It is against this background that public men in Europe must measure anything they have to say to America about co-operation in revising the League. If practical considerations impose restraint on the public utterances of Americans during the campaign, the restraint, it would seem, ought to be still greater on foreigners. It may be galling to Europeans to be warned at stated occasions not to speak frankly to America "because of the impending election." Plain speaking, however, will have only one consequence. It will drive candidates for office into pledges against any form of co-operation whatever. Silence, on the other hand, may allow the year to pass without fixing foreign policy for another four years.

MR HEARST ON MR BALDWIN

Even such mellifluous words as M. Blum's, regretting the misunderstanding about the debt, cannot change America's mind. Many Americans found it only natural that with Hitler fortifying the Rhineland, and with war on the horizon, France should think at last of her economic defences in the coming struggle. But M. Blum's remarks were rated higher than Mr Baldwin's at the Albert Hall, or Lord Dickinson's in the House of Lords. These at once gave Mr Hearst's *New York American* a streamer headline, seven columns wide, on the leader page, entitled, "A New British Campaign to Entice America into Europe's War Trap." Extensive passages of that leader deserve quotation, if only to remind public men how thoroughly they can be misunderstood abroad:—

The speech of Prime Minister Stanley Baldwin on the League of Nations in the Albert Hall, London, was nothing but part of another concerted attempt on the part of England to force the United States to become a party to this society for the fomenting of wars and for the further aggrandisement of the British Empire.

That this attempt is a new concerted drive at us is proved by the fact that at the same time that Mr Baldwin was making his plea to America, Lord Dickinson, former British delegate to the League of Nations' Assembly, told the House of Lords that he believed "the moment has arisen when it might be possible to induce the American people to reconsider their attitude toward the League. If the election in America gives Mr Roosevelt a new mandate, he may find it possible to lead the nation to accept its share of the responsibility in the international life of the world."

How brazen this propaganda has become to tie us up with England in the Geneva mudpuddle is further brought to light by the fact that the speeches of Premier Baldwin and Lord Dickinson follow on the heels of the visits to this country of the Archbishop of York and the Rt. Hon. George Lansbury, both of whom told us, in not very polite language, how blind we were not to get into England's League for the control of the Mediterranean and all points east and west.

Lord Dickinson is franker than Mr Baldwin. He is already on his knees praying for Mr Roosevelt's re-election so that we may share our "responsibility in the international life of the world." Our share so far in the "international life of the world" may be seen by the rows of crosses in France, a quarter of a million incapacitated soldiers at home, and \$12,000,000,000 worth of repudiated debts, a good share of which England owes us.

A child can see from this editorial that Mr Hearst is hoping that the unwitting Mr Baldwin and Lord Dickinson will help defeat President Roosevelt. And anything of the same sort said during the campaign will be used in the same way, with an undeniable influence on readers of any newspaper which quotes them.

WASHINGTON, May 21.

FRANCE

THE STRIKERS' CLAIMS

THE political situation has been far from clarified by the outburst of "stay-in" strikes, which after succeeding in the iron and steel factories have spread to various other industries. The claims of the workers are mainly for increased wages, better conditions, recognition of trade unionism, etc., and in general they have been conceded and the occupied factories evacuated. But in numerous cases the workers decided not to give way until the principle of collective bargaining and the forty-hour week had been granted. The Minister of Labour, however, with the aid of M. Blum, Socialist leader, and M. Jouhaux, leader of the General Workers' Federation, finally obtained an agreement that these latter claims should be regulated by the Government.

Public opinion was surprised by the strikes. The claims of the workers were known; but strikes were not expected, since it was thought that the new Government would impose new regulations as soon as it took office. But it appears that the strikes have been provoked by the Communist organisations in order to reap the fruits of a success which otherwise might have benefited the Socialist Government. The losers in this affair are perhaps less the employers than the Socialists, who control the new Government.

This first experience proves that in the future the position of the Socialists will become very delicate between the incitements of the Communists and the resistance of the Radicals, who have already shown some impatience at this week's strikes. The same impatience was perceptible at the Socialist Congress on Sunday last. One leader protested against the wild promises of the Communists and the reticence of the Radicals. M. Blum declared that he intended to make a last attempt to act within the present regime; but the goal, he said, was to try to lead the country to the regime of the future through calm and peaceable ways. This speech was not only addressed to his Socialist audience but also to the capitalists, whose confidence M. Blum will need for launching his new loans. "We shall have to be audacious," he said, "but also prudent."

THE POLICY OF THE RIGHT

The first consequence of the Communist strikes has thus been, on the one hand, to provoke soothing declarations by the Socialist leader, but also to arouse certain reflections in the minds of employers and Conservatives. Until now the game of the latter seemed to be to keep quiet whilst the men of the "Popular Front" were fighting their own battles against economic and political difficulties. After the strikes, however, Conservatives appear to think that if they let things slip, coming events may rob them finally of the direction of the country and the independence of their enterprises. Their idea therefore seems to be that the best policy is to support the efforts of a Blum who promises to act with daring but at the same time with prudence.

For the time being, the success obtained by the iron and steel strikes is encouraging other workers to join in; and this is precipitating the appearance of the Blum Government, which should announce its programme to the Chamber on Saturday or the Tuesday following. On the other hand, the increased wages, which were fairly easily accepted by the monopolised industries which work for rearmament and can raise their prices at once, will not be so easily accepted by other industries such as the export trades, which must face the competition of foreign producers, or agriculture, where there have long been protests about the margin between agricultural and industrial prices.

PARIS, June 4.

GERMANY

MORE DRASTIC EXCHANGE RESTRICTIONS

LAST week produced new restrictions on the international movement of cash and of precious metals; and also the repudiation of Reich coins which have been held abroad.

The ostensible design is to eradicate abuses, or to stop gaps, in the existing restrictions. It seems, however, that the shortage of foreign exchange, though not shown in recent Reichsbank returns, is being even more severely felt. The military demand continues to be heavy. Mainly for seasonal reasons, recent export surpluses have been meagre; and deliveries of Russian gold, which were very considerable and very useful in former years, cannot be counted on now that the old Russian export credits have been repaid. For the moment the new export credit to Russia is merely a liability in the balance of foreign payments. The import of Reich coins is henceforth prohibited (in form, made subject to permission) by applying to it the prescriptions about the import of Reichsbank notes of December 1, 1935.

It is henceforth also illegal to circulate for internal payments coins which have been imported in defiance of the prohibition. It is officially complained that coins which went abroad legally in single small sums for travel purposes have been re-imported in large sums for commercial and capital transactions. Sixty marks in coins may still be brought in by travellers, and coins which have legitimately left Germany in travel, frontier communication and river traffic are allowed to return under conditions, and may then be credited to a free mark account, i.e. used for payment within Germany.

TOURISTS' RIGHTS CURTAILED

Moreover, all coins brought or sent into the country without permission or without fulfilment of the proper formalities will, at the sender's wish, either be returned to him or booked to his credit in a blocked account, in both of which cases they become useless to him. The old right to send abroad Rm. 10 per person per month is restricted. This sum may still be sent abroad for support of relatives, and may be taken by travellers, but cannot be used for the payment for foreign goods, including books and journals. It is alleged that commercial payments have been made by letting the permitted Rm. 10 marks per month accumulate abroad or by using it for payments by instalment. In future the old prohibition against the export of precious metals will apply to manufactured articles containing such precious metals as are normally made of less valuable materials. It is asserted that gold curtain rings and name plates have been specially manufactured for the purpose of exporting capital.

The Reichsgericht has made two important decisions about foreign currency credits and loans. One decision treats the present exchange legislation as transitory and as of emergency character, and consequently (while recognising the temporary impossibility of fulfilment) upholds contracts by Germans to pay debts in foreign currencies. The refusal of an official permit to fulfil such a contract does not, it is decided, definitely free the debtor from payment in exchange. The creditor retains his right to compel such payment whenever the restrictions and prohibitions are removed. Consequently, a German bank that has borrowed pounds in England and has re-lent these pounds to native borrowers cannot, on mere ground of the prohibition against internal foreign currency payments, be compelled to accept repayment marks at the day's exchange.

The other Reichsgericht decision, which is more important, declares that German holders of dollar bonds have a right to repayment by the German borrower at the exchange rate of Rm. 4.20 per dollar. This decision differentiates German holders from American; for the latter receive, or are credited, at the current exchange of around Rm. 2.50. The decision refers to "certificated" dollar bonds, and only to such as passed into German hands before June 5, 1933, the date of the United States Joint Resolutions. Thereby the German dollar bond holder is put into a better position than the American; and the German bond debtor is forbidden to make at a German's cost the "depreciation profit" which he is allowed to make at the expense of an American. The effect will apparently be to create two classes of certificated dollar bonds, the "old-held" and the "new-held"—to borrow terms used in the similar distinction between German mark loans acquired before and after June, 1920.

In purely internal lawsuits the Reichsgericht has usually ruled that the dollar still counts at Rm. 4.20. These law-

suits concern German domestic loans in which either the gold dollar or simply the dollar, assumed to be impregnable, was taken as the standard of value, though actual payment in marks was contemplated. The express intention in such contracts was to guard the lender against loss from possible exchange depreciation. The Court has held that this aim would be vitiated were the creditor forced to accept mark payments at the depreciated dollar rate. In its new decision the Reichsgericht declares that a native debtor cannot plead the American exchange legislation of 1933, since otherwise the legal principle that a debtor is bound by his word would be nullified.

The official cost-of-living index for May was 124.3, unchanged. A shortage of eggs has again emerged, as a result, it is believed, of preparations for supplying Olympic Games visitors and of storage for the winter. The fats-card system has been extended until the end of September.

The Minister of Economy has now prescribed that economically depressed districts shall have preference in the granting of public contracts. The districts named are the formerly demilitarised zone, Saxony, Silesia, East Prussia and Hamburg. The number of persons employed at the end of April, according to the sickness insurance returns, was 17,038,000, and exceeded the highest number of 1935, which was 16,700,000 in August. The percentage of occupied working places in all industry in April was 67.3, as against 65.4 in March. All the listed industries, except the food preparations, show improvement, which is only marked, however, in the building and vehicles (mainly motor car) trades. The capital goods trades are occupied to 71.3 per cent., consumption goods to 62.2 per cent.

Reich revenue from taxation in April, the first month of the new financial year, was Rm. 780 millions, against Rm. 685 millions in April, 1935. The month-end money market developed normally. The demand for cash was considerable, but there were substantial repayments of Gold Discount Bank promissory notes. The day loan rate rose to 3½ per cent. at its highest. The Reichsbank enters June with swollen credits, only 70.5 per cent. of its April month-end credits having been repaid in the first three weeks of May.

BERLIN, June 2.

SPAIN

CONFUSION AND CONFLICT

CONFUSION remains the keynote of the Spanish situation. Endless labour conflicts on one hand, and on the other the sabotage of Government efforts in the civil service, armed forces, diplomatic corps and administration of justice, make it difficult to advance quickly. Nevertheless, as over three months have passed since the victory of the "United Front," the Republicans still seem half-hearted about fulfilling the conditions included in the joint pact with the labour parties.

One sector of Socialism, which is led by Don Indalecio Prieto, feels that without Socialist collaboration the Republicans will fall. By this he means collaboration in the Cabinet; the Republicans have the Parliamentary support of both Socialists and Communists. Señor Largo Caballero leads the group opposed to collaboration. They affirm that they are not inclined to repeat the experiment of 1931, and consider that with a big Parliamentary majority behind them the Republicans have every facility they need for swift legislation. These differences should have been threshed out at a national congress of the Socialist Party which was to have been held in June but which has been suspended by the executive committee. Those supporting Señor Caballero are endeavouring to obtain the convocation of an extraordinary congress.

The social situation leaves much to be desired. Some of the labour demands are justified; others are quite exorbitant. Some of the employers are not helpful. As always happens in Spain under any Government with Liberal tendencies, the anarchist labour union, the Confederación Nacional del Trabajo, has sprung up with mushroom growth. Unknown leaders manœuvre in the background; no accounts are ever published; and efforts are made to

stampede the workers. It has been said in authoritative circles that there is reason to believe that Fascist money is being paid to this organisation. Madrid has been plagued beyond all reason by strikes during the last month. In the countryside there has been a slight improvement on the whole. But the incident at Yeste (Albacete) is lamentable, in view of the severity of the repression by the Civil Guard. There is much unemployment and misery in Yeste owing to the cessation of important irrigation works. Labour unrest grew. An attack was made on the Civil Guard and two were killed, but the final death roll showed sixteen peasants dead and over twenty injured. Complete details are still lacking.

THE MONETARY POSITION

There was a full dress Parliamentary debate on the economic situation last week which brought neither constructive proposals from the Opposition nor any hint of the Government's plans for the near future. The peseta has been pegged to the gold franc at 48.40 francs to 100 pesetas since 1934. On the "Black Bourses" the rate is from 56 to 58. If the franc goes off gold, the peseta will presumably fall to its normal level. Pegging to gold has hindered exports and encouraged imports. A further sum of £1,000,000 in gold has been transferred to Paris. It is not clear if this is the sum referred to in the Law declared "urgent" by the Cabinet and rushed through Parliament last week authorising the Treasury to borrow £1,000,000 in gold from the Bank of Spain "for intervention in the exchange question." The Finance Minister threw no light on the probable use of this money. It is specified in the Law that the gold shall continue to count as part of the legal gold reserve backing the note circulation. Of the 2,456 millions of gold pesetas held by the Bank of Spain about 100 millions are tied up in exchange operations. The increase in note circulation has brought the legal reserve necessary for a note issue of 5,490 millions up to 2,345 millions gold; hence if the 100 millions involved in the exchanges should be deducted, the gold reserve would be very near the legal border line.

HOLLAND

DEVALUATION MOVEMENT GROWING

There are no signs of revival in trade or industry. Unemployment shows a slight decline in the last two months. But this is seasonal, and the total of unemployed is greater than in the corresponding months of last year. The latest return gives the percentage of insured persons unemployed as:—

31.6%	in the week from May 4 to 9, 1936.
32.1%	" " " April 20 to 25, 1936.
30.0%	in the first week of May 1935.
25.1%	" " " " 1934.

The ever-growing evil of unemployment and the constant decline of business have greatly increased the number of people who support devaluation, and advertisements are being displayed in the leading newspapers designed to win further public support for the movement. A special propaganda committee has been set up; and recently a petition, signed confidentially by about 250 prominent persons in Dutch banking, industry, shipping, commerce and university life, was submitted to the Government. This petition sets forth the urgency of currency adjustment in the Netherlands, and emphasises the following points:—

The general state of business in the Netherlands forms a striking contrast to that prevailing in the rest of the world. Unemployment is at an unprecedented level, and shows an alarming tendency to increase. Industry and commerce are still declining. They are working, generally speaking, at a loss, and under artificial circumstances which are becoming increasingly difficult to endure. The equipment of Dutch industry is becoming obsolete, and cannot be properly maintained. The craftsmanship of Dutch artisans is deteriorating through lack of work. Unemployment and other relief measures constitute an intolerable burden on the State finances. Equilibrium in the Budget situation is impracticable as long as deflation maintains the decline in incomes. The mortgage system is being dislocated. The financial tension is great, and it threatens to become greater. Finally, the clash of interests between the Netherlands and the Netherlands Indies is being accentuated by the failure to devalue.

The foreign trade returns show some advance in exports as compared with January and February, 1936, and a slight rise compared with March, 1936; and they are nearly 14 per cent. above 1935. The following are the full figures:—

	Imports			Exports		
	1934	1935	1936	1934	1935	1936
	(Million guilders)					
January	100	76	79	56	55	50
February	81	70	74	51	51	50
March	94	80	79	61	54	55
April	85	78	81	54	50	57
May	87	78	...	57	58	...
June	89	73	...	59	51	...
July	86	76	...	58	54	...
August	87	76	...	69	61	...
September	78	76	...	69	59	...
October	87	94	...	62	70	...
November	88	86	...	60	60	...
December	75	73	...	56	52	...
Jan.-April	361	304	314	222	210	213

Imports of gold and silver in April, 1936, amounted to 1,736,705 million guilders, and exports to 6,237,613 guilders. Exports of gold have again been increasing in the last few weeks, and gold is going not only to America, but also to Belgium. The Netherlands Bank has declared that it is again prepared to release gold for export to Belgium when such is warranted by the belga rate in Amsterdam. After the devaluation of the belga, the Bank first adopted the view that Belgium was not a country where the gold standard applied by law, although the National Bank of Belgium actually continued to give gold or *devisen* in exchange for bank notes. Now that the gold parity of the belga has become definite, and that the National Bank of Belgium has apparently stated to the Netherlands Bank that it will release gold for export to Holland when such is warranted by the guilder rate of exchange in Belgium, the Netherlands Bank evidently sees no objection to regarding Belgium as a gold standard country once again.

The negotiations recently conducted in Berlin about the transfer of interest on capital and such-like payments have resulted in an agreement in principle, to which the approval

of both Governments has since been given. The agreement is on similar lines to that hitherto in force, and it will apply from July 1, 1936, to June 30, 1937. The interests of Dutch subjects residing in Germany, who want to travel in the Netherlands, have been taken into account.

The tendency on the Amsterdam Stock Exchange remains dull. It is true that State loans are inanimate and that the tendency on the entire investment market is depressed; but on the share market there is no sign at all of anything like devaluation sentiment.

State revenue yield continues to be a depressing factor. The return for the month of April shows a drop, compared with April, 1935, to 28.7 million guilders from 28.9 millions. Compared with the estimate, the April, 1936, return was 2,255,000 guilders down. The total yield of revenue in the first four months of 1936 was 115,017,700 guilders, compared with 119,990,500 in 1935 and an estimate of 123,841,700 guilders.

AMSTERDAM, June 1.

[The renewed exchange crisis and the raising of the Bank rate in Holland are discussed in a Financial Note on page 556.]

ARGENTINA

THE FALL IN EXPORTS

The export figures for the first four months of 1936 are as follows:—

	Volume in Tons		
	1935	1936	
Live stock	441,101	459,656	+ 4.2
Agricultural products	5,023,269	3,637,261	-27.6
Total (all products)	5,631,697	4,256,532	-24.4
	Value in pesos		
Live stock products	201,338,218	236,906,228	+17.7
Agricultural "	347,364,073	254,090,025	-26.9
Total (all products)	573,342,128	515,134,504	-10.2

Hides and wool show an increase in value, compared with last year's figures, of 42.6 per cent. and 30.8 per cent., respectively.

These figures show a very large falling off, compared with last year. The reduction in volume for the first four months amounts to some 24.4 per cent., or over 1,250,000 tons. Fortunately values do not show such a large decline, as prices on the whole are firmer, particularly in the case of meat, wool and hides. The fall in exports this year, which was foreseen, has not so far been accompanied by a corresponding decline in imports.

The Ministry of Agriculture has issued a decree ordering the constitution of a committee to report on the petroleum industry in the Argentine. From the wording of the decree it would appear that the Ministry of Agriculture wish still further to protect the State petroleum industry from "unfair" competition by certain private companies.

BUENOS AIRES, May 26.

INDIA

SIR O. NIEMEYER ON DIRECT TAXES

SIR OTTO NIEMEYER's report on Indian finances which was required by the British Government as a prelude to Orders-in-Council establishing provincial autonomy next April has, of course, met with criticism. All the Provincial Governments complain about it, but privately they all realise that the report will be taken as it stands. If any one particular grievance was met, there would be a case for considering all. Consequently one has to admit that most of the official and ordinary public comments on the report are of rather academic interest. The thing particularly approved by the business community about the report is its insistence on the need to make the Indian State Railways once again self-supporting and able to contribute their share towards general revenues.

But the business community is complainingly loudly about Sir Otto Niemeyer's suggestion that the remaining surcharge

on income tax and super tax should be retained. Sir Otto justifies the retention on the following grounds:—

The present rates of income tax and super tax (he says) are by no means excessive. The general scheme of Indian taxation, Central and Provincial, operates to relieve the wealthier commercial classes to an extent which is unusual in any taxation scheme; and there would be no justifiable complaint if a slight correction of this anomaly were maintained.

It may be true that the wealthier commercial classes in India are not overburdened with taxation; but there seems also a case for the view that if any enhancement of income tax on any particular section of the community is justified, it should be done as a separate measure, and not mixed up with the emergency surcharge.

DEMANDS FOR MORE PROTECTION

Demands for more and more protection are becoming increasingly insistent among the Indian commercial classes. The Indian Chamber of Commerce, Calcutta, has addressed a long communication to the Finance Department of the Government of India on the subject. The document reads almost as though there were no disabilities in protection at all; and the theme is that protection should be given by the Government "less haltingly, and in a more whole-hearted manner than has been done hitherto." The demand really boils down to a request for the abandonment of the policy of discriminating protection recommended by the Indian Fiscal Commission and the substitution for it of indiscriminate protection.

One of the essential principles laid down by the Fiscal Commission was that any industry to be favoured by protection should enjoy ample domestic supplies of raw materials. There is now a cry for protecting industries even if they have to import raw materials. The time seems ripe for the Government of India to investigate how far protection has already proceeded beyond the principles laid down by the Indian Fiscal Commission, and how far this departure has had a damaging effect upon the country. An investigation is desirable not only on economic grounds in order to meet some of the economic heresies being promulgated, but also to clear the path for Federation. There is, for instance, a distinct cleavage of opinion about the virtues of protection between the Presidencies of Bombay and Bengal. It is highly desirable that this question of a new protectionist policy for India should be cleared up.

BOMBAY, May 21.

LETTER TO THE EDITOR
INDUSTRIAL ORGANISATION

TO THE EDITOR OF THE ECONOMIST

SIR,—The coal strike threat has happily passed, at any rate for the present, but all that took place last winter points conclusively to the fact that if we are to avoid grave troubles in the future it is absolutely necessary that industry should be thoroughly organised.

I venture to think that the time is getting ripe for some practical scheme to evolve, and I make the following suggestion for the organisation of industry on the basis of co-operation

between Capital and Labour, while at the same time safeguarding the interests of the consumer:—

- (1) The particular industry should be treated as the unit not the individual business.
- (2) Every manufacturer, therefore, should be in his trade association and every worker in his trade union.
- (3) All staple industries should be governed by industrial councils on the Whitley lines, but provided with statutory powers making their decisions binding on the industry as a whole.
- (4) These councils should be co-ordinated in a central council, each industry being represented by an employer and an employee.
- (5) In order that Labour may be fully acquainted with all the facts, and also for the protection of the consumer, each manufacturers' association should deposit an annual certified statement with the Board of Trade for publication showing—
(a) The average percentage of net profit on the turnover of the industry as a whole; (b) the average ratio of turnover to capital; (c) the average earnings per hour of skilled, semi-skilled and unskilled labour.

If the average profits made exceed the figure that can be looked upon as reasonable, it will become a question whether this should go to Labour in the shape of increased wages or to the community in the shape of reduced prices. No agreements, therefore, between Capital and Labour in any industry for an increase of wages should become operative until ratified by the Central Council, which, being representative of all industries and having all the data available in the various trades as regards wages, etc., will be in a position to give a just decision.

Industries thus organised would have control of production at the source and could control the prices of staple commodities to the ultimate consumer, allowing by way of discounts reasonable profits to the distributors, both wholesale and retail, as has been done for many years with great success in the tobacco trade. By this control of prices based on the cost of production the consumer would be fully protected against profiteering on the part of the distributors as well as by the producers.

When once industries were organised on the lines indicated, a fair and square deal between Capital, Labour and the consumer would become possible, for under such a system—

- (1) Economic security and the best wages the industry could afford would be ensured to the average worker.
- (2) Economic security and a reasonable return would be afforded to the average manufacturer.
- (3) The consumer would eventually pay the price he ought to pay, neither less nor more.
- (4) Initiative and enterprise would not be interfered with in the least, rather would they be encouraged.

The enterprising manufacturer who introduced new methods or new processes which increased his profits would obtain the reward of his enterprise, the increased profits which he made going to swell the average profits of the industry. As the new machine or invention or new process became more and more general throughout the trade, so the average profits of the industry would tend to increase and thus eventually go to Labour in the shape of increased wages or to the community in the shape of reduced prices.

The above may seem Utopian, but it is not. It is eminently practicable. The only thing that is vital is that the Industrial Councils should have statutory powers making their decisions binding on the industry as a whole.

T. B. JOHNSTON.

BOOKS AND PUBLICATIONS

SOCIAL SECURITY IN AMERICA

With the death of the N.R.A. and the A.A.A. the Social Security Act remains by far the most important of the legislative accomplishments of the New Deal. When President Roosevelt started his programme of radical legislation, he seemed for a time to be pursuing a very different course from that of social reformers in other countries; but whether from force of circumstances, or whether because of difficulties inherent in the American Constitution, he has been finally compelled to legislate on much the same lines as European progressive statesmen, that is, by providing for better health and for better security against old age and unemployment among the mass of the population.

Professor Douglas has long been an ardent advocate of social insurance; and he has rightly thought it necessary to trace in detail the growth of efforts for its establishment and the actual political controversies which took place in and out of Congress before the present legislation was finally passed. His book* is therefore of particular value to foreign readers, because it makes clear the reasons for the very different types of insurance legislation which exist side by side in the Social Security Act itself. As might be expected, these differences arose mainly from constitutional snags or because of the ever-present conflict between Federal and State rights.

* "Social Security in the United States." By Paul H. Douglas. McGraw-Hill Publishing Co. Ltd. 384 pages. \$3.

Only one section of the Act lays down any all-embracing national schemes—the section establishing old age annuities. Federal help for mothers' pensions, maternal and child welfare, pensions for the blind, certain public health grants—there is no scheme for health insurance—and supplementary old age assistance are given by a system of grants in aid which usually have to be matched by similar grants from the States. But the actual operation of all the schemes will be a matter for the States under the general supervision of the Social Security Board. Unemployment compensation will also be dependent on State action, though the setting up of State schemes is encouraged by the "tax offset" method, by which employers are relieved of up to 90 per cent. of their Federal taxes under the Act if they already contribute to State unemployment insurance funds. All these types of Federal action may, of course, meet with trouble when the question of their constitutionality arises. Professor Douglas gives an excellent summary of the various precedents on either side, and on the whole takes an optimistic view of the Supreme Court's probable verdict. As the chapter was written before the handing down of the A.A.A. decision, his views may now be rather different, though it seems that the system of grants in aid will in any case pass the test.

The old age annuity and the unemployment insurance schemes are, it is to be noted, "self-sustaining," and are not financed out of general taxation. There is therefore no attempt to redistribute income by means of social services of this kind. Payroll taxes are imposed on employers and employees for the former, and on employers for the latter; and the final burden, as Professor Douglas points out, is likely to fall mainly on the workers themselves either as wage-earners or as consumers. The old age annuities are, in fact, little more than a system of compulsory saving, which is calculated to create by 1980 a reserve fund equal to nearly twice the present total Federal Government Debt. As this fund grows, it will certainly raise some nice problems of banking and monetary policy.

Though Professor Douglas severely criticises much of the Social Security Act, his memory of the traditional American hostility to all social legislation makes him thankful for small mercies. Mrs Burns, in her shorter and less detailed work,† confines herself to a general description of the provisions of the Act, and to an analysis of its probable consequences; and her verdict is apt to be rather more critical. Her book will be useful to the general reader who wants to know why social insurance is necessary in America, and what the shortcomings of the present legislation are. For the student of social insurance, however, Professor Douglas's longer study will be essential, because it lays bare those fundamental weaknesses of the American social and political system which made these shortcomings inevitable.

Professor Douglas's book contains the full text of the Social Security Act and a very full bibliography, while Mrs Burns's gives all the essential clauses of the Act in full.

SHORTER NOTICES

"The Anti-Drug Campaign." By S. H. Bailey. Allen and Unwin. 264 pages. 12s.

In the course of its campaign against the abuse of opium and dangerous drugs, the League is planning to convene in Geneva early this month a conference which is to deal with the suppression of the illicit traffic in narcotic drugs. Mr Bailey's book gives an illuminating survey of the history of the anti-drug campaign, based on much original material.

The key-stone of international regulation of the traffic in narcotics is the Convention on Limitation of 1931. Its main object is to throttle the illicit traffic while permitting the satisfaction of the legitimate medical and scientific needs of the world. While formerly the East was flooded by narcotics manufactured in the West, the author can now rightly state: "The East is no longer seriously threatened with supplies of manufactured drugs from the West." Nevertheless, the ideal of complete control of the production, manufacture, traffic and consumption of drugs is far from being reached. A serious proof of this is the terrible extension in the trade in opium and narcotics which is taking place in the Far East, where not

only opium smoking and eating, but also drug addiction, is still very much in vogue. The author is of opinion that the fatal loophole is not to be found in the method of limitation, but in the lack of its effective application. The most important loophole is secret manufacture in countries where the raw materials are produced and therefore easily made available. Unfortunately, experience has proved that the overflowing of dangerous drugs from a country with established centres of abundant manufacture into other countries cannot in practice be prevented.

The author also ventures to tackle the thorny problem of limiting the production of raw materials. The necessity of such control has already been recognised by the Hague Convention, but tremendous difficulties of an economic, social and technical nature have so far prevented its being achieved. In spite of the great decline in the price of opium by one-fourth between 1929 and 1932, the world's opium production—not taking into account the illicit production in China—was in 1933 still 1,800 tons, while the legitimate needs of the world are estimated at 1,000 tons. All things considered, one cannot help being sceptical about the possibilities of effectively limiting the production of drugs.

"Managing the People's Money." By J. E. Goodbar. (New Haven) Yale University Press. (London) Humphrey Milford. 578 pages. 20s.

This very large volume is described as "an analysis of banking policies and banking control and their relation to economic stability." It is written by a lawyer, who suggests that it may appeal to readers of widely divergent interests.

The book falls naturally into three sections, discussing respectively theory, history and law. Much of the theoretical section is based upon Mr Keynes's Treatise on Money, but little account is taken of the important criticisms made of the "fundamental equations" by Mr Hawtrey and others. The two chapters on English banking history are perhaps of least value to English readers, since this field is being dug very thoroughly nowadays; nevertheless, the comparison of English banking experience of the nineteenth century, before amalgamation became so prominent, with American experience in the twentieth century is both interesting and informative.

Dr. Goodbar's most valuable contribution is undoubtedly in the chapters on American banking law. In one chapter he explains the working of the banking system before 1932 in the matter of affiliates, lending, and related problems. In another chapter he discusses the Banking Acts of 1933 and 1935. In this part of the work he had the benefit of consultation with Senator Carter Glass, who was largely responsible for the original Federal Reserve Act and for its subsequent amendment to meet new problems.

The thread that connects the three divisions of the book is the attempt to interpret the facts in terms of the theory. But as the theoretical analysis is the least satisfactory feature, the connection is slender.

MONEY AND BANKING

BRITISH MONETARY POLICY

Our policy of maintaining cheap and plentiful credit at home and using the Exchange Equalisation Account to smooth out fluctuations in sterling abroad has worked so unobtrusively and so successfully that to-day it is almost taken for granted. From time to time, however, minor inequalities arise as a warning that our policy does not operate automatically, and a week or two ago doubt arose of the permanence of cheap money. One cause of doubt was the May contraction in bankers' deposits at the Bank of England to an unusually low level. But it is also common knowledge that defence expenditure will entail fresh borrowing, and that in particular it may involve an increase, possibly temporary, in the floating debt. The immediate consequence has been a rise in the Treasury bill tender rate and a firmer tone in the discount market. The renewed franc crisis has also called in question our external as well as our internal monetary policy.

Nevertheless, it is clear that there has been no change in our official policy of cheap money. The Financial Secretary to the Treasury had no difficulty in explaining this to the House last week. The truth is that the recent drop in bankers' deposits was due to two definite causes, namely French hoarding of British currency and the normal May preparations for the half-year's War Loan dividend. A cursory examination of recent Bank returns establishes the second point. During May, while bankers' deposits fell from £104.7 to £78.3 millions, public deposits rose from £7.5 to £19.8 millions. This week the June War Loan dividend was paid, and public deposits have receded to £8.2 millions, while bankers' deposits have risen to £89.7 millions. Moreover, as is shown by the table below, the floating debt increased during May by only £18.4 millions, which is a perfectly normal movement.

The effect of French currency hoarding on our internal credit position is of greater interest. It throws new light upon the consequences of gold purchases by the Exchange Equalisation Account to offset the influx of French funds. To elucidate the sequence of events, we may take first the simple case of the purchase by French interests of £1,000,000 sterling in exchange for francs, and its subsequent deposit in the British joint-stock banks. The Exchange Account buys these francs, to support the exchange, and uses them to buy £1,000,000 of gold from the Banque de France to finance this transaction. The Exchange Account has to dispose of £1,000,000 of Treasury bills, and these have to be placed in the London market. In fact, they are either bought by the joint-stock banks or are lodged at the banks as collateral for fresh loans. The result is that the banks gain £1,000,000 in both deposits and earning assets, and nothing in cash, so that their cash ratio is reduced. Next, let us assume that, as has happened in recent weeks, the French interests prefer to hold British currency. It follows that in these circumstances the French interests withdraw their new deposits from the British joint-stock banks in the form of currency. The British banks thus lose cash and only gain new earning assets, for their deposits recede to their former size. In this case the contraction in their cash ratio is intensified.

To see the whole picture, let us set out certain statistics for the past six weeks:—

	Apr. 29	May 6	May 13	May 20	May 27	June 3
<i>Bank of England</i>						
Gold	202.7	203.7	204.3	205.4	206.4	207.3
Note circulation ...	416.9	422.6	424.8	423.1	426.1	433.5
Reserve	46.6	41.8	40.3	43.1	41.2	34.7
Public deposits.....	7.5	9.2	13.3	21.0	19.8	8.2
Bankers' deposits...	104.7	88.3	83.2	80.1	78.3	89.7
<i>Floating Debt*</i>						
Tender Treasuries...	518.0	528.0	538.0	548.0	558.0	568.0
Floating assets	250.2	250.7	247.4	238.2	223.5	218.6
Total floating debt	768.2	778.7	785.4	786.2	781.5	786.6

* Four days earlier than date of each Bank return.

The rise in public deposits up to the end of May, and

their subsequent decline on the payment of the War Loan dividend is apparent from the figures. The increase in the note circulation, due to French hoarding, and, latterly, to the Whitsun holidays, is also clearly revealed. As the Exchange Equalisation Account ranks as a public department, its gold purchases are largely responsible for the fall in floating assets. This fact, in turn, explains much of the £50 millions increase in tender issues of Treasury bills, most of which have either been bought by the banks or lodged at the banks as collateral for new call and short loans, which have added to the bank's earning assets. Finally, the contraction in bankers' deposits, due to the above causes, symbolises the banks' loss of cash, which by the end of May had created slightly less easy conditions in the money market.

When the Exchange Equalisation Account was established, the Government in effect took power to buy gold or foreign exchange up to the statutory limit of the account, and to borrow from the banking system (by issuing fresh Treasury bills) in order to pay for its purchases. Now, when the Government borrows from the banks for any purpose whatever, either to pay for new gold or new battle-ships, and does not supply the banks with fresh cash, credit is bound to become more stringent. Briefly, if bank loans (and therefore bank deposits), rise while bank cash remains unchanged, the banks' ratio of cash to deposits is reduced and this forces the banks to call in other loans or to contract their holdings of bills or securities. The only remedy is for the authorities to expand the supply of bank cash.

A fortnight ago we suggested that, valued at the current market price of about 140s. per ounce, the total gold reserves in the hands of the British authorities amounted to about £600 millions sterling. The Bank of England, however, holds only just over £200 millions, at the statutory price of 85s. an ounce, at which the Bank necessarily values its gold. If the authorities so desire, it would be a perfectly simple operation to transfer gold from the Exchange Equalisation Account to the Bank in such a manner as to augment the joint-stock banks' cash. One method would be for the Bank to take over gold from the Exchange Account in exchange for Treasury bills, and then to make good the reduction in its bill portfolio by buying Treasury bills in the open market. That operation would automatically increase bankers' deposits, i.e. the banks' cash. The process, indeed, may well have been in operation, on a small scale, during recent months, for the Bank, since last August, has added about £15 millions to its gold stocks.

How much gold, it may be asked, could safely be transferred from the Exchange Account? If and when the franc is devalued, there may be a reflux of funds to France. The Exchange Account must keep enough gold in hand to cover this reflux. This, however, is a bridge to be crossed in due time. Meanwhile, even if the Bank itself were required to part with a small amount of gold, no serious harm would be done. It would be short-sighted policy to risk present stringency for an indefinite future contingency. Any eventual reflux of funds to France, indeed, will be limited, since fears of penal taxation in France may persist even after the franc has been devalued. The transfer of only a small quantity of gold from the Exchange Account to the Bank, again, would be sufficient to neutralise any stringency arising from possible British Government borrowing during the next few months.

The inference would seem to be that the authorities, if they choose, can keep money plentiful and short-term rates low. They may have excellent reasons for refusing to commit themselves, in advance, to any precise measures. Nevertheless, the time seems peculiarly opportune for a clearer statement of the broad objectives of our monetary policy. An unfortunate suggestion appeared recently,

clothed in semi-official language in an august contemporary, that the function of the Exchange Equalisation Account was to minimise fluctuations in the gold value of sterling. It would be well if the Government would make it clear, beyond peradventure, that they are thinking in terms of the stability of sterling in general, and not of the relation of sterling to gold. As we pointed out last week, the main justification for our support of the franc exchange is that it prevents the pound from becoming increasingly over-valued against the dollar.

In these circumstances there is an assurance which the Government could helpfully give to France and the world: that if the franc were devalued there would be no competitive depreciation of sterling. Indeed, we should set on record our willingness, provided the devaluation of the franc were sufficient to restore equilibrium between the franc and dollar, to concentrate on keeping sterling, in its turn, in equilibrium with both. It is in our own interest to avoid both over-valuation and under-valuation of the pound.

Whether or not the authorities have formed any idea about the proper rates between the three currencies, we understand that the British and American Governments have already concluded an informal agreement to take common action in the event of the franc going off gold. This, of course, is not an agreement for stabilisation at any particular figure, but for co-operation to prevent undue fluctuations. In other words, the operations of the British and American Exchange Funds are to be concerted. It may be assumed that this understanding is known to the French authorities; for obviously it could not function except in conjunction with them.

Two further observations can usefully be made. First, the Government should state that for the time being neither Government borrowing, nor foreign hoarding of currency, will be allowed to interfere with the present policy of cheap money. Next, it should be made clear that while the operations of the Exchange Equalisation Account, made to off-set movements of panic or floating funds, will not be permitted to affect the internal supply and cost of credit, conditions may arise which will call for an internal rectification. For example, if there is a sharp rise in the internal price-level, then the proper correction is a contraction of credit, such as, in the days of the gold standard, was caused by a loss of gold by the Bank. Beyond this it is unwise to plan amidst the current uncertainties, but Government assurances of this character would be of definite value and assistance both at home and abroad.

FINANCIAL NOTES

The Franc Crisis.—The French strikes have precipitated a new crisis, and there have been heavy offerings of francs all the week. The British Control has only intervened intermittently, and on Thursday afternoon the spot Paris rate was Frs. 76 $\frac{1}{4}$, with three months' francs at Frs. 6 $\frac{1}{2}$ discount. The Banque de France's return for May 29th shows gold losses of Frs. 437 millions, a big increase of Frs. 1,451 millions in rediscounts and an expansion of Frs. 1,367 millions in the note circulation. It is estimated that the Banque de France lost another Frs. 200 millions of gold on June 2nd and Frs. 350 millions the following day. All these movements indicate a renewed flight of funds from France, coupled with fresh hoarding of currency and further borrowing at the central bank. The week's expansion £7.4 millions in the British note circulation points to a recrudescence of French hoarding of British currency, and there have been numerous transfers of small balances to England. The remaining gold *bloc* currencies and the dollar have weakened in sympathy with the franc, and the spot New York rate is now up to \$5.03 $\frac{1}{2}$, thereby accentuating the over-valuation of sterling. Three months' Swiss francs, in particular, have weakened to 48 centimes discount, equivalent to over 12 per cent. per annum. The general feeling is that the strikes in France have forced M. Blum away from devaluation towards exchange restrictions, and it is possible that restrictions will be announced

either during this week-end or early next week. Once restrictions begin it is difficult to see how their extension can be avoided, together with the growth of a "grey" or "black" market in francs in London. This will create grave problems, both for French trade and for the Paris market in international securities, and it is even possible that the franc will depreciate heavily, as it did just over ten years ago. Also it may prove necessary to prohibit the export of currency from France, and this may stimulate internal purchasing of commodities, leading to a rise in prices and even to unregulated inflation. These dangers render all the more essential the co-operation between France, England and the United States, discussed in the previous article. If France imposes restrictions the gold *bloc* will break up at once, but both Holland and Switzerland are not likely to impose restrictions as well. Opinion in both these last two countries is coming to recognise the need for devaluation, and this is the most likely consequence of a breakdown of the franc. With reasonable equilibrium established between the pound, the dollar and the gold *bloc* currencies, there would also arise an obvious opportunity for the revaluation of the Reichsmark. Thus the immediate future is fraught with heavy possibilities for good or for evil, but the next overt move must be in Paris.

M. Blum and the Franc.—The decision of the 72 Communist deputies to demand maintenance of the gold franc, and at the same time to urge strike action for higher wages and better working conditions, has gravely embarrassed M. Blum in his efforts to cope with France's economic problems. To the Right of the Communist *bloc*—which is, technically, still part of the Popular Front—direct interest in devaluation increases in proportion to distance travelled. The majority of the Socialists are reconciled to devaluation, as are most of the Radicals. Farther to the Right come the groups which represent the richer classes; and their supporters, the "big men" and the big concerns, already have sufficient of their funds outside France to nurse a considerable expectancy of profit upon repatriation after devaluation. Naturally, however, everyone wants the Socialists to carry the responsibility for the act of devaluation itself. This may explain why M. Blum is, for the time being, opposed to *dévaluation à froid*; for he has to consolidate his Government, allay Socialist and Communist fears of devaluation profits and of a rapid rise in prices, and, finally, establish a programme of co-operation with the Banque de France. The latter is necessary owing to the inability of the Government to raise the funds required for the current year's £200 millions total deficit (re-armament, railways, etc.) in the short-term market. The limit on the issue of Treasury bonds, raised from Frs. 15,000 millions to, roughly, Frs. 21,000 millions just over two months ago, will have again to be raised for this purpose; and, as the short-term market is constricted and bank deposits continue their long decline, the Banque will have to finance the new Government direct. This implies a tug-of-war between the Governor, M. Tannery, and the new Finance Minister, M. Vincent-Auriol. The industrialist Regents of the Banque are now more interested in devaluation, and see in it the only safeguard against the wage increases now demanded on all sides. It may therefore be that the Banque is already working out plans, not only for its own innocuous "reform," but also for devaluation itself. Devaluation, however, may not officially come until the autumn pressure on the ordinary Budget sets in. Nevertheless, the interim period, while plans are prepared, must be one of stringency, embargoes, and, possibly, centralised control of purchases and sales of foreign currencies.

New Guilder Weakness.—The difficulties of the franc have been accompanied during the last week or so by fresh uncertainty about the future of the guilder. As is well known, there is a large and vocal body of opinion in Holland in favour of devaluation, and the general lack of confidence is illustrated by the rapidity with which the crisis has arisen almost from the blue. A fortnight ago, apart from a slight weakening of the guilder, there was little to

presage the rapid developments that ensued. By May 28th, however, the guilder had moved to the export gold point against both the belga and the dollar, and large shipments of gold followed. A strong devaluation atmosphere developed on the Bourse and there were heavy purchases of various leading equities. On May 29th, the Netherlands Bank official discount rate was raised to 3 $\frac{1}{2}$ per cent., after having remained at 2 $\frac{1}{2}$ per cent. since February 4th. This proved ineffective, largely because the private discount rate remained at 3 $\frac{1}{2}$ –3 $\frac{3}{4}$ per cent. The gold flow continued unabated, and there was no surprise at the further raising of the discount rate on Wednesday by 1 per cent. to 4 $\frac{1}{2}$ per cent. The weekly return of the Netherlands Bank shows that gold stocks fell during the week ended June 2nd by Fl. 43,600,000, which was more than had been anticipated. Even more drastic measures may be expected if the higher Bank rate proves inadequate. Although the situation has deteriorated, devaluation does not appear to be imminent, and the most that can be said is that the case for devaluation is gaining ground. Holland is likely to remain on gold at least as long as France.

The Money Market.—In spite of the War Loan dividend payment, money remains less plentiful. The clearing banks again called small amounts on practically every day of this week, and one bank at least has raised its buying rate for August Treasury bills from $\frac{1}{2}$ to $\frac{3}{4}$ per cent. There is also a greater readiness to sell bills, which indicates a general impression that discount rates are likely to become firmer. The grounds for this impression are discussed on a previous page.

	May 14, 1936	May 21, 1936	May 28, 1936	June 4, 1936
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate :—				
Clearing banks	$\frac{1}{2}$ –1*	$\frac{1}{2}$ –1*	$\frac{1}{2}$ –1*	$\frac{1}{2}$ –1*
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates :—				
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$ – $\frac{3}{4}$
Three months' bank bills	$\frac{1}{2}$ – $\frac{3}{4}$	$\frac{1}{2}$ – $\frac{3}{4}$	$\frac{1}{2}$	$\frac{1}{2}$ – $\frac{3}{4}$

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

The rate for three months' bank bills is also firmer, and at least one purchase is reported of clearing bank bills at $\frac{3}{4}$ per cent. The new Australian loan is thought to have attractions for the money market. The banks have not yet formally decided their attitude, but will no doubt accept it as collateral for one per cent. loans. As its yield is 2.78 per cent., it should give holders a useful margin.

The Bank Return.—This week there has been an increase of £7.4 millions in the note circulation. Part of it is due to internal currency demands over Whitsun and the end of the month, but at least four millions of it must be due to renewed French hoarding. The Bank has acquired another £900,000 of gold, while the reserve is reduced by £6.5 millions.

	BANK OF ENGLAND				
	June 5, 1935	May 13, 1936	May 20, 1936	May 27, 1936	June 3, 1936
Issue Department :—	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Gold	192.7	204.3	205.4	206.4	207.3
Note circulation	395.9	424.8	423.1	426.1	433.5
Banking Department :—					
Reserve	57.6	40.3	43.1	41.2	34.7
Public deposits.....	7.6	13.3	21.0	19.8	8.2
Bankers' deposits	102.6	83.2	80.1	78.3	89.7
Other deposits.....	36.1	37.0	36.8	36.7	37.1
Government securities ...	90.0	89.9	91.2	91.8	98.5
Discounts and advances	5.4	8.8	7.1	6.7	6.2
Other securities	11.2	12.3	14.3	12.9	13.3
Proportion	39.3%	30.1%	31.2%	30.5%	25.7%

The payment of the War Loan dividend explains the reduction of £11.6 millions in public deposits and also the increase of £6.7 millions in Government securities—the latter probably representing Ways and Means borrowing.

Bankers' deposits, however, have only risen by £11.4 millions, as the release of the War Loan money has been partly neutralised by French currency hoarding. That is why money is less plentiful than it usually is immediately after a War Loan dividend payment.

INSURANCE NOTES

Equitable Life: Valuation Method.—Founded in 1762, the Equitable is the oldest life assurance office, but its great prestige does not depend on mere antiquity. On the contrary, the society is in the van of progress in its adaptation of practice to modern conditions. In the valuation of the society's liabilities in 1930 a very important breach was made with tradition. Much actuarial discussion crystallised in action by the abandonment for the participating class of policy of the net premium method of valuation and its replacement by the now not unfamiliar bonus reserve method. At the quinquennial valuation as at December 31st last this method has again been employed. The actuary's report is informative regarding the bases used. In the participating section the Eastern Counties (Rural Districts) table, as in 1930, was adopted; the actuary states that, although not formed from life assurance statistics, this table represents more nearly than other published tables the mortality experienced in this section. The future rate of interest assumed is 4 per cent., and a reserve is held for future bonuses on all existing policies at the rates now declared. It is no part of the bonus reserve valuation to guarantee these future rates of bonus; in the absence of serious adverse influences, however, the actuary expects that the rates now declared will be maintained. In the non-profit class the net premium method is used, and as regards mortality, the A 1924-29 table has been selected as the most appropriate. On this occasion, however, the rate of interest is 3 $\frac{1}{2}$ per cent. instead of 4 per cent. It is interesting to learn that, had the whole of the society's assurances been valued on the net premium method on the basis of A 1924-29 at 2 $\frac{1}{2}$ per cent., the liability would have been approximately £200,000 smaller than by the methods used.

Equitable Valuation Results.—Results of the past quinquennium and the previous four-year period are given below. In each case the trading surplus is arrived at after meeting the increased cost of the valuation basis. The amount carried forward is stated to be sufficient to meet the cost of a reduction to 3 $\frac{1}{2}$ per cent.—which in view of the fall in the rate of interest may be necessary—in the basis of valuation of the participating contracts at the next valuation in 1940 :—

	1927–1930	1931–1935
Trading surplus	335,821	652,259
Profit from investments	14,603	780
Brought forward	215,517	50,324
	565,941	703,363
Allocations :—		
To Policyholders	515,617	521,641
Cost of Pensions.....	...	39,000
Carried forward.....	50,324	142,722
	565,941	703,363

In the whole-life class the rate of reversionary bonus is 15s. per cent., calculated on the sum assured, multiplied by the number of years a policy has been in force—with the proviso that no policy shall receive a smaller addition than 30s. per cent. for each year of the past quinquennium. Thus a policy forty years in force receives, in respect of the past quinquennium, an addition of £30 per cent., while a policy one year in force receives a bonus of 30s. per cent. of the sum assured. In the endowment assurance class the rate of bonus is, for each completed year since 1930, 30s. per cent. per annum compound, payable at death or survival, plus 15s. per cent. per annum simple, payable on survival only. During the year new sums assured fell from £1,460,000 to £1,337,000, and there was a fall of 11d. per cent. in the net rate of interest to £4 5s. 6d. per cent.

THE STOCK EXCHANGE

TURNER AND NEWALL

TURNER AND NEWALL epitomises the qualities of leadership. Its paramountcy in the asbestos industry, like that of Courtaulds in rayon, derives ultimately from a single inspired decision which first induced a textile concern to produce packings for the engineering trade. Like Imperial Chemical Industries, the company is an integrated undertaking armed *cap-à-pie* at every point from mine to consumer, whose products subserve many branches of British industry. Like Wiggins Teape, it publishes annual accounts which are models of clarity and wealth of detail.

The present company took shape, as a private concern, as recently as 1920, when it amalgamated three old-established concerns—Turner Brothers Asbestos Company, of Spotland, Rochdale, founded in 1871; the Washington Chemical Company, with its headquarters in County Durham, established in 1840; and Newall's Insulation Company, founded in Newcastle in 1908, but now of County Durham. In 1925 the company became public, and its accounts on September 30, 1925, showed a total paid-up capital of £2,567,204. To-day, the total issued capital is £6,288,202, with approximately four-fifths in ordinary stock.

The results of the company's rapid evolution can best be studied in the table below, with its accompanying chart, on the opposite page. These display the capital, industrial activities and inter-relationships of the parent company and its subsidiary and associated undertakings. The group's interests range from asbestos mining to the textile, building and chemical trades. Some of its mining properties, which are situated in South Africa and Rhodesia, were purchased outright on profitable terms in the early years after the war, but the equally successful Rhodesian and General Asbestos interests were acquired by a share exchange in 1929. The group is more than self-sufficient on the raw materials side, and a significant part of its crude asbestos is sold to outside manufacturing concerns. The asbestos textile manufacturing side of the business is concerned with a variety of products ranging from engine packings, belting, jointing and asbestos cloth materials to brake linings. The original Turner Brothers Asbestos Company (which now maintains only a nominally separate "legal" existence as a £100 company, owned as to one hundred per cent. by the parent concern) operates generally in this branch. The manufacture of various friction linings is carried on by Ferodo, Limited (of which Turner and Newall obtained control in 1925-26) with its associated concern in America and separate companies, operating under agreement, in France and Germany. The distribution of insulation products is now concentrated largely in Newall's Insulation Company, another £100 "nominal" subsidiary, which is itself an amalgamation of nine companies, effected three and a half years ago. The same process of technical and financial co-ordination has concentrated in another "branch" subsidiary the asbestos cement side of the business—which includes a wide range of goods such as switchboard panels,

pressure pipes, boards for the ceilings and internal partitions of buildings, slates for roofing, fittings for the gas industry and rainwater goods. The £100 company which heads this branch is an amalgamation of the original Turners Asbestos Cement Company with three other concerns. The production of asbestos cement in India, under a concern separately registered under Indian law, started two years ago.

The manufacture of chemicals (magnesia carbonic acid gas, etc.) and heat insulation materials and bricks is organised under the aegis of the Washington Chemical branch subsidiary, the successor of one of the three companies in the original amalgamation of 1920. The Western Chemical Company (Paisley), Limited, acquired seven years ago, produces a variety of chemicals including carbonate of ammonia, dry ice, etc. The Carbon Dioxide Company was formed in 1928, to market the carbonic acid gas output of Turner and Newall and Distillers jointly, with a forty-sixty share interest. One of the newest branches—and one of the most promising—is represented by the Quasi-Arc company, founded in 1911, which was acquired by a share exchange six years ago. The company produces a steel electrode (i.e., welding rod) covered with blue asbestos yarn, which is obtaining a rapidly increasing market in the shipbuilding, engineering, electrical and building industries, where welding, as a competitor with the older method of riveting, is effecting far-reaching changes in constructional technique. Finally, the company, which from its earliest days has had important American connections, recently acquired a two-thirds interest in the Keasbey and Mattison Company, itself an amalgamation of two Pennsylvanian concerns.

This brief sketch of the group's structure and activities omits, perforce, detailed reference to such progressive sides of a many faceted business as the production of acoustical materials, and makes no mention of numerous companies, like Bells United Asbestos, which have been completely merged into the parent undertaking. On even a cursory survey, however, three conclusions of prime investment significance stand out. First is that Turner and Newall is concerned mainly with the manufacture of "producer's goods"—the raw materials of other industries such as the engineering, electrical, building, motor, locomotive, marine, and film trades. In the long run, the trend of consumption of Turner and Newall products must necessarily be upward, for their market lies in the "new" as well as the "old" industries. In the short run, however, profits may be susceptible to cyclical changes in the tempo of general industry. The second conclusion is that, despite the wide variety of its products and their uses, the organisation of the entire undertaking is remarkably close and compact. Its resemblance, in this respect, to Imperial Chemical Industries appears to be more than accidental. Both combines have shown a preference for one-hundred-per-cent. control, wherever possible, of their subsidiary undertakings; and both, having obtained such control, have proceeded to integrate

(1) Including profits (less losses) of subsidiary companies, after providing (inter alia) for management remuneration and expenses, bad and doubtful debts, mines amortisation, depreciation, directors' fees, and pension fund (£5,000 in 1932, and £10,000 annually, 1933 to 1935). (2) Gross amounts from 1929 onwards. (3) Including amounts allocated, from time to time, to general reserve, writing off goodwill and amalgamation expenses, and (in 1934) a special appropriation of £94,349 to write down book value of subsidiaries' assets; plus or minus any increase or decrease in total "carried forward." (4) Including amounts owing to and from subsidiary companies. (5) Total floating assets less "creditors and provisions." (6) Including assets and liabilities of subsidiary companies in which Turner and Newall hold not less than 75 per cent. of issued share capital. Consolidated balance sheet not published before 1931. * Income tax provision not disclosed. † After deducting investment reserve. ‡ Includes £120,000 balance on purchase account of Bells United Asbestos Company.

TURNER & NEWALL GROUPING

their properties and run them as "branches" of a centrally organised undertaking. The third conclusion is that a very large part of this development has been quite recent. Much of it, in fact, has been concentrated within the last ten years.

This last consideration has a material bearing on the financial record of Turner and Newall, which is summarised, in the table on the preceding page, for every year of the company's existence as a public concern. Two tendencies have been operating, side by side. One is the process of expansion, symbolised by the growth of nearly 150 per cent. in the parent company's issued capital within a decade; by the rise, within the same period, in the net book-value of its directly-owned fixed assets from £1,253,288 to £2,107,537 and in that of net interests in subsidiary and associated companies from £708,656 to £3,514,331; and by the increase in its net floating assets from £606,410 to £2,305,824. This period of intensive development, however, has coincided with a series of severe fluctuations in contemporary economic conditions over which the company itself has had no control. That the company's activities, as a whole, are sensitive to cyclical changes in general industry is strongly suggested by the fact that earnings on the ordinary capital fell from nearly 30 per cent. in the best year (1928) to under 4½ per cent. in the worst year (1932), with a subsequent recovery to a little over 14 per cent. last year.

It follows, therefore, that the ordinary units, which at 76s. 3d. yield 3½ per cent. on last year's dividend and 3½ per cent. on earnings, have a dual equity to-day. In one sense, an investor in Turner and Newall buys a unit in a fixed trust embracing all the constructional trades, whose dividends will be a function of the continuance of general recovery. In this connection, the probable duration of the present trade revival, and the effect, e.g. of the Government's re-armament programme, on the one hand, and the possible falling-off in building activity on the other, are all relevant matters for a stockholder's consideration. Behind all this, however, is the fact that the company has yet to reap the full fruits of the policy of extension, consolidation, and financial reorganisation of the last decade. Its strategy has been conceived on broad lines, and its financial position is strong. During the years shown in our table, it has ploughed back some £1½ millions of profits into its business. Its own goodwill has been completely written-off. Its general reserve stands at the round million. Total depreciation and amortisation reserves are equivalent to more than a third of the "cost" figure of consolidated fixed assets, and the group, as a whole, has nearly £1½ millions of cash and liquid investments. The present price of Turner and Newall ordinary reflects the view that the company should be in a position to meet any foreseeable increase in demand, and that the next ten years should see the fruition, in earnings, of the constructive work of the last ten.

INVESTMENT NOTES

Course of Share Values.—The month of May, for investors, has scarcely earned its traditionally cheerful adjective. Both in London and New York (as our customary chart shows) equity share prices have been reactionary. British share values are back approximately at the level at the end of January, and the same remark applies in the case of Wall Street, though in some instances American prices have been recently below any recorded since the beginning of 1936. For the first time for a number of months, market opinion is divided on ultimate and not merely on proximate possibilities. The view of the majority is that, although the present setback may endure, possibly, for some weeks—during which prices may oscillate without any definite tendency either way—the outlook for continued industrial activity is sufficiently good to promise a resumption of the upward movement in due course. A minority, however, whose numbers are slowly increasing, questions whether the long-continued bull market has not raised ordinary share prices to a level which leaves them vulnerable to the effects of a possible hardening of interest rates or a slowing-off in

the pace of increased profits, or both. Although the cloud on the market's horizon may be no bigger than a man's hand, its appearance, in a period of political unsettlement, has been sufficient to reduce the volume of business and to give the markets an air of "drifting." The reaction, indeed,

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS (1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

has depressed the price index for 178 industrial shares, computed by the Actuaries (December 31, 1928 = 100) from a high level of 83.9 on April 28th to 81.9 on May 26th, with a slight recovery to 82.2 on Tuesday last, the corresponding figures of average yield being 3.64, 3.75 and 3.75 respectively. The behaviour of various groups of shares is shown by the following table:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Five Weeks Ago (Apr.)	Last Week (May 26)	This Week (June 2)	Five Weeks Ago (Apr.)	Last Week (May 26)	This Week (June 2)
Insurance co.'s (24).....	134.4	130.7	130.1	3.15	3.25	3.26
Coal (7).....	98.7	92.6	92.8	4.13	4.45	4.43
Motors (5).....	59.1	55.1	55.0	3.99	4.27	4.29
Oil (5).....	84.8	85.8	85.7	2.61	2.89	2.89
Electric supplies (10).....	137.9	134.7	134.3	3.59	3.84	3.85
Home rails (4).....	72.9	68.8	68.1	1.57	1.59	1.61
Miscellaneous (56).....	75.8	74.4	74.8	4.00	4.09	4.07

The decline during the last five weeks has been fairly general. It has ranged from "money" shares, like those of insurance companies, to engineering and other "home industrial recovery" shares.

Another Australian Conversion.—Next week Australia will launch her twelfth refunding issue in London. The new stock will carry 2½ per cent. interest and will be offered at a point below par. Its life, however, will be definitely short, for the loan will be repayable at the earliest in 4½ years and at the latest in 6½ years. The proceeds will be used to fund just over £16½ millions of existing State securities, namely £10,954,000 4½ per cent. New South Wales 1935-45, £2,368,141 3½ per cent. South Australian 1926-36, £2,631,165 4½ per cent. Western Australian 1935-65, and £597,497 3 per cent. Western Australian 1916-36. The operation brings the total Australian conversions since October, 1932, close to the £200 millions mark—actually to £198,513,276—representing a total annual interest saving of £3,174,000 sterling, or £3,979,000 in Australian currency. Here is a substantial reward for courage and good faith, which suggests that the psychology of overseas investment is better understood by the statesmen of the Commonwealth than by those of certain Canadian provinces, who appear to have studied the wrong

text-books. A complete list of Australia's conversions is given below:—

Date of Prospectus	Amount	Old Rate of Interest	New Rate of Interest	Issue Price	Date of Maturity of New Loans
October 3, 1932.....	£12,360,959	5½	3½	97½	1936-37
February 24, 1933.....	9,621,846	4	4	100	1955-70
May 30, 1933.....	11,409,965	6½	3½	99	1937-38
July 15, 1933.....	17,221,191	6	4	99	1943-48
September 14, 1933.....	20,951,226	5½ to 6	3½	98	1948-53
December 6, 1933.....	16,647,349	5 to 5½	3½	99	1946-49
February 21, 1934.....	21,636,550	5 to 5½	3½	97	1954-59
November 8, 1934.....	14,801,806	3 to 5	3½	99	1964-74
January 17, 1935.....	22,384,000	5	3½	100	1956-61
July 23, 1935.....	13,469,981	3 to 5	3	100	1939-41
January 3, 1936.....	21,657,000	5	3	95½	1955-58
June, 1936.....	16,551,403	3 to 4½	2½	99	1941-43
Grand total.....	198,513,276	...	...	...	...

Although the latest operation is the cheapest of the entire series, it is fairly safe to say that the Commonwealth authorities, given the opportunity, would have preferred a more distant maturity, even at the cost of a slightly higher interest rate. The loan, however, must, of necessity, accommodate itself to the exigencies of the British authorities' new issue time-table. The results of recent home corporation offers have not been encouraging, and it is evident that the market must either have a substantial concession in "offered" interest rates, or a respite from new operations. Australia, herself, will not be in the market again for twelve months or more, for she has no further maturities, either optional or compulsory, before November, 1937. There is, further, in this instance, a certain virtue in necessity, for, as our table shows, no other loan in Australia's present conversion series has a maturity date falling within the limits of the present offer. Actually, of the £198 millions which has been converted in the last four years, some £37 millions now has a final redemption date before 1943, £71 millions between 1943 and 1953, and £90 millions between 1953 and 1974. The "spacing" has been well planned, and those concerned may be complimented, in general, on the skill with which they have handled a complex and protracted series of operations. Is Australia likely to re-emerge as a *new* borrower in the next few years? If the question were even tentatively raised, it is probable that an appreciable difference of view might be revealed, between Canberra and London, as to the precise lengths to which tangible recognition of financial orthodoxy should go.

Alberta "Converts."—It is reported that the removal of the three securities of Alberta from the Stock Exchange Official List this week has caused the Treasurer of that Province "no concern." This action followed reports, since confirmed by Order-in-Council, that the Provincial Government would impose a 50 per cent. cut in interest rates. Mr Aberhart's method of conversion, in fact, honoured the principles elucidated by the Mayor of Vancouver in January last year, which met a similar reception and an effective protest in London. But the treatment of Alberta's creditors is the more serious since it follows, not merely bankruptcy, but financial obduracy. Alberta has dismissed the proposed Loan Council of Mr Dunning with one hand, while making suppliant gestures for Federal assistance with the other. The discussions, however, have been unavailing, and, by her default on certain dollar maturities, this year, Alberta has gone down to history as the first Canadian Province to default. Canadian stocks have, inevitably, suffered a reaction on the news, although far-sighted bondholders may well feel sympathy with the Federal authorities not merely in their attempt to assist the Western Provinces, but also for their refusal to submit to inordinate pressure. It would be intolerable, on a long-term view of Canadian finances, if an appeal by any Province to avert default were to push bargaining to the point of blackmail. Mr. Aberhart has declared that "if bondholders will not take what we can give them they will get nothing." Creditors will refuse to consider such propositions in any settlement of the debt position. They must regret, however, the evident resistance to the introduction of the Provincial Loan Councils. The example

THE NATIONAL CITY BANK OF NEW YORK

of Australia, whose twelfth conversion in four years is discussed in the preceding Note, is evidently unheeded in the prairies.

Building Societies' Co-operation.—The desirability of co-operation within the building society movement has been repeatedly stressed in these columns, and was discussed at some length on page 24 of the special Survey of the movement published with the *Economist* of April 11th. Sir Harold Bellman's statement at the conference of the National Association this week is the more welcome and opportune in view of the possible extension of competition for mortgage business which might follow any serious check to house building activity. A large number of societies have decided to adopt a policy of co-ordination, aiming at the prevention of inordinate competition and intended to cope with external exploitation of the movement. The scheme has been devised to keep lending within prudent limits, and will cover, *inter alia*, such factors as borrowers' minimum personal stakes and vendors' collateral security deposits (discussed on page 22 of our Survey), the maximum repayment terms for advances and minimum rates of mortgage interest. No details of the code have, as yet, been made public, and it may be noticed that regional competition is not specifically referred to. After several years of negotiation and patient adjustment of detail to ensure that local practices and the interests of the large number of smaller societies should not be prejudiced—and after a disappointing breakdown last year which threatened to shake the confidence of the movement in the possibility of negotiation—the Association and its leading personalities may be congratulated on the successful conclusion of the scheme. It appears at a time when the movement has achieved new records. The order of magnitude of last year's advance was suggested by the analysis of the results of 98 societies for 1935 and earlier years which appeared in our Survey on page 12. It is confirmed by the return issued by the Chief Registrar recently, from which the following "key" figures are extracted:—

	1934	1935
Number of societies.....	1,007	999
Number of accounts open.....	3,620,144	3,881,259
Mortgage advances during year.....	124,558,507	130,676,119
Total mortgage assets.....	476,205,394	529,279,825
Total assets.....	555,590,610	601,632,323
Shares outstanding.....	424,276,199	446,925,889
Deposits outstanding.....	104,091,137	124,130,867

These record figures provide their own commentary on the wisdom of the Association's new policy.

New Issues in May.—Last month saw a further increase in the amount of new capital raised for home purposes. The result has been to swell the total new issues for May to a round £17 millions on the old basis and to £30,821,000 on the new basis of computation which

was outlined on page 29 of the *Economist* of January 4th. Figures for the first two months of the year were given in the issue of May 9th:—

(000's omitted) Including Conversions				
Monthly average (Old Basis)	United Kingdom	British Possessions	Foreign Countries	Total
1932	13,589	2,129	24	15,742
1933	17,520	2,429	449	20,398
1934	11,474	2,494	125	14,093
1935	18,388	1,270	21	19,679
Monthly Total (Old Basis)	Govt.	Other		
March, 1935	550	4,753	450	6

April, 1936	Dr. 350	10,321	280	30
May, 1935	Dr. 150	15,716	1,102	Nil
May, 1936	Dr. 300	15,078	2,014	208
(New Basis)				
March, 1935	550	25,272	Nil	160
March, 1936	200	17,762	1,203	820
April, 1935	Dr. 450	10,292	660	Nil
April, 1936	Dr. 350	22,447	1,495	1,993
May, 1935	Dr. 150	24,508	1,690	184
May, 1936	Dr. 300	28,442	2,387	292

The home issues are increased, roundly by £5½ millions, by the surplus of corporation borrowing during the month which was not specifically attributable to conversion purposes. Large issues have again been uncommon during the month—apart from County of London Electric and United Steel Companies—and a number of aircraft concerns have raised new capital from shareholders. The market recession and Whitsun preparations do not, however, appear to have daunted those responsible for the smaller type of industrial issue.

COMPANY NOTES

Textile Machinery Companies.—In the generally accepted view the textile machinists depend for their profits largely on the export trade. Home business, though useful and potentially important, has for many years been affected

William Preston, chairman of Platt Brothers, recorded in his speech two years ago that compared with only £5 millions spent on textile equipment in this country since the war some £95 millions had been spent abroad. Exports of over £11 millions per annum in the late 'twenties were of the first importance to the industry, and even enabled it, in some cases, to ward off the effects of Lancashire's decline. The fall in exports during the depression to less than half the 1929 level involved a severe break in prices in an industry where financially weak units became urgent sellers. Only the formation of the Textile Machinery Makers' group (after at least one abortive attempt in 1931) saved the industry from extreme distress. This group does not include such important concerns as Mather and Platt or Tweedales and Smalley, but since 1933 it has succeeded in restoring some orderliness to prices. Meanwhile exports, having expanded to £6.9 millions in 1935, are running slightly behind last year's level with £2.0 millions for the first five months. The 1936 average prices are higher; but it is reasonable to assume that, for the present, profits cannot rise very fast in the absence of export revival. It would seem likely, however, that the old view of the machinists' dependence on exports may have to be revised in the next decade. The facts quoted above give the measure of the large potential market for textile equipment which must ultimately become effective if Lancashire is to survive under internal or external initiative. Two years ago Sir William Preston claimed that with modern machinery Lancashire could meet Japanese prices in India and make a profit. The claim was hotly contested; but, as was recorded at Platt's meeting last week, experiment has proved the greater part of Sir William's thesis. Problems of capital financing and overhaul of organisation will have to be solved before re-equipment becomes extensive, but impoverishment need not mean that capital resources cannot be found for proper ends, once the ends are clear. The home market may then emerge to a position of dominant interest for the textile machinists, and may offer them substantial prosperity. That the industry does not lack long-term possibilities is to some extent confirmed by the successive offers which have been made for the shares of Textile Machinery Makers to the smaller and less affluent members of the group.

Shipbuilding Results.—Two announcements, this week, bring the investor a taste of the uphill recovery in shipbuilding. The *John Brown* dividend, announced when the "Queen Mary" was in mid-Atlantic, was, in fact, a more generous helping than the market had anticipated. The distribution of 1s. tax free per 6s. share—the first since 1924-25—has effectively set aside any doubts regarding profitability to the company of the "Queen Mary" contract. The dividend is equivalent to 5 per cent. tax free on the ordinary shares, before the reconstruction and writing-down of 1930, and explains the 6s. advance in the shares on Tuesday to 25s. 9d. Market expectations of an impressive report are based on the progress of the shipbuilding and engineering works, while apart from the question of a sister ship to the "Queen Mary," the long-term equity in naval shipbuilding is recognised. The *Harland and Wolff* results are still a promise of things to come. For the first time since 1930 a trading profit has been earned, amounting to £42,934. This compares with a loss of £112,940 for the previous year, both figures being shown before provision for depreciation. After the inclusion of dividends and amounts received on the indebtedness of associated concerns for previous years, the amount carried forward is raised from £50,054 to £117,874. The report claims a world record for tonnage launched during 1935, and several vessels were not completed before the end of the year. Prices, however, are still at a competitive level. The new joint interest in a new aircraft construction concern with Short Brothers was announced last week, but interests in this direction do not, of themselves, support a case for a substantial improvement in the earnings prospect, which is at present subservient to a reorganisation of the assets. The directors have recognised that interests in subsidiary concerns and general investments are in excess of present values, and the Assets Realisation Account has been charged with over £1,000,000

during the year, following the disposal of the Greenock shipyard and the David and William Henderson liquidation. Five years' depreciation have accrued on property assets valued at £8,895,597. Investments in subsidiaries, which come under the directors' reservation, total £3,990,018. The Royal Mail liquidation has reduced the indebtedness of associated concerns by some £171,000 to £663,874, but on the liabilities side the amount of deferred creditors' certificates remains at £4,332,687, while matured bills and guarantees, with accrued interest, total £6,607,949. In all, therefore, the balance sheet remains a contingent document, and the 6 per cent. £1 preference shares, *cum* six years' arrears, are rather dear option money at 9s.

Guest Keen and Nettlefolds.—The profits and dividend of this concern for the year to March last have disappointed market forecasts. Profits before debenture interest are slightly higher at £1,042,000, compared with £1,036,436 for 1934-35. After providing for debenture service (£102,274), wear and tear (£50,000) and obsolescence (£75,000), the resultant net profit is approximately £815,000, as against £808,813 in the previous year. Normal preference dividends require £326,732, so that earnings for the ordinary shares are equivalent to little over 7½ per cent., free of tax. The conservative distribution of 5 per cent. tax free is associated with a provision of £100,000 for works reorganisation schemes. Extended comment on the results must await publication of the full report, but although the company's own profits appear to have offset a fall in revenue from associated concerns, such stability may still hide the effects of rising raw material costs. Meanwhile current returns from the Guest Keen Baldwin's concern have been exchanged for the prospective earnings of the new plant. At 33s. 3d. the ordinary shares yield £3 18s. gross, but their substantial equity interest must be deferred at least twelve months ahead.

Boots Pure Drug.—The preliminary figures announced a month ago revealed a further expansion in the earnings of this concern. It is associated with a rise of £23,306 in trading profits to £932,071 after provision for taxation and staff pensions. Provisions for repairs and depreciation are slightly lower, and the net profit—lacking the previous year's small special credit—has confirmed the preliminary figure of £770,889, compared with £750,037 a year ago. The distribution is maintained at a rate by now traditional—24 per cent. gross, with a 5 per cent. tax free bonus—and is covered by the usual satisfactory margin of £200,000. Comparative results for the past three years are given below:—

	Years to March 31		
	1934	1935	1936
Trading profit, etc., after tax and staff pensions	916,690	908,765	933,455
Net profit	744,866	750,037	770,889
Preference dividend	8,200	8,200	8,200
Preferred ordinary dividends	88,550	88,550	88,550
Ordinary—			
Paid	435,000	464,000	464,000
Earned (%)	48.4	45.4	48.5
Paid (%)	30.2*	30.2*	30.1*
Reserve	166,018†	166,481†	172,141†
Carried forward	237,285	260,091	298,090

* 24 per cent. and 5 per cent. bonus, tax free, in each year.
† Includes £16,018 freehold property reserve in 1934, £16,481 in 1935, £17,948 in 1936, and £54,193 contingencies reserve 1936.

An item of £54,193 appears among the reserve allocations for contingencies, and the general reserve provision is consequently reduced to £100,000. The former provision replenishes a draft of £50,000 upon the contingencies reserve allocated to overseas development. Shareholders will be eager to know if this allocation betokens a new line of policy. Balance-sheet changes point to the continued expansion of interests revealed in earlier years. Properties have advanced by over £300,000, the subsidiary concerns have required more finance, and current items have

Preliminary Notice.

SOUTHERN AREAS ELECTRIC CORPORATION, LIMITED

Authorised,

£850,000

SHARE CAPITAL

Issued, and about to be issued,

£783,484

In Ordinary Shares of £1 each

The Subscription List will open on Tuesday next, the 9th inst.

FOR AN ISSUE OF
450,000 ORDINARY SHARES OF £1 EACH
AT 21/- PER SHARE

The prospectus will show inter alia that:

1. The Corporation (incorporated in 1933) derives its revenue from seven Subsidiaries, five of which are Electricity Supply Undertakings operating progressively under Statutory Powers in Brentwood, Crawley and Littlehampton, Salcombe and Kingsbridge, Seaton and Leominster.
2. The remaining Subsidiaries comprise the business of Mawdsley's, Ltd., Manufacturers (*inter alia*) of Electrical Apparatus, and the Brentwood District Electric Installations, Ltd.—Electrical Contractors.
3. The combined profits of the Corporation and its Subsidiaries (other than Mawdsley's, Ltd.) and dividends received from the last-named Company in respect of the periods ended 31st December, 1934 and 1935, have been as follows:—
6th May, 1933, to 31st December, 1933 £15,406
Year ended 31st December, 1934 20,510
Year ended 31st December, 1935 32,849
4. Dividends at the rate of 4 per cent. per annum have been paid by the Corporation for the periods ended 31st December, 1933, 1934 and 1935.
5. The output of the Electricity Supply Subsidiaries shows a continuous expansion. The units sold in 1935 were 37 per cent. in excess of 1934, and the first quarter of 1936 shows an increase of 28.9 per cent. over the corresponding quarter of 1935.
6. Except for a Secured Loan, which will be repaid out of the proceeds of the Issue, there are no Debentures or Mortgages.

Prospectuses and Forms of Application will be obtainable on Monday, the 8th inst. from:

LLOYDS BANK LTD., ISSUE DEPT., 72 LOMBARD STREET, LONDON, E.C.3, & Branches

From the Brokers:

FOSTER & BRAITHWAITE, 27 AUSTIN FRIARS, LONDON, E.C.2

and at the Registered Office of the Corporation:

PALACE CHAMBERS, BRIDGE STREET, WESTMINSTER, S.W.1

by sales of second-hand redundant machinery, while the steady growth of textile industries overseas which has created difficulties for Lancashire itself, has simultaneously opened up new markets for the textile machinery makers. Thus Sir

increased. The 5s. ordinary shares, at 53s. 6d., yield approximately £2 17s. on dividend and 4½ per cent. on earnings. Their attractions are of an essentially long-term order, coupled with the possibility of new capital issues on attractive terms.

* * *

Coast Lines Profits.—The announcement of a final dividend of 2½ per cent., making 4½ per cent. for 1935, came as a disappointment to investors, many of whom had acquired the shares since the recent introduction in hope of at least one-half per cent. more. Total earnings, after depreciation, were only slightly higher at £364,109, compared with £360,445 in the previous year. After paying debenture interest and normal preference dividends, the 4½ per cent. dividend is covered by a surplus of £11,470. The 2½ years' arrears of preference dividends to the end of 1934 cost £403,125 and were paid in August last out of special dividends received from subsidiary companies, amounting to £562,361. After providing £125,000 for writing down investments and £40,000 to cover the debenture redemption premium, the balance of £119,063 is carried forward, against £143,457. The latest report suggests, however, that the indicated earnings of 5.2 per cent. on Coast Lines ordinary might have been significantly augmented if the subsidiary concerns—and in particular British and Irish Steam Packet—had fully distributed their earnings. The repayment of the £2,000,000 of 5 per cent. debenture stock will afford a further opportunity for clarifying the interlocking holdings of a still complicated financial structure, for the 1,800,000 preference shares providing the funds were formerly held by three associated concerns. The desirability of issuing a consolidated statement might well be urged, since interests in subsidiaries account for 70 per cent. of total assets. The ordinary shares yield £4 19s. per cent. at the present price of 18s. 1½d.

* * *

Antofagasta Report.—It is fitting that one of the South American railway systems which suffered most by depression should lead the way out. The report of the Antofagasta (Chili) and Bolivia Railway is one of the most cheerful documents which have greeted South American railway stockholders for many weary months. Gross railway receipts increased during 1935 by 9.31 per cent. to £817,622, while operating expenses increased by £13,380 to £462,136. The operating ratio improved from 60.0 per cent. to 56.52 per cent. Working expenses were favourably influenced by the lower official exchange rate in 1935, but they carried some £66,404 in respect of renewals, compared with £13,689 in 1934. Combined net profits of railway and waterworks undertakings have increased from £465,736 to £507,324, as the following table shows:—

	1933	1934	1935
Railway receipts	552,332	747,959	817,622
Railway expenses	372,780	448,756	462,136
Net railway revenue	179,552	299,203	355,486
Net revenue—waterworks	5,206	9,261	3,813
Other income	197,394	157,272	148,025
Total net profits	382,152	465,736	507,324
Exchange losses and reserve	85,262s	294,191s	118,000s
Renewals	38,000		
Debt interest	262,949	278,054	275,901

Net profit	Dr. 4,060	Dr. 106,509	113,423
Preference dividend			100,000†
Carried forward	240,693	134,184	147,607

† Including leased lines. ‡ In respect of 1932. § Exchange reserve: 1933, £70,000; 1934, £261,000; 1935, £118,000.

For stockholders, it is refreshing to find that this recovery is accompanied by an alleviation of the enormous exchange burden shouldered in 1934. The exchange reserve provision is reduced from £261,000 to £118,000. While the official and export rates of the Chilean and Bolivian currencies are both widely divorced, the latest provision is required only to meet the further break in the Chilean rate from \$116 to \$127 to the £. A net profit of £113,423—the first since 1931

—covers the 1932 preference dividend, and leaves a modest 0.2 per cent. available for the ordinary capital. These results are the first portent towards a restoration of earnings. The 5 per cent. preference stock, *cum* three years' arrears, has advanced from a little over 40 a year ago to 68½, and carries prospects of modest improvement; the ordinary stock has made no significant net progress, and is still a speculative option at 20.

* * *

Associated Newspapers.—The disclosed profits of this group are struck after provision for "depreciation on buildings and plant, and reserves for doubtful debts, income tax, etc.," and may to that extent be subject to elements of "policy." The latest report, however, strongly suggests that whereas the rate of recovery in earnings had been progressive during the previous four years, further impetus has not been experienced during the latest year. The quarterly dividends were maintained, as expected, but something more impressive than a mere £7,112 increase in total profits might have been anticipated. Advertising revenue, however, has been "fully maintained"—and the phrase may reasonably be taken at its face value, in view of the stable nature of earnings. The resultant profits cover the deferred dividend with a margin of approximately 6 per cent., from which £100,000 is transferred to reserve—this year for "publicity"—and £35,000 provided against the premiums on redemption of £500,000 4½ per cent. notes in August last, leaving a somewhat reduced credit balance. A comparison of earnings for the last three years is given below:—

	Years to March 31,		
	1934	1935	1936
Profit and investment income, after note interest and depreciation ..	817,517	931,938	939,050
Directors' fees	7,891	7,785	8,250
Preference dividend	25,000	25,000	25,000
Ordinary dividend	42,000	42,000	42,000
Deferred shares:—			
Earned	742,626	857,153	863,800
Paid	553,068	737,423	737,423
Earned %	28.8	32.3	32.7
Paid %	20	26½	26½

Reserve allocations	150,000†	100,000†	100,000§
Carried forward	589,925	609,655	601,032*

* After charging £35,000 premium on notes redeemed. † To reserve for contingencies. ‡ To reserve account. § To reserve for publicity.

The principal balance sheet changes, consisting of a reduction of £316,000 in cash and £248,000 in gilt-edged securities, reflect the repayment of one-third of the note issue. The remaining £1,000,000 fall to be repaid in August, 1942, at 103 and on any previous date at 107. For the time, however, further opportunities for repayment may be limited, since the cost of the new plant, which is nearing completion, will be met out of cash resources. There is, also, no present sign of a resumed buoyancy of earnings. The 5s. deferred shares, at 23s. 1½d., fall into a stable dividend class under present conditions; this finds its reflection—together with the rather speculative rating always accorded to newspaper shares—in a yield of £5 12s. per cent.

* * *

Burmah Oil Report.—Like the dividend declaration, made some three weeks ago, the full Burmah Oil report is a satisfactory fulfilment of expectations. Trading profits have increased by 21½ per cent. to £1,903,443, equivalent to nearly 4½ per cent. on the ordinary stock. Investment income, at £1,057,923, is 25½ per cent. higher, reflecting the increased receipts from the "Shell" Transport and Anglo-Iranian interests. The major part of the advance in profits, as we suggested in our issue of May 23rd, page 432, is attributable to improved conditions in India, where kerosene sales realised a higher price. In addition, larger petrol sales were effected, and the further reduction in costs is described as "material." The elimination of debenture service charges and a reduced taxation liability assists the year's results, but after four years' interval the fields expenditure

equalisation reserve receives a contribution of £260,234, which restores the total to £1,000,000. These factors, as the following table shows, result in an increase in equity earnings from £1,242,941 to £1,714,884:—

	Years to December 31,		
	1933	1934	1935
Trading profit	1,976,129	1,565,500	1,903,443
Interest and dividends received ..	1,126,142†	842,436	1,057,923
Total income	3,102,271	2,407,936	2,961,366
Total depreciation	496,508	395,000	330,000
Taxation	238,405	242,914	189,275
Expenses and fees	19,434	32,814	27,666
Employees' fund	171,356	156,767	184,307
Specific reserves	20,000‡	...	260,234*
Deb. interest and redemption ...	165,000	80,000	...
Preference dividends	257,500	257,490	255,000
Ordinary shares:—			
Earned	1,734,068	1,242,941	1,714,884
Paid	1,356,480	1,161,880	1,538,202
Earned (%)	28.8	16.0	22.3
Paid (%)	22½	15	20

General reserve	289,419	200,000	200,000
Carried forward	573,679	611,517§	634,994§

* Fields expenditure equalisation reserve. † Of which £261,086 applicable to previous years. ‡ Insurance reserve. § After crediting £174,702 and £46,795, repayments of debentures previously written off in 1934 and 1935 respectively, and charging £17,925 new issue expenses 1934.

The balance sheet, as usual, is impressive. Surplus current assets comfortably exceed £5,000,000, covered by Government securities and cash. The value of the investment holdings, increased by £1,140,000 during the year to £15,367,761, is in excess of the latter book figure. At current value, indeed, the "Shell" Transport and Anglo-Iranian interests alone are valued at £20,100,000, showing an important hidden reserve. On present indications the outlook for the current year is distinctly favourable. Conditions in the Indian and Eastern markets should improve further, and the potentialities of the Burmah oil properties are confidently regarded. On the investment side the latest Anglo-Iranian and "Shell" dividends will produce, broadly, an increase of 1½ per cent. in ordinary earnings for Burmah Oil. The £1 ordinary units are quoted at 4½ to yield £4 13s. per cent. gross, after allowing for Dominion income tax relief.

* * *

Swedish Industrial Companies.—The economic recovery of Sweden has been the envy of every large State during the last two years. In defiance of the fact that her economy is largely based on external trade, Sweden's industrial progress began when other countries were still struggling in the toils of restrictive measures to "preserve" their trade. Her close relations with the sterling area suggest, in fact, that a tariff is as nothing compared with the effects of quantitative import and exchange restrictions, which have produced such devastating results in Central Europe. The Swedish company results for 1935 reflect the continued improvement. The earnings of S.K.F. and Elektrolux have been restored to the pre-depression level. The results of these concerns during the past three years are analysed below, and a comparison provided with the 1929 figures:—

(RESULTS IN THOUSAND KRONOR)

Company (Calendar Years)	Gross Profit and Income	Earned for Ordinary Dividends		Dividend	Present Quotation "B" Shares Kr. 100
		Amount	%		
S.K.F. (Swedish Ball Bearing)	1929	30,809	21.236	16.3	13½
	1933	16,290	9,349	7.2

	1934	6,117	3,100	3.8	
	1935	7,642	4,926	6.0	

† And bonus of one share (Kr. 50) in A.B. Volvo for every five S.K.F. shares held.

S.K.F. has enjoyed the most obvious industrial recovery in the group, for it supplies a large part of the world's require-

ments of ball-bearings. The Swedish, English and German factories worked at full capacity during 1935, and substantial plant extensions have been made. Conditions in the United States were better and the Philadelphia works, after the recent reorganisation, are well placed to take advantage of American recovery. Sales in all countries, eliminating inter-company transactions, rose from Kr. 172.4 millions in 1934 to Kr. 206.1 millions last year, and orders on hand at December last amounted to some Kr. 31 millions. The report of this concern is a model of clarity. *Elektrolux*, whose current dividend rate is higher than that of 1929, made striking progress last year, when sales of refrigerators, particularly in the "sterling area," pressed the factory capacity beyond its limits, and some orders were left unsatisfied. Extensions have been put in hand and stocks accumulated to meet the current season's demand. *Separator* is affected by the slow recovery in world agricultural conditions and—with apparently special force—by trade restrictions. All the reports are unanimous on the continued handicaps imposed by exchange and other restrictions. In the prevailing world circumstances, the recovery shown by these concerns is quite remarkable.

* * *

Other Company Results.—Our usual table of company results, which this week includes the profits of forty-six additional companies, will be found on page 584. One of the largest concerns in this week's list is *J. Lyons*, whose annual profits are closely "controlled" by undisclosed provision for charges and contingencies. The company, therefore, has always something in hand to provide a fresh record of profits each year. Net profits for 1935-36 amounted to £1,020,753, compared with £1,009,272, the ordinary capital receives the usual dividend of 22½ per cent., and the reserve allocation is repeated at £100,000, increasing the fund to £1,900,000. The full accounts of *British Electric Traction* show a rise in net profits from £305,371 to £331,600, and the "traditional" cash and bonus distributions were announced early in May. Total investments now amount to £6,077,720, of which some

PARIS

The more cheerful tone before Whitsun, when hopes of a settlement in the metallurgical industries caused bear covering, left prices considerably below the level of the previous days. After the holiday, business was quiet at first except in refugee internationals. Suez Canal shares improved after profit-taking, and Royal Dutch reached new high levels. Later, a slight rally (which in any case left industrials, and especially chemicals, unaffected) proved short-lived. Fresh anxiety for the franc and the spread of strikes depressed the market into abjection and prices were marked down all round. Rentes fell heavily in mid-week after an earlier improvement. Diamond shares, however, were active throughout the week.

	May 27, 1936	May 29, 1936	June 3, 1936
Langue de France	5,800	5,930	5,650

De Beers	1,115	1,086	1,082
Royal Dutch	27,150	28,050	28,950

BERLIN

The advance in prices, which had been resumed late on Tuesday last week continued until Friday. At first, Farbenindustrie and Reichsbank were favoured, but electrical, brewery and potash shares were supported later. The department store companies, Westdeutscher Kaufhof and Karstadt, also enjoyed substantial rises, and most standard industrials remained firm. Among Reichsmark fixed-interest issues, preference was shown for mortgage bonds, though the tone was generally firm. Quotations for certificated dollar bonds (which are unofficial) were suspended pending the settlement of questions arising out of a Reichsgericht decision. When the Bourse reopened on Tuesday, stock were in short supply and quotations moved rapidly upward, particularly for Kloeckner, Hoesch, Stahlverein and Mannesmann. Motor-car shares were also in demand. Prices weakened somewhat towards the close. Wednesday's business opened strongly, and in spite of profit-taking closing quotations were mostly higher.

	May 27, 1936	May 29, 1936	June 3, 1936
Reichsbank	189.50	193.75	194.25

Lloyd (New)	17.40	17.10	16.75

AMSTERDAM

Fears for the guilder and the raising of the Bank rate twice within a few days were the principal factors in an uncertain week, but the tendency towards a larger turnover which began before Whitsun was maintained. Internationals were inevitably in demand, the chief movement being the rise of Royal Dutch to a new high level of 277½. Sugar shares have been consistently strong, and rubber issues improved in mid-week after their recent quietness. Tobacco shares have been steady.

	May 27, 1936	May 29, 1936	June 3, 1936

CAPITAL ISSUES

HOLIDAY conditions have prevailed in the new issue market this week, and the appearance of a number of industrial issues is not promised until the new account opens next week. These include an offer of 450,000 £1 ordinary shares at 21s. by Southern Areas Electric Corporation next Tuesday. The Australian conversion, discussed on page 560, created much interest in advance of the opening of the lists next Monday. The only public offer of the week is of 500,000 5½ per cent. preference shares of Anchor Line (1935) at 20s. 6d. The company was formed in April last year to take over the steamship line established in 1852. During the first 5½ months of trading, profits after depreciation, but before debenture interest, amounted to £19,933. A more reliable indicator of profits, however, may be found in the directors' estimate for the current financial year, which amounts to £109,000. Net profits available for preference dividends on this basis would amount to £59,000, covering the dividends rather more than twice. The line is under excellent management, and long-term benefits are anticipated from the improvements in the fleet and development of the business. The preference shares may therefore be regarded as a reasonable lock-up shipping investment, with prospects of increased security over a term of years. Statements for information only have been published on behalf of T. F. Firth (a carpet business founded in 1822, with a steadily rising profits record), Vokes, Limited, and Stream-Line Filters, two of the manufacturing concerns, Central Wagon Company and Southmouth Coal.

Stock Portfolios

REDUCED

in MARCH . . . after Holding
for Year-Long Rise BROOKMIRE
Recommended the Sale of Stocks

WITHIN 6% of the top of the year-long rise on the New York Stock Exchange, Brookmire repeatedly urged Clients to sell stocks and to reduce investment portfolios. Of the 111 issues included in the Brookmire List of Approved Stocks, 91 were specifically eliminated during successive selling recommendations. Based on originally recommended prices, sales averaged net realized profits per stock of 73%.

Should INVESTORS ever SELL?

While Brookmire recommendations are primarily Cyclical in nature and are aimed at participating in the Major Movements, nevertheless, when of the opinion that prices over-discount prospects in any given market, Brookmire is prepared to advise selling. Brookmire believes that permanent investment is the reverse of wisdom in a changing world; and to reduce investments at certain stages in the economic cycle is not "to speculate." Not to make changes may, in fact, be to take the greater risk.

What Investment Policy NOW

Current Brookmire Bulletins clearly set forth an investment policy to follow under present conditions. Two decisive Bulletins will be sent to you at once, free, upon your acceptance of the following special offer.

● In order to advance both the sound theory and practice of planned investment programs, as opposed to random purchases and sales of investment securities, Brookmire has developed an entirely new conception of a financial magazine, PLANNED INVESTING.

Send 4/- (or \$1) for 4 monthly issues of this unusual, new-type magazine devoted to the philosophy of planned investing, with which you will receive at once the current issues of Brookmire Bulletins that definitely advise an investment policy to follow NOW. Simply clip the name-plate below, attach 4/- (or \$1), write your name and address plainly, and mail TODAY to—

551 Fifth Avenue, New York

A January Forecast of the April Top and Decline

A FURTHER advance becomes the logical expectation . . . Frequently a rise of approximately 10% can be expected after an Intermediate confirmation. From 148.44, the previous Industrial top, this would mean a rise to approximately 163 . . . (The market subsequently rose to 163.07) . . . The eventual Intermediate corrective decline should cancel one-third to two-thirds of the advance since March. If, for instance, the Industrials should rise 10% further—equivalent to slightly over 160—this would mean a subsequent decline of 20 to 40 points, or roughly back to between the 120 to 140 levels." [The market subsequently declined over 21 points, to 141.53 and has not yet (May 15) resumed its long-term uptrend.]

issued January 31, 1936.

The BROOKMIRE Economic and Investment Bulletin Service

FOR OVER 32 years Brookmire has been extending an Economic Advisory Service to industrial, commercial and financial organizations, and individual Investors.

BROOKMIRE forecasts upon American business and investment conditions, and upon the prospective movements of prices of stocks, bonds and trade commodities through a series of four-page Bulletins. The Bulletins are interpretative and advisory, rather than statistical; and are brief and specific. Those on the Stock Market are issued weekly; on the Investment Bond Market, semi-monthly; on other subjects, monthly.

BROOKMIRE BULLETIN SERVICE is provided for an annual fee of \$120, with which is included Consultation with Clients upon Economic, Business and Investment problems—by mail or in person.

A Special Trial Offer

So that you may become more fully acquainted with the possible value to you of the Service rendered through BROOKMIRE BULLETINS, you are invited to subscribe (without consultation) for a trial period of 10 weeks at \$27, or if you prefer, at £5 10s, which may, at any time during the trial period, be applied against the fee for an annual subscription.

Simply clip the name-plate of this advertisement, write your name and address plainly, attach your check, and mail to Brookmire Corporation, 551 Fifth Avenue, New York.

Cable address—BROOKMIRE, New York

RESERVE MANAGEMENT CORPORATION

A DIVISION OF BROOKMIRE CORPORATION
undertakes the Supervision, by mail or cable, of investment funds of \$100,000, and over, upon an annual fee basis.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

Area of supply, 223 square miles. Gas sold, 1930: 1,317.1 million cu. ft.; 1935, 1,571.5 million cu. ft.

ISSUES TO SHAREHOLDERS ONLY

Nitch Plantations of Java.—The directors have decided for redemption the outstanding 6 per cent. of the company's subsidiary, Anglo-Dutch Ltd. In order to provide funds for this

purpose and for the sinking fund of its own debenture stock 500,000 new shares are now offered to stockholders at 22s. 6d. per share in the proportion of one share for each £5 stock held on May 18th.

Barton Transport.—1,500,000 new deferred shares of 6d. are offered in the first place at par to existing deferred shareholders in the proportion of three new deferred shares for each deferred share now held.

London and Lombard Trust.—The issue is being made of £100,000 3½ per cent. debenture stock, 1957-62.

Scottish Stockholders Trust.—Issue of £100,000 4 per cent. first debenture stock at par.

CONVERSIONS AND REPAYMENTS

Croydon Gas.—The 7½ per cent. redeemable preference stock is due to be repaid at par on July 1, 1936.

Roan Antelope Copper Mines.—£29,900 6 per cent. debenture stock is redeemable at 106 per cent. on June 1, 1936.

Salford Corporation 6 per cent. Redeemable Stock, 1936-51.—This stock will be repaid at par on September 1, 1936.

OFFER ABROAD

Canada (Dominion of).—Issue of Dominion of Canada bonds involving \$208,000,000 (£41,600,000) to convert three issues maturing this autumn to the extent of \$188,000,000 (£37,600,000). Cash subscription bonds will be for 30 years, falling due June 1, 1966, and will bear interest at the rate of 3½ per cent. The issue price will be 99, plus accrued interest. The issue was quickly oversubscribed.

FORTHCOMING ISSUES

G. Hopkins and Sons.—In a few weeks' time a public issue will be made of 130,000 6 per cent. preference shares of 10s. each at par and 195,000 ordinary shares of 2s. at 2s. 6d.

Southern Areas Electric Corporation, Ltd.—An issue of 450,000 new £1 ordinary shares is being made by the Southern Areas Electric Corporation, Ltd. The shares will be offered to the public (preferential consideration being given to applications from existing shareholders and from consumers in the subsidiary companies) at 21s. per share, and the subscription list opens on June 9th. Since its incorporation on May 6, 1933, the corporation has regularly paid dividends at the rate of 4 per cent. per annum.

Alpine (Barberton) Gold Mine, Ltd.—The London Australian and General Exploration Company, Ltd., is making arrangements for the underwriting of the issue early next week at par of 920,000 5s. shares in Alpine (Barberton) Gold Mine, Ltd.

Williamson Manufacturing.—Underwriting has been completed for an offer for sale of 335,000 ordinary shares of 4s. each at 5s. 6d. in the Williamson Manufacturing Company, Ltd. The offer will be made by Leadenhall Investments and Finance, Ltd., early next week.

Kitchen and Wade.—It is understood that Seton Trust, Ltd., is now making final arrangements for the introduction to the London market of the 4s. ordinary shares of Kitchen and Wade, Ltd.

OTHER RESULTS OF ISSUES

Newcastle Corporation Loan.—78½ per cent. left with underwriters.

Eustace Watkins.—List closed May 29th at 9.5 a.m.

Cement, Ltd.—Underwriters had to take up 20 per cent. of the debenture interest.

COMPANY MEETINGS, &c.

UNION CORPORATION, LIMITED

RECORD PROFITS

RAND GOLDMINING EXPANSION

MR P. M. ANDERSON'S REVIEW

The ordinary general meeting of shareholders of the Union Corporation, Limited, was held in Johannesburg on May 22.

Mr P. M. Anderson presided.

The Chairman, in the course of his remarks, said:—I am pleased to be in a position to present to you a report and accounts for the year 1935 which, I feel confident, you will regard as very satisfactory.

Since South Africa abandoned the gold standard at the end of 1932 we have been reaping our share of the steady economic progress which the country has made in all branches of enterprise. Year by year our profits have risen, and for the past year a net profit of £604,920 is disclosed. That is, in fact, the highest profit in the history of your Corporation, and it exceeds last year's record by £39,104. Dividends aggregating 8s. per share for the year have been declared, and we are left with £130,906 to carry forward to the new year.

The valuation of share and debenture holdings is a matter which always receives the close attention of your directors in arriving at net profits declared and, as mentioned in the directors' report, provision for contingencies has been made by reducing the book value of certain holdings below both cost and market price.

ADEQUATE PROVISION FOR TAXATION

Two further provisions from current profits have been made to which I think I ought to draw your attention. These relate to taxation and to the staff. In these days tax liability, whether it be absolute or contingent, is difficult to determine. Our interests are spread over many countries, and where income is received there is usually some tax liability. The amount which has been set aside for this purpose is judged by the directors to be adequate. Finally a sum of £25,000 has been appropriated to provide for certain liabilities of the Corporation in connection with the staff pension fund and for certain contingencies in connection with the staffs of the Corporation.

The reserve account has been increased by £40,188 and now stands at £1,280,000. This is a large amount, but you will appreciate that the expanding scope of our business necessitates the building up of a strong reserve position.

In this connection you will observe that the book value of our holdings rose during last year by £501,044.

RAND GOLD PRODUCTION

Turning now to the Witwatersrand goldmining industry in general, the expansion in the scale of operations since the Union of South Africa left the gold standard has made further progress in all directions during the past year. The quantity of ore crushed exceeded 44 million tons, which was 10 per cent. above the 1934 total, and, though the average grade of the ore treated was reduced to about 4½ dwt. consequent upon the price obtainable for gold averaging about 3s. 6d. per ounce above the 1934 level, the gold production was about 236,000 ounces more, totalling approximately 10½ million ounces. Although this increase was only a little over 2 per cent., it marked a turning point from the declines of the two previous years, which were due to the policy of mining ore of lower grade being put into operation faster than it was possible to increase the treatment plants.

The price of gold having remained stable for a considerable time, the process of reducing grades is slowing up and the increases in plant are having more effect. This effect will be accelerated by the plants of new mines coming into operation during the present and subsequent years. The gold output is still 850,000 ounces below the peak year of 1932, but, given favourable conditions, it appears to be reasonable to expect the output to continue to increase for many years to come. Working expenses per ton milled showed a satisfactory reduction of 6d. and the gross working profit was £32,640,000, an improvement of £376,000 over the previous year. Approximately half of this sum

was paid in dividends, while over £14,000,000 went into the coffers of the Government as share of profits and taxation.

LARGE-SCALE DEVELOPMENT WORK

The large scale on which development work is being carried out can be gathered from the fact that the footage of shaft sinking accomplished during 1935 amounted in total to about 10 miles and the development footages to about 370 miles, while the ore reserves at the end of the year aggregated 190 million tons valued at 5.3 dwt.

Comparison of the past year's results with those for 1932, the last year under the old gold standard, reveals the great strides made by the industry during these three years.

At present there are employed about 35,000 Europeans and 300,000 natives, which represents an increase of 11,000 and 76,000 respectively since the end of 1932. Relations between employers and employees have remained on an entirely satisfactory footing and there have been various improvements in the conditions of the European employees, such as additional leave privileges, holiday bonus, and the inauguration of the provident fund, which, together, are equivalent to an increase of fully 10 per cent. in wages.

TAXATION BURDEN

During the past three years the quantity of ore milled has increased by more than 25 per cent., while the average value of the ore treated was less by 1½ dwt. The gross working profit is £17,300,000 higher, an increase of 113 per cent. Dividend distributions, however, have increased by less than 7½ million pounds, owing to the enormous increase of 360 per cent. in the scale of taxation levied on the goldmining industry. The proposed new taxation, although in a somewhat simplified form, does not purport to reduce the total amount of annual taxation; while for the third year in succession it effects a redistribution of the liability as between individual companies.

The redistribution is less drastic than on former occasions, but the main advantage of the change is that in future taxpayers will be responsible as individual units and not for a fluctuating proportion of a collective amount which cannot be determined till after the expiry of the tax year. It is to be hoped that future amendments will be directed towards a reduction in what can only be described as the very severe scale of taxation at present in force. For the ten years 1922-1931 the average working profit per ton of ore milled ranged from 10s. 4d. to 8s. 6d., and the taxation levied on this was at the rate of 15 per cent. Under the new scale, the taxation levied on a profit of 8s. 6d. per ton milled might amount to about 37 per cent., and for the majority of the producing mines the rate will exceed 40 per cent.

The chairman then dealt with the affairs of the Modderfontein Deep Levels, Geduld Proprietary Mines, East Geduld Mines, the Grootvlei Proprietary Mines, Van Dyk Consolidated Mines, Marievale Consolidated Mines, and the Witthok Proprietary Company, which were fully reviewed in the addresses from the chair at the annual meetings of these companies held recently. After reviewing briefly the Corporation's interests in other new gold-mining companies operating in the Far East Rand area, its Australian interests and its base metal and other interests, he moved the adoption of the report and accounts, which was duly seconded and carried unanimously.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

EDMUNDSONS ELECTRICITY CORPORATION, LIMITED

A YEAR OF CONTINUED PROGRESS

BENEFITS OF CO-ORDINATED CONTROL

The 39th ordinary general meeting of Edmundsons Electricity Corporation, Limited, was held, on the 2nd instant, at Thames House, Millbank, London, S.W.

Brig.-General Wade H. Hayes (deputy-chairman and managing director), in the course of his speech, said: You will doubtless agree that the balance sheet shows the company to be in a sound financial condition. The qualification in the note at the foot of the balance sheet refers to the adequacy of the provision for depreciation reserve of the Bedfordshire, Cambridgeshire and Huntingdonshire Electricity Company, which you will recall is a company still in its development stage, and up to the present it has not been possible to provide a proper provision for this important item from the company's earnings. Permit me to assure you, however, that the development of the company is progressing satisfactorily, though owing to the thinness of the area which it serves its progress must of necessity be slow.

The profit and loss account shows a total increase in excess of £51,000 over last year. You will observe a further increase as compared with 1934 in the trading profit. This is due primarily to the expansion of the company's business, and incidentally to the fact that the period under review was the first in which has been reflected the result of an entire year's working for the Shropshire, Worcestershire and Staffordshire Electric Power Company under our present system of co-ordinated control.

The year has proved to be one of continued progress, and I am pleased to report that each of the undertakings controlled through our associated companies has shown improvement.

SOUND FINANCIAL POSITION

Referring to the consolidated statement of assets and liabilities at December 31, 1935, it will be noted that the fixed assets of the various associated undertakings, after writing off the cost of obsolescent plant, amount to £19,273,532, which is an increase of nearly £1,500,000, while the surplus and reserves against this item show an increase in excess of £700,000. The consolidated statement reveals a further strengthening of the financial soundness of your company's undertakings as a whole.

During the year under review we have added 42,900 new consumers, bringing our total up to 301,000, an increase of 17 per cent. The connected load was increased by 114,000 kw., making a total of 789,000, which is also a 17 per cent. increase. 73,000,000 more units of output were sold, making the total units sold during the year 536,017,000. During the first four months of 1936 there has been a 22 per cent. increase in units sold as compared with the corresponding period of last year, and we have added a further 12,000 new consumers.

You will recall that three years ago there was initiated a policy of co-ordinated control of direction and operation of all the companies in the Edmundsons' group, in order to produce the efficiency and the economies resulting from the operation of the many companies, as a co-ordinated whole, rather than as a number of separate entities as had been the practice in the past. The adoption of this policy has necessitated many changes in organisation and methods of procedure, and a considerable period of time has been required to make them satisfactorily effective, but at last this has been accomplished.

THREE YEARS' EXPANSION

Conscious though I am that the mere recital of figures and statistics is usually dull and uninteresting I do invite your special attention to the following, because in my opinion it will give you a more accurate picture of the rate of progress in and the accomplishments of your company than is normally reflected by comparisons between yearly figures. Also it is believed that the change in policy just mentioned has had a material effect in producing these results. During the three years in question: The gross capital expenditure of the associated companies was increased by £4,775,000. The number of villages and townships connected to the company's network of distribution and supply was 781; these were composed of a population of 305,000 who never before had electric supply available to them. The overhead and underground mains erected or laid measured 3,200 miles (an increase of 59 per cent.) over those in operation three years ago.

The number of consumers served rose from 181,000 to 301,000 (an increase of 66 per cent.). The number of units sold increased

from 324,000,000 to 536,000,000, not including over 50,000,000 units sold to the Central Electricity Board. (This is also an increase of 66 per cent.) The connected load has risen from 504,458 kw. to 788,755 kw. (an increase in excess of 56 per cent.). Comparing the above percentages with such figures as are available from official sources showing the number of consumers added, increase in units sold and the increase in kw. in the United Kingdom during the same period of time, it is disclosed that the volume of expansion in your company is just about 50 per cent. in excess of the average for the entire country.

BENEFITS TO THE CONSUMER

Perhaps the most interesting comparison of all is the one relating to revenue. If the average price per unit for distribution sales for 1932 had been continued throughout the three-year period under consideration, your company's revenue would have been £950,000 higher than the amounts actually received. This obviously reflects the result of your company's policy to reduce tariffs and the cost of supply to consumers as rapidly and as drastically as sound economic considerations make possible.

To our associated and other companies engaged in electric supply have been given by the Government valuable rights approaching a monopoly. In the opinion of your directors and the company's executives these rights impose upon the company an obligation to its consumers and the public within the areas it serves. To meet this obligation fairly and efficiently must at all times be an underlying principle in the policies that govern our operations. The organisation known as "Edmundsons" appears to be, and I think results will justify this assumption, qualified to fulfil the mission with which it is entrusted, to give to the vast population it serves the electrical service which the public have a right to expect.

IMPORTANCE OF SECURITY OF TENURE

It is known to you that the Government has recently entrusted to a committee, under the chairmanship of Sir Harry McGowan, the problem of investigating and reporting with recommendations upon the electric supply industry. Representatives of your company had the privilege of appearing before this committee and making available to it complete information regarding the operations of your company, and the opinions and views of its executives. Without attempting in any degree to anticipate the report and findings of the committee, nevertheless it would appear that, considering the objectives indicated in the terms of reference that were submitted to the committee, your organisation is well fitted to render valuable assistance in achieving those objectives, provided reasonable tenure be given for the continued operation of the undertakings now entrusted to it. The development of electric supply, especially in such rural areas as constitute a large proportion of those served by this company, requires the investment of large sums of money. A reasonable return on this capital requirement can be anticipated only over a considerable period of time; therefore unless there is reasonable security of tenure in order to make possible what is generally known as the long view, sound economic and technical development becomes especially difficult and in some instances impossible.

RETIREMENT OF MR R. P. SLOAN

Since the report has been published, we have sustained another severe and regrettable loss from our board, owing to the resignation of Mr R. P. Sloan. Mr Sloan is too well known to the electrical industry in this country to require much from me in the way of comment upon his great value to the company during his association with us as a member of the board. When a vacancy occurred in the Central Electricity Board, the Minister of Transport and his advisers naturally wished to find a thoroughly qualified and experienced man to fill it, and quite obviously Mr Sloan's name must have been one of the first to be considered. Unfortunately for us, he was chosen for this important post, and his sense of public duty was so keen that it became practically impossible for him to refuse the Minister's invitation to accept an appointment. While we deeply regret our loss, we congratulate the industry as a whole and the Central Electricity Board in particular upon the good fortune of having acquired Mr. Sloan's services.

Mr R. P. Sloan, C.B.E., M.I.E.E., expressed his thanks to the chairman for the complimentary remarks he had made regarding himself, and said that, although he had resigned from the board, he would continue to take an interest in the undertaking and had every confidence that its progress would be maintained.

The report and accounts were unanimously adopted.

IMPERIAL CONTINENTAL GAS ASSOCIATION

A DIFFICULT YEAR

At the annual general meeting of the Imperial Continental Gas Association, held, on the 29th ultimo, at Winchester House, London, the Chairman, Sir Thomas Royden, Bt., C.H., welcomed the return to the board of Mr Theunis, formerly Prime Minister of Belgium.

Continuing, he said that the year had been one of considerable economic difficulty, the first important event being the devaluation of the Belgian franc, in consequence of which the exchange rate fell from Frs. 103 to to-day's rate of Frs. 147 to the £. Although as a result of the board's policy of covering forward the Association's foreign revenue, the accounts showed a profit of some £60,000, which would not have accrued if the purchase of exchange had been left until the actual date of payment of the Belgian dividends, yet this profit was non-recurrent. Remittances from Belgium were now converted into sterling at the new rate of exchange, which, taken by itself, meant a very considerable loss in revenue. On the other hand, the beneficial effect of devaluation upon trading activities in Belgium had been such that he hoped that this exchange loss would, in the course of the next year or two, be compensated by the improved results of the business there.

A moderate policy of devaluation seemed to engender a definitely optimistic atmosphere. For example, an enormous stimulus had been given to the building industry in Belgium since the last devaluation, one reason being that many branches of a family, having lived together to save expense during the period of depression, re-established separate households in improved times. For the year 1935 the increase in the sales of the Belgian distributing companies was 9.6 per cent. for electricity and 0.7 per cent. for gas, but for the first quarter of 1936 the respective increases were 15.7 per cent. and 3.3 per cent.

A FAVOURABLE FACTOR

Another favourable factor was the improved prospects of the Cokeries du Brabant, arrangements having been completed whereby the coke-oven plant would be leased to coal interests for five years at a fixed rent, plus a half share of any profits. It was anticipated that in the present year the company would enter the dividend-paying list.

In France profits were being adversely affected by the measure of deflation which came into force in July last, public utility companies having been specially selected by the Government as a means by which, through reduced prices of gas and electricity, a reduction in the cost of living could be brought about.

YEAR'S INCOME

The total income for the year, derived as to 34 per cent. from France, 58 per cent. from Belgium and 8 per cent. from England, was £607,000, a reduction of £81,000 on the previous year. This reduction was accounted for by the fact that the Compagnie Continentale had reduced its dividend and that, exceptionally, a year and a half's French tax had been deducted from one year's income. Further, the preceding year's income benefited from exchange profits to the extent of £33,000, which accrued upon certain loan repayments and which had no counterpart in the accounts now under review. Although the English income yielded only 8 per cent. of the total the English investments represented 17 per cent. of the total book value of the assets. The difference was the price which had to be paid for additional safety.

The income from Belgium, despite an increase of 10 per cent. in franc profits, underwent a shrinkage in terms of sterling. Thanks to the precautions taken, this reduction was wiped out on actual remittance.

Taxation and other expenses had increased by £5,000, so that the profit of £437,000 available for appropriation was the lowest since 1928 and showed a drop of £86,000 (2 per cent. net on the capital) as compared with the previous year; but, if the group's profits, including the sums put to reserve, were converted into sterling, a gross total of £1,043,000 would be arrived at, as compared with the record figure of £1,125,000 in the previous year.

The board had decided not to encroach upon the carry-forward, but to recommend a final dividend of 6 per cent., less income tax, making 10 per cent. for the year. They hoped that the extension of powers, which they had obtained from Parliament, would enable them to utilise their experience by taking an interest in public utility undertakings in this country and elsewhere.

The report and accounts were unanimously adopted.

HAWKER SIDDELEY AIRCRAFT COMPANY, LIMITED

INCREASE OF CAPITAL APPROVED

A separate meeting of the holders of the 5 per cent. cumulative preference shares and an extraordinary general meeting of the Hawker Siddeley Aircraft Company, Limited, were held, on the 4th instant, at the May Fair Hotel, London, W., to consider a resolution increasing the capital of the company to £4,000,000 by the creation of 1,000,000 5 per cent. cumulative preference shares of £1 each and of 4,000,000 ordinary shares of 5s., of which 400,000 of the new 5 per cent. cumulative preference shares (at par) and 600,000 of the new ordinary shares (at a price of 20s. per share) should be immediately offered to the existing preference and ordinary shareholders respectively.

Mr T. O. M. Sopwith, C.B.E., F.R.Ae.S. (chairman of the company), who presided, in moving the necessary resolution, said:—Ladies and gentlemen, your directors have deemed it wise to equip the company with additional capital. The immediate occasion of the need for increased capital is, of course, the exigencies of the National Aircraft Emergency programme. In the execution of this great enterprise, the Hawker and Hawker Siddeley Companies will be called upon to play an important part.

At the moment the group is employing 15,000 hands and large numbers of different types of aircraft are in course of production. A number of these types will be equipped with our own engines.

DEVELOPMENT OF THE BUSINESS

In arriving at the decision to increase the capital, your directors have also been influenced by the possibility of development in the company's business, which already covers a considerable commercial market, expanding to-day and possessing a capacity for further vigorous expansion. The company should possess the financial resources to enable it to take full advantage of this development.

While it is not possible to estimate with any degree of accuracy the duration of the emergency period, it is prudent to assume that it will not be for more than a few years.

As is known, it is the Government's intention to limit the profits for the manufacture of aircraft under this emergency programme. This decision is reasonable and proper provided that efficiency is encouraged by proper reward and that the question of plant, obsolescence and redundancy, which is inherent to the emergency programme, is suitably dealt with.

The emergency programme has accentuated the need for a constant and determined policy of research and experiment to enable the necessary new types of machines to be brought into design and eventually into production.

We have also under consideration the immediate development of our business in foreign countries whose political interests are closely allied with our own. Happily this can be done without seriously interfering with our production in this country.

The possibility of extension in British Colonies and possessions also receives our continued attention. It can be fairly claimed then that we are playing an important part in the national emergency that has arisen, as well as in the development of the aircraft industry as a whole.

While our main attention is at the moment inevitably directed towards the production of aircraft and aero engines, our motor car, civil engineering and other ancillary enterprises are making satisfactory progress.

It should be noted that the directors estimate that the current profits of the company will be sufficient to cover the dividend on the whole of the proposed preference share capital more than six times over, leaving a satisfactory balance for division among the ordinary shareholders.

The board have not decided at the moment whether their dividend policy will be confined to a total payment in cash or whether it may not be advisable to deal with it partly in cash and partly by means of an ordinary share bonus.

MR PHILIP E. HILL'S VIEWS

Mr Philip E. Hill said: In seconding the resolution before the meeting I think, quite rightly, that the chairman's speech errs on the side of caution. It does not require much imagination to appreciate that, with such a widely-flung Empire as ours, efficiency in aircraft production is vital to the retention of our possessions and our trade. In fact, in my opinion, it is the very life-blood of the nation. I look forward with confidence to the aircraft manufacturing industry in this country reaching that world pre-eminence which for so many generations has been the heritage of our shipbuilders.

The resolution was carried unanimously at each meeting, and the proceedings terminated with a vote of thanks to the chairman, directors and staff.

NEW KLEINFONTEIN COMPANY, LIMITED

(Incorporated in the Union of South Africa)

LARGE INCREASE IN PROFITS

MR G. MACKENZIE'S REVIEW OF YEAR'S OPERATIONS

The fortieth ordinary general meeting of New Kleinfontein Company, Limited, was held, on May 15th, in Johannesburg.

Mr George Mackenzie presided, and, in moving the adoption of the report and accounts, said:—I think you will agree that the results show a considerable improvement on the previous year. In the balance sheet the account "Property development and equipment" has been increased by £145,275 16s. 11d. being capital expenditure as follows: South shaft sinking and equipment £84,582, Apex No. 7 shaft surface and underground equipment £2,478, additions to reduction plant, etc., £35,467, additions to power plant £18,691, and new locomotive £4,055.

The option on 200,000 shares to December 31, 1935, held by the guarantors of the bank overdraft to your company, was exercised and the issue of these shares provided £350,000 of additional working capital. The capital of the company has been increased and is now £1,351,540, all of which is issued.

IMPROVED RESULTS

The result of the year's operations was a working profit of £166,408 19s. 2d., as compared with a profit of £65,062 11s. 4d. for the previous year. The tonnage mined was 805,360 tons, compared with 779,380 tons for 1934. The tonnage milled was 685,400 tons, being an increase of 35,800 tons and a record for the plant. The grade of ore to the mill in 1934 was 3.75 dwts. and in 1935 it was 3.9 dwts. The working costs at 20s. 5.9d. are 1s. 10d. per ton less than in 1934.

Since the close of the year there has been a further improvement in the tonnage, working costs and profits earned.

After allowing for sundry revenue and £28,819 12s. being interest and appreciation on funds lodged with the Miners' Phthisis Outstanding Liabilities Trust, the balance carried to appropriation account was £196,359 16s. 4d., to which has to be added the balance of £85,081 3s. 8d. unappropriated at December 31, 1934, and £10 from sales of plant, making a total of £281,451, which was dealt with as follows: Dividends £129,609, miners' phthisis compensation fund £28,820, Government taxes £27,000, and balance carried forward £96,022.

The amount standing to the credit of the company at the end of the year with the Miners' Phthisis Outstanding Liabilities Trust fund was £155,748 1s. 10d.

The total footage developed was 58,407 ft., of which 51,014 ft. were in the Apex section, being an increase of 8,279 ft. over the previous year. Of the 51,014 ft. developed in the Apex section, 31,310 ft. were sampled of which 10,140 ft. were payable, the average value being 6.41 dwts. over 60 ins.

ORE RESERVES

In former years the practice was to estimate the ore reserves at the end of the year on the basis of a pay limit of 4 dwts. In view, however, of the continuance of the price of gold and the reduction in working costs, it was decided to calculate the ore reserves at the end of 1935 on the basis of a pay limit of 3 dwts. Excluding all shaft and safety pillars it was estimated that on this pay limit there were at the end of the year 2,184,930 tons of ore of an average value of 4.83 dwts. over a stoping width of 53.3 ins. Of that tonnage 1,945,079 tons were estimated to be in the Apex section of an average value of 4.94 dwts. over 55.48 ins.

On the eastern side of No. 7 shaft in the Apex section, the development results have been highly satisfactory. The development from the main east winze, which is adjacent to the eastern boundary, has opened up large blocks of payable reef over a stoping width of approximately 90 ins. The 16th level drives east and west have been so far in rather badly faulted zones which disturbed the continuity of the reef. The footage sampled in the drives to date amounts to 875 ft., of which 435 ft., or 49.7 per cent., was payable at a value of 5.78 dwts. over a stoping width of 54 ins. The west drive is now nearing the point at which the south shaft will intersect the reef. A winze started from this drive is down 155 ft. and has exposed payable values for the total distance sunk. The development on the western side of the Apex is being pushed ahead. The 10th level drive west holed during the year with the 8/3 south haulage incline and passed through a good shoot, 620 ft. being payable, averaging 6.9 dwts. over 93 ins.

Operations in the No. 1 lease area during the year have been encouraging, the total footage developed being 9,145 ft., of which 3,075 ft. were payable averaging 7.51 dwts. over a stoping width of 47 ins. The 3rd level drive west for the 1,140 ft. sampled gave payable values for 535 ft., averaging 7.17 dwts. over 46 ins. The 6th level drive west at the end of the year was in close proximity to the boundary line of the No. 2 lease area. Of the No. 1 lease area approximately 70 per cent. is still undeveloped.

ADDITION TO PLANT

The alterations and additions to the reduction plant required to deal with a milling tonnage of 70,000 tons per month are now completed. A new steel ore-receiving bin and conveyor is in course of erection. This bin will not only enable the rope haulage from No. 3 shaft to the crusher station, which handles all ore from Nos. 3, 4, 5 and 7 shafts, to be dispensed with, but will provide storage capacity for the enlarged reduction plant.

In view of the anticipated tonnage to be taken from the Apex section, it was decided to order and instal at No. 7 shaft a winding hoist capable of handling 50,000 tons per month. This hoist will replace the present steam winder, which is of a very old type and in addition is too light for the work required of it. Use will eventually be found for this hoist elsewhere on the property. With the installation of the new winding hoist the tonnage from the Apex shaft will be increased, and this will have a beneficial effect on the grade of ore to the mill.

It may be explained that where there is a large development policy such as is being pursued at New Kleinfontein, there is invariably a difference between the value of the ore crushed and the ore reserves. A considerable proportion of the rock broken in development faces is sent to the mill together with a certain tonnage below the average grade, which is obtained from exploratory work and hanging wall leaders. In addition, the tonnage which comes from the Old Section is largely made up of ore from reclamation areas, which, although of a lower value than the average ore reserve, can be mined at a fairly low cost.

SOUTH SHAFT

During the year the South shaft was sunk a further 994 ft., but at 1,570 ft. a large water fissure was intersected, necessitating a complete stoppage in sinking operations. After considerable difficulty on account of the heavy inrush of water, the fissure was sealed by cementation and a further 29 ft. were sunk. Water, however, again broke through and the Francois Cementation Company was engaged to undertake the cementation work in the shaft. The difficulties were found to be greater than was anticipated, but the indications are that we are getting into better ground. The main water-bearing fissures have now almost passed out of the shaft and the management is of opinion that after a further 20 to 30 ft. of sinking, and if no further fissures are encountered, normal sinking should be resumed. The shaft is now down to a depth of 1,645 ft. Notwithstanding the delay in the sinking of the shaft, the development programme is not in any way retarded.

Various estimates have appeared of the company's liability for taxation this year, but although an assessment will be made on the company it will not have to pay tax, as the accumulated losses have to be set off.

The application to the Mining Leases Board for a mining lease of an area equal to approximately 148 claims adjoining our No. 1 lease area on Farm Rietfontein is proceeding. A satisfactory agreement has been concluded with the surface owners of the ground.

With the exception of the temporary setback in the sinking of the South shaft, the progress made both on the surface and underground is very satisfactory.

The additional plant is now in commission, and as soon as the new engine is installed at No. 7 shaft it will be possible to increase further the tonnage from this section.

The mine has now reached the stage when under existing conditions regular dividends can be looked for. It is proposed, therefore, to declare a dividend of 7½ per cent. for the half year ending June 30th next.

The report and accounts were unanimously adopted.

EVER READY COMPANY (GREAT BRITAIN) LIMITED

MOST SUCCESSFUL YEAR'S TRADING

MR MAGNUS GOODFELLOW ON PROMISING OUTLOOK

The ordinary annual general meeting of The Ever Ready Company (Great Britain), Limited, was held, on the 4th instant, at the Ever Ready Works, Hercules Place, Holloway, London, N.

Mr Magnus Goodfellow (the chairman and managing director) presided.

The Secretary (Mr F. W. Stevens, A.C.A.), having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and gentlemen, I have pleasure in submitting the directors' report and statement of accounts for the year ended March 31, 1936, and I presume we may follow the usual custom and take them as read. You have, no doubt, carefully considered the report and the clearly set out accounts, and you must be as pleased as we, your directors, are, at the result of the year's trading—the most successful your company has yet attained throughout its years of growth.

INCREASED SALES

The increase in our sales and the general information at our disposal, satisfy me that public consumption of dry battery goods of every description has again increased, and that the efforts made to rationalise and stabilise prices have met with a large measure of success. It is remarkable that the past five years' trading in our country, under the depreciation in the value of sterling and the general tariff, has not resulted in any material rise to the consumer in the prices of manufactured goods. None of our own goods are being sold at prices higher than obtained five years ago, and a large and varied quantity are being sold at considerably lower prices, to the benefit of the consumers, the distributing trade and ourselves. I should here like to pay a tribute to our 11,000 shareholders who support the business by insisting on Ever Ready goods whenever they require the products we manufacture, and, in thanking them, I beg that they will not only continue, but even increase, their efforts to use and popularise our products.

