of responsible Government officials and prominent members of the commercial community, as well as visiting all our offices in these two countries and discussing with our officials in each place various matters affecting the company's interests.

The cordial welcome I received and the many expressions of appreciation of my visit made to me by leading members of the Government and by prominent business men served to confirm the opinion which I already held that visits such as this are of very great value in maintaining and developing the friendly relations which exist between our company and the people of the countries visited, apart altogether from any more tangible results such as, in this case, the extension of our mail contract.

Unfortunately, I did not have sufficient time at my disposal to visit Rhodesia and East Africa, and, in view of our expanding interests in these Colonies, I hope it will be possible for me or one of my colleagues to visit them during the coming winter.

AN ERA OF PROSPERITY

No visitor to South Africa at the present time could fail to be impressed by the many signs of prosperity and industrial and commercial development which are to be seen there. This prosperity is admittedly due primarily to the great increase in revenue from gold-mining, as the result of the premium on gold, but the South African Government are fully alive to the necessity for establishing the economic structure of the Union on a broader foundation than that afforded by one industry, and every effort is being made to encourage the development of as many primary and secondary industries as possible.

There are no indications at present of any falling off in business activity in South Africa, and, in the absence of any untoward development in the International situation, it would seem that this era of prosperity is likely to continue. In this prosperity your company, as its new vessels and improved facilities become available, ought increasingly to participate.

I now move "That the report of the directors and the statement of accounts for the year ended December 31, 1935, now submitted, be and they are hereby received and adopted."

I will ask Sir Vernon Thomson to second the resolution, and before putting it to the meeting I shall be pleased to answer any questions you may like to ask. (Applause.)

Sir Francis Vernon Thomson, K.B.E., Deputy Chairman and Joint Managing Director, seconded the resolution, which, in the absence of question or comment, was carried unanimously.

The Chairman moved the re-election of Mr R. A. Murray, the retiring director.

The Duke of Abercorn, K.G., K.P., seconded the resolution and it was unanimously adopted.

On the motion of Mr H. C. Seear, seconded by Mr J. Philp, the auditors (Messrs. Deloitte, Plender, Griffiths & Co.) were re-appointed.

TRIBUTE TO THE BOARD

Mr F. Coward proposed a cordial vote of thanks to the chairman and directors for the way in which they had conducted the business of the company during the past year. He felt that the statement which the chairman had put before the shareholders was in every way satisfactory. He was particularly pleased that the troublesome litigation which had been pending for a long time had at last been settled in what he thought was a satisfactory manner. The directors were to be heartily congratulated on that fact.

Captain J. Hare, in seconding the resolution, said it was evident from their report that the directors had had a very busy year, and they all realised that the chairman's visit to South Africa was by no means a pleasure voyage, for he had had to carry out various important negotiations and make commercial arrangements for the company. He was very pleased that the arrangement with the holders of the ordinary shares had been amicably effected.

The motion was carried with acclamation and the chairman, in briefly acknowledging the compliment, said it was a great encouragement to the directors to know that they had the confidence and support of the shareholders.

The proceedings then terminated.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

COMMERCIAL UNION ASSURANCE COMPANY, LIMITED

RECORD NEW LIFE BUSINESS

MR HERBERT LEWIS'S REVIEW

The seventy-fourth annual general meeting of this company was held, on the 19th instant, in London.

Mr Herbert Lewis (the chairman) said that in the fire department the premium income amounted to £5,266,449, a reduction of £108,370 as compared with the previous year. That reduction was in the main due to lower receipts in the United States. Their home income had been not only maintained but increased. He wished he could say the same in respect of the general foreign field, but they could hardly look for much expansion there until there was greater stability and prosperity in the world generally.

GOOD FIRE EXPERIENCE

The ratio of claims paid and outstanding was 39.2 per cent., the lowest in the history of the company. Throughout the world and particularly in the Dominions their experience had been good, but they would not have attained that low ratio had it not been for the unusually favourable experience in the United States. It would be too much to expect a continuance of that experience; indeed, it would scarcely be healthy if it were so, and already there were signs that this year might produce a higher ratio.

After adjusting the reserve for unexpired risks on the usual 40 per cent. basis, there resulted the substantial underwriting profit of £602,063, or 11.43 per cent., as compared with £442,305, or 8.23 per cent., in 1934; £500,000 had been transferred to profit and loss account and the balance of the profit, £102,063, had been added to the additional reserve of the department, bringing the fire fund to £6,934,468, or 131.67 per cent. of the premium income.

MARINE AND ACCIDENT

In the marine department the net premiums were £584,935, an increase of £42,373, and £100,000 had been transferred to profit and loss account.

In the accident department premiums amounted to £7,609,467, an increase of £184,763 as compared with the previous year. That increase was due to the growth of their business at home and in the general foreign field. The policy of revising their commitments in the workmen's compensation and motor departments in the United States had entailed a reduction in the income from that country. The past year had shown a considerable improvement in America. He was not yet able to say that they had got back to the position of earning a profit on their accident business in the United States, but the difference between profit and loss last year was so small that he trusted the result for 1936 would be expressed as a plus rather than a minus quantity.

The net result of the operations of the accident department was a profit of £258,630, or 3.4 per cent., which indicated satisfactory trading at home and in other countries except the United States. A sum of £225,000 had been transferred to profit and loss, leaving the accident fund at £5,558,313, or 73 per cent. of the premium income.

INCREASED LIFE BUSINESS

Their life business was transacted almost entirely in this country and conditions had continued favourable for the development of new business. In 1934 the net new sums assured amounted to £4,630,681, a record in the history of the company, but in 1935 there had been a further increase of £489,222, making a net total new business of £5,119,903. Notwithstanding the increase in the amount of new business, expenses and commission were only greater by £2,152 than in 1934, and, when expressed as a percentage of the premium income, they showed a slight reduction from 12.9 per cent. to 12.8 per cent.

The premium income amounted to £1,796,115, an increase of £32,799. Claims by death amounted to £417,483, a reduction of £105,870, and the lowest amount since 1926. Claims by survival to the date of maturity in the case of endowment assurances amounted for the first time to over £1,000,000, namely £1,019,877, an increase of £236,807. During 1935 the amount of the life fund had increased, and at the end of the year was only a little short of £24,000,000.

They had now completed three years of the current quinquennial and everything pointed to the result being good. Under properties insuring policies which became claims this year they were their present position.

continuing to pay interim bonuses at the full rate of bonus declared at their last valuation.

PROFIT AND LOSS ACCOUNT

With regard to the profit and loss account, it would be seen that interest, dividends and rents, after deduction of income tax, amounted to £770,042, a reduction of £50,789. The greater part of this decrease was accounted for by a fall in the interest received from their American securities, due partly to defaults and partly to their policy of strengthening their investment portfolio in that country by increasing their holdings in short and medium term Government bonds. Furthermore, as exchange restrictions had prevented the remittance in due time of a dividend declared by a foreign subsidiary company, the account for 1934 benefited by the inclusion of two years' dividends, and 1935 suffered in comparison to the extent of £13,500. Finally, the interest account has had to provide a larger contribution to the leasehold redemption fund owing to an increase in the premium income of this department. This charge would be eventually recouped in the shape of the profits which that account contributed to profit and loss. The real decrease in the net interest receipts was not, therefore, so substantial as the figures appeared to indicate.

The investments had increased in amount by over a million pounds. The full benefit from this increase would only materialise this year. There were reasons for thinking that, if there was a further shrinkage in the interest receipts it should be less severe than that they had already experienced.

The various transfers from the departmental accounts totalled £825,000, or £100,000 more than last year, but it should be borne in mind that out of this total the sum of £300,000 had been transferred from profit and loss to general reserve.

HEAVY TAXATION CHARGES

In the past references had been made to the heavy charges borne in respect of taxation. If the amount borne by the life department was included, the total for 1935 reached £1,003,724.

As they were now in a position, without trenching upon the departmental reserves, to write off the balance of the cost of businesses acquired account, they had decided to take that step. That balance, amounting to £285,778, had accordingly been debited to general reserve, thus eliminating the item from the balance sheet and leaving the fund at £3,882,376, an increase of £20,324 over the previous year's figure.

The investments appeared in the balance sheet at £21,351,915, as against £20,274,327 in 1934, and showed the substantial increase of £1,077,588. Last year there had been a substantial excess over book values, and he was glad to say that that statement held good for 1935. In that connection he would mention the material improvement which had taken place in the market value of their American investments. The total assets, excluding the various life funds, now stood at £30,827,650, an advance of £410,454, notwithstanding the disappearance from the balance sheet of the item of cost of businesses acquired.

WORLD CONDITIONS

Referring to world conditions, the Chairman said that the insurance offices transacted business in one form or another in practically every country of the world, including even Ethiopia. Their operations in those many countries were naturally affected by the economic and financial ills from which most of them were suffering. They had felt particularly the effects of the decline in international trade and had experienced serious inconvenience and loss from the numerous artificial exchange regulations now in force.

Another adverse influence was the disconcerting frequency with which, in pursuance of the prevalent national—or rather ultra-national—spirit, legislation was threatened or enacted with the object of reducing or abolishing the opportunities for insurance companies to work in foreign countries.

They had had their full share of trouble from those and similar causes during the past year, and he wished he could see signs of improvement in that direction. Meanwhile, they might take comfort from the manner in which they had been able to meet those difficulties in the past and from the knowledge that they had an efficient organisation, able and prepared to meet the problems of the future.

The report and accounts were unanimously adopted, and a final dividend of 4s. per £1 stock, less tax, making 8s. per £1 stock, less tax, for the year was approved.

The retiring directors were re-elected and the auditors re-appointed.

A hearty vote of thanks was passed to the managers, officers, staff, representatives and agents, and, a similar compliment having been passed to the chairman and directors, the proceedings terminated.

LONDON AND MANCHESTER ASSURANCE COMPANY, LIMITED

ANOTHER SUCCESSFUL YEAR

COUNTRY STILL SERIOUSLY UNDER-INSURED

The sixty-seventh annual general meeting of the London and Manchester Assurance Company, Limited, was held, on the 20th instant, at the Chief Offices, Finsbury Square, London, Mr Walter H. Brown (the chairman) presiding.

The Secretary (Mr A. H. Dawes) having read the notice convening the meeting and the report of the auditors to the shareholders, The Chairman, in the course of his speech, said:—Despite the very considerable increase in life assurance business during recent years and the growth of industrial assurance with its greatly improved conditions of benefit among the wage earners, the people of this country are still seriously under-insured.

INADEQUATE PROVISION FOR DEPENDENTS

How seriously the community is under-insured is revealed in the official returns for estate duty. These show that of the adults who die in this country every year, eight out of nine leave less than £1,000, which would provide an income of only some £30 per annum; seven out of nine leave less than £300; and two out of every three adults who die actually leave under £100.

When only one person out of three leaves his dependents with £100 or more, it is misleading to talk of the increase in life assurance business, unless at the same time we emphasise the fact that the people of this country have scarcely begun to realise the part which should be played by insurance in providing, particularly for the family, a real measure of security against the risk of death.

Dealing now with the figures, the total premium income for the year was £3,137,881, an increase of £134,065 over that for the previous year, whilst the income from all sources amounted to £3,931,661.

ORDINARY BRANCH

In this branch the new assurances in the year reached the record figure of £4,690,312, whilst the premium income was £1,309,453, representing an increase of £80,069. Claims under policies amounted to £519,664, of which £370,826 was paid in respect of matured endowment assurances. Surrenders at £127,048 were less than in the previous year, whilst the consideration money for annuities granted amounted to £56,291, as compared with £128,309 in the year before. I may say that we are not anxious for too large an amount of this class of business in present conditions.

The excellent reversionary bonus of £2 4s. od. per cent. on the sums assured, which is recommended by the directors, with the concurrence of the actuary, will doubtless be welcomed by both the with-profit policyholders and the company's representatives. This is the eighth successive year that the £2 4s. od. per cent. will have been declared. I think you will agree with me that this is a notable achievement, especially when I can tell you that it has placed no strain on the company's finances to maintain this bonus.

It will interest you to know that the average amount per policy is increasing, and that the number of policies being effected for sums in excess of £500 is also increasing.

When it is remembered that in ten years the premium income of the branch has grown from £500,700 to £1,309,000, and the fund from £2,356,476 to £9,436,000, it is small wonder that our progress is regarded by some as phenomenal.

In these times of cheap money there can be no doubt that a policy with the "London and Manchester" securing an immediate estate forms a particularly attractive investment, there being no possibility of depreciation such as can apply to an investment in stocks and shares.

The interest yield upon the fund for the year I am reviewing was £4 9s. 6d. per cent. after deduction of tax.

INDUSTRIAL BRANCH

Dealing now with the industrial branch, the premium income was £1,749,546, representing an increase of £61,766 for the year. Claims under policies amounted to £813,859, an increased figure due chiefly to the high death rate all over the country during the long winter of inclement weather.

The popularity of endowment assurance among people who can pay premiums quarterly or yearly is of many years' standing; and it is interesting to note that there is a growing tendency among weekly wage-earners to take the same opportunity of combining saving with assurance and thus securing what is, in effect, a profit-producing investment when account is taken of the 10 per cent. bonus added to our sums assured. Ten years ago 14 per

cent. of our new industrial policies being issued were endowment assurances; now it is 26 per cent., and with a higher average weekly premium. Thus, in addition to providing a sum for his widow in the event of his earlier death, the weekly wage-earner, with the prospect of a pension for himself and his wife under the National Pension Scheme, sees the advantage of adding to his resources as a pensioner a capital sum either to be used to buy a small annuity or kept in reserve to meet emergencies.

It is proposed that £112,950 of the surplus of this branch be allocated to holders of policies of ten years' standing or more. The profits which have been so far distributed in this way aggregate £769,619.

The interest yield upon the fund for the year was £4 6s. 10d. per cent. after deduction of tax.

The house purchase department is proving of utility to many who desire to live in their own house. During the year steady development has taken place in it.

In the fire and general branch the premium income was increased during the year to £70,353. Whilst the results in this branch have not been spectacular, the premium income has been steadily progressive.

You will have observed that the assets were increased in the course of the year by £1,073,865, and on March 24th last stood at £16,547,723.

The security for the assurance funds is a prime consideration, and, as usual, our assets have been cautiously valued. £27,500 has been taken from profit and loss balance and applied to write down property values. Of Stock Exchange securities no less than 78.3 per cent. is invested in the United Kingdom, and a further 16.8 per cent. in the rest of the Empire, thus leaving only 4.9 per cent. in foreign countries. It may interest you to hear that as much as 43 per cent. of the amount of our Stock Exchange securities carry a definite date of redemption. The remaining assets are all in the United Kingdom.

Before concluding, I would remark that with the gradual improvement in trade which is undoubtedly taking place I feel that the future of the company can be looked forward to with the utmost confidence. As you know, the magnitude of the company's operations is such that the only requirement for its continued progress is the continued prosperity of the wage-earners. The report and accounts were unanimously adopted.

EQUITABLE LIFE ASSURANCE SOCIETY

The one hundred and seventy-fourth annual general meeting of this Society was held, on the 20th instant, in London.

Mr H. L. M. Tritton (the president) said that the new business for the year 1935 was about the same as that for the previous year and remained, as far as life assurance was concerned, at well over £1,250,000, while the sinking fund and capital redemption business made satisfactory progress. The premium revenue of the whole business was over £670,000—easily the largest ever collected by the Society, and the funds at December 31st last were over £10,000,000.

The most important matter in connection with the report was the result of the valuation made as at December 31st last. In the difficult conditions of to-day the directors were satisfied that it was necessary to carry forward a larger amount than five years ago, as they considered that, if the present low rate of interest and high income tax continued, a reduction in the valuation rate of interest for with-profit policies by one-quarter per cent. would be required at the next valuation. The amount carried forward was over £140,000, and that should allow for a lower rate of interest five years hence if necessary.

A sum of £39,000 had been carried to the cost of pensions and to valuation expenses. Judging from letters which had been received by the office, the bonuses declared had given considerable satisfaction, and, although the bonus had not been greater than the rates assumed in the valuation, members would have observed that the rates of interim bonus in the event of death during the next few years had been increased for policies which had been some years in force.

At the end of his report on the valuation the Actuary said that the rates of bonus were not guaranteed, but, catastrophe apart, he hoped and expected that they would be maintained. He (the president) thought it was fair to the Actuary to say that he would not have recommended a bonus which he did not think the office would be able to maintain, and it was fair to the directors to add that their view in that respect was wholeheartedly the same as that of the Actuary. He thought he might summarise the position by saying that the accounts for the year showed a most satisfactory position and that the valuation had given bonuses to their members of which the Society might indeed be proud.

The report and accounts were unanimously adopted.

THE LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES LIMITED

CONTINUED PROGRESS

STRONG FINANCIAL POSITION

The twenty-sixth annual general meeting of the London County Freehold and Leasehold Properties, Limited, was held, on the 19th instant, at the registered office of the company, 114-116 Park Street, London, W.1.

Sir William J. M. Burton, the chairman, said: The report and accounts mark another year of progress and consolidation. To-day we are on a firmer foundation than at any time since the company's formation. Our income, after deducting outgoings, is £568,610, as against £507,152, showing an increase of £61,468, whilst our net revenue is £350,056, as against £297,236, an increase of £52,820.

During the year we have made various issues of new capital and the proceeds have been expended as explained in the report. I draw your attention to the fact that we have not obtained the benefit of these purchases for the full year, and for part of the time we have been obliged to leave money on deposit with our bankers pending completion of certain purchases. When we issued our prospectus inviting subscription for our last share issue, the directors stated that they estimated that in a full year they would have a surplus of £90,000 after payment of dividend and bonus at the rate of 11 per cent. per annum. I am glad to say we now have every reason to believe that this estimate was conservative.

Competition remains keen, and it speaks volumes for the organising powers and alertness of our staff that we should find ourselves in the advantageous position in which we are to-day.

BALANCE-SHEET ITEMS

The repairs and maintenance reserve shows that we brought in from last year £101,276, and expended in extraordinary work during the year £59,339, leaving a balance of £41,937. We have added the sum of £60,000 to this account from the year's revenue, making the account now £101,937.

As stated in the report, we have completed our programme as to the exterior of our properties, and are budgeting for the completion during the next two years of our task of bringing the interior of our properties fully up to date as tenancies expire. I feel sure you will agree that the policy which your directors have pursued has resulted in placing the company on an extremely sound footing. The only criticism I have observed is that we have progressed too rapidly—a criticism which your board can regard with equanimity.

THE KEY-FLAT

The sign of the Key-Flat has become an item of goodwill, because prospective tenants are attracted by that sign, knowing they can rely on the efficient management of the property in which they propose to dwell. For the benefit of the staff we publish a monthly periodical giving details of the company's activities and also the results of the various sections of our athletic and social club. There are items in the last issue that may be equally of interest to you—I will give you some:—

Key-Flats provide accommodation for some 34,000 people, or just about equal to the population of Perth and rather more than that of Margate or Guildford. Over 6,000 yards of material are used every year for our porters' uniforms. Incidentally, this "roll" of cloth would stretch from Keysign House, Marble Arch, to Liverpool Street Station.

A staff of 40 gardeners is permanently engaged in the upkeep of gardens and beautification of entrances. Four large greenhouses and two acres of nursery gardens contribute to the propagation of shrubs, plants and flowers. More than 100,000 bulbs are planted in the gardens every year by our own gardeners. Some 2,000 shrubs and small trees are also required to keep the gardens fresh and beautiful.

Provision of central heating and constant hot water over 12,000 tons of coke are consumed annually, equalling the contents of 40 large railway wagons every week of the year. A works department of 500 men under the supervision of 20 clerks of works is regularly employed in maintenance.

HIGH CONTRIBUTION TO RATES

Pay rates amounting to nearly £250,000 every year, believed highest contribution of any property company to the

rates of London. Some of my friends seem to think that the management of a property company simply consists of sending out rent statements and collecting the rents.

The facts I have just given will indicate to you that efficient supervision and constant care have to be exercised by those responsible for working the company. Our staff have the essential team spirit and I can assure you we look forward to the coming year with every confidence.

I will now move, "That the directors' report and accounts for the year ended March 31, 1936, as printed and circulated, be adopted," and will ask our managing director to second the resolution.

MANAGING DIRECTORS' SPEECH

Mr T. J. Cullen (managing director), in seconding the resolution, said: Our chairman has, I think, given you all the essential details of our past year's work that have not already been quoted in our printed report and accounts. There is, accordingly, little for me to do other than formally to second the resolution.

NEW PROPERTIES

It may, however, be of interest to you to know that we are pleased with our purchases during the year. No less than sixteen individual purchases of established blocks of properties adjoining our existing properties or linking up with our district organisation have been made. The other purchases of new properties are the buildings in Portman Square and Portland Place and the three beautiful buildings on Putney Heath. Portland Place was sufficiently finished in September last for us to give occupation to a few tenants, but completion of the purchase could not take place until December. The lettings are extraordinarily good, and there are only a few of the small flats not yet occupied.

Portman Square is not yet completed, but no less than one-third of the flats are already let or under firm offer. At Putney Heath, where so many flats have been erected in the surrounding districts, we believe we have the most attractive properties—they are all of a high-class order and are letting steadily and well to an excellent class of tenants.

Our Norbiton Hall property which, as mentioned last year, was then nearly completed, has now a few flats remaining unlet and, at the present rate of letting, the building will be fully occupied within a few weeks.

A FUNDAMENTALLY SOUND UNDERTAKING

The chairman has mentioned that we believe our estimate of a full year's working was conservative. I would like to emphasise that our net earnings for last year were equal to 14 per cent. on the ordinary stock capital completely paid up and employed during the whole of that period. In a full year—that is, the current year—the earnings should be equal to 15 per cent. on the ordinary stock capital now issued. The excellent demand for our flats indicates that we have a fundamentally sound undertaking that will produce a regular and reliable return for our stockholders.

Mr T. J. Cullen (the managing director) having replied to questions, the resolution was put to the meeting and carried unanimously.

THE DIVIDEND

On the motion of the chairman, seconded by Mr T. J. Cullen, it was unanimously resolved:—"That a final dividend of 4 per cent. and a bonus of 1 per cent., less income tax at 4s. 9d. in the £, making, with the interim dividends of 6 per cent., less income tax at 4s. 6d. in the £, a total distribution of 11 per cent. for the year ended March 31, 1936, to be paid to holders of ordinary stock issued prior to July 5, 1935, whose names appear on the company's register at the close of business on March 31, 1936."

The retiring director, Mr C. T. Nicholls, was re-elected, and Messrs. George A. Touche & Co. and Mr Thomas George Piper, chartered accountant, were reappointed auditors.

At an extraordinary general meeting which followed, resolutions were passed providing the means of obtaining additional capital when required.

The chairman explained that they had no intention of making an immediate issue.

INCORPORATED ACCOUNTANTS

INCOME TAX CHANGES

In his speech at the Incorporated Accountants' fifty-first annual meeting at Incorporated Accountants' Hall, on the 20th instant, Mr R. Wilson Bartlett, J.P., president of the Society of Incorporated Accountants and Auditors, referred to contemplated changes in income tax. He mentioned Clause 19 of the new Finance Bill, which deals with income settled on children under so-called educational trusts. He said he wished that the Clause had been drafted in more comprehensible terms. Whilst there was nothing to be said for trusts which the parent could revoke at any time, yet in the case of irrevocable trusts the position was different. Such a trust disclosed an intention of the parent to alienate annually a definite portion of his income for educational purposes and maintenance. Where the parent settled for life a capital sum upon his child, the income enjoyed by the child was not the income of the parent for the purpose of income tax and sur-tax. From the point of view of income, there was little difference between an irrevocable undertaking to pay an annuity and the settlement of a lump sum. In both cases, it seemed reasonable that the parent should be relieved of income tax in respect of the income. Moreover, the payment of an annuity in the circumstances indicated was open to those of moderate means, where the settlement of a capital sum would probably be out of the question.

INCOME TAX CODIFICATION AND PRACTICE

Mr Wilson Bartlett also referred to the Report of the Committee on Income Tax Codification. The accountancy profession was an integral part in the administration of income tax, and would welcome any simplification of the accountant's labour and any clarification of the law with which it was the duty of the taxpayer to comply. In response to the Chancellor of the Exchequer's intimation that he would be glad to have the views of important representative bodies on the Committee's proposals, a sub-committee had been set up to consider the recommendations in detail and no doubt the society would indicate its views to the Chancellor of the Exchequer in due course.

While dealing with income tax, the President said he would like to make a statement on the services which the taxpayer could retain in dealing with income tax. The services of incorporated accountants in public practice were available for the aid of the taxpayer, and income tax work was a large and important part of the practice of accountants, who were fully competent to carry out their work in the best professional traditions, and to the advantage of all parties. There was at the present time, a good deal of advertising in the Press and elsewhere, on the part of income tax agencies. The practice was to be strongly deprecated. The advertisers conformed to no standard of qualification or of disciplinary control.

During the depression a good deal had been heard about overcrowding and unemployment in the professions. The information available indicated that the amount of unemployment among incorporated accountants was negligible, although, of course, some of the younger members were anxious to improve their positions and prospects. He was satisfied that no candidate of good character and education should be deterred from entering into articles. After he had qualified as an incorporated accountant, he would have as good a chance and as promising prospects as in many alternative callings.

FIXED TRUSTS

Experience had shown that legislation and publicity were necessary to protect the investor, and provide him with proper information. Four years ago, the society had expressed its view that amendments were necessary in company legislation, particularly as regards accounts and audit. Of late there had been a rapid development in fixed and flexible trusts. The idea was undoubtedly attractive, but it should be appreciated that the trustees who held the investment had no responsibility whatever for the management of the trusts. Management rested with a managing company, which was invariably a private company, controlled by a few individuals. Parliament had found it necessary to subject companies, savings banks, building societies, etc., to specific legislation and control, but no such legislation existed in relation to fixed trusts. In the view of the society, some kind of registration of fixed trusts was urgently necessary, and they should be required to file particulars similar to those sent to the Board of Trade by public companies. It was satisfactory that the Board of Trade had set up a strong Departmental Committee to inquire into the matter, and the result of the inquiry would be awaited.

SELECTION TRUST, LIMITED

INVESTMENT APPRECIATION

MR A. CHESTER BEATTY'S REVIEW

The third ordinary general meeting of Selection Trust, Limited, was held, on the 18th instant, at 20 Aldermanbury, London, Mr A. Chester Beatty (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The main financial features of our business during the year have been the marked rise in the valuation of our investments and an improvement in the revenue. At the beginning of 1935 the total market value of the quoted investments was lower than the book figure, but during the year there was a considerable rise in the market prices of these investments, and at December 31st last their aggregate value, based on prices at that date, was very substantially in excess of the figure of £2,867,000 shown in the balance sheet.

The profit and loss account shows an increase in the gross revenue from £156,500 in 1934 to £229,600 for last year.

The net profit for the year was £119,052, and after bringing in the adjusted balance from the preceding year, and making provision for income tax and reserve as shown in the accounts before you, there is an available balance of £156,370, out of which we recommend that you should to-day declare a dividend of 6d. per share, leaving a balance of £78,453 to be carried forward.

Turning to the investments, one of our largest holdings is in common shares of the American Metal Company, Limited, and a copy of that company's report for the year 1935 has been issued to you. The report records a gratifying improvement, and after making provisions for depreciation, reserves and taxation, the company showed a profit of \$801,000, against a deficit of about \$232,000 for the preceding year. For the first quarter of 1936 a profit of \$282,000 has been announced, and this compares with a profit of \$73,000 for the corresponding quarter of 1935.

The American Metal Company's investments include a valuable holding of shares of the Climax Molybdenum Company, which paid substantial dividends during the past year, and is conducting a progressive and remunerative business. It also continues to hold substantial investments in the shares of Roan Antelope Copper Mines, Limited, and in Rhodesian Selection Trust, Limited, which, as most of you are aware, holds a two-thirds interest in Mufulira Copper Mines, Limited. These interests in the Roan Antelope and Mufulira companies, with their great copper deposits in Northern Rhodesia, are very valuable assets, which may be expected to earn good profits for many years. The Roan Company paid its maiden dividend of 1s. per share last year, and for the first nine months—ended March 31, 1936—of its current financial year the profits are estimated at £372,000, against £330,000 for the whole of the preceding financial year. The Mufulira Company has now practically completed its construction programme and has entered the profit-earning stage.

A substantial contribution to our income from investments was derived from dividends on our holding in Trepca Mines, Limited. The operating surplus of £395,000 shown by that company in its financial year ended September 30th last was the highest reached since production began in 1930. For the first six months to March 31, 1936, of its current financial year the company reported an operating surplus of £253,398.

Kopaonik Mines, Limited, another of our companies with lead-zinc-silver properties in Yugoslavia, is making good progress in equipping its mine for production, and it is probable that another of our Yugoslavian interests—namely, Zletovo Mines, Limited—will also be entering the equipment stage before long.

Our holding in Consolidated African Selection Trust, Limited, is another principal source of revenue. The position of the diamond business of that company continues to be very satisfactory and higher dividends are being paid. We are well pleased with the progress at the company's Gold Coast mines and are particularly gratified by the excellent developments in the Sierra Leone field.

As regards the market for diamonds, trade steadily improved in 1935, and this improvement has been maintained during 1936.

The position of the base metals has also improved since our meeting last year. With regard to copper, the restriction scheme, which came into force in May, 1935, is operating effectively, and marketable stocks of copper outside the United States have been reduced as a consequence of production being maintained below consumption. In the latter part of 1935 consumption showed a marked increase, and a steady demand for the metal continues.

In regard to the market for lead and zinc, there are indications that the demand for lead will continue to expand. As to zinc, there is at present a tendency for production to outstrip consumption.

The report was unanimously adopted.

LUNUVA (CEYLON) TEA AND RUBBER ESTATES, LIMITED

A DISAPPOINTING YEAR FOR GOOD TEA PRODUCERS

FURTHER REDUCTION IN COSTS

RUBBER AND COPRA RESULTS

BRIGHTER PROSPECTS FOR 1936

The annual general meeting of the Lunuva (Ceylon) Tea and Rubber Estates, Limited, was held, on the 21st inst., in the Council Room of the Rubber Growers' Association (Incorporated), 19, Fenchurch Street, London, E.C.

Mr H. J. Welch (chairman of the company) presided.

Mr J. E. Ritchie, representing the agents and secretaries (Messrs Harrisons and Crosfield, Limited) having read the Notice convening the meeting and the report of the auditors,

TEA

The Chairman said:—Ladies and Gentlemen,—Although the Company made a larger profit on its tea production in 1935, the year was a disappointing one for tea producers. It was particularly so for those who produce good Ceylon teas such as this Company's, for they are not receiving the relatively better prices as compared with poorer qualities, which they deserve.

The average price realised for all Ceylon teas sold in the London market was only fractionally higher in the calendar year 1935 than in 1934, whilst the average price for Colombo sales was actually lower. In spite of the fact that our teas realised a slightly increased average price compared with 1934 the average price per lb. was well below that of any of the years 1921 to 1931.

Notwithstanding the lower International exportable percentage our 1935 crop was more than 700,000 lbs. in excess of that for 1934. This was due partly to young areas coming in for assessment, and partly to the inclusion for the first time of a full year's crop from St. John Del Rey Estate and nine months' crop from Dessford Estate.

The cost of production of tea was further slightly reduced and was the lowest for the last fourteen years, it having been found possible to effect economies in all the main groups of expenditure. Under restriction yield statistics have not the same significance, but as a matter of interest the average yield per mature acre during 1935 was 625 lbs., as against 619 lbs. in 1934. This is, of course, much below the potential yield of our estates. The profit per mature acre was £8 4s. 7d., as against £6 11s. for the previous year.

RUBBER

The rubber results were much poorer than those for 1934. The price obtained was lower and the cost of production higher—an experience shared by most rubber companies during 1935. The average selling price of rubber in London fell more or less steadily for the first nine months. In our own particular case the net average for 1935 (including uncoupons stocks taken into the accounts at a valuation) was .67d. per lb. below that of 1934. The higher cost was due to increased cost per lb. of cultivation, collection, packing, duty, loss on exchange, commission to staff, maintenance of untapped areas, and indeed, unfortunately, was experienced in nearly all the various groups of expenditure.

An average of only 54 per cent. of the mature area was in tapping during the year, and over nine-tenths of that 54 per cent. it was necessary during November and December to restrict tapping to two days per week in order to keep the crop in reasonable condition to the Company's exportable quota. The average area actually tapped was 436 lbs.

COPRA

The Company's interest in coconuts is small, but in spite of the much reduced crop—following a drought in 1934 and early in 1935—and the consequent increase of cost per ton of copra, the improvement in price resulted in the small profit of 11s. 2d. per acre being secured, as against a loss of 5s. 9d. per acre in 1934.

THE BALANCE SHEET

At the end of 1935 the issued capital was increased by 33,333 shares. The high 333 were issued for cash at 42s. 6d. per share and the

remaining 30,000 formed part of the purchase price of Dessford Estate. The Reserve Account has been increased to £52,299, as against £29,169 at the end of 1934.

On the assets side you will note that the book value of the Company's properties has been increased by £63,552. Of that sum the purchase of Dessford Estate accounts for £59,390, capital expenditure on immature areas for £3,651, and the balance consists of sundry small land purchases, etc. If, after allowing for payment of the final dividend proposed to-day, the amount of the surplus liquid assets over liabilities is deducted from the issued capital, the net capitalisation per acre is only £45 1s. 4d. As tea areas comprise over 60 per cent. of the planted area and are mainly of medium or high elevation this may be considered a very moderate figure.

The market value of our investments on December 31, 1935, was £4,000 above the cost at which such investments stand in the balance sheet.

PROFIT AND LOSS ACCOUNT

From the profit and loss and trading account it will be seen that tea produced an increased profit of over £21,000, but the profit on rubber, after charging £2,026 spent on upkeep of untapped mature areas, fell by over £7,500. The expenditure for the year on buildings, machinery and equipment amounting to £11,443 was written off out of revenue.

Our London expenses, notwithstanding the restricted crops, were equal to only 3d. per lb. of tea and rubber produced. This is a relatively low figure, and is one of the happy results of our increased areas and past amalgamations.

PROPERTIES AND STAFF

Our Vice-Chairman—Mr H. W. Horner—has visited all the company's properties, including Abbotsford, in the past twelve months and when he seconds the resolution to approve the accounts I hope he will give you some impressions of his visit. The Board welcomes the opportunity which such personal visits afford of maintaining close contact with the estates and the staffs in the East.

As you were informed in the Directors' Report, Abbotsford Estate, which is a high elevation property, has been acquired as from 1st January, 1936, thus making a valuable addition to the company's area of high grown tea. Steps are being taken to amalgamate it with our adjoining estate, Dessford, the factory on which is being enlarged this year to take the crops from both estates. It is anticipated considerable economies and other advantages will thereby be effected and the combined estate should make one of the finest of its size in Ceylon.

All our properties are reported to be in a first-class state of cultivation and generally well equipped with buildings, good roads, etc.

We have a very capable and efficient staff in the East—always giving of their best in the Company's interests. Our cordial thanks are again due to them, to our Visiting Agents, to our Agents, Messrs Harrisons & Crosfield, Limited, and to our Acting Secretary, Mr J. E. Ritchie, for their services to the Company during the year under review.

DIVIDENDS AND APPROPRIATIONS

£73,259 was brought forward in the Profit and Loss Account from 1934 and the Company's operations last year after debiting £8,800, the estimated liability for Ceylon Taxation, and writing off £11,443 expenditure on buildings, machinery, etc., resulted in a surplus from all sources of £66,016. The interim dividend of 3 per cent. which was paid in November last absorbed £19,637 and the balance we have to deal with to-day is £119,638. The Board recommends the appropriation of £11,000 to meet this year's income tax liabilities, the transfer of £3,000 to a reserve for

BANGAWAN ESTATES, LIMITED

BRITISH NORTH BORNEO QUOTA POSITION

The first annual general meeting of the Bangawan Estates, Limited, was held, on the 20th instant, in London.

Mr James Fairbairn (the chairman) said: The profit for the period from September 1, 1934, the date on which this company took over, to December 31, 1935, was £8,703, of which £1,587 was earned between September 1st and November 20th, i.e. prior to incorporation, and is thus not available for distribution by way of dividend.

The profit for the period under review does not, unfortunately, allow of a payment of a dividend to the ordinary shareholders, but this is due, in a large measure, to the unsatisfactory quota position of British North Borneo, coupled with the comparatively low average price of the commodity over the period. It is now admitted that the standard quota allotted to British North Borneo under the International Scheme is substantially lower than it should be, with the result that Borneo estates are under-assessed as compared with their counterparts in other territories within the International Scheme.

The standard quota of 1,937,000 lbs., which was originally allotted to this company, was, in February, 1935, reduced to 1,551,600 lbs., and when it apparently became clear to the British North Borneo authorities that adjustments would require to be made to keep within the country's exportable quota under the International Scheme, domestic cuts were imposed.

EFFECT OF ADDITIONAL CUT

During the period under review these cuts progressively increased as the quotas exportable under the scheme were reduced, with the result that the average exportable quota for 1935 from estates in British North Borneo was only 53½ per cent. of standard, as compared with 67½ per cent. under the International Scheme. For the fourth quarter of 1935 the estate was only permitted to export 40 per cent. of its quota.

It will thus be seen that, in addition to our quota being reduced by 385,400 lbs., we were penalised to the extent of a further 13½ per cent. over and above the average cut of 32½ per cent. imposed under the International Scheme for the year 1935. The actual crop harvested and free for export in respect of the 12 months ended December 31, 1935, was 833,985 lbs., but had we been allowed to produce and export to the full extent of 67½ per cent. of our original quota of 1,937,000 lbs., the crop free for export would have been 1,307,475 lbs., a difference of 473,490 lbs. It is reasonable to assume that with a larger crop the cost of production would have been lower, but even assuming that this was harvested at the same cost as was averaged over last year, and assuming the same average selling price, the additional profit would have amounted to £3,827, or nearly 4 per cent. on the ordinary capital of the company.

As I understand the position, the International Regulation Scheme was conceived and modelled on the basis of mutual sacrifice, and I am strongly of the opinion that it is in the ultimate interests of the signatory countries that the injustice which has been done to British North Borneo should be rectified without delay.

CURRENT YEAR'S POSITION

Fortunately, in respect of the current year, internal adjustments, presumably between European and native producers, have been made, and we are advised that reductions in the domestic cuts in respect of the first two quarters have been made. For the first quarter ending March, 1936, the domestic cut was reduced to 10 per cent., and for the second quarter, ending June, 1936, this has been further reduced to 5 per cent. The effect of this adjustment is that for the first six months of the current year the estate is allowed to export 52½ per cent. of its standard of 1,551,600 lbs., as against 60 per cent. under the International Scheme.

Notwithstanding the drastic economies which were effected during the slump period, the estates are in excellent condition and are now equipped with modern buildings and machinery.

The results of the past year show that, in spite of the difficulties which have beset plantation interests in British North Borneo, and the low realised price of only 5.45d. per lb. for rubber during that period, our production costs have been sufficiently low to enable us to make a profit of 1½d. per lb. on rubber produced. Bangawan is, undoubtedly, not only a first-class estate, but an economic producer, and, given a reasonable quota, is a competitive unit.

The report was unanimously adopted, and at subsequent extraordinary general meetings the extension of the conversion date of preference shareholders to December 1, 1940, was approved.

replanting rubber and the payment of a final dividend of 5 per cent., less income tax at 2s. 7d. in the £. You have no doubt appreciated that the average rate of income tax deduction on the dividends for 1935 works out at just under 2s. 6d. in the £ and that the total dividend of 8 per cent. for the year less such deduction is therefore equivalent to a dividend of 9.18 per cent. less tax at the standard rate of 4s. 9d.

The Reserve for replanting rubber is proposed because the Board has decided to inaugurate a programme of gradual replacement of some of the oldest areas with improved strains of rubber. Areas consisting of trees raised from selected material and cultivated on present-day lines should have an earning capacity much in excess of the rubber areas in contemplation for replanting. It should also be borne in mind that rubber trees are wasting assets (although their effective life has not been determined), and as a matter of prudence provision should be made in one form or another against their decline in productive capacity and value. Replanting is one of the suitable forms of amortisation for rubber-producing companies.

PROSPECTS FOR 1936

In addressing the shareholders of the Rubber Plantations Investment Trust, Limited, on the 14th instant I referred to the present position and prospects of the tea and rubber producing industries. With the report of these proceedings it is proposed to include a reprint of my speech on that occasion, and accordingly I will not now delay you with any further general reference to these industries.

You would like me, however, to say something about the Company's prospects for the current year. We have put on a care and maintenance basis more than one half of our mature rubber and shall tap the remainder for only two days per week. The Company expects to be able to export about 5,100,000 lbs. of tea and about 975,000 lbs. of rubber, but part of the latter will be provided from the stock in hand at the end of last year. According to our estimates our tea, rubber and copra will all be produced at slightly reduced costs. As you know, the prices for tea and rubber are at present above the average prices for 1935. We have sold forward 60 tons of rubber for shipment during the second half of the year at the London equivalent of approximately 8.00d. per lb. We have also sold 60 tons for delivery in 1937 at the London equivalent of approximately 8.19d. per lb. Without being unduly optimistic I think I may say the prospects are brighter for 1936 than for 1935.

I now beg to move: "That the Directors' Report and the Statement of Accounts for the year ended 31st December, 1935, be approved and adopted, and that a final dividend for that year of 5 per cent., less income tax at the rate of 2s. 7d. in the £, on the issued capital of the Company, be paid on the 29th May, 1936."

MR HORNER ON HIS VISIT

Mr. H. W. Horner (Vice-Chairman):—Mr Chairman, Ladies and Gentlemen,—I welcome this opportunity of saying a few words about my recent visit to the Company's estates in Ceylon. I can say with great pleasure, which I know you will share, that I found all of them in excellent shape, with the result of all the care and money expended upon them in recent years visible in their well-cared-for appearance.

The men in charge of them, and their assistants, with the advice and assistance of our Visiting Agents, have adapted themselves to conditions in a truly remarkable way. How difficult these conditions are I need not enlarge upon, but it is a constant uphill struggle to harvest at a reasonable cost a crop considerably below the producing capacity of an estate, and at the same time maintain the whole area and equipment in the first-class condition which is the rule with all of them. Particularly is this the case with rubber in Ceylon—owing to the severe internal cut.

I was particularly interested to see the estates which have been acquired in the past three years, subsequent to my last previous return to Ceylon—including Napier, now part of the Rookatenne group, Dessford and Abbotsford, which will be worked as one unit—St. John del Rey and the rubber estates Dabar and Maligatenne, which are in process of amalgamation with the Illuktenne Group. A good deal of work of an ameliorative character is in progress on all of them, and they will form valuable units in the Company's properties. I have much pleasure in seconding the resolution proposed by the Chairman.

The resolution was carried unanimously.

The retiring director, Mr John Mackie, was re-elected; the auditors, Messrs McAuliffe, Davis and Hope, were reappointed, and the proceedings terminated with a hearty vote of thanks to the agents and staff in the East and also to the directors and London management.

TEPHANY (FURNITURE TRADES), LIMITED

INCREASING TURNOVER

The statutory meeting of Stephany (Furniture Trades), Limited, was held, on the 20th instant, at Winchester House, London, E.C. Brig.-Gen. the Hon. Alexander V. F. V. Russell, C.M.G., M.V.O. (the chairman of the company), who presided, said: Gentlemen,—The statutory report has been in your hands for some days, and I presume therefore that I may take it as read.

As you will observe, the whole of the cash in respect of the issue of preference and ordinary shares has been received, and I think the receipts and payments account sets out quite clearly how it has been disposed of.

You will note that the sum of £16,250 has been advanced to the subsidiary companies. This is to assist them in financing their increasing turnover and it will, of course, be the policy of the holding company to employ as much as possible of their available cash in this manner, retaining only such amount as in the opinion of the board is necessary to meet their own requirements.

In the prospectus it was reported that the turnover for the current year had been fully maintained, and I am pleased to inform you that this state of affairs continues, the sales for March and April showing a substantial increase over those for the corresponding months in the previous year. Moreover, we have already been able to effect certain measures of reorganisation, which should lead not only to increased efficiency, but to definite economies in working.

RANGE OF THE COMPANY'S ACTIVITIES

By means of its subsidiaries this company is able to cover practically the whole country, and this, coupled with the fact that its business includes not only the more expensive, but also the cheaper grades of furniture, makes it less liable to sudden fluctuation than a single business carrying on one particular type of trade in a limited area.

The boards of the subsidiary companies—which have been strengthened by the addition of certain members of the board of the holding company—are working in close co-operation, and I am pleased to say that there is complete harmony between them. The views and experience of the directors of the various companies have been placed unreservedly at the disposal of the holding company, and I feel that we can look to the future with the greatest confidence.

I cannot let the occasion pass without referring to the tragic loss we have sustained in the sudden death of Mr J. C. Jackson, one of the original directors of the company. Mr Jackson was a man of great personal charm and ability, whose presence and influence will be missed more than I can say. The question of nominating a successor to the board is one which is having our earnest consideration.

In conclusion, I would like to say that we shall be pleased to welcome any shareholders who may care to see the company's show-rooms if they will kindly give prior notice of their visit either to the secretary or to the managing director of the company.

JAMES W. COOK AND COMPANY, LIMITED

10 PER CENT. DIVIDEND MAINTAINED

The thirty-ninth annual general meeting of this company was held, on the 15th instant, in London.

Mr W. J. Clarke (chairman and managing director), who presided, in the course of his speech, said: Through the autumn we started the job of bringing the up-river part of the quay at Millwall up to the L.C.C. level under the Flood Prevention Act. It has just been completed and is entirely satisfactory.

On the other hand, we intend as soon as we can to go in for a big scheme of development and rebuilding on our site, so that we can get the utmost possible out of our property.

On lighterage has been steady, suffering its share of the depression that affected the wharves, but I am glad to say that it is standing up very well, and, indeed, prospects there look brighter this year.

With regard to the subsidiary companies, I am glad to tell you that the Bulk Oil Steamship Company, Limited, continues to make satisfactory progress.

Previously I have referred to the activities of Eastern Roadways, Limited, and of the difficulties we have had to struggle with in the form of continually increasing licences and duty,

culminating last year with an increase of from one penny to eightpence per gallon on heavy oil, which was a heavy blow indeed to our calculations. I am glad to say that the service we are giving to the districts we serve is being more and more appreciated, so that with the increased tonnage carried we have been able to surmount these surprising dues and taxes and are becoming quite an institution in Norfolk and Suffolk.

As you see, we propose to pay the same final dividend as last year, making with the interim dividend already paid, 10 per cent. for the year. We are also asking you to agree to the transfer of £10,445 to reserve for contingencies. This is being done in order to bring that account up to a figure that will enable us to write off the balance of goodwill, £48,751, by appropriating the whole of reserve account, £28,303. This will then leave our reserve for contingencies account at the figure of £90,000.

The report and accounts were unanimously adopted.

BRITISH SHAREHOLDERS TRUST, LIMITED

IMPROVEMENT IN REVENUE AND CAPITAL POSITION

The fourteenth ordinary general meeting of the British Shareholders Trust, Limited, was held, on the 19th instant, at the registered office of the company, 3, Lombard Street, London, E.C. Sir Follett Holt, K.B.E. (the chairman), presided.

The Secretary (Mr H. C. Crafer, F.C.I.S.) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—We are again happy to present to you a satisfactory report for the twelve months which ended with March last.

The profit for the year amounted to £84,012, an increase of £8,194, while the value of our investments also shows a substantial improvement on the figures of the previous year. It is satisfactory to us to be able to report to you that not only have we our capital intact, but in addition investments and cash equal to a further £316,835, or, in all, funds amounting to £855,000, as the substantial backing to our business as an issuing house.

In these circumstances, having allocated £21,204 from the profits of the year to increase the general reserve, we feel that we are fully justified in recommending to you to bring the dividend again up to 10 per cent., at the same time increasing the carry-forward by some £6,000 to £60,605.

AN ACTIVE YEAR

As the results show you, we have passed through an active year, and one that has proved an advantage to our shareholders, and we hope to our ever-widening circle of clients. While it is impossible to predict the measure of the future capital requirements of home industrial undertakings—the field in which we specialise—this issuing house, with its very solid foundation, remains ready to help wherever it is possible the financial needs of the home industries which fortunately show at the present time great vitality.

I am very sorry that Mr Edgar Crammond, who, as managing director, has worked so strenuously and successfully to build up our business, is not, on account of ill-health, able to be with us to-day, and I feel that you will all desire to join us in sending to him from this meeting a message of sincere wishes for his speedy recovery. To lighten somewhat his labours we appointed last September as joint managing director Mr Ronald Crammond, who has been with the Trust for the past seventeen years, and we are very pleased to have him working with us in this important position.

With our report we sent out a notice calling an extra-ordinary general meeting to follow immediately after the close of this meeting. The object is to obtain your authority to alter our articles of association in order to bring them into line with the last Companies Act, and I would ask you to remain a few minutes longer in order to carry through what amounts to a formality only.

The report and accounts were unanimously adopted, and a final dividend of 4½ per cent., making 7½ per cent. for the year, together with a bonus of 2½ per cent., was approved.

The retiring director and the auditors were re-elected, and a hearty vote of thanks was accorded to the chairman, directors and staff.

At an extra-ordinary general meeting of the company held subsequently, a resolution was passed adopting new articles of association.

MID-EUROPEAN CORPORATION, LIMITED

RECOVERY IN INVESTMENT VALUES

The twelfth annual ordinary general meeting of this corporation was held, on the 18th instant, at Winchester House, London.

Mr Norman Holden (chairman of the company), in the course of his speech, said:—In the directors' report there is a table setting out a geographical analysis of our investments, and no doubt you will have remarked that the percentage in Germany is now 18.94 per cent., and in other European countries, which, of course, includes Scandinavia and the countries of Western Europe, 19.18 per cent., as compared with 24.80 per cent. and 23 per cent. respectively twelve months ago.

You will see, therefore, that for some years past we have been consistently reducing our interests on the Continent of Europe. Moreover, this has been done largely by liquidating those particular investments most vulnerable to the political and economic disturbances which have presented such a perplexing problem during the last few years.

I should now like to give you a little more information with regard to the valuation of our investments. I may tell you that in June, 1932, the depreciation amounted to £895,000. At that date, however, we valued at cost the secured loans which have since been realised at a loss. The total depreciation should therefore be reckoned as £1,050,000 in round figures, whereas to-day the total, including the capital loss, amounts to only £464,000, which is an improvement of nearly £600,000.

Even as compared with twelve months ago there is a net improvement of £36,000, although £81,000 (or more than half) of the losses on secured loans was incurred during that period.

We have actually earned on our ordinary stock for the year 3.43 per cent., as compared with earnings at the rate of 2.41 per cent. per annum for the eight months to March 31, 1935.

As regards future revenue, the income derived from the non-European investments, if only maintained at the current level, is sufficient to provide for the interest on our debenture stock and the preference dividend.

We shall continue to seek means and opportunities of overcoming the difficulties which face any investment company which attempts to operate on an international scale.

The report and accounts were unanimously adopted, and a final dividend of 2 per cent. on the ordinary stock, making 3 per cent. for the year, was approved.

THE LIVERPOOL AND LONDON AND GLOBE
INSURANCE COMPANY, LIMITED

100TH ANNUAL REPORT

NEW RECORDS IN 1935

The one hundredth annual general meeting of The Liverpool and London and Globe Insurance Company, Limited, was held, on the 20th instant, in Liverpool.

Mr A. E. Pattinson, the chairman, stated that, apart from two exceptional years immediately following the war, underwriting profit of £637,839 in 1935 had never been exceeded in the company's history. Every department contributed to that splendid result—fire to the extent of £482,741; accident £133,809; marine £21,289.

New life business, at £2,460,601, constituted a record high level.

ROAD AND OTHER ACCIDENTS

17,000 KILLED ANNUALLY

The Chairman said that public attention had been focussed upon the serious problem of road accidents. There were, however, more people killed every year in accidents which occur in and about the home than are killed on the roads by motor cars. Out of the total number of 17,000 fatal accidents occurring each year in Great Britain, roughly,

7,500 are killed in and about the home,
6,500 are killed on the road,
3,000 are killed in industrial accidents,
and the tale of injured is equally impressive.

FIRE WASTE

There had been very marked alteration in the general attitude towards fire waste. Not only was the machinery of fire-fighting

being more closely studied, but there was also considerable development in the use of fire-resisting material in building construction. Moral hazard had improved, both voluntarily and compulsorily, and active campaigns in many parts of the world against fraudulent fires were bearing fruit.

1935 RESULTS

Net premiums.—Fire, £3,960,629 (against £3,960,976 for 1934); accident and miscellaneous, £4,293,399 (against £4,483,705); marine, £290,393 (against £282,413).

Profits, exclusive of interest, were: Fire, £482,741; accident, £133,809; marine, £21,289; and life, £26,000. Total interest to profit and loss account was £442,749.

At the new record figure of £2,460,601 net new life sums assured were £101,118 greater than in 1934. Interim bonuses were maintained at the same high rate as in the preceding year, viz. whole-life at 45s. per cent. per annum, endowment at 40s. per cent. per annum.

Profit and loss account, after providing for dividend, income tax, etc., showed a balance carried forward of £553,796.

The report and accounts were adopted, and a final dividend of 13s. 6d. per share was declared, making 27s. per share, less tax, for 1935.

BRITISH-BORNEO PETROLEUM SYNDICATE, LIMITED

TOTAL DISTRIBUTION OF 17½ PER CENT.

The twenty-second ordinary general meeting of this company was held, on the 20th instant, at the Chartered Insurance Institute, London, Mr Walter MacLachlan (chairman and managing director) presiding.

The Chairman, in the course of his speech, said: During the past year the success attending the operations of the company has been more than maintained, which the directors consider justifies the increase of the total distribution for the year to 17½ per cent., while at the same time advantage is taken of the opportunity to increase the general reserve to £50,000.

I shall now refer to the oil interests and investments which appear in the balance sheet at a cost, less amounts written down, of £274,523. We hold a substantial interest in Apex (Trinidad) Oilfields, Limited, which continues its successful career. During its financial year, which ended on September 30, 1935, the production consisted of 460,145 tons of oil; this was less than the output for the previous year, which had, however, constituted a high record for the property. After writing off £126,421 for amortisation of wells, there was a net profit of £170,035, and dividends amounting to 27½ per cent. were paid for the year, making the total dividend distribution to date £2,212,000. The production for the first seven months of the current financial year of the Apex Company has been 298,598 tons, which makes the total output to date just over 5,000,000 tons. I have much pleasure in informing you that during the year under review, very satisfactory developments have taken place on the south-western portion of the property, which have resulted in an important extension of the proved area of the Apex Oilfield.

The royalty which the company receives upon the production of oil by the British Malayan Petroleum Company from its Seria Oilfield, in the State of Brunei, continues to constitute a considerable portion of our revenue; during the past year it amounted to over £22,000.

In pursuance of our policy to continue to take advantage of favourable opportunities for interesting our company in new enterprises associated with the oil industry, we acquired during the year a share interest in the Ultramar Exploration Company, Limited, which holds various oil interests in Venezuela, which we have reason to believe are of considerable potential value.

In addition to those interests in the oil industry which are not represented by quoted securities, our investments include securities and shares of home railways, iron and coal companies, electrical supply companies and other British industrial undertakings, shares and debentures of mining finance companies and mining companies and other interests of a similar nature. I have pleasure in giving you an analysis of our investments having market quotations based upon their market value at March 31st, the date of the balance sheet: Oil shares, 43 per cent.; home railways, mainly guaranteed and preference stocks, 16 per cent.; electrical supply companies, 5 per cent.; iron and coal companies and home industries, 9 per cent.; shares and debentures of mining finance companies and mining companies, 23 per cent.; rubber and tea shares, 1½ per cent.; and American securities, 2½ per cent. The market value of those investments at March 31st exceeded by over £50,000 the amount at which they stand in the balance sheet.

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period May 21st to 31st at 139.11½ per cent. The previous rate was fixed as from May 11th at 139.71 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	"Export" market selling rate fixed at 50 bolivianos per £ as from April 1, 1936.
Colombia.*	Sight rate, 176 pesos per 100 United States dollars on April 28, 1936. This rate applies to holders of permits buying in the "open" market.
Ecuador.	Sight selling rate on New York was maintained in March at 10.50 sucres per United States dollar.
Guatemala	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on March 31st, 1936.
Salvador.	Sight rate on May 9, 1936, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York, 3.91½ bolívares per United States dollar, on April 24, 1936.

* Exchange controls are operative in these countries.

MANCHESTER SHIP CANAL COMPANY.—The Right Honourable Lord Colwyn, P.C., D.L., has resigned his directorship of the Manchester Ship Canal Company owing to pressure of other business. Lord Colwyn has been a director of the company since January, 1927, and the board have accepted his resignation with great regret. Mr. Kenneth Stoker, the managing director of Manchester Liners Ltd., and a director of Furness Withy and Company, Ltd., has been elected director of the company by the directors elected by the shareholders, to fill the vacancy created by Lord Colwyn's resignation.

GOLD MARKET

Messrs. Samuel Montagu and Company write on May 20, 1936, as follows:—

The Bank of England gold reserve against notes amounted to £204,290,743 on the 13th instant, as compared with £203,660,401 on the previous Wednesday. Purchases of bar gold as announced by the Bank during the week amounted to £1,072,317. In the open market offerings at the daily fixing totalled about £2,400,000. There was a general demand, but with supplies plentiful, prices showed a declining premium over gold exchange parities, that over the dollar being very slight.

The s.s. "Viceroy of India" which sailed from Bombay on the 16th inst., carries gold to the value of about £424,000.

SILVER MARKET

The report that the United States Treasury had made a further purchase of silver from the Chinese Government stimulated demand from the Indian Bazaars and speculators, and prices advanced sharply, 20½d. for both cash and two months delivery being reached on the 15th inst. This level, however, was not maintained, buyers being disinclined to follow the rise, and on free offerings on China account and re-sales by speculators, prices quickly receded to 20½d. for cash and 20½d. for two months delivery quoted to-day.

An announcement was made on May 18th by Mr. Morgenthau that, at the end of a fortnight's conference of Treasury officials with representatives of the Chinese Ministry of Finance, the United States had agreed to buy from the Central Bank of China substantial amounts of silver and also to make available to that institution dollar exchange for currency stabilisation purposes. As the market made no recovery following the news, the effect of the agreement, the nature of which had been anticipated in some quarters, would seem to have been discounted.

Quotations during the week:—

IRON AND STEEL EXPANSION. (CARGO FLEET IRON AND SOUTH DURHAM STEEL DEVELOPMENTS).—Plans for future developments involving the expenditure of £1,000,000 are announced by the Cargo Fleet Iron Company and the South Durham Steel and Iron Company. This scheme is additional to one already being carried out at the Cargo Fleet Works and involves the reconstruction of two furnaces at Seaton Carew which have been idle since 1925; re-opening the malleable iron shop at Stockton and the erection of a new battery of coke ovens and a by-product plant at West Hartlepool. When completed, in about a year's time, the new works at West Hartlepool will have a capacity to deal with 7,500 tons of dry coal per week coming from the companies' pits.