IMPROVED PRODUCTION METHODS

Considerable improvements have again been achieved in the methods and processes of production, and the resulting lower costs have practically maintained the profit margin, in spite of the substantial reductions in prices made in January, 1935. It will be appreciated that the continued progress in methods of manufacture has rendered several of our old plants obsolete. These have been closed, thereby contributing to the savings in cost to which I have already referred. It is of interest to note, whilst on this subject, that ten years ago our plant and equipment appeared in the balance sheet at £15,000. Since that date we have expended £710,000; annual depreciation has reduced the capital value by £106,000, and in 1933 and 1934 we specially wrote off from our reserves £369,000, leaving the value in the balance sheet under review at £250,000.

I do not propose to review in detail our various activities. It will be sufficient if I inform you that, with two exceptions, all parts of our business, and everyone serving the company, have contributed to the successful result of the year's work.

IMPROVED POSITION OF LISSEN COMPANY

The first exception is the Lissen Company. Although this company has made no contribution to our profits, nevertheless, it has improved its manufacturing and trading position, as reported to its preference shareholders. We are hopeful that during the coming year this business will not only maintain the increase in sales achieved during the past year, but register a further improvement, and if this should be so, having regard to the very considerable economies effected by the reorganisation, we may anticipate in the present year a substantial improvement in the profits earned. The second exception is the group of manufacturing and trading companies on the Continent of Europe. These companies have experienced a prosperous year's trading, but exchange restrictions have prevented our receiving here any return upon the capital invested in them. We continue to hope that, in the not too distant future, these exchange restrictions will be removed, when we shall be able to obtain the benefits which have accrued to us.

On page 2 of the report and accounts you will observe that I have, with the cordial support of my colleagues, appointed three

joint general managers of our business. They have each of them served the company for some ten years or more, and I am sure that they will assist me greatly, not only in the business management of the near future but in maintaining for the company the tradition upon which the success of the business has been built up.

BALANCE SHEET FEATURES

Turning to the balance sheet and accounts, which bear in red ink the figures of the previous year for comparison, I have already dealt with the plant and equipment, on which we expended some £90,000 during the year, and although, of course, we shall continue our policy of development and improvement, and expenditure will again be considerable, it is not anticipated that we shall be called upon to expend as large a sum in the present year.

The only other item in the balance sheet that I need comment on is the stock, which has risen by some £50,000 to £253,000. This stock, which consists to a large extent of our raw materials, is well bought, and, having regard to our forward commitments for supplies, assures that there will be no considerable increase in the cost of the raw materials required for production during the present year.

CURRENT YEAR'S TRADING

This year's trading has opened promisingly, and we are hopeful that we shall again succeed in achieving the progressive result to which we are accustomed.

In conclusion, I again express our warm thanks to the managers, executive staff and workpeople, who have all contributed their part to the success of last year.

The report and accounts were adopted and the dividend resolution approved, and a hearty vote of thanks to the chairman, directors and staff closed the meeting.

CENTRAL ARGENTINE RAILWAY, LIMITED

IMPROVING OUTLOOK

At an extraordinary general meeting of the Central Argentine Railway, Limited, held, on the 4th instant, in London, a resolution was passed dealing with the borrowing powers of the company to meet the rights to be given to the noteholders under the proposed scheme of arrangement by which they would be able to convert their notes into 5 per cent. debentures.

Mr W. Howard-Williams, C.B.E. (the chairman) subsequently addressed the meeting on the general position. He said that there was tangible evidence that the Argentine authorities were realising the difficulties of the railway situation and seeking to ameliorate the position. References had appeared in the Press to the improved rate of exchange granted to the railway companies. It had been suggested that the railways were unduly favoured, but that was not so. They were grateful for that token of goodwill, which was very welcome to them in the midst of their many difficult problems, and he thought it might be regarded as an acknowledgment of the great debt which the Argentine owed to the railway shareholders for their vast contribution to the country's wealth.

One matter which they deemed of outstanding importance was the mutual arrangement come to with the Administrator of the State Railways, which, when in full force, would provide against the ill-effects of uneconomic competition between the railways which he administered and the privately owned lines. The directors were confident that the terms of the arrangement would be as loyally carried out by him and his successors as they would be carried out by the railway companies. It eased the position to know that they were working with the goodwill of the authorities, and that spirit of reciprocity was manifest to-day. Much, however, remained to be done before they could see a re-establishment of the financial position of the railways, particularly in connection with the urgent questions of co-ordination of traffic and pooling.

References had been made in the Press which were untrue. It was asserted in certain quarters that the motive power which kept the trade agreement with Argentina in being was supplied by the capitalists or financiers in the City. The large number of small shareholders and debenture holders in the railways showed that such suggestions were absurd.

At a subsequent meeting of the noteholders the scheme of arrangement was approved on a show of hands and a card vote was taken.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

SHIPLEY COLLIERIES, LIMITED

INCREASED TRADING PROFIT

The thirteenth ordinary general meeting of Shipley Collieries, Limited, was held, on the 4th instant, at Winchester House, London.

Sir John P. Fry, Bart., the chairman, said the total trading profit for the year was £157,400—an increase of £52,000 on 1935. He hoped that the shareholders would feel that the total dividend of 8 per cent., absorbing £40,000, was not larger than they cared to sanction.

The Ilkerton Colliery Company had again made a profit, which, however, had not been brought into the present balance sheet. In regard to the investment in Mitchell Main Colliery Company, this undertaking had a very long life before it. The Colliery was now being modernised, much as was done at Shipley some years ago, and in consequence an opportunity occurred for the board to make an investment both in debentures and ordinary shares. If the results panned out as anticipated the investment should prove a good one. In these extraordinarily unsettled times the board felt that the cash expended on these two colliery propositions should be replaced. Also during the next two years favourable opportunities might occur for linking up with other undertakings, and thus forestall by voluntary arrangement any Government compulsion which was so thoroughly objectionable to most of them.

It was proposed to increase the capital by 700,000 new ordinary shares of £1 each, of which 100,000 were to be issued forthwith at 22s. 6d. per share and the remaining 600,000 to be held in reserve. The 100,000 shares would be at the rate of one for every five now held.

With regard to the current year's prospects, it seemed clear that central selling must eliminate much inter-colliery and inter-district competition and result in a higher level of prices, and though a big share of this would go to the workers under the present sliding scale arrangement some benefit should also accrue to the colliery companies. The new financial year had already started very satisfactorily.

The report and accounts were unanimously adopted and the proposals to increase the capital were approved.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended May 30, 1936, amounted to £6,121,000, against ordinary expenditure of £10,513,000. After allowing for an increase in Exchequer Balances of £101,092, the operations for the week, as shown below, increased the gross National Debt by £4,719,000 to approximately £7,940 millions.*

TREASURY BILLS BY PUBLIC TENDER

Tenders for £50,000,000 Treasury bills were opened on May 29, 1936, and the total amount applied for was £67,935,000. Tenders were accepted for Treasury bills at three months dated Tuesday to Friday, at £99 17s. 1d., about 71 per cent. and above in full; Saturday, at £99 17s. 2d., and above in full. The average rate per cent. was 11s. 5-54d. The amount allotted was £50,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1934				
January 5	35,000,000	78,260,000	30,000,000	0 18 11-5
April 6	40,000,000	80,390,000	38,000,000	0 17 9-01

* For half-year. † Free of income tax. (a) On proportional and "B" proportional profit shares. (b) Represents a bonus of 10 per cent. on deferred ordinary shares. (c) Ordinary shares. (d) Deferred shares. (e) No comparable figures. (f) Includes £562,361 dividends from subsidiary companies, £528,911 declared by subsidiary companies out of reserves and arrears of dividends of preference of Coast Lines, and £33,450 declared by them out of profits on sale of investments (applied towards provision of £40,000 for premium on redemption of 5 per cent. first debentures). (m) For 3½ years to end of 1935. (n) 5 per cent. paid free of income tax.

ASSOCIATED BISCUIT MANUFACTURERS LTD.—Total profit for the year to March 31, 1936, after tax, amounted to £115,066, compared with £115,044. The final dividend on the ordinary is 4 per cent., tax free, making 6 per cent., tax free, the same as for the previous year. A balance of £2,768 is carried forward, against £1,936. Investments in and indebtedness of subsidiary companies appears in the balance sheet at £2,065,362, compared with £2,062,629 in the previous year. The cash holding is £22,917, against £25,007. Meeting, Hotel Victoria, London, W.C.2, June 9th, at 11.30 a.m.

BURNTISLAND SHIPBUILDING COMPANY, LTD.—During the year ended March 31, 1936, the volume of orders for new ships secured steadily increased, and the works are now employed at full capacity. In the year to March 31, 1936, profit, before depreciation, amounted to £21,003, against £335 in 1934-35. After charging £10,000 for depreciation of plant, etc., and writing £2,000 off investments, the directors propose to pay a final dividend of 5 per cent., making 7 per cent., and to carry forward a surplus of £2,095, subject to fees. The previous dividend was 4 per cent. in respect of 1930-31. Meeting North British Station Hotel, Edinburgh, June 10th, at 2.30 p.m.

profit of \$25,945.42 for the year, compared with a loss of \$800,728.95 for 1934 for the same activities. The report points out that while the results for 1935 show an improvement over 1934, the present outlook does not seem to justify expectations for any substantial improvement for the year 1936 over 1935.

SWEDISH MATCH COMPANY.—A gross profit on sales of Kr. 4,731,715 is shown in the report for 1935, which compares with Kr. 5,209,228 for 1934. These figures refer, however, only to deliveries from Swedish match plants, while profits from subsidiaries are included in dividends on shares, which have decreased from Kr. 6,780,000 to Kr. 5,397,000. Total income from investments has decreased from Kr. 34,883,000 to Kr. 30,116,000, but interest on bank liabilities has fallen from Kr. 19,593,000 to Kr. 15,956,000. Net profit amounted to Kr. 11,199,000, compared with Kr. 3,626,000 a year ago, and is again carried to reserves.

THE BRITISH ELECTRIC TRACTION COMPANY, LTD.—The total assets on March 31, 1936, amount to £6,384,215, compared with £6,220,987—an addition of £163,228 for the year. The following table shows the salient figures in comparison with the previous three years:—

Year ended March 31	Gross Profit	Net Profit after charging Debit Interest	Prof. Stock	Prof. Ord. Stock	Def. Ord. Stock (A)	Amount at Credit of Undivided Profits Account
1933	400,017	245,122	8	8	15	1,209,279
1934	421,272	262,026	8	8	15	1,241,231
1935	465,514	299,502	8	8	15	1,309,881
1936	505,245	331,600	8	8	15	1,397,295

(A) Payable as to 5 per cent. in cash and remainder in deferred ordinary shares.

The annual general meeting will be held at Winchester House, Old Broad Street, E.C.2, on June 12, 1936.

UNITED KINGDOM GAS CORPORATION, LTD. (PURCHASE OF CASTLEFORD AND WHITWOOD GAS COMPANY.)—The corporation has acquired 99.24 per cent. of the stock of Castleford and Whitwood Gas Company. The purchase price was 44.76 per cent. in fully-paid preferred ordinary shares of the corporation and the balance in cash.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

LARGELY owing to the holidays and unsettled conditions abroad, business in primary products subject to international arbitrage was quiet and the trend of the prices of many commodities was downwards.

The coincidence of favourable crop reports from North America and European countries with sustained Canadian selling pressure has been largely responsible for the small turnover in wheat and for the downward tendency of prices in recent weeks. Raw sugar was again marked down in price. Business in provisions was quiet, but butter prices registered a further rise.

The event of the week was the advance of quotations for iron and steel materials, ostensibly to allow for the increase in the price of coal, coke and other raw materials used by the industry. Owing to the pressure of demand, however, the rise in quotations is not expected to result in a decline of business in the near future. Another important development, discussed in a Note of the Week, was the slump in tin prices due to the loss of confidence in the market by consumers. Copper, lead and spelter were also marked down. The market in rubber was as dull as ever, consumers only covering immediate requirements on the assumption that devaluation in Holland would result in a fall of rubber prices. Among textile raw materials, cotton was firmer on unfavourable crop reports from the United States, but business in Lancashire goods was small in volume. Wool prices are scarcely changed on the week. The British jute industry remained depressed owing to the low prices of Indian jute manufacturers.

Commodity prices in the United States failed to recover. Thus Moody's index of the dollar prices of staple commodities stood at 163.8 on Wednesday, against 163.0 a week earlier, 169.0 a month ago and 156.6 on the corresponding day last year.

COAL

SHEFFIELD.—The all-round reduction of the Midland district quotas from 62½ per cent. in May to 55 per cent. of the standard tonnage in June is due in the first place to the decline of the demand for household and gas coal. Moreover, the holidays mean a shorter working month in some branches of the heavy trades which will lessen their demand for coal. It is expected that there will be a general reduction in the price of household coal this month. The export trade remains quiet.

OIL OUTPUTS

THE ATTOCK OIL COMPANY, LTD.—Production for April, 9,768 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended April 18th: Venezuela, 14,024 barrels; Trinidad, 25,769 barrels; total, 39,793 barrels. Production for the week ended April 25th: Venezuela, 14,659 barrels; Trinidad, 25,001 barrels; total, 39,760 barrels. Production for week ended May 2nd: Venezuela, 14,219 barrels; Trinidad, 23,686 barrels; total, 37,905 barrels. Production for the week ended May 9th: Venezuela, 14,541 barrels; Trinidad, 23,378 barrels; total, 37,919 barrels. Production for April: Venezuela 62,557 barrels; Trinidad, 107,128 barrels; total, 169,685 barrels. Deliveries for April: Venezuela, 57,104 barrels; Trinidad, 114,464 barrels; total, 171,568 barrels. Production for week ended May 16th: Venezuela, 14,447 barrels; Trinidad, 22,842 barrels; total, 37,289 barrels. Production for week ended May 23rd: Venezuela, 12,426 barrels; Trinidad, 24,157 barrels; total, 36,583 barrels. Production for week ended May 30th: Venezuela, 14,221 barrels; Trinidad, 23,965 barrels; total, 38,186 barrels.

DACIA ROMANO PETROLEUM SYNDICATE, LTD.—Gross production for April: Dacia, 2,166 tons; Perimeter X 3,801 tons; Star-naphta, 627 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended April 11, 1936, was 497,000 barrels. Production for the week ended April 18, 1936, was 507,000 barrels. Production for the week ended April 25, 1936, was 461,000 barrels. Production for the week ended May 2, 1936, was 524,000 barrels. Production for the week ended May 9, 1936, was 540,000 barrels. Production for the week ended May 16, 1936, was 520,000 barrels.

PHOENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix Group for April was 90,619 tons. The gross production of crude oil of the Phoenix Group for May was 92,888 tons.

TAMPICO OIL, LTD.—The total production from the company's properties in Mexico during April was 10,802 barrels, in respect of which Royalty due to Tampico Oil, Ltd., amounted to 810 barrels.

Export prices: South Yorkshire hards, 19s. to 19s. 6d.; washed gas doubles, 17s. 6d. to 18s.; washed trebles, 17s. 6d. to 18s.; washed coking smalls, 14s. 9d. to 15s. 3d.; Derbyshire top hards, 18s. 3d. to 18s. 9d.; washed trebles, 17s. to 17s. 6d.; cobbles 18s. 3d. to 18s. 9d. Inland prices: South Yorks best, 23s. to 25s.; Derbyshire best house, 22s. to 23s.; best screened nuts, 19s. to 20s.; Yorkshire hards, 19s. 6d. to 20s.; nutty slacks, 10s. to 11s.

NEWCASTLE-ON-TYNE.—The month has opened with a firm tone for all classes of steam coal. Inquiry is good from the Scandinavian countries for screened coal, the most recent being from the Swedish State Railways, who are seeking tenders for 68,500 tons for shipment during July-August. Export trade in Durham gas and coking coal remains at a low level, and there seems little prospect of improvement unless trade is resumed with Italy. Home trade is very active.

Current f.o.b. prices for export: **NORTHUMBERLAND**—D.C.B. screened, 15s.; smalls, 12s. 6d.; Howards, Bentineck, Newbiggin screened, 14s. 9d.; smalls, 12s.; Tyne prime large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main large, 14s. 9d.; smalls, 12s. 6d. **DURHAM**—Lambton/South Hetton screened steam, 15s. 9d.; smalls, 13s.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 6d.; coking unscreened and/or smalls, 13s. 3d.; prime unscreened bunkers, 15s.; second-class unscreened bunkers, 14s.; prime foundry coke, 26s.; Newcastle and district gas coke, 28s.

GLASGOW.—The feature is the sustained improvement of export business. The collieries catering for this branch are better placed than at this season for some years past, both as regards orders and prices. Baltic business is very satisfactory. In the home market the good industrial demand is compensating to some extent for the contraction of household and public utility business. Generally the market position remains comparatively strong, with little surplus of either large coal or nuts.

Current export prices f.o.b. district ports: **LANARKSHIRE**—Ell best, 16s.—16s. 6d.; splint best, 18s. 6d.; splint second, 16s. 6d.—17s.; navigation, screened, 15s. 6d.—16s. 3d.; navigation, unscreened, 14s.—14s. 6d.; steam, 15s.; trebles, 15s.—15s. 6d.; doubles, 15s.—15s. 6d.; singles, 16s.; pearls, 14s. 6d.—14s. 9d.; dross, 12s. 6d. **FIFE**—Best unscreened navigation, 13s. 9d.; unscreened navigation, 13s. 6d.—13s. 9d.; first-class steam, 15s.—15s. 6d.; third-class steam, 14s.—14s. 6d.; trebles, 15s. 6d.—18s.; doubles, 16s.—17s.; singles, 15s. 6d.—16s. 6d.; pearls, 13s. 9d.—14s. **LOTHIANS**—Best splint, 14s. 6d.—15s.; prime steam, 14s. 6d.; secondary steam, 13s. 6d.; unscreened navigation, 13s. 9d.; trebles, 16s.—16s. 6d.; doubles, nominal; singles, nominal; pearls, nominal. **AYRSHIRE**—Best unscreened navigation, 16s. 6d.; steam, 13s. 6d.; trebles, 15s. 6d.; doubles, 15s.; singles, 15s. 6d.; pearls, nominal; dross, nominal.

CARDIFF.—During the first three days of the current week work at the collieries was suspended, and, with the docks closed on Monday, shipments were also substantially below the average. The two chief events of the week have been the announcement of the details of the audit for the three months ended April and the placing by the Egyptian State Railways of a contract for 233,000 tons at 25s. 3d. c.i.f. and 57,000 tons at 18s. 3d. f.o.b. with Messrs

OTHER METALS

COPPER.—Prices tended easier, despite a renewed fall in home warehouse stocks. The uncertain political outlook, the weakness of the gold currencies and the strikes in France were the main reasons adduced to account for this weakness. A report that the Union Minière du Haut Katanga is in favour of raising production quotas had no effect on the market, since it is taken for granted that the other participants would not agree to an increase while the present weakness of prices continues.

Sales on the London Metal Exchange: 150 tons on Tuesday, against 1,600 tons last week; 1,600 tons on Wednesday, against 900 last week. Domestic spot was quoted at 8.85 cents per lb. in New York on Wednesday, against 8.92½ cents a week ago and 8.97½ cents a month ago. Wednesday's official closing price for standard cash in London was £36 5s. to £36 6s. 3d., compared with £36 12s. 6d. to £36 13s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 58,387 tons, show a decrease of 506 tons, while stocks of rough copper, at 5,617 tons, show a decrease of 50 tons on the week.

LEAD AND SPELTER.—Business in both lead and spelter was very restricted over the holiday period, and prices were easier in sympathy with other metals. World output of lead during April totalled 140,000 short tons, according to the American Bureau of Metal Statistics, against 128,700 short tons in the previous month. Since the production of lead has been lagging behind consumption during the past year, the latest increase should occasion no uneasiness. No further news of the Belgian zinc negotiations has been received during the past few days.

Sales of lead on the London Metal Exchange: 1,000 tons on Tuesday, against 900 tons last week; 750 tons on Wednesday, against 250 last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 3s. 9d. per ton, compared with £15 11s. 3d. a week ago.

Sales of spelter on the London Metal Exchange: 150 tons on Tuesday, against 200 tons last week; 950 tons on Wednesday, against 300 tons last week. Wednesday's quotation in East St. Louis was 4.90 cents per lb., against 4.90 cents the week before and 4.90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 2s. 6d. per ton, against £14 8s. 9d. last week.

TIN.—The past week witnessed a heavy slump on this market, the cash price losing £14 and the forward quotation £11 5s. The main reasons were the uncertainty created by the postponement until June 25th of the quota decision for the third quarter of the year, and the widespread belief that the tin scheme may collapse after December, owing to the opposition of Siam. Some weight is also attached to the statement of the President of the Chamber of Mines of the Federated Malay States to the effect that Malaya would not make concessions which might permit an increased production in other areas, at Malaya's expense. Moreover, the statistics published on Tuesday had a somewhat depressing effect on the market. According to Messrs A. Strauss and Company, the total visible supply increased by 1,812 tons during May, to 16,922 tons. Deliveries, at 8,901 tons, were 2,154 tons smaller than in April, while supplies rose by 3,181 to 11,505 tons. Consumers' demand remains restricted, although offerings have been readily absorbed. In particular, American consumers have shown some reluctance to buy—a significant fact, when it is remembered that the American tinplate industry is very busy. The bull position is practically liquidated, but the outlook is uncertain. Even if quotas are raised at the next meeting of the Committee, larger supplies would not be available till the end of August. Moreover, consumers' stocks are not large. Sooner or later, therefore, a sharp reaction from this week's downward price movement seems probable.

G. Beynon and Company, Ltd., for Monmouthshire coals, and another for 10,000 tons at 25s. 5½d. c.i.f. with the Maris Export and Trading Company. The audit shows a trading loss of £163,260, or 4.88d. per ton, compared with a profit of £262,217, or 6.66d. per ton, in the previous quarter, and with a loss of £223,188, or 5.56d. per ton in the corresponding period of 1935. The pithead proceeds per ton were 13s. 8.54d. compared with 13s. 9.24d. the previous quarter, and 13s. 2.88d. a year ago, but costs of production, partly owing to the increase in wages, and partly to irregular working, were 10½d. per ton higher than in the three months ended last January. The wages cost per ton increased from 8s. 0.92d. to 8s. 4.25d., and other costs (including 6.10d. in respect of subsistence allowances) were 5s. 9.17d. as against 5s. 1.66d. The tonnage of coal raised was only 8,030,314 tons compared with 9,447,798 tons the previous quarter, and 8,162,300 tons in the corresponding period last year, and while the output per man shift worked was less than in the preceding quarter the average wage per man shift worked was 9s. 6.99d. compared with 9s. 4.25d.

Current approximate market quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dries, 18s. 6d.; Black Veins, 18s. 3d.; Western Valleys, 17s. 6d. to 17s. 9d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s. 6d.; seconds, 13s. to 14s.; coking smalls, 14s. 3d. to 14s. 6d.; anthracite best large, 36s. to 40s.; Red Vein large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s. 9d.; rubbly culm, 11s. 6d. to 12s.; special foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship, French, 24s. 3d., Portuguese 21s. to 21s. 6d.

IRON AND STEEL

MIDDLESBROUGH.—Owing to the Whitsuntide holidays the customary market was not held on Tuesday this week. As a result of the strong demand for pig iron and steel, holidays at the works have been shorter than usual. Merchants report that they have been able to get slightly increased deliveries of local foundry iron during the holiday period. The price of Cleveland No. 3 foundry pig iron, for delivery up to the end of June, is nominally 70s. per ton delivered Middlesbrough, but new business for prompt delivery is almost impossible as output is fully sold. East Coast hematite is in increasing demand. The advance of 3s. 6d. per ton which was announced last week has not impeded business. The price is now 80s. 6d. per ton for No. 1 quality delivered locally. Shipments of pig iron from the Tees during May amounted to 3,283 tons, of which 1,573 tons were shipped coastwise, whilst of the remainder, 1,000 tons was shipped to the United States. A further shipment to America has been made this week.

The advances in the price of heavy manufactured steel were generally expected and the increase of 12s. 6d. per ton in the price of sections and plates will not seriously affect shipbuilders locally for some time as their requirements had already been covered at the old rates. Output continues to increase. Shipments of manufactured steel from the Tees during last month amounted to 38,157 tons, of which approximately 14,000 tons were shipped coastwise and the remainder to foreign destinations. Heavy steel melting scrap continues in good demand and up to 60s. per ton is being paid. Foreign ore is difficult. Only spot vessels are being chartered at advanced freights as Spanish tonnage is not available. Good Durham blast furnace coke costs 25s. per ton delivered at the works.

SHEFFIELD.—The increases of 2s. 6d. per ton and 3s. 6d. per ton in the prices of basic pig iron and hematite, respectively, are not likely greatly to affect the volume of business, though this week's market can hardly be indicative of the general effect upon buyers. Supplies of pig iron are urgently required and small parcels of basic and hematite have changed hands at the higher prices. Makers are fully booked, some of them to the end of the year. Producers of foundry iron have little to offer in the market, having difficulty in meeting present commitments. The Central Pig Iron Producers Association are not making any change in prices at present. For some time a premium of 5s. per ton on official basic prices has operated for deliveries after the end of June. Business in both East and West Coast hematite is brisk. In finished iron common bars are in increased demand. Acid and all classes of basic steel billets are now 5s. a ton higher, small bars, strip and hoops are 6s. dearer, and sections, joists and plates 12s. 6d. The price of wire rods is unaltered at present, but an increase is probable before long.

GLASGOW.—In Glasgow and district business in the iron and steel trades remains satisfactory. Steelmakers' plants are running to capacity and the amount of work on hand is sufficient to ensure a continuance for some time to come of the present rate of output. Makers of semis are also very fully booked and are unable to meet all the demands of local users. There is no change in the situation at the sheet rolling mills, which are steadily employed, although export business is still poor. Local tube makers report that business is quiet at the moment. Re-rollers of steel bars, etc., are all busy and have well-filled order books. In the manufacturing industries, almost all branches are exceedingly busy and work on hand at the various shops in the Clyde area is very substantial. Clyde ship repairs have again had a busy week.

CARDIFF.—The holidays have interrupted work this week in the South Wales iron and steel trade, and there was no meeting on the Swansea Metal Exchange last week. Current inquiries show no material improvement, and shipments in the tinplate trade continue unsatisfactory. Last week they totalled 56,462 boxes, compared with 109,141 boxes in the corresponding period last year, but there were also smaller deliveries into warehouse, and stocks totalled 69,555 boxes, compared with 71,357 boxes for the previous week, and 84,688 boxes a year ago. It transpires that at the recent meeting of the Executive Committee of the International Tinplate Association, Germany was granted an increased quota at the expense chiefly of France, the Saar and Italy.

Sales of tin on the London Metal Exchange : 685 tons on Tuesday, against 115 tons last week; 625 tons on Wednesday, against 165 last week. The New York quotation on Wednesday was 42.75 cents per lb., against 45.87½ cents a week ago and 46.75 cents a month ago. Wednesday's official closing quotation in London for standard cash was £187 to £187 10s. per ton, compared with £201 to £201 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 644 tons, an increase of 93 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was again quoted at £12 7s. 6d. per flask of 76 lbs. Chinese antimony was quoted at £56 to £57 per ton ex warehouse, duty paid, the same as last week. Chinese wolfram for June-July shipment was quoted at 32s. to 32s. 6d. per unit, c.i.f., as against 33s. to 33s. 6d. per unit last week. Platinum (refined) was maintained at £7 per ounce.

TEXTILES

COTTON.—Manchester.—Business during the past week has been interrupted by the Whitsuntide holidays, and there have been very few serious attempts at important negotiations. A feature of interest has been the hardening movement in raw cotton prices on further unfavourable reports concerning the prospects for the new crop in the United States.

There has been a fair amount of inquiry in piece goods, but most of the orders secured have been for small lots. Certain dealers in India continue to show increased interest in Lancashire goods. Useful lines have been reported in light whites and bleached shirtings, chiefly for Karachi and Madras, and some dhooties and fancies have been placed for Calcutta, while miscellaneous sales have occurred in dyed fabrics for Bombay and the up-country markets. Very little business has been done for China and the smaller outlets of the Far East. Scattered transactions have been arranged in bleaching styles for Egypt and prints have again been sold for West Africa. Rather more activity has shown itself for Australia, some fair weights being booked. Home trade houses are complaining of the unseasonable weather adversely affecting clearances. Yarn quotations have tended to harden.

COTTON PRICES

	1936					Corresponding Date

JUTE.—Dundee.—The jute market drags along, with little fresh business reported in any section of the trade. Quotations for raw jute have declined recently, and this has not been conducive to business in yarns and cloth, buyers purchasing only small lots to meet their immediate needs. Quotations remain unchanged, but competition is so keen for any orders going that concessions are being made. Spinners and manufacturers are compelled to reduce production and a fair amount of machinery is standing, besides firms closing down for a day or two each week. Unfortunately for Dundee manufacturers, prices for Calcutta goods continue at very low levels and competition for business in the ordinary makes of hessians is out of the question. One works in the Forfar district will be closed down at the end of this week because of lack of business.

In spite of the jute crop restriction scheme being again in operation this season, the next crop is expected to yield about 25 per cent. more than the last one. The latter will probably yield eight million bales, and the crop for season 1936-1937 is expected to yield ten million bales. World consumption of raw jute is estimated for next season at 10½ million bales, but stocks in the hands of consumers are ample to meet any deficiency in supply during this and next season. Sales have been made of Daisee-2/3 at £17 per ton for the new crop and Tossa-2/3 has been sold at £18 10s., October-November. Old-crop jute, however, is being maintained at £19 10s. per ton for Daisee-2/3 and at £19 15s. for Tossa-2/3, June-July. Good First Marks of the old crop are offered at £22 and good Lightnings at £20 15s., June-July, but sales of new crop have taken place at £20 10s. and £19 10s. respectively, August-September. Good Hearts are offered at £18 10s. to £19, August-September.

Jute yarns are quiet, with common 8-lb. cops quoted at 2s. and 8-lb. spools at 2s. 1d., but buyers are unwilling to pay even 1s. 11d. and 2s. respectively, which might be accepted with a fair business offered. Twist is steady at 3½d. for 3-ply 8-lb., and sacking yarns remain at 2½d. for 24-lb. weft and 3½d. for 8-lb. chains. Rove is easier at £19 10s. for 48-lb. and £15 10s. for 200-lb., and the finer yarns are neglected.

Quotations for jute cloth continue at 2½d. for 10-oz. 40-in. and 2d. for 8-oz., but buyers are not keen to pay these prices, and a shade less is being taken in some cases.

Calcutta hessians recovered a little yesterday on publication of the stock figures in Calcutta, showing a decrease of 13½ million yards at the end of May, compared with end of April, but stocks of sackings increased during the month by 26 million yards. The figures for hessians are now 68½ million yards and for sackings 120 million yards. The price of 10-oz. 40-in. is 17s. and 8-oz. 14s., July-September.

GRAIN MARKETS

WHEAT.—Wheat markets have again been quiet, but the downward price movement has temporarily been checked. The expectation of larger supplies next season, and of the continuance of Canadian selling has made buyers cautious; there is a disposition on the part of millers and bakers to allow stocks to run down.

On Wednesday last, "July" futures were quoted in Chicago at 84½ cents per bushel, against 83½ cents the week before and 87½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 31s. per 496 lbs., against 30s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 30s. 6d., against 30s. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,091,000 quarters, against 1,378,000 in the previous week and 1,567,000 quarters in the corresponding week a year ago.

FLOUR.—During the past week demand was again dull and prices have been further reduced. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 27s. per 280 lbs., against 28s. a week ago; delivered inner London, 27s. as compared with 27s. 6d. a week ago. Manitoba patents, ex store, 25s. to 26s. 9d., against 24s. 6d. to 26s. 3d. a week ago. Australian, ex store, 22s. to 22s. 6d., against 22s. to 22s. 9d. a week ago.

BARLEY.—Despite recent price reductions, buyers have shown little interest in imported feeding barley. Trade in English descriptions has practically finished for the season. Meanwhile, the new crop is urgently in need of more reasonable weather. "July" futures were quoted at 36½ cents per bushel in Winnipeg on Wednesday, against 35½ cents a week ago and 38 cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 22s. 6d., as against 22s. 6d. a week ago; "English malting" at farm, 25s. to 40s., against 25s. to 40s. a week ago.

OATS.—Demand remains quiet, prices showing little change. On Wednesday, "July" futures were quoted at 25½ cents a bushel in Chicago, against 24½ cents a week ago and 26½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 18s. to 19s. per 336 lbs., against 18s. to 19s. a week ago; "English White," at farm, 18s. to 19s., against 18s. to 19s. a week earlier.

MAIZE.—The market has shown no new features, and prices are approximately unchanged. Meanwhile, weather in Argentina has taken a turn for the better, being cold and dry. "July" futures were quoted on Wednesday at 60 cents per bushel in Chicago, against 60½ cents a week ago, and 61½ cents last month. Quotations in London, Wednesday: "Plate," landed, 19s. 3d. per 480 lbs., compared with 19s. 3d. a week ago; "Plate," ex ship, 18s. 6d., as against 18s. 6d. a week ago; "Plate," "June," 18s., as against 18s. a week ago; yellow maize meal, ex wharf, was quoted at £5 2s. 6d., per ton as against £5 2s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat	Cwts.	Cwts.	Cwts.	Cwts.
1 week to May 30	104,826	112,440	169,755	108,252
39 weeks to May 30	8,213,904	10,131,194	12,484,129	9,562,998
Average price of English wheat per cwt.	s. d. 5 11	s. d. 5 2	s. d. 5 6	s. d. 6 10

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
May 28, 1932	Cwts. 98,051	Cwts. 7,751	Cwts. 16,945	s. d. 6 3	s. d. 7 1	s. d. 8 0
May 27, 1933	104,826	55,177	22,170	5 11	6 8	5 8
June 2, 1934	112,440	5,558	20,617	5 2	7 3	6 3
June 1, 1935	169,755	29,045	19,134	5 6	7 0	7 3
May 23, 1936	193,215	17,683	42,818	6 10	6 10	6 2
May 30, 1936	108,252	13,460	18,393	6 10	8 11	6 2

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	June 5, 1935	Dec. 31, 1935	May 27, 1936	June 3, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	83½	84½	74½	77½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	83½	75½	83½	84½

The visible supply of wheat in Canada amounts to 93,884,000 bushels, against 96,085,000 bushels last week, and 108,446,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—No change was made in the official quotations last weekend, but English, Irish and Canadian descriptions have subsequently been rather irregular. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 90s.; Canadian, 80s.; Danish, 89s., the same as last week. Arrivals in London last week included Danish, 13,601 bales; Canadian, 4,167; Dutch, 2,217; Lithuanian, 1,640; and Polish, 2,030, as against 12,881, 3,989, 2,464, 1,518 and 2,602, respectively, in the previous week.

BASIC PIG PRICE.—The Pigs Marketing Board announced this week that, in accordance with the provisions of the present contract, the ascertained price of green Wiltshire style bacon is 87s. 1d. per cwt. and the ascertained value of offals is 9s. 2d. The ascertained cost of feeding stuffs, as certified by the Ministry of Agriculture and Fisheries, is 7s. 9d. per cwt. In accordance with the price schedule embodied in the contract, the price of the Class I, grade C pig, for the month of June is 11s. per score, against 11s. 4d. in May and 11s. 5d. in the same month of last year. The curers will also pay to the Pigs Marketing Board 2d. per score on every pig delivered and accepted during this year, to form a pool out of which will be paid the bonus on pigs delivered during the first four months of the year, in accordance with the 1936 Bonus Scheme.

BUTTER.—The firm tendency has continued this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 104s.; Australian, choicest salted, 102s.; Danish, 110s.; compared with 102s., 100s. to 101s. and 108s., respectively, a week ago.

CHEESE.—The market remains firm generally. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, factory, 53s. to 56s.; Canadian, finest coloured, 65s. to 66s.; and New Zealand, finest coloured, 58s.; against 50s. to 54s., 65s. and 56s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "October-December" was quoted 26s. 6d. per 250 kilos., c.i.f. Continent, against 25s. 9d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 26,746 bags; delivered, for home consumption, 9,358 bags; exported, 1,192 bags; stocks, 175,574 bags, against 195,714 bags a year ago.

COFFEE.—The London spot market was quietly steady this week. In New York, the spot market displayed a similar tendency. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 13 cwt.; delivered, for home consumption, 207 cwt.; exported, 400 cwt.; stocks, 10,499 cwt., against 17,486 bags a year ago. Central and South American, landed, 2,326 cwt.; delivered, for home consumption, 2,229 cwt.; exported, 838 cwt.; stocks, 125,757 cwt., against 113,699 packages last year. Other kinds, landed, 3,501 cwt.; delivered, for home consumption, 4,305 cwt.; exported, 1,206 cwt.; stocks, 178,078 cwt., against 128,503 packages last year.

EGGS.—The market remains steady. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 9s. 9d. to 10s. per 120, as against 9s. 9d. to 10s. last week, while Danish (15½ lb.) made 8s. 9d. to 9s. per 120, against 8s. 9d. to 9s. last week.

FRUIT.—Unseasonable weather was mainly responsible for a quiet demand over the holiday period. For the same reason, the season for strawberries and other outdoor soft fruit is much later than usual. At Covent Garden, according to *The Fruitgrower*, some poor quality outdoor strawberries have been available, while some indoor are still on offer. Green gooseberries made a better showing, selling at from 3½d. to 5d. per lb. Hothouse grapes remained in fair demand, but Guernsey green figs declined. Melons sold fairly well, while peaches and nectarines were steady in price. Spanish apricots were easier, on increasing supplies, but plums from the same source were dearer. Pears continued to sell well, but, in response to a heavy increase in shipments, apples were a point easier. The moderate supplies of oranges remained in demand at firm rates, with grapefruit rather easier. Lemons continue short and dear.

MEAT.—Trading at Smithfield Market has been on a moderate scale, prices showing little change. On Wednesday last Argentine chilled hindquarters were quoted at 3s. 4d. to 3s. 11d. per 8 lbs., as compared with 3s. 4d. to 3s. 10d. a week ago. New Zealand frozen mutton was 3s. to 3s. 6d. per 8 lbs., against 3s. to 3s. 8d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,700 tons, an increase of 909 tons on the corresponding week last year. Beef and veal accounted for 5,274 tons, mutton and lamb, 3,005 tons, and pork and bacon, 848 tons, as compared with 4,989, 2,691 and 729 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered, 7 tons; stocks, 1,759 tons, against 2,235 tons a year ago. White, landed, nil; delivered, 79 tons; stocks, 12,181 tons, against 18,179 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 9d. per cwt. ex warehouse on Wednesday, as compared with 8s. 9d. per cwt. a week ago. "June-July" in singles to Continent and U.K., was quoted at 7s. 7½d. per cwt., against 7s. 7½d. for "May-June" last week. Movements in London during the past week were as follows: Landed, 6 tons; delivered, 366 tons; stocks, 1,282 tons, against 6,684 tons a year ago.

SUGAR.—The spot markets, both in London and New York, have been quietly steady during the past week. The spot price in New York on Wednesday was 3.72 cents per lb., as compared with 3.72 cents per lb. last week and 3.72 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 8½d. to 4s. 8½d., against 4s. 8½d. to 4s. 8½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 18,355 tons, against 1,127 tons last week and 9,103 tons in the same week of last year; deliveries, 19,455 tons, against 17,758 tons last week and 15,666 tons last year; stocks, 170,010 tons, against 171,110 tons last week and 124,204 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
May 30, 1935	d. 11-38	d. 12-35	d. 13-90	d. 9-45	d. 8-22	d. 10-03	d. 11-99
Apr. 30, 1936	12-79	13-66	16-05	10-94	10-49	11-99	13-48
May 7, "	12-79	14-09	15-67	11-02	10-54	11-69	13-55
May 14, "	12-59	13-66	15-08	10-89	10-36	11-86	13-19
May 21, "	12-41	13-00	14-21	10-81	10-21	11-75	12-81
May 28, "	12-37	12-98	13-61	10-43	10-05	11-22	12-54

The London market has been closed this week, but public auctions will be resumed on Monday next.

VEGETABLES.—Although the cold weather has reacted unfavourably upon demand, prices of English and Guernsey tomatoes at Covent Garden remain at a fairly high level, states *The Fruitgrower*; arrivals are still moderate. Cucumbers have not sold so well, and are easier. Plenty of asparagus was on offer during the past week at firm rates, but lettuce declined. Mushrooms, however, were a shade dearer. Good spring cabbage and cauliflowers sold well; large supplies of rhubarb are now to hand. Old potatoes still receive fair attention at London markets, best siltland King Edward again realising from 7s. to 8s. per cwt. at the London Borough Market on Tuesday. With increasing supplies Jersey new declined from 28s. to 26s. a cwt., but Spanish Mataros made 17s. to 18s., against 16s. 6d. to 17s. per cwt. a week earlier.

MISCELLANEOUS COMMODITIES

POTASH.—Mainly in consequence of an improvement in international agriculture, the consumption of potash increased last year. World consumption outside France and Germany achieved a new record during the year ended May 31, 1935, amounting approximately to one million tons of pure potash. According to the chairman of the *Mines de Kali St. Thérèse* this high level of consumption was maintained in 1935-36. As a result of new agreements between the Cartel and several "outside" producers, certain consumers have covered their requirements for some time ahead, in anticipation of a rise in prices. These "newcomers" have apparently not joined the Franco-German Cartel, but have entered into agreements with it, in order to eliminate price-cutting. By this means, it is said, peace has been restored to the world market until 1941. During the first four months of the present year, the German Potash Syndicate sold 671,600 metric tons of K₂O, against 664,500 metric tons in the corresponding period of last year. Domestic sales rose by 13.2 per cent., but exports suffered a decline of 44.5 per cent.

RUBBER.—The expectation of a devaluation of gold *bloc* currencies has again restricted business this week. But, although buyers continue to hold off in the hope of a fall in quotations, prices have been maintained. Meanwhile the statistical position of the commodity continues to improve.

The spot price in New York on Wednesday was 15½ cents per lb. compared with 15½ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. for July-September shipment, as

YOUR DIFFICULTY—

How often do you say: "That's a good idea—I'll remember that," and you don't? Or you read something useful and say: "I must cut that out," and you do, but can't find it when you need it.

Last month, Mr. E. P. Briem, Chief of the Official Information Bureau of the GOVERNMENT OF IRELAND, bought MASTROM and solved such a difficulty.

MASTROM so classifies and handles your DATA—PERSONAL PAPERS—PRESS CUTTINGS—NOTES—ILLUSTRATIONS—ITEMS IN BOUND BOOKS—that any fact, figure, method, or idea is found AT ONCE when you want it. It is UNIQUE.

To Students, Private Secretaries, Public Speakers, Economists, Bankers, Company Directors and Public Men it is invaluable.

Clip out this advertisement and pin it to your card or note heading, or write for particulars (mentioning the *ECONOMIST* 636) to:—

MASTROM, LTD. 81 HOLLY LANE, ERDINGTON, BIRMINGHAM

against 7½d. to 7¼d. a week ago. Stocks in London and Liverpool at the end of last week totalled 130,560 tons, against 132,745 tons a week earlier. A year ago stocks amounted to 167,906 tons.

VEGETABLE OILS AND OLSEEDS.—Oil seeds opened on a rather firmer note after the holiday, but business is still very restricted. Although there is some demand on Continental account, Plate linseed is neglected by English crushers, for, with the 10 per cent. import duty, it is out of line with Indian descriptions, which continue to be offered freely. In view of the high basic price fixed by the Argentine Government, there is some question concerning the possibility of a reduction in order to compete more effectively in the world market or whether, alternatively, it will be maintained and an export subsidy given to growers. The former is considered

in some quarters as the most probable, but it appears that nothing definite has, as yet, been decided. So far this year Argentina has exported about 655,000 tons, and has an estimated balance of 647,000 tons available for shipment as against 965,000 tons and 920,000 tons last year. India, however, has shipped 108,000 tons, as compared with only 45,000 tons a year ago, and has available another 136,000 tons for export. Trade in linseed oil has developed slightly at the lower levels and prices are steadier. Raw oil, ex Hull mill, for June-July delivery, is now quoted at £24 5s. per ton, naked, later positions being at a small premium. Cotton seed is neglected and a shade lower. Demand for refined cotton oil for export is negligible and prices have dropped to £25 10s. per ton, with crude quoted at £23 ex Hull.

nearly £205 millions by 1940, against an average of £44½ millions in 1925-29. This greatly increased monetary basis, if associated with a psychology of expansionism, offers the prospect of a great—possibly even a dangerously large—price rise in the course of the next ten years.

If economic factors alone are taken into account, the long-term outlook, on this showing, is more hopeful than is generally believed. Unless the universal experience of past monetary history is at fault, we may expect a world-wide rise in prices, sooner or later; for if any one nation—the United States, for example—were to apply the torch to this combustible material, the resulting conflagration could not possibly be localised. Almost every country in the world which has enjoyed substantial recovery since 1932 has taken increased British exports, and under a regime of world-wide economic expansion the prospects for Britain's depressed areas would assume a new and more hopeful aspect. If the movement were not unduly delayed, any interim recession in national industrial activity might even be tided over without any serious loss of confidence. It might be argued that, as yet, there has been no serious threat to any one of the three main factors in contemporary domestic recovery—cheap money, devalued sterling and cheap food; and that the effect upon employment of a possible decline in the building trade (whose activity was responsible for nearly one-fourth of the total rise in employment between 1932 and 1935) might for a while be offset by such developments as the Government's re-armament programme.

Can we safely rule out, however, the possibility that events may take a different course, owing to the intrusion of factors which may quite properly be omitted from a review of purely economic possibilities? Can we dismiss the danger of an outbreak of war in Europe or of the continued distortion of international trade policies by pre-occupation with the fear of war? If not, how will British industry fare if world trade has shown no decisive expansion in two or three years' time when our re-armament programme has been completed? Can we confidently assume that a "controlled" economy, in these circumstances, can indefinitely maintain prosperity at or near a peak level? Or will its efforts prove increasingly restrictive? These are grave questions which cannot be dismissed from any comprehensive survey of the future. Economically, there are many reassuring factors in the long-term outlook. But now, as ever, the extent to which they will have "time and space to work and spread" depends on the policy of the world's rulers more than on any other single factor.

MR EDEN'S TWO VOICES

THE speech Mr Eden made to his constituents last Saturday gives the impression of a man trying to push his way through a thicket of thorns and briars who, in spite of his utmost effort, is brought to a standstill. Evidently this is the impression which the speech has made in Italy, where it is being interpreted as a sign that Signor Mussolini's totalitarian victory over the League in general, and over England in particular, is now very near to being acknowledged by his vanquished adversaries themselves. Possibly the tone and content of the speech have given the same satisfaction, and for the same reason, to a section of opinion in this country, which—with suicidal blindness—is congratulating itself on the discomfiture of the League.

Throughout the pronouncement we seem to detect a discord between two voices: the authentic note of Mr Eden himself and the very different refrain which he is compelled to recite in his official capacity as Mr Baldwin's Secretary of State for Foreign Affairs. This confusion of tongues gives the speech an unfortunate air of inconsequence. Time and again premise and conclusion simply do not fit.

Though the League has suffered a setback, we must keep the League in existence, Mr Eden declares, because His Majesty's Government in the United Kingdom still [*sic*] maintains its confidence in the League as the best instrument available to mankind for the preservation of international peace. We cordially agree; but how does the warmth of the Government's feeling square with the lukewarmness of its action? Does one so lightly sell a fort which one believes to be the key to one's own citadel? And what does the Government mean when it tells us, through the Foreign Secretary's mouth, that any modifications

which may be necessary in the structure of the League must be approached with the desire to make that body as effective as possible for the maintenance of peace? Does this admirable sentiment signify an intention to accept an increase of our obligations under Article XVI now that the Italo-Abyssinian test has shown that the minimum action at present required of States Members of the League is insufficient for the purpose? As we read Mr Eden's speech, we find ourselves confirmed in the suspicion that the Government is playing with the idea of watering down the coercive provisions of the Covenant, instead of fortifying them.

Confirmation comes from no less a person than the Chancellor of the Exchequer. In a speech on Wednesday evening he characterised as "the midsummer of madness" the suggestion that sanctions should in any way be intensified. For, said Mr Chamberlain, we must recognise their failure; reduce the obligations of the League to a point conformable to its capacities; and leave to those countries alone whose vital interests are involved the task of organising security in certain regions, under the general ægis of the League. What a wealth of inconsequence and myopia is here! Where do the vital interests of a world-wide Empire end? Mr Baldwin's obvious reluctance in the House on Thursday to answer a bombardment of questions whether Mr Chamberlain's statement expressed the Government's foreign policy will confirm the country's suspicions. Mr Chamberlain seems to have been expressly put up by the Government to prepare the nation for its change of policy.

With this watering-down there naturally goes an emphasis on national re-armament. We can have no quarrel in the present international situation with a policy of national re-armament in the service of collective security; and this is the policy which the Government is perpetually promising, whenever its spokesmen urge re-armament upon us. Indeed, when Mr Eden proceeds to tell us that "the objective of British foreign policy is the maintenance of a peace that should not be limited to one or two countries, or even to one or two continents," we seem to be hearing the speaker's true voice. But in the very next sentence the "official" voice breaks in to pull us up short again. "There are clearly certain areas in which our vital interests are more immediately affected by a disturbance of the peace; and one of these areas is Western Europe." And Mr Chamberlain's speech was one long paraphrase of this. Yet our supreme vital interest is surely one that cannot be defined—or confined—within regional limits. In conceiving of our vital interests in geographical terms, the Government is relapsing into an anachronistic view of armaments as instruments of national policy—as though our national welfare could be secured without a constructive organisation of the international society to which we belong.

Moreover, even if we were to accept the old-fashioned geographical view of security, we should surely have to revise our geographical scale in the light of recent technical developments. Yet when Mr Eden goes on to describe what our British regional interests in Western Europe amount to in the Government's opinion, it comes down simply to an undertaking to fulfil our Locarno obligations towards Belgium and France in the event of their being attacked by Germany. "These obligations affect the independence and integrity of countries which we regard, and which our forefathers before us regarded, as of vital importance to the British realm." But what on earth is the relevance of our forefathers' views about the strategical basis of British foreign policy to the new problems of an age which has seen the invention of flying? Our forefathers sought—in vain—to limit our concern on the Continent to assuring the integrity of of the Low Countries. Does Mr Baldwin imagine that, in substituting France for Holland as the second Continental country, in addition to Belgium, whose integrity we must maintain at all costs, he has brought our forefathers' strategy up to date? Does he not understand that, since the conquest of the air has brought Berlin within less than four hours' flying distance of London (over Dutch territory), the minimum area on the Continent to which Great Britain can afford to confine her strategic interest embraces the whole of Europe, including the western fringes of Russia? Does he not realise that if Germany—expanding eastwards—were to bring under her dominion all Eastern Europe up to the Ukraine, she could then

mobilise the entire air power of this huge empire on her western frontiers, within two hours' flying distance of English shores? In order to be able in the end to dictate to Great Britain and France, Germany does not need to attack either of them; she need only induce them to give her a free hand to outclass and eventually overshadow them by a career of expansion in the opposite direction.

This is a point which has not been hid from the French. It may be that absorption in her domestic problems and her deep-seated desire for a quiet life may induce France, for a while at all events, to rest passive even in the face of growing intrusion from Germany into Central Europe provided she can get a sufficiently binding guarantee of her western frontier. But Mr Eden's speech reminds us that even the British Government has misgivings about this policy. "There are points," he says, "which are not clear about the non-aggression proposed by Germany in Central and Eastern Europe, and about the circumstances of Germany's return to the League of Nations"—and Mr Eden concludes his speech with a reminder that the British questionnaire to Germany still lies unanswered. Here is perhaps the greatest inconsequence of all. For is not the Foreign Secretary himself virtually inviting Herr Hitler to ignore any British questions about Eastern Europe when Mr Eden is forced by his own Government's policy to reassure Herr Hitler in the same breath that Western Europe, in the narrow sense of Belgium and France, is the only patch of the Continent in respect of which the British Government is prepared to accept any definite commitments?

In this welter of confusion there are still voices in this country that would counsel us to make our peace with Herr Hitler, and leave him free to vent his energies on the penetration of Central and Eastern Europe. There is even a childish view that France has "gone Communist," and that if Herr Hitler tries to make war on Russia—and subjugate Central and Eastern Europe beforehand to facilitate it—he should be allowed to. This, it is suggested, will keep Germany occupied for decades to come. For a period, at all events, we should enjoy the benefits of isolation—even though at the cost of maintaining extravagant armaments. Others—who regard the imperialist ambitions of Italy as a passing phase, or at all events as of minor importance—would hem Germany in by the policy of the ringed fence. The first policy involves a great sacrifice of liberty in Europe and the surrender of the ideal of international order and the rights of small nations. The second involves something akin to the outlawry of Germany and a refusal to consider her alleged economic grievance. Both lead inevitably to disaster for Europe and for ourselves.

The only solution of this dilemma is not to water down, but to strengthen the efficacy of the League by increased assurances of support which should be clearly defined and organised in advance. But to this should be coupled the offer to Germany of frank co-operation within the League and the removal of obstacles to close cultural and economic association with her on the part of those coun-

tries that freely desire such co-operation. A strong League is the only way to ensure that such developments are entered into freely and not under compulsion. And a strong League is the only safeguard that they will not become a danger to others.

If, on the other hand, the British Government's policy is to make humiliating terms with a successful aggressor on June 30th, it were better that Signor Mussolini should leave the League. The League that would then remain would at least be a League of Powers vitally interested in the collective preservation of national integrity against potential aggressors. Such a League would afford the widely ramifying British interests more reliable safeguards than meek acquiescence in the policy and achievements of militant expansionism.

THE ADVERTISING INDUSTRY—II

In a preceding article, we reproduced the estimate of a well-known agency that last year's expenditure on "display" advertisement of branded goods, in some 151 newspapers and journals, amounted to £16,770,000. We may now proceed to trace the life history of a typical newspaper advertisement.

Suppose a producer of "food drinks" were starting an extensive sales campaign. The initial discussions between the advertiser and the agency handling his business would be entirely unconcerned with the form of the intended advertisements. They would be directed, rather, towards the determination of the size of the potential market for the product in question, the extent of competition, and the public's reasons for buying existing food products. They might include various tests to discover whether the "food drink" was likely to be popular or whether (e.g.) its flavour might be slightly modified to suit the public's taste. The packing of the article would be a matter of careful consideration. All possible retail outlets would be examined. Factory costs, retail discounts, selling prices, and gross and net profits would be determined. A "sales plan" would be drawn up, co-ordinating every relevant feature of the technique of salesmanship. Among the points covered in this programme would be the sales manager's plans, the instructions to be given to the manufacturer's travelling salesmen; the preparation of printed matter for the retail trade, and of window and counter "sales material"; the drawing up of circulars to be distributed by retailers to the public; and, finally, the extent of Press, poster and, perhaps, film and radio advertising. In short, the distribution of the commodity from the factory to the retailer, and from the retailer to the public would be "planned" as a single all-embracing operation.

The next point to be determined would be the best means of distributing the advertiser's message among his prospective customers. At this stage it would be the duty of the advertising agent to give expert advice on such highly

technical matters as the geographical distribution, circulation, "coverage," and "pulling power" of individual newspapers and journals, and the habits, age, sex, earnings, etc., of their readers. Finally, the form of the proposed advertisements would be discussed, and questions of their size and frequency of appearance would be settled. Commercial designers and advertisement writers would collaborate, a choice would be made of several alternative "lay-outs," and the finished advertisement would be prepared with the help of typographers, compositors, blockmakers and stereotypers.

It is no exaggeration to say that efficient modern advertising involves as careful and detailed planning as the technique of factory production. The initiative in its development has come less from the manufacturer than from the advertising agent, who works in a keenly competitive field. It has been inevitably associated, in the main, with the sale of "consumption goods," identifiable by a trade name. In more recent times, however, "co-operative" or "collective" advertising has assumed increasing importance. This form of advertising is based on an association of numerous manufacturers (who may, individually, be competitive producers) in an endeavour to increase the demand for a single class of product. Gas, electricity, tea, bread, coal, English tomatoes, beer, concrete, paint, and port, have all been the subject of collective advertisement.

The "market" for the advertising industry is tending to widen. Collective advertising, which was initiated as far back as 1911 by the gas industry and was widely developed after the war, has now attained a certain seniority. More recent entrants to the field have been official and semi-official institutions like the Empire Marketing Board, the Post Office, the "National Mark" organisations (for beef, eggs, etc.), the Milk Marketing Board and the Herring Industry Board. All these, in a sense, are "collective" advertisers. All have something to sell, and all have exploited modern advertising methods with powerful effect.

The permanence of advertising as an ancillary of modern industry seems assured, so long as consumers retain their idiosyncrasies of taste and freedom of choice. It is the resultant of many factors, including the Education Acts, the wider spread of post-war incomes, and the elevation of many former luxuries and "instruments of leisure" to the rank of "conventional necessities." Its objective is to overcome the conservatism of the average consumer, and then to make that conservatism its most powerful ally. Once a well-advertised product or a "brand" has become a household word, its producer enjoys a quasi-monopoly; but he retains it only by further advertising, by maintaining quality, and by selling at a competitive price.

FRANCE'S COLONIAL MARKETS

(BY A CORRESPONDENT)

TO-DAY France possesses the second biggest Empire in the world. Unlike Great Britain, however, France has only in recent years begun to pursue a systematic policy for the economic development of her colonies. French colonial economic policy is indeed the child of the economic crisis. The collapse of French exports to foreign countries has emphasised the importance to France of the development of trade with her colonies, where she is in most cases allowed preferential treatment. Since 1929 French goods have been progressively excluded from the world market, and so far French exports have not shared in the recent revival of world trade. While total French exports have declined during this period by two-thirds, however, exports to the colonies have only been reduced by one-third. The proportion of French exports going to the colonies has therefore risen from year to year, amounting in 1929 to 17.9 per cent., in 1931 to 24.1 per cent., in 1933 to 32 per cent., and in 1935 to 32 per cent.

The following table shows the development of France's trade with her colonies.

(In million francs)							
	1929	1930	1931	1932	1933	1934	1935

Syria	74	62	43	33	28	28	23
Total Exports	50,139	42,835	30,463	19,705	18,474	17,850	15,472
of which to							
Algeria	4,500	4,563	3,976	3,270	3,309	3,083	2,578
Tunis	1,006	915	800	754	665	618	567
West and Central Africa ..	677	633	334	258	215	223	282
Indo-China	1,013	896	537	462	434	449	438
Madagascar	249	260	222	221	189	189	184
Morocco	1,291	1,110	881	721	585	465	415
Syria	179	163	156	147	142	103	85

France's trade with her colonies has suffered considerable fluctuations, and both the import and export figures have fallen, owing partly to the fall in raw material prices on the world market. But as the fall in the prices of those materials produced in French colonies was relatively less than that in other primary-producing countries, the proportion of French trade with French colonies has risen.

The relative stability of French exports to the colonies has been of particular importance to France in the depression years, for 60 per cent. of French exports to the colonies are manufactured goods and these are the goods which have suffered most severely in the export markets in the depression. The colonies take 40 per cent. of total exports of manufactured goods. An analysis of French exports to the most important colonies—Algeria, Tunis, West Africa, Madagascar, Syria, etc.—shows that the commodities taken in the largest quantities by the colonies are cotton goods, perfumes and soap, metal manufactures, silk goods, pharmaceutical products, machinery and motor vehicles—all of which are articles containing a large proportion of French labour. A recent analysis of French exports published by Pierre Jeramec shows that industries which before the war accounted for the major part of French exports—textile and luxury industries—are precisely those which have been hardest hit by the crisis, while the "new" export industries, those working on mass production lines, have fared better. The French colonies have always been good customers of the "old" export industries. Not many figures are available about these industries, but estimates made by the President of the Roubaix Chamber of Commerce show that in 1934 28 per cent. of the output of the cotton industry went to the colonies, and only 3 per cent. to foreign countries. For the perfumery and soap industry and for the pharmaceutical industry also, the colonies form a very important part of the market. Trade with the colonies has thus been a stabilising influence for French industry, and has to that extent mitigated the effects of the depression.

The stability of French exports to the colonies is mainly a result of the preferential treatment France enjoys in these countries. The French colonies can be put into three classes in their commercial relations with the motherland. First, there are the "assimilated" colonies into which French goods enter duty-free. These include Algeria, Madagascar, Réunion, Martinique, Indo-China, Guadeloupe, Guiana and New Caledonia. In these colonies, which form an integral part of France's tariff system, French goods are treated in the same way as if they were being sent from Tourcoing to Toulouse. The second group contains those colonies which grant preferences to French goods. These are the Protectorates of Tunis, West and Central Africa, Oceania and the New Hebrides. Here French exporters derive advantages of various kinds. Of these benefits some measure is given by the tariff system of French Africa, under which French goods pay *ad valorem* duties averaging from 5 to 7 per cent., while foreign goods are taxed about 12 per cent. The third category includes the mandated territories—Syria, Togoland and the Cameroons—and the Protectorate of Morocco, in all of which foreign goods have to be allowed to enter on equal terms with French goods by international treaty. With one or two minor exceptions, therefore, these countries are under an "open-door" system. In the colonies giving preferences, the proportions of total imports coming from France in 1929 and 1934

respectively were in Algeria, 77 and 82 per cent.; in Tunis, 65 and 75 per cent.; in Indo-China, 47 and 58 per cent.; in West Africa, 50 and 50 per cent. In the "open-door" territories, on the other hand, the proportion sank between 1929 and 1934, in Morocco from 47 to 39 per cent.; in Syria from 17 to 15 per cent. Figures for the year 1935 are only available for a part of the colonial trade, but on the whole there seems to have been a reduction in the French share of the total trade with French colonies compared with 1934. The proportion of Algerian imports coming from France rose, it is true, to 87 per cent.; but the corresponding proportions for Tunis, Indo-China and Morocco fell to 70, 50 and 36 per cent. respectively.

The French share of imports into certain assimilated territories, such as Madagascar, Réunion, Martinique, etc., has also fallen. But in these territories French trade has already acquired a dominating position. Col. Mornet recently estimated that purchases of French goods per head in Martinique, Réunion, Guadeloupe and Algeria amounted to 1,100 francs per annum: whereas in Tunis similar expenditure only reached 500 francs; and in Senegal only 300 francs. According to Col. Mornet, the expansion of France's colonial markets depends principally on their economic development, which is calculated to increase the purchasing power of the populations. He pointed out that much remained to be done in this direction. Indo-China, for instance, possesses fewer railways than Siam, though it is larger in area. France owns one-third of Africa; one-quarter of the population; and one-fifth of the railways of that continent. While the British colonial Empire contains 220,000 km. of railway, the French Empire includes only 15,000 km. The shipping and harbour position is the same. The French merchant fleet, which maintains trade with the colonies is technically out of date. (A few modern ships for the Algeria service, for the transport of bananas, and certain cold-storage ships have been constructed in recent months.)

But French colonial circles feel that the Mother Country has stinted the colonies of resources for development. Public colonial capital issues in France have increased almost fourfold since 1929. In 1929 they amounted to Frs. 414 millions, and to Frs. 1,533 millions in 1934. On the other hand, private issues for colonial companies have fallen from Frs. 1,493 millions to Frs. 206 millions in the same period. An important colonial conference which took place a few months ago worked out an elaborate plan, which has been accepted by the Government, for the economic development of the colonies. But what is needed by the colonies for this development is not so much the approval and blessing of the State as plenty of private enterprise and initiative. The growing importance of the colonies as a profitable outlet for French industry makes such enterprise an urgent necessity.

THE SUPREME COURT ONCE MORE

(BY OUR WASHINGTON CORRESPONDENT)

THE decision of the Supreme Court that the Minimum Wage Law for Women in the State of New York is unconstitutional has suddenly damped the national, almost mystic, reverence of the public for the Court. Its finding against the N.R.A. was widely popular. The nullification of the A.A.A. was considered a hardship, but possibly a necessary price for the defence of local government against over-centralisation. The ruling against the Guffey Coal Act had been a foregone conclusion. But the veto of the New York wage law has suddenly thrown doubt on the Court's ineffable inspiration. Constitutional law is a web of complexities, into which are woven the personal opinions of judges during a century and a half. The vital question arises repeatedly whether the precedent of interpretation or the simple doctrine of the original document are of greater importance.

In 1923 the Court threw out a minimum wage law for women in the District of Columbia. This was the stumbling-block in the way of the justices this year. The New York law and the District statute were not as alike as two peas, but it would have strained consistency to uphold the one after annulling the other. Justice Hughes was

E X P O R T

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped for transit abroad, is the subject-matter of *A Brief Survey of the Financial Machinery of Exports and Imports*, copies of which may be had by asking at any local branch of the Westminster Bank

WESTMINSTER BANK LIMITED

41 LOTHBURY, LONDON, E.C.2

willing to apply the strain, and in his dissenting opinion argued, in effect, that the two peas were definitely dissimilar. Justice Stone, however, wished to leap over the stumbling-block altogether, and to base an opinion on quite another precedent. This was the most inviting Nebbia decision, which declared: "So far as the requirement of due process is concerned, and in the absence of other constitutional restrictions, a State is free to adopt whatever economic policy may reasonably be deemed to promote public welfare and to enforce the policy by legislation."

When the Court rules that control over social conditions by the Federal Government is impossible, since it invades the rights of the States, the average layman may agree. State legislation, however cumbersome and uncertain, is preferable to anything that looks like a drift towards a totalitarian super-State. But it is a different matter when the Court kills a State law regulating wages for women on the ground that it violates the right of contract and so infringes the due-process clauses in the Constitution. Its action then appears, not as the defence of State rights, but as the negation of any sovereignty whatever in a vital range of modern industrial life. President Roosevelt's careful description of the opinion was to say that it left a "no man's land." This was far more circumspect than the dissenting opinion of Justice Stone, who hurled this paragraph at his colleagues in the majority: "It is difficult to imagine any grounds, other than our own personal economic predilections, for saying that the contract of employment is any the less an appropriate subject of legislation than are scores of others, in dealing with which this Court has held that Legislatures may curtail individual freedom in the public interest."

To say that Washington was shocked by the decision, is no exaggeration. The majority opinion was roundly denounced in private by conservatives and liberals alike. The only delight evoked was from the professional feminists, who objected to the New York law because it "protected" women and thus singled them out for regulation in defence of their theoretical equality as citizens. William Allen White, closest friend of Governor Landon, thundered: "The Republican Party must not let the Democrats fire the first shot in the battle of human freedom. The Party cannot shut its eyes to the fact that, somewhere in the Government, power should lie which will make this Government an agency of human welfare." As Mr White is chairman of the Resolutions Committee at the Republican Convention, it will be known whether he has succeeded in having the first shot fired, about the time this letter is published. But his challenge takes it for granted that the constitutional issue no longer can be left dormant by the Democratic Party.

It may be incomprehensible to Englishmen, happy in their unwritten Constitution, why Americans should approach this issue so gingerly. They may ask President

Roosevelt himself for the reason. After the N.R.A. decision, confident that the country would be offended, he spoke testily about a return to the "horse and buggy" era. But the country did not respond. It was not wroth over his words; it was simply moribund. From that moment the President determined, one may imagine, that he would not raise the issue either of the Constitution or of the power of the Supreme Court. Instead, he would wait—to put it bluntly—until death permitted him to nominate more liberals to the highest bench. Since the Constitution is what the Supreme Court finds it to be, he could bring about its revision in interpretation, if not in text. That would avoid any offence to American susceptibility over attacks on either the Constitution or the Court. An amendment, on the other hand, whatever powers it extended to the Federal Government, was certain to be misconstrued as a drift towards totalitarianism. Of the four "conservatives" on the bench of the Supreme Court, Justice Van Devanter is 77, Justice McReynolds 74, Justice Sutherland 74 and Justice Butler 70. Justice Hughes, who has sided with the conservatives in several instances, is 74, and only Justice Roberts, the "baby" of the Court, is relatively young at 61. Within four years, if the President were re-elected,

he probably could create a more liberal Court which would last well beyond his own second term. This may appear like waiting far too patiently; in fact, it may be the swiftest way to obtain a relaxation of constitutional restrictions. Any amendment would be required to pass Congress by a two-thirds majority, and then to be submitted to the States for ratification by two-thirds—a process which might take years.

With the minimum wage decision, however, the Supreme Court has forced its way back to the footlights. Labour, on whom the President must rely heavily, cannot accept a "no man's land" where its economic interests cannot be protected. Nor is labour alone in demanding action at the Democratic Convention in Philadelphia. All elements which have worked for reforms through legislation will urge the Party to take a stand. The seventeen States which have similar laws to the New York Minimum Wage Act wish to save them. And the Democrats can hardly evade the issue. If Mr Landon is to be judged by his friend William Allen White, the Democrats will not be alone in criticising the Court. There may be no amendment for years to come, but the prestige of the Court has fallen heavily. Its halo is displaced and awry.

NOTES OF THE WEEK

The Budget Leakage.—The Budget Tribunal's report has had immediate repercussions both in the City and Parliament. First, Mr Alfred Bates, who was held by the Tribunal to have used for private gain unauthorised information given him by Mr Thomas, offered to refund the claims paid to him by Lloyd's underwriters. The net amount was £10,750, and the underwriters have decided to accept the offer. On Saturday the Committee of Lloyd's appealed to all underwriting agents "not to accept purely speculative risks without first satisfying themselves that the assured has a legitimate interest in the covering of such risks nor without requiring the name of the assured to appear in the slip." The Committee also propose to keep a permanent sub-committee from which underwriters may obtain a ruling on doubtful cases. These provisions should certainly go far to obviate the necessity for legislation. The whole matter, however, clearly required discussion in the House of Commons, as was freely admitted by Sir John Simon in reply to Opposition questions on Tuesday. Whether a debate was possible, however, depended on the Attorney-General's decision on the advisability of criminal proceedings; and he announced in the House on Wednesday that there would be no prosecutions. The principal reason for this decision was that the evidence would be insufficient to secure convictions under the relevant Acts. On Thursday both Mr Thomas and Sir Alfred Butt made personal statements to the House in which they reiterated their denial of any conscious disclosure of official secrets, but announced their decision to resign their seats. Sir Alfred Butt complained that he and Mr Thomas had been condemned by a Tribunal from which there was no appeal and that they had not been granted a trial. Mr Baldwin, speaking subsequently on a motion to "consider and accept" the Tribunal's findings, said that the impartiality of the Tribunal was beyond challenge and that the House "had no course but to accept it." With this there will be general agreement. But though the decision not to prosecute is endorsed by legal opinion, the man in the street will think it odd that after the Tribunal's report there should be no prosecution, and that the persons concerned should not be given an ordinary trial. In the circumstances, however, it is difficult to see what other course could have been followed; and the debate in the Commons may be taken to be the end of a thoroughly unhappy business.

A Tariff Innovation.—Late on Tuesday night, in the committee stage of the Finance Bill, Dr Burgin, Parliamentary Secretary of the Board of Trade, opened discussion of Clause 6, Sec. 3, under which power to alter duties

on certain iron and steel goods is proposed. On this occasion Mr H. G. Williams led an impressive attack upon procedure which, he alleged, without any adumbration by the Government in the Budget speech or the Second Reading of the Bill, would enable the British Iron and Steel Federation to secure the benefit of the lowered duties on these goods to associated members of their organisation, and would involve discrimination in favour of imports from the Steel Cartel countries, thus forcing this country to infringe the most-favoured-nation clause. Dr Burgin, replying, admitted that the Federation and the Cartel between them could alter the list of goods; and he read an undertaking given by the Federation which ostensibly guaranteed equal treatment to all British importers, but included the following doubtful passage—"membership of affiliated associations shall be open to all firms who are eligible under their rules and willing to observe them." An impressive all-Party phalanx, including Sir Percy Harris, Mr Lees-Smith, Sir Francis Acland, Mr R. C. Morrison, Mr Pethick-Lawrence, Mr Michael Beaumont, and Mr Attlee tried to secure postponement of the debate, but the Deputy-Chairman ruled that the clause must be passed or rejected. Eventually, Dr Burgin was compelled—and he himself expressed his desire to do so—to lay the Federation's undertaking before the House and promise a half-day debate on the whole matter at an early date. Representatives of all parties showed themselves anxious about a procedure which would allow important economic interests, rather than Parliament, to fix and alter tariff rates, control liberty of trading, and so entrench themselves in a position of unchallengeable economic monopoly. The iron and steel industry's return in exchange for protection has been, not reorganisation, but the seeking of powers to import more iron and steel goods from "Cartel" countries and to vary duties—downwards for the present, but also upwards. This innovation in fiscal practice might only too easily render the costs-basis of our industrial structure subject to the arbitrary decision of a monopoly.

The Republican Convention.—Amid the traditional blare of bands, and amateur pageantry intended to symbolise the various "favourite sons," the Republican National Convention opened in Cleveland, Ohio, on June 9th and entered its first phase—the sounding of the "keynote" by Senator Steiwer of Oregon. The second phase is the drafting of the "platform"; and the third, the choice of the candidate. The chief contest promises to centre about the platform, which must attempt

to reconcile the profound, and in instances, bitter differences of conviction which separate the various sections of a heterogeneous party of opposition, without becoming diluted into pure platitudes. For example, the most concrete passages of the Keynote speech re-affirmed the ancient faith in high protection and denounced Secretary Hull's reciprocal trade agreements; yet among the Eastern Republicans some of the most irreconcilable opponents of the New Deal make a solitary exception in favour of those same agreements. The candidate indicated is Governor Landon, of Kansas, who at the outset claims 481 of the 1,001 delegates, with the rest divided and split. For many months it has been conjectured that Republican strategy might include an effort to attract the support of the so-called Jeffersonian (anti-New Deal) Democrats; and it has even been suggested that it would go as far as to offer the Vice-Presidential nomination to a representative of that group. The opening hours of the Convention have not disclosed the slightest gesture in that direction. It is increasingly probable that the form of the Republican campaign will be shaped by the personality of the candidate and will be largely improvised. There is no corpus of Republican party doctrine; and there is little party loyalty except among the professionals. At the moment the Republicans can hardly go further than an opposition of negation—they can invite to their Cave of Adullam every "out" with a grievance against the "ins"—which is not unlike the historic position of the Democratic Party. In the summer of 1932 mere denunciation of the "ins" would have been sufficient to overturn the Party charged with responsibility for the depression. In 1936, a prosperous electorate will hardly be so responsible to negation; but no positive programme should be sought in the proceedings of the Convention or in the platform there adopted. If it is to appear at all, it will evolve later.

M. Blum Acts.—On Friday of last week, M. Léon Blum broadcast an announcement that he was proceeding to lay Bills before the Chamber providing for a 40-hour week, collective labour contracts, and 14-day paid holidays. Thus the chief grievances of the "stay-in" strikers were promised immediate redress. The new Cabinet met in the evening of last Friday, and unanimously approved M. Blum's Ministerial Declaration, which promised the introduction of Bills on Tuesday providing, in addition to the features mentioned above, for a political amnesty, raising of the school-leaving age, reform of the statute of the Banque de France, nationalisation of war industries, a public works scheme, revision of those Laval *décrets de misère* which press upon civil servants and ex-soldiers, and an Office to valorise wheat, wine, meat, milk, etc. M. Blum's Declaration also promised a further batch of Bills providing for revision of agricultural debts, pensions for older urban workers, and the simplification of taxation; and he promised that new resources of taxation would only be sought in "acquired fortunes," the prevention of fraud, and a general recovery of taxable capacity. M. Blum, in presenting this ambitious programme, called for the full authority of Parliament in the name of an effective democracy, pledged to oust corruption and to bring positive achievements; and he received 384 votes—a majority of 174 over the opposition. Where the money is to be found was not stated in detail; so prospects of devaluation have increased rather than diminished. In fact, the programme seems to have rendered devaluation inevitable; for it is calculated that the 40-hour week alone must raise French costs prodigiously. Last Saturday, as an earnest of M. Blum's intentions, he removed M. Tannery from the Governorship of the Banque de France and appointed M. Labeyrie, Procureur-Général at the Cour des Comptes, to the post. (This appointment, and the repercussions of M. Blum's programme upon the franc, are discussed in Financial Notes on page 613.) Finally M. Blum declared himself against any "monetary coup d'Etat," such as devaluation of the franc—or, as it is now generally termed in nearly all political circles, "alignment of the franc." How M. Blum expects to lure French capital out of internal and external hoards with such a programme, which renders French costs

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

Sums assured by new, paid-for Life Assurance policies issued during 1935 in Great Britain and Ireland total

£5,500,000

Total Assurances in force at November 15th, 1935, in Great Britain and Ireland

£69,500,000

H. O. LEACH (General Manager), 2, 3 & 4 COCKSPUR ST., LONDON, S.W.

more out of alignment than ever, is a riddle we cannot pretend to solve. M. Blum put forward his programme in the name of the Front Populaire; and the Communists in that Front, though they voted for him, are still against, while the Right and Centre are for, devaluation. M. Blum has chosen a difficult and dangerous row to hoe.

—And France Wonders.—A kind of stupefaction followed the tabling of the first block of M. Blum's new Bills on Tuesday. Some of the "stay-in" strikers still stayed in—testifying to the spontaneous nature of the strikes; and as we go to press many remain on strike in various parts of the country, though the action of M. Blum has met most of the men's demands. Negotiations are proceeding with employers, who say the 40-hour week will put business out of their reach; some Radical members of the Popular Front are supporting them; and the textile employers sent a deputation to M. Blum on Tuesday demanding a subsidy on exports and higher protection—a demand which bears an ominous similarity to Dr. Schacht's "new plan," and emphasises the dangers of an attempt to maintain the franc at a level which current legislation must render more over-valued than ever. M. Blum also issued a decree on Tuesday which places M. Daladier, Minister of National Defence, in supreme control of all three Services, and makes him President of a new Permanent Committee of National Defence. He is given supreme authority to co-ordinate all three Services with special reference to the re-armament programme, mobilisation of industry, and the allocation of Defence Votes. A beginning with the purge of "unreliable elements" has been made by the supersession of one or two officials in various services. Surely nothing quite so sweeping and expeditious as M. Blum's programme has happened in a European democracy since the war. Most of his reforms are familiar features of English life, and long overdue in France—which may account for the wide measure of popular support accorded him. The only danger is the old one, which must still dog his footsteps: the over-valuation of the franc. If he can finally clear away that danger without involving France in the toils of exchange restrictions and general control of all trade, as in Germany, he will have effectively set France on the road to recovery at last.

Uproar in Palestine.—There are now seven battalions of British infantry in Palestine, besides a detachment of the Royal Engineers and a unit of armoured cars. Still the uproar among the Arab population shows no signs of calming down. This was the burden of Mr Ormsby-Gore's first declaration in the Commons as Colonial Secretary. Attacks on Jews, on motor-omnibuses and on railway lines

continue; and in the countryside, even within close range of the towns, there have been miniature battles between the British troops and the armed bands of Arab insurgents. The strike of Arab workers goes on; the threat of a strike of municipalities is gathering head; and there is a spontaneity about the whole movement at this stage which makes it very difficult to suppress it even by the expeditious course of arresting and interning the strike leaders. At the same time, there has been one move on the Arab side in the direction of a settlement by negotiation. Last Sunday five authoritative members of the Higher Arab Committee—including the Mufti of Jerusalem and the Mayor—paid a visit to Amman, the capital of Transjordan, to discuss the situation in Palestine with the Amir Abdullah, prince of the Transjordan Arab State. The Amir is reported to have asked his visitors whether they were in a position to call the insurgents to order. They are said to have replied that it would be hopeless for them to make the attempt unless they were able to promise their people some definite concession to their demands. The minimum concession on the strength of which they would be prepared to act would be a suspension of Jewish immigration into Palestine during the period that will be occupied by the inquiries of the proposed Royal Commission. Jewish immigration was, in fact, suspended at the time of the disturbances of 1921 and of 1929—and these are certainly precedents. But the practice of conceding to violence a demand that falls on deaf ears so long as all is quiet is not, after all, one that becomes reputable just through repetition; and the British Government has already made concessions enough to violence in the international sphere. At the same time, the fear which is driving the Arabs frantic is that of seeing the Jewish element in Palestine still further strengthened in numbers, wealth and power up to a point at which the Jewish will quite overshadow the Arab community. Is our objective a Jewish Palestine with an Arab minority? Or is it a bi-national Palestine in which the two nationalities are stabilised at an even balance? It is high time for us to declare our policy.

* * *

Dr. Schuschnigg Visits Italy.—Last week Dr. Schuschnigg paid a flying visit to Italy, which included a two hours' meeting with Signor Mussolini at the Duce's Romagnol country seat, Rocca delle Caminate. The meeting is reported (though this is perhaps no more than common form) to have been satisfactory to both parties. We may judge that the Head of the Italian State has made up his mind to support the Austrian Chancellor against his obstreperous ex-colleague, Prince Starhemberg. Probably this decision flows from a number of considerations: a belief that Dr. Schuschnigg is a more serious person and a stronger personality than the rather showy leader of the Heimwehr; a calculation that Dr. Schuschnigg's supporters are a larger and more solid element in the population of Austria than are Prince Starhemberg's; and, last but assuredly not least, a conviction in Signor Mussolini's mind that, when a dictator and one of his henchmen fall foul of each other, the dictator ought to have the last word, while the henchman ought to give a good example of discipline. These unpalatable views of the Italian dictator's were no doubt impressed upon Prince Starhemberg himself when he was in Italy after his fall from power in Austria; and although he does not seem to have obeyed with complete meekness Signor Mussolini's exhortations to him to behave like a good boy, he will assuredly think twice before he shows fight against Dr. Schuschnigg, now that he knows for certain that the Austrian Chancellor has the Italian dictator behind him. But what is Austria to do if Italy resigns from the League of Nations, or is expelled from it? Is she to follow suit, and thereby forfeit all claim on any country except Italy for support in the present Austrian Government's struggle against absorption by Germany? Or is Austria to cling to the League at the cost of allowing a rift to appear in her solidarity with her present Italian patron? More serious still, what is to happen to Austria if Italy retorts to an implacable League by seeking a rapprochement with Germany? Can Italy and Germany, and will they, do a deal with each other at Austria's expense? Dr. Schuschnigg seems to have envisaged this in his conciliatory speech on Tuesday, when he promised an amnesty

to political prisoners, and held out a hand to Herr Hitler. It is evidently as difficult for Signor Mussolini to acquiesce in the *Anschluss* as it is for Herr Hitler to renounce it; and, for our part, we believe that the possibility of an Italo-German entente will be paraded as a bogey without being easily turned into a reality. Nevertheless, if we had the misfortune to lie in Dr. Schuschnigg's bed, we fancy this bogey would prevent us from sleeping sound o' nights.

* * *

Dr. Schacht on Tour.—Dr. Schacht is on a visit to the capitals of Central and South-Eastern Europe, where he is to have conversations with the respective Central Bank governors. His visit emphasises the importance of Germany's trading policy, which, under his hands during the last three years, has resulted in enormously increased German imports of agricultural products and raw materials from these countries, the proceeds of which promptly became "blocked." Thus, these countries could be forced to liquidate their "blocked marks" by taking German manufactures, at prices 30 to 40 per cent. above those of British, French or Czech products. Germany now owes Hungary and Yugoslavia for agricultural products about Rm. 25 millions each; she is in arrears to Roumania for heavier purchases of petroleum; a few weeks ago it was calculated that she owes the Greeks about Rm. 40 millions; finally, whereas Germany took 26 per cent. of all Bulgaria's exports in 1932, this figure rose to 36 per cent. in 1933 and to 48 per cent. last year, and this year it is expected to reach 60 per cent. Already in Athens and Bucharest strong counter-moves are being demanded against this German procedure, which many observers in Central and South-Eastern Europe have not scrupled to call "economic expropriation for political purposes"; and the same feeling is evidenced by the insistence of the Little Entente States on their essential unity of interests. M. Titulescu has concluded agreements with the French to increase Roumanian oil exports to other markets than the almost exclusive German market; and the Greeks are beginning to take measures to obviate the necessity to pay 25 or 33½ per cent. more for German goods—forced on them by earlier German imports from Greece that went without payment—than they need have paid. The Jugoslavs have hinted that they will limit their exports to Germany so as to reduce their growing dependence on the German market. They may even demand a gradual repayment of arrears, over and above imports to the value of their current exports to Germany. The conference of the heads of the three Little Entente States—King Carol, Prince Paul and Dr. Benesh—in Bucharest on Sunday must have considered the political after-effects of Dr. Schacht's ingenious scheme for increasing Germany's trade at her clients' expense, reckoned both materially and politically. The Roumanian and Greek National Bank authorities are shortly to meet, and it may be conjectured they will consider the same problems. Whether Dr. Schacht is intent on driving hard trade treaties with Germany's small creditors (themselves mostly debtors on international account), or whether it is all part and parcel of Germany's long-range European policy, Dr. Schacht is not likely to find the going easy on his triumphant tour.

* * *

Alarums in the Far East.—The sensational news of the last few days from the Far East has been the Canton Government's "declaration of war" against Japan. The Japanese have probably received the news with equanimity, if not with positive satisfaction; for the military danger to themselves, if there is any at all, is certainly not pressing, while on the other hand this Cantonese gesture gives the Japanese militarists an opportune excuse for extending their encroachments upon Chinese independence to China's furthest extremity. It is not impossible that the year 1936, like the year 1926, may see a Southern Chinese army make a triumphal progress from Canton to the Yangtse; for the Southern Chinese are one of the most forceful and energetic branches of their race. Ten years ago, it was President Chiang Kai-shek's rôle to sweep away the War Lords of the Yangtse Basin in the name of the Kuomintang. This time the President himself will be cast

for the part of the effete War Lord, while the Southerners on the war path will no doubt proclaim that they are fulfilling the mission which their predecessors failed to carry out. The immediate result will be a military collision, not between Chinese and Japanese, but between the rival Chinese centres of political power at Canton and Nanking. This familiar calamity, if it does recur, will enable the Japanese to inform an embarrassed Chiang Kai-shek that they are now so thoroughly convinced of his "sincerity" that nothing will deter them from chivalrously, and zealously, coming to his rescue. A recrudescence of armed conflict, at this stage, between South and Central China might thus greatly hasten the establishment of a Japanese domination over China as a whole. This would probably be followed by a collision between Japanese political and British commercial interests in China, south of the Yangtse. Week by week the instability of the Far Eastern situation increases. It is becoming difficult to see how we ourselves can avoid a violent conflict of interests—in which once more British power and prestige will be searchingly tested. Will it again be found wanting?

* * *

Iron and Steel Production.—The latest returns of the British Iron and Steel Federation indicate that the expansion in the output of crude steel was slightly checked in May. Production of steel ingots and castings last month, at 963,000 tons, showed a reduction of 21,200 tons on April but an increase of 109,700 compared with the corresponding month a year ago. The output of pig iron, however, which is still somewhat below requirements, continued to expand. Calculated on a daily basis, production of pig iron last month was 21,300 tons, against 21,000 in April and 18,000 tons in May last year. So far there are no signs that the recent increase in prices is tending to check demand. On the contrary, the pressure for supplies is as strong as ever. The stringency in semi-finished materials appears, however, to be a little less marked, as imports are now substantially higher than a year ago.

* * *

An Employment Record.—The marked improvement in employment during April continued throughout May. According to the returns issued by the Ministry of Labour the number of insured persons aged 16-64 in employment in Great Britain on May 25th reached a new high record at 10,831,000. This is 119,000 more than a month ago and 472,000 more than at the corresponding date last year. The increase from the April figure was in excess of the normal seasonal movement at this time of the year, and was shared by the majority of the chief industries. The number of unemployed on the registers was reduced by 126,188 during the month. The total of 1,705,042 consists of 1,397,755 wholly unemployed, 225,285 temporarily stopped and 82,002 normally in casual employment, and is the lowest figure recorded since April, 1930. The following table shows the incidence of the reduction in unemployment:—

NUMBER OF INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN

	May 20, 1935	April 27, 1936	May 25, 1936
Coal mining	262,879	218,477	216,676
Iron and Steel manufacturing.....	43,310	32,745	30,247
Engineering	90,883	65,908	60,443
Metal goods manufacturing.....	52,921	43,667	39,804
Shipbuilding and repairing	65,916	49,742	45,525
Motor vehicles, cycles and aircraft.....	24,879	16,781	14,772
Cotton	97,474	74,073	70,930
Woolen and worsted	33,037	21,380	21,828
Hosiery	17,338	13,168	10,360
Textile bleaching, printing, etc.	22,055	19,907	17,352
Building	129,860	119,511	103,297
Public Works contracting	118,218	116,501	110,169
Road Transport	38,655	34,320	32,136
Shipping Service	43,543	39,145	35,859
Dock, harbour, etc., service	52,009	51,914	48,042
Hotel, boarding-house service	61,010	65,261	59,387
Distributive trades	214,084	209,662	194,825
All persons registered	2,044,752	1,831,230	1,705,042

Activity in the building industry is being well maintained. Distributive trades, public works contracting, coal mining and the metal trades as a whole absorbed many more

workers. Textile industries showed some improvement, with the exception of the woollen and worsted industries; but even so the position was substantially better than a year ago. All parts of the country benefited from the improvement. The largest reduction in the number of unemployed was registered in the North-Eastern district, which was the only region where an increase was recorded in April. In London and the North-West the decrease in unemployment was substantial.

* * *

Sterling and International Prices.—Wholesale prices are a shade firmer both in England and the United States. The *Economist's* complete British index number has risen by 0.2 per cent., while primary products have risen by 0.4 per cent. In the United States, the complete Irving Fisher index number is unchanged, but primary products have risen by 0.4 per cent. The French index number has now remained unchanged for a month, so that the uncertainties over the franc are not so far affecting the internal price-level. There has been an advance of 0.2 per cent. in German wholesale prices.

Cereals and meat	64.5	73.4	72.0	72.8
Other foods.....	62.2	58.9	58.7	59.1
Textiles	43.7	59.2	58.4	58.0
Minerals.....	67.4	81.7	81.7	80.6
Miscellaneous	65.8	77.8	76.9	77.3
Complete index ..	60.4	70.5	69.8	69.9
1913 = 100	83.1	97.0	96.0	96.1
1924 = 100	52.2	60.9	60.3	60.4

Grain price movements were irregular, but there was a sharp rise in potatoes and beef was dearer. Among other foods, refined sugar is cheaper, but there has been a big advance in butter. In the textiles group, cotton is firmer, but wool, flax and jute have all fallen. Non-ferrous metals are down in price, the decline in tin being very marked. In the miscellaneous group the prices of hides, linseed oil, rubber and sulphate of ammonia all advanced.

1936 AND AFTER

A SURVEY OF BRITISH ECONOMIC PROSPECTS

INTRODUCTION

It is given to few men to see the times in which they live in due historical perspective. We cannot even guess at the events of next year, which, in the light of after-thought, will seem to follow so inevitably from those of to-day. The chronicler of the future will ignore developments which to us appear crucial, and will bring into the limelight of history happenings which have passed almost unnoticed.

The difficulty of seeing the wood while still among the trees is not least in economic matters. Once in a while, it is true, prediction is comparatively easy. In New York in the summer of 1929, for example, it did not demand a great prophetic insight (though it required the courage of heresy) to predict a collapse of the Stock Exchange boom. But even among those who, in that summer, were prophesying a downward turn of the economic curve, how many can claim to have foreseen the depth, the width and the appalling violence of the Great Depression?

These reflections may fittingly introduce an endeavour to look a few years ahead and foretell the future course of business activity. There are indications that the summer of 1936 may be a period of significant changes in the economic conjuncture of the world in general, and of Great Britain in particular. At home, domestic recovery will by midsummer have lasted for four years, almost without interruption. When a period of recovery enters its fifth year it must, judging by past experience, be considered to have passed middle age and to be approaching senile decay. It is true that the sky is still, on the whole, clear, but there are one or two clouds on the horizon which the prudent prophet will watch carefully.

Outside Great Britain there are also signs of change. Prices, with few exceptions, have been rising, and not falling, recently, almost everywhere in the world. The effort of deflation has been tacitly abandoned even in the gold bloc countries, and it may not be long before those nations draw the logical conclusion and devalue their currencies. The prospects for international trade, as such, cannot possibly be described as bright. But there is at least some reason for thinking that by the end of 1936 the last outposts of deflation will have surrendered and that recovery will have spread to every country in the world. For four years Great Britain, so far, at least, as the tempo of her recovery is concerned, has been the foremost performer in the international orchestra. Are we approaching a period when the tempo will be *rallentando* in this country and, possibly, *accelerando* in many others?

In the following pages we discuss the varying elements in Britain's economic outlook at greater length than is possible in our *Monthly Trade Supplement*. Of prophecy the reader will find little. Of the materials for prophecy, it is hoped

that he will find enough to enable him to form his own opinion. Of one large hazard, however, no account is taken: the possibility of a European war. The economic effects of a war would be far-reaching and, in the long run, disastrous. But the avoidance of those effects is not a matter for economic analysis. It is a matter for Faith, Hope and Charity.

INCOME OR EMPLOYMENT?

At the outset, it may be well clearly to define our terms. What is the criterion of an improving economic position? The classical economists would have answered, without hesitation, "a rising average real income"! Virtually all economic literature in our grandfathers' and even in our fathers' day was unconsciously founded upon that assumption, though politicians may have had other preoccupations. It was only in the first decade of the present century, however, that a full volume of employment achieved equality of status with a rising real income as a criterion of economic efficiency. Since the war we have perhaps swung too far in the opposite direction. There is a tendency to-day, among politicians and economists, to concentrate upon the reduction of unemployment, even at the cost not merely of the real income of those already employed but also of the average real income of the whole population. There are obvious dangers in such an undue concentration upon employment. Carried to its logical extreme, it would lead a country deliberately to seek out inefficient methods of production in order to employ a larger proportion of its labour force in producing the essential minimum of income. Certain Government policies, both in our own and in other countries, in recent years have not been far removed from this objective.

Completely to neglect the volume of unemployment, on the other hand, and to concentrate on average real income per head, is an utterly unrealistic method, which might leave our own Government unduly complacent with the state of Great Britain in the last few years. In the circumstances, accordingly, we have chosen as our criterion of economic improvement a reduction of unemployment, with the caveat that it must not be secured through the agency of a sharp fall in real incomes in the lower income-classes. Some rise in prices there will almost certainly be in the course of recovery. If we say, however, that real wages must not, in the process of recovery, fall below the pre-depression level, we shall probably err on the safe side. Average real income remains the only true long-term test of economic progress, but for a short-term survey we may safely rely on unemployment statistics.

Our first task, then, will be to analyse the existing volume of unemployment into its component parts.

THE STRUCTURE OF UNEMPLOYMENT

The most obvious, and the most neglected, fact about British unemployment is its striking lack of homogeneity. Some industries are prosperous; some are even very prosperous; others are extremely depressed. Some areas have comparatively little unemployment; others have an oppressive proportion. The regional disparity, in particular, is most significant. Of the eight regions into which Great Britain is divided for the purposes of the labour statistics,

it happens that the four with least unemployment (London, the South-East, the South-West and the Midlands) contain almost the same total of insured workers as the four depressed regions (the North-East, the North-West, Scotland and Wales). In July last, the former group contained 6,421,000 insured workers (employed and unemployed together), while the latter group contained 6,206,000. So far as the working population is concerned, these two

groups may thus be considered as two equal halves of the country. But the number of insured unemployed in the southern half of the nation on April 27th last was only 539,000, while the northern half had 1,203,000 unemployed. If one or two isolated "black spots" in the southern half—most of them bordering on the northern half—could be transferred, the contrast would be still more striking. It is no exaggeration to say that Inner Britain to-day is the most prosperous industrial country in the world bar none, while Outer Britain is one of the most depressed industrial countries that could be found.

These facts, or their outline, are not unfamiliar to the public. But there has been a strange reluctance to draw from them the obvious conclusion that unemployment in Great Britain cannot be treated in the mass as a homogeneous phenomenon. It must be analysed into its component parts before anything useful can be done about it.

There are two possible methods of sub-dividing the unemployment total. One would be to divide it according to the nature of the industries in which it occurs. For example, we might differentiate all trades according as they produced mainly for the home market or were dependent for their prosperity on the activity of the export market. An alternative method would be to split the total into portions assigned to different causes of unemployment. A certain minimum of unemployment is inevitable at any time, due to the normal turnover of labour, the existence of a margin of unemployables, and other similar causes. We may, with pardonable optimism, call this "Normal Unemployment." But the residuum of abnormal unemployment may be due to two causes. It may result from the temporary depression of a trade cycle, or from a more fundamental maladjustment of the labour supply, as a result of which large pools of unemployed workers have become attached to industries which have shrunk in size. Men in the second category will not regain their jobs through a revival of internal demand. They can be re-employed only through the removal of the special causes that have thrown them out of work, or by the slow processes of training and transfer. The former category of unemployment we may call "Cyclical." To the latter may be affixed numerous descriptive labels, none wholly satisfactory, such as "Special," "Frictional," "Evolutionary," "Dynamic," "Fundamental," etc. Throughout the present survey we propose to use the term "Special Unemployment," which, being analytical rather than explanatory, is least open to controversy. Here, then, we have a second list of unemployment categories. Our next step should be to see what light statistics can shed on the present position of British unemployment by these classifications.

"HOME" AND "EXPORT" TRADES

To divide the unemployed between, say, home and export industries is no easy task. Of the 100 trades distinguished in the unemployment returns, few can be placed without hesitation into either category, and any listing must necessarily be arbitrary. But an approximate classification reveals that on April 27th the total number of unemployed in "home" industries was about 1,139,000, or 12.2 per cent. of the insured workers in these trades. In the "export" industries, on the other hand, the number of unemployed workers was then 668,000, or 17.8 per cent. of the insured workers in these branches of activity.

These figures provide only the most approximate guide to policy or prospects. They suggest, nevertheless, that the experience of the export trades of Great Britain has stood out in strikingly unfavourable contrast to that of the industries catering wholly or mainly for the home market. The picture, however, is blurred, for it ignores entirely what has come to be known as secondary unemployment, due solely to somebody else's unemployment. This can be readily illustrated. On April 27th last, the percentage of insured workers unemployed in the Distributive Trades (a "home" industry *par excellence*) in the different geographical regions was as follows:—

UNEMPLOYMENT IN THE DISTRIBUTIVE TRADES			
	%		%
London.....	6.7	North-East	13.3
South-East.....	6.4	North-West.....	15.1
South-West	8.1	Scotland	15.8
Midlands	7.7	Wales	20.5

These figures show quite plainly that the primary unemployment of the depressed areas, which is notoriously associated with the malaise of the export industries, causes an unduly high proportion of secondary unemployment in those areas, even in industries which are not directly concerned with the export trade. In any thorough analysis of the causes of unemployment, shop assistants in County Durham or Glamorganshire must be included, equally with coalminers, under the head of "unemployment caused by loss of export markets." But a basic division of unemployment by industries cannot possibly make such distinctions as these.

THREE KINDS OF UNEMPLOYMENT

We are therefore thrown back upon the second line of approach, that of distinguishing unemployment according as it is Normal, Cyclical or Special. Normal unemployment may be due to a variety of causes. At any one time there are always men *en route* from one job to another. There are always, within each industry, expanding and contracting firms and areas. Beneficiaries from National Health Insurance are omitted from the unemployment returns, but there are grades of ill-health which result in unemployment without involving medical treatment. Seasonal fluctuations and "customary" short-time also cause unemployment. All these are normal unemployment. Its volume can be estimated within reasonable limits. The average percentage of unemployment among trade unionists in the forty years before 1914 was 4.8 per cent. If the ten best and the ten worst years be omitted the percentage was about 4.3 per cent. Normal unemployment at present, however, is almost certainly larger than either figure. Unemployment among non-organised workers, again, is likely to be larger than among trade unionists. In addition, the very existence of unemployment insurance tends to increase normal unemployment; short time is more prevalent and employers are less reluctant to discharge workers. Finally the fringe of unemployables, though they may have qualified for insurance, have almost certainly not attained trade union membership. To include these elements we cannot do less than raise the percentage to 5½ per cent. Even this may well be an understatement, but for our present purposes it may be convenient to put normal unemployment, in any region or period, at that proportion of the total of insured workers.

How are special unemployment and cyclical unemployment to be distinguished? The border-line, which is not always easy to draw in pure theory, is still more difficult to define in terms of published unemployment figures. We may, however, in default of a better method, follow the example of those expert authorities who have studied the question under official auspices, and pivot our analysis on the figures for the best employed area. The South-Eastern region, according to the Ministry of Labour's figures, has the lowest unemployment percentage of any in the country. It contains many prosperous and expanding industries, and, omitting London, it even excludes such "black spots" as the docks. Let us assume that special unemployment in this region is so small as to be negligible for our present purpose. The pre-1929 unemployment percentages for the area are not inconsistent with such an assumption. The annual average for 1927 was 5.0 per cent., for 1926 and 1928, 5.4 per cent., and for 1929, 5.6 per cent. The year 1927 was, in part at least, one of exceptional reaction from the General Strike and the coal stoppage of 1926. Otherwise the averages run very close to the 5½ per cent. at which, for reasons explained above, we have agreed to put normal unemployment. Since 1929, however, the unemployment percentage in this region has risen considerably, and in 1932 it reached 14.3 per cent. We may, therefore, proceed to base our analysis on two assumptions, neither of which is unreasonable: (a) that any unemployment in the South-Eastern region in excess of 5½ per cent. is cyclical unemployment; and (b) that the same proportionate amount of cyclical unemployment is present, at any time, in the other regions as in the South-Eastern region.

The next table shows the resulting figures for the entire country, first, before the onset of depression; secondly,

half-way through the worst year, 1932; and, finally, in July, 1935, after three years of economic revival:—

THE NATURE OF UNEMPLOYMENT

	Normal	Special	Cyclical
July, 1929	644,000	484,000	Nil
" 1932	682,000	1,194,000	894,000
" 1935	695,000	1,074,000	164,000

Our next table sets out the figures for July, 1935, in greater detail.

REGIONAL UNEMPLOYMENT IN JULY, 1935

	Normal	Special	Cyclical
London	136,000	31,000	32,000
South-East	59,000	...	14,000
South-West	51,000	32,000	12,000
Midlands	107,000	93,000	25,000
North-East	114,000	322,000	27,000
North-West	119,000	269,000	28,000
Scotland	75,000	179,000	18,000
Wales	34,000	148,000	8,000

The figures are shown for the month of July each time, for the reason that in that month alone accurate figures of the number of insured workers are available, and it is necessary to compare the same month in each year to avoid seasonal distortion.

PROBLEM OF "SPECIAL" UNEMPLOYMENT

These figures, reinforced by those in our first table, enable certain conclusions to be drawn about the unemployment problem. They show, for example, that the scope for possible further progress by way of general recovery is comparatively small, for the figure of cyclical unemployment has already been reduced to small proportions. This conclusion, it is true, needs to be modified to the extent that transfer is possible. General recovery, after eliminating all existing cyclical unemployment, could, in theory, go on to find jobs in new industries for some of the 1,074,000 persons in the category of special unemployment last July. The possibilities of transfer, if it were energetically fostered, cannot be measured. But the actualities of transfer in the last four years can be approximately ascertained. Of the eight geographical regions, four show an insured population increasing at a faster rate, and the other four at a slower rate, than the average. These differences may be due in minor degree to differ-

ences in population growth, or in age composition. But as the four expanding regions are the four "prosperous" regions, it may be assumed that the divergences are due, in the main, to transfer. The growth of the insured population in the four "prosperous" regions has exceeded that of the four "depressed" regions by 13,000 during the year ended July, 1932, 17,000 in 1932-33, 37,000 in 1933-34 and 38,000 in 1934-35. To show the volume of transfer these figures have to be halved (since "every vote counts two on a division"). It appears, therefore, that transfer has not amounted in the best of recent years to more than 20,000. This figure, of course, takes no account of transfers within the different regions inside the two main groups, which have been of fairly significant proportions.

Considerations of transfer (unless something drastic is done to speed up the process) do not therefore substantially modify the conclusion already reached. Comparatively little can be done to diminish unemployment by further general recovery. The main body of the unemployment problem consists of finding means, other than transfer, to reduce special unemployment.

Special unemployment can, within limits, be associated with the decline of the export markets—though not exclusively, since there is special unemployment in industries which do not export, and some of the unemployment in export industries is due to technological improvements rather than to loss of markets. But it is at least true that unemployment caused by loss of export trade is far and away the largest element in special unemployment.

So far as a further reduction of unemployment is concerned, therefore, we have a small problem of continuing domestic recovery and a large problem of recovering export trade. The two problems are largely separate, and their respective pools of unemployment are not interconnecting, since the junction-pipe of transfer is too narrow to equalise the level of unemployment in the two pools. It should, perhaps, be added that because the scope for further re-employment by means of general domestic recovery is small, it does not by any means follow that the damage done by general domestic depression would be equally small. On the contrary, it could, and would, be very large.

Our next task, therefore, must be to examine each of these problems in turn.

PROSPECTS OF THE DOMESTIC MARKET

THE main causes of British domestic recovery in the last four years can be conveniently listed. They have been (1) cheap money; (2) the release of the pound sterling from over-valuation; and (3) the maintenance of purchasing power by way of reduced food prices unaccompanied by an equivalent fall in money wages. These factors are by this time sufficiently familiar to need neither exposition nor emphasis. All three are still present and likely to endure for some time. Money is still cheap. Some observers may have claimed to discern incipient signs of a hardening tendency recently (e.g. in the gilt-edged new issue market). It is generally agreed, however, that if the Treasury has the will to live up to its expressed desire to maintain low interest rates, it has the means to its hand for making any necessary adjustment in the national credit structure, backed by a greatly increased national gold reserve. Sterling, certainly, is no longer under-valued, as it probably was in 1932-33. It is free to move, however, in the sense that it is no part of the duty of the Exchange Equalisation Account to maintain it at any fixed ratio with gold. Rates of wages and salaries are, on the whole, rising, while the volume of employment is growing. And so far, at least, there has been no very significant rise in the cost of living. Altogether, the purchasing power of the people, after they have provided for food, clothing and shelter, is probably larger now than ever before, and is still rising. The fundamental causes of recovery continue in full operation.

There is, however, one fly in the ointment. A substantial though not overwhelmingly large proportion of additional purchasing power has gone, since 1932, into housing. The housing boom is not the cause, but it is certainly the most notable symptom of recovery. Employment in the building and directly ancillary trades increased by some 250,000 between July, 1932, and July, 1935, while total employment increased by 1,064,000. These figures give some idea of the proportion of domestic recovery that has gone into bricks and mortar.

Housing, from the economic viewpoint, has all the advantages and disadvantages of a capital goods industry. Houses are very durable, and one year's production is only a small fraction of the total supply. A comparatively small variation in the total demand for housing may widely affect the building industry. If demand for new houses were to fall off without a compensatory growth in commercial building, the consequences for British employment would be serious. Though cheap money and ample purchasing power might remain, a sudden increase of unemployment in an industry employing 750,000 people would obviously be profoundly disturbing.

The likelihood of a decline in house-building is a question which has been frequently discussed in the *Economist*. The social need for houses is enormous and could keep the building industry busy at its present rate for decades. But social need and effective demand are widely different quantities. Much the largest constituent elements of the social

need are houses to improve the living standards of the very poor and houses in replacement of obsolescent houses. Of these two, the former depends upon subsidies of public money, while the latter depends upon a realisation by the public that its houses are obsolescent. Under both headings some progress has been made recently, and more is promised; but the volume of national effort is still disproportionate to national need.

BUILDING TRADE PROSPECTS

The demand for new houses in the past four years has come, in fact, to a considerable extent not from the poor, but from middle-class owner-occupiers, from the better-paid clerical and skilled manual workers, and, to a certain extent, from the artisan class. Among all those, in fact, whose circumstances have been more "comfortable" owing to the economic factors mentioned earlier in this survey, there has been a raising of conventional housing standards. Families who formerly rented rooms have moved into separate houses; married sons and daughters living under the parental roof have set up for themselves, and lodgers have become householders. This tendency has been superimposed on the normal demand due to increasing population of "householding age." Consequently, something like a million new families, in the sense of "housing units," have appeared at a time when the increase postulated by a study of birth and marriage rates was hardly a fifth of that number.

It is improbable that there will be any abrupt cessation of this "supercharged" demand, which has been facilitated by the ability of the building societies to advance as much as £440 millions on mortgage during the last four years. That it will indefinitely maintain its recent impetus, however, is most unlikely. If a decline occurred, slum clearance and overcrowding programmes, on the scale at present envisaged by the national and local authorities, would take up only part of the slack. Commercial building, however, is on the upgrade. Some sections, possibly—e.g. the building of new cinema theatres—may not

be capable of maintaining their recent semi-feverish activity. But the continuance of industrial prosperity and cheap money should facilitate the accomplishment of a considerable volume of factory reconstruction, due in part to the overtaking of arrears and in part to the setting up of new factories and the enlargement of existing premises.

If a fall in demand for new houses from those capable of arranging the necessary finance for themselves were to produce a drop in the rate of new building from its present level of approximately 360,000 dwellings a year to an annual figure of, say, 100,000, and slum clearance and overcrowding programmes required no more than an additional 50,000 houses per annum, it would be theoretically possible for the rate of building to fall to less than half of its present level. The upper limit of the possible increase in unemployment directly or indirectly due to this cause would be about 500,000. The actual dimensions of a possible falling off in activity, however, between this figure and zero, will be determined by the extent to which other forms of building develop, and displaced workers can be absorbed in other industries. Since the beginning of this year, in fact, the amount of new building plans passed for dwelling houses has been below the figure of last year. The probabilities are, however, that any progressive decline in building will come slowly, and will not disturb the beneficent trinity of cheap money, cheap sterling and cheap food. Building has so far been only the largest of the recovery industries. In other directions, there are no signs as yet of a check to advancing industrial activity. In particular, the Government's re-armament programme will stimulate the heavy industries, and increase the demand for the products of the more depressed parts of the country. In this respect it may be comparable in its effect, from the viewpoint of employment, with a partial revival in the export trade. What are the prospects of a more permanent recovery in exports, taking a long view? This question provides the subject matter for the next chapter of this survey.

THE INTERNATIONAL OUTLOOK

FEW things are harder to foresee than the trend of exports, but few are more necessary to any view of the future of British employment.

The first point to be noticed is that British exports have increased during the period of internal "recovery" at a more encouraging pace than is usually realised, though their upward trend has been appreciably checked in the last few months. The annexed chart shows the volume of total British exports, and of exports of manufactures, respectively in each quarter from 1929 to March, 1936.

Will this recovery in exports continue? Will it be accelerated or will the check to progress, since the beginning of this year, be accentuated? It is a familiar fact that exports to the Dominions and Colonies have increased more rapidly than exports to foreign countries. It is temptingly easy to draw the conclusion that the increase in inter-Imperial trade was due to the Ottawa Agreements; that the outlook for exports to foreign countries is obscure; and that the only hope lies in increased exports to the Empire. If this argument is correct, prospects are unpromising. It is not difficult to survey the Dominions and the large colonies one by one and to conclude that there is little promise of a very rapidly expanding market for British goods.

The argument, however, cannot bear close analysis. Upon examination it appears that the British countries have taken more goods from the United Kingdom, not because they are British, not because they conferred at Ottawa, but because they are all countries with depreciated currencies and rising price-levels. Between 1932 and 1935 the value of United Kingdom exports to the countries of the British Commonwealth of Nations (excluding the Irish Free State) increased by 31.8 per cent. In the same period, United Kingdom exports to those foreign countries which have

THE VOLUME OF BRITISH EXPORTS

(1929=100)

N.B.—The new Board of Trade indices based on 1930, have been linked on to the old indices, based on 1924.

depreciated their currencies increased in almost precisely the same proportion—i.e. by 29.1 per cent. Exports to the gold bloc currencies, and to those countries which have maintained the value of their currencies by exchange restrictions fell, on the other hand, by 7.7 per cent.

This fact is encouraging, since it shows that wherever recovery takes place more British goods are bought. This general conclusion is qualified by national commercial policies and by the height and impenetrability of the restrictions they impose. But the qualification is of less importance, on a long view, than might be thought. Tariffs are frequently imposed for non-economic reasons and will be maintained even when no economic justification can be put forward. But a very large element in their causation is the economic position. Tariffs, trade and currency restrictions are in the main imposed for economic protection. They were imposed in such profusion in the years 1930-34 because one country after another found itself in possession, not so much of a balance of payments as of an unbalance of payments. The worst excesses of present-day protectionism are a consequence of the disequilibrium which supervened in the world's international economic mechanism after 1928-29. If that disequilibrium can be corrected, the trade restrictions can be expected to diminish—not perhaps sufficiently to restore world trade to its 1929 level, but at least to permit of a substantial increase from the present level. This statement is not pure theoretical surmise; it is corroborated by the hard fact that there is scarcely a country in the world which has started to recover and has not increased its imports.

When, to complete our chain of reasoning, we inquire into the causes of international disequilibrium we find them in many places. But chief among them all is the world-wide fall in prices in the years preceding the crisis. At each stage of our argument we have ignored the minor elements and concentrated on the main thread. But with that qualification we may postulate that, provided the trading policies of the most important countries are not to be solely governed by preparations for the next war, the future of British exports will depend upon the future of the world price-level. World-wide deflation brought our exports low; a world-wide reflation or inflation of prices would at least partially restore them.

THE FUTURE OF WORLD PRICES

What are the prospects for the world price-level? There is no country in the world that has not endured, in the last five years, the rigours of deflation. Even in the countries of Continental Europe which have also had experience of inflation, the miseries of contraction are tending, in the popular mind, to outweigh the perils of expansion. There can be little doubt but that the majority of public opinion all over the world is in an expansionist mood. This, in itself, suggests at least the possibility of a rise of prices.

Pure psychological expansionism, however, is useless by itself. It needs to have a freely increasing supply of money to feed on. These are the two elements of inflation—expansionism and an increasing quantity of money. Either is useless without the other. Expansionism without money causes the short-lived "booms" of a period of declining prices. Plentiful money without an expansionist psychology merely results in stagnant money markets and unremunerative rates of interest. When the two are combined, there is more than a prospect of inflation. We have the expansionist psychology. Have we the expanding supply of money?

In a bank-money country such as Great Britain or the United States, it is not easy to say exactly what constitutes the supply of money. The system by which the banks "create" money means that the supply of money could, within limits, be expanded and contracted to suit the requirements of the moment. Probably, the best measure is to take the quantity of "currency plus the cash basis of the banking system." In countries other than the English-speaking nations, currency can safely be taken as the measure of money.

The cash basis of the banking system can be varied by Central Bank policy. In Great Britain, for example, the Bank of England can vary the amount of the joint-stock bank's cash within very wide limits. But the fundamental

determinant of the cash basis of the banking system, even in these days of management, is the reserve of the Central Bank itself, and that still means gold. With sterling off the gold standard, the Bank of England is more free than formerly to lever the volume of bank cash up and down. But the fulcrum of the lever is still gold. The fiduciary issue of the Bank of England is still fixed at £260,000,000. The Federal Reserve Banks must still maintain a reserve ratio of at least 40 per cent. Central Banks are still as eager purchasers, and as reluctant sellers, of gold as ever. Central Banks have gained a certain amount of freedom of manoeuvre. But it is tactical freedom only; in the strategy of money they are still dominated by gold. An outflow of gold would still predispose a Central Bank to caution and contraction. The possession—and the prospect of retention—of ample stocks of gold will still incline it to encourage expansion, or at least not to hinder the expansionism of the public.

THE WORLD'S GOLD SUPPLIES

The utmost importance, therefore, still attaches to the amount of monetary gold in existence. The facts in this connection are nothing short of startling. Gold production has increased by leaps and bounds in recent years. The estimates of the Union Corporation show that production increased from 19,586,000 fine ounces in 1929 to 31,000,000 fine ounces in 1935. The "record" year, previous to the present boom, was 1915, when total world production reached about 23,000,000 fine ounces. Average production in the decade 1921-30 was about 18½ million fine ounces. Moreover, still higher annual output is in prospect. The probable increase of production in South Africa and Russia alone will lift world production above the 40,000,000 fine ounces mark by 1940.

The increase in output has, of course, been stimulated by the rise in the price of gold. The same rise can be expected to diminish the future demand for gold for use in the industrial arts and for hoarding in the East. Let us assume, however, to be on the safe side, that these two sources of demand continue to take the same number of ounces each year as in the period 1925-29, namely, about 8,000,000 fine ounces. This means that the annual addition to the stock of "monetary" gold may be expected by 1940 to have increased from the 10½ million ounces of 1925-29 to something like 32 million ounces.

An increase in the annual increment, however, would only have a gradual effect unless at the same time there were an increase, from other sources, in the existing stock. There has, in fact, been just such an increase. Gold has been transferred in recent years from non-monetary to monetary uses to such an extent that world monetary stocks have increased from 553.6 million ounces in 1929 to 734.3 million ounces in 1935. These figures include 86.6 million ounces held in semi-monetary hoards in Western countries and also gold in Exchange Equalisation Accounts in 1935, the corresponding figures for 1929 being 50.3 million ounces. The position is, therefore, that the ultimate basis of the world's money has increased by 32.7 per cent., while annual production will soon be sufficient to increase it by a further 4½ per cent. per annum at least. Nor is the increase in monetary gold stocks confined to the United States and France. Omitting those two countries, the world's monetary gold stock has increased from 286.0 million ounces in 1929 to 316.4 million ounces in 1935, or by 10.6 per cent.

These figures as they stand are sufficiently imposing; but they do not, in themselves, tell the full story. For at the same time as the weight of the monetary gold stock has been increasing, its monetary value has been increased by the rise in the ratio of value of gold to money. Very few countries have yet definitely devalued their currencies. Some, indeed, are still protesting that they never will devalue; though their protestations no longer carry conviction. The American dollar has been devalued to 59 per cent. of its former value, the belga to 72 per cent. The pound sterling is currently standing at around 60 per cent. of its former gold value. Let us assume, for purposes of illustration, that when the present period of currency turmoil comes to an end the world's currencies will be devalued

to the average level of 66½ per cent. of their former gold values. This is equivalent to an increase of 50 per cent. in the price of gold. The 553.6 million fine ounces of monetary gold in 1929, at a price of 85s. an ounce, were worth £2,353 millions. The 734.3 million ounces in 1935, at the new price of 127s. 6d., would be worth £4,680 millions. The annual production available for monetary use in 1925-29 was worth about £44½ millions. The annual production available for monetary use in 1940 will be worth nearly £205 millions. In other words, the world's monetary stock of gold has increased since 1929 not by 32.7 per cent. but by 98.9 per cent. Excluding the United States and France, the increase is not 10.6 per cent., but 66.0 per cent.

These figures are most impressive in their implications. They suggest, indeed, that there is a greater unused supply of money, or potential money, in existence now than ever before in the history of mankind. The gold of the Incas which is supposed to have started the sixteenth century inflation, the gold of California after 1848, the gold of the Rand in the 1890's—all these were trifles compared with the increased supply of gold (measured by its monetary value) which has piled up in the last five years. And this piling-up has occurred at a time when the dominant monetary philosophy is one of expansion. Unless the lessons of all monetary history are falsified, a very large rise of prices is in prospect. But when? And how?

Given that the circumstances are ripe as almost never before for a large rise of prices, two preliminary conditions are nevertheless necessary before it can start. The first is that the last brakes on expansion should be removed. So long as any group of large and commercially important countries are still deflating, it will be difficult for a world-wide rise of prices to start. This condition is on the point of being realised. France, the head of the gold bloc nations, has turned her back on deflation. If M. Blum's programme means anything, it means a higher price level. If, in the course of the next few months, the remaining gold currencies are devalued and the customary post-devaluation recovery begins, it will be obvious beyond mistaking that the deflationary phase is finally passed. The countries which at present have exchange restrictions hardly provide an obstacle to expansion. Their economies are fairly completely isolated from the rest of the world. And in any case they are, one and all, practising internal inflation already.

The second pre-requisite for the start of a world-wide rise of prices is that some country should give it a powerful initial impetus. Where is that to come from? Great Britain can be acquitted of nefarious intentions in this respect. If a really rapid rise of prices were to get under way in Great Britain it could, and doubtless would, be controlled by the Bank of England. But the same cannot be said of the United States. There are four factors in the present monetary circumstances of the United States which make it more than likely that there will be a considerable rise of prices in America in the near future. These four factors may be briefly discussed.

AMERICA'S POSITION

In the first place, the cash basis of the American banking system has been increased to an extraordinary degree. America has both a large gold stock and a swollen total of "bank cash." The deposits in the commercial banks are now higher than in 1929. The reserves of the member banks in the Federal Reserve system (i.e. their funds at the Reserve Banks) are more than twice as high as in 1929. Excess, or unused, reserves have recently been larger than the total reserves in the middle of 1929. Thus, there is an enormous potential supply of money in the United States without reckoning the additional "bank cash" which might be created on the basis of surplus gold holdings, at present effectively sterilised.

The second fact of which note should be taken is that the monetary authorities have very little power to control the monetary structure of the country. The record of the Federal Reserve Authorities in 1927-29, when they were attempting (rightly or wrongly) to control an expansionist movement, was not very impressive. But they had many

more instruments in their hands than now. In those years there were no excess reserves, for the member banks were actually in debt to the Reserve Banks, and the re-discount rate had some meaning. If the Federal Reserve authorities, to-day, wished to gain control of the situation, they would need to have recourse to two species of measures. In the first place, they might choose to exercise their legal power to double the reserve requirements of the member banks. In the second place, they might vigorously intervene in the open market, by selling their holdings of Government securities. To the former expedient there would be strong political opposition, while the latter, on any decisive scale, can be dismissed, for the sale of something like \$2,000 millions of Government securities is not a feasible market proposition.

The possibilities of control are thus limited. But in any case the American monetary authorities have shown no desire to control the expansion of credit. The Federal Reserve system has always had an inflationary bias. Its mutual constitution makes the refusal of credit to member banks difficult, and its operations are subject to strong political influence. The personalities at present in control of the system are, moreover, confessed expansionists, and the United States is one of the few countries of the world where a strong inflationary party is entrenched in the legislature.

Finally, the United States Treasury is (and is likely to remain for some time) under the necessity of financing a large deficit. A high proportion of its indebtedness, further, is in short-term paper. An unbalanced Budget has been, in all the classical cases of inflation, a powerful impetus towards still further monetary expansion.

A WORLD-WIDE MOVEMENT?

Here, then, are all the indications of a very strong impetus towards rising prices. It would be imprudent to suppose that a rise of prices, if it started in America, could be confined to America. Even under freely fluctuating exchanges, the bonds of sympathy between one country's price-level and another's are strong. That can be illustrated from the events of the year 1933, when the relative

INDICES OF WHOLESALE PRICES IN 1933 *
(January, 1933=100)

* U.K.: Economist Index. France: Statistique Générale. U.S.A.: Irving Fisher

values of the three leading currencies, the pound, the dollar and the franc, were fluctuating relatively to each other as never before or since. An inflationary boom started in the United States which, though short lived, was very much of the type we have been envisaging. The

annexed chart shows what happened to wholesale prices in Great Britain, France and the United States.

Between the beginning of April and the middle of July, 1933, the index of wholesale prices in America rose by over 22 per cent. Prices in the United Kingdom and in France began to rise almost simultaneously; and although the extent of their increase was nothing like so great as in the United States, the *duration* of their rise corresponded exactly with the first inflationary phase of the American movement.

Would a rise in world prices be advantageous or otherwise? Up to a point (to the point, say, of 1929) public opinion would probably regard it, unanimously, as beneficial. But the magnitude of the available supply of money suggests that the rise in prices might, in fact, go a great deal further. This is not the place to enter upon an analysis of the highly contentious point whether such a movement would be good or bad. Any rise of prices has certain disadvantages—for example, its disturbance of the existing distribution of wealth. Our immediate concern,

however, is with the activity of business and the volume of employment. Here little room exists for doubt that the influence of rising prices is invariably favourable. One school of economists holds that every inflation is soon followed by deflation; that in economics, as in physics, every action is followed by an equal and opposite reaction. But experience of the past seems to show that rising prices can continue for considerable periods during which, though there are groups of good and bad years, the setbacks are neither severe nor lengthy.

If this interpretation of available facts is correct—and an effort has been made not to exaggerate it—the outlook for international trade is more promising to-day than for some time past. A world inflation, if it starts, will affect Great Britain in many ways other than through an expansion of exports. It may be expected, for example, to reinforce the existing impulse of domestic recovery (coupled with the Government's re-armament policy) which in turn would stimulate transfer out of the depressed industries.

CONCLUSION

WE may proceed to summarise the conclusions reached in the present survey.

(1) So far as a further reduction of cyclical unemployment is concerned, there is comparatively little scope for further progress. Moreover, an analysis of the position in the building industry shows that employment in that industry may be expected to decline, the maximum limit of the decline being as high as 500,000, though the actual figure may be expected to be much lower.

(2) There are grounds, however, for hoping that the decline will be neither sudden nor spectacular, and will not initiate a reversal of the general domestic recovery of the last few years. Unemployment caused by a decline in the demand for houses may therefore be offset to some extent by a continuance of expansion elsewhere.

(3) Transfer in recent good years from the less prosperous half of the country to the more prosperous areas has found jobs for only 20,000 men a year—apart from transfer between different regions in each area. This movement can be expected to continue. But the expanding industries cannot be expected to find jobs *both* for the present "specially" unemployed and also for any men who may be displaced from the building trades.

(4) Exports have been expanding for four years, though their improvement appears to have been checked, for the time being, since the beginning of this year. The revival, so far as it has gone, has been mainly due, not to special arrangements such as the Ottawa Agreements, but to recovery in many British and foreign countries. Accordingly, if the tempo of world-wide recovery increases, the rate of re-employment in the British export industries will also increase.

(5) The materials are to hand for a very extensive rise in the world price-level. Events in the gold *bloc* and in the United States show that the beginning of this rise may not be unconscionably far distant. A world-wide rising trend of prices would have favourable effects upon employment everywhere.

What will be the timing of these movements? Here we enter a hazardous zone of inquiry. Even if one is reasonably sure *what* will happen, it is often impossible to predict *when*. Speaking in broad terms, however, three periods of time may be distinguished.

The first is the period before the various influences, discussed above, have begun to operate. Until they do, the outlook is for "the mixture as before"—for a continuance of the trends that have been evident for nearly four years past. This phase may not inconceivably last for as long as another twelve or eighteen months.

The beginning of the second phase can, perhaps, be tentatively put in 1938. During this phase there will be a conflict between a decline in domestic building and a rising world price-level, with various minor factors intervening. It seems probable that there will be some increase in unemployment in this period. If we may imagine employment in building falling by 100,000 a year, while expansion in the export trades and rearmament, and transfer to other expanding industries between them provide 200,000 jobs, we have a net increase of 100,000 employed workers each year. But this would be insufficient to keep up with the increase in the adult population, and unemployment would increase by 100,000 or 150,000 a year. On more pessimistic assumptions there might be a decline of employment of as much as 150,000 a year and an increase in unemployment of 350,000 to 400,000 a year. But the more rapid the decline, other things being equal, the shorter it will be. And in either case, there is little reason to anticipate anything very catastrophic happening to British employment.

Finally, in the third phase, we may look for a period of rising prices, with their usual stimulating effect on employment. The lengths to which such a rise may go, and its effect on employment, elude statistical prognostication at the moment. Its consummation, however, may provide a key to many problems—social, political and economic—which now harass this unquiet world.