BEECHAM'S PILLS, LTD.—Profits of Beecham's Pills rose by £138,247 in the year to March 31st to £425,781. Tax requires more at £92,130, and after providing for directors' fees and bringing in £58,115, the available balance is £388,766. The deferred dividend is raised from 27½ per cent. to 50 per cent., less tax. The transfer to development reserve is increased by £50,000 to £65,000, and there is also a transfer of £12,500 to general reserve. The carry-forward has risen from £58,115 to £60,673. Meeting, Hotel Victoria, W.C.2, May 25th, at 12 noon.

YORKSHIRE AMALGAMATED COLLIERIES, LTD.—A rise in profits from £50,278 in the year ended March 31, 1935, to £108,504 for 1935-36 is shown in the accounts of this company. With the amount brought in, there is available £117,604. The directors have written off £22,500, being the whole of the outstanding balance of discount on the first mortgage debenture stock issued in the previous year, leaving £95,104 for disposal. A dividend of 4 per cent., against 2 per cent., less tax, is recommended on all classes of ordinary shares, leaving £6,191 to go forward. Dividends have been received during the year from all the constituent companies.

SINGER AND COMPANY, LTD.—A total loss of £203,449, of which £99,214 was incurred on trading, is shown in the accounts for 1935 of Singer and Company, Ltd. By the scheme of arrangement, £350,000 was written off properties, plant, stock, etc., but by utilising surplus reserves, the balance on profit and loss account and a small sum from surrendered shares, this amount was met, and the surplus of £74,247 has been used to reduce the 1935 loss to £129,202. Meeting, Canterbury Street, Coventry, May 27th, at 11.30 a.m.

ILLINGWORTH, MORRIS AND COMPANY, LTD.—The accounts for the year to March 31, 1936, show that dividends, free of tax, from subsidiaries amounted to £121,362, against £48,002 in the previous year. Adding £50,137 at credit of profit and loss account and tax recovered, the balance is £171,500, compared with £95,048. After deducting £82,268 debenture and other interest, preference dividends and total cost of debenture conversion, there is left £89,237. Reserve is raised by £7,638, to £25,000.

THE MID-EUROPEAN CORPORATION, LTD.—The net revenue for the year ended March 31, 1936, after provision for income tax,

amounts to £48,703 16s. 3d. After deducting the dividend on the 5½ per cent. preference stock paid and accrued, amounting to £23,443 15s., and adding £83,814 7s. 4d. brought forward from the last account, there is available £109,074 8s. 7d., which the board recommends be appropriated as follows: To payment of a final dividend of 2 per cent. (less income tax at 4s. 6d. in the £) on the ordinary stock, making with the interim dividend of 1 per cent. (less income tax) paid on November 15, 1935, a total of 3 per cent. for the year, absorbing £22,087 10s.; to carry forward to next account £86,986 18s. 7d. During the year the outstanding amount of the corporation's 5 per cent. redeemable debenture stock was reduced to £893,455 by the purchase and cancellation of a further £7,500. The investments held by the corporation and its subsidiary, including secured loans, numbered 363 on March 31, 1936.

HARRODS (BUENOS AIRES), LTD. (PREFERENCE ARREARS PLAN).—The directors of Harrods (Buenos Aires) have drawn up a plan to deal with accumulated arrears of preference dividend to be submitted for approval at meetings on June 12th. Preference arrears are to be satisfied by the allotment to each 8 per cent. preference shareholder of one new 4 per cent. £1 preference for every four existing preferences held, while the South American Stores is to have its debenture debt repaid amounting to some £759,000 out of the group's liquid resources. The board proposes to pay a half-year's dividend on the 8 per cent. preference shares for the six months ending August 31st next.

VACTRIC, LTD.—The directors have declared an interim dividend of 6½ per cent. actual, less tax, on the ordinary shares, payable June 2nd. The company is collaborating with a well-known American Corporation for the formation of a company in this country to market the products of the American Corporation which include electric refrigerators, washing machines and other domestic appliances.

STEPHANY (FURNITURE TRADES), LTD.—The Statutory meeting of this company was held on May 20th. The chairman (Brig.-General the Hon. Alexander V. F. V. Russell, C.M.G., M.V.O.) stated that "the whole of the cash in respect of the issue of preference and ordinary shares has been received," and went on to say "that the sum of £16,250 has been advanced to the subsidiary companies to assist them in financing their increasing turnover, and it will, of course, be the policy of the holding company to employ as much as possible of their available cash in this manner, retaining only such amount as in the opinion of the board is necessary to meet their own requirements. Turnover for the current year has been fully maintained, the sales for March and April showing a substantial increase over those for the corresponding months of the previous year. The boards of the subsidiary companies—which have been strengthened by the addition of certain members of the board of the holding company—are working in close co-operation, and I am pleased to say that there is complete harmony between them."

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE irregular tendency of the prices of primary products, noticeable since the beginning of May, continued during the past week. Wheat prices continued to sag under the influence of Canadian selling pressure, while most other grains were also cheaper. Raw sugar quotations failed to recover and the prices realised at the Mincing Lane tea auctions were lower than a week ago. The Smithfield meat trade was again slow, New Zealand mutton being slightly cheaper and Argentine beef a little dearer. On the other hand, the market in bacon showed a firmer tendency and butter rose sharply in price. English eggs were marked down a little.

Towards the end of last week rubber prices rose on more active buying, but the improvement was not fully maintained. Transactions in vegetable oils and oilseeds were small at declining prices. The London Spring Fur market closed firm, many descriptions registering an increase in price, varying from 5 to 15 per cent. Among precious metals, tin fell sharply in price to the lowest since the spring of 1933. Copper was also cheaper, while silver remained unchanged and lead rose a little in price. The market in iron and steel materials, however, remained very firm and, in many cases, it is impossible to place orders for near delivery. Business in coal was patchy. Our reports from Newcastle and Glasgow indicate a brisk trade, but there was no improvement on the Cardiff coal market.

The improvement in the demand for Lancashire goods, noticeable last week, has since continued and quotations for United States raw cotton again rose slightly. But wool prices showed an easier tendency and quotations for raw jute were marked down on favourable reports from the growing areas in India.

Prices of primary products in the United States recovered

a little during the past week. Thus Moody's index of the dollar prices of staple commodities stood at 165.4 on Wednesday, against 163.1 a week earlier, 171.5 a month ago and 159.9 on the corresponding day last year.

COAL

SHEFFIELD.—The volume of business in the export coal market continues unchanged and business remains quiet. Forward deliveries are still required, but little business is being transacted owing to price uncertainty. Quotations in the inland market remain steady, and demand for industrial fuel is unchanged. Requirements of household coal have lessened.

Export prices: South Yorkshire hards, 19s. to 19s. 6d.; washed steam doubles, 17s. 6d. to 18s.; washed trebles, 17s. 6d. to 18s.; Derbyshire top hards, 18s. 3d. to 18s. 9d.; Derbyshire cobbles, 18s. 3d. to 18s. 9d.; Derbyshire washed trebles, 17s. to 17s. 6d.; inland prices: South Yorks best, 23s. to 25s.; Derbyshire best house, 22s. to 23s.; best screened nuts, 19s. to 20s.; Yorkshire hards, 19s. 6d. to 20s.; Derbyshire hards, 19s. 6d. to 20s.; rough slacks, 11s. to 12s.

NEWCASTLE-ON-TYNE.—With home industrial trade so good, the usual seasonal decline in domestic requirements is hardly noticed. Northumberland steam collieries are fully booked, and large quantities of all classes have been sold over the next twelve months to home and Scandinavian markets. Despite the loss of the Italian market, production of Durham coal is substantial, this being due to active home trade. It is the general opinion that, should the Italian market be restored, conditions in Durham would be brisker than for some years. Coke remains a very firm market.

Current f.o.b. prices for export: NORTHUMBRIA.—D.C.B., screened, 15s.; smalls, 12s. 6d.; Howards, Bentinck, Newbiggin, screened, 14s. 9d.; smalls, 12s.; Tyne Prime, large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main large, 14s. 9d.; smalls, 12s. 6d. DURHAM.—Lambton, South Hetton, screened steam, 15s. 9d.; smalls, 13s.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-glass gas, 13s. 6d.; coking unscreened and/or smalls, 13s. 3d.; Prime unscreened bunkers, 15s.; second-class unscreened bunkers, 14s.; Prime Foundry coke, 26s.; Newcastle and District gas coke, 28s.

GLASGOW.—Trade is moving steadily. A revival in Continental buying has been a welcome feature. In spite of the seasonal slowing down of home business in various directions, most of the collieries are working fairly steadily and have good order books for a month

The New York Central Railroad Company

Extracts from the Report of the Board of Directors for the year ended December 31st, 1935

The Year's Business

Operating revenues amounted to \$310,192,979.54, an increase of \$15,108,088.25 (5.12 per cent.). Revenue freight handled amounted to 104,482,468 tons, an increase of 4,617,357 tons (4.62 per cent.). Freight revenues amounted to \$218,260,324.49, an increase of \$14,103,250.91 (6.91 per cent.). The company carried 44,381,459 revenue passengers, a decrease of 1,114,350 (2.45 per cent.). Revenue from passengers amounted to \$55,292,023.51, an increase of \$539,411.72 (0.98 per cent.). Net railway operating income was \$36,748,524.01, an increase of \$7,587,595.90. Net income for the year was \$115,045.54, which was carried to the credit of profit and loss.

Operating Expenses

Restoration of rates of pay under agreements with employees and the increased cost of locomotive fuel and other materials were major factors contributing to an increase of \$15,025,684.82 in operating expenses. By groups they were as follows:—

Group	Amount	Increase
Maintenance of way and structures	\$1,478,584.44	\$325,318.26
Maintenance of equipment	65,297,666.21	4,697,713.76
Traffic expenses	6,397,437.63	118,462.15
Transportation expenses	117,380,073.06	7,411,873.72
Miscellaneous expenses	4,868,439.20	298,888.99
General expenses	12,304,733.97	157,689.57
Transportation for investment—credit	23,479.75	15,748.37
	237,197,454.76	13,025,694.82

Railway Tax Accruals

Railway tax accruals were \$20,619,431.57, a decrease of \$4,217,549.49. Reductions in assessed valuations and decreases in rates of taxation in certain taxing districts, together with the adjustments in respect to taxes on buildings in the Grand Central Terminal area, resulted in a decrease of \$3,825,703.89 in taxes on real and personal property. Federal and State capital stock taxes decreased \$489,843.44, mainly due to credit adjustments in Pennsylvania capital stock taxes, and special franchise and transportation taxes decreased \$150,701.85. These decreases were partly offset by the following: Canadian and Federal income taxes, and taxes on gross earnings in the several States, increased \$81,188.08 and \$85,442.98, respectively, the result of a larger taxable income; emergency and special taxes increased \$69,477.38, and sundry items of taxation increased \$12,581.23.

Equipment Rents

The net debit to equipment rents amounted to \$11,678,501.48. Rents received for the use of the company's equipment on foreign roads increased \$1,403,896.42, while rentals paid to others for use of equipment increased only \$1,099,725.38, resulting in a net decrease in equipment rents of \$304,171.04.

Joint Facility Rents

There was a net debit to joint facility rents of \$3,788,859.30, a decrease of \$967,623.94 as follows: the accounts of the previous year included an adjustment of \$491,600 in rentals due to the Illinois Central Railroad Company for use of its station facilities at Chicago, Illinois; also, payment of \$224,154 to the Nicholas, Fayette and Greenbrier Railroad Company under the dividend provision of its lease, these dividends having been discontinued in 1935, and there were decreases in other items amounting to \$251,869.94, resulting from less use of the facilities of others.

Non-operating Income

Non-operating income amounted to \$22,638,841.34, a decrease of \$582,992.14. The more important items contributing to this result were as follows. There was a change in the method of accounting for taxes on land occupied by sundry buildings in the Grand Central Terminal area, under which these taxes were in 1934 charged to Tax Accrual Account and credited to Miscellaneous Rent Income, the one account offsetting the other, while in 1935 the accounting procedure was to charge the taxes as paid direct to the tenants. The effect upon the Income Account as a whole is the same in both instances. This revised accounting is mainly responsible for the decrease of \$1,684,404.82 in Miscellaneous Rent Income. There was also a change in the method of accounting for New York Central Building income. In 1934, the gross income from this building was credited to income from

non-operating physical property, and the expenses were charged to the same account but the taxes were charged to the account Miscellaneous Tax Accruals. In 1935, due to the transfer of the operations of the New York Central Building to a lessee, the account Miscellaneous Non-operating Physical Property reflects the net amount received from the lessee after the deduction not only for the operating expenses but for taxes, ground rent and certain additional expenses as well. This is the principal cause for the decrease of \$1,018,810.66 in the account Miscellaneous Non-operating Physical Property.

There was an increase of \$265,746.79 in profit from separately operated properties resulting from the increased revenues from the operation of the Pittsburgh, McKeesport and Youghiogheny Railroad, the Federal Valley Railroad and the Mackinac Transportation Company.

Dividend income increased \$3,307,748.66. There were increases amounting to \$3,631,902.66 in dividends received from the Chicago River and Indiana Railroad Company, the Pittsburgh and Lake Erie Railroad Company, the Reading Company and on sundry other holdings, while dividends received from the Detroit Terminal Railroad and from the Nicholas, Fayette and Greenbrier Railroad Companies decreased \$100,000 and \$224,154, respectively.

Deductions from Gross Income

Deductions from gross income were \$59,326,135.91, a decrease of \$933,733.21. Rent for leased roads increased \$83,825.65. Rentals based upon revenues increased \$227,086.03, resulting from the increased revenues of such lines, which, together with a net increase of \$2,176.18 in sundry items, is offset in part by a decrease of \$145,436.56 in interest upon obligations of lessor companies, due to the retirement of maturing obligations and to the refinancing of certain obligations at lower rates of interest. Interest on funded debt amounted to \$28,549,102.04, a decrease of \$195,783.40. A decrease of \$459,842.68, due to the retirement of maturing obligations, is offset by the following: \$184,345.21, resulting from the higher interest rate on the company's 10-year 6 per cent. Convertible Secured Bonds, issued during 1934, as compared with interest on issues refunded; \$109,282.62 due to a full year's interest on additional borrowings from the Reconstruction Finance Corporation during 1934 and from the Federal Emergency Administrator of Public Works; and there was a net decrease of \$29,568.55 in other items.

Interest on unfunded debt decreased \$125,236.84, mainly due to reduction in the rate of interest on bank and other loans. Other deductions were \$954,791.60, a decrease of \$696,538.62, resulting from credit adjustments amounting to \$192,564.65 in miscellaneous taxes applicable to prior years, a reduction of \$303,510.52 due to change in accounting for certain taxes; a reduction of \$208,123.85 in miscellaneous rentals and a net increase of \$5,680.40 in other items.

Net Income and Surplus for the Year

The net income of the company for the year amounting to \$115,045.54 was carried to the credit of profit and loss. After sundry adjustments, the profit and loss account at the end of the year amounted to \$195,968,343.44, and total corporate surplus to \$204,915,933.32.

Capital Stock

There was no change in the capital stock during the year, the number of shares authorised being 10,000,000 and the number of shares outstanding being 4,992,597 2/5.

Termination of The New York Central Railroad Company Equipment Trust of 1920

The New York Central Railroad Company Equipment Trust of 1920 having expired on April 15, 1935, the title to the equipment was transferred by the Trustee to the several railroad companies entitled thereto under the terms of the lease and sub-leases covering the equipment.

Loans from Reconstruction Finance Corporation Reduced

The indebtedness of the company to Reconstruction Finance Corporation, aggregating \$27,499,000, evidenced by three-year notes due at various dates in 1935, 1936 and 1937, was reduced to \$11,899,000, principal amount, by payment out of available cash resources of the \$15,600,000 of the notes which became due in 1935. In connection with this payment it is contemplated, subject to the Interstate Commerce Commission's approval, that the balance of \$11,899,000 of the loans, due in 1936 and 1937, will be extended to July 1, 1941.

Loans from The Railroad Credit Corporation

The loans obtained by the company from the Railroad Credit Corporation in 1932 and 1933, originally amounting to \$5,710,000, had been reduced by credits thereon and repayments to a balance of \$2,474,059.84 on December 29, 1935, as of which date the company gave its renewal note for the then outstanding balance. The Railroad Credit Corporation made a 1 per cent. distribution on December 31, 1935, the company's share of which, \$73,297.26, was credited on the renewal note, reducing the principal amount thereof to \$2,400,762.58 at the close of the year.

Railroad Retirement Act of 1935

On May 6, 1935, the Supreme Court of the United States declared unconstitutional an Act of Congress, approved June 27, 1934, known as the Railroad Retirement Act. Thereafter, Congress enacted two statutes, both thereof approved August 29, 1935, in one of which, known as Railroad Retirement Act of 1935, provision is made for annuities for railroad employees substantially as had been provided for in the earlier statute above referred to, and in the other of which there are imposed a so-called income tax on railroad employees at the rate of 3½ per cent. of carrier compensation up to \$300 per month and a so-called excise tax on carriers at the rate of 3½ per cent. of said compensation. Early in 1936, in the Supreme Court of the District of Columbia, suit was instituted by Class I carriers, including this company, and others, to test the constitutionality of said Railroad Retirement Act of 1935 and its said companionate Tax Act. During the year 681 employees were retired and pensioned: 402 at the age of seventy, 239 at disability and 20 special service pensions. There were 5,497 pensioners at the close of the year. The total amount paid in pensions for the year was \$3,533,038.86. The Board wishes to express its appreciation of the loyal and efficient service of the officers and employees of the company during the year.

For the Board of Directors,

F. E. WILLIAMSON,

President.

or two ahead. Industrial demand remains brisk. Nuts are still in a strong position owing to limited supplies.

CARDIFF.—There has been no improvement during the past week in the position on the Cardiff coal market. Shipments in the foreign and coastwise trades have improved slightly. The returns of the Great Western Railway Company for the week ended March 17th give a total of 354,300 tons, compared with 416,715 tons in the corresponding week last year. There is a promise of this improvement in volume being maintained for the current week, for the tonnage position, particularly at Swansea, Port Talbot and Newport, is better. New inquiries are very scarce, and except for sized and small grades, supplies at the minimum scheduled prices are abundant. The Egyptian State Railways have placed an order for 27,000 metric tons of sized steam classes, but the bigger order for large coals has not yet been allocated. A small contract has been placed by the Algiers Electricity Works, and tenders have been invited by the Greek State Railways for 18,000 tons of through coals and from a Portuguese shipping company for 20,000 tons of bunker coals. At the meeting last week of the Central Council in London, the request of South Wales for a percentage of the total trade of the country was not adopted, and for the time being allocations by the Council are to continue as heretofore. A new schedule of prices for supplies to the Irish Free State has been formulated by the Executive Board and is at present receiving the consideration of importers.

IRON AND STEEL

MIDDLESBROUGH.—Foundry pig iron is in slightly better supply owing to increased production in this area. Foundries have not experienced any actual shortage, as large quantities of Midland iron are being brought into this district. There is, however, no possibility of makers here accepting further business for early delivery, as they have arrears to overtake. East Coast hematite pig iron is not too plentiful, but so far makers appear to have been able to meet demand. Buyers are prepared to do further business, but makers are not willing to commit themselves very far ahead. The price of No. 1 East Coast hematite is based on 77s. per ton delivered locally. Shipments of pig iron are small.

In the semi-finished and finished steel departments manufacturers have orders on their books which will keep them busy for some months. Production of steel continues to increase, whilst the pressure for semi-manufactured material has been met to a large extent by the importation of foreign billets. The orders which have just been announced for four destroyers to be built on the Tyne are very welcome and will mean increased demand for steel.

Business in foreign ore is difficult owing to the strike of the Spanish seamen, and prices are purely nominal. Good Durham blast-furnace coke can be placed at 25s. to 25s. 7d. per ton delivered at the works, but it is expected that the output of coke in this area will be increased considerably during the next few weeks. Heavy steel scrap is in good demand at 57s. 6d. per ton delivered works.

SHEFFIELD.—Demand continues brisk in the iron and steel markets, mainly owing to the desire to add to stocks before prices are raised. Makers of pig-iron are booked well ahead, and new business is not being sought. Forge iron consumption at foundries is increasing, due to the heavier cost of scrap iron. With the output of Derbyshire iron going into use, both consumers and makers are finding it next to impossible to accumulate stocks. Lincolnshire iron makers are off the market. Demand for the best iron is giving rise to some anxiety. Although deliveries are being made, the shortage is increasing and requirements exceed supplies. Common and marked bars are in demand, and requests for crown bars are rather more numerous. Prices remain unchanged. The steel trade in this district is working at high pressure. Makers of basic billets are unable to accept all the orders offered. Acid billets are in good demand, but orders can be dealt with comfortably. Stainless steel sheets and strip and bars are in strong request, and business in wire rods remains at a high level.

GLASGOW.—Even with plant running to capacity, steelmakers in the West of Scotland are finding it impossible to meet the requirements of consumers. Makers of semis are in much the same position, and in neither branch is it possible to place large tonnages for early delivery. As regards semis, the consuming industries have been able to supplement home supplies with continental material. In the sheet trade the position is practically unchanged, rolling mills

being fairly busy, but the export trade still unsatisfactory. It is announced that the Admiralty are placing orders for five Tribal class destroyers of the 1936 programme with Clyde shipbuilders. These will afford a considerable amount of employment to shipyard works in the Clyde area as well as to other tradesmen.

CARDIFF.—Shipments of tinplates at Swansea last week dropped to the exceptionally small total of 38,068 boxes. This compares with 99,573 boxes the previous week, and 62,842 boxes in the corresponding week last year. Production was also apparently below normal for deliveries into vans and warehouse totalled only 45,780 boxes, as against 77,436 boxes in the corresponding period last year. As a result, stocks remained at the relatively low level of 64,284 boxes. No announcement has been made of the decisions at last week's meeting of the Committee of the International Tinplate Association held in Paris, but those decisions have had no favourable reactions on the market, and prices are unchanged. Galvanised steel sheets are quoted at £11 15s. per ton, and tinplate bars at £5 15s. and £6 per ton.

OTHER METALS

COPPER.—Copper prices tended easier after a slight gain on Thursday of last week. The basic position of the market, however, has not changed. The bull account is very small. Consumers on this side of the Atlantic are normally supplied. In the United States, however, advance bookings for June and July (effected before the rise in the United States domestic price in April) are rather heavy, so that the American market is likely to remain dull. In Europe much depends on the future of the gold currencies. There has been a certain amount of hedge buying against devaluation. Should the currency outlook become more settled, these positions are likely to be liquidated and may have a temporary depressing effect on prices. World stocks declined in April by 12,050 short tons to 471,100 short tons.

Sales on the London Metal Exchange: 1,025 tons on Monday, against 650 tons last week; 975 tons on Tuesday, against 550 tons last week; 1,300 tons on Wednesday, against 1,600 last week. Domestic spot was quoted at 8-87½ cents per lb. in New York on Wednesday, against 8-87½ cents a week ago and 8-95 cents a month ago. Wednesday's official closing price for standard, cash in London, was £36 5s. to £36 6s. 3d. compared with £36 11s. 3d. to £36 12s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 60,629 tons, show a decrease of 556 tons, while stocks of roughed copper, at 5,717 tons, show a decrease of 125 tons on the week.

LEAD AND SELLER.—Prices fluctuated slightly during the week while spelter closed unchanged against last week, lead gained 5s. per ton. The spelter position is still adversely affected by the lack of any news concerning the international cartel. Moreover, the market is of the opinion that the offers of the 98 per cent. Belgian zinc are depressing the price. The desire for a revision of the spelter duty, therefore, is gaining ground again. No complaints have been heard, however, concerning the working of the lead duty, although this duty is, in fact, only 7s. 6d. per ton, as compared with 12s. 6d. in the case of spelter. Lead output continues at a low level. According to the "Metallgesellschaft" the world lead smelter production totalled 117,068 tons in March, compared with 116,692 tons in February, and a monthly average of 117,081 tons last year. The daily output in March was below the daily average of 1935. In view of the increasing consumption of lead, the steadiness in production is remarkable.

Sales of lead on the London Metal Exchange: 950 tons on Monday, against 650 tons last week; 500 tons on Tuesday, against 500 tons last week; 700 tons on Wednesday, against 550 last week. The New York quotation on Wednesday was 4-60 cents per lb., against 4-60 cents a week ago and 4-60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 7s. 6d. per ton, compared with £15 2s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 300 tons on Monday, against 475 tons last week; 125 tons on Tuesday, against 450 tons last week; 500 tons on Wednesday, against 850 last week. Wednesday's quotation in East St. Louis was 4-90 cents per lb., against 4-90 cents the week before and 4-90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipments during the current month was £14 7s. 6d. per ton, against £14 7s. 6d. last week.

TIN.—Tin prices slumped considerably, although there was only a negligible increase in home warehouse stocks. The fall in prices, which was £5 17s. 6d. per ton in the case of "cash" tin and £4 2s. 6d. in the case of "forward" tin, was not due to a decline of demand (demand has been small for some weeks), but to a surprising increase in offers. There was a remarkable coincidence between the sudden tin offers and the approaching meeting of the Tin Committee. The International Tin Committee may fix the quota for the third quarter of this year on Tuesday next. The present decline has brought both cash and forward prices to the lowest level since the spring of 1933. The future of the market depends largely on the quota decision.

Sales of tin on the London Metal Exchange: 150 tons on Monday, against 145 tons last week; 285 tons on Tuesday, against 125 tons last week; 300 tons on Wednesday, against 225 last week. The New York quotation on Wednesday was 45-87½ cents per lb., against 46-87½ cents a week ago and 46-75 cents a month ago. Wednesday's official closing quotation in London for standard cash was £198 5s. to £198 10s. per ton, compared with £203 15s. to £204 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 607 tons, an increase of 30 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again

quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was again quoted at £12 7s. 6d. per flask of 76 lbs. Chinese antimony was quoted at £57 per ton ex warehouse, duty paid, against £59 to £60 last week. Chinese wolfram for April/May shipment was quoted at 33s. to 33s. 6d. per unit, c.i.f., compared with 33s. 3d. to 33s. 9d. a week earlier. Platinum (refined) was maintained at £7 per ounce.

TEXTILES

COTTON.—Manchester.—The general tone of the market continues rather better. Spinners and manufacturers have met with a larger inquiry compared with a week or two ago. Many buyers seem to have made up their minds that lower prices are improbable.

There have been signs of greater firmness in raw cotton prices. More bullish advices are being received from the United States. Weather advices from the belt are somewhat mixed, but the Eastern States are still suffering from lack of rains. New crop cotton continues to be purchased on a freer scale by spinners. The general inquiry in piece goods has continued rather better. An interesting development has been the increased demand for India, that market having been distinctly quiet for many weeks. Light bleaching descriptions have moved off more freely for Madras and Karachi, and more orders have been booked in dhooties and light whites for Calcutta. Some useful contracts have been reported in dyed cloths for Bombay and the up-country districts. Rather more activity has been experienced in white shirtings for Ceylon. Fancies and specialties have been put through for Java and Singapore. Some makers of sheetings have done better for South America. Steady buying has occurred in heavy shirtings and printed and coloured goods for West Africa. The improvement in home demand has been maintained.

Business in the yarn market has been patchy. A slightly improved demand has been reported in certain counts and qualities in the American section, but prices remain poor. Irregular operations have occurred in Egyptian descriptions.

COTTON PRICES

	1936				Corresponding Date

JUTE.—Dundee.—A fall in price of raw jute has been the result of favourable weather conditions for the new crop. A larger outturn is expected next season in spite of the restriction scheme. But the yield may still be below world consumption, estimated to reach approximately eleven million bales. Consumption of jute goods throughout the world is steadily increasing. Although the members of the Indian Jute Mills Association have increased their production by unsealing looms and working longer hours by approximately 32 per cent. during the past eighteen months, stocks of goods in Calcutta are not increasing, and the mills are finding a ready outlet for their additional output. Moreover, exports of raw jute from Calcutta are being well maintained, showing that the improvement in the jute industry is general. Unfortunately, however, the controversy over the question of working hours in India and the failure of the Indian Mills' Association to come to terms with the non-member mills has resulted in very low and uneconomical prices.

The price of Daisee-2/3 for old crop material has been well maintained at £19 10s. per ton for the full group and at £19 12s. 6d. for PR, while Tossa-2/3 is quoted at £20 7s. 6d. and four's at £19, May-June. New crop prices, however, are lower at £18 10s. for Daisee-2/3 and at £19 10s. for Tossa-2/3, October-December. Good First Marks have declined to £22 12s. 6d. and good Lightnings to £20 17s. 6d., May-June. New crop prices are £23 10s. for good Firsts, £21 5s. for Lightnings and £20 for Hearts, August-September. Spinners have shown very little interest, and sales have been few.

Jute yarns are in quiet, steady demand, and sufficient business is being done to enable spinners to maintain their prices. Common 8 lb. cops are unchanged at 2s. and 8 lb. spools at 2s. 1d., while twist is steady at 3½d., the lowest price for 3-ply 8 lb., and sacking yarns remain at 2½d. for 24 lb. web and 3½d. for 8 lb. chains. Rove is quiet at £20 for 48 lb. and £16 for 200 lb., and the finer yarns continue at 2s. 8d. for second quality 8 lb. warp, 2s. 5d. for third and 2s. 3d. for fourth.

No large contracts are being placed for jute cloth, but a fair number of small quantities are being bought. Buyers are endeavouring to depress prices further, but manufacturers are adhering to 2½d., the lowest price of 10 oz. 40 in. and 2d. for 8 oz. Linoleum hessians are slow, but unchanged, and heavy goods are quiet.

Prices of Calcutta goods have declined a few pence, but the mills are selling steadily for shipment many months ahead at the low prices, hoping to force their competitors to restrict their working hours. For 10 oz. 40 in. 17s. is named for May-September and 16s. 10d. October-December, with 8 oz. at 14s. and 13s. 8d. respectively.

GRAIN MARKETS

WHEAT.—Wheat prices continued to sag under the influence of Canadian selling pressure and favourable crop reports from North America. The trend of prices during the next few months will largely depend on reports from the principal growing areas. In Australia seeding appears to be held up by drought, but is proceeding under favourable conditions in Argentina.

On Wednesday last, "May" futures were quoted in Chicago at 95½ cents per bushel, against 93 cents the week before and 101½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 31s. 9d. per 496 lbs., against 32s. to 32s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 31s. 3d., against 31s. 3d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,197,000 quarters, against 1,331,000 in the previous week and 1,416,000 quarters in the corresponding week a year ago.

FLOUR.—The market in both home-milled and imported flour remained quiet. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 29s. per 280 lbs., against 29s. a week ago; delivered inner London, 28s. 6d., as compared with 28s. 6d. a week ago. Manitoba patents, ex store, 25s. 3d. to 27s., against 25s. 6d. to 27s. 3d. a week ago. Australian, ex store, 22s. to 22s. 9d., against 22s. 6d. to 23s. a week ago.

BARLEY.—Demand for feeding barley has tended to decline with the improvement in weather conditions. Prices are substantially unchanged on the week, though the tendency was definitely easier. "May" futures were quoted at 38½ cents per bushel in Winnipeg on Wednesday, against 37½ cents a week ago and 38½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 22s. 6d., as against 22s. 6d. a week ago; "English Malting" at farm, 25s. to 40s., against 25s. to 40s. a week ago.

OATS.—The market in oats has undergone little change in the past week. On Wednesday, "May" futures were quoted at 24½ cents a bushel in Chicago, against 26 cents a week ago and 27½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 18s. to 19s. per 336 lbs., against 18s. to 19s. a week ago; "English White," at farm, 18s. to 19s., against 18s. to 19s. a week earlier.

MAIZE.—The market in maize has been quiet, demand both in this country and on the Continent showing a tendency to decline. On the other hand, shipments, mainly from Argentina, rose last week and prices showed a sagging tendency. "May" futures were quoted on Wednesday at 63½ cents per bushel in Chicago, against 62½ cents a week ago, and 64½ cents last month. Quotations in London, Wednesday: "Plate," landed, 19s. 9d. per 480 lbs., compared with 20s. a week ago; "Plate," ex ship, 18s. 9d., as against 19s. a week ago; "Plate," "May," 18s. 6d., as against 18s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £5 5s. to £5 7s. 6d. per ton, as against £5 7s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following tables give the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to May 16	115,397	87,106	174,614	208,217
37 weeks to May 16	7,977,005	9,870,081	12,125,796	12,261,531
Average price of English wheat per cwt.	s. d. 5 7	s. d. 4 9	s. d. 5 6	s. d. 6 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT		
	Wheat	Barley	Oats	Wheat	Barley	Oats
May 14, 1932	Cwts. 68,660	Cwts. 8,215	Cwts. 18,373	s. d. 6 1	s. d. 7 2	s. d. 8 0
May 13, 1933	115,397	55,681	22,323	5 7	6 6	5 8
May 19, 1934	87,106	9,953	13,028	4 9	7 7	6 1
May 18, 1935	174,614	35,291	21,049	5 6	6 11	7 3
May 16, 1936	208,217	29,486	32,649	6 9	9 9	6 2
May 9, 1936	205,608	26,540	23,979	6 9	7 11	6 1

YOUR DIFFICULTY

How often do you say: "That's a good idea—I'll remember that," and you don't? Or you read something useful and say: "I must cut that out," and you do, but can't find it when you need it.

Last month, Mr. E. P. Briem, Chief of the Official Information Bureau of the GOVERNMENT OF ICELAND, bought MASTROM and solved such a difficulty.

MASTROM so classifies and handles your DATA—PERSONAL PAPERS—PRESS CUTTINGS—NOTES—ILLUSTRATIONS—ITEMS IN BOUND BOOKS—that any fact, figure, method, or idea is found AT ONCE when you want it. It is UNIQUE.

To Students, Private Secretaries, Public Speakers, Economists, Bankers, Company Directors and Public Men it is invaluable.

Clip out this advertisement and pin it to your card or note heading, or write for particulars (mentioning the *ECONOMIST* 636) to:—

MASTROM, LTD. 81 HOLLY LANE, ERDINGTON, BIRMINGHAM

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934 :—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	May 22, 1935	Dec. 31, 1935	May 13, 1936	May 20, 1936
Winnipeg (No. 1, Manitoba)	65½	82½	85½	84½	78	76½
Chicago (No. 2 Winter)	84½	89½	89½	75½	93	95½

The visible supply of wheat in Canada amounts to 99,016,000 bushels, against 100,928,000 bushels last week, and 108,612,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—The market showed a firmer tendency. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 90s.; Canadian, 83s.; Danish, 92s., as against 86s. to 88s.; 83s. and 92s. last week. Arrivals in London last week included Danish, 13,422 bales; Canadian, 3,890; Dutch, 2,163; Lithuanian, 1,820; and Polish, 2,092, as against 12,838, 4,179, 2,315, 1,776 and 2,352, respectively, in the previous week.

BUTTER.—Butter prices turned sharply upwards, partly on an improvement in demand. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 98s.; Australian, choicest salted, 96s. to 97s.; Danish, 108s.; compared with 92s., 92s., and 100s. to 101s. respectively, a week ago.

CHEESE.—There was little change in the market for cheese. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 80s. to 86s.; Canadian, finest coloured, 65s. to 66s.; and New Zealand, finest coloured, 55s. 6d. to 56s.; against 80s. to 86s., 65s. to 66s. and 55s. 6d., respectively, a week ago.

COCOA.—The market was dull, and prices declined slightly during the past week. The spot quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. In London on Wednesday last, good fermented new crop, "May-June," was quoted 24s. 10½d. per 250 kilos., c.i.f. Continent, against 25s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 4,743 bags; delivered, for home consumption, 9,861 bags; exported, 33 bags; stocks, 158,663 bags, against 197,765 bags a year ago.

COFFEE.—Demand at the auctions was steady, but some East Indian and Kenya grades were a little cheaper than last week. The New York spot market has had a steady tone. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 2 cwt.; delivered, for home consumption, 168 cwt.; exported, nil; stocks, 11,267 cwt., against 17,636 bags a year ago. Central and other South American, landed, 2,209 cwt.; delivered, for home consumption, 2,017 cwt.; exported, 939 cwt.; stocks, 126,536 cwt., against 113,390 packages last year. Other kinds, landed, 4,633 cwt.; delivered, for home consumption, 3,680 cwt.; exported, 569 cwt.; stocks, 181,299 cwt., against 131,623 packages last year.

EGGS.—English eggs continued to decline in price owing to the warm weather. Danish eggs were steady. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 9s. 9d. to 10s. per 120, as against 9s. 9d. to 10s. 3d. last week, while Danish (15½ lb.) made 8s. 9d. to 9s. per 120, against 8s. 9d. to 9s. last week.

FRUIT.—Business both at Covent Garden and Spitalfields was brisk last week, according to the *Fruitgrower*, partly owing to the spell of fine weather and partly because of the beginning of the London social season. Oranges at Covent Garden were in good demand. Despite heavy arrivals of apples, prices generally showed little change, and New Zealand Cox's hardened. Cape and South American grapes also met a good inquiry for the large supply. Grape-fruits and pears maintained last week's prices. Supplies of gooseberries increased and made moderate prices. Strawberries also increased in quantity, and a few French cherries were available at considerably lower prices than in the previous week.

MEAT.—The meat trade was again slow, New Zealand mutton slightly cheaper and Argentine beef slightly dearer. On Wednesday last Argentine chilled hindquarters were quoted at 3s. 2d. to 3s. 6d. per 8 lbs., as compared with 3s. to 3s. 6d. a week ago. New Zealand frozen mutton was 3s. to 3s. 6d. per 8 lbs., against 3s. 2d. to 3s. 8d. a week ago. According to the Smithfield Market's official report, supplies during last week amounted to 9,061 tons, a decrease of 774 tons on the corresponding week last year. Beef and veal accounted for 4,852 tons, mutton and lamb 2,927 tons, and pork and bacon 806 tons, as compared with 5,116, 3,334 and 929 tons, respectively, in the same week of 1935.

PEPPER.—The market in pepper was quiet. Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 18 tons; delivered, 6 tons;

stocks, 1,729 tons, against 2,279 tons a year ago. White, landed, nil; delivered, 43 tons; stocks, 12,301 tons, against 19,401 tons a year ago.

RICE.—Quotations for rice eased under more liberal supplies. The spot price of Burma No. 2, cleaned, new crop, was 9s. per cwt. ex warehouse on Wednesday, as compared with 9s. per cwt. a week ago. "May-June," in singles to Continent and U.K., was quoted at 7s. 9d. per cwt., against 7s. 10½d. per cwt. last week. Movements in London during the past week were as follows: Landed, 291 tons; delivered, 277 tons; stocks, 1,230 tons, against 5,085 tons a year ago.

SUGAR.—The market in raw sugar has undergone little change in the past week, but London quotations for refined grades were reduced owing to the persistent ease in the price of raw descriptions. The spot price in New York on Wednesday was 3.72 cents per lb., as compared with 3.72 cents per lb. last week and 3.75 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 9½d. to 4s. 10½d., against 4s. 9½d. to 4s. 10½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 12,012 tons, against 6,591 tons last week and 1,363 tons in the same week of last year; deliveries, 17,686 tons, against 17,669 tons last week and 16,291 tons last year; stocks, 187,741 tons, against 193,415 tons last week and 134,347 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks.

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
May 16, 1935	11-88	13-42	15-25	10-17	9-44	10-51	12-74
Apr. 7, 1936	12-73	14-74	15-95	Nil	Nil	11-78	14-30
Apr. 23, "	12-67	14-00	15-99	11-00	10-47	11-95	13-41
Apr. 30, "	12-79	13-66	16-05	10-94	10-49	11-99	13-48
May 7, "	12-79	14-09	15-67	11-02	10-54	11-69	13-55
May 14, "	12-59	13-66	15-08	10-89	10-36	11-86	13-19

This week's offerings at the public auctions in Mincing Lane comprised 55,790 packages of Indian and 25,857 packages of Ceylon tea. At Monday's "Indian" and Tuesday's "Ceylon" auctions competition among buyers was not very keen and prices tended to decline. On Wednesday, however, demand was a little better at the lower level of quotations, though Travancore experienced a fall in price.

VEGETABLES.—Demand at Covent Garden was good, reports the *Fruitgrower*, but prices tended to decline owing to increasing supplies. Asparagus was plentiful, with better average prices in spite of a rather unstable market. Inquiry for salads was particularly brisk, but demand for greenstuffs was slow. Best cucumbers were dearer, while tomatoes and lettuces tended easier. Demand for old potatoes fell off owing to increasing deliveries of new potatoes, and at the Borough Market on Tuesday best siltland King Edward made 8s. 6d. to 9s. per cwt., against 8s. 6d. to 9s. 6d. last week. New Spanish Matros were quoted at 18s. to 19s., compared with 19s. to 20s. a week earlier.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Very quiet conditions prevail and there appears to be no disposition on the part of consumers to anticipate requirements beyond the usual six or eight weeks. Linseed is easier and a small business in Indian descriptions is reported at slightly lower figures. Plate is neglected so far as English crushers are concerned, but a little business has been done to the Continent, mostly in afloat and early shipment, France being rather a better buyer. Supplies of linseed afloat for Europe are smaller and have dropped to 118,400 tons (including 49,500 tons from India), a decline of 21,400 tons on the week. Linseed oil is again lower and has fallen by 22s. 6d. per ton since the opening of the month and is 65s. below the highest reached last January. Any improvement depends upon an expansion of demand on the Continent rather than upon restricted seed supplies, which at the present rate of consumption are judged to be ample to cover requirements until the new Argentine crop comes along. Trade deliveries of oil in Great Britain continue at a fair level, but the export section is slow and unsatisfactory, while imports of foreign oil are still substantial, despite the £5 per ton duty. Cottonseed and cotton oil alike are dull and prices difficult to maintain. Further quantities of soya oil are being imported from the Continent, including Sweden, the duty of 20 per cent. apparently being no serious obstacle. Meanwhile imports of soya beans continue to diminish.

RUBBER.—Towards the end of last week rubber prices tended to improve on increased buying. This week, however, the market turned dull again, though last week's price gains have not been entirely lost. Meanwhile, the statistical position of rubber continues to improve.

The spot price in New York on Wednesday was 15½ cents per lb., compared with 15½ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., against 7½d. last week. In forward positions, business has been done at 7½d. for July-September shipment, against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 134,152 tons, against 136,696 tons a week earlier. A year ago stocks amounted to 167,770 tons.

FURS.—The last fortnight of the London Spring Fur sales, which closed at the end of last week, again showed a firm tendency. The offerings were not very large. But a considerable demand developed and the prices of most furs rose from 5 to 15 per cent., compared with January and February. The closing prices corresponded more or less with the prices given in a table last week. There was one interesting feature in the market, namely, the large German purchases. Contrary to the preceding sales German buyers bought more for cash. Several Leipzig firms had substantial amounts of foreign exchange available. This change in German buying, which is, of course, due to a change in the policy of the German Foreign Exchange Authorities, seems to be due to the concern about the future of the Leipzig fur finishing industries. Raw furs bought in

London on a clearing basis have to be finished in this country before shipment in order to transform them into British merchandise. The large Leipzig purchases on clearing account in recent months thus helped the young British fur finishing industry to the disadvantage of Leipzig. By buying raw furs for cash (sterling) it is intended to reverse this tendency in favour of the Leipzig fur finishers. A similar step was taken by Germany some weeks ago, when her new agreement with Soviet Russia was signed. Whether the international position of the old-established Leipzig fur finishing industry will be improved by this new German policy remains to be seen. The next London silver fox sale will take place on June 8th. The opening of the next London general fur sale is fixed for July 20th.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader
Page of THE FINANCIAL NEWS are as follows:

MONDAY, MAY 25—OIL SHARES AFTER THE DIVI-
DEND SEASON. The Shell dividend was well up to the
best reasonable expectations; the Royal Dutch dividend even
went slightly beyond them. The "Eagles," for reasons
special to themselves, have been a strong and active market.
Meanwhile, the developments on the U.S. "Rodessa" field
have been casting less favourable shadows. In this article
our Oil Market Editor reviews the further outlook for these
shares.

TUESDAY, MAY 26—RANDFONTEIN. Our special Mining
Correspondent, "MINOTAUR," deals with a share which is
an old favourite of his in the past and which has recently
been a bright feature in an otherwise sagging Kaffir market.

WEDNESDAY, MAY 27—THE STORY OF FAMOUS COM-
PANIES—No. 29. As this date is a red-letter day in the
annals of British shipping, with the sailing of the "Queen
Mary" on her maiden voyage, the Company chosen for
inclusion in our series of famous companies' histories is
CUNARD-WHITE STAR

THURSDAY AND FRIDAY, MAY 28 AND 29—TEA AND
TEA SHARES. Tea shares became a centre of interest—
though not very optimistic interest—as a result of the 50 per
cent increase in the tea duty in the last Budget. Opinions
divided, however, on the probable effects of this, just as
are divided on the general prospects for the commodity
share market.

In these articles, the general outlook is examined and the
prospects for selective investment in the tea share market is
figured in detail.

THE ARMS RACE

THE public now has its first glimmerings of what competi-
tive re-armament may mean to the economic life of all
the nations who engage in it. In this year of grace, Great
Britain is committed to spend at least £180 millions on arma-
ments (apart altogether from what we are still paying for
the last war), and this expenditure out of revenue will be
greatly increased in the next two years—with, in all prob-
ability, the further addition of one or two hundred millions
to be spent out of capital. Before the Great War, arma-
ment expenditure was rightly considered to be a serious
economic burden upon the world. In the nineteenth cen-
tury, 1½ to 2 per cent. of the whole national income was
the measure of the amount paid by civilised countries as
an insurance against aggression. By 1913 this figure had
risen under the pressure of conscription on the Continent
and naval competition on the sea to a little short of 4 per
cent. In spite of our increasing wealth, this year's arma-
ments budget has reached 4½ per cent. of the nation's total
income—the highest proportion (apart from actual war
time) in history—and there is little doubt that in two years'
time it will be nearer 6 per cent. In specific terms it
amounts in each year to £4 per man, woman and child; or
to £20 per family of five.

The reason for this tremendous increase is, of course,
that we are preparing to fight in three elements instead of
two, and that the scale on which we are contemplating war
in the air is not, as we thought some years ago, a mere
trifle compared to the activities of the army and navy, but
threatens to equal, and ultimately to exceed them. It is
commonly supposed, for example, that a nation can build
thousands of aeroplanes for the price of a battleship. This
is a complete illusion. When account is taken of the rapid
rate of obsolescence, high cost of upkeep, reserve machines,
and the very large personnel of all kinds required per
machine in the air, the number of "front line" machines
that are the financial equivalent of one battleship is sur-
prisingly small. Indeed, it was recently stated on good
authority that the equivalent figure is less than a hundred;
and it will probably be found that the actual figure

is nearer half that number. This means that, in
contemplating air parity with Germany and France
on the basis of 1,600 front-line machines, which is
the aim of the present programme, we are organising
a force equal in cost to at least 30 battleships of the
largest and most modern type. Little wonder that the Air
Estimates already equal those of the Army, and will soon
be challenging those of the Navy. Little wonder also that
the country is waiting to know, with increasing anxiety,
what view the responsible authorities hold of the great
"battleship versus bomber" controversy. If all these
things are to be prepared in time of peace, what is to happen
to the normal life of the country? Is our hope of prosperity
finally to be abandoned and to give place to iron discipline,
war-time control, and a progressive tightening of the belt?

In a world faced with such problems, representative
government is clearly being put to a vital test. When,
therefore, Sir Thomas Inskip rose to give an account of
the Government's intentions in last week's Defence debate
the House of Commons could justifiably have expected the
Government, at long last, to clarify both their intentions
for the co-ordination of defence measures, and the details
of the vast re-armament programme itself.

In actual fact, the House was told almost nothing. It
was scarcely surprising, therefore, that speakers from all
parties united in an impressive attack upon the Govern-
ment's "hush-hush" tactics. The leaders of the onslaught
were Sir Archibald Sinclair, Mr Attlee, and Mr Winston
Churchill; and, together, they endeavoured to elicit some
kind of answer to the fateful questions outlined above.

Sir Thomas Inskip, who both opened and closed the
debate—he has no Under-secretary—refused them satisfac-
tion. Mr Churchill urged with great authority the case
for a properly organised supply department for the War
Services—a Ministry of Munitions; for not only was it clear
that there was certain to be delay in securing the final
product, but also no assurance was forthcoming that the
actual work of organising the industry of the country to
implement the Government's programme had been really

taken in hand. Indeed, Sir Thomas Inskip admitted that there was already a deficiency in supplies of the necessary jigs, gauges and machine tools; and that, even if orders were placed at once, "production of a very substantial quantity" would take at least another four to five months; and this after a year's talk of re-armament, and four years after the abandonment of the official hypothesis that no major war would break out for ten years. Again, Sir Thomas informed the House that 400 firms had already been given detailed inspection for production of shells, and another 500 had been given a preliminary inspection. But, as Mr Churchill quickly pointed out, if the problem of the country's defences were already of such scope and dimensions; if a large number of *ad hoc* committees had finally to be set up; why not go the whole hog and set up a Ministry of Supply, responsible for the production of all the necessary equipment for the Army, Air Force, and the Navy? Surely, said Mr Churchill, that is where we are already tending—save that, at present, we are getting only delays, lack of effective co-ordination, and no real limitation of profits on armaments.

But that blessed word "co-ordination" has another aspect than that of supply—namely the harmonising of the various forms of a nation's military effort. Perhaps the most disturbing feature of the debate was the obvious unwillingness of the Government's spokesman to indicate the Government's conception of the rôles which the big battleship, the Regular Army, and the Air Force are to fulfil in any general scheme of national defence. Sir Archibald Sinclair and Mr Attlee both pertinently reminded the Government that such was not the way in which the House had been treated on the eve of the last war by the Minister for War, Lord Haldane, and the First Lord of the Admiralty, Mr Churchill. Sir Thomas could only ask, in rather lame fashion, if he were expected "to walk round the map of the world and consider all the probable conflicts that might take place." Perhaps not: though it goes without saying that any general staff worth the name will have done so day after day, and that the demands which it puts forward must be the outcome of this daily pilgrimage and its study of the requirements in every theatre of possible operations. Sir Thomas's retort, almost in a vein of levity, is no reply whatever to the perfectly reasonable request for enlightenment on the rôles, and the scale of tasks, which the Government must assign to the respective branches of the services. If the people are not to be told these things, if a democratically elected Government will not disclose even the general conceptions underlying its defence programme—for which the country is asked to pay, to enlist, and possibly to disturb its whole economic life in time of so-called peace—the Government is indeed trying to sell a pig in a poke. The people should be told the worst—and the best, if there be one.

This brings us to the most noteworthy gap in the debate; indeed, a lacuna which robbed it of real significance—namely the complete divorce between defence policy and foreign policy. Against whom are battleships being built? Against Powers with big air forces? And against whom do we need a one-Power-standard Air Force? If against Germany, what rôle is the collective system—and the air forces of France, Belgium, Czechoslovakia, Russia—to play? If the Army is being mechanised for rapid transhipment to many vulnerable points on our vital Imperial routes, or for concentration at some decisive strategic point in an eventual Continental land war, how effective could it be without consideration of possible coadjutors, in the League system of collective security or in of alliances?

are the questions the answers to which alone can the real framework for any discussion of our national defences. *Pace* Sir Thomas Inskip, even the man in the street can quickly name a few points on the map where they arise and need an answer. One of these is the Mediterranean. In this region, as Mr Churchill has pointed out, we must assuredly not count in future on Italian amity, nor even on the negligibility of the Italian air force. In that case, the "bomber *v.* battleship" problem becomes of peculiar significance for British Imperial security. No "Mediterranean Pact" which would range Britain alongside Italy, such as is being suggested in certain quarters, could offer the slightest reinforce-

ment in the circumstances of to-day, of our imperial security; nor could we ever be free, under such an agreement from the dangers of unilateral treaty-rupture, or of political blackmail at the hands of the Italian dictator. Again, the threat to British security from a Germany successful in all her pretensions to the hegemony of the Continent increases with every weakening of the idea of collective security, and with the growing range and destructive power of aircraft. Here, too, the choice between bombers and battleships is fraught with profound significance for the co-ordinator of Britain's defences.

The moral, both for Britain's safety and for the achievement of the greatest efficiency in our national defences, is evident. "Co-ordination," like patriotism, is not enough. Defence policy cannot even be safely considered apart from foreign policy; and the Government's defence policy therefore stands or falls by their foreign policy. But what is their foreign policy? We wish we knew.

M. BLUM AT THE CROSSROADS

AFTER seventeen years in opposition, M. Léon Blum will take office next Thursday as the first Prime Minister of the first Socialist Government of France. Foreign observers who have seen how often Left-wing Cabinets have been stultified by the economic and financial circumstances of their own accession to power, will await this new experience with anxious interest. In democratic countries, recently, failure to promote economic recovery has invariably been fatal to the party in power.

The verdict of the French electorate, emphatic as it may seem, was basically negative. It was certainly a defeat for deflation, preached year in and year out, for wage and salary reductions, and for the hated decree-laws of M. Laval. For the rest, it registered an impatience with the goose-stepping Croix de Feu, and a surging hatred of the great trusts and their monopoly profits. The positive platform on which the Radicals and Communists united is clear only in its political aims—the defence of liberty against Fascism, and the maintenance of peace through collective security. On the economic and financial side, however, there are significant divergences of view. The programme of the Front Populaire envisages such far-reaching reforms as the nationalisation of the Central Bank, the railroads and certain industries, and strict control of banking in general. It demands an increase of direct taxation, and the introduction of the 40-hour week without any further "cuts" of wages. Prosperity is to be restored by vast public works. Salary "cuts" are to be rescinded; but the gold value of the franc is to be maintained.

Here, indeed, is a heterogeneous and contradictory mixture of policies. It is to be introduced, moreover, at a moment when the economic and financial position is already strained. France, in fact, has never achieved the internal deflation of which the sacrifices imposed by M. Laval's decrees were intended to be only the first instalment. In spite of the nation's sacrifices, the pressing need for rearmament, and the falling tendency in the revenue produced a heavy Budget deficit. The loans necessary to finance this deficit could not be placed on the internal market, and were, perforce, obtained from abroad and by recourse to the Banque de France. A certain revival in business activity followed in their wake, despite the depression in the export trades and the tourist industry. The objective of the decrees was, however, tacitly abandoned.

Increasingly strict regulation of imports has failed to prevent the deficit in the national trade balance from increasing; and export of capital, superimposed on a passive balance of payments, has produced a formidable pressure on the gold reserve. Any further economic expansion which is financed by the Government and does not result from international revival, will merely intensify this problem. If radical measures threaten not only the immediate profitability, but the ultimate security of capital investments, the effect of Government works may be offset by the reluctance of the private capitalist to undertake any new commitments. America's example suggests that forcible stimuli must be given to capitalists merely to offset the depression caused by the threat of reforms. The for-

midable dilemma of previous French Governments has been greatly increased by the result of the election; and failure to revive business within a reasonable period would probably prove fatal to the new Government.

If M. Blum decides to maintain the present value of the franc, he must shape all his policies to this aim. At all costs he must maintain confidence. His recent utterance has given the impression that he would regard the fall of the franc as a patent failure to carry out his election pledges, which would be politically more dangerous than the postponement of the reforms and of the attainment of prosperity. Is this view really well-advised? Even if M. Blum tightens the existing restrictions on imports and on the free movement of capital, he cannot count on any return of the capital which has fled the country, and he may hope in vain for a far-reaching internal revival. A clear cut decision, on the other hand, to follow the British, Belgian and Scandinavian examples, though dangerous at the outset, might be a chance worth taking. The new Government might thereby restore profitability to many industries, lower the rate of interest, and achieve a measure of recovery in spite of political uncertainties. And there is much to lose. The extreme parties both of the Right and Left will certainly seek to profit from yet another possible failure of a moderate Government. It is probable, indeed, that further disillusionment would produce a violent movement of popular opinion towards the Right. It would certainly weaken France's influence in external affairs.

Nevertheless, there are powerful factors influencing M. Blum in the direction of a policy of "defending the franc." He can count for active participation in his Cabinet only on the groups on his Right, including the Radical Socialists, and to hold them he must give the impression of a "moderate statesman." Even M. Daladier, who is certainly not a Conservative, has been constrained to declare that the legitimate interests of nobody could possibly be hurt by the programme of the Front Populaire. So long as M. Blum follows a middle course, moreover, he can count on the co-operation of those groups to the Centre, like the followers of M. Flandin and M. Piétri, who are about to withdraw from the Government. The bitterness evoked by the victory of the Left Cartel, in 1924, is absent to-day. The "defence of the franc," accepted by the groups on both M. Blum's flanks, could be used as a weapon against the excesses of the economic demands that will be pressed on him by his friends on the Left, who are his more embarrassing allies. The Communists have already refused to enter M. Blum's Cabinet, declaring that by remaining outside they are better able, by pressure in Parliament and the country, to ensure that the promised social reforms are carried out. This is a powerful threat, since the Front Populaire have permanent organisations—the so-called Popular Assemblies—in each constituency. Many Trade Unions, moreover, are at one with the Communists in demanding the immediate enactment of the more radical measures promised in the election.

M. Blum may wish to retain the present parity of the franc as the only means of quietening the fears of the Radicals and holding the extreme Left in check.

His dilemma, in any case, need not arise immediately in an extreme form. The new Government may, by formal rather than effective measures, satisfy the most urgent demands of their followers and, at the same time, avoid giving offence to those still in command of the country's economic life. Even President Roosevelt did not encounter real opposition until he had been in office a year. Certain changes in the banking system, and some relatively ineffective modifications in the Statutes of the Banque de France could be enforced before the shock of the election has subsided. Such measures would not necessarily evoke violent and immediate opposition. The banks, for example, would certainly help, in the hope of averting more extreme measures. But even if M. Blum throws overboard all the more extreme measures in his programme, a policy of temporising about currency is hardly likely to yield better results than previous Governments have obtained—and these were not good enough.

The longer M. Blum postpones the fateful decision to devalue, the greater the risk of his being annihilated by the storm which that decision will arouse. And in any case, time is the most precious political asset in Europe to-day. M. Blum is at the crossroads. Political forces urge him to choose in his monetary policy the path of least resistance, and to support the franc to the last possible moment. But this path may well lead to catastrophe. M. Blum has not chosen it yet, in spite of all reports to the contrary. Will he—can he—resist?

RUBBER UNDER CONTROL

ON June 1st the International Rubber Regulation Committee will celebrate the second anniversary of the second attempt to control the world's supply of crude rubber. The time is opportune, therefore, for a critical examination of the results of the Committee's endeavour "to regulate the production and export of rubber in and from producing countries, with the object of reducing existing world stocks to a normal figure and adjusting in an orderly manner supply to demand, and maintaining a fair and equitable price level which will be reasonably remunerative to efficient producers."