UNITED STATES

THE PROGRESS OF RECOVERY

CURRENT production and trade continue at levels which compare quite favourably with recent years, and not a few trades are prosperous, even according to pre-depression ideas. The Federal Reserve indices for April were as follows:—

	BUSINESS INDICES		
	(1923-5 = 100 adjusted for seasonal fluctuations)		
	April, 1935	March, 1936	April, 1936
Industrial production (total) ...	86	93	100
Manufactures	86	93	99
Minerals.....	87	95	104
Construction contracts	27	47	48
Residential	18	26	29
All other	33	64	64
Factory employment	82.4	84.2	84.9
Factory payrolls*	70.8	76.3	77.9
Freight car loadings	61	66	69
Department store sales	73	88	81

* Without seasonal adjustment.

The nature of the favourable business showing is a constant source of argument in the business community; and the discussion appears likely to become a major controversy in the Presidential campaign, which, with the conventions in June, will get under way on a broad scale. Whether the recovery has been preponderantly caused by Government spending, or whether it is largely of the traditional type, is the question in debate.

Government spending certainly has stimulated some trades. The consumers' goods industries have, of course, recovered most, and these gains are certainly related to the distribution of purchasing power through deficit financing. In the heavy goods trades the public works outlays are noticeable. The high degree of recovery in agricultural regions seems in part at least connected with the payments to farmers. The motor industry has been the greatest single contributor to recovery, and Government payments of various kinds have undoubtedly found their way into both new and used cars.

The Government deficit for the fiscal year ended June 30, 1935, was \$3,000 millions; for the preceding fiscal year \$3,630 millions. For the current fiscal year it will exceed \$3,000 millions, to which will be added the bonus distribution, which will become a part of the public debt on June 15th, although the actual cashing of the bonds will proceed into the next fiscal year. And some rough similarity is noted between the annual gains in estimated national income and the amount of the annual deficits.

NEW INVESTMENT PROSPECTS

The opposing point of view emphasises the universal character of the improvement, and attributes the lags in some trades to special circumstances. Enormous shortages were accumulated during the depression, and the demand to fill these, following the cessation of financial panic and the trend towards a re-establishment of equilibrium, is becoming effective. Private investment has occurred in considerable volume, even if new capital borrowing in the long-term market has not been necessarily due to the strong financial position of many companies. Further gains are expected from the re-equipment of the railways and from building in particular, regardless of governmental outlays.

26 OLD BROAD STREET, E.C.2.

In any case the expectation of a good autumn is quite general, and while some summer pause is expected, it is not anticipated generally that this will prove more than "seasonal." The indices may be affected to some extent, as in 1934, however, by the steel industry. Steel prices have been advanced \$2 a ton, effective in the third quarter, and some production may occur in June at the expense of July and August as a result.

The weekly business figures reported for May continue to be favourable. Car loadings for the week ended May 23rd totalled 683,406, a gain of 0.3 per cent. over the preceding week, and of 14.2 per cent. over the same week a year ago. Motor production dropped to 109,821 from 117,156 the preceding week, but compares with 100,705 in the same week a year ago.

The commodity price averages have tended to be lower for several weeks. While analysis shows that the chief decline has occurred in some agricultural prices, the downturn has not been confined to these items alone. The following table shows the Bureau of Labour Statistics index of 784 commodities at wholesale, and the chief subgroups at the high record of the index this year, the latest figures, and the average for May, 1935:—

WHOLESALE COMMODITY PRICES
(Bureau of Labour Statistics Index) (1926 = 100)

	Monthly average, May, 1935	Week ended January 4, 1936	Week ended May 23, 1936
All commodities.....	80.2	80.9	78.2
Farm products	80.6	79.3	75.0
Foods	84.1	85.8	77.5
Hides and leather products	88.3	96.6	94.3
Textile products.....	69.4	72.9	69.2
Fuel and lighting materials	73.1	75.5	76.8
Metals and metal products...	86.6	85.9	85.7
Building materials.....	84.8	85.2	85.6
Chemicals and drugs	81.2	80.1	77.3
House-furnishing goods.....	80.6	82.2	82.8
Miscellaneous	68.7	67.5	69.1

The course of commodity prices during this period raises the question how far agricultural restriction and monetary expansion have affected prices. There has, up to now, been no close correlation between business activity, which is distinctly better than a year ago, and prices. These facts have led some to believe that the drought of 1934 was the chief cause of the rise in prices experienced here after the rebound from the financial crisis at the bottom of the depression. But on a broader perspective it can be contended that a rise is in progress; the index was 64.8 in 1932, 65.9 in 1933, 74.9 in 1934, and 80.0 in 1935.

For the present there appears little reason to anticipate a major decline in prices. For stocks are generally at low levels, and demand continues good. Production and consumption seem generally to be well balanced.

NEW YORK, June 1.

FRANCE

A REVOLUTION WITHOUT DEVALUATION

THE first aim of M. Léon Blum as Prime Minister has been to settle an epidemic of strikes, which was all the more dangerous because the claims of the workers were unrestrained. Every day the success of the strikers in one factory was followed by a new strike in a neighbouring one; and agreements between workers and managers were not always ratified by the Unions. M. Blum accordingly announced that he would take in hand the defence of the workers' interests, but he asked for their confidence in return on the ground that "the law must be obeyed." He thus obtained the collaboration of the Confédération Générale du Travail in the drawing up of collective contracts. On the other hand, M. Blum declared before the Chamber that even if the workers stayed in the factories, there would be no "occupation" in the juridical meaning of the word.

The strike movement now seems to be gradually ending. Agreements have been reached between the trade unions and the employers' unions, under the auspices of the Government; a procedure which is being applied for the first time in the French Republic. In many cases, however, the claims of the workers go beyond those put forward on their behalf by the trade unions and accepted by the employers. In some cases, also, the workers are refusing to return to work after the agreement.

Meanwhile, the Government is rapidly tabling in the Chamber the new Labour Charter, which M. Blum asked deputies to vote with the maximum speed. This being the case there are now two possibilities; for the strike movement has two origins, one economical and one political. Economically the workers, having obtained satisfaction, could at once return to work with a new spirit of collaboration. But the increase in wages, which will result from the new Charter of Labour (including rises in wages, the 40-hour week, paid holidays, etc.) will entail increases in costs, which are estimated in certain industries to amount to 35 and 40 per cent. If these new increases are not balanced by other changes, such as a fall in the rate of interest in the price of transport or in taxes, the rise in prices will annihilate the rise in wages, and the workers might finally embark on new strikes more dangerous because of their feeling that they had been cheated.

But certain observers, looking principally at the political significance of the strikes, believe that the workers may be encouraged by their first victory, or even stimulated by new incitements from Moscow. For the Soviet authorities, it is argued, may infer from this week's experience that social revolution in France may be pushed forward more rapidly, since it does not appear to be endangering the financial and military strength of the country.

HIGHER WAGES AND PRICES

But in fact the country could not stand another similar move. For the time, the *status quo* is being maintained by the efforts of the Press to emphasise the return of the workers to the factories and also by the assistance given by the Bank of France to the Treasury, which is preventing its bankruptcy. On the other hand, no rise in prices has yet made itself felt; and the masses of the workers are satisfied with the increase in wages, while small businesses are awaiting the favourable effects of this increased purchasing power on their turnover.

The problem now is to discover the financial policy of M. Vincent Auriol, the Minister of Finance, who is charged with the difficult task of finding the money necessary to speed up internal recovery of trade through large-scale public works and by the organisation of schemes for the valorisation of wheat and other agricultural products.

Two main events so far have indicated the financial orientation of the new Cabinet. M. Blum has declared twice that there will be "no devaluation," and M. Labeyrie has succeeded M. Tannery as Governor of the Bank of France. This last appointment is evidently the preliminary to the reform of the existing Statute of the Bank, which will be tabled in the Chamber on Friday next. This is, moreover, the prelude to the new loans which will be required from the Bank under the form of a "credit which the

country will open to itself," in M. Blum's words. It is rumoured that the new Minister of Finance intends to offer an important internal loan at a low rate of interest, the bonds being discountable at any time and for any amount on demand by individual holders.

The forthcoming Bill to be introduced by the Minister of Finance, which is to embody a summarised balance sheet showing the state of the public finances, will be discussed by the Chamber on Tuesday next. Following the debate, the Government will concentrate its efforts on a reduction in indirect taxes and a lowering of rates of interest. The difficulty will be to reconcile the maintenance of the present gold parity of the franc, with budgetary disequilibrium on one hand, and, on the other hand, with the disequilibrium between French and foreign prices. In any case, however, this goal cannot be obtained without a rapid return of the workers to the factories and without far-reaching financial reforms designed to enhance confidence. It should therefore be noticed that the abolition of the Doumergue and Laval deflationary decree-laws will not be sudden, but progressive and prudent.

PARIS, June 11.

SWEDEN

THE LEAGUE AND DEFENCE

THE Scandinavian countries' attitude towards Geneva has lately been clarified by authoritative statements. In a speech in the Riksdag the Swedish Foreign Secretary, M. Sandler, recently declared that the Swedish Government did not intend for the present to withdraw from co-operation with other nations. A similar statement was made by the Norwegian Foreign Secretary; but while M. Sandler did not express any opinion about the advisability of continuing sanctions against Italy, M. Koht declared himself against a continuation.

Discussions about the future organisation of Sweden's national defence continue with undiminished fervour, and may lead to the fall of the present Cabinet. Since the Government does not consider it advisable to be forced to resign on account of a defeat on its proposal for organising national defences, it will probably put forward as a reason for its resignation the rejection by the Riksdag of its proposals for taxation and pension insurance reforms.

FURTHER INCREASE IN TRADE AND EMPLOYMENT

Foreign trade in April again showed an increase in value as well as in volume, owing to increased imports of raw materials and increased exports of staple goods, particularly pulp and iron ore. The value of foreign trade for the period January-April is shown in the following table:—

	(In millions kronor)	
	1935 January-April	1936 January-April
Imports	444.6	504.1
Exports	345.2	402.4
Import surplus	99.4	101.7

Sales of timber continued to be satisfactory, though the figures of the preceding months were not quite maintained. A number of important contracts were concluded with France, but currency restrictions still hampered timber sales to Germany and Denmark. Sulphite as well as sulphate pulp was in strong demand for deliveries in 1936 and 1937. The iron and steel markets displayed great briskness owing to rising consumption in the home market.

Trade with the United Kingdom has moved as follows:—

	1935		1936	
	January-March mn. kr.	%	January-March mn. kr.	%
Swedish exports to U.K.	61.2	24.9	71.7	24.7
Swedish imports from U.K.	61.2	19.2	69.0	18.4

Employment improved further in April; and the number of unemployed dropped from 53,000 at the end of March to 47,000 at the end of April. This latter figure is 28,000 less than a year ago. The improvement affects practically all trades.

JAPAN

FURTHER INCREASE IN BUDGET EXPENDITURE

THE Government has presented to the present special session of the Diet supplementary estimates of 369,720,000 yen, which, together with the working Budget of 1,934,866,000 yen, brings up the total national expenditure for the current fiscal year to 2,304,586,000 yen (excluding savings in the interest cost of national debt due to conversion operations now in progress). This is an increase of 89,173,000 yen upon the preceding year. The deficit to be covered by fresh borrowing for the year amounts to 518,877,000 yen.

Besides the Finance Bill, Tariff Revision, the discharge allowance scheme, and the Trade Safeguarding (Extension) Bill are a few important Government measures which are now on committee stage in the House of Representatives. The new fiscal policy aims at the increase of the duties on aluminium and its alloys, hoop irons, oil and its products, and aspirin, antipyrin, pyramidon, and carbonate of guaiacol. The proposed increases are all highly protective; ranging from a 17 per cent. advance on petrol to that of 410 per cent. on aluminium. The purpose of the discharge allowance scheme is to make it compulsory for employers to create a discharge allowance fund out of profits. In view of its successful application in the recent trade war with Canada, the Government means to extend for three more years the Trade Safeguarding Act enacted in 1934 to protect trade against discrimination by foreign countries. According to the report presented by the Treasury to the Ways and Means Committee in the House, foreign securities held by nationals on December 31, 1935, amounted to 408,763,000 yen at gold par and deposits and advances abroad to 360,021,000 yen; while Japanese Government and municipal loans and company debentures issued abroad but purchased and held by nationals totalled 721,563,000 yen. The aggregate holdings of securities and funds in foreign currency thus amounted to 1,490.3 million yen, as against 1,448.7 million yen a year ago, an increase of 41.6 million yen.

HIGHER IMPORTS

The foreign trade returns for April show that, as compared with April, 1935, imports, at 247,057,000 yen, had increased by 30,133,000 yen, or 13.8 per cent., while exports, at 205,295,000 yen, remained practically unchanged. More than half the increase in imports is accounted for by raw wool, while iron and steel show a notable decline. On the export side, the decrease in major exports is nearly compensated by the increase in lesser exports. Both raw silk and cotton piece-goods continue to contract markedly. For the first four months imports show an increase of 91,867,000 yen, or 9.9 per cent. over the corresponding period of 1935, to 1,019,818,000 yen, and exports a rise of 22,927,000 yen, or 3 per cent., to 789,707,000 yen. The import surplus amounts to 230,111,000 yen, against 161,171,000 yen.

There are signs of an improvement in many home trade statistics for last month. After a gradual downward movement since November last the Bank of Japan's wholesale index number for April rose a fraction less than 1 per cent. on the month. The aggregate value of all shares listed on the Tokyo Stock Exchange on May 1st was up by 294,822,000 yen to 6,810,966,000 yen as against a month earlier, and nearly recovered the position reached just before the February insurrection. Output of cotton yarn in April totalled 121,525,000 lbs., an increase of 3,998,000 lbs. over March; and rayon yarn production in April

Money somewhat tightened in April, and the total of the joint-stock cash and balances at the Bank of Sweden declined from Kr. 309.3 millions to Kr. 233.9 millions. On the other hand, advances rose from Kr. 3,882 millions to Kr. 3,918 millions following the usual spring revival and the subsequent increase in the bill portfolio.

The turnover at the Stockholm Stock Exchange was comparatively large throughout April, and owing to demand from gold *bloc* countries for Swedish stocks, prices soared upward. These foreign purchases of Swedish stocks are viewed with some anxiety, however, since a devaluation of the franc would induce foreign holders to unload their holdings of Swedish stocks.

STOCKHOLM, June 6.

BULGARIA

"UNINTERRUPTED RECOVERY."

ECONOMIC recovery has been uninterrupted since the second half of last year. Foreign trade and industrial production have increased, and the State finances have improved. Ordinary State receipts for the first quarter of the present year amounted to 1,521 million leva, against 1,276 millions for the corresponding period of last year. The Budget deficit had been reduced from 263 millions to 137 million leva. The Financial Committee of the League is, however, of the opinion that the deficit will not be wiped out this year in spite of the increased revenue. Certain administrative reforms and economies have been suggested.

The foreign trade position for the first four months is far more encouraging:—

	(Million leva)	
	1935	1936
Exports	909	1,096
Imports	805	974
Export surplus	104	122

Both exports and imports have increased in value by over 20 per cent. The German participation in Bulgaria's foreign trade has grown in importance by 66 per cent. for exports and 63 per cent. for imports. This is to be explained by the higher prices German importers are ready to pay for Bulgarian raw materials. Settlement is made by way of the clearing agreement.

For the first time since the war Bulgaria's foreign trade with Great Britain shows a Bulgarian export surplus, amounting to some 12 million leva. Great Britain ranks at present third in the list of Bulgaria's customers.

NEW EXCHANGE REGULATIONS

A rather important change in the foreign exchange regime was made on May 10th. This change tends to simplify the present system by which the National Bank regulates exchange. The principle of compensating imports by exports is preserved, but the lists of exportable products have been reduced from three to two. The Bank still has the right to require the cession of a percentage of free exchange (about 30 per cent. on 80 per cent. of the value of the exports) at its official buying rate, and compensation is authorised for the remainder against the import of goods at an unofficial rate.

Exports are now classed in two lists. The first contains the more important products, such as tobacco, eggs, cereals (except wheat), and oil-seeds, against the export of which imports are allowed only on the basis of regular quotas. The second list comprises such articles as hides, fresh fruit, attar of roses, etc., the exportation of which is more difficult, but against which imports are permitted without any restrictions about quotas. An essential feature of the new regime is the authority which the National Bank acquires to intervene on the market in order to buy exchange at unofficial rates. This is destined to stabilise the compensation premiums for free exchange, which at present fluctuate between 30 and 36 per cent.

Investment For Appreciation

by L. L. B. ANGAS

Author of *Coming Rise in Gold Shares* (Feb. 1931); *Coming English Boom* (Sept. 1931); *Coming Rise in Wall Street* (Apr. 1933); *Coming American Boom* (Aug. 1934), etc., etc.

A method of forecasting and exploiting industrial cycles. Do not wait for a crisis to read this best seller. Descriptive folder available. Macmillan & Co. Ltd., St. Martin's St., London. Price 1s net.

recorded the highest monthly total at 20,904,000 lbs., or 797,000 lbs. more than in the preceding month.

Following the metropolitan clearing banks, all the provincial clearing banks throughout the country have reduced their deposit rates. The money market is quiet; overnight loans continue to be obtainable at $2\frac{1}{2}$ per cent., fine bills are quoted at $3\frac{1}{2}$ –4 per cent. and bankers' acceptances at $4\frac{1}{2}$ per cent. Conversion operations are in progress; the first series of the conversion scheme for 381 million yen at $3\frac{1}{2}$ per cent. proved a remarkable success, and the Government is now offering the second issue of 413 million yen, ensuring again a favourable response.

According to the report of the Department of Agriculture and Forestry, the silkworm rearing for the season is estimated at 64,643,000 grammes, a substantial decrease of 4,746,000 grammes, or 6.8 per cent., upon that of last year, which, in turn, was 10.4 per cent. less than that for 1934. Cocoon-raising has thus been declining rapidly in recent years. The decrease in rearing this year is largely ascribable to a holding off on the part of farmers due to the great damage done to the mulberry trees by the unusually heavy snowfall last winter. Relief measures for this are being submitted to the present session of the Diet. Cocoon prices, however, are expected to be sufficiently high to compensate for the decreased crop.

TOKYO, May 16.

AUSTRALIA

THE NEW IMPORT DUTIES AND JAPAN

THE new tariff proposals, which were laid before the Commonwealth House of Representatives on May 22nd, have been received with mixed feelings. So far as they give protection to Australian manufacturers or increase the preference to British manufacturers they have been welcomed by those concerned. But there is some feeling that they are likely to hamper the Australian export trade to Japan, should the latter retaliate. The Minister in charge of trade treaties, Sir H. Gullett, stated that agreement with Japan could not be achieved after many weeks of negotiation.

Official statistics show that during the financial year ended June 30, 1935, exports from Australia to Japan amounted to £12,095,514, out of a total of £112,986,037 to all countries. The two principal exports to Japan have been as follows in the last five years:—

	Wheat	Wool and Tops
1930-31	2,173,178	6,478,587
1931-32	3,383,868	7,513,760
1932-33	2,729,812	7,969,600
1933-34	1,042,234	12,127,621
1934-35	2,273,902	8,680,119

These figures are in Australian currency. The exports of wool and tops to Japan in 1934-35, £8,680,119, are 22 per cent. of the total of £39,265,940 (Australian currency) wool exports to all destinations. The total quantity of wool, greasy, scoured and washed, exported in 1934-35 was 857,768,400 lbs., of which 197,151,700 lbs., or 23 per cent., went to Japan.

Australian imports from the United States have greatly shrunk from the amounts reached in the 'twenties, though there has recently been some recovery. In 1926-27 the total was £41,394,277, from which it fell to £30,316,208 in 1929-30 and £17,037,751 in 1931-32, subsequently rising to £11,041,660 in 1934-35. The recovery has been spread over a great variety of articles, including tobacco, etc., imports of which were £1,258,818 in 1934-35 against £587,352 in 1931-32; timber, which amounted to £262,017 against £119,228; and motor cars (bodies and chassis and parts) to £2,110,622 against £112,023. The increase of nearly £2,000,000 in the last-mentioned item is approximately half of the total recovery in imports from America in the three years. Under the heading of oils, imports of mineral lubricating oils from the United States have risen from £487,952 in 1931-32 to £623,985 in 1934-35, but kerosene has

declined from £312,381 to £158,143, and petrol and a group of other oils from £1,722,130 to £738,062. The decline in these American oils has been accompanied by expansion in imports from the Netherlands East Indies.

Direct exports to the United States in 1934-35 amounted to £2,750,534 Australian currency (equivalent to £2,200,000 sterling), as compared with £8,578,504 sterling in 1926-27, omitting gold shipments. The 1934-35 exports (in Australian currency) consisted mainly of hides and skins £933,169, wool £347,678, tallow £331,039, and concentrates £330,893. These figures do not include indirect American purchases. Attempts were made a number of years ago to open trade in frozen meat, but without permanent success.

The Commonwealth Government is now about to issue a $3\frac{1}{2}$ per cent. loan, repayable 1951, for £9,000,000 at £98 10s., the yield including redemption being approximately £3 17s. 6d. per cent. This compares with £3 15s. 5d. for the previous loan issued last December. The increase reflects the hardening tendency of interest rates in the meantime. Some disappointment has been felt in political circles because an amount of £10 millions was not decided upon by the Loan Council, but business interests hold that the Government are inclined to press rather too freely upon available supplies of money in competition with private borrowers.

MELBOURNE, May 26.

LETTERS TO THE EDITOR

INDUSTRIAL ORGANISATION

TO THE EDITOR OF THE ECONOMIST

SIR,—From time to time we get these impracticable suggestions put forward, as made by Mr. T. B. Johnston in your current issue in his letter on industrial organisation.

How would he deal with the case of a firm which subscribes to its trade organisation, pays union rates to every worker, offers no objection to trade unionists, but does not subscribe to a ring or combine and sells its products, which are of standard quality, at 25 per cent. less than the combine prices, and under such conditions makes a handsome profit?

Through its power of competition such a firm can even export its goods to the United States against a 35 per cent. tariff, or to Australia against a 45 per cent. tariff, and can build up a considerable overseas trade. It is quite possible that the average profits would be called unreasonable. Labour is getting its just reward, and its success is entirely due to efficient organisation.

Letters of this description are periodically written even to the best of papers, but generally by those gentlemen who are not familiar with all branches of industry. I contend that the suggestions put forward are not eminently practical and would destroy the initiative of the most progressive firms.

I am,
Yours faithfully,
WALTER F. HIGGS.

A MYTH ABOUT ITALY

TO THE EDITOR OF THE ECONOMIST

SIR,—In the first part of his letter your correspondent "Ne Plus Ultra" uses an argument that will hardly be convincing to statisticians. He shows that the Italian Legitimate Live Births, using 1930 as a basis, have decreased fairly rapidly, but he does not bring any figures of deaths or migration into the picture. Does he consider that the trend of these latter figures does not influence the conclusion?

It is far from clear how his comparison with Great Britain since 1881 can affect the question. Surely we are dealing with the present and, assuming that the death rates are almost equal, I submit that any comparison which ignores the fact that the Italian birth rate is at present over 23 per 1,000 of the estimated population as compared with a figure of 14–15 for England and Wales, is bound to be misleading.

Your obedient servant,

Belfast,
Ireland.

ITALIA.

BOOKS AND PUBLICATIONS

"HAVES AND HAVE-NOTS"?*

It has become exceedingly fashionable of late to talk of the economic causes of war, of "have and have-not" nations, of raw materials, Colonies, markets, fields of investment, outlets for emigration, and so forth. To those with any acquaintance with the facts, the flimsiness of the claims made for the economic value of Colonies has long been plain, and several pamphlets have recently been issued expounding the bare statistics of the problem. Sir Norman Angell, who is an old hand at this particular controversy, here produces a devastating refutation not only of the economic case for Colonies, but also of the whole idea that a country's standard of living necessarily depends on the "possession" of certain parts of the globe.

Sir Norman shows that countries without Colonies are often highly prosperous and countries with Colonies often highly depressed. He shows that no great industrial country has ever got the main part of its raw materials and foodstuffs from Colonies. "In the year 1912 Germany drew one-half of 1 per cent. of her raw materials from Colonies." Similarly, the exports of industrial countries do not in the main go to Colonies. Only about 10 per cent. of Great Britain's exports go to her own Colonies, and in 1912 Germany's exports to her own Colonies represented a fraction over one-half of 1 per cent. of her total exports. Nor has a large proportion of Great Britain's foreign investment been in her Colonies, nor has foreign capital been excluded from British Colonies. Even as outlets for emigration, Colonies are of negligible value. "After forty years in the Colony of Eritrea, Italy has managed to establish about 85 agricultural colonists." "There were on the eve of the war more Germans earning their livelihood in the city of Paris than in all the German Colonies."

Why, then, if Colonies are so valueless, do nations hold on to them with such tenacity? Sir Norman does not shirk the question. After pointing out that the United States has actually renounced "possession" of the Philippines for economic reasons, he argues that the desire for Colonies really rests on strategic and political motives. For in war Colonies may become of actual economic importance. This main conclusion cannot be very seriously questioned. But Sir Norman might perhaps have given a little more importance to the value of *secure* export markets, particularly in deflationary periods, and to the operation of "invisible discrimination" in Colonies. He also might have considered how far, in the conditions of to-day, a situation in which a country has an over-valued currency and a rentier-minded Government may not be one in which there is a real economic pressure towards war. For, in these conditions, if devaluation and public works are both ruled out by the rentier interest, armaments and campaigns may appear the only immediate method of curing unemployment. There are pointed similarities between the economic position of Germany in 1933 and Italy in 1934.

In general, however, there can be no disputing Sir Norman's contention that the main remedy for international economic grievances is not the transfer of territories but the freeing of trade, and that the only cure for political and strategic anxieties is the construction of a really effective system of collective security. No open-minded person who reads Sir Norman's clearly written book is likely to doubt these conclusions for long.

SHORTER NOTICES

"The Agricultural Register." The Agricultural Economics Research Institute, Oxford. 407 pages. 5s. net.

For all who would be familiar with the latest developments in the organisation of agriculture this volume is indispensable. Although substantially larger than its predecessors, the third issue has been planned along similar lines. It deals only with the events of the past year, except in so far as reference to earlier years is needed to make them clear. Besides reviewing the legislation of the year, it contains a record of supplies and prices, labour conditions, etc.

* "This Have and Have-Not Business." By Sir Norman Angell. Hamish Hamilton. 206 pages. 5s.

"The Downfall of the Gold Standard." By Gustav Cassel. Oxford University Press. 258 pages. 6s.

In this characteristically vigorous and readable work Professor Cassel expresses the view that the old "automatic" gold standard is gone for good. Indeed, he thinks that the pre-war gold standard never was "automatic," but was, in fact, "managed" by central bankers. Professor Cassel believes that the return to gold after the war was justifiable at the time, and he even approves in retrospect the decision of Great Britain to restore the old gold parity.

The "downfall of the gold standard," as he sees it, began with the return of France to gold at an undervalued level in 1927–28, and the resulting influx of gold into Paris. This, combined with the failure of the American authorities to arrest the deflation that began in 1929, led to an enormous rise in the value of gold that has made the gold standard intolerable. Professor Cassel accordingly thinks that Mr. Roosevelt was perfectly justified in devaluing the dollar, and he praises the President for his message to the 1933 World Conference about "old fetishes of so-called international bankers." There can be no doubt, Professor Cassel contends, that the dollar would be again devalued if another deflation began in America.

The chief hope of the world's economic future seems to Professor Cassel to lie in the sterling area's experiment in a managed currency. He is inclined to be scathing, however, about the Bank of England's failure to declare its monetary objectives clearly, and he would like to see the stabilisation of the wholesale price-level as the Bank's avowed objective. It would be interesting to know Professor Cassel's opinion of the idea of "full employment" as a criterion of monetary policy. But perhaps he is wise to work on the principle of "one step enough for me."

MONEY AND BANKING

THE PHOENIX' METAMORPHOSIS

(BY A CORRESPONDENT)

The failure of the Phoenix Life Assurance Society ranks second only in importance to that of the Creditanstalt. Both failures involved widespread financial difficulties in Austria, and both had serious implications for foreign creditors. The following article describes the conditions which preceded the Phoenix failure, and the measures which have been taken by the authorities to deal with the situation.

DR. BERLINER, the late head of the Phoenix Life Assurance Society of Vienna, made of the Phoenix one of the largest existing continental undertakings, with business outside Europe (in Egypt, Morocco, Palestine, Iraq and the Lebanon Republic, and from time to time also in Persia) and with close connections, through re-insurance contracts, with other countries, particularly with Great Britain. Since the nationalisation of the Austrian Creditanstalt after the 1931 crash, the Phoenix had been the only really large Austrian private concern.

The rise of the Phoenix began during the world war. According to an official declaration by the Austrian Press Information Bureau, Dr. Berliner is said then to have won the support and approbation of the authorities by the useful part he played in the issue of State loans, in economic legislation, and in other ways. Subsequently, he applied his attention chiefly to the problem of maintaining confidence in insurance despite the catastrophic depreciation of the currency. The Phoenix took over the liabilities of many other companies in the Succession States, and these companies thereupon withdrew from the field. Although the assets of many of these companies became valueless, the Phoenix revalorised their policies to a substantial percentage of their former nominal value. In many cases provision was also made for the employees of these companies. In recent years, after the currency devaluations in central Europe, Great Britain and the United States, the claims of the policy holders were ranked higher than was justified by the value of the cover of their policies; for the relevant securities had not risen sufficiently in their own currencies to compensate the degree of devaluation. This continual weakening of the company's assets was, it was hoped, to be made good later by profits from insurance business and from various financial transactions, in which Dr. Berliner played, at first, a lucky hand. But, unfortunately, the Phoenix business lay in many different countries, whose restrictions on transfers froze its securities, and thus effectively withdrew large resources from the business. Dr. Berliner set out to overcome these difficulties by extensive canvassing and advertisement. Heavy expenditure for this purpose, combined with very attractive premium rates, was carried so far that, eventually, the annual income of the company was insufficient to build up the necessary actuarial reserves.

Actuarial reserves in life assurance are those reserves which must be accumulated in order to enable the contractual payments on the policies to be met, however the company's future income from all sources may vary. These sums, calculated at a hypothetical rate of interest, appear on the debtor side of the account and must be balanced by assets. If at any moment the value of the assets is less than these reserves, the company becomes—*theoretically*—insolvent. But so sweeping a conclusion would be economically unreasonable. The company's actuarial reserves are, for prudence sake, calculated on the basis of a rate of interest so low that it is certain to be achieved over long periods of years. But it must be recalled that the rate of interest rises when capital values fall; and that it is therefore, at such a time, justifiable to reduce the actuarial reserves by the adoption of an assumed higher rate of interest, in estimating the company's future liabilities. For these reasons, the balance sheet may be *theoretically* negative, without any threat to the real solvency of the concern.

Dr. Berliner was much occupied with this problem—the

continuance of current rates of interest at much higher levels than that on which the actuarial reserves were based. After the Creditanstalt crash in May, 1931, the public's confidence in the banks suffered a severe blow and the insurance companies obtained capital which would normally have gone into the banks' hands and been used for the purchase of investments, or as savings deposits. These sums could be counted as single premiums, as long as the insurance company earned with its funds about one-half of the rate of interest on the investments purchased with the single-premium payments. For at that time, securities in which the single premiums would be invested stood at a very low level on the Stock Exchange, and thus gave a high yield. Dr. Berliner therefore invented the following scheme. The single premium initially paid in was regarded as the purchase price of a security, whose interest was used partly as the current premium of an ordinary insurance transaction, and partly as a normal yield on the company's investments. Owing to the high level of yields on securities, the policy holder did very well out of this arrangement; but it was dangerous for the Phoenix, in that interest rates might be reduced either by conversions or defaults. Then the company's income would prove insufficient for such an insurance transaction. The Phoenix, in fact, had undertaken something very like a guarantee of the price of securities.

Exchange restrictions, especially in Germany, also forced the Phoenix to take over obligations which in normal times would not have come within the purview of insurance activities. Jewish refugees handed over German securities to the Phoenix, against which claims were to be made in other countries, usually Palestine. As the Phoenix could not get the proceeds of sales of these securities out of Germany, the company found itself with obligations in Palestine, Egypt, and other countries, against which it had no cover available in those countries.

The lacuna in the company's reserves therefore widened alarmingly. Dr. Berliner's ideas of the way in which this situation could be cleared up were never made clear; and in any case he had no chance to put them into practice. Last October he developed a major mastoid; refused to give up his work, and in February of this year he died. An operation was attempted, but it was too late. The Phoenix lost its pilot when its need was greatest.

A Council of Ministers, held in Vienna on March 3, 1936, passed a law setting up a fund, on the credit of which new bonds could be issued for the replenishment of the reserve deficiencies of needy institutions. This fund can make a levy on all insurance companies to cover the service of the new bonds. The needy company is obliged annually to repay a certain amount of the new bonds to the fund in proportion to its available resources. Another law, promulgated at the same time, annulled, as from June 30, 1936, the rights of the company's employees, which had formerly been guaranteed by a collective agreement. The resulting discontent did not produce exactly the right atmosphere for steady progress in the work of reconstruction. Moreover, there were innumerable complaints from the other insurance companies, which were burdened by the payments to the fund and had not been consulted before the law was passed.

But the most important threat came from abroad. It had apparently been overlooked. In many foreign branches of the Phoenix, reserve deficiencies appeared; and these could not be covered, since all available resources in Austria were seized to make good, as far as possible, the deficiency in the company's Austrian reserves. The company was thus threatened by the possibility that any foreign policy holder, who could not make good his claims through a local branch, might bring an action against the Phoenix in Vienna. This was particularly likely in places where British legal concepts were prevalent, and no

reserve requirement had been laid down. If premium income in Palestine or Egypt failed to cover the payment of local claims or surrenders, it was uncertain how long local reserves would suffice to carry on the local business of the company.

To obviate this danger a law was passed in Austria on April 4th, which empowers an "Administrator" to carry through the liquidation of the company in terms of the bankruptcy decree. Claims against the company are not permissible; and execution may only be levied on the company for the recovery of taxes and payments due to the State. Certain securities entered in a register, which serve as reserve cover, are to be expressly reserved for the paying of policy holders in Austria. This obviates any claims by foreign holders of the company's policies and makes it much more difficult for the employees to recover compensation for dismissal, or even salaries. Thus, these classes of creditors, who would have been comparatively well placed in normal bankruptcy proceedings, are especially hard hit. The law adumbrates also some eventual modifications in the contractual rights of the policy holders, so that it contributes very little to the satisfaction of that class of creditor. At the same time it was announced that a new company would be formed to take over the Austrian capital of the Phoenix. This company, the "Austrian Insurance Company," was formed on April 29th. The position of creditors of the Phoenix in other countries than Austria depends on the law in those countries. In countries where the rights of insurance policyholders are protected by no specific legislation, as in Germany and many other European States, their claims compete on a level with those of all other creditors. This is the case in Palestine and Egypt, so that the insurance funds can there be transferred to other companies. But owing to the deficiency in the company's premium reserves this will be very difficult.

The Austrian Chancellor, in his speech of April 26th, said that Austria, a small country which had already weathered so many storms, would also live through the Phoenix hurricane. It remains to be seen what conclusions are drawn by the authorities, who must now fully realise the seriousness of the situation from the internal point of view, as well as its importance to foreign countries.

FINANCIAL NOTES

Franc Cross-currents.—This week the Paris Exchange has been subject to wide fluctuations, for an early recovery has been followed by renewed weakness, with spot sterling once more above Frs. 76 and three months' rate at over Frs. 6 discount. There is a general impression that M. Blum's Government may be forced by the pressure of events to introduce some form of exchange restrictions, very likely within the next few days. For political reasons, including the attitude of the Communists, the wage increases gained by the recent strikes, and the fact that the Right is now accepting devaluation as inevitable, M. Blum is unable to contemplate devaluation at least for some months to come. The regrettable consequence of this *impasse* is that the continued flight of funds from France must force the introduction of exchange restrictions as the only possible alternative, for the Banque de France's gold reserves have now fallen to Frs. 55,521 millions, and the cash position of the commercial banks must be very difficult. A clear, if belated, expression of the case for devaluation was made last week by M. Charles Rist, a former Governor of the Banque de France. He called attention to the over-valuation of the franc and its consequences in the shape of economic paralysis and financial stringency, and also cited the benefits derived by Belgium from devaluation. He also made the important suggestion that pending a general return to gold, the franc should be attached to sterling. One disadvantage from the French point of view would be that there would be no profit from the revaluation of France's monetary gold to accrue to the relief of the French Treasury. From the British standpoint, it would throw a new responsibility upon us,

but it would be preferable to the present confusion. It would also resolve any French doubts that simple devaluation might be countered by a competitive depreciation of sterling. These doubts probably possess little substance, for we have been at great pains to keep sterling stable during recent months; and were the franc to be pegged to the pound at a reasonable rate, there would be every reason for us to continue our policy. Quite apart from M. Rist's suggestion of linking the franc to the pound, there is no indication that the French Government has yet asked for an assurance against the competitive depreciation of sterling, and the British Government may well feel it inadvisable to give an assurance in advance of an official request. Here, again, we need to know that any eventual devaluation will be of a reasonable magnitude, so that it will not disturb our own policy of cheap money, or make sterling over-valued in its turn. At the moment these points may not be of such great importance, for M. Blum is unable to consider devaluation. Yet adjustment in one form or another must come sooner or later, if serious difficulties both inside and outside France are to be avoided. There is every argument in favour of clearing the ground in advance so that the change can come about through co-operation between the Governments of England, France and the United States.

* * *

The Pound and the Dollar.—The weakness of the franc continues to drag the dollar down against sterling; and during most of this week the New York rate has been a fraction over \$5.00. The gold export point in Paris is Frs. 15.19 to the dollar, and so long as the franc remains at this rate and also at Frs. 76 to the pound, sterling must be quoted at \$5.00½ as a pure matter of arithmetic and arbitrage. We emphasise this point because it has been suggested that the dollar cannot be undervalued to-day, or else the outflow of funds from Europe to the United States would be rapidly pulling the rate well below \$5.00. The truth is that this movement of funds is being largely covered not only by British official gold purchases in Paris, but by a direct efflux of gold from Paris to New York. During the past fortnight arrivals of gold at New York amounted to \$51 millions from France and \$15 millions from Holland, while engagements for shipment during the past week alone comprise \$42 millions from France and \$6 millions from Holland. So long as the Continent continues to ship gold freely to the United States the dollar cannot rise above Frs. 15.19, and under these conditions it is only British support of the franc at about Frs. 76 to the pound which prevents the pound from rising well above \$5.00, thereby accentuating the under-valuation of the dollar. So far from the under-valuation of the dollar exciting any pull on the exchange, the truth is that the rigid connection between the franc and the dollar forces us to hold down the Paris exchange in order to hold down the New York exchange as well, and if we could push the New York rate down further it would create a better balance between the pound and the dollar. So long as the franc remains on a free gold standard at the present parity, this could only be done by driving the Paris rate of exchange down to Frs. 75 or even lower; and this has apparently not been thought expedient during recent weeks. If the franc is devalued or made subject to restriction, an entirely new relation between the pound and the dollar may develop, and that is the subject of anxious thought to-day. Obviously there will be a real need for close Anglo-American co-operation, and a week ago we were able to suggest that this might be developing. Unfortunately, there have been indications more recently that co-operation is not proving so easy to carry out. There is no doubt that the British authorities are alive to the need, and it is to be hoped that any obstacles which present themselves will be quickly surmounted. It is essential that both the authorities and public opinion in England and the United States should appreciate that equilibrium between their two currencies, with reasonable stability at whatever rate will establish such equilibrium, may well prove in the near future to be the only possible safeguard against serious world monetary disorder with its reactions upon economic stability and progress in the United States as well as elsewhere.

The Banque de France.—The advent to power of M. Blum rendered untenable M. Tannery's position as Governor of the Banque de France, for M. Tannery was appointed eighteen months ago by M. Flandin in the hope that he would further the Government's aims. Instead, he aligned himself with the traditional views of the Banque de France and its Regents, so that his relations with successive French Governments have for some time been none too easy. The victory of the Left, with its determination to reform the Banque de France, settled the matter, and M. Tannery was retired last week-end. He is succeeded by M. Labeyrie, Procurator-General at the Court of Accounts. M. Labeyrie will still occupy his old position and will draw no salary as Governor. He is by profession a civil servant, with no previous banking experience. The bill for the reform of the Banque de France has not yet been tabled, but M. Blum has already stated that it will be introduced almost immediately.

May Clearing Bank Averages.—The May returns of the ten English clearing banks confirm our forecast of last week. As a result of the influx of French money into England, coupled with the French hoarding of British currency, deposits at the joint-stock banks have risen by £23.7 millions, while cash is reduced by £7.2 millions. The offset to these movements is the increase of £40.9 millions in discounts, representing mainly the Treasury bills turned over by the Exchange Equalisation Account to the banks and the discount market in order to make room for the gold acquired by the Exchange Account in its work of supporting the franc and covering the transfer of this French money to London.

(a) Excludes District Bank.

(b) Includes District Bank.

From the clearing banks' point of view, the most important consequence is a reduction in the aggregate cash ratio from 10.6 to 10.1 per cent. For one of the "big five" the May cash ratio was only 9.69 per cent. In these circumstances it is easy to see why some of the banks have resumed their practice of weekly calling, and have also been reluctant to buy bills; and also why this influx of French money and the operations of the Exchange Account have created an atmosphere of greater stringency.

The Bank of Canada.—As stated in the *Economist* of March 21st, the Canadian Government intended to introduce measures for the "nationalisation" of the Bank of Canada. The Bill, which is being sponsored by Mr Dunning, the Minister of Finance, is now being discussed by the Parliament. Government control is to be established by the issue and purchase by the Government of \$5,100,000 new stock, against the \$5,000,000 now held in private hands. This new issue is deliberately designed to give the Government control over the central bank. In addition, the new Bill makes the Deputy Minister of Finance an *ex officio* member of the Board of Directors and also of the Executive Committee of the Board. To prevent any obstruction of Government policy an amendment was introduced on Wednesday increasing the number of directors

appointed by the Government from four to six, and giving them each two votes. This amendment was based on the Government's fear of a possible coalition between the Governor and Deputy-Governor of the Bank and the seven directors representing the private shareholders. Mr Dunning, in defending the Bill, stressed the need for Government control over the supply of currency and credit, tacitly suggesting that hitherto the financial mechanism has been completely independent of the legislature. This plea is open to question, but the main criticism has come from a different angle, the Conservatives attacking it for falling short of election promises and the Socialists desiring complete "nationalisation" by abolishing the privately-owned shares.

The Money Market.—For the moment rates are definitely firmer. There has been a good demand for loans, and while the clearing banks have not altered their rates, one or another bank has been calling from the market on every day this week. As the May clearing bank returns show, the banks' cash ratios are lower than they have been for some time. Tender issues of Treasury bills have also risen between May 2nd and June 13th from £528 to £578 millions. Many of these bills have been absorbed by the banks, but the market has also had to take up its share. Hence to-day not only are the banks reluctant to buy bills, but the market is having to carry a greater quantity. This readily explains the greater demand for loans.

	May 21, 1936	May 28, 1936	June 4, 1936	June 11, 1936
Bank rate	2	2	2	2
Clearing banks' deposit rate ..	1	1	1	1
Short loan rate:—				
Clearing banks	1-1-1*	1-1-1*	1-1-1*	1-1-1*
Others	1	1	1	1
Discount rates:—				
Treasury bills	1-1-1	1-1-1	1-1-1	1-1-1
Three months' bank bills	1-1-1	1-1-1	1-1-1	1-1-1

* Loans against Treasury bills and other approved bills, and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

The immediate consequence is an appreciable rise in discount rates. Last Saturday's Treasury bill tender rate was 14s. 7.12d. per cent., against 11s. 5.54d. per cent. the weeks before. The allotment remained at £50 millions. This week the banks only bought a small quantity of Treasury bills and quickly found them forthcoming at 1½ per cent. As was explained in last week's *Economist*, this greater stringency is solely due to the influx of French money and French hoarding of British currency. It indicates no change in our monetary policy.

The Bank Return.—Further purchases by the Bank have raised its gold stocks by another £1.2 millions. The note circulation is reduced by £500,000, as any additional French currency hoarding has been neutralised by the return of Whitsun currency from circulation. As the result of these two movements the Reserve is strengthened by £1.7 millions.

BANK OF ENGLAND

	June 12, 1935	May 20, 1936	May 27, 1936	June 3, 1936	June 10, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	192.7	205.4	206.4	207.3	208.5
Note circulation	398.8	423.1	426.1	433.5	433.0
Banking Department:—					
Reserve	54.7	43.1	41.2	34.7	36.4
Public deposits	7.8	21.0	19.8	8.2	13.5
Bankers' deposits	101.7	80.1	78.3	89.7	86.5
Other deposits	35.9	36.8	36.7	37.1	37.1
Government securities ..	92.3	91.2	91.8	98.5	97.8
Discounts and advances ..	5.9	7.1	6.7	6.2	6.2
Other securities	10.5	14.3	12.9	13.3	14.6
Proportion	37.5%	31.2%	30.5%	25.7%	26.5%

In the banking department discrepancies in the dates of Treasury bill payments and maturities probably explain the rise in public deposits and the drop in bankers' deposits.

THE STOCK EXCHANGE

TIN SHARE PROSPECTS

FOURTEEN months ago (see the *Economist*, April 13, 1935) we suggested that the prevailing short-term attractions in the market for tin shares were set in a background of long-period uncertainty. At that time, the permitted rate of output was no higher than 45 per cent. of basic quotas. Between November and March last, however, the industry was working at double that rate in an attempt to bring depleted stocks into more fitting relationship with current demand. Representative tin shares responded significantly to the upward adjustment of production quotas. The *Investors' Chronicle* index, which stood at 111.2 last April (December 31, 1923 = 100), had reached 119.0 last December, and fluctuated around 124 during the first quarter of this year. April saw a peak of 130.1, but at the end of last month the average level was no better than 122.6.

Events during the past year have increased, rather than diminished, the uncertain outlook for the industry. At one period last autumn the cash price reached £248 per ton, while in January last the quotation dipped below £200. In the last fortnight a spectacular fall from £195 13s. 9d. to £185 has attested the market's uncertainty concerning the renewal of the present restriction scheme which legally expires at the end of the year. In practice a new agreement should be reached some time before that date if control is to remain effective. And meanwhile the policy of the Committee—endowed with the necessity for unanimous decision—suggests a definite loss of leadership and more than a semblance of internal dissension.

It is this major contingency which is in the mind of every tin shareholder. It is, moreover, already evident that any new instrument for control will need to accommodate a lively disparity of views between the principal signatory countries. Malaya, Bolivia, the Dutch East Indies and Nigeria have expressed their willingness in principle to continue control for a further period, provided that Siam, the Belgian Congo and other tin-producing countries participate on satisfactory terms. It is reported that while negotiations with Belgian interests have proceeded favourably, Siam (which is allotted a basic minimum production of 9,800 tons, and is currently producing at an annual rate of 11,760 tons on the 85 per cent. quota) is again endeavouring to exploit her "nuisance value" by demanding a "substantial increase" in tonnage. In plain terms, she asks for at least 20,000 tons per annum as her basic figure. Meanwhile, spokesmen for the Malayan mining industry have declared their opposition to further concessions to augment tin production in other countries to the detriment of Malayan interests. The Malayan and Dutch delegates are now *en route* for Siam, armed with powers to negotiate a settlement. Investors may be loth to yield to premature fears of abandonment of restriction. The odds against it have, perhaps, lessened, but few responsible voices within the industry insist upon its complete abrogation, even if an increasing number stress the need for modification. Among the obvious reforms are the *actual* production of theoretical quotas (suggested by Bolivia's short-fall of 8,896 tons), the holding of larger mine stocks, and proportional representation and majority decision on the Committee.

On the weight of the evidence, tin shareholders may feel that concessions are demanded no less from high cost producers, such as Bolivia, than from new producers, like Siam. The former has a special incentive to maintain the restriction front, for the costs of Patiño Mines were as high as £163 1s. 4d. per ton during 1935. The latter country has a general interest in the welfare of the industry. Shareholders in the typical low cost concerns in Malaya and Nigeria may feel disposed to press for the recognition of this fact in the quota allocations.

The preceding discussion may suggest a case for a careful choice of shares of low-cost producers, assuming that

the restriction hurdle is cleared. The ultimate justification for such a policy, however, would be contingent upon consideration of the long-term trend of supply, consumption and prices. Assuming that stocks were increased by at least 10,000 tons to "normal," last year's consumption—at £225 per ton—could be satisfied by a quota little in excess of 70 per cent. This calculation takes no account, however, of the effect of a high selling price on world demand for tin. The value of Malaya's restricted production for 1935 was £9½ millions. Assuming an average price of only £185 per ton, the *current* rate of production would be worth £11.3 millions gross in a full year, with some prospect of slight cost reductions on the higher output. Despite the recent search for substitutes, there is no reason to suppose that demand for tin has lost all responsiveness to falling prices.

For the moment, trade demand is a minor market factor compared with restriction uncertainties. Even the prospect of guildster devaluation, with its possible unsettlement of sterling prices, is less important. If the negotiations break down, prolonged market uncertainty is unavoidable. If agreement is reached—with or without Siam—Malaya's demands will presumably receive some recognition. Provided that no further significant break occurs in the metal markets, opportunities may then recur for selective speculative investment. The accompanying table sets out the operating and profits record of a sample of companies in each principal producing area. Analysis of the figures should take account of the periods covered.

In the group of Malayan concerns, one factor stands out clearly. The reduction in costs since 1929 has been striking, but the tendency during 1934-35 was towards relative stability of costs, despite the increased rate of production. Kamunting, on which 5 out of 7 dredges were working compared with only two during the previous year, secured the most impressive reduction in costs from £46 to £33 per ton of tin ore. This achievement, however, appears to overstate the possibilities for many dredging concerns, which must face the possibility of a restoration of pay "cuts" and of the partial relinquishment of other economies in expenditure effected during the lean years. Certain companies, such as Malayan and Southern Malayan, are in process of distributing profits from the special Buffer Stock quota, produced last year. Both these prosperous concerns in the "Stephens" group, incidentally, are installing a large dredge, which should come into operation a year hence. This policy, which has been officially described as an insurance against the breakdown of the restriction scheme, should further reduce the companies' already low costs. Pahang, a lode producer, has suffered a substantial rise in costs, owing to output reduction, and expanding production would permit a further reduction from the latest figure of £83 per ton. Petaling, with five dredges under-employed, has maintained phenomenally low costs during the past four years, and has now added some 603 acres to her leased area. Re-commissioning of dredges to produce the higher quotas allotted during the current year is, however, likely to entail some increase in costs.

Market interest, last autumn, centred upon the producers of mixed concentrates of tin, wolfram and scheelite, such as Consolidated Tin Mines of Burma, Mawchi and Kramat Pulai. The demand for special steels for armaments and industrial uses has produced a sharp rise in wolfram prices and Mawchi has arranged for increased treatment capacity in England. Kramat Pulai, however, is essentially a short-life proposition, with but two years' supply of ore in sight for the mill. Its prospects are entirely dependent, therefore, upon current drilling operations, as the yield unmistakably suggests. The latest Toyo results, finally, have been disappointing owing to the Japanese operating company's sharp increase in costs and lower realised selling prices. Development, however, has recently been progressive.

The following table of share prices shows that current quotations lie uncomfortably between last year's extremes, and that yields are at speculative, rather than "crisis" levels:—

Company	Ord. Dividends				Ord. Shares						Yield (a) (%)
	1933	1934	1935	Int. Cur- rent year	De- nom.	1935		Present

(a) Based on latest complete year's dividend, unless exceeded by total interim distributions for current year.

* Two interims totalling 10 per cent. † Two interims totalling 20 per cent.

‡ Years to December 31st. § Four interim payments only; final dividend not yet declared.

In view of the major uncertainties in the industry, it may be questioned whether share prices have necessarily reached rock-bottom. And the fact that, for some time to come, tin share operations must be based on hopes and not assurances, may restrain professional speculators from undertaking substantial commitments. Undoubtedly, there are prospects for low cost producers, if a reformed and more elastic restriction agreement is reached. But until that result is achieved, tin shares will continue to be "anybody's market."

INVESTMENT NOTES

Disclosure in Company Accounts.—Each week brings further evidence of the demand for more informative company accounts. This week, Mr T. B. Robson urged the case for improvement in holding company accounts before British Chartered Accountants. It has been pleaded unceasingly in these columns, on the main ground that the investor with shares in a holding company finds it impossible to ascertain the earnings position of the group in the absence of a consolidated statement. He is interested in an economic unit consisting of the holding company and its subsidiaries; under the present legal dispensation he has the right to certain information regarding the income of the holding company only, and in practice the degree of disclosure varies, like equity of old, with the length of the chairman's foot. We have throughout adopted the attitude that shareholders were entitled to fuller information concerning the assets and profits of the group in such cases, since in its absence no significant investment valuation could be placed upon their shares. We have denied the relevance of the refuge of obscurantist boards who appeal to the "best interests of shareholders" by citing the supposed danger of disclosure of information to competitors; concerns with a large number of subsidiaries are precisely those which are likely to have some form of quasi-monopoly over a significant part of their market. The most enlightened forms of company accounts can be freely adopted at present, without waiting upon the law's uncertainties and delays. Recent signs, therefore, that reform in accountancy procedure is being associated with a revision of the Companies Act should not reduce the demand for more information within the framework of the existing Act. It was disclosed recently that the Council of the Institute of Chartered Accountants has been collecting information through a special committee so that the Institute might be ready with definite recommendations if the Government should seek advice regarding company law. The President of the Institute has revealed that the Government department concerned is closely watching the working of the 1929 Act, and has suggested that sooner or later a Commission may be set up to deal with company law amendment. There is force in his suggestion that the whole Act should be reviewed and that piecemeal legislation, even for matters obviously calling for rectification, should be avoided. History, however, teaches the virtues of patience. Amendment of the 1908 Act required 16 years, excluding the war period, and only half that time has elapsed since the substantive changes embodied in the 1929 Act were enacted. Meanwhile, pressure for voluntary reform is likely to bring wider adoption of intelligible holding company accounts. Some months ago Mr Arthur Chamberlain warned the shareholders of Tube Investments, Ltd., that a legal balance might present a more or less truthful but entirely misleading position of affairs. Shareholders may find themselves in regretful agreement with Mr Bumble on the character of the law which makes such a state of affairs possible.

China and the Investor.—The Rising Sun is throwing a lengthening shadow over the Chinese bond market. Since the disclosure by H.M. Inspector-General of Customs of the serious effect of smuggling, under Japanese connivance, on North China revenues, all the Customs-secured loans have been depressed. In these circumstances, the Chairman of the British and Chinese Corporation, Mr D. G. M. Bernard, performed a real service by insisting, in his speech on Wednesday, that there is light as well as shade in the Chinese picture. The Central Government, by all appearances, is making a determined effort to grapple with its internal economic problems. Railway construction, much overdue, is being taken in hand. In the Western and Central provinces about 1,500 kilometres of new lines were completed last year, and a further 2,500 are in hand. For the first time in history a Chinese

railway loan has been issued in Shanghai entirely on its own merits, without collateral security. The currency reforms have opened a new chapter in Chinese finance. If the danger of outside interference were eliminated, the way might well be clear for the programme lucidly enunciated by the chairman of the British and Chinese Corporation. The first desideratum would be a composition between the Government and the holders of bonds which are in default—for hardly one of the half-dozen Chinese railway loans issued by the Corporation during the past thirty years has not been allowed to drift into this condition. The next step would be the balancing of the Budget, which might be helped by the results of the recent currency stabilisation at a "discreetly chosen" level. Already, devaluation has corrected an adverse balance of payments, and if economic factors alone were relevant, investors might well accept the invitation (in Mr Bernard's words) "to pass a vote of confidence in the Chinese Government." But, in view of this week's news (discussed in a Note on page 598), can the bondholder view ultimate prospects with complete confidence? Time and again, China has assimilated her invaders. But treaty ports and railway loans are a sufficiently modern innovation in her centuries-old civilisation still to require the backing, in the last resort, of guns. And will the guns be British? The Central Government deserves every credit for its good faith, but the future of British investment in China hinges on the intentions of Tokyo as well as Nanking.

The Oil Situation.—It would appear from the speech of Sir John Cargill at the annual meeting of the Burmah Oil Company, as well as from the report of the directors of the Royal Dutch Petroleum, that the oil prospect is regarded not unfavourably by the European leaders of the industry, although a recent speech by Mr Walter Teague of the Standard Oil Company of New Jersey, suggested that all was not well in the United States. Sir John Cargill stated that there had been increasingly better control over extravagant production in America and that most other producing countries had regulated their output to the economic outlet available for it. But he was still disturbed by the uncontrolled Roumanian production which found its way to some extent into India and by the development of a new source of production outside India (meaning presumably that of the Standard Oil Company of California in the Bahrein Island in the Persian Gulf) which might also threaten the Indian market. Regarding the situation in America, it may be said that the statistical position has weakened with the rise in crude oil output to above 3,000,000 barrels a day, but has not deteriorated to an extent which threatens the stability of the market. The increase in crude oil production is attributable mainly to the development of the Rodessa field in Louisiana, but on the whole the increase in consumption should more than compensate for it. The Bureau of Mines statistics show that in the first three months of the current year the domestic gasoline demand, in spite of the bad weather, was 9.3 per cent., above the corresponding period of 1935. If consumption for the whole year should show an increase of 10 per cent. domestic demand for gasoline would exceed that of 1935 by 30 million barrels. The increase in gasoline stocks this year may not, therefore, be of serious importance. We are indebted to the Petroleum Press Service for the following adjusted figures of American oil stocks:—

U.S. Stocks (In 000s of barrels)					
	Crude Oil	Gasoline	Gas and Fuel Oil		
	1935	1936	1935	1936	
January 4 ...	322,173	297,899	49,028	52,811	108,002
May 23	323,379	297,325	59,306	67,490	97,637

It will be seen that gasoline is the only product whose stocks show an increase this year (of about 8,000,000 barrels) and that total stocks are in fact down by about 18 million barrels as compared with May, 1935. These figures are calculated after allowing for the new method of reckoning now employed for the published returns of the U.S. Bureau of Mines. The latter show crude oil stocks at about

AN INVESTMENT, FREE FROM LIABILITY, IN 52

MoN 796/1

17 million barrels, gasoline stocks at about 5 million barrels and gas and fuel oil stocks about 3 million barrels higher than they had been calculated in the previous year. If Rodessa is the only new important field to be developed this year there is nothing in the American oil situation to threaten a new collapse in oil prices. It is, however, important that gasoline stocks should not be greatly increased this autumn when consumption undergoes a seasonal decline.

Actuaries' Investment Index.—The latest computation of the Actuaries' Investment Index, based on last Tuesday's prices, takes in only the first stages of this week's market improvement. It is clear that the modest recovery has yet to offset the depressing close of the Whitsuntide account, which left no section of the market unscathed. It is not, therefore, surprising that the average level of the 178 ordinary shares included in the index has declined further to 81.9, compared with 82.2 last week and 83.1 four weeks earlier (December 31, 1928 = 100). The corresponding yield figures are 3.80, 3.75 and 3.68 per cent. The irregular movement of certain component groups is recorded below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)		
	Month Ago (May 12)	Last Week (June 2)	This Week (June 9)	Month Ago (May 12)	Last Week (June 2)	This Week (June 9)
<i>Higher this week:</i>						
Coal (7)	96.5	92.8	94.2	4.21	4.43	4.35
Motors (5)	56.4	55.0	55.5	4.19	4.29	4.25
Electric Supplies (10)	137.3	134.3	136.6	3.61	3.85	3.82
<i>Lower this week:</i>						
Insurance Companies (24) ...	133.0	130.1	129.1	3.19	3.26	3.29
Oil (5)	84.3	85.7	82.6	2.56	2.89	3.10
Home Rails (4)	73.0	68.1	67.0	1.56	1.61	1.61
Miscellaneous (56)	75.2	74.8	74.5	4.02	4.07	4.07

Coal shares have registered a slight gain on the postponement of the Coal Mines Bill until the autumn, while motor and electrical equipment shares have been well supported on current trade reports. The oil share market, however, closed the last account rather raggedly after the bulls had enjoyed full scope. The fall, however, seems likely to prove only a temporary correction. The home rail index has lost six points during a month which has reopened the wage issue for complete restoration of cuts.

COMPANY NOTES

Machine Tool Companies.—The accompanying table of profits covers relatively few companies in the machine tool trade, which has remained largely in private ownership, but it illustrates the difficulties which the trade has had to face in recent years. To Sir Thomas Inskip's remark that machine tools are one of the main essentials of adequate armament, there is a corollary: that after the last war the market was glutted with second-hand machinery, which affected business long after the war had stopped. In addition, the trade had to face what is now recognised as an "under-equipment" period affecting

almost every branch of British industry. There were, consequently, many companies which found difficulty in earning profits. Recently, however, conditions have been improving. The exceptional demand from Russia in 1931 and 1932 came at a singularly useful moment when the home market was at its worst. At £2,237,000 and £3,144,000, respectively, the exports for those years easily exceeded the best pre-depression years in the late 'twenties. The Russian sales are not necessarily reflected in profits for the period, however, since the business was mostly on extended credit, and normal practice would only take profits into the accounts as payments were received. In 1933 and 1934 domestic revival began to compensate for the cessation of the exceptional Russian orders. Nevertheless, the "Import Duties" census figures show that in 1933 the total output of machine tools was valued at little more than

half the 1930 output (£3,235,000, against £6,139,000), and that the further domestic recovery and rather better exports of 1934, though raising output sharply to £4,825,000, still left it well below 1930. Undoubtedly 1935 will have brought substantial further recovery. Exports rose to the respectable level of £2,246,000, and home demand was certainly larger—as is confirmed both by company accounts and chairmen's speeches. In the current year the flowing tide of capital equipment is being reinforced by the adventitious and powerful stimulus of re-armament demand. The tool makers last year were already showing profits as good as, or better than, any in the past decade. This, however, was not an extravagant achievement, and current prospects are almost certainly better than anything in recent years. It is quite possible that conditions will continue favourable for some time on the combined industrial and defence demand. Subject to the rather limited choice and narrow markets available, therefore, the skilled and active investor may find opportunities. The general investor, however, should not be tempted. In a capital goods industry, the machine tool makers are subject to wide fluctuations in activity; and, in particular, their permanent interests may not be strengthened by sudden urgent demand for re-armament purposes which, once satisfied (as one must hope under peaceful conditions), will subside and leave the makers to find new markets elsewhere.

"Shell" Accounts.—No indication is given in the "Shell" accounts of the group earnings, since the 17½ per cent. tax-free dividend is covered with a mere £8 to spare. Nor is any reference made to the trading position except for a discussion of the United States improvement last year and a cautionary note regarding current prospects in that market. There is, however, sufficient internal evidence to suggest that the 17½ per cent. tax-free dividend was comfortably earned. A good deal of idle tanker tonnage was put into service again last year, and freights jumped by 25 per cent. in October—when sanctions were being discussed on oil and the re-stocking movement was in full swing. The group's own tonnage was occupied to its full

extent. The uncommunicative profit-and-loss account is analysed in the following table:—

	1933	1934	1935
Receipts	2,790,969	3,852,601	5,067,195
Expenses and directors' fees	42,934	45,126	45,949
Earned for dividends	2,748,035	3,807,476	5,021,246
Preference dividends	800,000	800,000	800,000
Ordinary shares (tax free):—			
Earned	1,948,035	3,007,475	4,221,246
Paid	1,809,102	3,015,170	4,221,238
Earned %	8.1	12.46	17.5
Paid %	7½	12½	17½
Carried forward	389,378	381,683	381,691

The major oil interests of the group are unchanged, and the book value of properties and interests in associated companies is £160,000 lower at £33,519,749. Among the general investment holdings, an appreciable amount of "switching" from gilt-edged to T.F.A. stocks is suggested. Investors with a taste for statistical inference may note that the "Shell" profits increased by 31.5 per cent., whereas those of Royal Dutch showed an advance of some 36.2 per cent. The £1 ordinary shares were active on the publication of the report on Thursday, and rose to 98s. 1½d. to yield £3 11s. 3d. net and £4 14s. gross.

Royal Dutch Report.—A dividend up to the highest expectations has proved the curtain-raiser to an impressive recovery report from Royal Dutch. The directors state that, taking the world as a whole—which is no less than the scope of the company's operations in co-operation with the "Shell" group—the past year appears to mark the commencement of recovery in the industry. Expanding demand and more successful control of output suggest to the board that "a somewhat sanguine feeling is not out of place." The report provides the usual particulars of world oil production in 1935, which show a record level of 226,472,024 metric tons, compared with 208,261,193 in 1934. The United States provided 11 out of the 18 million tons increase with a production of 134,980,000 metric tons. Particulars of the group's production are given in the following table:—

ROYAL DUTCH SHELL PRODUCTION (Metric tons)			
	1933	1934	1935
Venezuela	7,597,821	8,168,560	8,469,447
United States	5,514,854	5,549,032	6,840,360
Dutch East Indies	4,815,998	5,152,512	5,000,523
Mexico	2,016,263	2,451,478	3,148,456
Roumania	1,304,372	1,701,054	1,540,117
Total	21,953,473	24,078,012	26,620,019

More tangible results were achieved towards stabilising the American industry, and home consumption rose in gratifying fashion. Russian production increased, but is losing its importance in the international oil market, since exports fell from 4 million tons to 3 million tons last year. The Iraq total figures showed a sharp increase from 1,066,365 to 3,728,681 metric tons, for 1935 was the first full year in which the pipe line was operated. The capacity of the latter is 4 million metric tons per annum, and Royal Dutch has a 23½ per cent. interest in the Iraq Petroleum Company. The group has, in fact, obtained a rather higher share of the expanded world output last year, and since prices were distinctly better last year, dividend receipts from the operating companies rose from Fl. 38,985,312 to Fl. 53,093,121. Whereas in 1934 some Fl. 3,767,516 was required against exchange differences, the slight improvement in the currency position last year allowed the taking of a credit of Fl. 771,867. The 10½ per cent. dividend is well covered by net profits, as the following table shows:—

	(Thousand florins)		
	1933	1934	1935
Gross income less exchange differences	34,743	40,782	58,074
Expenses and debenture service	4,198	2,651	3,795
Net profit	30,545	38,132	54,279
Preference dividend	60	60	60
Ordinary dividend	30,217	37,772	52,881
Rate, per cent.	6.0	7.5	10½
Directors' participation, etc.	...	411	865
Carried forward	547	437	910

The balance sheet shows an increase in investments of Fl. 22 millions to Fl. 82 millions, while shares in oil companies have increased by Fl. 24,471,479. The latter, however, is due to a revision of the book value of investments in other currencies on the basis of existing exchange rates, and an equivalent amount has been credited to specific reserves. The Fl. 100 shares are quoted at £36 15s., being firm on the report.

Brazilian Traction Progress.—Improvement in the position of this utility holding concern was signalled a month ago by the resumption of ordinary dividends with a 30 cents payment, the first since 1932. The accounts for 1935, however, suggest that it was of a negative order during the past year. Operating income of the group in Canadian dollars was smaller at \$30,579,394, despite an increase in business. These earnings are calculated from the milreis figures at arbitrary exchange rates each month, having regard to the exchange position, and the lower exchange value of the milreis was responsible for the fall. The report also notes that earnings were also affected by reduced temporary rates in certain services. The increase in available revenues for the parent concern, therefore, is due to the reduction of bond interest following the redemption of Rio de Janeiro Tramway bonds. The resultant earnings for the equity increased from 51 cents to 74 cents per share, as the following table shows:—

	1933	1934	1935
Consolidated Figures			
Total revenue	28,896,531	31,231,581	30,579,394
Operating expenses	12,973,647	14,616,593	14,144,485
Depreciation	7,720,803	8,067,847	8,508,054
Bond interest, sinking funds, etc.	4,243,678	4,319,206	2,674,509

Balance, being operating revenue	3,958,403	4,227,935	5,252,346
Add miscellaneous income	260,210	254,274	289,406
Less general expenses and amortisation†	789,658	846,710	331,514
Net revenue	3,428,955	3,635,499	5,210,238
Preference dividend	23,604	23,604	23,604
Ordinary shares:—			
Earned	3,405,351	3,611,895	5,186,634
Paid	Nil	Nil	Nil
Earned per share	\$0.48	\$0.51	\$0.74
Surplus	20,787,193	24,399,087	29,585,721

† 1933, \$450,000; 1934, \$500,000; 1935, nil, \$500,000 being charged by operating companies, and included in depreciation above

All branches of the undertakings recorded an advance in operations last year. Total passengers in the traction group increased from 782 to 824 millions. Some 1,120 million kilowatt hours were supplied by the electricity undertakings, an increase of some 10 per cent. The average daily calls made on the telephone service increased from 1,886,773 to 2,195,476. The report notes, however, that little progress has been made towards readjustment of temporary rates fixed for certain services by the Brazilian authorities after the abrogation of agreements providing for their variation according to the external value of the milreis. The first stages of recovery in Brazil, therefore, have been impeded, so far as the Brazilian Traction accounts are concerned, by precisely the same exchange difficulties which affected the neighbouring Argentine railways last year. Economic recovery in Brazil should assist milreis revenues during the current year, but holders of the ordinary shares, at 12½, must be reconciled to the effects of continued exchange weakness in determining the dollar amounts available for dividends.

Argentine Railway Prospects.—It is almost exactly eight months since the chairman of the Central Argentine Railway protested that out of £277 millions of British capital invested in Argentine railways, as much as £174 millions was earning no interest. Mr W. Howard-Williams had a more grateful task last week, when, at an extraordinary general meeting, he was able to inform stockholders that the Argentine authorities had given tangible evidence of their appreciation of the railways' difficulties.

Last February, the companies were granted special exchange concessions. In return, they agreed to reduce freight rates on maize. It was not clear, originally, whether the balance of advantage from this arrangement would lie with the railways or with the Government. Mr Williams declared, however, that the Central Argentine—which, as a maize-carrying line, is most affected—calculated its net gain under the arrangement, for the current calendar year, at not less than £150,000. It would be welcome to stockholders if the Argentine authorities, after having made so important a step in the right direction, could follow it up by the removal of other anomalies which bear hard on them. The agreement, recently made, providing for mutual arrangements against uneconomic competition between the publicly and privately owned railways, would be even more reassuring if the Government could see their way to introduce a bill to legalise traffic pooling arrangements. Above all, the authorities might use every effort to secure the passing of a road and rail co-ordination bill, on less emasculated lines than those of the measure which has lately emerged from the Chamber of Deputies. British investors, in their own interest, warmly desire the best possible relations with the Argentine Government; and the authorities in Buenos Aires have special reason, at the moment, to reciprocate that attitude. In the near future, both may be parties in the same suit before the High Court of Parliament at Westminster. If the renewal of the "Roca" Agreement proves a test case for the maintenance or otherwise of old-established trade relations which are challenged by "the new economy," investors may count, apparently, on influential allies. The Federation of British Industries, this week, in a considered statement of its attitude, has declared that "there is much to be gained . . . from a progressive increase of trade in both directions," and has expressed the hope that the Government will act accordingly.

Handley Page Accounts.—The report of this concern, which builds heavy bombing and passenger aircraft, provides the market with its first substantial fruits from the Air Force expansion programme, which was set in motion last spring. The omnibus profit figure for manufacturing, interest, royalties and profit on realisation of investments has increased from £135,265 to £195,737. Shareholders would doubtless welcome some division of the latter figure, and a statement whether the investment profits exceed the amount of £9,209 credited to revenue last year. As already announced, the participating preference shares receive a total distribution of 20 per cent., leaving the extremely high-gear, but privately held, ordinary capital with a right to some 265 per cent. The following table analyses the results of the past three years:—

	1933	1934	1935
Balance from manufacturing account, interest, royalties, and profits on realisation of investments (1934-35)	38,463	135,265†	195,737
Expenses and fees	67,439	78,719	102,705
Taxation	...	9,218	10,931
Depreciation	2,558	2,738	4,207
Fixed preference dividend	19,914	19,914	19,914
Further preference dividend	...	9,957	19,914
Ordinary shares:—			
Earned	Dr. 51,448	14,719	38,060
Paid	Nil	9,957	19,914
Earned (%)	Nil	17½	42½
Paid (%)	Nil	132½	265
Carried forward	£43*	5,704	23,854

* Includes £51,975 profit on realisation of investments.

† Includes £9,209 profit on realisation of investments.

The directors state that the company has been actively employed in producing the new type aircraft for the Air Force, and that considerable works extensions were put in hand towards the end of 1935. These statements are fully supported by the accounts. Plant and machinery, less depreciation, is some £11,000 higher at £33,246, and stocks—some £40,000 higher at £128,250—and other current

items reveal a considerable expansion. The Patents Realisation Reserve has been increased by £40,000 received during the year, and now stands at £190,541. Of this amount £116,965 is to be capitalised in new ordinary stock, of which £62,232 10s. will be allotted to preference shareholders in the proportion of 5s. new stock for two preference shares, and the balance of £54,732 10s. allotted to holders of the £7,500 existing ordinary capital. This scheme slightly enhances the participating preference shareholders' rights, and is unobjectionable. The existing preference shares are quoted at 37s. to yield £4 6s. 6d. per cent., without adjustment for rights.

* * *

Kaffir Dividends.—Twelve months ago, writes our mining correspondent, the June distributions of several Rand mining companies proved disappointing, for the market had underestimated liabilities under the prevailing basis of taxation. This year's payments have fulfilled—and even surpassed—market expectations. The declarations so far available—from the Gold Fields and the Johannesburg Consolidated groups—suggest that the change in taxation has on the whole proved beneficial. The payments are set out in the following table:—

	June, 1935	Dec., 1935	Total, 1935	June, 1936
<i>Gold Fields Group</i>				
Robinson Deep "B"	1/3	1/6	2/9	2/-
Simmer and Jack	-/3	-/3	-/6	-1 1/2
Sub Nigel	8/-	8/-	16/-	9/-
<i>Johnnies Group</i>				
Government G.M. Areas ...	3/-	3/-	6/-	2/9
Langlaagte Estate	2/-	2/-	4/-	1/6
New State Areas	2/6	2/6	5/-	3/-
Randfontein	2/-	2/-	4/-	2/6
Van Ryn Deep	3/-	3/-	6/-	2/6
Witwatersrand Gold	2/-	2/-	4/-	2/-

The outstanding advance is shown by Sub Nigel, which was not expected to pay more than 8s. 6d. per share, since net earnings for the half-year represent little over 8s. per share. The decision to pay 9s. is attributable in the main to reduced requirements for capital expenditure, which has been heavy in recent years. Robinson Deep has provided less for taxation, but the chief factor favouring the increased dividend was the release of profits by the recent issue of shares for capital expenditure. The cut in the Government Areas rate is less than might have been expected in view of the shrinkage in profits. Under the terms of the lease, however, the Union Government sustains a greater proportion of any decline in earnings. New State Areas have doubtless been assisted in increasing the rate by the debenture redemption last year. Reduced profits for Langlaagte and Van Ryn Deep—reflecting reductions in the grade of the ore reserves—have played their part, together with increased taxation. The increased Randfontein rate is particularly satisfactory to the market, which has watched the achievement of record profits, almost month after month, resulting from the treatment of increased tonnages of higher grade ore.

* * *

Other Company Results.—Our weekly table of company profits appears on page 653 and includes the results of 55 additional companies. Heavy industry is well represented this week. *William Cory*, whose maintained 17½ per cent. dividend was announced at the end of May, reports slightly lower profits at £646,331. In contrast, *Rickett, Cockerill* have enjoyed a distinctly better year, profits having advanced from £42,870 to £60,800 to provide a 5 per cent. dividend. *Manchester Collieries* also reports an increase in net profits, after providing depreciation and reserves, of £197,326 against £169,844, and the dividend is increased from 3 to 4 per cent. *Ruston and Hornsby*, having re-entered the dividend list with a 5 per cent. payment, shows an increase in earnings from £80,265 to £109,829. The *William Beardmore* accounts show a reduction in the net loss from £64,810 to £32,569, both amounts after charging debenture interest of £59,645 accrued but not paid under the moratorium arrangements. The results may

be somewhat more favourable than appears on the surface, since expenditure on reconditioning certain departments has been charged to revenue. The report makes no reference to current operations, but the works are presumably fully occupied with armament work. The reconstruction scheme has been postponed until the company's earnings capacity is clearer. A sharp increase in profits is reported by *Metal Traders* from £37,505 to £87,413. The dividend is raised from 15 to 22½ per cent., and £25,000 placed to reserve. *Glacier Metal* reports satisfactory profits in its first year as a public concern. Net earnings total £28,324 and a 10 per cent. ordinary dividend is to be paid. The profit of *Denny, Mott and Dickson* are sharply, and those of *Spicers, Ltd.*, moderately, down on the previous year, entailing reduced dividends. Rubber company results are not buoyant, and the *Telogoredjo* results (*Dr. £1,046* against £27,762) are distinctly disappointing. *Straits Plantations*, which appears in this group by courtesy rather than right since it produces copra, has enjoyed a distinctly good year, with profits of £24,998 against £11,645. The tea group includes *Baraooora* and *Lungla*. Further trust company results, including *Witan Investment*, show modest improvement. Among the week's dividend declarations are *South African Breweries* (20 per cent. against 17½ per cent., tax free) and *Goldsbrough Mort*, which has increased its profits from £101,188 to £179,917 and pays 7 per cent. against 6 per cent. *General Electric* announce profits of £1,485,153, against £1,184,483. The distribution is raised from 10 to 15 per cent., and a new issue of ordinary shares will be offered to holders at £3 at the rate of 1 in 10. The *Bristol Aeroplane* dividend of 22½ per cent. was well received in the market on Thursday.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of meetings of the following concerns:—Milk Marketing Board, Suez Canal Company, Antofagasta (Chili) and Bolivia Railway, British and Chinese Corporation, Welwyn Garden City, Burmah Oil, Anglo-Iranian Oil, Associated Newspapers, J. Lyons and Company, Boots Pure Drug, Kepong (Malay) Rubber Estates, United Sua Betong Rubber Estates, Batang Consolidated Rubber Estates, Allied Brick and Tile Works, Gordon Hotels, General Mining and Finance Corporation, Henderson's Transvaal Estates, Tronoh Mines, Geduld Proprietary Mines, East Geduld Mines, Modderfontein Deep Levels, Van Dyk Consolidated Mines, Grootvlei Proprietary Mines and Marjevale Consolidated Mines. The chairman declared that the British and Chinese Corporation had both preached and demonstrated the advantages of Anglo-Chinese co-operation. Sir John Cargill's statement at the Burmah Oil meeting is referred to on page 617. At the J. Lyons meeting Sir Isidore Salmon referred to the necessity for apportioning higher charges over a menu to counterbalance the recent increase in costs. Stockholders in Antofagasta (Chili) and Bolivia Railway were informed that the increase in sterling revenue would have been larger but for differences in exchange rates between 1934 and 1935. Sir Francis Voules, at the Kepong (Malay) meeting, referred to prospects of lower costs in future. The chairman of Batang Consolidated discussed the maintenance of the dividend in relation to a large carry-forward and a higher commodity price. Mr Hay, at the United Sua Betong meeting, considered that rubber regulation was achieving its purpose of reducing stocks. The chairman of Gordon Hotels explained that the proceeds of the sale of the Metropole had been used to redeem the prior mortgage and that negotiations with the debenture-holders had been delayed. At the General Mining and Finance meeting, Sir George Albu stated that investment income had risen steadily during recent years, and now represented the main source of dividends. Mr P. M. Anderson's statements at the meeting of the Union Corporation undertakings will engage the serious attention of mining investors. At the Geduld Proprietary meeting, he analysed the effect of taxation upon the company, and disclosed that a refund of £20,000 might be obtained. East Geduld shareholders were informed that the new taxation basis would not affect the company financially. At the Modderfontein meeting, Mr Anderson disclosed that operations would probably con-

nue during next year, although accurate estimates were impossible to frame. The difficulties encountered and overcome in developing the Van Dyk property received full discussion. The sinking of the No. 4 shaft is proceeding well. Highly satisfactory development work from the No. 1 incline of East Geduld was reported at the Grootvlei meeting. At the Marjevale meeting it was reported that development work from the No. 1 shaft, whose sinking is now in progress, would be started at the end of the year. At the Tronoh Mines meeting, Mr C. V. Thomas emphasised the claims of the Malayan tin industry in a renewed restriction scheme. The Chairman of the Milk Marketing Board referred to repeated requests for a levy subsidy on imported dairy produce. At the Welwyn Garden City meeting, Sir Theodore Chambers stressed the increasing importance of the industrial area of the town. The Marquis de Vogué informed Suez Canal shareholders that by an agreement with the Egyptian Government, the company could face currency movements without anxiety. At the Boots Pure Drug meeting the chairman discussed the prospects of the company in relation to current re-armament activity. The chairman of Associated Newspapers stated that the new plant would be in operation before the end of the financial year.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
JUNE 23

ACCOUNT
JUNE 25

FROM the moment that M. Blum applied his seal to the sanctity of the franc—and, perhaps, to his own eventual fate—the London market was bound to improve. The removal of the threat of devaluation, which would have provided an immediate technical disturbance irrespective of its ultimate economic consequences, was not the only

relief from Paris, for the handling of the strike situation had been carefully watched from London in view of its possible repercussions here. Technically, the markets were in better trim after the dolours of the Whitsun account. The employment figures made a real impression, whereas last week they might well have gone unnoticed. Wall Street helped with a firmer tone, and since the foreign situation was quiet—though basically more ominous—a recrudescence of modes buying was sufficient to put the market in better fettle than it has known for some time.

Gilt-edged stocks opened better, with bear operators covering their positions. Foreign purchasing became more significant after M. Blum's concessions to the strikers' demands, on fears that the inherent contradictions in his programme would ultimately involve a higher rate of devaluation. Old Consols were favoured by Continental demand, and closed as much as 7/8 higher on Wednesday, but a slight reaction occurred on Thursday afternoon. In the Dominion list, Calgary issues were lowered sharply on the suggestions of a cut in interest rates to 3 per cent.

In the foreign bond market, Far Eastern issues opened under continued depression, with no relieving feature in the Canton-Nanking situation. The market, however, was inclined to put a hopeful interpretation on the talks between Sir Frederick Leith-Ross and the Japanese authorities in Tokyo this week. European issues registered small irregular movements. Brazilian and Chilean issues opened with a reaction, but the former were rather better in mid-week, when San Paulo Coffee bonds also improved.

Among home rail stocks, "bargain basement" buying helped quotations early in the week, although the overhanging wage discussions prevented any real buoyancy in dealings. Modest buying continued on Wednesday, despite the poor holiday traffics. In the foreign rail market, some early support for Canadian Pacific issues was reported and the Argentine stocks were modestly supported, despite the discouraging traffics.

Business in industrial shares has been on a small scale throughout the week, but the investing public appears to be showing more interest in a selected range of shares.

Cable and Wireless issues showed distinct improvement from the low levels recorded last week. Aircraft issues were in better form, with support for Hawker Siddeley on the meeting and Handley Page on the report (discussed on page 619). Austin and Standard led the improvement in the motor group, impressed by reports of active trading conditions. Although iron and steel shares became irregular after a firm opening, demand was well maintained for Dorman Long, John Brown and Firth Brown shares, while Richard Thomas were in renewed demand on dividend expectations. In the electrical equipment group, Crompton Parkinson were active and again advanced after the cessation of mid-week profit-taking. Callender's Cable closed higher on a maintained dividend, and General Electric were supported in anticipation of Thursday's dividend declaration.

Demand for brewery and tobacco issues remained quiet, and in the latter group B.A.T. were subjected to further precautionary sales. Store shares were steady rather than firm, and the recent rise in Courtaulds was not maintained. Among building issues, London Brick jumped on Wednesday on the publication of record output for May, but the smaller brick and cement issues were inclined to ease. The miscellaneous industrials, such as Turner and Newall and British Oxygen improved, and a number of machine tool concerns, such as Coventry Gauge and Tool and Greenwood and Batley, responded to informed buying. In the shipping group, P. and O. revived, but insurance and bank shares showed little alteration.

The oil share market opened quietly, with a small volume of business and rather jaded professional interest. Eagle issues opened with somewhat faithless support, followed by a mid-week rally. The Royal Dutch and "Shell" reports, however, produced a general broadening of interest on Thursday. Apex (Trinidad) were unaffected by the interim dividend announcement. Further liquidation of tea shares was reported in a rather difficult market and rubber shares remained dull with the trendless commodity.

Although business in the Kaffir market showed no evidence of expansion, conditions remained generally firm, and the tone was assisted by the satisfactory June dividends (discussed on page 620). Possible modification of taxation for newer concerns helped the speculative counters. The temporary settlement of the franc crisis was only slightly encouraging to a market which was inclined to fear worse to come, but Paris support helped the mid-week improvement. Sub Nigel and Randfontein responded to the dividends and a number of finance issues improved. The Rhodesian copper issues turned dull after a promising opening, and East African gold issues remained depressed. Tin shares, whose prospects are discussed on page 615, reacted on the further fall in the metal.

NEW YORK

WALL STREET seems to have captured something of the "keynoting" spirit from Cleveland this week. The market opened better, responding more freely to a sustained flow of business and company reports, and with the shadow of franc devaluation once more removed from the current scene. Even the House of Representatives' struggle to secure the Tax Bill and the recent depression over margin regulations seemed to have lost their bearish potency. Business at first was restrained, but industrials advanced—in some cases by over a point—with steel shares in the lead. Strong buying of steel issues continued later in the week, for the achievement of 70 per cent. of capacity (according to *Iron Age* estimates) was accompanied by reports of heavy consumers' buying in anticipation of price increases next month. Business in other markets also tended to expand as the week progressed, and, in addition to improvement in the rail and motor groups, there was some stirring of life among utilities. The bond market remained quiet, but the improved trend in the stock market carried some second-class issues to higher levels. Although the market would welcome a resurgence of Republican spirit, the proceedings at the Convention have been uninspiringly devoted to denunciation rather than exhortation. The improvement in tone suggests that the technical position of the market has now improved sufficiently to be responsive to business news at least in the immediate future, despite operators' concern over the November election.

* Two-hour session.

PARIS

At the end of last week markets responded readily to every gleam of hope, and a substantial improvement in home issues was evident all round, Friday's session being perhaps the brightest since the labour troubles began. Rentes moved upwards, and bank shares showed particular firmness, especially Banque de France. Yet the rally did not survive the week-end, and this week the improvement has not been maintained. The strike settlements failed to produce any tonic effect on a market impressed by the scope of rising wage costs. Conditions have been dull, and industrial and bank shares marked down. Some of the reaction was, however, due also to profit-taking, particularly in Royal Dutch, whose fall was followed by other oil shares. Refugee Internationals have not been very sensitive to variations in the franc exchange, but interest in them has revived a little this week, especially in Suez Canal.

	June 3, 1936	June 8, 1936	June 10, 1936		June 3, 1936	June 8, 1936	June 10, 1936

BERLIN

Brisk trading at the end of last week was followed on Monday by a slight irregularity. A good demand for Farbenindustrie developed after the announcement of the results though, as this had already been discounted to some extent, actual price movements were unsensational. Siemens improved, but otherwise the differences from previous prices were not very marked. The early irregularity was followed by firmness and then by rapid advances, which were not justified by the increase in the actual volume of business. By Wednesday a reaction set in on profit-taking, but although prices closed below their best they were frequently above the levels of the previous day. The upward movement in Siemens, in common with other shares, was reversed, though prices closed higher than a week ago.

	June 3, 1936	June 8, 1936	June 10, 1936		June 3, 1936	June 8, 1936	June 10, 1936

AMSTERDAM

In a rather featureless week, the few recorded movements came in response to the exchange situation. The market closed at the end of last week on a more confident—though

still hesitant—note. The improvement in the guilder rate on Monday brought about a recovery in bonds, which had been markedly depressed during the previous week. Nevertheless turnover remained small and prices moved only within narrow limits. A slightly more brisk demand all round has since developed, rubber shares in particular improving on the publication of better export figures for the Dutch East Indies.

CAPITAL ISSUES

THE new issue market has quickly resumed its activity after the Whitsuntide holidays. The *Commonwealth of Australia Conversion Loan* was discussed in last week's *Economist*. On the result (which will be announced next week) may depend the decision whether the authorities are again to call a halt to gilt-edged offers. All the remaining issues of the week are on behalf of companies. *Southern Areas Electric Corporation*, which is issuing ordinary shares, chiefly to repay bank loans, serves mainly semi-rural areas, but unit sales and profits have risen rapidly in the last two years. *Sena Sugar Estates* is a well-established undertaking with refineries in Portuguese East Africa. The capital has recently been reorganised, and the status of the debenture stock will depend on the company's ability to avoid the recurrence of such a fall in profits as occurred in 1934. *C.N.A. Investments* acquires almost the entire share capital of a South African publishing house, whose profits have shown impressive recovery from the effects of depression. *G. Hopkins and Sons*, which adopts high denominational preference and low denominational ordinary shares in its capitalisation, takes over a business specialising in the manufacture of brewery and dairy fittings. The cover for the preference shares is not generous, and profits have shown wide fluctuations in recent years. *Greeff-Chemicals Holdings* acquires the issued capital of a chemical distributing business, with a progressive profit-earning record. The purchase consideration includes an indemnity of £68,625 for the cancellation of agreements by the operating company, but a considerable proportion is to be re-invested by the recipients in ordinary shares at the issue price. *Williamson Manufacturing Company* acquires a camera and photographic apparatus business, which is on the Air Ministry list, and is extending its factory to cope with increased business. Last year's profits were two and a half times as great as in either of the two preceding years, and much obviously depends on the continuance of international activity in aircraft construction. *Thomas Blackburn and Sons* is a combination of three ironfounding and engineering businesses in Lancashire whose preference shares are well covered. The earnings of 12½ per cent. shown on the ordinary shares (and reflected in the premium of 30 per cent. in their issue price) presuppose the continuance of the increased activity of 1935. *Steel, Barrel Scammells and Associated Engineers* is another combination of relatively small engineering concerns, floated at a time when its factories are working at high pressure. The increase in profits for 1935 is less striking than in certain other flotations of the week, but the same criticism applies to the basing of a substantial ordinary share premium on the earnings of the best year. Investors cannot assume that, in the engineering industry generally

(Continued on page 626)

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

(Continued from page 623)

the earning power of a "boom" period will be indefinitely maintained. *Alpine (Barborton) Gold Mine* is a frankly speculative offer of Transvaal properties on which the consulting engineers report conservatively but favourably. The week's "statements for public information" include debenture stock issue, partly of a conversion character, by a well-established investment trust and an issue by a retail boot and shoe enterprise.

ISSUES OF THE WEEK

January 1 to June 6, 1936, including conversions, Old Basis, £153,980,936.
January 1 to June 6, 1936, excluding conversions, Old Basis, £89,405,556.
January 1 to June 6, 1936, including conversions, New Basis, £218,710,042.
January 1 to June 6, 1936, excluding conversions, New Basis, £153,234,661.

National Savings Certificates, Net receipts week ended June 6, 1936, Dr. £100,000.

PUBLIC OFFERS

Southern Areas Electric Corporation, Ltd.—Issue of 450,000 ordinary £1 shares at 21s. £430,000 of proceeds to repay bank loan. Holding company incorporated 1933, owns *inter alia* Sussex Electricity Supply Company, Ltd., and Mawdsleys, Ltd. Combined profits, after depreciation and before bank interest, of Corporation and six subsidiaries: May 6 to December 31, 1933, £15,406; 1934, £2,510; 1935, £32,849.

Net profits of Corporation: period to December 31, 1933 £6,472; 1934, £8,328; 1935, £10,510. Dividends, 4 per cent. Lists closed at 9.30 p.m., June 9th. Oversubscribed. Allotment letters posted June 10th. The larger applications received 40 per cent. on allotment.

Sena Sugar Estates, Ltd.—Issue of £750,000 5½ per cent debenture stock at par. Secured by first charge on land, plant etc., in Portuguese East Africa and Portugal. Redeemable by 1 per cent. sinking fund by December 1, 1971, at par, or or three months' notice from December 1, 1941, at various rates. Profits, before depreciation, years to December 31: 1933 £103,475; 1934, £47,356; 1935, £120,214. Net assets, December 31, 1935, £1,741,880, of which £1,291,562 land plant, etc. List closed 9.5 a.m. June 10th.

G. Hopkins and Sons, Ltd.—Issue of 130,000 6 per cent cum. 10s. preference shares at par and 195,000 2s. ordinary shares at 2s. 6d. Formed to acquire business of similar name founded 1879, brewing, dairy and general engineers. Profits, after depreciation: 1933, Dr. £12,412; 1934, £14,064; 1935, £14,446. Net assets, £72,300, purchased for £75,500, £50,000 in cash, and 255,000 ordinary shares.

Greeff-Chemicals Holdings, Ltd.—Issue of 250,000 5½ per cent. cum. 10s. preference shares at 10s. 6d. and 500,000 5s. ordinary shares at 7s. 6d. Acquires share capital of R. W. Greeff and Company, Ltd., founded 1881, distributors of industrial chemicals. Trading and investment profits of operating company, after depreciation: 1933, £29,077; 1934, £35,337; 1935, £41,603. Net assets, £123,337. Total purchase price, £300,775.

Alpine (Barborton) Gold Mine, Ltd.—Issue of 920,000 5s. shares at par. Formed to acquire from Swaziland and General Gold Mining Co., Ltd., gold mining claims held under licence for £147,500, payable £27,500 cash and 480,000 5s. shares. £175,000 available for working capital to carry out development programme suggested by Bewick, Moreing and Company.

BY OFFER FOR SALE

Steel Barrel Scammells and Associated Engineers, Ltd.—Offer for sale of 125,000 5½ per cent. cum. £1 preference, at par, and 250,000 5s. ordinary shares at 6s. 3d. Formed to acquire Steel Barrel Co., G. Scammell and Nephew, and Carrimore Six Wheelers. Combined net profits, after depreciation: 1933, £18,222; 1934, £19,258; 1935, £23,399. Net assets, £225,282, of which land and buildings, £145,000. Total purchase price, £225,000 in 100,000 preference and 500,000 ordinary shares.

C.N.A. Investments, Ltd.—Offer for sale of 500,000 5 per cent. cum. preference £1 shares at 21s. Formed in South Africa to acquire 103,090 £1 shares (out of 103,930) Central News Agency, Ltd., publishing business founded 1896. Profits (South African currency), after revision of depreciation, years to June 30: 1933, £91,361; 1934, £94,734; 1935, £94,423. Net assets, £1,011,961. Shares purchased at £9 11s., of which £4 16s. payable in cash, and £4 15s. in 19 ordinary 5s. shares.

Williamson Manufacturing Co., Ltd.—Offer for sale of 335,000 4s. shares at 5s. 6d. Issued capital, 500,000 shares. Formed to acquire photographic apparatus business of similar name. Profits, after depreciation: 1933, £5,776; 1934, £5,956; 1935, £14,922; four months to April 30, 1936, £9,278. Net assets, £52,067. Purchase price, £68,000, payable £35,000 in cash and £33,000 in 165,000 shares. List closed 9.5 a.m. June 10th. Heavily oversubscribed.

Thomas Blackburn and Sons, Ltd.—Offer for sale of 120,000 6 per cent. cumulative preference shares at par and 440,000 5s. ordinary shares at 6s. 6d. Acquire ironfounders', engineers' and road-making machinery businesses. Combined profits, before depreciation: 1933, £9,249; 1934, £9,642; 1935, £26,424 (or £20,136 after depreciation). Net assets, £135,040. Purchase price, £135,038, payable by 10,080 6 per cent. cumulative 10s. preference shares and 519,992 5s. ordinary shares.

BY STOCK EXCHANGE INTRODUCTION.

Anglo-American Investment Trust.—Issued capital, 2,500,000 £1 S.A. shares. Issue of £1,500,000 (sterling) 4½ per cent. debentures at 98½. Redeemable at par December 31, 1954, at 102½, or after June 30, 1941, on three months' notice. Secured on £2,068,000 Diamond Corporation, Ltd., 4½ per cent. debentures. Latter acquired, together with 1,305,000 £1 shares, £2,068,000 debentures and 171,727 £2 10s. deferred shares of De Beers Consolidated Mines, for £4,430,303 in cash. Vendors take whole of issued shares at £1 10s.

The Charter Trust and Agency, Ltd.—Particulars of issue of £250,000 3½ per cent. debenture stock, redeemable at par June 1, 1961, or from June 1, 1956, on three months' notice. Proceeds to repay £86,850 4½ per cent. debenture stock (convertible into new issue at 98) and for general purposes. Formed 1907 as an investment trust company. Investments

less liabilities, £561,837. Profits before debenture interest, years to November 30: 1933, £29,483; 1934, £31,331; 1935, £28,539.

The Stylo Boot Company (Northern), Ltd.—Issued capital, 400,000 5s. shares and 40,000 5s. management shares. Acquires boot and shoe businesses at par for £58,588 15s. by allotment 194,355 ordinary and 40,000 management shares, latter carrying eight votes per share. Combined profits before depreciation, years ended January 31: 1934, £9,719; 1935, £11,391; 1936, £14,413.

Kitchen and Wade, Ltd.—Issued capital, 625,000 4s. ordinary shares. Acquires net assets of drilling machines business valued £88,124 (including £30,100 drawings, designs, etc.), for £103,500 in cash, of which £15,400 for goodwill. Seton Trust are to take up 459,500 shares, and vendors 163,500 shares at par, out of the purchase consideration. Profits, before depreciation, years to March 31: 1934, £8,676; 1935, £18,392; 1936, £28,074.

Quirk, Barton and Company, Ltd.—Issued capital, 566,925 4s. ordinary shares. Producers of lead sheets, pipes, etc. Profits before depreciation: 1933, £10,687; 1934, £10,266; 1935, £11,732. Total assets, December 31, 1935, £161,608.

BY TENDER

Southgate and District Gas Company.—Offer for sale by tender of £15,000 consolidated (7 per cent. maximum) stock, authorised to be raised in accordance with the provisions of the Southgate and District Gas Acts and Orders, 1866 to 1936. The minimum price of issue has been fixed at £155 10s. for each £100 stock. Applications may be made for £50 stock or for any multiple of £10 stock above £50.

BONUS ISSUE

Metal Box Company.—Continued expansion, state the directors, necessitates the raising of further capital, and ordinary shareholders are to be offered one new ordinary share for every ten held at the price of £3 per share. This will mean the issue of 98,715 shares.

ISSUES TO SHAREHOLDERS ONLY

Hawker Siddeley Aircraft.—400,000 5 per cent. cumulative preference shares are issued at par and 600,000 5s. ordinary shares at 20s. per share.

Jersey General Investment Trust.—Issue of 102,500 5½ per cent. preference shares of £1 at 23s. 6d. per share and 122,500 ordinary shares of £1 at 26s. per share.

Kentan Gold Areas.—The directors offer 500,000 new 10s. shares to shareholders registered on May 29th for subscription at par in the proportion of one new share for every four shares held.

Sphere Investment Trust.—100,000 ordinary shares of £1 are offered to ordinary shareholders registered on May 30th at 21s. 6d. per share in the proportion of one new ordinary share for every five ordinary shares held.

Salisbury (Southern Rhodesia) 4½ per cent. Municipal Loan of £100,000.—Numbers are announced of certain Bonds drawn for redemption at par on June 30, 1936.

The New Transvaal Chemical.—The offers made on behalf of Lever Brothers, Ltd., to the holders of first preference and "A" preference shares of the New Transvaal Chemical Company to exchange their preference shares for preference shares (to be converted into stock) of Lever Brothers, Ltd., have been accepted by over 90 per cent. in value of each class of preference share.

Japanese Conversion Loan.—Japan is to convert 352,000,000 yen of 5 per cent. bonds maturing 1940-42 into 3½ per cent. bonds to be issued from July 15th.

CONVERSIONS AND REPAYMENTS

Commonwealth of Australia Government.—Offer of conversion to holders of £16,551,402 South Australia, Western Australia and New South Wales stocks into Commonwealth of Australia 2½ per cent. registered stock, 1941-43, at 99. New stock redeemable at par, January 1, 1943, or from January 1, 1941, on three months' notice. Lists closed at end of banking hours, June 9th. Conversion lists will close June 15th.

Charter Trust and Agency.—The company will repay the whole of the 4½ per cent. debenture stock at 102 per cent. on December 1, 1936, and is creating a new series of £250,000 3½ per cent. debenture stock of which £86,850 has been reserved for the conversion of the existing 4½ per cent. stock and the balance will be issued at such price and on such terms as may from time to time be arranged.

India (Government of) 5½ per cent. Stock, 1936-1938.—This stock will be paid off at par on and after July 15, 1936.

OTARD'S

ESTABD. 1795

THE BRANDY WITH A PEDIGREE

FORTHCOMING ISSUES

Philco Radio and Television Corporation of Great Britain.—An issue of shares is expected to be made next week.

Gas Consolidation, Ltd.—It is proposed, at an extraordinary meeting on June 30th, to name the existing ordinary shares "B" ordinary shares, and to create £500,000 of new ordinary shares which will be known as "A" ordinary shares. It is proposed also to create £250,000 4½ per cent. irredeemable cumulative preference shares of £1 each.

Alders (Tamworth).—A public issue is expected to be made shortly by this company.

OTHER RESULTS OF ISSUES

Anchor Line.—The lists for issue of £500,000 5½ per cent. cumulative preference shares were closed at 9.5 a.m. June 5th. Fully subscribed.

Consett Iron.—Hambros Bank states that of the 5,000,000 shares offered for subscription to the debenture and share holders, applications for approximately 94 per cent. have been received.

REPORTS AND NOTICES

(See also page 655)

ANGLO-IRANIAN OIL COMPANY.—The report for 1935 states that normal development has continued at the fields. The policy of exploring further areas is being pursued. Consumption of oil products increased and sales benefited thereby, although exchange and import restrictions in various countries caused serious trading difficulties. Refinery, tanks and other fixed assets have expanded from £3,599,757 to £3,994,348, and stores, stocks, etc., from £796,000 to £801,497. Investments in subsidiaries total £19,227,729, and in allied and other companies £6,571,295. The comparable figures for 1934 were £21,163,415 and £7,252,123. Stocks of crude oil, products, etc., have increased from £2,343,291 to £2,575,340. Holdings of British Government securities stand at £4,857,318 as against £3,315,896, and other marketable securities at £775,728. The market value of the two combined is £6,161,325. Cash item is reduced from £2,274,516 to £1,991,525. Reserves are unchanged at £7,665,629. The total of assets, £44,808,575, compares with £45,624,938.

MANCHESTER COLLIERIES, LTD.—Profit for year ended March 31, 1936, £262,795, after providing for income tax, comparing with a profit of £251,315 for year to March 31, 1935. Profit on sale of investments amounted to £19,875, as compared with £37,958. The ordinary shareholders receive a 4 per cent. dividend, absorbing £129,551, against a 3 per cent. distribution for previous year. The carryforward is increased from £99,693 to £100,268. Cash stands at £263,075, compared with £158,578. Debtors stand at £398,530, compared with £443,750. Creditors stand at £164,519, compared with £135,322. Meeting, Midland Hotel, Manchester, June 23rd, at noon.

CORY (WILLIAM) AND SON.—For the year to March 31, 1936, profits amount to £655,331, compared with £678,503 in the previous year. The income from investments was affected by the sale of securities for the purpose of the redemption of the 4 per cent. first mortgage debenture stock, in January, 1935. Interest on the redeemed debenture stock is

COMPANY MEETINGS, &c.

SUEZ CANAL COMPANY

ANNUAL GENERAL MEETING, JUNE 8, 1936

EXTRACT FROM DIRECTORS' REPORT

The full report may be obtained upon application to the company's inquiry office, 6 Bishopsgate, London, E.C.2.

During the year 1935 shipping through the Canal has been specially active. There is no doubt that this activity, due to an exceptional cause, the Italo-Abyssinian conflict, must be considered, in part, at any rate, as temporary. There nevertheless remains that, under its influence, the transit receipts have, during last year, exceeded by about 31 millions those of 1934. Expenses having, on the other hand, slightly diminished, the amount at your disposal is 620 million francs, an increase of about 39 millions over 1934. We propose to maintain the various allocations, at the same figures as last year, which would permit us, whilst placing 35 millions to the extraordinary reserve, to increase by 15 francs the gross income on the capital share, thus bringing it to 540 francs.

THE GOLD CLAUSE AGREEMENT

Our President explained to you last year the position in which your enterprise had been placed by the decree of the Egyptian Government of May 2, 1935, abolishing the gold clause in Egypt. Long negotiations which have been carried on in this connection between the Egyptian Government and ourselves have terminated in the conclusion of an agreement which gives your company the possibility of obtaining an increase in the maximum transit dues stated in the Statutes to the full extent necessary to maintain its original gold value. It would be superfluous to insist on the importance of the guarantee thus obtained, which in practice protects the collection of your receipts from monetary upheavals, unfortunately always possible.

Besides this advantage of a financial character, the agreement concluded presented the very great interest of tightening the bonds between your company and the State from which it holds its concession. We have therefore undertaken to reserve in future two seats on the board to Egyptian notabilities. We have further agreed to introduce progressively on our staff in Egypt a certain proportion of young men of Egyptian nationality. Finally, we have been able to settle, in a satisfactory manner, a whole set of questions concerning the Customs regime, conceded land, and conditions of upkeep of the towns of Ismailia and Port Tewfik. As a counterpart to the various advantages derived from the agreement by your concern, it has been agreed that an annual payment of E.£200,000 would, in future, be made to the Egyptian Government by the company.

REDUCTION IN TRANSIT DUES

The conclusion of this agreement brings about the condition to which our president alluded last year when he stated that your company was ready to resume its traditional policy of reducing transit dues as soon as the necessary precisions regarding its monetary status were obtained. We have therefore decided that, from July 1, 1936, transit dues of ships will be reduced from P.T.36.56 or 7s. 6d. to P.T.34.125 or 7s. per ton net register. The conservative policy which you have always followed, and which has led to the building up of an important reserve, enables us to contemplate without anxiety for the financial position of your enterprise the reduction in receipts which will result from this lowering of the dues.

In the accounts which are submitted to you we have shown as capital charges the sums which the company would have had to expend if the debenture interest and the capital shares' interest and redemption had continued to be made on the gold basis. The sum representing the difference between the amount thus carried to expenditure and the amount actually paid has been placed to a reserve account. It will be maintained in this account until the Egyptian Courts to which the question has been submitted have decided on how the decree affects the position of the debenture holders.

CANAL TRAFFIC

Traffic through the Canal in 1935 reached 5,992 transits, representing 32,811,000 tons net register. The year 1929, a year of great world prosperity, is the only one which has given the Canal a greater tonnage, and that by a mere 2 per cent.

Compared with the total tonnage of 1934, the maritime movement of last year shows an increase of 1,060,000 tons, or 3.3 per cent., the increase applying to both directions of transit. Unfortunately, this great activity is not due to an increase in trade activity via the Canal. It is due to the Italo-Abyssinian conflict, and to the transport of troops and supplies resulting therefrom.

If deduction is made of the tonnage of ships engaged in this traffic, it is found indeed that the truly commercial movement is slightly under 28½ million tons. This is one of the smallest totals for the last ten years. Compared with 1934, it represents a reduction of about 3 million tons.

The weight of merchandise carried through the Canal was 26,328,000 tons, a reduction of 7.4 per cent. on 1934. The reduction was in the homeward traffic, the total of which is only 17,404,000 tons, instead of 20,464,000 tons. On the contrary, the North/South traffic shows an increase of 940,000 tons, or 11.8 per cent., reaching 8,924,000 tons in spite of a marked reduction in Russian exports during the second half of the year.

The most important item in the South/North traffic still remains, in 1935, that of petroleum products, in spite of a large decrease of 16.6 per cent., which reduces it to 4,285,000 tons. This diminution, which we foresaw last year, is the consequence of the export of Irak petroleum.

The year 1935 was marked, at the same time, by a very active shipping movement, and a falling-off in trade activity. This reduction seems to belie the trend of the indexes which reflect world activity, and which have shown, in the course of last year, indisputable improvement. But the Canal traffic has felt the repercussions of the unusual circumstances which have brought about a decrease of activity for certain trade currents using the Canal.

THE CURRENT YEAR

As regards the Canal traffic, the beginning of the present year shows the same characteristics as 1935: increase of the maritime movement and reduction in the movement of cargo. In the first four months the net tonnage shows an increase of 3.7 per cent. over the corresponding figures of last year. As to the cargo traffic, although there is a slight improvement in Russian shipments as compared with the last quarter of 1935, nearly all items constituting the return traffic show a reduction, and the present outlook of the principal commodity markets does not permit us to expect, for the whole year, an improvement in the position.

However, certain favourable symptoms are apparent. First of all, the economic outlook shows elements of improvement: absorption of stocks, increase in the prices of raw materials, decrease of world unemployment. In shipping there is a reduction of laid up tonnage. This reduction is due, to a large extent, to the breaking up of old ships, but it has, nevertheless, contributed to an improvement in the freight markets. Finally, at the Canal itself, a favourable indication appears in the important increase, during the first quarter of 1936, of ships in Ballast going East of Suez.

Nevertheless, the fact remains that, as a whole, economic activity is still paralysed in its attempts towards improvement by the feeling of insecurity and instability which, unfortunately, increases in all directions and nullifies the most reasonable forecasts, thus discouraging the spirit of enterprise. It is to be hoped that circumstances will, without delay, become more favourable to the development of initiative and efforts on which general prosperity depends.

The meeting unanimously approved all the resolutions presented by the board.

SUEZ CANAL COMPANY

ANNUAL GENERAL MEETING, JUNE 8, 1936

ABRIDGED SPEECH OF M. LE MARQUIS DE VOGUÉ, CHAIRMAN OF THE BOARD OF DIRECTORS

In the changing scene of events during this year, the Suez Canal Company has, without wishing it, had the limelight played upon it on several occasions.

The first was the Italo-Abyssinian conflict. Voices have been heard to ask, almost to demand, that the Canal should be closed to Italian ships. An extensive, sometimes aggressive, discussion was started in the Press regarding the duty and the rights of the company.

COMPANY'S ABSOLUTE NEUTRALITY

Yet the truth is very simple; absolute neutrality is the law of your company. It is stated in the Act of Concession and in the Statutes. Furthermore, it is guaranteed by an International Convention of October 29, 1888, expressly confirmed by the Treaty of Versailles. Article 1 of this Convention says, in the following terms, that "the Suez Maritime Canal will always remain free and open, in time of war as in time of peace, to all merchant or war vessels, without Flag distinction," and it adds that "the Canal will never be subject to the right of blockade." If, by an act of force, which nothing entitles one to anticipate, any Power thought of forbidding entry into the Canal to ships of another Power, that gesture would be equivalent to an act of war, with all its consequences.

As for your board, the question of closing the Canal could not arise, and they were never called upon to discuss it.

THE AGREEMENT WITH THE EGYPTIAN GOVERNMENT

Once again comments in the Press have greeted, even before its conclusion, the agreement we have made with the Egyptian Government.

With regard to the origin of this agreement, I must remind you of what I was saying here last year when speaking to you of the uncertain position in which the Egyptian decree of May 2, 1935—abolishing the gold clause in international contracts—had placed your company. At first sight we were well entitled to believe that, in view of the very terms of the Decree and of the opinions expressed by competent authorities and by virtue of judicial decisions which had fixed its monetary status, the company was not affected by the new legislation. However, these views met with objections, and it appeared to us necessary that the competent authority should give official precisions as to the application in our case of the decree in question.

These precisions have been conveyed to us by a decree of April 30th last which, whilst making the Egyptian Piastre our legal currency, has decided that it will always be possible to raise the maximum of the transit dues to the number of piastres corresponding to the ten gold francs stated in the Act of Concession. Our monetary status, threatened for a moment, rests thus on a solid basis and enables us to face without anxiety the movements which may still take place in the unsettled realm of currency.

In the course of the negotiations which took place in this connection, it appeared that the moment was favourable for a final settlement of several other matters which had long been in suspense, as there was nothing to be gained by postponing their settlement. An agreement was arrived at stipulating on the one hand the granting by the Government of certain concessions to the company, and, on the other hand, the payment of an annual allocation to the Government by the company in consideration of the advantages gained, the details of which you have just heard.

Finally, these conversations have once more shown how useful it would be to tighten the already very friendly bonds which have existed for over eighty years between Egypt and the company. Measures have been taken to render their collaboration closer both on the board in Paris and in Egypt.

INCREASED DIVIDEND

Free from the anxiety that the persistent instability of currencies had been giving us for the future, we now see the

fulfilment of the conditions to which was subordinated the maintenance of your company's traditional policy; which policy, as you know, consists of serving at the same time the interests of its clients, the shipowners, and those of its shareholders. And to-day, whilst proposing to you an increase in the dividend, it gives us pleasure to be in a position to offer the shipowners an appreciable reduction of the transit dues.

In the sharpness of the economic struggle, which is above all a fight against cost prices, an advantage, small though it be, can bring about a change of direction in a commercial movement.

The Egyptian Government has not felt that it should confirm by means of legislation the status of our debentures, which the Court of Alexandria, by a judgment of June 4, 1925, had established on a gold basis. The Court itself, deviating somewhat from its former jurisprudence, on February 18th last, in another case, delivered judgment by which it appears to reject now all reference to gold as regards the franc stipulated in Egypt.

STATUS OF COMPANY'S DEBENTURES

Does the new decision apply to our debentures? There is still room for doubt. The question was submitted to the Mixed Tribunals by a group of debenture holders, and an Egyptian credit Institution, holder of founders' shares and "Part Civiiles," intervened in the proceedings and opposed its views to those of the debenture holders. In this dispute, wherein interests between which we do not wish to distinguish are in conflict—we can only await the legal decision and, pending delivery by the Court of Alexandria of the final judgment, we shall continue to apply the provisional solution adopted last year, the only one which safeguards the various interests concerned.

To summarise, the year which has just closed has given your company appreciable satisfaction. What have the years to come in store? Towards what evolutions—or revolutions maybe—are we drawn by the new ideas which are upsetting the conceptions—economic, political, philosophic and moral—upon which the old world had founded its existence. None knows what the morrow may bring forth.

But whatever may be the difficulties confronting it in the future, one may say that your company is in a better position than in the past to face them, and although exaggerated optimism is out of place, it seems, however, that there is no occasion to fear the future.

Thus, ladies and gentlemen, all circumstances combine to allow your company to pursue its course with confidence, through political fluctuations and the vicissitudes of world economy, and to better adapt to its universal purpose the great work created in the land of Egypt by the genius of Ferdinand de Lesseps.

(Unanimous approval).

THE MILK MARKETING BOARD

INCREASE OF 78½ MILLION GALLONS SOLD

SUCCESS OF THE ACCREDITED SCHEME

The third annual general meeting of the Milk Marketing Board was held, on the 11th instant, at King George's Hall, London, W.C.

The Chairman, Mr T. Baxter, presiding, said:—The year we are now reviewing is the second completed year of the work of the Scheme. Consequently, we are able for the first time to examine the operations of the Scheme by having before us actual comparisons of like periods.

The first outstanding fact is the increase of 78½ million gallons in the volume of milk sold and an increase of 4,106 in the number of contracts in operation. The increase in gallonage obtained is due to the additional number of contracts registered, and the rise in sales must be associated with the turn over from stock-raising and farm butter-making on farms to milk selling. The regular monthly cheque provides ready cash for these farmers, but the increased quantities of milk thus marketed must be manufactured on terms which depreciate the collective returns of producers.

PROBLEM OF INCREASING SUPPLIES

This tendency towards increasing supplies is a serious matter. The first result must be that the stock-raising and cattle-feeding areas are turning over to dairy farming, which must create a real problem in efforts to hold the balance of agriculture in this country. I can see a cumulative shortage in supplies of store cattle and dairy cows within a few years. If the Government's long-term policy for assisting the store cattle and beef producers materialised much less milk would have been offered for sale and the Board would have been able to return to milk producers substantially better prices.

If there is to be any measure of price stability for milk producers in this country, there must be introduced into the Scheme some method of relating price to sales realisation in the different markets by the introduction of a standard basic quantity of liquid sales for each producer. Eighteen months ago the Board produced a scheme for the regulation of sales, and on advice it was referred to the Reorganisation Commission for Milk for Great Britain. We believe that such a scheme would prevent the gap between the pool price and the liquid price becoming wider.

Another feature is the cost of administration which, during the year, was one-tenth of a penny per gallon of milk sold. The total income of the fund for this purpose amounted to £845,000, of which £416,000 is unused and is carried to the balance sheet as a reserve.

There is a balance in the general reserve account of £876,314, and if we add to this the sum of £153,385 which was raised in August, 1935, to meet the emergency position you have a total reserve of over one million pounds.

EMERGENCY DISTRIBUTION ARRANGEMENTS

Last year I was able to report that we had concluded the negotiations of the 1934-35 contract with the Central Milk Distributive Committee without resort either to appointed persons or to any other form of arbitration. The terms of that contract were fulfilled without the necessity for alterations other than the revision of the Cheese Milk Formula. When the negotiations for the current contract took place last year matters became much more difficult, and it was evident that there was wide disparity between what we asked and what the buyers were prepared to offer. We asked 15s. 6d. per dozen gallons, and the buyers could not be induced to increase their offer of 14s. 5d. per dozen gallons. There was also disagreement on manufacturing prices, and consequently a breakdown in negotiations was inevitable, and we exercised our powers of prescribing the contract which came into operation on October 1st last.

Between the conclusion of the consultations and the lodging of complaints, considerable inconvenience was caused by the decision of buyers not to sign contracts. In these circumstances we had an obligation to the public, and we decided to create a distributive organisation to provide the public with milk supplies if the distributors persisted in their attitude.

COMMITTEE'S RECOMMENDATIONS

The report of the Committee awards to producers £2,700,000 more than the distributors were prepared to pay. It is to be regretted that our prescribed price of 15s. 6d. per dozen gallons was reduced to 15s. 3d. The previous year's price was 15s. 1d.,

and the distributors had contended that producers should be paid only 14s. 5d.

We agree that it would be unfair to the consuming public to increase liquid milk prices in order to carry increasing quantities of manufacturing milk. The Committee, on the other hand, have shown clearly that the price of 15s. 3d. per dozen gallons is fully justified by the circumstances in which the industry is now placed.

The most unsatisfactory feature of the Committee's recommendations is the suggestion that the price of milk for butter-making should be revised by means of a formula which gives no allowance for the value of skimmed milk. I must comment upon manufacturing prices in relation to the provisions of the Milk Act, 1934. The Act was designed to assist the Board to carry the burden of loss of manufacturing milk over a temporary period by means of loans from the Treasury to bring the price of milk for manufacturing up to 5d. per gallon in the summer and 6d. per gallon in the winter. The Act was a direct result of the depression in world values of manufactured products, and in the last two years £2,000,000 have been paid in this way by the Government to the Board. This money has all been passed to producers. I must explain that the intentions of the Act, as we understood them, have not been fulfilled. We clearly understood at the time that manufacturing milk prices would be guaranteed by the Government up to the level of 6d. and 5d. in the winter and summer respectively. The construction of the Act, however, has not made these minimum prices effective because the minimum "Cheese Milk Price" determined by the Government every month has been substantially higher on the average than the prices which we have been able to realise on milk for butter and cheese.

MARKETING PROBLEMS AND GENERAL TREND OF FUTURE DEVELOPMENT

You are aware of the public interest at present in the nutrition of the people, and the publicity that has been given to the nutritional deficiencies of the food of a great proportion of the population. In these discussions milk plays a prominent part, and we are anxious that ample supplies of fresh British milk should form a basis for this campaign. We have informed the Government that we are willing and able to co-operate fully in order that milk supplies may be made available in increasing quantities to those who most need them. We hope that in the declaration of the Government's long period policy for agriculture facilities will be given for us to carry out this policy.

QUESTION OF LEVY SUBSIDY

I want to make some reference to the request which we have repeatedly made for a levy subsidy on imported dairy produce to be incorporated in the long period policy of the Government. We regard it as indispensable that a policy of a levy subsidy should be implemented. The Government is already committed to this policy, and with the increasing quantities of imported dairy products at low prices and the scheme designed by exporting countries to dump supplies in this country there is no better alternative than to collect by means of a small levy on imported produce a substantial sum to assist the industry at home. The Act in operation at the moment will terminate in September, 1937, and it is our expectation that as from that date the levy subsidy principle will operate. Money raised in this way for the industry should not be confined to assisting manufacturing milk, but should be available to enable us, in co-operation with the Government, to provide schemes to give liquid milk in abundance to the poorer classes of the community.

I am hopeful that the funds of a levy subsidy would enable us to take effective steps to improve further the quality of the milk supply. Last year I was able to announce the introduction of the Accredited Scheme, and you know that it has been a phenomenal success. We have already no less than 16,000 milk producers who have become "Accredited." Many of them have refashioned their buildings; many of them have brought piped water on to their cowsheds and buildings; many of them have used sterilising plant for the first time; and many of them have improved their herds and their method of production. I venture to say that the Accredited Scheme has been a decisive step taken by the Board in the right direction.

We have also extended our manufacturing operations by acquiring sites for factories during the year at Nesscliffe, Crudgington, Swansea, and Camborne in Cornwall, and we hope to extend still further in the current year.

BURMAH OIL COMPANY, LIMITED

IMPROVED TRADING RESULTS AND LARGER REVENUE FROM INVESTMENTS

DIVIDEND OF 20 PER CENT.

FURTHER SUBSTANTIAL REDUCTIONS IN COST

SIR JOHN CARGILL'S REVIEW OF MARKET CONDITIONS

The thirty-fourth annual general meeting of the Burmah Oil Company, Limited, was held, on June 5, within the Merchants' Hall, 30 George Square, Glasgow.

Sir John T. Cargill, Bt. (chairman of the company), presided over a large attendance of members.

The Chairman:—Ladies and gentlemen,—Following our usual procedure, I suppose we may take it that the report and accounts are held as read. (Agreed.) I shall call upon the secretary forthwith to read the auditors' report.

The Secretary (Mr E. Colman) read the auditors' report.

THE LATE DR. LEONARD GOW

The Chairman continued:—Before proceeding to the business of our meeting, I feel sure I shall be interpreting the feeling of all in giving immediate expression to the great loss the company has suffered through the death recently of our colleague, Dr. Leonard Gow, after a long and painful illness borne with wonderful patience and bravery. Dr. Gow's father was one of our first directors, and when the son came to us 19 years ago he brought with him not merely wide business experience but a tradition of pride in the company's past history, confidence in its future, and a whole-hearted determination to serve it to the best of his ability and opportunities. An expression of sincerest sympathy in the loss in which we feel so great a share has already been made by your board to Mrs Gow and her family.

Confirmation of the appointment of Sir Louis Kershaw to fill this vacancy on the board will be asked from you later to-day. A distinguished member of a distinguished service, Sir Louis has held many important positions both in India itself in the earlier part of his career and later in the India Office in London, where he was Deputy Under-Secretary of State on his retirement recently. His great experience and knowledge of India's economic and commercial conditions should make him a valuable addition to the board.

I am sure we all share the regret expressed by Sir Campbell Kirkman Finlay and Sir David McCowan in letters to me that because of illness they are unable to be with us to-day.

THE ASSAM OIL COMPANY

As a result of a further offer made by us in November last to the holders of ordinary and preference shares in the Assam Oil Company, Limited, who did not accept that made them in 1920, the number of members of that company was reduced well below that requisite for a private company and the conversion to that status has consequently since been arranged. In the circumstances the proceedings at the annual meeting of that company will no longer be published but at our own meetings here you will be advised of the position from time to time of this, as of the other investments we have.

Last year its producing, refining and marketing operations were broadly at the level we meantime feel justified by proved crude oil resources. Considering the market situation these had to meet, which you will learn from me later to-day, the Assam Company's trading results must be regarded as satisfactory. They justify payment of preference dividends accrued to 30th instant, but the company was still in indebtedness, not only at December 31st last, but now, so that no ordinary dividend can wisely be paid in respect of 1935. While it is hoped it may be found possible and safe to pay an interim ordinary dividend before the end of the current year, this will depend on there being no serious setback in market conditions during the remainder of the period.

INCREASED REVENUE FROM INVESTMENTS

Now that I have got on to the subject of your outside investments it will be convenient that I should turn with you to the balance sheet and profit and loss account for 1935, which has been in your hands for some days. There have been considerable changes during the year in our holdings of British and Indian Gov-

ernment sterling securities with a net increase of some £38,000 at £4,459,336; an increase of over £1,000,000 in miscellaneous investments, principally in Empire Government loans; and an increase of some £10,000 in investments in subsidiary companies due to the acquisition of further shares of the Assam Oil Company, Limited, already referred to.

On the credit side of the profit and loss account you will see that these investments made a net increased contribution to our 1935 revenue of over £215,000. The fact that increased dividends brought into the account from our investments in the ordinary capitals of the Anglo-Iranian Oil Company, Limited, and of the Shell Transport and Trading Company, Limited, alone amount to some £326,000 emphasises the lower values which have offered for funds temporarily on deposit throughout the period, which, you will observe, amounted, with cash, on December 31st to £1,052,697, or some £13,000 more than at the end of 1934.

ADEQUATE DEPRECIATION

The assets side of the balance sheet does not call for much further comment. Adequate depreciations have, as usual, been provided in the case of the first six items and, as the print states, the value of your investments, at market prices where quoted and on a conservative valuation where there is no quotation, is very considerably above the aggregate value taken for them in your books.

Advances on loan to the Assam Oil Company, Limited, account for the indebtedness of subsidiary companies. The liquidation of this has been steadily proceeding and should be completed during the current year.

On the liabilities of the balance sheet the only items calling for special reference are the allocations to general and fields expenditure equalisation reserves, which your directors have made out of the profits for the year, the former reserve being thereby brought up to £900,000 and the latter restored to the round figure of £1,000,000, at which it stood before resort was had to it in 1934 for the special fields expenditure described by me last year. That special expenditure continued in 1935, and at December 31 some 50 per cent. of the estimated total cost of it had been expended.

Reverting to the profit and loss account, you will see that the balance of trading profit, including £46,795 received in the period in respect of the final repayment of debentures of a subsidiary company which had been written off against revenue in previous years, shows an increase at £1,620,238 of £275,036 on 1934. Parenthetically I might tell you that that company is the Tinplate Company of India, Limited, which has not only thus cleared its debenture debt but is now earning and paying dividends on its ordinary capital.

BALANCE AND ALLOCATIONS

Adding to that increased balance of trading profit of £275,036 the increase of £215,543 from interest and dividends, and allowing for the slight drop in transfer fees, we have a total increased credit of £490,523. Savings as compared with 1934 on the debit side of the profit and loss account as to £53,639 in respect of income tax, £5,148 in respect of subscriptions, and £97,925 in respect of debenture redemption premium, and new share issue expenses, or in total £156,712, increase the 1935 disposable balance in aggregate by £647,235 over 1934 to £2,461,220. To this has to be added the balance of £611,517 brought in from 1934, giving a total of £3,072,737. Preference and interim ordinary stock dividends, less tax, have taken £546,900. The allocation to the reserve accounts I have already referred to absorbs £460,234. We are thus left with £2,065,603, which we are proposing to you to-day should be used as to £1,246,302 for the payment of a final dividend on the ordinary stock of 16½ per cent., less tax, making 20 per cent., less tax, for the year. If that proposal is accepted

the relative contribution to employees' provident fund will take £184,307, and we recommend that the balance of £634,994 be carried forward, being an increase of £23,477 on the amount brought in.

This brings me to some reference to the market conditions in which the trading results have been secured and the present and prospective position in that regard.

IMPROVED WORLD CONDITIONS

The many dividend announcements by the industry have already made most of you aware that 1935 has witnessed generally a considerable improvement in world conditions affecting the market for petroleum products. If not yet complete, or too firmly based, there has been increasingly better control over extravagant production in the United States of America and generally other producing countries have regulated their production to the economic outlet available for it. Roumanian production on the contrary has not been so regulated. It has continued to be forced into export at values which must be absolutely unprofitable to many of its producers and has been a disturbing factor both directly and indirectly because, for purposes of acquiring foreign exchange, some countries which have imported it have offered and given inducements for re-export to others at prices even lower than these consuming countries could have laid them down from Roumania direct.

Then again one country after another, abandoning economics and following a policy of opportunism, whether for reasons of national unemployment or of self-sufficiency or of national defence, have to a greater or lesser extent continued their efforts to reduce their dependence on imports of the natural petroleum which they do not possess by recourse to much more expensive indigenous synthetic substitutes, such as alcohol from crops or the products from the hydrogenation or low-temperature, etc., distillation of coal.

Even so there has, however, generally throughout the world been an increased outlet for natural petroleum. While India has participated in such increased demand in respect of petrol and fuel oils, the demand there for kerosene declined as compared with 1934, making it quite clear that such improvement as there may have been in the world value of agricultural products has not yet filtered through to the cultivator in India who represents such a preponderating part of that country's population and on whose prosperity the purchasing capacity of India so largely depends.

INDIGENOUS PRODUCTION

To an extent perhaps less in volume than in 1934, yet spread more widely than in that year over our market in India, imports of the sort of "distress" Roumanian production to which I have referred and, if for quite other reasons, also from Russia, called, as they may increasingly call, for continued vigorous action by us to defend the outlet essential to the maintenance of the volume of indigenous production. There is, of course, an alternative which we certainly do not contemplate, that is to make room for such imports at the expense of the indigenous industry and of those important indigenous interests of local employment and revenues bound up with it. But before that there could also be a third. We can deal as we have been dealing with the sort of competition I have referred to. It causes us no serious anxiety in respect of our responsibilities to the interests I have mentioned.

INDIA'S REQUIREMENTS

There is, however, developing in our marketing part of the world, but outside India, a new source of production, in hands which hitherto have had no or very little marketing position there, which may or may not—I do not know and cannot say—have ambitions for its outlet which may not fit in to the existing scheme of things. I do not imagine that those who control this new source have other economic views than that indigenous production has the first call on the consuming demand in its own country. India's requirements, however, are not being and never have been completely met by the indigenous production, and there may not be the same sort of recognition by this new production of any vested importing interest there. All I wish to emphasise to-day is that you cannot put more than a pint into a pint pot without an overflow. If then there is to be an overflow which involves us and threatens the maintenance of the volume of indigenous production, our own production may be correspondingly forced into export, and I must point out that to that extent his will cause the pint pots of other markets in their turn to overflow.

BETTER AVERAGE VALUES

We had some compensation in better average values for our reduced volume of sales of our products as a whole in 1935 but our improved trading results were due enormously more to reductions in our costs. Although no effort will be spared soundly to hold the considerable savings we have effected in recent years, we cannot possibly expect to continue indefinitely to offset further unfavourable market conditions in this way. But our resources are very considerable, preponderantly liquid, and entirely unencumbered. Our business is sound, up to date, and efficient in every way. Our balance sheet speaks eloquently as to all this and as to the heavily written down state of our fixed assets, but, even so, it does not, as I have already indicated, tell the whole story of the strength of our position.

While it has been my duty to let you know quite frankly that the industry is not yet so completely or so securely stabilised in respect of the relation of supply to demand as you may have heard or seen suggested in recent months and that there exist, so to speak, atmospheric conditions whose development to good or foul weather has still to be determined it must be satisfactory to you as it is to me that at the same time I can with such complete confidence give you these assurances as to the technical and financial strength of your company to maintain the outlet we require there for our Indian production.

In recent years I have given you very full figures to show the direct and indirect value of your company to India—the employment its operations provide; the purchasing value of its wage and salary disbursements; its contributions to State and other public and commercial revenue; and, less tangible but not least important, to the part it plays in the industrial education of its people to say nothing of the value as a reserve of a healthy, indigenous industry for purposes of national defence. I do not propose repeating these in respect of 1935. Substantially they are unchanged, and I refer to them here only to emphasise that for the greater part—because the crude oil production and refining themselves are involved—these contributions to the economic and technical advance of India are peculiar to indigenous production and would be lost to the extent that India's petroleum requirements are met by unnecessary imports.

GEOLOGICAL SURVEYS AND DRILLING TESTS

While we continue to spend, and immediately charge to revenue, substantial sums each year on geological surveys and on actual drilling tests of geologically promising areas in India and Burma I regret to report that these have added nothing of value yet to the territories the Assam Oil Company, Limited, and we have been operating. There are still one or two areas of which hope has not yet been abandoned, and this expenditure must continue until we are completely satisfied, by the drill or otherwise, that we have nowhere in them anything of commercial value. On the other hand, both as regards the developed field of the Assam Oil Company, Limited, in India and our own territories in Burma, we continue to receive the confident assurances of our technical experts of a long life on our present scale of operations.

In the case of men who have held specially important and responsible positions in our Eastern service you have always, I think, felt with me that it is fitting that reference be made at these meetings when the time comes for their departure. Passage of time has now brought to a close the active association with us in India of two valued members of our geological staff, Mr Lepper, our senior geologist there, and Mr Sale. Men of high scientific attainments, they have served the company with great ability and carry with them into their retirement the best wishes of all who have worked with them.

SIR KENNETH HARPER'S SERVICES

Before leaving these staff references you will certainly wish me to express our congratulations to Sir Kenneth Harper on the honour of knighthood conferred on him in the New Year by his late Majesty for distinguished public service to India in Burma.

Increasingly since the Morley-Minto reforms the progressive development of democratic and representative Government in India and Burma has required that this country's nationals resident there should play the part prescribed for them and their Indian and Burman fellow-citizens in the Legislatures and in public work generally. This is possibly only to the extent that these men can be freed from the commercial and other responsibilities which they carry in the country, and it has been the privilege and duty of your company, as of others, to do this. Sir Kenneth Harper, like his predecessors in our employment, has in this way been able to render valuable service in the Legislatures and elsewhere. He was for some time a representative from Burma on the Council of State, and was a delegate

from that country to the Joint Parliamentary Committee on the Indian and Burman Constitutional changes and on the question of separation of Burma from India. He has been in our service in Burma for some 23 years, and is now joining our London staff on retirement from the East.

MANAGEMENT EFFICIENCY

Before putting the various resolutions in connection with 1935 results I think you will cordially agree with your board that these reflect most creditably on the care and efficiency with which the management, here and in India, whether administrative, executive, or technical, supported by the loyalty and keenness and pride in your and their company of the whole of your employees, have once again looked after your interests, and that you will wish me in this way to express our appreciation for another year's work so well and faithfully done.

I now beg to propose: "That the report of the directors and the audited statement of accounts, including the balance sheet and profit and loss account to December 31, 1935, presented to the meeting will be received, approved, and adopted," and I shall call upon Mr R. I. Watson, your managing director, to second this motion. After the motion has been seconded an opportunity will be given to stockholders to ask questions or make comments.

Mr R. I. Watson: I beg to second the resolution.

The Chairman: Before I put the motion, are there any questions to be asked?

EMPLOYEES' PROVIDENT FUND

Mr Mackenzie Lees: I am sure I voice the feelings of this meeting in congratulating the directors on applying £184,000 to the employees' provident fund. In doing so, I should like to ask if you would kindly inform the stockholders as to the specific parts of the provident fund; in other words, does it apply to pensions or to sickness, and is the fund on an actuarial basis or is it on a voluntary basis entirely? There is another point I would like to raise, merely for information. In the reserves you have insurance £620,000 on the liability side, and further down have fire and marine insurance of £1,448,000. What is the relativity of these two amounts?

The Chairman: I would just like to explain with regard to the provident fund that it is really based largely—as you would realise from what I said to you in the speech to-day and what you knew before—upon the actual dividend paid by the company. In 1919 we formed this fund and we felt that it would be a very strong point if we gave all our employees a direct interest in the results of the business. That is the fundamental basis of the fund. The fund is administered separately. The funds are all invested outwith the business entirely and are administered by a board of directors.

There are no actual pensions attached to it, but on retirement from the business every member of the provident fund is paid out what he has at his credit of the three accounts in the fund, these being created by 5 per cent. paid in on his own salary and 5 per cent. contributed by the company, and the third account is based upon the dividend. I think it is an extremely satisfactory and generous fund, and I and my directors feel it has been a great incentive to all your employees to do their very best for the company. (Applause.)

THE INSURANCE FUND

As regards insurances, sir, the separate fund of £600,000 we created by for many years putting £20,000 a year to that fund as an insurance fund. I told you last year we were not going to put any more to that fund, as we thought it was large enough already.

The other fund represents the savings on the internal insurance. We insure internally for a large amount of our risks, and we created that fund with the premia and the net result is that we have at the credit of that fund that large amount of saved premia which otherwise would have been paid to insurance companies. I hope you are satisfied, sir, with my explanations.

Mr Mackenzie Lees: I am much obliged to you, sir, for what you have told us, and I am sure the stockholders are also of the same opinion.

The Chairman: I have now much pleasure in formally putting to the meeting the motion which I have already proposed and which has been seconded by Mr. Watson. Those in favour kindly hold up their hands; those against; carried unanimously. (Applause.)

THE DIVIDEND

The Chairman: I have now pleasure in moving "that the following dividend on the ordinary stock recommended by the

directors—namely, dividend at the rate of 16½ per cent. per annum (3s. 3d. per £1 unit), less tax, making, with the interim dividend paid in November last, 20 per cent., less tax, for the year—be adopted and that the same be hereby authorised to be paid on June 12, and that the balance of £634,994 be carried forward." I shall call upon Mr Whigham to second the resolution.

Mr G. C. Whigham: I have much pleasure in seconding the resolution.

The Chairman: Well, I am sure, ladies and gentlemen, you are all in favour of that. (Applause.) I have great pleasure in putting together the resolutions confirming Sir Louis Kershaw's appointment to the board—we are very glad to see him with us to-day—and the re-election of Mr. R. A. Murray and Sir Campbell Kirkman Finlay, who are both well known to you, and I shall call upon Mr Ashton to second that.

Mr H. Ashton: I have pleasure in seconding the resolution.

The Chairman: Well, ladies and gentlemen, are you agreeable that these gentlemen should be re-elected? (Applause.) Now there remains the re-election of Mr Wilson as auditor, and I shall call upon Mr William George to move the necessary resolution.

Mr William George: I beg to propose the reappointment of Mr James Herbert Wilson, C.A., as auditor for the current year.

Lieutenant-Colonel A. G. Spiers: I should like to second the motion.

The Chairman: Are you all agreeable, ladies and gentlemen? (Applause.) That concludes the business of the meeting, and I have to thank you for your presence and your patient hearing.

VOTE OF THANKS

Mr C. D. Donald: Ladies and gentlemen,—I have a very pleasant task to perform to-day—namely, to move a vote of thanks to our chairman, Sir John Cargill, who has guided the destinies of the company for over 30 years. I am sure we have all listened with the greatest interest to his admirable, lucid and comprehensive survey both of our company's activities and of the oil industry at large. I think you will agree with me that the past year's results and the magnificent balance sheet laid before you are really worthy of this our jubilee year. (Applause.) I am not going to dilate upon Sir John's past services to the company. That has been done by abler men than I at bygone meetings, but I would like to say this:—Many causes have contributed to the success of the Burmah Oil Company, but two of these have been constant throughout the years—first, the prudence, wisdom and far-sighted acumen of our chairman—(applause)—and, secondly, the loyal co-operation of the team of which he has been captain for so long. Before I move formally the vote of thanks a proposal has just been made to me that, seeing this is our jubilee year, would the directors consider a presentation by the stockholders to Sir John of his portrait in oils? (Loud applause.) I now ask you to accord a hearty vote of thanks to our chairman, and I couple with this his co-directors and the staff of the Burmah Oil Company both at home and in the East. (Applause.)

THE CHAIRMAN'S REPLY

The Chairman: Ladies and gentlemen,—I feel that I have already detained you quite long enough. I need hardly say how greatly I appreciate both the very kind words in which Mr Donald has proposed this vote of thanks and the cordial way you have responded to it. Although this is not really the jubilee year of this company, which was the reconstruction in 1902 of the original Burmah Oil Company formed in 1886, 50 years of prudent building up and able and far-seeing management are nevertheless reflected in the balance sheet which we have been examining to-day and which is, undoubtedly, the strongest balance sheet you have ever had put before you. (Applause.)

Behind this achievement are the men who have been, and are, actively responsible for the building up to the wonderful position of your company as shown in that balance sheet. I always welcome this second opportunity at our meetings to add my own appreciation as chairman to that you have already authorised me to convey to them of their ability and zeal in the conduct of your business. I regard this vote of thanks with which you couple my name and position as your own more direct way of expressing your gratitude for these results to the men who are responsible for the day-to-day management of your great enterprise and in whom you have, I am sure, as I have, the most complete and continued confidence. (Applause.) Mr Donald, ladies and gentlemen, many thanks again both on their behalf and on mine for this extremely kind and hearty vote of thanks.

The meeting then terminated.

J. LYONS AND COMPANY, LIMITED

ANOTHER SATISFACTORY YEAR

VOLUME OF BUSINESS AND CASH RECEIPTS AGAIN INCREASED

PROBLEMS OF PRICE ADJUSTMENT

IMPROVED METHODS OF SHOP VENTILATION

SIR ISIDORE SALMON ON THE YEAR'S ACTIVITIES

The forty-second ordinary general meeting of J. Lyons and Company, Limited, was held, on the 9th instant, at the Trocadero Restaurant, Piccadilly-Circus, London, W.

Sir Isidore Salmon, C.B.E., D.L., J.P., M.P. (one of the managing directors), presided.

DIRECTORS' REPORT

The report of the directors for the year ended March 31, 1936, states that:—

The directors have the pleasure to submit their forty-second annual report, with a balance sheet and profit and loss account, made up to March 31 last, showing the financial position of the company at that date.

	£	s.	d.
The balance remaining available in the trading account after providing reserves against contingencies is	1,010,753	16	2
To which is to be added the amount brought forward from last year	36,601	19	7
Showing a total available for distribution of ...	1,047,355	15	9

	£	s.	d.
From this amount is to be deducted:—			
Dividend on 5 per cent. preference shares paid to November 30, 1935, and proportion provided for period to March 31, 1936	32,353	5	0
Dividend on 7 per cent. preference shares paid to March 31, 1936	350,000	0	0
Dividend on 8 per cent. preference shares paid to March 31, 1936	80,000	0	0
Dividend on 6 per cent. preferred ordinary shares paid to September 30, 1935, and proportion provided for period to March 31, 1936	28,000	0	5
Interim dividend (1s. 8d. per share) on ordinary and "A" ordinary shares already paid for the half-year ended September 30, 1935	138,856	1	8
Interim dividend (4d. per share) on proportional and "B" proportional profit shares already paid for the half-year ended September 30, 1935	15,833	6	8
And the directors propose to deal with the balance as under:—			
To place to reserve (making a total of £1,900,000)	100,000	0	0
To pay a dividend of 2s. 10d. per share on the ordinary shares and "A" ordinary shares for the half-year ended March 31, 1936	236,055	6	10
To pay a dividend of 6.8d. per share on the proportional and "B" proportional profit shares for the half-year ended March 31, 1936	26,916	13	4
To carry forward to next account	39,341	1	10
	1,047,355	15	9

During the financial year the following establishments have been opened:—

- 24/26 Maddox Street, W.1.
- 6 and 10 Northgate Street, Gloucester.
- 16/17 Whitefriargate, Hull.
- 14/15 Wellington Place, Hastings.
- 448/50 Holloway Road, N.7.

Additional premises have been acquired and will be opened in due course and negotiations for other premises are proceeding.

The board and the company have suffered a great loss during the year in the death of Mr H. L. Edwards, who was held in the highest esteem by his colleagues and the staff. His loss is keenly felt.

Mr G. Dee, after more than 40 years' valued service with the company, has, to the great regret of all his colleagues, retired on account of the state of his health.

Mr H. H. G. Bennett during the course of the year, and Dr. L. H. Lampitt since its close, have been appointed employee directors.

Messrs Geo W. Booth and S. I. Salmon retire from the office of director and being eligible offer themselves for re-election.

Messrs G. A. Pollard and H. H. G. Bennett, employee directors, retire, and are eligible for re-election.

Messrs Turquand, Youngs and Company, the auditors, retire and are eligible for re-election.

The dividends received from subsidiary companies have been included in the company's trading account. In the aggregate the profits of the subsidiary companies exceeded the declared dividends. Losses of subsidiary companies so far as they concern this company have been dealt with in this company's accounts.

(Signed) ISIDORE SALMON } Managing
HARRY SALMON } Directors.

Cadby Hall, London, W.14.

26th May, 1936.

CHAIRMAN'S SPEECH

Mr H. H. G. Bennett (one of the secretaries) having read the notice convening the meeting and the report of the auditors.

The Chairman said:—Ladies and gentlemen,—Before proceeding to the main business of the meeting, I must refer to the loss we sustained in July last in the sudden death of our colleague, Mr H. L. Edwards. He had only joined the board as an employee director in the previous year, after nearly 40 years' splendid service with the company as a departmental manager. Mr Edwards was held in the highest esteem by us all—directors and staff alike—and we deeply mourn his loss. (Hear, hear.)

Mr G. Dee, our accountant, who joined the company in the first year of its existence and became an employee director in 1919, retired in January last on account of ill-health. Mr Dee's service to the company will be remembered with gratitude, and he has taken with him in his retirement our best wishes in the hope that relief from the cares of business will bring him a measure of health to enjoy the rest he deserves. (Hear, hear.)

You will have seen from the report that Mr H. H. G. Bennett and Dr. L. H. Lampitt have been appointed employee directors. The former, as you will know, has been a secretary of the company for some years past, and the latter has been, since immediately after the war, the company's chief chemist. We are all delighted to welcome them as colleagues on the board. (Hear, hear.)

DIVIDENDS MAINTAINED

My colleagues and I are pleased to welcome you once again to our annual meeting, this being the forty-second in the series. It is gratifying to us to be able to produce again such satisfactory accounts. The amount which we regard, on the principles which I have explained to you in previous years, as available for distribution is £1,010,753. The amount brought forward from last year is £36,602, giving, as you will have seen in the report, a total available for distribution of £1,047,355. We are dealing with this amount by paying, subject to your confirmation, final dividends at the same rates as last year, again placing £100,000 to reserve, making that account £1,900,000, and carrying forward the slightly increased sum of £39,341.

I am pleased to be able to say that both the volume of business and the total cash revenue show an increase on the previous year. There has also been a very slight increase in spending power, which reflects the general improvement in the country's trade.

BALANCE-SHEET FIGURES

Turning to the figures in the balance-sheet, I will deal briefly with such differences from the previous year as may call for comment. On the property and assets side, "freehold land, buildings, etc." at £10,512,000, shows an increase of £435,000. This amount is accounted for by the purchase of additional plant and machinery and by additional expenditure on land and premises. There have been developments at the factories at Cadby Hall and Greenford, the Strand Corner House has been enlarged with satisfactory results, while the growing business has made it necessary to find other premises for our engineering department, and we have purchased freehold premises at Abbey Road, Park Royal, adjacent to our other property there, to which that department has been transferred. We have added to the number of our teashops and extensive alterations have been made to our teashop at 213 Piccadilly—incidentally the first ever opened by the company.

MODERN PROGRESS—IMPROVED VENTILATION

We have always, as you know, endeavoured to keep pace with modern progress, not only in the equipment of our shops but also in their decoration and amenities. This shop has, in fact, been brought up to date many times; now, in the latest changes, we might almost appear to have passed from evolution to revolution—we hope, however, without the evil effects which often follow the latter. The newest system of ventilation has been installed, whereby the shop can be cooled in summer and warmed in winter, so that a suitable temperature can be maintained throughout the year. This is something strikingly new in teashops, but, like most luxuries, one that the future will probably regard as a necessity. We are pushing forward as speedily as possible with this programme of development, which our experience with our newest teashops indicates is the public taste.

Under the heading "Subsidiary Companies" the first item—namely, the figure at which the shares stand upon our books—shows a reduction, due to a further writing down we have made during the year, of some £42,000. This represents no more than a precautionary provision. The other two items under this heading—namely, loans and current accounts—show merely normal periodic fluctuations.

THE HORNIMAN COMPANY

While I am dealing with subsidiary companies I will mention that the Horniman Company will shortly be applying to the Court to sanction a reduction of £200,000 in its capital. I am telling you this now because if, without warning, you had seen in the papers that there was such an application before the Court, you might have assumed we had incurred a loss which would affect the current year's earnings. Such, however, is not the case. It will have no effect whatever on our accounts, for you may remember that I told you four years ago that we had made provision in the Lyons accounts for possible contingencies by writing down our investments in subsidiaries so that they represented gold assets only. That position still exists, and our balance-sheet figure is a net value eliminating all goodwill and every asset of doubtful value.

The reason for the reduction of the Horniman capital is that, owing to difficulties caused by the currency arrangements of several countries, quotas, tariffs, and the like, the export trade conducted by one of that company's subsidiaries is becoming more and more difficult, and the amount standing in the Horniman accounts as an investment in its subsidiary is not, in our opinion, a proper valuation. That amount is being written down drastically, so that it shall represent the value even at what I may call break-up price. At the same time the whole of the goodwill account in Horniman's books is being written off. This will bring that company's accounts into accord with our own. It may be a very conservative way of treating the figures and it may prove to have been quite unnecessary—for, so far, it is not a question of loss but only of diminished profit—but I think you will agree that it will provide that there shall be no future back-wash from that source, and if it turns out to have been unnecessary so much the better.

CASH RESOURCES

To return to the other figures on the assets side, "loans to associated companies" are down £160,000, the temporary increase which I mentioned last year in our loan to Strand Hotel, Limited, having been repaid. "Stock in trade," at £208,000 more, and "sundry debtors," at £102,000 more, are fully accounted for by extensions in business. Cash in hand shows a diminution against the previous year of £448,000. As I said in 1934, this only means that it has taken another liquid form. Deposits with banks to-day earn practically nothing, and we are fortunate in being able to employ the money—more profitably—in other ways. If

any shareholder has made a calculation as to the cash required to pay the dividends which will be declared to-day, I can assure him he need not worry—the cash is available.

On the liabilities side "mortgages" are £17,000 less, represented by further premiums paid on redemption policies and capital sums paid off in accordance with the terms under which the mortgages were created.

CONTINUED IMPROVEMENT IN TRADE CONDITIONS

I have referred to the indications of the continued improvement in trade conditions generally. There are signs that the recovery from the years of depression is being maintained, but there is still much political, financial, and economic uncertainty throughout the world, which has its repercussions on us. Though money is plentiful and interest rates correspondingly low, our customers have not yet apparently fully recovered the spending power they had before the depression set in, nor can we expect them to do so until world conditions generally improve. The economists have assured us that a rise in world prices, particularly of primary products, and a resumption of international trade freed from restriction will bring a full return to prosperity here and elsewhere. If they are right we may perhaps regard increasing cost of raw materials with a certain degree of equanimity.

INCREASED COST OF RAW MATERIAL

There has been a tendency throughout the year to an increase in the cost of those articles which are the raw material of our business. This has had its effect on the manufacturing cost of bakery goods and it has caused us, during the latter part of the year, to raise our prices for such goods here and there. This increased cost to us of what I have called raw material has amounted to no less a sum than £150,000, and you will recognise from this that there has had to be compensation in other directions to enable us to obtain the results we have shown.

ADJUSTMENT OF RETAIL PRICES

Unfortunately these compensatory factors are showing signs of falling off and, from present appearances, it will be necessary soon to extend the list of our products to be raised in price. Here are a few of the things which have risen in price: Butter, eggs, lard, flour, milk, cream, potatoes, sugar, and—to take one section only of our business—it is difficult to assess these costs in an equal manner over the various items of a menu. Many items cannot be raised without disturbing their relation to others. The adjustment of these figures to cover increased costs is a mathematical operation, yet immediately any small change is made someone who, presumably, feels he knows much more about our business than we do suggests it is iniquitous and accuses us of profiteering.

For example, if we were to put ½d. on a cup of tea, it would, at once be pointed out that a halfpenny on a cup of tea, with so many cups to a pound, means so many shillings, and that the only additional cost we have to pay is a few pence in the cost of tea or it may be a few pence additional duty on tea, altogether overlooking the fact that there may be other reasons for the increase than the mere duty or even the cost of the tea itself. When prices are rising it is an impossibility to raise every item on the menu even by so small a sum as ½d. That indeed would bring, in a return, always assuming that we did the same volume of business, out of all proportion to the required amount of cover.

APPORTIONING MENU CHARGES

One item may call for ¼ of a penny, another ½, and so on, so the result is that some one item has to be increased to cover half a dozen others which remain at the old price and, as the cup of tea is one of the readiest means of arriving at the balance we seek, it may be that item which is chosen in order that several others may continue unaltered. After this explanation I hope it will be recognised that if the price of a cup of tea or any other item of a similar character were to be raised at a time which happened to coincide with an increase of duty, it would not necessarily be for the mere purpose of recovering the 2d. per pound or other duty imposed, but that there might be a number of other costs the recovery of which was being sought in this manner.

I need only, I think, add this—we do not view the passing on of increased costs and charges to our customers with equanimity, taking the view that they are easily borne by them. We delay it as long as we can, until in fact it is inevitable; but I do want to stress the point that sooner or later it must become inevitable. There is this consoling thought, that if the general improvement in the country's trade continues, we may reasonably expect that our customers' purses will expand to meet any increased demand we may have to make on them.

TRIBUTE TO THE STAFF

That, ladies and gentlemen, concludes my survey of our activity for the past year, and I feel sure you endorse our feeling of satisfaction in the results we are able to put before you. They have been achieved not solely by the efforts of my colleagues and myself, but by the co-ordinated effort of a magnificent team with more than 30,000 members, each doing his best, and I will end by paying a tribute to the directors' behalf and on yours to the loyalty and devotion of the whole of our staff to the company's interests.

I will now propose: "That the report of the directors and the balance sheet submitted to this meeting be and are hereby adopted; that the payment of interim dividends of rs. 8d. per share on the issued ordinary and 'A' ordinary share capital of the company and 4d. per share on the proportional profit and 'B' proportional profit share capital of the company for the half-year ending September 30, 1935, be and are hereby confirmed; and that a dividend be paid for the half-year ending March 31, 1936, of 2s. 10d. per share to the holders of ordinary and 'A' ordinary shares of the company and 6.8d. per share to the holders of proportional profit and 'B' proportional profit shares of the company who were on the registers on May 14, 1936." (Applause.)

MR HARRY SALMON'S VIEWS

Mr Harry Salmon, J.P. (one of the managing directors): Mr Chairman, ladies and gentlemen,—I have pleasure in seconding the resolutions my brother has proposed, and in doing so I should like to add a little to what he has said, particularly on the effect of increasing cost of commodities and increasing charges of various kinds. I wonder how many of those people who talk so glibly about prices and profits realise how much is represented in the price they pay by the rates, taxes, duties, and charges levied on us by the Government and local authorities. They amount in our case to an enormous sum annually and they seem to be always increasing. I have had some figures prepared which I think will interest you.

During the year under review we paid in income tax, local rates, motor taxes, petrol duty, various Customs and Excise duties, quotas, State Insurance, etc., no less a sum than £1,600,000, and in the coming year the recent Budget will add a very substantial figure to the bill. There is actually very little in the incidence of taxation by Government and local authorities in this country that does not touch us at some point and, through us, our customers, even to the 15s. a year local taxation licence for a gardener or two at our Greenford factories. This process of taxation goes further and touches our suppliers who have had to find all the charges made on them in their turn out of the price we have to pay them for our commodities.

THE CONSUMER'S CONTRIBUTION

There is a general reluctance to admit that rising prices of commodities and other increases in costs must in due course become a charge to the consumer; from my point of view this is inconceivable. We have had of late such an organisation as the Milk Marketing Board stating that although they may be paying more to the milk producer this should not raise prices to the consumer. Yet it should be obvious that, unless someone has been making an abnormal profit or is carrying on his business in a most inefficient manner, increased cost of commodities cannot be provided out of profits, and the supplier must recover the additional cost or be forced out of business; and who would benefit by that?—not labour, nor capital, nor, I venture to think, the community.

So far as we are concerned, we claim that our business is run efficiently and that there is no abnormal profit anywhere. The margin of profit is so small, the margin between profit and loss so narrow, that it would frighten most business people and therefore in our case rising costs of whatever kind must mean increased charges to our customers. If business is carried on properly that must always be the case, and the sooner it is recognised by the public the better.

I am offering no argument either for or against rising prices of commodities. That is a matter best left to the economists. I am merely stating what, in my opinion, is an obvious and undeniable fact. (Applause.)

The Chairman then invited questions from shareholders, and, none being asked, he put the resolution, which was carried unanimously.

Mr Harry Salmon proposed the re-election of Mr George W. Booth and Mr S. I. Salmon as directors of the company.

Mr Stanley Taylor seconded the resolution, which was unanimously adopted, and Mr George W. Booth, on behalf of his

colleague and himself, thanked the shareholders for this mark of their continued confidence.

Major M. Gluckstein (one of the managing directors) moved that Mr G. A. Pollard and Mr H. H. G. Bennett be re-elected employee directors of the company, and Mr Julius Salmon (one of the managing directors) seconded the proposition, which was unanimously agreed to, and was briefly acknowledged by Mr Bennett on behalf of Mr Pollard and himself.

On the motion of Mr A. J. Wood, seconded by Mr Stanley Taylor, Messrs. Turquand, Youngs and Company were re-appointed the company's auditors for the current year.

SHAREHOLDERS' APPRECIATION

Mr Maurice G. Liverman proposed a cordial vote of thanks to the chairman, directors, and staff of the company for their services during the past year. He said that such a resolution might almost seem redundant, but he felt that the shareholders would be failing in their duty if they did not record, briefly, their appreciation of another magnificent year's work and offer respectfully to the directors their warmest congratulations on the results achieved, the profits constituting once more a record profit for the great house of Lyons. The investments which were held by shareholders, great or small, in this company might quite accurately be described as gilt-edged, although that term was not usually applied to industrial shares. When they saw a business built up on such strong foundations, on such progressive lines, and on such conservative finance, adapting itself to all the exigencies of the situation—anticipating difficulties and preparing for whatever might arise—they might feel convinced that their money was not only giving them a reasonable return but was being thoroughly well looked after. (Applause.)

Mr A. Wood seconded the motion, remarking that the results achieved were more than the shareholders really comprehended having regard to the very keen competition to which the business was subject. The report submitted reflected very great credit on the board, and, in fact, on all concerned. He might add that before they met again the Coronation celebrations would have been concluded, and he sincerely hoped that the "powers that be" would relax the irritating licensing regulations during that period, so that they could get the atmosphere of "Merrie England" once again. (Laughter and applause.)

The vote was passed with acclamation and, the Chairman having briefly acknowledged the compliment and announced that the dividend warrants would be posted that evening, the proceedings terminated.

BATANG CONSOLIDATED RUBBER ESTATES, LIMITED

DIVIDEND MAINTAINED

The sixteenth ordinary general meeting of this company was held, on the 5th instant, at 19 Fenchurch Street, London.

Mr E. F. Slade, J.P., chairman of the company, presided, and in the course of his speech, said:—The profits for this year do not cover a dividend of 2½ per cent., but in view of the large carry-forward and the fact that the present price of the commodity is some 1½d. per lb. higher than last year's average, we think we are justified in recommending the dividend indicated. The lower profit for 1935 is explained by two facts—first, that our average selling price of rubber for the year 1935 was 5.889d. per pound, as against 6.128d. for the previous year; second, owing to the smaller output and unavoidable increase in wage rates, the f.o.b. cost per pound for the year was approximately ½d. higher than the previous year.

It is very satisfactory to know that consumption has gone, and is going, forward in increased ratio, and that the statistical position is eminently sound. Some people doubted the wisdom of the International Committee in increasing the exportable quota by 30,000 tons from July to December this year. I think they were right.

No doubt you have worked out for yourselves the par capitalisation per acre of the property, which is £92. In 1920, for certain reasons, a reorganisation was effected by which each shareholder was given two and a half new shares of 2s. each for each old one held, and a subsidiary company was absorbed. To-day properties can be bought at very much less than £92 per acre. Remember this, that if the capital stood at half the amount your dividend to-day would be 5 per cent. instead of 2½ per cent. It would make no difference to you in actual income, but the capitalisation would stand at a figure which would put the company in the position to consider the acquisition of a desirable property with younger trees if such became available.

The report and accounts were unanimously adopted.

BOOTS PURE DRUG COMPANY, LIMITED

PAST RECORDS EASILY BEATEN

The forty-eighth annual ordinary general meeting of Boots Pure Drug Company, Limited, was held, on the 11th instant, at Station Street, Nottingham, the Right Hon. Lord Trent, chairman of directors, presiding.

The Chairman, in the course of his speech, said:—The net balance amounts to £770,889, an increase of £20,853 over last year, and easily a record for the company. Under the circumstances, even taking into consideration the periods of severe weather which increased the demands for drugs and medicines, I think you will regard this as very satisfactory.

After payment of all preference and preferred ordinary dividends, and of four quarterly dividends of 6 per cent., less tax, on ordinary shares, we have a balance of £290,139, which, together with the balance brought forward, amounts to £550,230, as compared with £506,571 last year.

Your directors recommend the payment of a bonus of 3d. per share, free of income tax, on the ordinary shares, absorbing £80,000, a transfer to the general reserve of £100,000, the transfer to the freehold reserve fund of £17,948 and the transfer to the contingencies reserve fund of £54,193, making that fund £200,000. This leaves £298,089 to be carried forward to next year.

During the year our subsidiary companies have made steady progress, and besides enlarging and modernising a large number of shops, have opened 45 new branches and closed four, bringing our total at March 31st up to 1,120. The number of our sales transactions increased by over six and a half millions.

Our total sales and number of prescriptions dispensed easily beat all our records.

During the past year we have taken the first step in a pioneering enterprise which may lead to important developments in the future. After careful preliminary investigation your board decided to open our usual type of chemist shop in New Zealand. The first Boots branch in New Zealand was opened in Wellington in January of this year. It is too early yet to indicate to what extent we shall be able to expand our business in New Zealand and thereafter, perhaps, in other parts of the Empire, but, needless to say, our plans are not confined to the one branch already open.

Colonel Braithwaite and I returned from the Dominion a few weeks ago, and I can assure the shareholders that they have reason to be proud of both shop and the staff there. During our visit we had the privilege of conferring with members of the New Zealand Cabinet and explaining to them our aims and policy in launching out in the Antipodes as well as acquainting them with our methods of business and the ideals by which we are guided.

During the year Dr. Brett also made a trip round the world in connection with the British Medical Association's meeting in Melbourne. As a result of the personal contacts we have made and of the knowledge we have gained in the course of our journeys, we may reasonably expect a stimulation of our export trade.

Progress with the centralisation and extension of our various Nottingham manufacturing units at Beeston continues according to plan, and we hope to move into the first section during the summer.

In the fine chemical department we have had to contemplate a considerable extension both of factory accommodation and plant. We have not only to meet a great and rapidly increasing demand for special medical products, such as Boots Insulin for the treatment of diabetes. We have also to provide for the manufacture of an extending range of fine chemicals, for we have continually in mind the importance of making this country independent of foreign supplies.

On the research side of our business we are enjoying still closer co-operation with medical men, hospitals, institutions and learned societies. We attach particular importance to this work because of the part it plays in helping to create and maintain the world-wide reputation we enjoy for the quality of our products and our service.

The veterinary and agricultural department continues to develop. An increasing number of livestock owners and farmers are making use of our branches for supplies.

In addition to the developments at Beeston, there is also nearing completion an important extension of our London warehouse in Stamford Street. The new block has been designed on the most modern lines, and its architecture and interior decoration worthily represent the progressive spirit of the firm.

I spoke last year of the introduction of our new series of Number Seven Beauty Preparations. The success of this new line is now definitely established.

Our library service continues to grow in popularity, and the reduction of the Class B subscription to 7s. 6d. a year—or less than 2d. a week—has brought in a new public which is not satisfied to confine its reading only to cheap fiction.

Turning to staff matters, I think you will be interested to hear that we are nearing the 20,000 mark. At the end of March our staff numbered 19,665, of whom about 7,000 were in the manufacturing and wholesale departments and about 12,500 in the retail. The figures show an advance of nearly 1,000 on the previous year, which is another indication of the rapid development of the business.

The pension scheme for the staff, which was introduced in April, 1935, is working with complete success.

I need hardly say that it is highly appreciated by those who are already enjoying its benefits, and the sense of security or of favours to come that it offers to the whole staff is one of many factors operating to make the employees of the firm one of the most contented communities in British industry to-day.

The five-day week is now established as a permanent institution in our Nottingham factories, and we may take pride in the fact that we have provided an example which is likely to have an important influence on the industrial life of this country. The provision of more leisure is the inevitable corollary of mechanical efficiency and large-scale production. In one form or other we are likely to see in the future a steady reduction of working hours or working years. More leisure per head not only means a fairer distribution of available employment, but also it makes for more spending and thereby tends to create more employment.

After a prolonged trying-out of various methods of granting extra holidays, I am very glad to be able to inform you that we have arranged for the whole of the retail staff to have the equivalent of an extra week's holiday in the year.

Urgent appeals have recently been made to employers to encourage by every means in their power recruiting for the Territorial Army. Ever since the Force was started in 1907 the firm have allowed employees the full fortnight off for camp, besides their normal holidays, and in addition have made up their Army pay to what they would have earned had they been at work. In view of the present international situation, your directors feel that we should now go further. They have, therefore, decided to allow full pay during the fortnight's training, in addition to their ordinary holidays on full pay.

It is, as you know, our constant aim to enable those who work for the firm to share in its prosperity, whether in the form of wages, pensions, better working conditions, more leisure, opportunities for sports and games, or a variety of other amenities. In some respects we are, however, hampered in our efforts owing to circumstances over which we have no control.

There appears to-day to be an unfortunate tendency to increase retail hours, already unduly long. In some districts, such as holiday resorts, not only are shops permitted during the summer months to remain open for very long hours, but advantage is also taken of exemption from the half-holiday closing.

If retailers generally are to get the type of employee so necessary to the continued success of their businesses, some adjustment must be made to bring the working hours more into line with those worked in factories and warehouses.

THE FUTURE

Under present conditions, he would be a foolish man who would forecast business conditions for twelve months ahead. If the purchasing power is in the pockets of the public, there is no question as to the excellent prospects of your company. But with the nations equipping themselves less and less for productive pursuits of peace and more and more for aggression on the one hand, and self-defence on the other, the world seems to be organising for sterility rather than for stability. Money spent on armament programmes creates an illusion of prosperity in certain sections of the population, but such expenditure is, by its nature, largely unproductive, and sooner or later has to be paid for in a diminution of purchasing power, which reacts upon the world as a whole. Here in this country, after emerging a long way from the world depression, we have been compelled by external pressure to embark on a rearmament programme. We can probably afford this unavoidable expenditure better than almost any other nation, but it is a programme of waste, and does not make for healthy economic conditions. So far as your company is concerned, therefore, we feel it essential to keep ample funds in hand, so that we may be prepared for any eventuality.

The report and accounts were adopted.

BRITISH AND CHINESE CORPORATION, LIMITED

IMPROVED CONDITIONS IN CHINA

MR D. G. M. BERNARD'S INTERESTING REVIEW

The thirty-eighth ordinary general meeting of the British and Chinese Corporation, Limited, was held, on the 10th instant, at the registered office of the company, 3 Lombard Street, London, Mr. D. G. M. Bernard (chairman of the corporation) presiding.

The Secretary (Mr E. R. Morris) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said:—Your directors are happy to be able to recommend a dividend of 10 per cent. on the paid-up capital, free of tax—the same as last year—and to place £20,000 to the general reserve. I hope shareholders will consider this a satisfactory result of the year's operations.

The general trade depression, the repercussions of which were felt in China later than in other countries, was shown during the latter half of last year in a general decrease in gross railway earnings of from 7 to 13 per cent., with the exception of the Tientsin-Pukow Railway, whose earnings continued to increase.

It is satisfactory to be able to report that payment has at last been resumed by the Peking-Mukden Railway of the service of the hanghai-Fengching Railway Mortgage Redemption Loan of 1914.

The balance of interest due in February, 1926, and two other interest coupons have been paid.

The advance made in 1929 for purchase of rolling stock for the Hankow-Shanghai Railway has now been repaid. Two coupons of the 1903 loan, due December 1, 1933, and June 1, 1934, have been paid; three half-yearly coupons and six instalments of principal still remain in arrear. The distribution of the share of net profits from 1933 to 1935 according to holders of net profit certificates is now under discussion.

CHINA'S PROBLEMS

In any nation a change over from autocratic to republican rule is scarcely fail to prove a painful process. Nevertheless—and it is a notable tribute to the tenacity and essential solidarity of the Chinese people—during all this toil and trouble the Government of China, the Nanking Government, appears to have been successfully and slowly but surely consolidating its position and extending the area within which the writ of its authority may be said to run. The hostility which formerly reigned between the Governments of the North and the South has been sensibly mitigated. There has been shown a new disposition to co-operate, which suggests that the fears of those who despaired of the ultimate unification of China may have been premature. The Tu-Chuns are now held in check. The cloud of Communism has been broken up. Civil war has ceased throughout the length and breadth of China, and civil disturbance, though still too prevalent, appears to be on the wane.

RAILWAY DEVELOPMENT

The Chinese Government has been quick to perceive that, if advantage is to be taken of this favourable turn in their fortunes, to consolidate their position and extend still further their authority, the development of railway communications is becoming an urgent and indeed paramount necessity. It has always been the contention of your corporation that the expansion of the Chinese railway system should be undertaken in the first instance by China herself, and that only when internal supplies of finance showed signs of drying up should recourse be made to foreign loans. This salutary lesson, enforced no doubt by the strictness ruling in the leading money markets of Europe, has been taken to heart. We have watched with active sympathy the energy and resource displayed by the Government in financing through the Chinese banks the completion and construction of important railways which traverse some of the central and western provinces of China. Some 2,500 kilometres of new construction are now in hand and about 1,500 kilometres were completed last year.

ANGLO-CHINESE ASSOCIATION

It is not enough to sympathise. Precept without practice is vain thing. Your corporation has not been content to preach the advantages of Anglo-Chinese association; it has proceeded to demonstrate it. In addition to direct advances to the Chinese railways, of which, as you will see by the figures shown in the balance sheet, the amount outstanding is now £734,800, the corporation has during the last two years, in association with its bankers, the Hong Kong and Shanghai Bank, joined with a number of Chinese banks for the public issue in Shanghai of

loans aggregating £2,600,000 for the completion of the Hankow-Canton and the Shanghai-Hangchow-Ningpo railways.

I should like to point out here that the latter of these transactions is a new departure for the Corporation. It is also a new adventure. We have staked our reputation on the word of China. We, in effect, are inviting the subscribing public to pass a vote of confidence in the Chinese Government. If this faith should be justified, as we earnestly hope and believe it may be, a new chapter will be opened in Chinese finance. The loan, to which I have just referred, may well become the bell-wether of a series of similar essays in joint international loans to the great advantage of Chinese and foreigners alike. But clearly there are two conditions precedent on which, with your permission, I should like to say a few words.

SETTLEMENT OF EXTERNAL DEBTS

First of all the external debt of China must be regularised. It is a lamentable fact that there is hardly one of the half-dozen Chinese railway loans issued by this Corporation during the past thirty years which has not been allowed to drift into default. We have to take things as they are, and the dominant fact is that the foreign money market must remain closed to any new Chinese issue until the situation is cleared up by a settlement of the loans in default. Then, and not till then, will the decks be cleared for action and the foreign markets reopened to Chinese finance. I hope our shareholders will soon reap the reward of the policy your directors have so long pursued of steadily building up reserves in order to meet just such a contingency. I am aware that this has involved a considerable strain on your patience, and I am glad to take this opportunity of thanking you, on behalf of my colleagues and myself, for the confidence you have placed in us. I trust the time is not far off when we may be enabled to dispense with further calls on your forbearance.

NEED OF A BALANCED BUDGET

The second condition I am almost ashamed to mention; it is so obvious. But without a balanced Budget all our efforts for the reconstruction of China are of no avail. The recent stabilisation of the Chinese dollar, based on the average rate of exchange for the five years from 1930 to 1934, appears to have been discreetly chosen, and for the last six months no great difficulty has been experienced in maintaining the new Chinese dollar at par. Wholesale prices are gradually rising and the balance of trade is improving. The British banks have shown their confidence in the soundness of the scheme by turning over their stocks of silver to the Chinese Treasury in exchange for the new currency. A further ground of confidence is the arrangement by which the Government of the United States has undertaken to relieve China of substantial amounts of surplus silver and to provide her with supplies of foreign exchange for stabilisation purposes.

FUTURE OF CHINA

The general economic situation in China, as I have tried to show, is not unfavourable and, if economic considerations formed the sole criterion of a country's fortune, we might look forward with good hope to the future. The devaluation of the currency has already corrected the adverse balance of payments and restored China to the rank of a creditor nation. Unfortunately economic conditions are not the only criterion. There are also political factors to be taken into account.

As the only great undeveloped market in the world, China, in her present defenceless condition, holds out a tempting prize to national aggrandisement. There can in fact be no effective security for China which is not collective security. This was recognised by the Washington Conference as far back as 1922, when Great Britain, France, the United States and Japan agreed to renounce their individual aims and to work together for the reconstruction of China. That policy still holds the field. The machinery is at hand in the Consortium created by the Washington Agreement Powers as the financial instrument of their general policy in China. If the several international groups of which the Consortium is composed have the vision to see that the time is ripe: if they have the courage to seize the opportunity which now presents itself of joining hands with their colleagues of the China group in a common effort to assist China in working out her own salvation, then indeed it may not be too late even now to repair the broken channels of international trade and to bring back peace and sanity to a distracted world.

The report and accounts were unanimously adopted, the recommendations of the directors were approved, and the proceedings terminated.

ASSOCIATED NEWSPAPERS LIMITED

STRONG FINANCIAL POSITION

THE HON. ESMOND HARMSWORTH ON THE YEAR'S TRADING

The thirty-first annual ordinary general meeting of Associated Newspapers, Limited (proprietors of *The Daily Mail*, the London *Evening News* and the *Sunday Dispatch*), was held on the 11th instant, in the Memorial Hall, Farringdon Street, London.

The Hon. Esmond C. Harmsworth (the chairman) presided.

The Secretary (Mr J. P. Hobbs, F.C.I.S.) read the notice convening the meeting and the report of the auditors.

The Chairman, in moving the adoption of the annual report and balance sheet, said:—

Ladies and Gentlemen,—I think I may assume that you have seen the balance sheet and directors' report which were sent with the notice of this meeting, and therefore you will not wish me to occupy your time in reading them.

It is gratifying to be able to show a profit for the year amounting to £930,799 18s. 7d., which is slightly more than that declared last year. This profit is arrived at after charging interest on the Registered Note Issue of the company, allowing for depreciation of buildings and plant, providing for income tax, and making the usual reservations.

EMINENTLY SATISFACTORY RESULTS

During the past year we have had to face an exceptional series of big national events, and while the prestige of our newspapers has been considerably enhanced by our handling of those events with special news services and attractive supplements, the cost of production incidental thereto was necessarily increased. We consider, therefore, the results we place before you to be eminently satisfactory.

The half-yearly dividends on the preference and ordinary shares of 5 per cent. and 7 per cent. respectively have been paid, and also quarterly interim dividends, making a total distribution of 26½ per cent., to the holders of the deferred shares. The directors are setting aside an amount of £100,000 as a publicity reserve, and after deducting the premium on the registered notes which were repaid last August, there is a balance of profit remaining on the appropriation account of £601,031 13s. 5d. to carry forward, compared with £609,655 18s. 6d. last year.

I will now run through the items on the balance sheet. The share capital is unchanged—the 4½ per cent. Ten-Year Registered Notes have been reduced from £1,500,000 to £1,000,000 by the repayment of the half-million pounds' worth of notes last August. The amounts for reserve account and pension funds remain unaltered. The item sundry shareholders for dividends is self-explanatory, and the dividends have now been paid. Amounts owing to subsidiary companies £268,158 3s. 5d., is higher than last year. Most of this amount was owing to the Anglo-Newfoundland Development Company for newspaper paper which we had in stock and for which payment is made as the paper is used. To safeguard our interests it is necessary to keep several weeks' paper supply in this country, and winter shipments are now made from St. John's, Newfoundland, thus ensuring regular supplies during the period when Botwood Harbour is icebound. The amount £1,009,434 7s. 2d. for creditors and reserves includes a comparatively small sum for trade creditors and substantial provision for contingencies.

On the assets side of the balance sheet I must again draw attention to the fact that nothing is included for the very valuable goodwill of our business freehold and leasehold properties. Machinery, plant, etc., at £1,598,287 18s. 4d. show an increase of £96,252 10s. 4d., which is due to the inclusion of payments on account of our new building and its equipment. Stocks of paper, etc., are greater this year, but these are bound to vary according to the forecast of our requirements.

Investments in subsidiary companies are the same as last year, and I would add we are very pleased with the progress made by our provincial newspapers.

The Government securities shown in last year's balance sheet were realised to help provide funds for the repayment of £500,000 of registered notes.

The loan to liquidators of Northcliffe Newspapers, Limited, has been reduced by £53,000 since last year, while amounts owing by subsidiary companies is £17,725 10s. 9d. higher—these debts are fully secured. The balance for sundry debtors, £575,333 2s. 9d.,

is £47,113 16s. 1d. less than last year. The smaller amount of cash is due to the note repayment and expenditure on the new building, but at £596,299 9s. 9d. is ample for our requirements and indicates a strong financial position.

ANGLO-NEWFOUNDLAND DEVELOPMENT COMPANY, LIMITED

The Anglo-Newfoundland Development Company, which, as you know, is the company from which we obtain all our paper supplies, has again issued a satisfactory report in respect of the year 1935, and has announced a final dividend of 3½ per cent., subject to confirmation at the annual meeting of the company to be held on the 17th of this month, making 6 per cent. for the year. The balance sheet again reveals the very strong financial position of this company.

As the result of an improvement in the price of zinc and lead, the operating profit of the Buchans Mine showed a very substantial increase last year, and the directors of the Anglo-Newfoundland Development Company state that there is good reason to expect that its subsidiary company, Terra Nova Properties Limited, will begin to receive revenue from this source towards the end of the present calendar year. Your directors are well satisfied with their investment in this company, and I might perhaps here mention that for the benefit of shareholders who are interested, the report of the chairman's speech at the annual meeting of the Anglo-Newfoundland Development Company, to be held in Canada next week, will be published, as is usual, in *The Daily Mail* and other papers.

NEW BUILDING

Last year I referred to the purchase of the valuable freehold site formerly occupied by the Metropolitan Asylums Board building and of our plans to erect additional premises thereon.

The new building, which a year ago was in the very early stages of construction, is now practically completed, and the work of installing plant and machinery is being proceeded with as rapidly as possible.

It is a five-storey, steel-framed building, with frontages on the Embankment and Carmelite Street, and is being equipped with the most modern machinery for newspaper production. When finished it will be the most advanced achievement of its kind in newspaper development.

Before the end of our financial year this additional equipment will be in full operation, relieving the pressure on and augmenting our present sources of production, which by reason of increased sizes of our various newspapers have been found barely sufficient to meet the demands made upon them.

IDEAL HOME EXHIBITION

The *Daily Mail* Ideal Home Exhibition, continuing a career of popular success, attracted an attendance of visitors which showed an increase of no fewer than 45,000 on that of the preceding year—638,021 in all.

The exhibition was the subject of universal admiration from the general public, and the remarkable stimulation it gave to many trades was attested to by a flood of congratulatory letters received from exhibitors.

Next year's exhibition will celebrate the coming-of-age of this ever-welcomed national event, and the organisers hope to bring into being some long-cherished plans for its further development.

PROVINCIAL NEWSPAPERS

As stated in the directors' report, the profits of the provincial newspapers owned by your company have again exceeded those of the preceding year, and your directors regard these properties as an increasingly valuable asset.

You are probably aware that the situation in Bristol has greatly improved since our last meeting. As a result of prolonged negotiations, an agreement was reached whereby both evening newspapers there, the *Evening World* and the *Evening Post*, came under the control of a new company, the Bristol United

Press, Limited, in which we have a very substantial interest. Your directors anticipate that this holding will become a valuable asset in the near future.

One provincial newspaper is still in course of development, and has made considerable progress during the past twelve months. Your directors are satisfied with the outlook.

ADVERTISING REVENUE

On the advertisement side the position is one to be viewed with satisfaction. The year, as I have already mentioned, was an abnormal one, with the period of national mourning, the uncertainties of the general election, and the difficulties of the international situation.

Nevertheless, the previous year's increase in display advertisement revenue has been more than maintained, and once again an increase can be recorded.

This increase in trade advertising has been attained not only by *The Daily Mail* but by *The Evening News* and the *Sunday Dispatch* as well.

The supremacy of *The Daily Mail* as the leading and most productive advertising medium in the country is recognised by all. It is an accepted principle of scientific selling that unless *The Daily Mail* figures prominently in the plans the success of any national advertising campaign is prejudiced from the start.

The explanation is that *The Daily Mail* has a larger percentage of its readers among families of higher spending capacity than any other newspaper in the country.

The staunch loyalty of that public to *The Daily Mail* has been and still is the most significant feature of the fierce competition within the newspaper industry.

PRESTIGE AND SALE OF "THE DAILY MAIL" MAINTAINED

Despite a year of great competition, *The Daily Mail* maintains its sale and undoubted prestige. This steady sale is much valued by advertisers because of the loyalty of its readers and its amazing pulling power.

In token of its supremacy *The Daily Mail* always carries a considerably greater volume of trade advertising than that apportioned to its competitors, and, invariably, increases in display advertising are reflected in the number of enlarged issues published.

More 24-page issues of *The Daily Mail* were published during the year than in any previous year, while the record size issue of 32 pages in September, 1934, was equalled on four occasions.

More recently another 32-page issue marked the celebration of the fortieth anniversary of *The Daily Mail*, one notable feature being the number of tributes it contained from leaders in business and in advertising to the unique position and prestige of *The Daily Mail*.

In the evening newspaper field *The Evening News*, with the largest evening net sale in the world, continues to increase its net sales lead over its nearest competitor. The net sale of *The Evening News* at present is very considerably in excess of that at the same time last year.

Trade advertisement revenue has again increased, and the fact that this is due in part to an increase in motor advertising shows that *The Evening News* net sale figure represents quality as well as quantity.

The great selling power of *The Evening News* in that most vital market to advertisers, London and the Home Counties, is proved beyond question in the amount of keyed advertising carried in its columns. In particular, *The Evening News* carries twice the amount of store and drapery advertisements placed with its nearest rival.

The publication of a greater number of enlarged issues is another feature of the year.

With the *Sunday Dispatch*, also, the trend is progressive. The net sales position is satisfactory and the paper remains firm in the favour of the better placed families.

This is reflected in the advertisement revenue, the figure for which stands as the highest ever recorded for any year since the paper was founded 135 years ago. This advance is made all the more stable by the fact that the previous record year of 1934-35 included 53 issues, compared with 52 for 1935-36.

As a sure sign of the prestige of our newspapers in financial as well as in the home and business circles, it is to be noted that a proportion of the general increase in advertisement revenue is represented by an increase in financial advertising.

The Overseas Daily Mail, exercising a world-wide influence in the interests of Britain's trade abroad, has again increased its advertisement revenue over a most successful year. Growing

demands for advertisement space have permitted the publication of more and enlarged colour issues, which have been welcomed by our readers as well as advertisers.

HEALTHY PROGRESS OF THE PUBLICATIONS

Everything considered, therefore, it can be said very definitely for all our publications that healthy progress has once again been made.

Prompted, I would suggest, by the fuller measure of results, advertisers are reserving their spaces with increasing confidence. Advance bookings are of a highly satisfactory nature, especially for *The Daily Mail*, including the famous Front Page, which is the most potent and most widely sought after advertisement space in the world.

I am sure you would again wish me on your behalf to thank the members of our staff in all departments and in all branches for their loyalty and good work.

As to the future, these are troublous times and it would be unwise to venture into the realms of prophecy. The present position is such as to promote perhaps a more optimistic outlook than has been permissible for some time past. Trade generally is better and the signs are there that the improvement will slowly yet surely gather impetus, unless, of course, there is some unexpected upheaval in world affairs. But, given freedom from political and international upheavals, we have every reason to regard the position as encouraging. Certainly this business should have its share of the great prosperity which this country is undoubtedly enjoying at the present time, and I see no reason to doubt its continuance.

The chairman concluded by moving the adoption of the report and accounts.

Sir George A. Sutton, Bart. (vice-chairman), seconded the resolution, which was carried unanimously.

The retiring directors: Viscount Rothermere, Hon. Esmond C. Harmsworth, Mr G. Ward Price, Mr H. W. Wilson, Mr F. L. FitzHugh, Mr W. A. McWhirter, Mr W. L. Warden, Mr William Graham, Mr Stanley J. Bell, Mr A. L. Cranfield, and Mr H. Morison, were re-elected, and the auditors, Messrs. Lever, Honeyman and Company, were re-appointed.

The proceedings terminated with a vote of thanks to the chairman and directors.

TRONOH MINES, LIMITED

MR C. V. THOMAS ON TIN RESTRICTION

The thirty-fourth annual general meeting of Tronoh Mines, Limited, was held, on the 10th instant, at the Institute of Chartered Accountants, London.

Mr C. V. Thomas (the chairman), in the course of his speech, said:—The output was limited to an average during the year of 42.35 per cent. of standard assessment. The profit for the year is as shown, £67,980.

Dividends totalling 2½ per cent. were paid during the year, and we have a balance of £73,966 to be carried forward. Since the close of the year we have paid an interim dividend of 7½ per cent., and the board yesterday declared a further interim dividend of 7½ per cent. and a bonus of 2½ per cent.

As to tin restriction, we have now reached a point where the extravagant claims of Siam and the Congo are a hindrance to the new agreement for restriction being entered into, and I entirely share the views expressed by the President of the F.M.S. Chamber of Mines at Ipoh at the annual meeting of that association when he said, "Malaya has now reached the point at which she will make no further concessions which might permit the expansion of tin production in other countries to the detriment of Malayan interests." Whatever may be the outcome of the proposed negotiations between the representatives of the International Tin Committee and Siam, I think that Malaya must be very firm in refusing to allow the extravagant claims of Siam to prevail, as to admit the claims of Siam as put forward would be a position that could not be tolerated. I can hardly think that the Siamese Government would be so foolish as to break down restriction if it cannot attain all that it requires. The position might be improved if Bolivia were not in a position to produce its quota and were to give up some of its quota. This might ease the position, but to expect Malaya to bear 50 per cent. of the extra tonnage granted to Siam is not in my opinion reasonable, and Malaya cannot entertain it.

I share the views of *The Financial News* of June 4th, namely, "Malaya cannot be expected to make concessions as though she were the express beneficiary of restriction, when, in fact, she is the best equipped to face its disappearance."*

The report was unanimously adopted.

WELWYN GARDEN CITY LIMITED

ALL ROUND PROGRESS

INCREASING DEMAND FOR FACTORIES

The sixteenth annual general meeting of this Company was held, on the 10th instant, at the Holborn Restaurant, London.

Sir Theodore G. Chambers, K.B.E. (the chairman), said:—

The profit this year is £16,038, compared with £112 last year, a most satisfactory improvement which we believe is not transitory. A dividend of 2 per cent. is recommended, absorbing £10,726, £4,074 being carried forward after setting aside £1,350 to provide for the company's liability to income tax. Revenue from subsidiary undertakings has reached a more satisfactory figure, auguring well for the future.

The building company has shown marked improvement in turn-over and efficiency. Our electricity undertaking has maintained the steady improvement shown in previous years, enabling us to announce important tariff reductions as from the 1st July next. After the payment of specific fixed charges, all consumers will be able to purchase electricity at the low rate of 4s. per hundred units throughout the year.

An extraordinary general meeting of the company has been called for the 24th June next, to increase the borrowing powers of the company to £1,200,000 to enable future expansion to be financed. This finance will consist of mortgages and it is not proposed to issue new loan or share capital.

The industrial area of the town is becoming increasingly prosperous and important. Existing industries are doing well, and many have recently extended or are contemplating expansion. It is now fully accepted that Welwyn is a place to be considered automatically as a potential location for a new industry. The progressive policy of the L. & N.E. Railway Company, whereby London has been brought within twenty-three minutes by rail, has gone far to create the present view that Welwyn is ideally situated for industry.

The increasingly rapid development of the industrial estate has led to a decision of the directors to open up a new area of about a hundred acres north of the branch railway line. The factory sites in this area have many attractions. They are level and easily built upon, whilst a number of them have appreciable publicity value owing to the proximity of the main railway line. Furthermore, the area borders on half a mile of railway from which siding facilities can easily be arranged.

The demand for sectional factories to let is increasing and new factories of this kind are being taken as fast as they are completed. The directors have decided to accelerate this side of our industrial development to ensure, as far as possible, that we have an adequate supply available.

The company and the local urban district council are able to collaborate in providing an ample supply of houses for new workers. There would to-day be little difficulty in coping with a demand for housing accommodation for a new industry employing even so large a number as a thousand workers.

Despite rapid development as an industrial centre, the town is exceptionally attractive as a place of residence for middle-class and well-to-do people. The excellent rail and road facilities, the delightful character of the building sites, coupled with existing public and social services, and expanding shopping facilities, combine to make Welwyn Garden City one of the most attractive residential districts within easy reach of London. Good class residential development may, therefore, be expected to proceed steadily side by side with the development of industrial activities.

As regards the future, I think we may look forward, with reasonable grounds for optimism, to steady progress. In an undertaking such as ours we cannot reasonably anticipate spectacular improvements. What one hopes for is a steady increase of population year by year—at a rate that will permit of the absorption of the new population and the consequent expansion of the services which such increase of population demands. It is, however, satisfactory to note that all the evidence to-day goes to show that the seeds sown during the last sixteen years, which have included some of the most difficult years in the economic history of the country, are beginning to bear fruit. We are naturally being helped to a material extent by the gradual improvement in the general financial conditions in the country. The tendency for new industry to select the vicinity of London for its location, the rapid spread of London outwards and the growing acceptance of the idea of decentralization are all in our favour and you may rest assured that the directors will lose no opportunity of turning these conditions to the advantage of Welwyn Garden City, which is in a position to offer facilities second to none in the neighbourhood of London.

Mr Charles Boot, J.P., seconded the resolution to adopt the Report and Accounts, which was carried unanimously.

ANGLO-IRANIAN OIL COMPANY, LIMITED

INCREASED PROFIT AND DIVIDEND

The twenty-seventh ordinary general meeting of the Anglo-Iranian Oil Company, Limited, was held on 11th instant, at the Chartered Insurance Institute, 20 Aldermanbury, London.

Sir John Cadman, G.C.M.G., D.Sc. (the chairman of the company), presided, and in moving the adoption of the report and accounts said the first item on the asset side of the balance sheet, Refinery, Tank Installations, Pipe-Lines and Buildings, had increased by £395,000, representing the amount by which expenditure had exceeded depreciation. Extensive building operations had been conducted in 1935, and were still in progress. The item Investment in Subsidiary Companies had been reduced by £377,000, owing mainly to reserves they had considered it prudent to make. Advances had decreased by £1,559,000, of which approximately £800,000 represented reductions in advances to the D'Arcy Exploration Company, and a further £500,000 repayments by another subsidiary. Cash and the two items "Securities" showed an increase of £2,034,000, the market value of securities at the end of the year being over £500,000 in excess of the balance sheet value. The profits for the year exceeded those of 1934 by £336,000 enabling the board to recommend an increased rate of dividend which, coupled with the strong financial position, would be a source of satisfaction to the shareholders.

PRODUCTION IN IRAN

Production of crude oil in Iran had amounted to 7½ million tons. At the Haft Kel field further wells had been drilled. In consequence, it had been possible, during 1935, to increase offtake from Haft Kel to over 40 per cent. of the total production from Southern Iran. The search for further oilfields was, of course, one of the board's constant pre-occupations leading to exploratory activities in Iran, Iraq, Kuwait, and Great Britain, while the provision of further manufacturing equipment at Abadan was still in progress. As to the fleet, 12 new motor tank vessels each of 12,250 tons deadweight, were under construction in Great Britain at a cost of approximately £2,000,000, giving regular employment to some 10,000 men; they would replace earlier vessels and provide the needed greater carrying capacity.

The world's consumption of oil products had increased during 1935, and, in most countries, the company's sales had benefited thereby; the average of prices had been slightly higher, but unfortunately exchange and import restrictions considerably hampered trading activities, and had been largely instrumental in preventing even better results for the year.

DRILLING IN GREAT BRITAIN

Following a substantial volume of scientific evidence collected by the company's geologists, prospecting licences had been obtained under the provisions of the Petroleum Act of 1934 covering areas in the south and east of England and in Scotland. The first well, in the south of England, was begun on March 30th last, and had reached that morning a depth of 1,904 feet; the second would be started shortly, and geological and geophysical surveys were being conducted over large portions of the licensed area. Although the decision to drill had been made principally on the basis of the evidence collected, which was of the kind on which the company would normally undertake prospecting activities in other countries, the very special value of indigenous supplies of petroleum had been an additional and cogent consideration. The board did not, at the best, envisage the possibility of more than moderate production, and he would not attempt to predict the outcome of the search, but it was the company's intention to put beyond doubt the question whether oil existed in commercial quantities or not.

There had been some improvement in conditions in the industry during 1935, and he was glad to say that it had been possible to increase the wages of the workers. As to prospects, last year he had told the shareholders he could not give a definite prophecy as to the results for 1935 because of the existence of too many variable factors. Factors of the type he had had in mind still existed, both within and without the framework of the oil industry. International business was still characterised by a variety of restrictions which it was hoped would gradually be removed, but until that occurred, progress must necessarily tend to be retarded. On the other hand, world consumption continued to increase, and the company, was well able by virtue of its oil reserves, equipment and finance, to make the best of future trading conditions, whatever they might be.

The report and accounts were unanimously adopted.

HENDERSON'S TRANSVAAL ESTATES, LIMITED

IMPROVED RESULTS—GOOD PROSPECTS

The twenty-fourth ordinary general meeting of Henderson's Transvaal Estates, Limited, was held at River Plate House, Finsbury Circus, London, Sir Joseph Ball, K.B.E., presiding.

Sir Joseph Ball, in the course of his speech, said: I hope you will feel satisfied not only with the actual results for the past year, but also with the strength of the balance sheet generally.

The profit for the year carried to the balance sheet is £55,227, as against £51,011 last year, an increase of £4,216, making, with the balance of £47,171 brought forward, the sum of £102,399 to the credit of profit and loss. Out of this we recommend the payment of a first and final dividend of 10 per cent. for the year, less tax, leaving to be carried forward a balance of £59,437.

HENDERSON CONSOLIDATED

Agriculture during 1935 failed to show signs of any marked recovery, and the revenue of the corporation from this source during that year, while satisfactory, has not increased. As was natural in the existing situation, inquiries for land have been negligible, and no sales have been effected.

The income from the colliery interests, however, has been increased by £5,443, and this has permitted the distribution of a dividend of 6 per cent., as against 4 per cent. for 1934, and at the same time left a sum of £51,652 to be carried forward.

DELAGOA BAY DEVELOPMENT

For the year ended June, 1935, this corporation was able once again to declare a dividend on its ordinary shares of 3 per cent., tax free, and in addition to redeeming a further £15,250 of the debenture issue, to carry forward £19,369.

TWEEFONTEIN UNITED COLLIERIES

Turning to coal, which is one of our principal assets, we mentioned last year that we were justified in anticipating even better returns from this source than for the previous year. I am glad to be able to tell you that our anticipations have been amply fulfilled inasmuch as the coal sales by Tweefontein United Collieries for the financial year ended September 30, 1935, amounted to 843,903 tons, being 84,236 tons higher than for the previous year, which in turn were, as you will remember, 103,592 tons better than those of the preceding year.

The management have for some time past been giving very close attention to improvements in the methods of production, and, with an increased demand for our coal the profits of the company, even after a liberal allowance for depreciation, have reached a new high record for the year.

The rate of dividend on the ordinary shares was raised to 8 per cent. for the year, as compared with a steady rate of 6 per cent. for the previous nine years in succession. The maximum rate of 10 per cent. was paid to the holders of the preference and participating shares, while the carry-forward was increased from £14,112 to £23,348.

I may add that the monthly returns received from the collieries up to the end of May of this year show that the improvement in the coal trade is being well maintained.

TWEEFONTEIN COLLIERY

For the year ended December 31, 1935, the revenue of this company showed further expansion, due to the higher dividend received from Tweefontein United Collieries, Limited. The full rate of dividend, namely, 10 per cent., was paid on the preference and participating shares, while the ordinary shareholders received a dividend of 15 per cent., plus a bonus of 5 per cent., making a total of 20 per cent., as compared with 15 per cent. for the previous year.

White's South African Portland Cement Company, Limited:—The cement industry had an exceptionally good year, and for a time the demand was in excess of production. Business is very well maintained, but with the coming into operation of several new works, keen competition is bound to result. The return from this investment is very satisfactory.

Speaking for the board, we are gratified at being able to present to you this account of our stewardship, which we hope and believe that you will find satisfactory. Excluding unforeseeable international complications, there would seem to be no reason why, under the sound and sane Government which now controls its affairs, South Africa should not continue the progress which it has achieved during the past three years, and why this company should not continue to enjoy its share of this increased prosperity. The report and accounts were unanimously adopted.

GORDON HOTELS, LIMITED

IMPROVED RESULTS AND PROSPECTS

The forty-sixth ordinary general meeting of the Gordon Hotels, Limited, was held, on the 9th instant, at the May Fair Hotel, Berkeley Square, London, Major-General Guy Dawnay, C.B., C.M.G., D.S.O. (the chairman), presiding.

The Chairman, in moving the adoption of the report and accounts, said: Our meeting this year takes place nearly two months later than usual. The delay has arisen owing to the fact that we have been engaged in somewhat protracted negotiations in connection with the partial moratorium arranged with our debenture holders. It was our hope that these final and definite arrangements might have been come to during the early months of the present year. In the meantime, however, a new factor was introduced owing to our finding ourselves in negotiation for the sale of the Metropole Hotel in Northumberland Avenue. You will remember that when we first embarked upon the Dorchester Hotel undertaking, we hoped to finance the latter by the sale of the Metropole, or perhaps the Victoria Hotel. The economic crisis and consequent slump rendered this plan abortive, and until this year no opportunity to revert to it offered.

It became necessary to call the debenture stockholders together in order to get their consent to this sale, since the Metropole, of course, was one of the principal assets upon which their debentures were secured. The result was that your company received a large sum in cash, part of which, as our report informs you, it was agreed with the debenture stockholders to apply to the redemption of the prior mortgage held by our bankers, Messrs Glyn Mills. This necessarily altered the course of the negotiations for final settlement with the debenture stockholders; and though it naturally tended to facilitate our negotiations, it also delayed their conduct to a definite conclusion. We therefore decided to hold our annual general meeting without waiting further for the completion of this matter; and we can only tell you at present that definite arrangements appear to be in sight, which should afford some relief to the heavy burden of standing charges which the company has had to meet.

GENERAL IMPROVEMENT IN RESULTS

I will now turn to the accounts. Taking first the trading account, you will observe that the balance transferred to profit and loss account is about £16,000 more than the corresponding figure for the previous year. As the directors' report informs you, this is entirely due to a general, if not very marked, improvement in the results shown by our hotels in England.

The profit and loss account is almost identical with that of the previous year, except that the share of the profits of the Grosvenor Hotel, payable to the Southern Railway, were considerably increased, while the interest payable to our bankers in respect of £274,400 second mortgage debenture stock of the Dorchester Hotel was decreased by about £1,200. The result shows £5,346 profit carried to the balance sheet. The final profit and loss balance carried forward stands at £15,418 after, as I have already pointed out, having made full provision for interest deferred in accordance with the debenture scheme, but before making provision for deferred sinking funds.

The actual tendency of the business to-day and the increased volume of inquiries for accommodation which we are now receiving give indication of resiliency and show some improvement.

Since the close of the financial year, with the consent of the trustees for the debenture stockholders, we have also sold the Hotel Royal at Dieppe.

SIR FRANCIS W. TOWLE'S VIEWS

Sir Francis W. Towle, C.B.E. (managing director), in seconding the resolution, said: Ladies and gentlemen, as the chairman has already told you, the profits earned by the hotels during the past year have shown a fair increase, and this is perhaps a little more satisfactory than it appears on the face of it, as very little additional profit was earned during the Jubilee celebrations, and the greater proportion of the increase is due to the increased earning power of the company's hotels.

It is a little difficult to forecast the trend of business in the future because the situation was much altered by the sale of the Hotel Metropole, but the business is showing signs of improvement, and I hope and believe it will be maintained, because there are definite signs of an increased number of visitors from the United States.

The Chairman having replied to shareholders' questions, the report and accounts were unanimously adopted.

ANTOFAGASTA (CHILI) AND BOLIVIA RAILWAY

SOME IMPROVEMENT IN RESULTS

The forty-eighth annual general meeting of the Antofagasta (Chili) and Bolivia Railway Company, Limited, was held, on the 9th instant, at Winchester House, E.C.

Mr A. W. Bolden (chairman and managing director) said that, generally speaking, the results for the year 1935 showed some improvement on those for 1934. So far as Chile was concerned passenger traffic was practically the same as for 1934, but the total goods traffic increased by some 18 per cent., while in Bolivia there was quite considerably increased passenger movement with rather more than 26 per cent. increase in the goods traffic. Had the rates of exchange been the same for both years the accounts would have shown a larger increase in the gross sterling revenue. The ratio of expenditure to gross receipts for the railway was 56.52 per cent. in 1935, against 60 per cent. in the previous year, and the improved ratio was common to both Chile and Bolivia.

A dividend of 2½ per cent. had been paid on the cumulative preference stock during the year, and it was proposed to pay a further 2½ per cent., being the balance of dividend payable in respect of the year 1932, leaving £147,606 to be carried forward, or £13,423 more than was brought forward.

The question of tariffs was one which gave the greatest concern, as they were anxious to do the best they could for their freighters while at the same time having some regard for a reasonable commercial result and because of the large capital invested in the business. He had explained to them last year what had been done during his then recent visit to Chile in connection with the tariffs on the Chilean Section. Those arrangements ruled for the year 1935 and they had been renewed for the year 1936. On some articles, such as foodstuffs and second-class passenger traffic, there was no surcharge, while on others such as nitrate and coal for the nitrate oficinas the surcharge was the same percentage as was previously agreed, and for some classes of traffic it had been increased in accordance with the lower sterling value of the Chilean peso.

In Bolivia the surcharges had not been increased, but they were hopeful that some arrangement could be mutually agreed hereon because of the continued fall in the sterling value of the boliviano.

The report was unanimously adopted.

KEPONG (MALAY) RUBBER ESTATES, LIMITED

IMPROVED PROSPECTS

The thirty-first annual general meeting of this company was held, on the 5th instant, in London.

Sir Francis Voules, C.B.E. (chairman and managing director), said that results had been adversely affected by the lower sale price and increased cost, so that the net profit for 1935 of £24,480 showed a decrease when compared with the previous year. They proposed to pay a dividend of 4 per cent., less tax. As a result of improved organisation they were confident that costs would show an improvement. The comparatively high costs of 1935 were partly due to their policy of expansion, the acquisition of new properties always entailing a substantial non-recurring expenditure. The main part of that had had to be met during 1935 and had been necessary to safeguard the future of their extended properties. He was confident that the future would show compensating advantages. Their standard production was rising every year, because of their extensive young areas, and that placed them in a very strong position now that the reorganisation was practically completed.

An old area on Kepong estate had been replanted with selected clonal seed. The experiment proving satisfactory, provision had been made in the 1936 estimates for similarly treating some 225 acres of their Selangor estates.

With the improvement in price they looked forward to substantially better results for 1936. Every 1d. per pound of profit gave them £25,000, or over 3½ per cent. on their capital. Signs were not lacking that the future held out better prospects for the industry. Statistically, rubber was getting into a sound and improving position, brought about with a minimum of inconvenience to all, for which thanks were due to the Regulation Committee.

Some of their acquisitions in 1934 were paid for out of current resources, the total amounting to over £50,000. They had deferred making an issue as options were outstanding until June, 1936, involving £278,000 shares at 3s. 6d. per share. Those options would probably lapse, and they had, therefore, decided to issue 622,052 shares of 2s. each at par, every member having the right to subscribe for one new share for every ten held. At the current price that represented a substantial bonus.

The report and accounts were unanimously adopted.

GENERAL MINING AND FINANCE CORPORATION, LIMITED

RISING REVENUE FROM INVESTMENTS

A STRONG RESERVE POSITION

SIR GEORGE W. ALBU'S REVIEW

The annual general meeting of the General Mining and Finance Corporation, Limited, was held, on the 19th instant, in Johannesburg.

Sir George W. Albu, Bart., the Chairman, after referring to the severe losses sustained by the corporation through the deaths of Sir George Albu, Bart., and Mr Arthur French, and to the sterling work performed by them in the interests of the industry and the country, pointed out that the sound and commanding financial position established by the corporation within recent years had been fully maintained and could only be disturbed by some world catastrophe. He made special reference to the fact that "Stocks and Shares" were standing in the balance sheet at well below market prices, and to the very considerable margin existing between these and book values. The proportion which revenue from investments bore to total net profits had risen steadily in the past few years and to-day represented the main source from which dividends were paid.

Reviewing the accounts, he pointed out the satisfactory position in which they found themselves in being able to pay similar dividends to the previous year, while placing a further £100,000 to reserve, bringing that fund to £400,000. He drew attention to the increase in stocks and shares, this representing additional investments, mainly in goldmining shares, made during the year.

WEST RAND CONSOLIDATED MINES

The Chairman gave details of the conditions under which the deferred shares of the West Rand Consolidated Mines, Limited, participated in future profits, and stated that the fact of the Corporation holding practically all of these shares had a great effect on the general position and future outlook, and would result in a considerable increase in the revenue to be derived from investments.

After dealing with the principal interests of the Corporation, and referring to the hope that the West Rand Consolidated would maintain the present rate of dividend on the ordinary shares owing to the material increase in the tonnage treated, coupled with an encouraging development position, the Chairman referred to the continuance of satisfactory relationship with the employees during the past year. He pointed out that the number of Europeans at present employed by the industry stood at 35,188, compared with an average number employed during 1932 of 23,542. The total of Europeans in direct employment, however, represented only a fraction of the number of white people in South Africa who derived a living indirectly from the industry, and the latter's recent expansion was therefore of enormous benefit to the entire country.

Dealing with the native labour position, he drew attention to a possible shortage in future, which would have to be met from outside sources. In this connection it was satisfactory to note that the experiment of employing a limited number of tropical natives had proved an unqualified success.

MINING TAXATION

The new system of taxation removed the principal anomalies produced by the old system and was, therefore, to be welcomed; nevertheless, the industry had received no relief from its crushing burden, and, if anything, the total amount to be exacted from the goldmines was likely to be even higher than formerly.

The Chairman emphasised various points in the report of the Departmental Committee on Mining Taxation, in which attention was drawn to the serious effect of the high rate of taxation in being directly responsible for the difficulties in raising capital for opening up new areas; also to the fact that heavy indirect taxation not merely reduced the profits of the industry but diminished its life and restricted its development. Unfortunately, the legislators apparently had not realised the significance of the warnings issued by the committee.

He further pointed out the vital importance of the mining industry to farmers and agricultural interests generally, and in this connection he quoted the following sentences from the committee's report: "There is no doubt that a far better prospect offers itself in the development of a local market at remunerative prices than in the maintenance of an overseas market at which

produce has to be sacrificed at world rates offering little or no profit to the Union producer. The Committee agrees that it would be unfortunate if any system of taxation hindered the development of such a local market."

Before moving the adoption of the directors' report and accounts for 1935, the Chairman referred to the recently announced change in the chairmanship and directorate of the corporation, and recorded his appreciation of the services rendered by the management and staff.

UNITED SUA BETONG RUBBER ESTATES, LIMITED

BENEFIT OF OUTPUT REGULATION

The twenty-seventh annual general meeting of this company was held, on the 8th instant, at 19 Fenchurch Street, London, Mr J. G. Hay (chairman) presiding.

The Chairman, in the course of his speech, said: If you approve the recommendation which we shall make to-day our dividends for the year will total 10 per cent., which will absorb nearly as much cash as the higher dividend we paid in respect of 1934.

As regards prospects for the current year, I anticipate that we shall be able to work at a cost per pound which will not exceed the 1935 figure, and if the present price of rubber is maintained our profits should show some increase.

And now perhaps I might just say a word about a subject of apparently never failing interest—namely, rubber regulation. In 1935 declared stocks were reduced by 103,000 tons. On the basis of the generally current estimate of world absorption during 1936—namely, 980,000 tons—it seems reasonable to anticipate that by the end of this year stocks will be reduced by another 126,000 tons. If this is achieved, then the position will be that since rubber regulation came into force declared stocks have been reduced by 232,000 tons, and practically the whole of that reduction will have been achieved within the space of two short years. In 1933, the year before rubber regulation came into force, the price of rubber fell to 2d. per pound. The lowest this year has been 6½d. and the highest 7½d. The avowed object of the scheme is two-fold—to reduce stocks and to raise price.

From the facts that I have stated it can hardly be denied that we are steadily progressing towards the achievement of our purpose. That we are doing so without giving consumers in any part of the world any reason to believe that there will not be ample supplies of our commodity at a reasonable price, and without apparently giving any undue encouragement to the extended use of substitutes, and without putting too heavy a strain on the administrative machinery of participating territories, are surely considerations that should not be overlooked.

Our liquid reserves are very considerable, but against that we have a large acreage and considerable commitments. We have decided the time is appropriate for strengthening our financial position, and with that end in view we propose to issue 50,000 ordinary shares at 45s. per share, a price which gives a considerable bonus to shareholders.

The report and accounts were unanimously adopted.

ALLIED BRICK AND TILE WORKS, LIMITED

HOPEFUL OUTLOOK

The second annual general meeting of Allied Brick and Tile Works, Limited, was held, on the 8th instant, at the Institute of Chartered Accountants, London.

Sir Charles Edgar Wood (chairman of the company), who presided, said that it had been a great disappointment to them that the prospects which appeared so good towards the end of last November should have been spoilt materially by the abnormal weather conditions of December to February. He thought shareholders would appreciate that the winning of certain types of clay, particularly for the plastic process, became extremely difficult in weather conditions such as they experienced in those months.

With regard to profits, the public was apt to think that with so much demand for common bricks for rehousing and town-planning schemes the manufacturers were in a position to obtain more remunerative prices. Actually the opposite was the tendency. Requirements might be abnormally large, but a manufacturer's preference for a large easily-made sale carrying a small margin of profit in place of the usual smaller sales on larger margins caused prices all round to be reduced. The business of supply to the larger schemes was thus apt to mean cut prices and to become concentrated in a few hands—not altogether a healthy state of things for the industry.

There appeared to be no lull in building activity, and prospects for the current year were good. They continued to sell the whole of their output at remunerative prices, though competition in the North remained keen.

Building promised to remain very active for a long while in the vicinity of the Northern towns. Their Southern works manufactured more specialised products and thus were not subject to intense price-cutting. Price regulation agreements were now in force in practically all the prospering industries in the country.

Provided they had no repetition of several months of stormy weather, such as they suffered from during the period under review, the board felt that the current year should show better results; in which case they would hope to be in a position to recommend a somewhat better distribution to the ordinary shareholders, who had already borne the brunt of the improvements made to the balance sheet.

The report and accounts were unanimously adopted.

MARIEVALE CONSOLIDATED MINES, LIMITED

NEW PROPERTIES ACQUIRED

DEVELOPMENT WORK

The first ordinary general meeting of Marievale Consolidated Mines, Limited, was held at Johannesburg, on May 14, 1936.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks said:—

The issued capital at the end of the year totalled 1,925,000 shares of ten shillings each.

Since the close of the year, eight claims scattered inside our mining area on the farm Draaikraal No. 296 and which covered certain old shafts and other improvements have been acquired from the Southern Van Ryn Reef Gold Mining Company, Limited. The purchase consideration for these claims and improvements was applied by the Southern Van Ryn Company to subscribing for 7,500 shares.

CAPITAL POSITION

This transaction brought the issued capital to 1,932,500 shares.

At the end of last month the funds available to the company amounted to about £408,000 and when additional funds are required the Board may issue further shares up to a total of 2,500,000, subject to one-half of such shares being offered to the shareholders of the company registered at the time of any offer, pro rata to their shareholdings, and the other half to Union Corporation, Limited, and/or its nominees, as consideration for subscribing and guaranteeing the initial working capital and for services rendered and obligations undertaken in connection with the company. The first 2,000,000 of these shares are to be offered for subscription at par and the remaining 500,000 at a premium of 5s. od., should this be possible.

DEVELOPMENT PROGRAMME

I now turn to the development programme which the company has in hand. The intention is to explore the main reef horizon in three areas, and with this in view a 5-compartment vertical shaft, known as No. 1 shaft, has been started to open up the western portion of the farm Vlaktefontein. This shaft has been provided with its permanent headgear, steam winders, and other equipment and serious sinking has now commenced. At the beginning of this month the depth was 83 feet. As it is only planned to sink the shaft to a total depth of about 1,500 feet, it is anticipated that development work from it will be started about the end of the year. The second point of attack is at the No. 2 shaft, from which it is proposed to open up the central portion of the farm Vlaktefontein. This shaft takes the form of a 15° incline located some 6,600 feet east of the No. 1 shaft. It is being sunk in a northerly direction to pick up the sub-outcrop, and at the end of last month it was 412 feet deep measured on the incline. It is expected to intersect the reef horizon in the latter half of the year. The No. 3 shaft is a 55° incline shaft, to be sunk in a south-westerly direction to open up the northern portion of the farm Draaikraal. Work here is not so far ahead as at the other two shafts, but it should be possible to initiate exploratory work in this section also towards the end of the year.

The shallow depth of the reef horizon over a large portion of our mining area will greatly facilitate and accelerate both the opening up of the property and its exploitation if development results prove satisfactory. In this latter connection we may note with satisfaction that payable ore bodies are being opened up by our neighbours.

Our mining area is equal to 5,891 claims and the question of acquiring an adjoining area of 257 claims is at present under discussion with the Government.

The Report and Accounts were adopted.

GEDULD PROPRIETARY MINES, LIMITED

RECORD TONNAGE MILLED AND WORKING PROFIT

LOWEST COSTS YET ATTAINED

DIVIDENDS DISTRIBUTED EXCEED £1,000,000

The thirty-fifth ordinary general meeting of Geduld Proprietary Mines, Limited, was held at Johannesburg on May 13, 1936.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks said:—

You will have noted that a number of new records have been established during the past year—the working costs are the lowest yet attained; the tonnage milled and working profit are the highest; and the dividends distributed exceeded a million pounds for the first time in its 22 years of dividend progress, in spite of paying over £700,000 in taxation.

The additional plant, to which I referred at the last annual meeting, made it possible for the quantity of ore milled to be increased for the seventh consecutive year, the total of 1,160,300 tons being 44,300 tons more than was accomplished in the previous year.

The average price obtained for gold was slightly higher than in the previous year and consequently ore of somewhat lower grade was treated, the average for the year being about one-fifth dwt. less than in the previous year. The gold production was thus only 563 ounces more than in 1934, totalling 324,699 ounces, which together with the silver produced gave a revenue of £2,303,587, an improvement over 1934 of nearly £64,000.

WORKING EXPENSES

Working expenses were nearly £11,000 more than in 1934, totalling £837,533, but the rate per ton milled showed a further reduction of 4½d. to the very satisfactory level of 14s. 5½d. I would point out, however, that two-thirds of this reduction was due to a lower charge for development. This revenue and expenditure gave a working profit of £1,466,054, which exceeded the 1934 figure by approximately £53,000, the rate per ton milled being fractionally lower at 25s. 3½d. Sundry revenue, mainly derived from dividends on the large shareholding in East Geduld Mines, Limited, less sundry expenditure, was £40,790 higher at £314,162, thus bringing the total profit to £1,780,216, which is a gross improvement of £93,784 compared with last year.

Taxation amounted to £706,624 and £2,323 was set aside for donations and sundry contributions, leaving £1,071,269 to be carried to appropriation account, which, together with the amount of £275,585 brought forward from the previous year, gave a total of £1,346,854, and this was dealt with as follows:—Expenditure on capital account, namely, subscription of shares in the East Geduld Mines, Limited, less revenue derived from the sale of the No. 4 Shaft headgear no longer required, absorbed £21,164; in respect of the company's proportion of the outstanding liability under the Miners' Phthisis Act a further amount of £5,000 was provided; £1,022,600 was distributed in two dividends aggregating 70 per cent., which was 2½ per cent. more than the previous year's distribution; and, after making provision for the additional remuneration to directors, there remained a balance of £296,290 to be carried forward to the current year's accounts, or about £20,000 more than was brought forward from the previous year.

TAXATION

With regard to the method of dealing with taxation in the year's accounts the position is as follows:—In terms of the Act the company's total tax liability was approximately £780,000; the amount paid, after deducting provisional rebate, £706,000; and we estimate that there will be a refund of possibly over £20,000 when the final rebate is determined.

It may be of interest to note that the provisional payment in respect of mining taxation is over 48 per cent. of the working profit from gold mining. With regard to the incidence of the new taxation measures applicable to the current year, in our case it appears to be about 4 per cent. less than under the old taxes.

DEVELOPMENT WORK

The scale of development work was almost the same as in the previous year, totalling 20,175 feet, which sufficed to maintain the ore reserves at 9,000,000 tons despite the larger tonnage milled, the average value being slightly lower at 5.2 dwts. and the width unchanged at 57 inches. In the calculation of these reserves the

same gold price was assumed as a year previously, namely, 130s. per ounce.

During the first four months of the current year 403,000 tons have been milled, which indicates that, provided nothing unforeseen occurs, the total for the year will again be a record, possibly exceeding last year's total by about 50,000 tons. The grade of ore treated has been further reduced to a very slight extent and the gold price has ruled slightly below last year's average, but there has been a further reduction in working costs per ton milled to 14s. 4d. The net result for the four months is a gross working profit of £471,182, which compares with £484,827 for the corresponding period of last year. This figure is the gross profit on working, and does not take into account either sundry revenue or taxation.

Our East Geduld interest has been increased by the shares accruing from the exercise of our right to subscribe equally with the Union Corporation, Limited, for the final capital issue of the East Geduld Mines during the year, and our shareholding in that company now amounts to a little over 36 per cent. of the capital. Our interest in the Grootvlei Proprietary Mines remains unchanged at 80,000 shares.

The report and accounts were adopted.

EAST GEDULD MINES, LIMITED.

INCREASED DIVIDEND

MR P. M. ANDERSON'S REVIEW

The ninth ordinary general meeting of East Geduld Mines, Limited, was held at Johannesburg on May 13, 1936.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks, said:—

The increase of plant, to which I referred when addressing you a year ago, was completed in April, the total quantity of ore milled during the year being 1,152,300 tons, which was 179,800 tons more than in the previous year. It is noteworthy that this expansion was not accomplished at the expense of the residue values, which were reduced to the very satisfactory level of ¼ dwt. Though advantage was taken of prevailing conditions by treating ore averaging in value about ½ dwt. less than that handled in 1934, the gold production of 360,924 ounces was 29,432 ounces more than that of 1934. This output was realised at an average price of £7 1s. 6d. per ounce, or 3s. 6d. per ounce more than the previous year's output, and, as the working costs for both years averaged 18s. 5d. per ton milled, the working profit was increased by £106,447 to a total of £1,500,715. Sundry revenue, less sundry expenditure, amounted to £2,430.

PROFIT AND ALLOCATIONS

The gross profit was thus £1,503,145. After making provision for taxation and donations, there remained £992,923 to be added to the amount of £63,876 brought forward in the appropriation account, giving a total of £1,056,799, which was dealt with as follows:—£120,000 was set aside as part provision for the capital expenditure of the year, £1,000 was provided in respect of the company's liability for Miners' Phthisis Compensation as at July 31st last; Government share of profits amounted to £58,798 after setting off the increase in taxation; £8,800 was provided for directors' additional remuneration; £776,875 was distributed in dividends; and the balance of £91,326 was carried forward to the current year's accounts, this amount being £27,450 more than was carried forward at the end of the previous year.

The two dividends distributed during the year aggregated a rate of 43½ per cent., which was 2½ per cent. above the previous year's rate, but, as the capital was increased during the year by £50,000 to the final amount of £1,800,000, the higher rate involved an increase of £85,000 in the amount distributed.

TAXATION

You are aware of the benefit which the company derives from the very valuable provision in its lease under which any taxation levied by the Union Government in excess of the 15 per cent. Normal Income Tax in force when the Lease Agreement was entered into is offset against the share of profits payable to the Government. But for this provision the company would have had to pay to the Government, as its share of the year's profit, an amount of approximately £412,600, which, together with the sum of £508,000 for taxation, would have given a total of £920,000, or 61 per cent. of the year's profit. The levy for taxation being £353,800 in excess of the sum that would have been due under a

15 per cent. rate, the lease provision effected a saving of that amount, the sum payable to the Government in discharge of the share of profits obligation being reduced to £58,798 as already mentioned. The net amount payable to the Government by way of taxation and share of profits was thus £566,798, or about 38 per cent. of the year's profit. It is not anticipated that the company will be affected financially by the proposed change in the method of levying taxation on the Gold Mining Industry announced by the Minister of Finance in his recent Budget speech.

CAPITAL EXPENDITURE

Capital expenditure for the year totalled £185,688. The total expenditure to date on capital account has been £2,088,093, of which £315,000 has been provided out of working profits. Expenditure during the current year is estimated at £96,000, which, allowing for the capital funds in hand, will entail an appropriation of about £70,000 from profits.

Future capital expenditure should be on a much reduced scale, unless a further increase in the capacity of the plant becomes justified, as we hope it will, by the development work tributary to No. 2 Shaft and the additional hoisting facilities provided by that shaft, which reached its final depth of 4,137 feet in June of last year. Since cutting the necessary stations, ore bins, pump chambers, etc., active development work has been pursued at all available points. Up to the end of last month, the reef exposures at this shaft amounted to 2,150 feet, of which 72 per cent. was payable, having an average value of 7.2 dwts. over 39 inches.

For the whole mine the development footage for the year was slightly lower than in the previous year, the total being 38,201 feet, which included 2,214 feet of station work at No. 2 Shaft. The values disclosed continued to be satisfactory, and the scale of the work was not only adequate for the expansion in milling operations but enabled the ore reserves to be increased by nearly 1,000,000 tons to a total of 7,950,000 tons, the average value of 6½ dwts. being 1/10th dwt. lower than at the end of the previous year and the width of 59 ins. unchanged.

CURRENT YEAR'S OPERATIONS

Operations during the first four months of the current year have proceeded normally and call for little comment. The ore milled has totalled 420,000 tons; the gold produced has realised about 1s. an ounce less than last year's average; working costs have been reduced to an average of 18s. 1d. per ton milled; and the resultant working profit of £508,000 is £18,000 more than was earned in the corresponding period of last year. The rate of development work has been temporarily increased but will return to normal later in the year when a number of headings have been connected and certain others have crossed the boundary into Grootvlei. The total footage accomplished during the four months was 15,762 feet, of which 8,700 feet were on reef and sampled, disclosing a payability of 68 per cent. with an average value of 8.4 dwts. over 41 inches, equivalent to 344 inch-dwts.

The report and accounts were adopted.

THE MODDERFONTEIN DEEP LEVELS, LIMITED

FURTHER MILLING RECORD

CONSIDERABLY EXPANDED DEVELOPMENT WORK

The thirty-fifth ordinary general meeting of The Modderfontein Deep Levels, Limited, was held at Johannesburg, on May 14, 1936.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks said:—

You will have noticed that a milling record for the mine was again achieved with a total of 573,000 tons. This was made possible, in a measure, by ore from the Kimberley Reef. Owing to the decreased value of the ore reserves, the ore treated was of substantially lower grade, the average of 5.3 dwts. per ton milled being nearly 1½ dwts. below the 1934 average, and, consequently, the gold production showed a decrease of 40,558 ounces, totalling 151,979 ounces. The silver and osmiridium production was also lower at 14,709 and 170 ounces respectively. A somewhat higher price for gold mitigated the financial effect of these decreases to a small extent, the gross revenue from mining operations totalling £1,080,723, as against £1,333,991 in the previous year. Working expenses per ton milled averaged 16s. 4d., which was 1s. 1d. more than in the previous year, the increase being due to a considerably greater expenditure on development, incurred mainly in exploring the possibilities of the Kimberley Reef.

PROFIT AND DIVIDEND

The net result was a working profit of £613,923, which was augmented by sundry revenue to £618,398, and represents a decrease of £287,085 from the total of the previous year. After making provision for the taxation liability of £176,995 and setting aside a small sum for donations, etc., there remained £439,640 to be carried to the appropriation account, which, together with the sum of £204,427 brought forward from the previous year, gave a total of £644,067 to be dealt with; £450,000 was absorbed by the distribution of two dividends aggregating 90 per cent., which was 30 per cent. less than in the previous year; £1,000 was paid to the directors as additional remuneration; and the balance of £193,067, represented by cash and cash assets, has been carried forward to the current year's accounts.

DEVELOPMENT WORK

The scale of development work was considerably expanded and totalled 13,909 feet for the year, as against 3,273 feet in the previous year. As already mentioned, this work consisted almost wholly of exploration of the Kimberley Series of reefs and a small footage on Black Reef, which in one area lies very near the Kimberley Series. The quantity of Black Reef developed was of no economic importance; but from the Kimberley Reef over 50,000 tons of ore were sent to the mill, and 84,000 tons of fully developed ore, having an average assay value of 2.3 dwts. over an estimated stoping width of 56 inches, were included in the ore reserves. The inclusion of this tonnage in the re-calculation of the ore reserves at the year-end, plus some payable ore of low grade in Hanging Leaders in the vicinity of the vertical shafts, as well as the depletion of some of the high-grade Main Reef blocks, had the effect of reducing the average assay value of the reserves from 4.6 dwts. at the end of 1934 to 3.3 dwts. at the end of 1935, and the estimated stoping width from 65 inches to 59 inches, but the quantity only showed a reduction of 100,000 tons at 800,000 tons. For the purpose of this calculation, the same gold price was assumed as at the end of the previous year, namely 130s. per ounce.

During the current year additional payable ore from the Kimberley Series has become available, and further payable patches may, I think, reasonably be expected to be discovered. I might also mention that some of the stope faces in the Kimberley Reef are sampling as high as 4 dwts. This work is confined to the central and eastern sections of the mine, no payable Kimberley Reef having been met with in the western section.

The quantity of ore from the Kimberley Series that can be mined profitably is small compared with that from the Main Reef Series, but it is serving a very important and useful purpose in that it is not only helping materially to keep the mill running at full capacity but it is also easing the strain on the Main Reef tonnage and thereby assisting towards making it possible for virtually all payable Main Reef ore to be mined. All Main Reef ore from the distant corners of the mine has now been removed and mining operations are being concentrated in the neighbourhood of the two vertical shafts. It must be borne in mind that the average value of the remaining ore reserves is estimated at 2 dwts. less than the average of the ore milled last year, therefore future working profits will be considerably lower.

In the not very distant future it will become necessary to consider the desirability of placing the company in voluntary liquidation while mining operations are still being carried on. Present indications are that production operations will continue throughout the current year and probably next year, but you will appreciate that it is impossible to gauge with any accuracy how long profitable mining operations may continue.

THE CURRENT YEAR

As regards the operating results for the first four months of the current year, milling has proceeded at a slightly greater rate than in the past year, the total for the period being 199,000 tons, as against 188,600 tons for the corresponding period of last year. The average value of the ore treated has been about 3½ dwts. per ton milled and the average cost per ton milled about 15s. 2d., the reduction of 1s. 2d. below last year's average being due to discontinuance of Incline shaft sinking in connection with the exploration of the Kimberley Reef. The net result is a working profit of £96,000 for the period, which compares with £258,000 for the same four months of last year.

The report and accounts were adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bowverie Street, Fleet Street, London, E.C.4.

THE GROOTVLEI PROPRIETARY MINES, LIMITED

SATISFACTORY RESULTS

"CONSIDERABLE JUSTIFICATION FOR OPTIMISM"

The twenty-ninth ordinary general meeting of The Grootvlei Proprietary Mines, Limited, was held at Johannesburg, on May 13, 1936.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks, said:—

During the year shares were issued in respect of the exercise of the rights on 42,398 of the shares under option, and shares in respect of the remaining 547,437 rights were issued shortly after the date of the balance sheet. The whole of the 1,773,540 shares have now been issued, 1,474,284 being fully paid and 299,256 ten shillings paid. As a result of these subscriptions for shares and of certain prepayments in anticipation of calls on partly paid shares, there accrued to the company £668,439 net of new money, so that, allowing for the balance brought forward, the company opened the current year with about £730,000 in hand and nearly another £150,000 available to be called up on the partly paid shares.

The No. 4 Shaft was sunk 1,604 ft. during the year and at the end of December the depth was 2,114 ft.; by the end of last month a further 608 ft. had been sunk to a depth of 2,722 ft. Progress has been retarded, as the shaft has had to be lined with concrete over most of its length in the interests of safety while sinking and to ensure a permanently satisfactory job. This has been necessitated by the broken nature of the ground at the contact of an almost vertical dyke which has meandered in and out of the shaft for the last 2,300 ft. As far as can be judged at present, the reef horizon should be intersected at a depth of just over 4,000 ft. which could be reached in about four months if all were plain sailing, but, in the circumstances, it seems unlikely that the reef depth will be attained before the year end. I would like to emphasise that, while the loss of time in sinking this shaft has been most unfortunate, the shaft when completed should not suffer in any way from the fact that it has passed through bad ground; in fact, quite the reverse as large sections of it are of necessity concrete lined.

UNDERGROUND DEVELOPMENT WORK

The underground development work, which is being done from the No. 1 Incline of the East Geduld Mines, continues to disclose highly satisfactory results, the 2,920 ft. sampled in the course of last year having shown a payability of 81 per cent. based on current levels of the price of gold and working costs, the value being 11.4 dwts. over 38 ins., or 434 in./dwts. Results during the first four months of the present year have continued to be satisfactory, the footage sampled having shown a payability of 50 per cent. and a value of 560 in./dwts. The total footage on reef and sampled to date is 4,235 ft., of which 3,175 ft., or 75 per cent., is payable with an average value of 11.0 dwts. over 41 ins. equivalent to 449 in./dwts., so that, although only a small section in the South-Western portion of the property has been explored, shareholders have considerable justification for optimism. A new entry for development in the Northern section of the property will shortly be made from No. 2 Shaft of the East Geduld Mines. A drive from this shaft is rapidly approaching our property and the boundary should be crossed next month. From then on, development work will be for our account, and it is hoped that other drives in this section will enter our property before the end of the year. Although the pushing forward of these drives is in the best interests of the East Geduld Company, I think we owe that company a debt of gratitude for affording us these new headings from which to explore our property, which compensates us for the unavoidable delay in pushing forward the No. 2 Incline from that property. With a view to further expediting the opening up of our mining area it is intended to sink a new vertical shaft, which will be called No. 3 Shaft, and will be situated about 9,000 ft. south-east of the No. 4 Shaft, and orders for the necessary winding engines and equipment will be placed shortly.

When we met last year I gave shareholders brief particulars of the lease of 400 additional claims contiguous to our eastern boundary which had been granted to us by the Government. You will have noticed that this area has not yet been formally included in our property, the reason being that the lease has not yet been finally concluded.

Our company retains its interest in the capital of the Palmietkuil Gold Mining Company, which, as you are aware, is sinking two vertical shafts on its property adjoining our eastern boundary. The company has recently offered its shareholders the right to subscribe for one new share in respect of each share held and our subscription right under this offer will be exercised in due course.

The report and accounts were adopted.

VAN DYK CONSOLIDATED MINES, LIMITED

PAST YEAR'S OPERATIONS

IMPROVEMENTS ON PROPERTY

The second ordinary general meeting of Van Dyk Consolidated Mines, Limited, was held at Johannesburg on May 14, 1936.

Mr P. M. Anderson, chairman of the company, presided, and in the course of his remarks said:—

During the year the capital was increased by the creation and issue of 50,000 shares in respect of the purchase of portion of the property of The Eastern Gold Mines, Limited, thus bringing our total mining area to 5,777 claims. Since the close of the year the capital has been further increased by the creation of 1,560,000 new shares, which were offered in February of this year for subscription at par as to one-third by shareholders and as to two-thirds by the preferent right holders, in terms of the arrangements in force. This brought the issued capital to 4,157,119 shares of 10s. each and there remain 842,881 shares available for issue by the board, as and when may be necessary. At the end of 1935 the company had £245,000 in hand, or sufficient to finance its programme during the first half of the current year; the proceeds of the above issue raised the amount available to £1,023,000, which should be sufficient to equip the mine fully—except for the reduction works, which will be ordered as soon as development work has made sufficient progress. As you are aware, shareholders have the right to participate in the provision of the necessary funds for this purpose. The erection of the necessary buildings and other essential surface works has proceeded satisfactorily during the period under review. The expenditure for the year amounted to £459,700. A comparatively small sum has been spent on development, the reason being that much preparatory work had to be done in providing equipment and facilities generally.

PAST YEAR'S WORK

I will give you a brief résumé of the present position at the four Shafts, together with some account of the work done at each.

At No. 1 Shaft work has been confined to the erection of a fan. This shaft is connected to the workings of No. 2 Shaft and, for the time being, will be used for ventilation purposes only. No. 2 Shaft has been thoroughly reconditioned and equipped with a permanent electric hoist, and the de-watering of this section is now virtually completed. There are four Levels from this shaft on reef but the old lay-out at the bottom of the shaft is rather primitive. Before development work can be resumed in this section it will be necessary to sink the vertical shaft 200 to 300 feet, open out the stations, put in ore bins and clean up the old workings generally. When this has been done development in this section of the property should go ahead rapidly and, in particular, the drives extending towards No. 3 Shaft section of the mine will be pushed ahead. The re-sampling of the reef exposures on the four Levels has just been put in hand and the results, when completed, will be published.

The main activity has been in the No. 3 Shaft section, which constitutes the old Van Dyk Proprietary Mines workings, and here also we have had brought home to us the fact that the reorganisation and reconditioning of an old lay-out is a slow business. The first problems to be tackled, after the re-equipping of the shaft and its de-watering and deepening by 436 feet, were the reorganisation of the underground stations and the re-equipping of the old workings, which in many places are rather tortuous. While this essential work was being carried out the re-sampling of the old workings was undertaken and the results thereof published. The main features were that, of 15,910 feet re-sampled, 45 per cent. was estimated to be payable, having an average value of 11.5 dwts. over 22 inches, equivalent to 253 inch-dwts. Since the close of the year almost 1,000 feet of new development on reef has been done, the sampling results of which show 48 per cent. payable, having an average value of 12.3 dwts. over 26 inches, equivalent to 319 inch-dwts. A major item of off-reef development is the connection which is being driven from the bottom of the Main Incline to join up with the No. 4 Shaft.

INCREASED DEVELOPMENT

The sinking of the No. 4 Shaft has proceeded well, 1,082 feet having been sunk during the first four months of this year, the depth of the shaft at the end of last month being 2,638 feet. Sinking is being temporarily suspended this week to permit of a cross-cut being driven from the shaft to meet the one from the bottom of the incline from No. 3 Shaft. In this way it is hoped to hole through much earlier than would otherwise have been possible, and this will have the immediate effect of enormously improving

ventilation conditions in the No. 3 Shaft section of the mine and removing a number of the Mines and Works Regulations restrictions under which we are at present labouring, so that thereafter the rate of development footage should show a material increase. The depth at which this shaft is expected to strike the reef is a little over 3,000 feet, which will not take long to reach after sinking is resumed about two months hence.

In the light of what I have said, shareholders will appreciate that they can expect a considerably increased development footage during the second half of this year.

The report and accounts were adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended June 6, 1936, amounted to £6,219,000, against ordinary expenditure of £36,949,000. After allowing for a decrease in Exchequer Balances of £8,683, the operations for the week, as shown below, increased the gross National Debt by £30,722,000 to approximately £7,971 millions.*

TREASURY BILLS BY PUBLIC TENDER

Tenders for £50,000,000 Treasury bills were opened on June 5, 1936, and the total amount applied for was £70,075,000. Tenders were accepted for Treasury bills at three months dated Monday to Friday, at £99 16s. 3d., about 53 per cent. and above in full; Saturday, at £99 16s. 4d., and above in full. The average rate per cent. was 14s. 7-12d. The amount allotted was £50,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %
1934				
January 5	35,000,000	76,260,000	30,000,000	0 18 11-5

Messrs Samuel Montagu and Company write on June 10, 1936, as follows :—

The Bank of England gold reserve against notes amounted to £207,281,973 on the 3rd instant as compared with £206,397,096 on the previous Wednesday. Purchases of bar gold as announced by the Bank during the week amounted to £1,215,126. In the open market about £1,275,000 of bar gold was disposed of at the daily fixing and was absorbed by general demand. The depreciation of gold currencies in terms of sterling, influenced by the weakness of the franc, caused the price of gold in the London Market to show a further decline; 138s. 3½d. was touched on the 4th instant and this was the lowest quotation since August 21, 1934. The declaration made by M. Blum over the week-end to the effect that no devaluation was contemplated, brought a rally and checked the outflow of gold from the Bank of France; this, however, appeared to be but temporary; there was a subsequent reaction and it is believed that the withdrawals of gold are now continuing.

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period June 11th to 20th at 138.24 per cent. The previous rate was fixed as from June 1st at 138.75 per cent.

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate :—

*Bolivia.** "Export" market selling rate fixed at 50 bolivianos per £ as from April 1, 1936.

Colombia.* Sight rate, 176 pesos per 100 United States dollars on May 19, 1936. This rate applies to holders of permits buying in the "open" market.

Ecuador. Sight selling rate on New York was maintained in April at 10.50 sucres per United States dollar.

Guatemala. Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.

*Nicaragua.** Official selling rate was established at 110 cordobas per 100 United States dollars on April 30th, 1936.

Salvador. Sight rate on May 9, 1936, 2.51 colones per United States dollar.

Venezuela. Sight rate on New York, 3.91½ bolivares per United States dollar, on April 24, 1936.

* Exchange controls are operative in these countries.

(i) Nine months. † Free of income tax.

CREDIT FONCIER D'ALGERIE ET DE TUNISIE.—A dividend of Frs. 37 has been declared by the board in respect of the bank's year ended December 31, 1935, being the same as in the previous year. The net dividend payable per registered share is Frs. 34.50, and bearer shares Frs. 30.30 per share. As an interim dividend of Frs. 18.50 per share was paid in January, 1936, a final dividend of Frs. 18 per registered share and Frs. 13.80 per bearer share will be payable on or after July 1, 1936, against coupon No. 57.

DAVY BROTHERS.—The directors of Davy Brothers recommend a dividend of 5 per cent. for the year on the ordinary shares. This is the first distribution since 1923-24.

FIRST RECOVERY TRUST.—Distribution of 1.6d. per Sub-unit.—An initial distribution is to be made by the First Recovery Trust of 1.6d. net per sub-unit for the period from February 4, 1936, to May 15, 1936, payable on June 15, 1936, on presentation of Coupon No. 1 at Martins Bank, Ltd., 68 Lombard Street, E.C.3.

LIMITED INVESTMENT FUND.—The first distribution in respect of the first period ended June 5, 1936, is 3.60d. per unit, free of tax, equivalent to a gross yield of 4 1/2 is. 9d. per cent. per annum on the initial price of £1. This is arrived at after allowing for all expenses, including the remuneration of the managers and trustee, and after making full provision for amortisation of wasting assets.

MILMO AND ASKAM HEMATITE IRON COMPANY.—Payment of preference dividend withheld. The directors believe it to be the most prudent course to adopt.

SNIA VISCOSA DIVIDEND.—This company is paying a dividend of 16.50 lire per share for 1935, the same as for 1934. Hambros Bank has now been advised that, as under the existing financial regulations in Italy no remittance of the funds to England is permitted, the lire in respect of the dividend on the English tranche will be placed on a blocked lire account with the Credito Italiano, Milan.

COAL

SHEFFIELD.—Demand for coal is steady, but supplies are not plentiful owing to the Whitsuntide holidays, and there is a shortage of washed smalls. Coke is in strong demand, especially furnace qualities, and current quotations are likely to be maintained for some time.

Export prices: South Yorkshire hards, 19s. to 19s. 6d.; washed trebles, 17s. 6d. to 18s.; washed smalls, 14s. 9d. to 15s. 3d.; Derbyshire top hards, 18s. 3d. to 18s. 9d.; Cobble, 18s. 3d. to 18s. 9d.; washed doubles, 16s. 9d. to 17s. Inland prices: South Yorkshire best, 23s. to 25s.; Derbyshire best house, 22s. to 23s.; best screened nuts, 19s. to 20s.; Yorkshire hards, 19s. 6d. to 20s.; nutty slacks, 10s. to 11s.

NEWCASTLE-ON-TYNE.—Northumberland steam coals remain a firm market, there being no indication at present of any seasonal slackness. Large screened coal has a good sale in Scandinavia, whilst smalls and singles are shipped in increasing quantities to the Thames. Durham is in an unusual position. The South of the coalfield is active under the influence of a good home demand, whilst in the North some collieries have to close down owing to the scarcity of export business, which has been brought about largely by the suspension of shipments to Italy. Coke of all descriptions is very firm.

Current f.o.b. prices for export: NORTHUMBERLAND.—D.C.B. screened, 15s.; smalls, 12s. 6d.; Howards, Bentinck, Newbiggin, screened, 14s. 9d.; smalls, 12s.; Tyne Prime, large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main, large, 14s. 9d.; smalls, 12s. 6d. DURHAM.—Lambton/South Hetton screened steam, 15s. 9d.; smalls, 13s.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-class gas, 13s. 6d.; coking, unscreened and/or smalls, 13s. 3d.; Prime unscreened bunker, 15s.; second-class unscreened bunkers, 14s.; Prime foundry coke, 26s.; Newcastle and District gas coke, 28s.

GLASGOW.—The tonnage raised in April was 2,648,033 tons. The tonnage consumed for colliery purposes was 178,196. Total proceeds were £1,619,738, against £1,652,800 in March, production costs being £1,480,500, against £1,496,409 in March. Pit-head proceeds come out at 12s. 2-80d. per ton, compared with 12s. 4-98d., and the net credit balance per ton was 1s. 0-61d., against 1s. 3-35d. in March. The market remains firm in tone. The improvement in exports has been maintained. Bunkering trade has been much better. Coastwise business, however, has slackened in some directions. Generally outputs are moving away well and, with the exception of the household trade, prices remain firm.

Export rates, f.o.b. district ports, are as follows:—LANARKSHIRE.—Ell best, 16s.-16s. 6d.; splint best, 18s. 6d.; splint second, 16s. 6d.-17s.; navigation, screened, 16s.-16s. 6d.; navigation, unscreened, 14s.-14s. 6d.; steam, 15s.; trebles, 15s.-15s. 6d.; doubles, 15s. 6d.-16s.; singles, 16s.; pearls, 14s. 6d.-14s. 9d.; dross, 12s. 6d. FIRE.—Best unscreened navigation, 14s.-14s. 6d.; unscreened navigation, 13s. 9d.-14s.; first-class steam, 15s.-15s. 6d.; third-class steam, 14s.-14s. 6d.; trebles, 16s.-18s.; doubles, 16s.-16s. 6d.; singles, 16s.-16s. 6d.; pearls, 14s.-14s. 6d. LOTHIAN.—Best splint, 14s. 6d.-15s.; prime steam, 14s. 6d.; secondary steam, 13s. 6d.; unscreened navigation, 13s.-14s.; trebles, 16s.-16s. 6d.; dross, 15s. 6d.; singles, nominal; pearls, nominal. AYRSHIRE.—Best unscreened navigation, 16s. 6d.; steam, 13s. 6d.; trebles, 15s. 6d.; doubles, 16s.; singles, 16s.-16s. 6d.; pearls, nominal; dross, nominal.

CARDIFF.—During the past week a contract for 6,000 tons of large coal for early delivery at Haifa has been placed by the Palestine Railways, and there are inquiries on the market by the Tunis Tramways and the Oran Electricity Works for 4,000 tons respectively. Otherwise, business on the Cardiff Exchange has been featureless. The volume of trade is below the average weekly figure for the current year. Last week, when loading operations were suspended for the Whitsun holiday, exports, foreign and coastwise, totalled only 191,000 tons, compared with 353,500 tons the previous week and 297,300 tons in the corresponding Whitsun week in 1935, while during the early part of the current week there were as many loading berths idle as there were occupied. There has been a glut of large coal; and as a result of the reduction in the output of large coal, supplies of washed and graded smalls have been very scarce, particularly for spot shipment. Furnace coke continues in strong demand, and with the expanding requirements of the pig-iron industry an agreement has been made between the Powell Duffryn and Guest Keen companies for the relighting of a battery of the latter furnaces at Merthyr. There was a fair inquiry for patent fuel, but the pitwood trade is slack.

Current approximate quotations: Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best dries, 18s. 6d.; Black Veins, 18s. 3d.; Western Valleys, 17s. 6d. to 17s. 9d.; Eastern Valleys, 17s. 3d. to 17s. 7d.; best small steams (washed), 13s. 6d. to 14s. 6d.; seconds, 13s. to 14s.; coking smalls, 14s. 3d. to 14s. 6d.; anthracite best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s. 9d.; rubbly culm, 11s. 6d. to 12s.; special foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21s.; pitwood ex ship, French, 24s. 3d., Portuguese 21s. to 21s. 6d.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that the volume of new business in the iron and steel markets has been somewhat restricted since the holidays; but a considerable amount of inquiry has been put into circulation. Manufacturers are acting cautiously in undertaking new commitments, as they are well sold until late in the year, and the time required for delivery is gradually lengthening.

In the pig-iron department prompt business is difficult to arrange, and transactions which have been entered into lately have been

almost entirely for delivery over the second half of the year. The recent increases in the price of pig iron have had no effect upon demand, and consumers appear anxious to cover as far forward as possible at the new rates. In order to spread their production over the market manufacturers of some descriptions of pig iron have been obliged to ration buyers even for forward business.

In the semi-finished steel department the situation has become easier, and there is not the same pressure to obtain supplies. This is the result of an expansion in British production and of the increased quantities of Continental material imported by special arrangement.

In the finished steel section of the market heavy deliveries continue to be made to the consuming works, and in most branches the mills are operating at capacity. Some improvement has been noticeable lately in the export trade, but the great bulk of production goes to satisfy home requirements.

MIDDLESBROUGH.—The iron and steel market continues steady and prices are firm. Home requirements are absorbing practically the whole of the output of foundry and hematite pig iron, whilst the basic pig iron manufactured locally is being used in makers' own steelworks. Business in foundry pig iron is being transacted for delivery during the second half of this year at 75s. per ton, delivered locally. The increase in the price of East Coast hematite has not resulted in any hesitation on the part of buyers. More inquiries are circulating and any supplies which become available are readily changing hands on the basis of No. 1 grade at 80s. 6d. per ton delivered locally. A parcel of about 1,500 tons of special hematite has been shipped to the United States, whilst smaller parcels of pig iron have been shipped to Denmark and Holland; the usual coastwise shipments of foundry iron to Scotland have been resumed. Demand for all classes of semi-finished and finished steel is still strong, all departments working at capacity to fulfil contracts already on their books. New business in foreign ore is restricted owing to the Spanish seamen's strike. Blast-furnace coke, whilst rather more plentiful, is maintained at 25s. per ton, delivered at furnaces. Heavy melting steel scrap from British sources, at about 57s. 6d. per ton delivered works, is slightly easier owing to imports of scrap from abroad.

SHEFFIELD.—The rise in prices has had very little effect on the iron market and demand is good. Contract commitments are absorbing practically the whole of the output, and the volume of business is therefore comparatively small. There have been transactions in a few small parcels of basic and foundry pig iron, but consumers are unable to obtain large consignments. Demand for forge pig iron is good and fair supplies are available. Makers are still unable to accumulate stocks as production goes into immediate consumption. East and West Coast hematites are still in brisk demand, but there is little on offer owing to makers being fully sold for some time past. Business in finished iron is better than for some time past. Demand for common bars is at a high level, and marked bars are showing steady improvement. Derbyshire forge is 71s. and foundry 75s. per ton. Lincolnshire iron is not quoted here, makers having nothing to offer. East Coast hematite is 85s. 6d. for mixed numbers, and West Coast 90s. 6d., all delivered in Sheffield and district. The various increases in steel prices have given no setback to demand, and business is on a good scale. Demand for basic billets cannot be fully satisfied, and acid billet requirements are becoming heavier. Wire rods are also a very strong market.

Quotation: Soft basic billets, £6 7s. 6d. to £7 5s.; hard, £7 7s. 6d. to £8 17s. 6d.; acid carbon billets, £8 10s. to £11 7s. 6d.; soft basic wire rods, £8 14s. 6d.; hard, £10 15s. 6d.; acid, £12 16s.

GLASGOW.—Work is being steadily maintained and output readily absorbed. Steelmakers find a ready market for almost all classes of material and anticipate a further increase in the amount of shipbuilding material required as a result of the important contracts which Clyde shipbuilders now have on hand. Sheet makers are exceedingly busy with orders for home delivery, and both rolling mills and galvanising plant are steadily employed. Tube makers are still rather quiet. Structural engineers in this district have a number of big jobs on hand and there are quite a number of promising inquiries on the market. Re-rollers of steel bars also report a steady business and plant is well employed.

CARDIFF.—Conditions in the tinplate trade are practically unchanged. At a meeting this week manufacturers decided to make no change in the output quota, current production being about 58½ per cent. of capacity. Shipments show no expansion, but there is a fair home demand. Deliveries into warehouse last week were about 5,700 boxes more than the previous week but nearly 9,000 boxes less than in the corresponding week last year, while stocks increased to 82,125 boxes, against 69,555 boxes the previous week and 88,730 boxes a year ago. It transpires that British makers surrendered a part of their nominal share of the cartel quota in order to satisfy Germany's claim for an increase, but in view of the conditions prevailing in some of the overseas markets it is hoped that there may not be a corresponding reduction in the actual exports from the South Wales ports. Prices are unaltered for galvanised sheets and tinplate bars as well as for tinplates.

OTHER METALS

COPPER.—Prices continued to show weakness, owing to the uncertain outlook generally, although no major decline occurred. Similar conditions prevail on the New York market. American sales did not exceed 16,000 short tons last month—which is not surprising in view of the heavy volume of business effected in April (158,000 tons). Since the bulk of these April sales were for delivery during June and July, no important upward movement of American prices seems probable in the next few weeks.

Sales on the London Metal Exchange: 775 tons on Monday; 1,050 tons on Tuesday, against 150 tons last week; 850 tons on Wednesday, against 1,600 last week. Domestic spot was quoted at 8-82½ cents per lb. in New York on Wednesday, against 8-85 cents a week ago and 8-87½ cents a month ago. Wednesday's official closing price for standard cash in London was £36 1s. 3d. to £36 2s. 6d., compared with £36 5s. to £36 6s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 58,127 tons, show a decrease of 260 tons, while stocks of rough copper, at 5,817 tons, show an increase of 200 tons on the week.

LEAD AND SPELTER.—Despite the news of an increased world output in April, lead prices scored a slight advance. According to the American Bureau of Metal Statistics, world production rose from 128,700 short tons in March to 140,400 short tons in April. But this increase was overdue and the statistical position remains excellent. Spelter prices showed no new change on the week, at the close on Wednesday, although a slightly firmer tendency had been apparent on Monday. Consumers' demand in Europe remains small. Zinc deliveries in the United States rose in May by 1,666 short tons to 43,977 short tons; but since the American output simultaneously advanced by 2,653 short tons to 44,905 short tons, stocks showed a rise of some 1,000 to 81,710 short tons. Meanwhile, the Czechoslovakian Government has received from its zinc smelting industry an application for an increase in the import duty on crude zinc from 240 to 720 koruna per metric ton. Some increase is generally expected—though possibly not to the extent proposed by the smelters.

Sales of lead on the London Metal Exchange: 1,350 tons on Monday; 1,100 tons on Tuesday, against 1,000 tons last week; 750 tons on Wednesday, against 750 last week. The New York quotation on Wednesday was 4-60 cents per lb., against 4-60 cents a week ago and 4-60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 6s. 3d. per ton, compared with £15 3s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 350 tons on Monday; 850 tons on Tuesday, against 150 tons last week; 750 tons on Wednesday, against 950 tons last week. Wednesday's quotation in East St. Louis was 4-90 cents per lb., against 4-90 cents the week before and 4-90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £14 2s. 6d. per ton, against £14 2s. 6d. last week.

TIN.—After substantial fluctuations, prices, at the close on Wednesday, showed a net decline of £3 10s. per ton on the week. On Wednesday the backwardation again amounted to £2, although at one time it had touched £1 12s. 6d.—the narrowest margin for many months. Uncertainty concerning the future of the tin scheme continues and until this is removed there is little chance of a major improvement on this market. Although consuming industries are active, consumers have become cautious buyers and the market seems likely to remain rather narrow for some time to come.

Sales of tin on the London Metal Exchange: 180 tons on Monday; 340 tons on Tuesday, against 685 tons last week; 325 tons on Wednesday, against 625 last week. The New York quotation on Wednesday was 42-12½ cents per lb., against 42-75 cents a week ago and 46-87½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £183 10s. to £183 15s. per ton, compared with £187 to £187 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 625 tons, a decrease of 9 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was again quoted at £12 7s. 6d. per flask of 76 lbs. Chinese antimony was quoted at £55 to £57 per ton ex warehouse, duty paid, as against £56 to £57 last week. Chinese wolfram for June-July shipment was quoted at 31s. to 31s. 6d. per unit, c.i.f., as against 32s. to 32s. 6d. per unit last week. Platinum (refined) was maintained at £7 per ounce.