Let us turn first to the supply side. The framers of the second scheme had in mind the disastrous consequences of the first (the so-called "Stevenson scheme"), which applied to Malaya and Ceylon but not to the Dutch East Indies, and inevitably penalised the restricting countries at the expense of those remaining outside. The second plan was only put into operation when the adherence of the majority of the producing countries had been secured. Thus it comprised nearly 100 per cent. of the world's output

of crude rubber. The next step taken was to ascertain the capacity of the chief producing countries for a period of five years. These estimates were then used to form the basis of regulating exports. Exports of British Malaya, including Brunei and Labuan, the Dutch East Indies, Ceylon, India, Burma, North Borneo and Sarawak, were thus regulated by reference to their estimated capacity. Siam and French Indo-China held out for, and were given, somewhat more favourable terms.

The International Rubber Regulation Committee, which is administering the scheme, started with a moderate turn of the restriction screw. The proportion of the agreed capacity which the various countries might export was fixed at 100 per cent. for June and July, at 90 per cent. for August and September, at 80 per cent. for October and November, and at 70 per cent. for December, 1934. In 1935 restriction was gradually intensified, the export quotas being reduced from 75 per cent. in the first quarter to 70 per cent. in the second quarter and 65 per cent. and 60 per cent. in the third and fourth quarters respectively. During the first half of the current year the export quota is being maintained at 60 per cent. of estimated capacity, but quotas will be raised to 65 per cent. in the second half of the current year. But since the output capacity of the restricting countries, including Siam, was estimated to increase from 996,500 tons in 1934 to 1,118,500 tons in 1935 and 1,254,000 tons in 1936, the actual curtailment of supplies was not as marked as the reduction in quotas might suggest. Actually, total net exports of the countries which concluded the agreement, after rising from 699,400 tons in 1932 to 1,017,900 tons in 1934, declined to 810,205 tons in the past year. Again, although the export quota in the first quarter of 1936 was only 60 per cent. of estimated capacity, compared with 75 per cent. in the corresponding quarter of 1935, the net exports declined only slightly from 131,939 tons in the first two months of 1935 to 130,634 tons in the corresponding period of 1936.

Although the regulation of exports, especially of rubber produced by natives in the Dutch East Indies, did not proceed smoothly, most of the difficulties appear now to have been overcome. In 1934 the actual exports of the restricting countries fell below the permissible quota by 11,830 tons, but in the past year exports exceeded the quota by 25,214 tons. Last year's excess was due largely to the difficulties of controlling the exports of native growers from the Dutch East Indies. These native shipments during 1935 exceeded the quota by 29,774 tons, but part of this excess was made good by a reduction in shipments of estate rubber by 12,574 tons. The authorities in the Dutch East Indies have made strenuous efforts to make regulation effective, and their efforts appear at last to have been successful, but not without an upward revision of the estimated capacity of that country. As was to be expected, exports from countries outside the restriction scheme have shown a tendency to increase. Nevertheless, the proportion of world exports shipped by non-restricting countries amounted to only 2.4 per cent. in the past year.

As a result of the restriction of supplies the price of crude rubber rose from an average of 2½d. per lb. in 1932 to 6½d. per lb. in 1934. In the past year, however, the average price declined again to 6d. per lb. The price has since risen to about 7½d. per lb. As the first two years of rubber restriction coincided with a period of increasing industrial activity in the majority of countries, it is difficult to ascertain precisely the influence of the rise in the price on demand for crude rubber and on the production of rubber in the United States. The output of rubber in the United States rose from 74,700 tons in 1932 to 108,200 tons in 1934 and 123,100 tons in the past year. The output in the past year was still far below production in 1929, when it reached 218,800 tons, with the price of crude rubber at 10½d. per lb. There can be no doubt, however, that the low price of rubber during the depression provided a stimulus to consumption, for world absorption in 1933, at 811,188 tons, showed an increase of 5,767 tons over the pre-depression record. Between 1933 and 1934, when the average price of crude rubber rose from 3½d. to 6½d. per lb., world absorption continued to expand from 811,188 tons to 939,241 tons. But a substantial proportion of the rubber consumed in 1934 was pur-

chased at a price considerably below the average for that year. Between 1934 and 1935 world absorption of crude rubber rose by only 8,362 tons to 947,603 tons, despite the continued expansion of the motor industry and other rubber-consuming trades.

Changes in world supplies and absorption of crude rubber, together with the annual deficiency or excess of supply over demand in recent years, are shown below:—

SUPPLIES AND CONSUMPTION OF CRUDE RUBBER
(In thousands of tons)

	World Net Exports			World Absorption	Excess (+) or Deficiency (-) of Exports compared with Absorption
	Restricting Countries (incl. Siam and French Indo-China)	Other Countries	Total		
1927	570.7	45.6	616.3	597.1	+19.2
1929	838.1	29.8	867.9	805.4	+62.5
1930	804.7	21.4	826.1	714.3	+111.8
1931	783.1	16.6	799.7	679.6	+120.1
1932	699.4	9.4	708.8	686.0	+22.8
1933	839.9	13.2	853.1	811.2	+41.9
1934	1,017.9	13.6	1,031.5	939.2	+92.3
1935	810.2	19.8	830.0	947.6	-117.6
1935 Jan.-Feb. ..	131.9	3.7	135.6	163.9	-28.3
1936 " " ..	130.6	4.4	135.0	157.0	-22.0

Since the rise in prices in 1934 appears to have checked the rapid expansion of world demand, the International Rubber Regulation Committee had to resort to drastic curtailment of supplies to bring about a reduction in stocks during the past year. Changes in the relationship between stocks and world absorption, as well as the trend of the price of crude rubber, are shown in the next table:—

STOCKS AND PRICES OF CRUDE RUBBER

	Stocks outside Regulation Areas (incl. "Afloat") (End of year or month) In thousands of tons			Price in London (b) (Standard ribbed smoked sheet) (pence per lb.)
	Stocks	Increase (+) or Decrease (-)	Stocks expressed in terms of number of months Absorption (a)	
1927	263.5	+ 32.6	5.3	18.7
1929	328.7	+ 81.3	4.9	10.1
1930	453.3	+124.6	7.6	5.1
1931	589.3	+136.0	10.4	3.4
1932	589.2	- 0.1	10.3	2.4
1933	616.4	+ 27.2	9.1	3.1
1934	679.0	+ 62.6	8.7	6.4
1935	575.7	-103.3	7.4	6.1
1935 March	652.7	- 5.0	8.4	5.1
1936 " " ..	539.4	-20.5	6.9	7.4 (c)

(a) Based on average monthly absorption, during previous twelve months.

(b) Monthly average.

(c) Current price, 7½ pence per lb.

Actually, stocks of crude rubber at the principal points outside the regulation areas (including rubber afloat) declined by 103,274 tons during the past year. Those stocks, which were equivalent to 8.7 months' world absorption at the end of 1934 (calculated on the average absorption of the previous twelve months), were reduced to 7.3 months' absorption at the end of last year and to 6.9 months' absorption at the end of last March. As stocks were equivalent to 10.4 months' world absorption at the end of 1931, it is evident that the international rubber position has undergone a considerable improvement. It is probably in the light of these considerations that the Committee recently decided to raise export quotas to 65 per cent. during the second half of 1936.

The International Rubber Regulation Committee* has certainly achieved its aim of bringing about a substantial increase in the price of crude rubber. And there can be no doubt that the current price is "reasonably remunerative to efficient producers." Although the exaggerated hopes of investors in the rubber-producing industry may not have been realised, the majority of concerns are once more operating at a profit. At the same time, the recent trend of consumption indicates that demand is not as independent of changes in the price of crude rubber as has been suggested. It would seem to be in the interests of both producers and consumers that the policy of the International Rubber Regulation Committee should be designed to secure a rise in consumption rather than in prices.

THE TRADE OF THE DANUBIAN COUNTRIES

It is now more than two years since Signor Mussolini produced his plan for the economic rehabilitation of Austria and Hungary. The Rome Protocols, signed in March, 1934, were renewed only a few weeks ago, when both Chancellor von Schuschnigg and General Gömbös visited Rome. Both Austria and Hungary "contracted-out" of the League's sanctions against Italy, mainly on the plea that, as a result of these protocols, their economic existence depended on Italian demand for their products. Two years ago (March 31, 1934, page 687), we examined the commercial relations of Italy, Austria and Hungary. This year, the Austrian and Czech Governments have initiated closer economic relations; the unfreezing of blocked Yugoslav export proceeds in Germany has only been purchased by intensified German commercial penetration in Yugoslavia; and the prospects of increasing the volume of trade between the three States-members of the Little Entente have been more actively canvassed. The time is therefore ripe for an examination of the trading relations between all five Danubian States—Austria, Czechoslovakia, Hungary, Roumania and Yugoslavia.

All five Danube States seem to have thought that they could only secure better economic conditions for their populations by plunging deeply into autarkic experiments. Indeed, work-creation through the elimination of foreign competition affords immediate benefits to protected industries, which, unfortunately, are only later outweighed by a fall in the country's own exports. The final result has been that, on the average, no noteworthy improvement in the standard of living has been reached in any of the five Danubian States. Whereas industry in the three agrarian States has enjoyed a boom period, and agriculture in the two mainly industrial States has given a better yield than ever, the foreign trade of each of the Danubian countries has steadily dwindled during the whole period of autarkic experiments:

Year	Foreign Trade of the Five Danubian States in million Gold Dollars		Common Trade of the Five Danubian States as Percentage of their Total Foreign Trade	Year	Foreign Trade of the Five Danubian States in million Gold Dollars		Common Trade of the Five Danubian States as Percentage of their Total Foreign Trade
	Total	With the Danube Area			Total	With the Danube Area	
1928	2,726.3	976.0	36.2	1932	1,154.1	333.6	28.9
1929	2,958.3	957.6	32.3	1933*	943.1	259.4	27.6
1930	2,479.3	829.0	33.5	1934†	880.7	261.6	29.7
1931	1,815.2	529.0	29.1	1935	1,029.2	283.6	27.6

* Austrian schilling at new parity.

† From February 15th, Czechoslovak crown at new parity.

Apparently, political considerations are responsible for this unfavourable development, for it is a striking feature of the table in the next column that the common trade of all five States among themselves has been dwindling more rapidly than the common trade of Austria and Hungary—later on linked up with Italy in the Rome agree-

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

EQUITY & LAW LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W. C. 2
Established 1844 Funds exceed £22,000,000

ments—and, except in 1929, the common trade of the three States of the Little Entente:—

Year	Index (Basis 1928) Value of the Common Trade between			Year	Index (Basis 1928) Value of the Common Trade between		
	All Five Danubian Countries	Three States of the Little Entente	Austria and Hungary		All Five Danubian Countries	Three States of the Little Entente	Austria and Hungary
1929	98.1	95.0	105.5	1932	34.2	46.8	41.1
1930	84.9	100.4	91.5	1933*	26.6	31.3	37.1
1931	54.2	64.7	62.4	1934†	26.8	32.8	40.9
				1935	29.1	40.7	41.7

* Adjusted for depreciation of the Austrian schilling.

† Adjusted for depreciation of the Czechoslovak crown beginning from February 15, 1934.

The most urgent task was to increase trade between the members of the two opposed groups of States, if the process of shrinking foreign trade, synonymous with shrinking welfare, was to be halted and reversed. The beginning was made by Czechoslovakia and Hungary, when they put an end in 1935 to a tariff war which had lasted for five years; and early this year the Czechoslovak Prime Minister, Dr. Milan Hodza, took the initiative of trying to bring the Little Entente and the Austro-Hungarian group closer together on the economic plane. Unfortunately his attempt was balked in Belgrade at the outset; and the only outcome was a new commercial treaty between Austria and Czechoslovakia.

The large table below shows how profoundly the economic policies of the post-war period have altered the fundamental economic aspects and relations of the Danubian States. Each of its sections includes only those groups of commodities, the import of which into one country is of outstanding importance for one or more of the other Danubian countries. In order to eliminate the influence of exchange fluctuations and the fall in prices, the import figures are based on quantities (metric tons) and the indices are so calculated. The absolute figures will be found on page 533.

Austria imports only mere fractions of her former needs of cattle, poultry, flour, milling by-products, eggs, fats

and lard, and meat; while she has considerably increased her maize imports. This shows clearly that she has taken over from the agricultural countries of the Danube area the task of breeding hogs (for grease, lard and meat) and poultry; and the enormous increase in her domestic production of cereals and in cattle breeding is responsible for the heavy fall in her imports of flour, cattle and meat. The average value of each metric ton of total imports, compared with the average value of imports of the agricultural products in the Austrian section of the table at the foot of the previous page, shows that there has been a much greater fall in the prices of agricultural imports than in the prices of all imports together. Thus, Austria has supplanted to a large extent her former imports of finished farm products by imports of primary products, fodder, etc.

There is a remarkable resemblance between the development of Austria's imports of farm products and those of Czechoslovakia. In both cases imports of all kinds of farm products became smaller and smaller, except leguminous plants and, in Czechoslovakia, poultry. Moreover, Czechoslovakia increased her home production of maize, reduced imports of hogs to a fraction of the basic 1926-28 average, and cut down imports of beef and pork to practically negligible quantities.

Year	Quantities of Farm Products imported into:			
	Austria		Czechoslovakia	
	Metric tons	Index	Metric tons	Index
1928*	1,146.157	100.0	927.234	100.0
1933	1,139.325	99.40	322.197	34.74
1934	1,120.340	97.75	226.826	24.46
1935	941.605	82.15	238.328	25.70

* Basis for Austria: average 1926-28

In the case of Czechoslovakia, as compared with Austria, the fall in the average value of each metric ton of imported farm products is even greater than the fall in the average value per metric ton of all imports.

In Hungary, the trend to supplant imports of finished industrial products by imports of raw materials is even more pronounced than the trend in Austria and Czechoslovakia to supplant imports of finished agricultural products by imports of fodder stuffs. All imports into Hungary have dwindled to fractions of the former figures. There is one exception: iron and metal finished goods, for which important purchases of machinery are responsible. On the other hand, pig iron imports show a substantial increase, as do those of raw cotton—which is not included in the large table on page 477, as it cannot be supplied by any other Danubian country. It is also significant that the index figures of imports of both cotton and wool have fallen much more for the textiles than for the yarns. Again, in the case of Hungary there has been a more rapid fall in the average value per metric ton of imports in which the other four Danubian States are interested, than in that of the average value per metric ton of all imports.

With very few exceptions, imports into Roumania have dwindled to insignificant fractions of the figures in the basic year. Heavy imports of iron ore began in 1934, and the index (basis 1928) rose to 155.6 in 1934. In the first six months of 1935 it fell back to 40.5. The drop may be explained by the recent substantial increase of iron-ore mining in Roumania. The index of raw cotton imports (basis 1928) moved from 183.2 in 1933 to 219.2 in 1934, and fell to 70.8 in the first six months of 1935. It is interesting to examine how the average value of each ton of imports has evolved, compared with the average value of each ton of imports in section IV of the large table on page 477. In the case of Roumania's imports, the trend is contrary to that observed in the case of Austria, Czechoslovakia and Hungary. The index of the average value per metric ton of imports has steadily fallen, whereas the index of the average value of imports of the commodities included in section IV increased until recently. Roumania has had to proceed step by step in building up her industry, and, at the beginning, could produce only simple and low-quality goods. The imported industrial products mostly represent high-quality goods, the prices of which are naturally higher than the average prices of Roumania's former imports of high- and low-quality goods. Subsequent developments, however, have begun to bring the indices of value per metric ton of all imports and of special imports

nearer to each other; and this fact must be construed as proof of the improving quality of industrial goods produced in Roumania.

Imports of all kinds of yarn into Yugoslavia have increased, whereas the imports of the respective textiles have decreased. This shows that Yugoslavia, in turn, has developed her domestic industry. Leather imports, too, have been steadily increasing since 1933, though they still represent only two-thirds of the quantities imported during the basic year. On the other hand, imports of shoes have dwindled to negligible quantities. The index of imports of printing paper has been rising uninterruptedly ever since 1933; and in 1935 it exceeded the figure of the basic year. A comparison of the development of the average value per metric ton of all imports with that per metric ton of the special imports included in section V of the large table on page 477 leads to similar conclusions as were prompted in the case of Roumania.

Our tables show how profoundly autarkic tendencies have changed the economic structure of the Danube basin from what it was—not only before the war, but even as recently as in 1928. All five Danubian States have pounced on the *débris* left by the war and the Peace Treaties, and have set about constructing their own petty economic buildings. They have done it with an energy worthy of a better and more profitable cause. Originally they adopted autarky, hoping that it would relieve them from economic pressure. Now it has become obvious, even inside each of the five countries, that autarky is an economic stimulus the effect of which is about as short and noisome as that of alcohol on the human organism. It is consequently difficult to stop it. For it breeds political mistrust, which in turn leads to demands for its perpetuation as part of an effective national defence. Only if the political relations between each of the Danubian States and the other four could be so greatly improved that each could rely, in case of armed conflict, on the help of all the others—at least in the form of supplies of foodstuffs and/or industrial products—could they remove autarky from among the constituents of their respective policies of national defence. Unfortunately, in the Danube problem there appears to be no honest broker, though no lack of interested parties outside. Any effective mediation to eliminate political tension in the Danube area would render invaluable service, both to the cause of world peace and of world prosperity.

TRUSTS AND TAX EVASION

(BY A. CORRESPONDENT)

Many parents are affected by Clause 19 of the Finance Bill, which deals with so-called educational trusts. The clause is a masterpiece of obscurity. The following article is an attempt, in non-technical language, to state part at least of its meaning.

After the war, and under the pressure of high taxation, many middle-class taxpayers developed a fashion which had hitherto been confined to families of greater wealth, and began to make settlements on their children. But the salaried bread-winner is not in the same position as the man of land or securities, and he could not afford to make the same disposition of his income that they had been in the habit of making. He had no assets to settle and so provide an income, and he had not the certainty of his income continuing until his death, which would enable him to charge his income unconditionally. Consequently, he made his trust revocable, settling only the income and reserving the right to cancel his liability.

The Finance Act of 1922 changed the position, and denied relief to any trust that was revocable without the consent of some person other than the settlor. For a time, that enactment killed the new form of trust. Of recent years, however, ingenious minds have found a way round it by nominating a third party to do the revoking, and arranging for the settlement to last until it was revoked by X or Y or Z. In this way it became possible again to make a settlement that would not commit the seller for all time. The device was adopted very freely by men of fixed and moderate incomes with families to educate, their pur-

pose being always the same: to remove income from the field of income tax without losing control of the expenditure or making any change in the application of the money.

The new Finance Bill is intended to kill these trusts in so far as they evade taxation, but there still remain some kinds of tax-evading trust that the Chancellor has not touched. Perhaps the clearest way of dealing with the question will be to set out, item by item, a few of the trusts that the Bill does affect, and to follow them with a few that the Bill does not affect. Trying to make sense of the clause is like cutting a daylight path through an impenetrable jungle, but we may briefly describe some of the devices that the clause certainly checks.

First, all revocable trusts under which money is paid to the settlor's child, while the settlor is still alive, are excluded if the child who benefits is still a minor and unmarried. The effect is that the ordinary trust entered into by a parent for a child's school education, and made revocable by a third party, does not evade taxation.

Secondly, an irrevocable trust of the same kind is also useless unless it was entered into before April 22, 1936. Consequently, a parent who has hitherto been working on a revocable trust cannot now substitute for it an irrevocable trust and obtain the same results.

Thirdly, a trust is not irrevocable, even though it purports to be irrevocable, if it arranges for a penalty in place of the payment of income, or contains any plan to indemnify the settlor if he defaults.

Fourthly, a mutual trust is useless for tax evasion. I cannot avoid tax by saying to you: "You settle £100 a year on my son Cuthbert and I will do the same by your son Claud." The subsection dealing with this point is difficult to interpret, but that appears to be its intention.

The trusts which do not seem to be affected by the Bill include, first, any settlement in favour of a person who is not the child of the settlor. This view is qualified by the section of the Bill which deals with reciprocal or mutual settlements. Subject to that point, however, it would appear that any settlement on a non-child remains valid for income-tax relief.

Secondly, any settlement in favour of a child who is married, or has come of age, is good. The effect is that a revocable settlement which has hitherto operated in favour of a boy or girl at school will (if continued) become good for tax relief when the boy or girl reaches the age of

twenty-one. The father who sends his son into the army, or to the university, or to a hospital will secure, in the later stages, a relief which he cannot obtain in the boy's school days. And he can make new revocable or irrevocable trusts as his children come of age.

Thirdly, if the father can afford to settle an income on his child without spending it, then the dividends and interest accruing from it in after years will be regarded, not as part of the father's income, but as the child's legitimate income. That seems to be the effect of S. 3 (a) in the Bill, though the obscurity of the language makes dogmatism dangerous.

If this brief description of what does and what does not secure relief under the Bill is clear, the principles on which the Chancellor has proceeded in drafting his Bill will be apparent. He obviously said to himself: "What I want to tax is the income escaping under the most numerous type of settlement—the middle-class settlement." With that in mind, he has concentrated on the income of the middle-class taxpayer concerned with the education of his children, and has not directed his attack on the rarer kind of settlement which is available only to the richer class of taxpayer. The man who has no capital, but who enjoys an income of £1,000 a year and has two children at school, will no longer find relief in a settlement. The Bill is kinder to the wealthier parent, who can afford to settle securities on his children, to give his son an allowance after he has come of age, to make of him a man of leisure, to send him to the bar and keep him during his briefless years, to put him into a good regiment and supplement his pay, or to turn him into a surgeon or specialist and maintain him for ten years in Harley Street. Such a parent will continue to receive full relief for whatever he settles in the future, or has settled in the past, whether the trust is irrevocable or revocable by a third party. Similarly, the very rich man who makes settlements on his domestic staff will still evade taxation by paying his servants under deed instead of in wages. The wealthy man who keeps a mistress and settles on her part of his income will be allowed to get the same benefit in tax exemption that he has enjoyed in the past. The person who will really be affected by the Bill is the taxpayer with a moderate earned income and educational responsibilities, who succeeds with difficulty in sending his children to a good school, but is not in a position to keep them after they have left it.

NOTES OF THE WEEK

Mr Baldwin and the Rebels.—Rumours and denials, semi-secret gatherings and week-end house parties have provided the political news of the week. On Thursday evening of last week Mr Baldwin addressed a dinner party of 140 back-bench Conservatives at the House; and the stage was supposed to have been set for a "fighting" speech in which the Prime Minister would say what he thought of his Conservative critics. But Mr Baldwin did nothing of the kind. Instead he discoursed reminiscently on the last fifteen years of politics, spoke vaguely of the virtue of "loyalty," and criticised the Socialist "intellectuals." The rebels and critics were not attacked, and the *débâcle* over the Coal Mines Bill was not even mentioned. Yet the speech was understood to have been a personal success; and we were told that Mr Baldwin had once again charmed away all opposition. Has he, or has he not? Was it consummate guile that led him to ignore his critics? Or was it that he could think of no answer to them? Or merely that he had not made up his mind what line to take? Almost before the public had had time to reflect on these questions news of a week-end gathering at Lord Winterton's country house was blazoned before them. Sir Austen Chamberlain, Mr Churchill, Sir Robert Horne and Sir Henry Page-Croft were among the guests. Shades of the Carlton Club meeting of 1922 naturally began to haunt the political air once more. Was Lord Winterton's party evidence that the conspirators intended openly to challenge Mr Baldwin's leadership, or merely that they would like to? Meanwhile Mr J. H. Thomas's resignation (referred to in the succeeding

Note), and the resulting speculation about his successor, had intensified the general sense of uncertainty; and it was even rumoured, apparently without any foundation, that Mr Ramsay MacDonald was on the verge of resigning. This naturally called in question the whole design of the "National" façade—now wearing, as even *The Times* has observed, "a little thin." For with Lord Snowden and Lord Sankey long departed, Mr Thomas resigning, and Lord Allen—the group's foremost intellectual—indignantly seceding, the "National Labour" Party has come more closely than ever to resemble the clan MacDonald. Even Mr Baldwin's supposed concern to retain the National Labour proportion in his Cabinet was belied when, on Thursday, Mr Ormsby-Gore's appointment to Mr Thomas's place was announced. It is indubitably the best appointment that could be made. But it does nothing to dispel popular dissatisfaction over the Government's attitude on foreign policy and on the various domestic measures with an uncertain future, such as the Coal Mines Bill, the Education Bill and the Unemployment Regulations.

* * *

Mr J. H. Thomas.—The announcement of Mr Thomas's resignation caused little surprise. In the words of his letter to Mr Baldwin, the "way in which my name and private affairs have been bandied about renders my continuation as a member of the Government impossible." Quite independently of the contents of the Tribunal's report, which will not be published until Tuesday of next week,

Mr Thomas clearly took the right course in resigning as soon as he had become a political liability to the Government. Once an engine cleaner on the G.W.R., Mr Thomas became member of Parliament for Derby in 1910 and General Secretary of the National Union of Railwaymen in 1918. As a trade unionist, his interests were "industrial" rather than "political," and in negotiation he applied the principle *suaviter in modo, fortiter in re*, with powerful effect. He won considerable reputation as Dominions Secretary in the first Labour Government of 1923-24, and was one of the most successful Ministers in that Government. In the Labour Government of 1929-31 he was originally "Minister for Employment," but his failure to cure unemployment by public works in face of world deflation and an over-valued pound cannot be counted against him. The task, in these circumstances, was impossible. Opinions on Mr Thomas's decision to join the National Government in 1931 naturally varied with the political standpoint of the critic. His old trade union friends bitterly resented it, while his new political associates applauded it as a statesmanlike act. Mr Thomas's resignation last week is not, of course, due to political differences of any kind. The appointment of Mr Ormsby-Gore in his place, however, impairs the all-party character of Mr Baldwin's administration.

* * *

The School-leaving Age.—The Education Bill is yet another example of the Government's missed opportunities. To have raised the school-leaving age to 15 outright would almost certainly have been in accord with the broad inclination of public opinion: the cost would have been trifling in comparison with the increase in defence expenditure. Merely to have raised the age to 14½ without exemptions would have been at least a reasonable compromise. But the Government has obstinately rejected even this, and Mr Stanley pressed the original Bill on to its third reading in the House of Commons on Wednesday. On the previous day Mr Stanley had rejected a Liberal National amendment designed to ensure that exemptions should be the exception rather than the rule. The amendment would have allowed individual local authorities to rule out exemptions altogether. There was Conservative as well as Liberal and Labour support for this plan, and the Government would almost certainly have secured a majority for it, had it so desired. Mr Stanley's final speech on Wednesday clearly left members unsatisfied in all parts of the House; indeed, the only really welcome parts of a sadly unimaginative Bill were the settlement embodied in it of the long-standing religious controversy, and the undertaking given by Mr Stanley that the Civil Service, the Post Office and the fighting services would not recruit juveniles under 15.

* * *

Hackney Marsh.—The settlement of the Hackney Marsh controversy, announced by the Minister of Health last week, may be warmly welcomed. The dispute began when the London County Council proposed to use 30 acres of Hackney Marsh as a building site and to schedule as a substitute open space a corresponding amount of land some miles away. It was of the very greatest importance to use the Hackney Marsh site for building, since the greater part of the Council's slum-clearance and re-housing programme was being held up for lack of a sufficiently large space on which to "decant" the first batch of re-housed slum-dwellers. Far-distant sites were of no avail; for the great mass of East London workers must inevitably live near their work. On the other hand, to build on land which was as a public open space was clearly a bad precedent, particularly in the comparatively parkless East End. The controversy was settled in the first instance by the decision of the Courts that it would be contrary to the London Open Spaces Act of 1893 to exchange part of Hackney Marsh for any but adjoining land. Undeterred by this setback, however, the L.C.C. promoted a Parliamentary Bill designed to remove the legal obstacle. At this point there were ominous signs that the whole issue would be degraded to the level of an inter-party quarrel. Now, however, at the eleventh hour a satisfactory solution

has been found. Mr Arthur Villiers, manager of the Eton Manor Club, offered last week on behalf of the club to sell to the L.C.C. 20 acres of open land adjoining Hackney Marsh; and the L.C.C. accepted the offer on Tuesday. Some 20 acres of the original Hackney Marsh will consequently be available for building. This agreement, reached at a time when reasonable and agreed settlements are none too common in the political world, reflects credit on all concerned. It is understood that large blocks of working-class flats are to be erected on the Hackney site; and the progress of the scheme, which should accelerate the rebuilding of all London's slums will be watched with the keenest interest.

* * *

Palestine in Ferment.—Up to the last few days, the situation in Palestine had taken a serious turn for the worse. The rural Arab population had taken up arms against the present regime—Jewish national home and British mandate alike—and had started to wage guerilla warfare not only against the police, but also against the British troops who have been rushed to Palestine from Egypt. These troops can ill be spared at a moment when General Graziani has announced that the huge Italian army in East Africa is to be maintained there intact. Happily, the tension has eased; but the problem remains. No doubt this Sinn Fein movement of the Palestinian Arabs can be put down by sheer force if that is the policy which His Majesty's Government mean to follow. Palestine is a tiny country, no larger than Wales; and the Arab majority of the population is only 760,000 strong all told. But the Palestinian Arabs have an immensely strong incentive to rebel against our British yoke. We have packed Palestine with Jews in much the same way in which we have "grouted" with cement the rubble filling of the columns of St. Paul's. The simile is apt, for such "grouting" is unquestionably good for rickety structures—whether of cathedrals or of countries. Yet, if the rubble has a voice, it may protest; and if it has life it may bite and kick. When we pledged ourselves to enable the Jews, under our ægis, to establish a Jewish national home in Palestine, we took the line that the Arabs, (whose national feelings we were fanning into flame all round, in Arabia and Syria and Iraq) were in Palestine no more than a kind of human rubble, with little national coherence or tradition that deserved, or needed, to be respected. So we guaranteed these Palestinian Arabs their civil and religious rights, but nothing more. We have now reached the point at which, under our ægis, the Jewish national home, which is being established in Palestine by the wonderful energy and idealism of the Zionists, is overshadowing the Palestinian Arabs in their own house. But now that this point has been reached, the Palestinian Arabs have made it clear that they do not mean to accept the position of underdog without a fierce struggle. What are we going to do about it? Are we going to crush the Palestinian Arabs in the ruthless fashion in which Mussolini has crushed the Amharas? Or are we going to betray our Zionist protégés (that is, in concrete terms, to leave them to suffer the fate of the Assyrians of Iraq)? Either course will be so unpleasant and so invidious that no doubt we shall take whichever turns out to be the line of lesser resistance.

* * *

Storm Signals in Austria.—It is difficult to know what to make of the abortive Nazi raid, during the night of Friday to Saturday last week, on Prince Starhemberg's Castle of Wachsenberg in Upper Austria. Though the raiders were beaten off, they appear to have been well organised and equipped, and their purpose is said to have been to seize a store of arms belonging to the Heimwehr, which, in their belief, were deposited in the Castle. More serious, from Dr. Schuschnigg's point of view, are the reports that the Austrian Nazis now aim—not so much at seizing the Heimwehr's arms before these come into Herr Schuschnigg's hands, as at inducing the Heimwehr to march over, bag and baggage, with colours flying, from the Freiheitsfront into the Nazi camp. It is reported that Prince Starhemberg himself has decided to play for his own hand in Austria, despite the warnings from Signor Mussolini during the Prince's visit to Italy last week. In

any case, it will not be easy to persuade the local Heimwehr leaders and their bands to submit quietly to being disarmed, disbanded and incorporated into Dr. Schuschnigg's militia. If Dr. Schuschnigg means to do all that he threatens to do to the Heimwehr, the Austrian Nazis might really have a good chance of persuading the Heimwehr to join forces with them. In any case, it is probable that, in all districts where the Heimwehr have the upper hand to-day, they will be found on the map to-morrow under the pseudonym of a militia. But even the Austrian Nazis are not of one mind. There is evidence that a section of the more moderate among them have abandoned the idea of the *Anschluss* and would genuinely wish to see a cultural association with, rather than a political absorption by, Germany. It is by no means impossible that before long Dr. Schuschnigg may find himself in a position to make his peace with such sections as these on his right and with the Socialists on his left. Politically, Dr. Schuschnigg's position would appear to be definitely strengthening. Instead of making a frontal attack on the Heimwehr, Dr. Schuschnigg may try to circumvent them by building up his new conscript army and thereby gaining the whole of the rising generation to his own cause. Dr. Schuschnigg has a perilous path to tread, for the situation is still full of dangerous possibilities, but he has shown that he knows how to walk warily.

* * *

The Belgian Elections.—Belgian parliamentary politics are always particularly interesting to British observers because, of all Continental European countries that have adopted, or adapted, British political institutions during the last century, Belgium has hitherto worked the parliamentary system most nearly on British lines. In Belgium, as in England, the post-war three-party system has been neither satisfactory nor conclusive. Now the recent elections in Belgium have posted up the writing on the wall; and the emergence above the horizon of the rexists is of distinctly greater personal interest to us, over here, than the most sweeping Fascist and National-Socialist triumphs in Central European countries, where parliamentary democracy has never been acclimatised. The significant thing about the Rexist movement is that, like the Flemish Nationalist movement, it represents a breakaway from the Belgian Catholic Party, which survived the shock of the war when the Liberal Party was broken up by the se of the Socialists. While the Flemish Nationalists stand for a *reductio ad absurdum* of Nationalist particularism that is perhaps already out of date, Rexism stands for aashing attack on capitalism and *laissez faire*, which is authoritarian without being Socialist, and which is therefore likely to make a strong appeal to the rising generation. The Belgian Rexist Party, which is named after Christus Rex and is captained by a domineering and confident young man called Degrelle, stands nearer, perhaps, to the oldfuss-Schuschnigg movement in Austria than to any other contemporary European political party. Rexism is atholic—though it seems to be regarded with some distaste and trepidation by the hierarchy, as well as by the political atholic Party—and in this sense it is not Fascist. (There is, in fact, a Fascist movement in Belgium of the usual hate-worshipping kind; but these "Realists," as they call themselves, have not won a single seat. The three orthodox post-war parties (Catholics, Socialists, Liberals) still hold, between them, 156 seats out of 202; and though the Socialists are now the strongest single party, owing to the atholics' losses to the Rexists, the present proportional lengths (70 Socialists, 63 Catholics, 23 Liberals) are not startlingly different from the old. What is significant is that the three younger parties have won 20 seats from the older parties, as well as 15 seats that have been newly created. The Flamings have risen from 8 to 16, the Communists from 3 to 9, the Rexists from 0 to 21. This is a portent.

* * *

Tug-of-War in Japan.—We may perhaps venture the opinion that the momentary swing of the Japanese pendulum is in a direction leading away from a violent *nouveau*. Lieutenant-Colonel Aizawa, who murdered General Nagata in the War Office at Tokyo on August 12th last, has been condemned to death by a divisional court-

martial. A notorious book by a wild-cat Japanese naval officer, whose theme was the inevitability of an Anglo-Japanese war, has been officially disowned by the Japanese Government. In this connection it has been stated officially that Japan has no territorial ambitions in regard to either Australia or New Zealand. The Emperor has publicly condemned the action of the mutineers in the recent military *émeute* in Tokyo, with its accompanying crop of political murders. These straws point the same way as the speech which was delivered on May 6th in the Diet at Tokyo, by the Foreign Minister, Mr Arita. He declared his country's desire especially to maintain, upon the basis of her "special and inseparable relationship" with Manchukuo, her "position as a stabilising force in East Asia." Then he went on to avow a desire for the maintenance of normal and peaceful relations between Japan and Manchukuo on the one hand and Russia on the other. Mr Arita's enlargements on this theme were perhaps rather quaint. "It is not necessary to say that neither Japan nor Manchukuo harbours any aggressive designs"—and the repulse of Japanese military incursions into Outer Mongolian territory was censored as "a wanton resort to arms, on the dogmatic assumption" that trespass had been committed. The fundamental cause of the incompleteness of the felicity of present Russo-Japanese relations was declared by the Japanese Foreign Minister to lie in "lack of comprehension on the part of the Soviet statesmen of Japan's position in East Asia, coupled with their baseless fears and suspicions"; and the "excessive armaments" maintained by the Soviet Union at "remote outposts" were stigmatised as "a real menace to peace." A foreign observer may be at a loss to understand how there can be so much vice in Russia's retorts in kind to Japanese moves that have been so virtuous. But he will also infer that Russia is not the Power whom Mr Arita wants to fight. Moreover, Mr Arita's references to the British Empire were friendly and his references to the United States almost fulsome. It is still, apparently, China whom Japan is regretfully compelled to chastise for her good. And, in fact, Japan has just announced that she is making a large increase in her military forces in North China. If it is true that the advance guard, which has already arrived in Tientsin, is 8,000 strong, then the reinforcements bear no relation to the figures laid down in the Boxer Protocol, and we are witnessing, in North China, a Japanese military occupation in force. Where will it end?

* * *

Higher Australian Tariffs.—Higher tariffs and increased preference for Great Britain were the main features of the fiscal changes announced by Sir Henry Gullett, the Australian Minister of Trade, at Canberra last Friday. By means of these higher duties, and the introduction of an import licence system for certain goods, it was hoped, Sir Henry said, to "divert" £2,299,000 of Australian import trade. Of this, Australian manufacturers were to get £854,000, United Kingdom exporters £1,310,000, and "good customer" nations £135,000. The goods principally affected are cotton, artificial silk, imported tobacco, Oregon timber, electric refrigeration, typewriters and roller ball-bearings. There is also to be an increased duty on imported motor chassis, designed to assist the development of a new Australian industry. The general purpose of the import licence system is to enable Australia to refuse to buy from countries which do not buy to a corresponding

extent from her—to take another step, that is to say, on the road towards bilateral trade. No attempt is made to disguise the fact that Japan and the United States will be severely affected by these measures, and there are already signs of retaliation from Japan. British manufacturers may expect some immediate benefit: and the President of the Manchester Chamber of Commerce has stated that "Australia's action will be very warmly appreciated in Lancashire." From a wider point of view, however, Australia's new fiscal venture can only be regretted. It is calculated to reduce the volume of international trade and to hasten the lamentable tendency towards bilateralism. It is, indeed, precisely the kind of exclusive protectionism that gives some substance to the economic grievances of the so-called "dissatisfied Powers."

* * *

Britain and Argentina.—In advance of negotiations for a new definition of the trading relations between Great Britain and Argentina, an effort is now being made, in some political quarters, to prove that the Roca Agreement has been beneficial to Argentina alone. Whatever we may think of the Roca Agreement as a means of fostering international trade, this is certainly not true. The exchange clauses of the Agreement, which were specifically designed to benefit Great Britain, have been loyally carried out by the Argentine Government. This is fully demonstrated not merely by the figures given in our Argentine letter, published a fortnight ago, but also by the admirably objective and informative address delivered by Mr E. R. Lingeman, the British Commercial Secretary in Buenos Aires, at the British Chamber of Commerce dinner on May 20th.

I wish to express openly and in all sincerity (Mr Lingeman said) the unqualified satisfaction of H.M. Embassy with the loyal manner in which the Argentine authorities have implemented their treaty undertakings in regard to the redistribution of the United Kingdom [exchange] quota. With the figure in its possession the Embassy experiences no difficulty whatever in accounting for all the exchange created by United Kingdom purchases of Argentine exports since May 1, 1933, when allowance is made for the undertakings of certain exporters.

Mr Lingeman went on to discuss frankly the various controversies connected with the British-owned railways, the meat trade, and Argentina's foreign debt. He expressed the hope that outstanding disputes would be settled in the same spirit of mutual compromise which had marked Anglo-Argentine relations in the last three years. Mr Lingeman's speech should be read in conjunction with the full and interesting survey of Argentina's fortunes contained in the President's Message to Congress of May 7th. The President might perhaps have conceded a little more importance to the devaluation of the peso as a contributory cause of Argentina's recovery. But he was fully justified in painting an optimistic picture of the future of a country which is bound to grow ever more important as a purchaser of British goods.

* * *

India's New Constitution.—A White Paper (Cmd. 5181) published on Thursday explains a new draft Order-in-Council which fixes April 1, 1937—only ten months distant—as the "appointed day" for the beginning of Provincial Autonomy in India under the new constitution. The draft Orders are explained in the same White Paper. They make arrangements for the separation of the revenues for the redistribution of revenues between the central and provincial Governments, in accordance with the recommendations of Sir Otto Niemeyer (discussed in the *Economist*, May 2nd, page 240). These draft Orders bring the goal of nearly nine years' endeavour within sight. Sir Otto's report was favourable to the early inauguration of Provincial Autonomy; and both the Secretary for India, Lord Zetland, and the new Viceroy, Lord Linlithgow, have expressed their agreement on an early date for bringing the new Constitution into effect. The White Paper explains the need for the transitional provisions in the draft Orders. These permit Governors, *inter alia*, to authorise appropriations from provincial revenues during the six months after April 1, 1937; and to continue taxation after March 31st next for a period not

exceeding twelve months. Other provisions allow for the holding of elections to the provincial legislatures well before April 1, 1937, "probably . . . in February next." Most of the other provisions are of a transitional administrative nature, owing to the assumption of powers by new entities responsible for the continuation of services. The views of the Government of India and of the Provincial Governments on Sir Otto Niemeyer's report are published in the White Paper. The Government of India state categorically that the various claims preferred by the Provinces for greater shares of central revenue could not be met by the central finances. Sir Otto's recommendations are to cost the Budget at the outset 2 crores a year, and the separation of Burma another 2½ crores per annum. The Government of India say:—

The general level of the tariff is now so high that the maintenance of the aggregate (Customs) yield, which is by far the most important single factor in the whole revenue position, has become a somewhat precarious task. There is plainly no further reserve which could now be drawn upon to meet an emergency, as was done twice in 1931; and any serious relapse in the value of India's import trade would inflict damage which would be beyond the remedy of a mere increase of the tariff. . . . The Government of India therefore consider that any material increase in the tariff will endanger the practicability of the (Niemeyer) plan; they conceive, in fact, that in order to conserve the revenue yield it will be necessary from time to time to propose reductions of particular duties.

This only serves to emphasise the objective nature of Sir Otto's allocations for the Provinces. The House is to debate the new draft Orders after Whitsun. Meanwhile, it is good to know that the Governments of India and of this country are pressing on with the application of India's new Constitution without delay.

* * *

The Northern Ireland Budget.—The effects of economic recovery are apparent in the Northern Ireland Budget for 1936-37, which was introduced in the Northern Ireland House of Commons on Thursday, May 14th. The estimates for expenditure on supply services—our Belfast correspondent writes—amount to £9,229,000, and show a decrease of approximately £380,000 over the actual expenditure in 1935-36. Since no provision is made in the Estimates for 1936-37 for compensation to local authorities consequent on the postponement of the second appointed day under the Unemployment Assistance Act of 1934, the decrease in supply services is more properly placed at about £250,000. The transferred taxes (i.e. taxes under the control of the Northern Ireland Parliament and including estate duty, entertainments tax and motor vehicles duty) are estimated at £1,701,000, compared with actual receipts of £1,848,000 in 1935-36, when the yield of estate duty was swollen by a sum of £296,000 from one large estate. Reserved taxes are estimated at £8,620,000, as compared with £7,630,000 last year. The main items of reserved taxation are Customs and Excise, estimated at £5,410,000 for 1936-37 and showing an increase of £546,000; and income tax and surtax, estimated at £3,205,000, or £445,000 over the corresponding 1935-36 figures. With total expenditure estimated at £12,824,000 and total revenue at £13,280,000, Mr Milne Barbour had a provisional balance of £456,000 at his disposal, and he has increased this figure to £550,000 by retaining in the Exchequer interest on the capital fund which was being accumulated to wipe out the old debt on the Unemployment Fund. This modification has been rendered possible by the unemployment "reinsurance" agreement recently negotiated with the British Treasury. Certain concessions are given in a further partial restoration of the economy cuts in teachers' salaries and also the cuts in the salaries of Members of Parliament imposed in 1931. These concessions will amount to £50,000, leaving a balance of half a million, of which it is proposed that £400,000 should be utilised as a contribution to Imperial expenditure.

* * *

British Industrial Production.—In contrast to our index of business activity which, after correction for seasonal variations, showed a slight decline between the last quarter of 1935 and the first quarter of 1936, the uncorrected Board of Trade index of industrial production showed a rise of 1.9 per cent. during this period. As com-

pared with the first quarter of 1935, the Board of Trade index registered a rise of 8.9 per cent., against an increase of 5.4 per cent. shown by the more comprehensive *Economist* index of business activity:—

Group	Year 1934	Year 1935	1935		1936	
			March Quarter	Sept. Quarter	Dec. Quarter	March Quarter
1. Mines and quarries	90.8	91.7	95.4	85.8	98.2	100.5
2. Iron and steel	115.7	125.6	121.9	124.1	133.3	146.2
3. Non-ferrous metals	122.7	137.3	142.2	136.6	132.1	134.8
4. Engineering and shipbuilding ..	94.0	104.9	105.7	102.3	108.1	116.0
5. Building materials and building ..	133.4	147.0	135.9	133.5	150.2	149.9
6. Textiles	113.3	118.9	118.9	113.3	126.5	126.7
7. Chemicals, oils, etc.	104.6	111.8	109.8	120.3	116.2	116.2
8. Leather and boots and shoes ..	104.5	116.0	116.8	109.7	122.1	125.4
9. Food, drink and tobacco	101.8	107.6	98.7	109.2	113.9	108.9
10. Gas and electricity	121.8	132.3	(a)	(a)	(a)	(a)
Total of manufacturing industries (2-10)*	108.4	117.0	115.9	114.9	124.5	126.8
Total of all groups (1-10)*	106.0	113.5	113.0	110.8	120.8	123.1

* Includes also various industries not specified above. (a) Complete information about gas production in 1935 is not yet available; a provisional estimate of the quantity made has been used for the calculation of the group index for the year 1935, but no information is available about the quantities made in each quarter. The available data for electricity have been included in the general index number for the quarter.

Of the various group indices published by the Board of Trade, that of non-ferrous metals alone was slightly lower than a year ago. With the exception of the indices relating to building, building materials, chemicals and food, drink and tobacco, all the group indices registered an increase between the December and March quarters. A slight fall in the index relating to building and building materials confirms the impression gained from our own index of building activity, which turned downwards after December, 1935. In general, however, activity remains most marked in the metal and building industries.

* * *

Sterling and International Prices.—The past fortnight has witnessed a further decline in wholesale prices. The *Economist's* complete British index number has fallen by 0.9 per cent., while primary products have fallen by 0.7 per cent. The complete index number reached its peak for the year in the middle of January, when it stood at 118.5. Since then the trend has been mainly downwards, and the total decline is 2.5 per cent. Primary products reached their peak in March, at 134.5, and have since fallen by 3.3 per cent. French and German wholesale prices remain very stable, but are fractionally below their highest for the year. It is beginning to look as if the present trend of world prices is a very slow decline.

SEPTEMBER 25, 1931=100

May 27th	115.5	130.1	140.5	164.3	116.7	85.0*	95.3*

* These figures relate to May 20th.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

"ECONOMIST" INDEX
(1927 = 100)

	Sept. 18, 1931	Apr. 29, 1936	May 13, 1936	May 27, 1936
Cereals and meat	64.5	73.3	73.4	72.0
Other foods	62.2	59.0	58.9	58.7
Textiles	43.7	59.6	59.2	58.4
Minerals	67.4	83.1	81.7	81.7
Miscellaneous	65.8	78.1	77.8	76.9
Complete index ..	60.4	70.9	70.5	69.8
1913 = 100	83.1	97.5	97.0	96.0
1924 = 100	52.2	61.2	60.9	60.3

In the cereals and meat group there was a general decline in grain prices and also in those of bacon and potatoes. Meat prices were mostly higher. Among other foods, tea, sugar and cheese and coco-oil were all cheaper, but there was a sharp rise in butter. In the textiles group, cotton and hemp prices were firmer, but wool was weak, and there were also decreases in flax and jute. Non-ferrous metals were irregular. In the miscellaneous group there were declines in Swedish timber, leather, linseed oil and tallow.

* * *

Retail Trade in April.—The value of retail trade, as recorded in the *Board of Trade Journal*, continued its seasonal increase during the past month. But the increase over the corresponding period a year ago was less marked than in previous months, partly owing to unfavourable weather and partly because sales in April, 1935, were probably stimulated by preparations for the Jubilee:—

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Other Merchandise	Total
1932	102	99	101
1933	100	100	100
1934	103	103	103
1935	111	108	109
1935—March	107	92	100
April	110	112	111
May	110	112	110
June	110	108	109
July	105	113	109
August	107	81	94
September	110	99	104
October	112	114	113
November	116	115	115
December	133	160	146
1936—January	115	118	116
February	116	88	102
March	117	97	108
April	121	113	117

A comparison of turnover last month with April, 1935, shows that the improvement in sales of food and perishable articles was well maintained. Actually sales in this category showed an increase of 9.7 per cent. over April, 1935. On the other hand, sales of other merchandise rose by only 0.5 per cent. The value of sales of piece goods, women's wear, men's and boys' wear, boots and shoes, sports and travel requisites and furnishing materials was actually lower than a year ago. With the exception of Central and West End London, turnover in other districts showed increases of 5 per cent. and over. In view of the continued expansion of general business activity, accompanied by an increase in the purchasing power of consumers, the trend of retail sales will probably continue to rise in the near future.

* * *

Surrender to the Coalowners.—Mr Baldwin's announcement of the postponement of the Coal Mines Bill to the autumn is reported as we go to press. The congestion of parliamentary time is pleaded by Mr Baldwin in explanation; but the decision will be regarded by the public, rightly, as a complete capitulation to the coalowners. The enforcement of the necessary amalgamation is once more deferred to an ever-receding future. If there is to be anything whatever to offset this deplorable decision, the nationalisation of the royalties promised to the miners during the General Election, and the institution of selling schemes promised them during the strike negotiations, should be undertaken without further delay.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

"BOOM" AND UNEMPLOYMENT

THE jesting slogan of the New Era was "two cars in every garage." In 1929 there were four months in which motor-car output exceeded 500,000 cars; in 1936, that figure was passed in April, and if the last half of May equals the first half, the month will better April. Yet the full impact of the Bonus payments will not come until June at the earliest. The characteristic of the New Era boom was the synchronization of a consumer goods boom based upon consumer credit, and a building boom, largely based upon Stock Market credit. The characteristic of the present is the consumer goods boom, based upon consumer credit and upon public credit (via the Budget deficit) and the absence of that type of building which is financed through the capital markets. Although the issue market has been active, this activity has been almost exclusively confined to the refunding of corporate issues, and to meeting the demands of Government, including local Government, for new capital. As there has been no increase of Stock Market credit, the capacity of the market is less than it was in the New Era. Partly as a result of the controls introduced, partly for more complex reasons, both credit and capital are more closely canalized than they were formerly; but, wherever the channel has been left clear, there are the expected phenomena, which, in instances, justify the descriptive term of "boom." All things considered, there is, therefore, no particular anomaly in the coincidence of such a boom with an unknown, but substantial amount of unemployment.

There is, of course, no boom in agriculture; indeed, the relief rolls in agricultural regions are high. This is particularly true in areas where curtailment schemes have reduced the demand for farm labour; e.g. in the cotton belt. But agriculture, if not booming, is at least doing so well that it does not at the moment constitute an acute political problem. Farm income, in the current year, is expected to equal that of last year, with a possibility of a small improvement. Earlier in the year, there was a prospect of a wheat surplus for export; the recurrent drought has diminished this probability, and if the small carry-over and the estimated crops are remembered, it does not seem likely that there will be wheat for export in any volume. On the other hand, the shortages in hogs and other livestock are being made up; the prices are below their last year's peaks, and consumption is expected to recover sufficiently to absorb the increased supplies at a satisfactory price.

While it is customary to speak of the American farm problem as if it were a unit, it is not a unit. There is an intermittent wheat problem—in the years when the Dust Bowl receives good rains, the United States produces a crop in excess of domestic consumption; when it does not, the crop does not greatly exceed domestic needs. It is these arid regions which were the centre of distress in wheat; and which became a source of distress for all grain farmers. This region was brought into production during the war, and it is questionable if it can be kept in production without some form of subsidy, of which several have been employed since the war.

The cotton problem is entirely different. Cotton is produced in two areas of different character, and at widely differing costs. Cotton can be produced West of the Mississippi in volume sufficient for domestic needs at a cost which the Eastern States cannot meet. The problem in cotton is not merely the problem of export markets; it is, like many others, a problem of economic sectionalism.

There are in the United States about 6,800,000 farms. Of these, about half represent single ownership by the operator, and about 700,000 represent divided ownership. Beyond this, there are almost 3,000,000 tenant farms, and

700,000 share-croppers. Total farm acreage is almost exactly 1,000 million acres; but the acres under cultivation are just over one-third of the total acreage. The total valuation put upon all farms in the census of 1930 was \$57,000 millions; and the total farm population, 33 millions. It is a truism to say that the problem of American agriculture is the conventional problem of the pressure of a fraction of marginal producer upon an entire industry; the practical difficulty arises from the diverse conditions which surround the marginal production in a diversified industry like farming.

Congress is still hopeful of adjourning on June 6th—three days before the Republican Convention. Of the two major items—taxation and relief—the attention of Congress is devoted to taxation; for its control over, or interest in, the relief appropriations has never been more than formal. The Senate has taken strong exception to the House form of the Tax Bill, largely on the ground that it favours the powerful corporation and penalizes the new or weakened enterprise; and on the two secondary grounds that its revenues are problematical and the form unnecessarily complicated. The Frazier-Lemke Bill for re-financing \$3,000 millions of farm mortgages with paper money was decisively defeated by the House. On several occasions, this measure has been regarded with grave apprehension; and earlier this year, even, it was watched with some concern, and passage by the House generally expected. Its defeat was due, as much as to anything else, to the outspoken opposition of the American Federation of Labour.

THE PRESIDENTIAL PRIMARIES

Outside of Washington, the primaries preliminary to the National Conventions are a centre of perfunctory interest. No serious opposition to the President's renomination has appeared in the Democratic Party, and it is not unlikely that the opportunity will be taken in Philadelphia to substitute a majority vote for the two-thirds vote hitherto required by the Democratic Party. In the Republican primaries, the delegations generally stand either for Governor Landon (Kansas) or are uninstructed. From the returns to date, it would appear that Governor Landon would be chosen quickly; but under the circumstances, the field is still open to a dark horse. Governor Landon's primary campaign has been anything but active; he has not travelled or made speeches, and his views on major questions have not yet been revealed.

In current business two facts stand out with equal clarity. Although the second quarter is half over, there is as yet little sign of the "seasonal recession," and hopes are accordingly expressed that, for a variety of reasons of which the Bonus is chief, the present plane of activity may be continued through the third quarter. The second fact is that although business in general is up to or beyond expectations, building, whether residential or non-residential, is not materially more active than in the last half of 1935. Contrasted with the optimism expressed at the end of last year, this is disappointing, and is not readily explicable.

FRANCE

GROWING SUPPORT FOR DEVALUATION

M. LEON BLUM will be charged by President Lebrun with the task of forming a Cabinet on June 5th. The Cabinet will be constituted rapidly and will appear before the Chamber on June 9th or June 11th. What, however, will be M. Blum's monetary and financial programme? When the new Government enters office it will first have to procure money. It will find the Treasury empty, and it will simultaneously have to face huge expenditure uncovered by revenue: 6,000 million francs for the extraordinary arms Budget, 4,000 million francs for the railway

deficit, and many more thousands of millions for public works. Moreover, the partial or total suppression of the decree-laws would increase expenditure still further.

There are only two methods of finding the money: "confidence" or coercion. For the time being there is no confidence and no possibility of launching loans. The Bank of France is therefore printing notes, and its commercial portfolio is already stuffed with 10,000 millions or 12,000 millions of Treasury bills. The first goal of the Blum Government must therefore be to reawaken confidence by some big change of policy. This might consist in a devaluation of the franc; for "the fear of devaluation seems to be more dangerous than devaluation itself." After devaluation capital would return, money would be abundant on the market, and there would be a chance for the State to issue loans at lower interest rates.

The Conservatives are ready for devaluation—the Bank of France probably because it considers it the only way of saving the remainder of its gold reserves; the industrialists because the alternative—reflation within exchange controls—would signify numerous incursions by the State into private business; and the economic experts because they consider that, as in the Belgian case, an "alignment" of French prices with international prices would assist foreign trade and internal business and so enable the State to find in increased fiscal receipts the means for its public works and military expenditure. Within the ranks of the "Popular Front," the Radicals are in favour of devaluation; the Socialists are mostly favourable; and *Le Peuple*, the organ of the "Confédération Générale du Travail," has just admitted that a surgical operation, if disagreeable, is better than an exhausting deflation. The Communists remain almost alone in favour of "defending the franc" and also of "soaking the rich," probably with the intention of launching the Government into an experiment in autarky after the example of Germany or Italy—a policy which has been condemned by both the Radical M. Daladier and the Socialist M. Blum.

The question now is whether the Communists will force the Government to maintain provisionally the internal value of the franc while allowing its external value to fall. It appears, indeed, that the Communists' political game has already begun seriously to complicate the task of M. Blum, and that their wild electoral promises, combined with the discontent likely to be provoked among the Left parties by personal difficulties, may well endanger the new Government's chances. It is possible that the Communists will show themselves more realistic in Parliament and will leave M. Blum the opportunity to "reorganise" the various national institutions, such as the Bank of France. But it may be that M. Blum's economic experiment will depend more and more upon considerations of foreign policy. In the matter of peace, just as in that of the franc and of economic liberty, the new Government will have to take account above all of France's national traditions, which are likely to prove stronger than even the present economic discontents.

PARIS, May 28.

GERMANY

THE DEMAND FOR COLONIES

WHILE the reply to Mr Eden's questionnaire has been delayed, the Colonial question has come into the foreground in official and industrial utterances and in the Press; and the curious claim that Germany should be given back her former overseas possessions as a condition for being allowed to violate the Locarno Treaty has been enthusiastically endorsed. The foundations of the demand are ostensibly legal and economic, the former being the invalidity of the whole Versailles Treaty, the latter the arguments, originally derived from Dr. Schacht, that the import of Colonial products would solve the raw materials and foreign exchange difficulties.

On this point optimistic calculations are published; the Reichsbank director, Dr. Eicke, affirms that 15 per cent. of the present imports of raw materials, worth Rm. 500-

600 millions, could be delivered by "Colonies," presumably the now mandated territories. The raw material argument is calculated to take in political innocents, who are mostly pacifists inclined to reject honest imperialistic considerations; naturally, therefore, the demand has gathered impetus from the British official intimation that changes in the distribution of natural resources might be practicable. But British official ambiguity on the Colonial question in the narrower sense has given still more impetus.

The Nazi Party's record in the matter of Colonies is instructive. Until he came to power, Herr Hitler condemned and derided Colonialism and *Weltpolitik*, holding with many authorities that it was the cause of pre-war Anglo-German antagonism. He recommended instead a narrow territorial militarism at the expense of Germany's Western and Eastern neighbours; and the only Colonies he promised were to be in West Russia and the Baltic Provinces. Germany's blunder before 1914, he held, was her attempt to combine European territorial policy with world policy, a combination beyond her power. Owing to the military restoration of Soviet Russia, the continued association of Great Britain and France, and the quarrel with Italy, the plan of European conquest has fallen into the background; and the Colonies possibly present a practicable substitute.