TEXTILES

COTTON.—Manchester. — Business in the market has been rather slow after the Whitsuntide holidays. Demand, however, continues rather better, and some buyers have been stimulated to place orders more freely. A further upward movement has occurred in raw cotton prices. Weather reports from the American belt remain very mixed. It is generally acknowledged that the crop has made a poor start. Demand for actual cotton continues healthy. World consumption tends to increase.

The undercurrent of inquiry in piece goods for abroad has been more encouraging. Large sales have been of rare occurrence, but the turnover in small lots has improved. With regard to India, a steady demand has been reported in bleaching qualities, not only in the lighter styles but also in shirtings, some fair orders being secured for Karachi. Dhooties, light whites and fancies have been wanted for Calcutta. Most of the demand for Bombay and the up-country markets has run on printed and dyed cloths. Some useful lines have been mentioned in fancies for Java and Singapore. Demand for Egypt has been fair, and a steady business has again been done for West Africa in printed and coloured cloths. Some makers of sheetings continue to sell more freely for South America. Demand for Australia has been more active. This development is probably due to the recent reduction in the import duties. Rather mixed reports have been received from the home trade, but a fair amount of replacement buying has taken place. Quotations in

WOOL. — Bradford. — The absence of new business in wool tops and other materials, as well as the strikes in France, have had a slightly depressing effect. Prices of tops have moved in buyers' favour, but everything else has been fairly steady. The reason for the decline in the price of tops is that small firms have been willing to grant concessions to spinners. Certain importing top-makers who buy heavily in Australia during the season have also seen fit to sell merinos at about 1d. per lb. below market quotations. There has been no definite delivery date, the arrangement being that tops could be taken up by spinners at the agreed price at any time between July and September. This renders it possible to deliver tops made from wool which is already in importers' warehouses. Other firms who do a very big importing and topmaking business have refused to make any further reduction in their quotations, because they cannot sell tops already covered by purchases of wool. Their combing machinery is busy, and is expected to continue so until the commencement of the next Australian selling season. These firms are not giving any lead to lower prices, and are relying on a normal revival of demand to prevent prices falling much further. At the moment, it is impossible to buy wool at a price which corresponds to the current nominal quotation for average 64's tops, which is around 32d. per lb. Quotations for carded cross-bred tops are about ¾d. per lb. lower than a fortnight ago, and 46-48's have been sold for export to the Far East at very reasonable prices. Consumption of fine and medium carded and prepared qualities by home trade spinners is substantial, and prices for the latter are quite steady. Some spinners of high-class botany yarn are busy, and are therefore refusing to indulge in the price cutting to which others are tempted by the lack of delivery instructions and the fact that their manufacturing clients have already placed the bulk of their seasonal orders. Most of the employment for spinning and weaving machinery is provided by the demand for men's wear fabrics. No big buying move on the part of the multiple stores is expected until July or later, and in the meantime prices are more or less in the balance.

GRAIN MARKETS

WHEAT.—Although American prices show little change, the markets in this country have been barely steady. Markets are now largely under the influence of crop news from the spring wheat areas of Canada and the United States. In these regions the position was relieved by good showers last week-end. Meanwhile, favourable weather has been experienced both in Australia and in Argentina.

On Wednesday last, "July" futures were quoted in Chicago at 84½ cents per bushel, against 84½ cents the week before and 85½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 30s. 9d. per 496 lbs., against 31s. a week ago; No. 2 Northern Manitoba, ex ship, 30s. 3d., against 30s. 6d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,315,000 quarters, against 1,091,000 in the previous week and 1,167,000 quarters in the corresponding week a year ago.

FLOUR.—Demand remains quiet and there is a tendency for quotations to sag. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 27s. per 280 lbs., against 27s. a week ago; delivered inner London, 26s. 6d. as compared with 27s. a week ago. Manitoba patents, ex store, 25s. to 26s. 9d., against 25s. to 26s. 9d. a week ago. Australian, ex store, 21s. 9d. to 22s. 3d., against 22s. to 22s. 6d. a week ago.

BARLEY.—The market in imported descriptions remains steady. "July" futures were quoted at 36½ cents per bushel in Winnipeg on Wednesday, against 36½ cents a week ago and 37½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 22s. 6d., as against 22s. 6d. a week ago; "English malting" at farm, 25s. to 40s., against 25s. to 40s. a week ago.

OATS.—Demand continues quiet, with prices showing little change. On Wednesday, "July" futures were quoted at 24½ cents a bushel in Chicago, against 25½ cents a week ago and 26½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 18s. to 19s. per 336 lbs., against 18s. to 19s. a week ago; "English White," at farm, 18s. to 19s., against 18s. to 19s. a week earlier.

MAIZE.—The market has had a stronger tone. Shipments from Argentina remain small, while demand in this country shows some improvement. "July" futures were quoted on Wednesday at 61½ cents per bushel in Chicago, against 60 cents a week ago, and 60½ cents last month. Quotations in London, Wednesday: "Plate," landed, 19s. 6d. per 480 lbs., compared with 19s. 3d. a week ago; "Plate," ex ship, 18s. 10½d., as against 18s. 6d. a week ago; "Plate," "June," 18s. 7½d., as against 18s. a week ago; yellow maize meal, ex wharf, was quoted at £5 2s. 6d. per ton, as against £5 2s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat	Cwts.	Cwts.	Cwts.	Cwts.
1 week to June 6	64,640	129,401	116,466	146,955
40 weeks to June 6	8,278,544	10,260,595	12,600,595	12,709,953
Average price of English wheat per cwt.	s. d.	s. d.	s. d.	s. d.
	6 2	5 4	5 6	6 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
June 4, 1932	Cwts. 81,938	Cwts. 8,263	Cwts. 16,651	s. d. 6 3	s. d. 7 4	s. d. 8 0
June 3, 1933	84,640	30,783	7,592	6 2	6 11	5 8
June 9, 1934	129,401	6,725	15,017	5 4	7 1	6 3
June 8, 1935	116,466	12,933	12,786	5 6	7 0	7 4
May 30, 1936	108,252	13,460	18,393	6 10	8 11	6 2
June 6, 1936	146,955	18,342	24,415	6 9	6 6	6 2

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	June 12, 1935	Dec. 31, 1935	June 3, 1936	June 10, 1936
Winnipeg (No. 1, Manitoba)	65½	82½	81½	84½	77½	77½
Chicago (No. 2 Winter)	84½	98½	80½	75½	84½	84½

The visible supply of wheat in Canada amounts to 88,636,000 bushels, against 93,884,000 bushels last week, and 107,407,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—Demand has been fair and the market steady. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 90s.; Canadian, 80s.; Danish, 89s., the same as last week. Arrivals in London last week included Danish, 14,263 bales; Canadian, 4,495; Dutch, 2,523; Lithuanian, 1,955; and Polish, 2,437, as against 13,601, 4,167, 2,217, 1,640 and 2,030, respectively, in the previous week.

BUTTER.—The market has had a strong tone, with prices showing a substantial gain on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 112s.; Australian, choicest salted, 111s. to 112s.; Danish, 118s.; compared with 104s., 102s. and 110s., respectively, a week ago.

CHEESE.—The market has ruled firm for all descriptions. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, factory, 53s. to 56s.; Canadian, finest coloured, 66s. to 68s.; and New Zealand, finest coloured, 61s. 6d. to 62s.; against 53s. to 56s., 65s. to 66s. and 58s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 6 cents per lb., as against 5½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, "October-December" was quoted 26s. 10½d. per 250 kilos., c.i.f. Continent, against 26s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 590 bags; delivered, for home consumption, 5,141 bags; exported, 1,258 bags; stocks, 169,765 bags, against 193,390 bags a year ago.

COFFEE.—A rather quiet tendency has been in evidence, both in London and New York. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb. in New York, as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed,

44 cwt.; delivered, for home consumption, 262 cwt.; exported, nil; stocks, 10,281 cwt., against 17,433 bags a year ago. Central and South American, landed, 2,412 cwt.; delivered, for home consumption, 2,744 cwt.; exported, 1,012 cwt.; stocks, 124,413 cwt., against 114,068 packages last year. Other kinds, landed, 1,677 cwt.; delivered, for home consumption, 3,053 cwt.; exported, 785 cwt.; stocks, 175,917 cwt., against 125,961 packages last year.

EGGS.—At the London Egg Exchange on Monday, supplies were rather smaller, while demand remained good. Prices generally were well maintained. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 10s. to 10s. 6d. per 120, as against 9s. 9d. to 10s. last week, while Danish (15½ lb.) made 8s. 9d. to 9s. per 120, against 8s. 9d. to 9s. last week.

FRUIT.—Following the holiday period, business at Covent Garden showed a steady improvement, states *The Fruitgrower*. But fine weather is needed for a good soft-fruit season. Supplies of outdoor strawberries are now on the increase, and demand good. Green gooseberries have been well in evidence, and a few French red currants made their appearance this week. Spanish apricots and plums encountered a better inquiry, and sold at good prices. Grapes and melons have also sold well. English peaches and nectarines, in splendid form, met a steady inquiry. Although demand for apples remains fairly good, prices have eased owing to the competition of the soft fruits. Oranges are also rather lower in price, although pears remain steady. Grapefruit have been in better demand at firm rates, while lemons remain steady at the recent high level of quotations.

MEAT.—Trade at Smithfield for chilled beef and for mutton and lamb was fair this week, with beef prices rather higher. Quotations for pork were firm. On Wednesday last, Argentine chilled hind-quarters were quoted at 3s. 10d. to 4s. 4d. per 8 lbs., as compared with 3s. 4d. to 3s. 11d. a week ago. New Zealand frozen mutton was 3s. to 3s. 6d. per 8 lbs., against 3s. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 7,861 tons, a decrease of 735 tons on the corresponding week last year. Beef and veal accounted for 4,436 tons, mutton and lamb, 2,400 tons, and pork and bacon, 629 tons, as compared with 4,842, 2,653 and 638 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 10 tons; delivered, 6 tons; stocks, 1,763 tons, against 2,189 tons a year ago. White, landed, nil; delivered, 51 tons; stocks, 12,130 tons, against 19,059 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 9d. per cwt. ex warehouse on Wednesday, as compared with 8s. 9d. per cwt. a week ago. "June-July" in singles to Continent and U.K., was quoted at 7s. 9d. per cwt., against 7s. 7½d. for last week. Movements in London during the past week were as follows: Landed, 593 tons; delivered, 102 tons; stocks, 1,773 tons, against 8,313 tons a year ago.

SUGAR.—The spot markets in London and New York have had a steady tone, prices being unchanged. The spot price in New York on Wednesday was 3-72 cents per lb., as compared with 3-72 cents per lb. last week and 3-72 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 8d. to 4s. 8½d., against 4s. 8½d. to 4s. 8½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 20,611 tons, against 18,355 tons last week and 4,202 tons in the same week of last year; deliveries, 26,997 tons, against 19,455 tons last week and 15,441 tons last year; stocks, 163,597 tons, against 170,010 tons last week and 112,965 tons last year.

TEA.—This week's offerings at the public auctions in Mincing Lane comprised 48,580 packages of Indian and 28,584 packages of Ceylon tea. Demand for Indian grades was quieter, with low price and medium sorts cheaper than before the holidays. A similar tendency was apparent at Tuesday's Ceylon auction, although demand was moderately active.

VEGETABLES.—With decreasing supplies, prices of asparagus have become firmer this week, states *The Fruitgrower*. Some outdoor green peas are now to hand from Kent, while house-grown peas and beans are still on offer. Tomatoes, in rather short supply, continue to sell well, and cucumbers are steady. Mushrooms, however, are a point easier. With the warmer weather, spring cabbage and cauliflower have fallen from the high level of recent weeks. But new carrots and forced marrows are firmer. Cabbage lettuce, in heavy supply, has been difficult to clear. Demand for old potatoes at London markets remains good, and best siltland King Edward, which ranged from 7s. to 8s. per cwt. at the Borough a week ago, rose to 8s. to 9s. on Tuesday last. Meanwhile, new potatoes continue to sell well, Jerseys making 23s. per cwt., against 26s. a week ago, and Matros 18s. to 19s., compared with 17s. to 18s. in the previous week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets generally are steadier, but the volume of business is not large. A better demand for linseed on the Continent, coupled with uncertainty concerning the yield in the United States, caused Plate to advance to the highest point reached since February. English crushers, however, are satisfying their moderate requirements from Indian linseed, which is still offered freely. Argentine shipments are heavier. The quantity now afloat for Europe is 126,500 tons (including 41,700 tons from India), an increase of 9,400 tons on the week; and for America 22,000 tons, against 44,400 tons a year ago. Trade in linseed oil is fair, but prices, which had advanced by 20s. per ton from the

lowest recorded for some months, have lost some of the ground gained. The current price of raw oil ex Hull mill is around £24 10s. per ton, naked, for June and July-August deliveries, the later position being at a very small premium.

The market in old crop Egyptian cottonseed is very firm, for very little now remains unsold and £7 5s. is now wanted. Business in new crop has not yet begun and £6 2s. 6d. is the nominal quotation for October-December. Crude cotton oil is dearer in sympathy with seed and £24 10s. ex Hull is quoted; refined is quoted at £26. Palm-kernel oil is easier, but little or no change has taken place in regard to other seed oils. Demand for oilcakes is fair and prices are steady.

RUBBER.—The market has been rather dull during most of the past week. Renewed fears concerning the future of the franc and

the guilders were responsible for early weakness, but prices subsequently firmed up, and closed on Wednesday showing a slight net gain on the week. Meanwhile, stocks in the United Kingdom continue their gradual decline.

The spot price in New York on Wednesday was 15½ cents per lb., compared with 15½ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. for July-September shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 128,960 tons, against 130,560 tons a week earlier. A year ago stocks amounted to 169,068 tons.

THE JOHANNESBURG CONSOLIDATED INVESTMENT COMPANY LIMITED

Group Declaration of Dividends

NOTICE IS HEREBY GIVEN that Dividends have been declared payable to Shareholders registered in the books of the undermentioned Companies at the close of business on 30th June, 1936, and to persons presenting the respective Coupons, detailed below, detached from Share Warrants.

Coupons must be deposited FOUR CLEAR DAYS before being paid and, unless accompanied by Inland Revenue Declarations will be subject to a deduction of United Kingdom Income Tax as above.

The Dividends are declared in the currency of the Union of South Africa and become due on 1st July, 1936, but Warrants in payment will be posted both from Head and London Offices on or about 30th July, 1936, this interval being necessary for the balancing of the books and preparation of the Warrants. Dividends payable from the London Office will be paid in British currency at par provided there is no material difference between South African and British currencies on 1st July, 1936. Should there be any material difference between the two currencies the London Office will pay on the basis of the equivalent British currency calculated at the rate of exchange ruling on that date. Amounts payable to persons presenting Coupons will be on the same basis irrespective of the date of presentation of Coupons.

Warrants despatched from the London Office to persons resident in Great Britain or Northern Ireland will be subject to a deduction of United Kingdom Income Tax at rates to be arrived at after allowing for relief (if any) in respect of Dominion Taxes.

Shareholders with registered addresses outside South Africa who desire to have their Dividends paid to an address therein or vice versa must give notice to the Companies to that effect on or before 30th June, 1936.

The Transfer Books and Register of Members will be closed in each case from 1st to 7th July, 1936, both days inclusive.

The Dividends on the shares included in Share Warrants will be payable to the persons presenting the relative Coupons at the London Office, 10 & 11, Austin Friars, E.C.2, on or after 31st July, 1936, in accordance with a Notice to be issued by the London Office.

NAME OF COMPANY (each of which is incor- porated in the Union of South Africa)	Divi- dend No.	Cou- pon No.	Per share in the currency of the Union of South Africa

RETREAT

THE reversal of policy announced by Mr Eden in the historic debate on Thursday was, on the surface, the pronouncement of a united Cabinet, firmly supported by an overwhelming Parliamentary majority. Indeed, it might have been expected that so momentous a statement would be an expression of will by a united nation.

In fact, the opposite was the case. For the temper of the House revealed a conflict of political emotion that had not been seen in Parliament for many years. The final decision to abandon sanctions was arrived at—or perhaps we should be more correct in saying "stumbled into"—after much division of opinion and obviously with the gravest misgivings on the part of the Foreign Secretary; while the announcement itself is one which will permanently change the attitude of a considerable section of the electorate towards the Government, and leave foreign opinion in a state of baffled bewilderment. A sick world requires that British policy should be distinguished by strength and singleness of purpose. It is a tragedy that it should be possible to describe British policy during the last six months as one of weakness and vacillation.

Seven months ago the third National Government obtained an overwhelming majority in a General Election. That election was fought by the outgoing Government on a most favourable field. The Opposition Parties were manoeuvred into a tactical disadvantage by nation-wide support for the strong line taken by the Government at Geneva, and by that Government's firm adherence to the principles of collective security within the framework of the Covenant. Government spokesmen vied with each other and with the Opposition in protestations of unswerving fidelity to the principles of the League and to collective restraint of aggression. They obtained the prize of office.

Within four weeks of the election, the publication of the terms of the Hoare-Laval plan revealed a Cabinet divided in counsels, a Prime Minister apparently uninformed and certainly uninformative, and a depth of public indignation

against the Prime Minister and Cabinet which was scarcely assuaged by Mr Baldwin's sacrifice of Sir Samuel Hoare. Still the Cabinet declined to maintain the lead against Italy which Sir Samuel Hoare had first assumed at Geneva. They refused to put that pressure on France which could have been successfully employed to make sanctions truly effective; and Mr Eden was given the hopeless task of reassuring public opinion—more by his name than by any action which the Government were prepared to take—that the Government meant business. For six months of delay and hesitation, the lack of precision in British policy has filled our friends with misgiving, rendered impotent the one institution which guaranteed us allies, alienated American sympathy, and—worst of all—gone a long way towards driving the Dominions into policies of isolation. Italy has been established as a threat to our imperial territories and communications. Germany and most of the smaller nations of Europe have discovered that Great Britain can be ignored with impunity. And thus has been prepared the worst conceivable *terrain* for British diplomacy.

From the standpoint of our fellow-members of the League, the last phase of this sorry story is in keeping with the rest. For the new Foreign Minister of France has pointed out that Britain's decision has been announced to the world *before* consulting the League Council, and in a way that will make it almost impossible for other nations to influence what is supposed to be a collective decision. He has also pointed out that the abandonment of sanctions is to be made unconditionally, and without even the pretence of asking for a *quid pro quo* from Signor Mussolini. The British climb-down could not be more hasty or more complete.

From the domestic political standpoint the results, though less immediate in their effect on the course of events, are deeply significant. Mr Neville Chamberlain's unpremeditated reflections in public to the effect that sanctions should be raised and the powers of the League reduced were, in the circumstances of the case, the application of the

method of the *fait accompli* to a supremely important matter of public policy. For clearly if the Chancellor's views had been rejected it would have broken the Government. Indeed, for some days it seemed that this might be the result. It has revealed Mr Baldwin as no longer master in his own house.

Mr Eden, too, was placed in a very awkward predicament; for the decision he announced has destroyed the hold which he had obtained over a public much wider than the ranks of the Conservative Party.

Finally, the temper of the House on Thursday revealed that the solid front of public opinion in the face of a great international crisis has been shattered. It is difficult to see how our foreign policy in general, and our attitude to the League in particular, can fail to become a party issue. Not even a handsome Parliamentary majority has given the third successive National Government the will to carry through to success a policy on which it had deliberately embarked, and to which it was in honour deeply committed.

Unless the Government speedily evolve some policy which will enable them to restore their shattered prestige, and also discover the will to carry it out, it is to be feared that two consequences will follow. First, dictatorship will gain gratuitous advertisement, as the only decisive and effective political system, by the default of a democratically elected British Government. And secondly Germany and Italy will rapidly attract into their political and economic orbits the smaller Powers of Europe and the Near East. These smaller Powers will tend to accept the leadership and the political systems of countries at the head of which stand men who appear to know their own minds, and possess the determination to act accordingly.

In the long run, we see no reason to despair of democratic institutions in this country. But the Government's latest reversal of policy invites a warning that the sands of public patience may soon run completely out. A deplorable chapter in British history will be turned to good account if it impels our political leaders to handle great public issues more forcefully and more courageously.

THE NEXT STEP

HIS MAJESTY'S Government in the United Kingdom have duly adopted, as their public policy, Mr Neville Chamberlain's private thoughts. They have decided to come out openly, at the forthcoming meetings of the League Council and Assembly, for the abandonment of the sanctions now in force against Italy.

In taking this line they have the support of His Majesty's Government in Australia, and perhaps the acquiescence of His Majesty's Government in Canada. On the other hand, the South Africans, being closer to the actual scene of Signor Mussolini's assassination of our post-war system of international law and order, are more sensitive to the implications of a policy of giving the criminal a free hand to garner the harvest of his crime at leisure. In the South African Assembly, on Tuesday, General Hertzog declared that, whatever other countries might do, South Africa would not run away from her obligations under the Covenant; that, if the League collapsed to-morrow—as, in his opinion, it would, if sanctions were now abandoned—nothing could prevent the outbreak of a world war within the next twenty years; and that the choice lay between this certainty of world-wide disaster to-morrow and acceptance, to-day, of the risk of a war between the States-Members of the League and one single Power, for the sake of making the collective system of international law and order really work.

The latter of the alternatives which General Hertzog has laid before us is obviously the right choice among competing foreign policies. There is no doubt that, even at this twelfth hour, a success could be made of it if the people of this country (in collaboration with a France that is at last ready to take this line) were to summon up the courage and the far-sightedness to go through with it. If we not only maintained the present sanctions but intensified them to the point of complete non-intercourse, then—even allowing for defections in the sanctionist ranks—we could

be fairly sure of bringing such pressure to bear on Italy that she would be forced to choose between disgorging her Ethiopian prey, or going to war with the rest of us. Mr Eden said on Thursday she would make war. But Italy cannot afford to face fatal odds, such as those constituted by League Members in deadly earnest. True, the risk of war is there. But we have to weigh that risk against the certain peril to the British Empire and the world of allowing the League to collapse and the aggressor to triumph. If we follow General Hertzog's advice, it is certain that, whether it were by economic pressure or by war, right would be vindicated. And we should be able to say to the Germans and the Japanese, in tones they could not then afford to ignore: *Sic semper tyrannis*.

That is the right policy. We have, however, to face the fact that it has been rejected in this country by a Government which commands a majority in Parliament. The lifting of sanctions, however, is merely Part I of that story. Part II concerns our relations with Italy afterwards, for there is a further choice still to be taken. We shall have to choose between a European policy which ignores Italy and one which aims at taking her into partnership. We shrewdly suspect that this latter choice is the one into which the Government is now about to push the country, after the lapse of whatever they consider to be the political interval of time.

So humiliating a reversal of British policy is in no way dictated by the alleged failure of sanctions as an instrument of League policy. This weapon has been only very partially and half-heartedly applied. Even so, fifty countries have loyally played their part; these half-measures have drastically reduced Italy's trade; and the experience has shown that a prompt and full economic boycott would have had decisive results. If the Government are really sincere in their professions still to make the League, and what it stands for, the basis of British Foreign policy, then the reform of the League which is commended to us by experience up to date is clear. It consists in confining League membership to States which genuinely believe in the collective system, and which believe in it to the point of accepting all its risks and sacrifices—even in the last resort the risk of war with a Great Power—for the sake of securing, as between themselves, the assurance of mutual support.

If we apply this principle to the present situation, it means, first, suspending Italy from membership of the League and depriving her of all claim to collective protection until she is ready to accept the validity of the League's decisions. In the second place, it means trying to build a more exacting, and to that extent more effective, League on the basis, if necessary, of a narrower membership. Our aim should be to bring France, Russia, the States-Members of the Little Entente, Poland and the West-European ex-neutrals into a genuinely reformed League consisting of States which are not only law-abiding for their own part, but are also all prepared to go to war in defence of any of their number. This is the second decision we have to take. If the Government were prepared to adopt such a policy, it would at least do something to mitigate the calamitous result of their present surrender.

We suspect, however, that this is not the Government's intention. For this wholehearted League policy, on a stricter basis of membership, involves both risks and sacrifices from which we fancy this Government will continue to flinch. One risk is that of an Italo-German understanding. On the nature of that risk we would make two observations.

First, if a general European war is to be avoided, France and Britain must in any case try to discover a just *modus vivendi* with Germany. That implies some recognition of Germany's need for unhindered economic development, and practical proof of our willingness to examine and, if possible, to satisfy the German claim to colonial possessions. Does Mr Baldwin, and do his colleagues, accept all the implications of this policy *vis-à-vis* Germany, and *vis-à-vis* our fellow League Members?

Our second observation is that, unless we are to play our cards extremely badly, the fear of an effective Italo-German understanding is largely unreal. Signor Mussolini cannot abandon Austria, unless he is willing to believe that

Herr Hitler, secure on the Brenner, would never claim the South Tirol. And if Germany had the South Tirol, the industrial backbone of Italy would be at her mercy. Moreover, German armies at Graz and Klagenfurt, coupled with the German economic penetration which we describe in a succeeding article, would jeopardise Trieste, Fiume, and the entire Adriatic. The report that Signor Mussolini is himself now in favour of a Habsburg restoration in Austria, in the last resort, may therefore contain more than a grain of truth.

Now the Government may not believe in the possibility of any *modus vivendi* with Germany, or they may deem Herr Hitler's terms far too high. They may also really believe in the possibility of an effective Italo-German understanding. They may therefore be tempted to think that some agreement with Italy, which would in effect aim at encirclement of Germany, would be the lesser evil; and may then seek to adopt the Laval policy on the morrow of its repudiation by the French electorate itself. In making such a choice they would, we believe, commit as gross a blunder as they made when they tried to foist on the British people the Hoare-Laval Plan. Persuading the country to abandon sanctions is quite a different thing from persuading it to employ Mussolini as a policeman against Hitler.

There is only one way out of this dilemma. The Government must not attempt to play off Italy against Germany, or to enter into special relations with either of them. Their policy should be to follow the course outlined above. On the one hand, they should forthwith strengthen our relations with all those Members of the League whose support for it is genuine. On the other, they should not cease to employ our diplomatic influence to induce both Italy and Germany to accept the principles of that League, with all the obligations, as well as the advantages, which such a system embodies.

FUTURE MONETARY POLICY

THERE has been remarkably little difference of opinion over monetary policy in this country during the last five years. The departure from the old gold parity in 1931, though anticipated with the gravest apprehension, was soon accepted with relief; and in the conditions of acute depression and unemployment then existing nobody could seriously oppose the obvious policy of cheap money, credit expansion and conversion operations. Nor, in the years that followed, has there been any serious question of the beneficial effects of this policy. No very acute difference of opinion arose, because on the one hand the influx of gold into the Bank of England was sufficient, even valued at the fictitious pre-1931 price, to support a marked credit expansion, and because on the other hand industrial recovery was proceeding smoothly and steadily.

To-day, however, there are signs that these conditions may before long begin to change. A certain tendency towards a hardening of long-term interest rates is discernible; the private housing boom cannot indefinitely continue; and the cessation of recovery some time in 1937 has been predicted by various responsible authorities. To assume, on the grounds of building recession alone, that depression will supervene in Great Britain in the next eighteen months, would doubtless be rash, as we pointed out in our survey of economic prospects in last week's *Economist*. A really sustained recovery in the outside world, and in particular in America, might easily keep our own recovery going.

It is nevertheless pertinent to inquire well in advance what monetary policy ought to be pursued by the British authorities, supposing unmistakable signs of internal depression did emerge, and there were no countervailing external stimulus. To ask that is not to ignore the paramount need for direct measures of a fiscal kind designed to expand our exports. Indeed, at the moment unemployment cannot be further quickly reduced except by such measures; for the unemployment remaining over and above the minimum that might normally be expected at the top of a trade cycle is almost entirely in the exporting areas. Supposing, however, that such direct measures failed, or were not

7, CHANCERY LANE, LONDON

attempted, that world deflation did not materialise, and that cyclical unemployment began to increase throughout this country as a result of building recession; what then would be the appropriate policy?

To answer this it is necessary to scrutinise the broad facts of our recovery in the past four years and our present monetary position. Whether we attribute the housing boom mainly to cheap food or cheap money, it will be agreed that the fall in long-term interest rates was the nerve centre of recovery. In an article in our Money and Banking Section on December 28th we traced this fall to the purchase of Government securities made by the Bank of England during 1932-34 on the basis of the increase of gold reserves that followed our departure from the gold standard. Between November, 1931 and November, 1935 the gold reserve of the Bank of England, as officially valued, rose from £121 millions to £198 millions, and the Bank's holding of Government securities rose from £57 millions to £85 millions. As a result the total of Bank of England notes rose from £396 millions to £458 millions, and the clearing banks' reserve of coins, notes and balances at the Bank of England rose from £173 millions to £214 million, i.e. by £41 millions, during the period. In theory such an increase should permit an expansion of at least £410 millions in total bank deposits, and there was actually an expansion during the period of £333 millions. Since advances were falling, however, owing to the initial influence of recovery in thawing frozen loans, and since discounts were also falling in the later part of the period, the increase in deposits was almost entirely counter-balanced by an increase in investments. Actually investments increased from £300 millions in November, 1931 to £621 millions in November, 1935. The banks, that is to say, bought something like £320 millions of gilt-edged between 1931 and 1935. Here, without question, is the main origin of the fall in long-term interest rates.

The experiences of these years show that changes in the long-term rate of interest are, in the short run at any rate, and in a country divorced from the gold standard, largely in the hands of the monetary authorities. What lesson must be drawn from this in considering the problem of a possible business recession in the next two years? During the last few months there has been persistent talk of a hardening tendency in interest rates. This tendency, though real, has not gone very far. The issue price of new 3 per cent. municipal stocks has been steadily reduced this year from 101 to 98½, but 2½ per cent. Consols and 3½ per cent. War Loan are barely one point below the level of the end of January; though there has been a greater fall since January, 1935. Does the underlying monetary situation, however, threaten any rise in interest rates? The May clearing bank returns are abnormal, as they are distorted by the influx of French money and French hoarding of British currency. If the April returns, as being more representative, are examined, it appears that between January and April, 1936, the total advances of the clearing banks rose from £788 millions to £839 millions. Reserves (i.e. coin, notes and Bank of England balances) remained stationary

during the period. It was consequently only through a fall in discounts that a fall in total investments was avoided. For if discounts and reserves had both remained stationary while advances rose, investments would have had to be reduced. To some extent, of course, the cash ratio might be allowed to fall since it was still 10.6 per cent. in April; but this could not go on long. It seems likely, therefore, that as the business demand for advances tends to expand still further, a pressure to sell investments, and so to force up interest rates, may begin.

Simply to deplore this tendency as inevitable would be both defeatist and unwise. If we wish to prevent it, we can do so by further broadening the basis of credit. In what circumstances, however, should this be done? It should not be done if either an inflationary rise in prices beyond the point necessitated by full normal employment were threatened; or, alternatively, if the gold reserve behind the credit structure were clearly insufficient to support it (assuming that our monetary policy must still, for psychological reasons, bear some relation to gold). The first objection will not be valid if credit is expanded in order to prevent an increase in unemployment in our "prosperous" domestic industries. The validity of the second depends on the real size of our gold reserves.

An attempt to estimate this was made in an article on "Britain's Gold Reserve" in our issue of May 23rd. It was there concluded that if the declared reserve in the Bank is revalued at the market price and the holdings of the Exchange Account—whether earmarked in Paris or elsewhere—are added, the total must be somewhere near 9,000 million Swiss francs, or about £600 millions. To treat the whole of this as a banking reserve would, of course, be foolish; for much of it is an offset against refugee money which would soon fly home if the franc were devalued or if various other things happened.

But we shall be on the safe side if we allow £250 millions as a reserve against this contingency. This leaves us with £350 millions of genuine reserve. Some further deductions must be made, however, since sterling is free to fluctuate on gold, and the sterling price of gold might conceivably fall. It is inconceivable, however, that sterling should be allowed to appreciate more than, say, 12 per cent. on gold at a maximum; and we may thus assume a gold reserve of £300 millions without fear of overestimation.

A rough calculation shows that a gold reserve of £300 millions would permit an expansion of the present note circulation by £100 millions; and supposing the proportion of notes held by clearing banks to the total of Bank of England notes remained approximately the same as has prevailed recently, then rather over £20 millions of the new notes would find their way into the banks' reserves. This would permit an expansion of over £200 millions in bank deposits. Such an expansion would enable the banks to increase their holdings of gilt-edged by nearly 30 per cent. without any reduction in advances, or alternatively to increase their investments and advances considerably at the same time. If it were thought imprudent to take "an interim dividend" on the gold profit in this way without irrevocably fixing the gold value of sterling (though the problem must be faced sooner or later), it would only be necessary for the Bank to buy Government securities, and for the fiduciary issue to be expanded. To refrain from doing this in face of rising unemployment, with an artificially written-down gold reserve, would be sheer deflation.

If, therefore, a rise in interest rates and a rise of unemployment should begin to emerge in the next eighteen months, it should be the duty of the monetary authorities to ease the credit structure either by an interim re-valuation of the gold stock, or by open-market purchases and the expansion of the fiduciary issue. This policy would be no more than an extension of the Bank's policy of buying gold, on which we comment in a Financial Note on page 678. Moreover, such a policy would be complementary and not antithetical to a stimulation of public works, civil or military, and a resumption of foreign loans. In the first place, if public works and building are sufficient in themselves to maintain employment, there will be no increase in unemployment, and the problem will not arise. In the second place, foreign lending need not, as is often supposed, necessarily raise internal interest rates. If the supply of saving is fixed, then rates would, of course, rise. But if

the credit structure were expanded it would be possible for foreign loans to stimulate exports, and internal loans to stimulate home trade at one and the same time.

The situation must therefore be closely watched for a rise in interest rates and a rise in unemployment. And if both these tendencies emerge simultaneously, steps should unhesitatingly be taken to expand the credit structure.

GERMANY LOOKS SOUTH-EAST

Nor the least unsettling influence in Europe before the war was the effort of German foreign policy, conceived to realise the dream of a Berlin-Bagdad railway, to penetrate gradually, through the gateway of Vienna, into South-Eastern Europe. This *Drang nach den Süd-Osten*, as it was termed, was always in the mind of Bismarck, who tried to stem his more extreme critics' demands for overseas colonies and an accompanying "Big Navy" policy by pointing out the peaceful advantages that would accrue to Germany by reason of commercial penetration in Central, South-Eastern and Eastern Europe. Bismarck's successors renounced his policy in favour of a more dangerous one.

Germany's pre-war colonial policy was a mere prestige-point, while the "natural" bent of her economy was towards Eastern and South East Europe. The development of industry in the Empire of Austria-Hungary depended upon German capital and German influence. Hence the "Pan German League" built up branches in Austria-Hungary. They claimed and pursued a policy of economic and political unification of Germany and Austria-Hungary in a "Greater Germany" reaching from the Baltic to the Adriatic. This would have brought about complete dependence of the small Balkan countries on Germany. Thus, the economic unification of Central and South East Europe, backed by such Eastern European countries as Poland, Lithuania, Latvia, Estonia and Finland under German administration, became in 1917 the official German war objective.

Germany's defeat in 1918 stopped any expansion in such directions. On the contrary, the former unified Danubian basin, as well as the Western part of Tsarist Russia, were split into several small States, each raising barriers against Germany, and some even becoming industrial competitors, like Austria and Czechoslovakia. But the "natural" tendency of Germany's economy remained towards South East Europe. The idea of the unification of Central and South-Eastern Europe was resurrected first within the conservative ranks, and then in the unimportant Nazi Party (supported by heavy industry), which claimed the *Anschluss* of nearly 12 million Germans in Austria, Czechoslovakia, Hungary, Yugoslavia, and even Roumania. The economic crisis brought about several attempts between 1930 and 1932 to accelerate the penetration of South-Eastern Europe. The chief attempt was to establish a Customs Union between Germany and Austria. That soon collapsed after the intervention of Italy and France. Thereafter Germany developed a system of preferential duties with Hungary, Yugoslavia, Roumania and Bulgaria. To-day this system has become a series of barter and exchange agreements.

Since the Nazi Government embarked upon its threefold policy of maintaining the nominal value of the Reichsmark, achieving the highest degree of self-sufficiency, and controlling imports and exports so as to secure the raw materials for a rapid and extensive re-armament programme, the German penetration of Central and South-Eastern Europe has once more become a veritable *Drang nach den Süd-Osten*. It has been powerfully reinforced by an astute trade and foreign exchange policy under Dr. Schacht's leadership. Bilateral clearing agreements have replaced most of Germany's export surpluses in her European trade with heavy import surpluses. The smaller European countries have exported more and more to Germany in recent years, in the belief that their "clearings" would ensure payment to their exporters. But they sold Germany more than Germany could pay for on the basis of Germany's current exports. The small Central and South-Eastern European countries, mainly debtor countries themselves, found the proceeds of their export surpluses in their trade

with Germany piling up "blocked marks." Then Germany demanded greater exports, in her turn, to these countries, to unfreeze the frozen balances. The results of this astute business were striking; and the present discussions which Dr. Schacht is undertaking in the Central and South-Eastern capitals of Europe are expected to lead this process of "penetration by German debtors" still farther, until Nazi Germany has peaceably acquired the commercial hegemony of all Central and South-Eastern Europe.

The share of Austria, Czechoslovakia, Hungary, Roumania, Yugoslavia, Bulgaria and Greece, taken as a whole, in Germany's foreign trade is as follows (in per cent. of Germany's total imports and exports by value):—

Year	German Imports	German Exports	Year	German Imports	German Exports
1913	8.8	13.1	1934	10.7	10.2
1929	9.0	10.7	1935	12.3	11.5
1932	9.4	9.7			

These figures derive increased significance by comparison with Eastern Europe—which, in 1913, was Tsarist Russia, and now is European Russia, Finland, Estonia, Latvia, Lithuania and Poland. The share of this region in Germany's foreign trade is as follows:—

Year	German Imports	German Exports	Year	German Imports	German Exports
1913	13.2	8.7	1934	8.5	4.7
1929	7.8	7.9	1935	8.7	4.3
1932	9.5	14.3			

The first remarkable change is the decrease in Germany's foreign trade with Eastern Europe; secondly, there has been a decrease in her foreign trade with Austria and Czechoslovakia taken together, as shown below:—

Year	German Imports	German Exports	Year	German Imports	German Exports
1925	5.6	8.8	1934	5.1	6.2
1929	5.1	8.2	1935	4.6	5.6
1932	4.4	7.2			

The increase in Germany's foreign trade with the other South-Eastern European countries is thus the more important, though her exports to them have not reached the 1913 percentages. This is due partly to the Balkanisation of South-Eastern Europe, partly to the shrewd use of the clearing agreements by Germany.

Germany's share in the total foreign trade of each Central and South-East European country has moved as follows since before the Nazi economic experiments were inaugurated:—

(Percentages of Total Foreign Trade)						
1932		1934		1935		
Imports from Germany	Exports to Germany	Imports from Germany	Exports to Germany	Imports from Germany	Exports to Germany	
Austria	20.0	16.5	17.1	15.8	16.7	16.0
Czechoslovakia	26.3	16.2	19.4	21.4	17.3	14.9
Hungary	22.5	15.1	18.2	22.1	22.6	23.8
Roumania	24.5	12.4	15.5	16.6	24.4	16.6
Yugoslavia	17.9	11.3	14.2	15.5	16.7	18.7
Bulgaria	25.9	26.0	40.1	42.7	53.6	48.2
Greece	9.7	15.1	14.7	22.5	20.4*	29.1

* Estimate.

Austria and Czechoslovakia are the only countries in whose foreign trade the German share has decreased. In the case of Hungary, Austria used to take the chief share in her total foreign trade; but since 1934 Germany has occupied the first place.

Thus Germany has driven a formidable economic wedge into Central and South-Eastern Europe in the last two years; and this wedge will permit the passage of considerable political influence. The process will greatly aid Germany, both militarily and in her self-sufficiency programme. For example, out of her total necessary imports of the following commodities in 1935, by quantities, Germany took the following percentages from the five South-East European countries together:—

PERCENTAGE OF TOTAL GERMAN IMPORTS OF CERTAIN GOODS COMING FROM SOUTH-EAST EUROPE		
Imports into Germany	Percentage from South-East Europe	
	1934	1935
Wood	36.1	40.9
Pulp	21.0	19.7
Oil	7.8	19.4
Bacon and meat	33.2	54.9
Lard	13.5	44.6

Moreover, considerable proportions of Germany's total imports of eggs, fruit, fodder, oilseeds, tobacco, copper, bauxite and ores came from the five south-eastern countries: Hungary, Roumania, Yugoslavia, Bulgaria and Greece. Germany's chief exports, in exchange, are heavy equipment, chemicals, machinery, electrical apparatus and hardware. By rapid development of its extractive industries, coupled with mechanisation of its agriculture, South-Eastern Europe may render Germany much more independent of overseas raw materials, and help to develop her industries in exchange. For this consummation of Nazi foreign policy, the political control of Austria and Czechoslovakia is the condition precedent of a German Continental hegemony. German commercial and financial policy is ably preparing the ground for control of that portion of Europe in which other Powers affect to disinterest themselves.

BACK TO GRUB STREET!

(BY A CORRESPONDENT)

PROGRESS seems to have done little for the artist. The Greeks, we are told, educated their people in public theatres; and the Athenian State laid a public duty upon its richer citizens to provide, equip and train a chorus. Ever since, material progress has created the patron-citizen, who has followed the example of the Greek State and supported the arts. Patronage, however, has its disadvantages; and in eighteenth-century England authorship had become so dependent on patronage that authors had, in the main, become hacks in unsavoury Grub Street. So opprobrious did the name of this street become that it was later renamed Milton Street. But in the last analysis it is the public which is, and has been, the great patron of literature. In our own day, private patrons have commercialised themselves, and now take the form of publishing houses. Never were more books written, more books read, than to-day; but public support has been rather for publishers than for authors. Ninety-nine per cent. of professional authors to-day are unable to support themselves on the products of their creative abilities. Instead, they are forced either into compilation or "pot-boiling." And it almost seems as if our age will be dubbed by posterity "the pot-boiling epoch."

In these days of mass production and libraries, publishers are moderately content if a book sells 1,500 copies. But what is an author's royalty on 1,500 copies? After paying the expense of typing, paper, postage and agents' fees, £30 is about all he can expect from such a sale. With some publishers an author has to wait eighteen months or two years for this sum; and with all publishers he will not get a penny until some three or four months after the finished manuscript has been accepted for publication. Is there any public service so badly paid? Yet publishers and libraries are enjoying a kind of Indian summer of prosperity. It is estimated that one library book serves fifty

readers; which means that *fifty readers collectively subscribe less than ninepence* to an author's royalty. The second-hand market contributes nothing to the support of authors. Is there any library subscriber or second-hand book buyer who will say that this is "a fair return"? One hopes not. But it is a question whether this situation of the author is legally remediable. There are good grounds for believing that it is.

Copyright law was framed to give protection to authors. The law was framed to protect copyright material from being exploited for gain unless the author had made an assignment in writing. It is not difficult to see why a newspaper is unable to buy a copy of a book which it likes, and run it as a serial for its readers, unless the holder of the copyright has so assigned that right. Or why a cinema producer, or stage manager, cannot produce a book on the screen or stage without an assignment from the author. The law makes no specific mention of newspapers, cinemas or theatres; but various judgments have laid down that these actions are an infringement of copyright. That is to say, these infringements of copyright are *interpretations* of the law, perhaps not existing in the letter of the law. But if the interpretation of the law can protect one thing, it seems curious that it cannot protect another. If the legal advisers of sports clubs can interpret copyright to the advantage of footballers, it should not be impossible for authors to secure a legal interpretation to their own advantage.

Now libraries are doing what newspapers are not allowed to do. They buy a book and circulate it to fifty readers, on an average, without an assignment from the author. This infringement of copyright has never been challenged, and never will be, until authors get together and collectively urge the legal rights—and wrongs—of their case. When the present law was framed the number of libraries was insignificant in comparison with what it is to-day. One

or two sufficed for the needs of each community. But to-day there exist long chains of them throughout the Kingdom; and in London it is not uncommon to find three or four in one street—a testimony, perhaps, to the nation's love of reading, but a source of great loss to authors.

Our public libraries perform a great service to the public; but from an author's standpoint the system of inter-lending now in vogue means penury, or something so near it as to necessitate "pot-boiling." Books often represent many months or years of study on an author's subject. Carried to its logical conclusion, the library system might mean that an issue of 100 books would serve the whole kingdom—as long as they were durable. In the same way it would appear that the whole of the second-hand book trade is also an infringement of copyright.

Literature, we may legitimately hope, is above political controversy. It should not be difficult, therefore, to obtain powers to authorise two issues of royalty stamps—say, to the denomination of one halfpenny and sixpence. One halfpenny stamp could be affixed each time a book was loaned and a sixpenny stamp each time a book was sold at second-hand. The labour entailed in each library or second-hand bookshop would be small. It need be no more than the entry of title, author and publisher, on an endless roll, the carbon of which could be forwarded to the central authority when purchasing the supply of stamps. If literature be entertainment, there seems no reason why an entertainment tax, borne by public and publisher alike, should not be utilised to guarantee at least a subsistence minimum for the professional author. It would not be a dole; for its yield would rise if the public accorded the author full meed of approval. Indeed, it would be little more than a guaranteed royalty, the guarantee given by public and publisher, with the State as umpire. Certain it is that, unless something be done soon on these lines, literature will lapse into pot-boiling, and authors will go back to Grub Street.

NOTES OF THE WEEK

Unemployment Assistance.—A great deal of light is thrown on the untractable unemployment assistance problem by the publication of the first annual report of the Unemployment Assistance Board. The Board was created by the 1934 Act to provide for the "material needs" and "welfare" of those able-bodied unemployed, normally wage-earners, who had exhausted their right to benefit under the Insurance scheme. New standard relief schedules were drawn up by the Board, and came into force on January 1, 1935. After six weeks, however, as everybody knows, the schedules were withdrawn in deference to public outcry; and a standstill was instituted providing for the maintenance of the new scales, or the old "transitional payments," whichever were the higher. The present Report is a statement neither of what the Board thinks ought to be done nor of what it thinks about the rights or wrongs of the standstill decision. It is simply a description of the principles on which the Board drew up its schedules and of the way they have been carried out. As such it is an impressive document, seemingly imbued with a humane and broad-minded outlook. It shows how fully the Board was conscious, in devising its scales, of the danger on the one hand of excessive bureaucratic rigidity, and on the other of perpetuating unjustifiable discrepancies between different areas. The Board found itself confronted with a multiplicity of different local scales, based in most cases on no rational ground; and it decided to draw up standard scales allowing for differentiation according to certain definite principles. The most important of these principles was that relief should vary according to rent; but "discretion" was allowed to local officers in a great many important ways. In particular, a fairly liberal interpretation was placed on the household needs test enjoined on the Board by the Act; and extra payments were made in many cases for both "exceptional needs" and "special circumstances." Altogether the Report leaves one even more puzzled at the intensity of the spontaneous outcry which greeted the regulations eighteen

months ago. The explanation may perhaps be that traditional scales had come to be regarded as fair in particular areas, and that the inevitable local reductions implied in any standardisation were therefore felt as an outrage on administrative justice. If so, it may be necessary to preserve some of the traditional scales, at least in the case of long-standing claimants. Clearly, however, this cannot be allowed to continue on the general, and chaotic, scale implied in the present standstill.

The 40-hour Week.—This year's discussions of the 40-hour week proposal at the International Labour Office have drawn heightened significance from their coincidence with the French and Belgian strikers' demands, and the introduction of a legal 40-hour week in New Zealand. The 40-hour week now appears as one of the immediate aims of the working class in all the advanced industrial countries. It is a demand which will arouse general sympathy, but must at the same time present very serious difficulties. We discussed the general problems raised by the 40-hour week proposals in our issues of June 2 and November 22, 1934; and we there suggested that the 40-hour or five-day week should be regarded as a social reform, alternative to higher incomes, rather than a cure for unemployment. For a reduction in hours may either be offset by an increase in the workers' efficiency, in which case no new workers will be needed; or else it will not be so offset, in which case there must be a rise in costs. It is of course this danger of a rise in costs which has inspired most of the employers' delegates at the I.L.O. this week to oppose the proposed convention for an international 40-hour week in the textile industry. The difficulty is a real one; and it is aggravated by the fact that a reduction in hours is more likely to bring a reduction in wages in countries with weak trade union movements than in those with strong. Nevertheless, it would be a pity if

the employees' delegates, and even the British Government, were to give the impression of obstructive opposition to the whole movement. The proper line of advance is a reduction in hours in those industries and those countries where very long hours are worked; for here there is the best chance of a corresponding increase in efficiency. And undoubtedly the I.L.O. is right in attempting to organise the change internationally, and to do so industry by industry. The question of hours of work is a very important one; for even in this country very much longer hours are worked in certain trades than is generally realised. Certainly the British Government should not fall behind the French, Belgian and American in tackling the formidable obstacles that at present stand in the way of the 40-hour week.

"Inflation Without Devaluation."—M. Auriol, the French Finance Minister, has told France this week that there is to be no devaluation, but that the Government's reform programme will be financed by a restoration of confidence and by "first-aid inflation." This official pronouncement on financial policy was finally postponed from Thursday until after the closing of the Bourse on Friday. Whether this portends devaluation or exchange restriction, is naturally still uncertain. But M. Auriol cannot seriously imagine that he can go on much longer without one or the other. It may be possible to stimulate ephemeral accesses of "confidence" by reiterated denials of the intention to devalue, and it may be possible to borrow without limit from the Bank of France. But, in the present enormous disparity of French and world prices, the effect of such policies can only be a headlong outrush of gold. Of the two possible solutions, devaluation would be far the best. But to adopt neither solution, and simply to let the situation drift would of course be worst of all, and would almost certainly involve France's new Social-Democratic experiment in catastrophe. It is good news that M. Blum's Cabinet has drafted decrees designed to dissolve entirely the extra-Parliamentary Croix de Feu, Francistes, Solidarité Française and Jeunesse Patriote. But the future of democracy in France, and perhaps elsewhere, seems at the moment more likely to depend on monetary policy than on the dissolution of any number of "Fascist" Leagues.

Strikes in Belgium.—M. van Zeeland this week succeeded in forming a Government at the end of three weeks' negotiation; and he already seems to be on the way to settling the strike crisis. After the General Election, despite the general support given to his Government, M. van Zeeland announced his intention to resign. It was even reported that he intended to return to the National Bank. The Socialist leader, M. Vandervelde, however, failed to form a Government owing to the unwillingness of the Catholics and Liberals to serve under any but a non-party Prime Minister. M. van Zeeland, on a second attempt, found the situation still difficult, since the Socialists, now the strongest party in the Chamber, wanted a more forward policy. Further, M. van Zeeland had some constitutional reforms of his own to propose, which have not been made public, and do not seem to have been wholly acceptable to the party leaders. Finally, however, agreement was reached this week, and a Government was formed containing Socialist Ministers of Finance and Foreign Affairs. But almost on the same day on which M. van Zeeland's success was announced, an epidemic of strikes began, affecting in particular the coal mines and heavy industries. The immediate occasion of the strike has clearly been the success of the French workers. For the Liège and Mons areas, which are not very far from the industrial districts of North-East France, first felt the movement; and the strikers' demands for a 40-hour week, holidays with pay, collective bargaining and higher wages were similar to those of the French workers. But the movement must be presumed to have had its origin in the long deflationary pressure which, up to March, 1935, was as severe in Belgium as in France. Since devaluation there has been a far-reaching industrial recovery in Belgium and a large fall in unemployment. But the worker who has been employed

throughout must have suffered almost as great a reduction in money wages in the last five years as the French worker. Indeed, since the cost of living has risen 10 per cent. in the last year, he is actually worse off; though the Belgian working class as a whole has benefited as a result of the 50 per cent. fall in unemployment. In these circumstances the strikes are understandable; and it may be hoped that the new Government will be able to meet such of the strikers' demands as will not involve a rise in costs great enough to offset the effect of devaluation. The provisional agreement reached on Wednesday night included the grant of a minimum wage, a six-day holiday with pay, and the recognition of union rights. Separate negotiations are to be directed to the introduction of the 40-hour week. Thanks to devaluation, these concessions should not overstrain the Belgian economy. Indeed, they may be fairly regarded as the completion of M. van Zeeland's work of general economic reconstruction.

The Republican Candidate.—The Republican Party Convention which has just ended compared unfavourably with some of its predecessors, judged by the number of hours filled by cheering, parades and brass bands. Nevertheless, it has been one of the most important in the Party's history. Governor Landon, of Kansas, received the nomination for the Presidency and Colonel Knox for the Vice-Presidency. All other candidates withdrew their names and supported Governor Landon, except Senator Borah, who retired to Washington in disgust at the new candidate's devotion to a monetary system based on the rigid gold standard. The main issue before the Convention was the choice of a programme for the campaign against the New Deal. The Old Guard of Eastern Republicans were for a flat rejection of any meliorist policies, for high tariffs, and for no interference by Government in industry; they were prepared to lose the election rather than adopt a progressive platform. The Western Republicans favoured a policy which had much in common with the Democratic New Deal. The platform finally adopted has all the contradictions common to its kind, but must be interpreted as a definite victory for the progressives; the day of "rugged individualism," with prizes for all, is dead. This shifting of position may increase the Republicans' somewhat slender chances of replacing the Democrats in this year's Presidential elections and heighten their prospects of a victory four years hence. The Democrats are far more vulnerable on the ground that many of their actions do not produce the social results which the New Deal postulates as desirable, than on the charge that the Federal Government has no right to attempt to ameliorate social and economic maladjustments. It is true, of course, that, just as the Democrats since 1932 have reversed their traditional defence of State rights and have fought for enlarged Federal powers, so now the Republicans have deserted their previous support for increased centralisation and have become defenders of the States. But when Republicans obtain office they will probably discover, as the Democrats did, that their objectives cannot be secured without modification of the limitations imposed upon the Federal Government by the Supreme Court's interpretation of the Constitution. It is to Governor Landon's credit that he has not shirked this point. Far from taking issue with President Roosevelt, he has already declared that if the Constitution will not permit desirable economic and social

ends to be achieved, it must be amended. In any case, the fundamental contradictions which remain in the new Republican platform may have no more binding influence upon Republican policy after the election than the Democratic platform of 1932 had on President Roosevelt. What chiefly matters is that the Republicans have been converted to social reform.

* * *

Turning the Screw in Palestine.—There are now eight battalions of British troops in Palestine. The mandatory authorities have been turning the screw in their efforts to repress the present disorders. On June 12th the High Commissioner, Sir Arthur Wauchope, issued an ordinance making additional regulations under the Palestine Defence Order-in-Council of 1931. The civil courts are now empowered to pass sentences of death or of imprisonment for life on persons convicted of having fired on the Palestinian police or on the forces of the British Crown, or of having thrown bombs with intent to injure persons or to damage property. And life terms (rising to death sentences in cases involving danger to life) have also been made legal as the punishment for a wider list of acts of sabotage. No doubt any Government must take—and use—all powers that may be necessary in order to re-establish its own authority against a campaign of terrorism, and this must be its first concern. But our Palestinian policy, though it may have to begin at this point, most certainly cannot end there. It is possible that the present measures of repression may momentarily succeed in achieving their immediate object; but, unless they are accompanied by constructive statesmanship, the crop of embitterment which they will have sown is bound to spring up in successive *émeutes* which will call for new repetitions of repressive measures. Such conditions would render the development of the Jewish National Home quite impossible, and would thereby defeat the very object for which the Mandatory Power has thrown itself into collision with the Palestinian Arab community. Surely, it is only right that we should now at last let the Palestinian Arabs know clearly where they stand over against British policy. They have to expect that Jewish immigrants will continue to be admitted into Palestine as fast as the economic situation permits and with no other limit. If there is to be no end to this process, then the Arabs will find themselves reduced, sooner or later, to the status of a poor minority. This is a prospect to which no community in the world would submit without a desperate struggle. Surely we ought quickly to decide, and to declare, our intentions on the ultimate stabilisation of the national strengths of Arabs and Jews in Palestine.

* * *

Nazi Violence at Danzig.—At Danzig on the night of June 12th one person was killed and some fifty or sixty were injured in a Nazi attack on a political meeting organised by the survivors in Danzig of a German National Party, which is now only a memory in the Reich. The attack was delivered by 120 S.A. men, armed with hand-grenades taken from the Danzig police arsenal. Though the man killed was one of the Nazi assailants, while another of them has since died of his injuries, the majority of the casualties were sustained by the victims of the attack, including a large number of women. The fact that the National Party was the object of attack, and not either the Catholic Centre or the Social-Democrats, underlines the truth that, in domestic politics, the Nazis regard the existence of any non-Nazi political organisation as an unpardonable affront to themselves. The latest outbreak of Nazi violence at Danzig is serious, because Herr Hitler is known to be acutely sensitive, and desperately sore, about the success of the non-Nazi parties in the Free City in holding, between them, not much less than half the seats in the local Senate, against vehement and repeated Nazi attempts to take Danzig by storm. The state of parties in the Danzig Senate is, indeed, a standing commentary upon the virtually totalitarian Nazi votes which Herr Hitler obtains nowadays in his six-monthly plebiscites within the frontiers of the Reich. It is not as if the political conditions within the borders of the Free City were completely free and fair. Far from it. The Nazis at Danzig have the advantage of superior financial resources (obtained from the Reich) and superior powers of intimidation (exemplified in last week's hand-grenades). If,

in such circumstances, a mere residue of freedom and fairness makes it possible for the non-Nazi parties to hold their own, this calls in question Herr Hitler's claim to have behind him the unanimous support, not only of the inhabitants of the Reich, but of the whole German "nation," outside as well as inside the Reich's present frontiers. Meanwhile, the Nazis in Danzig are doing their best to suppress their opponents by internal action, with indirect and underground assistance from the Reich. Opposition members are arrested; all opposition newspapers confiscated; the Nazi police, secret and official, are everywhere; and all this on no grounds but Nazi totalitarianism. It is a situation which is putting a heavy tax on the patience and fortitude of the League's admirable Irish High Commissioner, Mr Sean Lester. But what will the League—and the Danzig *rapporteur*, Mr Eden—do if the Danzig opposition appeal again? Wag the finger at the Nazis? If so, the Nazis may well retort by copying Signor Mussolini's tactics, as soon as the Third Reich has expanded far enough to overawe Poland—and Britain.

* * *

Little Entente Policy.—The three States-Members of the Little Entente seem to have agreed to continue to stand firmly together, while each makes itself as strong as possible. Whatever may be going to happen in Europe, it is certain that Czechoslovakia, Yugoslavia and Rumania will be able to secure better terms *en bloc* than piecemeal. If their statesmen had not seen this patent truth for themselves, the Germans and Italians could not have failed to enlighten them by the very assiduity of their efforts to prise the three allies asunder. While Italy allows Roumania and Czechoslovakia to understand that they have nothing to fear from her as long as they leave Yugoslavia to her fate, Germany hints to Yugoslavia and Roumania that they have only to leave Czechoslovakia to her fate in order to secure favourable terms from a rapidly expanding Third Reich. If the East European Successor-States do have to come to terms with either or both of the Central European dictatorships, then union is strength. While they would vastly prefer to run risks and to make sacrifices for a system of collective security, they have to face the question whether anything that deserves to be called by such a name can be expected to survive an abdication by both France and Great Britain from their once great positions in European affairs. If the two Western democracies deliberately reduce themselves to the rank of small States, can the Little Entente Powers still look to Russia, single-handed, to back them in upholding the collective system in Eastern Europe? In such circumstances, would not Russia treat a German act of aggression against the East European Successor-States with the same inhuman self-restraint that she showed when the Japanese over-ran Manchuria and seized the Chinese Eastern Railway? With these formidable contingencies to consider, the Little Entente obviously cannot rule out the possibility of being confronted one day with a choice between political extinction and capitulation to Germany—not outright, but on terms. For this, too, they would find great advantages in maintaining their unity. They would have more, for instance, as a trio than Hungary or Bulgaria would have to offer to a German master of Europe. If the Little Entente does eventually make its own terms with Germany, the consequent increase in Germany's strength will be exceedingly serious for us. And we shall have only ourselves to thank for it.

* * *

The Swedish Government Resigns.—The resignation of the Swedish Government last week-end is scarcely surprising. It had been clear for some time that the three *bourgeois* parties—Conservatives, People's Party (i.e. Liberals) and Peasants—were not going to lose a chance to jockey the Government out of office on the issue of national defence, and that the Cabinet itself was somewhat undecided about the best course to adopt before the coming elections. Mr Per Albin Hansson's Socialist Government has been in office for four and a half years—a longer period than that of any other Swedish Cabinet during the last twenty-five years. The Cabinet can show a remarkable record of success and solid achievement. Through a com-

bination of good luck and good management, Sweden's Socialist administration had succeeded in leading the country out of the depths of depression and out of the *débris* of the Kreuger crash, but in developing an altogether new peak of national prosperity. Being a minority Cabinet, and having to rely on the support of the Peasants, it pursued a cautious national policy, dictated by solid practical considerations and not by Marxist dogma. In these circumstances the *bourgeois* Opposition found it increasingly difficult to challenge the Socialists on any really vital issue, and their repeated efforts to find or create such issues invariably ended in their discomfiture. Moreover, they had little or no policy to offer. The re-armament wave was a godsend to them. Here at last was a platform on which they could all unite and attack the Government. But Mr Hansson's Cabinet, realising the nation's genuine desire for a stronger defence force, and not wishing to be forced to resign on so burning a question, went a long way towards a compromise. It offered 135 million kronor for defences, whereas the Opposition demanded 148 millions. The petty 13 million kronor were thus the extent of the gulf between them. But the Opposition prepared to throw out the Socialists. Thereupon the astute "Per Albin" put forward a plan by which these disputed 13 millions were to be linked with another 5 million kronor for old-age pensions. The Opposition rejected his offer, and after a good fighting speech he resigned. He and his colleagues will now be able to concentrate on the election campaign free of the burdens and responsibilities of office. There is little doubt that they will be successful.

* * *

To and Fro in China.—After marching—or, rather, entraining—for the North with an anti-Japanese flourish of trumpets, the troops of the Chinese Government at Canton are now falling back again behind their own provincial boundaries as the troops of the Chinese Government at Nanking approach the southern borders of Hunan. It looks as though the flux in the political relations between Canton and the Yangtse Basin might at last be brought to an issue by the slow but sure process of railway construction. It is now reported that, some four months hence, the through route between Hankow and Canton will be opened at last, with the completion of the missing link on the watershed. There is also a project for prolonging the Shanghai-Hangchow Railway south-westwards until it joins the Hankow-Canton Railway at a point south of Changsha. If these two railway developments soon coincide, there will be some prospect at last of politically consolidating all that is left of an independent China under a single Government, which, without being plagued by Chinese rivals, will be able to focus against Japan all the still surviving forces of Chinese resistance. A united South Chinese Government in all probability would not establish its capital in Nanking or Canton—exposed, as both of them are, to Japanese attack. It would be more likely to seek a safer seat at some point in the interior which had been opened up by the improvement in the South Chinese railway system. This development would be unwelcome to Japan, who now seems to have set her ambition upon swallowing China whole, as an easier option than attacking Russia, who can strike back at Japan more effectively than Japan can strike at her. Perhaps this is the light in which we should read the report of a conversation at Tokyo, on June 10th, between the Japanese Foreign Minister, Mr Arita, and Sir Frederick Leith-Ross. The economic adviser to the Government of the United Kingdom seems to have suggested that the revival of Chinese trade might be beneficial to Japan, and to have received the reply that Nanking can expect no Japanese economic assistance so long as she remained politically hostile. "In regard," *The Times* correspondent continued, "to certain railway plans which Sir Frederick Leith-Ross considered financially sound," Mr Arita, "pointed out that railways in China had political as well as economic aspects." Now that the Japanese front has advanced, in four and a half years, from the Yalu River to the hinterland of Hongkong, what are His Majesty's Government beginning to think about 1937? May they not soon be forced to help China to resist Japan's aggression, in defence of Empire? Or have they given up that idea together with the idea of collective security?

Three Million Houses.—Sir Kingsley Wood, Minister of Health, announced with pardonable satisfaction, in a speech at Winchester on June 16th, that about 3,000,000 new houses had been provided in England and Wales since the Armistice. As the total number of houses in England and Wales at the end of the war was a little under 8,000,000, much progress has clearly been made in rehousing the nation. But out of 2,981,417 new houses provided since the war, 2,120,369 have been built by private enterprise. The total of 174,009 houses built in England and Wales in the half-year ended March 31st last was a record, and was 5,282 more than in the corresponding period a year ago and 24,092 more than in the six months ended September 30, 1935. Of particular interest is the fact that 61,826 houses were built to let during the half-year ended last March. Of the smallest types of houses having a rateable value not exceeding £13, some 81,015, during this period, included 47,073 for letting. Slum clearance is making gradual progress; the number of houses completed by local authorities during the six months ended last March totalled 27,198. That much remains to be done, however, in this direction is being clearly revealed by the results of the survey of overcrowding which is now in progress.

* * *

Iron and Steel Production.—The figures recently published by the British Iron and Steel Federation reveal a slight decline in the output of steel ingots and castings, but a further increase in the production of pig-iron. There is still, however, a marked shortage of pig-iron; and despite increased imports of semi-finished materials in recent months, a satisfactory balance between production and requirements has yet to be achieved:—

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929 " "	632.4	803.0	235.2	364.9
1932 " "	297.8	438.5	132.7	157.4
1933 " "	344.7	585.3	80.9	160.2
1934 " "	498.2	738.3	113.9	187.8
1935 " "	335.5	820.2	96.0	197.7
1935—April	526.3	808.7	62.7	204.3
" May	558.9	853.3	86.4	206.8
" June	529.3	770.0	98.2	195.1
" July	547.3	803.3	90.2	205.7
" August	543.4	759.9	74.3	202.5
" September	529.6	855.9	89.3	187.2
" October	544.3	907.3	101.2	224.0
" November	529.3	903.3	77.0	215.8
" December	559.3	811.5	113.0	190.3
1936—January	595.5	911.7	119.9	164.8
" February	584.7	938.5	123.2	167.8
" March	633.6	980.1	130.3	163.4
" April	629.8	984.2	120.8	177.5
" May	661.0	963.0	117.5	204.1

Since last autumn the increasing pressure of home demand has been satisfied, in part, at the expense of export orders. Exports last month, however, showed appreciable expansion, though the tonnage shipped was still below the level of May, 1935. In that month, British India was our most important iron and steel market, but in May, 1936, our exports to India were only 14,905 tons, against 20,029 tons. Exports to Russia, which were substantial three years ago, have now dwindled to insignificance. Shipments to Argentina have declined from 19,635 tons a year ago to 10,564 tons last month, while exports to Canada have risen from 17,143 tons to 21,876 tons. Shipments to China have increased from 3,194 tons to 10,113 tons, and to Denmark from 10,480 tons to 21,101 tons. As compared with a year ago there has been a sharp decline in total exports of pig iron, plates and sheets (except tin-plates) and wrought tubes, while shipments of railway material have greatly increased.

Overseas Trade in May.—A further slight improvement in Britain's overseas trade occurred last month, when imports and exports both showed an increase compared with the previous month and with the corresponding month of 1935. The figures, however, failed to attain the level of the last quarter of 1935:—

OVERSEAS TRADE IN MAY
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	%
Total imports	£ 61,797	£ 64,529	£ 69,178	+ £ 4,649	+ 7.2
British exports	32,759	35,207	36,396	+ 1,189	+ 3.4
Re-exports	4,787	5,560	5,635	+ 75	+ 1.3
Total exports	37,546	40,767	42,031	+ 1,264	+ 3.1
Excess of imports over exports ..	24,251	23,762	27,147	+ 3,385	+ 14.2
Transshipments under bond	1,829	2,190	1,908	- 282	- 12.9

OVERSEAS TRADE IN FIRST FIVE MONTHS
(000's omitted)

	1934	1935	1936	Change between 1935 and 1936	%
Total imports	£ 301,311	£ 302,073	£ 335,688	+ £ 33,595	+ 11.1
British exports	157,608	173,578	175,853	+ 2,275	+ 1.3
Re-exports	24,708	23,641	27,392	+ 3,751	+ 15.9
Total exports	182,316	197,219	203,244	+ 6,025	+ 3.1
Excess of imports over exports ..	118,995	104,854	132,444	+ 27,590	+ 26.0
Transshipments under bond	10,122	9,992	10,621	+ 629	+ 6.3

The increase in imports compared with last year was fairly well spread between the principal categories, but was most marked in the raw materials group—a factor which gives promise of continued expansion of industrial activity in the near future. In view of the fact that sanctions have reduced our trade with Italy almost to nil, the maintenance of British exports is moderately encouraging. Re-exports, however, showed a slight decline during the past month.

★ ★ ★

Chief Imports and Exports.—Imports of the majority of raw materials during May were higher this year than last:—

RETAINED IMPORTS
Month of May

Item and Measure	1934	1935	1936
Wheat	'000 cwt.	9,205	10,438
Beef and veal	'000 cwt.	1,101	1,123
Mutton and lamb	'000 cwt.	673	856
Sugar (unrefined)	'000 cwt.	3,417	3,067
Iron ore and scrap	'000 tons	476	463
Raw cotton	'000 cents	979	812
Sheep's and lambs' wool	'000 cents	455	811
Flax, hemp and jute*	tons	24,900	21,497
Crude petroleum*	'000 galls.	28,914	42,171
Hides, wet and dry	'000 cwt.	72	111
Wood pulp*	'000 tons	234	193
Rubber	'000 cents	219	280
Unwrought copper*	tons	14,727	25,424
Pig-lead	tons	22,407	26,643
Tin	tons	4,121	5,113
Ore and concentrates*	tons	51	194
Blocks, ingots, slabs and bars	tons	122	86
Iron and steel manufactures	'000 tons	6,501	7,163
Machinery	tons	6,501	9,324

* Total imports.

Imports of grains and meat showed a decline by comparison with a year ago, but imports of other foodstuffs were generally higher. Imports of raw cotton and cotton waste increased sharply, and their value rose by £555,000, while purchases of other textile raw materials, with the exception of raw silk and waste, were also considerably higher. The reduced import of unwrought copper was partly due to a falling-off in shipments from Chile, while British Malaya was mainly responsible for the decrease, £644,000 in value, in our imports of crude rubber. Despite considerably increased imports from Nigeria, total purchases of tin ore and concentrates showed a decline this year. Imports of iron ore and scrap reflected the sustained activity of the iron and steel industry. A steep rise in purchases of machinery—mainly from Germany and the United States—may be attributed to expanding production in general and to demand for special types of machinery.

BRITISH EXPORTS
Month of May

Item and Measure	1934	1935	1936
Coal	'000 tons	3,648	3,668
Iron and steel scrap	tons	27,165	12,172
Pig-iron and ferro-alloys	tons	12,503	17,790
Railway materials	tons	15,753	4,574
Total iron and steel manufactures	tons	188,455	206,797
Textile machinery	tons	8,101	6,787
Total machinery	tons	29,857	33,983
Cotton yarns	'000 lbs.	11,272	11,677
Cotton piece-goods	'000 sq. yds.	150,645	158,156
Wool tops	'000 lbs.	3,760	3,811
Worsted yarns	'000 lbs.	3,176	2,495
Woollen tissues	'000 sq. yds.	4,722	4,198
Worsted piece-goods	'000 sq. yds.	2,335	2,570
Leather boots and shoes	doz. pairs	36,573	26,672
Leather	cwt.	14,676	22,219
Paper and cardboard	'000 cwt.	328	325
Locomotives (complete and parts)	tons	474	868
Motor vehicles and chassis	number	4,551	5,881

British exports of railway materials showed a welcome recovery compared with the previous year, and exports of locomotives and parts were also substantially above the corresponding 1935 figure. The prosperity of the woollen and worsted industry and the continued depression of the cotton industry are again reflected in the export figures. Coal exports are still suffering from the drastic curtailment of Italian purchases, but this factor has been partly offset by increased exports to other countries.

★ ★ ★

Shipping Freight Index.—As measured by the monthly index the general level of whole cargo shipping freights fell by 1.2 per cent. during May, following a rise of 0.1 per cent. in April. The current figure of 88.8 compares with 83.7 in May, 1935, and 83.4 in May, 1934. Details of the index number are as follows:—

(1898-1913=100)

	Average 1913	May, 1935	March 1936	April 1936	May, 1936
European waters	110.0	87.9	85.8	86.1	88.0
North America	113.1	81.7	90.4	90.9	89.0
South America	123.4	80.1	85.4	87.4	85.2
India	106.3	88.7	97.0	95.0	92.5
Far East and Pacific	117.4	79.2	87.9	87.3	85.8
Australia	127.9	84.6	92.6	92.6	92.6
TOTAL	116.3	83.7	89.8	89.9	88.8

Hull reports a continued limited demand for tonnage and easy rates. At Liverpool, from the River Plate chartering homewards has been moderately active, and from Montreal a fair interest has been maintained. Newcastle reports a slightly better enquiry for the Baltic. Southampton shows a continued improvement, and the April figures are considerably above those of April last year. There has been very little improvement at Cardiff, Newport and Swansea. At Glasgow the French, Bay and Mediterranean trades have been dull. The Baltic trade has been fairly brisk with rates firmly maintained, and in the Atlantic trades Montreal has been a little busier. Movements of the various sections are as follows:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	80.9	+3.1	South America:—		
Bay—outwards	104.6	...	Outwards	61.3	-4.6
Bay—homewards	91.9	+1.6	Homewards	109.1	...
Mediterranean:—			India—outwards	77.2	-1.4
Outwards	80.3	+2.2	India—homewards	107.7	-3.8
Homewards	89.2	+1.5	Far East, etc.	85.6	-1.7
North America	89.0	-1.9	Australia	92.6	...

Expressed as a percentage of the average for 1913, the complete figure of our index number for May is 76.3, compared with 77.3 for April and 71.9 for May, 1935.

Another "Queen Mary."—We learn as we go to press that Mr Chamberlain has announced his agreement "in principle" to the Cunard-White Star Line using funds available under the North American Shipping Act for the construction of a sister ship to the "Queen Mary." The decision is welcome. Since the economy of a large and fast ship depends entirely on a two-ship weekly service, the sooner the new ship is built the better.

OVERSEAS CORRESPONDENCE

UNITED STATES

THE SUPREME COURT'S NEW VERDICT

THE Supreme Court's decision on June 1st invalidating the New York State Minimum Wage Law for Women and Children promises to be the most consequential of the series of definitions of Governmental authority given by the Court during the past two years. The previous ones concerned the powers of the Federal Government, and, of course, preponderantly circumscribed them. Likewise they affected New Deal measures. The reactions to the previous decisions varied little. The Opposition applauded, and the Administration was forced to be silent after the cold reception which greeted Mr Roosevelt's bitter comment on the N.R.A. decision. The latest ruling did not, however, concern the New Deal nor Federal authority. It denied that a State had the power to establish minimum wages and questioned State efforts at industrial regulation in most forms. This is an especially stiff blow to the Opposition, which has held that, if regulation be needed, the States should do it. Mr Roosevelt coined a popular phrase by saying that the decision points to a kind of "no man's land" in which both the Federal and State Governments are powerless. In any event, the Opposition is not a little embarrassed, and some prominent figures in the Republican Party have urged their Convention meeting at Cleveland this week to propose a Constitutional amendment to enlarge the powers of the States. Whether or not the Opposition does attempt to "kidnap Thomas Jefferson," as it threatens to do on other issues as well, the decision greatly increases the probability that the Constitution will be an important centre of campaign discussion.

A continually favourable level of business is shown by current reports. Steel operations are forecast for this week at 69.5 per cent. of capacity, compared with 68.2 per cent. during the previous week. General Motors sales of cars and lorries in May set an all-time high for that month and the same was true of May sales of Montgomery Ward. Carloadings declined in the week of May 30th with the holiday, but remained 18 per cent. ahead of a year ago, as in the preceding week.

WALL STREET AND THE NEW MARGIN RESTRICTIONS

There is increasing discussion of the current shift of security market operations abroad designed to escape the margin and other restrictive regulations now in force. Reports are current that already operations in American securities abroad equal a third or a fourth of the volume here and that the proportion is rising. Whether an important movement of funds is implicit in this situation, if it is as consequential as stated, is a question; thus far evidence is lacking. At the same time, the Reserve authorities are reported to be less adamant about the equity required from brokers than from their customers.

The Treasury's June offering of securities was well received. Subscriptions for the \$1,000 millions of securities offered for cash totalled \$7,054 millions. Of this, total subscriptions for the \$600 millions of 2½ per cent. 15-18-year bonds aggregated \$4,282 millions; and those for the 1½ per cent. five-year notes \$2,772 millions. Allotments to subscribers for the former were 14 per cent. and for the latter 15 per cent. The financing also included refinancing of the notes maturing on June 15th and August 1st. The holders were given the option to take either bonds or notes, and showed a marked preference for bonds. The popularity of the new securities, which were promptly quoted at premiums, demonstrates the continuing ease of money and the banking demand for earning assets. The Treasury does not expect to do any further financing until September, except for the weekly bill offerings. The cash balance already built up, plus the addition by this operation and further small accretions from the weekly bill offerings, is expected to be adequate to care for the deficit and the cashing of the bonus bonds which are to be distributed to veterans on June 15th.

NEW YORK, June 8.

FRANCE

THE SENATE AND REFORM LEGISLATION

THE Conservative Senate will follow the Chamber in voting M. Blum's measures of social reform. The Senate Committee of Finance, which has been the great fortress of deflation and Budget economies, has surrendered; and it accepts the abrogation of certain decree-laws, though it does not know what new charges this decision implies. M. Blum has declared that he is unable to fix them. Parliament knows well enough that the country supports the economic experiment of the "Popular Front." Resistance is therefore impossible unless and until public opinion has changed as the result of keen disappointment. It should be noticed, however, that if the Socialists have been outdone by the wild claims of the Communists, the Communists seem to have been in their turn outdone by the Trotskyists. The task of the Government in maintaining harmony between its supporters of the Right and of the Left accordingly looks more and more difficult.

For the time being, however, the strikers have resumed work and social peace has been re-established. The next task will be to reconcile the new social charges with the necessity for economic equilibrium, both in private and public affairs. Since wages have been increased, profitability must somehow be safeguarded and fiscal receipts increased. It is all-important to estimate the repercussion of the increase in wages on costs and selling prices—a question which is here being obscured by the various theories and interests concerned.

Pursuing his campaign for devaluation, which is also a campaign for the maintenance of profitability and economic liberty, M. Paul Reynaud, the leader of the devaluationists in the Chamber, now declares that the recent social laws will increase costs by 35 per cent., although French prices are already the highest in the world. The estimate of 35 per cent. comes from M. Jouhaux, the leader of the Confédération Générale du Travail. But M. Blum, starting from his "no devaluation" point of view, contends that this rise of 35 per cent. in costs will entail a rise of only about 4 or 5 per cent. in selling prices, while M. Gignoux, a writer in the Conservative Press, expects a rise of 5 to 8 per cent. A rise of 4 to 5 per cent., M. Blum says, will be rapidly absorbed by a revival of production and trade, since the increased charges will be distributed over a greater number of manufactured goods.

This argument is not without substance. But the 35 per cent. estimate is premature, first because the application of the social laws will vary considerably from industry to industry, and, secondly, because the rise in prices will depend not merely upon costs but also on demand. For the increase of incomes only affects the workers. The incomes and consumption of the rest of the public will not be increased; and it may even be diminished by the *crise de confiance*, the flight of capital, and the possibility of greater saving in expectation of a rise of prices and new social disorders.

THE "MYSTIQUE" OF THE FRANC

The whole difficulty of the problem lies in the internal contradictions of the French political and economic situation. For instance, all members of Parliament (except the 72 Communists) are, in fact, converted to devaluation, but the "mystique" of the franc is so great that a proposal for devaluation by M. Reynaud would not obtain more than perhaps twenty official votes; so that M. Reynaud himself, in spite of his staunch support of devaluation, will probably not even table this proposal in the Chamber. Again, the whole country considers devaluation inevitable; yet the holders of the 40,000 million francs of hoarded franc notes are not exchanging them against gold or other "real" assets. But if these huge sums of money remain hoarded now, will they emerge in answer to future appeals for confidence by the Minister of Finance, M. Auriol? Will they not perhaps refuse to circulate as stubbornly as they did at

the time of the reiterated appeals of MM. Germain-Martin and Marcel Régnier?

Thus M. Blum has embarked on the policy of higher wages and prices, which would normally imply a revival of business or else lead to a control of prices and the exchanges. But M. Aurion insists that he is not moving towards a monetary adventure comparable with that in which Dr. Schacht has involved Germany. He rejects exchange control. He wishes to mobilise, by restoring confidence, the 40,000 millions of hoarded francs, and he believes the exchange rate will remain stable, on the ground that all capitalists who wished to take their money abroad have already done so. But, in fact, if the hoarded funds do not come to the rescue of the Government, economic recovery will not start and the end of the Government's experiment will be an increased debt owed by the State to the Bank of France, and a reduction of the competitive power of French producers in international markets—in a word, an intensified crisis for France's public and private finances.

PARIS, June 18.

GERMANY

ANSWERING THE QUESTIONNAIRE

GERMANS are at present engaged in an edifying Peace Drive, and are even calling their new Olympic Games village and bridges "Peace" construction. Having a characteristic faith in the magic of such labels, they cannot conceive how anyone could doubt their honesty. They remark that the only threat to European peace in the last half-year has been the Anglo-Italian quarrel, the responsibility for which, not being interested in Abyssinia, they do not seek to determine. The report that London is impatient at the delay in replying to Mr Eden's *questionnaire* has not been well received either. There was a very long delay, it is retorted between Herr Hitler's offers of March 7th and the presentation of the *questionnaire*; and it must not be expected that so many questions, even if inspired by *naïveté* and *Weltfremdheit*, could be answered in the first innocence of a midnight dream. The uncertainty of the League's attitude to Abyssinia is one important ground of German dilatoriness.

It is probably an error for London to assume that Germany's return to the League would make that institution a more efficient peace instrument. The latest failure of the League—as Germans see it—was not due to the absence of certain Great Powers but rather to the presence of certain other Great Powers. There is no reason to think that Germany would have shown more vigour against Italy than was shown by Great Britain and France. If Germany now re-enters the League her aim will be to share in the Great Power policy, from which when formerly at Geneva she was excluded by her military weakness. The newly-repeated British devotion to the League as an instrument of security is not taken seriously here. To critical German minds League policy seems destined always to fail. The League, it is argued, was based on assumptions of progressive international improvement or improvability which do not accord with history.

There is once again a serious shortage of meat, and prices have risen very much. Eggs can hardly be bought. Butter, however, is now plentiful. Butter production in 1935 is returned at 435,000 tons, as against 395,000 tons in 1932, and net imports as 70,995 tons against 69,300 tons. The cereal crops report for June 1st is very good; the "conditions index" (3 = good, 2 = middling), was for winter rye 2.4 as against 2.7 in the same month of the best recent year, 1933, and winter wheat was 2.4 against 2.6. The fodder crops are also satisfactory. Cereals, however, are very largely influenced by June weather, and so far this has been very bad. The total retail trade turnover in April was 9 per cent. above that of April, 1935, but business in the department stores again declined.

The number of unemployed decreased in May by 272,000 to 1,491,200. Only 200,000 unemployed now receive insurance pay; while 640,000 draw "crisis relief" and 246,000 poor law relief. The extent of occupied capacity in

industry (per cent. of occupied working places) in the past four years has moved as follows. If seasonal changes are eliminated, July, 1932, was about the lowest point of the depression:—

	July, 1932	April, 1936
All industries	41.4	67.3
All capital goods	36.4	71.3
All consumption goods	47.9	62.2
Heavy iron and metals	42.1	85.6
Machinery	36.9	82.2
Vehicles	28.9	84.1
Textiles	57.2	71.4
Building	16.0	66.5

In the building industry (end March) the unemployed numbered 269,400, as against 931,900 in 1932. The activity in building is very largely due to public orders; and much of it, e.g. re-armament construction, is temporary. Nazi policy, which in general aims at a static economic condition, seeks to temper the extremes of trade cycles. It is hoped that when the re-armament and work-creation stimuli disappear, no marked general trade decline will ensue. One favourable factor is the heavy accumulation of reserves by joint-stock companies, whereby private investment may be financed as soon as the existing prohibitions on expansion are withdrawn. Public finance is being officially influenced from the same viewpoint. For the municipalities the Reich Government recently issued an Ordinance prescribing the accumulation of reserves for the future financing of works on the eve of depression. In general these reserves are to be fed out of ordinary Budget resources; and until the prescribed reserve sums are accumulated no reduction of taxes may take place. This is officially called a "trade policy of compensation."

ACTIVITY IN HEAVY INDUSTRY

The steel industry continues to be active, and there are reports of increasing foreign orders for machinery. The machine tools trade is almost fully engaged. The main demand is domestic, but exports this year have so far risen about 50 per cent., despite a heavy fall in the average price per machine. The export of hand tools has also considerably increased. Of all industries, the cement trade has recovered most; monthly output of cement has multiplied fivefold since early in 1932, and exports have more than doubled. The demand for foreign wool continues to be heavy, and the Bremen market cannot satisfy it.

The I.G. Farbenindustrie announces an unchanged dividend of 7 per cent. for 1935, thereby disappointing Bourse expectations. Gross profit was Rm. 612 millions, as against Rm. 565 millions in 1934; and net profit Rm. 56 millions, against Rm. 53 millions.

The imposition on German products of countervailing anti-dumping duties by the United States came as a surprise. Only a fortnight ago German official quarters were threatening a further reduction of imports from America owing to dislike of Washington's policy. Germans object with reason that the notion of "dumping," always an absurdity, has become meaningless in consequence of currency changes. The German export subsidy system involves, it is true, selling to abroad at below production cost; but the currency depreciations of other countries, it is pleaded, make it possible to "dump" without selling at below production cost.

BERLIN, June 15.

BELGIUM

THE REXISTS AND M. VAN ZEELAND

THE elections of May 24th weakened the three traditional parties; and the Rexists, a new anti-Parliamentary group, as well as the Communists and the Flemish extremists, gained an unexpected success. Do these results mean a defeat for the Government which has been in power for the last year? The best-informed observers say it does not. In fact the Communists and Socialists together only secured 38 per cent. of the votes, against 40 per cent. in 1932. The axis of Parliament has been pushed slightly to the Right. Moreover, the success of the Rexists, who now have 21 seats in Parliament, was obtained by attacks on the Government in power before devaluation and not by attacks on the van Zeeland Government. The Rexists

denounced scandals which were alleged to have taken place during the period of State intervention made necessary by the previous deflation.

The interference policy of the Government during the deflationary period seems nevertheless to have been successful; for the collapse of efficient enterprises was thereby avoided. The big banks and important industrial concerns were all able to resist the crisis. Besides, the interference policy has not involved the expenditure of large sums of public money. The State made available 6,000 million francs; and repayment of these debts is now almost complete. It is estimated that the losses will not exceed 100 million francs, and that they will be covered by the reserves of the official organisations which supervise these operations.

In any case, the elections are not a condemnation of the policy followed by M. van Zeeland. The absence of a movement to the Left shows that there has been a relaxation of the tension; and the fact that political strife is once again prevailing suggests that economic difficulties are less keen. The economic situation, however, though improved, remains difficult, especially among certain classes of the workers. Retail businesses, in particular, are not flourishing.

After the elections the van Zeeland Government resigned, as is usually done, and the King asked M. Vandervelde, to form a new Cabinet. He failed. After a fruitless endeavour, M. van Zeeland succeeded on a renewed attempt; indeed, he was obliged by the social unrest in the industrial areas to adopt an immediate solution. One may regret M. van Zeeland's departure from the Foreign Office. He will now only hold the chairmanship over Cabinet meetings, having left the Foreign Office to M. Spaak, a Socialist deputy, less than forty years old, who showed considerable ability in the first van Zeeland Ministry.

THE STRIKE MOVEMENT

The strike movement which emerged in France and caused a temporary breakdown of industrial activity there has had its effect in Belgium, though the situation is entirely different in the two countries. Unemployment still prevails without any diminution in France, while in Belgium it has fallen by 50 per cent. in fifteen months. Wages have not been reduced any further in Belgium; they have even been advanced a little on the average. Nevertheless, it has frequently happened in the past that social unrest and even riots have extended from France to Belgium over the very thin frontier. The French papers are read throughout Belgium.

The Government is resolved to make all concessions to the workers which are compatible with the economic position of the country. It will advocate paid holidays and will improve the unemployment insurance system and make it compulsory. Urged by the Socialists to establish the 40-hour week, the Government has promised to examine the question, particularly in relation to certain industries. The Government is also determined to maintain order, and has already effected the evacuation of a few factories which had been occupied by the strikers in the same way as in France.

In general, the improvement of the economic situation should allow a prudent increase of wages. This will mean a certain rise in the cost of living, but the general price level in Belgium can bear a small increase. Experts are of opinion that it would have been preferable to wait a little longer on account of monetary insecurity in Europe, but circumstances have made it necessary to go quicker. If the movement is kept within reasonable limits, it should not be injurious to the economic convalescence of the country.

The business trend was still upwards when the strikes began. The collieries, heavy industries and building are doing particularly well; and general unemployment has fallen to a low level not thought possible a few months ago. Industries producing for home consumption have been slightly more affected by the hesitancy felt after the military occupation of the Rhineland. But the state of the public finance remains very satisfactory. Of the surplus realised by the re-valuation of the gold reserve, only the amount required for the repayment of public debts has been used. Belgium is thus likely to overcome the present difficulties without very much friction.

HUNGARY

PUBLIC OPINION AND THE LEAGUE

THE Budget for 1936-37 was voted in the House of Deputies without alteration. During the general debate, the Foreign Minister, M. de Kánya, reiterated the desire of the Government to work for a peaceful reorganisation of the unsatisfactory situation in the Danube Valley. The corner stone of Hungary's foreign policy, he stated, was the preservation of friendships and not unilateral alliances. He also reiterated Hungary's adherence to the League of Nations. Public opinion here sincerely desires an improvement in British-Italian relations, as it is believed that a thorough understanding between these two countries is absolutely necessary to the solution of the Danubian problem.

Trade returns for the first five months of the year show an import surplus of 6.1 million pengő, against an export surplus of 15.7 million pengő in the corresponding period of last year. Exports have increased from 162.8 million pengő to 178.8 million pengő, thanks to a rise in prices rather than to an increase in volume. Imports have risen by more than 25 per cent. from 146.9 million pengő to 184.9 million pengő. The size of the import surplus shows that in spite of the scarcity of foreign exchanges, Hungary was able to replenish exhausted stocks of raw materials. Imports of maize necessitated by the bad crops of last year, and the drop in wheat exports were chiefly responsible for the import surplus. There is little doubt, however, that the import surplus will disappear during the rest of the year. Crop prospects are promising.

DR. SCHACHT'S VISIT

The impending visit of Dr. Schacht at a time when a commercial delegation from Germany is negotiating here for the adjustment of the existing clearing agreement, is awaited with great interest. The German market has become increasingly important, especially for slaughtered animals and other food products which Hungary cannot sell elsewhere at satisfactory prices. On the other hand, being a debtor nation, Hungary cannot afford the luxury of extending merchandise credits to Germany, and it is believed that the forthcoming negotiations with Dr. Schacht will centre upon the use of the 25 million pengő balance, which accrued as the result of an Hungarian export surplus.

Hungary's clearing with Austria, on the other hand, shows a heavy deficit. Instead of an export surplus of 50 per cent. of the value of imports, as provided in the treaty, imports from Austria have actually exceeded exports to Austria in the first five months of this year. Both Italy and Switzerland bought more wheat from last year crops than was agreed, while Austria did not exhaust her quota.

In spite of political and financial difficulties in foreign countries, internal recovery continues. The purchasing power of the rural districts has risen as a result of higher

commodity prices and lower debt charges. Industrial employment is better than in any year since 1928, and in some industries, notably in textiles, production is at a record height. The stock market is very firm. Industrial shares are at their highest level for many years, and yield about 3.5 per cent. on the average. There has also been a revival in the bond market.

Owing to international uncertainties the Hungarian authorities aim at prolonging the existing agreements with the various groups of foreign creditors for another year, in the hope that meanwhile the currency position will further improve so that the way will be open by then for a general settlement. Thus the standstill agreement which will lapse on June 30th will be renewed for another year, and the Finance Minister, who is soon going to London to negotiate with the League Loan Committee, will offer 50 per cent. payment in original currency for the next coupons. Actually a 50 per cent. payment on the League Loan coupons corresponds to 3½ per cent., whereas other creditors, short-term and long-term creditors alike, at best receive 2 per cent. interest.

BUDAPEST, June 15.

ARGENTINA

FALL IN EXPORT SURPLUS

THE official trade figures for the first four months of the present year continue to show a fall in the export surplus:—

FIRST FOUR MONTHS OF			
	1935	1936	%
	\$	\$	
Imports	377,553,382	377,038,505	— 0.1
Exports	573,342,128	515,134,504	— 10.2
Export Surplus	195,788,746	138,095,999	

The decline in the value of imports has been negligible, and the tonnage figure actually shows an increase of 13 per cent. over last year. Great Britain continues to maintain her position as a seller to the Argentine; and the formerly rapidly increasing influx of Japanese goods has apparently slowed down, as this year's figures show little change over last year.

Imports of tobacco and textiles show an appreciable reduction as compared with last year; but imports of machinery and vehicles are considerably higher. The import of motor vehicles from Great Britain is still relatively unimportant, compared with that from the United States; but there is no doubt that some headway has been made during the last few years. The mass-produced, high-powered, cheap American car, however, is eminently suited to this country, and as sales are large, good service, an important point in out-of-the-way places, can be given.

As usual, regrettable delay in the presentation of the Budget to Congress is the subject of local comment. The Budget is supposed to be placed before Congress during the first month of the ordinary session. During the last few years it has been rushed through at the last moment with a host of other decrees.

A decree has recently been passed by the National Government authorising a scheme of road construction throughout the country at a cost of \$300 millions. That more and better roads are necessary, there is no doubt. Unfortunately, however, the sums hitherto expended on roads have often been used to build highways running parallel to the already existing railways instead of constructing roads connecting outlying districts with the railway stations.

The anomaly of keen competition for business and comparatively high deposit rates still continues in the money market. Argentine internal bonds are firm. Bankruptcy figures for May show a slight reduction in liabilities, as compared with those for the same month of the previous year; and the total for the first five months of 1936 is \$24,600,000, compared with \$38,600,000 during the same period of 1935. This improvement is most satisfactory.

The revenue and expenditure figures for the first five months of 1936 show a substantial improvement over those for the same period of 1935:—

	1935	1936	\$
Cash revenue	349,311,000	394,789,000	+45,478,000
From credit operations	65,291,000	55,679,000	— 9,612,000
Total	414,602,000	450,468,000	+35,866,000
Expenditure	427,340,000	446,329,000	+18,989,000
Surplus or Deficit —12,738,000		+4,139,000	

The improvement in revenue is chiefly from inland and various revenue, and the extra expenditure is mainly attributable to salaries.

BUENOS AIRES, June 3.

CANADA

REVISION OF OTTAWA TO BE DISCUSSED

MR. DUNNING, the Minister of Finance, hopes to leave for London at the end of June to begin discussions with British Ministers about the revision of the Anglo-Canadian Ottawa Agreement. In view of the progress which has been made with parliamentary business, Mr Mackenzie King, the Prime Minister, may be able to accompany him. But this may be prevented by a controversy which threatens to develop between the Government and the Senate over the proposed constitutional amendments designed to enable the Federal Government to assist in the rehabilitation of Provincial finances. In the Commons the Conservatives did not divide against the resolution which is to be the basis for a petition for the amendments. In the Senate, however, it was strongly criticised by prominent Conservatives, who argued that the proposed changes would impair the financial arrangements underlying the Confederation and permit ruinous competition between the Provinces in sales taxes, which would soon become the equivalent of inter-Provincial tariff walls. Eventually the clauses conferring upon the Provinces the right to levy sales taxes and other indirect taxation were struck out by the large majority of 50 to 10. The effect of this vote is to block a change which the Government holds to be essential for the financial salvation of the Provinces. The Senate is also threatening to alter the Government's bill for changing the system of management of the Canadian National Railways.

Meanwhile, a bill drafted for the avowed purpose of fulfilling the Government's election pledge to bring the Bank of Canada under public control is before the Commons. It proposes that the capital of the bank, now fixed at \$5,000,000, should be doubled; that the Treasury should be authorised to expend funds sufficient to purchase 51 per cent. of the total outstanding stock when it is increased; and that the Government should be empowered to nominate four additional directors, who, reinforcing *ex-officio* directors like the Governor and the Deputy-Minister of Finance, would give it a majority control on the board. The bill has encountered sharp criticism from all quarters of the House. Mr G. G. McGreer, the Liberal Mayor of Vancouver, said that it would still leave the control of currency and credit in the hands of the financial oligarchy, which had been dominating Canada's economic fortunes.

MR ABERHART AND THE BONDHOLDERS

Ministers were taken greatly by surprise when, following a conference in Ottawa with Mr Aberhart and some of his Ministers, at which the latter seemed to show a more conciliatory spirit, word suddenly arrived from Edmonton that the Provincial Government has notified its intention to reduce, through exercise of its powers under the Treasury Act, interest on all outstanding bonds of the Province, which now averages nearly 5 per cent., to 2½ per cent. A suspicion prevails that the action of the Aberhart Ministry is not necessarily irrevocable and that, having thus frightened bondholders, it may be prepared to negotiate for a voluntary conversion on more generous terms.

The latest crop report of the Bureau of Statistics asserts

that except in the two insular regions, Prince Edward and Vancouver Islands, the outlook for spring-sown crops is "rather unfavourable and uncertain." By its account conditions in the northern districts of the prairie country are reasonably good and the early growth of grain satisfactory; but in the central and southern areas abnormally high temperatures and lack of rain in the last ten days of May gave grain prospects a decided setback which has only been slightly corrected by showers in the opening days of June. On the other hand in most regions the hay crop and pastures have rarely been in better condition at this date.

The area of autumn wheat (538,000 acres) surviving for harvest is virtually unchanged; but the area of spring wheat is placed at 24,354,000 acres, as compared with 23,560,000 acres in 1935 and 26,646,100 acres in the peak year, 1932. There is little change in the intended acreages for oats and spring rye, but the acreages destined for barley and flaxseed are up, respectively, 4 and 10 per cent.

The level of business is still being maintained at a substantially higher point than a year ago, but there has been no marked advance for some weeks past. The economic indices of the Bureau of Statistics have moved as follows:—

	Car-loadings	Wholesale Prices	Bank Clearings	General Index
Week ending—				
May 9, 1936 ...	79.3	71.9	101.4	107.4
" 16 " ...	74.7	71.9	94.4	105.5
" 23 " ...	73.2	71.8	107.7	107.0
" 25, 1935 ...	70.9	72.4	93.8	101.8

The outlook for the second half of the year is rather clouded by the uncertainty of crop prospects. Manufacturers are also afraid that the increase of the sales tax may curtail business. However, there has been a gain in employment as the result of the general resumption of outdoor work, and the Bureau's employment index for May 1st was at the highest point since May 1, 1931. Railway earnings have shown a marked improvement, and an effort is being made to stimulate passenger traffic by lower fares. The banks have also reduced their rate of interest on savings deposits from 2 to 1½ per cent.

Foreign trade continues to grow. Domestic exports and imports for April were, respectively, valued at \$57,422,847 and \$42,320,032, compared with \$47,313,862 and \$36,636,702 in April, 1935. The controversy with the United States about liquor exports has been settled and the trade treaty with the Republic is bearing fruit in various directions; for example, exports of cattle to the United States up to May 14th had risen to 94,356 head, compared with 64,869 head in the previous parallel period.

OTTAWA, June 5.

BOOKS AND PUBLICATIONS

MR ROOSEVELT'S CHALLENGE

GOOD books on the New Deal have been few, mainly because the great majority of them fail to see the wood for the trees. *The present is one of the best, particularly for English readers who have only followed Mr Roosevelt's exploits cursorily in the newspapers. It is written by two Englishmen who have spent much of the last three years in America, and who are well equipped to appreciate both the economic and historical issues raised by the New Deal.

In an admirable historical introduction the authors bring out both the urgency of the social conflicts that came to a head in America in the Great Depression and the appalling difficulty of meeting them in the existing political and constitutional context. The central conflict arose from the fact that America's party system and constitution had been devised in the days when the "frontiers" of geography and class hardly existed at all. Even in the nineteenth century it was possible for any energetic American to find new land, or rise to a new class; and highly

LETTER TO THE EDITOR

SANCTIONS AND ITALY

TO THE EDITOR OF THE ECONOMIST

SIR,—If the subject of sanctions has not already been ventilated on the following lines, I should appreciate the courtesy of your columns for that purpose.

(1) The operative force, if any, contained in Sanctions, is presumably the starvation effect hoped to be produced in Italy by depriving her or reducing her supply of certain commodities.

(2) The original object of Sanctions was stated to be to stop the Italian war against Abyssinia. This war now being over, an alternative object for Sanctions should be found, if they are to be continued.

(3) Alternative objects might be (a) To force Italy to hand over Abyssinia to some other country. This other country might be Abyssinia itself, or some other nation. It is not reasonable to expect Sanctions to force Italy to hand the country back to the Abyssinians, when Sanctions have already failed to stop them taking it. This, therefore, cannot be reasonably regarded as a reason for continuing Sanctions. Can they therefore be expected to force Italy to hand over the territory to some other nation or nations. If so, what nations would be prepared to accept Abyssinia, and to which also would Italy agree to give it? I doubt if a justification for the continuance for Sanctions could be found on these lines. (b) Sanctions should be continued just as a plain punishment on Italy for taking Abyssinia. This object only seems to need stating to be regarded as ridiculous. (c) The object of the continuance of Sanctions is to teach Italy the meaning of the word "justice." If so, it is a very worthy object, but one may surely ask is justice learned by being starved, and in this case, since all nations and individuals are likely to argue that they could all afford to be better acquainted with the meaning of justice, surely the common sense thing to do would be for all to diet voluntarily.

I raise this issue, as the wisdom of continuing Sanctions is being debated in the ensuing weeks, and it would seem wise that all should be clear on the following:—

- (1) What are Sanctions?
- (2) What is the nature of the operating force contained in them?
- (3) What precise object is hoped to be achieved by their use?
- (4) Is the object a proper and worthy object?
- (5) If so, is the essential nature of Sanctions such as will inherently ensure the achievement of the desired end, or, alternatively, are such means and the end in view in no way related?

Ludwick Corner,
Welwyn Garden City,
Herts.

Yours faithfully,
F. MURPHY.

individualist social ideas and institutions resulted. By the time of the New Era and the Great Depression, however, the two frontiers had closed in, and it was no longer possible to find new land and no longer easy to rise to another class. But the old constitutional strait-jacket remained.

In this anomalous and critical situation, the authors point out, Mr Roosevelt was bound to embark on "bold,

SECURITY FIRST

persistent experimentation." They divide this experimentation into four parts: monetary policy; the organisation of industry; agriculture and relief; and taxation and social services. Mr Roosevelt's monetary policy, they think, began well with the devaluation of the dollar (and observers of M. Blum's difficulties will certainly accept this judgment); but he missed the opportunity to nationalise the banking system outright immediately after the original banking holiday. The attempt at industrial organisation contained in the N.R.A. is regarded by the authors as rather incoherent, and they greatly regret the eventual failure to establish a really effective trade union organisation—perhaps the most crying need in the whole American social structure. Agricultural policy is recognised to have been the Administration's main success, and relief measures, though chaotic, at least to have saved a critical situation and helped to expand purchasing power; the Tennessee Valley Authority in particular seems to the authors worthy of praise. But they deplore the failure of the New Deal so far to achieve any really adequate re-distribution of wealth; and they are of the opinion that the financing of the new social security schemes more extensively out of the Federal Budget, combined with much heavier taxation on the rich, is the proper line of advance.

In conclusion the authors point out the ironic moral of the situation. The American people have declared indisputably in favour of social reform; and the American constitution has declared indisputably against it. They believe that Mr Roosevelt did not sufficiently realise how emphatically his policy was a challenge, and they are accordingly left with the question: "Will Mr Roosevelt, if re-elected, have the courage to secure adequate constitutional powers and to issue the challenge again?"

SHORTER NOTICES

"Report of the Director of the International Labour Office: Twentieth Session, 1936." (London) I.L.O., 12 Victoria Street, S.W.1. 87 pages. 1s. 6d. net.

Mr Harold Butler's report for 1935 is cautiously optimistic, though it rightly contains many warnings. The index of the world's industrial production is back at the 1929 level, and it has been exceeded in Chile, Denmark, Finland, Greece, Hungary, Japan, Norway, Roumania, the United Kingdom and Sweden. Expansionist monetary policies, and to some extent armaments and temporary tariff booms, have increased national production in the leading countries. A gradual improvement in prices has occurred, happily most marked in the case of primary products (Poland and Holland appear to be the exceptions); unemployment fell sharply in 1935, except in the gold bloc, where it rose sharply; and the quantum of international trade continued to rise.

Mr Butler, who only returned from America in February, thinks that American commercial policy "represents the first bold effort on the part of a great industrial nation to stem the tide of economic nationalism," in virtue of the President's power to negotiate treaties reducing tariffs by as much as 50 per cent. But he perhaps over-estimates the effects of the nine treaties already concluded.

Mr Butler's chapter on unemployment is a valuable review of the situation and of the activities of the various States' methods of handling the problem. The degree to which the national economies of Germany and Japan have become dependent on State armaments programmes is strikingly demonstrated. Mr Butler evinces here, as in the chapter on social and industrial policies, a belief that the bulk of the unemployment problem is caused by the rapid introduction of new labour-saving machinery; against which he urges the expedient of shortened hours—an experiment about to be made in France. In a section on "planning," he issues a warning, adducing Germany and Italy as examples: "once the principle of State control is admitted, the method of its application is likely to be similar."

In an interesting concluding chapter, "The Task of Reconstruction," the Director rightly advocates action to raise consuming power, citing the conclusions of eminent dieticians about the deplorable extent of malnutrition; and he also urges a thorough inquiry into "the raw materials question"—if only because so much nonsense, if nothing worse, arises from misconception of that question. His own conclusion is: "The only way out of our present troubles is by restoring as far as may be the free exchange of goods, services, money and population, upon which pre-war prosperity was founded."

"Holding Companies and Their Published Accounts." By the late Sir Gilbert Garnsey. Third Edition by T. B. Robson. Gee and Company. 362 pages. 17s. 6d. net.

Mr Robson, who collaborated with the late Sir Gilbert Garnsey in the preparation of the second edition of this important work, has undertaken the revision for the third edition. The principal changes affect the chapter on taxation problems connected with holding companies. Like earlier editions, the present volume contains a valuable appendix illustrating current holding company accounting practice from the published balance sheets of British, American and European companies.

The author, while acknowledging that the 1929 Companies Act marked the first step in procuring more informative company accounts, believes that the obligatory supplementary information which accompanies the legal balance sheet should be extended, and the directors' discretion reduced. After the doubts recently cast on the truth and correctness of the view derived from many company accounts, this statement from a professional quarter comes as a welcome confirmation. "Legal accounts are not always drawn up . . . to disclose facts which might with advantage be disclosed to shareholders." The limitations of the Statement under Section 126 (dealing with the treatment of subsidiary companies' profits for the holding company's accounts) are also discussed, with thirty-four examples, most of which are models of unenlightenment to the average shareholder. Sub-subsidiary companies, moreover, fall outside this Section.

To the intelligent investor, this plea for more adequate information will be as welcome as the detailed and adequate discussion of the technical accountancy problems involved.

MONEY AND BANKING

HOLLAND AND THE GUILDER

WHATEVER befalls the franc in the immediate future, it is certain that any abandonment by France of the free gold standard will spell the immediate break-up of the gold bloc. Both Holland and Switzerland will need to shape their monetary policy anew, and the recent difficulties of the guilder suggest that this fact is already well appreciated in Holland. It may be timely, therefore, to consider the political and economic background of the guilder.

Holland's position is a paradoxical combination of serious weakness and great strength. Among her chief assets are a sound and well-managed banking system, one of the most highly developed money markets in Europe, and a Government whose credit still stands high. She has had, too, an ample margin in hand with which to operate the gold standard on strictly orthodox lines. Each crisis with its heavy gold loss has been dealt with by raising Bank rate. It is significant that so far the orthodox remedy has proved successful, for the recurrent crises have been surmounted and part of the gold losses have been recovered during subsequent months. All this affords convincing testimony to Holland's excellent credit and sound technical skill.

On the other hand, Holland has for several years been experiencing all the troubles of a country with an over-valued currency—a high internal price level, dwindling foreign trade, severe unemployment, devitalised production, trade and revenue and an unbalanced Budget. The deterioration of her position is revealed in the series of tables which follow. The first presents a simple comparison of British and Dutch prices:—

PRICES AND COST OF LIVING
(September 18th, 1931=100)

	England		Holland		Sterling Exchange Rate
	Wholesale Prices	Cost of Living	Wholesale Prices	Cost of Living	
Dec., 1933 ...	105.3	98.0	84.6	94.1	Fl. to £ 8.14
Dec., 1934 ...	108.4	99.3	84.6	91.8	7.29
Mar., 1935 ...	109.0	96.0	82.4	90.2	7.13
June, 1935 ...	112.7	98.5	82.9	89.6	7.23
Sept., 1935 ...	114.5	100.0	84.2	89.5	7.25
Dec., 1935 ...	117.9	101.4	85.2	90.2	7.25
Dec., 1936 ...	117.3	99.3	83.8	...	7.30
Apr., 1936 ...	117.5	99.3	83.3	...	7.28

Though it is difficult to make a precise calculation of the over-valuation of the guilder against the pound, the present margin between the wholesale price index numbers and still more between the cost-of-living figures is far from being equal to the depreciation of 40 per cent. in the exchange value of sterling against the guilder. During the past three years, further, wholesale prices in Holland have shown practically no tendency to rise. They have shared neither in the general recovery of the United States, Belgium and the sterling area, nor in the inflationary recovery of France. Other economic indices confirm the general impression of a stagnant economy:—

ECONOMIC INDICES

	Im-ports*	Ex-ports*	Import Surplus*	Unem-ploy-ment	Produc-tion Index	Ord. Share Index
	Fl. millions			%	1928 = 100	1921-25 = 100
Dec., 1933	326	178	148	40.0	70.9	37
Dec., 1934	250	177	73	37.4	72.8	28
Mar., 1935	226	160	66	37.0	69.0	34
June, 1935	229	159	70	32.9	69.0	33
Sept., 1935	227	174	53	35.4	62.2	30
Dec., 1935	253	183	70	40.7	71.6	34
Mar., 1936	233	156	77	37.7	71.6	39

* Aggregate returns for the quarter ending with the months specified in the table.

A considerable contraction in the import surplus since 1933 has been secured at the cost of a striking reduction in the total external trade turnover. Imports have been lowered by tariffs and other restrictions, but the latter have served to maintain a high internal cost of living. Production has recovered somewhat during the last few months, and ordinary share prices have shown some response to this development, but unemployment remains severe. One reason for this is that Holland's Premier, M. Colijn, has refused to consider devaluation pending a thorough reorganisation of Dutch industry. This reorganisation has now been carried out, and its drastic character is suggested by an estimate that, in spite of the over-valuation of the guilder, Dutch shipbuilding costs have been brought within 8 per cent. of British costs. On the other hand, rationalisation has undoubtedly reduced the demand for labour and accentuated Holland's unemployment problem.

The position of the Dutch East Indies has improved during recent years, probably to a greater extent than that of Holland. The East Indies produce primary materials such as tin, rubber and tea, whose prices have shown impressive recovery in the last two or three years. Their rise, however, has been based on a regime of restriction, which has reduced the volume of production and sales below a normal level. In any case, Holland herself derives only secondary benefit from the recovery in the Dutch East Indies. Dividends and other income accruing to Holland may be higher, but Dutch employment obtains little direct assistance thereby. Again, while the Dutch East Indies' Budget is now approaching the point of balance, the stage has not been reached at which colonial finances are a source of revenue rather than a drain upon the home Budget.

Our final table deals with Holland's monetary position:—

NETHERLANDS BANK Fl. millions					
	Gold	Discounts and Advances	Note Circulation	Deposits	Bank Rate
Dec., 1933 ...	922	178	912	230	2.5
Dec., 1934 ...	842	175	913	146	2.5
Mar., 1935 ...	813	154	848	163	2.5
June, 1935 ...	627	183	809	48	4.0
Sept., 1935 ...	536	278	819	42	6.0
Dec., 1935 ...	643	173	809	50	3.5
Mar., 1936 ...	714	152	781	121	2.5
Apr., 1936 ...	709	152	766	137	2.5
May, 1936 ...	684	159	763	121	3.5
June 15, 1936	589	181	752	62	4.5

Although the Netherlands Bank's gold reserves have now dropped to Fl. 589 millions, the position remains sound. There is no big increase in discounts and advances, which would indicate either internal banking stringency or heavy Government borrowing. Nor is there any expansion in the note circulation, which would point to hoarding. From the financial angle, the recent pressure on the guilder has remained well within bounds, and is obviously no more serious than would normally have ensued from the general *malaise* in France. There are world-wide doubts of the gold bloc's expectation of life and of Holland's future monetary policy. There are no doubts of Holland's financial stability.

Politically Dr. Colijn commands general confidence. When the Catholics turned him out of office last August it quickly became clear that he was irreplaceable, and he returned after a few days' interregnum. He is not rigidly opposed to devaluation, but he played a prominent part in the formation of the gold bloc in 1933, and he then tried unsuccessfully to achieve some agreed measure of stabilisation between the gold and sterling countries and the United States. Subsequent events have forced him into the path of tariffs and import restrictions. Dr. Trip, at the Netherlands Bank, remains an obdurate opponent of devaluation, on the ground that such a policy can only yield temporary

relief; while it will raise the cost of living and impose heavier burdens upon the poorer classes. In the country at large, however, the case for devaluation is rapidly gaining ground. Rotterdam looks with envious eyes at Antwerp with her devalued belga. Industrialists feel that in carrying through rationalisation they have played their part, and that they have now earned the reward of devaluation. Politically, over half the Socialist Party and nearly half the Catholic Party are converts, and only their loyalty to Dr. Colijn restrains them from more overt agitation and pressure.

Probably Dr. Colijn will choose his own time. If and when he decides to devalue, he may well act overnight without giving speculators or other interests the benefit of any preliminary warning. It may be taken for granted that he will introduce no form of exchange restrictions, for both he and Dutch public opinion are entirely opposed to any of the German devices of the past few years. It may be confidently assumed that, whenever action is taken, the technical details will be handled with Holland's customary financial skill. There is thus a fair prospect of a minimum of disturbance, probably less even than occurred in Belgium a year ago. Whether Dr. Colijn will opt for devaluation in terms of gold, or a transfer from gold to sterling, remains to be seen. In part the choice may depend upon Britain's readiness to co-operate. We should be prepared to give any assurances to that effect which may be advisable.

FINANCIAL NOTES

The Money Market.—Notwithstanding an increase of £4.5 millions in bankers' deposits since last week, there is still some shortage of money, and one at least of the clearing banks was calling on every day of this week. Outside rates for day-to-day money remain at $\frac{1}{2}$ per cent., but the rate for loans into July has hardened to $1\frac{1}{4}$ per cent., and very little money is so far available. The banks are also very reluctant buyers of bills. Hot Treasury bills are nominal, but there have been a few isolated purchases at $\frac{3}{8}$ per cent. The banks have bought a few late August and early September Treasuries at $\frac{1}{8}$ and $\frac{3}{8}$ per cent.

	May 28, 1936	June 4, 1936	June 11, 1936	June 18, 1936

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Last week the Treasury bill tender rate rose to 18s. 10d. per cent. Some £50 millions of bills were allotted against maturities of £43 millions, and the tender issue has expanded to £58½ millions, against £518 millions on April 25th immediately before the serious influx of funds from France and gold purchases by the Exchange Equalisation Account. As the Bank return shows, however, the authorities are beginning to take steps to ease the position.

The Bank Return.—This week's Bank Return is unusually interesting. A fortnight ago, we showed how the influx of French money into British bank deposits and British currency, combined with the Exchange Equalisation Account's purchases of gold and transfer of Treasury bills to the banks and the discount market, was reducing the banks' cash ratios and creating stringency. We suggested as a remedy that the Bank might purchase gold from the Exchange Account, surrendering Treasury bills in exchange, and make good the reduction in its securities by taking up fresh Treasury bills. As the banks and market would have to take up fewer bills bankers' deposits would be replenished. This week's return suggests that this is being done. Gold has increased by no less than £3.4 millions, the Reserve by £4.4 millions, and bankers' de-

posits by £4.5 millions. A further £899,000 of gold was bought on Thursday.

BANK OF ENGLAND

Proportion	37.3%	30.5%	25.7%	26.5%	28.6%

The following table shows what has happened since French hoarding of British currency first became noticeable :—

	April 29 £ mill.	June 17 £ mill.	Change £ mill.
Bank of England			
Gold	202.7	211.9	+ 9.2
Circulation	416.9	432.0	+15.1
Reserve	46.6	40.8	— 5.8
Securities	122.3	119.4	— 2.9
Bankers' deposits	104.7	91.0	—14.7
Treasury bills (tender issue)	518.0	578.0	+60.0

The Bank has now neutralised most of the increase in the note circulation by means of gold purchases, but bankers' deposits are still on the low side, while the banks and the market are having to carry £60 millions more of Treasury bills. The Bank therefore has so far only given partial relief, and there is a strong case for further purchases of both gold and securities.

The Foreign Exchanges.—The London market has been waiting for the next move in Paris, but with money continuing to come over from France the British Control has had to give heavy support to the spot franc rate. On Thursday afternoon it stood at Frs. 76½. British banks are now only accepting large offerings of French currency notes "for collection," and customers are only credited with the sterling equivalent after the notes have been safely received by the Paris agents of the British banks. This is a precaution against any sudden imposition of restrictions upon the re-importation of currency into France. In the forward market, one month's francs have rallied sharply since ten days ago from Frs. 4 to Frs. 2½ discount, but three months' francs remain at over Frs. 6 discount. The rally in the one month position indicates that the market now believes that devaluation will not come for at least a month. Spot dollars have been uncertain at about \$5.03. There has been some demand for forward dollars at a higher premium than a week ago. This is partly due to the switching forward of the positions maturing at the end of June, but certain interests are buying sterling spot and selling forward in order to have sterling in hand at the end of the half-year. The Dutch and Swiss rates are mostly unchanged, with spot rates at the gold export point.

THE STOCK EXCHANGE

ETHICS OF "RECONSTRUCTION"

EVERY trade recovery brings a plethora of company reconstruction schemes, as regularly as dust-carts follow a Bank Holiday. So long as there are lost assets to be written off, relationships between different classes of shareholders to be adjusted, and creditors to be placated, reconstruction schemes are inevitable. So far, however, directors, accountants and solicitors alike have failed to agree on any code of basic working principles applicable to all such schemes. When is reconstruction desirable? How should the burden of sacrifice be distributed between different classes of shareholders? No two schemes have exactly the same details, but all involve an answer to these and similar questions. Some effort to substitute a scientific approach for the present empiricism is necessary if investors are to be spared a recurrence of certain schemes, recently published, whose terms have been repugnant to the most elementary conceptions of equity.

Legally, "reconstruction" involves the winding-up of a company and its replacement by a new one, while "reorganisation" covers changes within an existing financial structure. In practice, the choice of method is a matter of circumstance and convenience, and we may conveniently apply the term "reconstruction" to both. A more useful procedure may be to divide reconstruction schemes according to their origin. There are three types of reconstruction just as there are three types of unemployment (see the *Economist*, June 13, 1936, page 601), for reconstruction and unemployment have a common source. Normal reconstruction is made necessary by mistakes in management, when directors (e.g.) who might successfully have purveyed butchers' meat have become manufacturers of pottery. Cyclical reconstructions involve the salvaging, after a period of depression, of companies which have been carrying overmuch sail in time of active trade. Special reconstructions, the most difficult of all, are the legacy of organic changes in the distribution and prosperity of individual industries, which create pools of unemployed capital no less than of labour.

Broadly, there is a *prima facie* case for reconstruction whenever a company finds itself unable to earn sufficient profits to make some return to all its shareholders, within the contractual terms imposed by its Articles of Association, after satisfying its creditors and maintaining its capital intact; and when there is reason to regard this condition as more than a temporary phase. By the courtesy of Mr. W. Bertram Nelson we reproduce the annexed table (from the report of a recent lecture to the Incorporated Accountants' Bradford and District Society), as a guide to the varied legal forms which reconstruction may assume. There are many gradations, it will be seen, between formal capital re-adjustment and a severe surgical operation which may possibly involve a company's demise and the creation of a successor concern. In all but the simplest cases, though the will of a specified majority is binding on all shareholders, the final verdict lies with the Court. In other words, behind the machinery of democratic decision stands a benevolent despotism, which has not infrequently intervened to preserve a majority of shareholders from the consequences of their own lethargy. For example, two years ago the Court declared invalid certain proposals to reduce the preference dividends of the Union Cold Storage Company, after the necessary three-fourths majorities had been obtained, on a poll, at meetings where holders of nearly two-thirds of the capital involved failed to register their vote. But it is not the function of the Court, as a tribunal of final appeal, to shield proprietors from the evils of inaction. A more encouraging precedent was the withdrawal, last year, of proposals to reduce the dividends on De Beers preferred shares, after the mobilisation of opposition under the leadership of the Association of Investment Trusts.

Where a mere reduction of ordinary share capital is involved, the issue, as a rule, is simple. The writing down, say, of a £1 ordinary share to 2s. leaves shareholders' rights in the division of profits unimpaired, and would be unnecessary if British law, like that of America,

COMPANY REORGANISATIONS AND RECONSTRUCTIONS

Nature of Scheme	Section(s) of the Companies' Act, 1929	Method	Members	Creditors	Court	Dissentients
ALTERATIONS OF CAPITAL	50	Alteration of share capital by increase, consolidation, conversion into stock and subdivision of shares or by cancellation of unissued shares.	Resolution as provided by articles.	...	...	Appeal to Court under Section 61 (if rights are varied).
	55–60	Cancellation of lost paid-up capital, extinction of uncalled capital or repayment of excessive capital.	Special resolution. Articles must permit.	Notified if Court directs.	Petition and hearing necessary.	...
COM-PROMISES	153–4	Compromise with creditors and/or members. The company need not necessarily go into liquidation. If it is desired to cease business, the Court may make provision for the transfer to a new company of the property and liabilities of the old company.	Three-fourths majority in value.	Three-fourths majority in value: all bound.	Consent required.	...
	248	Compromise with creditors during winding-up.	In members winding-up: extraordinary resolution.	In creditors winding-up: consent of Committee of Inspection or Court required. Not binding on all creditors.	...	...
SALES	251	Compromise with creditors during winding-up.	Extraordinary resolution.	Three-fourths in number and value: binding on all creditors.	Creditors have right to appeal to the Court.	...
	...	Sale of assets under a power in the memorandum of association.	See articles as to resolutions.	...	...	...
	234, 243	Sale of whole or part of the assets of a company in liquidation to a new company for shares.	Special resolution.	Liquidation meeting if creditors winding-up.	Consent of Court or Committee of Inspection required in creditors winding-up. If compulsory or supervision winding-up resolution is passed within one year, consent of Court will be required in all cases.	May give notice of dissent within 7 days, cannot be compelled to take new shares; may petition for compulsory winding-up.
...	...	Sales of shares by individual shareholders to another company.	...	...	...	Shares of dissentients may be acquired if nine-tenths in value have accepted (S.153). (Right of Appeal to Court).

NOTE.—Companies not in operation may be struck off by the Registrar of Joint Stock Companies, under Section 295.

were prepared to allow the issue of "no-par value" shares. The "nominal" value of an ordinary share is a conventional item, whose essential purpose is to define the proportion in which a given amount of profits (or, in a winding-up, of surplus capital resources) is to be divided among a number of proprietors.

When the rights of preference, as well as ordinary, shareholders are involved, however, more complex questions arise. Both preference and ordinary shareholders are partners in a single enterprise. Their dividends come from an identical source—the earnings of their company. In the last resort, their interests are parallel and not divergent. Any scheme stands convicted of inequity if it reduces the income of the one class of shareholder merely to increase that of the other. Public opinion has almost killed the once-prevalent type of scheme in which, e.g., a 7 per cent. £1 preference share was written-down to 10s. and a £1 ordinary share to 2s.—in which, in other words, the amount of preference dividend was halved, and the balance handed over to the ordinary shares. Similarly, an unfavourable response was elicited by the suggestion, made a year ago on behalf of Siemens Brothers, that in certain circumstances holders of the company's 10 per cent. preference shares might be asked to take a lower dividend. On the other hand, preference and ordinary shareholders have indubitable differences in composition and outlook. The one class has a *rentier*, the other an "equity" interest. There are serious objections to the proposal originally made by the directors of the Union Castle Company that preference shareholders should have permanent voting control. They are certainly entitled to representation on the board, as a protection against the jeopardising of their interests. It is essential, however, that decisive issues of managerial policy should be decided by those whose direct stake in the reward of their enterprise does not stop short at any fixed point.

Suppose, however, that a company's profits have become insufficient to permit of a full contractual return to preference shareholders, or, still worse, to debenture holders. What then are the canons on which a reconstruction scheme should be framed? The prime object of any scheme is to preserve a business and the first *desideratum* is to discover whether there is any reasonable prospect of its eventual rehabilitation. It may be necessary to distinguish between a "company" and a "business." It was clear, three years ago, that no power on earth could save the Royal Mail Steam Packet Company as such, but that its fleet could and should be maintained as a separate entity, under the control of a new operating company. Whenever the possibility of salvation exists it is reasonable to ask every party concerned—creditors, debenture holders, preference and ordinary shareholders—to make *some* sacrifice. Even secured creditors may find it worth while to "buy time," rather than to subject the fragments of a business to a forced sale. For time (and economic recovery) may transmute old iron into profit-earning plant. On a conservative computation the creditors in the Royal Mail group liquidation have already gained about £8,000,000 by waiting.

Where creditors are unconcerned the matter is one of equity rather than urgency. Indeed, if no new capital is required and/or no reasonable estimate of future earnings is practicable, there may be a strong argument for postponing the formulation of a scheme. The criterion for dividing the burden of sacrifice must be the amount of future profits which the company may be expected to earn. It may be equally unjust to deprive preference shareholders of their rights on the assumption that the company, in years to come, will achieve only its present earnings or something closely resembling them, as to shut out ordinary shareholders from all possibility of an eventual return, even if their capital appears to have been entirely "lost" on a current assets "valuation." With the recent experience of many British iron and steel companies in mind, who can say when capital is irretrievably "lost"? John Brown and Company, builders of the "Queen Mary," who have just declared a 16½ per cent. ordinary dividend, reorganised as recently as 1930, and had an appreciable capital "deficiency" at that time.