This implies that Germany's motives are not economic, but are motives of prestige and power. And that is a fact. The Abyssinian affair has helped. Now that it has been happily solved in Italy's favour, it is time for Germany to put in her claims. Restoration of Colonies is practically a German condition for re-entering the respectable League of Nations and of assisting Signor Mussolini therein in pushing the collective interest of peace.

RAW MATERIALS AND PHILANTHROPY

But, apart from political ambitions, and a friendly desire to relieve Great Britain of possessions which she is apparently afraid to defend, Germany has no motives. The raw materials argument is statistically unsound. Were it, however, sound, it would appeal to no Government except the philanthropic Government of England. In economic matters all countries pursue the narrowest policies of self-interest, administering their special resources solely for their own profit. In this way before the war the German potash monopoly was exploited; and the same policy is pursued to-day in so far as it is practicable in view of the loss of Alsace-Lorraine and the competition of Spain and Russia. In supplying the world with industrial goods of the kinds officially classed as "monopoly-like" (*monopolartig*) Germany fully exploits her advantages by imposing unfavourable sale and price conditions. Her whole system of foreign trade and exchange regulation is inspired by a resolution to exploit the world's needs. If there is an unfairness needing remedy in the present distribution of the world's goods, equity could certainly not be attained by considering Colonial resources independently of home resources; indeed, Germany's argument is based on the paucity of her own resources. This raises the question whether if Great Britain were to grant Germany favours in the matter of tin or rubber, she could demand compensating favours from Russia or the United States in the matter of oil, or whether Germany herself would grant favours to Italy and Sweden in the matter of her superfluous coal. Nobody expects any such thing. It seems therefore, that raw materials is a catchword to be used at the cost of the British Empire alone.

But this raises the consideration that as Great Britain, as is believed, wants peace at any price, the weakness of German arguments counts for nothing if only Germany can be satisfied. Greater equality of resources, it is affirmed, would remove dissatisfaction, justified or unjustified, and conduce to peace. This argument assumes that a natural, absolute, and ideal redistribution of territory and resources might be attained, and that once attained it would be permanently upheld by beneficent Nature. Historical grounds for this assumption are hard to find. Were Germany satisfied by Colonial or raw material concessions—which she would probably not be—Poland or Yugoslavia, or some other developing country might prefer an equally plausible demand. Indeed, a

more plausible demand. For although Germany to-day has no Colonies and has meagre home resources, her Government claims that she has already attained almost perfect prosperity. The same Dr. Schacht who thinks that Colonies would solve German exchange difficulties, simultaneously rebukes England, the United States and other countries for their distressful currency anarchy; and the Nazi Party, holding that Germany cannot even exist without Colonies, promises that within one year she will have no unemployed at all.

PROSPERITY IN STEEL AND MACHINE TRADES

Industrial reports are on the whole satisfactory. The annual company reports, most of which have now appeared, are being criticised on the ground of alleged excessive writing-down and accumulation of reserves; and it seems that many directors feel doubt about the duration of the present activity. Steel export orders are coming in well. Coal production in the first quarter year was 51,055,500 tons—without Saar production 49,188,100 tons—against 44,778,200 tons, also without Saar production, in the first quarter of 1935. The machine manufacturing trades are active, and were employed in April to 74 per cent. of potential capacity. Some machine manufacturing firms already report a shortage of skilled labour. The export of machinery in the first quarter of 1936 reached 74,000 tons, which is at the rate of nearly 300,000 tons a year, as against 255,000 tons in 1935, nearly the same quantity in 1934 and 700,000 tons in 1930. The value in each of the last two years was Rm. 418 millions, against 1,400 millions in 1930. Exports of machinery to industrial Europe have not recovered, but there have been marked increases in sales to South-East Europe and to South America. The same is true of the export of electrical machines and electro-technical accessories.

National income from wages and salaries (including official) in the first quarter of this year is returned at Rm. 7,997 millions, as against Rm. 7,412 millions and Rm. 6,070 millions (recent lowest) in the same quarters of 1935 and 1933 respectively. (Figures after February, 1935, include the Saar.) A report on the settlement of peasants on new farms, three of which are in the Eastern provinces, shows that the number of new settlers is not increasing, but that the average size of new farms is some 75 per cent. greater than in pre-Nazi years. Settlers are now being chosen on "race-biological" principles, which means in fact that they must be physically healthy and have large families.

The Reich-owned Railways Corporation returns its operating profit in 1935 at Rm. 152 millions, as against a profit of Rm. 24 millions in 1934 and a loss of Rm. 136 millions in 1933. Goods traffic increased in volume as compared with 1934, by 14.2 per cent., and passenger traffic (numbers carried) by 9.5 per cent. Goods revenue increased 8.6 per cent. and passenger revenue 7.8 per cent. Total receipts were Rm. 3,586 millions, which was Rm. 260 millions more than in 1934. The deficit on the whole account, due to fixed charges, compensation reserve, contribution to the Reich, and dividend on preference shares, in all Rm. 228 millions, was not made good.

Money last week remained fluid, but the month-end demand set in earlier than usual. The reduction of the market discount rate of 2½ per cent. caused a slackening in the demand for Gold Discount Bank promissory notes. The day loan rate early this week was 2½-¾ per cent. June usually brings an increased demand for money, and an increase in the market rate is discussed. The commercial returns for April 30th indicate increased liquidity.

May 26.

POLAND

THE GENERALS TAKE CHARGE

The reconstruction of the Cabinet, expected for several weeks, took place on May 15th, when President Moscicki, to the surprise of public opinion, entrusted the task to General of Division Felician Slawoj-Skladkowski, who is now Prime Minister and Minister of the Interior. M.

Zyndram-Koscialkowski, who became Prime Minister last October, has been given the Ministry of Labour and Social Welfare in the new Cabinet.

General Slawoj-Skladkowski was Minister of the Interior in 1930 during the "pacification" of the Ukraine, and the "clean up" of the Opposition when many Deputies of the Left on the eve of a General Election were sent to the fortress of Brest-Litovsk. Some of the leaders subsequently fled from Poland, and have never returned—the most prominent, M. Witos, the peasant leader, being in Czechoslovakia. M. Witold Grabowski, appointed Minister of Justice on May 15th, was the prosecuting attorney at the trial of the Opposition deputies. The new Ministry has been called "A Cabinet of Contradictions."

General Slawoj-Skladkowski on numerous occasions was the man selected by the late Marshal Pilsudski when there was a "heavy job" to do in the pacification line, and he worked very effectively. The decision had to be reached on May 15th, whether to continue the move to the Left which began last October with the appointment of M. Zyndram-Koscialkowski, and hope to bring about a working arrangement with the peasants similar to that made with the Ukrainians, so that the Government could obtain a substantial measure of public confidence, or to double back to the Right and call in the Army. The latter course was adopted, and General Rydz-Smigly, the Marshal's successor as Inspector-General, nominated General Slawoj-Skladkowski for the Premiership, and by so doing virtually guaranteed that the Army would "see him through." There is accordingly now no hope of reaching an understanding with any important Opposition group.

Roughly, one-third of the population might be termed Nationalists (the Right Opposition) and one-third peasants (the Left Opposition). The remaining third are Ukrainians, Jews and the business and professional interests which support the Government for various reasons—the Ukrainians because they find it possible to work with M. Zyndram-Koscialkowski; the Jews because the Nationalists and peasants are strong anti-Semites, the business and professional classes because they want internal security and do not much mind how it is obtained.

The situation is very difficult. Parliamentary Democracy up to May, 1926, when Pilsudski "took over," was unable to give Poland stable and responsible government. Pilsudski in the next nine years gave the country that, but without destroying Parliament or losing touch with public sentiment. He knew there was nothing permanent about a dictatorship. If his followers think they can make it permanent by bringing the Army into the Government, they need to be told before the experiment goes too far that it is doomed to failure.

"MILITARY" PUBLIC WORKS

The new Cabinet will doubtless go ahead with an extensive public works programme to relieve unemployment—but from the military rather than the purely economic angle. Dr. Byrka, who was appointed President of the Bank of Poland on May 14th, one week after the resignation of Colonel Adam Koc, has stated that there will be neither inflation nor devaluation of the zloty; and the continued presence of M. Kwiatkowski at the Ministry of Finance is regarded as an assurance that his balanced Budget, which has been so difficult to attain, will be maintained, if at all possible. But the Army will have the last word.

With Colonel Beck remaining at the Foreign Office as the acknowledged custodian of "the Marshal's testament," no change need be expected in foreign policy. Economic influences are bringing Poland and Germany closer together, and seem likely to further the process; but there is a wide gulf between them politically, just as there is between Poland and Soviet Russia. The tendency at present is to seek a close understanding with the Baltic and Scandinavian countries.

A Decree was published on May 8th establishing official control over foreign trade, with the technical prohibition of all imports, so as to "harmonise" with the *devisen* "control" introduced on April 27th. Also on May 8th, Poland denounced the commercial treaty with France, concluded in 1924, which for several reasons does not "har-

monise" with the foreign trade and *devisen* controls. Other commercial treaties of the "old type" (this does not include the one with Great Britain concluded last year) will be denounced and the decks cleared for "compensation trade" treaties of the type arranged with Germany last year, and with a number of other countries.

While the "compensation trade" problem can be solved without much difficulty—that is, from the official side—in the case of Germany, Austria, Czechoslovakia, Soviet Russia, Roumania, etc., the Decree of May 8th may lead to serious difficulties with countries like the United States, Brazil, Australia and Egypt, which supply Poland with necessary raw materials for which they require payment for the most part in sterling or dollars. About 60 per cent. of Poland's foreign trade is now covered by "compensation" agreements.

Difficulties will also be experienced over Jewish emigration to Palestine. Jewish emigrants are known to have taken about £11 millions from Poland to Palestine in the last three years, and, while the authorities have no desire to place any obstacle in the way of Jews leaving Poland—they wish, in fact, as do the Jews themselves, that it was on a much larger scale—the exodus of capital cannot continue unchecked.

WARSAW, May 20.

JUGOSLAVIA

GERMAN ATTEMPTS AT PENETRATION

THE struggle between France and Germany for the allegiance of Yugoslavia has been much intensified of late. It is common knowledge that the cessation of French financial help since 1931 and the murder of King Alexander on French soil have considerably cooled relations between France and Yugoslavia. More recently, the failure of France to give more than minimal assistance to Yugoslav export trade in recompense for Yugoslavia's heavy losses on sanctions, the closer Franco-Italian co-operation, and the French sabotage of the League, have put a definite strain on these relations. Germany, fully aware of this, is making a great effort to capture Yugoslavia for herself, and indeed, her political propaganda, greatly increased of late, is meeting with some measure of popular success.

In spite of this, however, Germany is far from having won over the Government. The latest declaration of the Little Entente countries, specifically emphasising the identity of policy of the three countries towards Germany, Austria, Russia and the League, is an unmistakable sign, in view of the Czech attitude, that Yugoslavia has not yet been drawn into the German orbit. Further, since the accession of Prince Paul to the Regency, Yugoslav policy has become much more sensitive to British influence, and the final attitude of Great Britain towards the Franco-German problem is bound to be of extreme importance. Lastly, also, the victory of the Front Populaire and the return of France to a League policy, cannot fail to have a profound effect on Yugoslavia's final attitude.

Germany's strongest weapon is her economic pull on Yugoslavia. She has made use of Yugoslavia's export difficulties as a result of sanctions to buy up much of her accumulated export surplus, and has run up a debit account which at one moment reached nearly 500 millions dinars. Payments on the clearing account now lag by nearly ten months. In order to thaw at least a part of these frozen credits, the Yugoslav Government has accepted the German suggestion that more goods should be bought from Germany. Already German firms are profiting by this policy. Krupps have obtained the contract for the reconstruction of the Zenica iron foundries; and other firms have secured large orders for railway material and metal goods under the Government rail and road schemes; and there is talk of a German contract for a Sava bridge at Zagreb.

To hasten further the unfreezing of the credits in Germany, the Government has now introduced a system

of import control, which is to come into force on June 1st. It has declared, of course, that this control is not intended to injure other countries, although it is hard to see how damage to other industrial countries can be avoided in view of the vital articles included in the list of controlled imports, such as coal, machinery, yarns, mechanical and electrical goods. In fact, statistics show that imports from Germany rose during the past quarter from 59.8 millions to 88.6 million dinars; and this, together with a fall of exports, combined to reduce Germany's debit on the clearing account to 420 million dinars by the middle of May.

The first result of the Government's announcement of import control has been a rush to secure stocks of foreign goods; and hence imports during March, amounting to 420 million dinars, show an increase of no less than 37.21 per cent. over March last year (284.2 million dinars). Trade figures for the quarter read:—

	1935		1936	
	Exports Mill. Tons	Imports Mill. Tons	Exports Mill. Tons	Imports Mill. Tons
March	288,600	362.1	64,600	284.2
Total for 1st quarter	688,200	867.3	171,600	769.8
			198,700	345.5
			468,200	849.3
			250,600	1,056.2

The Budget returns for the financial year 1935-36 show a revenue of 9,757 millions and an expenditure of 9,202 millions. The apparent surplus of 555 millions, however, must be reduced first by 253 millions, which is the sum of outstanding accounts, and further by extraordinary expenditure not provided for in the Budget.

The Ministry of Finance's figures give the total of internal debt on April 1st as 5,400 million dinars as against the original issued figure of 6,288 millions. The reduction during the past year was 102 millions. To hasten the liquidation of the floating debt, the Government has issued 4 per cent. Treasury Bonds to the value of 500 million dinars.

Many Yugoslavians have been hit severely by the collapse of the Phoenix at Vienna, which had extensive business in this country. This has produced an agitation for better legislation, more adequate protection, and stricter control of insurance companies.

BELGRADE, May 26.

CHINA

THE GROWTH OF SMUGGLING

THE attention of the world has recently been directed to the large-scale smuggling in North China which is paralysing the trade of Tientsin and other ports in "autonomous areas." Smuggling in the South may not be so spectacular, but has been steadily developed since 1929, when the uniform Customs tariff of 7½ per cent. was replaced by a high range of duties. The Hongkong authorities go to considerable trouble in their efforts to suppress illicit trading, but it is a hopeless task and a steady stream of merchandise filters into the country without appearing on a ship's manifest. In addition, regular shipments from Hongkong to foreign colonies, such as Macao and Kwong-chow-wan, are obviously destined to be smuggled into China. The latest activity in irregular trade is the sudden rise of exports of Japanese piece-goods from Hongkong to the Philippine Islands. A gentleman's agreement between the United States and Japan restricts the importation of Japanese cottons into the Philippines, but it appears that the quota is being circumvented by trans-shipping such goods in Hongkong. According to the Manila Bureau of Customs the normal monthly importation of textiles from Hongkong does not exceed 50,000 square metres. During March, however, the actual imports amounted to over 3¼ million square yards.

The time is fast approaching when there will be through connection by railway between Canton and Hankow. The last remaining section is expected to be completed by the end of June, and a full service of trains should be possible by the autumn. The next development awaited is the linking up of the Canton-Hankow Railway with the

Canton-Kowloon Railway, so providing a through connection between Hongkong and the Yangtse. Unfortunately there is considerable opposition to the construction of a loop line, a matter of a mile or two, as many Canton merchants fear that the benefits to be derived from through traffic with the Yangtse will be diverted from Canton to Hongkong.

Hongkong has now enjoyed for one month the boon of a weekly air mail service inward and outward. Letters posted in London on Saturdays reached here only ten days later on every Tuesday morning in April. The mails are brought by the Imperial Airways' liner Dorado, which flies between Penang and Hongkong, staying overnight in Tourane. There are now possibilities that the trans-Pacific Clipper service may make its terminus in Hongkong instead of at Macao as at present arranged.

CHIANG KAI-SHEK AND THE COMMUNISTS

An important conference was held in Yunnanfu recently, at which Marshal Chiang Kai-shek met various military leaders of the Western Provinces to discuss further action against Communist forces. The Communist threat is a vast problem in a country with scanty means of communication, but it is to the credit of Marshal Chiang that he has never shirked it.

Sir Frederick Leith-Ross is probably justified in his restrained optimism about China's ability to manage her currency, but it is difficult to see from what source money can be borrowed to tide over the not inconsiderable period before a balanced Budget is possible. The semi-independence of Kwangtung and Kwangsi and the precarious position of the provinces north of the Yellow River have greatly diminished the value of Customs revenue as security for a loan. Apart from the Customs, it is doubtful whether China has anything to pledge, and presumably neither Governments nor investors will advance funds on note of hand alone.

The trade returns of Hongkong for the first quarter of this year show very little variation in local currency values from those of the first quarter of last year. There is, however, a big decrease in both imports and exports when converted into sterling, due to the fall of the Hongkong dollar from an average of about 1s. 10½d., over the first three months of last year, to 1s. 3½d. for the corresponding period of 1936. The following are some comparative figures in millions:—

	1st Quarter of				
	1932	1933	1934	1935	1936
Imports	\$170.7	132.8	95.8	97.3	98.2
	£ 11.9	8.5	7.1	9.0	6.3
Exports	\$127.0	105.3	77.5	74.8	76.0
	£ 8.8	6.8	5.8	6.9	4.9
Percentage of Total trade.					
China	25.4	28.8	33.5	33.8	33.4
Japan	2.7	4.2	8.1	10.3	12.3
U.S.A.	8.9	9.0	5.9	8.4	9.5
U.K.	14.8	12.0	8.8	7.5	6.6
Germany	3.8	3.7	2.9	4.1	5.3

The combined imports and exports in sterling for the first quarter of this year show a falling off of nearly 30 per cent. from last year's figures. This suggests a very serious contraction in the volume of trade, about two-thirds of which is carried on with countries whose currencies are sterling or pegged to it, directly or indirectly. The further decline in the proportion of trade with the United Kingdom is regrettable, but it must be remembered that the percentage of exports to the United Kingdom for the first quarter of 1932 included abnormal amounts of piece-goods, partly on account of the anti-Japanese boycott and partly due to over-trading.

It is certainly disappointing to find that the brighter outlook for Hongkong at the end of 1935 has not so far been justified by trade statistics. It may be that the first quarter's trade returns do not reflect the true state of current business. There has certainly been some improvement and undoubtedly there is more money in circulation. Orders for retail stores have been booked during the past few months on a much bigger scale than at any time during the past three or four years.

HONGKONG, May 10.

BRAZIL

BRITISH TRADE LOST TO GERMANY

THE outstanding feature of the 1935 trade returns is the very large increase in trade with Germany and the decrease of trade with the United Kingdom. Total trade figures for 1935, in pounds sterling and in contos, are as follows:—

	('000)		
	1934	1935	Per cent.
Exports	58,146	54,961	- 6.0
Imports	41,937	45,912	+ 9.0
Export surplus	16,209	9,049	-43.0
	(Contos '000)		
Exports	3,459	4,104	+18.5
Imports	2,503	3,856	+54.0
Export surplus	956	248	-74.0

The volume of imports and exports may be expressed as follows:—

	('000 tons)		
	1934	1935	Per cent.
Exports	2,185	2,761	+25.5
Imports	3,971	4,295	+ 8.4

As more than 50 per cent. of Brazil's foreign trade is with the U.S.A., the United Kingdom and Germany, the figures for these countries are of some interest:—

	('000)			
	1932	1933	1934	1935
U.S.A. :—				
Brazilian exports to ...	23,488	24,657	22,702	21,674
Brazilian imports from ...	9,193	8,788	9,925	10,722
Brazilian export surplus	14,295	15,869	12,777	10,952
United Kingdom :—				
Brazilian exports to ...	3,598	3,949	7,013	5,086
Brazilian imports from ...	5,845	8,067	7,188	5,705
Brazilian import surplus	2,247	4,118	175	619
Germany :—				
Brazilian exports to ...	4,557	4,285	7,610	9,075
Brazilian imports to ...	2,744	4,959	5,878	9,386
Brazilian export surplus	1,813	-674	1,732	-311

The above figures show that, compared with 1934, the value of German imports into Brazil increased by £3,508,000, or 88 per cent. of the total increase of imports into Brazil. The United States gained £800,000 and the United Kingdom lost £1,480,000. But if 1932 and 1935 are compared, Germany increased its sales to Brazil four times and doubled its purchases.

This abnormal increase in trade with Germany is to a large extent due to the "Compensation Mark" arrangement, which gives the importer from Germany a 30 to 35 per cent. price advantage over its competitors dealing in free currencies. The loss in British exports, however, is also largely due to British exporters' lack of knowledge and understanding of local conditions, their unwillingness to meet local market demands, their usual insistence on "cash against documents United Kingdom" terms of payment, and the lack of long-term credit facilities in the local British banks, which are of less help to an importer of goods from England than the League of Nations has been to Abyssinia. In order to regain lost business the British exporter and manufacturer should get away from his usual "take what we offer standpoint," and instead try to supply what the market wants and facilitate long-term payments either through existing banks or through a special discount house. It will be seen that these obligations have been very fully discharged.

The Banco do Brazil recently published its 1935 report, which showed that the yearly average cash balance was 284,000 contos, or about 10.6 per cent. of total deposits. At the closing of accounts for the 1935 fiscal year (January 31, 1936) the Federal Government's obligations to the bank amounted to 652,226 contos, against 842,629 contos a year ago. The debits of States and Municipalities to the bank decreased from 530,700 to 529,300 contos. In the same period the National Coffee Department reduced its indebtedness from 737,000 to 600,000 contos.

The Government continued to purchase gold through the Banco do Brazil in 1935. Moreover, Brazil regularly met her foreign obligations during the year, and commercial collections have been obtainable without any difficulty. The following remittances were made at the official rate of exchange through the Banco do Brazil:—

	£	Contos	%
External debt service	9,233,674	61.1	
Federal	4,691,186		
States and municipalities	3,048,301		
Expenses of 1931 Funding Loan	27,702		
Part not applied during year by National Coffee Dept.	1,446,485		
Liquidation of commercial arrears	5,805,428	38.4	
European (1933) Agreement ...	853,114		
U.S.A. (1933) Agreement	488,025		
French (1934) Agreement	57,225		
January (1936) payment	185,847		
Other liquidations commercial arrears	4,221,217		
Imports of newsprint paper	76,198	0.5	
Total	15,115,300		

RIO DE JANEIRO, May 24.

CANADA

HUGE BUDGET DEFICIT

THE country has been staggered by the size of the Federal Budget deficit for the year 1935-36, \$162,191,000. It was at least \$20 millions more than the financial experts had been predicting. Some of the special expenditures, such as the cost of the Bennett Ministry's adventures in the Winnipeg wheat market, were abnormal and will not be repeated. But, although the main and supplementary estimates for 1936-37 show a reduction of total expenditures to \$509 millions, as compared with \$534½ millions last year, there was left to be bridged a huge gap between them and the revenues promised for the current year on the existing basis of taxation, which the Treasury officials estimate at \$377½ millions. The achievement of a balanced Budget would have entailed an increase in taxation by about one-third. So Ministers have contented themselves with attempting to keep the deficit for the current year below \$100 millions by raising an extra \$30 millions, of which \$23 millions will come from an increase of the rate of the sales tax from 6 per cent. to 8 per cent., and \$6 millions from an increase in the corporation income tax from 13½ to 15 per cent. The increase in the sales tax will certainly raise the cost of living and will press with particular severity upon the poorer classes.

The tariff changes are being accepted by the general public as a reasonable second instalment, following the Canadian-American Treaty, of the Liberal Party's promise to reverse the high protectionist policy of the Bennett Government. But the elimination of the specific duties on a long list of cotton and rayon goods, which virtually cuts the protection available to the domestic manufacturers in half, has enraged the latter, who contend that they will be exposed to ruinous competition from Britain. However, the two most important rayon corporations have close connections with parent companies in Britain and will probably be able to make some arrangement to divide the market. For the appeasement of the farmers the duties on farm implements, which were reduced from an average of 25 to 12½ per cent. by the Canadian-American Treaty, have been cut further to 7½ per cent.

Mr Bennett's general criticism of the tariff changes has been pitched in an unexpectedly moderate key; and one reason for this is the fact that the King Government has taken the shrewd course of basing most of the important tariff changes upon recommendations made by the Canadian Tariff Board which the Bennett Ministry had appointed. Mr Bennett's lead has prevented Conservative criticism of the Budget from being serious, and the Opposition has moved no amendment. But the spokesmen of the C.C.F. (farmer-labour) Party have assailed it as a thoroughly Tory Budget.

The Government's Bill for unemployment relief and agricultural rehabilitation has encountered considerable criticism even from some of its own supporters. Ministers,

under pressure, found it necessary to enlarge their programme of special public works; and supplementary estimates of \$124½ millions which were tabled on April 22 provide for the expenditure of about \$60 millions on projects of various kinds throughout the Dominion; they also included \$26 millions for relief grants in aid to the provinces; and so, after allowance for normal new public works is made, the relief expenditure for the current year will be rather larger than for 1935-36. The severest critic of the Government's unemployment programme is Mr McGeer, Mayor of Vancouver, a Liberal, who contends that the Government is labouring under the same delusion as its predecessor, namely that a cure for unemployment can be found without drastic reforms of the monetary system. He has exhorted the Cabinet to follow the example of the British Government, which, he said, has demonstrated that a managed currency is within the power of modern Governments.

DISAPPOINTING BUSINESS RESULTS

Business conditions have shown the usual spring improvement; but it has not been as marked as usual, and there has been some curtailment of manufacturing operations as the result of uncertainty about tariff policy. The Bureau of Statistics' Employment Index for April 1st had fallen to 97.4, compared with 98.9 on March 1st; but it was higher than the figures of 93.4 and 93.1 recorded for April 1, 1935 and 1934, respectively. The figures for new construction during April were also disappointing, though the mining industry continues to expand.

There was some disappointment with the results of the first quarter of 1936, but the economic index of the Bureau of Statistics for that quarter averaged 106.0, as compared with 100.3 for the parallel quarter of 1935. The following table shows that each of six components of the index made gains in this comparison.

	First Quarter 1935	First Quarter 1936	Increase (+) Decrease (-) Per Cent.
Carloadings (13 weeks) ...	555,149	544,758	- 2.0
Wholesale Prices	71.8	72.6	+ 1.1
Inverted index of Bond Yields	139.3	140.5	+ 0.9
Bank Clearings*	3,577,760,592	4,399,150,602	+ 23.0
Common Stocks	88.7	121.1	+ 36.5
Shares Traded	3,202,884	7,393,737	+130.8
Economic Index	100.3	106.0	+ 5.7

* Includes totals for Ottawa.

Visible stocks of Canadian wheat on April 17th were placed at 197,786,436 bushels, as compared with 200,588,005 for the previous week, and 222,134,147 bushels on the parallel date in 1935. Total exports of wheat and wheat flour in the first eight months of the crop year, August to March inclusive, were 161,637,346 bushels, compared with 126,399,210 in the previous parallel period. Although this represents a substantial gain, the pace of the export movement is not good enough to reduce the carry-over to reasonable dimensions by July 31st. It is held, however, that Canada is in a very good statistical position in the international wheat market.

The foreign trade returns for March were again very

MAKING POSTERITY PAY*

THE Chancellor of the Exchequer has introduced the largest peace-time military Budget in Britain's history. Hurriedly we are trying to remember the lessons of the last war; we talk of the necessity of a Government costing system to prevent profiteering, of Government organisation of industry for munitions production, of building up food stock, and so on. But the one great economic error of the war, we are apparently going to repeat. Mr Chamberlain has informed us that it is a proper thing to raise money for defence expenditure by loan, and so pass on some of the burden of war to the coming generation who doubtless will be as patriotically grateful to us as we are for our own legacy. Mr Fairer Smith's devastating analysis of the origin of that legacy of War Finance and its consequences, could have appeared at no more appropriate moment.

The case against loans for war is simple and unanswerable. The economic effort of waging war can be made only at the time the materials of war are made, the munitions used, the soldiers killed, the civilians gassed; it cannot be passed on to the next generation. If you cannot increase your production or diminish your civilian consumption sufficiently to meet your war needs, posterity cannot see you through. It is merely a question *whose* consumption is reduced during the war, and what consequences it has on the distribution of income afterwards. If the only alternatives are inflationary loans or heavy direct taxation, the choice is between, on the one hand, imposing part of the burden on the poor through rising prices and bribing the rich by the prospect of interest payments to bear their share of the burden, or, on the other hand, imposing most of the burden on the rich through taxation without any subsequent redistribution in their favour. The former method was adopted on a large scale during the war. As a result, nearly 20 years afterwards we are raising nearly one-third of our total Budget revenue in order to pay it to a small part of our population which has claims against the nation.

The vast majority of those claims were bought originally out of war profits, or with money borrowed from the banks. And the banks were able to lend for such purposes only because the Government by creating securities (on which it paid interest), and by public expenditure, expanded the basis of bank credit. The Government might have used its powers directly to finance war production without incurring any interest burden; it might have raised more of its revenue by taxes, as it should have done; in fact, it chose the primrose path of loans for war, with the corollaries of inflation, profiteering and inadequate taxation. As the wealth of the country was dissipated in war, claims to wealth increased by leaps and bounds; and the consequent piling up of the national debt wiped out some part of the success previously made toward greater equality of wealth. It is that the choice between different methods of war cannot postpone the absolute fall in consumption. It does do is to alter the distribution of incomes both before and after the war.

Mr Smith's case, and he certainly makes it look strong. Ruthlessly he quotes from the speeches of our war-time bankers and financiers, our politicians and our Chancellors. His extracts from "Hansard" are a terrible commentary on the financial ineptitude of our war-time governments, under advice from the City. His indignation sometimes gets the better of his sense of order and clarity; but some indignation is desirable if the same mistakes are not to be repeated in the future.

SHORTER NOTICES

"France To-day." By Maurice Thorez. Gollancz. 255 pages. 5s.

The accession of the Front Populaire Government to power this week-end has drawn general attention to the economic and political crisis in France which is discussed by M. Thorez in this book. M. Thorez is General Secretary of the French Communist party and one of the architects of the Front Populaire. The first part of his book examines the effects of the financial crisis in France. M. Thorez wishes "not to make a detailed study of the crisis, but only to note its social and political repercussions." He gives figures in support of the Marxist theory that the development of capitalism is accompanied by the concentration of industrial and financial concerns and the gradual decline of the small producer into the ranks of the proletariat. M. Thorez accuses certain members of the French financial and industrial oligarchy (which he shows to be one and not two oligarchies) of urging a deflationary policy in order to prolong the crisis and so ruin their weaker business competitors. In the first part of the book he thus describes the economic background, as he sees it, of that concentration into two extremes which is shown in the political field by the creation of the Fascist Leagues and the Front Populaire.

Though he maintains his analytical method in describing the former, his account of the latter is disappointing. The later chapters are repetitive and savour more of election addresses than historical analysis. Nevertheless, these chapters have some interest. In one, M. Thorez gives the programme of the Front Populaire, in another, "The Programme which the Single Party of the Working Class Proposes to Carry Out when in Power," which is much more like the Communist programme. "France To-day" is a lively and interesting book, which, incidentally, illustrates not only the need, but the very great difficulty, of forming a united "Popular Front" in France.

"Money Matters." By F. J. Scanlan. P. S. King and Son, Ltd. 156 pages. 6s.

In this book the author of "The Pound's Progress" once more takes up the cudgels in defence of recent British monetary policy. The first few chapters, dealing mainly with the problem of gold and the position of France, are lucid and interesting. This is particularly true of the chapter on judicial interpretations of the "gold clause" in various countries, by which governments have nearly always been successful in altering contracts on the principle—"Salus populi, suprema lex."

The author then goes on to discuss the internal recovery of Great Britain. He makes the familiar point that this has been far more important than the recovery in foreign trade, but fails to give a clear picture of why this has been so. His most important omission is an analysis of the effect of cheap money, particularly in promoting a recovery in building, and he has made no attempt to link up budgetary and tariff policy with the fall in interest rates. Nor is his treatment of foreign trade very helpful.

The chapter on banking policy is mainly devoted to attacks on banking nationalisation. There are few signs, however, that the author has made himself familiar with the chief arguments in favour of nationalisation, so that the greater part of his defence of our existing institutions is not as effective as it might be. He appears to be suspicious of the claim that banks can create credit, and to adhere rigidly to the view that banks "cannot lend unless trade and industry require to borrow from them," once again overlooking the vital factor of the rate of interest.

There are several factual inaccuracies which should be noted, for instance (page 64), the statements that the number of unemployed in 1935 was "double the number in 1930," and again (page 120), that in America unemployment was a "negligible" amount in 1929.

Public Control of Road Passenger Transport. By D. N. Chester. Manchester University Press. 221 pages. 8s. 6d. net.

Much of the difficulty in forming a balanced view of road and rail competition arises from the rapidity with which changes in the structure of the road transport industry have taken place in recent years. In Mr Chester's orderly work we are presented with a cross-section of the industry at the present moment.

The first part of the book is a commentary on the available statistics, and probably the most interesting section is that on the size of road passenger transport concerns. It is curious that numerically the very small operator still predominates; 43.6 per cent. of operators own one vehicle, and 82.6 per cent. have less than five vehicles each. On the other hand, the tiny minority of very large operators owns the majority of the vehicles; London Transport, for instance, owns more vehicles than all the one- and two-vehicle operators put together. Mr Chester does not attempt to generalise widely about the optimum size of operation, but he indicates that "there seems no reason to believe that large-scale is cheaper than small-scale operation." But "differences in size of operation are bound up with differences in the type of service provided," and the virtual exclusion of the very small operator from urban stage-carriage work is an example.

The second part of the book is a careful study of the methods and effects of statutory control. The somewhat empiric manner in which certain problems facing Traffic Commissioners have been solved is noted, and also the effect of the Minister's General Directions to Commissioners.

A chapter on "The General Transport Problem" concludes the book. Mr Chester writes lucidly on the current compromise between competition and monopoly. How far there is still "real" competition between road and rail is a matter of opinion. The battle for freight traffic is still being waged between the railways and the holders of "A" licences; but in passenger traffic the position has greatly changed since the Royal Commission on Transport heard the railways' grievances stated. As Mr Chester observes, "the same argument for competitive equality in the matter of control may now be used on behalf of the road transport interests." Railways can reduce their fares and increase their facilities without reference to the Traffic Commissioners; and there can be little doubt that their fare policy and better services have in the past few years attracted a considerable amount of traffic away from the roads. Still, in the background of the picture there is a silent witness—private transport.

"Trade Unionism and Labour Disputes in India." By Ahmad Mukhtar. Longmans, Green. 251 pages. 10s. 6d.

The Indian Trade Union Movement is still in its infancy, not so much in years—as early as 1884 strenuous efforts were made to establish the movement along more or less Western lines—but in organisation and leadership. Leaders are still drawn largely from the middle classes; central co-ordination is sadly lacking; many Unions have only a transitory existence; and the objects and policy of Unionism are ill-defined. The general public, and many Trade Union members, also, are ignorant of the legal position of Trade Unions in India, and have little appreciation of Trade Union principles and methods.

If Unionism is to develop along sound lines in India, if the best use is to be made of existing Trade Union legislation, and if disastrous industrial disputes are to be avoided, or at least lessened, it is essential to spread a better knowledge of the whole subject. For this reason Professor Mukhtar's little volume on "Trade Unionism and Labour Disputes in India" is to be warmly welcomed. The author gives a historical review of the development of Trade Unionism and of the course of labour disputes in India, and summarises the present position of the movement and of Trade Union law. If he throws little new light on the more fundamental problems involved, or even on the broader aspects of the movement in India, he does at least provide a handy summary of the main facts and statistics; and it was a happy idea to print the main Indian Acts on the subject in Appendices.

"Planning under Socialism and Other Addresses." By Sir William Beveridge. (London) Longmans, Green and Company. 142 pages. 3s. 6d. net.

Sir William Beveridge has reprinted his ten-minute broadcast addresses in the News-Service of the B.B.C. during 1935, together with his Herbert Spencer Lecture before the University of Oxford on "The Economic Implications of Planning under Socialism." The title essay is as good a short and popular exposition of the problems of economic planning as can be obtained anywhere. Many of the addresses discuss unemployment and will be found particularly interesting, coming from the chairman of the new Statutory Committee on Unemployment Insurance.

MONEY AND BANKING

THE EXCHANGE TRIANGLE.

THOUGH the pressure upon the franc continues, for the moment it appears that the franc has escaped with the loss of only one more of its nine lives. Yet few would be courageous enough to risk much either way on the future of the franc, for, as we point out on page 474, M. Blum will be faced with a formidable dilemma when he takes office next week. For the moment, however, we have a breathing space, which may be appropriately and usefully employed in an examination of the present relations between the pound, the franc and the dollar, against the background of the trend of prices in the United Kingdom, France and the United States.

As in previous years, the latest report of the Bank for International Settlements contains useful information bearing on these questions. The report is, perhaps, not quite so complete as it might have been, partly because it has had to respect the secrecy of various National Exchange Funds, and partly because the authorities of the B.I.S. still think exclusively in terms of gold. To say that, taking 1913 as 100, the gold index number of wholesale prices for Great Britain is 66, conveys little to British readers, who find it a wrench to realise that they must multiply the current British index number by a corrector equivalent to the extent of the depreciation of the pound against the franc. Still more meaningless is an American "gold" index number of 69, derived from the difference between the former and the present gold content of the dollar. We suggest that future reports of the B.I.S. might give, in the first place, the ordinary index numbers of each country, expressed in the national currency of the day, and might subsequently calculate purchasing power parities in the ordinary way. Nor can we entirely accept the conclusions of the B.I.S. to the effect that the relative levels of costs and prices in France, Great Britain, and the United States have on the whole become better adjusted to each other. These conclusions are derived solely from an examination of the relevant index figures at the end of each calendar year. To obtain an accurate picture of the trends it would seem advisable to take at least quarterly figures.

We mention these points less by way of criticism than as an introduction to a detailed survey of the relations between the three main currencies. We have prepared two tables covering the period since the revaluation of the dollar at the beginning of 1934. The first table gives quarterly wholesale price and cost-of-living index numbers for Great Britain, the United States, and France. September, 1931, equals 100 in every case:

Date	Wholesale Prices*			Cost of Living		
	U.K.	U.S.A.	France	U.K.	U.S.A.	France
1933, Dec.	105.3	104.0	85.9	98.0	90.2	99.0
1934, Mar.	108.7	107.7	85.9	95.9	91.6	99.0
June	108.2	112.1	83.2	97.4	92.1	99.0
Sept.	109.3	116.1	81.4	98.5	94.7	96.1
Dec.	108.4	114.1	77.7	98.5	94.5	95.0
1935, Mar.	109.0	116.9	77.7	96.0	95.0	93.0
June	112.7	118.3	77.7	98.5	95.4	92.3
Sept.	114.5	124.0	78.0	100.0	96.2	88.4
Dec.	117.9	121.8	80.7	101.4	103.2	90.0
1936, Mar.	117.3	119.7	85.6	99.3	102.8	91.7
Apr.	117.5	119.6	85.0	99.3	...	...

* U.K., Economist; U.S.A., Irving Fisher; France, Statistique Générale.

From these index numbers it is possible to calculate approximate purchasing power parities, and by applying to the actual rates of exchange, to calculate the over-valuation or under-valuation of each currency in terms of the others. In making these calculations the commonly-accepted basic assumption is made that sterling was over-valued in September, 1931, by 10 per cent. against both the franc and the dollar.

The next table shows the over- or under-valuation of each currency at different dates. Those columns headed (a) are derived from wholesale prices, while those headed (b) are derived from cost-of-living index numbers. In the columns relating to the pound against the dollar and the

franc a plus sign indicates that the pound was over-valued, and vice-versa. The sign $\pm$ o indicates equality. In the last two columns, which compare the dollar and the franc, a minus sign indicates that the dollar is under-valued.

Date	£ against \$		£ against Fr.		\$ against Fr.	
	a	b	a	b	a	b
1933, Dec.	+16.3	+24.8	-9.0	-26.7	-21.8	-41.1
1934, Mar.	+15.8	+20.2	-13.3	-33.6	-25.2	-44.8
June	+10.0	+20.5	-11.8	-32.8	-23.8	-44.4
Sept.	+6.5	+17.8	-11.1	-32.2	-16.5	-42.3
Dec.	+6.3	+16.8	-6.7	-30.8	-12.4	-40.7
1935, Mar.	$\pm$ 0	+8.2	-10.8	-34.4	-10.8	-39.4
June	+5.9	+15.2	-4.2	-29.5	-9.8	-38.6
Sept.	+2.8	+15.8	-2.7	-25.2	-5.7	-35.4
Dec.	+8.8	+10.8	-3.7	-25.5	-11.7	-32.8
1936, Mar.	+10.2	+8.2	-9.2	-28.2	-17.6	-33.6
Apr.	+9.7	...	-8.0	...	-16.7	...

The revaluation of the dollar in January, 1934, at a new parity of Frs. 15.08 to the dollar created a new discontinuity, involving the pronounced under-valuation of the dollar in terms of the franc. Sterling, occupying an uncomfortable position between the two was over-valued against the dollar and under-valued against the franc. The discontinuity was much greater when measured by comparative cost-of-living index numbers. Wholesale prices, which were more elastic and more subject to international influences, showed the discontinuity in less pronounced terms, but all the same left it considerable.

During 1934 and early 1935 British and American prices were free to rise, while French prices were pressed downwards. The consequence was that during the first half of 1935 equilibrium was within sight; for the discrepancies derived from wholesale prices had become so small as to be explainable possibly, by technical differences in the method of calculation of the various index numbers. In fact, the use of an alternative British index number suggests that during most of 1935 the pound was actually under-valued against the dollar. Based on the more rigid cost-of-living index numbers, and also on wages which were equally inelastic, the discrepancy persisted. How far it was due to tariff and import restrictions which affected the internal prices of the three countries in different degree is a question requiring lengthy argument. The theory of purchasing power parity loses a little of its relevance in a world of economic nationalism.

Towards the end of 1935 definite changes occurred which the B.I.S. report does not bring out. First of all the advance in American wholesale prices was arrested, while at the beginning of 1936 the rise in British wholesale prices also received a check. But at this moment French prices began to rise, partly because deflation in France had been carried to intolerable lengths, so that the needs and borrowings of the Treasury initiated a reflationary movement. This has given some relief to France, but at the cost of a renewed over-valuation of her currency and a growth in her import surplus. The extent of this new over-valuation is clearly illustrated in the second table.

Once more sterling has become faced with the impossible task of adjusting itself to both the dollar and the franc, and once more it has had to occupy a half-way house. By the early part of this year, the over-valuation of sterling against the dollar, which a year before had practically disappeared, had grown to about 10 per cent., and there is as yet little sign of any diminution. Simultaneously, the pound has become more under-valued against the franc. All that can be said is that the April index figures suggest a slight reversal of both trends, but it is premature to say that the present tendency is towards the restoration of equilibrium.

Roughly, sterling to-day might be in equilibrium at \$4.60 and somewhere between Frs. 82 and Frs. 104. This would imply that the dollar should be quoted in Paris at somewhere between Frs. 17.80 and Frs. 22.60. If we made

more precise estimates of \$4.60 to the pound, Frs. 92 to the pound, and Frs. 20 to the dollar, they would suggest that in terms of gold and on the assumption that the dollar is fixed at its present gold content, the franc should be devalued by almost exactly 25 per cent. All these estimates are subject to the usual wide margins of error inherent in calculations of purchasing power parity, but they help to put the problem of the franc and other exchanges in their proper perspective. Whether a solution will be attempted along these lines may become apparent in the course of the next few months—or even weeks.

In the meantime we have ample justification for supporting the franc. So long as France is on an unimpaired gold standard, the dollar cannot rise above Frs. 15.20. If we ceased our support of the franc, so that sterling rose in Paris to, say, Frs. 85, the pound would automatically rise in New York to \$5.60! It is true that there would also be a rapid outflow of gold from Paris to New York, in substitution for the outflow to the British Exchange Account, but so long as the franc remained on gold this would not suffice to keep sterling down in terms of dollars. At \$5.60, the pound would be over-valued against the dollar by over 20 per cent., which would be a very serious matter for British trade.

FINANCIAL NOTES

The Foreign Exchanges.—The London market has been fairly quiet this week, possibly because all the large holdings of liquid funds have already fled from Paris. A drain of funds in small quantities continues, and so the franc has remained weak. There has been little intervention by the British control, but spot sterling has been quoted as high as Frs. 75½, and spot dollars are at Frs. 15.19, or just over the export gold point. Three months' francs are now Frs. 6½ discount (equal to 32 per cent. per annum), while one month's francs are at Frs. 3½ discount (or 41 per cent. per annum). The heavier discount on one month's francs indicates a belief that something may happen within the next month, possibly about the middle of June. If the new French Government can hold on to July—which means the postponement for the present of public works—a seasonal expansion in revenue is due, and will help the Treasury. In the meantime, however, the needs of the Treasury may necessitate devaluation, and French opinion is now becoming more reconciled to this possibility. For one thing, all holders of funds in foreign centres stand to profit out of devaluation. At the moment there are no legal exchange restrictions in force in France, and opinion is becoming more opposed to such a course. On the other hand, the banks are placing obstacles and delays in the way of purchases of gold and also of the transfer of funds abroad. Forward business is still being transacted, in spite of official hints to the contrary. These unofficial restrictions are reflected both in this week's diminution in gold shipments to London and also in the contraction in the London gold premium. As a result of this contraction and the rise in sterling against the franc and dollar, the London price of gold has now fallen to 139s. 6d., or to the lowest price since November, 1934. Three months' guilders have fallen since a week ago from 8½ to 13 cents discount, and three months' Swiss francs from 22 to 32 centimes discount. Swiss francs are now the weaker of the two currencies, and, contrary to previous belief, it is now suggested in London that Switzerland, instead of Holland, may be the first to follow France off gold. The spot New York rate has now risen to \$4.99½, in sympathy with the depreciation of spot francs against sterling.

The Money Market.—The further reduction in bankers' balances at the Bank of England has made the clearing banks reluctant to buy bills. The result is that the discount market is having to carry more bills than usual, and so there has been a good demand for loans. This was accentuated by the fact that one or more of the clearing banks have called small amounts from the market every day of this week. Next week, when the War Loan dividend is paid, money will be more plentiful, and the market

Foreign exchange dealers

Messrs. Marmolin, Rydberg, Holmberg, and Markland, of the SKANDINAVISKA KREDITAKTIEBOLAGET, Stockholm, offer you a complete foreign exchange service. Call Stockholm 1010

expects the banks to buy more readily. Notwithstanding suggestions to the contrary, the recent drop in bankers' deposits is due to special causes, including the French hoarding of British currency and the usual preparations for the War Loan dividend. It does not indicate any change in British monetary policy.

	May 7, 1936	May 14, 1936	May 21, 1936	May 28, 1936
Bank rate.....	% 2	% 2	% 2	% 2
Clearing banks' deposit rate ...	1	1	1	1
Short loan rate :—				
Clearing banks	1-1*	1-1*	1-1*	1-1*
Others	1	1	1	1
Discount rates :—				
Treasury bills	1	1	1	1
Three months' bank bills	1½-1½	1½-1½	1½-1½	1½
* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.				

Nevertheless discount rates are appreciably harder. The Treasury bill tender rate, has risen from 10s. 5.98d. to 11s. 0.47d. per cent., and three months' bank bills are now a firm 1½ per cent., and at times a shade higher. The temporary contraction in bank cash has been accompanied by a further increase in tender issues of Treasury bills, which now total £558 millions against £493 millions in early April. Offerings of bills to be paid for next week are £50 millions against maturities of £45 millions, but the release of the War Loan dividend should enable these additional bills to be easily absorbed. Hence there is little ground as yet for expecting money to become dearer.

The Bank Return.—Whitsun currency requirements superimposed upon French hoarding have once more raised the note circulation to a new record. The week's increase is £3.0 millions, but as the Bank has acquired a further million of gold the reserve is only reduced by £1.9 million.

	BANK OF ENGLAND				
	May 29, 1935	May 6, 1936	May 13, 1936	May 20, 1936	May 27, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	192.6	203.7	204.3	205.4	206.4
Note circulation	390.4	422.6	424.8	423.1	426.1
Banking Department :—					
Reserve	63.0	41.8	40.3	43.1	41.2
Public deposits.....	23.1	9.2	13.3	21.0	19.8
Bankers' deposits	55.0	88.3	83.2	80.1	78.3
Other deposits.....	36.0	36.7	37.0	36.8	36.7
Government securities ...	85.4	88.8	89.9	91.2	91.8
Discounts and advances	5.3	9.4	8.8	7.1	6.7
Other securities	11.2	11.9	12.3	14.3	12.9
Proportion	42.8%	31.1%	30.1%	31.2%	30.5%

In the banking department public deposits remain high in preparation for next week's War Loan dividend. The small decrease since last week is probably fortuitous, reflecting inequalities between Treasury bill payments and maturities. Currency withdrawals have reduced bankers' deposits to £78.3 millions, or again to the lowest point for this year.

INSURANCE NOTES

Royal Insurance.—In spite of a large increase in new business from £3,794,000 to £4,650,000 in 1934, the closing year of the valuation quinquennium, last year witnessed a further considerable expansion to £4,908,000. Annuity consideration moneys, however, fell from £241,000 in 1934 to £181,000. The net rate of interest on the life and annuity funds increased by 1s. 6d. per cent. to £3 19s. 6d. per cent. Fire premium income at £5,558,000 was slightly smaller, but underwriting profits were even better than in 1934. In the accident department premium income was £23,000 greater at £5,160,000, and profits were more satisfactory. These gratifying results were no doubt directly attributable to improved experience in the United States. Marine premium income increased from £792,000 to £808,000; the marine fund now amounts to £1,502,000. Strong departmental reserves are held, amounting in the fire branch to 103 per cent. and in the accident branch, after transferring £248,000 from profit and loss to the additional reserves, to 103 per cent. also. The results of the last two years are shown below.

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	594,920	10.6	720,631	13.0
Personal accident, employers liability and general	181,595	3.5	297,108	5.8
Marine	17,095		60,914	
Life	50,000		50,000	
Less items debited to profit and loss	843,610		1,128,653	
To general reserve	372,518		382,224	
	471,092		496,429	

Total assets in the consolidated balance sheet increased from £54,645,000 to £56,110,000. The general reserve fund has been raised from £1,000,000 to £1,250,000. The profit and loss balance, after providing for the year's dividend, increased from £1,890,000 to £1,959,000. Mortgages on property rose substantially from £1,966,000 to £2,919,000, but policy loans decreased by £100,000. British and Colonial securities showed some reduction, but foreign Government securities, which formed nearly 15 per cent. of the total assets, increased from £6,533,000 to £8,193,000. Debenture stocks fell by £639,000 to £8,489,000, but preference shares increased by £425,000 to £3,958,000. For the sixth successive year the dividend is 65 per cent. and costs £1,414,000, compared with available interest earnings of £1,234,000.

* * *

Sun Insurance Office.—The report now issued relates to the two hundred and twenty-sixth year since the foundation of this office, which is the oldest fire insurance company in the world. Total fire premium income fell from £2,338,000 to £2,293,000, but accident premium income increased from £1,775,000 to £1,854,000. Certain of the premiums on automobile insurance in the United States, however, were credited in previous years to the fire fund. In 1935 such premiums amounted to £94,676. These have been included in the accident account as being appropriate. If allowance is made for this, the position is reversed, since a true increase has occurred in the fire premiums, with a reduction in the accident premiums. At the beginning of the year a reserve was held in the fire account for unexpired risk in connection with this special type of policy, so presumably all claims relating to that reserve are included in the fire account. A small part of the premium income in the accident account refers to risks already expired at the close of the year, the figure being £40,098 in 1934 and £84,837 last year. For the purpose of our notes, the reserve for unexpired risk has been taken as 40 per cent. of the remain-

ing premium income in each year. The results of the last two years are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	208,295	8.9	310,556	13.6
Personal Accident, etc.	35,671	2.0	24,785	1.3
Marine	80,000		50,000	
Less items debited to Profit and Loss	323,966		385,341	
Net Trading Surplus	206,131		196,806	
	117,835		188,535	
To Reserve (Accident Dept.)			135,000	

The departmental reserves are very ample, amounting in the fire branch to 110 per cent. of the premium income, and in the accident branch to 71 per cent., after transferring during the year £135,000 from profit and loss. In the marine branch the fund of £933,000 is equal to 169 per cent. of last year's premiums. The total assets of the Sun and its subsidiaries amount to £10,609,000, and general and investment reserves amount to £1,200,000. In addition, the profit and loss balance, after paying the 1935 dividend, is £1,084,000. The dividend is again at the rate of 53½ per cent., and costs £251,208, against available interest earnings of £251,784.

* * *

Car and General.—The fire premium income of this company, which is controlled by the Royal Exchange, showed a reduction from £101,000 in 1934 to £95,000 last year, but in the accident branch, which includes the company's main activity of motor insurance, premiums at £1,117,000 were greater by £56,000. In both branches the underwriting profits were distinctly favourable:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	9,353	9.3	14,025	14.7
General accident	58,703	5.5	73,391	6.6
Marine	7,279	14.0	4,655	8.5
Less items debited to profit and loss account	75,335		92,071	
	33,197		65,271	
	42,138		26,800	
To general reserve	12,000		45,000	

Assets increased from £1,780,000 to £1,870,000. Investments appear in the balance sheet at £1,245,000, against market values on December 31st last of £1,382,000. General and investment reserve funds amount to £477,000 and £21,000 respectively. The dividend is again at the rate of 50 per cent., and costs £41,000 compared with available interest earnings of £45,000.

* * *

Gresham Life.—This Society is one of the few life assurance offices which transact business abroad. Although it is now controlled by the Legal and General, it fully retains its individual character. Last year new sums assured amounted to £3,307,000, of which £2,141,000 were of foreign origin, compared with £2,603,000 and £1,641,000 in the previous year. Annuity consideration moneys increased by £33,000 to £146,000, the bulk of the business being obtained in this country. The net rate of interest was only 2d. per cent. smaller at £4 9s. 10d. per cent. Home premium income increased from £296,000 to £315,000 and foreign premium income from £639,000 to £682,000. Claims in this country were £79,000, compared with £70,000 in 1934, and abroad were £171,000, against £149,000. Total assets increased from £9,913,000 to £10,187,000 without any noteworthy change in the distribution of investments. Legislation in most foreign countries requires the deposit by foreign life offices of approved assets not less in value than the actuarial reserves of the business in force there. The total book value of the investments so deposited by the Gresham is almost £2,000,000.

THE STOCK EXCHANGE

CANADIAN PACIFIC RAILWAY

"It will be the policy of the directors to re-establish a dividend on such (preference) stock in whole or in part at the earliest possible date consistent with prudent administration . . . We have grounds for hoping that that desired consummation may be realised in the near future. . ."—Sir Edward Beatty, President of the C.P.R., at the annual meeting, May 6, 1936.

HOLDERS of Canadian Pacific 4 per cent. preference stock have realised, since October, 1932, that a non-cumulative security which receives a dividend when the current year's earnings permit, and carries no prior right for capital repayment, qualifies for the appellation "preference" by courtesy only. For the 28,000 holders of this stock (some 98 per cent. of whom are domiciled in Great Britain) bygone are, perforce, bygones. Their present problem is to assess the potential value of the equity which the president's words have suggested. In market circles the prospect is evidently regarded as favourable. At a current quotation of 49½, the stock apparently looks forward to a distribution of at least 2½ per cent. What are the prospects of such a payment?

It would be unfair to invest Sir Edward Beatty's words with more than their literal content. They are certainly more optimistic than any statement from the chair since depression began. But it is too early, as yet, to canvass any figure for future payments—or even their date; for the claims of "prudent administration" may be heavy, and recent reports have revealed that cupboards which have been bare of dividends have not always lacked their skeletons. Current earnings prospects suggest several reasons for a cautious investment view. For example, how are investors to interpret the recent improvement in the trend of traffic receipts? The relevant figures are given in the following table:—

	(\$'000)					
	Gross Earnings		Net Earnings		Cumulative Increase 1936	
	1935	1936	1935	1936	Gross	Net
January	8,267	9,324	205	613	1,057	408
February	8,656	9,281	830	867	1,682	425
March	9,516	10,680	1,047	1,348	2,846	726
Total, 3 months	26,439	29,285	2,102	2,828	2,846	726
Total to date (20 weeks)	43,040	47,706	...	...	4,666	...

The March quarter has always been the smallest revenue producer for the Canadian Pacific, and the increase in net earnings from \$2,102,000 to \$2,828,000 is undoubtedly significant. The average weekly increase in gross receipts has tended further to widen during April and May. But comparison of the results with those of 1935 must take account of the recovery in Canadian economic conditions during the summer of last year. Although industrial activity was at a higher level during the first three months of this year than of 1935, a slight tailing off in certain branches of trade has recently occurred. It is a hopeful sign that grain marketings were appreciably higher during the first quarter of this year than of 1935. That a system whose economic *raison d'être* is the prairie grain haul should have earned less from agricultural products last year than at any time since 1914 shows how little the relatively prosperous Eastern Provinces call the Canadian Pacific. If activity in the grain markets were normal, a significant increase in agricultural freights might accrue. But it is early, as yet, to speculate on what Nature and Man, between them, may do before next December.

An improvement in operating conditions on the C.P.R. is suggested again by the fact that 9.7 per cent. of the first quarter's gross revenues were retained net this year, compared with 8.0 per cent. last year. Two primary factors were at work a year ago to increase operating expenses.

Partial wage-cut restorations in January and May, 1935, combined with anticipated maintenance work, carried out before its due date, produced a substantial increase in maintenance and transportation costs. For the investor it is important to decide whether either of these factors, in a long-term view, can be regarded as "abnormal." Stockholders realise the importance of adequate maintenance provision, even in lean years. They may raise little objection to the Dominion Government's arrangement for expediting the work last year, and should be prepared to contemplate its continuance. Wages, however, are still subject to a basic 10 per cent. reduction. Last year's restorations are reflected in the increase of \$4.1 millions (to a total of \$64.4 millions) in wages charged to operating expenses. If experience in this country is any guide, preference stockholders may have rival claimants for a share in any substantial net revenue increase.

The contemporary improvement in earnings, modest though it is, provides even more slender support for unguarded preference stock estimates. For the investor who looks farther ahead, there is significance in the following table showing changes in the chief headings of revenue and expenditure since 1929:—

	(\$'000)				
	1929	1933	1934	1935	Fall since 1929 (%)
Revenue:—					
Freight	153,317	85,735	95,416	98,375	36
Passenger	34,139	14,280	15,159	15,156	56
Other†	22,275	14,255	14,968	16,148	28
Total	209,731	114,270	125,543	129,679	38
Working Expenses:—					
Maintenance of way	33,325	17,613	18,890	19,726	41
Maintenance of equipment	39,854	17,324	20,428	22,923	43
Transportation	71,235	43,633	45,592	47,453	33
Total‡	166,586	93,408	101,159	107,281	35
Other Income:—					
Dividends and investment income	7,404	3,068	2,344	3,443	54
Net earnings, steamships	3,220	2,175	2,675	3,236	...
Net earnings, hotels	4,609	975	1,645	1,466	68

† Includes mail, express sleeping and dining cars and miscellaneous.
‡ Includes traffic expenses, miscellaneous and general expenses and railway tax accruals.
§ Before depreciation. Amounts of \$3,854,000 in 1933 and \$3,784,000 provided for depreciation from surplus, and \$3,551,000 in 1935 charged against total income.

Since 1929 the fall in maintenance provisions has exceeded every other operating movement—except passenger revenues. Direct transportation costs vary fairly closely according to the volume of traffic handled. The incidence of maintenance costs, however, depends upon the accountancy procedure adopted. Where the suit is tailored according to the cloth, as in C.P.R., the provision bears close resemblance to a direct charge. Taking the lean years with the good, this procedure meets cyclical fluctuations reasonably well, but in a period of sustained freight depression, "economy" in maintenance may well have both a voluntary and an involuntary aspect. Since 1933, the annual maintenance provision has been increased. It may very probably be deemed sound finance to raise it still further whenever traffic improvement is well under way.

The company has recently set aside substantial sums for "special" non-operating charges, including such as losses on abandoned lines and properties retired (for which \$4,692,085 was charged to surplus last year) and provision for losses on United States interests (\$4 millions). Regarding the former, the president was explicit. It was "obviously" unnecessary, he declared, to consider such charges as losses on abandoned lines in connection with dividend policy, since no cash disbursements were involved. Can this view be reconciled with orthodox accounting canons? During the past three years, "surplus" has been charged with some \$38 millions for these and other charges. In 1932, the first year in which the common dividend was completely passed, a net credit of \$41,977,000 was transferred

to revenue "surplus" from "Surplus in other assets." This capital accretion has thus, in effect, been used to meet charges which normally would have required satisfaction from revenue. Nor does a distinction between these charges and, say, the provision for depreciation in American investments appear fundamental. In the last four years, some \$16 millions have been charged to "surplus" under the latter heading, avowedly because of their "extraordinary" nature. But the necessity for making further advances to the "Soo" line is to be taken into account in determining dividend policy. With all due respect to the company's accountants, stockholders may question whether their prospects—as the lawyers used to say of a different kind of "equity"—do not "vary with the length of the Chancellor's foot."

The problem of capital charges on the C.P.R. cannot, indeed, be lightly dismissed. The company's steamship fleet, for example, during the past three years, has failed to earn depreciation at the modest rate of 3½ per cent. The problem of preserving capital values—whether presented in the guise of steamship depreciation, line abandonments or shrinkage in investments—is a matter of prime moment, in view of the figures given in the following table, which analyses changes in Property Investment since 1929:—

\$'000

	1929	1931	1933	1934	1935
Property Investment (end year):					
Railway rolling-stock, etc.	798,914	868,448	870,927	867,435	865,074
Ocean steamships	100,992	116,398	116,437	111,887	104,849
Interests in associated lines at cost	154,190	177,155	181,747	184,268	199,956
Total property investment	1,054,096	1,162,001	1,169,110	1,163,589	1,169,880
Analysis of Property Investment charged during year:					
Rail	17,315	12,739	Cr. 306	—Net—	1,178
Rolling-stock	40,187	6,767	Cr. 640	Cr. 3,292	Cr. 2,230
Offices, hotels and tel.	13,377	3,076	106	256	Cr. 139
Leased rail properties	3,958	8,122	199	1,387	Cr. 1,061
Issued Capital (end year):					
Ord. stock	330,000	335,000	335,000	335,000	335,000
Preference	117,182	137,257	137,257	137,257	137,257
Bonded debt	364,810	404,235	513,450	496,444	491,751
Locomotives and Rolling-stock:					
Locomotives	No. 2,143	No. 2,041	No. 2,104	No. 2,048	No. 2,011
Passenger cars, sleepers, etc.	2,832	2,841	3,381	3,341	3,312
Freight cars	92,113	87,539	86,095	83,835	81,096

Two features stand out clearly. First, new capital expenditure since 1931 has been reduced to the minimum. In the last three years it has actually been exceeded by properties retired. Secondly, it has been necessary to increase the bonded debt by some \$87½ millions during the period, largely by the issue of short-life bonds, convertible into ordinary stock at par. Preference stockholders may feel that an increase of traffic such as would justify a dividend payment in the near future, might not inconceivably synchronize with a judicious programme of capital expenditure.

Everything turns, in fact, on the construction which the company places on the term "prudent administration." The immediate future, so far as it can be foreseen, promises some further improvement in receipts, but not a spectacular rise. Basic railway conditions in Canada have lately shown little change. Although the C.P.R. is a "long-haul" system, it is by no means immune from road competition. Economies from working arrangements with the Canadian National System have so far achieved only financial results. Their total potential saving is in the order of \$1,600,000, shared by the two systems. On "Thornton" and "Beatty" estimates, unified management would provide \$60 or \$75 millions savings under normal traffic conditions. It is unlikely, however, that a Liberal Administration will take further steps towards unified management when its Conservative predecessor was content with the Act of 1933.

The conclusion, in short, of this survey of current conditions and future prospects, would seem to be that C.P.R. preference stock, whose price rarely exceeded 80 in pre-depression years when its dividend was covered ten times or more, is somewhat generously valued at 49½ today. The \$25 common shares, at \$12½, are a proposition for the specialist rather than the private investor.

INVESTMENT NOTES

A Debatable Precedent.—Men and angels rejoice when conciliation replaces litigation. Nevertheless, we may question whether all the principles involved in the Union-Castle settlement, announced at the end of last week, form desirable precedents. Broadly, the company's preference holders sought to retain, in perpetuity, voting control to which they had formerly been entitled only when their dividends were in arrear. Under the agreed terms, both classes of capital, which have similar nominal totals, will share voting power on a fifty-fifty basis. To obviate any possibility that the whole of the ordinary stock shall ever come again under a single ægis, the settlement provides that steps will be taken to spread it widely among the investing public. Presumably (although the chairman did not say so at last week's meeting) it is intended that any future increase of capital shall be divided equally between preference and ordinary holders, for otherwise, on a one vote per £1 basis, if the paid-up capital were raised to its full authorised amount, the preference would have over five million votes against three million for the ordinary stockholders. It may be questioned, however, whether, as a general principle, the ranking of preference with ordinary capital equally for voting purposes is wholly advisable. We have always protested, in these columns, against the widespread practice of disfranchising preference shareholders by depriving them of votes unless or until their dividends have fallen into arrear, i.e. until damage has been done to their interests. They are clearly entitled to such voting power, and its corollary of representation on the board, as will give them a voice in a company's affairs, *proportionate to their interest*. But that interest, after all, is not wholly identical with the interest of the equity shareholders. Both classes are ultimately dependent on earning power for their income, but preference shareholders, once their fixed dividend has been amply covered, have not the same incentive as the ordinary shareholders to enterprise in the conduct of affairs. Further, it can scarcely be maintained that, in an accounting or in any other sense, £1 nominal of preference capital is in all respects identical with £1 nominal of ordinary capital. Both are "conventional" amounts, in the sense that their true value, at any given moment, depends on such factors as general interest rates and the current level of a given company's profits. But under normal conditions, the benefits of energetic and successful directorial policy accrue almost entirely to ordinary shareholders—or, in other words, the more progressive a company, the wider the discrepancy between the nominal and the "true" value of the ordinary capital. In ultimate analysis, the case against *rentier* control (as distinct from *rentier* representation) appears overwhelming, and a similar view applies, with some modification, to arrangements for the equal division of control, on the lines of the Union-Castle settlement. While there will be every sympathy with the anxiety of that company's preference shareholders to safeguard themselves against the possibility of ever being drawn into another Royal Mail disaster, it would be regrettable if preference shareholders in other companies were widely encouraged to seek significant concessions by threatening to change temporary and provisional powers into permanent rights.

Chronique de Défaut.—In a world in which moral suasion and even the power of the purse exert decreasing effect, the Corporation of Foreign Bondholders pursues its work—not without success—of urging the claims of the creditor and protecting him from wanton default. It brings to its task expert knowledge and a willingness to make concessions to those debtors who are still genuinely hard-pressed by the slowly lifting world depression. The record of its work during 1935 is contained in the 62nd annual report.* A list of positive achievements of the year, however, would certainly underestimate the value and effectiveness of the

* Published by the Corporation at 17 Moorgate, E.C.2. Price 7s. 6d.

Corporation's achievement. The record of defaulting debtors shows that some slow progress is being made, but the classical recalcitrants, like Ecuador, Mexico and Peru, continue to trade solely in good intentions. Some States who are willing to make token payments also appear to regard them with pessimistic finality. Greece, for example, maintains her maximum offer of 35 per cent. of interest, although her creditors maintain that it would be within her capacity to transfer 50 per cent. The failure of City opinion to respond to her recent unofficial suggestions of a modest increase in the service is apparently responsible for the non-departure of the financial delegation which was expected in London early this month. The effect of depression upon debtor countries the world over is evident in the statement of defaults at the beginning of this year. The bondholder must continue to hope for the day when the effects of world depression, trade restrictions and nationalist financial policies will have passed away and leave him some fruit to share.

Actuaries' Investment Index.—The past month has marked a recessionary phase in almost every section of the Stock Exchange. That the phase is one of dull stolidity, rather than of nervous selling, is clearly discernible in the movements of the general indices. The index of 178 industrial ordinary shares, for example, was two points lower at the end of May, at 81.9, compared with 83.9 on April 28, and six points higher than the end-May figure of 75.8 last year. The corresponding yield figures are 3.75 per cent. on Tuesday last, 3.64 per cent. a month ago, and 3.83 per cent. a year ago. Similarly, miscellaneous industrial debenture and preference issues have resisted a fall of two points in the Consols index during May. The movements in the principal fixed-interest and ordinary share groups are illustrated in the following table:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Year Ago (May 28, 1935)	Month Ago (April 28, 1936)	This Week (May 26, 1936)	Year Ago (May 28, 1935)	Month Ago (April 28, 1936)	This Week (May 26, 1936)
Fixed Interest:						
2½% Consols	157.0	151.7	149.7	2.84	2.94	2.98
Misc. Indust. Dbs. (17)	124.5	125.8	125.7	3.91	3.92	3.92
Do., Preference (44)	117.9	120.7	121.1	4.33	4.27	4.25
Ordinary:						
Insurance Cos. (24)	118.5	134.4	130.7	3.54	3.15	3.25
Coal (7)	90.3	98.7	92.6	3.89	4.13	4.45
Cotton (6)	39.2	40.5	36.8	2.26	2.19	2.18
Iron and Steel (12)	57.8	70.7	67.7	3.56	3.14	3.31
Motors (8)	52.3	59.1	55.1	4.87	3.99	4.27
Electric Supplies (10)	110.9	137.9	134.7	4.49	3.59	3.84
Home Rails (4)	66.3	72.9	68.8	1.58	1.57	1.59

A feature of particular interest in the ordinary share selections, however, is the "tiredness" of certain individual groups. The iron and steel trend, for example, reflects a spreading belief that most sections of the industry, apart from those directly connected with the armament demand, have been operating close to optimum profitability for some time. Home rail stocks are also once more affected by the wages question. In a month which

has seen waning interest in Home Corporation issues at regulated prices, the fall in Old Consols is not unexpected, although a certain amount of French support earlier in the month has sheltered the market from a larger recession. The fall, however, has reinforced the conclusion, discussed in these columns within recent weeks, that the course of "gilt-edged" ordinary shares, including those of insurance and utility companies, may be affected by considerations of harder interest rates if the movement continues.

COMPANY NOTES

General Engineering Companies.—In an age of specialisation the general engineer has been giving way to the specialist, and the class of "general engineers" now largely comprehends those miscellaneous engineering businesses outside such large and obvious categories as electrical engineers, marine engineers and precision en-

gineers. Consequently the fortunes of the individual concern are often linked to some extent with one or more regional trades which it serves. Yet even in this diversity of partial specialisation, common characteristics appear. The accompanying table, covering the depression and recovery period, demonstrates the marked liability to fluctuation in profits, which is always associated with a

capital goods trade. But even over a period of reasonably consistent general trend, such as 1924-29, the profits of "general engineers" tended to fluctuate unpredictably and independently of the trade cycle as a whole. During the past decade competition in the group has been fairly severe. In the late 'twenties profits were often quite good; but the increase in British consumption of engineers' raw materials (steel, the base metals, alloy metals, etc.) has, over the decade, coincided with a contraction in the numbers employed in general engineering. Evidently the "general" section has been losing ground to such vigorously expanding sections as the electrical engineering, precision engineering, and motor manufacturing trades. In some of his more important activities the general engineer is identified with the age of mechanical drive, which is now rapidly giving way to the age of electrical drive. And in a context of large scale enterprise the general engineer, of which the rather small independent concern is typical, is losing some of his business to the internal engineering departments maintained within the large concern itself. This, in turn, has frequently increased the general engineer's dependence on the export market, a development illustrated by the relative prosperity of many of the companies in the years of good exports of engineering products before 1929. With the broadness invariably associated with generalisations on the trade, it would seem reasonable to suggest that if this country can look forward to a further period of re-equipment (which is still quite possible in view of the under-equipment of our industries during the post-war decade) the general engineers should be able to secure a fair share of prosperity—as is normal for them at such times. But their shares are emphatically for the specialist with close industrial contacts. In most cases the market is narrow, and it is seldom that a reasonable estimate of future profits can be based upon the trend of the immediate past.

Realisation Group Accounts.—The initial reports of the R.M. and E.D. Realisation Companies set out officially for the first time the complete list of the assets of both concerns. The directors emphasise, for obvious reasons, the difficulty of indicating even approximate realisable values for the assets still held. As no specific values were attributed to the individual items at the time of the acquisition, the assets are shown in the balance sheets under an omnibus heading. A study of these schedules, however, confirms the general outline of the position given in the article on the group which appeared in our issue of February 8th, page 308. An item of £462,000 among the E.D. assets being a claim "in respect of amounts received by creditors of the British and African Steam Navigation Company, Ltd., under guarantees given by Elder Dempster and Company, Ltd.," is of particular interest, for it confirms our deduction that the proceeds of the £250,000 of E.D. shares sold in the market at the beginning of this year would eventually return to the Realisation Company for the benefit of the shareholders. We inferred "a substantial windfall, of at least £450,000," due to the probable solvency of the British and African Company. This latter condition is now fulfilled by the announcement, last week, that a new holding company, Elder Dempster Holdings, Ltd., is to be formed to acquire all the assets of the African group. The scheme, as is further referred to below, provides for the disposal of the indebtedness of the British and African Company and the allotment to it, as balance of the purchase price, of 55,000 shares in the new holding company. This represents a value of rather more than 5s. on each preference share of the British and African Company. E.D. Realisation holds 199,000 British and African preference, and the indicated valuation represents a modest surplus over the basis taken for the estimate given in the above-mentioned article. In one or two other items also our estimates appear to have been slightly conservative. A small premium over par is now thought probable on the final liquidations of James Moss and David Colville, while the debts due by Glen and MacAndrews may have yielded a little more. Taking into account such adjustments, our estimates may be brought up to date. Each R.M. Realisa-

tion £1 ordinary represents (we deduce) 27s. 5d. nominal of Union Castle ordinary, plus 20s. 10d. in Royal Mail ordinary, minus 22s. 6d. Since the sale of Royal Mail House, the speculative element has been further reduced, the main unknown factor being the value of Royal Mail Lines ordinary shares, which, despite the payment of a maiden dividend, would still appear to be fairly well priced at anything over par. The former E.D. Realisation estimate—10s. 2d. cash, plus 27s. 4d. of Union Castle ordinary stock—stands. It remains evident, therefore, that unless Royal Mail Lines shares prove to be appreciably more valuable than normal circumstances appear to justify, there is a wide margin in favour of E.D. shares as against R.M. shares, both of which are currently quoted in the market round 42s. In favour of the R.M. position it may be noted, however, that it is more liquid than that of the sister company. The R.M. position has now resolved itself largely into three factors: the balance of the properties; the Royal Mail Lines interest; and the Union Castle interest. All of these interests could be liquidated in the not far distant future. The E.D. position contains some items which may take longer to move, and a moderate discount for this factor would be justified.

Elder Dempster Holdings Ltd.—The formation of the new holding company, Elder Dempster Holdings, Ltd., marks the final victory of the African Steamship debenture holders in a long struggle. They have on at least two occasions been in serious danger of seeing their security sold at a knock-out price in order to meet the claims of prior creditors. The present plan provides for the discharge of all the liabilities of the African group and for the gathering together in one hand of all the capital of Elder Dempster Lines, Ltd., which passed piecemeal into the hands of the creditors as a result of the 1932 scheme. The new company will have an authorised capital of £3,000,000 in £1 shares, of which 1,506,133 are to be placed privately for cash at 22s. 3d. (675,000 to be subscribed by the Ocean Steamship Company or its associates) and 89,867 are to be allotted to E.D. Realisation, British and African, and African Steamship. The balance of 1,404,000 shares are to be reserved to meet the conversion rights attached to a 3 per cent. income debenture which will be issued on a par-for-par basis in exchange for the existing African Steam 6 per cent. debentures. The new 3 per cent. income debentures will be convertible into shares of the holding company at the rate of 90 shares for £100 stock until June 15, 1939. The African debenture holders thus hold a stock which has a good backing of assets and a three years' option on 46.8 per cent. of the equity.

Anglo-Iranian Oil Company.—The net profits of the Anglo-Iranian Oil Company for 1935 amounted to £3,519,183, an increase of approximately £336,000 over the figure for 1934. After providing £408,747 for extra depreciation and a final dividend of 10 per cent., making 15 per cent. for the year, £511,126 is carried forward against £485,674. The market had been estimating, as we stated in our leading article last week, a dividend of 20 per cent. for the year against 12½ per cent. in the previous year. Various reasons have been given for this disappointing dividend. In some quarters it is believed that the company's trade has been dislocated by the extra demand for fuel oil for the Fleet in the Mediterranean. In others it is suggested that political considerations dictated a conservative dividend policy, having in view the attacks which had been made on the company for selling oil to the Italian forces in Abyssinia. The British Government is, of course, interested on account of its holding of £7,500,000 out of the ordinary capital of £13,425,000. The shares of the company fell, on the announcement of the dividend, from £41½ to £41. Having regard to the fact that the company enjoyed a rise of 1d. per gallon on petrol since May last year, and that the consumption of petrol is steadily increasing, there is every disposition to regard the future of the company as hopeful.

Edmundson's Electricity Results.—The results of this large undertaking for the past year again show a substantial increase in earnings. The following table shows that the greater part of the expansion is attributable to direct operating profit—presumably from the contracting departments since all the supply undertakings are controlled through subsidiary companies. The extent to which this profit arises from services rendered in respect of capital expenditure by subsidiary companies is not clear, but the total gross trading profit of £196,693 is qualified (for the first time) by a note to the effect that a "considerable part," as in past years, is derived from this source. Since the total amount for stocks and work in progress is only £6,313, the trading profits, which amount to more than £160,000, even after provision for all expenses, seem generous. It is understood that the McGowan Committee on Distribution (whose report is now said to be completed) has examined the relation of holding companies and their subsidiaries engaged in electric supply. It may be that the company may experience some difficulty in maintaining this part of its profits at the present level. If this item were entirely excluded, however, the earnings would still be adequate to cover the dividend, as the following table shows:—

	Years to March 31st		
	1934	1935	1936
Operating profit	67,380	143,387	196,693
Dividends and interest received, etc.	496,612	502,533	527,778
Total income	563,992	645,920	724,471

Carried forward	41,855	44,577	49,720†

† After writing off £44,150 issue expenses.

Without a consolidated profit and loss account, it is impossible to assess the group earnings, but some indication can be drawn from the consolidated balance sheets. Between the end of 1934 and 1935 the gross total of general reserves and profit and loss credit balances increased by over £250,000. Of this total, perhaps half may be attributed to profits on investments and £45,000 to the 1934-35 reserve allocation of the parent company, leaving perhaps some £75,000 as increase in credit balances. On the other hand, premiums paid for shares in subsidiary companies increased by over £60,000. In view of the very small decrease in outside shareholdings in subsidiary companies, the bulk of this item must relate to new shares subscribed, possibly accounting for part of the £75,000 attributed to increased credit balances. Alternatively, these premiums may have been used to write off other assets whose disappearance cannot be traced in the balance sheet or to increase the depreciation reserves of the operating companies. The latter show an increase of nearly £500,000 during the year. Since the bulk of this increase must arise from revenue allocations and fixed assets are less than £20 millions, it is evident that the group's depreciation policy is generous. Ignoring the contracting profits of the parent company, it would seem that its position is not dissimilar to that of the majority of electric supply companies, since earnings cover the current rate of dividend without a substantial margin. The £1 ordinary shares are quoted at 43s. 6d. to yield £3 14s. per cent.

Cable and Wireless Prospects.—Since the eve of publication of the accounts, a fortnight ago, Cable and Wireless (Holding) preference stock has fallen from 111½ to 102 and the "A" ordinary stock from 27½ to 22½. A poor traffic figure for April succeeded an undemonstrative reception to the accounts, and Mr J. C. Denison-Pender's speech on Friday, last week, brought little comfort to the market. It is evident from the chairman's pronouncements that a

THE ASSOCIATION OF FIXED AND FLEXIBLE TRUST MANAGERS

President :

The Right Hon. Lord Rankeillour, P.C.

Chairman :

Sir Stanford London, C.B.E.

Deputy Chairman :

Sir H. Cassie Holden, Bt.

This Association, formed by the Managers of leading Fixed and Flexible Trust Groups, ensures the continuance of a uniform high standard in the management of such Trusts by the establishment of rules to be observed by members of the Association.

Only members of the Association add the words 'Member of the Association of Fixed and Flexible Trust Managers' after their names; thereby giving Investors and the Public an additional assurance as to the sound management of the Trust concerned.

THE FOLLOWING GROUPS ARE MEMBERS OF THE ASSOCIATION

- The National Group, 125 Pall Mall, S.W.1
- The Keystone Group, 24 Throgmorton Street, E.C.2
- British Empire Group, 160 Piccadilly, W.1
- The 15 Moorgate Group, 15 Moorgate, E.C.2
- Allied Investors Group, 165 Moorgate, E.C.2
- First Provisional Group, 21 Spring Gardens, Manchester 2
- British General Group, King's House, King Street, E.C.2
- Selective Group, 53 New Broad Street, E.C.2
- Protected Group, 1 Chancery Lane, Manchester 2
- Aviation Group, Palmerston House, Old Broad St., E.C.2

scheme to deal with the long-expected capital reorganisation "might be unfair or even unnecessary at a later date" and must await the realisation of normal telegraph traffics. Upon the prospects of such a happy consummation, however, the Governor spoke with candour, referring to the laggard revival in international trade and the handicaps of political uncertainty. The recovery of the group since 1929 was described as the fruit of internal reorganisation rather than the result of external improvement. This stress upon the need for increased revenue was associated with anticipation of an approaching limit to internal economies, which have now attained the figure of £1½ millions. The praise of stockholders is due to the directors and staff for the achievement of this result. But without a substantial expansion of international trade, the full advantage of increased efficiency cannot be won. Competition from new wireless services, frequently subsidised by foreign governments, has prompted the company to seek discussion of the problem at the forthcoming Imperial Conference. Coupled with the unimpressive traffic indices for this year, the tenor of the Governor's speech has left the market with rather deflated hopes of a further substantial improvement in the group's position over the next few months.

Recent Textile Results.—There is little in the results recently emanating from the main branches of the cotton textile industry (of which a selection is given in the accompanying table) to suggest that a real recovery is at hand. The increased activity last autumn finds a certain reflection in the spinning results, but for *Fine Cotton Spinners* and *Lancashire Cotton Corporation* it is overshadowed by the legacy of past burdens. The former concern records an increase in total profits of over £100,000, but after providing £100,000 for depreciation—the adequacy of which is queried—this amount covers the debenture interest with only £17,203

(a) Flat yield.

feat, which has been achieved for the first time in the history of the company, is but slight ground for encouragement in view of the large debit balance of £434,880 with which the company is still burdened. The improvement revealed by *Lancashire Cotton Corporation* for the six months to April 30th also confirms that an uphill recovery is still in progress, and the amount earned for debenture interest is, in fact, larger than the total for the previous year. On the latest figures, the Corporation might come within sight of "earning" the full amount of the debenture interest, which requires £130,000, without providing, as in past years, a penny towards depreciation. The results, in fact, shed no light on the future of the Corporation, for the £2,000,000 6½

per cent. debentures fall due for redemption next March, and in addition the guarantor's advances for interest to last October, which are repayable, amounted to £573,333. Market interest is therefore limited to the form which an inevitably drastic reorganisation will take. The *Bleachers' Association* results are somewhat disappointing for those who had anticipated that the new shrinkage process and output concentration would produce a significant increase in profits. Preference shareholders, whose dividends are now 2½ years in arrear, must therefore hope for better results on these grounds during the current year. The *British Cotton and Wool Dyers* results, on the other hand, are sufficiently improved to permit an increase in the ordinary dividend from 5 to 6½ per cent. It is, perhaps, in the sewing cotton branch that disappointment has been most marked. The sharp fall in profits disclosed in the *J. and P. Coats* statement has already been discussed in these columns. Coupled with the reduced profits earned by *English Sewing Cotton*, which left the 10 per cent. partially uncovered, the results suggest that the export markets remain difficult in this branch. In all, the results clearly show that the cotton textile industry remains the Cinderella of recovery.

Finlay Group Results.—The announcement of the reduction in the James Finlay dividend from 12½ per cent. to 10 per cent. was immediately followed by a report showing a trading loss of £29,004 for 1935 and a reduction of dividend income from £243,432 to £229,637, the latter being attributable to a fall in dividend receipts on ordinary shares (other than railway and bank shares) from £148,229 to £131,428. The reduced dividend is covered by earnings of 10.5 per cent., as the following table shows:—

	Years to December 31,		
	1933	1934	1935
Trading profit	Dr. 19,814	1,994	Dr. 29,004
Dividend and interest receipts ...	193,717	243,432	229,637
Total profit	173,903	245,426	200,633
Directors' fees	2,274	2,398	2,400
Income tax	10,000	20,000*	12,000
Preference dividends	30,000	30,000	30,000
Ordinary shares:			
Earned	131,629	193,028	156,233

Paid (%)	9	12.5	10

Carried forward 255,019 260,547 266,780

* Includes £5,000 depreciation.

The four estate companies show rather irregular results. Consolidated Tea and Lands, the principal concern, reports surplus revenue amounting to £240,277, compared with £228,448 for the previous year, and the dividend is raised from 9 to 10 per cent. *Amalgamated Tea Estates* earned net profits of £86,185, compared with £64,184 for the previous year, and 4 per cent. is paid on the ordinary capital compared with 2½ per cent. *Kanan Devan* also record slightly better profits, at £148,155, the dividend being maintained at 12½ per cent. *Anglo-America Direct Tea Trading*, however, have suffered a severe fall in earnings from £120,388 to £75,051, which has entailed a reduction in the dividend from 10 per cent. to 6 per cent. The crop returns show that Consolidated Tea plucked a much reduced quantity of leaf, but the rise in prices—common to the whole group—protected the resultant profits. *Anglo-American* was particularly affected by the fall in other trading income. These companies have entered the current year with reasonable promise, and may produce some improvement in *James Finlay's* investment revenue. The sharp fall recorded last year, however, suggests that holders of the £1 ordinary shares, which are quoted at 62s. to yield £3 4s. per cent., should confine their expectations within modest limits.

De Beers Preference Arrears.—The 1935 report of De Beers, discussed in these columns on April 18th, page 139, contained no reference to the expected payment of preference dividend arrears, although Sir Ernest Oppen-

Next Week's Issue of

THE ECONOMIST

will include a

SPECIAL ANALYSIS

of the history, structure, financial record
and prospects of

TURNER AND NEWALL

heimer's statement at a reopening of the Dutoitspan mine had already received wide currency. On that occasion, Sir Ernest foreshadowed the repayment of arrears, which had accumulated since July, 1931, during the current year. At the annual meeting in Johannesburg last Friday, the chairman disclosed that the board contemplated the payment of two ros. dividends on the 40 per cent. £2 ros. preference shares in June, with two similar payments, given settled conditions, at the end of the year. These payments, it will be seen, would bring distributions up to June, 1933, and would be made out of current profits. The volume of trade last year amounted to £6½ millions, and on current indications the total for the present year was put at £8 millions. On this volume of annual trade, therefore, fair dividends could be paid on the 1,400,000 £2 ros. deferred shares. To prepare for this resumption, the directors have in mind the raising of short-term facilities—not debentures—on the company's reserve diamond investments. This procedure will anticipate, perhaps by as much as two years, the re-entry of the deferred shares into the dividend list, for it is hoped that payments will be resumed in 1937. An amount of £1,600,000 for the current year's profits—based on the chairman's statement—would imply earnings of 29.4 per cent. for the deferred capital in a normal year, and after the short-term facilities had been repaid. The preference shares are quoted at 17½, cum £5 dividend arrears, and, on a net basis, offer a yield of approximately 8 per cent. Provided that conditions in the United States encourage further buying of stones, this quotation may be regarded as reasonable. The £2 ros. deferred shares are quoted around 8½d.

Other Company Results.—The latest profits of some 34 additional companies will be found in our usual summary table on page 531. Among the concerns to register recovery during the past year are *Shipley Collieries*, whose profits advanced from £75,748 to £128,166, the dividend being increased from 6 to 8 per cent., while *Amalgamated Press* also enjoyed a successful year, profits increasing from £524,149 to £555,197 and the dividend being maintained at 11 per cent. *Albert E. Reed*, the paper manufacturers, achieved a very satisfactory increase in profits from £75,434 to £117,799, comfortably providing for the increased dividend of 9 per cent. *Anglo-Egyptian Oilfields* report a slight reduction in earnings at £212,342, the dividend being maintained at 10 per cent. Further rubber results show, on the whole, a continued falling trend, although it has been resisted by *Allied Sumatra*, whose profits are slightly higher, while the dividend is maintained. *Sialang* and *United Patani* report lower profits and dividends. The most impressive result in the tea group comes from *Pabbojan*, whose dividend cheered the market last week, and *Isa Bheel* and *Tara* also record satisfactory improvement. From Stockholm come the results of the *Swedish Match Company* for 1935, which have been reduced to Kr. 4,731,715, against Kr. 5,209,228 in the previous year. Although sales of matches were increased, the lower average selling price caused a reduction in gross sales profits. The total interest payable amounted to Kr. 21,376,966, compared with Kr. 20,085,851 receivable. The trading profits of *Ruston and Hornsby* amount to £109,369, an increase of £21,093 compared with the previous year. An ordinary dividend of 5 per cent. is to be paid, representing the first distribution since 1929. The *Turner and Newall* interim dividend has been raised, to the market's satisfaction, from 2½ per cent. to 3½ per cent. *J. Lyons and Company* report a balance of trading profit, after providing for contingencies, of £1,010,753, compared with £1,009,000 for the previous year. *British Electric Traction* reports an increase in total profits from £411,385 to £505,246. The long-standing 5 per cent. dividend and 10 per cent. capital bonus are maintained on the deferred stock. *Guest Keen and Nettlefolds* announce a profit of £940,000 after debenture interest, compared with £933,813 in the preceding year. A dividend of 5 per cent. net is paid for the year. The *Allied Ironfounders* dividend is reduced from 12½ to 10 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Certificate Holders of El Salvador 6 per cent. Sterling Bonds, British Bank of South America, Royal Insurance, Sun Insurance Office, Hudson's Bay Company, Selected Land and Property, Central Mining and Investment, Cable and Wireless (Holding), Madras Electric Supply, Venezuelan Oil Concessions, Amalgamated Finance, Dalkeith (Ceylon) Rubber Estates, Sungei Batu (Malaya) Rubber Estates, Marks and Spencer, Wiggins Teape, Beechams Pills, Great Universal Stores, and Kamra Tin Dredging. At the Royal Insurance meeting, Mr A. E. Pattinson, after discussing the improvements recorded in the company's various branches, stated that the funds had now grown to £47,438,000. The chairman of the British Bank of South America referred to the effects of the Brazilian currency position on the country's trade and the Bank's accounts. At the Sun Insurance meeting Sir William Goschen referred with satisfaction to the substantial improvement in underwriting profit during the past year. Deposit Certificate Holders of the El Salvador 6 per cent. Sterling Bonds of 1923 series "B" ratified a readjustment agreement, the terms of which were fully set out by the Earl of Bessborough. Mr Ashley Cooper referred to "ways and means" to deal with Hudson's Bay preference arrears and to the prospect of modest ordinary share dividends. Mr H. W. Batty at the Selected Land and Property meeting pointed out that the dividend recommendation was very conservative. The strong financial position of the Central Mining and Investment Corporation was emphasised by Mr Phillips, who discussed the position of the various interests. Mr J. C. Denison-Pender's speech at the Cable and Wireless (Holding) meeting is discussed on page 499. The chairman of Madras Electric Supply Corporation said that the accounts showed a continuation of the progress to which they had become accustomed. Viscount Bearsted, at the Venezuelan Oil Concessions meeting, said that the exchange situation had adversely affected the results of the company's operations. The chairman of the Amalgamated Finance Company alluded to the company's interests in gold-mines showing a possibility of development. Rubber restrictions in Ceylon, contrasting with increased quotas in Dutch East Indies, were given as one of the reasons for lower profits of the Dalkeith (Ceylon) Rubber Estates. The artificial conditions prevailing in the rubber market were also mentioned by the chairman of Sungei Batu (Malaya) Rubber Estates. Mr Simon Marks stated at the Marks and Spencer meeting that development had been directed to the extension of existing stores in addition to opening new ones, and that a similar programme would be followed this year. Lord Portal, at the Wiggins Teape meeting, reported that the company's new ventures except the Greaseproof Paper Mills had shown improvement during 1935. Mr Philip Hill, at the Beechams Pills meeting, referred to the great scope for expansion in overseas markets. Sir Archibald Mitchelson, at the Great Universal Stores meeting, disclosed that the profits would have equalled those of the previous year but for the establishment of two important subsidiary undertakings. The chairman of Kamra Tin Dredging reported that a reduced quota entirely explained the fall in profits.

THE WEEK IN THE MARKETS

THE LONDON STOCK EXCHANGE

SETTLING DAYS

 TICKET
JUNE 9

 ACCOUNT
JUNE 11

INTEREST in the London market has been at a minimum this week. In a steadier but not intrinsically absorbing technical situation, the competition of the compelling attractions at Epsom and Southampton on Wednesday, reinforced by the approaching holiday, reduced the volume of business to minimal proportions. No fireworks were expected this week, and none have eventuated. The underlying factors remain unchanged; the franc is still subject to a degree of pressure which suggests that a final ordeal may be approaching when the new Government takes the reins. At home, the dull course of gilt-edged prices has shed its baneful influence over a wide range of investment industrials, and the week's business news, including the rayon output figures and the smaller expansion in retail trading during April, has not been of the sort which inspires a listless market to fresh advance. There is little in the immediate prospect which suggests a broadening of interest, although the tone from mid-week onwards seemed brighter.

This last factor was perhaps most evident in the gilt-edged market. A colourless opening marked the general pre-occupation with the Chancellor's forebodings of the previous week, and with the rapid approach towards congestion in the Home Corporation market. When the selling came to an end on Tuesday, however, prices improved fractionally. The eager subscription of the Salford loan, pitched a half-point lower than recent issues, strengthened the tone among corporation scrips.

Foreign bonds were not at their best. Chinese loans, after maintaining their recent headway, reacted on reports of the continued seriousness of smuggling, while Greek issues were affected by the Greek Premier's denial that negotiations were in prospect. In the European group, some support was reported for German funding issues, but the remaining German issues were dull.

Home rail stocks opened under the cloud of the wages deadlock, but the precautionary lowering of prices was followed by a steadier tendency later on Monday. The lower levels, in fact, attracted cheap buyers for a time, until the traffic proved to be less encouraging than had been hoped. Great Western and Southern preferred alone, however, were affected. London Transport "C" stock continued heavy. Interest in the foreign rail section was at a minimum at the opening, but better conditions prevailed in mid-week, on speculative support in defiance of poor traffics.

Quiet conditions prevailed in the industrial markets throughout the week, but the improvement in tone after Tuesday's scattered selling had been arrested was very obvious. Cable and Wireless experienced a further fall on week-end consideration of the Governor's speech (discussed on page 499, but on Wednesday the "A" ordinary stock showed a response to speculative purchasing. In the electrical equipment market, General Electric provided most interest in anticipation of the forthcoming accounts, and Edmundsons were supported in the supply group on the results (analysed on page 499). Aircraft shares continued irregular, Hawker Siddeley being offered on consideration of the capital proposals. Motor shares followed an easier course, and iron and steel issues, after finding support at the close of last week, again relapsed into quietude, with no decided improvement set in on Thursday. Ruston and Proctor were active on the resumed dividend and received support. Most textile shares were inactive, and made no response to recent results (page 500). In the rayon group, however, Rayonite was again moving upward after a long period of stability. In the stores group, Great Universal and Marks and Spencer were supported on the meetings. Several provision shares, including Cerebos and Unilever, were responsive to modest support, but brewery and tobacco shares had a quiet week.

Among the miscellaneous industrials, fair support was deserved for the precision engineering shares, Henry leadows continuing active, although subject to profit-taking after the recent strong rise. The leading cement

issues were in better mid-week form, and several of the favourite industrials like Murex and British Oxygen recorded a modest recovery. Turner and Newall, whose increased interim dividend was somewhat unexpected, rallied appreciably on Thursday. Bank shares recorded mixed movements, but insurance shares continued to decline.

Turnover in oil shares was considerably reduced as the week progressed. Anglo-Iranian recorded a sharp fall on disappointment with the dividend (discussed on page 498), and Mexican Eagle issues became less active after a busy day on Tuesday. Fluctuations on the latter made for occasional trading difficulty, and the Canadian issues were possibly a centre of greater interest on Tuesday. The leading oil shares were only temporarily affected by the Anglo-Iranian results.

Idle conditions have prevailed throughout the week in the rubber and tea share markets. In the former, some small but persistent sales by the public have depressed the market out of proportion to their volume, and in the tea share market there was similar difficulty in dealing at times, on selling orders evoked by the waning trend in Mincing Lane recently.

The Kaffir market, invariably forsaken by its fondest supporters when national sporting events occur, proved this week that it could at least maintain a good tone, even if it sadly missed their business. The reduction in the gold price affected dealings early in the week, and even West Witwatersrand were subdued by the quiet conditions. Activity revived on Tuesday, however, and several of the Far Western issues hardened, and were fairly maintained by Cape buying in mid-week. De Beers were adversely affected by the meeting (discussed on page 500). Rhodesian copper issues were deserted, and while some Australian gold shares were better there was no recovery in the "Jungle." Tin shares were depressed by the failure of the International Committee to reach a decision regarding the tin quota.

FOREIGN STOCK EXCHANGES

NEW YORK

WALL STREET continues to rub its eyes and to assure itself that, after all, no bones were broken in the setback which occurred last month. But of increased momentum there is at present only modest sign, although the volume of trading on Tuesday again broke through the million mark and was well maintained in mid-week. The most appreciated pointer, this week, was the increase in steel prices by

several large units, and the shares were a consistently firm market. United States Steel jumped nearly two points in Tuesday's active trading, and Youngstown were also active. Rail issues provided a feature on satisfactory April earnings, the first 15 reports showing a 23 per cent. increase in gross revenue. The leading motor issues were much more confident than of late. Although the tax measure—and the revenue position in general—is making heavy weather, the tone in Wall Street is undoubtedly better than for some weeks past. The franc is no longer a market factor, and more attention is being paid to current business news. Iron Age reports that current steel operations are at 68 per cent. of capacity, a fall of half a point on last week. It is expected, however, that the rise in prices announced for the third quarter will produce a rise in operations during June. In the bond market Treasury issues have not been supported, but other domestic high-grade issues have improved. Opposition to the new margin rules appears to be gathering force, and the possibility of important alterations is now being canvassed.

PARIS

Politics continue to be the deciding factor on the Bourse. The recovery which followed M. Blum's statement that he was opposed to devaluation was succeeded on Monday by a very marked decline. Banks and industrials fell heavily after the Socialist demonstrations and were clearly

depressed by M. Blum's apparent willingness to listen to the demands of the C.G.T. Bank of France shares at 5,700 were at their lowest since 1922, showing a fall of 27 per cent. since the elections began. The depression of home industrials contrasted with the demand for internationals, which were actively bought at much lower yields. The yields on home industrials, however, were high enough to attract buyers towards mid-week, the recovery among some "heavies" being pronounced. Bank of France recovered from their lowest level and Rentes also showed an improvement. But by Wednesday news of further disturbances in Paris brought about a reaction, and emphasised once more the sensitiveness of the market to day-to-day politics.

BERLIN

The market last week declined until Friday, except for shipping shares, which were influenced favourably by the Hapag and Norddeutsche balance sheets, and also for some public utilities and metal shares. On the last days of the week the market was firm, with consistent support for shipping shares, heavy industrials, Farbenindustrie and Reichsbank. The new week opened steadily, but later reacted, influenced partly by the reduced dividend of Dessauer Gas. Farbenindustrie and shipping shares were sold, but rubber and linoleum issues remained firm. Tuesday was irregular, but despite several sharp reactions, the market closed firm. The advance in reichsmark bonds ceased late last week, and the new week opened irregular. Dollar bonds were also irregular, but many quotations remained unchanged.

West End Branch: 9 NORTHUMBERLAND AVENUE, W.C.2
NEW YORK AGENCY: 67 WALL STREET

HAMBURG AGENCY: 49 SCHAUBENBURGER STRASSE
Over 370 Branches, Sub-Branches, and Agencies in SOUTH, EAST and CENTRAL AFRICA

EXECUTOR AND TRUSTEE BUSINESS CONDUCTED

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

AMSTERDAM

Last week ended very quietly, rubbers reacting slightly after the previous improvement on the American consumption figures. Royal Dutch declined at first following new issue rumours, but recovered and closed higher than at the end of last week. Industrials remained steady, but the turnover was small and the general tone was listless until Wednesday, when there were signs of a little more activity.

CAPITAL ISSUES

THE "shading" of the official price of corporation issues continues, for though *Newcastle-upon-Tyne* has, this week, offered a 21 year stock—mainly for conversion purposes—at 99, a *Salford* offer has been priced as low as 98½, for an 18-20 year maturity. The queue of borrowers is, obviously, to be kept moving. The industrial offers of the week have followed familiar lines. *Wm. P. Hartley* has taken over an old-established preserving and canning business, which was affected by increased competition between 1925 and 1934. Its organisation has since been overhauled and modernised, with beneficial effect on earnings, but the auditors' report gives only the last three years' profits. In view of the competition which still prevails, the issue price both of the preference and the ordinary shares appears generous. *Eustace Watkins* is a post-war business which, since 1929, has held the sole distributing rights of the Wolseley car in Greater London. The average profits cover for the last 4½ years is not unimpressive, but the results for individual years show wide fluctuations. Nearly one-third of the purchase price is attributable to goodwill. *Cement, Ltd.*, is noteworthy as being the first company incorporated in the Irish Free State which has visited the London capital market for some time. The real security for the debenture stock is the determination of the Irish Free State Government to make Irish cement in Ireland. The company comes out under experienced trade auspices, but until its profit-earning power has been established, its securities will doubtless appeal primarily to subscribers across the Channel, who are the destined beneficiaries of the Free State's economic nationalism. *Elephant Trading (South Africa) Holdings* adopts the high denominational preference and low denominational ordinary capitalisation (at a premium in both cases) which is now common form in most industrial issues. The company's warehousing and merchanting business has shared in the prosperity of South Africa, and the prospects of both classes of shares are reasonably attractive. *Central Line Sisal Estates*, which has a "straight" ordinary capital, is a frankly speculative issue, whose main feature is a mathematical table showing percentage earnings at various hypothetical profit margins per ton of sisal. As the directors refrain from any estimate of the profit which will actually be achieved, it is impossible to say whether a cash purchase price of £129,000 for the company's estates is attractive or otherwise. *Leading Investment Trust* is not an investment trust, but a property-owning and an estate-developing concern, half of whose properties are leasehold. The prospectus makes no mention of any intention to apply for a Stock Exchange quotation. The offer will appeal, therefore, mainly to those who are prepared to lock up their money in a somewhat speculative class of business. The week's "public notices" include statements on behalf of a well-established investment trust, a lacquer and varnishing business and a cinema-theatre syndicate.

ISSUES OF THE WEEK

January 1 to May 23, 1936, including conversions, Old Basis, £147,604,186.

BY STOCK EXCHANGE INTRODUCTION

General Consolidated Investment Trust, Ltd.—Particulars of issue of 200,000 4½ per cent. cumulative "A" £1 preference shares. Shares rank after existing 5½ per cent. preference stock. Fuller information regarding company in Stock Exchange Year Book. Cazenove, Akroyds and Greenwood and Company, and Rowe, Swann and Company, subscribe jointly for issues at par, less ½ per cent. commission.

Majestic Theatres Corporation, Ltd.—Issued capital, 400,000 5s. ordinary shares and 119,343 6 per cent. cumulative 10s. preference shares. Acquires five freehold theatre properties occupying important sites for £219,343, satisfied as to £119,343 in 10s. preference shares and £100,000 in 5s. ordinary shares. Net annual income, £16,250. Total assets, March 31, 1936, £318,846.

Titanine, Ltd.—Issued capital, 800,000 2s. ordinary shares. Acquires from January, 1936, the business of Titanine-Emallite, manufacturers of aeroplane dopes, etc. Net assets acquired, £53,205 for £80,000, all in ordinary shares except £100 in cash. Profits, after provision for depreciation, years ended March 31st: 1933, £754; 1934, £1,916; 1935, £6,801; ten months ended January 31, 1936, £12,421.

ISSUE TO SHAREHOLDERS ONLY

Handley Page, Ltd.—£116,965 of reserves is to be used to pay up new shares. The capital is to be raised from £206,644 to £323,609. It is proposed to convert existing preference and ordinary shares into stock, and to allocate to holders of preference shares such an amount of ordinary as will give them the same proportion of profits and the right of 50 per cent. of the surplus assets in a winding up. After the conversion of shares into stock the capital will be increased by the creation of 467,860 new ordinary shares of 5s. each, to be paid out of reserves. One-half of the new ordinary stock will be allotted to the preference holders.

FORTHCOMING ISSUES

Hawker Siddeley Aircraft Company.—Proposals are to be made to issue 400,000 of the new preference shares at par in the form of rights to existing preference shareholders, who will

ADVANCE LAUNDRIES, LTD.—Gross profits for the year to March 31, 1936, amounted to £93,979, an increase of over £12,000. The sum of £27,174 is set aside for depreciation and obsolescence against £21,315. The ordinary dividend is raised from 9 per cent. to 10 per cent. Reserve receives £4,822 against £5,000, and £5,447 is carried forward against £4

FINANCIAL AND ECONOMIC SITUATION IN THE ARGENTINE

THE PRESIDENTIAL MESSAGE TO CONGRESS

STRICT FULFILMENT OF OBLIGATIONS OF NATIONAL DEBT

27 MILLION PESOS BUDGET SURPLUS

In the message which he delivered to Congress on May 7th at the opening of the Session, the President of the Argentine Republic, His Excellency Augustin P. Justo, made a full statement of the country's economic and financial position.

The message contains detailed information regarding the manner in which the Argentine Government has in recent years effected important economies in the Budget and also regarding the transformation and diminution of the National Debt and the fulfilment of the obligations which it implies, both internal and foreign. It also deals with the creation of the Central Bank, brought about by previous consultation with Sir Otto Niemeyer.

Following is a translation of the introductory part of the President's message, together with the portions dealing more particularly with Argentina's economic and financial position.

Addressing the members of the Senate and of the Chamber of Deputies, the President said:—

Gentlemen:

I appear before you in fulfilment of the duty imposed on me by the Constitution to inaugurate the new Session of Congress and to render account to you of the general state of the country, the work achieved with your assistance during the past year, and the principal aspects of the action to be taken during the present year.

In the first place, it is my pleasing duty to place on record that the severe economic crisis through which the country has been passing in recent times—an inevitable repercussion of the world-wide slump—shows very marked signs of being on the decline. The re-establishment of our economic strength as a consequence of the reawakening of productive capacity, facilitated by prudent and opportune measures of government, restores confidence to the sceptical and stimulates the energies of those who are confident in the future of the country.

The severe test to which we have been subjected has at least taught us two lessons. First, the value of faith in a great cause, and second, the effectiveness of the intervention of public authorities, provided that they face the problems arising out of economic disturbances with decisive action, so as to lessen their effects, stimulate the collective organism and accelerate the process of restoration. The Republic marches forward anew, interrupted for just one brief moment, in its march towards that destiny the future holds in store for it, thanks to the enormous wealth which the generous hand of Providence has scattered over its vast territory.

DIFFICULTIES OVERCOME

The firm will and the decisive action of all those who felt the sense of responsibility, has to a great extent swept away the difficulties which were on the point of plunging the country into general poverty and bankruptcy, due to the world depression and the barriers erected against international trade, as well as to internal disorder and unpreparedness. The combined efforts of the executive power of Congress, and of the live forces of the productive classes, admirably backed up by their working and fighting spirit, has succeeded in consolidating on sound foundations the economic and financial organisation of the country, placing it in a position—through its defensive resources—of facing up successfully to possible future contingencies.

Our country has maintained its traditional friendly international relations, and in the period under review no perturbing incidents or difficulties have been recorded.

After patient and conciliatory negotiations, the efforts made through the joint mediation of six South American countries, to bring the war in the Chaco to an end, were crowned with complete success. Cessation of hostilities was secured and a Protocol was signed, containing the basis of a friendly settlement of all differences between the ex-belligerent countries.

The Pan-American Commercial Conference, which took place in Buenos Aires, and in which conclusions of far-reaching importance were reached, has made clearly manifest the close economic and commercial relationship existing between the countries of this Continent. Intense activity has also been displayed by the Argentinian representative bodies within the framework of the League of Nations, where the problems to be solved were faced in a spirit of utter impartiality which is traditional to our foreign policy.

The proof of our moral position in the South American Continent lies in the designation of the City of Buenos Aires, by the accord of all our brethren of America, as the City for the great Pan-American Conference, which will take place on the initiative of President Roosevelt.

COMMERCIAL TREATIES

The commercial policy initiated by this Government has resulted in the pacts made with England, Chile, Brazil, Holland, Belgium, Switzerland, Germany, Spain, Finland and Uruguay.

The approaching expiration of the Roca-Runciman Treaty, which regulates interchange with Great Britain in relation to one of our basic industries, has given rise to negotiations which are being carried out with a view to solving in a satisfactory manner the serious problem which this situation involves.

I deemed it expedient to convoke the Meat Conference, which took place in March of this year, with the intervention of representatives of those industries and bodies associated with the Meat Trade, in order that with their direct experience of the multiple aspects of the problem, the members of this Conference should act in an advisory capacity to the Executive Power.

In the realm of Public Finance and of the general economic policy of the country, the past year has been a period of execution and practical realisation of the far-reaching reforms sanctioned by both Chambers in the previous period. At the same time, the Executive Power, on the Administrative side, has, as in previous years, carried out a policy of strict economy in regard to expenditure.

Two outstanding events characterise the period: the reduction of the Floating Debt and the surplus obtained during the Financial Year.

FLOATING DEBT

The Executive Power, since coming into office, has considered that the reduction of the enormous Floating Debt was not only an obligatory task from the point of view of putting our finances in order and of monetary defence, but also because it was an indispensable condition for securing the economic recovery of the country. The State, in the past, by accumulating enormous deficits, was actually contributing to making the economic crisis even more acute. If these enormous deficits had been left to continue weighing on the country, the solution of the crisis would have been delayed and the generative nucleus of an enormous block of frozen credits would have been maintained immovable. Fortunately, a solution has been found to this problem. The measures adopted in compliance with the banking and monetary laws have permitted the cancellation or consolidation of more than 730 million pesos. With this and the application of the 1935 Budget surplus, the initial sum of 1,230 millions, already reduced in the three preceding years, has now been reduced to 100 million pesos.

Because of its singular importance, I must also particularly draw attention to the surplus secured in the last Financial Year. Revenue has been greater than expenditure by the appreciable sum of 27 millions. This auspicious result reflects, on the financial side, the improvement in the economic situation, but this would not have been achieved without the constant, persevering and energetic work carried out by the Government over a long period in several directions; the economies in administration introduced; the scrupulous fulfilment of the State's obligations, which made possible the Debt Conversion, effected with decision at the right moment; the prudent calculations made of public revenues and the severe control in the collection of these revenues.

I am pleased to place on record that the collaboration I have had from both Chambers has been efficient and patriotic and that the whole of the inhabitants of the country have assisted, in an equally patriotic manner, in remedying the difficult situation of the Nation.

It is unnecessary for me to emphasise the significance of this success, reached at a time when nearly all countries keep on accumulating enormous debts, faced with the impossibility of reducing unavoidable expenditure or of increasing their resources.

BANKING REFORMS

In the year under review, the new institutions created by the Banking and Monetary Laws have been constituted and have commenced their activities with all efficiency.

The Banco Central, during its first financial year, has made use of the principal powers conferred on it by law for the regularisation of currency and banking.

The activities of the "Instituto Movilizador" were initiated with an operation of banking reorganisation which by reason of its volume has no precedent in this country and which has allowed the establishment of solid institutions capable of guaranteeing the fruits of the people's savings and attending to the credit necessities of our commerce and industries.

The Statute of Unification of Internal Taxes has been applied with satisfactory results. The volume and security of the revenues with which this law provides the Provinces, has facilitated the work of financial reorganisation. The same effects will be secured by the agreements relating to transfer of provincial debts to the Nation, which the Executive Power has entered into with certain States and is negotiating with others. The regularisation of provincial finances will strengthen the credit of the whole Nation, it will considerably improve that of the Provinces, and will produce, in addition to the definite suppression of the barriers against interprovincial trade, beneficial economic effects for the country.

As a consequence of the transformation of the floating debt, the total of the national debt has considerably decreased during the course of the year 1935. The conversion of several foreign loans has been successfully carried out. The credit of the Argentine in the world market has appreciated to an extent which has not been realised for years. This is reflected in the increasing demand for National Bonds, quotations for which reached high levels.

THE FUTURE COURSE

The year under review has seen the garnering of the fruits of a co-ordinated action by all the healthy forces of the country, imbued with the firm will to make recovery definite. But if the results achieved permit us to have faith in the future, it would be imprudent to allow ourselves to be possessed by a spirit of confident security, which in the present circumstances might be pernicious. We should, on the contrary, continue our task with the same prudence and the same energy displayed up to the present.

The desire that the economic life of the country should recover its normal rhythm, nurtured solely by its natural resources, should be conciliated with the preoccupation that the Nation be provided with the defences necessary to face up to any new setback.

The administration of national finances should be in harmony with this double objective. Any great increase in expenditure would perilously weaken our reserves.

The easier situation of national finances which we place on record with legitimate satisfaction should be taken advantage of in order to modify and perfect the taxation which it was imperative to impose in order to repair our gravely affected financial situation. It is the constant preoccupation of the Government to try and reduce as far as possible the taxation which up to the present it has been necessary to extract from the productive classes of the community. However, this must not be carried out by drastic means, but rather through the medium of gradual reform, already initiated and concretely put before the Chambers in Bills, aided by other measures which I shall in due course submit to your consideration.

The Army and Navy have during the past year continued dedicating themselves wholeheartedly to their tasks, and by intensive labours are furthering the work of perfecting their respective arms, which day by day ensure to them a greater capacity for carrying out the exacting duties of their noble mission. The former in their barracks and instructional camps, and the latter on the sea have maintained a constant activity, the entire personnel of the forces being fully aware that it is only by carrying out their professional duties that they can ensure

their own efficiency and continue to merit the applause and respect of the Nation.

In order to maintain themselves at the high level demanded by constant technical progress and in accordance with the authority bestowed on them by the respective Laws, both institutions are renewing and completing part of their equipment. When so, this only satisfies a few of their most urgent needs. It will, in addition, be necessary to equip the Army and new resources, and this measure will entail increase in personnel, a necessity which is also being met by the Navy.

NEW WORKS

In the year under review, important works have been initiated. By virtue of Law 11,925, a contract was entered into with the firm of Vickers Armstrong of Great Britain for the construction of a new training ship, which should come into service at the beginning of the year 1938. Law No. 12,155 is also being complied with. This law relates to the renewal of aviation equipment, and the first machines and materials acquired are expected very shortly.

At this stage in the life of my Government, it is possible to observe the results obtained from the agricultural policy we have followed. Situations of extreme urgency demanded emergency solutions. But, from the very beginning we have never lost sight of the broad aims we have in view of creating a stable and progressive agricultural and cattle industry. Now that the defensive laws we have made for our farming industries are being fully applied, we shall deal with the organic structure of the greatest economic and social force in the country.

The Ministry of Agriculture is a dynamic institution, which inspires confidence in the mass of agricultural workers. The bonds of relationship between the Ministry and the workers are becoming more closely knit day by day, as a result of untiring and harmonious joint efforts. The men who dedicate their efforts to work on the land, feel they are being defended but not excessively protected. In this way the natural economic equilibrium of the different productive activities will not be altered.

The several measures lately adopted have been based on this policy, and comprise: the increasing of the minimum price of the three cereals which constitute the basis of agricultural production; the call for tenders recently put out for the first group of grain elevators; the distribution of seed on loan to farmers who lost their harvests; the policy of good, sound and cheap fruit; the encouragement to fruit-growers to form themselves into a guild; the assistance given to the vine-growers; the extension of Argentine exports; the constitution of the Commission for Regulating the Production and Marketing of Yerba Mate; the rational development of cotton-growing; the meeting of the Consultative Conference for the Meat Trade and the study of the questions arising out of the approaching expiration of the Treaty of London.

An event of positive economic and political value which I have pleasure in announcing to you is the increase in production of petroleum in the State oilfields. The incorporation of new wells, especially in the Comodoro Rivadavia Zone, and the discovery of a new source in the same oilfield, the potentiality of which is greater than anything known up to the present, modifies in a substantial form the accepted conception of the value of our oil-bearing resources, which are generally considered to be insufficient.

The recent surveys and boring operations carried out, form part of an extensive plan covering the established reserve zones, and permit us to predict that the question of national fuels will be definitely solved.

PUBLIC WORKS

With regard to Public Works, the Executive has continued developing the organic plan it had mapped out, keeping strictly within the margin of the resources at its disposal. It has endeavoured to harmonise as far as is possible the precepts of our basic laws of accountancy and Public Works with the respect due to contractual obligations and the urgent necessity of maintaining and intensifying the indispensable services and complying with most pressing public needs.

The benefits of the Federal action have extended to the whole country. The laws promulgated by you during the previous Financial Year, have permitted the Government to carry out the works of expansion on the lines of the State Railways, the benefits accruing from which are palpable and will be translated more and more each day into different aspects of progress and well-being to which our provinces and territories legitimately aspire. Work has actively continued also on the extensive irrigation, hydraulic, port and architectural schemes in progress, some of which will be inaugurated in the near future.