The ideal scheme would put back all shareholders, on a future restoration of earning power, into the identical posi-

tion they enjoyed before the onset of adversity. But reconstruction schemes are made by faith and not by sight. It may be both lawful and expedient, therefore, to offer preference shareholders a maximum total reward *in prospectu*, exceeding the fixed dividend to which they were entitled under the old dispensation. In the meantime, they will have foregone part of their rights, and accepted a business risk which was outside the terms of their original contract.

On the whole, the balance of advantage appears to lie with the practice of compensating preference shareholders by a share of the equity, i.e. by the distribution to them of ordinary shares in proportion to the extent of their sacrifice. This method avoids the perpetuation of an overwhelming *rentier* interest, carrying with it, *inter alia*, a direct incentive to the distribution of a large proportion of future profits. At the same time, it allows holders who prefer a fixed-interest share to dispose of their "compensation-equity" holdings, whenever they wish, through the ordinary machinery of the market. An indispensable feature, however, in our opinion, of every scheme framed on these lines, should be the furnishing of every shareholder concerned with a table showing exactly how profits will be divided, at various levels, under the old and the new conditions. Had such a practice been general, it is safe to say that many recent schemes which have been adversely criticised would never have seen the light at all.

INVESTMENT NOTES

Nominee Shareholdings.—Last week's Budget leakage discussion in the House of Commons, which ranged over a variety of topics from "honour policies" at Lloyd's to the morals of Stock Exchange speculation, was noteworthy for a declaration by the Chancellor of the Exchequer of his conviction of the necessity for amendment of present company law. Though the Chancellor (having in mind the effect of his earlier pronouncement in the same week, on a different subject and before a more exclusive audience) was careful to emphasise the essentially personal character of his view, there is no doubt but that the subject of company law reform has been marked down for early consideration by the authorities. From the tenor of Mr Chamberlain's speech, it would seem that the question of the registration of shares in the names of banks and nominees will be taken up in any general overhaul of the Companies Act. On this subject, the Government has "all the information that it wants." It may be hoped that the authorities have taken due account of the familiar danger, which besets all reforms involving restriction of an existing facility, of rooting up the wheat with the tares. The nominee system has many time- and money-saving advantages. Securities lodged with banks as collateral for stockbrokers' loans, and, occasionally, collateral securities against general advances, may quite legitimately be transferred into the names of bank nominees. A customer living abroad who cannot execute the necessary documents when securities are bought and sold may either grant a power of attorney to his bankers, or have his securities entered in the names of the bank's nominees. The latter method is in every way the more advantageous. A basic objection to the system is the readiness with which it can be, and is, used to defeat the intentions of the Companies Act in making the registration of shareholders' names and addresses compulsory. Every diligent inquirer in the Companies' Search Room at Bush House is acutely aware of the fruitless hours involved in investigations which, more often than not, come up against a blank wall of nominee entries whose real identity would have baffled both Sherlock and Mycroft Holmes. This matter received unfavourable publicity at the time of last year's "pepper crisis," and the revelations attendant upon the recent Budget leakage have brought it to the front once more. It would seem that all the legitimate advantages of the present arrangement might be retained if the law were to require the names of beneficial owners to be entered in company records, side by side with those of the nominee

companies. Men of straw, however, like the poor, are always with us, and their services will continue to be conveniently at the disposal of those who have something to hide. On the whole, however, it is easier to pierce a veil of straw than a thicket of nominee registrations, and such a reform may have much to recommend it. In the recent Budget inquiry, indeed, the taking out of contracts in the maiden and married name of the secretary of one of the principals itself served as a signpost, pointing inquirers to the true *fons et origo* and indubitably fastening responsibility where it belonged.

* * *

Wall Street and American Recovery.—The signs of life evident in Wall Street last week have not subsided into lethargy, and evidence in favour of a revived upward price movement is slowly accumulating. Business reports are still excellent, and consumers' goods of all kinds are likely to benefit from the spending of the veterans' bonus, which was duly distributed this week. The Interstate Commerce Commission has ruled that the emergency surcharges on freight rates are to be continued for six months, a decision which will relieve the anxieties of the railway companies, who had applied for an indefinite extension and had feared an immediate cancellation. The arguments for expecting substantial capital development by the railroads are almost irresistible, since technological changes which could greatly reduce railroad operating costs have been rapid in the last few years. Obstacles to capital expenditure are to be found mainly in the general political uncertainty—which may be expected before long to decline—and in the financial burden inherited from the past. Given a sympathetic attitude from the regulatory commissions, of which at any rate some evidence may be found in the recent I.C.C. decision, and reasonable financial reorganisation, the way should be clear for a marked increase in demand for capital goods. Similar arguments give equally solid reason to anticipate considerable development by the utilities. The present strike against Federal annihilation of holding companies must before long be terminated for three main reasons. The President is in a mood to compromise; the Supreme Court will almost certainly declare the Holding Company Act unconstitutional; and even if it is upheld, the Securities and Exchange Commission, which will have the administration of the Act, is an eminently reasonable body. The overtaking of accumulated deficiencies in plant and in dilapidations may, in fact, be quite imminent. And in still a third field the capital equipment industries may expect before long to become active. America's deficiencies in housing accommodation are steadily piling up, and no federal government projects have been able even to scratch the problem. In spite of these obvious opportunities for extension of American recovery from the consumers' goods to the capital goods industries—an extension for which every opportunity will be provided by determined maintenance of cheap money—Wall Street still shows hesitance and lack of conviction. This may be attributed in part to the turmoil of a Presidential election, and much more to the activities of the Securities and Exchange Commission in raising margin requirements on brokers' loans and on bankers' loans to brokers. But in this work the Commission should have every encouragement, since Wall Street has always been a too fickle speculative market and not primarily a market in which security values are determined by close economic consideration. The new Wall Street under the Commission control should be a much healthier place than the Wall Street of the 'twenties.

"Stock Exchanges Ten-Year Record."—For the philosophical investor this annual publication* is apt to provoke sighs, both of relief and regret, for perils escaped and chances missed. To the holder of Argentine rail stocks, for example, the tables are not the happiest of reading, but what opportunities have passed in the commercial and industrial list during the past decade! For the investment

A PERSONAL INVESTMENT

PROFESSIONAL people must provide for themselves. Most business men have commercial "goodwill" vested not solely in their personalities, but in established organisations which can subsidise them without embarrassment. But professional people stand alone. Their ability and personality are the only income-creating assets they possess. They can rarely find deputies to act for them. Even a brief absence can make a difference to their earnings. Present happiness and future well-being not only of themselves but of their families depend upon their continuous activity.

Small wonder that the new "Triple Income" Plan has been accorded a very warm welcome by professional people because they appreciate the imperative necessity of guaranteeing adequate incomes both to themselves and to dependants in the event of misfortune. This long overdue security provides:—

INCOME ON RETIREMENT

INCOME FOR DEPENDANTS

INCOME DURING DISABLEMENT

The "Triple Income" Plan is of immense value to the professional community because it so completely meets present and future needs. Send for particulars and learn at what moderate cost this comprehensive security may be achieved.

LEGAL & GENERAL ASSURANCE SOCIETY LTD.

Head Office:

10 FLEET STREET, LONDON, E.C.4

Established 1836

Assets exceed £33,000,000

General Manager: W. A. Workman, F.I.A.

adviser and the institutional investor the record of high and low quotations is of undoubted service. The helpfulness of the *format* has been proved in the past, and the dividend statistics, as usual, are set under the approximate date of payment, to facilitate income-tax calculations. The work remains, as ever, an invaluable compendium for the investor and his advisers.

* * *

Industrial Profits in May.—The 269 companies whose reports reached us during May showed a slightly—but only slightly—lower return of increased profits than the 254 companies which reported in April. Industrially, the May sample is not fully representative, for of the 269 companies as many as 137 fall into one of four groups:—financial and land, rubber, tea and investment trusts. Figures for recent months are set out below:—

Reports published in	No. of Companies	Rise in Profits*	Reports published in	No. of Companies	Rise in Profits*
1935—			1935—		
March ...	261	22.54	November ...	160	17.47
April ...	242	16.49	December ...	159	12.27
May ...	244	11.07	1936—		
June ...	191	21.72	January ...	128	13.66
July ...	232	13.44	February ...	205	9.00
August ...	38	5.93	March ...	236	17.39
September ...	77	9.28	April ...	254	9.66
October ...	166	29.19	May ...	269	9.41

* After payment of debenture interest.

Last month's reports disclose net profits of £27,354,879 compared with £25,002,202 in the preceding year. A fall in iron, coal and steel earnings is attributable mainly to the disappointing Stewarts and Lloyds figures. Oil profits, however, have been satisfactory, for four companies reported an increase in net profits from £4,658,794 to £5,039,131. Electrical equipment, newspaper and textile profits have also shown increases well above the average. On the whole, the pace of advancing profits appears to be slackening, but the evidence on this point is not as yet conclusive.

Foreign Holdings in America.—An increase of \$765 millions in foreign holdings of United States securities during 1935 is shown in an analysis by the Department of Commerce. This brings the total up to \$5,035,000,000, of which 27.3 per cent. is held in Great Britain, 20 per cent. in Canada, 15.6 per cent. in the Netherlands, 7.9 per cent. in Switzerland, 5.6 per cent. in France, and 12.9 per cent. in other European countries. If bank deposits and other short-term funds are added, the grand total of foreign holdings in the United States at the end of 1935 is estimated at \$6,235 millions, compared with \$4,870 millions at the end of 1934. Apparently, therefore, there has been a big increase in foreign short-term as well as long-term holdings during the past year. The distribution of the long-term holdings is given as follows:—

(In millions of dollars)

	Great Britain	Canada	France	Holland	Switzerland	Other European Countries

It appears from these figures that French holdings in Wall Street are not so large as had been thought, and that a great part of the refugee French funds in New York must be in short-term accounts. If this is so, French distribution might not be followed by such heavy selling on Wall Street as had been imagined. Nevertheless, the considerable volume of Dutch and Swiss long-term holdings is significant. If the guilder and Swiss franc were to be devalued with the French franc, as is probable, the effect on Wall Street would clearly be marked.

Actuaries' Investment Index.—The steadier recent one in the markets finds its reflection in an improvement of half a point in the average level of 178 industrial ordinary shares in the Actuaries' Investment Index, from 81.9 a week ago to 82.4 on Tuesday last (December 31, 1928=100). The average yield is computed at 3.78 per cent. this week, 3.80 per cent. last week, and 3.72 per cent. a month ago, when the index stood at 82.6. The following table presents a number of typical movements which have contributed to the week's rise:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Month Ago (May 19)	Last Week (June 9)	This Week (June 16)	Month Ago (May 19)	Last Week (June 9)	This Week (June 16)
Building Materials (5)	100.0	99.1	101.2	4.84	4.88	4.78
Coal (7)	93.0	94.2	95.9	4.43	4.35	4.23
Oil (5)	89.8	82.6	83.4	2.78	3.10	3.07
Electric Supplies (10)	135.4	136.6	137.6	3.81	3.82	3.79
Shipping (4)	16.2	15.7	16.6	0.78	0.83	0.81
Tobacco and Catering (20)	86.5	85.4	86.4	3.58	3.64	3.60
Miscellaneous (56)	75.0	74.5	75.0	4.04	4.07	4.05

From the market's point of view, recent movements have been somewhat indecisive. Thus, while building materials shares have tended to appreciate, the leading iron, coal and steel shares have shown little net movement. Oil issues, favoured with an almost consistent run of favourable reports and dividends, are still six points lower than a month ago. Coal equities, however, continue slowly to improve, and there have been recent signs of re-awakening in the shipping

NORANDA MINES, LIMITED DIVIDEND NOTICE

Notice is hereby given that an interim dividend of \$1.25 per share, payable in Canadian funds, has been declared by the Directors of NORANDA MINES, LIMITED, payable June 30th, 1936, to shareholders of record at the close of business June 10th, 1936.

By order of the Board. T. N. HAY,
Toronto, May 28th, 1936. Secretary.

market. Although last week's political developments found the market responsive to speculative activity, there is no indication that a purposeful advance in share prices is in immediate prospect.

COMPANY NOTES

Marine Engineering Companies.—The choice of marine engineering companies open to the investor is not wide, for a large part of the industry is in the hands of companies which are primarily shipbuilders, while such well-known names as Howden, Doxford and Barclay Curle are not to be found in the Official or Supplementary Lists. There remain, however, such concerns as Richardsons Westgarth, Wallsend Slipway, Yarrow and Parsons Marine Steam Turbine who, though partially engaged in shipbuilding or connected with shipbuilding concerns, rank primarily as marine engineers in the engine-making or boiler-building trade. Suppliers of auxiliary machinery include Clarke Chapman, Chadburn's Ship Telegraph, and possibly also Marconi International Marine Communication and Shanks and Company (who furnish sanitary ware and plumbing for ships). Finally, if the list be extended to

include those who are closely connected with the shipbuilding trade, room might be found for South Durham Steel and Iron, who specialise in the production of plates and other shipbuilding materials, and Babcock and Wilcox, whose boilers have a high reputation over the Seven Seas. The marine engineers may hope to avoid the worst of the fluctuations inherent in the shipbuilding industry, since, though the hull of a ship is designed to last for, say, twenty-five years, much of the machinery, main or auxiliary, has to be renewed or completely overhauled at least once during the life of the hull. But inevitably the trade is dominated by conditions in shipbuilding itself—and shipbuilding is noted as the capital construction industry most liable of all to wide fluctuations. The "import duties" census of production shows that the total output of marine machinery rose in value from £2,392,000 in 1933 to £4,181,000 in 1934, a movement which, though leaving the total far below that of 1930, well illustrates the mercurial nature of the trade. The advance in engines alone was from £1,378,000 to £2,858,000. It is probable that 1935 showed only a moderate further recovery, since the recent impetus to shipbuilding only came in the closing months of the year, after an earlier period of slight recession. But if shipbuilding maintains its recent advance, a considerable expansion in

the output of the marine engineers might be achieved during the present year. The evidence of the engine builders' reports (Yarrow, Parsons and Wallsend) suggests that during the depression considerable economies have been achieved, and that profits earned on recent output might be raised above 1929 levels at a turnover only approaching that of 1929. Similarly, a business such as Clarke Chapman, providing auxiliary equipment for shipping, should find room for ample further recovery. It may be noted, incidentally, that the evidence of the census of production suggests that fluctuation, though present in a considerable degree in the auxiliary trade, is not so severe there as in the engine-building section. In general the trade appears to offer opportunities to the skilled investor during the later stages of general recovery, but it would involve risks for the investor who is not prepared to follow conditions fairly closely. Some of the leading concerns, however, mitigate this risk to some extent by a dividend stabilisation policy, as the accompanying table shows.

Richard Thomas Results.—The market was well satisfied with the Richard Thomas preliminary figures. The group, which includes a number of South Wales collieries and tinplate works, as well as the very profitable Grovesend Steel and Tinplate Company, has increased its gross profit from £880,000 to £1,184,000, earnings sufficient, after very adequate allowances for depreciation and heavily increased taxation, to pay a dividend of 12½ per cent. on the ordinary shares, compared with 6 per cent. last year, with a little to spare. Moreover, a profit of £57,000 has been brought in from a previous year—presumably showing that frozen credits are gradually becoming liquidated—while some £34,000 has been credited from the sale of investments. These sums are very properly put to reserve. The following table shows the consolidated earnings of the group during the last three years, the latest figures being approximate. The final figure for the carry-forward is not available yet, and a number of adjustments are usually made before the figure is determined:—

	Years ending March 31,		
	1934	1935	1936
Gross profit	772,410	879,995	1,184,000

* On assumption that whole of surplus is available for R. Thomas Ordinary Shares. † After miscellaneous adjustments.

These results, in view of the limited improvement in exports of tinplates, are very satisfactory. Much of the extra profit, no doubt, is attributable to the steel works at Redbourn, which have only in the last year achieved the full advantages of capacity production. The sheet business, too, must be doing well, and the home demand for tinplate is growing. The future depends upon two factors. On the one hand, the export market, though unlikely to expand rapidly, is definitely improving. The international tinplate cartel has been prolonged for two years, and Britain has received a slightly larger quota than before. The export price structure—the company's most vulnerable point—is therefore firm. On the other hand, the company's business at home is developing so rapidly that it is difficult properly to assess the prospects. During the past year more tinplate works have been acquired, and the relevant properties of the Ebbw Vale Steel, Iron and Coal Company

Investors' Needs Vary

Within the 52 Trusts sponsored by Members of the Association of Fixed and Flexible Trust Managers can be found investments which satisfy every major need of the investing public. There are general units for those who wish to invest in British industry as a whole, and specialized units for those who desire an investment in a selected industry.

Two things are common to all these Trusts: the greater safety they offer by a 'spread' investment and the ease with which this investment can be realized.

The Association of Fixed and Flexible Trust Managers, by whom this announcement is made, has been formed to give permanence to the safeguards offered to the public by the Trusts sponsored by its members.

THE FOLLOWING GROUPS ARE MEMBERS OF THE ASSOCIATION

- The National Group, 125 Pall Mall, S.W.1
- The Keystone Group, 24 Throgmorton Street, E.C.2
- British Empire Group, 116 Old Broad Street, E.C.2
- The 15 Moorgate Group, 15 Moorgate, E.C.2
- Allied Investors Group, 165 Moorgate, E.C.2
- First Provisional Group, 21 Spring Gardens, Manchester 2
- British General Group, King's House, King Street, E.C.2
- Selective Group, 53 New Broad Street, E.C.2
- Protected Group, 1 Chancery Lane, Manchester 2
- Aviation Group, Palmerston House, Old Broad St., E.C.2

have been taken over. In securing its supplies of coal and ore, the company has safeguarded itself against the worst effects of an increase in the price of raw materials, and the new American strip mill which it will construct at Ebbw Vale should be profitable. Investors, however, will hope that this expansion does not proceed too rapidly: the demand for steel will not remain indefinitely at its present high level. At 15s. cum dividend the ordinary shares yield £5 14s. per cent.

* * *

Guest, Keen and Nettlefolds.—Maintaining its traditionally terse character, the report adds but little to the provisional profit statement discussed in the *Economist* of June 6th, page 563. Shareholders must await the meeting next Tuesday for further elucidation of the reasons why profits rose by less than £11,000 in a year when the bumper dividend received from Lysaghts had encouraged higher hopes. It will be seen from the figures that the 5 per cent. tax free dividend declared on Guest Keen ordinary stock was covered with £171,990 to spare (equivalent to a further 2½ per cent.), but £100,000 of this sum was applied to writing down book values under the works reorganisation scheme:

	Years ended March 31		
	1934	1935	1936
Net profit, after debenture charges	324,960	933,813	945,445
Depreciation	50,000	50,000	50,000
Obsolescence	Nil	75,000	75,000

Earned (%)	Nil	7.5‡	7.7
Paid (%)	Nil	Nil	5

Provision for works reorganisation	...	...	100,000
Carried forward	448,951	459,568	531,558

* One year's arrears (1931-32). † Three years' arrears (1932-35). ‡ After normal preference dividend.

The balance sheet is, as usual, uninformative, for out of total assets of £19,360,901, as much as £16,127,687 is represented by interests in subsidiary and associated concerns. The specialised Birmingham interests of the firm appear favourably placed for future developments, and the South Wales works reorganisation policy should prove its worth in due course. Interest is increasingly directed, however, to the prospects of the new Guest Keen Baldwins plant at Cardiff, in which Guest, Keen and Nettlefolds has a 93 per cent. interest. The Welsh coal properties, however, can hardly be in sight of any substantial improvement. For these reasons the £1 ordinary stock units, which yield £3 3s. net and £4 2s. 6d. gross at their reduced price of 31s. 9d., appear reasonably valued for the time being.

* * *

Allied Ironfounders.—This concern—which manufactures drainage fittings, baths, fireplaces and cookers—is more properly regarded as a building materials company than an iron and steel producer proper. This factor accounts for the stability of revenue during the past year. The total trading profits earned by subsidiaries, after charging depreciation, amounted to £332,036, compared with £326,530 in the previous year, while dividends brought into the parent company's revenue account totalled £259,730, against £260,182. These results suggest that trading may have been affected by the high plateau achieved in residential building during the past year, and it is conceivable that costs, both of materials and labour, have tended to rise. Income tax provision of the parent concern is reduced from £40,000 to £7,500, and a vestigial amount of £3,501 only is required for service on the debentures, now redeemed. Central obsolescence reserve, which last year received a large sum in respect of profit on debenture redemption, is credited with a further £7,279 from the same source and £15,000 from revenue. Earnings for the ordinary shares, on a strict revenue basis, have risen from £120,260 to £179,543, equivalent on the increased

ordinary capital to 14.4 per cent., against 12.5 per cent. a year ago. The reduction in the dividend rate from 12½ to 10 per cent. involves a slightly higher total distribution on the increased capital:—

	Years to March 31,		
	1934	1935	1936
Income from subsidiaries and other interest	241,583	262,305	265,502
Directors' fees	Nil	8,529	6,437
Income tax	27,500	40,000	7,500
Debenture interest	33,217	24,983	3,501
Debenture redemption	14,466	14,577	Nil
Central obsolescence and depreciation reserve	...	...	15,000
Preference dividend	53,086	53,956	53,521

Ordinary shares—			
Earned	113,314	120,260‡	179,543
Paid	57,593	120,546	124,818
Earned (%)	14.8	12.5	14.4
Paid (%)	7½	12½	10

Reserves	30,000	90,000§	35,000§
Carried forward	102,674	124,767‡	146,411†

‡ Excludes £112,379 dividends from subsidiary companies from profits on realisation of investments. This amount adjusted in amount carried forward. † After crediting £1,919 refund of income tax. § Includes research and development reserve—£30,000 in 1935, £10,000 in 1936.

Significant movements are shown in the balance sheet. The cash balance has been reduced, in round terms, from £375,000 to £122,000, and the remaining balance of debenture stock has disappeared. Increases are shown, however, by shares in subsidiaries—reflecting the acquisition of Aga Heat during the year—by deposits (£304,000, against £34,000 a year ago), and in the amounts due to and from subsidiary companies. A new trade investment is shown at £11,500, and gilt-edged securities to a value of £19,982 have been acquired. At 32s. the £1 ordinary shares yield £6 5s. per cent. This yield registers the general view that any decline in building activity might significantly affect earnings.

* * *

John Brown Accounts.—The Market was pleasantly surprised by the 16½ per cent., tax free, dividend of John Brown, and the shares, which had been down to 18s., have advanced to 27s. 6d. The full accounts are also very acceptable. Profit and dividends from subsidiaries have increased from £228,086 to £559,920; £24,000 has been received in respect of previous year, and the tax-free earnings are equivalent to 30 per cent. on the ordinary shares. The following table analyses the profits during the last three years:—

	Years ending March 31,		
	1934	1935	1936
Total profit	82,751	229,170	585,635
Depreciation	34,592	33,948	40,596
Interest, fees, etc.	107,111	101,200	94,739
Income tax	...	21,051	49,736
Earned for dividends	Dr. 58,952	72,971	400,564
Preference dividend	...	...	49,010

Ordinary shares (tax free):—			
Earned	Nil	...	351,554
Paid	Nil	Nil	195,809
Earned (%)	Nil	Nil	29.9
Paid (%)	Nil	Nil	16½

Reserve	Dr. 53,000	Nil	100,000
Carry-forward†	18,471	97,672	95,462

† After bringing in £8,852 income tax adjustment in 1934 and £6,230 in 1935, and after deducting £57,956 net expenses of debenture issue in 1936.

This large increase in total profit is definitely surprising. From the Firth Brown subsidiary 12½ per cent. tax free, was received this year, compared with 5 per cent., a difference is equivalent to approximately £100,000. The profit on the company's own yards at Clydebank must have increased by about £230,000. Naval work, though bigger than in the previous year, can have accounted for only a small proportion of that sum. A large part, therefore, must represent profit on the "Queen Mary": but whether all the profit has been taken now—in which case this high profit level is non-recurring—cannot be settled before Lord

Aberconway's speech at the meeting. In the meantime, the conversion of the debentures last year to a 4½ per cent. basis, and the recovery in the company's business, have markedly strengthened the balance sheet. An excess of current liabilities over liquid assets of £839,000 has been converted into a positive balance of £140,000. It was disclosed by the Chancellor on Thursday that Cunard-White Star have obtained preliminary tenders for a sister ship to the "Queen Mary" and are negotiating with the company. Lord Aberconway's speech on Friday next will therefore be awaited with particular interest. The 6s. ordinary shares yield £3 12s. 6d. per cent., free of income tax, at the current price.

* * *

Iron and Coal Company Results.—Among the coal and iron concerns whose reports have appeared this week, *Stanton Ironworks* naturally takes first place. The report shows a welcome expansion of earnings (after the previous year's fall) from £300,759 to £377,266, equivalent, after meeting the increased preference dividend, to 17.2 per cent. on the ordinary shares, against 11.1 per cent. in the previous year. The whole of the increase of £68,311 in ordinary earnings, however, has gone to swell the credit balance carried forward, since the dividend is maintained at 10 per cent. less tax. The movement of recent profits is shown below:—

	Years ended March 31		
	1934	1935	1936
Profit after tax and depreciation	322,278*	300,759*	377,266*
Debenture charges and directors' fees	42,463	47,180	44,979
Additional depreciation	50,000	50,000	50,000

Preference dividend	20,481	31,556	41,953
---------------------	--------	--------	--------

Ordinary Shares	Earned	209,334	172,023	240,334
	Paid	155,279	155,279	155,279
	Earned (%)	13.4	11.1	17.2
	Paid (%)	10	10	10

Issue expenses written off	15,705	...	...
Carried forward	258,965	275,709	360,763

* After providing £50,000 for contingencies.

Some part of the recent modernisation of plant has yet to fructify, and since the expansion of operations may involve further capital expenditure, the conservation of resources is to be understood. The prospects for road drainage under the £100 millions scheme and industrial demand for cast iron and concrete pipes suggest a continuation of active trading for some time to come, although the scale of the latest year's expansion, to judge from the increase in trade debtors and advances to subsidiaries, has been substantial. The £1 ordinary shares, at 50s. 9d., give a "stable equity" yield of £3 19s. per cent. *Tredegar Iron and Coal*, whose profits have increased from £40,015 to £63,236 for the year to March, reports that continued adversity in the South Wales coalfield, currency restrictions and the loss of the Italian market, have compelled resort to the most stringent economies. Hopes are expressed that the coal sales scheme will improve marketing conditions. The "B" ordinary shares of £1 fully-paid at 12s. yield £5 per cent. on a 3 per cent. dividend. The *Butterly Company*, a mixed coal, iron and constructional engineering concern, has enjoyed a record year, trading profits having increased from £116,642 to £190,498. Earnings available for the ordinary shares, at £137,940, are equivalent to 7.7 per cent., against 4.9 per cent. a year earlier. The dividend is raised from 5 to 6½ per cent., tax free, affording a net yield of £3 16s. 6d. per cent. at the present ordinary share quotation of 34s. This company is also well placed to secure further business from industrial construction work. The full report of *Whitehead Iron and Steel* (whose preliminary figures were discussed in the *Economist* of May 23rd, page 436) is couched in encouraging terms. The recent plant installations have proved highly efficient and it is proposed to instal a modern rolling mill which "should add materially to future profits." The Whitehead Hill subsidiary has given satisfactory results, and has earned six years' preference arrears, of which part has been paid to the parent concern. The ordinary shares, at 7½, yield slightly under 5 per cent. and are reasonably valued.

General Electric Report.—Last week's announcement of record profits and a 15 per cent. dividend last week has been followed by a report couched in confident terms. The outlook for the "near future" is regarded as encouraging; order books are in a satisfactory condition; and the growth of business is indicated by the expansion of current trading items such as debtors and stocks. The market, however, had apparently discounted all this, and the £1 ordinary shares, which declined on Friday of last week from 83s. to 82s. 3d., show little net change at 80s. 4½d., ex rights. Trading profits and investment income have, in fact, jumped by 25 per cent. to £1,485,153, and since the debentures were redeemed during the previous year—from the proceeds of an ordinary share issue—the earnings for the equity have advanced from 14.8 to 25.8 per cent. The profits are analysed in the following table:—

	Years to March 31,		
	1934	1935	1936
Profit and investment income, after provision for contingencies	971,481	1,184,485	1,485,153

† Earnings and dividends shown gross for 1934.

The wide spread of the company's expansion during the past year is emphasised in the report. The company is itself a supplier of capital goods to industries of the same general nature. Export trade within the sterling area has been good, and the building boom has further increased the demand for domestic appliances. Hopeful views re-

garding the future, however, should be closely related to the prevailing level of the shares. The present price of 80s. 4½d. ex rights includes a dividend (net) of 2s. 3d., and the effective yield is therefore £3 17s. per cent. The market, therefore, is not merely confident of the maintenance of the 15 per cent. dividend on the increased capital which is to be raised—381,670 £1 shares at £3 per share—but is also anticipating a further increase in dividend. Recovery factors still favour the company, and the current year has commenced well enough to suggest that plant extensions will quickly become remunerative if the present level of activity is maintained. Those investors, however, who are becoming less assured regarding the general level of ordinary shares, will probably allot General Electric an intermediate place between the stable equities and those shares with "recovery" potentialities.

Bristol Aeroplane Report.—Having gratified the market with a dividend of 22½ per cent. at the end of last week, Bristol Aeroplane has issued a report which bears all the indications of a high level of activity. Net trading profit for 1935, after providing for depreciation of property and plant, but before income tax, amounted to £300,366. The prospectus issued a year ago showed profits (on the same basis, but after adjustments) of £217,102 for 1934 and £128,880 in the preceding year. Earnings have, in fact, increased less rapidly than expenditure on airframes, engines and parts. After crediting a profit on investment sales and interest, the total profit amounts to £306,725, from which directors' fees (£4,500) and income tax (£65,000) have been provided. The amount earned for ordinary dividends (excluding investment profit) is £209,877, equivalent to 45.6 per cent. A sum of £100,000 is carried to reserve, and the balance carried forward is increased from £29,758 to £40,233. The balance sheet exhibits some striking changes. Property and machinery, which totalled £621,571 at the end of 1934, was increased

by no less than £396,650, the latter being itself a net figure after providing depreciation for the past year. Stocks and work in progress, less cash received on account, have increased from £467,664 to £690,956. Expansion on this scale has drained liquid resources dry, and the sum of £258,748 due to bankers at December last has almost certainly been increased since that date. It is proposed to take powers to increase the ordinary capital by the creation of 1,200,000 10s. ordinary shares, and the issue at least of some part of these shares can hardly be long delayed. History throws doubt on the raising of new capital at a time of boom demand, but official assurances regarding the protection of such aircraft issues have been definite, if vague. Under current pressure, moreover, the incentive to expand plant is overwhelming for the entire aircraft industry, although it may create awkward problems when the main part of the present programme has been completed. Bristol Aeroplane is in a strong position in the industry, for in addition to manufacturing the new "Bristol 142" medium bomber, the company supplies engines to a number of airframe constructors. This combination of airframe and engine manufacture is, in fact, quite rare in the industry. The latest profits, earned in a year of growing production pressure, suggest good short-term prospects—since expenditure on the air expansion programme will continue into 1937-38—subject to the Air Ministry's control of contract prices. Although maintenance work will be at a permanently high level thereafter, investors should discount the prospective falling off in new orders in considering current share prices. Bristol Aeroplane 10s. ordinary shares are quoted at 70s. 9d. to yield £3 5s. 8d. per cent.

Oil Dividends and Results.—The Eagles dividends, which were announced too late for comment last week, fulfilled the market's best expectations. *Mexican Eagle* is to pay 10d. per share on the participating preference and ordinary shares, while *Canadian Eagle* has declared 23.88 Canadian cents on the participating preference and 9d. per share on the ordinary shares. The former concern announces that profits available for 1935, after crediting reserves no longer required, and providing for depreciation and the settlement of the *Amatlan* case, amounted to £702,421. The profit in the preceding year amounted to £781,571. From the *Canadian Eagle* statement it would appear that profits in 1935 amounted to £635,000, compared with £539,054 in 1934, including a draft of £222,884 from investment reserve. The directors of *Lobitos Oilfields* have maintained the dividend at 7½ per cent., less tax, leaving £191,911 to be carried forward. Indicated profits are therefore of the order of £37,600, compared with £58,283 for 1934. The shares were dull on this disappointing result, but recovered part of their fall. The company's failure to share in improved conditions in the industry may, perhaps, be associated with the "growing pains" of the Ellesmere Port refinery. *United British Oilfields of Trinidad* report gross proceeds from sales of oil amounting to £880,956 for 1935, compared with £720,259 in the previous year. Net production amounted to 188,208 tons, compared with 146,588 tons, and crude oil purchases increased by 58,198 tons to 277,555 tons. Total sales of refined products amounted to 473,940 tons, compared with 345,678 tons in 1934, no crude oil being sold. The lower prices obtained were more than offset by expanding sales. The increased refinery operations have necessitated additions to the Trumble plant. As already announced, the ordinary dividend has been increased from 3 per cent. to 7½ per cent. Oil shares have remained firm this week, although professional interest, particularly in the *Eagle* issues, has been less active than of late. Anglo-Iranian, however, have provided a strong feature on suggestions that the recent results were subject to temporary influences which should be removed during the current year.

Recent Rubber Results.—The rubber share market remains in a hesitant condition. The commodity has painfully advanced to 7½d. per pound, and fears have recently been current regarding devaluation of the

gold currencies. Whether the latter would exert a prolonged deflationary effect on sterling prices, within a context of restriction, may be doubted, but a good deal of market unsettlement would inevitably follow the fall of the gold bloc. Meanwhile, the majority of recent rubber company reports hardly make inspiring reading, as the following analysis suggests:—

Name and Denomination of Shares	Total Profits		Earned for Ordinary		Dividend		Ordinary Shares	Yield

§ Or 2.1 after charging 1 year's preference dividend only.

It would appear that trade demand is being kept as low as possible in anticipation of a fall in Mincing Lane if the guilder is devalued. If so, a "hidden demand" might well produce a sharp check to any undue downward movement. Expansion of industrial consumption—particularly in the United States—is still steadily reducing stocks, and would promise—apart from the guilder—some prospect of firmer prices. The Dutch native position, moreover, should be brought under closer control when the survey has been completed. For the present year, however, there is prospect of only modest advance in profits, for current costs, as Mr J. G. Hay pointed out at the United Sua Betong meeting, will frequently include wage increases, and investors must expect, at most, their maintenance rather than reduction. Despite the fractional falls in share values recently recorded, current yields appear too low to encourage speculative or investment activity for some time to come.

Further Rand Dividends.—The later Kaffir dividends, writes our mining correspondent, broadly maintain the favourable impression created by the first announcements, discussed on page 620 of last week's *Economist*. The declarations of the largest group, the Rand Mines-Central Mining, are particularly satisfactory, since among the declarations four companies—Consolidated Main Reef, Crown, East Rand Proprietary and Modder East—set up records. The earnings of the New Modder, whose reduced dividend is prominent, have declined owing to deterioration in development values, and the concern is one of the few adversely affected by the changed taxation basis. Rand Mines again pays 4s. per share. Changes in the Anglo-American group are usually comparatively small. The increase in the Daggafontein rate, although appreciable, is scarcely up to expectations. As anticipated, it is

West Rand Consolidated Ord.	1/-	1/6	2/6	1/-
Ditto. Deferred	...	...	...	£2/5/9
Witwatersrand Deep	1/9	1/9	3/6	2/-

The two Geduld undertakings in the Union Corporation group continue their tale of expansion, but the Modder Deep cut is more sharp than had been expected. With the exhaustion of the property in sight—operations are not expected to continue after the middle or end of next year—the directors have apparently kept the rate down on income-tax considerations. In considering General Mining declarations, it should be recalled that the Van Ryn Gold distribution for the first half of 1935 was 2s. per share tax free on the then existing £1 shares and for the second half 2s. less tax on the 10s. shares, whose nominal value was halved by the return of capital. Dividends on the deferred capital of the West Rand Consolidated—25,000 in £1 shares—have commenced, as expected. A small balance payment completed the £1,500,000 to which holders of the ordinary shares were entitled before the deferred began to rank. Profits being now divisible in the proportion of three quarters to the ordinary and one quarter to the deferred, the latter receive £2.59 per share. There is at present no market on the Stock Exchange in West Rand deferred; but the value of the shares is undoubtedly high, and the principal holder, the General Mining and Finance Corporation will benefit appreciably.

* * *

Other Company Results.—Our usual table of company results, on page 707, includes the profits of 56 companies which have not been discussed in preceding Notes. The table clearly shows the importance of this week's iron and steel results, where "recovery" is still the watchword. Concerns such as *Mirrlees, Bickerton and Day, Ransomes Sims and Jefferies* and *Whessoe Foundry* report improved profits and dividends. The net profits of *Stephenson Clarke* have advanced from £183,083 to £204,107, the dividend being maintained at 10 per cent. *Barrow Hematite* have sustained a further heavy loss of £12,812, while *Richardsons Westgarth* have fared no better than a year ago. A number of publishing concerns appear among the general industrial results. *Kelly's Directories'* profits have achieved the very satisfactory level of £114,634, while *George Newnes, Country Life* and *Hazell, Watson and Viney* have increased the previous year's profits by a few thousand pounds. *C. Arthur Pearson*, however, have earned rather less at £34,458, and the dividend has been reduced from 6½ to 5 per cent. *Scribbans*, the cake manufacturers, have experienced the ill-effects of rising costs of raw materials, and profits have been reduced from £148,786 to £127,941, involving reductions in the ordinary and deferred dividends. *Hall and Company*, the builders' merchants, have

maintained profits at a high level and the dividend at 22½ per cent. Further small rubber company results show reduced earnings, but among tea companies substantial advances in profits are recorded by *Eastern Assam* and *Rajmai*. A disappointing result is shown by *Brocklehurst-Whiston*, which has sustained a loss of £3,291 compared with the previous year's profit of £69,407.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Ottoman Bank, Sena Sugar Estates, British Electric Traction, Rio de Janeiro City Improvements, Telephone Rentals, Wm. Cory and Son, General Ceylon Rubber and Tea Estates, Holyrood Rubber, United Sumatra Rubber Estates, Willoughby's Consolidated, and Charterland and General Exploration and Finance. Sir Herbert Lawrence, at the Ottoman Bank meeting, referred to the Franco-Turkish agreement for the payment of external debts. At the Sena Sugar Estates meeting the chairman ascribed the greatly improved results to larger output, with consequent reduction of overheads. Mr J. S. Austen, at the British Electric Traction meeting, said that the Tilling and British Automobile Traction share bonus amounted at market price to about £1,500,000. At the Rio de Janeiro City Improvements meeting, Mr Francis Glyn reported that the Brazilian Government had promised a revision of the annual payment to the company. Colonel Fenwick alluded, at the Willoughby's Consolidated meeting, to the competition among prospectors and companies for mining claims and the resulting prohibitive prices. At the United Sumatra Rubber Estates meeting, the chairman reported that the sale of the Bangoen Poerba Estate had enabled them to make a fresh start. Sir Edmund Davis, at the Charterland and General Exploration and Finance meeting said that the valuation showed that the net assets amounted to 9s. 2.75d. per 5s. ordinary share. At the meeting of Telephone Rentals, the chairman described the successful application of the company's apparatus to factory uses. Sir A. Cory-Wright, at the Wm. Cory meeting, said that a voluntary increase in the contract price of coal had averted a stoppage. At the Ceylon Rubber and Tea Estates meeting, the chairman pointed out that though rubber and tea covered equal acreages, rubber produced the smaller revenue. Mr Addinsell, at the Holyrood Rubber meeting, commended the members of the International Control Committee for their administration of restriction.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET	ACCOUNT
JUNE 23	JUNE 25

THE market this week has taken some time to make up its mind regarding political factors, and it has reached only a tentative conclusion. Reports of Cabinet differences and anticipations of Thursday's important debate were more cautiously regarded than the market's general acquiescence in the raising of sanctions—at least initially. Business has been quiet throughout, but the tone tended to improve after the turn of the week. The improvement revealed in the May trade returns assisted the mild recovery, but price movements have been strictly limited throughout the lists, and not least in the recent speculative markets.

Gilt-edged securities opened dull, on consideration of the higher Treasury bill rate on the previous Friday, 2½ per cent. Funding Loan being a particularly poor feature, while Bank of England and India stocks were sympathetically affected. Tuesday witnessed a partial rally in the afternoon, but it was hardly sufficient to move prices on the day, and it was not until mid-week that reasonable firmness was restored. A modest demand was maintained on Thursday, when prices recorded further fractional improvements.

ELECTRICAL ENERGY AT ECONOMIC RATES IN NORTH-EAST COAST AREA NORTH-EASTERN ELECTRIC SUPPLY Co. Ltd. Carlisle House, NEWCASTLE-UPON-TYNE SITES FOR WORKS Apply to the above Address for details

In the Dominion market, satisfaction was voiced on the response to the Australian conversion, but the scrip opened at ¼ discount, and did not find par until later in the week. Canadian Provincial issues remained nominal on further reports of imposed interest cuts by various debtors.

Realisation that the Cantonese leaders were prepared for demonstration but not for civil war, brought a sharp recovery in Chinese bonds. Advances of well over a point were common earlier in the week, and there were signs of special support for Vickers and Marconi notes and the railway issues in hope of a scheme to settle arrears. Assurances from the Brazilian Finance Minister on the observation of the 1934 Debt Plan helped the loans initially, but their subsequent movements lacked any enthusiasm. German issues were inclined to recede until revenue prospects were canvassed in mid-week.

Home rail stocks passed an uneasy week, affected by the wages negotiations and the rejection of the companies' offer. Good traffics therefore exerted only ephemeral influence, and quotations for the marginal stocks were successively marked down. Little interest was found in the overseas rail market. Argentine ordinary stocks were steady after their initial half-point fall, despite the poor traffics. Nitrate rails recovered an initial loss on the lapsing of a concession.

The volume of business in the industrial markets has not been large during the week, but the tone has been fairly satisfactory, and some sections have been quite active. Irregular movements in the iron and steel section at the end of last week gave place to brighter conditions, which improved as this week advanced. Several company results were disappointing, but *Stewarts and Lloyds* benefited from anticipations that the International Tube Cartel might be revived, and *John Brown, Whitehead Iron* and *Butterley* shares improved on the reports (discussed on pages 684-5). In the aviation group, *Bristol Aeroplane* shares were in demand following the dividend announcement, but reacted on the plan to increase the capital (see page 686). The settlement of the strikes at the *Fairey* and *Parnall* company works encouraged the whole market. The motor section has been firm, and *Austin* shares were prominent in a general advance attributed to good output figures for April.

Electrical equipment shares have been a fluctuating market, the chief items of interest being found in the satisfactory *General Electric* report (analysed on page 686) and the maintenance of last year's dividend by *Callenders*, which caused some disappointment. In the stores group *Woolworth* rose steadily to a new high level of 135s. *Scribbans* fell on the reduced dividend and profits. The textile section has been rather dull, with active but intermittent demand for *Courtaulds*.

Business in the miscellaneous industrials group has been small, but there have been several bright features. *British Oxygen* shares steadily improved under good trading reports, and initially cement shares were well supported. Demand for *British Plaster Board* shares fluctuated with expectations of dividends, and the trend in the building material group became uncertain in mid-week. *British Piston Rings* were a feature in the motor components section.

The oil shares market closed last week with a flourish, thanks to the unexpectedly high dividends announced by the *Eagle* companies. This week the market has been more restrained, although *Anglo-Iranian* shares have been well supported on the strong balance-sheet position, and *Royal Dutch* have been bought from Amsterdam as a hedge against devaluation of the guilder. There has been a good market for *Burmah* issues. Business in the rubber share market has been on a very small scale, with a slight tendency toward firmness in sympathy with *Mincing Lane*, which receded in mid-week. A certain amount of confidence was demonstrated in the tea share market this week, although interest was strictly confined to the Indian section, where some good dividends have been declared. The *Ceylon* section was dull.

In contrast to last week, quiet conditions prevailed in the *Kaffir* market, which showed signs of activity only in mid-week, when development companies attracted some interest. Idle conditions are attributed to the political uncertainty, which appeared to offset the good half-yearly

dividend announcements (discussed on page 687), and the taxation concession granted by the Union Government to new producers. There was good demand for *West Witwatersrand* shares and a renewed investment demand from *Paris*. In the *West African* section business was very slight, with a very modest improvement in *Ashanti* in mid-week. Prices in the *Rhodesia* copper section were maintained, but activity was small. The continued fall in the price of the metal has induced a very dull tendency in the tin shares groups, and although selling has been limited prices have been marked down for many securities.

FOREIGN STOCK EXCHANGES NEW YORK

A FIRM close to business at the end of last week has been followed this week by a mixed display of strength trying to break through the blanket of inertia. Business news continues to justify much more forceful action than *Wall Street* demonstrates. Steel mill activity, estimated by *Iron-Age* at 71 per cent. of capacity for the week, is at the highest rate for six years, but although prices rose at the beginning of the week, the market later became timid on the prospect of having to share higher earnings with the employees of the steel industry, and marked them down again. The decision of the Interstate Commerce Commission to continue freight surcharges for another six months, together with rising freight and passenger revenues, encouraged rising prices for railroad shares. Utility shares were slightly more active than they have been for some time. There is not yet much sign of benefits from *Veterans'* spending on a large enough scale to provoke a rise in retail and distributing company shares, but automobile output is at very satisfactory levels. The bond

arket is rather dull. Professional operators had their enthusiasm for the Landon nomination rather damped by s outspoken progressive policies, and are trying to buoy themselves up with hopes of a breakaway from the Democrats of prominent anti-New Dealers. During the week resident Roosevelt signed the Commodity Exchange Control Bill, which is designed to restrain all but legitimate trading operations.

* Two-hour session.

PARIS

The exaggerated responsiveness previously shown to every political change has by now become less noticeable, yet monetary and industrial conditions continue to overshadow all others. This week's steady drift back to work—being more significant than earlier reports of nebulous "settlements"—induced a new feeling of optimism, and the market was helped by the Government's declaration that it would keep order. After two or three days' improvement, however, technical conditions led to a reaction which was followed by a state of depression due to deeper causes. Tension gave place to uncertainty pending the Finance Minister's statement late this week. For a time rumours of a compulsory conversion of Rentes sadly depressed the market but they were officially denied in mid-week. Metallurgical shares were depressed, the Government's attitude towards the nationalisation of the armaments industries being uncertain. Internationals remained somewhat in the

background; and share prices generally were irregular and trendless.

BERLIN

An unloading of holdings has followed the realisation that many prevailing share prices seem unjustifiably high, and the market has devoted this week to recovering from the minor surgical operation. Quotations have in general come down to more reasonable levels and no outstanding movements have interfered with the normal ebb and flow of price movements. The Bourse was a little disturbed on Tuesday by selling of Steel Trust shares by a Berlin bank, and the slight weakening in prices then spread to other sections. The market later displayed reserve, but was supported by an undercurrent of rather better sentiment. The strength of Siemens shares continues, in spite of one or two small setbacks, but shipping issues have lately figured among the weaker features.

AMSTERDAM

Owing to continuing currency uncertainties, the week began inauspiciously, with an irregular tendency and a small turnover. Home bond prices in particular experienced a deepening of depression after the announcement of a further issue of a 3 per cent. loan in exchange for Railway Bonds. On Tuesday, however, the market tried to persuade itself that monetary cares did not weigh too heavily upon it, and a decidedly firmer tone developed, particularly in commodity issues. Tobacco shares, which had been strong for some days, led an improvement which spread to sugar shares. Even the rubber market became more active after a short period of extreme dullness. A recession, however, ensued on the next day, rubber shares alone resisting the general, if small, downward movement.

CAPITAL ISSUES

THE new issue market, after last week's large output, has been granted a respite from municipal issues—where the "holiday" has been prolonged by the "wishes" of the authorities—and also from ordinary share issues, good, bad or indifferent. The only public offer, in fact, is of the 5 per cent. preference shares of *John Thompson Engineering Company*, issued at 21s. 6d. per £1 share. The company acquires interests in a number of associated boiler and metal working concerns. The prospectus commendably sets out a ten-year record of profits, which shows that the combined earnings of the undertakings amounted to £165,983 for 1935. This is the highest figure during the decade, and the record exhibits a marked cyclical swing in earnings which involved a loss in 1931. The preference dividend is well covered by the latest earnings, but in 1934 profits were equivalent to some four times the dividend, while a year earlier it would have been little more than covered. It is necessary to go back to the 1929 level of earnings before a satisfactory cover is again found. While the shares are adequately secured at present earnings levels, therefore, a somewhat speculative rating seems called for, in view of the wide fluctuations in profits in the past, and the shares are not primarily suitable for the long-term holder. Statements for information have been

published this week by *Electrical Switchgear and Associated Manufacturers, Derbyshire Stone, Imperial Cold Storage and Supply, Bedford Brick, John Bowes and Partners, Java Investment Loan and Agency, and Mount Magnet Gold Mines.*

Bowes (John) and Partners, Ltd.—Issued capital, £698,625 ordinary stock. Particulars of issue of £425,000 5½ per cent. first mortgage debenture stock at par, to redeem £169,200 outstanding debentures and to provide £232,000 for construction purposes. Secured by first charge on property, mines, etc. Redeemable at par by April 1, 1964, by drawings commencing 1939, or at 105 after April 1, 1940 on six months' notice. Durham colliery company formed in 1886. Profits before depreciation, excluding profits or losses of a subsidiary: 1933, £31,476; 1934, £41,613; 1935, £18,192. Total assets, December 31, 1935, £1,066,384, including £928,369 collieries, etc.

Java Investment Loan and Agency, Ltd.—Issued capital, £400,000. Particulars of £100,000 3½ per cent. debenture stock secured by first floating charge. Redeemable at par, August 1, 1971, or after August 1, 1966 on six months' notice. Issue purchased by Cazenove, Akroyds and Greenwood and Company at 98 per cent. less ½ per cent. commission.

Mount Magnet Gold Mines, Ltd.—Issued capital, 568,043 2s. 6d. ordinary shares and 50,000 7 per cent. cumulative participating £1 preference shares. Preference shares entitled to 10 per cent. of profits in excess of the fixed dividend, and on winding up to 10 per cent. of surplus after repayment of ordinary capital. Company owns mining leases in Western Australia. Total assets at December 31, 1935, £136,910, with property at cost, £73,612. Balance on profit and loss account, years to June 30: 1934, nil; 1935, £703; balance net profit, subject to tax, July 1 to December 31, 1935, £5,335; net profit, January to May, 1936, £8,027.

BY TENDER

Rugby Gas Company.—Messrs. A. and W. Richards offer for sale by tender £24,000 4½ per cent. preference stock, at a minimum price of 108, which yields £4 3s. 4d. per cent. Net revenue 1935, £15,456. Accumulated funds at end of 1935, including £10,473 undivided profit, £25,820. Sales of gas, 1935, 377 million cubic feet; 9,624 consumers. Capital required for extension of plant, etc.

ISSUES TO SHAREHOLDERS ONLY

Settle, Speakman and Company.—Issue of 65,600 ordinary £1 shares to shareholders on the register on June 9th at 25s. per share in the proportion of one new share for each £5 stock held.

Tinsley Park Colliery.—240,000 ordinary shares of £1 have been offered to ordinary shareholders *pro rata* at par.

(Continued from page 691)

General Electric Company.—Issue of 381,670 £1 ordinary shares at £3 each in proportion of one for every ten held.

OFFER ABROAD

Texas Corporation.—Issue of \$60,000,000 15-year 3½ per cent. debentures. The proceeds of the issue are to be used for redeeming, on October 1, 1936, at 101 per cent., the Corporation's outstanding \$60,000,000 5 per cent. convertible sinking fund gold debentures due 1944.

FORTHCOMING ISSUES

Titanine, Ltd.—An issue of 289,000 2s. ordinary shares at 4s. 3d. each will be made shortly.

Vogelstruisbult Gold.—Meeting June 24th at Johannesburg to consider an issue of 628,571 10s. shares in proportion one for each seven held.

Tunnel Portland Cement Company, Ltd.—Extraordinary general meeting will be held July 8th to authorise increase of capital by creation of 1,500,000 "A" £1 preference shares. It is proposed to issue at a premium 500,000 of such preference shares and to retain the balance for future issue. The present issue of capital will be primarily used in developing a new cement manufacturing unit and for the general purposes of the company.

OTHER RESULTS OF ISSUES

Alpine (Barborton) Gold.—Issue 920,000 shares 5s. each at par. Applications were received for about 125,000 shares.

Greeff-Chemicals Holdings.—Owing to oversubscription lists for issue of 250,000 5½ per cent. cumulative preference shares 10s. at 10s. 6d. and 500,000 ordinary shares 5s. at 7s. 6d. were closed at 9.5 a.m., June 11th.

G. Hopkins and Sons.—Subscription lists for issue of 130,000 6 per cent. cumulative preference shares of 10s. at par and 195,000 ordinary shares of 2s. at 2s. 6d. per share were closed at 9.10 a.m. June 11th.

Steel Barrel Scammells.—Lists for offer for sale of 125,000 5½ per cent. cumulative preference shares £1 at par and 250,000 ordinary shares 5s. at 6s. 3d. each were closed at 10 a.m. June 11th.

Castlefield Rubber.—The offer of 1,000,000 shares of 2s. each at 3s. has been fully subscribed.

C.N.A. Investments.—The offer for sale of 500,000 5 per cent. cumulative preference shares £1 has been heavily oversubscribed. Subscription lists were closed at 9.5 a.m. June 12th.

Thomas Blackburn and Sons.—Lists for the offer for sale of 120,000 6 per cent. cumulative preference shares of 10s. at par and 440,000 ordinary shares 5s. at 6s. 6d. per share were closed at 9.15 a.m. June 12th.

Australia 2½ per cent. Loan.—Cash subscribers for up to £10,000 of stock received full allotment. For amounts above that level the basis of allotment was about 68½ per cent. of requirements.

REPORTS AND NOTICES

Mr Francis Adams Beane has been appointed to a seat on the board of the Bank of British West Africa, Ltd.

Mr David Courtney Wybrants, M.C., has joined the board of Rylands and Sons, Ltd.

BANKS

CHEMICAL BANK & TRUST COMPANY.—The condensed statement of condition of Chemical Bank and Trust Company, New York, at March 31, 1936, shows assets totalling \$602,796,090, comprising cash and due from banks, \$140,899,587; U.S. Government obliga-

tions, direct and fully guaranteed, \$147,722,820; bankers' acceptances and demand loans, \$91,837,673; eligible paper and short-term notes, \$63,295,080; State and municipal bonds, \$37,918,874; other bonds and investments, \$18,084,086; loans and discounts, \$80,013,808; banking houses owned, \$267,907; other real estate owned, \$6,363,349; mortgages owned, \$5,005,160; credits granted on acceptances, \$7,449,466; other assets, \$3,938,274. On the liabilities side appears capital stock, \$20,000,000; surplus, \$40,000,000; undivided profits, \$11,689,548; dividend, payable April 1, 1936, \$900,000; reserved: taxes, interest, etc., \$8,490,925; acceptances outstanding, \$7,841,627; other liabilities, \$4,165,960; deposits, \$509,708,028—total, \$602,796,090.

RAILWAYS

MEXICAN RAILWAY COMPANY.—Gross receipts for the half-year to December 31, 1935, were \$6,587,131, or \$662,623 more than in the second half of 1934. Working expenses were \$1,110,567 heavier at \$6,539,938, and the balance carried to net revenue account is down to \$47,193 from \$495,137. At the standard rate adopted, the balance is equivalent to £2,622, which with interest amounts to £4,567. After charging debenture interest £87,338, and Mexican income tax £808, there is a deficiency of £83,579, which increases the debit brought in to £551,981. The debenture moratorium has been extended for a further three years. Meeting at Winchester House, London, E.C., June 24th, 2.30 p.m.

MISCELLANEOUS

LEHMAN CORPORATION.—On March 31, 1936, gross assets of the Lehman Corporation totalled \$89,846,303 or \$131.41 a share. At market prices cost of assets was \$67,329,224 and gross unrealised appreciation \$22,517,079. Investment at market value in common stocks totalled \$66,225,239 or 73.7 per cent. of gross assets. Investment in this group was equivalent to \$96.86 a share on Lehman stock. In preferred stocks investment at market prices was \$7,971,613 or 8.9 per cent. of gross assets, equal to \$11.66 a share on Lehman Corporation stock. Cash and government securities amounted to \$6,727,773 or 7.5 per cent. of gross assets, equal to \$9.84 a share. Investment in bonds other than Government bonds was \$6,371,576 or 7.1 per cent. of gross assets, equal to \$9.32 a share on Lehman Corporation stock. Other assets, valued at \$2,550,102, involved 2.8 per cent. of gross assets and amounted to \$3.73 a share on Lehman Corporation stock.

TOKYO ELECTRIC LIGHT CO., LTD.—Return for February, 1936: Kw. hours sold, 400,689,732; gross revenue, Yen 12,087,498; sterling equivalent at par of exchange, £1,237,960; increase over corresponding period last year, £76,963. Return for March, 1936: Kw. hours sold, 430,864,667. Gross revenue, Yen 11,705,718. Sterling equivalent at par of exchange, £1,198,861. Increase over corresponding period last year, £100,042. Return for April, 1936: Kw. hours sold, 440,482,693. Gross revenue, Yen 11,538,701. Sterling equivalent at par of exchange, £1,181,755. Increase over corresponding period last year, £88,313.

ALLIED IRONFOUNDERS, LTD.—Income for year ended March 31, 1936, after deduction of income tax, amounted to £259,730, compared with £372,561 for preceding year. The ordinary shareholders receive 10 per cent. dividend, compared with a distribution of 12½ per cent. for preceding year. The sum of £57,500 is transferred to reserves, and the carry-forward is increased from £124,767 to £146,410. Central obsolescence and depreciation reserve stands at £119,098. Mr James Shaw has been appointed managing director. During the year the company acquired the whole of the share capital of Aga Heat, Ltd. The chairman of that company, Mr J. E. V. Jobson, has been appointed an additional director of Allied Ironfounders. Total assets, £3,514,161. Cash, £122,214, against £374,578. Deposit accounts, £304,000, against £34,000. British Government securities, £199,982 against nil. Meeting, June 25th, at Winchester House, London, at noon.

THE LONDON COUNTY FREEHOLD AND LEASEHOLD PROPERTIES, LTD.—The directors announce that the ordinary stock of the company will in future be dealt in and be transferable in 10s. units. The preference stock will continue to be dealt in and be transferable as at present in £1 units.

RUSTON AND HORNSBY, LTD.—Balance of trading account for year ended March 31, 1936, was £109,369, against £88,276, and dividend from associated companies £24,400, against £18,600. Net profit was £109,829, against £80,265. Ordinary dividend 5 per cent., against nil; to reserve, £25,000, against nil; forward, £59,594, against £59,765. Rationalisation agreement with R. A. Lister and Company has been terminated by mutual agreement, and both parties have taken such steps as will enable them to safeguard their respective interests.

BEARDMORE (WILLIAM) AND COMPANY, LTD.—A trading profit of £18,557 on operating departments was secured in 1935 by William Beardmore and Company, Ltd. This compares with a loss of £524 in 1934. A slightly larger income was received from heritable properties, and £23,242, against £20,108, was received by way of interest and dividends from subsidiary and other companies. The net loss for the year was £32,568, against £64,810 (after crediting reserves of £19,000 no longer required). The total debit carried forward is £830,324.

BUTTERLEY COMPANY, LTD.—Net profits for year ended March 31, 1936, amounted to £137,939, comparing with £93,964 for year 1934-35. The ordinary dividend is raised from 5 per cent., free of income tax, to 6½ per cent., free of income tax. A transfer of £25,000 is made to reserve against nothing a year ago. Carry-forward reduced from £66,904 to £62,843. Total assets, £2,797,270. Cash is at £122,131 against £81,256. Meeting at Ripley, Derby, on June 25th, at noon.

COMPANY MEETINGS, &c.

OTTOMAN BANK

DIVIDEND MAINTAINED

REVIVAL IN ECONOMIC ACTIVITY

PROGRESS OF TURKEY

TRADE CONDITIONS IN THE NEAR EAST

SIR HERBERT LAWRENCE'S REVIEW

The annual general meeting of shareholders of the Ottoman Bank was held, on the 16th instant, at Winchester House, Old Broad Street, London, E.C.

General the Hon. Sir Herbert A. Lawrence, G.C.B., presided.

Mr W. Stewart McKim (secretary to the committee) having read the notice convening the meeting,

The Chairman said:—Ladies and gentlemen,—I have been informed that this meeting is properly constituted, and I presume it is your pleasure that the report and balance sheet circulated among you should be taken as read.

During the year 1935 the conditions in the sphere of our activities continued in many respects the same as in 1934.

The spirit of nationalism which is now so prevalent makes it increasingly difficult to give a general outline, but undoubtedly there has been some recovery from the critical conditions of recent years and some progress made in meeting new conditions.

INCREASE IN VOLUME OF INTERNATIONAL TRADE

The marked increase in most agricultural prices and those of certain raw materials, the liquidation of stocks and the increase in industrial production are encouraging signs which have marked the past year, and although the revival of economic activity has been mainly in the expansion of internal markets, there has been some increase in the value and volume of international trade. The soundness of industry has been increased by the elimination of the weaker elements, and there has been a progressive reduction of that indebtedness which was the cause of the financial crisis.

It is, however, difficult to find much cause for optimism and confidence in the future when one realises the political tension which, on the other hand, paralyses all initiative, when the world appears to be farther than ever from any general currency stabilisation, and when customs and monetary restrictions on the circulation of goods and money are every day increased.

As time passes it becomes more difficult to see how the old order of economic co-operation on which prosperity rested can be restored. It is almost unnecessary to recall that before the War Western Europe and Eastern Europe were economically complementary one to the other, the former being the principal outlet for the agricultural produce of the latter, who, in exchange, imported manufactured products. To-day agriculture is protected in the big industrial nations concurrently with the growing industrialisation of the agricultural countries where our branches and affiliations are established. It cannot reasonably be expected that, when these countries have become self-sufficient, they will consent to lose the fruit of the immense efforts they have made during this long crisis to equip themselves so completely.

PROGRESS OF TURKEY

When we summarise the economic development in Turkey since our last meeting we see immediately the numerous, and, at first sight, contradictory results of this general system of self-reliance to which I have just referred.

Here we have a young country of more than 16,000,000 people, full of enthusiasm and faith in their destiny, solidly supporting a truly National Government determined to spare nothing to improve the country's welfare, and, at the same time, to increase its influence abroad.

The indications of progress are numerous and apparent. With the exception of cereals, affected by the lack of rain, crops have been very good. The numbers of livestock, which had continually decreased since 1931, have begun to increase. Sales, both of agricultural products and of livestock, have continued to be easy

and remunerative; the new policy of clearing agreements has frequently had the result of forcing prices above the levels even of world prices. Artificial as this state of things is, it has nevertheless resulted, in one year, in an increase of exports from 92,000,000 Turkish pounds to nearly 96,000,000 Turkish pounds. At the same time imports have only increased from about 87,000,000 to about 89,000,000, with the result that there is a favourable commercial balance of 7,000,000 Turkish pounds, an increase of 2,000,000 over that of 1934; but I will indicate to you later the reservations which must accompany this satisfactory statement.

There is another symptom of improvement: the Budget receipts for the year 1934-35 exceed 190,000,000 Turkish pounds, an increase of 6,000,000 over estimates, and a surplus of 7,000,000 over expenditure. Two issues of the Sivas-Erzurum Internal Loan have been placed, the first of 2,000,000 at the beginning of the year, and the other of 4,500,000 at the end of the year. Work on this railway line is much advanced. The line to carry coal, which is to join up Irmak with Eregli, has been opened up to traffic as far as Filyos, and as regards the line for copper, intended to serve the Ergani mine, it already reaches as far as Diyarbakir.

ACTIVITY IN INDUSTRIAL SPHERE

In the industrial sphere there is the same activity: the Kayseri cotton mill was opened on September 16th last, and its annual output of material is already estimated at 5,000,000 kilos. Some months previously, at Ketchiborlu, a sulphur refinery was opened, with the object of supplying immediately the entire internal requirements. At least half the requirements of the country for glass and bottles will shortly be supplied by the new glass works at Pacha-Baghtche. I must also mention the semi-coke factory at Zonguldak, and, as a more normal example of industrialisation in an agricultural country, the attar of roses distillery at Isparta. In short, the five-year plan at the beginning of this year is already two-fifths completed.

There are, however, some difficulties, and they arise principally from the deflection of trade from the usual commercial channels and the transfer difficulties arising from that deflection.

EXTERNAL TRADE PROBLEMS

There is no doubt that in the case of Turkey, as in that of several other Balkan nations, compensation agreements, and in particular those which have been concluded with Germany, tend to misdirect the tendency of all external trade. The result has been that business has been more and more directed to countries only offering in payment non-transferable currency. Thus Germany, by paying high prices, attracts practically 40 per cent. of Turkish exports and, by means of payment in blocked marks, compels the selling country to buy German industrial products; trade with France and England has, on the other hand, fallen considerably, although, to meet the service of the Public Debt, as well as the recent agreements for the repurchase of certain concessions, it is to the nationals of these two countries that Turkey has to remit the major part of its financial obligations.

In a relatively short time, however, the dangers became obvious to all, and it is now realised that in spite of the most careful measures for the protection of the national currency, the favourable trade balance was not sufficient to prevent a deficit in the balance of external payments, recently estimated by the competent authorities at 5,000,000 Turkish pounds for 1935. Temporarily, the Central Bank was able to meet the situation by taking advances

on its gold and at the cost of a very slight decrease in the percentage of note cover; but more effective remedies became necessary, and this was the object of the Franco-Turkish agreement of April last.

THE FRANCO-TURKISH AGREEMENT

As you are aware, this arrangement provides that during the five years which Turkey needs to re-establish equilibrium, its various external debts will only be paid in cash to the extent of 50 per cent., the other 50 per cent. being provided in Turkish pounds to be used for the purchase of certain products, such as coal and various minerals, to be sold in France for the account of the creditors, with the object of making up the amount to which their agreements entitle them.

It is a fact of which we have had only too much experience that debtor countries can only discharge their obligations by exports of goods, and that creditor countries expose themselves to a complete cessation of payments if they close their frontiers; the French Government, by agreeing to admit additional imports of Turkish minerals, has rendered to the bondholders and to the other creditors of Turkey a service for which, in view of the present circumstances, they should be particularly grateful.

As regards our establishment, we have considered it our duty to take an active part in the elaboration of the agreement in question, and we have collaborated as founders with the Council of the Debt, of the Franco-Turkish Commercial Company which, using the authorisations obtained from the French official departments, and without seeking profit for itself, will endeavour, in the best interests of all, to effect the transfer of the balance necessary to meet the engagements undertaken by Turkey in 1933, 1934 and 1935.

This initiative cannot but contribute to the maintenance of the excellent relations which we have established with the Turkish Government since the renewal of our concession, and of which we have already received from them many proofs.

The improvement, which I reported to you last year, of our working in Turkey continued in 1935 and would have shown more satisfactory results if, unfortunately, it had not still been necessary to provide for certain items dating from before the crisis.

TRADE PROSPERITY IN EGYPT

In Egypt improvement was shown by all the usual evidences of trade prosperity. The figures of foreign trade showed an increase over the previous year. Imports amounted to 25,700,000 Egyptian pounds, as against 23,700,000 Egyptian pounds in 1934, and exports to 26,700,000 Egyptian pounds, as against 24,000,000 Egyptian pounds in the preceding year. Customs receipts up to November 30 last amounted to over 10,000,000 Egyptian pounds, an increase of 1,500,000 Egyptian pounds. The 1934-35 Budget produced a surplus of no less than 4,000,000 Egyptian pounds.

The cotton situation has been good, and the Government's estimate for the season 1935-36 is nearly 1,000,000 cantars more than the actual production of the previous season, although the area under cultivation was less.

The Egyptian Government in 1935 approved a Five-Year Plan of works involving an expenditure of 36,000,000 Egyptian pounds. The plan includes reconstruction of the Delta barrage and the building of a dam at Lake Tsana, the source of the Blue Nile. Schemes of land reclamation, involving more than 400,000 acres over a period of twenty years have also been approved in order to utilise the additional water made available by the heightening of the Assouan dam.

CONDITIONS IN PALESTINE

In Palestine during the first seven months of 1935 prosperity continued in all branches of trade. This was followed by a period of uneasiness provoked by fear of complications arising out of the war in Abyssinia; but subsequently the situation improved, and towards the end of the year gradually became more normal. The value of imports increased from 15,500,000 Palestine pounds in 1934 to 17,900,000 Palestine pounds in 1935, and that of exports from 4,350,000 Palestine pounds to approximately 4,700,000 Palestine pounds. The very large adverse trade balance shown by these figures is only apparent, as it is compensated by the funds brought into the country by the Jewish immigrants.

During the year 298 new companies were registered, with a total capital of 3,120,000 Palestine pounds. Our branches have participated fully in the commercial activity of Palestine, and the results have been satisfactory.

Unfortunately the steady progress in the country has since been interrupted by the present disturbances, and the prosperity

of Palestine will largely depend on a speedy settlement of the dispute.

IRAQ, IRAN, AND CYPRUS

In Iraq the pipe-line to the Mediterranean was opened during the year and considerable progress was made with numerous works. Some damage was done to agriculture by weather conditions and the cereal crops were below average, with the result that exports of grain were considerably less than in the previous year. The cotton crop was very satisfactory for the small area planted, and high hopes are held for its future. The date trade was adversely affected by the existence of large stocks and the closing of Italian markets.

The money repatriated from Iran, as the transit trade through Iraq dwindled, has been steadily leaving the country, principally for Palestine and, to a lesser degree, Egypt, both these countries offering opportunities for investment, especially as there is no income tax. As a result, interest rates in Iraq rose during the latter part of the year and our branches felt the benefit.

In Iran trade has been affected by the uncertainty produced by the fluctuations in the price of silver. Practically all the trade is now a State monopoly. As a result of the increasing control exercised by the Government, trade is tending to be centralised in Tehran and the employments of our branch there have consequently increased, with a corresponding reduction in the business of the provincial branches, which led us to close our branch at Hamadan at the end of the year.

In Cyprus the improvement in general conditions continued during 1935. Crops were satisfactory and prospects for the next olive, caroub, and cereal crops were excellent; but recently those prospects have been affected, to an extent which is not yet known, by climatic conditions. An increase was shown both in imports and exports. The results of our branches in the island reflected this general improvement.

THE NEAR EAST

As usual, I should like to say a few words regarding the other parts of the Near East, where we are indirectly interested through our affiliated institutions.

The activity of the Banque de Syrie et du Grand Liban has been most satisfactory during 1935, and it has been able again to increase its dividend, from 9.66 per cent. to 9.80 per cent. In its report the bank states that the good results of the agricultural season in the Levant States under French Mandate have started a recovery in the movement of trade which must confirm confidence in the future outlook of these territories.

In Yugoslavia, as in the majority of mainly agricultural regions, the upward movement in prices has been aided by German purchases. However, towards the end of the year commercial relations with Italy suffered from the effects of sanctions. The result is that the country has suffered from the immobilisation of its resources in blocked Reichsmarks and later from restriction of its exports.

In view of the circumstances, the business of the Banque Franco-Serbe during the course of the year can be regarded as relatively favourable. The board has, however, as a measure of prudence, recommended the shareholders to pass the profits to a provision account to meet contingencies.

GREECE

In 1935 the Greek market showed, on the whole, a greater activity than in the previous year, and an improvement was recorded in practically all branches of national activity. The total of external trade showed an increase of more than three-and-a-half million drachmae and of half a million tons, i.e. 25 per cent. in value and 18 per cent. in quantity.

I am able to inform you that a decree of the Greek Government has at last been issued to settle the different questions arising out of the drachmification, and particularly the question of indemnities to the banks affected. I remind you that a decree dated July 29, 1932, called "The Law of Necessity," imposed upon the banks conversion into drachmae, at an arbitrary rate of 100 drachmae to the gold dollar, of their deposits and advances in foreign currencies. In the case of our Salonica branch, the foreign currency assets considerably exceeded the liabilities. Unfortunately, the indemnity which we have received represents but a proportion, not only of the initial loss, but also of the reduced amount by which it was represented in our 1934 balance sheet owing to the appreciation of the drachma.

Our filiale, the British-French Discount Bank, Limited, which is established at Athens and Piræus, has, in spite of political events and the restrictions on exchange, benefited from its organisation and from the confidence which it has inspired in a clientèle which

has grown steadily since the bank's foundation in 1928. While it has not yet been able to earn profits it had at least, at December 31, 1935, recovered the losses which it had previously incurred as a result of the depreciation of the drachma.

In Rumania, where our subsidiary, the Bank of Rumania, Limited, is established, business continues to be affected by the existence of exchange restrictions.

POLICY OF PRUDENCE AND LIQUIDITY

It is evident that the general conditions, of which I have just endeavoured to outline the main characteristics, have not been of such a nature as to induce your committee to depart from its principles of prudence and liquidity.

In London, where the bulk of our funds are kept, the rates for money have been continuously unremunerative.

In Paris, where the monetary market was affected by two crises, the first in June-July and the second in November-December, the Bank of France had to take measures to meet the situation, with consequent adverse effect on the even course of banking business.

The accounts made up to December 31, 1935, after providing for bad and doubtful debts out of revenue and provisions previously made, show an amount available of £104,783 19s. 5d., including £29,541 17s. 9d. brought forward from the previous year.

The proposal of your committee is to maintain the dividend at 3s. for 1935. If you are in accord, this dividend will be paid on June 22nd in Istanbul, London, and Paris, in the latter place free of tax. The amount carried forward will be £29,783.

TRIBUTE TO THE STAFF

Before concluding, it is my pleasant duty, as it is at all our meetings, to thank all our staff for the way in which they have co-operated in our efforts during the year.

I now beg to move, ladies and gentlemen: "That the report and accounts now read be received and adopted: that the dividend for the year ended December 31, 1935, be fixed at the rate of 3s. per share, and that this dividend be payable in Istanbul, London, and Paris on the 22nd June, 1936."

Before I put this resolution I shall be happy to answer any questions.

Monsieur A. Roudy: I have pleasure in seconding the resolution.

No questions being asked, the Chairman put the resolution to the meeting, and it was carried unanimously.

The Chairman: I have also to move: "That Baron Hottinguer, General the Honourable Sir Herbert A. Lawrence, and Comte Frédéric Pillet-Will be and they are hereby re-elected members of the general committee."

Sir John P. Hewett, G.C.S.I., K.B.E., C.I.E.: I have very much pleasure in seconding the resolution.

On the motion of Mr Gordon L. Jacobs, seconded by Mr A. Bradbery, a cordial vote of thanks was passed to the chairman, directors and staff.

The Chairman: Ladies and gentlemen,—On behalf of my colleagues and of the staff I beg to thank you for the resolution which you have passed. I think that it is important that all members of this company should realise the extraordinary difficulties which have to be contended with in a world which is torn with political dissensions, as it is to-day, but I think you can rely on this, that the action of the board will be a cautious and careful one in conserving the resources of the bank.

The proceedings then terminated.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

WILLOUGHBY'S CONSOLIDATED

IMPROVED RESULTS

The ordinary general meeting of Willoughby's Consolidated Company, Limited, was held, on the 15th instant, at Winchester House, Old Broad Street, London. Col. H. T. Fenwick, C.M.G., M.V.O., D.S.O. (chairman of the company), presiding, said,

The liquid assets of your company—that is to say, the value of securities, plus cash and debts—show an increase over the previous year's figures of £15,741 after deduction of liabilities. With regard to the general valuation of our assets in comparison with our share capital, I can only repeat what I said last year, that our assets can be shown to represent more than the amount of our issued capital.

We have no liabilities beyond those for current expenses, and I venture to say that the company is in a very very sound financial position.

PROFIT AND DIVIDEND

I propose now to deal with profit and loss account for the year under review. As you will see, the expenses in London and Bulawayo amount to £9,434, about £200 more than last year. We have written off some £2,000 more than last year in respect of mining claims abandoned, and income tax is about the same sum as last year. On the revenue side we are up over £4,000 in the item dividends and interest, and down on the amount of profit made on the realisation of shares, which as you know is a fluctuating item and depends on the markets.

Our ranching business, I am glad to say, shows a much better result than in the last two years. For the year ending December 31, 1933, a loss of £27,057 was sustained; at December 31, 1934, we had to show a loss of £9,651, whereas in the year ending December 31, 1935, the debit was reduced to £2,177, which has been merged in the item profit on land, etc.

This includes the sum of over £3,000 for writing down the value of the cattle, so that altogether we have made an actual working profit this year of a small amount on cattle, which is, of course, a great improvement on the previous two years.

Altogether our profit and loss account shows a balance of profit for the year carried to balance sheet of £46,428 9s. 6d.—against £40,834 6s. 2d. in 1934—£10,000 has been placed to reserve account—against £6,500 in the previous year—and we are able to recommend a dividend of 5 per cent., leaving to carry forward £4,719 6s. 3d., against £3,306 10s. 9d. brought over from 1934.

As regards mining, we have not been successful in obtaining any substantial reward for all our endeavours. A large number of claims and prospects were inspected during the year both on behalf of the company and the Rhodesia Premier Syndicate. For the most part these were not of sufficient promise to be worth acquiring and for those few claims which showed promise the purchase prices demanded by the owners were prohibitively high. At the present time there are many prospectors and companies like ourselves in search of mining properties, and as a result of this competition owners are asking larger sums for their claims than they can possibly be worth.

PROGRESS OF SOUTHERN RHODESIA

In conclusion, I would like to say a few words on the general state of Southern Rhodesia. All the signs which one generally accepts show a steady improvement. Thanks chiefly to the improved gold and base-metal mining there is an all-round improvement in trade.

The output of gold and base metals was £6,255,000, compared to £4,939,000 in 1933.

Another good index is the gross earnings of the railways, which improved from £2,407,000 for the year ending September, 1933, to £3,791,000 for the year ending September, 1935.

Imports for the year 1935 were £944,000 up over 1934, while exports showed an increase of £558,000.

In regard to a trade which concerns this company—namely, the export overseas—notwithstanding several setbacks owing to restrictions, the actual exports overseas of cattle was 80,000, compared with 70,000 the previous year; under the circumstances, a most satisfactory increase.

Albeit a very late rainy season, in the end it proved one of the best rainy seasons we have experienced of late years. The tobacco farmers produced 19,000,000 lbs. weight of tobacco and the outlook for the agricultural interests seem better than they have done for some time.

The thanks of the board and of the shareholders are most certainly due to our staff in Southern Rhodesia.

The report and accounts were unanimously adopted.

SENA SUGAR ESTATES, LIMITED

MR A. N. LUBBOCK ON THE OUTLOOK

The sixteenth ordinary general meeting of Sena Sugar Estates, Limited, was held on the 12th instant, at Southern House, Cannon Street, London, E.C.

Mr A. N. Lubbock, who presided, in the course of his remarks said:—Gross profit is up by £70,000, due first to the closing of the Caia Estate, which had operated at a loss in previous years, and secondly to the successful crops at Moepa and Marromeu, where large outputs very naturally reduced overhead costs and thus diminished the loss per ton on sugar sold in open markets.

The net result is a profit of £49,032, compared to a loss in the previous year of £24,234. The quota of sugar which we were allowed to send to Portugal, and which is fixed annually by Government decree, amounted to 20,921 tons, being rather more than 1,000 tons above the figure of the previous year.

LARGER TONNAGE OF SUGAR PRODUCED

The tonnage of sugar produced per acre was better than in the previous year, though some way below the record figures of 1933. However, the main feature was that both Moepa and Marromeu had ample cane to keep them in full operation throughout the season.

The cost of a factory staff is a constant figure, and consequently a large output automatically brings down costs in comparison with years of smaller output.

A sugar refinery is in course of erection at Bulawayo, Southern Rhodesia, by a company formed in Rhodesia for that purpose. The intention was that this refinery should enter into a contract to purchase the whole of its requirements of raw sugar from us at a price which would leave us in the same position as we had enjoyed in the past. On going closer into the matter we found that difficulties at once arose over the form of the proposed contract, and we consequently accepted the offer made whereby we subscribe for the whole of the ordinary capital of this company, and our company will thus own the whole of the equity.

The capital necessary for this installation has all been subscribed in the form of debentures, and the only amount that we shall be called upon to provide in order to take up the ordinary capital is £15,000. We have been experiencing for some time past increased competition in Rhodesia from imported refined sugar, the quality of which is naturally superior to our semi-refined product. The advent of this refinery will now place us in a very favoured position and assure the whole of this market to us.

Turning now to the future. It was clear that the unsatisfactory results of the past could no longer be allowed to continue. The company was working on the basis of an output of 70,000 tons per annum with overhead charges in proportion and, as a cheap producer, on the assumption that all this quantity could be sold at a profit. The increase of tariffs throughout the world with the consequent dumping of surplus production reduced the values in open markets to an unprecedented level.

At previous meetings comparisons have been drawn by shareholders of the results obtained by this company and those companies situated in other parts of the world. I wish to point out that no true comparison can be made without taking into consideration the tariff barriers behind which each company is operating. Companies situated in the British Empire are able to sell the whole of their production at a profitable price, as, in addition to their local highly-protected markets, they have an outlet for the whole of their surplus production in this country at a preferential rate of duty. This company, as a producer in a Portuguese Colony, has access to very limited protected markets, leaving a large surplus to be dumped in the open markets at a loss which was steadily increasing.

With no sign of recovery in world values, we had no alternative except to reduce our output so as to eliminate this surplus.

The average quantity of sugar which we had been able to place in markets showing a profit, or at any rate no loss, had been rather less than 40,000 tons for some years past. This quantity could comfortably be manufactured by our modern Larabo factory with the addition of one of the older factories. Having taken this decision it then became necessary to write down the book values of the closed factories to a scrap value, except for those items of machinery to be used in the operating factories, which were taken at a fair second-hand valuation. All expenditure which had been incurred on future crops on the abandoned plantation, together with their capital value, was entirely written off.

Having thus reduced the value of our assets we had to reduce the nominal value of our ordinary share capital, otherwise our

profits for many years to come would have been absorbed in the increased depreciation necessary.

EFFECT OF SCHEME OF ARRANGEMENT

At the extraordinary general meeting held on 13th February last, the scheme of arrangement for reducing and reorganising the company's capital was fully explained, and those who did not attend received circulars setting out exactly what it was intended to do. I am pleased to say that an overwhelming majority of shareholders approved of the scheme, which in due course was sanctioned by the court on March 9 and became effective on March 26.

The question of arrears of preference dividends had to be dealt with as part and parcel of the scheme, and as you know preference shareholders agreed to accept £100,000 in ordinary shares at their nominal value in exchange for their net arrears of dividends, amounting to £104,000. I feel confident that the market value of the ordinary shares in the future will show that they made a very good bargain. At the same time, ordinary shareholders should congratulate themselves on getting rid of this large accumulated debt which stood in front of their prospects of dividends on such easy terms.

Thus, we have a balance sheet before us showing the value of our assets on the basis of an output of 40,000 tons in a normal season.

ECONOMIES EFFECTED

Economies were made in various directions, the management fee was reduced nearly 40 per cent., the commission payable to our selling agents was limited to a much reduced sum. Salaries in certain instances were reduced, and the annual fees to the board of directors were reduced from £3,500 to £1,300 per annum. In order to achieve this two of your directors voluntarily resigned, while the others agreed to accept a reduced fee with the exception of the chairman, who has asked that he should not receive any fees, as he is unable to take an active part in the management of the business owing to advancing years.

The greatly improved financial position of the company is shown by the fact that to-day we owe nothing to our bankers either in the form of advances against sugar stocks or by way of overdraft. Not so many years ago we owed them £370,000.

We estimate that owing to the closing of a further factory the net benefit to the company will amount to £40,000.

CONVERSION OF DEBENTURE STOCK

Finally, we had to deal with the conversion of the first and second debenture issues to a lower rate of interest. The first debenture issue could not be called for redemption prior to June 1, 1936, and we considered it inadvisable to negotiate for this conversion before the scheme of reconstruction was out of the way and the accounts for 1935, showing a more satisfactory position, had been published. It was for this reason that we could not say anything more definite in our report now before you. However, you now know that no time was lost after the publication of the report, and the issue has been made under the auspices of Messrs Schröder, the new stock bearing interest at 5½ per cent. We consider this rate satisfactory, and I am glad to tell you that the issue was successfully made last Wednesday, when over 75 per cent. of our debenture-holders agreed to convert into the new stock.

The annual cost to the company of this new stock will be £48,750, while the cost of the two old issues which it is replacing was £71,222 in the accounts now before you. The saving is thus £22,472. The issue was fully subscribed, but not heavily over-subscribed, which is sufficient proof that the rate decided upon was the correct one and that the issue could not have been done at a lower rate of interest.

The current crop is proceeding normally, both factories having started operations last month. We have carefully studied the question as to what use, if any, can be made of the land which is ceasing to grow sugar cane. We are now carrying out experiments in various directions, and hope that we may find an alternative crop, the cultivation of which would be profitable.

We hope that in the early autumn we shall be sufficiently sure of our ground to be able to declare an interim dividend on the preference shares, and from details which I have given ordinary shareholders will realise that the day is fast approaching when they can look forward to a welcome return on the capital which they have invested.

I wish to take this opportunity of thanking Messrs Schroder for the very great financial assistance which they have given us in the past, especially during the dark days of the company's history, and for their help at all times.

The report and accounts were adopted and the retiring directors and auditors re-elected.

GENERAL CEYLON RUBBER AND TEA ESTATES, LIMITED

A DIFFICULT YEAR

The thirty-ninth annual ordinary general meeting of this company was held, on June 18, at 4 Lloyd's Avenue, London, E.C., Mr D. Erroll Sinclair (the chairman) presiding.

The Chairman, in the course of his speech, said that the balance at the credit of profit and loss account was £9,396. After adding the amount brought in and appropriating £3,000 to reserve, bringing that account up to £70,000, there remained £7,545. The directors recommended a dividend of 2 per cent. on the ordinary shares, leaving £1,424 to be carried forward. The period covered by the accounts had been as difficult—if not more so—as its predecessor, 1934, and many unusual problems had arisen which were not easy to solve. Under the circumstances, the somewhat disappointing results were not unexpected.

The tea crop exported under Regulation was 1,777,405 lbs., which had sold at a gross average of 1s. 1.16d., against a crop of 1,832,095 lbs. for 1934 realising 1s. 0.33d. The total crop—that was, both exported and sold locally—amounted to 1,820,253 lbs., produced at a cost of 9.87d. f.o.b., against 1,921,602 lbs. in the previous year costing 9.87d.

From an acreage point of view, rubber was an equal partner with tea, but from a revenue point of view it was definitely the smaller contributor. In the past, however, very large sums had been derived from that source, and he confidently believed that in the not too far distant future they would again see prosperous times for that commodity. The total crop harvested amounted to 1,014,430 lbs., of which 945,239 lbs. were exported, produced at a cost of 5.13d. f.o.b., and netted 5.21d. as against 4.10d. and 5.65d., respectively, for 1934. That result was poor, but illustrated the meagre profits on which the industry generally was subsisting. However, the scheme for regulation of export was achieving its objective, namely, the reduction of stocks to a figure more in keeping with world requirements.

During his recent visit to Ceylon he had seen each one of the company's tea and rubber estates and factories. Generally speaking, he had been pleased with all he had seen.

The report was unanimously adopted.

RIO DE JANEIRO CITY IMPROVEMENTS COMPANY, LIMITED

NEGOTIATIONS WITH THE GOVERNMENT

The seventy-fourth ordinary general meeting of this company was held, on the 7th instant, at Winchester House, London.

Mr Francis M. G. Glyn (the chairman of the company), in the course of his speech, said: I have recently returned from a visit to Rio. While I was there I was actively engaged in negotiating with the Government for the revision of the annual payment to the company, and it was a great disappointment to me to have to leave without obtaining a final settlement. The President of the Republic and the Ministers of Finance and of Education and Public Health have all assured me personally that the Government's decision will not be long delayed and that the company may confidently expect a prompt and just solution. Strengthened by these assurances, I have every reason to believe that during the present year a permanent basis of payment will be agreed with the Government which should enable the company to earn the just return on its capital, which is contemplated in Article 137 of the new Brazilian Constitution.

In Rio building is progressing extremely fast in the areas which we serve, and the new connections to our system during 1935 amounted to 3,004, which number is a record. This building activity shows no sign of falling off, and mainly takes the form of large blocks of flats; its continuance will provide a welcome increase in the company's revenue.

There are three features which lead the board to take a slightly more favourable view of the future; firstly, the most definite promises which we have been given of a fair settlement; secondly, the slowly improving position of Brazilian trade; and, thirdly, the growing realisation in Brazil that foreign capital is required for the expansion of her industries and that fresh capital will not be forthcoming unless and until fair treatment has been accorded to capital already invested there.

In these circumstances the board have felt justified in recommending a dividend of 2½ per cent., although you will see from the profit and loss account that our net profit for the year falls short of the amount required by over twenty thousand pounds, for which we have had to draw on the "carry-forward."

The report and accounts were unanimously adopted.

UNITED SUMATRA RUBBER ESTATES, LIMITED

IMPROVED PROSPECTS

The twenty-seventh annual ordinary general meeting of this company was held, on the 12th instant, at 30 Mincing Lane, London.

The Chairman (Mr Herbert A. Barrett) in moving the adoption of the report and accounts, said:—The year has been an eventful one in the history of the company. For, following the sale early in 1935 of Bangoen Poerba Estate, what is equivalent to a reconstruction of the company has been carried out, without any cess or monetary call upon shareholders, and as a result the company emerges from a difficult period with a balance sheet which I feel sure you will all agree is a sound one.

Having put our house in order and made a fresh start, the board's one regret is that it has not been found possible to return a profit for the season. We, in common with all rubber producers, suffered in two ways—lower prices and lowered output, and, instead of a substantial profit on our rubber, the margin over estate cost was reduced to £2,140 rs. 6d. Then again as regards copra, prices were rising, but unfortunately crops proved most disappointing. After bringing in interest, etc., and profits on investments realised and allowing for London expenses, there is a loss for the year of £642 3s. 11d.

For the present season prospects are definitely more favourable. The position of rubber is much sounder than it has been for many years. For our rubber we have realised improved prices to date and have sold forward 36 tons for shipment over the period July-December at a price equivalent to 7½d. per lb. landed in London. Our copra sales have yielded prices which do at any rate exceed estate cost prices. Then there are our holdings in shares of the Padang Langkat Rubber Estates, Limited, and the Batu Rata (Sumatra) Rubber Plantations, Limited, on both of which we hope to receive dividends; on the former of these we have already received an interim of 1½ per cent., and in all the circumstances your directors have decided, as already announced in the report and the Press, to declare an interim dividend of 1½ per cent. for the current season. It is not very much, it is true, but your directors are concerned to make some return to shareholders at the earliest moment possible.

The report and accounts were unanimously adopted.

BRITISH ELECTRIC TRACTION COMPANY, LIMITED

FURTHER INCREASE IN PROFITS

The fortieth ordinary general meeting of the British Electric Traction Company, Limited, was held, on the 12th instant, at Winchester House, Old Broad Street, London.

Mr J. S. Austen (the chairman) said that it was not his custom to worry the shareholders by going over the statements in the report and the figures in the balance sheet, but he wished to draw their attention to the first line of the report, which told them the gross earnings of the company, and he did so because this was the first occasion on which those gross earnings had exceeded £500,000.

He also wished to point out that their profits for the year showed an increase of £32,000, following on an increase in the previous year of £37,000, so that in the two years it would be seen that they had an increase of about £70,000. He did not think that the shareholders could fairly ask them to maintain that rate of increase in the profit, but he had no hesitation in saying that in the current year they would have a substantial increase—something with which the shareholders ought to be satisfied—and he said that because their good friends the Tilling and British Automobile Traction, Limited, had again to come to their help with a substantial share bonus. That bonus did not yet appear in the company's list of investments, but he could tell them that if they liked to take the market price of those shares as an indication of their value, that bonus was equivalent to a present of about £1,500,000.

He would take the opportunity of stating that, if they cared to value their whole holding in that company upon the same basis, there was enough to repay at par the whole of the British Electric Traction Company's debenture stocks and share capital, including the deferred stock, and leave a margin over of about £2,000,000. The directors were not presenting a valuation this year, but he did know that the value of the company had increased materially during the year. Shareholders could get at the figure by seeing that the profits had increased by £32,000; then they could add to that the tax, because that profit had already paid tax, and thus they would get an amount which, multiplied by twenty, would give them some idea. He had not done it himself, but he would think that it would come out at about £800,000, or something of that sort.

The report and accounts were unanimously adopted.

WM. CORY AND SON, LIMITED

SATISFACTORY TRADING

The fortieth annual ordinary general meeting of Wm. Cory and Son, Ltd., was held, on the 18th instant, at Southern House, Cannon Street, London, E.C., Sir A. Cory-Wright, Bart. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, welcomed Mr H. L. Collard on his appointment as a director of the company, and, continuing, said that the accounts showed a net profit for the year ended March 31st of £646,330 9s. 9d. There had been a loss of interest on securities disposed of to redeem the 4 per cent. debenture stock, but debenture interest was now eliminated. The actual decrease in net profits was about £2,000. After paying dividends a balance of £952,921 8s. 5d. remained to be carried forward to next year's account.

The year had presented exceptional difficulties to all connected with the coal trade, but, generally speaking, the trade of the company and its subsidiaries had been satisfactory both in coal and oil. The company's export trade was fully maintained.

A voluntary increase of rs. per ton on the contract price of many of the principal consumers alone averted a stoppage at the mines in January, and Central Control of Selling as from August 1st next was envisaged. Distributors were ready to co-operate fully in this effort to improve the condition of the industry, and were satisfied that the coal owners, in operating the new scheme, would support and strengthen the position of regular and established distributors.

The conversations with Stephenson Clarke and Associated Companies, to whom reference had been made a year ago, have been interrupted by the changes in the coal trade during the year. Should the conversations ultimately lead to an agreement shareholders would be informed. It was proposed in future to pay the interim dividends on the ordinary and employees' shares on January 1st, instead of December 1st as hitherto.

Resolutions were passed by an extraordinary general meeting following the annual ordinary general meeting, reducing the directors' qualifications to £500, and authorising the directors to convert the ordinary shares into stock. The stock will be transferable in units of £1.

TELEPHONE RENTALS, LIMITED

INCREASED PROFITS AND DIVIDEND

VALUE OF "TELEMATIC" AND "CHRONOMATIC" SERVICE

The seventh annual general meeting of Telephone Rentals, Limited, was held, on the 18th instant, at Southern House, Cannon Street, London.

Mr Fred. T. Jackson (chairman and managing director), in the course of his speech, said: Since our last meeting we have changed the titles of our British subsidiary companies to "Telephone Rentals," with geographical designations indicating the respective areas of operation. Your directors' reasons for making this change were that they felt it was not generally realised that our organisation was a national one, covering the whole of this country and offering a most comprehensive service, and they wished to support this service by making it more widely known through a national advertising campaign. No doubt you will have seen in the national Press the advertising which we have carried out over the past twelve months under the collective name of "Telematic Service." Also with the directors' report we enclosed a circular which was a reproduction of some of our advertisements. I am pleased to be able to inform you that this circular has resulted in a large number of inquiries.

WIDE RANGE OF SERVICE OFFERED

The service we offer through our rental operating companies is a very comprehensive one. It includes all forms of private telephone service consisting of a complete range of intercommunicating telephones, automatic switchboards with tie-lines which enable scattered factories under the same control to be linked up in communication with their separate and several departments. Where desired we provide loud-speaking telephones, which leave the hands free for making notes, and what we term "Round Call" signalling devices which enable the head of a large factory to get in touch with any important executive at once, wherever he may be, although the factory may cover many acres.

This telephone service has given such universal satisfaction that your directors decided to extend the range of apparatus offered on rental to electrical instruments which would simplify factory control and production, also electric publicity clocks, all of which apparatus is marked under the name of "Chronomatic Service." This departure is meeting with a good reception from those in control of up-to-date factories, and I do not think I shall be assuming the rôle of prophet lightheartedly if I predict that eventually this business will be as important to your company as the telephone business is and has been; in any case, it has the additional advantage of broadening the basis of your company's profitable operations.

Last year I told you that many of our rental subscribers had become our shareholders, and that all shareholders connected with business should become our subscribers; now I would go further and say that even shareholders who are not directly connected with business can assist in the development of their company by advertising to their friends the merit of the service we offer and suggesting to them that they might put before us any of their administration problems where either quick communication or time factors are of importance. Every manufacturer knows the importance of reducing factory costs. The service we offer definitely achieves this object by saving time and so reducing hidden losses. Our Chronomatic Service goes further and controls time processes. By suggesting to their friends that they should get in touch with the company in this connection, shareholders will be rendering a service to their friends as well as to the company in which they are interested.

OPERATING COMPANIES' SUCCESSFUL YEAR

You will have judged by the dividends your company has received from the subsidiary companies that these operating companies have had a very successful year. It gives your directors great satisfaction to report that during the first five months of this year progress has been maintained, and there can be no doubt that your business continues to hold its predominating position in our industry.

The profit and loss account makes very satisfactory reading, as the profit for the year amounts to £93,594, as compared with £72,799 last year. After deducting the interim dividend already paid, which absorbed £18,987, and transferring £10,000 to general reserve, we have a disposable balance of £66,288. Your directors

recommend the payment of a final dividend of 5 per cent., making 8½ per cent for the year, which will absorb £27,187, leaving a balance to be carried forward of £39,100, which compares with last year's carry-forward of £24,124.

It is possible that some shareholders may be of the opinion that a greater increase in dividend than ½ per cent. might have been distributed. Your directors have considered this, but in view of the fact that your company has the reputation of being a safe investment, with the necessary stability for maintaining its profits through periods of depression, it was deemed wise to conserve the resources and at the same time maintain dividends on an equitable basis.

The report and accounts were unanimously adopted.

CHARTERLAND AND GENERAL EXPLORATION AND FINANCE COMPANY, LIMITED

The ordinary general meeting of this company was held, on the 17th instant, in London.

Sir Edmund Davis, chairman and one of the managing directors, who presided, said: Under the heading profit and loss account we have brought in £39,098 from last year, and deducted therefrom the dividends paid this time last year and the directors' percentage thereon, together £29,650, leaving a balance of £9,448, which, added to the balance of profit for the year under review of £48,692, makes a total of £58,141. We recommend a final dividend of 3 per cent. on the preference stock, and a dividend of 10 per cent. and bonus of 2½ per cent. on the ordinary shares, all less income tax, and leave to be carried forward, subject to directors' percentage of profits, the sum of £9,641.

As regards the position of the company at May 31, 1936, if we take the quoted investments at the market price at that date and the unquoted at cost or at directors' valuation, we have £574,826, and, after adding cash and debtors, less creditors, and allowing for the preference capital and preference dividend to May 31st, we then had a total of £479,897, or 9s. 2.75d. per 5s. ordinary share.

At our last general meeting I referred to the interest we held in Albatross Publishing. This we have slightly reduced in our desire to spread our investments, though the business is progressing. Sales for the twelve months ended April 30, 1936, were 262,905 volumes, as compared with 293,358 volumes for the corresponding period last year, owing to the satisfactory arrangement which obtains with Tauchnitz. Under this, during the six months ended April 30th last, 105,786 volumes were sold, which, if added to the above-mentioned 262,905, makes a total of 368,691 volumes sold, taking six months only for a portion of the business.

On the ordinary shares, during the last twenty-four years, we have paid in dividends 319 per cent.—an average of 13.29 per cent. per annum—and with the dividend and bonus now recommended (12½ per cent.), 331½ per cent., an average of 13.26 per cent. per annum, plus a bonus of one free ordinary share for every two shares held (in 1925), and a bonus of one free preference share for every three ordinary shares held (in 1927).

The report and accounts were unanimously approved.

HOLYROOD RUBBER, LIMITED

DIVIDEND OF 5 PER CENT.

The twenty-third annual general meeting of Holyrood Rubber, Limited, was held on the 17th instant at the offices, 7 Martin's Lane, E.C.

Mr W. Arthur Addinsell, the Chairman, in moving the adoption of the report and the declaration of a dividend of 5 per cent. said:—The profit resulting from last year's operations was a little more than one-half the net earnings for the previous year. This is wholly attributable to the fact that the crop harvested declined by 202,797 lbs. During the first five months of 1934 exports were not under control. Furthermore, although the International Restriction Regulations formally commenced to operate as from June 1, 1934, there was practically no effective restriction until the last quarter of that year. Lower crops mean higher costs, but, taking everything into account, I think we may be well content with the past year's figures, and that a dividend of 5 per cent. can be regarded as satisfactory.

You will see that the Standard Productions assessment for 1936 has been raised to over the million mark. The International Committee has decided to allow an increase of 5 per cent. in the export rate for the second half of this year, and with the prospects of a higher average net price, we can look forward to an upward trend in net profit.

Little need be said with regard to the Estate. We are assured from the reports that efficient cultivation has been maintained; and costs per unit compare quite favourably with other companies. The financial position is eminently sound, and we have little cause for anxiety so long as nothing occurs in world affairs to undermine the industry. Application has been made to the authorities for permission to plant up an additional 63 acres of reserve land under an experimental planting scheme which the Restriction Enactment provides for. We are advised that the area has been inspected by a representative of the Rubber Research Institute, and the prospects of the application being granted are regarded as favourable. The company's cash resources will permit of the expenditure being made without interfering with dividends.

Our interest in Edensor Rubber Estate, Limited, has been previously explained. The planted area is 1,007 acres, and arrangements are being made to commence tapping on 878 acres at the end of this year. Holyrood's interest, in proportion to the holdings of other subscribers, amounts to the equivalent of approximately 84½ acres.

In my opinion the gentlemen who constitute the International Control Committee deserve sincere commendation for the manner in which they have carried out their exacting task. They have shown that they have the welfare of the industry at heart—at the same time giving full consideration to the claims of those bodies which form the link between the producer and the vast public who are the actual consumers.

Perhaps the most favourable feature of the immediate outlook is the determination of the Dutch officials to strengthen control; and if (as they seem confident) they are able to exercise complete control of native output on a crop restriction basis in preference to an export tax by the end of this year, we may look forward to steady profits and a reasonable return.

The resolution was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended June 13, 1936, amounted to £7,159,000, against ordinary expenditure of £7,159,000. After allowing for a decrease in Exchequer Balances of £304,182, the operations for the week, as shown below, increased the gross National Debt by £5,435,000 to approximately £7,976 millions.*

(000's omitted)			
Treasury Bills.....	+ 5,445	National Savings Certificates	— 50
Public Department Advances ...	+ 690	P.O. and Tel. Capital Exp.	— 650
	+ 6,135		— 700

* Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt at March 31, 1936, appeared in the *Economist* for April 4, 1936.

SILVER MARKET

Quiet conditions have continued, and there has been little movement in prices during the past week. Demand from the Indian Bazaars has slackened, but offerings on China account have been only moderate, sellers showing no inclination to press the market.

There have been no new features, and although the tendency at the moment appears rather dull, the present level does not seem likely to attract selling in any volume.

Quotations during the week:—

† Free of income tax. (c) Paid on a capital of £2,500,000. (d) Paid on a capital of £4,500,000. (e) Also cash bonus 60 per cent. (f) Also cash bonus 66½ per cent. (g) Also cash bonus 33 per cent.

BULOLO GOLD DREDGING, LTD. (Incorporated in British Columbia).—With reference to the announcement dated May 29, 1936, of the declaration of a dividend of £1.40 (Canadian) the rate of exchange on June 12, 1936, was \$5.03 to the £. The gross amount of the dividend is \$5.68d. per share, less Canadian income tax of 5 per cent. (1s. in £) and United Kingdom income tax at 3s. 9d. in the £, is 3.865d. per share; and the net dividend payable to United Kingdom shareholders is 4s. 2.935d. per share. The dividend warrants will be posted on July 2, 1936.

BRADFORD DYERS ASSOCIATION.—The directors have decided to pay the interest on the 4 per cent. debenture stock, as usual, on July 1st, but to postpone the dividend on the 5 per cent. cumulative preference stock for the six months ending June 30, 1936. The preference dividend is paid to December 31, 1932.

GLASGOW.—Business is satisfactory. Export markets have maintained their recent improvement, and in the home trade business with industrial consumers remains brisk. Navigation bunker coal has been in strong demand. Most sizes of nuts are still in short supply, though the position has eased somewhat in one or two districts.

Current export prices, f.o.b. district ports :—**LANARKSHIRE** :—Ell best, 15s. 6d.; splint best, 18s.; splint second, 16s. 6d.; navigation, screened, 16s. to 16s. 6d.; navigation, unscreened, 15s.; steam, 15s.; trebles, 15s. to 15s. 6d.; doubles, 15s. 6d. to 16s.; singles, 16s.; pearls, 14s. 9d. to 15s.; dross, 12s. 6d. **FIFE** :—Best unscreened navigation, 14s. to 14s. 6d.; unscreened navigation, 13s. 9d. to 14s.; first-class steam, 15s. 6d.; third-class steam, 14s. to 14s. 6d.; trebles, 16s. to 18s.; doubles, 16s. to 17s.; singles, 16s. to 16s. 6d.; pearls, 14s. to 14s. 6d. **LOTHIANS** :—Best splint, 15s. 6d. to 16s.; prime steam, 14s. 6d. to 14s. 9d.; secondary steam, 14s.; unscreened navigation, 13s. to 14s.; trebles, 16s. to 16s. 3d.; doubles, 15s. 6d. to 16s.; singles, 16s.; pearls, nominal. **AYRSHIRE** :—Best unscreened navigation, 16s. 6d.; steam, 13s. to 13s. 6d.; trebles, 15s. 6d.; doubles, 16s.; singles, 16s. to 16s. 6d.; pearls, nominal; dross, nominal.

CARDIFF.—Conditions in the South Wales coalfield continue severely depressed. Foreign and coastwise shipments last week totalled only 273,900 tons compared with 408,600 tons in the corresponding week last year, and on Saturday last the Customs clearance returns recorded the very low figure of just over 7,000 tons. In the inland trade there is the usual seasonal lull in deliveries for domestic consumption, while practically all branches of the export trade are showing less activity than a year ago. There have been no shipments to Italy, and for the first five months of the year the loss in that market amounts to nearly one million tons. In these circumstances, the collieries have been working irregularly, stocks of large coals have increased, and the scarcity of small and sized descriptions has been accentuated. The Madrid-Zaragossa Alicante Railways are inquiring for 40,000 tons for delivery over the second half of the year. There has been a little better demand for patent fuel, and coke is very strong.

Current approximate quotations :—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 3d.; best drys, 18s. 6d.; Black Veins, 18s. 3d.; Western Valleys, 17s. 6d. to 17s. 9d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s. 6d.; coking smalls, 14s. 3d.; to 14s. 6d.; second steams, 13s. to 14s.; anthracite best large, 36s. to 40s.; Red Vein large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s. 9d.; rubbly culm, 11s. 6d. to 12s.; special foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship, French, 24s. 3d.; Portuguese, 21s. to 21s. 6d.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that great activity prevails in the iron and steel industry; the recent high rate of production has been maintained, and in some cases exceeded. The volume of new business reaching the works has shown a tendency to increase after the spell of quietness which followed the holidays and the advance in prices. There is a considerable volume of inquiry, and consumers appear anxious to cover themselves over a long period; but manufacturers are adopting a cautious attitude, and are disinclined to commit themselves.

Demand for pig iron shows no signs of falling off, and in all sections producers are finding it difficult to satisfy consumers' requirements. New business put through recently has been almost entirely for delivery in the second half of the year.

In the semi-finished steel department the situation is more satisfactory, and consumers are finding that supplies reach them with greater regularity. There is still difficulty in obtaining prompt delivery of material, but the forward position is distinctly easier. Manufacturers, however, hesitate to accept contracts extending over a long time ahead.

In the finished steel section of the market business has again become active, and the orders taken recently have amounted to a heavy tonnage. Specifications against old contracts are coming forward at a satisfactory rate, and recently there has been a noticeable tendency for export business to expand.

MIDDLESBROUGH.—The pig iron market continues very firm, and if larger quantities were available they could easily be sold. In addition to enquiries from home consumers, there are now indications that merchants are receiving tentative enquiries from abroad. Makers are obliged, however, to see that home requirements are covered first, and under these circumstances there is not much opportunity of doing business for export, although small parcels continue to be shipped.

It is expected that there will shortly be an increase in the production of basic pig iron, which will be required by local steelworks. No. 3 Cleveland foundry iron is quoted at 70s. per ton for delivery up to the end of June, although buyers would be prepared to pay a premium on this price if they could obtain quick delivery. The fixed minimum price will increase by 5s. per ton for deliveries after July 1st. East Coast hematite No. 1 quality is quoted at 80s. 6d. per ton, and it is now reported that to home consumers this figure will be advanced by 5s. per ton next month, but this amount will be returned as a rebate to loyal customers, that is, to those purchasers who only take supplies from the Hematite Makers' Association.

Demand for semi-finished and finished steel continues strong, and makers are heavily sold for some time ahead. Re-rollers have

received fair quantities of imported billets, which have relieved the position.

It is announced that Messrs Wm. Gray and Company, of West Hartlepool, have received orders for two high-speed cargo liners for the Ellerman Lines; this will mean additional work for the ship-building departments of the local steelworks.

Good Durham blast-furnace coke continues to realise 25s. per ton delivered at the furnaces, whilst foreign ore is difficult to secure owing to the continuance of the strike of the Spanish seamen. Heavy melting steel scrap is 57s. 6d. per ton delivered works, the demand being rather easier following the importation of fairly big quantities from abroad.

GLASGOW.—The situation at the Clyde shipyards continues to improve, announcement of another important contract having been made this week, viz., two cargo liners to be built by Messrs Barclay, Curle and Company, of Whiteinch, for the Ellerman Lines, Ltd. It is also stated that Clyde shipbuilders have a number of tenders out at present and are confident that further contracts will be obtained at an early date. In the steel trades activity is maintained at a high level and, notwithstanding the approach of the holidays in the West of Scotland and the annual stocktaking period at many plants, new business is considerable and makers may reasonably look for a long spell of full-time operations. Makers of semis are equally busy and likewise have well-filled order books. Sheet makers have been exceedingly busy with home trade orders for prompt delivery, largely on account of the expectation of an increase in prices. It has been decided, however, to make no change just yet. In contrast to most branches of the iron and steel industry in the West of Scotland the tube trade continues quiet.

SHEFFIELD.—Although normally markets begin to display an easier tendency at this period of the year, there is so far no indication of "summer conditions," current demand being as active as at any time this year. In the iron market consumers are pressing for delivery under contract before July 1st, when the increase in prices of 5s. per ton will come into operation. Production is at capacity, and makers have very little foundry pig or basic iron to offer in the open market. Forge iron has lately come into much better demand, and forward buying is on a good scale. Hematite iron deliveries under contract are in arrears, and more business is on offer than makers are prepared to accept. Common grades of bar iron are scarce, and demand for crown bars is improving. Despite the fact that production of basic steel billets surpasses all records, it is insufficient to meet demand. Acid qualities are in strong request, and steel strip and wire rods are being taken up in huge quantities. The recent increase of prices has caused no hesitation on the part of buyers, this move having been expected for some time past. Trade continues on the up-grade in this area, and the heavy forges and rolling mills working for hire are fully employed. The Government's defence programme is bringing important orders, and although the bulk of other work is from home sources, there is an increasing flow from overseas.

CARDIFF.—The heavier branches of the iron and steel industry continue busy, and current output is nearly 10 per cent. greater than a year ago, while the quotations for sheet and tinplate bars are firm at £6 delivered locally as against £5 5s. in June, 1935. There has been a fairly active sale of tinplates both for inland and export, but prices are unchanged at 18s. 4½d. per standard box for home consumers and 18s. 9d. f.o.b. for export. Galvanised sheets show little improvement and are quoted unchanged at £11 15s. for export and £13 10s. for inland deliveries. Steel makers are somewhat concerned over the price of pig iron at 75s. for basic and 78s. 6d. for hematite and are making representations with a view to the suspension of the additional 2½ per cent. duty under conditions of supply scarcity. Shipments of tinplates at Swansea last week totalled 49,262 boxes compared with 75,534 boxes in the corresponding period last year, and stocks stand at 81,025 boxes compared with 67,951 boxes.

OTHER METALS

COPPER.—Prices hardened slightly during the past week. In view of the continued uncertainties of international politics, this is an encouraging feature and emphasises the basic soundness of the market position. World stocks, according to the unofficial statistics, showed a drop of 4,930 short tons during May, bringing the total down to 466,130 short tons. World output rose by 1,500 short tons to 131,560 short tons; consumption, although falling by 4,650 short tons, was still 6,000 short tons in excess of output. During the first two months of this year Chile produced 39,267 metric tons, against 51,356 tons during the corresponding period of 1935. This sharp decline evidently shows that Chile is taking her obligations under the restriction scheme seriously—a fact which had been doubted in some circles on account of the high Chilean production last year.

Sales on the London Metal Exchange: 625 tons on Monday, against 775 tons last week; 950 tons on Tuesday, against 1,050 tons last week; 750 tons on Wednesday, against 850 last week. Domestic spot was quoted at 8.87½ cents per lb. in New York on Wednesday, against 8.82½ cents a week ago and 8.87½ cents a month ago. Wednesday's official closing price for standard cash in London was £36 5s. to £36 6s. 3d., compared with £36 1s. 3d. to £36 2s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 58,368 tons, show an increase of 151 tons, while stocks of rough copper, at 5,717 tons, show a decrease of 100 tons on the week.

LEAD AND SPELTER.—Both metals were rather easier. The decline in lead was traceable partly to the uncertain political outlook and partly to the fall in spelter. Consumers' demand

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE general downward trend of the prices of primary products subject to international arbitrage, which began last March, appears to have been arrested. But there are as yet no signs that prices will resume a strong upward trend in the near future. Meanwhile most markets are marking time.

Wheat markets were a little more cheerful, and quotations rose under the influence of unfavourable crop reports from the United States. Quotations for raw sugar, on the other hand, were marked down. At Monday's tea auctions prices continued to sag, but on Tuesday and Wednesday the market was firmer. Business in meat at Smithfield market was slow at practically unchanged prices, but quotations for bacon were marked up owing to the coincidence of an improvement in demand, with limited supplies. Following the steep rise in the price of butter in recent weeks, the past few days witnessed a slight reaction.

Among the principal non-ferrous metals, copper was a little firmer, but prices of lead, spelter and tin registered a fall. Unsuccessful attempts to resuscitate the Zinc Cartel, coupled with increasing supplies of spelter, are mainly responsible for the sagging tendency of the price of this metal in recent weeks. It is noteworthy that, despite the fall in the price of "spot" tin to £180 per ton, the quotation for "three months" tin is still about £2 per ton below the "spot" price. There was no important change in the market in rubber, prices being practically unchanged on the week. Linseed, however, was a little firmer, partly owing to pessimistic views concerning the crop in the United States.

The sagging tendency of raw wool prices is reflected in a decline in the activity of the wool textile industry. In contrast, demand for Lancashire goods improved with the rise in raw cotton prices. The coal trade remains patchy, but the volume of new business in iron and steel materials has tended to expand again.

In the United States the trend of quotations for primary products was a little firmer. Thus Moody's index of the

dollar prices of staple commodities stood at 165.0 on Wednesday, against 163.5 a week earlier, 163.8 a month ago and 157.5 on the corresponding day last year.

COAL

SHEFFIELD.—Home industrial demand continues to be the chief feature of the market, best South Yorkshire and Derbyshire hards being well taken up. There is a steady improvement in the demand for Yorkshire coal in the Irish Free State and Northern Ireland. On the inland market contracts for renewals are being arranged at the increased prices. Business in household coal remains quiet. Rather easy conditions prevail on the export market, but some slight improvement is showing itself in the demand for best hards. With the exception of singles and smalls, supplies are fairly plentiful. Very little coke is on offer for shipment.

Prices at pit (per ton) for inland include: South Yorks best, 23s. to 25s.; seconds, 20s. to 21s.; Derbyshire best house, 22s. to 23s.; best brights, 19s. 6d. to 21s.; kitchen coal, 16s. 6d. to 19s. 6d.; best screened nuts, 19s. to 20s.; small, 18s. to 18s. 6d.; Yorkshire hards, 19s. 6d. to 20s.; nutty slacks, 10s. to 11s. Export prices: South Yorkshire hards, 19s. to 19s. 6d.; washed trebles, 17s. 6d. to 18s.; washed steam doubles, 17s. 6d. to 18s.; washed gas doubles, 17s. 6d. to 18s.; screened gas coal, 19s. 6d. to 20s. 6d.; washed coking smalls, 14s. 9d. to 15s. 3d.; Derbyshire and Notts top hards, 18s. 3d. to 18s. 9d.; cobbles, 18s. 3d. to 18s. 9d.; washed trebles, 17s. to 17s. 6d.; doubles, 16s. 9d. to 17s.; slacks, 9s. 6d. to 13s.

NEWCASTLE-ON-TYNE.—The Swedish State Railways who enquired for 68,500 tons of screened steam coal for shipment August/September have placed 58,000 tons in this district at current prices. The steam market is steady, enquiry being good from the Scandinavian countries and there is little doubt that collieries producing these qualities will work full time this summer, despite the seasonal decline in home trade. Export trade in Durham gas and coking coals is quiet, but it is expected that in the event of trade being reshaped with Italy at anything like the figures before sanctions were imposed, there will be a vast change in this market. Home industrial trade in coking coal continues at a high level.

Current f.o.b. prices, per ton, for export :—**NORTHUMBERLAND** :—D.C.B. screened, 15s.; smalls, 12s. 6d.; Howards Bentinck, Newbiggin screened, 14s. 9d.; smalls, 12s.; Tyne prime large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main large, 14s. 9d.; smalls, 12s. 6d. **DURHAM** :—Lambton/South Hetton screened steam, 15s. 9d.; smalls, 13s.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon

cannot be regarded as unfavourable, so that a recovery seems probable in the near future, despite a recent increase in production. Some rise in output was overdue and has not had any serious effect upon the statistical position. Meanwhile, spelter has dropped to the lowest level of the year, owing to uncertainty concerning the revival of the Cartel, and to the current high level of output. The daily rate of production was again higher in April and, for the first time for several years, passed the 4,000 tons mark.

Sales of lead on the London Metal Exchange: 750 tons on Monday, against 1,350 tons last week; 750 tons on Tuesday, against 1,100 tons last week; 550 tons on Wednesday, against 750 tons last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 ls. 3d. per ton, compared with £15 6s. 3d. a week ago.

Sales of spelter on the London Metal Exchange: 650 tons on Monday, against 350 tons last week; 1,200 tons on Tuesday, against 850 tons last week; 1,000 tons on Wednesday, against 750 tons last week. Wednesday's quotation in East St. Louis was 4.90 cents per lb., against 4.90 cents the week before and 4.90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 8s. 9d. per ton, against £14 2s. 6d. last week.

TIN.—Tin prices also touched the year's lowest this week. The three months' price is now well below the £180 mark and the cash price may dip below this level in the immediate future. Lack of confidence in the stability of the market is more noticeable than ever, and the outlook is uncertain in view of the fact that the International Tin Committee is to meet next Thursday to fix the quota for the third quarter of the year. Meanwhile, latest statistics show that Bolivian output advanced from 1,460 metric tons in March to 2,426 in April, and that shipments during May amounted to 2,263 tons. In other words, Bolivia was still over 1,000 tons in arrears with her shipments last month. Next Thursday's meeting will therefore be awaited with keen interest, since the decision then taken is likely to have an important bearing on the future trend of the market.

Sales of tin on the London Metal Exchange: 325 tons on Monday, against 180 tons last week; 340 tons on Tuesday, against 340 tons last week; 200 tons on Wednesday, against 325 last week. The New York quotation on Wednesday was 41.37½ cents per lb., against 42.12½ cents a week ago and 45.87½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £180 to £180 15s. per ton, compared with £183 10s. to £183 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 737 tons, an increase of 112 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was again quoted at £12 7s. 6d. per flask of 76 lbs. Chinese antimony was quoted at £55 to £56 per ton ex warehouse, duty paid, as against £55 to £57 last week. Chinese wolfram for June–July shipment was quoted at 30s. 3d. to 30s. 9d. per unit, c.i.f., as against 31s. to 31s. 6d. per unit last week. Platinum (refined) was maintained at £7 per ounce.

TEXTILES

COTTON.—Manchester.—The tone of the market has tended to improve. In certain quarters the higher rates for raw cotton have stimulated demand for manufactures. Bullish sentiment with regard to the raw cotton situation has increased on crop complaints from the Eastern belt of the United States. Demand from trade sources continued active. There is a tendency at the moment for world consumption to expand.

The larger inquiry in cloth for foreign outlets has been maintained, with business patchy. Most shippers to India have received more offers, but it has been exceedingly difficult to arrange transactions. A scattered business has been done, chiefly in light bleachers and fancies. A few more bids have been about in special cloths for China, Java and the Straits Settlements. Some exporters to Egypt have displayed more interest in prices and further buying has taken place, principally in bleaching styles. Rather more favourable reports have come to hand concerning the turnover for South America. Heavy materials have moved off fairly well for the Dominions, especially Australia and South Africa. There have been indications of freer buying for the home trade, chiefly in autumn goods.

COTTON PRICES

	1936					Corresponding Date	
	May 27	June 3	June 10	June 17	1934	1935	
Raw Cotton—Mid. American per lb.	6.59	6.72	6.71	6.88	6.74	6.79	
Sakellandis Fully Good Fair Egyptian per lb.	8.74	8.75	8.78	8.97	8.47	8.05	
Yarns—32's twist per lb.	10½	10½	10½	10½	10½	10½	
" 40's twist per lb.	10½	10½	10½	10½	10½	10½	
" 60's twist (Egyptian) per lb.	15½	15½	15½	15½	15½	15	
32-in. Printers 116 yds., 16 by 16, 32's and 50's per lb.	17	17	17	17	17	17	
36-in. Shirtings, 75 yds., 16 by 16, 32's and 40's per lb.	24	24	24	24	23	24	
38-in. ditto, 98 yds., 16 by 16, 10 lb.	10	10	10	10	10	10	
39-in. ditto, 37½ yds., 16 by 15, 8½ lb.	9	9	9	9	9	9	

A firmer tone has prevailed in the yarn market. It has been difficult, however, for spinners to obtain higher prices. There has not been any general improvement in sales, but some spinners have had a rather better week, principally in coarse and medium American counts and medium Egyptian numbers.

JUTE.—Dundee.—The heavy imports of jute goods from India is still having a depressing influence on the jute market in Dundee. According to the Board of Trade Returns, 13,262,000 sq. yds. of hessians were imported into this country from Calcutta last month, compared with only 4,598,000 sq. yds. during the corresponding month last year. Imports during the first five months of 1935 and 1936 were 26,731,000 sq. yds and 59,984,000 sq. yds, respectively. Imported sacks and bags from British India totalled 378,059 cwts. during January–May, 1936, against 310,689 cwts. during the corresponding period last year. The value of these imports from India this year was £1,020,588, compared with £670,544 in 1935. On the other hand, exports of jute goods from this country recently have shown a tendency to fall off, and during the first five months 49,577,000 sq. yds. were exported, against 50,239,000 sq. yds. a year ago. Spinners and manufacturers are compelled to restrict production owing to the lack of orders, and short time and stopping of machinery is prevalent throughout all the works. The number of persons receiving unemployment benefit in the jute industry in Dundee increased by 281 during May.

The prospects of a big crop of jute in the coming season have caused sellers to lower their prices for both old and new crop fibres. It is reported from Calcutta that imports of the old crop, which have been restricted, have increased recently. Old crop Daisee: 2/3 has fallen to £18 5s. for good marks, June shipment, while new crop has been sold down to £16 for the full group, October/November. Tossa: 2/3 is quoted at £18 10s. for old crop and at £17 15s. for new. Old crop First Marks rule at £21 and Lightnings at £19 5s., June/July, and new crop First Marks are nominal, not being offered, while Lightnings are named at £18 10s., and good Hearts have been sold at £17 10s. and £17 7s. 6d., August/September.

Jute yarns are dull and prices are not being tested. Common 8 lb. cops are quoted unchanged at 1s. 11d. and 8 lb. spools at 2s., with 3 ply 8 lb. twist at 3½d. and sacking yarns at 2½d. for 24 lb. weft, and 3½d. for 8 lb. chains. Rove is quiet at £19 10s. for 48 lb., and £15 10s. for 200 lb., and the finer yarns are more or less neglected at prices slightly under last quotations. Carpet yarns are very steady at 3½d. for 14 lb. warp.

Only trifling lots of jute cloth are being bought and manufacturers are showing anxiety for fresh orders. The quoted rates might be shaded under 2½d. for 10 oz. 40 in. and 1½d. for 8 oz. Inquiries are fair, including meat wrappers and hessians for sugar bags. Linoleum hessians and heavy goods are dull.

Calcutta goods have been fairly well maintained, but prices are already so low that a further decline cannot be looked for. At 16s. 10½d. for 10 oz. 40 in. and 13s. 10d. for 8 oz. per 100 yds. for July/September shipment, prices are very low.

GRAIN MARKETS

WHEAT.—Markets remain under the influence of crop reports. After last week's easiness, quotations advanced in Chicago and Winnipeg in response to the news that the United States spring wheat crop continues to suffer from lack of moisture. Liverpool and London followed this upward lead. With the exception of 1934, the condition of the American crop is now the lowest for ten years. In Canada, on the other hand, crop prospects have shown a moderate improvement as a result of showers and relatively low temperatures.

On Wednesday last, "July" futures were quoted in Chicago at 88½ cents per bushel, against 84½ cents the week before and 86½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 31s. 9d. per 496 lbs., against 30s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 31s., against 30s. 3d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 1,226,000 quarters, against 1,315,000 in the previous week and 1,070,000 quarters in the corresponding week a year ago.

FLOUR.—A slight improvement in demand has been apparent this week, but quotations remain generally unchanged. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 27s. per 280 lbs., against 27s. a week ago; delivered inner London, 26s. 6d., as compared with 26s. 6d. a week ago. Manitoba patents, ex store, 25s. 3d. to 27s., against 25s. to 26s. 9d. a week ago. Australian, ex store, 22s. to 22s. 6d., against 21s. 9d. to 22s. 3d. a week ago.

BARLEY.—Business in imported feeding barley has been more active, with prices showing a hardening tendency. Practically no trade is passing in English malting descriptions. "July" futures were quoted at 37½ cents per bushel in Winnipeg on Wednesday, against 36½ cents a week ago and 37½ cents a month ago. Quotations per 44 lbs. in London on Wednesday were: "English feed" at farm, 22s. 6d., as against 22s. 6d. a week ago; "English malting" at farm, 25s. to 40s., against 25s. to 40s. a week ago.

OATS.—In response to an improvement in demand and a rather limited supply, prices have been firmer this week. On Wednesday, "July" futures were quoted at 26½ cents a bushel in Chicago, against 24½ cents a week ago and 25½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 19s. per 336 lbs., against 18s. to 19s. a week ago; "English White," at farm, 19s., against 18s. to 19s. a week earlier.