Road construction has also been the object of preferential attention, as it constitutes another of the fundamental objectives of Government policy, seeing that the development of roads and highways takes into account the characteristics of the country and responds to the vocation and the aspirations of the Argentine people. Not only has there been intense activity on these works, but, in addition, in order that they may be carried out at the earliest possible moment, because of the economic, political, social and strategic advantages they offer, the original three-year plan is to be modified, raising to 300,000,000 pesos the funds to be spent, up to 1938 inclusive, on the construction of the network of roads.

FOREIGN AFFAIRS

Although, fortunately, the war in America has ceased, we cannot remain indifferent to the gravity of the present international situation. In spite of the fact that the events which determine this situation do not directly affect our country, since our entry to the League of Nations and in view of the character of member and President of the Council which was held by our representative last year, the question of international interdependence has for us been accentuated, obliging us to consider very carefully all the problems with which it is surrounded.

The policy of "rapprochement" which is engaging the attention of the Government, above all with the countries of America, and more especially with our immediate neighbours, has been forwarded in relation to the Republic of Brazil, by the welcome visit to our country of His Excellency, Doctor Getulio Vargas, President of the United States of Brazil, accompanied by his Ministers for Foreign Affairs and Marine Doctor Don Jose Carlos de Macedo Soares and Admiral Guimaraes respectively.

Accompanied by His Excellency, the President of Brazil, we inaugurated the Pan-American Commercial Conference, which took place in Buenos Aires from May 26 to June 19, 1935. During the course of its sessions, four conventions of which the Argentine was a signatory were approved. One related to the repression of smuggling, another to the creating of special passports for tourists and motor-cars, the third prescribing regulations for aircraft traffic, and the last organising the Pan-American Commercial Juntas. The Conference also approved numerous resolutions and recommendations tending to insure the carrying out of its objects of mutual understanding and harmonising of Continental interests.

Of all the happenings, in which our Chancellery intervened, none had the repercussion attending that of the signing of the Protocol of June 12th, by which an end was put to the war of the Chaco Boreal. Compliance was thus given to the vehement desire of the American peoples and with it a prolonged and difficult process of promoting international understanding was concluded. The Government believes that in that manner it faithfully interpreted the pacific and friendly feelings which have always characterised the Argentine people, and that this event accentuated, once again, our noble prestige in this sense. As a consequence of those Protocols, the Peace Conference was inaugurated, which since then continues in session, seeking through its mediation, that the two parties arrive at a satisfactory solution of all those questions which a war brings in its train. The labours of the Conference have been arduous and prolonged, as in basing its action on the conclusions of the Hague Conferences, relating to good offices and mediation, it cannot employ methods other than those of reason and good advice, seeing that, as was declared at the inauguration of this Peace Conference, "mediation does not assume any other coercion than that of a moral nature," and it is because of this, also, that "nations who offer to act as mediators do not contract obligations other than the certainly very strong and very decisive obligations of the moral nature aforementioned."

SETTLING THE CHACO WAR

The labours of the mediators have already borne fruit, and amongst them, the signing by the Representatives of Bolivia and Paraguay of the Memorandum of January 21st last merits special mention. This Memorandum agreed to the reciprocal return of prisoners and the renewal of diplomatic relations. The documentation published relating to the labours of the Mediating Commission is already known to you, and the Commission is now arriving at the conclusion of its friendly negotiations, seeing that the only question now pending is the solution of the frontier or territorial problem, which is beyond the scope of its reference.

On February 22nd last, the negotiations which were being carried on by the Chancelleries of Washington and Buenos Aires for the realisation of a Peace Conference to be held in Buenos Aires by the nations of America were brought to a successful issue, thus consecrating international goodwill on a solid basis.

In taking part in all these International measures, the Government has accentuated the standing of our country amongst the nations of this Continent, sponsoring the fulfilment of the highest ideals of international justice.

In the affairs brought before the Assembly and the Council of the League of Nations, the actions of our Chancellery were inspired by those principles lived up to at all times by the Republic, without vacillations, and preserving always an equidistant position in the relations between the States with which we maintain traditional associations of peace and friendship. In following this purely objective policy, the obligations emanating from the Pact of the League of Nations have been complied with.

In referring to the League of Nations, we must place on record that, in view of the importance of the questions therein debated,

and the fact that it devolves upon our country to preside at the 89th meeting of the Council, the establishment of a Permanent Delegation was promulgated by decree of July 30th.

FINANCE

It has been the duty of the Treasury Department during the year under review to carry out the arduous task of getting under way the functioning of the organisations brought into being by the laws sanctioned by you relating to banking, monetary and financial policies. The execution of this vast plan of financial reorganisation has coincided with the consolidation of public finances. The gradual improvement shown in the preceding years has been so marked that, for the first time since the beginning of the severe crisis which affected the country, I am able to inform you that the Financial Year has closed with a considerable surplus, that is to say, 27 million pesos.

This very satisfactory result I have already announced to you in my Message of December 24th last, on requesting approval for the suppression of different licences and the exemption from taxation of certain profits. The provisional figures made it then possible to anticipate that income would exceed expenditure by 20 million pesos. The adjusting of figures for expenditure after the closing of the Financial Year—the definite figures are not yet compiled—shows that the surplus exceeded by 7 millions the figure anticipated. This surplus is much the more significant when it is considered that the Estimates for the 1935 Budget were sanctioned with the large balance of 71 million pesos on the wrong side.

Factors which have contributed to this financial success are the greater income obtained than the figures estimated and the carrying out of the economies approved by you.

RESOURCES

One of the outstanding features of the last Financial Year is the great increase in the collection of the Revenue of the Nation, which exceeded estimates by more than 65.5 millions, national currency; and the income of the preceding year, by more than 52.5 millions national currency. The details are given in the following table:—

INCOME COLLECTED IN CASH DURING THE FINANCIAL YEARS 1934 AND 1935 AND ESTIMATE OF INCOME FOR 1935.

Items	Collected in 1934	Esti- mates for 1935	Differences between		
			Collected in 1935	Collected in 1935 and 1934	Collected and esti- mated income 1935
I.—			(In millions \$ m/n.)		
General Income	746.3	730.3	799.1	+52.8	+68.8
Customs and Ports	297.9	304.0	323.6	+25.7	+19.6
Unified Internal Taxes	130.4	111.4	112.4	-18.0	+1.0
Land Tax	15.3	14.9	15.5	+0.2	+0.6
Licences	11.9	11.5	12.5	+0.6	+1.0
Stamps	59.7	53.0	60.6	+0.9	+7.6
Profits	66.5	66.0	77.2	+10.7	+11.2
Sales	...	24.7	24.7	+24.7	...
Transactions	18.5	...	...	-18.5	...
Participation in Profits Rep. Aut.	6.3	8.0	\$9.0	+2.7	+1.0
Posts and Telegraphs*	38.8	42.0	41.2	+2.4	-0.8
Financial Service	35.2	42.4	40.3	+5.1	-2.1
Misc. Income	22.8	18.7	45.7	+22.9	+27.0
National Educational Council†	43.0	33.7	36.4	-6.6	+2.7
II.—Social Service.....	25.0	28.0	24.7	-0.3	-3.3
	771.3	758.3	823.8	+52.5	+65.5

* Deducting official service—that is to say, \$ m/n. 4.0 millions in 1934 and 4.1 millions in 1935.

† For purposes of comparison, as it formed part of the Council's own income, this sum has been included in General Income.

‡ \$ m/n. 58.0 millions belong to profits of 1935 and \$ m/n. 19.2 millions to previous years which do not figure in the distribution to the provinces.

§ Receipts of Banco Central included—that is to say, \$ m/n. 2.0 millions not included in the estimate of income.

Of the total amount collected by the Nation for the different items, the sum of \$ m/n. 824 millions, details of which are given in the preceding table, was expended in covering its Estimate; the Provinces required 89 millions, of which 75 millions are derived from internal taxes, 10 millions from the Profits Tax and 4 millions from the tax on sales. In its turn the Municipality of the Federal Capital received the sum of \$ m/n. 19.8 millions through the following items: Profits Tax, \$ m/n. 2.2 millions; Sales Tax, 0.9 millions; Land Tax and Licences, 16.7 millions. Finally, the municipalities in the territories received 0.8 millions through the two items last mentioned. In these

amounts the collection of the income specially affected is not included, among others that of the tax on petrol, which ensures the realisation of the roads construction plan, without necessity of issuing bonds, as has been done for the rest of the national public works.

The application of the tax on profits has given satisfactory results.

The collection of 89.5 millions has exceeded the estimates by 9.5 millions. But of this amount, 19.8 millions are from profits earned in years before 1935, and which, therefore, are not included in the distribution for the provinces.

The tax on sales, established in place of the tax on transactions, in order to avoid the well-known anti-economic effects of the latter form of taxation, have been applied for the first time during the last Financial Year. Its proceeds of 29.9 millions have coincided with the estimates made for it.

EXPENDITURE

You will remember that in the Estimates sanctioned for the year 1935, expenditure exceeded resources by 71 million pesos. In order to balance the Budget, you directed the Executive Power to carry out economies during the course of the year amounting to 50.8 millions. There remained, however, a sanctioned deficit of 20.2 millions.

It is with great satisfaction that I have to announce that in executing the estimates, the Executive Power has been able to secure a total economy of 56.5 millions, or say, 5.7 millions more than the figure directed by you. Pressing requirements of the Administration, however, obliged the Executive Power to incur expenses authorised in Councils of Ministers to the amount of 13.7 millions. In fulfilment of laws sanctioned by you, and as extraordinary expenses, the sum of 10.3 millions was expended, with which part of the economy mentioned has been neutralised.

The following table shows in detail the expenditure incurred in the Financial Year, according to the provisional figures supplied by the General Accountancy Department of the Nation:—

TOTAL EXPENDITURE IN 1935

Items	Budget Expenditure	Extra-ordinary Expenditure	Expenditure in special accounts	Total
(In millions \$ m/n.)				
I.—Covered by revenue in cash	772.8	24.0	54.8	851.6
General Administration	494.5	23.4	129.8	647.7
Pensions, Gratuities, etc.	42.6	0.1	...	42.7
Contributions to National Pensions	15.0	...	...	15.0
Public Debt	196.0	...	25.0	221.0
Social Service	24.7	0.5	...	25.2
II.—Covered with Proceeds Negotiation Bonds	...	...	...	146.6
Public Works	...	...	...	115.4
Armaments	8.4	12.6	...	21.0
National Pensions	5.4	...	...	5.4
Military Pensions	3.0	...	...	3.0
Other Laws	...	1.8	...	1.8
				998.2

* These amounts are not given, as no details are available.

† Including 13.1 millions of differences in exchange in the payments of the Administration and 1.6 millions administrative expenses of the Control Boards of the Milk Industry, Cereals and National Cotton, and for encouraging exports of meat, as well as of the Offices of the Exchange Control.

During the past year, the expenses authorised by special laws outside the Budget, to be covered by general revenue, have amounted to considerable sums. These special credits have increased with an ever-accelerating rhythm during the past few years. If in 1932 they amounted to only 2 millions, in 1933 they increased to 3 millions, in 1934 to 9 millions, and in 1935 they soared up to 26 millions.

These amounts do not include the ex gratia pensions nor the considerable sums voted by special laws for public works financed through the issue of bonds.

The Executive, which greatly appreciates the efforts made by the National Congress to make financial equilibrium possible, considers it his duty to point out to you the dangers entailed in this growth of expenses authorised by special laws. The Executive Power well knows that every day you receive solicitations for improvements from all parts of the country, and it realises that these special laws of expenditure often owe their sanction to the generous desire to solve immediately the problems put before Congress. But on voting expenditure, without at the same time creating resources with which it is to meet, the grave risk is incurred of unwittingly going back to deficits.

One of the principles of sane financial policy which we must strictly observe is the principle that every necessary expense known during the period of sessions must be included in the general estimates law, which is sanctioned on the basis of the income on which the Nation may count.

The Executive Power has tried, as far as possible, to comply with the wishes of the Chambers, condensed in these special credits, but it has taken special care, and care must be taken that in the future this does not affect the financial equilibrium.

RESULTS OF THE FINANCIAL YEAR

The economies effected and the greater sums collected have permitted the securing of such a considerable surplus as 27 million pesos, as may be seen in the following table:—

RESULTS OF THE FINANCIAL YEAR 1935

	Expenditure	Revenue	Surplus
	(In millions \$ m/n.)		
Covered by revenue in cash	851.6	878.6	27.0
Covered with the proceeds of negotiation of bonds	146.6	146.6	...
Total	998.2	1,025.2	27.0

This result is even more pleasing if one considers that in the expenses covered by revenue in cash during the year 1935 there appears the item of Contribution to the Pensions Bank amounting to 15 millions, which previously was paid in bonds. On the other hand, on sanctioning the Budget law for 1935, you had directed new appropriations of several million pesos to be made, and the suppression of half of the scale of salary cuts, without taking into account the inclusion of the total amount of expenses and income of the National Council of Education.

The surplus has been secured without computing the profits on exchange, nor the 20 per cent. surcharge on imports brought into the country without previous permission, the proceeds from which have been credited to the "Fondo de Divisas" ("Foreign Currencies Fund").

In the Financial Year 1936, expenditure will necessarily be increased with the suppression of the scale of salary cuts of the personnel of the Administration, and if you approve the Bills submitted to you in due course, revenue will suffer the decrease determined by the exemption from tax of certain profits and the suppression of certain licences. It will, therefore, be an inevitable duty to continue the handling of the national finances in a spirit of prudence and economy, and from this moment I claim, once more, your collaboration in the sense indicated.

APPLICATION OF THE LAW OF UNIFICATION OF INTERNAL TAXES

In my previous Message, I pointed out the great advantages from an economic standpoint that would be secured by the law of unification of internal taxes. Since then its beneficial effects have been clearly demonstrated. From the financial point of view, the application of the law has also confirmed the predictions. On a total collected of 187 millions, there has been distributed to the Provinces a sum of nearly 75 millions, that is to say, nearly two millions more than the law demands, due to certain States having requested greater initial quotas within the limitations established by Article 28. The rest of the collection or, say, 112 millions has gone to general revenue. As I anticipated last year, the new regime has signified for the Nation, during the Financial Year under review, a drop in revenue of some 20 millions, if the figures are compared with the previous Financial Year, and a somewhat greater sacrifice too, if one calculates what the Nation would have collected in 1935, in the event of the unification of the taxes on consumption not having become an accomplished fact.

The Provinces have been able to improve their finances to a very great extent. The certainty of receiving income known beforehand, guaranteed by the Nation, has given a sound backing to their credit. Certain Provinces have thus been able to contract loans, in advantageous conditions, from private institutions of credit, with the object of converting, unifying or consolidating old debts, or for initiating works of general utility. The new regime has given greater elasticity to their finances, as local administrations have been able to cover with ease passing deficiencies in other items of their revenue, or face up to momentary requirements of a greater amount of liquid funds, by means of advances of sums which by virtue of the law they should receive in the rest of the year.

Certain States have approached the National Government in order to arrange with the latter the transfer of their debts to the Nation, in accordance with Articles 8 and 9 of the law. These Provinces can, through this medium, eliminate problems which were more or less insoluble within the local sphere before the unification of the taxes on consumption came into operation. Floating Debts, accumulated in the years of disordered finance, will be consolidated with advantage by the Provinces and their creditors. Loans contracted by local governments in onerous conditions have been, and can be, transformed in debts more in keeping with the present situation. It has been possible also to find a reasonable solution for taking out of circulation the scrip, which

under several denominations constitute issues of provincial paper money prohibited by the Constitution, and which, within a very short time, will I trust have disappeared never to return.

As a consequence of these transfers of debts, the obligations of the Nation will increase to a certain extent. A part of this increase is the natural consequence of stipulations of the law, and constitutes, together with the drop in the general revenue, the contribution from the National Treasury, to ensure for the Nation, the Provinces—and the whole of the population—advantages which, it is my firm conviction, are fully compensatory. The remaining part of the increase has its counter-entry in the credits that, in its turn, the Nation acquires against the Provinces, and which the latter will amortise in a convenient form, during the period in which the law of unification of internal taxes is in force.

It is to be hoped that the provinces will know how to conserve the benefits obtained, scrupulously administering their present resources, in order to maintain the solid credit which they to-day enjoy, thus contributing to increase their future wealth and prosperity.

TRANSFORMATION AND DIMINUTION OF THE NATIONAL DEBT

Thanks to the banking laws and the monetary laws sanctioned by you at the beginning of the year 1935, the Executive Power has been able to eliminate very nearly the whole amount of the heavy floating debt which weighed on the National Treasury for a long time past. Already in the years 1932 to 1934, the most pressing portion of this debt had been consolidated, decreasing from more than 1,200 millions at the beginning of 1932 to a little more than 800 millions at the end of 1934. But there remained the great mass of drafts of the Treasury, re-discounted in their greater part by the Banco de la Nación Argentina, and becoming the direct debt of the State to the said institution, apart from other debts of lesser importance.

In all, the floating debt has been reduced by 746 million pesos. Of these, 301 millions were paid in cash with the use of funds accruing from the re-valuation of gold, 72 millions by employing the Conversion Fund, and the 373 millions remaining in the following form: with Consolidated National Treasury Bonds, 255 millions, and with bonds of the Credito Argentino Interno, 118 millions.

In this way, including the normal alterations of the other items of the Treasury balance, the considerable floating debt which so much disturbed the official finances during the past few years, was brought down at the end of 1935 to the comparatively small sum of approximately 100 million pesos. The Government has, therefore, succeeded during the first four years of office in reducing the floating debt of more than 1,200 millions to approximately 100 millions, or say by more than 1,100 millions.

Apart from the consolidation of the floating debt, the Executive Power has transformed in Consolidated National Treasury Bonds, the balance of 145.3 millions of bonds of the Patriotic Loan which were held in the Caja de Conversión.

As a consequence of this transformation of the public debt, the nominal value of the total debt of the Nation has been reduced by more than 200 million pesos at December 31, 1935. It is only natural that the consolidated debt should have increased by the consolidation and issue of bonds for the financing of public works. The nominal increase of the consolidated debt amounts to 518 million pesos. Its real increase is very much lower. You will allow me to expand a little on this point, because it is of the greatest importance that the real modification of the amount of our debt should be seen in its true perspective, as it would be appreciated in a totally erroneous manner if only nominal values are compared. Actually it is not the nominal amount of a debt, but the real value of the annuities to be paid in order to amortise it with interest that gives one the true measure of the burden assumed.

If to obtain 100 pesos in cash the nation has at a given moment negotiated—as happened at the end of 1933—scrip of 5 per cent. interest and 1 per cent. amortisation at 90 per cent. of its value, delivering in consequence bonds to the nominal value of 111 pesos, and then has sold—as occurred at the end of 1935—in order to obtain the same amount of ready money, bonds of 4½ per cent. interest and ½ per cent. amortisation for the nominal value of 115 pesos at 87 per cent. of their value, the advantage of the second operation over the first is evident. It is true that the nominal value of the debt in the first case amounts only to 111 pesos and in the second case to 115 pesos. But in order to pay the first debt, apparently the smaller, the nation must pay but nearly the sum of 6.66 pesos; in order to cancel the second, at first glance, it is only necessary to find the sum purely of 1.11 per annum.

In referring to annual payments being unequal in both cases, that, in view of

the estimated present value of these allows their value to be reduced to figures which are comparable one with the other. This calculation shows—both series of annual payments being at the rate of 5½ per cent., approximate cost of the money on the first of the dates mentioned—that the second debt although its nominal value exceeds that of the first, is actually the smaller debt, being less by 6 pesos than the first.

It is in this way that the increase of the consolidated debt should be considered determined by the new issues for consolidating the floating debt or financing public works. These issues earn a smaller interest than the one obtaining the preceding year, and they were negotiated at rates of accommodation which did not annul this fall in interest. The real increase of the consolidated debt is not, therefore, represented by the nominal value of these issues, but by its lesser actual or present value in relation to the value of the debt which existed a year ago.

From this it will be seen that the real growth of the consolidated debt is less than the purely nominal increase cited of 518 million pesos. In considering the total amount of the total debt of the Nation, this minus difference must be taken into account, and should logically be added to the plus figure of 200 millions which represents the decrease which has taken place in it.

THE CONVERSION OF THE PUBLIC DEBT

The operations of conversion of the public debt initiated with such great success at the end of 1933, with the unification of the internal debt at a lower interest, and the substitution in 1934, of the old loans floated in Great Britain for others in better conditions have continued during the year under review, with the conversion of several loans floated in France, amongst which are included several of the provincial loans.

With profound satisfaction I am able to declare that, as a result of the different conversion operations carried out up to December 31, 1935, economies have been obtained in the services of the public debt to the value of 45 million pesos.

As and when circumstances permit, the Executive Power will continue the task of lightening the burden of the Exchequer, by reducing the cost of the public debt, with which the Nation will thus increase the benefits gained up to the present, thanks to the strict fulfilment of the obligations contracted with the holders of the bonds.

CREDIT OF THE NATION

The economic and financial recovery of the country, the faithful fulfilment of all its obligations and the transformation effected in the public debt, have contributed to strengthening the national credit. For the first time the bonds of the Credito Argentino Interno of 5 per cent. were quoted around par. Three years previously, those of 6 per cent. had gone down to less than 80 per cent. of their nominal value.

The improvement of credit permitted the Government to continue with all success placing the new bond of the public debt at 4½ per cent. interest and ½ per cent. amortisation, which, for the first time since 1911, was again put on the market at the end of 1934. The new issues, destined for the greater part to financing the plan of public works, were being negotiated in conditions growing more favourable day by day, so that when the last operation was carried out at the beginning of February of the present year there was an increase in the negotiation rate of more than five points net relative to the first issue referred to above. At the present time these bonds have an excellent market, and are quoted at more than 90 per cent. of their nominal value with an immediate yield of less than 5 per cent.

This favourable evolution of the capital market has considerably cheapened the cost of the Public Works of the last Financial Year in relation to those effected in the preceding years.

In its turn, short-term credit, with the elimination of the frozen Treasury drafts, has again commenced the functions appertaining to it, that is, the satisfying of the transitory requirements of the Treasury. The new non-rediscountable drafts which the Treasury issues, and the circulation of which does not exceed in all 50 million pesos, are punctually paid at their due date.

Dealing with bonds eligible for short-term accommodations, these have turned out very attractive to the local Banks, financial and commercial institutions, and even to private investors, who may prefer to maintain their resources in a liquid form. In recent transactions they have been adjudicated at an interest varying between 1½ per cent. at one month and 2½ per cent. at 90 days.

So that these drafts, instead of being a hindrance to the banking system, constitute an important factor in the regularisation of the money market, by taking the pulse of interest of money on short terms.

EXCHANGE

With the sanctioning of the financial Statutes, the Exchange Control has entered on a new phase. The Banco Central has taken over the regulating of the market of exchanges and the fixing of the negotiation rates of the different currencies.

In its turn, the Executive Power, in fulfilment of Law 12,160, has appointed a Foreign Currency Commission, charged with the mission of advising the Government in questions relating to the distribution of our products. Thus, during the year 1935, it has been possible to continue granting, without trouble, the advance exchange permits on the basis of the agreements to which this country is a signatory and the availability of the market.

The measures referred to, together with prudent handling of the Foreign Currencies Fund, have permitted us to maintain our monetary stability. The pound sterling which in January was worth 17.01 pesos in the official market, has maintained this level during the whole year without any appreciable variation, and in December it was quoted at 17.02 pesos. This stability has been secured, thanks to the Foreign Currencies Fund having attained the necessary magnitude for satisfying the demand of holders of exchange permits, even in the periods in which the delivery of currencies to the official market decline, as a consequence of the stationary nature of our exports.

With the object of allowing the peso, after a long period of quotation rigidity, to develop a trend more closely approaching market realities, there was established in the official market a system of auctions or bids for the acquisition, by holders of exchange permits, of foreign currencies. The reasons which made this measure advisable have disappeared by reason of the present stability of our currency, as has already been expressed. In consequence, the system of bids has been abolished, and it has been replaced by the direct fixing of the rate of exchange by the Banco Central, on the basis of the Currencies Market situation. This measure has also considerably facilitated the negotiations of the holders of exchange permits and the labours of the respective offices.

The Executive Power maintains its purpose of aiming at complete liberty of exchange operations as soon as the circumstances permit. In this regard, there was recently created a Commission, charged with the duty of fixing tariffs for the delivery of currencies emanating from the regular exportation of our goods; but it is natural that, whilst measures exist abroad, which have been the cause of establishing a regime of exchange control, it will be necessary to proceed cautiously.

The margin of exchanges emanating from the difference between buying and selling prices of export drafts in the official market has continued being applied in the form laid down by you. An investment of the said fund, of the very highest interest to the country and cereal producers, has been proposed to you and the Bill awaits the sanction of the Chamber of Deputies. This consists of the building of a chain of grain elevators.

Within the scope of its policy of giving the benefit of the profits on margin of exchanges to producers, the Executive Power has recently arranged with the Railway Companies to lower the freight for the carriage of the maize harvest, compensating the fall in their revenue by the concession of a more favourable rate for the transfer abroad of their funds.

CENTRAL BANK

In dealing in my previous Message with the monetary and banking laws, I pointed out to you that the intention was to apply them decisively, aiming definitely at the complete fulfilment of the high purposes for which these transcendental reforms were promulgated. The moment has now arrived to make an exposition of the work achieved, which is, in itself, an eloquent refutation of the prejudices, errors, and unjust criticisms which these measures provoked, and which the Executive Power faced with serenity, being aware that the ultimate outcome would give it the justification that its judgment and foresight merited.

Actually, the unfounded rumours of inflation have proved illusory. At the end of the year 1935, after the execution of all the operations contemplated in the plan of monetary reform, the total amount of money in circulation, both in the bills issued by the Banco Central and the subsidiary coinage in charge of the National Government (excluding that in the coffers of the said Bank) amounted to 1,177,900,000 pesos, against 1,171,500,000 pesos in the previous year; the increase has been insignificant.

The revaluation of metallic stocks on being transferred to the Banco Central has not fortunately had the extreme inflationist results which were anticipated. The fact is that a considerable portion of the benefits accruing from revaluation and from subsidiary coinage, which amounted to 701,100,000 pesos, were re-absorbed in the form already known to you. The remainder was employed to strengthen the ready money of the banking

system, increasing it from 436,200,000 to 827,500,000, or, say, by the sum of 391,300,000, making its proportion with regard to the deposits 25 per cent., which is a very satisfactory result.

With this, the banking system has recuperated its essential liquidity, and the dangers which threatened it have been completely overcome. These dangers affected not only banks in difficulties but also all banks, due to the general consequences which these phenomena of lack of confidence on the part of depositors bring in their train.

All these events are consolidating the prestige of banking reform, which is an indispensable condition in order that the Banco Central may carry out with efficiency its delicate functions of regulating the system independently of all influences foreign to its own task, but subject always to supervision of the authorities through the stipulations laid down in the law and in its regulatory decrees.

THE BANK INVESTMENTS MOBILISING INSTITUTE

At the end of the last financial year, this Institute commenced its operations, thus initiating the last stage of the plan of action set out in the Banking and Monetary Laws sanctioned by you.

Its first operation was to acquire from the Banco de la Nación Argentina the credits which this Bank had in difficult moments granted to private banks, and which on December 28, 1935, amounted to the sum of \$ m/n. 314,591,000.

Within the scope of the fundamental objects of the law of organisation No. 12,160, of ensuring that liquidity so necessary to Banks, the Instituto Movilizador was responsible in the form opportunely made public, for the banking consolidation of greatest volume the country has ever known, as much by reason of the importance of the banks absorbed, as by the magnitude of the figures involved.

On its part, the Instituto Movilizador should now deal with the liquidity of assets which were transferred to it by the Banks, assist the development of the businesses of debtors with capacity to pay, and increase the productivity of the properties. This is truly a complex task to be carried out without undue precipitation, as this might frustrate the sane purposes for which the Instituto was brought into being.

THE BANCO DE LA NACION ARGENTINA

The Banco de la Nacion Argentina was an efficient and valuable instrument which served to overcome the dangers of the extremely grave situation provoked by the crisis the country passed through in recent years.

The Banco Central de la Republica Argentina having commenced operations on May 31st last year, the National Government made restitution to the Banco de la Nacion Argentina through the handing over of \$ m/n. 428,149,000 in cash, of \$ m/n. 118,052,000 in bonds of the Credito Argentino Interno and of pesos \$ m/n. 5,546,000, by the cancellation of the conversion fund, the debt contracted previously, which amounted to \$ m/n. 551,748,000. This measure, together with the purchase made by the Instituto Movilizador to a total value of \$ m/n. 314,591,000 to which I have referred in another part of the Message, endowed the Banco de la Nacion Argentina with very strong available assets. It thus cancelled its re-discounts, which on May 31, 1935, stood at \$ m/n. 246,000,000, and at the present time it possesses large liquid funds, notwithstanding the transfer of official deposits and of the Camara Compensadora to the Banco Central.

Having unloaded the weight of official credits and considerably increased its liquidity, the Banco de la Nacion Argentina is in a solid position to intensify its action of fostering the basic industries of the country.

THE NATIONAL MORTGAGE BANK

The consolidation of the position of the Banco Hipotecario Nacional, after the conversion of the mortgage scrip and the modification of the terms granted to debtors have permitted it a favourable evolution of business, especially in relation to the mora and the placing of its bonds.

The Bank operates in the measure of the receptivity of the market, issuing scrip destined preferably to the reduction of short-term mortgages with high interest, and for habilitating industries, the stimulating of which is in the country's interests.

Schooled by past experience, the Board of the Bank is zealously consolidating the economic position of the Institution and extending to the greatest possible extent the benefit of the credits it grants within the margin of the scrip at its disposal, to which end it has established standards more in keeping with the present-day situation.

REPUBLIC OF EL SALVADOR (6 PER CENT. STERLING BONDS, 1923)

READJUSTMENT AGREEMENT APPROVED

A general meeting of Deposit Certificate Holders of the Republic of El Salvador Six per Cent. Sterling Bonds, 1923, series "B," was held, on the 27th instant, at Beaver Hall, Garlick Hill, London, E.C., to consider, and if thought fit to ratify, an *ad referendum* Readjustment Agreement made between the Government of the Republic of El Salvador, the American Protective Committee of the Holders of Bonds of the Republic of El Salvador, Series "A," "B," and "C," and the Council of Foreign Bondholders.

The Right Hon. the Earl of Bessborough, P.C., G.C.M.G. (President of the Council of Foreign Bondholders), presided.

The Chairman, in the course of his speech, said: The Readjustment Agreement makes certain permanent modifications of the 1922 Loan Contract, but should the Government default on its undertakings under this agreement the bondholders are to revert to their full rights under the original contract.

The new service for interest and sinking fund (which is to be resumed) is to be limited to \$850,000 per annum, which is to be remitted to the paying agents by monthly instalments of varying amounts, which are to be used in the first place to pay interest at the rate of 5½ per cent. instead of 8 per cent. on the "A" bonds, 4 per cent. instead of 6 per cent. on the "B" bonds, and 3½ per cent. instead of 7 per cent. in the case of the "C" bonds.

During the first four and a half years covered by the readjustment one-quarter of the amount remaining after making these payments is to be used as a fund—to amount approximately to \$150,000—for the purchase of the deferred interest certificates of the "C" bonds at not exceeding 15 per cent. of their face value. After July, 1947, any unexpended balance of this fund will be transferred to the sinking fund account. The remainder of the \$850,000 per annum, after providing for the interest payments and for the deferred interest certificates fund, will be devoted to sinking fund, 50 per cent. being applied to redemption of "A" bonds, 20 per cent. to "B's," and 30 per cent. to "C" bonds.

The resolution will enable us to continue to maintain the necessary representative contact with other parties to the readjustment. Both the council and their bondholders' committee are of the opinion that the arrangement, in view of all the circumstances, is a very fair one, and as we do not think that any better terms can be obtained it is one which we recommend.

I will now formally submit the following resolution:—"That this meeting of Holders of Certificates of Deposit issued by the Council of Foreign Bondholders against 6 per cent. sterling bonds, 1923, Series "B," of the Republic of El Salvador, (a) hereby ratifies the Readjustment Agreement, dated New York, April 27, 1936, and signed *ad referendum* on behalf of the Government of the Republic of El Salvador, represented by Dr. Rodrigo Samayoa, and the (American) Bondholders Protective Committee for the bonds of the Republic of El Salvador, Series "A," "B," and "C," and the Council of Foreign Bondholders and authorises the Council of Foreign Bondholders to do or concur in the doing of all acts and things which the council may deem necessary or expedient to give effect to the said Readjustment Agreement, and to carry out the same, and (b) hereby consents to and ratifies the deduction of 10 per cent. from the nominal amount of the coupons due July 1, 1935, and January 1, 1936, on the Series "B" bonds, as if such deduction had been made by the Council of Foreign Bondholders under the terms of deposit and to such further deductions upon any further payments on the Series "B" bonds under the said Readjustment Agreement as the Council of Foreign Bondholders may approve for the purpose of providing for the expenses of and incidental to the negotiations with the Government of the Republic of El Salvador, and the preparation and carrying into effect of the said agreement; (c) hereby authorises the council, whether before or after redelivery of the bonds deposited with it, to enter into all such further negotiations with the Government of the Republic of El Salvador and any other parties as in the opinion of the council may be necessary and expedient for the furtherance or protection of the interests of the holders for the time being of such bonds or as the case may be of the certificates of deposit representing the same."

The resolution was unanimously adopted. III. A cordial vote of thanks were passed to Lord Bessborough for paying the way, to the Council of Foreign Bondholders, to their representative in the United States, their representative in Central of the League of Nations, and also to the American Committee.

In referring to that, in view of

HUDSON'S BAY COMPANY

LARGE INCREASE IN PROFITS

The General Court of the Governor and Company of Adventurers of England trading into Hudson's Bay was held, on the 26th instant, at Beaver Hall, Garlick Hill, London, Mr Patrick Ashley Cooper (the Governor) presiding.

The Governor, in moving the adoption of the report and accounts, said:—The outstanding feature is the largely increased profit and the dividend which we are able to declare. It is a matter of great interest to you and of great gratification to us that after five years of effort we are able to resume the payment of a dividend.

The fur trade department in Canada made a rather larger profit than in the previous year. Our operations have been overshadowed by the international situation. We sell to many countries, and the vagaries of exchange, embargoes, etc., are a sore trial to our people. Markets were hesitant in the first half of 1935, but in the summer there was some improvement. Our October auction was moderately successful, but later the demand strengthened considerably and the auction in January showed a marked advance. With the continual spread of civilisation in Canada, certain areas are showing a serious decrease in the number of fur-bearing animals. We are trying to solve this problem by the establishment of a number of preserves, where hunting will only be allowed on a regulated basis. We are maintaining our interest in fur-farming so as to keep abreast of current developments and in touch with the fur farmers and their associations.

RETAIL STORES AND LAND DEPARTMENT

The other main section of our operations in Canada is our retail stores. Here again I can report most encouraging progress and an appreciable increase in profits. Our reputation has been enhanced and the number of our customers increased, but it must be remembered that we cannot earn a really satisfactory return on the money invested in these stores until the general level of prosperity in Western Canada is considerably higher and the population much more numerous.

With regard to the land department, in spite of the disastrous effect of rust and frost on the yield and quality of grains, the farmers have had a slightly better year than in 1934. When the farmer does do better, we receive the benefit by his payment of outstanding instalments.

We have only been able to sell small areas of land at prices which are most disappointing when you compare them with those of ten years ago. The Prairie Provinces still have a long way to go in recovering from the effect of post-war booms and depressions before we can expect adequate returns from our land department.

There is little to say about the wholesale department, except that our branded goods have more than maintained their reputation.

YEAR'S RESULTS

In regard to the accounts, the fact which will interest you most is that the net profit has increased in round figures from £41,000 to £145,000, an advance of £104,000. This, added to the amount brought forward, gives us an available balance of £214,000. Our charter of 1912 provides for the repayment of capital out of a reserve fund set aside for the purpose. In accordance with that provision, the board now propose to repay £600,000 of the preference share capital. We also propose to pay all the arrears of dividend on that sum—that is, for the six years up to and including June 30, 1936. These arrears absorb almost the whole of last year's profits. We thus leave ourselves with a carry-forward out of which to pay a half-year's preference dividend on January 1st next, as we hope to be able to continue regular payments on the preference shares. There are still left considerable arrears of dividend in respect of the outstanding preference share capital. If the results for last year are maintained, we hope to find ways and means whereby these arrears can be dealt with, and so clear the way for a modest dividend on the ordinary share capital at an early date.

It is evident that we are round the corner, though I will not go so far as to say that we are free of our troubles. For conditions in Canada, improved as they are, still give cause for anxiety, while in other parts of the world they remain seriously unsettled. However, the fact that we are fully alive to the difficulties that surround us is an additional assurance that we will leave no stone unturned in our efforts to build upon the company's great tradition and experience an organisation which will face the future full of hope and confident of success.

The report and accounts were adopted.

MARKS AND SPENCER, LIMITED

EXTENSION OF BRANCHES

FUTURE DEVELOPMENT

MR SIMON MARKS ON THE TREND OF EMPLOYMENT IN DISTRIBUTIVE TRADES

STAFF WELFARE, PENSIONS SCHEME AND BENEVOLENT FUND

The tenth annual general meeting of Marks and Spencer, Limited, was held, on the 25th instant, at Winchester House, Old Broad Street, London, E.C., Mr Simon Marks (chairman and managing director) presiding.

In the course of his speech the Chairman said:—The net profit, after providing for directors' fees, management remuneration, depreciation, and other charges, amounts to £1,264,406, an increase of £177,809 over the preceding year.

ALLOCATION OF PROFITS

The net profit of £1,264,406, after deducting £167,165 for income tax, leaves a balance of £1,097,241, which, together with £73,469 brought forward from the previous year, makes a total of £1,170,710 available for distribution. After the payment of the dividends on the two classes of preference shares, and the interim dividend of 15 per cent. on the ordinary and "A" ordinary shares, there is left an available balance of £850,465, which the directors recommend should be appropriated as follows:—

Debt redemption fund	...	...	£10,544, against	£10,000 last year
Properties contingency reserve	...	...	£50,000	.. £150,000 ..
General reserve account	...	...	£343,496	.. £206,969 ..
Payment of a final dividend on the ordinary and "A" ordinary shares at the rate of 25 per cent., thus making 40 per cent. for the year ended March 31, 1936	£358,741	..	£326,128	..
By carrying forward to next year's accounts...	£87,684	..	£73,469 brought in	

ISSUE ON BONUS TERMS

The directors further recommend that £143,496, part of the general reserve account, be capitalised and that a distribution by way of bonus be made to the holders of the existing ordinary and "A" ordinary shares of the company in the proportion of one "A" ordinary share for every ten ordinary and/or "A" ordinary shares held.

RESERVES

The directors consider that the proposed allocation this year of £50,000 to the properties contingency reserve will be ample addition to that fund, which will then stand at £234,013.

After the allocations proposed, and after making provision for the bonus shares, our general reserve will stand at £1,700,000.

The sum of £243,120 has been charged against the accounts in respect of depreciation and repairs to properties and fixtures before arriving at the net profit. This compares with £202,752 for the preceding year.

Turning to the assets side of the balance sheet, freehold, leasehold and leased properties stand at £6,382,334, being a net increase of £924,661.

DEVELOPMENT

We have built 15 new stores, 5 of which have replaced stores which had become wholly inadequate to our needs. Further, we have completed considerable extensions to 19 other stores. We are now operating 209 stores.

Our programme at present for 1936-37 embraces 22 entirely new stores (3 being replacements) and over 30 extensions.

We have continued to spread our business over the country, but you will have noticed that the number of extensions last year exceeded the number of new stores, and that in the current year this will be even more the case. The popularity of our stores compels us, wherever we can, to enlarge their size, in order to cope with the increasing trade. The growth of our business and the growth of the individual store is not merely mechanical; it is organic. Our ideas develop with our experience and demand the rebuilding of the older stores to express these ideas. The extension of a store means more than an addition to selling space. It involves re-planning, re-equipping and modernising the whole store to conform with the development of our business.

The present resources of the company will provide for our expansion during this year, but the development we contemplate beyond this period will call for fresh capital over and above the amounts retained in the business from profits each year. Your directors will make the necessary financial arrangements when required.

THE TREND OF EMPLOYMENT

The industrial life of Britain has been in a condition of rapid change since the War. Outstanding among changes is the increase in the distributive trades and the decline in the older manufacturing industries. The increase in the numbers engaged during the last twelve years in the distributive trades (753,000) is almost equal to the decrease in those engaged in coal, cotton, wool, ship-building and ship-repairing, general engineering, and iron and steel (779,280).

Whilst the old staple trades are subject to increasing mechanisation, there is practically no place for mechanisation in the distributive trades and services, and their expansion necessitates a growing volume of employment.

CHANGING DEMANDS

A fundamental change in people's habits has come about. Millions are enjoying a substantially higher standard of living. Producer and distributor must adjust themselves to this new level of demands, which their own activities have helped to create.

To this substantial rise in the standard of living our company claims to have made a definite contribution.

We have been fortunate in winning the co-operation of manufacturers who, like ourselves, are prepared to respond quickly to the changes in public demand. We have taken the lead in aiding our manufacturers to produce good, serviceable commodities at prices within the income range of the majority of the population. With the assurance of large scale orders they are in a position to buy their raw materials at the best prices, instal the most efficient machinery, and lay out their plants to give the most economic results.

STAFF WELFARE

The company now employs nearly 13,000 persons permanently, and the improvement of their working conditions is the constant care of the board. The company has expended under the heading of "Welfare" a sum of nearly £60,000 during the past twelve months.

PENSION SCHEME AND BENEVOLENT FUND

Your board has decided to introduce a scheme of Group Life Assurance and Pensions for certain sections of the male staff. The scheme will be upon a contributory basis. The company will undertake to bear the cost of the pensions provided by the scheme in respect of past services, and will make considerable contributions towards the cost of future pensions. The company will also pay the entire cost of the benefits payable on death or disablement.

In addition to the pension scheme, the directors propose to create a benevolent fund, which will be vested in trustees, designed to meet needs not covered by the pension scheme, and to deal with certain other classes of our employees who cannot be included in a pension scheme.

In order to set up the benevolent fund, you will be asked to agree that 40,000 "A" ordinary shares in the company be issued at par to trustees. Certain of the directors have agreed to provide the £10,000 cash necessary to subscribe for these shares. The trustees will deal with these shares at their discretion in the interest of those concerned.

RETIREMENT AND RE-ELECTION OF DIRECTORS

The shareholders will have gathered from the Report that they have seen changes in the constitution of the board of directors of the company. When addressing you last year, I referred to the fact that Mr Alexander Isaacs had found it necessary, on account of ill-health, to relinquish the office of assistant managing director, which he had filled for a long period of years, but that he was proposing to continue in office as a director.

Unfortunately, the health of Mr Isaacs did not improve sufficiently to enable him to give that attention to the affairs of the company which he would have wished; accordingly, he requested the board to accept his resignation, which they did with regret.

The Board are also sorry to lose the services of Mr R. F. Norland, who resigned during the year. I should like to put on record our appreciation of Mr Norland's services to the company which dated back to the time of its incorporation.

The board was left with three vacancies; accordingly, the remaining directors exercised their power to fill them by appointing the Rt. Hon. L. S. Amery, P.C., M.P.; Captain C. E. Benson, D.S.O.; and the Marquis of Milford Haven, G.C.V.O.

In accordance with the provisions of the Articles of Association, the new directors retire from office at this meeting, and you will be asked to pass a formal resolution re-electing them to the board.

Mr Sacher is the director who retires from office by rotation, and he being eligible, you will be asked to re-elect him to the board.

THANKS TO OFFICERS AND STAFF

It is a pleasant duty to propose the thanks of the board and of the company to the staff, who have carried out their duties with loyalty and enthusiasm. Their team spirit and loyal co-operation is responsible in no small measure for the success of the business. Mr Simon Marks then moved the adoption of the report and accounts.

In the absence of Mr I. M. Sieff (vice-chairman), Mr Norman Laski, B.A., seconded the resolution for the adoption of the report and accounts, which was carried unanimously.

Resolutions were also passed re-electing directors, approving capitalisation of reserves and bonus issue and the creation of a staff benevolent fund.

It was announced that letters of allotment in respect of the bonus issue and dividend warrants will be posted on June 4th to those shareholders whose names were on the register of members on May 4, 1936.

SUNGEI BATU (MALAYA) RUBBER ESTATES, LIMITED

DIVIDEND OF 5 PER CENT.—REPLANTING PLANS

The twenty-third annual general meeting of this company was held, on the 22nd instant, at 149 Leadenhall Street, London, Mr E. D. Hewan (the chairman) presiding.

The Chairman, in the course of his speech, said: Our investments in Government securities stand in our books at £12,978, their market value on December 31, 1935, being £14,646. Our cash position is also satisfactory at £9,171.

We have, you will see, about £3,960 of unspent capital, and in addition £2,000 at the credit of general reserve. Taken as a whole, our balance sheet reflects a position which I think may be regarded as comfortable and sound.

We made a net profit last year of £4,077, and your directors recommend the payment of a dividend of 5 per cent., less income tax, absorbing £4,125, and the transfer to general reserve £1,000, leaving a carry-forward to 1936 of £11,103.

The estate was assessed for 1935 at 885,645 lbs., and of this, under restriction, we were allowed to ship 597,600 lbs. Our assessment for 1936 amounts to 913,680 lbs., and, if no further change is made in the percentage quotas already decided upon, we shall be permitted to export about 571,000 lbs.

It seems useless to attempt any forecast as to either the immediate or distant future of the rubber market, as the position is altogether an artificial one. The potential production from the rubber producing areas at present within the scheme of international regulation is so greatly in excess of the probable consumption that a continuation of the present scheme appears to be essential. The excess stocks, due to over-production in the past, are gradually being liquidated, and during the current year it is estimated that they will be further reduced by about 120,000 tons. The decision as to the percentage of rubber allowed for export lies, as you know, in the capable hands of the International Committee, who have the advantage of having before them all the factors of the problems which have to be considered, and I feel confident that we can rely on their decisions as being the best for the industry as a whole.

The board have decided to go in for a moderate programme of replanting. The programme under consideration is about 300 acres, and we have authorised a third of this to be taken in hand forthwith.

The report and accounts were unanimously adopted.

CABLE AND WIRELESS (HOLDING), LIMITED

SUBSIDISED FOREIGN COMPETITION

The seventh ordinary general meeting of Cable and Wireless (Holding), Limited, was held, on the 22nd instant, at Southern House, London.

Mr J. C. Denison-Pender (the Governor) said that after paying 2½ per cent. for three consecutive years, it was possible last year to approve a dividend of 4½ per cent. They were now able to recommend a full year's dividend of 5½ per cent. on the preference stock. This was a further and noteworthy advance, and he hoped it marked another stage of an improvement which would continue in the coming years.

Continuing, he said: I must make some reference to the general question of competition and our relations with His Majesty's Government. As I mentioned last year, new wireless routes continue to spring up in all parts of the world, thereby exposing the company to ever-increasing competition. Since January, 1928, over 150 new wireless services have been established, mostly by foreign countries, in many instances being deliberately opened by the Governments concerned at uneconomic rates with the object of fostering their foreign trade. An illustration of the support given by foreign Administrations to their communications services is afforded by the relations between the Italian Government and an Italian company. Not merely does the company in question receive a substantial subsidy which has been guaranteed for forty years, but special facilities have been afforded by that Government for the collection of traffic, necessary repairs to cables and in connection with taxation matters.

We are, of course, powerless to prevent the establishment of wireless services between two points situated in foreign territory, but the gravity of the position has been aggravated by proposals which are continually being pressed for the inauguration of direct wireless services between foreign countries and Empire points, where telegraphic facilities by cable already exist which are fully adequate for the present and for any prospective volume of traffic that can be foreseen.

If these direct wireless services are permitted to be established within the Empire, it will inevitably mean that the system of communications operated by your company will become uneconomic, and the position in the telegraphic world which this country has enjoyed in the past will be lost. With it will go a very vital factor of Imperial unity and Imperial strength.

DANGER TO IMPERIAL COMMUNICATIONS

In stressing this question of the opening of direct wireless services, I think I should emphasise that the whole of the traffic which they will carry will, to all intents and purposes, be "lifted off" the existing British system, and furthermore that at least one-half of the revenue which they earn must inevitably pass into the pocket of the foreigner.

The position was such that the management of your company considered that the ultimate danger to Imperial communications generally, which would result from the opening of such services, justified a suggestion being made to H.M. Government that the issues involved warranted the early convening of an Imperial Wireless and Cable Conference similar to that of 1928. Such a Conference could have considered Imperial communications anew in the light of the experience gained during the seven years since the 1928 set-up.

A request for the convening of a Conference, to which I have just referred, was made by the company in July of last year. In January we were advised that the Government could not see its way to comply with our suggestion.

An Imperial Conference will probably be held in London next year, and we have, therefore, recently submitted a further request that, even if what I may call a special "Communications" Conference cannot be called, the subject of "Communications" should at least be included in the agenda. Under this heading we have suggested that opportunity should be taken to bring under review not only such items as the question of the Beam Rental and the Pacific Cable Board Annuity, but also, among others, the maintenance of strategic cables, and rate reductions, which latter, for one cause or another, have, since the merger, cost the company a very considerable sum per annum. It should be borne in mind, however, that the main reason for our original suggestion to the Government for the calling of a conference, and for our latest proposal, is the danger which we envisage to Imperial Communications, and to the company from the opening of these superfluous direct wireless services.

The report and accounts were unanimously adopted.

CENTRAL MINING AND INVESTMENT CORPORATION, LIMITED

SATISFACTORY YEAR WITH INCREASED PROFIT

APPRECIABLE INCREASE IN INCOME FROM DIVIDENDS AND INTEREST

WIDESPREAD ACTIVITY IN SOUTH AFRICAN GOLD MINING INDUSTRY

THE BURDEN OF TAXATION

BOARD'S CONFIDENCE IN FUTURE OF THE INDUSTRY

MR F. R. PHILLIPS ON THE OUTLOOK

The thirty-first ordinary general meeting of the Central Mining and Investment Corporation, Limited, was held, on the 27th instant, at No. 1 London Wall Buildings, London. Mr F. R. Phillips, M.C. (the chairman), presiding.

The secretary (Mr R. A. Macqueen) having read the notice convening the meeting and also the auditors' report,

The Chairman addressed the meeting as follows: As you will have seen from the accounts, we have had a satisfactory year, the profit realised being higher than last year, and only on three occasions previously have larger profits been shown.

Before arriving at the credit on the profit and loss account of £867,849, we have applied a portion of the year's profit to writing down the book price of certain stocks below cost and below market price, and have also made two further appropriations—namely, £53,280 to the credit of the depreciation reserve account against our interest in the Anglo-Spanish Construction Company, Limited, to which I will refer later, and £50,000 for the creation of a contingencies account. We think it desirable to have such a reserve, which can be drawn upon as a stabilising factor in the event of any unforeseen contingency arising.

General expenses were slightly less, and after allowing for an increase in Dominion income tax, we carry to appropriation account £737,637, against £701,867 in the previous year. The balance brought forward amounts to £182,375, which gives a total of £920,012 for disposal. The dividend on the 5 per cent. cumulative preference shares absorbs £50,000, and we propose a final dividend on the ordinary shares of 12s. per share, making, with the interim dividend, a total distribution of £1 per share, equal to £425,000. The distribution on the two classes of capital therefore requires £475,000.

We propose to transfer to the reserve fund £175,000, being £50,000 greater than last year. Provision for income-tax calls for a rather larger appropriation this year, and after allowing for the amount due to the directors under the articles of association, the sum of £177,564 is carried forward, which is £4,811 less than the amount brought in.

STRONG FINANCIAL POSITION

The balance sheet shows that the corporation is in a very strong position. Cash and gilt-edged securities and loans aggregate £9,459,433, and debtors, excluding the debt of the Anglo-Spanish Construction Company, Limited, amounts to £389,941, making a total of £9,849,374.

Creditors total £9,761,837 and subsidiary companies have deposited with us £129,507. Of the latter sum, £88,722 belongs to wholly-owned subsidiary companies and is thus, in effect, our own cash. Our total obligations, excluding dividends payable, therefore amount to £9,802,622, and are covered by our liquid assets.

Investments in subsidiary companies have been reduced by £354,000, and the total under the heading shares, investments and interests has increased by an almost similar amount to £5,404,997. As stated in the directors' report, this figure is very substantially below market valuation. The reduction in debentures of subsidiary companies is accounted for by further repayments of debentures of the Anglo-Spanish Construction Company, Limited, and London Wall Estate, Limited, while in the case of shares of subsidiary companies, it reflects mainly the liquidation of Bernhard Scholle and Company, Limited, in respect of which a first liquidation distribution in excess of our book value of this interest was received during the year.

The figure to which the item shares of subsidiary companies has now been reduced—namely, £314,350—represents our share interest

in London Wall Estate, Limited, the owners of the building in which these offices are situated, and the shares of two wholly-owned subsidiary companies in Johannesburg interested mainly in properties. Following upon substantial increases in the two previous years' gold-mining interests show an addition of £93,467.

The increase under the two headings, sundry debentures and foreign Government securities, and industrial commercial and sundry represents, in the main, temporary investments. Under oil, coal and base metals an increase is shown of £66,289, which reflects our larger interest in oil shares, particularly Trinidad Leaseholds, and South African coal-mining shares, after allowing for the realisation of certain base metal interests and the adjustment of book values. The larger amount of £32,198 under the heading Land Companies, etc., is accounted for by the additions to our holding in the Transvaal Consolidated Land Company.

TWO MAIN SOURCES OF REVENUE

It is a source of gratification to the board to be able to place before shareholders to-day such a satisfactory statement of the affairs of the corporation as is revealed in the accounts. As I expect you realise, our revenue is derived from two main sources, one being dividends and interest and the other profits on share dealings. The revenue from the first source showed an appreciable increase in 1935 as a result mainly of the additions made in recent years to our holdings of South African dividend-paying gold shares. We anticipate receiving a regular and increasing income from these holdings.

As regards share dealings, we took advantage of the increased activity in South African gold shares to make profitable changes, but, on balance, as the accounts show, the book value of this item is greater at the end of last year than in December, 1934. In South African shares our policy has been dictated largely by the opinion we have expressed for some years past that the world price of gold is unlikely to undergo any substantial reduction. Past experience has shown very clearly that in times of crisis gold is the safe refuge to which capital immediately resorts.

GOLD OUTPUT STATISTICS

An examination of statistics of the world output of gold in 1935 shows that while, as a whole, the number of ounces produced has increased, the total number of ounces obtained from the South African gold mines, though greater than in 1934, is less than in the peak year of 1932. The explanation for this reduction lies not in a contraction in the scale of operations but in the extension of the policy of treating lower grade ore, the reduction in grade over the whole industry being approximately 8 per cent. and 27 per cent. when compared with the years 1934 and 1932 respectively.

In the year 1935, the ore milled by the mines of the Witwatersrand, including Heidelberg, amounted to 44,235,000 tons, compared with 39,723,000 tons in the previous year, which was already a record in the history of the industry. Inasmuch as the average price per ounce rose from £6 18s. to £7 2s. 1d., the currency value of the gold output was £74,414,000, against £70,857,000. The total working profit in 1934 amounted to £32,264,000, and in 1935 to £32,640,000, of which dividend declarations absorbed £16,391,000, against £15,828,000. The Government received from the industry in taxation and lease payments no less than £14,378,000.

During the year the number of persons employed in the industry was again increased, and in the month of December last the white and native employees on the Witwatersrand averaged 33,479 and 282,917 respectively. The steady rise in numbers from the figures

of 23,835 whites and 223,500 natives in 1932 to the present total is impressive.

PROBLEM OF NATIVE LABOUR SUPPLIES

On the subject of native labour the question of future supplies is one of the problems which confronts the industry. It must be borne in mind that as the new companies which have been formed during the past few years commence production, in addition to the enlarged scale of operations on producing mines, greater demands for native labour will have to be met, and, if there is not to be any check to the expansion of operations, no time should be lost in making arrangements for supplying the additional requirements which can now be foreshadowed. This problem is one to which the South African Government, I believe, is fully alive, and, deriving as it does such a large amount of revenue annually from the industry, it should, in its own interests, give this vital question immediate and practical consideration.

To-day, widespread activity prevails throughout the South African gold-mining industry. I have already mentioned the substantial increase in the tonnage crushed by the producing mines. The change in the outlook of the Rand is clearly shown by the fact that no less than 13 new vertical shafts are being sunk on producing mines, in some cases in order so to improve underground conditions that mining will be possible at greater depths than have hitherto been visualised, and in others in order to enlarge the present scale of operations. Further, for the development of the recently formed companies, 23 main vertical shafts have been, or are being, sunk.

NEW INTERESTS

In the report you will see mentioned the various new companies in which we are interested, and I would like to make a short reference to the borehole which was put down under our direction on the farm Blyvooruitzicht on the Far West Witwatersrand. This borehole was located and sunk under our agreement with the New Witwatersrand Gold Exploration Company, Limited, and in August last intersected a reef in the Upper Witwatersrand series at a depth of 4,887 ft., assaying 13.5 dwts. over 22 ins., or 297 in-dwts.

In order to confirm our correlation of this reef as being of the Main Reef series, the borehole was continued into the Jeppetown shales. This result was of considerable importance, since it was the most westerly point at which the presence of this series had so far been proved, the distance from the Randfontein Mine being some 26 miles as the crow flies. We are interested with the New Witwatersrand Gold Exploration Company, Limited, in an area on this farm of 724.7 morgen, and consideration is now being given to the policy to be followed in regard to this ground.

On the Far Eastern Rand, I might mention that the Transvaal Consolidated Land and Exploration Company, having completed a boring programme on the farm Hoffontein, has applied to the Mining Leases Board for a prospecting and mining lease, and, if this is granted, proposes to undertake further active exploratory work.

BURDEN OF TAXATION

In the latest South African Budget no relief from the heavy burden of taxation imposed upon the gold-mining industry is given. All those connected with the industry welcome the introduction of the simplified taxation regulations which the Budget contains and also the fact that taxation will be distributed on a more equitable basis than has been the case in the past. (Hear, hear.) I cannot help feeling, however, that the levy which the South African Government takes from the industry to-day has passed the point of sound economics, and in due course the industry should be afforded some relief from the present excessively high scale if it is to continue in the future to be the mainstay of South African prosperity, as it has been in the past.

It must not be forgotten that it is entirely due to the provision of private enterprise, and to a predominant degree by private investors overseas, of enormous sums for the development of the industry that the Government to-day is able to rely upon it for such a large proportion of its revenue. With the hazard which must always attend mining development, that capital is entitled to receive a reward commensurate with the risk.

On my recent visit to the Witwatersrand I was again much impressed by the outstanding keenness and efficiency displayed by all those connected with the running of the mines. (Hear, hear.) The efforts to improve upon the already high efficiency in the operation of each individual mine remain unabated, while the search for, and trial of, new methods have been continuous. This is particularly gratifying, as it by no means infrequently happens that

when a business or industry attains a considerable measure of success, there is a tendency to be content with what has been done. I should like to give you a few facts and figures which will serve to demonstrate the steady progress and high efficiency of the industry to which I have just referred.

OPERATIONS OF GROUP'S RAND MINES

Dealing only with the Witwatersrand mines of our own group, we see that new records were again established in the tons milled, the fathomage broken and the development footage done. The enormous tonnage of 16,908,700 was milled, or rather more than 38 per cent. of the tonnage milled by the whole of the Witwatersrand mines. In order to mill this tonnage, 1,219,768 square fathoms were broken, or, to put it in more familiar terms, ore was extracted from a surface area equivalent to 1,008 acres. The development footage accomplished amounted to 702,935 ft., or about 133 miles.

The yield per ton milled dropped to the low figure of 4.3 dwts., a reduction, when compared with 1932, of 1.6 dwts., or 27.1 per cent. This figure may be compared with 4.99 dwts. per ton of ore milled by all the Witwatersrand mines except the Central Mining-Rand Mines group. This very considerable decrease in grade has been possible, of course, as a result of the higher sterling currency value of gold, which has very materially increased the prospective lives of the mines.

In spite of the extraction of over 50 million tons in mining operations during the years 1933, 1934 and 1935, the ore reserves of the Witwatersrand mines of our group now amount to the enormous figure of 66,122,355 tons, compared with 31,726,180 tons in 1932.

REDUCTION IN AVERAGE COSTS

In spite of the increased depth of working and the large increase in development footage charged to working costs, a decrease of 6.1d. was obtained in the average working costs of our mines. A portion of this is naturally attributable directly to the considerable increase in tonnage milled, but, nevertheless, it can only be looked upon as a most satisfactory showing. That this decrease is not entirely due to the spreading of overheads over a bigger tonnage is shown by the fact that the two chief operations in mining—namely, development and stoping—were both carried out at a record low cost, since there was a decrease of 2s. 8d. per foot in the former and 11d. per fathom in the latter.

I might mention some other directions in which efforts are being made to improve mining conditions, and therefore efficiency and costs. Some attempt is being made at the partial elimination, in the support of workings, of inflammable material and its replacement by steel and increased waste packing. Various appliances are being tested for the reduction of dust in the underground air, while improved ventilation is being obtained on two mines by the sinking of large ventilation shafts, and on many others by the increased use of ventilating fans of considerable capacity.

On two mines experimental air-cooling plants are being installed with a view to obtaining information regarding the possibilities of cooling the main intake air, and, as a result, of working to greater depths than have been so far forecast.

IMPROVEMENTS IN TECHNIQUE

The group's investigations committee, which has now been constituted for many years, and which has in the past done much excellent work resulting in increased efficiency and considerable savings to the mines, has again accomplished an active year's work. It has for some time past been experimenting with a view to ascertaining the best type of steel for use in drilling operations. Although final conclusions have not yet been reached, the increasing use of alloy in place of straight carbon drill steels is indicated by the fact that of the hexagonal steel purchased by the group's mines last year 53.5 per cent. was alloy steel, against 35.3 per cent. in the previous year. That its investigations into the type of drill steel and the methods of its use have borne some fruit is shown by the fact that the cost per fathom for drill steel used in stoping was reduced from 1.1s. in 1934 to 0.9s. in 1935, and of that used in development from 1.3s. per foot developed in 1934 to 1.1s. in 1935. This resulted in a decrease of over £14,000 in the total cost of drill steel used for both stoping and development, in spite of the big increase in the scale of operations and the fact that the average cost of drill steel purchased in 1935 was slightly higher than in 1934.

The City of Johannesburg is celebrating the fiftieth year of its foundation, and to mark the occasion of its Jubilee the Empire Exhibition is to be opened on September 15th in Johannesburg, the first time an Empire Exhibition has been held outside Great Britain. During the last fifty years the growth of Johannesburg has been phenomenal, and I think the claim will be undisputed

that it is due entirely to the discovery and development of the Witwatersrand gold-mining industry, with which your corporation is and always has been so closely identified. (Hear, hear.) It is with some justifiable pride that we can reflect that not only has the gold-mining industry contributed to the well-being of South Africa, but that indirectly, through the vast sums annually expended on machinery and materials, it has played no small role in helping to bring about the trade expansion of this country.

AUSTRALIAN INTERESTS

With regard to our gold-mining interests in Australia, Mr A. J. Brett has recently returned from a visit to that country. The object of his visit was to obtain first-hand knowledge of the properties in which the Gold Exploration and Finance Company of Australia Limited and the Gold Mines of Kalgoorlie, Limited, are interested, and to meet the people who direct them on the spot. As a result of our discussions with him, we feel that the progress that has been made by these companies is satisfactory and that the prospects are encouraging, particularly as it should not be forgotten that the first-named company was formed as an exploration company and that more rapid results than have been obtained could not reasonably be expected.

I do not propose to go into the operations of these companies in any detail, but it is expected that at least two of the properties which are being developed will be earning profits during the course of the present year from production on a small scale. In addition to these, a small mill is being erected and will be used for testing purposes as well as production on a moderate scale on Bendigo Mines, Limited, where the parent company's largest expenditure is being undertaken.

Gold Mines of Kalgoorlie have been steadily opening up and investigating the leases which they hold and have now been producing since September from a small mill which they lease. It is considered that the prospects are sufficiently encouraging to justify the erection of a larger and more modern mill which is being planned at the present time.

MORE SATISFACTORY OIL CONDITIONS

While the predominant business of the corporation is gold mining, it is also largely, though to a lesser degree, interested in the oil industry. At the time of our last meeting, I expressed the opinion that the oil industry showed distinct signs of improvement, and I am pleased to say, in view of our important stake in it, that my forecast has been borne out in fact. Results of the leading American oil companies provide evidence of the more satisfactory conditions now prevailing, which have been brought about mainly by the more effective regulation of the output of crude oil and increased consumption.

As you will remember, one of the main reasons for the depression in the industry during recent years was the uneconomic production of oil from various fields, resulting in a totally inadequate return being received from such output. The dark cloud of trade depression which has for so long overhung the United States seems to be gradually passing away, and if the improvement in trade and industry now evident in the States gains further impetus, there is every likelihood of the oil industry as a whole entering upon a new chapter of progress and prosperity.

The development of the properties of Trinidad Leaseholds, Limited, continues to be eminently satisfactory, and at the last annual meeting of that company the chairman was able to report that the year's work had resulted in a substantial increase in the estimated oil reserves. In the year ended June 30, 1935, the company was able to show considerably increased profits, and a dividend of 17½ per cent. was paid, as compared with 12½ per cent. in the previous twelve months. An interim dividend of 7½ per cent. for the current year was recently announced.

INCREASING DEMAND FOR "REGENT" MOTOR SPIRITS

The motor spirits distributed by Trinidad Leaseholds in this country under the trade name of "Regent" continue to meet with increasing demand from the motoring public.

Siparia Trinidad Oilfields, Limited, in which we are also interested, was recently granted by the Trinidad Government the oil rights underlying 7,600 acres of alienated Crown lands, and an arrangement is being made with Trinidad Leaseholds to test the new area on a mutually satisfactory basis.

In Venezuela the North Venezuelan Petroleum Company, Limited, is drilling an exploration well in the Araurima—Riecito area of its concession, where recent geological work has indicated the advisability of further test drilling. The development of the Cumarebo section, under the control of the Standard Oil Company of Venezuela, is continuing, and substantial production is being obtained.

I might mention that the corporation has obtained an interest in a company owning large areas of potential oil lands in another part of Venezuela, where geological reports have been highly favourable.

The test well in the El Mene South district, which was put down by Tocuyo Oilfields of Venezuela, Limited, last year, failed to disclose productive sands, and no drilling is now being carried out by that company, work being restricted solely to the operation of the existing wells, from which a small production is being obtained. The future of this company seems to lie in the success or otherwise of the development work now being undertaken by the North Venezuelan Petroleum Company.

INTERESTS IN SPAIN

Our interests in Spain continue to cause great anxiety. For some years we have had the same story to tell—a large and undisputed claim by the Santander-Mediterraneo Company for payment in respect of work completed more than five years ago, and no satisfaction obtained from successive Spanish Governments in spite of constant representations, in which we have had the support of the Foreign Office. We do not forget that the Republic has experienced difficult and fluctuating times since its inception in 1931. Nevertheless, the treatment which your interests have suffered and the situation which has developed leave us no alternative but to protest against the total absence of effort on the part of the Spanish State to fulfil its contracted obligations.

Where incapacity to pay has never been alleged there exists every reason for stressing the injustice suffered by a lender who has performed his side of a contract in good faith. The failure to make even a payment on account has had, and will have, a serious effect upon the credit of a great country. I would like to emphasise this aspect of our claim and to state with confidence that to settle a debt, the details of which are so well known, would have an immediate and favourable reaction in this City and elsewhere. (Hear, hear.)

You will have seen from the accounts that we have now provided a total of £1,050,000 for the depreciation reserve account. This amount is earmarked to meet a possible loss in connection with the Anglo-Spanish Construction Company, Limited, and whether it proves to be more or less than sufficient depends on the extent to which the Spanish Government pays the amount it owes for completed construction.

The Anglo-Spanish Construction Company, Limited, has now redeemed 65 per cent. of the capital moneys secured by its debenture issue. Until payments are received from the Spanish Government, it is uncertain to what extent it will be possible to make further repayments of debentures, in view of the small amount of funds at present on hand in London and Spain. Once again I would like to express our warm thanks to Señor Aguinaga and Señor Cobain for their loyal and unstinted work in the face of disheartening conditions.

In Yugoslavia the properties in which your corporation is interested continue to show satisfactory development. Kapaonik Mines, Limited, have recently made a further issue of capital with a view to bringing that mine into a position to enter the producing stage during the course of 1937.

THE OUTLOOK

Before concluding my remarks, I would like to add a few words about our current prospects. Notwithstanding the uncertainties of the times in which we live, we regard the future with confidence, believing, as we do, in the inherent soundness of our investments, as a whole and in our gold-mining interests in particular.

It is true that at the present moment a large part of the world might be described as a depressed area, but at the same time we take the view that in spite of some apparent evidence to the contrary, most nations are travelling towards better prospects and increasing stability.

This statement is perhaps less true about those countries whose Governments' main preoccupation appears to have been in militaristic preparations rather than in the economic well-being of their peoples, but taking the world as a whole, and notably the British Commonwealth of Nations, the Continent of America, North and South, the Scandinavian countries and some European countries, we believe that the area of stability is increasing and will continue to increase; and that at some future date, near or distant, pacific influences will make themselves felt even in those quarters where the opposite tendencies are now so openly and menacingly apparent.

TRIBUTE TO DIRECTORS AND STAFF

I am very glad to welcome back to the City my colleague, Mr Ashley Cooper, after his long and trying indisposition. I

would like to convey to our colleague in South Africa, Mr John Martin, the board's appreciation of his eminent services. To my other colleagues, I extend my thanks for their unvarying support and help.

Once again I wish to thank the staff of the corporation and all those in the service of allied companies for the splendid and efficient manner in which they have worked in the interests of the corporation during the past year, and I know shareholders will wish to be associated with me in this expression of appreciation. (Agreed.)

I now beg to move: "That the report and accounts for the year ended December 31, 1935, as printed and circulated among the shareholders, be and they hereby are received, approved and adopted, and that the payment of a final dividend of 12s. per share, less United Kingdom income tax at 4s. 0.867d. in the pound, to shareholders registered on the books of the company at the close of business on May 19th, 1936, and to holders of coupon No. 44 attached to share warrants, in respect of the year ended December 31, 1935, be and the same is hereby sanctioned." I will ask Mr Rogers if he will kindly second the motion. (Applause.)

Mr A. W. Rogers seconded the resolution, which was carried unanimously.

The Chairman announced that the dividend warrants would be posted that evening and would be payable on May 28th.

Mr J. Martin and Monsieur J. Aguilon were re-elected directors of the corporation, and Messrs Cooper Brothers and Company were re-appointed auditors.

A vote of thanks having been passed to the chairman, the proceedings terminated.

WIGGINS, TEAPE AND COMPANY (1919), LIMITED

LARGER VOLUME OF TRADE

LORD PORTAL'S REVIEW

The seventeenth annual general meeting of Wiggins, Teape and Company (1919), Limited, was held, on the 22nd instant, at Winchester House, Old Broad Street, London, E.C.

Lord Portal, D.S.O., M.V.O. (chairman of the company), in the course of his speech, said: Ladies and gentlemen, the report and accounts have been in your hands for the requisite period and I propose, with your permission, to take them as read. (Agreed.)

The directors, in their report, have referred again to the larger volume of trade done by your company and its subsidiary companies during the year 1935. The improved trading conditions of the country during the year under review have undoubtedly led to an increased demand for paper, and I am confident that the Wiggins, Teape group of companies has secured its fair share. We have again enjoyed an increased export trade derived mainly from the British Empire.

I am glad to report that your company's new ventures showed some improvement during the year 1935, but in the case of the Greaseproof Paper Mills a loss was again incurred, though on a much reduced scale.

SALES

I have referred to the general improvement in trading conditions in the home markets, with the increased demand for paper. During the year 1935 all but one of our operating mills have run full time. Your company continues to follow the policy of developing the manufacture of speciality papers and, by doing so, displacing the manufacture of certain cheaper grade papers previously taken by our merchanting and manufacturing subsidiary companies, who now purchase such papers from mills outside our group.

With regard to the export market, I have already mentioned that the further improvement which has taken place in our sales has mainly occurred in the Empire markets. We continue to carry on an extensive trade in China, Japan and South America, but the difficulties due to unstable exchanges make it impossible to increase our business in those territories.

DIVIDEND

You will see that we recommend the payment of a final dividend on the ordinary shares of 5 per cent., less income tax, which brings the dividend for the year 1935 up to 8 per cent., being the same dividend as was declared for the year 1934. In addition, we are recommending the payment of a bonus on the ordinary shares of 1 per cent., less income tax. Then we propose that £10,000 be transferred to income tax equalisation reserve and £15,000 to special obsolescence reserve. We also propose the transfer of £50,000 to general reserve, bringing that account up

1936 — OUR CENTENARY YEAR

*"The best pledge of the future
is from the past"*

THE

INSURANCE CO., LTD.

Head Office: 1 Dale Street, Liverpool, 2 | London: (Chief Office): 1 Cornhill, E.C.3

to £390,558. The total allocation to these reserves of £75,000 compares with £50,000 for 1934, an increase of £25,000.

PROSPECTS FOR 1936

Before I close my remarks you will doubtless expect me to say something with regard to the trading operations for the current year. You have already been made aware of the profits for the first three months. These show a very slight decrease of £279 compared with those for the similar period of last year.

We are still very busy at our mills, but are faced with rising costs of manufacture. I am hopeful, however, that increased trade and an improvement in the results of our greaseproof mill will enable me to report on an equally good balance sheet this time next year.

The report and accounts were duly adopted; the dividend and bonus, as proposed, were approved; the retiring directors were re-elected, and the auditors were reappointed.

SELECTED LAND AND PROPERTY COMPANY, LIMITED

RECORD PROFIT

The eighth ordinary general meeting of this company was held, on the 25th instant, at 126 Bishopsgate, London.

Mr Harold W. Batty, F.S.A.A., F.C.I.S. (chairman of the company), in the course of his speech, said: The accounts before you show the largest profit made by the company in any year since its formation and an increase of £1,857 on the previous year. Of the total profit of £13,998 we have distributed as an interim dividend £2,083, and we recommend a final dividend requiring £4,813 before the deduction of income tax. This will make a total distribution for the year of £6,996 gross, or just under half the net profit earned. If we had been less mindful of the desirability of placing adequate sums to reserve, the dividends recommended, making 8 per cent. for the year on the ordinary and 27 7-12ths per cent. on the deferred shares, could have been doubled without drawing on profits set aside from previous years. You will thus see that our dividend recommendation is a very conservative one. Moreover, we have not taken into account any profit earned by the subsidiary company. The total undistributed profits now amount to £24,473, or just under 40 per cent. of the share capital. I think I am entitled to say that our balance sheet reflects a strong position, of which we may justifiably be proud.

Now that the profit-earning capacity of the subsidiary company—Capital and Counties Freehold Equity Trust, Limited—has been established, this company intends to increase its share holding therein by taking up a further 12,999 shares at a premium of 1s. per share.

We are constantly on the look-out for land suitable for development, and we have in view a small piece of land which appears to meet our somewhat exacting requirements and to offer a satisfactory prospect of turning it to profitable account.

There is no doubt that the company has a large hidden reserve in the increase in value over cost of the land zoned for shops, which was purchased before the considerable development at Whitton during the past six years commenced.

The report and accounts were unanimously adopted.

AMALGAMATED FINANCE COMPANY, LIMITED

COMPANY'S HOLDINGS

The fifth annual general meeting of this company, was held, on the 27th instant, at Winchester House, London.

Mr James Fairbairn (chairman of the company) said:—The profit for the year ended April 30, 1936, amounted to £11,955 2s. 7d., which, with the amount carried forward from last year, gives a total available profit of £16,084 7s. 3d., which it is proposed to appropriate in the following manner: Payment of a dividend, No. 3, of 10 per cent., less income tax at 4s. 9d. in the £, £6,677 3s. 7d.; directors' special remuneration, £1,195 10s.; transfer to reserve for taxation and contingencies, £5,000; and carry-forward balance of £3,211 13s. 8d.

At the extraordinary general meeting of the company held on April 14th last, the reduction of capital to be effected by the distribution of 6 per cent. cumulative preference shares in Bangawan Estates was approved. The necessary formalities have now been completed, and transfers of Bangawan preference shares for completion by shareholders will be posted with the dividend warrants.

The quoted securities appear in the balance sheet at £78,572 14s., against a market value of £86,168 12s. 10d., and were spread at April 30th approximately as follows: Gold mining 24 per cent., rubber 67 per cent. and miscellaneous 9 per cent. After deducting the Bangawan preference shares, which are being distributed, the proportions would be as follows: Gold mining 48 per cent., rubber 34 per cent. and miscellaneous 18 per cent., with a book cost of £38,944 12s. 10d., against a market capitalisation of £46,286 11s. 9d.

MINING INTERESTS

As I advised you in my speech at last year's annual general meeting, the company had a substantial interest in gold-mining enterprises, most of which are of a speculative nature. No one of them yet is a dividend payer, as it is the policy of the company to exploit the possibility of developing mines rather than invest in gold producers showing fixed yields. Miscellaneous securities consist largely in a holding of ordinary shares in a prosperous shipping line.

The unquoted securities consist of tin-mining interests, which, although promising, must be considered definitely speculative, and this item appears in the balance sheet at the nominal figure of £1. At the present stage, no accurate valuation can be placed upon it. However, one of these interests has returned substantial dividends to this company. As regards the subsidiary company, this has, during the year, returned a satisfactory dividend.

The above particulars are given as a guide to shareholders, but it must not be assumed that these proportions are fixed, as, in the ordinary course of business, the company's investments are constantly changing and the amount invested varies from time to time. As the shareholders of the company are now reduced to the denomination of 4d., the question of re-consolidation into 1s. or 2s. shares is receiving the consideration of the board. The financial year now under review has been an extremely difficult one for a company of this nature. Nevertheless, I think the profit disclosed in the accounts must be considered by all shareholders a satisfactory one.

IMPROVED RUBBER POSITION

As regards the general rubber situation, the statistical position of the rubber industry continues to improve. Of recent months we have seen the effect of the increased percentage of restriction fixed for the six months January to June. The monthly exports have been considerably lower, while absorption has been fairly well maintained. Even allowing for the increased percentage of exports which will operate during July to December, exports for the year should not exceed about 850,000 tons, whereas the estimate of absorption is higher than that of 1935, the peak year, when absorption was over 940,000 tons. The welcome reduction in stocks which has been so prominent of recent date, it is therefore expected will continue, even though not at the same high rate. The present price, however, is not so encouraging, and does not reflect the improvement in the statistical position. It seems to me, therefore, that the future of the industry depends upon a continuance of the development on the absorption side and a continuance of the Rubber Regulation Scheme. With a potential production of about 1½ million tons, and even greater potential production in the future, it needs very little argument to show the need for Rubber Regulation. I trust, therefore, on the expiration of the present scheme in 1938, that a further period of regulation of at least another five years will subsequently be agreed upon.

The report was unanimously adopted.

BEECHAMS PILLS, LIMITED

SATISFACTORY RESULTS — INCREASED PROFIT

The eighth ordinary general meeting of Beechams Pills, Limited, was held, on the 25th instant, at the Hotel Victoria, London, Mr Philip E. Hill (chairman of the company) presiding.

The Chairman, in the course of his speech, said: The net profit for the year amounted to £425,780—which is £138,247 in excess of that of the previous year. This result is attributable almost entirely to our home trade position, which we have every reason to believe will steadily improve, and for that reason the Board view the results of the forthcoming year with confidence.

Your directors have always been of the opinion that our main expansion of business lies in overseas trade. At the moment we have scarcely touched the fringe of this, our difficulty in the past having been that of allocating the necessary funds for extension out of the revenue earnings of the company, but with the establishment of our development reserve (which if you adopt the directors' report and accounts will stand at £105,000, and which we intend to augment annually) we are enabled to attack in an energetic manner this side of our business, and the accumulative effect on our export trade in the course of the next few years should be considerable.

HIGH STANDARDS MAINTAINED

In contemplating our expansion programme we have realised the supreme importance of endeavouring to secure for our products the highest possible pharmaceutical standard. In our endeavour to accomplish this we are spending large sums of money to secure the best results in medical research and intend to spend still more in the future.

We have now completed the extension and rebuilding of the new Beecham factory at St. Helens. Here, and at all other centres, every care is taken to ensure that the materials used are of the highest quality and that our methods of manufacture and packing under the supervision of experienced chemists are as hygienically perfect as possible.

Your Board have realised for some time past the importance of the policy of placing to development reserve a substantial amount of the profits available for distribution to the deferred shareholders. The results so far achieved have exceeded their expectations, and they are therefore desirous of continuing this policy. While this has the effect of increasing the security and capital value of the preferred shares, it does, during the period of such development, affect the dividends to be paid to the deferred shareholders. For instance, the amount of £65,000 transferred to the development reserve out of the funds available for distribution to the deferred shareholders this year is equivalent to a further 26 per cent. dividend on these shares, while the effect on the 2 per cent. participating rights of the preferred shareholders by the proposed increased capital would be negligible even if the total amount of the proposed increased capital were allotted immediately, which it is not proposed to do. Of course, any further increase of capital must be sanctioned by the preferred shareholders.

We feel sure, in view of this explanation, that the preferred shareholders will gladly agree to the suggestion and thus encourage the deferred shareholders to agree to put still larger amounts to development reserve, which I am convinced would be to the advantage of all concerned.

STAFF'S SERVICES RECOGNISED

Success in business can only be obtained by harnessing the loyalty and good will of everyone connected with it and encouraging their efforts in some substantial form. In furtherance of this, I should like the shareholders to authorise their directors to earmark each year, say, 5,000 of the unissued 5s. deferred shares, the call on which for one year from the date of the annual general meeting at the market price at the date of such authorisation to be distributed by the Board among such members of the staff as it may from time to time decide. The result of this to-day would be that the recipients will have an option on 5,000 5s. shares at 57s. per share for the period of a year. This would provide increased incentive to make the company still more prosperous.

I would particularly ask any shareholder unable to attend the formal meeting convened for June 9th to return their proxies to me not later than the 6th of that month. These proxies will be sent out to-morrow. I have sometimes noticed shareholders do not deal as promptly as one would wish with the communications received from their Boards, which results in a great deal of unnecessary correspondence.

The report and accounts were unanimously adopted.

VENEZUELAN OIL CONCESSIONS, LIMITED

INCREASED PRODUCTION AND DELIVERIES

NEW CONTRACTS FOR SALE OF OIL

The twentieth ordinary annual general meeting of the Venezuelan Oil Concessions, Limited, was held, on the 22nd instant in London.

The Right Hon. Viscount Bearsted, M.C. (the chairman), in the course of his speech, said:—Sales of oil realised £2,723,821, compared with £2,988,197 in 1934, a reduction of £265,000. Although production and sales were greater than in 1934 the company delivered an appreciably larger proportion of heavy crude oil over 1935, and the gross proceeds per barrel of oil delivered were accordingly affected.

During the year, in order to provide the funds required for repayment of capital, we realised a large holding of British Government securities, and a profit of over £272,000 was realised. Out of this profit your directors have brought £150,000 to the credit of profit and loss account and have thought it prudent to retain the balance of £122,000 as a reserve against the investments still held. Oil stocks £31,000, trade debtors, etc., £142,000, investments at market value £743,000, and cash £531,000 amount together to £1,447,000, and if we deduct from this figure trade and other creditors amounting to £552,000 we find that the net liquid assets of the company amounted at December 31, 1935, to £895,000.

The exchange situation, although not quite so unfavourable to us as that existing in 1933, continued to have a very adverse effect on the result of our operations. Similar conditions still maintain. In the face of this handicap it has been necessary to continue our policy of exceedingly strict economy, and the degree of success which has been achieved in this direction is best shown by the fact that our general drilling, production and field expenses in 1935 show a reduction of over 1,000,000 bolivares as compared with 1934, despite the considerably higher production and greater amount of drilling in 1935. In this connection I should perhaps draw attention to the fact that the amount of footage drilled at Lagunillas during 1935 is not in itself an adequate indication of our activity as it refers to new wells only and takes no account of the sixty-seven wells which were repaired.

EXPLORATORY DRILLING

Our Lagunillas field, as presently defined, has now been under active development for some ten years, and, although we may confidently expect that it will be capable of producing at approximately the present rate for a number of years to come, the probable productive territory remaining undrilled is naturally not unlimited. As the first step towards providing further reserves of proved territory to meet our future needs, we have decided to undertake certain exploratory drilling along the Bolivar district coast. The first area to receive attention has been the Tia Juana region, situated between La Rosa and Lagunillas, where we have completed four productive wells during the last few months. In addition, we are making preparations for the drilling of exploration wells in the Pueblo Viejo and Bachaquero regions, both of which lie to the south of Lagunillas. Whether or not these exploration wells are successful, we believe that, generally speaking, geological conditions along the Bolivar district coastline from Ambrosio, in the north, to Bachaquero, in the south, are approximately similar, and the whole region may, in effect, be regarded as one and the same productive or potentially productive unit. Up to the present time the greater proportion of this area remains undeveloped, although approximately 2,000 wells have been drilled by ourselves and our two competitors who operate in the lake.

DISPOSAL OF PRODUCTION

As regards the arrangements for the disposal of our crude oil production, I advised you at last year's meeting that in view of the approaching expiry of our sale of oil contracts with the Asiatic Petroleum Company, Limited, and following the recommendations of a committee of the board appointed for that purpose, it had been decided to enter into negotiation with the Asiatic Petroleum Company for a new contract or contracts to take the place of those expiring. These negotiations have now been concluded, and I am pleased to inform you that complete agreement as to the terms of a new contract has been reached on a basis which we consider entirely satisfactory. The new contract, which will take effect as from July 1st next, will cover the sale of approximately 100,000 barrels of crude oil daily, with provisions for increased quantities. The contract will be for a period of five years, and the prices paid under it will vary with the fluctuations of world prices for petroleum products, with a minimum price. Either party will have the right to request arbitration once in each calendar year.

A new short-term contract was concluded with the Canadian Eagle Oil Company, Limited, covering the sale of 2,000,000 barrels of oil during the present year, to take the place of the agreement with that company which expired at the end of 1935.

As regards the trend of oil prices in 1935, an improvement was shown in the quotations for various grades of gasoline at American Gulf Ports, but gas oil was lower in price and the New York bunker fuel market was also slightly lower on the average of the year. Apart from the question of price quotations of products recoverable from the company's crude, the production of heavy crude from the Lagunillas field increased by nearly 5,000,000 barrels in 1935 over the 1934 production, and there was a decrease in the lighter grades of crude oil from the La Rosa Cabimas Ambrosio fields of over 2,500,000 barrels. The production from the Maracaibo district, which is also relatively light crude, was somewhat lower.

COMPANY'S PIONEER WORK IN VENEZUELA

You are aware of the important political changes which have occurred in Venezuela in the last few months. In the past twenty-five years Venezuela has progressed and developed in a manner and to an extent which has attracted world-wide recognition. Your company, with a belief in the country's oil possibilities and with confidence in the fair treatment they could expect to receive from the Government, undertook exploration work some fifteen years ago, which I think may fairly be said to have resulted in this company becoming the pioneers of the enormous development which has taken place around the shores of Lake Maracaibo. It was through the expenditure of V.O.C. moneys that the La Rosa field was proved by the bringing in of the Barroso well in December, 1922.

The administration in Venezuela since the political changes has been of such character as to justify me in saying that it is the belief of your board that we and all who are interested in and have assisted in Venezuela's progress may look forward to the future with confidence.

The report and accounts were unanimously adopted, and a final dividend of 1s. 6d. per share, less income tax, making a total of 2s. 6d. per share for the year, was declared on the preference and ordinary shares.

The retiring directors were re-elected, and a cordial vote of thanks to the Chairman terminated the proceedings.

MADRAS ELECTRIC SUPPLY CORPORATION, LIMITED

CONTINUED PROGRESS

The ordinary general meeting of the Madras Electric Supply Corporation, Limited, was held, on the 27th instant, at 1 Queen Victoria Street, London, Mr James Gray (the chairman) presiding.

The Chairman said that the accounts under consideration exhibited a continuation of the progress to which the company had become accustomed. The number of consumers had increased by 8 per cent., and the units sold had increased by 11.4 per cent. The respective increases in units sold were as follows: Lighting and fans 6.5 per cent., power 13.5 per cent., and street lighting 4.9 per cent. It was gratifying to note that there had been an increase in the units sold under every heading. The average price per unit sold was As. 1.608, compared with As. 1.680 for 1934, a rate which he ventured to say compared favourably with that of any similar electrical undertaking. In regard to the financial results the balance carried to net revenue account was £161,108, i.e. £20,677 more than the preceding year. To that balance had to be added for dividends on investments, interest, transfer fees and profit on exchange £5,495, making a total of £166,603. The balance of net revenue remaining was £81,619, being £7,814 more than 1934. Adding £26,857 brought forward, they had a total of £108,476 available for distribution, and the directors recommended the payment of a final dividend of 5½ per cent. actual on the ordinary shares, making 8 per cent. for the year.

The question of tariffs had been receiving their careful attention, and they had voluntarily made important reductions, which, they hoped, would recommend themselves to the Government of Madras. Those changes would reduce their gross revenue this year, but they considered it appropriate that consumers should participate in the reduced cost of production. They had anticipated that to some extent by carrying forward an increased balance in revenue account.

The directors' report had advised shareholders of the setback in the return on the company's investment in the tramways, and details had also been furnished of the year's working. It was, therefore, sufficient to repeat that the falling off in traffic necessitated a reduction in the ordinary share dividend to 2½ per cent., free of income tax.

The report and accounts were adopted.

BRITISH BANK OF SOUTH AMERICA, LIMITED

BRAZIL'S FAVOURABLE TRADE BALANCE

The seventy-third ordinary general meeting of the British Bank of South America, Limited, was held, on the 27th instant, at the Head Office, 117 Old Broad Street, London.

Sir Bertram Hornsby, C.B.E. (the chairman), who presided, referred first to the regrettable deaths of Mr R. J. Hose and Mr F. H. Houlder. Continuing, he said that the foreign trade of Brazil for 1935 showed a favourable balance of £5,581,000 gold, exports having decreased by £2,228,000 gold as compared with 1934, and imports increased by £1,964,000 gold.

As to the coffee position, it would seem that there would still be a substantial surplus at the end of June, 1937, in excess of local consumption and export possibilities.

As regards Great Britain's trade with Brazil, in 1935 Great Britain had taken 19.5 per cent. in value of Brazil's total exports, excluding coffee, as compared with 31 per cent. in 1934, the decrease being due chiefly to Brazil's "Compensation Marks" arrangement with Germany.

The internal trade of Brazil had again increased in 1935. Payments under the Federal Government's Exchange Arrears Scheme of 1935 had been made promptly. The new scheme resulting from the Anglo-Brazilian Agreement of 1935 had come into operation, as well as arrangements for clearing up Brazil's trade arrears with other countries; the Four Years' Debt Plan of 1934 had been complied with, exchange for imports had continued freely available and the Banco do Brazil was allowing remittance of a certain amount of private interest and dividends.

Turning to the bank's accounts, the chairman pointed out that Brazilian currency items had been converted at the "free" rate of exchange, the change involving a reduction of one-third in their sterling equivalent and more than accounting for the decreases shown in the balance sheet. Owing to keen competition for sound business, the margin of profit had been small. Provision for bad and doubtful debts had been made without drawing on the contingencies account, as had been done in recent years.

The report and accounts were unanimously adopted.

KAMRA TIN DREDGING, LIMITED

DIVIDEND OF 5 PER CENT.

The eighth ordinary general meeting of Kamra Tin Dredging, Limited, was held on the 25th instant at Winchester House, London, E.C.

Mr P. J. Burgess (the chairman), who presided, said that the report from the Mine Manager which had been circulated with the Annual Report, entirely explained the reduction of profit for 1935 as compared with 1934, and showed it to be due to the reduced percentage of their assessment which they were permitted to win and sell. The reduction in profit from £20,211 for 1934 to £15,866 for 1935 was very nearly in the same ratio as the permitted quotas of 62.5 per cent. for 1934 and 47.46 per cent. for 1935. It might reasonably have been expected to find the profit reduced by a greater proportion than the output reduction, instead of being slightly more favourable, being actually 22 per cent. less profit for this year obtained with a 24 per cent. less output.

It was proposed to pay a final dividend of 2½ per cent., making 5 per cent. for the year, to write a further £4,000 off the Preliminary Expenses, and to carry forward £2,603.

The price of tin during the year remained at a very satisfactory level, from which there had been a decided relapse during this year. The period of International control of output terminated at the end of 1936, and until there was a definite announcement of its continuance or not, the market must continue to be hesitant. They had expressed their view that continuance was desirable, and provided Siam and the dredging interests received equitable treatment, they would continue to support the policy of internationally controlled production and export.

At the present time they were not satisfied that their assessment fairly represented the combined capacity of their dredge, and the tin bearing areas they held. The dredge was only running for 39.1 per cent. of possible time in 1935, and for the current year the percentage had been still less. They had taken the necessary steps to bring the case before the authorities and hoped that their appeal for revision of the assessment would be favourably received and the justice of it recognised.

The report and accounts were unanimously adopted.

DALKEITH (CEYLON) RUBBER ESTATES, LIMITED

DRASTIC EXPORT RESTRICTIONS

The twenty-sixth ordinary general meeting of this company was held, on the 25th instant, at 19 Fenchurch Street, London.

Sir Delves Broughton, Bt. (chairman of the company), who presided, said:—Due to the increased cost of production caused by the drastic international and Ceylon export restrictions and a prospective fall in the rubber selling price, a profit of £1,331 only was realised, as against profits of £9,041 in 1934 and £7,481 in 1933 respectively.

In the directors' report we stated that this company had made forward sales for 340,000 lb. of mixed grades at 8½d. per lb. Since issuing this report we have sold a further 33,600 lb., making a total of 373,600 lb. to be delivered during 1936. A net profit of approximately £4,500 on these sales can be anticipated, leaving a balance of 200,000 lb. of standard grades to be sold at a favourable opportunity. In view of these forward contracts, as compared with 250,000 lb. sold forward at this time last year at 6½d. per lb., your board has decided to recommend a dividend of 1½ per cent., less income tax, for 1935, as compared with 5 per cent. for 1934.

There is little doubt that the original international quota received by Ceylon under-estimated considerably the acreage claimed to be under rubber in the island, which now necessitates a 15 per cent. internal cut and reduced assessments.

I wish to emphasise that the internal cut in Sumatra and Java is under 4 per cent. and in Malaya is negligible, and in the Dutch E. Indies the basic quota has been raised for the three years 1936, 1937 and 1938. Unfortunately, our representatives on the International Control Board do not seem interested in demanding a similar concession for Ceylon. This, combined with the existing undesirable practice unchecked by the control authorities which permits the sale of export coupons by estates not producing their full assessments, must affect very adversely the operations of well-managed Ceylon estates, which are limited to 47½ per cent. exports of a reduced assessment for 1936.

Fortunately, the average selling price for 1936 to date shows some improvement on 1935, and I am hoping that a higher profit for the current year is ensured.

The report and accounts were unanimously adopted.

GREAT UNIVERSAL STORES, LIMITED

SUCCESSFUL YEAR'S OPERATIONS

The eighteenth ordinary general meeting of the Great Universal Stores, Limited, was held, on the 26th instant, at Winchester House, Old Broad Street, London, Sir Archibald Mitchelson, Bart., presiding.

The Chairman, in moving the adoption of the report and accounts, said that the net profit for the year amounted to £306,000 odd, which enabled the directors to propose a total cash dividend of 50 per cent. for the year, together with a capital bonus in "A" ordinary shares of 10 per cent. In addition, the financial position was being further strengthened by a substantial allocation to general reserve, which, after allowing for the share bonus, would then stand at £245,000. That, with the capital reserve, £57,727, made a total reserve of £302,727, an amount nearly equal to the ordinary share capital.

During the past year two important subsidiary companies had been established, one the New Universal Stores, Limited, to take over their chain store business, embracing some seven super stores in operation and a further seven now approaching completion. The establishment of these two undertakings, which constituted an important part of their work during the past year, had involved considerable expenditure which had been charged against the year's profits, otherwise the profits would have been as great as those of the previous year.

During the year they acquired a controlling interest in the old-established Glasgow departmental store business of Boness, Limited. Their mail order business had shown a substantial increase of late. The company catered for the masses of the people, whose purchasing power as a whole continued to increase. The outlook was therefore exceedingly satisfactory.

Their large furniture manufacturing factory was full of work. At the present time there were over 2,500 shopkeepers stocking their output. In view of the growth of their subsidiary companies he thought it possible that arrangements would be made later on for raising additional capital to provide for those developments. The present shareholders, as far as possible, should reap whatever benefits were to be derived from the new capital issue.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended May 23, 1936, amounted to £11,594,000, against ordinary expenditure of £6,715,500. After allowing for an increase in Exchequer Balances of £111,824, the operations for the week, as shown below, decreased the gross National Debt by £4,767,000 to approximately £7,935 millions.*

(000's omitted)	
Treasury Bills.....	+ 5,211
Public Department Advances	- 9,900

GOLD MARKET

Messrs Samuel Montagu and Company write on May 27, 1936, as follows:—

The Bank of England gold reserve against notes amounted to £205,363,059 on the 20th inst., as compared with £204,290,743 on the previous Wednesday. Purchases of bar gold as announced by the Bank during the week amounted to £1,034,037.

In the open market about £1,200,000 of bar gold changed hands at the daily fixing. Offerings were absorbed by general demand and the premiums over gold exchange parities showed little change; however, with the appreciation of sterling in terms of gold currencies, the price of gold in the London Market declined to the lowest level since November, 1934.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
May 21	139s. 11½d.	12s. 1.68d.
" 22	139s. 11½d.	12s. 1.68d.
" 23	139s. 8d.	12s. 1.98d.

" 27	139s. 7½d.	12s. 2.03d.
Average	139s. 8.92d.	12s. 1.90d.
May 28	139s. 6d.	11s. 11.30d.

The s.s. "Kaiser-i-Hind," which sailed from Bombay on the 23rd inst., carries gold to the value of about £533,000.

SILVER MARKET

Prices declined further during the past week, offerings meeting with less resistance as the demand from the Indian Bazaars showed a considerable decline. The Indian Bazaars and speculators re-sold, and whilst sales on China account were still in evidence, selling was not forced, the fall in prices being due mainly to hesitation on the part of buyers. Yesterday, 20d. was quoted for both deliveries, and to-day further speculative re-selling on a poorly supported market caused a fall of ½d. in the cash and ¾d. in the two months' quotation to 19½d. and 19½d.

The market is rather uncertain, and although the tone may be steadier at the decline, this depends largely upon whether the present level proves attractive to the Indian Bazaars.

Quotations during the week:—

(c) On old capital. (d) Equal to 6 per cent. on old capital. † Free of income tax.
 (e) Also capital bonus 300 per cent.
 (f) Also bonus of one ordinary share for each ten held.
 (g) 1 1/2 per cent. to be paid July 8th and the balance when the cash is available.

HUNDRED SECURITIES TRUST.—The managers announce a first distribution of 5d. net per sub-unit, payable June 15th on all sub-units issued up to and including May 1, 1936. This is in respect of income received in the period from October 28, 1935, when the Trust was formed, to May 1st, inclusive.

BRITISH EMPIRE FIXED TRUST (COMPREHENSIVE SERIES).—Holders of sub-unit certificates of the British Empire Fixed Trust (Comprehensive Series) are notified that coupon No. 2, maturing June 15th, will be paid on or after that date on presentation to the Trustee, Lloyds Bank, 72 Lombard Street, E.C., at the rate of 3d. per sub-unit on all sub-unit certificates purchased on or before May 1, 1936.

COMPANIA HISPANO-AMERICANA DE ELECTRICIDAD S.A.—A final dividend for the financial year 1935 is declared at the rate of 25 Argentine Paper Pesos for the shares Series A, B and C, and 5 Argentine Paper Pesos for the shares Series D and E, free of Spanish taxes. The dividend will be payable on and after June 1, 1936, on presentation of Coupon No. 30 at the offices of the company in Buenos Aires, Calle Balcarce, 184.

ANGLO-IRANIAN OIL.—Profit for 1935, £3,519,183, compared with £3,183,195 for 1934, and £2,643,978 for 1933. Ordinary dividend 15 per cent., against 12 1/2 per cent., absorbing £2,013,750, against £1,678,125. Carry forward increased from £485,674 to £511,126.

SHELL UNION (PREFERRED DIVIDENDS RESUMED).—Shell Union Corporation has declared a dividend of £1.37 1/2 on the convertible preferred stock in respect of arrears, which amounted on April 1, 1936, to \$9,727,300, representing \$26.125 per share. This is the first dividend paid since July, 1931.

TURNER AND NEWALL.—Interim dividend, 3 1/2 per cent., against 2 1/2 per cent. a year ago.

J. LYONS AND COMPANY.—A record profit of £1,010,734 has been made for the past year, against £1,009,272 for the previous year. Reserve again receives £100,000, making a total of £1,900,000. Ordinary dividends are maintained at 2 1/2 per cent. The carry-forward is up from £36,602 to £39,341.

TRANSVAAL GOLD OUTPUT IN APRIL 1936

THE TRADE OF THE DANUBIAN COUNTRIES

(See page 477)

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that steady conditions rule in the iron and steel markets. Although new business is rather quiet, production is maintained at a high level. It is expected that prices will be increased at the end of the half-year, and transactions for the most part are limited to delivery before that date.

In the pig iron market, demand continues to be in excess of production. In some districts consumers find it practically impossible to obtain material for near delivery, and it has been found necessary to ration supplies. The majority of the important consumers, however, have covered their forward requirements; but there is a considerable inquiry for supplementary parcels. Some producers are unable to accept orders for delivery earlier than the second half of the year.

In the semi-finished steel department the position is less stringent, but output is passing immediately into consumption and some works are behind with deliveries. Recent imports of Continental material, however, have eased the situation, and consuming industries are finding it less difficult to obtain the necessary supplies.

Business in finished steel has been moderately active, and there has been some improvement in the volume of inquiry from overseas markets. The heavy steelworks are operating at capacity and can see their way to maintaining the present rate for some time to come. In spite of the lull in new business, there are no signs of any diminution in the requirements of the home market.

MIDDLESBROUGH.—Demand for all classes of iron and steel is maintained. Cleveland foundry iron is easier owing to the increased production of this quality, and merchants report that they are now getting better supplies for home consumers. The price of No. 3 Cleveland foundry iron is maintained officially at 70s. per ton delivered locally, but this only applies to deliveries up to June 30. As the output until then is sold, new business can only be transacted for later delivery, and it is anticipated that there will be an advance of 5s. per ton on all deliveries after June 30. East Coast hematite production is almost equal to requirements, but makers are well sold at the existing minimum figure of 77s. per ton for No. 1 quality East Coast hematite.

Manufacturers of semi-finished and finished steel in this area continue to be fully employed, but output is still short of requirements. Demand for finished steel for shipbuilding, as well as for structural steel and rails, is good, and the orders received will keep producers busy for some months. Heavy steel scrap is maintained at 57s. 6d. per ton delivered at the works, whilst the demand for good Durham blast furnace coke is strong, the price being 25s. 6d. per ton delivered at the furnaces. New business in foreign ore is limited owing to the difficulties of the freight position, particularly from the Mediterranean.

SHEFFIELD.—The position in the iron and steel market shows little alteration. Demand for forge pig iron is firm and at a good level, while foundry and basic output is virtually at full capacity. At the close of the first half of the year the advance of 5s. per ton on uncompleted contracts comes into operation and in consequence, consumers are pressing for delivery under contract within that time. There is some doubt, however, whether makers can accomplish this. There is little accumulation of stocks of iron at furnaces; the increased output of Derbyshire iron is being quickly absorbed. Lincolnshire iron goes almost wholly into consumption at source, very little coming into this district. Arrears of delivery of East and West Coast hematite are less pronounced. Makers are fully booked for months ahead. Common and marked bars are in good demand and there is some slight improvement in orders for crown iron, though business still remains rather small. It is difficult to meet all the requirements in raw and semi-finished steel. Basic billets remain in heavy demand and acid billets are coming into stronger request. Steel strip and wire rods are good features. Prices generally are unchanged.

WORKINGTON.—The uncertainty whether the advance of the price of hematite pig iron is to be 3s. 6d. or 5s. per ton is responsible for the stagnation of business. Makers demanded an additional 5s. per ton, and users declined to buy as long as they thought the increase might be smaller. Once doubts are resolved next week, there will be an active resumption of business. Although production is at a higher level than since the early post-war years, there is not sufficient iron to go round, and Midland, South Walian and Scottish users will all be anxious to cover their needs for the remainder of the year. Until Thursday of this week prices were at the old rates. Bessemer mixed numbers were quoted at £3 17s. per ton at Glasgow; £4 2s. 6d. at Sheffield; £4 5s. 6d. at Manchester; £4 8s. 6d. at Birmingham, with special brands 2s. 6d. to 6s. per ton extra. Refined iron, malleable iron, at £6 delivered at Birmingham, and ferro-manganese, at £11 5s. home, are all in keen request. Prospects in the steel trade are excellent. Already makers possess orders that will keep their mills engaged for eight months to come. Workington, rolling rails, billets, bars and slabs, last week shipped coastwise 1,500 tons of pig iron and 900 tons of rails; Barrow is on rails, hoops and strip. Local demand for native ore, at from 16s. to 17s. 6d. per ton, is in excess of output, and there are heavy imports of Spanish ore.

GLASGOW.—New business in the heavy trades is a little quieter, but there is no slackening of production. All plants are exceedingly busy and have heavy tonnages of unexecuted orders on books. Although there has been a large tonnage launched within the past week or two, there is a fair amount of work on hand at the Clyde shipyards, an important addition at the end of last week being an order placed by the Anchor Line, Ltd., with the Fairfield Shipbuilding and Engineering Co., Ltd., of Govan, for a motorship. Ship repairs also have a number of extensive repairs on hand. In the sheet trade home business continues satisfactory and provides employment for a large section of the plant. Export bookings of

galvanized sheets show some improvement and include a considerable tonnage for South America. Engineering firms in practically every branch are working to capacity.

CARDIFF.—There has been no material change in the condition of the South Wales iron and steel trades. The heavier branches are active, and production of both pig iron and steel ingots is substantially greater than it was in the earlier months of 1935. Shipments of tinplates last week were slightly better than in the previous week, but about 20 per cent. less than in the corresponding period last year, and current inquiries are disappointing. It is reported that a measure of agreement has been reached over the German application for an increased export quota and the Continental complaints against British competition, and that the International Tinplate Association has been renewed for a period of two years. Prices of tinplates, galvanized sheets, and tinplate bars are unchanged. Stocks of tinplates at the end of last week totalled 71,337 boxes compared with 64,284 boxes the previous week, and 111,436 boxes a year ago.

OTHER METALS

COPPER.—Although the market showed no new features, prices scored a slight advance over the week. Home warehouse stocks have continued to decline, but the view is expressed in some circles that this tendency may be reversed next month, owing to an increase in exports from the United States. Although the New York market remained dull during the past week, the New York export price rallied slightly, probably in response to an expansion of shipments to Japan. If Japanese purchases in the United States are maintained at their recent high level, the expected increase in American shipments to Europe may not materialise.

Sales on the London Metal Exchange: 1,000 tons on Monday, against 1,025 tons last week; 1,600 tons on Tuesday, against 975 tons last week; 900 tons on Wednesday, against 1,300 last week. Domestic spot was quoted at 8.92½ cents per lb. in New York on Wednesday, against 8.87½ cents a week ago and 8.92½ cents a month ago. Wednesday's official closing price for standard cash in London was £36 12s. 6d. to £36 13s. 9d., compared with £36 5s. to £36 6s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 58,893 tons, show a decrease of 1,736 tons, while stocks of roughed copper, at 5,667 tons, show a decrease of 50 tons on the week.

LEAD AND SPLICER.—After early weakness, lead scored a recovery, which was certainly overdue, in view of the excellent statistical position of the metal. Reports of negotiations between the various Belgian zinc producers were responsible for the slight improvement in spelter. Failure to secure the agreement of Belgium was one of the chief obstacles encountered in the recent Cartel negotiations; the discussions now proceeding in that country may therefore be the prelude to the resumption of international negotiations for the renewal of the Cartel.

Sales of lead on the London Metal Exchange: 700 tons on Monday, against 950 tons last week; 900 tons on Tuesday, against 500 tons last week; 250 tons on Wednesday, against 700 last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 11s. 3d. per ton, compared with £15 7s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 500 tons on Monday, against 300 tons last week; 200 tons on Tuesday, against 125 tons last week; 300 tons on Wednesday, against 500 last week. Wednesday's quotation in East St. Louis was 4.90 cents per lb., against 4.90 cents the week before and 4.90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipments during the current month was £14 8s. 9d. per ton, against £14 7s. 6d. last week.

TIN.—The easing of selling pressure and the return of American consumers to the market were responsible for the improvement of prices this week. At its Tuesday meeting the International Committee decided to postpone the quota decision for the third quarter of the year until its next meeting in Paris on June 25th. The delay appears to be due to Bolivia's reluctance to agree to the cancellation of her arrears—the fact that decisions must be unanimous enabling her to enforce her views. Despite the benefits of devaluation, Bolivian arrears must now amount to some 9,000 tons and, since the labour problems in that area cannot be removed overnight, the scarcity of supplies on the world market seems likely to continue.

The decision of the International Committee to send two representatives to negotiate with the Government of Siam in connection with the prolongation of the scheme is of considerable interest, for Siam has been demanding a high quota as a condition of its adherence. The agreement of October 27, 1933, makes the co-operation of Siam essential, but the latter—fortified by her experience of the Rubber Scheme—shows no sign of reducing her demands. By way of contrast, negotiations with the Belgian Congo seem to have made considerable progress and the demands of this country are no longer regarded as impossible.

Sales of tin on the London Metal Exchange: 160 tons on Monday, against 150 tons last week; 115 tons on Tuesday, against 235 tons last week; 165 tons on Wednesday, against 300 last week. The New York quotation on Wednesday was 45.87½ cents per lb., against 45.87½ cents a week ago and 46.62½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £201 to £210 10s. per ton, compared with £198 5s. to £198 10s. a week ago.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged

Quicksilver, on the spot, was again quoted at £12 7s. 6d. per flask of 76 lbs. Chinese antimony was quoted at £56 to £57 per ton ex warehouse, duty paid, against £57 last week. Chinese wolfram for May-June shipment was quoted at 33s. to 33s. 6d. per unit, c.i.f., the same as last week. Platinum (refined) was maintained at £7 per ounce.

TEXTILES

COTTON.—Manchester.—There has not been any particular change in market conditions. The general inquiry in yarn and piece goods has continued rather better, and some fair contracts have been arranged. In many sections, producers find it impossible to obtain any relief, and order lists remain very irregular. There has been a scarcity of fresh news of importance with regard to raw cotton supplies. Speculative interest in the futures market has been dormant, but the demand for actual cotton continues encouraging. Mixed weather advices are being received from the American belt and the drought in the Eastern section is causing anxiety.

Varied reports have been received from sellers of cloth concerning the amount of business. There has been more activity in some quarters than in others. The larger inquiry for India has been maintained. Moderate lines have been reported in dyed fabrics for Java and the Straits Settlements. Finishing cloths and sheetings have been sold for South America. Some makers have had an encouraging week in prints for West Africa. Activity for the Dominions has been of moderate extent, and owing to the important revision in the duties there is every expectation of a larger trade in the future with Australia. Dress materials, linings and overall cloths have been in steady request for the home trade. In the yarn market demand has been disappointing. In the American section, however, a slightly better turnover has taken place in coarse and medium counts. Some producers of Egyptian qualities, especially medium numbers, have secured a few more contracts.

COTTON PRICES

	1936				Corresponding Date	
	May 6	May 13	May 20	May 27	1934	1935

AMERICAN COTTON STATISTICS.—The Department of Agriculture of the United States Government has issued final statistics relating to the cotton crop for the 1935 season, production being given as 10,638,000 bales of 500 lb. gross, against 9,636,000 bales in the previous season. In actual bales the output was 10,420,000 bales. The area picked was 27,335,000 acres, against 26,987,000 acres, the yield per acre being 186.3 lb., against 170.9 lb. The figures have had no effect upon prices, as interest is now centred on the prospects of the new crop. The carry-over at the end of July, 1935, was about 9,000,000 bales, which gives a total supply for the twelve months of about 19,400,000 bales. It is estimated that consumption during the season will be about 12,400,000 bales, leaving a carry-over at the end of July of about 7,000,000 bales.

WOOL.—Bradford.—Since the close of the third series of London wool sales there has been a slight modification in quotations for tops, without any injurious reaction upon the general state of the industry. Except for a slackening in the output of merino tops, machinery is well occupied, and the reduction in output has been partly due to the inadequacy of the wool supply. Before the commencement of the next Australian selling season there may be a slight squeeze for merino wool, for the bulk of wool held in Bradford as well as the wool still to arrive is sold against top contracts. Crossbred wool is a more speculative proposition than merino, particularly medium qualities. Supplies of all descriptions are expected to be sufficient for the trade's needs, but even these wools are well held.

It is too early to anticipate the commencement of the next Australian selling season, and it is recognised that an improvement in conditions on the Continent before the commencement of the next series of London sales on July 7 may easily be reflected in a recovery of prices in that centre. It is observed, however, that prices are undergoing a test, and what happens is dependent upon whether cheap sellers of tops force the hands of others who at the moment are refusing to accept less. Spinners would buy average 64's tops, if they could get them at around 32d., but most makers are demanding 32½d. for standard tops of that quality. Only those who can draw upon wool which is cheaper than anything obtainable during the last series of London sales will accept 32d. It may be possible to find sellers of good tops at slightly less, but in spite of the smaller output from the commission combing machinery, there are still large deliveries to spinners, and this makes firms who are well placed quite indifferent about selling. There is only a small demand for crossbred tops for export to the Continent, and low bids are being made for export, but local consumption of all qualities is maintained, and prices are steady. The approach of the Whitsuntide recess is one reason for the general quietness which has come over the trade. Spinners may be able to buy this week at fairly reasonable prices, but bulk business will probably not develop until later.

GRAIN MARKETS

WHEAT.—The factors responsible for last week's decline have again been operative and quotations on world markets have been further reduced. Canadian selling pressure continued and the possibility of large spring crops in North America and favourable harvest prospects in European exporting areas have caused buyers to exercise caution.

On Wednesday last, "July" futures were quoted in Chicago at 83½ cents per bushel, against 95½ cents the week before and 86½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 30s. 3d. per 496 lbs., against 31s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 30s., against 31s. 3d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,378,000 quarters, against 1,197,000 in the previous week and 1,925,000 quarters in the corresponding week a year ago.

FLOUR.—The easy tone on the wheat markets has affected flour, for which there has been little demand. Prices have consequently been marked down during the past week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 28s. per 280 lbs., against 29s. a week ago; delivered inner London, 27s. 6d., as compared with 28s. 6d. a week ago. Manitoba patents, ex store, 24s. 6d. to 26s. 3d., against 25s. 3d. to 27s. a week ago. Australian, ex store, 22s. to 22s. 9d., against 22s. to 22s. 9d. a week ago.

BARLEY.—Demand for imported feeding barley is dull and prices have tended to sag. Little business is passing in English malting descriptions. "May" futures were quoted at 36½ cents per bushel in Winnipeg on Wednesday, against 38½ cents a week ago and 37½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 22s. 6d., as against 22s. 6d. a week ago; "English Malting" at farm, 25s. to 40s., against 25s. to 40s. a week ago.

OATS.—The market has shown no new features, but tends rather easy. On Wednesday, "July" futures were quoted at 24½ cents a bushel in Chicago, against 25½ cents a week ago and 25½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 18s. to 19s. per 336 lbs., against 18s. to 19s. a week ago; "English White," at farm, 18s. to 19s., against 18s. to 19s. a week earlier.

MAIZE.—A seasonal slackness of demand produced an easy tone on this market, and prices continued to sag. Unfavourable weather has adversely affected the quality of the Argentine crop. "July" futures were quoted on Wednesday at 60½ cents per bushel in Chicago, against 60½ cents a week ago, and 61½ cents last month. Quotations in London, Wednesday: "Plate," landed, 19s. 3d. per 480 lbs., compared with 19s. 9d. a week ago; "Plate," ex ship, 18s. 6d., as against 18s. 9d. a week ago; "Plate," "May," 18s. 3d., as against 18s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £5 2s. 6d. per ton, as against £5 5s. to £5 7s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following tables give the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to May 23	132,073	148,673	188,578	193,215
38 weeks to May 23	8,109,078	10,018,754	12,314,374	12,454,746
Average price of English wheat per cwt.	s. d. 5 9	s. d. 4 11	s. d. 5 6	s. d. 6 10

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT		
	Wheat	Barley	Oats	Wheat	Barley	Oats
May 21, 1932	Cwts. 120,841	Cwts. 14,694	Cwts. 29,333	s. d. 6 2	s. d. 7 4	s. d. 8 0
May 20, 1933	132,073	48,505	18,811	5 9	6 7	5 9
May 26, 1934	148,673	13,710	27,728	4 11	7 5	6 2
May 25, 1935	188,578	25,052	24,840	5 6	7 0	7 6
May 16, 1936	208,217	29,486	32,649	6 9	9 9	6 2
May 23, 1936	193,215	17,683	42,818	6 10	6 10	6 2

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

(IN FULL CLOTH, LETTERED ON SPINE AND FRONT)

Price 5/- each, post free (Overseas 6/-)

A SOCIALIST FRANCE?