MAIZE.—Demand has been fairly active, and the market has remained firm. "July" futures were quoted on Wednesday at 62½ cents per bushel in Chicago, against 61½ cents a week ago, and 60½ cents last month. Quotations in London, Wednesday: "Plate," landed, 20s. 6d. per 480 lbs., compared with 19s. 6d. a week ago; "Plate," ex ship, 19s. 6d., as against 18s. 10½d. a week ago; "Plate," "June," 19s., as against 18s. 7½d. a week ago; yellow maize meal, ex wharf, was quoted at £5 5s. to £5 7s. 6d. per ton, as against £5 2s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—				
1 week to June 13	90,436	94,928	176,498	98,800
41 weeks to June 13	8,368,980	10,355,523	12,777,093	12,808,753
Average price of English wheat per cwt.	s. d. 6 4	s. d. 5 5	s. d. 5 6	s. d. 6 9

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

OTHER FOODS

BACON.—In response to some decline in supplies, the market ruled exceptionally firm this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 92s. to 94s.; Canadian, 85s.; Danish, 93s., as against 86s. to 90s., 80s. and 89s. last week. Arrivals in London last week included Danish, 14,393 bales; Canadian, 3,876; Dutch, 2,453; Lithuanian, 1,749; and Polish, 2,244, as against 14,263, 4,495, 2,523, 1,955, and 2,437, respectively, in the previous week.

BUTTER.—Following last week's advance in quotations, demand was much quieter this week and prices showed a slight reaction. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 108s.; Australian, choicest salted, 107s.; Danish, 118s., compared with 112s., 111s. to 112s. and 118s., respectively, a week ago.

CHEESE.—Cheese was a quiet market, except for English factory which rose in price. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, factory, 56s. to 60s.; Canadian, finest coloured, 64s. to 68s.; and New Zealand, finest coloured, 60s.; against 53s. to 56s., 66s. to 68s. and 61s. 6d. to 62s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 6½ cents per lb., as against 6 cents per lb. last week. In London, on Wednesday last, good fermented new crop, "October-December" was quoted 28s. 6d. per 250 kilos, c.i.f. Continent, against 26s. 10½d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 7,000 bags; delivered, for home consumption, 6,654 bags; exported, 202 bags; stocks, 169,909 bags, against 189,111 bags a year ago.

COFFEE.—Demand in London has been rather quiet, while the New York spot market has ruled steady. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb. in New York, as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 295 cwt.; delivered, for home consumption, 137 cwt.; exported, nil; stocks, 10,439 cwt., against 16,662 bags a year ago. Central and South American, landed, 2,185 cwt.; delivered, for home consumption, 10,439 cwt.; exported, 941 cwt.; stocks, 122,759 cwt., against 114,974 packages last year. Other kinds, landed, 2,326 cwt.; delivered, for home consumption, 3,829 cwt.; exported, 722 cwt.; stocks, 173,692 cwt., against 123,402 packages last year.

EGGS.—The market has ruled firm, with prices higher for all selections. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15–15½ lb.) realised 10s. 9d. to 11s. 6d. per 120, as against 10s. to 10s. 6d. last week, while Danish (15½ lb.) made 9s. to 9s. 6d. per 120, against 8s. 9d. to 9s. last week.

FRUIT.—Business at Covent Garden was disappointing last week-end, in consequence of bad weather, but some improvement has occurred this week. According to *The Fruitgrower*, strawberries made a fair showing; there was a steady demand and all arrivals cleared readily. A few English cherries have put in an appearance, and there has been a fair showing of French red and black currants. Green gooseberries, in larger supply, declined in price on a poor demand. Spanish cherry plums were also easier. Larger supplies of melons met a rather slow sale, but peaches and nectarines were about steady in price. Hothouse grapes were easier. Owing to the competition of the soft fruits, the apple trade was slow and prices weak; the limited supplies of pears, on the other hand, sold well. Grapefruit cleared more readily this week, while oranges were steady in price. Lemons dropped sharply and are expected to decline further in response to heavier arrivals.

MILK.—Information relative to the operation of the Milk Marketing Scheme during May, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	May, 1935	Feb., 1936	March, 1936	April, 1936	May 1936
Regional pool prices* (per gallon)	d.	d.	d.	d.	d.
Northern	9½	14½	12½	11½	8½
North-Western	9½	14½	12½	11½	8½
Eastern	9½	14½	12½	11½	9
East Midland	9½	14½	12½	11½	8½
West Midland	9½	14½	12½	11½	8½
North Wales	9½	14½	12½	11½	8½
South Wales	9½	14½	12½	11½	8½
Southern	9½	14½	12½	11½	9½
Mid-Western	9	14½	12½	11½	8½
Far Western	9	14	12½	11½	8½
South Eastern	10	15	13½	12½	9½
Liquid milk price (per gallon, all regions)	12	17	17	16	12
Manufacturers' price (per gallon, average)	5.01	5.942	5.793	4.885	4.755
Total sales under contract	89.24	65.22	74.05	77.03	90.56
For liquid consumption	48.67	44.71	47.54	45.44	48.03
For manufacturing	40.57	20.51	26.51	31.59	42.53

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries and for Grade "A" or special services are paid to the producers concerned in addition to the pool price. Transport charges are payable by individual producers and are deducted from accounts.

MEAT.—Demand at Smithfield Market has been rather slow this week, with prices showing little alteration. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 10d. to 4s. 2d. per 8 lbs., as compared with 3s. 10d. to 4s. 4d. a week ago. New Zealand frozen mutton was 3s. to 3s. 6d. per 8 lbs., against 3s. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,445 tons, an increase of 509 tons on the corresponding week last year. Beef and veal accounted for 4,672 tons, mutton and lamb, 2,651 tons, and pork and bacon, 692 tons, as compared with 4,546, 2,368, and 618 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, nil; delivered 5 tons; stocks, 1,758 tons, against 2,168 tons a year ago. White, landed, 5 tons; delivered, 40 tons; stocks, 12,095 tons, against 18,883 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 9d. per cwt. ex warehouse on Wednesday, as compared with 8s. 9d. per cwt. a week ago. "June-July" in singles to Continent and U.K., was quoted at 7s. 9d. per cwt., against 7s. 9d. last week. Movements in London during the past week were as follows: Landed, 146 tons; delivered, 197 tons; stocks, 1,722 tons, against 9,404 tons a year ago.

SUGAR.—The New York spot market developed a firm tone last week-end and prices were marked up. The spot market in London has been quiet. The spot price in New York on Wednesday was 3.80 cents per lb., as compared with 3.72 cents per lb. last week and 3.72 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 7½d., against 4s. 8d. to 4s. 8½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 7,273 tons, against 20,611 tons last week and 8,405 tons in the same week of last year; deliveries, 20,048 tons, against 26,997 tons last week and 13,809 tons last year; stocks, 150,849 tons, against 163,597 tons last week and 107,561 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
June 6, 1935	11.37	11.98	13.27	9.68	8.36	10.04	11.77
Apr. 30, 1936	12.79	13.66	16.05	10.94	10.49	11.99	13.48
May 7, "	12.79	14.09	15.67	11.02	10.54	11.69	13.55
May 14, "	12.59	13.66	15.08	10.89	10.36	11.86	13.19
May 21, "	12.41	13.00	14.21	10.81	10.21	11.25	12.81
June 11, "	12.24	12.73	13.30	10.22	10.15	11.48	12.40

This week's offerings at the public auctions in Mincing Lane comprised 46,538 packages of Indian and 25,538 packages of Ceylon tea. At Monday's Indian auctions prices of common and medium sorts were easier, despite a fairly good demand. On Wednesday, the market showed a firmer tendency and quotations were well maintained. Tuesday's Ceylon auction showed a brisk tone and prices were practically unchanged compared with last week. Fannings were the best feature.

VEGETABLES.—Demand for asparagus at Covent Garden has fallen off, states *The Fruitgrower*, and prices eased this week. Good quality green peas from Kent sold readily. Tomatoes were fairly steady, but cucumbers rather slow. Lettuce was cheaper, but spring cabbage hardened in price on short supplies. Meanwhile, supplies of English new potatoes have begun to appear at London markets, realising from 19s. to 22s. per cwt. At the Borough Market on Tuesday a steady business was reported, Jersey making 21s. to 23s. per cwt., and Spanish Mataros 18s. per cwt., against 23s. and 18s. to 19s., respectively, a week earlier. Old crop potatoes were also in demand, best siltland King Edward being quoted at 8s. to 9s. a cwt., the same as last week.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OLSEEDS.—The market in oilseeds has a better tone and prices are inclined to harden. Uncertainty concerning the progress of the sowing of linseed in the United States caused some firmness in Plate demand, mainly on Continental account. Crushers here are relying on Indian descriptions for their modest current requirements, prices of Plate being out of line. The official report of the American crop is due on July 10; until then reports must be purely conjectural. Shipments from the River Plate are smaller, but the quantity afloat for Europe is only slightly affected. Linseed oil is dearer in sympathy with the firmness of seed, and again registered an advance, and is about 20s. to 22s. 6d. higher than the lowest touched three weeks ago. The current price of raw oil ex Hull is now around £25 per ton for June and July-August delivery, with the later four months at a small premium. A very little old crop Egyptian cottonseed is now on the market, and prices are firm around £7 2s. 6d. June-July. Dealings in new crop have begun and up to £6 13s. 9d. has been paid for September loading, and £6 6s. 3d. quoted for October-December. Crude cotton oil is easier and is offered at £24 per ton ex Hull, while refined is steady at £27. Oil cakes are in normal demand for the time of year and remain steady.

RUBBER.—Prices have fluctuated within narrow limits and closed on Wednesday unchanged on the week. Buying has been

largely on a hand-to-mouth basis, and many manufacturers have allowed their stocks to fall to small proportions. Meanwhile, stocks in the United Kingdom recorded a further fall of 1,594 tons last week and the statistical position remains sound.

The spot price in New York on Wednesday was 15½ cents per lb., compared with 15½ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½ to 7½d. for July-September shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 127,366 tons, against 128,960 tons a week earlier. A year ago stocks amounted to 170,087 tons.

A SELF-BINDER

• FOR

The Economist

Week by week you keep your copies of
"The Economist," and ultimately you either
file them or bind them. Doubtless you are
accustomed to the annoyance which attaches to
the ordinary binder—the difficulty of reading
half the left-hand page and the unwieldiness
of the device generally.

We are able to offer our readers a binder which
overcomes these irksome difficulties and is, in
our opinion, the most efficient contrivance for
the purpose we have yet seen.

It holds three months' issues and index, it
has no wires, clips or metal contrivances,
and each issue can be bound up in an instant—
in such a way that it can be read as easily
as a well-bound book.

"WHAT IS OUR POLICY?"

On Thursday of last week and on Tuesday of this the House of Commons held two debates on British foreign policy. They were momentous rather for their effects than for their quality. For while the Opposition speakers had a devastating case against a Government which has been in supreme control of the country's destinies for five years, they were inclined to overplay the Party game. The Government spokesmen, on the other hand, had placed themselves in a position extremely difficult to defend; and, feeling their discomfiture acutely, Mr Eden, Sir John Simon and Mr Baldwin were human enough to fall back on debating points. Whereas in the first debate Mr Lloyd George was able to concentrate the widespread feelings of dismay and national humiliation in a Philippic against the Government, all speakers in the second debate—on the Labour Party's vote of censure—were only too disposed to give up to Party what was meant for mankind.

The most striking feature of both debates, and certainly the most pregnant with grave contingencies, was the inability of the Government's spokesmen to adduce any cogent arguments in defence of their declared policy to propose the abandonment of sanctions at Geneva next Tuesday. Mr Eden's line of argument entirely ignored the justification of sanctions as the collective defence, not of Abyssinia, but of the League Covenant—the repository of those principles of collective security to which Mr Eden and Mr Baldwin both expressed the Government's continued fidelity. All three Government spokesmen could only justify the *volte-face* in British policy by invoking Italy's readiness to levy war against the League, and on this country's battleships. Sir John Simon, generally a shrewd man, probably said more than he intended:—

With the present situation in Europe and the great dangers surrounding us here at home, I am not prepared to see a single ship sunk even in a successful naval battle in the cause of Abyssinian independence.

This was a gift to Opposition speakers, who at once demanded if that had been the Government's policy all

along. If so, why had they ever dared to move the fleet into the Mediterranean at all; why had they asked for, and obtained, undertakings of naval assistance from other League Powers in the Mediterranean; why had they been spending hundreds of millions on the Navy in the last five years; was the Navy unprepared for action; and why had the Government ever assumed the leadership of 50 nations in the imposition of measures for the collective restraint of a condemned aggressor? The House was vouchsafed no convincing answers to such questions.

More disturbing, however, was the degree of disingenuousness to which Sir John Simon and Mr Baldwin were reduced in their efforts to exculpate the Government from a charge of inconsistency. Responsibility for the inadequacy of sanctions was thrown on nations that agreed to follow the British lead. Sir John Simon, an ex-Foreign Minister and a lawyer, and one who must know the facts, attempted to argue that Britain had done most on behalf of the League, by comparing British imports from, and exports to, Italy during the sanctions period with those—not of Yugoslavia or Roumania, whose trade and national economies have suffered far more than ours—but of Switzerland! True, British trade with Italy has declined more than Switzerland's trade with her. But it is unnecessary to remind Sir John of the Gotthard traffic convention, by which Switzerland is bound to permit free trading with Italy; for his convenient reminders in the House on the status of the Suez Canal must have suggested to him the similar situation of Switzerland. It is equally unnecessary to remind him of Switzerland's guaranteed neutrality, her special position as a League member, with limited responsibilities. Clearly, counsel for the defence was hard pressed for an argument.

Again, Mr Baldwin in his speech at Wishaw last week-end was driven to argue that no sanctions could succeed without the oil sanction, and that, as the United States were unwilling to impose this, the League's efforts were stultified. This was a shocking travesty of the truth; and

Mr Baldwin half-heartedly modified it on Tuesday. Even so, neither he, nor Sir John Simon, nor Mr Eden, cared to be reminded—as they were often enough—that it was the notorious Hoare-Laval Plan which completely baffled President Roosevelt's initiative, surprisingly successful till then, in limiting American shipments of oil and other materials to Italy.

But when due allowance is made for the Labour Party's tactical error in moving a vote of censure on Tuesday, as well as for the striking and pointed speeches of Mr Lloyd George, Mr Attlee, Sir Archibald Sinclair and Mr Hugh Dalton, the after-effects of the two debates remain more impressive, more disturbing, than anything they actually contained. Mr Baldwin, who wound up the second debate, could only give the House this equivocal utterance as the basis of his policy after the Government had suffered so shattering a diplomatic *débâcle*:—

"The question is, what is our policy? . . . Our policy is still based, as is the policy of many of the countries of Europe, on the League of Nations. . . . There is no foundation for a single word of what the hon. Member (Mr Dalton) said about our plans for leaving the whole of Europe to look after itself, provided we could safeguard ourselves in the West. The safeguarding of ourselves in the West is of vital importance. It may come to that if the League of Nations breaks down ultimately, but we are not there yet. I have every hope, but negotiations may be futile if, when negotiations come between our three countries (Britain, France and Germany), we cannot make provision for the same security in the countries to the centre and the East of Europe as we hope to make for ourselves. . . . But let the House be under no misapprehension about the difficulties of the task."

Neither the House nor the country is likely to be under any misapprehension about the difficulties of that task; for no observer can really make out what the task is to be. "We cannot be expected to state here and now in detail what changes, if any, we would wish to see made in the practice of the League," says Mr Baldwin. But British policy is still to be based on the League. And, while we do not want to have to confine "collective security" to a West European application only, we may have to. But we are not going to leave the whole of Europe to look after itself, all the same. It is scarcely surprising that Lord Beaverbrook should have resurrected his anti-Baldwin campaign; for in the world of to-day, even less than in the Roman world of St. Paul, one cannot be all things to all men.

The outcome of two bitter debates provides no inkling what British foreign policy is to be now. Mr Duff-Cooper's speech in Paris on Wednesday—perhaps he was thinking aloud as prophetically as Mr Chamberlain a fortnight ago—suggests that it is to be an alliance with France. All we know is that the Government's policy is based on heavy re-armament and that it has imparted a most powerful urge to all members of the League, as well as all members of the British Commonwealth of Nations, to seek safety in heavily armed isolation. It is the policy of South Africa as much as of Turkey. That policy of *chacun pour soi* will infallibly produce the worst conceivable strategical terrain upon which this country will one day have to defend, with all its heavy armaments, purely British interests against immeasurably aggrandised predatory Powers. The Government have produced no policy. They have merely enveloped in a fog of confusion and uncertainty their election rallying-cry which would have concentrated all parties in the country behind British armaments: "steady and collective resistance to all acts of unprovoked aggression." It is hard to see, now, how they can retrieve this error; and how they can prevent an embittered party division arising between those who would have prepared and employed armaments in restraint of aggression—and therefore in support of security and peace—and those who will only use armaments in defence of British acquisitions in the past.

The Government have surprised the country and the world by taking two diametrically opposed initiatives in the short space of nine months—at the end of which Britain finds herself with her prestige profoundly shaken. For the sake of the ideals for which the British Empire stands in the world to-day, it is imperative that respect for our diplomacy and belief in the value of our friendship should be promptly and energetically restored.

PALESTINE

It is now clear that the Arab outbreak in Palestine is not just an ebullition of temper which may be trusted to die down again under judicious handling. As the mandatory Power we are confronted to-day with a task which bids fair to be both long and difficult, whether repression or conciliation or some combination of the two methods be the line of policy we decide to follow. The moment has, therefore, come for trying to look before and after—the more so, perhaps, as we can hardly help pining for what is not.

Our commitments to the Jews are, of course, definite and substantial. The Mandate, in which the Balfour Declaration of nearly nineteen years ago is embodied, pledges us to secure the establishment in Palestine of a Jewish national home. This plainly means facilitating and safeguarding the settlement of Palestine with as large a number of Jewish immigrants as the country can support economically at any given moment—the process of immigration and settlement to be pushed forward as fast as the progressive material development of Palestine permits. This obligation of ours is not limited by any maximum figure or *numerus clausus*. Subject to the economic capacity of the moment, we are bound to allow the Jewish element in the population of Palestine to go on increasing *ad infinitum*, so long as nothing is done which may prejudice the rights which are guaranteed to the Palestinian Arabs in the Mandate and Balfour Declaration, and in the paragraph of the Covenant which deals with mandates of the "A" class, to which the Palestine mandate belongs.

But what really are our commitments? Article 2 of the Mandate commits us to "safeguarding the civil and religious rights of all the inhabitants of Palestine." Does this mean that we are only bound to safeguard the private interests of the Arabs as individuals? Article 6 of the Mandate commits us to "ensuring that the rights and position of other sections [than the Jewish section] of the population are not prejudiced"; and the Balfour Declaration itself binds us to do nothing "which may prejudice the civil and religious rights of existing non-Jewish communities in Palestine." Indeed, the Churchill Memorandum of June 3, 1922, declared that "His Majesty's Government did not contemplate either the creation of a wholly Jewish Palestine or the disappearance or subordination of the Arabic population, language or culture in Palestine."

Here we are getting to the heart of the conflict; for, although both communities have increased in almost equal numbers, the Jewish community is 400,000 souls as against an Arab community of 760,000. In view of the growing proportion of Jews, the Arabs fear that they may become subordinate to a Palestinian Jewry which is immensely superior to the Palestinian Arab community in wealth, ability, education and organisation. If the Jewish population were to increase to numerical parity or beyond, the Arabs would assuredly be swamped as a community; though at the same time it is probable that, as individuals, only an infinitesimally small number of them will have suffered serious economic detriment, while a considerable number will have obtained positive economic benefit from an increase in the material prosperity of the districts that have been the scene of Jewish colonisation. In such a situation, would our obligations to the Arabs have been fulfilled or broken?

So far, we have been discussing obligations towards the Arabs which flow from contracts to which the Arabs themselves are not parties. The Balfour Declaration is a contract between the British Government and the Zionist Organisation. The Covenant is a contract between the British Government and the Governments of the other States Members of the League. The Mandate is a contract between the British Government, the League and the principal Allied Powers. The Arabs maintain that they have a contract with us which is prior to all these; for they claim that Palestine is included in the area within which the British Government undertook, in the MacMahon-Husayn correspondence of 1915-16, to recognise and uphold the independence of the Arabs. The Colonial Office view is that Palestine does not lie within this area; and this juridical controversy, which

8 KING WILLIAM STREET, LONDON, E.C.4

turns on fine shades of interpretation of an inconclusive and unpublished correspondence, will probably end in stalemate. This does not, of course, dispose of the practical problem. That problem cannot be shelved; for it is being created by events—first and foremost, by the wonderful success of the Zionists, since the war, in making the Jewish national home in Palestine a success.

It is just this success that has inspired the Palestinian Arabs with a fear which, in its turn, is now driving them to a determined and desperate insurrection. Within the last three years in particular the establishment of the Jewish national home has been progressing by leaps and bounds; and, in spite of the participation of many individual Arabs in the resultant increase in the general prosperity of certain parts of the country, the Arab population as a whole is quite reasonably concerned lest, notwithstanding the Churchill Memorandum, they may now become "subordinated," in their own country, to the alien community that is being built up in their midst by the Jewish immigrants. "Subordination" means falling into a position in which, as a community, they would be permanently at the Jewish community's mercy. And the Arabs fear that, when this stage is reached, the mandatory Power may retire and leave the dominant community in unfettered control of the country. Mandates of the "A" class are, by definition, temporary; and now that the French in Syria are following the British example in Iraq, Palestine will be the sole surviving "A" mandate in which the mandatory Power has not yet wound up its business and duly abdicated. If Great Britain in Palestine did eventually abdicate in favour of a Jewish majority which had been created deliberately under the mandatory regime, the Palestinian Arabs might well feel that, for them, the formula of the Covenant—provisional recognition as an independent nation until such time as they were able to stand alone—had been applied in a very odd way.

Is it our British intention to go on implementing our indisputable commitments to the Jews until they automatically produce this result for the Arabs in process of time? That would mean crushing the Arabs and continuing to hold them down by force until the Jewish community had achieved a superiority of strength which was decisive. Could we find a juridical justification for such a policy on the ground that (on our own official interpretation of the MacMahon-Husayn correspondence) we are not contractually bound to the Arabs at all; that the assurances quoted above are mere sops, *ex gratia*, to the sensibilities of an Arab population over whose country we are entitled to dispose by right of conquest? Such a line of argument would quickly lead us into a moral morass. To a "right of conquest," a "right of insurrection" would be an equitable retort. A perpetual conflict between an insurgent Arab population and a repressive mandatory Power would destroy the very political, social and psychological conditions that are indispensable if the work of building up a Jewish national home in Palestine is to go forward. Even if the Jewish home were to be completely established by British force of

arms within the frontiers of Palestine itself through the repression, subordination or eviction of the Palestinian Arabs, Palestine itself, whose economic future depends on its development as a meeting place of steamship lines, air routes, oil pipe-lines and railways, would then be strangled by a bitter anti-Jewish Pan-Arab movement in the surrounding Arab countries. For if the inhabitants of Palestine have always looked out towards the sea, Egypt, Saudi Arabia, Transjordan, Syria and Iraq constitute between them her hinterland.

Thus, a sheer repression of the Palestinian Arab community, without any conciliation in prospect, will lead us nowhere except to frustration. Can we find any basis for a possible settlement with the Arabs which might induce them to lay down their arms instead of fighting on with the courage of despair? Perhaps the key is given by the thesis of the Churchill Memorandum "that the terms of the Balfour Declaration did not contemplate that Palestine as a whole should be converted into a Jewish national home, but that such a home should be founded in Palestine." Could the Arabs be reconciled to a communal solution, combined with an increase in individual well-being, in those parts of the country where the work of building up the Jewish national home has so far been concentrated? This "mixed area" might then be separated administratively from a "reserved area" in other regions, where the Palestinian Arabs might be assured in perpetuity of a Spartan pure and frugal national home in Palestine of their own. We shall not have solved the Palestinian problem until we have made Arabs as well as Jews feel securely at home in what is, in different senses, the mother-country of both peoples.

UNEMPLOYMENT ASSISTANCE

THERE is no more important, and no more difficult, task before Parliament than the revision of the unemployment assistance regulations. The whole issue needs the most careful and objective consideration—more, at any rate, than it received in the House in Monday's debate—if an arrangement equitable to both employed and unemployed is to be reached when the Government introduces the forthcoming new regulations.

The Unemployment Assistance Board was formed at the end of 1934 to liquidate the gross anomaly of the co-existence of two separate relief systems: transitional payments nominally connected with the insurance scheme, and public assistance for able-bodied unemployed who had exhausted their insurance rights under the Unemployment Insurance scheme but normally worked for wages. The Board was to take over 800,000 applicants of the transitional payments class on January 1, 1935, and a further 200,000 public assistance applicants on a second appointed day. Such, however, was the outcry against the new scales, particularly in the distressed areas, that Parliament

intervened; and it was presumably accepted by the Government as well as the Opposition that there was something substantially wrong with the new scales. Since then a dual system has been worked, according to which applicants receive either the old transitional payment or the new assistance scale, whichever is the higher.

What are the real rights and wrongs of the controversy over the new scales? It is impossible to infer a final answer to this question from the first annual report published by the Board last week. For the report is, perhaps of necessity, an apologia for the principles of the new scales; and by implication it declines to admit that anything was substantially wrong with them. Lord Rushcliffe, in his introduction, explains that the Board found in existence enormous variations between scales in different districts. Since its main task was to abolish indefensible anomalies, it decided that "it would not be justified . . . in proceeding on any other principle than that of equality of treatment for householders in similar circumstances wherever they lived." It also felt compelled to adopt scales below standard wage levels; and it was enjoined by Statute to apply a household "needs test." It accordingly decided to adopt standard scales, assessed according to needs, and to provide for exceptions and qualifications based on certain definite principles.

Within these limits the Board's case is—and it is admittedly making a case—that it took every possible account of ascertainable differences in needs, and that it made every effort to use justifiable discretion. The Act forbade the Board to employ a "destitution test," and it conceived it as its duty to supply applicants with "conventional necessities" as well as with sheer subsistence needs. In particular it decided to assume a standard rent and allow extra allowances where the actual rent was higher and reductions where it was lower. Extra payments were also permitted for "exceptional needs" and "special circumstances"; and the officers of the Board were encouraged to apply the utmost discretion in treating individual cases. In fact, 20 per cent. of the Board's applicants are receiving payments above the standard rate.

In administering the household needs test the Board was fairly closely controlled by statute in calculating what resources should or should not be counted. It decided, however, to take into account the "personal requirements" of anyone contributing to the household in order that he might retain a reasonable proportion of his earnings in order to "lead his own life." The Board also divided family relationships into three categories, so that the claims of distant relatives and other members of a household should not be considered as great as those of a wife, husband, father or mother. The Board categorically maintains that the household needs test has not had the effect of "breaking up homes"; and its district officers, in their separate reports, almost unanimously state that such cases have been few, though in the distressed areas they appear to have been more common.

There are points of detail where, even on the showing of the Report itself, reforms seemed to be called for. In general, however, the Report taken at its face value would indicate the conclusion that the new regulations were in every way fair and proper; that every care had been taken to make them flexible and humane; and that the standstill order of February, 1935, was a mere political capitulation by the Government to an unscrupulous public agitation. Can this view really be accepted? It is at least noticeable that practically nobody in any part of the House was willing to accept it on Monday. The Labour Party view, frankly expressed, was that the Board was a body of soulless bureaucrats and the Report the work of a "supreme master of the art of making the bitterest pill taste sweet." This view, however, would seem as unlikely to contain the whole truth as the apologia of the Board itself.

Part of the answer to the puzzle would seem to lie in the fact that in the first few weeks of its existence the Board's officers were compelled by lack of experience and time to apply the new standard scales ruthlessly without adequate individual qualification. This particular difficulty should by now have been overcome. Nevertheless, it is now apparent beyond all doubt that the Board's scales, if universally applied, would mean a very large number of reductions in relief. It has been stated in Parliament that

over 50 per cent. of the applicants are receiving, through the protection of the Standstill Act, more than they would have received under the Regulations. The full application of the Board's scales would therefore reduce the relief of more than half of the applicants. This is, of course, a formidable criticism of the scales that Parliament originally approved. But the exact significance of the result would be clearer if it was known what were the differences in amounts, what were the classes of cases in which the differences arose, and what were the chief factors in the regulations which produced the reductions that the Standstill Act had to restore. On the face of it the main reason for the surprising preponderance of cases in which transitional payments exceeded the new scales would seem to have been partly the non-disclosure of resources before the Board took over, and partly the comparatively generous nature of the public assistance scales previously prevailing in the distressed areas.

It is almost certain, however, as a Government supporter said in the House on Monday, that Parliament would not have adopted the scales if it had been known how they would work out. It did not intend there to be a reduction in the relief paid to more than half of those unemployed who were not receiving unemployment benefit. How can this mistake now be corrected? It appears from examination of the report that the Board, which sincerely thought its scales would operate more generously, miscalculated on two points: the rent allowance and the household needs test. The deductions for low rents, though on paper perfectly fair, meant heavy cuts in relief in the distressed areas. Secondly, the tightening up of the needs test inquiries at once made the test more burdensome and the relief more exiguous.

There would consequently seem to be two clear lines of amendment. First, the rent reduction arrangement should be revised. And secondly, the household needs test should be liberalised, if not abolished entirely. There is a strong case for total abolition; for neither experience nor *a priori* considerations suggest that the absence of the test would on balance diminish the number of persons seeking work. The motive for the test is really simply the desire to save money. If, however, the test as defined in the Act is to be retained, there are two clear methods of liberalising it. First, the Board might go even further in discounting certain classes of resources in the determination of needs. And secondly, all persons other than husbands, wives and children below earning age might be regarded as not belonging to the household at all. These two concessions, both of which can be abundantly justified, would surely go far to correct the oppressive effect of the application of the new scales in the depressed areas.

It will be a great misfortune for the unemployed if the Unemployment Assistance Board is made the subject of political rancour either by its critics or its defenders. For there is at least sufficient evidence in the Board's Report of a humane and equitable outlook for Parliament to be able to devise, by the liberalising of certain of the regulations, a really new and constructive social service.

THE NEW POPULATION PROBLEM

In the *Economist* of February 15th, page 347, we published an article on "The Future of Population," in which we drew attention to the "startling" calculations of Dr. Enid Charles on the future trend of population in England and Wales. Dr. Charles made three assumptions: (A) that fertility and mortality rates remained at their 1933 levels; (B) that they continued to decline at the rates recently recorded; and (C) that fertility increased to the 1931 level while mortality declined. On the "moderately optimistic" assumption (A) the population of England and Wales seventy years from now would be 27,090,000; on assumption (B) it would be only 15,058,000; and on the "considerably optimistic" assumption (C) it would fall to 38,177,000. We have asked Dr. Enid Charles to contribute the following article, in which she examines population trends in other countries.

The rate at which women of child-bearing age in this country are having children is now so low that our popu-

lation must soon rapidly decline, unless new factors intervene to raise the fertility of such women. Is England unique in this respect? How does our position compare with that of other countries?

Crude birth and death rates give no indication of the capacity of a population to expand. If every woman, on the average, gave birth during her lifetime to less than one girl child, the population as a whole would necessarily decline. The index of growth-capacity in a population, devised to exhibit the replacement of potential mothers by daughters, is known as the *gross reproduction rate*; and it is obtained by adding together specific fertility rates for each year of child-bearing age. It thus indicates the number of girl children born to each woman between 15 and 50 during the course of her life. If the index is less than unity, the reproductive group in the community must dwindle in every generation; and it would do so even if every girl baby were to live to maturity. Countries in this position, therefore, cannot even attain a stationary population by any improvement in mortality alone. The following table shows the countries which have a gross reproduction rate of unity, or less:—

TABLE I.
COUNTRIES WHOSE GROSS REPRODUCTION RATE IN 1933
WAS FOUND TO BE UNITY OR LESS

Country	Gross Reproduction Rate
France	1.000
Estonia	0.924
England and Wales	0.845
Sweden	0.830
Germany	0.800
Austria	0.800

The low fertility of Germany and Austria will doubtless surprise many readers; but the decline of their fertility has been rapid since the war. In Austria, the gross reproduction rate was very nearly 2.0 in 1913; and though the fall in the rate has occurred partly because Austria lost some of her more fertile territory, there has undoubtedly been a very rapid growth of sterility in both countries. In Germany the position has been overshadowed by the recent and spectacular rise of the birth-rate, from 15.1 in 1932 to 18.0 in 1934. While most European countries at this time showed a slight recovery in births after the accelerated fall of the depression years, no rise as large as the German has ever been recorded, save after a war. But there is nothing to show that there has been any permanent recovery in German fertility. There was considerable postponement of marriages during the depression everywhere. With the beginnings of recovery came an inevitable rush of marriages formerly postponed, accelerated in Germany in 1933 and 1934 by the Nazi Government's measures of encouragement.

When fertility is as low as in Germany, first births form a very large proportion of all births. Consequently fluctuations in marriages, and the ensuing fluctuations in first births, produce larger fluctuations in any single year's fertility index than would occur under conditions of high fertility. Clearly, the increase in the German marriage rate must soon reach a limit. The question which is vital to future population growth is whether the rate of production of third, fourth and fifth children has been, or will be, increased. According to a recent analysis there was some increase in these later births. According to Burgdorfer, 1.4 million births per year are required to maintain the German population at its 1933 level. In 1934, there were still only 1.18 million births. Since September, 1935, the birth rate in 55 large cities of Germany has begun to fall.

To secure a fuller picture of the population problem today we must allow for girl babies who are born but do not live to maturity. This can be done by weighting the specific fertility-rates (for births of girls) by the proportion of girls born who live to each year of child-bearing age, according to the Life Table. The index so obtained is called the *net reproduction rate*. It indicates the number of future mothers resulting from the present generation of mothers. If fertility and mortality rates were to remain stable for about 60 years, the age composition of the population would become stable. The net reproduction rate

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance.

It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Established 1844 Funds exceed £22,000,000

would then represent the actual rate of turnover of the population in a generation; for example, a population with a net reproduction rate of 0.75 would be diminishing by one-quarter every thirty years.

In Table II are set out some representative *net* reproduction rates for recent years.

TABLE II.
RECENT NET REPRODUCTION RATES

Country	Year	N.R. Rate
1. Western and Northern Europe:—		
Saxony	1933	0.50
Germany	1933	0.70
England and Wales	1933	0.73
Sweden	1933	0.73
France	1933	0.82
Scotland	1934	0.91
Denmark	1933	0.91
2. Eastern and Southern Europe:—		
Austria	1933	0.67
Estonia	1933	0.70
Hungary	1933	0.91
Italy	1933	1.18
Portugal	1933	1.29
Bulgaria	1933	1.30
Ukraine	1929	1.39
European Russia	1927	1.70
3. Non-European Countries:—		
U.S.A.	1930	0.98
Australia	1933	0.98
N. Zealand	1933	0.98
Canada	1931	1.32

The figures in Tables I and II (except those for Great Britain, Australia and the U.S.A.) are taken from "The Measurement of Population Growth" by Dr. Kuczynski. The figure for the U.S.A. is a rough estimate for registration States only. Western and Northern Europe, the United States, Australia and New Zealand present a uniform picture. In none of these countries are the possible parents of to-day reproducing their own numbers.

We should not jump to the conclusion that those countries which now have a net reproduction rate *above* unity are going to continue to have an increasing population. It is first necessary to see how the present situation has been reached. Any fertility index for a single year may represent a minor fluctuation. Hence it is of major importance to know whether our annual indices are on a rising or falling trend, and for how long the rise or fall has been going on. Unfortunately, historical material of this nature is scanty. So far as it exists, it is completely consistent; for we do not know of any country in which the net reproduction rate has not been falling steadily throughout the period of which we have knowledge.

Our data go back farthest in Sweden. The course of the gross reproduction rate in that country for the last sixty years is shown in the diagram below. It probably represents fairly well the decline of fertility in many other countries.

The accelerated fall and partial recovery due to the war were much greater in the belligerent countries; and the recent temporary recovery in Germany and England

occurred in Sweden as early as in 1930. In France, the decline in fertility has been going on longer and has proceeded more gradually. Some of the countries which now have a net reproduction rate *above* unity have been experiencing a rapid decline. For example, in Bulgaria fertility has fallen from 3.18 in 1901-1905 to 1.30 in 1933; in Italy from 2.0 in 1921 to 1.18 in 1933. The position of Soviet Russia is somewhat different. The writer has not been able to obtain data for a period later than 1929. Though fertility had decreased somewhat from the pre-war period up to that year, it was still very high; while mortality had decreased much more rapidly. The increase in population was thus very great. Whether this is likely to continue or not, it is too soon to say.

No mention has been made of population trends over a large area of the habitable globe. There are no available data for estimating population trends in most of Asia, Africa and South America. In China and India most experts believe that the increase in population is taking place very slowly. The population situation in Japan is of great interest; and it is unfortunate that we cannot yet say definitely whether the decline in fertility, characteristic of all other industrialised nations, has begun there.

The population trends to which attention has been drawn may seem at first sight inconsistent with the enormous increase in the number of persons of European stock during the last 160 years. According to Kuczynski, they have grown from about 155 millions in 1770 to about 720 millions to-day. This, however, has been mainly due to a decrease in mortality. The average expectation of life at birth increased in Europe during this period from about thirty years to about sixty years, so that the simultaneous decrease in fertility has not become apparent up to the present. But now mortality is ceasing to be the significant factor in determining population growth. Out of 1,000 newly-born girls in New Zealand, 863 live to the age of fifty; and, as we have noted, improvement in mortality after this age has no lasting effect on population growth.

Thus, it would appear that—except Russia—all the countries of Europe, North America and the British Dominions have reached, or are rapidly approaching, a stage at which they are, or will be, totally incapable of maintaining even a stationary population. It is possible to go further. We can say that, as yet, we know of no reason why the decline should stop at the precise point it has now reached. A phenomenon so widespread, and with such a lengthy history, suggests the operation of social forces of

THE DECLINE IN FERTILITY IN SWEDEN DURING THE LAST 60 YEARS

great magnitude. It is all the more important that attention should be paid to the problem before a considerable adverse balance of births and deaths makes it clearly visible. By that time, the decline in fertility will probably have proceeded so far that it will be extremely difficult to arrest or reverse it.

BRITAIN AND CHINA

Nine months ago Sir Frederick Leith-Ross, Chief Economic Adviser to H.M. Government, was sent out officially to examine "the financial and economic difficulties of China and the possibilities of our assisting her, in conjunction with the other Powers interested, to overcome these difficulties." The following is a summary of his statement of views, issued from Shanghai on Monday.

Sir F. Leith-Ross states that the rise in the value of silver in 1934 caused an acute deflationary crisis. In October, 1934, the Government imposed a variable export tax on silver, thus divorcing the Shanghai dollar from the free silver standard. Sometime afterwards the Government decided to adopt "an inconvertible managed currency on the basis of their own resources." "This action," Sir F. Leith-Ross says, "has been fully justified by the success it has achieved." The notes of the Government have been steadily replacing the silver dollars in circulation; and their exchange value has been firmly maintained. The rate of exchange fixed has encouraged exports and has raised agricultural prices. Consequently the import surplus has been greatly reduced, and the balance of payments is now in equilibrium. "Thus the fundamental economic conditions for a stable currency are fulfilled."

Much yet has to be done, however, before the currency can be taken as a basis for long-term trading and investment plans. The unification of the note issue and the re-organisation of the Central Bank as an independent Reserve Bank have not yet been carried through effectively. There is also a large Budget deficit, and the price of Government bonds is low. Political difficulties have also interfered with currency reform. But "all things considered there would appear to be every reason, so far as economic factors are concerned, for confidence in the present currency system provided that the Chinese Government complete and carry through efficiently the programme of internal reforms, including especially the re-organisation of the Central Bank and the reform of the Budget."

Sir Frederick states that maintenance of peace and order in the interior of China and "a settlement of the special situation in North China (especially in East Hopei) are conditions precedent to fair prospects for the currency and for the country's whole financial situation. Chinese finance depends on the vital factor of customs revenue, and without a settlement in the North this will be seriously threatened."

On the other hand, the Chinese authorities could further stimulate exports and purchasing power if, without curtailing revenue, they could lower local taxes, inter-port dues, and certain import duties. This would be possible where such duties are prohibitive. The restoration of Chinese rural economy should have first consideration in reductions of tariffs. A monopoly organisation of China's natural exports would be dangerous. British exporters must make careful study of China's requirements; Sino-British Trade Councils may serve the cause of co-operation between British and Chinese interests.

China requires imports of capital goods; and British credits—especially medium-term credits for public utilities—would benefit both China and British exporters. Long-term credit would be necessary for the railways, many former loans to which are in default; but the national Government appear genuinely anxious to settle outstanding obligations, "within the limits of their financial possibilities," and to reorganise the railways. This settlement effected, extensions to the railway system could be financed and new regions opened up. Municipal enterprise is impressive, and offers opportunities for joint enterprise to China and the United Kingdom.

Sir Frederick fully agrees with the American Economic Mission: "A vast change is coming over China: a modernisation that, as compared with ten or even five years ago, masks many centuries." He believes it will make China "not a less, but a more fruitful field for British enterprise—commercial, industrial and financial. Our principal interest here is to promote the peace, the prosperity and the trade of China, and in working for this, it seems to me we are working in the interests of all countries trading with China." He concludes with a tribute to the achievements of the Chinese national Government in the administrative and economic spheres.

NOTES OF THE WEEK

Foreign Policy and the Empire.—The very different reactions to Mr Baldwin's foreign policy of the several self-governing Dominions are now becoming apparent. The divergence illustrates a political truth which is of momentous importance for the future of the British Commonwealth. So long as the League was being organised as an effective instrument for international co-operation in the cause of law and order, the several States-members of the Commonwealth found themselves spontaneously pursuing identical policies as loyal States-members. Now that the League is being weakened, and threatens to fall asunder, the Commonwealth countries tend, *pari passu*, to be prised apart by the pull of their respective attempts to solve the security problem—each for herself, on regional lines of her own. Canada is going North American, South Africa is going African, and Australia is going isolationist. In the present crisis, the Australian Government anticipated Mr Baldwin's decision by announcing in advance that the Government would vote this week, at Geneva, for dropping sanctions against Italy. On the other hand, the South African public, and General Hertzog in his speech on Thursday, have shown disapproval and dismay at this decision to capitulate to the first *coup de force* in what threatens to be a new partition of Africa. (It was the editor of a South African newspaper—and not Mr Lloyd George—who reminded us that last Thursday was Waterloo Day!) In this East African business, the policies of South Africa and Australia have been at opposite poles. Hitherto the Australians have been very sensitive to the security of their communications with Great Britain along the short route through the Red Sea and the Mediterranean. They testified to this feeling in the part which they played in the Dardanelles campaign, and also in their attitude over the Chanak incident and at the time of the successive post-war attempts at a settlement between Great Britain and Egypt. To-day, when the Italians are establishing themselves right astride the Imperial route at two vital points—one in the Red Sea and the other in the Mediterranean—the Australians seem to be indifferent. Are they so sure that the South Africans are going to provide them with an equally satisfactory alternative route *via* Simonstown? And what about the Canadian attitude? Unenthusiastically, Canada is to-day following the United Kingdom's lead away from the League Front. Such a situation threatens to carry England into another European war, and Canada into a North American zone of insulation. Mr Baldwin's decision to retreat before the aggressor looks ominous for the British Empire.

France and Europe.—"The reform of the League" is a phrase which is being bandied about to-day between people who use the words to describe one or other of two diametrically opposite policies. On the one hand, the term is being given its natural meaning of some change in the constitution or procedure of the League designed to make it a more effective instrument for fulfilling the major purposes of the Covenant. On the other hand, "reform" is being used in this context in a euphemistic sense which is less native to our English usage than to the French. In French military parlance, *reformés* mean soldiers who have been released, as broken men, from active service. This is not the sense in which a reform of the League is desired by the present French Government. On Tuesday, M. Blum and M. Delbos, the Foreign Minister, read in the Chamber an unexceptionable statement on foreign policy, which obtained for the Government an even greater majority than when they first appeared before the Chamber. The statement declared that the Government would not seek a selfish peace based on withdrawal within France's own boundaries; agreed with the abandonment of sanctions against Italy; but said that no reform of the Covenant was necessary for peace to be consolidated by the reinforcement of security. The inadequacy of collective security, say the new French Government, was not the fault of the Covenant. It was because the Covenant was applied late and incompletely—a view

which the British Government can scarcely relish, even if it amounts to an admission by M. Blum that M. Laval was chiefly to blame. The French Government go on to abjure alliances on the old lines, but to advocate regional pacts for collective military resistance against aggression, supplemented by general obligations under the Covenant on States-members outside the region to impose financial and economic sanctions. It reminds Germany that Jaurès and Briand worked and suffered in the cause of Franco-German understanding, and records the Government's belief in Herr Hitler's sincere desire for peace; but it also reminds Germany that unilateral action, aggression, and a policy of "dividing up peace" cannot lead to agreement. The French statement ends with two aspirations: first, for the reconstitution of the Disarmament Conference; and secondly, for the re-establishment of M. Briand's Commission for European Union. The statement indicates that the new French Government of the Popular Front may make its mark in foreign affairs. The German Government should not underrate its hold on the French people; and the British Government, in default of any policy of their own, may well embrace a French policy which, at least, looks forward.

* * *

Dardanelles and Bosphorus.—Delegations from all but one of the Powers signatory to the Lausanne Straits Convention of 1923 met on Monday at Montreux, on the invitation of Turkey. They came to consider a proposal from Angora that Turkey should be permitted to refortify the shores of the Dardanelles and the Bosphorus, and to reoccupy militarily the demilitarised zones on either side of each of the two stretches of narrow waters. The parties besides Turkey herself are Great Britain, France, Russia, Japan, Greece, Bulgaria, Roumania and Yugoslavia. The absentee, of course, is Italy, who is waiting until the present sanctions have been lifted. Her absence is piquant, because the fear of an Italian *coup de main* is probably the most acute anxiety in the minds of the Turkish general staff. The other parties have made it plain that they look with favour upon the Turkish proposals which, besides the questions of reoccupation and refortification, envisage conditions for the passage through the Straits of foreign merchant ships and warships, in peace and in war. On this latter head the Turks are not proposing to make things more difficult for merchant ships than they are under the existing convention; but they do propose to tighten up the conditions on which foreign warships may pass through. The friendliness of the other parties towards the Turkish move has been increased by the manner in which the Turks have chosen to raise the question—eschewing the fashionable *fait accompli* for the *démodé* method of round-table conference. We believe that, in refusing to follow his European *confrères'* fashion, the Anatolian dictator will prove to have shown himself a better diplomatist than they are. What use is Turkey likely to make of that complete mastery in her own house which her fellow signatories of the Lausanne Convention will gracefully concede, having no intention to refuse it? In the present state of collective security, Turkey—like Canada, Belgium, Czechoslovakia, the Baltic States, and other small countries—will be moved to seek an alternative form of protection by "commending herself" (in the phrase that became current during the break-up of the Roman Empire) to some mighty man of valour who can be relied on to take up arms on her behalf in return for her dutiful allegiance. In Turkey's case, this protector can only be Russia. Is the Czardom's age-long ambition to command the Straits about to be achieved for Russia by Stalin through the agency of a Turkish satellite State? Apparently the British Government fear so; for they are reported to be opposing Russia's demand that all Black Sea Powers shall be free to send their navies into the Mediterranean, as long as Turkey proposes the limited entry of non-Black Sea Powers' warships into that sea. The Montreux negotiations will certainly prove interesting.

America Raises the Embargo.—It is logical that the Administration at Washington, which was the first Government in the world to recognise and proclaim officially the existence of a state of war between Abyssinia and Italy, should also be the first to declare that hostilities have come to an end and to revoke the embargo on exports of munitions to belligerents. This step on the Administration's part will not be censured by anybody, inside or outside the United States, who realises how strenuously and courageously the President and the State Department worked, during the earlier months of the crisis, to co-ordinate the isolation policy of the United States with the sanctions policy of the States-members of the League. Mr Baldwin's and Sir John Simon's allegation that it was the American attitude and action that prevented the imposition of the oil sanction is as untenable as it is impolitic and ungenerous. If the oil sanction had been imposed at the date originally intended, last November, it is virtually certain that the Government at Washington and the public opinion of the American people in combination would have saved the League's action from being stultified for the sake of American commercial profits. What killed this probability was not American thirst for war profits, but American disgust and disillusionment over the Hoare-Laval plan. M. Laval was the murderer of sanctions, and Mr Baldwin was his accessory. It ill becomes the Prime Minister of the United Kingdom to attempt to shift to the shoulders of the President of the United States a load of responsibility which, however onerous, is Mr Baldwin's own. Meanwhile, before there has been any collective decision to abandon the existing sanctions, the British Government, acting unilaterally, has decided to prohibit the import of arms through the Sudan into the vast tracts of Western Abyssinia that are still unsubjugated. Mr. Eden admitted that the situation would be "entirely different" if a Government responsible to the Emperor were in existence in the region in question. Two days before this statement by Mr Eden in the House Lord Lugard had addressed a letter to *The Times* in order to report the receipt of a telegram from an English observer on the spot, Colonel Sandford, certifying that such a Government did exist. Thus Mr Eden's altered wish seems to be father to this latest and least happy of his thoughts.

Democrats in Convention.—It is perhaps fitting that the Democrats should be meeting at Philadelphia, that traditional city of Republicanism, whose Democrat mayor was elected by the Republicans in order to keep out a Republican mayor supported by Democrats. For to the assembling delegates came an appeal from Al Smith's resurgent Democrat "quintuplets," urging rejection of Roosevelt and a return to non-interference by the Government in business. It had been announced that the Republican, Mr Lemke, would stand as a third party candidate trying to consolidate the support of Father Coughlin, Dr. Townshend and the remnants of Huey Long's share-the-wealth movement, for a policy of currency of inflation. And the early speeches of the convention were devoted to ridicule of the Republican party platform for trying to conceal unabashed reactionary longings behind a veneer of liberalism. The task of the men behind the convention is to draw up a platform which will successfully compete with these various oppositions; the candidates to offer this programme to the electors will be the present office-holders, President Roosevelt and Vice-President Garner. From the reports of the proceedings so far received, it appears that the platform will not raise the question of constitutional reform, although this is admitted to be necessary; it will definitely oppose Governor Landon's suggestion of a return to a monetary system rigidly fixed, presumably internally as well as externally, to gold. It will support the policy of bi-lateral trade agreements, as negotiated by Mr Cordell Hull, but not to the point of serious interference with domestic industries. It may also demonstrate how live an issue the war debts are by transferring the blame for default to Mr Hoover's moratorium of 1931. Unlike the last Democrat platform, there will be no tribute paid to balanced budgets if the cost of balancing is the cessation of all relief payments. A noteworthy feature of the early proceedings was the emergence of Governor Earle of Pennsylvania as

a possible candidate for the Presidential nomination in 1940. President Roosevelt still has the best prospects of winning the present election; but so well has he played the part of Elijah that it may be difficult to find a capable Elisha for the next election.

British Tariff Policy.—Under this title the Federation of British Industries this week puts forward "certain observations in the light of recent experiences" of the workings of our tariff. For the home market, the F.B.I. think that in general the working of the Import Duties Act has been "successful in assuring a reasonable level of protection to the bulk of efficient British industries without detriment to consuming interests." (We wonder if the F.B.I. would call the iron and steel industry an "efficient" British industry; or whether the level of protection it has obtained is "reasonable.") There are still, however, in the F.B.I.'s view three dangers to British industries working for the home market: foreign governments' subsidies to their exports, further currency depreciation abroad, and competition from countries with such low standards of living as to render British industry incapable of competition. These dangers, they say, should be met by adding to tariffs the power to impose import quotas. For the export markets, the F.B.I. urges this country to exert more of its bargaining power as the world's leading import market; and it also urges that more use should be made of the powers under the Import Duties Act and the Debts Clearing Offices and Import Restrictions Act to threaten countries that discriminate against United Kingdom products, or which exercise exchange controls so as to limit funds available to pay for imports of British goods. Against unfavourable treatment of British goods without actual discrimination, the F.B.I. urges once more that the benefits of Most-Favoured-Nation treatment should be restricted by the Government to such countries as enter into "satisfactory" commercial agreements with the United Kingdom. To this end, a third, higher set of import duties should form a British "fighting" tariff—"say 50 per cent. above the normal rates." The F.B.I. is apparently not concerned to secure a wider, freer-trading group of nations which, in common, would abrogate the M.F.N. clause *vis-à-vis* countries not in the group. The F.B.I. wish such abrogation to become only a British weapon. Thereby it is hard to see how they expect to expand British exports. For, under the heading, "The Balance of Trade," while recognising "that a mathematical balance of imports and exports between the United Kingdom and each individual country is an impossibility," the F.B.I. make the scarcely original proposal that the balance of trade "should be primarily regarded" as the balance of British domestic exports as against British retained imports of the other country's produce. They base this proposal on the view, "the greater is the proportion of British domestic exports, the greater is the advantage to this country." Have the F.B.I. never heard of "the terms of trade," which, as Professor Pigou and Mr. Colin Clark have recently shown, have enabled this country throughout the depression to buy more necessary imports with less exports of our domestic products? The F.B.I. conclude with a novel suggestion—novel to imperialists—that British industries should be given as effective protection against imports of Imperial manufactured goods as they receive against foreign manufactures. Well, that is the logical goal of protectionism within the Empire.

The Coal Selling Schemes.—The draft of an Order under the 1930 Act providing for the setting up of central selling organisations was approved by the House without a division on Wednesday. Four sets of schemes were covered by the Order: first an amendment of the already existing Lancashire scheme; secondly, a scheme similar to the Lancashire scheme adopted by Shropshire, South Staffordshire and the Forest of Dean; thirdly, a central control of sales system favoured by 12 other districts; and fourthly a scheme for the amalgamated Midland Districts. The

schemes are a little different in each case; but this is inevitable in any industry as large and various as the coal industry. In general, Captain Crookshank, the Minister for Mines, defended the schemes as necessary to put the coal industry in a stronger bargaining position, and raise the present uneconomic level of prices and wages. Several critics of the Order complained that monopoly powers were being given to the industry. Of course, monopoly powers are being granted. That is the object of the selling schemes; and the justification for it in this case rests on the fact that the collieries have long been in the position of highly competitive producers selling to semi-monopoly buyers. Monopoly privileges, however, should only be given in return for concessions to the public interest; and those concessions should in this instance have consisted in the grant of compulsory powers of amalgamation to the Reorganisation Commission. For the coal owners one day to resist compulsory amalgamation on the ground that it means "Government interference" and on the next to invoke Government powers in order to establish monopolistic selling schemes is, to put it mildly, inconsistent. The Government cannot fully justify the selling schemes until it reintroduces the Bill granting compulsory powers to the Reorganisation Commission.

Friendship or Enmity with Egypt?—While the Anglo-Egyptian negotiations are being carried on in private—almost unmarked by the eyes of a public for whom Africa, at this moment, means the Ethiopian tragedy—we are on the verge of momentous decisions. We are now being offered our last chance of placing Anglo-Egyptian relations upon a basis of free agreement, embodied in a comprehensive treaty. We are also, apparently, in imminent peril of letting this last chance slip, owing to the weakness of our Government and the pig-headedness of our military authorities. Before Signor Mussolini was allowed to seize Abyssinia, and thereby to catch Egypt and the Anglo-Egyptian Sudan in a pair of Italian pincers, the War Office in Whitehall was content to limit the British forces in Egypt to some three thousand men, and to agree to their being confined within a zone along the banks of the Suez Canal, away from the principal centres of Egyptian population. Now that Signor Mussolini has been moved to consummate his act of African aggression, one of the incidental consequences, to which our War Office has at last awakened, is that elaborate and far-reaching measures will have to be taken for the security of the British Empire's communications across Egyptian territory and territorial waters, if these are not to be left at the Italian dictator's mercy. The Egyptians, on their side, realise that this is true not only for British interests in Egypt, but for Egypt herself. The leaders of the Wafd, who are the sole political force surviving in Egypt now that King Fuad is no longer there, are also intelligent enough to appreciate the wisdom of Aesop's dog in the fable of the Dog and the Ticks. If a dog must resign himself to being battered on by ticks of some sort, then it is better to leave the settled ticks alone than to comb them off in order to make room for hungry newcomers. The Egyptians are therefore prepared, as never before, to enter into cordial co-operation with Great Britain for a plain common interest. This new Egyptian goodwill is the best security for the British Empire, and a great political gift which Mussolini has unintentionally thrust into our hands. But the gift has one condition attaching to it; and that is that the agreement between ourselves and the Egyptians should be on a basis of equality. Meanwhile, our War Office is rumoured to be demanding a totalitarian military occupation of Egypt—Cairo and Alexandria included—which it is politically impossible for Nahas Pasha and his colleagues to accept. Dare we hope that for once, Mr Baldwin will do a Prime Minister's duty?

Belgium's New Deal.—Work was resumed by an increasing number of Belgian strikers from Wednesday onwards on the recommendation of the Trade Union Committee. That Committee had first satisfied itself that the Bills to be introduced into Parliament substantially satisfied

the workers' demands. Included in these Bills will be provisions for minimum wage rates, shorter hours, paid holidays, collective agreements, the raising of the school-leaving age and family allowances. The 40-hour week is to be introduced in certain industries immediately and in others later; the manufacture of arms is to be controlled; and measures are to be taken against monopolies. Improvements are also promised in unemployment relief, old-age pensions, and Government salaries. These concessions, if usefully applied, should represent no more than a fair distribution among the workers of the fruits of the recovery resulting from devaluation. Both M. van Zeeland and the workers' leaders are consequently to be congratulated on the conclusion of a just and moderate settlement. Belgium, at a time when the I.L.O. has adopted a draft convention on paid holidays, now follows the United States, Sweden, New Zealand, Spain and France in introducing a New Deal amounting in effect to a charter for industrial labour. There are many features in common between the various New Deals, and the achievement of these concrete social reforms in the democratic countries in the last few years is at least one feather in the cap of democratic government.

Progress in the Motor Industry.—The British motor industry continues to make headway. Production of both private cars and commercial vehicles during the twelve months ended September next will in all probability reach a new record. The number of private cars produced during the six months ended last March, as estimated by the Society of Motor Manufacturers and Traders, was 179,672, an increase of 18,507, or 11.5 per cent., over the corresponding period a year ago. Private cars in use in Great Britain rose from 1,370,785 at the end of May, 1935, to 1,536,514 at the end of the past month, an increase of 12 per cent. The expansion in the production of commercial vehicles was scarcely less marked. During the six months ended last March the number of commercial vehicles produced was 53,594, an increase of 5,227 units, or 10.8 per cent. over the corresponding period last year. The number of goods vehicles in use in Great Britain increased from 409,935 at the end of May, 1935, to 432,258 at the end of the past month. In contrast to the rapid increase in the number of private cars and goods vehicles on the road, the number of commercial passenger vehicles ("hackneys") in use declined slightly, from 79,884 in May last year to 79,263 at the end of last month. Since the beginning of the current motor season last October British manufacturers of private cars have gained further ground abroad, total exports during the eight months ended last May amounting to 39,720 units, against 35,272 units during the corresponding period a year earlier. Imports, on the other hand, have declined, from 8,878 units during the seven months ended in April, 1935, to 7,458 units during the corresponding period of the current season. The experience of manufacturers of commercial vehicles has been less satisfactory. Imports rose from 1,126 units during the seven months ended April, 1935, to 1,347 units in 1935-36, while exports declined from 10,214 units to 9,704 units between the first eight months of the 1934-35 and 1935-36 seasons. Since February, however, exports of commercial vehicles have exceeded those of a year ago. By all appearances, the barometer is still "set fair" for the British motor industry, which, incidentally, has a direct interest in the Government's re-armament programme.

Lancashire Cotton in India.—On September 10th of last year a Special Tariff Board was appointed in India to report on the "levels of duties necessary to afford adequate protection to the Indian cotton textile industry against British imports of cotton piece-goods and yarn, artificial silk fabrics and mixture fabrics of cotton and artificial silk." The conclusions of the Board, which have been anxiously awaited by Lancashire, were published on Wednesday. Its recommendations have been accepted by the Government of India. Considered in the light of recent tariff changes, the revised duties seem none too generous. Since 1930, Lancashire's trade with India has been increasingly handicapped by the sharp increase of

import duties. Thus, the tariff on piece-goods was raised from 11 to 15 per cent. in 1930; from 15 to 20 per cent. in March, 1931; and from 20 to 25 per cent. in September, 1931. Under the revised tariff only relatively small concessions are granted to Lancashire. Thus, the duty on plain grey cotton piece-goods is to be reduced from 25 per cent. *ad valorem*, or 4½ annas per lb., whichever is higher, to 20 per cent. *ad valorem*, or 3½ annas per lb., whichever is higher. The duty on bordered, grey, bleached, and coloured piece-goods, excluding prints, is to be reduced to 20 per cent. *ad valorem*. But the duty on cotton yarn is to remain unchanged. Moreover, "in the absence of evidence of the nature and extent of competition between imports from the United Kingdom of printed cotton goods and artificial silk manufactures on the one hand, and products of Indian cotton mills on the other," the duties on these goods are left unchanged. Lancashire has been keenly disappointed, especially as the Indian mill-owners declared in the agreement reached with the Lancashire delegation in 1933 that they would not oppose the removal of the last 5 per cent. surcharge on British goods. Much more had been expected. Nevertheless, it must be remembered that Lancashire enjoys a substantial preference in India, which has been slightly increased by the reduction in the duty on British piece-goods; for example, prints. The duty on non-British piece-goods, moreover, is to remain unchanged at 50 per cent. If, at last, Lancashire feels disposed to increase its efficiency by drastic reorganisation, there seems no reason why it should not be able to hold its own in India's import trade.

* * *

Sterling and International Prices—Wholesale price movements have been very uneven during the past fortnight, but their general trend has been upwards. In Great Britain the *Economist's* complete index number has risen by 0.4 per cent., while the primary products index has risen by 2.0 per cent. The margin between the two movements is to some extent fortuitous, depending on the selection of commodities, but there has undoubtedly been a definite recovery in the prices of primary products. In the United States the movement is more pronounced, for primary products have risen by 4.2 per cent., while the complete Irving Fisher index number has risen by 1.6 per cent. French wholesale prices are unchanged, and the German index number is slightly lower.

* These figures relate to June 17th.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are here given.

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	May 27, 1936	June 10, 1936	June 24, 1936
Cereals and meat	64.5	72.0	72.8	72.8
Other foods	62.2	53.7	59.1	58.8
Textiles	43.7	58.4	58.0	59.2
Minerals	67.4	81.7	80.6	80.8
Miscellaneous	65.8	76.9	77.3	77.8
Complete index ..	60.4	69.8	69.9	70.2
1913 = 100	83.1	96.0	96.1	96.6
1924 = 100	52.2	60.3	60.4	60.6

In the cereals and meat groups there were sharp advances in grain prices and an equally heavy decline in beef and mutton. Bacon was dearer. Among other foods, tea and butter fell appreciably in price and there was a noticeable increase in cocoa. In the textiles group cotton and hemp were dearer, but wool and jute weakened. Non-ferrous metal prices were higher, with the single exception of lead. In the miscellaneous group there were price increases in hides, petroleum, linseed oil and rubber.

Wages and Incomes in Great Britain—A most informative review of economic changes in Great Britain in the last 15 years is contained in a memorandum,* recently published, by Professor Pigou and Mr Colin Clark. Professor Pigou is stated to be responsible for the text and Mr Clark for the statistics. After surveying the growth of population and the changes of employment between industries, the authors give Mr Clark's figures for the national income in money from 1924 to 1935. The provisional total figure for 1935 is £3,909 millions, compared with £3,912 millions in 1929; and the per head figure is £83.5 millions, compared with £85.5 millions in 1929. An index of "real income per head" is then given which, on the basis of 1924 = 100, shows a figure of 116.2 for 1929 and 129.5 (provisional) for 1935. In considering more detailed movements of money and real wages, the authors show that money wages were not so rigidly resistant to reduction, in the period of the over-valuation of the pound, as *average* wage figures suggest. They further estimate that there was an increase in the "rate of real wages per head," allowing for unemployment, of some 9 per cent. between 1924 and 1934. Very illuminating also is the calculation made of the changes in the "terms of trade," i.e. the volume of exported goods which has had to be given in exchange for a given volume of imports. From 1924 to 1929 the price of imports was falling much faster than that of exports. From 1929 to 1933 the divergence accelerated; but since 1933 it has been reversed owing to the rise in the price of raw materials. The authors finally give an estimate of the distribution of incomes, which, though actually compiled for 1929, is thought by Mr Clark to be valid, in so far as proportions of the national income are concerned, for the present day. The estimate is as follows:—

INCOME DISTRIBUTION		
Income	Nos. ('000)	Income £ million
Over £10,000	10	221
£2,000-£10,000	100	378
£1,000-£2,000	199	237
£500-£1,000	508	312
£250-£500	1,527	404
Over £250	2,344	1,552
£125-£250	4,924	980
Below £125	11,600	1,170
Total	18,869	3,702

These are, of course, personal and not family incomes; but as they exclude the unemployed, the proportion of working-class families to total families is probably fairly reliably shown. Actually if we roughly describe working-class incomes as all those of £5 a week or under, it will be seen that there are about 16,500,000 working-class income-receivers out of a total of just under 18,000,000. As the authors remark, "At the top end of the scale some 12 per cent. of the income-receivers took 42 per cent. of the whole national income; while at the bottom end some 60 per cent. of the income-receivers had less than £125 a year, i.e. about £2 8s. a week."

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

THE REPUBLICANS AND THE NEW DEAL

ANY doubt of the influence of Mr Roosevelt and his New Deal upon American thinking is dissolved by a reading of the Republican Party's platform adopted at Cleveland. For if the vigorous "indictment" against him be shorn from it, the President could be reasonably content, with but few and minor exceptions, to accept it as his own. The candidate, Mr Landon, will give body and perhaps some qualification to the terse and, at points, ambiguous declaration during the coming months of the campaign. But it is not necessary to await the details to realise that the United States is now without a Party dedicated to Conservative doctrine.

The platform declares for a "sound currency," opposes further devaluation and calls a balanced Budget the first requisite of soundness, which Mr Landon has supplemented with a second requisite: "a currency expressed in terms of gold and convertible into gold." But he adds that the "second requisite must not be made effective until and unless it can be done without penalising our domestic economy and without injury to our producers of agricultural products and other raw materials"; while the platform favours stabilisation of currencies "as soon as we can do so with due regard for our national interests and as soon as other nations have sufficient stability to justify such action." The Republicans would return the authority to change the gold content of the dollar to Congress.

The declaration for a balanced Budget and a sizeable reduction in Governmental expenditures is vigorous, but there is a pledge to continue expenditure on all the chief purposes for which it is now being made, while social security benefits would be given to a larger number than under the present programme. The agricultural section of the platform is a basket containing virtually every proposal made during recent years, with the New Deal's soil conservation programme (*née* A.A.A.) on top. While the programme of reciprocal trade treaties adopted by the present Administration is denounced, the tariff proposal calls for both continued protection and adjustment of tariffs. Mr Borah secured the inclusion of an anti-monopoly proposal satisfactory to him; and regulation of business in general, and of the securities and inter-State public utilities business in particular, is endorsed. The labour statement is identical with the New Deal. "Entangling alliances" are, of course, denounced and payment of the war debts demanded. Despite the similarity with the objectives of the present Administration, business appears pleased and to a degree enthusiastic; the denunciations of the New Deal and the spirit of the Party are apparently more than compensatory for the specific proposals.

THE RISE IN THE NATIONAL DEBT

With consummation of the June 15th Treasury operations, the gross Federal debt rose to about \$34,400 millions, the additions being the bonus bonds and the securities sold for cash. To this Federal total there must be added nearly \$20,000 millions of State and local debt in order to reach the aggregate Governmental obligations in this country. The *per capita* total Governmental indebtedness in 1935, as compiled by the National Industrial Conference Board, was \$376.24, and the Federal debt, with this latest increase, is some \$6,000 millions higher than at the time these figures were calculated. This *per capita* figure compares with \$277.23 in 1929 and \$59.28 in 1913.

That tax collections by Federal and State Governments took a substantially higher proportion of the national income during the depression years than during the preceding decade, the Industrial Conference Board study shows; but the rise in the proportion was due to falling national income. Thus the proportion taken by the tax collector in 1934, the latest year which the compilations include, was 17.5 per

cent., as compared with a range around 11-12 per cent. in the several years prior to 1930. But total collections in 1929 were \$9,759 millions, compared with \$7,501 millions in 1933 and \$8,767 millions in 1934; while the national income is estimated at \$78,600 millions in 1929, \$44,900 millions in 1933 and \$50,200 millions in 1934. Governmental expenditures, of course, exceeded tax collections, and aggregated \$15,496 millions in 1934 and \$13,316 millions in 1933.

The official crop report has substantiated the expectations of a large increase in the wheat crop this year. Winter wheat output is placed at 482,000,000 bushels and spring wheat at 200,000,000, or a total probable supply of 682,000,000 bushels. Since then rains have been reported in the North-west, which had been lacking in moisture. The estimated total supply compares with a yield of 603,000,000 bushels last year, and indicates a small surplus this year compared with a deficit last.

When the wheat situation is added to other farm factors, the agricultural position continues to appear favourable. Cash income from the sale of farm products in April is estimated by the Department of Agriculture at \$490 millions compared with \$468 millions for April 1935. The total income from marketings for the first four months of this year is reported to be \$2,017 millions as compared with \$1,749 millions last year. Government payments were only \$62 millions during this period compared with \$221 millions last year, but this discrepancy is not expected to prevail for the entire year. Current expectations are that farm income this year will exceed that of last year by something like 10 per cent.

Business reports remain favourable. Motor-car output in the week ended June 6th fell to 101,896 cars, but remains ahead of last year. Car loadings rose to 530,780 from the holiday week, but did not maintain the percentage gain over last year they had held during earlier weeks. Steel operations were at 69.5 per cent. of capacity. The commodity price average has been virtually stable for four weeks, following its decline earlier. May department store sales are reported to have risen unseasonably from April and to be 12 per cent. ahead of May 1935.

NEW YORK, June 18.

FRANCE

A "STAY-IN STRIKE OF CAPITAL"

THE central idea of M. Auriol, the Finance Minister, is that the French crisis is more due to hoarding than to the dearth of French prices, since this dearth, in his view, is itself a first consequence of hoarding. Hoarding he regards as the origin of high rates of interest, of stagnation in internal business, and finally of the disequilibrium between "fixed costs" and the volume of trade. The extent of this hoarded capital has been estimated by experts of the Bank of France at 60,000 million francs; of which one-half is in gold or in 500 and 1,000 franc notes, and the other half has flown to Brussels, London and New York. If this capital should be dishoarded, the Treasury could obtain money at low interest rates for its expansionist policy; it would then enter circulation and the French crisis would come to an end. Such is M. Auriol's view.

He thus has three motives for maintaining the present gold parity of the franc: (1) the political and economic opposition of the Communists to devaluation; (2) the opposition of the Radicals to a devaluation not associated with an international agreement on exchange stabilisation—devaluation, it is believed, would not produce a return of the flight of capital caused by the social legislation, while it might provoke new demands from the workers, who might believe, in face of a new rise of prices, that they had been deceived by their leaders; (3) the huge fall in the gold stock of the

Bank of France. A 33 per cent. devaluation of the franc with a gold stock of 50,000 millions, would have meant a profit of 25,000 million francs for the State. But M. Auriol is now to obtain 24,000 millions by inflationary methods on the assumption that the gold parity of the franc will be maintained on the German plan. M. Auriol also stated in his speech before the Chamber that the French import surplus was more the effect of foreign protective measures than of high French prices.

The primary tactics of M. Auriol, therefore, are to appear as a friend of liberty and confidence, who rejects complaisance and condemns cowardice. He rejects the Communist project of "soaking the rich" (capital levy). He also rejects the complete nationalisation of the Bank of France and of the private banks; he even suggests tax alleviations on personal property; and he is appointing committees for the lowering of taxes and rates of interest, etc.; but, at the same time, he announces that if capital persist in its "stay-in" strike and its flight abroad, he will decide on penalties against it. He also proposes an amnesty for all persons declaring their holdings abroad, and asks for new powers to deal with fraud.

The answer to M. Auriol was given by M. Paul Reynaud, who emphasised the dearness of French prices, which would only be intensified by the new social legislation. M. Reynaud maintained that these laws would increase the railway deficit from 4,000 to 6,500 million francs; and that the credits asked for by the Minister of Finance would be insufficient, since they did not take into consideration the cost of various subsidies demanded by exporters and farmers; so that the franc would be menaced by a catastrophic inflation. Another argument of the Opposition is that the new francs launched into the French economy will be more and more directed to speculation against the franc, and briefly that the whole expansionist policy of the Cabinet is incompatible with the maintenance of the present gold parity.

NEW BORROWING POWERS OBTAINED

Whatever the truth of this, the Government have already obtained the facilities requested by the Treasury. The 14,000 millions of Treasury bills which have been discounted in the last few months by the bank will be transferred from the item "Commercial Portfolio" to "Advances to the State"—an item which has been absent from the balance sheet of the Bank since the stabilisation law of 1928. Moreover, a further 10,000 millions will be advanced to the State, so that the credit extension, past and future, will reach 24,000 millions.

The extra 10,000 millions will have to cover the expected Treasury deficit: that is 2,000 millions for the Budget deficit, 5,000 millions for military and public works extraordinary expenditure, and 3,000 millions for the English loan. But these estimates do not take account of the new charges resulting from the new policy of the Government, which are estimated by M. Gardey, *rapporteur* of the Senate, at 5,000 or 7,000 millions; and certain members of the Opposition declared that the Minister of Finance would need in fact the 10,000 millions from the Bank plus a further 8,000 or 10,000 millions to be produced by loans.

The Government stated, however, that it would try not to utilise these new credit facilities immediately by borrowing from the public. The loan is to take the form of small one-year bonds which would probably be the same as the National Defence Bonds, which had a great success notably among farmers, because the interest was paid at the subscription date and because the bonds could always be rediscounted at the banks. M. Auriol hopes that hoarders will be tempted by these small interest-bearing notes.

Briefly, three main psychological causes are expected to bring hoards back into circulation: (1) the maintenance of the franc parity; (2) the rise in prices; (3) the interest on the new "baby bonds." Two factors, however, might hinder dishoarding: (1) social disturbances; (2) a too rapid rise in prices which would upset workers' recent gains and provoke new strikes. The Government is therefore anxious to control prices and exchanges by (1) police measures against speculation; (2) the lowering of the rate of interest (the Bank has just reduced its rediscount rate from 6 to 4 per cent.); (3) the reduction of certain taxes;

and (4) the granting of new credit facilities to industrialists who have been hampered by the recent social laws and notably to small and middle-sized firms.

Total foreign trade in May showed a new drop to 3,137 millions, against 3,321 millions in April; but there was a slight increase compared with May, 1935. The detailed figures were as follows:—

	First five months of 1935	First five months of 1936 ('000 francs)	
<i>Imports</i>			
Foodstuffs	2,380,797	2,682,530	+ 301,733
Raw materials	15,275,107	16,144,621	+ 869,514
Manufactured goods	793,775	808,221	+ 14,446
Total	18,449,679	19,635,372	+ 1,185,693
<i>Exports</i>			
Foodstuffs	897,350	585,661	- 311,689
Raw materials	9,968,092	10,741,626	+ 773,534
Manufactured goods	1,152,162	927,591	- 224,571
Total	12,017,604	12,254,878	+ 237,274

The import surplus was thus 4,000 millions in the first five months of 1936, against 2,250 millions in the first five months of 1935.

Total fiscal receipts in May were 2,299 millions. The yield of indirect taxes was 95 millions lower than the estimates, but 35 millions higher than in May, 1935. The turnover tax yield of 511 millions was 17 millions higher than the yield in May, 1935. For the first five months of the year, the total yield of indirect taxes was 11,000 millions, or 190 millions lower than the estimates, but 67 millions higher than the yield in 1935.

The Statistique Générale has just published its monthly figures showing industrial production in France (1913 = 100):—

	April, 1935	Feb., 1936	March, 1936	April, 1936
General index	93	99	101	101
Engineering	96	99	100	101
Iron and Steel	80	84	86	86
Textiles	59	71	70	68
Mines	101	101	102	103
Building (adjusted figures)	70	70	71	72
Leather (Do. do.)	88	93	97	100
Paper (Do. do.)	133	135	144	150
Rubber (Do. do.)	754	970	997	997
Motors (Do. do.)	411	451	465	465

In April 16,980 motor-cars and 1,985 lorries were put on the road, compared with 15,624 and 1,925 respectively in March. The figures for the cotton industry were as follows:—

	1936			
	January	February	March	April
<i>Spinning</i> (average per spindle in kilograms):				
Production	1,748	1,601	1,768	1,698
Deliveries	1,794	1,681	1,788	1,733
Stocks	1,802	1,798	1,788	1,763
Unfulfilled orders	5,330	5,412	5,356	5,639
<i>Weaving</i> (average per loom, in pieces of 100 metres):				
Production	5.44	5.14	5.58	5.16
Deliveries	5.47	5.15	5.62	5.03
Stocks	8.16	8.09	7.87	8.14
Unfulfilled orders	20.78	22.47	24.97	25.96

Bankruptcies and judicial liquidations in May were 1,116, compared with 1,041 in April and 1,115 in March.

PARIS, June 25.

SPAIN

FASCISTS' HIRED GUNMEN

THE situation has definitely improved in Spain, although it remains to be seen if this improvement is transitional or is a real move towards a more stable situation. Strikes continue but with rather less intensity. Fascists and Socialists continue to wage a guerrilla warfare which has attained considerable proportions in the provinces of Santander and Valladolid, where the Fascists have considerable strength. Those who should know say that the Fascist forces in Madrid have 2,000 professional gunmen on their pay-roll;

AUSTRIA

RIISING BUDGET REVENUE

THE remarkable increase in State revenue has made it possible for the Austrian Government to extend its public works programme far beyond the original Budget provision. Taxes have yielded 42 million schillings more in the first four months than in the corresponding period of last year and 22 million schillings more than was estimated in the 1936 Budget. If this had been anticipated, the Government might not have executed the Budgetary economies of last December, which provoked serious discontent among a section of the public and, more especially, among the civil servants. In particular, the pension reduction law, which reduced many pensions greatly, and abolished some altogether, met with sharp criticism.

The public works programme for 1936 has accordingly now been increased by 45 million schillings up to a total of 220 millions. The main part of this is allotted to national defence schemes connected with the introduction of conscription. Nearly one-third of the sum allocated to public investment, namely 72 million schillings, will be for Army purposes. The "employment-creation" programme cannot, of course, be covered wholly out of current revenue. It has therefore, been decided to issue a law empowering the Minister of Finance to emit Treasury bonds, of terms not exceeding twelve months.

Austria's foreign trade has this year been showing a falling off in the progress, which was observable in 1934 and 1935, particularly on the export side. The value of foreign trade continues to increase, but this is largely due to the rise in prices. The value figures are as follows:—

	January to April 1935	January to April 1936 (Million schillings)
<i>Imports:—</i>		
including—	381	416
Raw materials	147	174
Finished goods	118	133
<i>Exports:—</i>		
including—	289	313
Raw materials	81	87
Finished goods	193	206
Import surplus	92	103

The increase in foreign trade which might have been expected under general world influences has not occurred this year, largely as a result of clearing and compensation schemes. Prominent among these are the understandings which Germany reached with individual Danubian States. More than half of the increase in Austrian imports comes from Germany, Roumania and the United States. In exports there was an increase of 10 million schillings to both Italy and Roumania. Now that the war with Abyssinia is over, however, a decrease in exports to Italy must be expected. But not only are fewer war supplies needed; during the past year Italy has been further industrialised. On the other hand, it is hoped in certain economic circles that, because Austria took no part in the sanctions imposed against Italy, she will be allowed to assist in the economic development of Abyssinia.

Production for Austria's home market shows weakness in various directions, partly for seasonal reasons. In almost all cases, however, the figures are above those for the corresponding period of last year, and for some articles the improvement is very great. Moreover, production of consumable goods is now overtaking that of capital goods. This may be attributable in part to the limitation of public investment, but it is certainly connected with the rise in the public's purchasing power. During the first quarter the turnover index for consumable goods rose by four points, while last year it fell by ten points. This is strikingly illustrated by the expansion of beer output:—

	1935	1936
Thousands of hectolitres		
January	225	196
February	209	215
March	230	273

The figure for March is the highest recorded for the last eighteen months.

VIENNA, June 20.

and although this number seems high, if only from the immense sum of money which would be required for wages, there is no doubt that the gunmen at the service of this organisation are numerous. A man alleged to be in the pay of the Fascists who recently was convicted for attempting to murder Sr. Ortega y Gasset, secretary of a Communist organisation, had £40 in his possession when arrested, and there is obviously a good deal of money flowing. Nevertheless, the probabilities of an attempt at a Right *coup d'état* in the near future are not great; any such efforts are likely to be retarded until the United Front becomes less united than it is at present.

The battle for control of the Socialist forces goes on with intensity between Sr. Largo Caballero and Sr. Prieto. The supporters of the former are trying to bring about the holding of a special congress of the Socialist Party on July 27th in order to decide whether the party shall adopt a "centre" or "left" policy. Sr. Prieto, who sees little hope of winning the day at present, is fighting skilfully to prevent any congress being held in the hope that something will turn up to enable him to get back the control of the masses.

The financial situation shows no tendency towards improvement. The demand for higher wages and shorter hours weighs heavily on an economy never stalwart even in its most palmy days. The Minister of Public Works has presented a measure to Parliament which would bring the railways under a measure of State control which would be almost tantamount to nationalisation; a measure which has brought bitter protests from the railway interests. The trouble is that there is no obvious solution to the problem. The operation of railways over a thinly populated, non-industrial and very mountainous land is bound to be difficult even without the further handicap of the existence of eighty different companies and of obviously defective management.

The arrest of over a dozen persons, some of them prominent in banking circles, for infringement of the exchange regulations caused a sensation among those in the know. The general public learned nothing of the matter, as the Press, probably owing to censorship, silenced the affair. The principal figures have been released without charge. In general the Government is obviously worried by dealing in foreign currency which goes on behind the back of the Official Exchange Centre. As much as 45 pesetas to the pound sterling has been paid recently for notes or negotiable cheques and drafts, and the difference between this and the official rate of 36.95 is obviously more than sufficient to encourage considerable unofficial dealing.

POSSIBILITY OF DEVALUATION

There is a report which has been widely circulated to the effect that it is intended to cut loose from the franc. One obstacle in the way of any devaluation is the fact that the Official Exchange Centre somewhat light-heartedly undertook extensive insurance of the demands made for foreign currency at the low rate of one per cent. This insurance is obligatory for some countries. The demandee must pay pesetas on making his demand and in return is guaranteed the rate prevailing on the day he makes the demand. Devaluation on any serious scale would, therefore, imply heavy losses. This would be recuperated in part if the Centre had large quantities of foreign currency on hand which would automatically increase in value; but there is no evidence that this is the case.

Spain has not shown great interest in the lifting of sanctions. On the whole the sanctions favoured her, as she has been able to obtain part of the olive oil export trade previously held by Italy. The publication of the so-called memorandum sent by Don Salvador de Madariaga to various States which are members of the League, in which is discussed the restriction of general sanctions and their substitution by regional zones to which sanctions would be limited, caused a deplorable effect. The Government on two occasions issued official denials of any responsibility or even knowledge of the memorandum, and was obviously embarrassed to find itself portrayed abroad as having active anti-sanctionist views. Obviously there was some confusion between the activities of Don Salvador de Madariaga, Permanent Delegate of Spain to the League, and the activities of Sr. de Madariaga as a private individual.

MADRID, June 22.

SWITZERLAND

A BIG DEFENCE LOAN

THE slight improvement recorded in Swiss foreign trade during the first quarter continued in April and May, but it is small. Imports totalled 91,456,223 francs in April and 88,602,496 francs in May, a drop of about 12 per cent. over 1935, due to import quotas. Exports totalled 68,634,881 francs in April (a rise of 300,000 francs over 1935) and 68,927,847 francs in May (a rise of 3,400,000 francs over 1935). The watchmaking industry is improving its position every month, and the machine industry seems to be improving slightly. The trade agreement concluded with the United States has so far had no great effect on Swiss-American trade.

The two Chambers of Parliament have approved the Government's proposal to issue a loan of 235 million francs for national defence. The day before the vote the Socialist Congress sitting in Zurich had by a small majority decided to oppose the re-armament scheme, and this decision, which was contrary to the opinion of the leaders and Socialist deputies in Parliament, involved the resignation of the Committee of direction of the Party. The discussions in the Socialist Congress show that the breach between moderate and extreme elements has widened. The extremists consider that the Socialist Party should be a party of opposition and form a common front with the Communists; but towards the end of the Congress a proposal for a union with the Communists was defeated by a big majority.

Federal Councillor Herr Obrecht, chief of the Department of Public Economy, recently issued a report in which he declared himself opposed to the State control of business, but favourable to a collaboration between private undertakings and Government organisations. The country's economy, he said, should pursue two objects: the maintenance of agricultural production and the recovery of lost foreign markets. He suggested in the first place the appointment of a consultative committee of representatives of the principal branches of industry, with whom, as Minister of Public Economy, he would study the various aspects of the economic problem. He proposed in the second place that the power be granted to him of taking any urgent decisions without waiting for the approval of Parliament. By these means the Government might succeed in bringing down Swiss prices to the level of other countries so as to foster the export trade, while remaining opposed both to devaluation and to complete deflation. In fact, Swiss prices are generally rising; and the cost-of-living index, which was 129 (1916 = 100) at the end of 1935, is now 130, and the index of wholesale prices has also risen.

No definite decision has so far been reached about the reorganisation of the Federal railways, the position of which is growing worse week by week owing to the persistent decline in passengers and goods traffic. The accounts for 1935 show a deficit of 58,722,860 francs, which was only exceeded in 1921 when it reached 72 million francs; and the railways' debt is now well over 3 milliards of francs. During the first quarter of 1936, receipts totalled 63 million francs, against 68 million francs in 1935; while expenditure totalled 52 million francs, against 58 million francs last year.

GENEVA, June 20.

ROUMANIA

LITTLE ENTENTE SOLIDARITY

THE visit of Prince Paul of Yugoslavia and M. Benes, President of the Republic of Czechoslovakia, which coincides with the anniversary of King Carol II's return to Roumania, has great importance in view of the present political chaos in Europe. At the recent meeting of the foreign ministers of the Little Entente States in Belgrade, a common accord was established on the question of the Anschluss and the restoration of the Habsburg monarchy

in Austria, as well as on the attitude to be adopted at Geneva. The meeting of the heads of the three States confirms this solidarity. The Economic Council of the Balkan Pact is also to meet at Bled on July 6th. Methods are to be discussed for the encouragement of the exchange of goods between Roumania, Turkey, Greece and Yugoslavia and for concerted action in trade with other countries.

In internal politics the energetic propaganda of the national peasant party against the Government is continuing. The leaders particularly insist on the democratic and constitutional aims of the party, and accuse the Government of reactionary tendencies and of favouring militant quasi-fascist elements in the country.

TRADE AGREEMENT WITH GREAT BRITAIN

The Anglo-Roumanian Trade Agreement, signed on May 2nd, is dependent on a technical agreement that has been issued subsequently. The Trade Agreement establishes a clearing office for the settlement of Anglo-Roumanian trade debts. In general lines it provides for the allocation of the sterling proceeds of Roumanian imports into the United Kingdom between payment for current imports and the liquidation of old debts. The amount of all outstanding trade debts to be settled under the Agreement in the year ending June 9, 1937, is to be Lst. 400,000, of which Lst. 70,000 is to be settled in the first quarter and Lst. 110,000 in each subsequent quarter. A special article provides for the payment of the outstanding trade debts by investment in Roumanian enterprises. In such cases the net revenue derived from such investments at a rate not exceeding 5 per cent. per annum, together with not more than 3 per cent. for amortisation, shall be at all times freely transferred in sterling.

The foreign trade figures are as follows:—

	Imports		Exports	
	Tons	Value (1,000 lei)	Tons	Value (1,000 lei)
Jan.-April, 1936 ..	181,370	3,671,534	2,670,336	4,682,915
Jan.-April, 1935 ..	137,316	3,375,580	2,516,077	3,873,531
Increase	44,054	295,954	154,259	809,384
			Export Surplus	
			(1,000 lei)	
January-April, 1936			1,011,381	
January-April, 1935			497,951	
Increase			513,430	

In view of the exchange and foreign trade restrictions which are in force in many countries the above figures do not give a fair picture of the balance of payments. In fact, the export surplus for the year 1935 was over 6,000 million lei, and yet it was impossible to pay abroad the interest on the foreign debt as the proceeds of exports were to a great extent immobilised in countries with currency restrictions. A new foreign trade regime was therefore instituted on December 1st last in order to divert trade from countries with currency restrictions (weak currencies) to countries without restrictions (strong currencies). The result in this respect of the four months' trading can be gauged by the following figures showing the total of the trade balances with a certain number of countries divided into strong and weak currencies for the period of January to April of this year and last year:—

	January to April, 1935	January to April, 1936
Trade Balance	203 million	597 million
Countries with strong currencies	export surplus	export surplus
Countries with weak currencies	201 million	229 million
	import surplus	import surplus

The ample rains which have fallen recently have enhanced harvest prospects. Unfortunately they have not been sufficiently general; the south of Bessarabia and parts of Moldavia are suffering again from prolonged drought. Sowings of wheat cover a smaller area than in previous years, and even with a good yield it is not expected that the crop will reach the average of the last few years. Fruit is expected to be scarce this year, as the early cold weather has destroyed the blossoms in many districts.

BUCHAREST, June 21.

SOUTH AFRICA

PROPOSED TARIFF INCREASES

AMENDMENTS in the Customs duties have been very frequent lately, particularly since the publication of the report of the Union Customs Tariff Commission which was presented to Parliament early in the year. Latterly there have been a number of supplementary reports and recommendations, particularly designed to foster certain local industries. This attempt is specially marked in the case of the State-controlled South African Iron and Steel Industrial Corporation, Ltd. According to a Treasury White Paper issued this week the proposed amendments to the Customs Tariff Act "will obviate dumping and prevent imports below the fair average price in the world's markets." It is understood that this standard is to be embodied in the measure when it comes before Parliament; but there appears to be considerable doubt among many members of Parliament how the term "fair" is to be interpreted—and to whom the adjective is to be applied, the producer, importer or consumer. It is assumed that in practice the average world price contemplated in the Bill will correspond very closely to the British domestic price, which is in any event the figure agreed upon by the cartel countries with which "Isacor" (Industrial Steel Corporation) recently concluded an agreement. But the British price is not necessarily the lowest. The largest consumers in this country are, of course, the gold mines.

Further "supplementary recommendations" for Customs Tariff amendments which are about to be submitted by the Board of Trade and Industries include, *inter alia*, motor-car batteries and the motor vehicle industry generally; materials for general industrial purposes; the iron and steel and engineering industries; butter and cheese manufacturing industries; wine, grape syrup brandy and spirit industries; whaling industry; oil extracting and refining and fat-making industries; and the hat and cap manufacturing industry. A considerable section of the Board's latest report discusses the local manufacture of motor-car batteries, to assist which comparatively new enterprise there is a proposal to increase the existing tariff. The chairman of the Board, in a dissenting opinion, points out that "the employment value of the industry is at present very small and does not appear to offer material scope for expansion."

PROSPERITY IN THE MOTOR TRADE

A recently developed industry of much greater potentiality—the local assembly or construction of motor vehicles—has been the subject of representation by the two principal firms concerned in this industry, the Ford Motor Company of South Africa, Ltd., and General Motors (South Africa), Ltd. Both companies have stated that they will have to revert to the import of completely assembled units if the present duty position is maintained. The companies import the unassembled chassis and the various sections of the body in a completely knocked-down condition (in the case of light commercial vehicles and trucks), but they are obliged to pay the full duty of 20 per cent. on their imports, so that their margin of protection only consists of the difference in the ocean freight rates on the assembled and unassembled vehicles, which is entirely inadequate. The bodies of commercial vehicles cannot be manufactured in the Union, as they are made of panel pressed in steel dies, the cost of which would be prohibitive. The Board of Trade and Industries, "after careful consideration, is of opinion that the applicants' request should be granted," and accordingly recommend an *ad valorem* tariff of 10 per cent. in the case of completely unassembled chassis for light commercial vehicles.

A significant aspect of South African trade during the first three months of the present year is the continued buoyancy of the motor trade. Cars imported numbered 7,956, valued at £1,128,627, as against 5,328 in the first three months of 1935, valued at £789,123. Chassis and other parts, to the value of £588,000, were also imported this year, exclusive of other motor-car accessories.

The first quarter's trade returns show South African exports of a total value of £25,581,100, of which 84 per cent., or in value just under £22 millions, was taken by the British Empire. South African imports from the United Kingdom show a slight decline, representing 48.3 per cent. of the Union's total imports as compared with 50.6 per cent.

in the corresponding period of 1935. South African imports from the United States are, however, rising; the three months' imports are valued at £3,572,779, which represents an increase of £600,000 compared with the figures for the first three months of 1935. The United States' share of the Union's import trade actually rose from 17.1 per cent. to 18.8 per cent., and South African goods to the value of £271,924 were imported by the United States in the first quarter of this year, representing an increase of £150,000 compared with the corresponding period of 1935.

An interesting sidelight on the effect of sanctions is revealed in the Customs and Excise returns for the first quarter of 1936. In this period South Africa bought goods from Italy to the value of £45,102, compared with £264,263 in the corresponding period of 1935. Exports from the Union to Italy were valued at £30,755, as compared with £397,064 during the first quarter of 1935.

JOHANNESBURG, June 15.

LETTER TO THE EDITOR

BRITAIN'S ECONOMIC PROSPECTS

TO THE EDITOR OF THE ECONOMIST

SIR,—The important and comprehensive article in your issue of June 13 on the economic prospects of this country suggests one additional reflection.

The *Economist* reminds us of the two main factors:—

(a) the growing shortage of labour in industries, mainly in the South-East and mainly "light," catering primarily for home consumption;

(b) the persistent heavy unemployment mainly concentrated in the older "heavy" industries depending on export markets;

and points out that, in view of the stickiness of home labour-transfer and of foreign currency mentality, both these factors are likely to continue to operate for a few more years.

But the *Economist* breaks new ground in emphasising the vital importance of the hopeful prospect that, after a few years, the conversion to expansionist currency policies of those of our foreign customers whose countries are still in the hands of devotees of masochistic deflation will lead to a vigorous general revival of their demand for our exports. This leaves open the question of the long-range future transferability of home labour.

The possibility remains, however, that the renewal of foreign demand when it comes may not be directed wholly into the old channels; it may in part accrue, not to the older depressed "heavy" industries, such as cotton, but to the newer "light" industries. For many of these, though at present flourishing on home demand, cater also for the export market, and, given an adequate labour supply, the high efficiency of their modern mass-production methods should put them in a strong position to compete in that market as soon as it begins to expand. But if nothing be done meanwhile to divert home labour towards them, will the condition which I have italicised be fulfilled? Will not, on the contrary, their labour costs have risen and their power of expansion to produce on a larger scale for export have become restricted?

One of the practical conclusions suggested by your article seems, therefore, to be that the time has come for us to make a concentrated effort to increase the flow of labour out of the worst situated and least promising of the heavy export industries into those parts of our labour market where a shortage of labour is developing. Such a policy would satisfy the "real income per head" test, both in the short run and in the long run. Indeed, on any view, it is hard to see how, in the situation you describe, measures designed to facilitate the natural transfer of labour could be uneconomic at any reasonable cost. May I express the hope that the *Economist* will deal in a later article with the practical question of what can be done in this direction, and how?

Yours, etc.,

HUGH TOWNSHEND.

BOOKS AND PUBLICATIONS

BRITISH ECONOMIC POLICY*

It is nearly five years since the pound left gold in 1931, and the period since that epoch-making disturbance has witnessed a complete change in the foreign economic policy of Great Britain. Overseas lending has been controlled, protection has taken the place of free trade, imperial preference has been increased, and British agriculture has been artificially supported. Great Britain has had a new deal quite as important as that of the United States, but less heralded and less spectacular. Professor Richardson has done a very useful service in writing a well-documented and critical account of the first five years of the new regime in so far as it has affected the country's foreign relations. The principal subjects examined are monetary policy, financial policy, protection, imperial preference, agricultural policy and labour policy. And it may be said without qualification that Professor Richardson has done his work well.

A general survey of this kind is particularly useful; not least because many of the measures described are emergency measures which have no place in a permanent economic policy. Professor Richardson draws this very important distinction between emergency and permanent policy. The truth is that the present economic policy of Great Britain consists of a patchwork of inconsistent short-period measures, some of them good in their own way but calculated to frustrate their companions. "Thus attempts are made at the same time to stimulate home production, secure increased exports, avoid distress in shipping and shipbuilding, and maintain the value of British investments abroad." Arrangements so confused as these can scarcely be described as a plan, and, while inconsistencies may be tolerated in the defensive programme directed against the depression, they must not be permitted to survive as part of the Government's long-period policy. Assuming that the present degree of public intervention is to continue, the first necessity is a plan which will ensure that the different parts of the policy will not conflict and that gains in one direction will not involve disproportionate losses in others.

In the construction of any such plan much would be learnt from a study of Professor Richardson's account of the experience of the last five years. The restrictions on foreign investment should, in his opinion, be relaxed; protection has done as much as it can be expected to do at a steeply increasing cost; the Ottawa Agreements have benefited the Dominions far more than Great Britain; the increase in Empire trade has been caused by the stability of the sterling area and the freedom of imperial capital movements rather than by anything done at Ottawa; and the defence of British agriculture has been needlessly expensive. If the measures adopted to save British farmers in the depression are made permanent, they will injure consumers, industrial and shipping interests and overseas investors, to say nothing of farmers in the Dominions and the foreign debtors of Great Britain. If agricultural protection is to be permanent, its least expensive form is the simple tariff combined with marketing schemes at home. But, as in the case of industry, the limits of reasonable protection are already almost reached, and Great Britain will be well advised to rely for her security in wartime on powerful alliances and her own great wealth, built on a foundation of international trading and international lending.

The general impression which Professor Richardson seeks to convey is that the protective measures of the emergency period have done their work, and that the further stages of British recovery depend upon the revival of foreign trade and foreign investment. Any extension of industrial or agricultural protection will yield a rapidly diminishing return, and the building of houses and armaments will not provide unlimited or permanent employment. The purely economic factors in the world to-day are favourable to a revival of foreign demand; gold prices promise to rise and

many countries are recovering from the depression. If Great Britain is to profit fully from this revival of demand, she must adopt a policy of progressive efficiency in the export trades, specialising on those products in the manufacture of which she possesses natural and acquired advantages and refusing to countenance increases in costs of production resulting from further protectionist experiments. If the world recovery is prevented by the ambitions or the fears of politicians, Great Britain may be forced to continue to look homewards rather than abroad for her own prosperity. But let us be clear that such an introversion of an essentially extravert nation will be the result of necessity rather than of choice; that it will aim at recovery on a low rather than a high level; that it will signalise the victory of fear over hope. No country has more to gain than Great Britain from international prosperity and peace; none has more to lose from international poverty and war.

SHORTER NOTICE

"I Lived in a Slum." By Mrs Cecil Chesterton. Gollancz. 288 pages. 3s. 6d.

Mrs Cecil Chesterton has collected a remarkable series of experiences of slum life into this book, and she draws some very interesting conclusions. She paints a picture of the slums as plague-spots all over London—not confined to special districts, as many people imagine. She devotes special sections to the slums of Notting Dale, Westminster, and Soho. While recognising what has been done, Mrs Chesterton sees the need for more ambitious efforts. She condemns the idea of estates outside London on the grounds of the expense involved in travelling, the loneliness of such estates, and the resulting curtailment of already insufficient sleeping hours. But, while advocating the abolition of the Victorian cottage dwelling, Mrs Chesterton thinks much could be done to convert and restore the large Georgian house of which so many slums consist. She particularly deplores both the failure of many borough councils to buy up the land sites of condemned property and the tendency to allow middle-class people to inhabit reconditioned slum property in such areas as Soho and Westminster. These tendencies increase overcrowding, since they decrease the amount of land and houses occupied by working-class tenants.

Mrs Chesterton's main constructive ideas include the proposal to set up a central housing authority, designed to supervise the quality of the building materials used, and to try and get some minimum standard of æsthetic value. As she says, "What a poor town like Vienna can do in this direction, surely a rich town like London can do also." This is a book of genuine feeling and sound judgment.

MONEY AND BANKING

FINANCIAL REFORM IN FRANCE

At the end of last week M. Vincent Auriol, France's new Finance Minister, made his eagerly anticipated statement. He began by declaring that deflation had failed. Instead of solving France's problems it had only plunged her deeper in the mire. Marshalling his facts, he pointed out that the economies envisaged under last year's Decrees had not been fully realised. After allowing for the cost of re-armament and other supplementary expenditure, the Budget deficit was still in the neighbourhood of Frs. 6,500 milliards to Frs. 7,000 milliards. Treasury commitments up to the end of the year amounted to Frs. 7,900 millions, while in addition the repayment of the London credit, due in November and December, would require Frs. 3,000 millions. Allowance must also be made for the cost of the measures now being voted by the new Chamber. To meet these outgoings, the Treasury only had available the insignificant sum of Frs. 840 millions, for all the remainder of its total borrowing powers of Frs. 22,780 millions had already been exhausted. Rediscounts at the Banque de France alone, M. Vincent Auriol revealed for the first time, amounted to Frs. 13,832 millions.

Nor was the general economic position of the country any better. Trade and industry were caught between the scissors of low wholesale prices and a high cost of living, for while wholesale prices had fallen between 1930 and 1936 from 623 to 421, or by 32.4 per cent., the cost-of-living index had only fallen from 611 to 456, or by 25.3 per cent. The blades of the scissors had crossed, and wholesale prices were now the lower instead of being the higher index of the two. Meanwhile the index of production had fallen from 140 (in 1930) to 92 to-day, while the total number of assisted unemployed had risen from 267,900 in 1932 to 425,900 in 1935 and 422,036 to-day. The total of bank clearings in Paris had fallen from Frs. 555,998 millions in 1930 to Frs. 339,202 millions in 1935. The national revenue had equally suffered. The yield of the turnover tax had shrunk from Frs. 8,826 millions in 1930 to Frs. 5,557 millions in 1935, and the yield from the indirect taxes had shrunk from Frs. 9,600 to Frs. 6,700 millions between the same two years. There was a parallel contraction in the revenue derived from direct taxation and from monopolies.

Having proved conclusively that deflation had been of no assistance to France, M. Vincent Auriol turned to the alternative of devaluation. In rejecting this remedy he was much less convincing. He began with an attack upon the recent converts to devaluation, from which he was careful to exempt M. Paul Reynaud, who for a long time was the sole advocate of devaluation. Next he refused point-blank to lend himself to a policy which would only put increased and unmerited profits in the way of those who had sent funds abroad. He warned the Chamber that if France were to devalue she might set in motion new forces which would have repercussions all over the world. Germany might devalue in her turn, nor was there any guarantee that other countries might not adopt defensive measures which would neutralise the devaluation of the franc. Internally devaluation would arouse fears of higher prices and would inevitably provoke fresh labour unrest.

M. Auriol would have been wiser if he had rested his case on these grounds alone, but he proceeded to argue that on the basis of wholesale price index numbers in France, England and the United States, the franc was not seriously over-valued at all! In proof of this he said that the margin between the French and British index numbers, reduced to terms of gold, was only 13 points, while the margin between the French and American index numbers, again in terms of gold and on the basis of the pre-1933 dollar, was only 8 points. This part of his argument was rendered needlessly obscure by his failure to quote the index numbers themselves or to state their base-dates. Obviously he was not using index numbers based on September, 1931, and we are left wondering if his adopted base was 1929 or 1913—or even 1492 or 1066, the latter years being of almost the same practical value as 1913. Still, so far as we can

deduce anything at all, his figures suggest that the franc is over-valued by about 12 per cent. against the dollar and by about 20 per cent. against the pound. Our own calculations, published in the *Economist* of May 30th last, make the over-valuation of the franc 8.7 per cent. against sterling and 20 per cent. against the dollar. Unlike M. Vincent Auriol we make the dollar the more under-valued of the two currencies, and as it is patent that sterling is over-valued against the dollar, our calculations would appear nearer the mark. Still, even if we admit M. Vincent Auriol's obscure and surprising calculations, on the basis of his own results no reasonable person can maintain that the franc is not seriously over-valued. A 10 per cent. over-valuation sufficed to give sterling its quietus at a moment of crisis.

Having rejected devaluation, M. Vincent Auriol came to his counter proposals. There was no mention of exchange restrictions, but he outlined a series of proposals to secure the dishoarding and repatriation of panic money, estimated by him at 30 to 40 milliards of francs hoarded in notes or gold at home, plus a gross amount of 25 milliards estimated to have fled abroad. To enforce the repatriation of the latter funds he tabled a Bill giving the owners of foreign assets a period of grace until July 15th during which to disclose their foreign assets, but imposing severe penalties upon those who had failed to make any disclosure by that date. A further clause in the Bill was more questionable, for it binds the French Government not to conclude any agreement regarding double taxation or estate duties with any foreign Government which refuses to aid the French authorities in tracking down French-owned foreign assets. The British Government is hardly likely to yield to outside pressure to interfere in the confidential relations between bankers and their customers.

M. Vincent Auriol also proposes to rely upon publicity to bring back funds from abroad, for the names of defaulters are to be made public. His next proposal is more constructive. He intends to make an issue of short-term bonds in small denominations in the hope of meeting in this way the Treasury's immediate needs, and he also intends to organise the Paris bond market upon a wider basis. The success of this plan obviously depends upon the restoration of public confidence, and he hopes to achieve this by co-ordinating and clarifying the whole system of French public finance, so as to leave the country under no doubt about the actual position.

To do this, he begins by abolishing the fiction that the Banque de France is not really lending to the Government. The 14,000 millions of Treasury bills now rediscounted at the Bank are most of them to be replaced by a direct, overt loan. To regularise this, a Bill was tabled embodying a new agreement between the Treasury and the Banque de France and revising the limit to the Treasury bill issue. The Bill states that, including the London credit, Frs. 22,700 million of Treasury bills are now in circulation. Frs. 13,000 millions (now held by the Banque de France) will be replaced by a direct Banque de France loan, leaving about Frs. 10,000 millions of bills outstanding. The limit is fixed in the Bill at Frs. 20,000 millions, and so the Treasury is receiving power to issue a further Frs. 10,000 millions of bills. The Banque de France is also to open a special credit of Frs. 10,000 millions, so that the Treasury will gain power to raise the floating debt by a total of Frs. 20,000 millions. A separate Bill provides for the reform and control of the public accounts and for the co-ordination of the present piece-meal system of Government borrowing.

Clearly, M. Vincent Auriol hopes that these measures will revive confidence, frighten back home again the funds now lodged abroad, and enable the Treasury once more to tap the savings of the nation. If these hopes are realised, the Treasury's immediate emergency will be overcome. Among his longer-term measures come the reform of the Banque de France, a general overhauling of the banking system in

* "British Economic Foreign Policy." By J. Henry Richardson. Allen and Unwin. 250 pages. 10s. 6d.

order to eradicate abuses, and the cheapening of money. The details of the Bill dealing with the reform of the Banque de France are discussed in a Financial Note. M. Vincent Auriol said that the Government's object was to ensure that the Bank acted in the interests of national production and labour, and that among those in control of the Bank should be representatives of agriculture, industry and labour. Credit was to be made available to small farmers, artisans and industrialists, as well as to the big interests. The commercial banking system was not to be nationalised but to be drastically reformed, and the profession of banker is to be regularised and made subject to defined conditions. These proposals sound drastic, but everyone who realises the wide differences between the conduct of banking in France and England will realise their need.

No proposals for balancing the Budget were put forward. Instead the Finance Minister urged that a revival in trade, employment and purchasing power must precede any increase in taxation. When the time came, he proposed to redress the balance between direct and indirect taxation, and between rich and poor, and to ensure that such taxation as was imposed was properly collected.

In many ways M. Vincent Auriol's statement represents the first honest attempt to grapple with the confusion into which French finances have fallen. He is eager to reveal the real facts to the public and to introduce a system of simple and straightforward finance. In the circumstances he cannot be condemned for his failure to put forward immediate proposals for balancing the Budget, for France's position is so desperate that the first need is to make trade profitable, to revive production and consumption, and in general to make life worth living. Once the national income is restored, the sensitive Budget revenue will automatically revive.

The weakness of his policy is his utter failure to realise that internal reflation cannot be combined with a rigid adherence to gold. Economic theory and the experience of Great Britain, the United States and Belgium unite in proving that devaluation must precede reflation and that the first need is to get rid of an over-valued currency. There may be a case for a brief delay to restore confidence before the currency is devalued; just as we in Great Britain were able to delay the suspension of the gold standard until we had formed the first National Government and balanced the Budget. The crux is, can France hold out in her turn long enough to delay devaluation until her chosen time? This depends upon the immediate course of events in France and on the extent to which her new Government succeeds in restoring confidence and reversing the flight of funds abroad. Sooner or later devaluation still appears essential. When the time comes, both the United States and ourselves must be ready to extend a helping hand.

FINANCIAL NOTES

The Banque de France.—The Bill for the reform of the Banque de France is drafted in very wide terms, for the chief operative clause leaves to the Government the responsibility of modifying and extending by decree the laws and statutes of the Banque de France. In explaining the Bill to the Senate, the Rapporteur said that the object of the Government was to obtain the powers needed to ensure that in the conduct of the affairs of the Banque de France the economic interests of the nation would predominate. The Council of Regents is to be strengthened in several directions. First, Government officials would be appointed, charged with the duty of safeguarding the public credit, and with them would be technical advisers whose duty would be to ensure the proper functioning of the Bank. Next the National Economic Council is to appoint to the Regency representatives of commerce, industry and agriculture, including both "great" and "small" interests. These changes will undoubtedly place the control of the Banque de France upon a wider basis, but it is only fair to add that the Regents of the Bank already have to include among their number Government officials and representatives of industry and agriculture. Thus, the change is of degree rather than of kind. The real question of the future is how far the Banque de France will be under

direct Government control and whether than control will be wisely exercised. France has now to discover the proper line of demarcation between the functions and powers of the State and the central bank.

The Foreign Exchanges.—M. Vincent Auriol's statement that the French Government had rejected devaluation as a remedy was the prelude to a general rally in the gold *bloc* currencies, accompanied by some bear covering. The Paris spot rate dipped at one time below Frs. 76, and it was rumoured that the British Control then turned a seller of francs. On Thursday afternoon the rate was back to Frs. 76½, but the British Control gave no support during the whole of the week. Three months' francs have narrowed from Frs. 6½ to Frs. 3½ discount, while three months' guilders have come in from 14½ to 10½ cents discount, and three months' Swiss francs from 39 to 30 centimes discount. The French Bank rate was lowered during the week from 6 per cent. to 5 per cent. and again to 4 per cent., but the general impression is that these reductions were made mainly with the object of reviving confidence and carrying out the Government's determination to cheapen money. During the week ended June 19th, the Banque de France lost Frs. 670 millions of gold, reducing its stocks to Frs. 53,950 millions, while its rediscounts rose by Frs. 713 millions to Frs. 21,455 millions. The outflow of gold from Holland has been checked, and the Dutch Bank rate has been lowered from 4½ to 4 per cent. The dollar has lately weakened under selling pressure in New York. The sterling rate is now \$5.02½, while the Paris rate is quoted at Frs. 15.16, or comfortably within the export gold point. It is not easy to find a motive for this selling, but New York may feel that if the franc is placed under restrictions, so that the British Exchange Account cannot buy gold in Paris, it may prove difficult to prevent an appreciation of sterling against both the franc and dollar. This may explain the American sales of dollars for sterling.

The Money Market.—Preparations for the end of the half-year have now begun. A small amount has been borrowed from the Bank of England, and one or two of the banks who lend weekly money have raised their rates by ¼ per cent. (namely, to ¾, 1 and 1½ per cent., according to collateral) for money borrowed in June and repayable in July. Up to 2 per cent. has been paid for new money into July. It does not appear likely, however, that there will be any serious pressure over the turn of the half-year. The Bank of England's heavy gold purchases are making conditions easier, while as June 30th falls towards the middle of the week, the market will probably turn out to have arranged its Treasury bill maturities and payments so as to fall on either side of this crucial date. If so, part of the half-yearly borrowing will fall on the Government, as has happened upon previous occasions. It is already believed that the market and not the banks possess the bulk of the outstanding June bills.

	June 4, 1936	June 11, 1936	June 18, 1936	June 25, 1936
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	½	½	½	½
Short loan rate :—				
Clearing banks	1-1-1*	1-1-1*	1-1-1*	1-1-1*
Others	½	½	½	½
Discount rates :—				
Treasury bills	1-1-1	1-1-1	1-1-1	1-1-1
Three months' bank bills ...	1-1-1	1-1-1	1-1-1	1-1-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Discount rates have become definitely easier. In spite of an increase in the tender issue of Treasury bills from £585 millions to £595 millions the tender rate fell from 18s. 1.04d. to 17s. 0.83d. per cent. on June 19th and one of the clearing banks bought September Treasury bills at ¾ per cent. This setback in rates shows that the Bank's gold purchases are proving efficacious and puts an end to the recent rumours of dearer money.

The Bank Return.—This week the Bank of England has made further substantial gold purchases, with the result that there is an increase of £4.4 millions in its gold stocks. The note circulation has risen by £2.8 millions, so that the Reserve is only £1.7 millions higher. A similar increase of £1.2 millions in the circulation occurred last year, so that this week's expansion may not be due to foreign hoarding.

	June 26, 1935	June 3, 1936	June 10, 1936	June 17, 1936	June 24, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	192.7	207.3	208.5	211.9	216.3
Note circulation	396.9	433.5	433.0	432.0	434.8
Banking Department :—					
Reserve	56.5	34.7	36.4	40.8	42.5
Public deposits.....	16.2	8.2	13.5	13.9	20.0
Bankers' deposits	102.4	89.7	86.5	91.0	90.8
Other deposits.....	38.8	37.1	37.1	37.4	37.4
Government securities ..	96.2	98.5	97.8	98.3	99.6
Discounts and advances	10.2	6.2	6.2	4.8	7.6
Other securities	12.4	13.3	14.6	16.3	16.5
Proportion	35.8%	25.7%	26.5%	28.6%	28.6%

In the banking department discounts and advances have increased by £2.8 millions as the result of the borrowing which took place on June 24th in anticipation of the end of the half-year. This increase, together with the expansion in the Reserve, should have raised bankers' deposits, but it has been entirely offset by an increase of £6.1 millions in public deposits, so that bankers' deposits are slightly lower. The rise in public deposits is purely fortuitous and may be due to inequalities in Treasury bill payments and maturities.

Chilean Exchange.—Following his recent European visit, the Chilean Finance Minister has returned to Chile, and, apart from preoccupations with the political situation, finds awaiting him a difficult exchange situation requiring solution. In addition to continued heavy importation, particularly of equipment for the growing national industries, the shortage of exchange has been emphasised by the prohibition of exports of wheat and certain other products which are required for home consumption, and whose internal prices have been forced up by export demand. As against a previous export commercial rate of 136 pesos per £, the Exchange Control Commission will now not allow dealings above 130 pesos per £, based presumably upon a dollar rate of 26 pesos, at which the so-called "privileged" exchange is released in small amounts daily to the banks. This small quota is in any case liable to suspension, and the result is that the exchange market is virtually paralysed. Furthermore, as from mid-May the Exchange Control has prohibited the importation of luxury goods, including automobiles and wireless sets. There had recently been considerable import activity in these lines, but goods are now held up at the Customs House, and there are considerable trade protests. The importation of these articles is not permitted, even against so-called "blanqueado" (whitewashed) exchange under the recently permitted arrangements whereby the banks could act as intermediaries between would-be remitters and the sellers of "free" sterling and dollar exchange. British and American importers are particularly affected inasmuch as the articles may apparently still be imported under a "Compensation" Treaty such as that which exists between Chile and Germany. Moreover, German trade with Chile shows a remarkable expansion this year due to the low quotation for the mark, as well as the heavy discounts allowed to Chilean importers of German goods. It is believed that, if this state of affairs continues, the United States may seriously consider imposing increased duties on Chilean products.

Bank of British West Africa.—The affairs of this bank have evidently not been seriously affected by the war on the other side of the continent, and at the general meeting on June 23rd the chairman was able for the first time in seven years to give a favourable report. The rise in prices for primary produce during 1935 had a stimulating effect on the area served, and although prices for palm oil and palm kernels have recently reduced the firmness of cocoa

should maintain the advance. The improvement is reflected in the increase of £700,000 in deposits, of £230,000 in advances, and of £143,000 in commercial bills discounted. Bills for collection and acceptances also show increases. The accounts for the past three years are summarised below:—

	1934	1935	1936
	£'000	£'000	£'000
Liabilities :—			
Capital	1,200	1,200	1,200
Reserve	400	400	400
Deposits	6,134	6,673	7,373
Bills for collection	620	695	709
Acceptances	65	86	122
Assets :—			
Cash	769	771	1,739
Investments	3,636	4,367	3,833
Treasury bills	585	200	100
Other bills	553	471	614
Advances	2,222	2,328	2,559
Net profits	59	65	85
Dividend	4%	4%	5%

The considerable increase in cash and the decrease in investments must not be regarded as symptomatic of a desire for liquidity, as the size of the bank's cash holding on March 31st depends on whether the West African produce season finishes before or after that date. The change may thus be regarded as fortuitous. Net profits have risen from £65,000 to £85,000 and the dividend has been increased from 4 to 5 per cent.

Phoenix Assurance.—The chief interest in the life department lies in the bonus declaration in respect of the quinquennium ended December 31, 1935. The results of the quinquennium appear to have been satisfactory, but in the absence of any information regarding the amount of surplus or cost of distribution we are unfortunately not in a position to give our usual table of results. The whole of the profits in the participation section, but not of the profits in the non-participating section, belong to the policyholders. The rates of bonus declared are the same as five years ago and are very satisfactory, namely 50s. per cent. per annum and 46s. per cent. per annum in the whole life and endowment assurance classes respectively. The new business increased from £3,714,000 to £3,806,000, and death claims fell by the substantial amount of £83,000 to £562,000, while the net rate of interest was 3s. 7d. per cent. smaller at £4 2s. 8d. per cent. Fire premium income fell by £117,000 to £2,664,000, but accident premium income increased from £3,340,000 to £3,444,000. In both branches the profits were greatly increased. In the marine account premiums fell from £600,000 to £555,000; the fund now amounts to 112 per cent. of the premium income. The results of the last two years are given below:—

	1934	1935
	Amount of Profit	Amount of Profit
	£	£
Fire	204,106	311,071
Personal Accident, Employers Liability and General	1,599	139,247
Marine	30,000	30,000
Life	88,785	20,000
Sinking Fund	...	30,000
	324,490	530,318
Less items debited to Profit and Loss Account	110,946	243,131
To Investment Reserve ..	100,000	100,000
Net Trading Surplus	113,544	187,187

The total combined life assurance assets increased from £17,575,000 to £18,195,000, but no important re-distribution in the investments took place. A special consolidated balance sheet is given for the other branches of assurance, in which the assets increased from £16,784,000 to £16,939,000. The general reserve of £2,500,000 remains unaltered. There is an investment and contingency reserve of £1,960,000 and a profit and loss balance, after providing for the year's dividend, of £1,442,000. The financial position is of great strength. The dividend is again at the rate of 60 per cent., and costs £467,000, contrasted with interest earnings of £364,000.

THE STOCK EXCHANGE

STOCKTAKING FOR INVESTORS

THE investor, anxious to strike an interim balance for the first six months of 1936 and to assess the immediate market prospect, is confronted with no simple problem. During the past four years the exclamation mark has often been the appropriate commentary on market movements; at this stage the query seems more relevant. Are ordinary shares too high? Which ordinary shares are too high? That these questions (discussed in the *Economist* of April 9th and 16th) are being asked at all argues a disposition to hesitancy rarely seen since recovery began. Bullish operators have at least been unable to persuade the market, during the past six months, that ordinary shares have been significantly too low. The Actuaries' Investment Index of 178 industrials, which entered the year at 80.8, climbed vigorously to 85.4 during the first seven weeks of 1936; its subsequent fluctuating fall leaves it approximately midway at 83.0. The *Financial News* index of 30 industrials, a more sensitive market indicator, reached its highest point at the identical time, and has similarly recorded only a partial recovery from the Whitsun secondary "lows." At 112.7 the index is still nearly two points below the peak.

A year ago the chief doubt was whether gilt-edged would maintain their existing levels; this year their recession—though still of moderate dimensions—has become an accepted fact. This event, however, is only one of the many which control the destiny of equity shares. The market's first step has inevitably been to distinguish between the "fixed-interest" and "recovery" industrials. If firmer interest rates are on the way, no calculation of balance-sheet strength can shield such stable dividend shares as J. Lyons and Boots Pure Drug from a recession. The attraction of preference shares, particularly of high dividend rate, has been limited for the same reason. And at this stage of recovery, when the first phase of geometric increases in earnings, even in such industries as steel, has passed, and when future expansion involves new capital expenditure—sometimes with a considerable gestation period—the quest for an under-valued share is rendered doubly difficult. Its choice requires an accurate estimation of the duration and spread of industrial progress.

Although that fatal moment in 1937, when expert forecast suggests a halt to recovery, is drawing nearer, the constituents of recovery are in fact maintaining their position. Building activity has made further progress during the past six months, and the figures of plans approved are still encouraging. Steel output has successively broken through established records each month. The re-armament programme is straining the aircraft industry to capacity, and the Government has, in fact, recently decided to establish two new factories under the management of existing motor firms. The employment figures have shaken off their earlier hesitancy, and in some directions, indeed, a shortage of specialist labour is being disclosed.

The relevance of these three factors—interest rates, industrial recovery and the level of ordinary shares—may be assessed from the accompanying chart. If the peak registered by the *Economist* index of business activity during the closing months of 1935 is discounted because of exceptional coal activity, it will be observed that the trend of the index continues steadily upward, though the pace of the climb in these high altitudes is slower. The market's behaviour, however, suggests that it regards this advance as the fulfilment of previous expectations, rather than as justification, in itself, for a renewed rise in share values. The Actuaries' Index, which stood at 77.5 a year ago, showed an average yield of 3.80 per cent. It is significant that to-day the yield is barely changed at 3.79, despite a rise of 5½ points during the year. If a term is to be set to further industrial advance—say, towards the end of 1937—that stabilisation of average share levels is not inherently unreasonable, even though rising dividends may prevail for the next twenty months or more. The

margin of three-quarters of one per cent. between gilt-edged and industrial yields is still lower than the "normal" differential.

Both the level of share values and of industrial activity will primarily depend upon the successful maintenance of low interest rates. While there is little doubt regarding the resolution of the authorities in this matter, it is less certain that subscribers to issues of fixed interest securities will be such keen lenders as in the past. The queue of corporation borrowers has moved intermittently forward with numerous halts at the official behest (and these "holidays" have usually been accompanied by the revision of terms slightly but significantly in favour of lenders).

COURSE OF SECURITY VALUES AND INDUSTRIAL ACTIVITY, 1931-36

("Consols" curve based on the Actuaries Index. "Ordinary Shares" curve based on *Financial News* index of thirty industrials. "Industrial Activity" curve based on revised index of the *Economist*. End of 1928=100 in all cases.)

During the past six months markets have been markedly sensitive to political and currency influences, at present only partially appeased. There has been no escape in the Kafir, rubber and arbitrage markets from the writhings of the franc. Some support for gilt-edged securities, it is true, accompanied the early stages of the French capital flight, yet Old Consols are a point lower over the half-year. Slight recessions are common to the gilt-edged list, although a number of the Dominion issues show a net improvement. Canadian credit, however, has been prejudiced by the threatened and actual default of certain Western provincial and municipal authorities.

Recovery for the foreign bondholder is still a painful topic. Some areas, conspicuously in South America, are experiencing a slow improvement, which may be expected gradually to percolate to bondholders. Brazilian bonds, however, have recently fluctuated considerably, on irresponsible statements casting doubt on the continuation of payments under the 1934 plan. Far Eastern issues are in still worse plight. The shadow of Japan spreads ever southwards over China, and the persistent erosion of the Customs revenues, under the kindly surveillance of the Japanese militia, has reached serious proportions.

For the investor in ordinary shares the significant feature of the half-year is the steadiness of industrial

equities, which has been more marked than in any comparable period since recovery began. Over a large range of the market sub-normal speculative interest has prevailed. In the home rail market, however, the resultant of a triangle of forces leaves marginal preference and ordinary shares in most cases higher. Goods traffics have exceeded expectations. And the existing basis of rating has been reaffirmed, leaving three lines with theoretical nil assessments during the next quinquennium. But the unions have refused the moderate counsels of their leaders and insist on full restoration of existing wage cuts. Hence, market conditions are again somewhat unsettled. The seeker of capital profits in the industrial markets must now pursue a strictly selective policy. Weak spots have been detected in the aircraft share market. Even in steel, investors have been careful to discriminate between companies with a direct armaments interest and those non-integrated concerns which may be vulnerable to rising raw materials costs. Record motor registrations have brought support for companies whose latest models are known to be popular, and the commercial vehicle producers have found steady support. In the general industrial list, the greatest advances have been scored by companies associated with the building trades which have a commercial, rather than a residential, interest—for example, Associated Portland Cement as compared with London Brick, by shares with a general equity in construction work like Turner and Newall and Murex, and by companies likely to benefit from increased purchasing power like F. W. Woolworth. A group of no mean market importance—it includes J. and P. Coats, Courtaulds and Dunlop Rubber—records significant falls during the past half year. In each case the market was guilty of under-estimating the effects of rising costs and competitive difficulties in overseas markets.

Among commodity shares, rubber, tea and tin shares have been depressed in various degree, but oil and gold issues are still in the ascendant. The rise in oil shares which has been associated with a marked improvement in the American situation, and with rising world consumption, has been justified by the recent impressive reports. Gold shares have made progress despite two hurdles—a waiting period before the welcome adjustment of Union taxation, and the plight of the franc. Although the latter problem is still with us, the inflationary possibilities inherent in a revaluation of gold stocks by the Central Banks has gone far to outweigh its market importance. While recent dividends were well up to market expectations, speculative interest has been more concerned with companies developing the East and West Rand, of which West Witwatersrand, with a rise of no less than 7½% to 12½% during the half-year, is obviously the shining example.