FRANCE is the birthplace of revolutions, *bourgeois* and proletarian alike, and the cradle of modern Socialism. Yet by the time these lines appear in print Frenchmen will be reading for the first time the list of Ministers who are to form a mainly Socialist Government—a Government, moreover, which has been established as a result of a crushing popular vote against all Fascist tendencies.

France and Paris remain two different entities. The capital nurses all forms of political extremism, from the *Camelots du Roi* to the Communist strongholds in "the red belt" of the *banlieu*. But the country, the rich and sparsely populated provinces which are almost wholly agricultural, has recently shown as clearly as on many other occasions during the last hundred years that it remains liberal, Republican and evolutionary. This is true, even on the eve of a Socialist Government's entry into office. For the swing of the electorate to the Left in the second election a few weeks ago was nothing else than a protest against the *Croix de Feu* (whose minions had visited electors between the two elections, inviting them to vote wisely at the second election!), and against the equivocations of M. Laval, who has been accused by the Press of the Left of having worked in close connection with the *Croix de Feu*. France wanted to get back to fundamentals: to democratic representation of the popular will, to progress and social reform, and to the elimination of that "graft" and corruption which always attends the political rule of financial and industrial oligarchies. The result of the election was a vague protest against a "bought" press, a financial hegemony, and a Parliament manipulated by vested interests. For that reason, the new Chamber, which met formally on Whit Monday, contains a slightly strengthened Right facing an overwhelmingly strengthened Left.

Meanwhile, a working-class movement of apparently spontaneous origin has quickly gathered momentum among the factory and distributive workers of Paris and the chief industrial regions. As a protest against the wage-cuts imposed under the Laval *décrets de misère*, and as earnest of their demands for shorter hours, collective settlement of grievances and paid holidays, workers to the number of at least 250,000 quietly struck work and occupied the factories. As we go to press the Ministry of

Labour, and both the old and new Prime Ministers, have been unable to compose these dissensions. While some affect to see the red hand of Moscow in the demonstrations, it seems more probable—in a country still deeply imbued with the syndicalist traditions of Proudhon and Sorel—that the French Communist Party, in the first flush of electoral victory, is engaged in showing its own zeal for the working class independently of, and more swiftly than, M. Blum and his Cabinet. Thus the Communists may hope to gain electoral credit for concessions to the workers which M. Blum's Government will, in any case, put forward. It is a dangerous game; for, in the meantime, the Communists may precipitate such a political crisis as would break the new Government almost before it took up the reins, restore the shattered morale and forces of the Right, and sweep the franc, which the Communists want to maintain, off gold—to the unfeigned delight of the very industrialists against whose iron hand the present strikes are directed. Nevertheless, it seems likely that, as on many earlier occasions, these syndicalist strikes will turn out to be gestures elicited by real grievances; and the gestures will cease once the grievances are promised effective redress. The French worker is too *bourgeois* to want to "take over" industries, in the Communist sense.

Two further developments, however, have combined to form a new setting for the Sixteenth Legislature of France's Third Republic. First, the notorious "group system" in the Chamber—by which Governments could be made and unmade "off-stage" by manipulation of parliamentary groups—has received its first real blow. There has been a notable concentration of policies and efforts between those various groups which, on and off, in the past have hunted together. The Popular Front comprises two of the only three organised political parties (in the English sense) in France (Socialists and Communists), and part of the third (Radicals). It arose as a parliamentary association of all three Parties in defence of republican liberty against the *Croix de Feu*, and against dubious parliamentarians like M. Laval and M. Tardieu. Moreover, after the recent election, there has been a concentration of the Centre and the Right. Thus, the former Democratic Alliance, on the Left of the Centre, of which MM. Flandin and Piétri are

members, has been reorganised as the Alliance of Left Republicans and Independent Radicals, with 60 members; and M. Paul Reynaud, the cogent protagonist of devaluation, is among them. On the extreme Right, M. Louis Marin has also been forming a compact group.

The second, and more disquieting, innovation in this Chamber is the threatened disintegration of Left policy, as reflected in the Popular Front. M. Léon Blum was at great pains last Sunday, at the Socialist Party's Annual Congress, to remind his supporters that the electoral victory was that of the Popular Front, and that the Government would therefore have to reflect the will of that Front, rather than the exigencies of a Party programme. Unfortunately, M. Blum is not only leader of the Socialist Party in an administrative as well as in an intellectual sense, but also the head of a Government in which the Communists have declined to be represented. No one quite knows why the Communists, who made the greatest proportional advance in the election, are playing a waiting game; nor why they have so precipitately demanded the maintenance of the gold franc. It may be that, as some aver, Moscow has a greater partiality to M. Herriot and the Radicals than to M. Blum and the Socialists. Communists everywhere find Socialists unpalatable, and M. Herriot is the ardent architect of the Franco-Soviet Pact. Again, apparently the Communists fear a runaway rise in retail prices if devaluation comes, and they ignore the possibility of control by the abolition or modification of import quotas, which would enable prices to be kept within control by permitting a greater volume of imports. If M. Bonnet remains Minister of Commerce, and if devaluation takes place, this instrument will almost certainly be used. In any case, the new Government of the Socialist and Radical members of the Popular Front, supported (or "controlled," as the Right declare) by the Communist members, can be sure of a majority in the new Chamber as long as their programme commands Communist support, or—in the event of some measure proving insufficiently "Left" for the Communists—the support of the Democratic Alliance on the Left Centre.

But what is the new Government's programme? M. Blum's speech on Sunday, and the Socialist Congress resolution on Tuesday, were alike vague. "To destroy Fascism, defend public liberties, to fight against industrial and financial oligarchies, to wipe out unemployment, to stimulate the national economy, to restore the Republican spirit in the higher ranks of the Civil Service"—all these are features of the Popular Front's demands as a whole. They are all Socialist formulas; but most Radicals would agree with them in principle. No Communist could disagree with any measure calculated really to effect any of these reforms. But how are they to be achieved?

The difficulties of M. Blum and of the Popular Front will begin when definite measures are tabled. For example, M. Blum is now in high favour with the bankers owing to his appeals for the re-establishment of "confidence" and for belief in his "good faith." But can he allow the Regents of the Banque de France—those representatives of *les deux cents familles* that still rule France—to draft the statute of their own reform? Can he really envisage the maintenance of the gold franc by embargoes on the flight of the small men's capital (the big men's is already outside France) without envisaging a prodigious apparatus of control and intervention in industry, finance and foreign trade? Such a system would be utterly repugnant to most of his own supporters, and would eventually involve France in difficulties no less pressing than those of Dr. Schacht. Or is M. Blum, astutely enough, preparing to bide his time during the easy summer months, and build up a political *mythos*—a confidence in Blum? Upon that basis he might, in October or November, when the Budget problem recurred, feel strong enough either to disavow the Communists, or to devalue the franc and still remain in power as head of a Left Government which had moved far enough to the Right to secure the adherence of MM. Flandin and Piétri. Will he, however, be permitted to bide his time? M. Blum has importunate friends, but no effective opposition. And that, paradoxically enough, is his danger; for it demands from him the one thing he has not yet given: a clear and concise programme of social and economic reform.

THE BUDGET•LEAKAGE

THE Judicial Tribunal appointed to investigate "a definite matter of urgent public importance"—namely, whether any unauthorised disclosures were made of information relating to the Budget and used for the purpose of private gain—has issued its report with exemplary promptitude. The tribunal consisted of Mr Justice Porter, a judge of the High Court, and of two King's counsel, Mr Gavin Simonds and Mr Roland Oliver. Its public hearings occupied eight days between May 11th and 20th, and its findings are unanimous. After a careful analysis of the evidence they report that the Right Hon. J. H. Thomas, Secretary of State, disclosed the secrets of the Budget to two friends—one of them an M.P.—who used the information for their own gain. That is the verdict and, startling though it is, no one who followed the evidence or heard the unmistakable perjury of some of the witnesses can doubt its justice.

Mr Chamberlain's unexpected and sensational Budget announcement, that, owing to the re-armament programme, income tax would be raised by 3d. in the £ and the duty on tea raised by 2d. per lb. was made on April 21st. In the week after Easter, i.e. the week before the Budget, there came to Lloyd's, to be placed in what is known as the "spec." market, a number of orders to insure against a rise in income tax. The market in which these orders were placed is not a separate entity like a market on the Stock Exchange, or even so clearly marked as the fire market or the time market at Lloyd's. It consists of whatever underwriters are willing to back their judgment on some coming event, and it is largely dominated by one skilful and experienced broker, whose reputation is such that other brokers, when they receive orders of this kind, entrust such orders to him. When, therefore, the time came for the policies to be prepared and the claims collected, he saw almost all of them and noticed one peculiar fact—that orders for several different people with different brokers had a common source in an office in Fleet Street, belonging to a Mr Bates. At the same time, information came to him about other insurances, done on the morning of Budget day, in which he had not been concerned. He was so much impressed by the unusual nature of the transactions that he passed his information to the committee of Lloyd's and an inquiry was set on foot.

Two men were found to be immediately concerned: Mr Alfred Cosher Bates, newspaper proprietor, and Sir Alfred Butt, Member of Parliament for Balham and Tooting. Inquiry proved that Mr Bates was an old friend of Mr J. H. Thomas, then Secretary for the Colonies, and had spent the Easter holiday with him on the South Coast, immediately after the Chancellor had told the Cabinet what his Budget would contain. Returning to London, Mr Bates at once began negotiations to insure against a rise in income tax. His reason, according to his own evidence, was that he disliked the financial situation, though there was no satisfactory explanation why the state of the country's finances which had not disturbed him before Easter looked so black to him immediately after Easter. He did not take the obvious course of getting into touch with a Lloyd's broker, but preferred to approach several different people—a solicitor, two stockbrokers and a banker—to start negotiations in his place. By a stroke of almost incredible stupidity he chose as one of his intermediaries Mr Thomas's son, who was a member of a highly reputable firm of stockbrokers, and thereby involved him—an innocent party rightly exonerated by the Tribunal—in the scandal that was to follow. The insurances were effected in several different names—one the married name of Mr Bates's lady secretary and one her maiden name. The whole procedure was so tortuous that the exact amount placed was in dispute before the Tribunal, which, against Mr Bates's oath, found that one considerable insurance which was said to be for a third party was actually for Mr Bates's own account.

Among the men whose names were used by Mr Bates was a Mr Waterton, who was naturally excited by the good thing he had got hold of and mentioned it to several friends, telling them not only that income tax would go up but that it would go up by 3d. The evidence that he did so is too strong to be rejected, and the fact that he anticipated so

correctly the details of the rise indicates the fullness of knowledge which lay behind the instructions given to him. Once admit that Mr Waterton knew that the tax was going up by 3d., and it is impossible to believe either that Mr Bates, from whom the orders came, or his solicitor, Mr Eves, through whom they came, was speaking the truth in the witness box. Almost every detail of this unwholesome story points to foreknowledge in Mr Bates and to a deliberate effort to deceive the Tribunal.

Sir Alfred Butt, himself a member of Lloyd's as well as a Member of Parliament, made an even worse figure in the box than Mr Bates, and his laboured explanations probably had more effect on the mind of the Tribunal than anything else in the case. His transactions were as follows: On the day before the Budget he wrote at 12 per cent. a risk to pay a total loss if there were a rise in income tax, and thereby made himself liable for a considerable sum if the rate of income tax were raised. On the morning of Budget day he entertained a suggestion that he should accept further liability of the same kind at 15 guineas per cent.; and according to the evidence of an unimpeachable member of Lloyd's he actually did accept it. Later on in the morning—the exact sequence of events was in dispute—he did three things. He got out of the liability he had accepted; he had a talk with Mr Thomas; and he speculated heavily on the other tack. Consequently, he put himself into the position of winning several thousand pounds out of a rise in the tax instead of losing several thousands as he would have done if his book had remained unchanged.

Why this sudden revolution? Sir Alfred Butt's answers were confused. He had been impressed, he said, by the Budget article in the *Economist*. (That article, incidentally, suggested that a rise in income tax might be advisable, but could hardly be expected this year.) On Sir Alfred's showing, the article—if it is to serve as an explanation—must have been read and digested in the middle of a busy morning's work, including a visit to the House of Commons, a visit to Mr Thomas, the sale of a great block of securities, messages to his son and his stockbroker and a sandwich lunch with the two of them in his private office. He had been impressed, too, by what his son, employed at Lloyd's, told him about the market and he was incensed by the thought that the rate paid him on the previous afternoon was not the market rate. His mind (at the moment when he laid nine to one against a rise) was, he declared, in a state of flux; and at noon on Budget day his mental tide turned so strongly that he not only paid up to forty guineas per cent. instead of receiving twelve or fifteen guineas, but arranged things in such a way that his orders were to be given to five or six different brokers without his name being mentioned. He also included a rise in the tea duty with the rise in income tax.

At more than one point the evidence of the Butts, father and son, had an unpleasant flavour; and by a tactical blunder Sir Alfred Butt so challenged the evidence of a Lloyd's broker that the Tribunal was forced to decide which of them was telling the truth. As things turned out, this did his case the maximum of harm. It was combined, moreover, with his own admission that he had concealed a vital fact from the Treasury Solicitor (a) because he did not realise its relevance and (b) because—strange contradiction—it might raise imputations against Mr Thomas. Sir Alfred's son also made the damaging admission that, in a statement to his employers at Lloyd's, he had lied in order to keep his father's name out of the transaction. Little doubt remained that Sir Alfred was not a reliable witness.

The sequence of facts, indeed, was damning both to Sir Alfred and to Mr Thomas. Sir Alfred's certainty on Monday that there would be no rise; the creeping doubt of Tuesday morning; the escape from liability; the talk with Mr Thomas; the hurried call to his son and his stockbroker; the violent change of mind; the feverish haste to get cover before the Budget speech and in the name of nominees; the lame explanations; and the concealment. All in all, it was a terrible and a devastating exposure.

Little is to be gained by moralising on this tragic story. But one solid reason for satisfaction it does provide in the clearance of the Civil Service and the Government printers from all suspicion of wrong-doing. It is a dreadful thing that a Cabinet Minister should do what Mr Thomas has

CHRISTIANIA BANK OG KREDITKASSE OSLO

been found to have done. But here, at least, is no Stavisky scandal.

The story is a reminder of the temptations that all knowledge of Government secrets carries with it. Civil servants are, in general, not men of wealth, and printers are very far from being men of wealth. Year by year they are given this knowledge, on which they could speculate with certainty, but they do not betray their trust. And on that fact we may congratulate both ourselves and them. Their honour, indeed, stands so high that we take their integrity for granted and, so taking it, perhaps we appreciate it not enough. Let us at least pay to the servants of the Government this tribute of respect, and commend the commissioners of the Tribunal for their courage, thoroughness and public spirit. These are the only reassurances which emerge from an unpleasant, though salutary, public washing of dirty linen.

THE EFFECT OF SANCTIONS

How powerful an effect are economic sanctions exerting on Italy? The answer to this question must vitally affect the answer to two further questions: What is likely to happen in Europe in the next few months, and what action ought to be taken by this country now? It is consequently of the greatest importance to discover, so far as is possible, the actual facts of the situation.

The sanctions imposed last autumn, apart from the prohibition of financial credits, were of two main kinds: an embargo on the export of certain war materials to Italy, and an embargo on all imports from Italy. Among the war materials banned the chief were rubber, tin, nickel, iron ore, scrap iron and aluminium. These sanctions, which were imposed by 50 nations, came into effect on November 18th. The following table, compiled from the League report of April 30th on Italian trade, shows the imports of these commodities into Italy from all sources during the first months of sanctions and during the corresponding period of the previous year:—

EXPORTS TO ITALY
(in metric tons)

	November		December		January		February	
	1934	1935	1934	1935	1935	1936	1935	1936
Rubber	578	1,601	942	10	826	4	377	...
Iron ore	17,790	36,655	34,505	...	8,998	...	28,693	...
Scrap iron and steel	37,602	68,100	43,295	819	43,752	246	31,861	...
Aluminium ..	7	42	22	43	4	48	219	...
Nickel	155	134	95	26	173	14	293	16
Tin	10	257	25	1	61	...	34	...

NOTE.—These figures apply to 45 countries for November, 44 for December, 44 for January, and 38 for February. They include Germany, Austria, Hungary, and Switzerland.

It is apparent from these figures that when the embargo on the export of war materials to Italy had actually been adopted, it was extremely effective. But time had previously been given to Italy to import heavy stocks, and in November in particular, when sanctions were known to be coming into effect, very heavy imports of these materials occurred. Other figures compiled by the League incidentally show that Italy imported petrol on an enormous scale during November and December while talk of the oil sanction was going on.

In any case, however, since military operations are over, the exclusion of war materials can exert little pressure on Italy. But the second class of sanction is still crucial: the embargo on Italian exports. The purpose of this sanction was to reduce Italy's exports and so deplete the reserves in gold and foreign exchange which she needed to pay for the imports required to maintain her economic efficiency. How far is this sanction proving effective? The total of imports from Italy into a large group of countries which have supplied information to the Secretariat at Geneva has been, as follows during the sanctions period compared with a year previously:—

IMPORTS FROM ITALY (Thousands of "old" gold dollars)		
	1934-35	1935-36
November (58 countries)	21,550	25,808
December (57 countries)	21,521	17,155
January (66 countries)	19,661	10,158
February (61 countries)	19,190	8,649
March (37 countries)	17,570	9,281

From this table it appears that the fall in Italy's exports did not become severe in December, on account of the fulfilling of orders in process of execution on November 18th; but that since December the fall in exports has been of the order of 50 per cent. Italy, that is to say, has not succeeded in making good the fall in her exports to sanctionist countries by exporting to non-sanctionist countries. Imports from Italy (and Italian colonies) into Germany, Austria, Hungary and Switzerland have been as follows:—

IMPORTS FROM ITALY INTO COUNTRIES NAMED. (Thousands of "old" gold dollars)										
	November		December		January		February		March	
	1934	1935	1934	1935	1935	1936	1935	1936	1935	1936
Germany*	3,641	3,675	4,395	4,905	4,205	3,513	3,959	3,419	3,066	3,672
Austria	442	455	587	478	460	428	455	454	550	550
Hungary	657	471	685	750	431	577	545	607	505	533
Switzerland	1,588	1,478	2,096	1,282	1,221	746	1,421	852	1,677	950

* The figures represent the approximate value of the chief commodities only.

Germany, it will be seen, has shown some tendency to increase her purchases from Italy, but not nearly to the extent which might have been expected; Austria has continued to buy on about the normal scale; Hungary has increased her purchases somewhat; and Switzerland has reduced hers to about half the normal volume. Yugoslavia, 30.6 per cent. of whose exports went to Italy in 1934, has reduced her purchases from Italy to practically nil, and has lost about 80 per cent. of her exports to Italy. Albania, 63 per cent. of whose exports went to Italy in 1934, has also reduced her purchases very heavily and lost exports as a result—but in the case of Albania the process seems to have been reversed after February.

How far has the halving of Italy's exports affected her trade balance and gold reserve? The merchandise import surplus in recent months cannot be estimated with complete accuracy. There are, first, the figures given by the Minister of Finance in a speech on May 10th. These figures suggest an import surplus averaging about 210 million lire a month between December, 1935, and March, 1936. A further estimate may be made on the basis of the figures published by the League. Italy's import surplus, however, can only be estimated at all accurately from the foreign trade figures of other countries if various adjustments are made. To allow for the difference between f.o.b. and c.i.f. figures, for instance, 10 per cent. may be

added to the value of exports from other countries to Italy, and 10 per cent. deducted from the value of imports into other countries from Italy. This adjustment gives figures for the import surplus between November, 1934, and March, 1935, which are very similar to those in the Italian trade statistics for those months.

The correspondence is not so close, however, for the sanctions period November, 1935, to March, 1936. During this period the Italian Finance Minister's figures are, curiously enough, larger than those obtained by the other estimate. Since this discrepancy may be due to the time lag between the date of dispatch of goods from an exporting country and their arrival in Italy, and *vice versa*, a further estimate may be made by assuming this lag to be on the average equal to one month. In the following table the estimate in Column A is that given by the Italian Finance Minister; that in Column B consists of the League figures adjusted for the difference between the c.i.f. and f.o.b. values only; and that in Column C consists of the League figures adjusted both for that difference and for this time lag.

ITALIAN IMPORT SURPLUS (Million lire)			
	A	B	C
December, 1935	302	162	511
January, 1936	289	153	331
February, 1936	112	207	170
March, 1936	149	174	...

The adjustment for the time lag makes the League figures even less consonant with those in the Finance Minister's speech. Since, however, the Italian figures are at least less favourable to Italy than those in Column B, they may perhaps be accepted as not far from the truth. In that case the import surplus has averaged something like 210 million lire a month since sanctions began. This is actually less than the import surplus of a year earlier; and we must consequently conclude that Italy's imports of commodities other than war material have been very heavily reduced indeed in the last few months. Such a reduction must have impaired her ordinary industrial life very seriously, if it has not in some instances (e.g. normal motor-car and textile production) actually brought it to a standstill. The fact that the merchandise import surplus has actually been less than normal in the last five months, while the gold reserve has been rapidly falling, suggests that Italy's "invisible" receipts from tourist traffic, emigrants' remittances, shipping, etc., must have fallen heavily since last autumn.

The crux of the matter, however, is Italy's reserve of gold and foreign assets. For it is only out of this, as long as the embargo on exports remains in force, that she can pay for essential imports. It is consequently here that the pressure will in the end be felt. The Governor of the Bank of Italy on March 31st stated that the gold reserve of the Bank had fallen between October 20th and December 31st from 3,936 million lire to 3,027 million lire, a fall of about 25 per cent., and that its foreign exchange reserve remained about the same at 370 million lire. During the first quarter of 1936 gold imports from Italy and Italian Colonies into the countries which have replied to the League questionnaire amounted to 1,092 million lire. This further outflow suggests that the Bank must have lost about half its gold reserve in the five months October to March, and that it had a reserve of only about £33 millions left at the end of March. These figures do not include, however, the gold collected internally by the Italian Government, which has been fairly reliably estimated at about £10 millions, or the foreign assets requisitioned by the Treasury, which are estimated at between £20 millions and £30 millions.

In so far as these figures can be relied on, therefore, it would appear that Italy now has a total reserve of gold and foreign assets amounting to about £70 millions, and that it is being depleted at the rate of about £6 millions a month. How long Italy can stand this drain, must of course partly depend on the extent to which "leakages"

occur in the embargo on her exports. In general, "leakage" means the purchase of goods by sanctionist countries through Germany and Austria; but the figures suggest that this form of leakage has not so far been great. In the coming six months Italy's demand for foreign military materials will naturally fall, but her demand for ordinary raw materials, stocks of which must have been depleted, will as certainly grow. The available evidence consequently seems to indicate that the present pressure on Italy, if resolutely maintained, would begin to become critical from next autumn onwards.

THE ADVERTISING INDUSTRY—I

In a perfectly organised world, demand would doubtless follow hard upon the heels of increased supply. In the world as we know it, technical knowledge has rapidly increased, but intelligence is unequally distributed, and prejudices die hard. So long as new products are being devised and old products improved, extensive advertising must supply the indispensable link with the consumer.

Like all business expedients, advertisement is open to abuse. But in the long run it carries its own corrective. If a manufacturer attaches his name, as he must, to advertised wares, it is as likely to be avoided if the articles are bad as to be respected if they are good. Nor is advertisement designed merely to sell one article. In so far as it is informative, it quickens demand for the products of a whole industry, and may yield a return many times greater than its own cost. For example, the manufacturers of a new chemical product or solvent not infrequently use the technical Press merely to advertise its properties. New uses for industrial products have often been opened up in this way. During the last five years the fixed trusts have obtained between fifty and sixty million pounds of subscriptions from investors for an expenditure of half a million pounds on Press advertisement. To-day, the great majority of business firms accept the inevitability of a process which, even a few years ago, would have been dubbed risky by many, undignified by some, and unnecessary by most.

A highly ramified advertising industry, in short, has grown up, with producers and distributors as its clients, the newspapers as its most important media, and the entire adult and adolescent population of the country as its objective. A few significant figures may serve to indicate the extent of this "industry's" operations. It has recently been calculated that total newspaper sales in Great Britain for every 100 families are equivalent to 95 morning, 57½ evening, and 130 Sunday journals. A typical penny "national" daily newspaper obtains 0.6d. per copy from sales and up to half as much again from "display" and "classified" advertisements. The London Press Exchange has calculated the amounts spent, last year, in "display" advertisement of branded goods in some 151 publications, comprising all the principal national and provincial morning, evening and Sunday newspapers, monthly magazines and weekly papers. This shows a total expenditure of £16,770,000, of which £1,704,000 was spent on advertisements for foodstuffs, £1,412,000 on toilet preparations, and £993,000 on soaps. A total of £1,066,000 was spent on drinks (of which beer and stout accounted for £359,000) and £463,000 on the advertising of "food-drinks." Cigarettes accounted for £1,222,000 and patent medicines for £2,560,000. Lower down in the list, gramophones, radiograms and wireless sets accounted for £415,000; but the advertisement of records—curiously enough—for only £32,000. Despite the joint marketing arrangements of the "combine" petrol companies, as much as £768,000 was spent on advertising petrol, oils and tyres under the names of individual brands.

The advertising industry has certain well-defined characteristics. It is subject to pronounced seasonal fluctuation, which is greatest in the daily and Sunday Press, and corresponds, broadly, with the seasonal movement of retail trade. For most of the year the daily Press (morning and evening) carries about 34,000 columns of advertisements each month. A seasonal rise, however, brings up the aggre-

In Next Week's Issue of THE ECONOMIST will be included a SPECIAL SURVEY of

BRITISH ECONOMIC PROSPECTS

Among the subjects discussed in this Survey will be:

Unemployment	Will Recovery Last?
The Building Boom	Foreign Trade Outlook
Consequences of Rearma- ment	Gold Reserves
	Future of World Prices

gate to a peak of about 38,000 columns between March and May. The "close season" for advertisement occurs mostly in August, when the total falls to 23,000 columns, and is followed by a recovery to the highest point of the year, which is reached in October with 42,000 columns. Newspaper advertising, incidentally, probably represents something between 75 and 85 per cent. of the whole national advertising expenditure. About two-thirds of the residuum, it has been estimated, is expended on poster advertisement, and the rest on direct circularisation, advertisement films, and broadcasting from foreign stations. In the 1931 census, over 18,000 persons reported themselves as occupied in advertising, compared with 10,000 in 1921. These figures understate the importance of the industry from the viewpoint of employment. A large share of the work involved in conducting market investigations, preparing and illustrating advertisements, and setting them up in type is done by "field investigators," commercial artists, photographers, blockmakers, compositors, and other persons who are almost certainly not included in the census total. There are 129 separate firms engaged in the practice of advertising within the Institute of Incorporated Practitioners in Advertising alone. These are firms which, within limits in some cases, are prepared to submit themselves to the rules of a governing body, and to contribute to the expense of mutual protection.

The practice of advertising is much less of a showman's business than in its earlier days. The clever "slogan" and the ingenious "stunt" are no longer the sole preoccupation either of the advertisement practitioner, or of the advertiser. Modern advertising practice at its best is exemplified by a recent publication, "The Home Market," written by the managing directors of the agency to which reference was made earlier in this article. This volume was reviewed in the *Economist* of March 28, 1936, page 708. It does not deal with such technical matters as advertisement writing or illustration, or with the processes of blockmaking or typography. It is concerned rather with basic questions such as changes in regional areas and population, the present and future age and sex composition of the population, and the present and future numbers and sizes of families. It includes an analysis of the population in social grades, gives indices of purchasing power, discusses the distribution of incomes and wealth, and sets out figures of earnings in the principal industries, etc. Successful marketing to-day depends upon knowledge of such matters, and not, ultimately, upon arresting pictures and "catch" phrases.

It is not surprising, therefore, that, to-day, few commercial firms (other than big retail shops), themselves employ the necessary staffs of specialists to conduct their own advertising. Even big combines, like Imperial Chemical Industries, who maintain an advertising department, use advertising agents, in addition. Other large firms which, like them, enjoy wide public goodwill, also retain advertising agents. In a concluding article, we propose to describe the methods followed in composing and "placing" a typical advertisement.

AFTER FOUR YEARS

"A slowing down of the rate of building might in the ordinary way lead to considerable unemployment in the building trade, but do not let us forget the enormous defence programme which the Government are going to launch, which will occupy all the available labour in the building trade."—Mr Neville Chamberlain in the House of Commons, May 26, 1936.

"WELL," said the British Foreign Minister, "the purposes of this meeting are clear enough. As you all know, the armaments programmes have done the trick as far as the economic problem is concerned. None of us, I think, can report unemployment greater than 2 per cent. But with the disappearance of economic grievances most of the political trouble has vanished as well; and the pacifists are already agitating for sweeping reductions in military expenditure which will let the whole thing down. We must keep the pot boiling and that means a fresh process of exacerbation. I suggest for a start that our esteemed German colleague should compose a few bellicose speeches and . . ."

"Now, why in heaven!" burst out the German Chancellor. "I beg your pardons, but why should I get the sore throat every time?"

"Come, come, my dear Adolf," said the British chairman, "you know you do that sort of thing so much better than the rest of us."

"Well, without false modesty, I'll admit that. But a man's entitled to some relief."

"My dear Chancellor," said the French Premier, "I suggest that you make a demonstration on the Austrian border."

"How you would like to land us with that place!" retorted the Chancellor.

"Well, bother it, you don't expect our banks to finance them up to the day of judgment. The place is German all right and naturally in your sphere. You used to howl enough about that in the old days."

"Good!" cried the chairman, delightedly, "that's the right spirit of recrimination. Now that's precisely the sort of row we ought to have in public."

"Look here!" said someone, "can't we all switch over to roads. To me a battleship is a floating platform on which a number of men spend their time saluting a lot of other men. A road is a fixed platform on which the same men, dressed as automobile scouts, could salute the other lot as they go by in cars."

"Now, for heaven's sake, don't let's go into that," said the chairman. "I posed the same problem myself a few years ago and foolishly passed it on to the Economic Advisory Board. I got fourteen different reports. And

the diagrams! They looked like the blueprints of a new pocket battleship. One fellow proved that if you dropped sixpence down a drain and failed to report the matter to the Central Bank, you set up a cumulative process of deflation which ended with everybody out of work. I was so intrigued that I sneaked out one night and threw half a crown into the Thames, just to see what would happen."

"Well! what did happen?"

"We had the best year on record. No, let's stick to armaments. They're the only public works that go over. Everyone agrees that building roads and houses is extravagant, but building battleships stimulates business. I can't understand why. But there it is. Life's good all round at the moment, and particularly so for us leaders. Why, even rear-admirals purr like cats nowadays."

"Yes," said the German Chancellor, "and they like to take all the credit. Von Schlacht of the Staff tried that with me the other day. 'Look here,' I said, 'I can easily put out a sequel to 'Mein Kampf' and call it 'A Recantation.' Where would you be then? Out on the back of your ears.' That shut him up."

"Well, then, Chancellor," said the chairman, "can't we have a real contribution from you?"

"What can I do?" expostulated the Chancellor. "I can't tell the people they're starving. They're fairly oozing with butter."

"That's precisely the point," said the chairman. "They will be starving unless we keep the munitions going."

"All right, then," said the Chancellor. "I don't mind doing the heavy stuff while you English put out the cant, which is your particular forte. But you ought to work at it. You're such a lazy crowd. Look at Baldwin. He cleared out at the first opportunity, and sends me a postcard every spring, blethering about apple blossom in the Evesham Valley. Don't forget that Benito and I had to do the whole thing off our own bat in '36."

"I think we are in fundamental agreement," said the chairman. "What about you, Duce? You haven't said anything."

"I don't talk," said the Duce, "I act. And whenever I act, more has to be spent on armaments. Malta, Cyprus, Egypt, Sudan, Palestine, Somaliland, Aden, Kenya! They've all had their fortifications doubled in the last four years."

"Splendid!" said the chairman. "Well, that's all settled. We'd better go out separately and put on a grave face before the reporters. By Jove! I can see our Sunday papers. You talk about cant, Herr Kollege. Wait till you see the leader which starts off 'Let us clear our minds of cant,' and then empties out three columns of it on the public. Well, then, till to-night. We can all slip up to the little restaurant on the lake and celebrate."

NOTES OF THE WEEK

Parliamentary Prospects.—The publication of the Budget Tribunal's report (discussed in a leading article on page 540) has monopolised political attention during the Whitsun recess, and a debate is to be held on the report after Parliament has assembled next week. The debate will presumably contain personal statements by Mr J. H. Thomas and Sir Alfred Butt, but it is not yet clear what the attitude of the Government and the Opposition will be. Such loss of prestige as the Government may have suffered from the whole affair has been partly mitigated by the prompt manner in which the Tribunal was instituted and the thoroughness of the subsequent investigation. Any decision on possible further legal proceedings is, of course, a legal question for the Law Officers of the Crown and not a political one for the Cabinet; while the future Parliamentary status of Mr Thomas and Sir Alfred Butt will presumably depend on the sentiment of the House and of their constituents. After the leakage debate is over, the House will turn to a substantial list of less spectacular and more solid business. The Education Bill, in a still unsatisfactory state, has gone to the House of

Lords; and the Coal Mines Bill, unless the Government again changes its mind, has been postponed till the autumn. There remain, however, large sections of the Finance Bill to be debated; and these should afford Mr Chamberlain an opportunity to give a fuller account of his views on the economic outlook, the comparative importance of housing and defence expenditure, and the proper role of British monetary policy in the coming months. Even more important are the long-awaited unemployment assistance regulations. Mr Ernest Brown's promise to introduce the regulations "in the spring" has now been explicitly abandoned, and it is believed that the Government is engaged in "trying out" the new scales in various parts of the country. This may in itself be wise; but the long postponement, following a hasty decision, eighteen months ago, is highly undesirable. Indeed, if the Government tackles this problem resolutely and equitably at last, it will do much to retrieve its waning reputation. Meanwhile, Mr Baldwin has to appoint a new First Commissioner of Works to succeed Mr Ormsby Gore, and a new First Lord of the Admiralty to succeed Lord

Monsell, whose resignation is understood to be imminent. It is widely rumoured that Sir Samuel Hoare is to receive the latter office. We cannot see, however, why such an appointment at this stage should enhance the Government's popularity.

* * *

The Nation's Defences.—An interesting debate on national defence took place in the Commons on the adjournment for Whitsun. Sir Edward Grigg, in a forceful opening speech, proceeded to examine the uninformative statement of Sir Thomas Inskip in the earlier debate on national defence (described in an article in last week's *Economist*). Sir Edward voiced the general disquiet over the principles on which the Government's programme was based, and over the degree of co-ordination effected: "I believe the time has come to tell the country the truth, and the truth has been too long withheld from them." He thought that Sir Thomas Inskip's speech had "not only discouraged our friends and the friends of peace in Europe," but feared it had "done something to encourage those whose interest in peace is not so great." Sir Edward urged Mr Churchill's earlier plea for a Ministry of Supply for all the Services under a special Minister with overriding powers in all matters of defence. (It is interesting to note that he continually put forward his pleas in the first person plural.) Sir Robert Horne, another of the Conservative Cave of Adullam, followed by urging the Government to adopt a firm and unequivocal foreign policy. Mr Cary reminded the House that "the next war" would come as a thief in the night, speedy and unannounced; and he, too, asked for swift and effective co-ordination of all our defence services. In replying, Sir Thomas Inskip had to face continuous questioning of his reassurances, especially on the reason for delays. He stated that he did not conceive that a Ministry of Supply would be in the country's interests; and his conception of his duties was merely to try to "keep abreast of the performance of the different Departments and of their programmes, to help them not to get in each other's way, and to stimulate the production as far as possible." These, said Sir Thomas, "are exactly the duties which a Minister of Supply would perform." The House did not seem convinced by what Mr Churchill, concluding, called "Parliamentary arts." It separated for Whitsun with an uncomfortable feeling that Mr Churchill's rôle of Cassandra was nearer reality than Sir Thomas's rôle of Pippa.

* * *

The Coal Tangle.—It is becoming every day more apparent that the Government's surrender over the Coal Mines Bill is causing widespread confusion. The Bill was part of a long-standing three-cornered bargain between the owners, the miners and the public. The bargain began with the Coal Mines Act of 1930 by which the miners were to get shorter hours, the owners price-fixing and quota-fixing powers, and the public a concentration of production on the more efficient pits. Amalgamations, however, which were to secure this concentration and so pay the owners' debt to the public, never became general; and the Reorganisation Commission reported to the Government last February that compulsory powers were necessary. Meanwhile the miners had been induced not to strike for their full demands by promises, first, of selling organisations designed to raise the price of coal, and, secondly, of the nationalisation of royalties. To allow the selling organisations to lapse would be plainly to break faith with the miners. But to impose a higher price on the public—who have already submitted to a "voluntary" rise—without conceding the *quid pro quo* of more efficient production would be to break faith with the public. And this week the big coal-consuming interests have been protesting against the proposed selling schemes. With these protests in themselves we have little sympathy. For, notoriously, gas and electricity companies have long been in the position of semi-monopoly buyers, and the collieries that of highly competitive sellers. This anomaly has been one among many causes of depression and low wages in the mines; and its correction is desirable and necessary. But its complement should be compulsory amalgamation; for without this there would be some

The Argentinian Move.—On May 29th it was announced at Geneva that the Argentinian Government, through their delegate Señor Ruiz-Guinazu, had made a verbal request that a special meeting of the League Assembly should be summoned to be held either concurrently with the forthcoming meeting of the Council or immediately after it. The Assembly should be asked to consider the present state of the Italo-Abyssinian conflict—particularly in relation to sanctions, to the status of the Abyssinian Empire, and to the future of Abyssinia's membership of the League. It seems certain that the Argentinian move is not directed towards playing Italy's game, by promoting the removal of sanctions. For one thing, Argentina has been distinctly on the side of firm measures during the past nine months. Señor Ruiz-Guinazu himself last autumn played a prominent part, as President of the Council, in the finding that Italy had broken the Covenant; and at the last Council meeting in May when two Latin-American States Members of the Council, Chile and Ecuador, declared themselves in favour of abandoning sanctions, the representative of Argentina objected, not to the provisional maintenance of sanctions, but to the prorogation of the date for taking any decisions at all for another five weeks. Again, the Italians have not concealed their displeasure at the latest Argentinian *démarche*. This Italian displeasure clinches the argument for summoning the Assembly this month. And constitutionally the step is simple, since the Assembly has remained officially in continuous session ever since September 1st, and accordingly a meeting can be called at the shortest notice. At the moment, it seems probable that, instead of the Council alone meeting on the 16th of this month, the Council and Assembly will both meet at the end of June. One of the first questions which they will have to consider is the evidence—on which we comment in this issue of the *Economist*, in another column—how sanctions have worked up to date and how long it will take, if the present sanctions continue without being reinforced, to make the pressure on Italy really effective.

* * *

The Week in Palestine.—The Arab upheaval in Palestine rises and falls in waves, and towards the end of last week there was a lull. But instead of being the harbinger of calm, this lull was followed by a fresh outburst of violence over the week-end. Day by day the situation in Palestine grows more like that in Ireland when Sinn Féin was on the war-path against the Black-and-Tans. Indeed, if any of those Black-and-Tans who were literally sent to Jericho after the signature of the Anglo-Irish Articles of Agreement are still on active service in the Palestinian police, they

must feel that their present experiences are quite like old times. In the urban areas, Jaffa is the storm-centre, and it looks as though the police were losing control over the old-fashioned part of the city. In the countryside, the main storm-centre is still Nablus; with a subsidiary one tending to form at Hebron. One of the new features is a guerilla warfare against Jewish motor omnibus services, which are now having to be convoyed by police or troops in armoured cars. Another new feature is the strike of Arab municipalities. It is clearly a spontaneous Arab movement which is stimulated by a lively fear that, if the building up of the Jewish national home in Palestine goes any further, the Arabs will find themselves outnumbered by the Jewish immigrants and will be reduced, as a community, to the position of under-dog, even if all Palestinian Arabs individually are secured by the Mandatory Power in the continued possession of their civil and religious rights. Meanwhile, the Permanent Mandates Commission, now in session at Geneva, has been trying without success to obtain some information about the present state of affairs from the Mandatory Power's accredited representative, the Attorney-General of Palestine, Mr. Trusted. Acting, no doubt, on instructions from Downing Street, Mr. Trusted has declared that he can only speak about events covered by the last annual report, and that he must be silent about the present crisis—on the ground that it will remain *sub judice* until the prospective Royal Commission has reported. In fact, Mr. Baldwin is once more saying "My lips are sealed." We should have thought that this notorious phrase had served the Prime Minister's turn so badly that he would have been shy of repeating it in any context, even by proxy.

* * *

"Italian East Africa."—Signor Mussolini's present policy stands revealed in a recent sequence of events. On May 27th the head of the Italian State gave a reassuring interview to a correspondent of the *Daily Telegraph*. In London, on the 28th, similar assurances were conveyed to Mr. Eden by Signor Grandi, and the gesture of friendship was repeated—for the third time—to Sir Eric Drummond by Signor Suvich in Rome on the 29th. On Monday, June 1st, it was announced in Rome that the Italian Cabinet had approved an organic law dividing "Italian East Africa," inclusive of Abyssinia, into five provinces under the supreme authority of a single viceroy and governor-general, who is to be resident at Addis Ababa. Again, on June 3rd, Signor Grandi saw Mr. Eden and repeated the assurances given earlier. Taken together, these gestures make Signor Mussolini's meaning clear. "On condition," he says to us, "that you now drop sanctions and recognise my title to hold all that I have conquered, in violation of the Covenant and of the world's judgment of the rights and wrongs of the case, I should prefer to be on friendly terms with you again for just as long as this may suit me." Obviously what Signor Mussolini would like, as the next phase, would be a restoration of the Stresa Front—whether with or without a "Mediterranean Pact of Mutual Assistance"—only now with Abyssinia as an Italian province instead of as an independent State-member of the League. A renewal of the Stresa Front would increase Italy's chances of borrowing foreign money for the development of the conquered territories in Italy's own interest. Already, on May 30th, it was being hinted in Rome that a new autonomous branch of the Italian Public Works Consortium, which is being organised for the financing of the exploitation of Abyssinia, may issue bonds abroad. If the British Government goes on capitulating to Signor Mussolini, hands down, the Duce can make good use of British financial support in Africa and diplomatic support in Europe, without being in a hurry to get on with the next stage in the reconstruction of the Roman Empire. For the rest, the British public is asked to trust the word of an Italian statesman who has been so scrupulous to keep true to his pledges under the Covenant of the League, the Chemical Warfare Protocol, the Kellogg-Briand Pact and the Italo-Abyssinian Treaty of Amity and Arbitration. On the surface it seems that British public opinion is speaking with two voices. In *The Times* of Tuesday Lord Rennell advised us that "the balance of advantage lies in concession." But in *The Times* of Wednesday Sir Abe Bailey argued that to remove sanctions

"provides no solution, but merely the respite which postpones the day of reckoning to a date chosen by Italy and not by us." And on Thursday, in the same place, Mr. Wickham Steed warned us that the dropping of sanctions would mean dropping the League and collective security—to the great embarrassment of British defence policy. For our part, we stand with Sir Abe Bailey and Mr. Wickham Steed, and we believe they correctly interpret British public opinion.

* * *

Japan and China.—In a scientific age when one believes in the uniformity of nature, this week's Japanese report of an innocuous outrage on a Japanese train in Chinese territory ought to mean that, within the next few days, weeks or months, the Japanese Army is going to overrun at least four hitherto unoccupied Chinese provinces. The Japanese military occupation of the Manchurian provinces of the Chinese Republic outside the Great Wall in and after the autumn of 1931, was the effect (so the Japanese tell us) of an abortive Chinese attempt to wreck a Japanese train travelling on the South Manchuria Railway. An equal effect—say, the occupation of Hopei, Shansi, Shantung and Honan—ought now to follow from the latest Japanese report. Truly, some one has lost no time in giving the Japanese their pretext for a new act of aggression as soon as the Japanese High Command has assembled the necessary Japanese forces. The British, too, have been equally obliging, if we are to believe the Japanese once again; for last Sunday the Japanese military authorities in Peking declared their belief that, on the previous Tuesday, a Japanese officer named Sasaki had been set upon and murdered in Peking by British soldiers belonging to the Legation Guard. Such an outrage as that would surely justify the confiscation of the Sino-British coal mines at Kailan and the annexation of the British Concession at Tientsin, and would thereby relieve Japan, at the outset, from the awkwardness of having to put up with alien enclaves in a new dominion of the Japanese Empire. (Marshal Graziani might care to copy this precedent, for he has just such another obnoxious British Legation Guard under his nose at Addis Ababa.) At the moment of writing, effect has not followed cause again, as yet. But the Japanese are a scientific people. They will not easily allow the law of causation to lapse.

* * *

The "Queen Mary."—The Cunard-White Star Company well deserves the congratulations it has received on the brilliant beginning of the career of the "Queen Mary." That she is fast, comfortable and manageable is clear beyond a doubt (writes a correspondent), and she will certainly prove to be a popular boat with trans-Atlantic passengers. It would seem, too, that the management of the company, which must have watched with an anxious eye the bill of costs in running her, is so far satisfied with her performance and regards her, for her tonnage and speed, as an economic proposition. The final test under this heading will come, of course, if and when her sister ship is put into service and the scheme, which the directors had in mind when they decided to build her, is in operation. If two boats making the voyage each way in less than five days, can do the work hitherto done by three slow boats at a cost that is less than that of the three boats, then the scheme will have proved a commercial success; and perhaps the most interesting thing about the history of the "Queen Mary" will be the line taken by the company in providing her with a younger sister. How much value is to be given to the question of prestige and the blue riband, it is most difficult for a layman to guess; but of the publicity value of these giant ships there can be no doubt, and the interest taken in her first voyage has been extraordinary. The writer of this Note made the trip with the "Lusitania" on her first voyage when she was as great a marvel as the "Queen Mary" is to-day. The contrast between this week's course at Southampton and the twilight flitting of the "Lusitania" from the quay at Liverpool in 1907 reminds one that if the science of shipbuilding has progressed in twenty-nine years, the science of publicity has not lagged behind.

Increased Steel Prices.—For many months British heavy steel producers have been demanding an increase in the official prices of their products. They have maintained that the advances in coke and scrap prices have narrowed profit margins so that the economies achieved by the working of plants at full capacity have been entirely offset. Until about a year ago, higher costs were balanced by higher effective prices, thanks to the elimination of the margin between actual transaction prices and the official schedules, which had become considerable during the depression. This resource having been exhausted, the industry was compelled to ask for an increase in the official price lists, which the Executive of the British Iron and Steel Federation were unwilling to permit. When the tariff was imposed in 1932 the industry gave the Government definite guarantees that there would be no undue price increases. The demand for constructional steel, moreover, is known to be elastic. But the rapid advance of raw material costs, together with the rise in the prices of pig iron and semi-finished steel (intensified by the appearance of bottle-necks at certain parts of the industry's structure), left the Federation no alternative. At the end of last week new advances were announced in pig iron and semi-finished steel, together with increases of 12s. 6d. per ton in the prices of heavy plates, joists and sections and of 10s. per ton in medium plates. These advances are equivalent to about 7 per cent., and include virtually all steel for the constructional and shipbuilding industries. Whether they are justified by the extra raw material costs is uncertain. There have been sharp rises in the open market prices of many intermediate materials—East Coast hematite pig iron, for example, has risen by 17 per cent. in the past year—but these prices are not necessarily representative for companies which combine the whole series of processes from coke ovens and blast furnaces to steel works. Moreover, the increases vary in different parts of the country. On the whole, the advance may fairly represent the extra material costs of average concerns, together with the wage increases which will become due under the sliding-scale arrangement. There is little sign yet that the higher prices will check the unprecedented demand for steel at home. They may well, however, deter exports, and—more important—may affect the "indirect" export of steel. The rises, though substantial, are not serious, but they call attention, once again, to the danger that the steel industry may be entering a spiral of increasing costs and prices, which must needs affect demand sooner or later.

The Port of London.—It is welcome news that the Port of London Authority has decided on a £12 million development plan to provide for increasing traffic. Last year a record was created not merely for the tonnage of shipping entering and leaving London, but actually for the tonnage of goods carried. Shipping tonnage reached 60,597,315 n.r.t., an increase of 57 per cent. over 1907, when the Authority was created; and the tonnage of goods carried was 40,888,825. Evident as is the present liveliness of London seaborne trade even to the casual eye, many will be surprised to learn that the volume of that trade is now above the 1929 level. The explanation is, of course, first that the volume of international trade in the sterling area is not far from the pre-depression level; the volume of British imports in the first quarter of 1936 was (average of 1930 = 100) 100.6 and of British exports 90.6. Secondly, much of London's seaborne trade is coastal rather than international, and the relative importance of London in internal trade is steadily growing. For these reasons the Port of London Authority seems thoroughly justified in introducing a comprehensive programme of development at this time. The programme is to include the construction of electric cranes; the rebuilding of warehouses; the development of the north side of the Royal Victoria Dock, the north side of the Eastern Dock, London Dock, and the south side of the West India Import Dock; the building of new bridges; and the electrification of quays. The programme is to be carried out "in as short a time as financial considerations permit." As a whole the P.L.A. scheme is an admirable example of the sort of semi-public works

which should not only give an immediate stimulus to trade, but should also permanently enhance the nation's productive powers.

* * *

Slump in Tin.—Since the beginning of May the price of tin has declined by more than £20 per ton. During the past week the downward movement gathered momentum, and the price for "spot" tin fell by £14 to £187 per ton. The slump in prices is due to the fact that confidence in the tin market has been completely undermined by recent events. The postponement of the decision about output quotas for the third quarter until the end of June suggested disagreement among the signatory countries in the tin scheme. Moreover, the prolongation of restriction after the end of this year now appears somewhat doubtful, largely owing to Siam's apparent unwillingness to accept a reasonable quota. It is understood that Siam is holding out for a quota of over 20,000 tons per annum, compared with her minimum quota of 9,800 tons under the present scheme. The acceptance of Siam's demand would involve further sacrifices on the part of the other members of the scheme. And it is hardly surprising that Malayan producers are becoming somewhat restive. Both Malaya and Nigeria, being low-cost producers, might be able to view a possible lapsing of the scheme with more equanimity than certain other countries. It would obviously be against their interests to accept a further substantial reduction in their share of world production under a new scheme. They are well aware that the present scheme, like the Stevenson rubber plan, has reduced the share of British areas in world production. To accept yet a further cut, lowering their relative status, would seem to be too high a price to pay for the continuance of "regulation."

Russian Timber and British Shipping.—The annual report of the Baltic and International Maritime Conferences, in the course of a review of the working of the minimum freight scheme established in the Baltic and White Sea timber freight trades, makes special reference to the attitude of the Soviet Authorities. The latter (writes our shipping correspondent) are in process of acquiring a large fleet of steamers specially adapted to these trades, and are endeavouring to reserve for them as large a share as possible of Russian timber exports, to the exclusion of foreign—including British—shipping. The Soviet authorities have openly opposed the minimum freight scheme and have consistently endeavoured to charter tonnage below the minimum rates. The report disclaims any lack of sympathy with the U.S.S.R.'s desire to become a maritime power. The effect, however, is unfortunate to British owners. The tonnage of British vessels employed in this trade has fallen by 10 per cent. between 1927 and 1935, while Russian tonnage has increased from 301,000 gross tons to 1,350,000 gross tons. It appears that last year only 201,000 tons of Russian wood were carried in British ships, against 353,000 tons in 1934. It is understood further that no British ship whatever is included in the 130 voyages which have so far been arranged for this season's White Sea trade. It is clear that Great Britain, more than any other country, is vulnerable to every new development in the endless process of economic nationalism.

Watch and clock † ... { 1933 1934	855 888	449 458	2,354 2,637	191 174

† These trades were not included in the Inquiry for 1933.

All these industries show increases in the value of gross and net output and in the output per employee and all of them recruited additional labour between 1933 and 1934. But as the metal trades have been in the vanguard of recovery, the widespread improvement is not surprising. Incidentally, it is noteworthy that the output of aeroplanes with and without engines increased only by six between 1933 and 1934, from 1,102 to 1,108. The number of aeroplane engines produced, however, increased from 1,444 to 1,685.

* * *

Incomes and Tax-evasion.—In a most erudite and elaborate paper read before the Royal Statistical Society recently, Sir Josiah Stamp discussed the effect of changes in the price level on the distribution of incomes. Unfortunately, owing to the absence of complete statistics, he was only able to examine incomes of over £2,000 a year. Some most interesting conclusions, however, emerge from the investigation. In the first place, it appears that the very rich gain from the moderately rich when the price level is high, and lose when it is low. Their incomes, in fact, are more sensitive to changes in the price level. This is presumably because the larger a man's capital is, the larger proportion of it is likely to be invested in variable dividend securities. Sir Josiah hazards the opinion that if statistics were available for the middle incomes, below the surtax level, they would also show a tendency to change less with the price level than higher incomes. A still more interesting conclusion from Sir Josiah Stamp's investigation is that the number of incomes in all the surtax ranges has declined in recent years. He attributes this to the following four causes:—

- (1) The incompleteness of the assessments for recent years.
- (2) The extent of the trade depression from 1930 to 1933.
- (3) The successful adoption of legal methods of avoidance and arrangement of income resources so as not to "attract" taxation.
- (4) The degradation of the taxable *corpus* under the influence of the heavy duties themselves over a long period.

The last cause, he points out, however, has not been as important as some opponents of the death duties have suggested. As Messrs G. W. Daniels and H. Campion have also recently shown,* the number of the large estates has not been falling over the last 15 years. Sir Josiah therefore concludes that "we must look to the second cause—legal avoidance—for the main reason for the disproportionate fall in the incomes assessed to surtax." We trust that Mr Chamberlain will take due note of this conclusion.

* * *

"The Anatomy of Employment."—In recent leading articles under this title (see the *Economist*, May 9 and 16, 1936) we discussed changes in the employed labour force of individual British industries during the last seven years. We showed that, between July, 1929, and July, 1932, the total employed in all trades declined by 1,029,000, while during the succeeding three years of recovery, to July, 1925, it rose by 1,179,000. It is of interest to inquire which industries moved against the trend. Some fortunate trades actually employed more insured workers in the depression year, 1932, than in 1929, the year of prosperity; while a select number, less happily circumstanced, employed fewer workers in the recovery year, 1935, than in 1932. Their identity is revealed by the following tables:—

INDUSTRIES WITH MORE EMPLOYED IN 1932 THAN 1929

Group	Nos. Employed (thousands)		Percentage Increase
	1929	1932	
Public works construction	133.3	175.2	31.5
Professional services	118.1	129.1	9.4
Distributive trades	1,587.9	1,724.9	8.5
Electrical trades	186.5	201.7	8.2
Road transport	314.5	335.4	6.6
National and local government	364.2	387.5	6.5
Recreative industries	391.2	416.7	6.4
Laundries and dry cleaning	130.1	136.3	4.8
Commerce and finance	223.0	229.7	3.1
Printing, publishing and bookbinding	251.1	256.2	2.1
Gas, water, electricity	153.3	155.2	1.4
General food trades	332.6	333.2	0.2

INDUSTRIES WITH FEWER EMPLOYED IN 1935 THAN 1932

Group	Nos. Employed (thousands)		Percentage Decrease
	1932	1935	
Public works construction	175.2	152.2	13.1
Tobacco	43.6	39.2	10.0
Shipping and docks	220.7	212.5	3.4
Cotton textile	347.1	342.6	1.2

The industries which enjoyed apparent immunity from depression in the earlier period were, broadly, those which showed the biggest increase in their labour force during the entire six years' period 1929-35. Those which dismissed workers while others were taking them on during the period of recovery were, similarly, among those which lost most heavily during the entire period. The most striking exception to the latter generalisation is provided by the figures of the Public Works Contracting group, which increased its employed labour force by nearly one-third between 1929 and 1932, but lost 13 per cent. of its workers in the next three years, after the onset of the "economy campaign." It is clear that, during the depression, unskilled workers displaced from their jobs in other trades crowded for shelter into this industry. In 1929, one in every five of its workers were unemployed. By 1935 the proportion was nearly one in every two.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

THE PRESIDENT AND THE LEAGUE

ONLY the professional organisations dedicated to foreign affairs, like the League of Nations Association and the Foreign Policy Association, are contributing any specific suggestions for the reform of the League. The subject is being ignored, no doubt wilfully, by newspaper editors and public speakers. It is thorny; it brings up unpleasant memories; it raises dire forebodings. The League of Nations Association proposes a new League based on the Kellogg-Briand Pact, and though this meets the chief American objections to the League in years gone by, the proposal disappeared from view after a subordinate place in one day's news. This is not a year for a dispassionate and reasonable discussion of increased American collaboration for the maintenance of world peace. Certainly spokesmen for the Administration wish to say as little as they can about it, however urgent they may know the problem to be. This is the time to stress friendship only on the Western Hemisphere and to confine "good neighbourliness" to those near by.

The Buenos Aires conference of the American republics is expected to produce substantial gains in improving the relations between Washington and Latin America, and the President will be content if he can blot out the memories of finance imperialism which were so vivid when he entered the White House. The long search for a new definition of neutrality has also been deferred until after the election. Here the conflict is between a vague desire of the many not to be drawn into another war, and the belief of a few, with an appreciation of history, that the United States has always fought for the freedom of the seas and must not reverse its position lightly. Here the Administration is taking middle ground, and ultimately expects to maintain neutral rights as between neutrals, while surrendering the rights of neutrals trading with belligerents.

It is well to note a marked change in public temper since the beginning of Italy's invasion of Abyssinia, which in itself is responsible for the disinclination to discuss foreign policy. Last autumn, after the harvest of sensations brought in by the Senate Munitions investigation, came one of those rare moments of clear national agreement on an over-simplified thesis. Briefly: It was that the United States had entered the World War in defence of commercial interests, and must never do so again. When Italy invaded Abyssinia, the pacifists joined forces with the isolationists, and for a few weeks sent the United States on the way toward co-operation with the League, in forbidding the sale of munitions to both belligerents (in effect only Italy) and in frowning on trade in essential war materials. The President was able to anticipate the League in discovering the war in Abyssinia, and might have kept the American course parallel to the League's in the matter of sanctions.

The Hoare-Laval peace proposals put an end to this. In the disillusionment which followed, League opponents quickly rallied. Oil interests, acting through the influential Texas delegation in Congress, quietly awakened the desire for such profits as could be legally earned in Italian trade. And a cry went up against abandoning the freedom of the seas. When the Senate came to vote on an extension of the neutrality principle, only thirteen members could be mustered by the Munitions Committee leaders, Nye, Bone and Clark. This was before the Italian victory in Abyssinia. When Marshal Badoglio marched into Addis Ababa, the now very aloof observers in America remarked that the League was finished. Most of them also believed that war in Europe was inevitable. And all of them agreed that the United States must not be drawn in. Indeed, if

there is any single proposition about which unanimity exists in the sprawling American Republic, it is this. The wise may know that foreign policy cannot simply be abandoned because of such a public opinion. But they want nothing said or done which could be conceivably misrepresented as a will to co-operate with anyone overseas.