Looking ahead, the vigilant investor must assess the importance of three main factors—domestic recovery, the future of

INVESTMENT NOTES

Control of Foreign Lending.—Blessed indeed are the contemporary uses of informality in controlling manifold banking, bullion and capital transactions in the City. To avert the much-feared consequences of a "scramble" in the home corporation market, the authorities allow the queue to move forward only at their beckoning, a procedure which has now produced the second major "log-jam" in the market this year. In the overseas capital markets, however, there is little eagerness on the part of established debtors to renew their borrowing, and less willingness among investors to venture their money abroad. The Foreign Transactions Committee, which advises the Chancellor of the Exchequer on "applications for his consent in respect of foreign issues and similar transactions" have issued a memorandum to firms and institutions concerned, explaining the scope of their principal functions. It is, in fact, largely supplementary to the Terms of Reference and Instructions set out in the Official Report of April 7th, and discussed in the *Economist* of April 11th, page 86. The Committee are not "in general" concerned with private overseas investment, provided it is "not made for the purpose of distribution or likely to lead to public dealings." The Committee—who, it will be recalled, are concerned only with foreign issues—observe that the primary object of restriction is to safeguard sterling, whose intrinsic strength must be judged without regard to the temporary inflow of short-term capital. This need to safeguard sterling, however, will not normally bar foreign loans which result in "additional" exports, or are calculated to produce direct benefit to British industry and employment. If control is to exist, there is much to be said in favour of expert consideration of proposed issues. But it appears to us undesirable that control should be instituted and a body of precedent created on the basis of these general indications of policy without any public discussion. This is the more necessary since in the task of "safeguarding sterling" the Committee may be induced to make recommendations that may give the impression of being arbitrary or discriminatory. To the average investor, for example, the reasons for approving, say, a Chinese railway loan and frowning upon British participation in a New York underwriting syndicate may not be wholly clear. The working of informal control on this scale, which may involve important political and economic consequences, will be closely watched not only by the interests immediately concerned but by those to whom the methods of Government supervision in economic affairs present a problem of the first importance.

Cable and Wireless Developments.—The City was surprised to learn unofficially at the end of last week that Mr J. C. Denison-Pender had intimated his intention of resigning from the chairmanship of Cable and Wireless, Limited. This concern, formed in 1929 as Imperial and International Communications, is the operating company in the Cable and Wireless group, its earnings being distributed, by way of the constituent cable companies, to Cable and Wireless (Holding). In a statement issued for publication, it was emphasised that no differences existed in the Cable and Wireless board and that the retiring chairman had introduced suggestions for reorganisation of management which had been unanimously agreed. A statement this week recorded the election, with the Government's approval, of Mr Edward Wilshaw to be chairman and sole managing director of Cable and Wireless, Ltd. Hitherto, three joint managing directors have been appointed, including the new and retiring chairmen and Sir Norman Leslie. The latter retires in order to facilitate the new arrangement. Mr Denison-Pender will continue to act as governor and managing director of the controlling company, Cable and Wireless (Holding), and as chairman of some twenty subsidiary and associated companies in the group. These changes, it would appear, precede "a re-examination" of the position which the Dominion Governments regard as timely. The initial stages of reorganisation of the group, under the chairman's direction,

have produced substantial operating economies of the order of £1½ millions since the merger in 1929, but the scope for further savings has been correspondingly reduced. Accordingly, earnings prospects have become primarily associated with the volume of operating receipts, but successive traffic indices this year have been decidedly unencouraging. In his speech a month ago the retiring chairman alluded to losses sustained by Cable and Wireless, Ltd., arising from anomalies under the International Telegraph Conference rules. Competition from new wireless services was gravely stressed, but it was stated that the Government was unable to comply with the company's suggestion that an Imperial Conference should be convened to consider the position. It may, perhaps, be inferred from the statement that this attitude may be subsequently modified. Cable and Wireless stocks have been distinctly firmer this week after their recent unsettlement, the preference closing at 103½ on Thursday and the "A" ordinary at 23.

Prospectus Points.—Two main features have been evident recently in the new issue market. A significant number of the smaller industrial issues (usually having a £1 preference-5s. ordinary capitalisation) have been made by engineering and precision concerns, whose merits have been supported, not infrequently, by a recital of principal consumers, in which the three Service Departments often take a high place. With the all-pervading influence of armament demand now in evidence, these statements are legitimate and informative to the investor. Since Sir Thomas Inskip's organisation has examined the position of 400 engineering works and has 500 more scheduled for inspection, the participation of the light engineering industry in the defence programme is to be expected. A recent example is provided by Howard and Bullough, which are now working on an armament order (reported to be for shells) at the Accrington textile machinery works. The present level of activity, however, may rob the second main feature of many recent prospectuses of the attention it merits. A sharp rise in profits in the latest year tabulated is common, and in some cases the contrast with the earnings of the two preceding years is very striking. Some examples of this movement, in varying degree, are given below:—

	Issued Capital and Denomination	Amount Offered	Price	Profits, latest 3 yrs.			Present Price
				I.	II.	III.	
<i>By Offer for Sale</i>	£	£	s. d.	£	£	£	s. d.
Williamson Mfg. Co., Ltd.	100,000(4s.)	67,000	5 6	5,776	5,956	14,922	7 0
Blackburn (Thos.) and Sons, Ltd.	Pref. 60,000(10s.) Ord. 130,000(5s.)	Pref. 60,000 Ord. 110,000	10 0 6 6	9,249	9,642	26,424	9 9 5 6
Steel Barrel, Scammells & Engineers, Ltd.	Pref. 125,000(11s.) Ord. 125,000(5s.)	Pref. 125,000 Ord. 62,500	20 0 6 3	18,222	19,258	23,399	19 7½ 6 3
<i>By Stock Exchange Introduction</i>		Introduction Price	s. d.				
Kitchen & Wade, Ltd.	Ord. 125,000(4s.)	5 9		8,676	18,392	28,074	16 10½
Stream Line Filters, Ltd.	Ord. 76,000(5s.)	11 0		3,741	7,214	13,772	12 3
Vokes, Ltd.	50,000(2s.)	3 4½		1,869	2,289	11,033	4 3

If the latest profits—or even higher estimates of current earnings—are to be adopted as a basis for capitalisation and yield expectations, investors should satisfy themselves regarding their permanence. At the prevailing level of industrial and armament activity, this may involve taking a longer view than is frequently thought suitable for a new concern with a relatively short or fluctuating profit record. It may also be necessary to discount prospectus calculations of anticipated ordinary share earnings, first, by reference to the premiums at which the ordinary shares are frequently being issued; and, secondly, by reference to the improving, stable or recessionary profits trend of immediately preceding years. In general, a sharp rise in earnings, after a period of relative stability, sets up a presumption of dependence upon cyclical recovery and vulnerability to increased competition. Shares to which these factors apply are unsuited for stable investment portfolios.

Actuaries' Investment Index.—A further improvement in market conditions is reflected in the rise in the Actuaries' index of the average price of 178 industrial shares to 83.0 on Tuesday of this week, compared with 82.4 a week ago and 81.9 a month ago (December 31, 1928 = 100). A slight increase is also shown in the average yield, which stands this week at 3.79 per cent., compared with 3.78 per cent. last week and 3.75 per cent. a month ago. Movements in various groups are tabulated below:—

Group (No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month ago (May 26)	Week ago (June 16)	This week (June 23)	Month ago (May 26)	Week ago (June 16)	This week (June 23)
Insurance Co.'s (24)	130.7	129.4	131.7	3.25	3.28	3.23
Coal (7)	92.6	95.9	98.0	4.45	4.23	4.24
Iron and Steel (12)	67.7	69.8	71.7	3.31	3.97	4.11
Motors (5)	55.1	55.2	57.1	4.27	4.23	4.15
Electric Supplies (10)	134.7	137.6	138.8	3.84	3.79	3.89
Stores and Catering (7)	85.9	16.6	87.1	3.60	3.60	3.58
Home Rails (4)	68.8	67.3	66.8	1.59	1.61	1.63

Iron and steel shares have received new support, aided by the John Brown results. In the coal group a number of small dividend increases and the postponement of legislation have produced a 2-point rise over the week. The index of home rail prices is down slightly, for the wage negotiations have obscured the favourable traffics trend.

COMPANY NOTES

Cotton Spinning Companies.—To the general investor, cotton spinning shares imply fine cotton spinning shares. Securities of many small mills in the American section of the trade are dealt in on the Oldham exchange, but they are a specialised market, and are little known outside Lancashire. The Lancashire Cotton Corporation is the one really large business in the American section, but only its debentures are publicly held. There remain the great combines in the Egyptian section, of which the Fine Cotton Spinners' and Doublers' Association is the largest, but which also include such substantial concerns as Amalgamated Cotton Mills Trust, Combined Egyptian Mills, and (on rather a smaller scale) Crosses and Winkworth. De-

pending less on the Oriental bulk markets for their ultimate outlet, these fine cotton spinning concerns were able to resist depression longer than the American section. Moreover, three of the four amalgamations (i.e. all except Amalgamated Cotton Mills Trust) have fair to substantial surplus liquid assets, which have provided reasonable security even when their trading losses have been large. Finally, as some 9,300,000 spindles out of a total of about 16,000,000 in the Egyptian section are in the hands of the amalgamations, the fine cotton spinners have progressed much further towards integration of control than any other section of the trade, except the finishers. This continued evidence of longer resistance to depression, greater financial strength and better organisation is generally interpreted as showing that the

ADVANCE PARTICULARS.

FOSTER, YATES & THOM LIMITED

CAPITAL - - - £250,000

The Subscription List will open on Tuesday, June 30th, 1936
FOR AN ISSUE OF
780,000 Ordinary Shares of 5s. each at par

The full Prospectus shows (inter alia) that:—

The Company will acquire the business of Joseph Foster & Sons, Ltd., manufacturers of steam engines, electrical winders, mill gearing and machinery for the rubber, chemical, glass bottle and artificial silk industries, as well as castings up to 40 tons. An export trade, in particular for winding-gear for mines in South Africa, forms an important part of the business.

In 1928 the highly successful engineering business of Yates & Thom, founded in the early part of last century was purchased by Joseph Foster & Sons Ltd. Due largely to the world economic depression, which followed soon afterwards, losses were incurred and in 1935 a Receiver was appointed.

The assets of Joseph Foster & Sons at Preston were disposed of, leaving the original assets and business of Yates & Thom, which this Company is acquiring.

Following reorganisation in the administration of the works, the business was again placed on a profit earning basis. For the 5½ months period from 3rd October, 1935, to 14th March, 1936, THE NET PROFITS (after allowing for all expenses, subject only to income tax) amounted to £11,465, which sum on an annual basis would represent over 10 per cent. on the Capital of the Company.

Total assets (exclusive of goodwill) amount to £250,606.

Copies of the full Prospectus and Forms of Application are now available from:

Egyptian spinners are likely to reflect recovery (whenever it may dawn on the cotton trade) sooner than the other sections. There is, however, reason for questioning this conclusion. The existence of amalgamations covering some 60 per cent. of the trade has not succeeded in preventing violent cutting of margins by the "outside" mills—or by some of them. Repeated attempts at "gentlemen's agreements" to maintain margins have collapsed; and recently it has seemed almost more difficult to hold margins at reasonable levels in the Egyptian section than in the American. The Census of Production and the later "Import Duties" Census for 1933 and 1934 throw some light on this state of affairs. While production of counts up to 40's (i.e. coarser yarns) fell from 1,021,985,000 lbs. in 1924 to 821,600,000 lbs. in 1930, and had recovered to 981,866,000 lbs. by 1934 (thus involving a drop of only 4 per cent. between 1924 and 1934), production of yarns of counts from 40's to 120's fell from 369,584,000 lbs. in 1924 to 221,999,000 lbs. in 1930, and still further to 214,855,000 lbs. in 1934, showing a fall of 42 per cent. between 1924 and 1934. It would seem that the effects of Japanese competition on coarse yarns and their manufactures are not so serious as the competition of rayon and the depression of Europe—an important market for fine cottons—on the finer yarns. Some relief may come from European recovery, and some from the introduction of spun rayon fibre. But in face of a shrinkage of 42 per cent. in output over the past decade, it would be unwise to look for any early or sharp recovery in the finer end of the cotton spinning industry. For the present the shares appear to lack attraction—though the debentures of the Lancashire Cotton Corporation, in the American section, may emerge from the "guarantee" period (ended last March) in a better position than has been anticipated.

Callender's Cable Progress.—The gross profit of this concern—£647,515 against £527,692 for 1934—must be close to the record for the decade, for the 1929 record of £684,369 included an unstated amount for tax reserve no longer required. Like other cable companies, Callender's have achieved a somewhat late recovery, since increased general business coincided with the termination of the special grid demand which had supported the cable companies during the earlier part of the depression. As the market had exaggerated the prospective benefits of the grid orders for cable manufacturers, it similarly exaggerated the adverse effects of their cessation. The latest figures make it clear that, though competition is still present, the volume of work is now ample, without any special grid demand, to provide satisfactory profits for the well-managed concern. The profits for the last three years are analysed below:—

	Years to December 31,		
	1933	1934	1935
Gross profit.....	£ 522,311	£ 527,692	£ 647,515
Expenses, fees, pension fund, etc.	240,926	237,463	241,566
Depreciation	42,000	40,000	64,000
Tax	...	...	20,000
Debt interest	13,500	13,500	13,500
Preference dividends	56,000	56,000	56,000
Ordinary shares:—			
Earned	169,885	180,729	252,449
Paid	168,587	168,587	168,587
Earned %	15.1	16.4	24.8
Paid %	15	15	15
Carry forward	294,230	306,372	390,234

The balance sheet shows that Callender's is in a strong position to finance expanding business. Debtors have risen from £988,199 to £1,109,339, and stocks are also larger. Surplus liquid assets, however, have expanded from £460,000 to £572,000, neither figure including "general" investments which have been increased from £1,486,587 to £1,513,807. Though these general investments include such trade investments as Anchor Cable, St. Helen's Cable, and Okonite Callender, it may be assumed that they also include substantial marketable investments, which further assist the company's liquidity. The shares (which are shortly to become stock) retain their character of a stable industrial investment—this is the seventeenth year in succession in which a 15 per cent. dividend has been declared—but it

would not be unreasonable, given a continuance of 1935 conditions, to look for some repetition in the next year or so of the capital bonus (20 per cent.) distributed in 1928. In contrast to many other leading industrials, Callender's shares at approximately 85s. ex dividend are appreciably below the 1929 high point (91s. 3d.), a commentary on the earlier exaggerated hopes from the grid orders. The yield of approximately £3 ros. 6d. appears to discount the possibility of a bonus to come.

Daniell-Cobbold Merger Proposals.—The offer which the directors of Cobbold and Company, the Ipswich brewing concern, have made to shareholders of Daniell and Sons' Breweries, of Colchester, raises a number of special points. The directors of Daniell and Sons do not favour the amalgamation, and Cobbolds have therefore been compelled to put their offer directly to the shareholders. Their offer is eminently reasonable in principle, for amalgamation in the industry has increased the general level of profits despite the fall in output. But the fact that these advantages are pleaded with urgency on the one side and rejected on the other by those entrusted with the safeguarding of shareholders' interests, creates a special presumption in favour of caution by shareholders of Daniell and Sons' preference and ordinary shares. The issued capital of Cobbold and Company is approximately twice that of Daniell and Sons' Breweries, following the recent revaluation of the former company's fixed assets and the adjustment of the ordinary capitalisation by a 225 per cent. capital bonus. Daniell and Sons' 7 per cent. preference shareholders are offered a similar security in Cobbold and Company, or alternatively 29s. in cash. The yield of £4 16s. 6d. on this basis is somewhat out of line with equally secured shares. The existing dividends are covered 4.7 times, but the shares offered in exchange would be similarly covered only if combined profits are increased by the expected £20,000. For the ordinary shareholders of Daniell and Sons, the main incentive lies in this estimated increase. They are offered one £1 share in Cobbold and Company, or £3 10s. in cash (against a nominal quotation of £3), yielding £3 16s. per cent. Existing combined profits would broadly maintain their earnings position, while the adjusted figures for Cobbold and Company show a slight advantage to their shareholders. Since the acquisition of Daniell and Sons' is a *sine qua non* in the achievement of the estimated economies, it might be argued that the shareholders of that concern, in hard bargaining, might command better terms. This suggestion emerges from the statement of Daniell and Sons' directors. They have hitherto adopted the principle that the business was not in the market. For the time being Daniell and Sons' shareholders may be prepared to follow the lead of the board which, when all allowance is made for a strong family interest, may be presumed to have intimate knowledge of the value of the business and which, in any event, has provided an increase in dividends from 7½ to 13½ per cent. during the past four years.

Mexican Eagle Results.—The restored prosperity of "Twin Eagles," which has engaged the market's attention during recent months, is evident from their full accounts published this week. The settlement of the Amatlan lawsuit and the improvement in the oil industry have increased the earnings of Mexican Eagle and relieved the accounts of heavy special charges necessitated in recent years. Sales, however, were below total production and purchases, as the following table shows:—

	Production (Barrels)	Purchases (Barrels)	Sales (Barrels)
1933	14,271,675	5,261,883	18,593,917
1934	17,346,231	4,023,394	22,779,421
1935	22,386,710	4,789,259	25,605,782

The increase in trading profits, at £895,891, amounts to £114,320, but the former figure is credited with reserves not required, after providing for the disposition of the

Amatlan lawsuit. After providing for Mexican income tax, a balance of £705,097 is available for dividends against £663,653 in the previous year. The sterling profits for the past two years are analysed below:—

	1934	1935
Trading profit (after depreciation and reserves)	£ 781,571	£ 895,891*
Other income	21,707	16,390
Total income	803,278	912,281
Mexican income tax	139,625	207,184
Available for dividends.....	663,653	705,097
First preference dividend	84,698†	83,113
Participating preference dividend ...	Nil	35,417 (10d. p.s.)
Ordinary dividend	Nil	586,782 (10d. p.s.)
Tax payable for previous years	145,240	Nil
Provision for duties payable on cancellation of 1906 concession	422,535	Nil
Carried forward	11,180	10,965

* After crediting reserves not required, and providing for disposition of Amatlan lawsuit. † Paid and/or accrued in 1933 and 1934, arrears being paid to date in May, 1936.

The disposal of the Amatlan case permitted the payment of first preference dividend arrears and the resumption of participating preference and ordinary dividends at 10d. per share. The report notes, however, that over-optimism as to the immediate future would be unwise, in view of the "overproduction of crude oil and the accumulation of excessive stocks of products. The \$4 ordinary shares declined to 24s. 7½d. on Thursday, and yield £3 7s. 6d. per cent.

Canadian Eagle Progress.—Net profits of Canadian Eagle increased from £539,054 to £625,880 during 1935. Dividend receipts were over £100,000 higher at £753,046, but a net loss of £82,194 again resulted from oil trading. For 1934, however, the loss was shown after crediting £222,884 from investment reserve, compared with £10,565 during the latest year. The actual trading position, therefore, has shown a substantial improvement. Purchases by the shipping subsidiary amounted to 20.8 million barrels, against 20 millions in 1934. Profits are analysed below:—

	1933	1934	1935
Dividends and interest	£ 652,526††	£ 753,046††	£ 753,046††
Oil trading	Dr. 71,028†	Dr. 82,194†	Dr. 82,194†
Total income	376,627‡	581,498	670,852
Expenses and charges	...	42,444	44,972
Available for dividends	376,627	539,054	625,880

Transfer to reserve	183,553	400,000	...
Total carried forward	83,684	60,348	38,277

* Not stated. † After credit of £222,884 in 1934 and £10,565 in 1935 from investment reserve no longer required. ‡ After crediting transfer from investment reserve (amount not stated) equal to depreciation provided in 1933 by Arend Petroleum and Eagle Oil and Shipping. § Paid and/or accrued in 1933 and accrued in 1934, arrears paid to date on May 7, 1936. || General reserve. In 1934 includes £200,000 special exploration reserve. †† Includes, in 1934, £222,975 dividends relating to 1933, and in 1935, £68,229 relating to 1933-34.

The shipping subsidiary has scrapped 34,411 tons and has placed orders for five diesel tankers totalling approximately 60,000 tons. The fleet earned a reasonable profit after depreciation last year. In the report it is emphasised that profits are dependent upon the trading margin between purchase and selling prices, the main business being the marketing of the refined products of Mexican Eagle available for export. Canadian Eagle ordinary shares of no par value eased to 16s. 9d. on the report, and yield £4 9s. 6d. per cent.

Barclay Perkins Accounts.—Though Barclay Perkins and Co. have not been able to equal the recovery of some other brewing companies, which have already exceeded their pre-depression profits, the expansion in earnings for

the year to March 31, 1936, maintains the steady recovery since 1932-33, when only £268,444 was earned. The earnings on the ordinary shares, however, only rose from 8.7 per cent. to 9.8 per cent., and the directors have preferred to adhere to the 8 per cent. distribution which has now been declared for three years running. The profits over that period have been as follows:—

	Years to March 31,		
	1934	1935	1936
Total gross profit	£ 404,827	£ 413,288	£ 426,149
Depreciation	64,680	64,913	64,867
Other expenses	18,807	18,565	17,452
Debt interest	101,432	100,967	100,453
Earned for preference	219,908	228,843	243,377
Preference dividends.....	75,600	75,600	75,600
Ordinary shares:—			
Earned	144,308	153,243	167,777
Paid	143,061	143,061	143,061
Earned %	8.1	8.7	9.8
Paid %	8	8	8
To reserves	...	10,000	15,000
Carried forward	51,855	52,037	61,753

Though the company increased its investments in licensed and other houses from £3,147,943 to £3,367,305 last year, it has been less active in the acquisition of premises than many brewery companies during recent years. In 1929 licensed and other properties and loans to publicans were £3,549,000; the equivalent total for 1936 is only moderately higher at £3,730,000. Similarly, shares in subsidiary companies have only risen from £1,078,000 in 1929 to approximately £1,121,000 in 1936. This relative stability of assets may explain why the company's recovery record does not equal that of some of its fellows. There remains a moderate but deferred "equity" in the possibility of converting the existing debenture stocks, but the prospective savings are not substantial in relation to an ordinary capital of £1,788,265. It would appear that only a moderate increase in earnings and dividends should be expected over the next few years, despite the assistance recently given to home lager brewers. At approximately 37s. ex dividend the shares yield approximately £4 6s. 6d., and appear fairly valued.

Metal Box Progress.—Both at home and abroad, the development of existing business and the opening up of new branches have contributed to the recent expansion of this concern. Total profits have increased from £287,558 to £346,817, and equity earnings from £142,207 to £176,827. Since the amount earned for the equity is equivalent to 23.2 per cent., the raising of the ordinary dividend from 10 per cent. to 12½ per cent. is at once satisfactory and cautious. The company's present prosperity follows the general trend of recovery, but it is also associated with social changes favouring prepared foods. Extension, moreover, is by no means confined to the home market, for which the re-equipment of the Eaglesbush Tinplate Works is designed. The new factory in Bombay is now working, two factories in Capetown have been replaced, and improvements have been effected at Durban and Calcutta. The following table analyses the profits for the last three years.

profits of General Electric were due mainly to exports to the British Empire. The chairman of George Newnes discussed the progress of a number of the company's chief publications. Sir Sydney Benn attributed the maintenance of Forster's Glass sales partly to the increased demand of existing customers.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET	ACCOUNT
JULY 7	JULY 9

With its proverbial capacity to take a short view of politics, the Stock Exchange made a virtue out of the Government's policy on sanctions. Domestic securities have been rising this week, and even European bonds regained some favour on what was regarded as an improvement in the European political situation. There has also been a renewal of confidence in continued economic recovery in England, and speculative securities have benefited from reports of improving trade conditions.

Gilt-edged securities were supported at the end of last week as a result of the lower bill rate. This week, however, the market was adversely affected by the unloading of 2½ per cent. Funding Loan by public departments, who were understood to take up most of the issue last December. Unsettling continued until the Funding Loan became steady at 93½, after the special selling had ceased. There was some selling of Old Consols, attributed to repatriation of funds to France, but by mid-week the market had become somewhat firmer. Indian and Dominion issues were steady throughout and relatively featureless.

Chinese bonds have been less firm than at the end of last week, owing to the renewed quarrels between North and South, but Sir Frederick Leith-Ross's report was found encouraging. Brazilians attracted support at the end of last week on the improved internal position described by the chairman of Rio de Janeiro City Improvements, but this week they became dull on fears for the coffee position. Peruvian issues were in demand on reports of negotiations regarding the debt service. Among European issues, Poland Sevens had an erratic week, the removal of sanctions apparently counteracting the adverse internal economic position, and creating a demand, which, however, proved to be short-lived. There was a general improvement in other European issues in midweek.

Home rail stocks were still depressed this week, owing to the uncertain labour position, but an excellent set of traffics induced some firmness later in the week, although there was not a great volume of business. The foreign rail market has been almost stagnant throughout the week, with some revival of interest in Cordoba first debentures. Small losses were registered by American rails, which moved in sympathy with Wall Street prices.

The new account opened cheerfully in the industrial market, and although the amount of business has been modest, prices in several sections have been very firm. In view of the political situation and statements in Tuesday's debate, interest has naturally been directed to the rearmament securities, although other sections have by no means been idle. In the iron and steel group business has been steady at rising prices. John Brown shares continue in demand on the higher profits of last year, and the prospect of securing the contract for the sister ship to the "Queen Mary." Firth-Brown shares have also been prominent in the general rise. The feature of a strong aviation share market was provided by Bristol Aeroplane, which were strongly supported on the meeting and the gratifying issue on bonus terms. Hawker and Hawker-Siddeley were also in demand, and Imperial Airways issues improved on the good April traffics. The motor group had an irregular appearance throughout the week, the principal improvement being shown by Leyland shares.

The resignation of the chairman of Cable and Wireless provoked irregularity. An initial improvement was fol-

lowed by a reaction in the preference and the "A" ordinary stocks, and both issues lost further ground on the low record traffic index for May. A sharp improvement occurred in mid-week. Henley's and Crompton Parkinson issues were in occasional demand in the electrical equipment group, which displayed all-round firmness in mid-week. Brewery issues have put up a mixed showing, with some profit-taking and a marked improvement in Tamplins' shares in anticipation of the final dividend. Business in the stores section has been modest, but Woolworth maintained their recent rise. Gallahers were a feature in the tobacco section. Courtaulds improved on the record rayon output for May.

There have been several bright features in the miscellaneous industrials section. British Oxygens have been in steady demand, and in the building materials group cement shares have been supported, together with Wall Paper deferred. There has been a good demand for various small engineering issues, notably British Timken, Reynolds and Coventry Chain, and Weybridge Engineering. Amalgamated Dental deferred shares benefited from the resumed dividend payments.

In the oil shares market the end of the old account and the opening of the new was marked by quiet conditions and a very small amount of business. On Tuesday of this week there was strong renewed interest in Eagle issues, following Lord Bearsted's statement that relations between the Mexican company and the Government were much improved. Later in the week profit-taking developed and prices reacted. Orders from the Continent were mainly for sales, and small declines were recorded by Royal Dutch, Anglo-Iranian and Trinidad Leaseholds.

A marked improvement in the rubber shares market at the end of the last account continued during this week. Fears for the devaluation of the guilder have been postponed, and the technical position of the industry is considered sounder. The volume of business has been smaller, and prices have been marked up rather too eagerly, but the improvement is more determined than any the market has soon for a long time past. The tea shares market registered a flicker of improvement at the beginning of the week, which died away later.

A cheerful end to the last account in the mining market was followed this week by spectacular improvements in many Kaffirs. West Witwatersrand shares headed the rise, and from a new high of 9½ at the end of last week improved at one time to 12½. Subsequent profit-taking caused a reaction, but there is no serious slackening in the general interest, which extends also to many Far Eastern issues. The West African section has been considerably more active than of late, with special attention for Gold Coast Selection. Rhodesian copper shares were firm on the higher commodity price, and tin shares advanced under a similar influence.

FOREIGN STOCK EXCHANGES NEW YORK

WALL STREET has experienced a week of irregular price movements, with signs of firmness on the whole prevailing against weakness. Conversion of the Veterans' Bonus bonds into cash is proceeding more slowly than the market had anticipated, and the political party conventions continue to exert a restraining effect. The new Tax Bill was passed, and although it was not as modified from the original draft as had been hoped on Wall Street, it is expected to provoke some increased dividends. A number of stocks, such as U.S. Rubber preferred and Chrysler, became firmer for this reason. Railroad stocks declined on estimates that traffic will be affected by drought conditions. The level of stock prices, as measured by the Dow Jones Index, is now back in the region of the April peak. Most business reports continue to be very satisfactory. *Iron Age* estimates steel mill activity at 70 per cent. of capacity, the same as for last week, but although demand is well maintained there are fears of labour trouble in the industry. Considerable uncertainty has been occasioned by the report of the Securities and Exchange Commission on the segregation of the functions of jobbers and brokers, and it is reported that the opposition among professional operators may lead to a challenge to the constitutionality of the Commission's proposals. On the bond market Italian bonds have been very strong on the approaching end of sanctions.

* Two-hour session.

PARIS

If good intentions were sufficient in themselves, the market should have received M Auriol's statement last Friday with rather more enthusiasm than was actually the case. Conditions were definitely more cheerful, but the general reception of the speech was less of positive satisfaction than of relief that there were to be no great coercive or restrictive measures—at least on the Bourse. The chief upward movements were recorded in Rentes, particularly in those carrying the higher rates of interest. The 5 per cent. issue of 1920, for example, advanced in a single day by nearly 3½ francs. In other directions there were no very spectacular changes, though the general gains in local securities were substantial. No doubt it was intended that the inauguration of the policy of cheap money by the reduction in the bank rate to 5 per cent. should be received with unmixed pleasure. Instead, conditions on Tuesday were lifeless, and the feeling of unsettlement which had prevented any very brisk business last week became noticeable once more. Prices, however, were more characterised by irregularity than by any substantial falls. Internationals, which had been neglected on account of domestic improvement, attracted renewed attention. By mid-week the market counting the blessing of cheaper money—at least temporarily—marked prices higher, especially for industrials and public utilities.

BERLIN

Although rumours of a new government loan had been in circulation for some days, the announcement of an issue of Rm. 700 millions 4½ per cent. Treasury bonds came too late on Monday to affect prices, which had been inclined to sag. On Tuesday interest centred mostly around the new issue; the result was a tendency towards easier prices, as stocks were being realised in preparation for the loan. The session on the whole proved dull, movements being mostly downward. Shipping issues, after rallying last Friday, slipped back, and then recovered somewhat in mid-week. Nothing has occurred to infuse life into the market, and although a slightly better tone is evident, the volume of business remains small.

AMSTERDAM

The Bourse had been inclined at the end of last week to wait upon events in France, but the temporary stimulus to Paris prices did not extend to Amsterdam. On Monday small declines in quotations, except for tobacco shares, were widespread. A firmer tone developed later, without greatly enlarging the volume of business. Commodity issues remained the brightest section of the market, rubber shares in particular being in good demand. Better conditions

began to develop under the general influence of more stable foreign exchanges, the reduction in the French bank rate, and the adjournment of the United States Congress. In mid-week rubber shares strengthened further, while tobacco issues again spurred.

CANADA

The tone of the Canadian stock markets remained fairly strong until mid-May, but reacted thereafter. Uncertainty about French monetary policy and the European political situation had the same depressing influence as in New York. Disappointing news about the Western grain crop discouraged hopes of expanding rural purchasing power, while the textile issues suffered from disclosures made before the Royal Commission on tariffs. Early this month the stocks of all Quebec power companies fell sharply following the resignation of Premier Taschereau and the announcement of another Provincial election, which the Opposition is to fight on lower rates for power consumers, if necessary through State competition. Distillery stocks have been stronger, and there has been considerable activity in the newsprint stocks. Despite a general recovery in stocks at the turn of the month, Quebec power issues have remained weak. In the gold-mining market conditions have been very brisk, with spectacular advances in some new stocks. Western provincial issues alone have been dull in a fairly firm bond market, the Bureau's index of long-term Dominion bond prices reaching a high of 116.7 for the week ending June 12th, compared with 115.9 in May. The "Investors'" index was slightly higher at 117.6 for the week ending June 11th, as compared with 117.4, 117.9 and 119.2 for the weeks ending June 4th, May 28th and 21st respectively.

† \$5.03 to £1.

CAPITAL ISSUES

THIS week's capital issues have been largely composed of dual preference and ordinary share offers on behalf of small industrial concerns. The largest capitalisation, indeed, is of *Brooklands (Weybridge)*, which issues 4½ per cent. debenture stock, 6 per cent. 10s. preference shares and 5s. ordinary shares, the latter at 20 per cent. premium, the whole comprising a nominal total of £280,000. The property is acquired broadly at valuation, for cash, and recent profits have shown a rising trend. The ordinary shares, whose prospective earnings are expected to increase to 14 per cent., are highly geared, and the emphasis upon their speculative interest, by the adoption of an equally small preference capital, may involve less ready marketability. The debenture stock is covered with a modest margin of assets and earnings. The issued capital of *Alders (Tamworth)* totals £100,000, divided into 100,000 6 per cent. 10s. preference and 500,000 2s. ordinary shares, the latter being issued at 25 per cent. premium. *Cornercroft, Limited*, with a total share capital of £132,000 issues 120,000 10s. preference and 120,000 4s. ordinary shares, the latter at 5s. 9d., or 43 per cent. premium. The capital of *Riding's Stores*, of which 100,000 6 per cent. cumulative preference and 100,000 2s. ordinary shares are offered—the latter at

4s. per share—totals £150,000. It has been suggested repeatedly in these columns that the adoption by concerns of this size of a dual capitalisation to secure advantages of "gearing"—for which the applicant for the ordinary shares is invited to pay substantial premiums—is in the long run usually outweighed by the handicap to marketability. Due regard should be given to the compensating disadvantages of highly geared ordinary shares, should the trend of profits be reversed. The earnings of *Titanine*, manufacturers of aeroplane "dope," amounted to £754 three years ago. For 1930-31, profits were £10,088; for the ten months to January last, £12,421. Net assets of £53,205 have been acquired for £80,000 of which the larger part is satisfied by 799,000 2s. ordinary shares at par. The offer of 389,200 shares at 4s. 3d. thus leaves the vendors with control, while they receive a total cash consideration for the shares offered amounting to £64,008 15s. Statements "for information only" have been published by *Crittall-Hope Metal Windows (South Africa)*, *Deritend Stamping, Wagon Repairs*, and *Anglo-American Asphalt*.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

(Continued from page 745)

proportion of four new ordinary shares to every complete nine ordinary shares held on June 8th. The shares will rank for dividend on one-half the nominal amount of each share from July 1st and on the balance from October 1st and the amount payable in respect of the period to March 31, 1937, will be paid on June 30, 1937.

Telephone Manufacturing.—Issue of 200,000 new 5s. shares at 6s. 9d., to members on the register at the close of business on June 5th, in the proportion of one new share for every five shares held.

Bristol Aeroplane.—Issue of 1,200,000 new 10s. ordinary shares at 25s. each at rate of one new share for every ordinary share now held. Rank for dividend from January 1, 1936.

South African Torbanite Mining and Refining Company, Ltd.—Issue to shareholders on register July 13th 295,000 10s. ordinary shares at 15s. each in proportion of one new for each five shares held. Funds required to increase company's refinery facilities and to acquire participations in other interests.

United Sua Betong Rubber Estates.—50,000 shares of £1 are offered to stockholders at 45s. per share, in the proportion of one new share for every complete multiple of £15 of stock held on May 18th.

Webb's Crystal Glass.—97,880 ordinary shares of 5s. are offered to ordinary shareholders registered on June 9th at par in the proportion of one new share for every five ordinary shares held.

Fisher and Ludlow.—Issue of 160,000 ordinary shares 10s. each at 34s. 6d. each in order to provide capital required for extensions to the works. These shares will rank for dividend from April 1, 1936, and are offered to the ordinary holders registered on June 9th in the proportion of one for every five shares then held.

OFFER ABROAD

Federated Malay States Loan.—A loan for \$15,000,000 (£1,750,000) is to be raised locally by the Government of the Federated Malay States, the title of the loan to be "Federated Malay States Government 3 per cent. Loan 1936-66." It will be in the form of bonds to bearer and will carry interest at 3 per cent.; the issue price to be par. Interest will be payable December 15th and June 15th.

FORTHCOMING ISSUES

Foster Yates and Thom.—An issue will be made early next week of 780,000 5s. ordinary shares at par under the auspices of the London Industrial Finance Trust.

South Durham Steel.—An issue, at par, of £750,000 4 per cent. mortgage debenture stock will be made next week.

Tunnel Cement.—A public issue of 500,000 5 per cent. "A" cumulative £1 preference shares at 22s. each is expected to be made next week.

Patons and Baldwins, Ltd.—The Board has under consideration an issue of ordinary shares at a premium to be offered in the first instance pro rata to ordinary stockholders.

REPORTS AND NOTICES
RUBBER

GORDON (MALAYA) RUBBER ESTATES.—Profit for 1935 was £6,354, against £12,049, plus £1,000 from tax reserve. Deduct Pref. dividends £2,925. Dividend 2 per cent. against 4 per cent. on Ordinary, £5,140; forward £9,679, against £10,390. Crop 1,685,488 lbs. (1,745,726 lbs.); gross price London 6.21d. per lb. (same); f.o.b. cost exclusive of depreciation was 4.06d. per lb. (3.56d.). Estate assessments 2,273,320 lbs. for 1936. On present basis of release exportable crop for 1936 should be 1,420,800 lbs. Meeting, 19 Fenchurch Street, E.C., July 3rd, 12.0.

MISCELLANEOUS

THE ARGENTINE NAVIGATION COMPANY MIHANOVICH, LTD.—Gross takings and those of the associated concern, Cia. Uruguaya de Navegacion, Ltd., together amounted to Arg. paper \$2,416,645 for the month of April, and the following is a comparison by month and aggregate with previous figures: Gross takings (both companies) April, 1936, A.P. \$2,416,645; April, 1935, A.P. \$2,344,545; increase, A.P. \$72,100 = 3.1 per cent. Aggregate, January-April, 1936, A.P. \$10,505,125; aggregate, January-April, 1935, A.P. \$10,241,268; increase, A.P. \$26,857 = 2.6 per cent.

RIO TINTO COMPANY, LTD.—The board of the Rio Tinto Company announces that an illegal strike broke out in Spain at the Rio Tinto mines, on the company's railway and at the company's pier at Huelva on June 15th. It is understood that the men are staying at their posts, but refusing to do any work. The board of the Rio Tinto Company is informed that the Spanish Government is taking all reasonable steps and precautions to secure the safety of the company's British staff in Spain, and to safeguard the properties.

WHITEHEAD IRON AND STEEL COMPANY, LTD.—The directors point out in their report for year to March 31, 1936, that net profit has expanded, enabling them to increase the dividend and cash bonus from 30 per cent. to 35 per cent. for the year despite the increase of capital due to last year's capital bonus issue. They have also increased the allocation to reserve and the amount carried forward. A new plant is being put into commission for producing wide hot-rolled strip in heavy coils which, the directors think, should assist materially to future profits. Cash stands at £89,833, compared with £38,915. Debtors stand at £30,013, against £246,076. Total assets £1,386,874, against £1,219,144 a year ago.

SCRIBBANS AND COMPANY, LTD.—Total profit year to April 30, 1936, £211,178, which includes £10,000 from development reserve. Profit a year ago was £228,944. Ordinary dividend, 5½ per cent. against 6½ per cent., absorbing £71,931 against £85,637. Deferred dividend, 15.583 per cent. against 18.42 per cent., absorbing £23,977 against £28,546. Carry-forward increased from £28,681 to £30,714. Meeting, Hotel Victoria, Northumberland Avenue, London, June 24th, at noon.

PAHANG CONSOLIDATED.—Interim dividends paid to date in respect of the current year total 20 per cent. At the present price of 14s. 3d., the yield, on the basis employed in the table on page 616 of last week's *Economist*, is approximately 7 per cent.

CONSOLIDATED GOLDFIELDS OF SOUTH AFRICA, LTD.—We understand that an influential group has acquired the whole unissued ordinary share capital of Consolidated Gold Fields of South Africa, Ltd., amounting to approximately a quarter of a million shares at the price of 82s. 6d. per share. We understand the shares have passed into strong hands.

BEET SUGAR RESULTS.—The accounts for year to March 31, 1936, of the Anglo-Dutch Sugar Beet group of companies show that in each case no credit has been taken in respect of the amount receivable from the Government for capital services under the Sugar Industry (Reorganisation) Act, 1936. The results are tabulated below:—

	Net Profits		Dividends	
	1934	1935	1934	1935
English Beet Sugar Corporation	156,593	100,000 (a)	20½(c)	20½
Ely Beet Sugar	97,505	67,500 (b)	15½(f)	15½
King's Lynn Beet Sugar	53,841	27,000(c)	8½	6½
Ipswich Beet Sugar	37,249	32,000 (d)	7½(g)	8½

† Free of income tax. (a) Includes £4,388 from reserve. (b) £6,812 from reserve. (c) £7,955 from reserve. (d) £3,551 from reserve. (e) Also cash bonus of 60 per cent. from general reserve. (f) Also cash bonus of 66.67 per cent. £270,500 from general reserve and £30,500 from capital reserve. (g) Also cash bonus 35 per cent. £4,000 from capital reserve and £136,000 from general reserve.

At meetings of the companies held on April 24, shareholders approved the transfer of their assets to the British Sugar Corporation, Ltd., which has been incorporated with a nominal capital of £5,000,000, for the purpose of amalgamating fifteen beet sugar manufacturing companies, under the provisions of the Sugar Industry (Reorganisation) Act.

A HIGH YIELDING INDUSTRIAL INVESTMENT

Warner's Radio & Electric is a rapidly developing Company which essentially is not a manufacturer, but a distributor of well diversified and popular products. It has now forty-one retail shops, selling radio apparatus and fittings, cycles and accessories, baby carriages, vacuum cleaners and refrigerators. The branches are well spread throughout London and the provinces, and are operated under a highly organised and efficient control.

When the issue of shares was made last December there were only 19 branches. Profits were equivalent to 30 per cent. on the Ordinary Share capital. The additional branches since acquired have been secured out of the company's cash resources.

The confidence of the directors has been shown by the payment of an interim dividend at the end of May at the rate of 30 per cent. per annum for the three and a half months from mid-December to the end of March. The Ordinary 1s. shares at 2s. 7½d. on the interim dividend at the rate of 30 per cent. show a substantial yield of 11½ per cent.

COMPANY MEETINGS, &c.

BLEACHERS' ASSOCIATION, LIMITED

TRADING CONDITIONS STILL DIFFICULT

FUTURE DEPENDENT UPON EXPORT POLICY EXTENSION

TRADE INCREASES MAINLY DUE TO EMPIRE MARKETS

'MARGIN OF TRADE' AS BARGAINING FACTOR

SIR ALAN SYKES' REVIEW

The annual general meeting of Bleachers' Association, Limited, was held, on June 23, 1936, at Blackfriars House, Manchester, Sir Alan Sykes, Bart. (the chairman), presiding.

After referring to the loss which the Association had sustained through the death of two of the directors—Colonel J. W. Slater and Mr W. H. Carey—the chairman drew attention to a change which had been made in the form of the balance sheet. He pointed out that, for some years, it had been the practice to deal with depreciation by simply writing it off the value of the fixed assets, but the directors had decided that, in future, the amounts set aside for depreciation should be dealt with through a depreciation and obsolescence fund. A sum of £140,000, which was the same amount as that provided last year, had been credited to this account and, in order to strengthen it further, the directors had transferred a sum of £30,000 from the balance of the profit and loss account and a further sum of £9,896, representing the profit on the sale of investments during the year. The fund had been charged with £37,110 in respect of the amount which it had been found necessary to spend on renewals and developments, apart from the normal expenditure on repairs and maintenance.

The balance of the depreciation and obsolescence fund, which appeared as a deduction from the value of the fixed assets in the balance sheet, and which amounted to £142,786, would be available in the future together with other amounts, similarly provided, for the purpose of renewals or writing down the value of any of the assets of the company which might have become redundant through policies of concentration or obsolete by reason of changes in market or fashion.

POLICY OF CONCENTRATION

The value of the fixed assets had been further reduced by adjustments—including the transfer of £50,000 from the general reserve fund—consequent upon the policy of concentration, and now amounted to £7,525,063.

The Chairman said that he could assure stockholders that the condition of the physical assets of the company was being fully and carefully maintained.

Shares in subsidiary companies showed an increase of nearly £60,000 as a result of adjustments following the transfer of business from closed works to other branches, whilst advances to subsidiary companies, which represented the working capital of the branches, were at practically the same level as in the previous year. No important changes were shown in the value of stock-on-hand, sundry debtors, or cash, but investments at £554,952 were somewhat higher than they were a year ago.

On the liabilities side of the balance sheet there was no change in the amount of issued capital or debenture stock, but mortgages, loans and trade creditors were somewhat lower. The general reserve fund was reduced by the transfer of £50,000, and the superannuation fund by allowances paid during the year which amounted to about £20,000. There was no alteration in the investments contingency fund, which, in the opinion of the directors, was more than sufficient to cover the risk of depreciation in the market value of investments.

UNWISE TO IMPAIR FINANCIAL STRENGTH

Trading profit, after payment of central charges and interest, and after charging £150,961 for repairs and maintenance, amounted to £270,154, to which was added £9,896, representing the profit on the sale of investments. After charging directors' fees, depreciation, and debenture interest—which required the same amounts as last year—there was a balance of £36,452, which, with the amount brought forward from the previous year's accounts, made a total available balance in the profit and loss account of £214,565.

The chairman explained that the directors had transferred from this account to the depreciation and obsolescence fund a sum of £39,896, which included the profit on the sale of investments, and he added: "You will realise from the figures before you that, after payment of interest on the debenture stock, there remains only a small balance of the profit earned in the past year. In the absence of any certainty of improvement in our foreign trade, and in view of the difficult times which the future still seems to hold, your directors feel strongly that it would be unwise to impair the strength of our position by any depletion of our available reserves. They, therefore, recommend that the remaining balance—£174,669—should be carried forward to next year's accounts, and they regret that they do not feel justified in recommending the payment of a dividend on the preference stock."

The past year has been as difficult as that which preceded it, and conditions have called for economy and sacrifice in every direction. Every member of our salaried staff, including the chairman and managing directors, is continuing to make a practical contribution to economy by the maintenance of the voluntary reduction in salaries.

GROWTH OF SANFORIZING

The Chairman said that he presumed the stockholders would like him to tell them what progress had been made in the production of cotton goods guaranteed within small limits, under the process of Sanforizing, against shrinkage—a subject to which he had referred in his speech last year. Several works had been equipped with the necessary plant, and the trade had shown a steady and continuous increase. The directors were satisfied with the results obtained, and they looked forward with confidence to a continuation of the increase, but they had always recognised that some time would elapse before the full benefits of the expenditure incurred were realised.

Progress was dependent upon the demand of the consumer, and an extensive campaign of advertising had been undertaken to acquaint the public with the advantages which they could obtain by insisting that their purchases of cotton goods should be guaranteed Bleacraft Sanforized-Shrunk. The Chairman expressed the hope that all stockholders would exercise their prerogative as consumers by demanding Bleacraft Sanforized-Shrunk Cotton Goods to the advantage of themselves and of the company.

In referring to the trade in the past year, the Chairman said that there had been practically no variation in the volume of exports of bleached goods—the figures for 1935 being only one-half of one per cent. below those for 1934, and he expressed the hope that this stability indicated the end of a decline which, apart from the recovery after the depression of 1931, had been continuous since 1928.

Losses of trade had been experienced in South and Central America, the Dutch East Indies, Egypt, Morocco and the French Colonies in West Africa, mainly by reason of the intensive competition of low priced Japanese cloth, but the Chairman said he was glad to know that, in Egypt at least, steps were being taken to control the situation.

TRADE INCREASES MAINLY EMPIRE

The increases in trade which had offset these losses had been confined almost entirely to the markets of the British Empire, and especially to those markets in which the importation of foreign cloth had been limited by quota restrictions. The effect of these regulations, and particularly of those imposed by the British Government, constituted the most satisfactory feature of the past year's trading.

Excluding India, exports of bleached goods to British Colonies and other possessions where quotas were imposed increased from

45 million square yards in 1934 to 85 million square yards last year and now accounted for no less than 14 per cent. of our total exports of bleached cloth—nearly as much as was taken by the remainder of the British Empire (excluding India) and one-half as much as was taken by all foreign markets. For this improvement the Government was entitled to the thanks of the Trade, and the results were so encouraging that they should vigorously prosecute the protection of our export trade by legislation where they had the power or by negotiated agreements where they had not.

In India the volume of trade during 1935 had been barely maintained at the low level reached in 1934, and, unfortunately, conditions had become much more unsatisfactory since the end of the year. In the autumn the Government of India set up a Tariff Board to report on the level of duties necessary to equate the price of British cotton piece-goods with the fair selling value of Indian products, and it was expected that the Board would report in time for its recommendations to be implemented in the Indian Budget.

INDIA TARIFF DELAY

Unfortunately this was not done, and although the report of the Tariff Board was in the hands of the Government of India, it had not yet been published, with the result that a position of great uncertainty had been created, which was making trade very difficult and was likely to have a very injurious effect upon exports during the present year. The damage to our trade was so serious that the Government of India should be urged to deal with the matter without further delay.

The Chairman then referred to the results which had accrued from the Trade Agreements which had been made by the Government during the past two years with a number of countries in Europe—principally in Scandinavia and the Baltic regions—and with Argentina. Our trade with each of these countries had one common feature—that we bought much more from them than they bought from us; but, as the immediate result of these agreements, the unfavourable merchandise trade balance had been reduced from £95 millions in 1932 to £69 millions in 1935. Although the most important contribution to the reduction of the trade balance was an increase of practically 50 per cent. in our exports to these countries, the advantages were mutual and our imports from each country had increased, except those from Norway, where there had been no change, and from Denmark and Argentina, where they had been reduced by the restrictions, expressly provided for in the agreements, which were necessary to conform to our agricultural policy.

A BARGAINING FACTOR

Nevertheless, we were still buying nearly three times as much in value from Denmark and Argentina as they bought from us. The revision of these agreements was due to take place during the next twelve months, and it appeared that, after allowing for our invisible exports, there must still remain a considerable margin of trade which could be used, and should be used, as a bargaining factor in the negotiations.

We were a creditor nation—a fact frankly admitted in all our negotiations—but it could not be denied that, in many cases, we were not getting the full advantage to which we were entitled as the largest buyers of agricultural and pastoral products in the world.

The Chairman added that an examination of the figures upon which his remarks were based seemed to lead to two definite conclusions. In the first place, it was clear that the policy adopted by the Government was proving of value to the export trade, and it was also clear that there was ample room for this policy to be carried further, for the Trade Agreements to be improved upon, and a considerable increase in our export figures obtained in return for the valuable, and largely free, market which this country offered.

COTTON AND COAL

The agreements had another feature which had proved to be a real value, as, in a number of cases, a specific provision was included that not less than a certain percentage of the imports of coal should be obtained from the United Kingdom. In every case this condition had been observed, and the volume of our exports of coal to the countries in question had increased by more than 50 per cent. between 1933 and 1935. There appeared to be no reason why, without in any way detracting from the advantages which had accrued to the coal mining industry, similar specific provisions should not be made for cotton goods, the exports of which, after all, were still twice as great in value as those of coal. It was recognised that the cotton trade had received

some benefit from these agreements, but it was a significant fact that the exports of cotton piece-goods to this group of Trade Agreement countries had decreased by some 35 million yards between 1934 and 1935.

If arrangements had been made for cotton similar to those made, in some cases, for coal, this diminution in trade might have been avoided. The greater part of this decrease in the exports of cotton goods to the Trade Agreement countries was attributable to the reduction in exports to Argentina. The United Kingdom takes nearly 40 per cent. of Argentina's total exports—a substantially larger share than we used to take—and, to that extent the United Kingdom, relatively to other countries, is a better customer of Argentina than she was. In those circumstances, we should be entitled to a larger share of her import trade, and this is especially true of our exports of cotton goods.

In this connection, it was worthy of note that the exports of cotton piece goods from Japan to Argentina had increased from less than eight million square yards in 1930 to more than 103 million square yards in 1935. These facts would appear to merit full consideration in the negotiations which would doubtless follow the decision to terminate the existing agreement.

EXTEND THE NEGOTIATION POLICY

The Chairman concluded: "I have purposely dealt at some length with the conditions obtaining in those markets where efforts—and successful efforts—have been made to improve British trade by regulation or negotiation. It appears to me that, apart from a general increase in world purchasing power, and apart from such reorganisation as may be necessary in the structure of our industry at home, any improvement in that section of our own trade which is confined to export markets must be dependent upon a continuation and extension of that policy which has already been proved to be capable of achieving the desired end.

"In the meanwhile our plant is being kept in a high state of efficiency, and advantage is being taken of every improvement that can be introduced to enable us to obtain the maximum benefit from any increase in the volume of trade. You may rest assured that these efforts will be continuously maintained."

The resolution approving the report and the accounts was moved by the Chairman, seconded by Sir William Clare Lees, and carried unanimously.

On the motion of Mr A. L. Arnold, seconded by Mr George Lee, the retiring directors were re-elected, and the election of Messrs C. H. V. Elliott, A. M. Hamilton, W. H. Clare Lees, H. B. McCance and R. C. Reynolds as directors of the Association was confirmed.

NEW DIRECTORS

With regard to the new directors, Mr Arnold explained that Mr Elliott was in charge of a branch of the Association in the Nottinghamshire area, Mr Hamilton in Scotland, Mr Clare Lees in England and Mr. McCance in Northern Ireland, whilst Mr Reynolds, as executive officer, had held a position of responsibility and importance in connection with the central organisation of the Association. He was informed that the election of these gentlemen to the board would involve no added cost to the Association, as they were already serving in managerial positions for which they were remunerated. Their election to the board was a recognition of their services and would give them an added status in representing the interests of the Association in their various spheres.

The re-election of the joint auditors, Messrs Jones Crewdson and Youatt and Messrs P. and J. Kevan, was proposed by Mr W. B. Morison, seconded by Mr J. Rosbottom, and carried unanimously, and the meeting terminated with a vote of thanks to the Chairman, proposed by Mr S. S. Nightingale, seconded by Mr H. H. Feather, and carried unanimously.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

MEXICAN RAILWAY COMPANY, LIMITED

INCREASE IN GROSS RECEIPTS

INCESSANT DEMANDS OF LABOUR

FINAL RESULT UNSATISFACTORY

MR VINCENT W. YORKE'S ADDRESS

The one hundred and forty-second ordinary general meeting of the Mexican Railway Company, Limited, was held, on the 24th instant, at Winchester House, London, E.C.

Mr Vincent W. Yorke (the chairman) said:—Gentlemen, I fear that those of you who attended our last general meeting must have left it in a despondent mood, and I regret that I cannot hold out any hope that any of my remarks to-day will be of a cheerful or more encouraging nature.

I should perhaps in the first place apologise for the absence from the report of the usual statistics, which I, and I expect many of you, always study with interest. The excuse given for their absence in paragraph 9 of the report is, I can assure you, no empty one. I know from personal observation of the very great difficulties which beset those responsible for our office work in Mexico City to-day. I trust, however, that there will be no recurrence of these omissions in the future.

There is no fault to be found with our gross receipts for the half-year under review, which have reached the high figure of over 6½ million pesos, an increase of over 11 per cent. compared with the corresponding half-year of 1934. This increase is well spread over passenger traffic and both foreign and national goods traffic, the only decrease shown being in fuel oil. This latter traffic, however, has made a good recovery during the current half-year. The average rate received per ton, which has increased from \$9.55 to \$10.18 per ton, owing to a substantial increase in foreign goods traffic, our best paying traffic, is also satisfactory. The increase in our gross takings in the last few years has been really remarkable. In the corresponding half-year of 1932 they were as low as \$3,900,000, compared with the figure I have just mentioned of \$6½ millions, or in other words there has been an average increase of \$440,900 for each of the last six half-years.

GROWTH OF EXPENSES

Under ordinary circumstances it would have been possible to retain a material portion of this remarkable increase in the form of net earnings, but incessant agitation on the part of our employees under the aegis of the labour law, and supported so far as we can judge by the Government, has diverted the earnings which should have emerged into the pockets of the company's servants. Expenses in every department have been enormously swollen by the payment for the seventh day, which is now the law of the land, and by many other privileges which we have been forced to concede.

Thus, dealing with the results of the last half-year, while gross receipts have increased by 11.18 per cent., expenses have increased by no less than 20.45 per cent. It is true that a large part of the increase in expenses is due to the additional allocation of 4 per cent. of the gross receipts to renewals account, the reasons for which I gave you at some length at our last meeting, but if the figures for the two half-years are placed on a strictly comparable basis, net earnings have been reduced by \$145,000, in spite of an increase in gross earnings of \$662,000, which can only be described as a most lamentable showing.

After making the necessary adjustments for exchange there is left in sterling the paltry sum of £4,566 towards payment of debenture and other interest accrued during the half-year of £88,000.

THE CURRENT HALF-YEAR

The results of the current half-year show that the tendencies of both receipts and expenses remain the same as I have already indicated, receipts showing an increase for the four months to April 30th of \$340,000 and expenses an increase of \$688,000, with the result that net receipts for the four months are only \$96,000, as compared with \$450,000 in 1935. We shall, therefore, probably not earn more than \$150,000 for the whole of the current half-year in spite of an increase in gross receipts of about \$500,000.

I am glad, however, to be able to state that we were successful for the second time in succession in disposing of the coupons of the 40-year non-interest-bearing bonds which we hold in respect of compensation, at a very reasonable discount—that is, about 2½ per cent. This is equivalent to the receipt in pesos of \$351,223, which will in due course be added to the net revenue for the half-year.

STRAIN ON ROLLING STOCK

The increase in traffic means necessarily a greater strain on our already over-strained equipment, and we are finding it more and more difficult to cope with the business offering. The 50 new freight cars ordered a year ago are already insufficient, and we are being urged by the management to purchase another 70 at once. The number of motor cars and trucks carried last half-year was 1,711, nearly a thousand more units than in the corresponding half-year, and it is estimated that the number may rise to 200 per week in the near future. As only three units can be carried in one box car, it is clear that a number of cars will be absorbed by this traffic alone. At the same time, road competition which is steadily increasing, as a motor road from Mexico City has now reached Vera Cruz, calls for prompt delivery, which can only be effected by a sufficient supply of freight cars.

Our locomotives are also suffering under the increased strain, which necessitates their remaining in service when they should be under repair in the shops, a situation not only dangerous but leading in the end to inordinate expense. They are also in many cases obsolete by age and of inadequate capacity to deal with modern train loads. Small wonder, therefore, if we are also being pressed by the management to acquire a number of new modern locomotives. Unfortunately, the only money that we earn is in depreciated pesos, and it takes a vast number of these to pay for cars and locomotives which can only be bought with American dollars or English pounds. While we in London sympathise with the management in Mexico, we must cut our coat according to our cloth, and shall find it very difficult to accede to their demands, however well justified we may know them to be.

It is satisfactory to be able to point to a steady development of tourist traffic to Mexico which is being fostered by the continuance of tranquil conditions and the low rate of exchange as compared with the American dollar. Our own share of this traffic showed a marked falling off after the disasters to the vessels of the Ward Line some eighteen months ago, but is now showing a healthy recovery.

BALANCE-SHEET ITEMS

If I may now turn to the balance sheet, there are certain items which appear for the first time and which you may think call for some explanation.

You may have noticed that for several half-years past there has been a note in the account of receipts and expenditure on capital account to the effect that the Pachuca-Tampico Line had been abandoned with the consent of the Mexican Government, and that the necessary adjustments in the capital account would be made at a later date. These adjustments have now been made, and you will see that the cost of the line, less the salvage, appears as a loss on the debtor side of the balance sheet.

The salvage, which is equivalent to nearly £20,000, consists of rails which have been or will be applied to the relaying of the Puebla Branch. The loss, of course, is a serious one, but looking back it is difficult to criticise ourselves seriously for having incurred it. At the time when the purchase was made we, in common with the other railways of the country, were making good profits, and it seemed to offer a good opportunity for extending our operations, which were then, as they are now, somewhat narrowly circumscribed. It was difficult also to realise the danger of road competition, which has been the real reason for its abandonment.

LATEST CABLEGRAM

I will now read a cablegram just received from the general manager:—"Tourist bookings from United States increasing and outlook promising; import traffic continues upward. Local traffic heavy. Stocks of staples at storage points on line increasing. Crops Upper Division fairly good but rain required. Lower Division crops abundant. Factories working on satisfactory scale. Generally speaking, prospects next half-year very encouraging if stable conditions continue. Political and general situation unchanged. To June 14th traffic shows the following increases: Passengers 16 per cent., sleeping cars 17 per cent., local freight 9 per cent., foreign 5 per cent., pulque 8 per cent. Only decreases express traffic 6 per cent. and oil fuel 5 per cent."

It is evident from what he says that the prospects of increased traffic are highly encouraging, but I can hold out little, if any, hope to you of a corresponding increase in net earnings. In the present spirit of the labouring classes in Mexico, supported as it seems to be by the Government, any increase in our prosperity is only likely to encourage demands for fresh concessions. The only effectual remedy to apply to the situation would be a substantial increase in our rates, but I cannot hold out any hope to you at present that such an increase will be granted to us.

The report and accounts were unanimously adopted.

"SHELL" TRANSPORT AND TRADING COMPANY, LIMITED

LARGER PROFITS AND DIVIDEND

BURDEN OF TAXATION ON OIL INDUSTRY

The annual general meeting of the "Shell" Transport and Trading Company, Limited, was held, on the 23rd instant, in London, the Right. Hon. Viscount Bearsted, M.C., the chairman, presiding.

The Chairman, in the course of his speech, said: Whilst the company's assets amount to upwards of £49,300,000, the creditors amount to £63,000. The profits available for distribution, including the carry-forward from last year, are upwards of £1,200,000 greater than those available for distribution in 1934. This very gratifying increase enables us to increase the dividend of 12½ per cent. free of tax in 1934 to 17½ per cent., also free of tax, for 1935 without drawing on the amount brought forward, the carry-forward to the credit of 1936 amounting to £381,691.

The question of an interim dividend will again receive the most serious consideration of your directors, but in the distressed and distressing state of world affairs I am in no position to make any definite statement. All I can say is that the declaration or non-declaration of such dividend must not be taken as any indication of the state of the Group's profits.

Our profits are trading profits and do not include such obvious credits to capital account as the repayment of part of the capital invested in the Venezuelan Oil Concessions, Limited. Their increase is sufficiently explained if you look at the figures of our turnover. Our production increased from 24,000,000 tons to over 26,500,000, and the tonnage of our fleet increased by 100,000 tons carrying capacity. Whereas the world production figures show an increase of about 7 per cent., we showed 10 per cent. As consumption rose in somewhat similar proportion, the increase was absorbed without disturbance of the markets.

TAXATION BURDEN

A factor limiting the expansion of demand in the United Kingdom is the enormous and ever-growing weight of special taxation borne by the oil industry. Special taxation of petroleum products, which was non-existent in the United Kingdom in 1928, amounted to £12,982,000 in 1929 and £42,323,000 in 1935, for 5.9 per cent. of the total national revenue (other than self-balancing revenue) of £716,441,000. Total taxation imposed on users of petroleum products is much greater, and for the financial year ended March, 1929, amounted to £38,000,000, whilst for the year ended March, 1935, it amounted to £74,000,000, or over 10 per cent. of the total national revenue. The sums contributed directly by the Group to various Governments throughout the world are even more striking. The gross figure paid by all the companies in which the Group is interested was £89,000,000, exclusive of income tax.

CONTRIBUTION TO GENERAL PROSPERITY

In the United Kingdom 8d. of the cost of every gallon of petrol or heavy oil used as motor fuel represents tax; the retail price of petrol is 1s. 6d. a gallon, which, after deducting tax, leaves only 10d. to meet both the c.i.f. cost of the petrol and also all the marketing and transport costs, leakage, and evaporation, together with the retailer's profit. A great deal of nonsense is often talked about the cost of "imported" oil, but of the price of 1s. 6d. a gallon paid by the motorist only 22 per cent., or 4d. per gallon, goes in payment for the imported product, while no less than 44 per cent. is collected by the Government in taxation. The import cost includes the cost of ocean freight, and the existence of this carrying trade in oil constitutes an immense asset for the British mercantile marine. In addition the oil-distributing companies last year paid the British railways some £2,000,000 for the carriage of their merchandise, and the oil industry is one of the chief customers of the engineering and iron and steel trades, and, through setting up a demand for steel, greatly benefits the coal industry also.

Apart from the direct purchases of British industrial products, many British industries could not possibly have been developed at all without the help and active co-operation of the oil industry, as, for instance, motors and aircraft.

NEED FOR PROGRESSIVE ROAD POLICY

Nothing will stimulate the present industrial revival on better and sounder lines than a progressive road policy. There is still room, or, I would rather say, need for road development on a

very wide scale. We need new roads and better roads in place of those existing. A bold policy of road development will provide, directly and indirectly, employment in a variety of forms. The motor industry—with all its important ramifications—has reached a stage when it requires much greater elbow room in the shape of new roads if it is to continue to expand. As things stand to-day petroleum users in this country get a very inadequate return for their annual payment of over £74,000,000.

You will not have failed to notice the comparative success attendant on progressive industries such as our own and those which I have just mentioned, in contrast with some other commercial interests that cannot offer the service required to-day. In face of this and of the enormous sums of money invested in these industries by prudent British shareholders—who in the case of your company alone number well over 100,000—I cannot forbear from a passing reference to the policy exercised by recent Governments. This policy aims at penalising by taxation the successful and expanding industries such as motors, oil and diesel engines, and the numerous light industries connected with or dependent on road transport, in an endeavour to bolster up declining industries. The detrimental effects of this on employment need no elaboration. I suggest that the more statesmanlike policy would be to encourage the expanding industries, which give some hope of increasing the total amount of employment available, to expand still further, while helping the contracting industries to adjust themselves to present world conditions with as little friction as possible.

IMPROVEMENT IN U.S.A.

The prosperity of the oil industry generally throughout the world depends largely on conditions of the industry in the United States. I am very glad, therefore, to report that the year 1935 saw an improvement in American oil affairs. Although the N.R.A. was declared invalid by the Supreme Court curtailment of crude production was continued by those States which had their own laws for that purpose, and co-operation between most of the oil-producing States was secured by the so-called inter-State compact.

There are, however, two flaws in this picture. The first is that Louisiana, which is assuming more importance as an oil producer, did not subscribe to the inter-State compact, and the second is that California, one of the largest oil-producing States, has no curtailment law, and, although towards the end of the year strenuous efforts on the part of the leading oil companies were successful in bringing about a scheme of voluntary curtailment, obviously, so long as Californian curtailment is not properly regulated, a state of uncertainty exists. The benefit of a return to reasonable petrol and fuel oil prices is shown by the fact that the Shell Union Company are now resuming payment of preference dividends and have been able to refund their debentures on a 3½ per cent. basis.

STRICT COMMERCIAL POLICY

With regard to Japan and Manchuria, negotiations between the Government of Japan and our company with regard to the provisions of the new petroleum law are still proceeding, and I am still hoping that a mutually satisfactory settlement can be reached. We, as a trading concern, have found it necessary—not only in Japan but in every other country where we do business—to conduct our affairs strictly on a commercial basis, paying attention to economics and avoiding politics. Although we are being pressed in many countries towards a line of action which is quite at variance with our position as bona-fide traders, it must in the long run be to the advantage of the public, whom it is our duty to serve, that the company should keep itself entirely clear of political issues.

As a result of recent conversations with the Mexican Government the Mexican Eagle Company's relations with the Government are on more satisfactory terms, and there is a very definite indication that co-operation between the Government and the company has improved.

The development of aviation throughout the world continues apace, and, as we foresaw, is becoming more and more an important means of transport. By general accord amongst those interested in aviation the Shell organisation has been an important contributing factor to its successful growth.

For all purposes for which they are in demand it is our definite policy—successfully carried out over a long period of years—to supply our customers with a range of petroleum products second to none.

The report and accounts were unanimously adopted.

BRISTOL AEROPLANE COMPANY, LIMITED

INCREASE OF CAPITAL APPROVED

EXPANSION OF OPERATIONS

The first annual general meeting of the Bristol Aeroplane Company, Limited, was held, on the 23rd instant, at Bristol.

Mr W. G. Verdon Smith, C.B.E., who presided, said that although the company had behind it a record of 26 years of aircraft manufacture this was the first ordinary general meeting since the company was converted to a public company. The past year had been one of considerable activity and they would see from the accounts that the net income for the year, including £4,097 from the sale of Treasury bonds, amounted to £306,724. After deduction of directors' fees and provision for income-tax, the balance remaining was £237,224, which, with the balance of £29,757 brought forward from the previous year, gave a total net revenue available for appropriation of £266,982. The directors considered that ample reserve should be provided against any contingency and they have therefore placed £100,000 to a general reserve account. After allowing for the dividends which had been paid during the year, viz., 5 per cent. on the cumulative preference shares and an interim dividend of 7½ per cent. on the ordinary shares, there remained a balance of £108,857. The board recommended that this sum be appropriated to the payment of a final dividend on the ordinary shares of 15 per cent. (making a total distribution to the ordinary shareholders of 22½ per cent. for the year) and that the remaining balance of £40,232 be carried forward to the credit of the next account.

FACTORY ADDITIONS

The board had had to provide as a matter of urgent necessity for extensive additions to the factories, machinery and equipment and for that purpose the cash resources had had to be utilised together with a further sum of £258,747 obtained from the company's bankers by way of loan.

In view of this position, and to provide for substantial outlays during the current year, new capital was required. A resolution would therefore be submitted for increasing the ordinary capital by the creation of 1,200,000 new ordinary shares of 10s. each. These new shares would be offered forthwith to the ordinary shareholders at 25s. per share at the rate of one new share for every ordinary share now held. The new shares would rank equally in all respects with the existing ordinary capital as from January 1st last.

The company's works, both aircraft and engine, had been engaged to capacity throughout the year.

The demand for the company's products, both at home and abroad, were greater than could be supplied with their various resources at the beginning of last year. It was then evident that greatly increased aircraft equipment would be required by the Royal Air Force, and, without waiting for definite information as to such requirements, the company entered upon a considerable scheme of building and plant so as to cope with demands as they arose.

AN UP-TO-DATE ORGANISATION

With the rapid growth of the company's business, the office accommodation had become unsuitable and insufficient. A new block of offices had, therefore, been erected, and its occupation by the administrative staff had released a considerable amount of accommodation for other purposes connected with production. These new offices, embodying the latest practice in office design and arrangement, should result in a maximum efficiency.

As they could well imagine, the gradual change-over to new types of aircraft and engines, together with the greatly increased demand for their products, had involved numerous difficulties arising from the reorganisation and extension of premises and plant. Those difficulties had been overcome, and the company had been able to fulfil all commitments to its customers without interruption or delay in deliveries.

To state the position in general terms, the company had now succeeded in providing an organisation in which was combined factories for the construction of aircraft and of aeroplane engines, an aerodrome at Filton fully equipped for the testing of machines and the training of pilots, and, in addition, the new flying school at Yatesbury. Taken altogether, the organisation formed a complete manufacturing unit for the construction of aircraft and engines and their flight testing on a scale which made the whole concern a national asset of the highest value for both civil and military purposes.

SUCCESS OF NEW AIRCRAFT DESIGN

The urgent requirement for aircraft of very high speed led the company to concentrate on experiments for the development of

a design of aircraft into which was introduced the company's new form of "stressed skin" construction. These and other important features embodying the latest patents in aircraft design were incorporated in a new type of aircraft ordered by Lord Rothermere, and that machine, on being tested at the Government station at Martlesham, showed such outstanding merits as to justify its adoption, with certain modifications, as a standard military machine for the Air Ministry. The aircraft was ordered by Lord Rothermere for his own use and paid for in full by him. It was on the proof of its high qualities for military purposes that Lord Rothermere presented the machine to the Government, and this type of aircraft was now being constructed in considerable numbers for the British Government.

It was anticipated that the company's factories would continue to work at full pressure at any rate for the duration of the Government expansion period. Further, as stated in Parliament, national requirements for air defence purposes were of such magnitude that the Government had decided to supplement the existing manufacturing resources of the country by the creation of a shadow industry which they were informed was not intended to supply normal requirements, but was for the special purpose of supplying demand under the expansion scheme and afterwards for providing manufacturing capacity available in a time of national emergency. The company's aircraft and engines had been chosen for manufacture under the proposed shadow industry, and various questions affecting the company which arose in connection with this scheme were now the subject of discussion with the Air Ministry.

In view of the probable future normal requirements and the insistent demand for the company's products from foreign countries, they believed there would be full and remunerative occupation for the whole of the enlarged organisation.

FOREIGN SALES

The position with regard to foreign sales was still encouraging. The company's engines continued to be constructed under licence in several foreign countries, and there had been an increase in the sales of their products in the Dominions and other parts of the world. During the past year engines had been supplied to Australia, Finland, Iraq, Poland, Persia, Denmark, Latvia, Lithuania and China. Further substantial foreign orders for engines were being executed and others were being negotiated. Their latest aircraft, known as the "Blenheim," was not yet released by the Government for sale, but it had already attracted an enormous amount of interest in many countries. At a time when they were fulfilling large orders for the British Government they were endeavouring not only to maintain but to extend their foreign trade which had been built up by their sales organisation over a long period of years.

The company's engines continued to operate successfully in the large fleet of aircraft of Imperial Airways in Europe and in the Mediterranean, and were also giving complete satisfaction in civil aircraft in commercial use on the Continent. The company had recently entered into a contract with Imperial Airways for the supply of further engines, the contract being the largest ever placed by a British company for engines for civil purposes. Those engines were of the "Bristol Pegasus" type, and were being installed in the fleet of flying boats now under construction for the new Empire services. The company was not permitting production on a large scale to delay new design and technical developments, and new types of aircraft engines were being developed, the details of which could not be divulged.

It would doubtless be of interest to shareholders to know that the development of the new "Bristol" sleeve-valve air-cooled series of engine, upon which the experimental department had been working for some years past, was well advanced. Their engineers were of the opinion that this sleeve-valve engine would provide higher power and greater efficiency than had been obtained with any previous series of "Bristol" engines.

The board, added the Chairman, recognise that the staff and body of employees—7,700 in number—whether engaged in testing or production, took the keenest possible interest in their individual work and craftsmanship, making in that way their full contribution to the outstanding success attained by "Bristol" products.

The report and accounts were unanimously adopted, and the increase of capital approved.

GEORGE NEWNES, LIMITED

A PROSPEROUS YEAR

DIVIDEND OF 15 PER CENT.

The thirty-ninth annual general meeting of George Newnes, Limited, was held, on the 25th instant, at 8 Southampton Street, Strand, London, W.C.2.

Sir Frank Newnes, Bart., the Chairman, presiding, congratulated the shareholders on another successful year and on the very sound financial position of the company. A dividend of 15 per cent. for the year was declared. The Chairman, after a reference to the company's new buildings nearing completion, and to other matters of interest, including the acquisition of all the ordinary shares of The National Trade Press, Limited, a prosperous publishing house, and to the termination on December 31st next of the B.B.C. contract for printing and publishing "The Radio Times," continued:—

"It has been customary for me to say something about the company's publications. They are an ever-growing number, and, if I am to be brief, I can only mention a very few of them. It has always been the policy of your directors to take advantage of every modern printing improvement and to keep abreast with every new development in magazine production. "The Strand Magazine" to-day, both in its contents and its production, and its circulation, is second to none. During the year its page-size has been enlarged a little, with a view of getting larger and more striking colour illustrations and otherwise enhancing its attractiveness to reader as well as to advertiser. The magazine remains just as popular as ever and with an increased circulation this year. Advertisers have welcomed the enlarged size, and their support is undiminished. The consistent popularity of "The Wide World Magazine" is very gratifying and shows no falling off. "The Grand Magazine" and "The Happy Magazine" hold their own and have a leading place among English fiction magazines. I am glad to say that "Tit-Bits" is prosperous and full of vigour. No literary weekly has anything like the circulation of our "John o' London's Weekly." It remains unsurpassed both in interest and circulation. "The Humorist" is as humorous as ever and continues to gain ground in circulation. "Practical Motorist," one of our newcomers, is doing well, and our latest newcomer, "The Cyclist," met with instant success.

The women's journals and magazines published by the subsidiary company, Leach's Publications, Limited, and which are owned jointly by ourselves and C. Arthur Pearson, Limited, now hold an important place in our many activities. I shall name five which show very gratifying results for the year, "Modern Woman," "Modern Home," "Miss Modern," "Lady's Companion," and "Woman's Own." The demand for advertising space in these journals has exceeded that of any previous year. Considering the quality and circulation of these journals, that is just what we would expect. "Home Notes," which, of course, is the property of C. Arthur Pearson, Limited, has also had a good year. It is in the very front rank of women's papers and continues its successful career undiminished. It is of particular interest to know that a recent issue was a record issue in advertisements during the whole of its 42 years' existence.

Amongst other publications of C. Arthur Pearson, Ltd., besides "Home Notes," are "Pearson's Magazine," "Pearson's Weekly," "Home Gardening" and "The Smallholder," and there have been three newcomers during the year, one a shilling monthly, "Men Only," one a sixpenny monthly, "Woman's Sphere," and the other, "Lucky Star," a popular weekly. Pearson's have also acquired during the year a controlling interest in "Popular Flying," which appeals to a large and growing public interested in aviation. These four new publications have every prospect of adding to the company's profits.

I must mention two other of our subsidiary companies, Country Life, Limited, and W. H. & L. Collingridge, Limited. The former company has had a good year with the beautifully produced paper, "Country Life," and also with "Homes and Gardens." Both of these magnificent papers continue to add to their fine reputations. "Amateur Gardening," owned by the Collingridge subsidiary company, is, as I have said before, the widest read gardening paper in the country, and, I may add, its prosperity continues.

The proof that advertisers are alive to the value of our various publications to sell their goods is evidenced by the increased advertising revenue during the year. It is the highest for a good many years. This is very gratifying, for advertisers, being experts, know what they are about.

The directors again warmly thank the staff for their valued work during the year. It has been highly appreciated. We thank them for their energy, their resource, and loyal service.

GENERAL ELECTRIC COMPANY, LIMITED

DISTRIBUTION OF 15 PER CENT.

RECORD VOLUME OF EXPORT BUSINESS

The annual general meeting of the General Electric Company, Limited, was held, on the 25th instant, at Magnet House, Kingsway, London.

The Rt. Hon. Lord Hirst of Witton (chairman and managing director), in the course of his speech, said: As regards the profit and loss account, the outstanding feature is the figure denoting profit on trading and income from investments, which is about £300,000 more than last year.

We thought a cash bonus of 5 per cent., in addition to our usual 10 per cent. dividend, is a reasonable and satisfactory distribution of profits, more especially as shareholders reap additional benefit this year through the bonus issue which we have announced in connection with a moderate increase of our capital.

Our main activities have, of course, been concentrated on the supply to the home market, but we have made considerable progress during the last year in the supply to our Dominions Overseas and to our Colonies and also to foreign countries, mainly those which can be described as being within the sterling area. The steady growth of our export business has continued, our increase over the previous year being in the neighbourhood of 20 per cent. The volume of our total exports constitutes a record in the company's history, though the actual money value falls a little short of the year 1929-30, when prices were considerably higher. I am pleased to say that the increase we have achieved is mainly due to exports to the British Empire, which now absorbs over 75 per cent. of our overseas shipments.

The increased activity reported last year in the heavy engineering workshops at Witton has been well maintained, and the number of employees at our Witton works has risen to 8,000. Striking advances have been achieved in several directions, two outstanding examples of which are the introduction of the pumpless air-cooled mercury arc rectifier and the completion of the high-power test laboratories. In putting the pumpless air-cooled mercury arc rectifier on the market, we lead, not only in this country, but in the world.

Among the many orders for Turbo alternators received during the year, a third 62,000 K.V.A. generator for the Birmingham Hams Hall Power Station may be mentioned. This is the sixth set supplied by the G.E.C. to this station, making a total of 300,000 k.v.a. in all.

A further large Turbo set of 30,000 k.v.a. has been ordered by the Johannesburg Municipality, bringing the total capacity in this power station to 120,000 k.v.a. It is interesting to note that this new set will generate at 20,000 volts.

Our position in connection with railway electrification has been well maintained, and a number of orders have been received from the London Passenger Transport Board.

EQUIPMENT FOR THE "QUEEN MARY"

The field of communication has seen further development and expansion. Our telephone works have received their full share of all this work, and have kept busy throughout the year for contracts at home and abroad. The telephone equipment for the Cunard-White Star liner "Queen Mary" was installed by our Coventry works, and incidentally we were responsible also for the lighting of practically all the public rooms in that magnificent ship.

You will, I know, expect me to make some reference to the advent of television. The recommendations of the Selsdon Committee have been very largely adopted by the Postmaster-General, and the public is now awaiting the announcement of public transmissions. Your company is ready with its receivers immediately these transmissions commence, and you may rest assured that we shall be able to take our place in the arena when the moment arrives.

We have also made great progress in the field of illumination. Floodlighting, colour lighting, neon lighting, architectural lighting all have their special uses. But the most important development during the year has been the study of aerodrome lighting, and to show our success I may mention that during the last twelve months we have received contracts for the lighting of aerodromes at Gravesend, Gatwick, Leicester, Leeds, Brussels, Penang, Singapore, Durban, Rhodesia and Jodhpur. The Indian Government alone have entrusted us with the lighting of twelve aerodromes from Karachi to Rangoon.

The report and accounts were unanimously adopted, and at a subsequent extraordinary general meeting resolutions were passed removing the restrictions on British ordinary shares and authorising the conversion of all shares into stock.

ASSOCIATED TIN MINES OF NIGERIA, LIMITED

BENEFITS OF INTERNATIONAL CONTROL

The ninth ordinary general meeting of the Associated Tin Mines of Nigeria, Limited, was held, on the 24th instant, at 20 Aldermanbury, London.

Mr Douglas Christopherson (the chairman) presided, and in the course of his speech said: A profit of £207,311 is shown, compared with £144,020 last year, but this greatly increased profit is not entirely due to sale of tin concentrates won during the year, as £29,144 was received from our participation in the Buffer Stock, and the total sales were further assisted by the absorption into output of some 400 tons of reserve stocks, in respect of which tonnage the costs charged are those relative to dressing, bagging and realisation only.

We propose to pay a final dividend of 7½ per cent., less tax, making a total distribution for the year of 17½ per cent. With regard to the current year, we have decided to pay a first interim dividend of 5 per cent. at the same time.

Our ore reserves now stand at 50,666 tons, of 70 per cent. concentrates, compared with 47,324 tons at the end of 1934. That position, you will agree, is extremely satisfactory, especially as there is still a considerable acreage totally unprospected, or only partially prospected.

TIN PRODUCTION AND CONSUMPTION

In view of the fact, so well known to all of you, that negotiations are now proceeding for the renewal of the International Tin Control Scheme, it is, I believe, an opportune moment to emphasise the benefit derived by all sides of our industry from this scheme.

The year 1935 proved to be a year of active expansion in both consumption and production of tin. World production amounted to 139,120 tons, and world consumption to 142,531 tons. These figures show how closely production has been kept parallel with consumption. I may remind you that in previous years when increased demand occurred, increased supplies have been forthcoming to such an extent that markets became glutted with unwanted stocks and prices fell to ruinous levels.

The average price of spot tin over the whole year was £226, the daily price during the whole year having been always within £20 of that average. As a matter of fact from the middle of 1933 to the end of 1935, price fluctuations have been kept within those limits, and again it must be borne in mind that period was when potential production had been enormously developed. The maintenance of a price within such reasonable limits would obviously have been utterly impossible without careful control of production.

This in itself proves the benefits of the international control scheme to both the producer and the consumer of the metal, while the dealer is able to carry on his business with reasonable margins. The only person who suffers by control is the pure gambler who has no stake whatever in the industry and prefers to see large fluctuations in price.

With regard to the recent decline in tin prices, in my opinion this illustrates the point that control of output alone is not sufficient, and I hope that the International Tin Committee will give this matter their earnest consideration. I would suggest that the international delegates should propose to the Governments concerned that a reasonable stock of metal should be held in the Straits and in London and New York to be released, or not, in sufficient quantities to keep the price at a reasonably level figure. This would strengthen the position as regards the maintenance of an average price. The price, of course, could and would fluctuate within reasonable but not excessive limits, according to supply and demand. This reserve of metal to be controlled by one man or a small committee. If it were found possible to do this, and the renewed tin control agreement were for not less than five years, it would, I feel certain, be of very great benefit to all producers, to all consumers, and to the dealers in the metal.

It has been argued that the maintenance of the price of tin metal at £200 or over, would stimulate outside production, and would lead to the introduction of substitutes. The answer to the former is that production from sources outside the signatory and adhering countries has since 1933 shown a steady decline. As regards substitution, so far from being displaced by other materials, there is considerable development in the use of tinplate as a container in fields where it has not been previously considered. I venture to say that the maintenance of the price of tin at £200 to £220 is a fair and reasonable price to both consumer and producer.

The report and accounts were unanimously adopted.

BANGRIN TIN DREDGING COMPANY, LIMITED

SIAM AND RESTRICTION

The sixteenth ordinary general meeting of this company was held, on the 22nd instant, at Winchester House, E.C.

Mr Kenneth O. Hunter presided in the absence, through indisposition, of Sir Cyril K. Butler, the chairman of the company, and read his speech, in which it was stated that the operations during 1935 showed some contraction when compared with those of 1934, and whereas they were enabled by purchase of quota to produce 68 per cent. of their restriction assessment in 1934, they had only been able to produce 48 per cent. of the assessment during 1935. The output in 1935 was 430 tons of tin ore, compared with 668 tons in 1934.

Mining revenue amounted to £68,621, against £102,342 in the previous year, the fall being due to the smaller output.

The profit from mining operations amounted to £13,770, compared with £23,272 in the previous year, and after adding £2,884 as interest earnings and providing for the writing off of prospecting expenses, general administration and other expenses in London, there remained a credit balance for the year of £12,915. It was proposed to pay a dividend of 5 per cent. for the year and to carry forward £7,327. The balance sheet showed the strong liquid position of the company, cash and gilt-edged securities totalling £136,686 out of capital and reserves amounting to £336,118.

Since the beginning of 1935 the amount of quota available for the company's working in Siam had continued to shrink. The quota available for the first six months of the year was 48.7 per cent. of assessment and the last six months 46.6 per cent. of assessment, as against 58 per cent., 55 per cent. and 53 per cent. of assessment in 1934. The quota for the first six months of 1936 was raised slightly to 54.6 per cent. of assessment, and in May last was further increased by 8.3 per cent. The assessment of this company had remained unaltered.

Some doubt appeared to exist as to whether the present restriction agreement would survive after the end of 1936. Should the efforts to renew the agreement after 1936 unfortunately fail, then they must be prepared to face a period of falling prices and bad conditions in the tin mining industry, but, should this happen, their company could face the position with confidence as their production costs are low and their operating plants efficient.

The report and accounts were adopted.

SIAMESE TIN SYNDICATE, LIMITED

SIAM'S QUOTA UNDER RESTRICTION

The twenty-ninth ordinary general meeting of this company was held, on the 22nd instant, at Winchester House, London.

Mr Kenneth O. Hunter presided in the absence, through indisposition, of Sir Cyril K. Butler, the chairman of the company, and read his speech, in which it was stated that in November last he paid a visit to the East, where he went carefully into questions affecting the future policy of the company, particularly with regard to prospecting and the position that had arisen in Siam in connection with the proposed renewal of restriction. He brought before the responsible Minister the difficult position that tin producers in Siam were encountering, and emphasised the necessity for the Government to obtain a larger tonnage of permitted output. At the same time he pointed out how important it was that all the signatory Powers to the restriction scheme should hang together for the well-being of the industry generally.

The total mining revenue for the past year amounted to £163,117, and after deducting the cost of mining operations and the provision made for amortisation of properties and depreciation of plant, there was a net mining revenue of £47,114. Two dividends of 10 per cent. each had been paid during 1935. It was regretted that results obtained in the later months of the year were not up to our anticipations.

The total yardage of payable ground at present held by the company, including the unworked remainder of the original areas, plus additions thereto in the East, amounted to approximately 154,000,000 cubic yards, the average value of which was higher than 1s. 2d. per pound per cubic yard, a position which could be considered highly satisfactory.

Since the beginning of 1935 the amount of quota available for the company's working in Siam had continued to shrink. The quota for the first six months of 1936 was raised slightly to 54.6 per cent. of assessment, and in May last was further increased by 8.3 per cent. The assessments for this company's various mines had remained unaltered.

Some doubt appeared to exist as to whether the present restriction agreement would survive after the end of 1936, but the company could face the position with confidence.

The report and accounts were unanimously adopted.

THE STRAITS PLANTATIONS, LIMITED

DIVIDEND OF SIX PER CENT

Presiding at the annual general meeting of the Straits Plantations, Limited, held on the 19th instant in London, Mr Eric Macfadyen said:—The late Mr H. J. Gillespie was manager of our largest estate and visiting agent to the others for many years before he came home and joined the board. We held him in high esteem as a friend and as a director the shareholders owe him much. We have also suffered another great loss by the death of Mr W. H. Watson, our senior manager.

Mr Maguire and myself have visited the estates at different times during the year. They are situated in what I believe to be the best coconut-growing district in the East; they have an unbroken record of good management, and I have never seen them in better condition. The product of the coconut palm, although perhaps the most valuable of the vegetable oils, has to compete with many others, and of late years we have had to reckon with political complications—tariffs, exchange movements and economic—more properly uneconomic—nationalism. The market for oils has in consequence experienced extreme fluctuations of late.

In the last four years the net prices we have received for our copra, after deducting the heavy item of freight and other selling expenses, have been respectively £10 8s., £6 18s. 4d., £6 4s. 4d. and £8 14s. 6d. At our last meeting I suggested that prices had touched bottom, and the tendency has, in fact, been upwards. The United States Supreme Court decision outlawing the N.R.A. Code produced a temporary reaction, but that was counter-balanced by a rather steep rise, culminating last January, associated with Italian activities in Ethiopia. We may hope for some further improvement in average price in 1936-37, nor do I foresee any reduction in crop.

After two years of dividends at 4 per cent., the lowest rate ever paid by the company, your directors are glad to be able to recommend a distribution of 6 per cent.

Mr F. E. Maguire said that during his recent visit he had been exceedingly glad to find the estates in such an admirable state of cultivation. In several places he had observed a decided improvement, and he had received a very definite impression that the company had a notably capable and loyal staff.

The report and accounts were unanimously adopted.

SCRIBBANS AND COMPANY, LIMITED

EXPANSION OF BUSINESS

The ninth annual general meeting of Scribbans and Company, Limited, was held, on the 24th instant, at the Hotel Victoria, London, W.C.

Mr Philip E. Hill (the chairman) said that, in common with other concerns engaged in their industry, they found themselves in the position of having increased business and less profits. The reduction in their case amounted to some £25,000 less than the comparable figure for the previous year. It was naturally disappointing at a time when industry in this country was so prosperous to show a fall in profits, but the true importance of that was, in his opinion, quite insignificant when compared with the actual expansion of the company's business during the period under review.

The increased prices of raw materials paid by the company and its subsidiary were over £63,000 in excess of those of the previous year. Under normal conditions they should have been able to show an increase in net profits of something in excess of £38,000. During the period under review the company had opened many thousands of new accounts, and its output for the present year showed a steady increase. As far as actual trade was concerned, he was anticipating that 1936 would be an excellent year for sales, but it was quite impossible to make any accurate forecast with regard to the price of raw materials. He personally thought they would see a further rise. They did know they were maintaining the quality of their products. They were manufacturing economically and pursuing an energetic sales policy.

He felt quite confident that when they met next year he would be able to report a still further expansion of business. He personally saw no cause for concern at the setback they had experienced, but genuine grounds for satisfaction on the expansion results they had so far achieved and the further progress so strongly indicated.

The Chairman then referred to the retirement of Mr Hathaway as managing director, but he was glad to say he had agreed to sacrifice some of his well-earned retirement by acting in an advisory capacity on the board.

The report was unanimously adopted, and the proceedings terminated with a vote of thanks to the chairman, directors, and staff.

BANK OF BRITISH WEST AFRICA, LIMITED

IMPROVED CONDITIONS—INCREASED DIVIDEND

The forty-second annual general meeting of the Bank of British West Africa, Limited, was held, on the 23rd instant, at the office of the company, 37 Gracechurch Street, London.

The Right Hon. the Earl of Selborne, K.G., G.C.M.G., the chairman, said:—It is now seven years since I was last able to give you an encouraging or moderately cheerful account of business in West Africa, which has had even more than its full share of the world depression of trade.

In the year, the report and accounts of which are now presented to you, we have done better than for some years past, and it is a great satisfaction to your board that the improvement which there has been in trade, combined with the rigorous economies made in the lean years, have enabled them to recommend a little better return to our shareholders and to our staff.

There has been a real improvement in your business during the past year, as part of the national improvement for which we are all so thankful.

Current, deposit, and other accounts at £7,370,000 are almost £700,000 higher, while drafts issued are down by £29,000. Bills for collection show an increase of £13,000, and the liability on acceptances for customers is up by £36,000. There is an increase of £968,000 in cash, which is largely accounted for by the rise in current and deposit accounts. Investments, which stood at an unusually high figure last year, are down by £533,000, whereas there are increases of £143,000 under the heading of "other bills," and of £232,000 for loans, advances, and other accounts.

The net profit is £85,298 9s. 3d., which is rather more than £20,000 in excess of 1935, and after allocating £25,000 to writing down premises and furniture, as compared with £15,000, it is proposed to increase the dividend from 4 per cent. to 5 per cent. per annum, which will absorb £60,000 and will leave £54,972 12s. to be carried forward.

During the greater part of our financial year there was a noticeable improvement in West African trade conditions, and this was accompanied by substantial increases in the Government revenues—increases which were all the more welcome because of the years of stringency which had been experienced by our four Colonies.

The report and accounts were unanimously adopted.

W. J. BUSH & COMPANY, LIMITED

A PROSPEROUS YEAR

The thirty-ninth annual general meeting of this company was held, on the 22nd instant, in London, Mr J. M. Bush (chairman and one of the managing directors) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The accounts for the past year are very gratifying.

The policy of the Government in recommending Parliament to extend the key industry duties for another ten years, encourages us to feel that the large expenditure of capital we have incurred in past years on plant and machinery will not have been in vain. On the other hand, there are signs of increasing competition in some of the most important chemicals we manufacture, and the numerous obstacles in the way of carrying on export business in foreign countries still remain.

The accounts of our subsidiary companies all show satisfactory profits for the past year.

As is shown by the scientific Press, new processes for the manufacture of organic chemicals are constantly being devised. Our own research chemists are also continually working with a view to initiating new or improving existing processes of manufacture, increasing yields, and cutting down costs. Such changes sometimes necessitate considerable modifications of the plant, or the installation of completely fresh units, rendering the old obsolescent. It is for this reason that your directors recommend the creation of a reserve against this contingency.

In view of the substantial increase in the company's freehold premises over a period of years, your directors consider it prudent to increase the reserve against this asset.

After providing for the amount required for the dividends on the Preference shares, income tax, and exchange, there remains a balance of £174,633 4s. 6d. Your directors recommend that this balance be dealt with as follows:—

By the payment of a final dividend of 8 per cent. on the ordinary shares, making with the interim dividend already paid 13 per cent. for the year, £32,500; by writing down goodwill, £20,000; by creating a reserve against possible plant obsolescence, £10,000; by adding to reserve against freehold works, £10,000; and carrying forward a balance of £102,133 4s. 6d.

The report and accounts were unanimously adopted.

LISBON ELECTRIC TRAMWAYS, LIMITED

INCREASED PASSENGER TRAFFIC

The thirty-eighth ordinary general meeting of Lisbon Electric Tramways, Limited, was held, on the 24th instant, at the company's offices, 4 London Wall Buildings, London.

Lieut.-Colonel V. Vivian, C.M.G., D.S.O., M.V.O., presided in the absence of Mr F. W. Kerr (chairman), who was attending to the affairs of the company in Lisbon. He read the speech prepared by Mr. Kerr, which stated:

You will first be interested to hear the result of our operations. The traffic returns show that during the period under review 121,810,659 passengers were carried, as compared with 120,534,321 in the preceding year, an increase of 1,276,338 passengers.

The receipts from all sources show an increase of £3,686 10s. 3d. On the other hand, the expenses have increased by £20,234 6s. 3d. The resulting profit of £178,574 12s. 4d. shows a decrease of £16,547 16s. on the preceding year. The directors recommend the declaration of a final dividend of 4½ per cent. net on the ordinary shares in respect of the year 1935, which makes 7½ per cent. for the year, being the same rate as the previous year. This will absorb £42,796, and will leave a balance of £47,627 to be carried forward to the credit of next year's profit and loss account.

In spite of the extremely bad weather which has been experienced in Lisbon during the first few months of this year in common with many other parts of the world, I have found that the passenger traffic has been well maintained. This I consider was due to a certain extent to the 15 new passenger cars put into service in the current year. These form part of the construction programme for 30 new cars which was commenced last year.

The capital expenditure programme at present in view still involves about £100,000, which covers the new rolling stock before mentioned and further car shed accommodation, extensions of track, etc. The work entailed will be undertaken as far as possible in the current year.

I trust you will agree with me that the results obtained for the period under review are quite satisfactory under the circumstances.

The report was unanimously adopted.

EAST RAND CONSOLIDATED, LIMITED

STRONG FINANCIAL POSITION

The annual general meeting of East Rand Consolidated, Limited, was held, on the 24th instant, at River Plate House, London.

Captain H. B. Jameson (the chairman), in the course of his speech, said:—The book cost of the investments is £596,259, whereas at December 31st the market value amounted to £1,714,684. This is, I feel sure you will agree with me, a highly satisfactory position. Further, I think you will like to know that your shareholding is to-day substantially the same. The net profit for the year was £16,685, mainly derived from the realisation of some of our investments.

I want to emphasise the importance of the developments on the properties of the two subsidiaries which your company has already formed—Spaarwater Gold Mining Company, Limited, and West Spaarwater, Limited. With regard to the former, I emphasised at our meeting last year the advantage that company derived from its position adjoining the Sub Nigel. From the progress that has been made during the last year, you can visualise what an enormous area will be available when regular development commences from the shaft. Of the values encountered in the haulages their excellence must be apparent to everybody.

West Spaarwater, Limited, was formed in June, 1935. We know of nothing to prevent good progress being made and the company has plenty of funds available for the development of the property.

You hold a large interest in both Witwatersrand Nigel and West Spaarwater, and you own one-third of the issued capital of Spaarwater Gold Mining Company. I do not think I am exaggerating when I say that yours is the controlling interest in this district on the south and west of Sub Nigel.

One word about Vlakkfontein No. 65. Remember that it adjoins the Vlakkfontein Gold Mining Company and is on a similar reef plane, hence the reason for our joint borehole. Now consider the value placed on the Vlakkfontein Gold Mining Company at its present market valuation of over nine millions sterling. This should bring home to you the possibilities of your Vlakkfontein property when we decide upon its flotation.

Your liquid cash position is excellent.

The report and accounts were unanimously adopted.

FORSTER'S GLASS COMPANY, LIMITED

STRONGER BALANCE SHEETS

The seventeenth annual general meeting of Forster's Glass Company, Limited, was held, on the 25th instant, at Winchester House, Old Broad Street, London.

Sir Sydney H. H. Benn, K.B.E. (chairman), presided, and, in the course of his address, said the net profit for the year is some £600 higher than last year at £41,842. The actual profit on trading is lower by £2,400, but owing to a saving in bank and debenture interest and income tax of almost £3,000, the above slight increase in profit has been made possible.

Before arriving at the above profit, all trading and managerial expenses have been met and adequate provisions have been made where called for, including provision for income tax.

We are pleased to say that bank interest is now almost a negligible item, and owing to the gradual reduction of outstanding debentures, interest on these is also on the decrease.

Passing to the balance sheet, it will generally be agreed that the position as a whole shows a great improvement over any previous year. The option held by Estates Control, Limited, and referred to in the directors' report for the year ended March 31, 1934, has been exercised, and this accounts for the increase in the issued ordinary shares. The 5 per cent. mortgage debenture stock has been reduced during the year by a further redemption of £7,000. The 6 per cent. second debentures still remain at the same figure, as the time when these fall due for redemption has not yet arrived.

The last balance sheet showed reserve at £60,000. To this has been added the £17,000 agreed to at the last annual meeting, making a total of £77,000. With the present allocation of £18,000 the reserve now stands at £95,000.

We are pleased to say that our sales have maintained the volume of previous years, and, in fact, they are slightly better than during the preceding year. This is not due to a large increase in the number of our customers, but is due to the improved conditions in the country generally and to the fact that our existing customers have mostly taken more than during the previous year.

The report and accounts were adopted, and a dividend on the ordinary shares of 5 per cent. and a cash bonus of 5 per cent., both less income tax, were declared.

AFRICAN AND EUROPEAN INVESTMENT COMPANY

PROGRESSIVE METHODS

The thirty-first ordinary general meeting of this company was held on June 11th at Johannesburg.

Mr Louis Marks (the chairman) said that he was in the happy position once more of being able to submit a satisfactory account. It was gratifying to note that the profit earned had again been a substantial one. Realised profits on the sale of shares and properties, together with interest and dividends, and income received from farming and other activities disclosed a profit of £680,971. Receipts from interest and dividends showed an increase on the previous year, and the farm revenue figures compared favourably with those of 1934. The net profit amounted to £600,006, as compared with £863,167. After providing for dividends totalling 15 per cent., a balance of £83,952 was carried forward, compared with £43,922.

The progressive methods which had been pursued by the company during the past few years had enabled the directors to strengthen the company's financial resources so materially that it had been possible, without prejudicing the shareholders' interests, to adopt a policy which aimed at placing the company on such a sound and permanent financial foundation as would permit of the building up of its revenue-earning capacity in keeping with the functions of an investment and development company such as theirs.

They had given effect to that policy by investing a considerable portion of the company's funds in South African and British industrial investments and in selected dividend-paying gold mining and finance companies in this country, and they hoped from time to time to be in a position to increase considerably their holdings of that nature to maintain an investment fund sufficient in itself to provide a permanent income so that shareholders might be assured of dividends whether markets were good or bad.

With regard to their mining interests, those were principally centred in the East Rand through their holdings in Palmietkuil, Grootvlei, and the East Rand Consolidated. They were also substantially interested in the Far Western Rand through their holdings in New Central Witwatersrand Areas, Limited, New Machavie Gold Mining Company, Limited, and Gold Areas Witwatersrand (East), Limited.

The report was unanimously adopted.

THE TUNNEL PORTLAND CEMENT COMPANY, LIMITED

RECORD DEMAND

CAPITAL INCREASE APPROVED

An extraordinary general meeting of The Tunnel Portland Cement Company, Limited, was held on Tuesday, June 23, at the Company's Office, Horseferry House, London, S.W.1.

The Deputy-Chairman (Mr N. M. Jensen) presided.

The Secretary (Mr S. Hagdrup) having read the notice convening the meeting.

Mr Jensen said:—In the circular letter which has been sent to you, we have pointed out that we are primarily raising additional capital for the purpose of erecting a new manufacturing unit in this country.

The position to-day is that we are unable to cope with the demand for our product and we are having to turn away business, particularly in the export market.

The current demand for Portland Cement throughout the country is undoubtedly a record. There is a possibility that it may slacken off as house-building activities diminish, but against this, civil engineering contracting work is only just getting into its stride and, therefore, my personal opinion is that we can look forward to a good demand for our product for some time to come.

We are fortunate in that our industry is a growing one. If we look back over the past twenty years' records, or more, we find that there is an almost steady increase in the cement consumption amounting to about 5 per cent. per annum. Your directors feel, therefore, that if we are to maintain our relative position in the industry, it is essential for us to increase our manufacturing facilities.

The resolution effecting the necessary increase of capital was passed unanimously.

NORTH ASHANTI MINING COMPANY, LIMITED

SATISFACTORY DEVELOPMENT OPERATIONS

The annual general meeting of this company was held on the 19th instant, at the Abercorn Rooms, London.

Mr W. D. Scott-Scott, the chairman, in moving the adoption of the report and accounts, said that with regard to three of the company's properties, Adowsena No. 1 and Nyafoman No. 1 and No. 2, the directors had continued their conservative policy of assigning them no specific value.

In his speech last year he explained the geographical and geological position of the company's properties and said that the board were negotiating the acquisition of certain areas in the territory intervening between the Nyafoman and Adowsena Concessions. Those negotiations had been concluded and the company had acquired two areas known as Rogers No. 1 and No. 2, which appeared to be the most valuable and through which, it was reported, the Nyafoman reef runs. He reported that the company held 492,000 shares in Ashanti-Adowsena (Banket) Goldfields, Limited, and that their policy was to keep a balance of not less than 500,000 shares in that company.

After dealing with other specific items in the balance-sheet, the Chairman proceeded to speak of the two main assets of the company, first dealing with the shares in the Ashanti-Adowsena Company. He pointed out that that company's progress reports, which appeared fortnightly, had kept the shareholders up to date with the progress made, and stated that the Adowsena Company's plant after passing through a period of trials and adjustments, and even small breakdowns, inseparable from the starting-up of any new plant, had settled down to steady production. The board of that company had approved the extension of the cyanide plant so as to be able to treat 6,000 tons per month.

With regard to the future, the board had made arrangements for the issue of a new company to be known as the Ashanti-Wallis, which would acquire the Nyafoman No. 2 Concession on which the board were continuing to carry out development work. The necessary arrangements for floating the company at any moment that might be deemed advisable had already been made.

He added that the Banket formation has been proved in the Nyafoman Concessions from boundary to boundary, a distance of 2½ miles, and there were seven shafts and five adits on that property. On this level the ore body had an average width of 9 ft. and payable ore up to 12 dw. per ton had been proved. The development work on this concession had been sufficient to prove its high value and, in the opinion of experts, the property should prove at least as important as that now being worked by Ashanti-Adowsena Goldfields.

After this property had been acquired by a producing company the policy of the board would be to develop Rogers No. 2 Concession with a view to proving its value and bringing it to the producing stage.

Mr G. A. Stockfeld, M.Inst.M.M. (director and Superintendent Mining Engineer), in seconding the resolution, said that the work that had been carried out had been mainly confined to Nyafoman No. 2 Concession. The mining operations that had been pursued there had been confined to the No. 3 and No. 7 shafts and the adit level. The result of these operations had been very satisfactory, in so much as the reef had been definitely proved underground for a distance between the two shafts of approximately 2,500 ft. It bore all the characteristics of the reef at the Adowsena Concession, both in width and values. This mine was now in successful operation, and he felt confident, from the developments that had taken place on the Nyafoman Concession, that when it was properly equipped this mine would prove to be equally as good.

The resolution was unanimously adopted.

BRITISH EMPIRE TRUST COMPANY, LIMITED

INCREASED INCOME. STRONG POSITION

The thirty-fifth ordinary general meeting of the British Empire Trust Company, Limited, was held, on the 23rd instant, at the Great Eastern Hotel, London.

Mr J. Davidson (chairman and managing director) said:—The net profit for the year under review is £77,497. This compares with £50,865 rs. 10d. last year—an increase of £26,631. Having regard to the fact that 58 per cent. of your company's investments, i.e. some £800,000, or an amount nearly equal to the whole of the share capital, is of the highest class, we consider that the increase in income must be regarded as satisfactory. After paying dividends of 6 per cent. on the preferred ordinary shares and 8 per cent. on the deferred ordinary shares, the amount to be carried forward will be £59,781, as compared with £31,739 last year.

Some of you may think that we might have recommended an increase in dividends. There are, however, two good reasons for our decision: Firstly, that in the present state of world affairs we must be prepared for the possibility of serious shocks affecting investment values, and secondly, because it is impossible to forecast when the present low interest returns, which are to some extent anyway artificial, but which limit your interest earning capacity, will come to an end. We therefore consider it advisable to safeguard you in every way we can against the risk, under adverse circumstances, of any reduction in the present dividend; further, we venture to think that it is in itself no mean performance to pay dividends of 6 per cent. and 8 per cent. at a time when income on investments generally is showing a steady decline. Our purpose has been, and is, to keep the company strong, and as far as possible in a position to increase its income, and your dividends, when investments generally return to a higher interest-producing level.

Your company for many years devoted its energies and capital almost entirely to the study of, and investment in, Canadian securities. As I explained in 1932, largely as the result of world events about that time, our policy in this respect changed, and the major portion of your capital was transferred from Canadian to British investments. The policy then adopted proved profitable and has not been changed.

At the present time there is every evidence of improving economic conditions in Canada. After giving figures indicating the character and extent of the improvement, the chairman continued: Such encouraging indications of returning prosperity would ere now, especially in view of the low interest rates obtainable in Great Britain, have led to a large demand in this country for Canadian investments giving a higher return than is obtainable here, but this demand, which was coming strongly into evidence 18 months ago, has been retarded by a series of unfortunate events. One of these events to which I referred last year was a proposal by the City of Vancouver in January, 1935, to reduce the interest payments on its bonds and debentures by one-half. This proposal, which was neither reasonable nor just, was rejected by the bondholders and disallowed by the Government of British Columbia.

Another unfortunate and more recent event in that the Province of Alberta, owing to prolonged adverse conditions, has professed embarrassment in meeting its existing obligations in full. It is to the credit of the Dominion of Canada that the Government of the Dominion has expressed its willingness to give assistance subject to the establishment of a Loan Council who will have a voice in the future financial plans of the Province.

In conclusion, the Chairman said it was only by conserving the resources of the company that they could be assured of present safety and future prosperity, and the accounts presented showed clearly the strong financial position which the company enjoyed.

The report and accounts were unanimously adopted.

WEST SPAARWATER, LIMITED

PROGRESS OF PRELIMINARY WORK

The first ordinary general meeting of West Spaarwater, Limited, was held, on the 24th instant, at Johannesburg. Mr T. Marks, who presided, said:—

The directors' report and accounts cover the period from the date of incorporation of your company, namely June 14, 1935, to December 31, 1935. The authorised capital of your company is £2,000,000 in 8,000,000 shares of the nominal value of 5s. each. At December 31st last, 3,601,152 shares had been issued, and the remaining 4,398,848 shares are all reserved to cover options. Of these options 400,000 are exercisable at par and 1,999,411 at 7s. 6d. on or before September 30, 1937, and 1,999,437 are exercisable at 10s. on or before September 30, 1938.

The expenditure during the period under review totalled £210,486 rs. 5d., and is clearly disclosed under appropriate headings on the balance sheet at December 31st. At that date, the balance of cash in hand, allowing for sundry creditors, etc., amounted to £690,015 rs. 14s. 1d.

If and when the options on shares are exercised, the company will be provided with additional cash resources of £1,849,497 rs. 6d.

At the statutory meeting last year I explained the terms of our lease agreement with the Government, and as this is again fully set out in the directors' report, there is no need for me to dilate further on this subject.

The main work carried out by your company has been directed to the establishing of data to permit of the location of the most suitable position for the first vertical shaft. In addition to an aerial survey and a geological examination, a drilling programme was commenced during May, 1935, and details in regard to the two boreholes put down are furnished in the reports of your joint consulting engineers.

No. 1 Borehole has been stopped in the Kimberley Shales, a definite market from which the depth of the underlying Nigel Reef can be estimated.

No. 2 Borehole has already passed through the Kimberley Shales and is being continued to intersect the Nigel Reef.

By March, 1936, sufficient information was available to decide on the site for No. 1 vertical shaft. Preliminary designs were thereupon put in hand, and the position for the shaft was chosen on the northern portion of Klippoortje, in proximity to the Spaarwater and Maraisdrift boundaries. The design of the shaft provides for five compartments, which allows for adequate ventilation arrangements necessary to the subsequent development programme mapped out.

Sinking operations were commenced at the end of May, and it is estimated that the Nigel Reef will be intersected at a depth of about 4,000 ft. below the surface.

The position of No. 2 vertical shaft has also been tentatively fixed, but it is intended to postpone the sinking of this shaft till additional knowledge of the trend of the shoots is revealed by development from No. 1 shaft.

While it is yet early to venture an opinion as to the disposition of payable shoots in your holdings, it is encouraging that the payable shoots disclosed on Poortje, projected parallel to the line of shoots proved in Sub Nigel, Limited, are trending so as to be within your ground. The continuance of payable values in the neighbouring Spaarwater Gold Mining Company may also be regarded as a promising feature.

In conclusion, I wish to take this opportunity of expressing your board's appreciation of the services rendered by the joint consulting engineers, Messrs J. D. Mackenzie and J. L. van Eyssen, and by Mr G. H. Hurtzig, the manager of your company's property, and his staff.

The report was unanimously adopted.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To The Publisher, "The Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended June 20, 1936, amounted to £10,261,000, against ordinary expenditure of £9,486,000. After allowing for an increase in Exchequer Balances of £112,328, the operations for the week, as shown below, decreased the gross National Debt by £662,000 to approximately £7,975 millions.*

		(000's omitted)	
Treasury Bills	+ 88	National Savings Certificates	£ 50
		Public Department Advances	£ 700
	+ 88		£ 750

* Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

A complete analysis of the approximate position of the National Debt at March 31, 1936, appeared in the *Economist* for April 4, 1936.

The s.s. "Narkunda," which sailed from Bombay on the 20th instant, carries gold to the value of about £503,000 consigned to London.

SILVER MARKET

Mainly owing to poor support, prices had eased to 19½d. for cash and 19½d. for two months delivery by the 19th instant, but with a revival of Indian demand and hesitation on the part of sellers, there was a recovery, the quotation on June 20th being ½d. higher at 19½d. and 19½d. for the respective deliveries. A slight reaction followed, but today, further demand from India caused prices to be fixed at 19½d. for both deliveries—a rise of ½d. over the quotations of yesterday.

There have been some speculative operations, both buying and selling, but the market has been quiet and for the time being prices may continue to move within narrow limits.

(c) Also capital bonus 20 per cent. (s) Paid on a larger capital. † Free of income tax.

CANADIAN EAGLE OIL COMPANY, LTD.—The directors will recommend to the annual meeting to be held in Toronto early in July next the declaration of dividends of (a) 23.88 cents Canadian per share on the participating preference shares and (b) 9d. per share on the ordinary shares. The profits available for 1935, after charging 7 per cent. cumulative first preference dividend of £152,541 and including £60,348 brought forward from 1934, amount to £533,687.

CENTRAL ARGENTINE RAILWAY, LTD.—The directors regret that the dividend due on July 1st of the 6 per cent. cumulative convertible preference stock has not been earned and cannot therefore be paid.

FIRST BRITISH FIXED TRUST.—Coupon No. 10, payable June 15, 1936, 7½d. per sub-unit, free of tax.

GENERAL ELECTRIC CO.—Profits show an expansion of £300,670 to £1,485,153 for year ended March 31, 1936. Ordinary dividend 10 per cent. as before, but a cash bonus of 5 per cent. is also paid against nil.

PROVINCE OF BUENOS AIRES 3 PER CENT. EXTERNAL.—Erlangers, Limited, 4 Moorgate, London, E.C.2, announce that they have received instructions to pay coupons of the Province of Buenos Aires 3 per cent. External Sinking Fund Dollar Bonds of 1936, due July 1, 1936, on and after that date.

LYSAGHT (JOHN).—Net profits £32,488 higher at £521,718. Dividend raised from 16 per cent. free of income tax to 20 per cent. free of income tax.

RICHARD THOMAS AND COMPANY, LTD.—Combined trading profits year to March 31, 1936, £1,275,000, against £883,500. Total dividend 12½ per cent. for year against 6 per cent. Transfer to general reserve £91,293, increasing it to £300,000. Carry forward increased from £424,000 to £440,000.

THE BENGLA COAL COMPANY, LTD.—Messrs. Yule, Catto and Company, Ltd., announce the receipt of a cable from Calcutta, giving the figures for the half-year ended April 30, 1936, of this company. After allowing Rs. 1,000,000 for depreciation, profit and loss account shows credit of Rs. 3,54,000, which includes the balance carried forward from the previous half-year. Dividends, Rs. 2,40,000; commission, Rs. 17,400; carry forward, Rs. 97,000; dividend for the half-year, 6 per cent.

THE MEXICAN EAGLE OIL COMPANY, LTD.—The directors will recommend to the annual meeting in Mexico City early in July next the declaration of dividends of 10d. per share on the 8 per cent. participating preference shares and on the ordinary shares. These dividends will be subject to a deduction of 2 per cent. Mexican absentee tax. The profits available for 1935, after crediting reserves not required and after providing for depreciation and the disposal of the Amatlan lawsuit and all other charges and including £11,180 brought forward from 1934 and after deducting £93,113 7 per cent. first preference dividend, amount to £630,488.

THE TECKA (ARGENTINA) LAND COMPANY, LTD.—Following the sale of certain securities during the past three years, a profit extraneous to the company's ordinary business has been realised. The directors are of opinion that they are justified in making a special payment to shareholders from such profit, and have made an immediate distribution of 10 per cent., not subject to income tax, to shareholders registered on the books on June 11, 1936.

Sub Nigel	56,000	41,278	£287,754	191,527	195,248	33 0-5

(a) The decrease in profit is due to the loss of tonnage as a result of a winding accident which occurred in the Milner Main Incline Shaft during the month.

(b) The decrease in profit is due to the loss of tonnage as a result of a severe pressure burst which occurred in the Rhodes Vertical Shaft during the month and which, as previously announced, has necessitated milling at a reduced crushing rate.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE firmer tendency of prices on the principal commodity markets, noted a week ago, has continued. In the vanguard of the upward movement, wheat rose sharply in response to unfavourable crop reports from the United States and Russia. Further damage to the spring wheat crop is anticipated unless a good rainfall occurs in the immediate future. Maize also registered a rise, partly in sympathy with wheat, partly owing to short supplies. Linseed and other grains were also strong.

Among industrial raw materials, cotton scored a sharp improvement, consumption being well maintained and crop news rather unfavourable. Wool was steady after its recent weakness and other textile raw materials were generally firmer. Following a period of stagnation, the rubber market showed a better tone and prices were marked up in response to an improved trade demand, a further fall in stocks and the impression that the devaluation of the gold *bloc* currencies can be staved off for the time being. A firmer tendency in copper was attributable to a slight clarification of the international political outlook, while tin moved upwards in anticipation of a "bullish" quota decision at Thursday's meeting of the International Tin Committee. In the event, however, the Committee decided to increase the quotas from 85 to 90 per cent. of the basic tonnages, and the market registered a reaction. Meanwhile, industrial grades of coal remain in active demand and some rise of prices is anticipated when the selling schemes, discussed in the House of Commons on Wednesday, come into force on August 1st.

Prices of foodstuffs showed no general tendency. At the Mining Lane tea auctions, the sagging tendency of prices, which has been apparent in recent weeks, was checked. Sugar, however, was a shade easier. At the London Provision Exchange, bacon was a firm market, but butter and cheese were barely steady. The influence of the hot weather in checking the demand for certain foodstuffs was apparent in falling prices for eggs and meat during the past week.

In the United States a considerable rise of prices has taken place—grains, cotton, rubber and metals being mainly concerned in this movement. Moody's index of the dollar prices of staple commodities advanced from 165.0 (December 31, 1931 = 100) to 168.4 during the week ended last Wednesday, against 164.7 a month ago and 156.5 on the corresponding day last year.

COAL

SHEFFIELD.—Demand for industrial coal continues steady. Best hards are firm and well taken up. There is but limited activity in the export trade, mainly due to the shortage of the chief shipping qualities, which restricts the activities of exporters. Demand for household coal is very poor, and stocks are accumulating, prices remaining in most cases at the winter level. It is expected that these will be reduced in the course of a week or two, with a view to encourage stocking. The coke market is very strong, and coking

|--|

there is an increasing tendency amongst manufacturers to concentrate upon working off some of the heavy tonnages they have in hand.

Business in pig iron is limited by the reluctance of producers to commit themselves, although consumers would be prepared to cover their requirements up to the end of the year and beyond. Producers, however, are disinclined to book so far ahead, except on the understanding that deliveries after December shall be subject to any revision in prices which may occur.

Producers of semi-finished steel are still in arrears with deliveries, although works are operating at capacity. The output is passing immediately into consumption; but most consumers are better situated with regard to supplies than a few weeks ago.

Demand for finished steel in both the light and heavy departments has become more active; but new business is somewhat restricted, as most of the manufacturers are only in a position to accept orders for extended delivery. Export inquiry has improved; but orders have so far been disappointing.

MIDDLESBROUGH.—The market for iron and steel continues strong. The additional furnace to be started at Messrs. Dorman Long & Co.'s plant at Cleveland will be blown in towards the end of this week on basic pig iron, but this will all be required by that concern.

Although the official minimum price of Cleveland No. 3 pig iron remains at 70s. per ton until June 30th, new business is for forward delivery at the new price of 75s. per ton, which comes into force on July 1st. East Coast hematite is in good demand by home users, but business for export develops slowly owing to the limited supply. A further parcel of about 1,000 tons of hematite pig iron is being shipped this week to America. Total shipments of pig iron from the Tees between June 1st and 22nd amounted to 8,056 tons, compared with 2,333 tons in the corresponding period in May.

The steel departments are very busy. Makers now have good order books for shipbuilding material and constructional steel, whilst orders for sheets have improved, and contracts already on books for railway material will take some time to complete. Heavy steel melting scrap is quoted at 57s. 6d. per ton, but steel makers, having received good supplies from abroad, are not keen to purchase. Blast furnace coke is firm at 25s. per ton delivered at the furnaces.

WORKINGTON.—Business in the North-West Coast hematite pig iron market has been very brisk since prices were raised by 3s. 6d. per ton. As soon as uncertainty concerning a possible increase of 5s. per ton was removed, Midland, South Walian and Scottish consumers entered the market for all the iron they can get. It is expected that producers will soon have on their books orders representing a tonnage equivalent to the smelting capacity of the eight furnaces in blast during the next six months. Buying for immediate or early delivery is at the moment of rather a wild character, but it will settle down in the course of a few weeks. Prices are firm, with Bessemer mixed numbers £4 0s. 6d. per ton at Glasgow; £4 6s. at Sheffield; £4 8s. 6d. at Manchester, and £4 12s. at Birmingham. Special qualities are from 2s. 6d. to 6s. per ton dearer. Malleable iron, the price of which was raised by 5s. per ton, is in lively request at £6 5s. delivered at Birmingham. Ferro-manganese is a steady trade at £11 5s. home. Steelmakers are so well sold that they can keep their mills running at capacity for another twelve months. Workington is rolling rails, billets, bars and slabs, and Barrow is on rails, hoops and strip. Native ore is in short supply, despite the fact that two mines have been reopened, and is in big demand at from 16s. to 17s. 6d. per ton. Imports of foreign ore are heavy.

SHEFFIELD.—With the majority of consumers covered for the next three months and a good many until the end of the year, business in both forge and foundry iron relates chiefly to limited parcels for immediate delivery. Makers, indeed, are not in a position to accept additional business of any weight, deliveries under contract accounting for virtually the whole output. Consumers in this area rely chiefly upon Derbyshire iron, Lincolnshire production being almost wholly consumed at source, and makers are not in the market. There is considerable pressure for hematite, quoted here at 85s. for East Coast mixed numbers and 90s. 6d. for West Coast mixed numbers, but producers have little for disposal, and are in arrears with deliveries. Consumers are anxious to accumulate a certain amount of stock, but so heavy are requirements that this is hardly possible. In finished iron interest is displayed principally in common bars. There is a slightly better call for South Yorkshire Crown bars at £10 2s. 6d. per ton, f.o.t. Buying in nearly every section of the steel market remains at a high level, and there is no easing of the pressure for basic billets. Acid billets show further improvements. There is a persistent demand for wire rods, and bright drawn steel is another good feature, while it is not easy to cope with the call for stainless steel sheets. Steel scrap shows an easier tendency, and 56s. is now regarded as the top price for heavy basic steel for melting. Heavy steelworks cast iron is quieter at 54s. per ton, but there are plenty of buyers of foundry cast iron at up to 62s. 6d. delivered. Heavy wrought shearing iron remains at 62s. 6d. to 65s. per ton.

GLASGOW.—Steelmakers in Glasgow and district are overwhelmed with work and are being hard pressed to meet the demands of users of all classes of material. The requirements of shipbuilders are steadily increasing, while structural and other engineers and re-rollers are all making heavy demands. Sheet makers are maintaining a large output and bookings both of black and galvanised sheets of light and medium gauges are satisfactory. While tube makers are still finding business dull, there is a better market at the moment for boiler tubes. Structural firms in the West of Scotland are all busy now, the greater part of the work being on home account and much of it for erection in their own districts, but some fairly large export contracts are in hand. Demand for wrought iron is also showing some improvement, but here again the bulk of the business is for the home trade.

CARDIFF.—The tinplate industry is better employed than for some time, and current production is at the rate of a little over 60 per cent. of allotted capacity. Inland and export demands have contributed to the improvement, but prices are unchanged on the basis of 18s. 9d. per box, f.o.b. for export and 18s. 4½d. f.o.t. for home consumers. The heavier branches of the iron and steel industry are relatively more active, but the pure steel makers are complaining of recent increases in the prices of pig iron and are making representations with a view to some relief either in the form of concessions from blast furnace owners in respect of exported products or of a reduction in the present additional duty of 33½ per cent. Galvanised sheets continue depressed but are still quoted at the minimum of £11 15s. per ton. Steel sheet and tinplate bars are ruling at their recently enhanced level of £6 per ton. Shipments of tinplates at Swansea last week totalled 53,163 boxes, compared with 46,127 boxes in the corresponding period last year, while stocks in warehouse and in vans totalled 86,727 as against 101,198 boxes.

OTHER METALS

COPPER.—Prices were again slightly higher. Despite the obscure political and economic outlook on the Continent, consumers' demand is now running on a fair level. Exports of copper from Ontario amounted to 36,480 short tons during the first quarter of this year, against only 29,528 short tons in the corresponding period of 1935, but there is no selling pressure from that quarter, for the Canadians remain anxious not to hamper the activities of the restrictionists. A further improvement in prices is anticipated if the general outlook becomes more settled.

Sales on the London Metal Exchange: 425 tons on Monday, against 625 tons last week; 800 tons on Tuesday, against 950 tons last week; 875 tons on Wednesday, against 750 last week. Domestic spot was quoted at 8.95 cents per lb. in New York on Wednesday, against 8.87½ cents a week ago and 8.92½ cents a month ago. Wednesday's official closing price for standard cash in London was £36 11s. 3d. to £36 13s. 9d., compared with £36 5s. to £36 6s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 58,544 tons, show an increase of 176 tons, while stocks of rough copper, at 5,517 tons, show a decrease of 200 tons on the week.

LEAD AND SELLER.—In sympathy with the general tendency of the metal market, lead prices showed a slight improvement and the basic position of the market remains strong. United States lead stocks at the end of May are estimated at 229,400 short tons—according to reports from New York—an increase of 8,400 short tons on the month. But this movement is of little significance outside the United States, since the country is not a large importer of lead. Spelter suffered a slump, owing to liquidation, in the early part of the period under review and prices dropped to £13 6s. 3d. per ton—the lowest of the year. But quotations subsequently rallied to £13 18s. 9d., which represents a net gain of 10s. on the week. In the absence of news concerning the cartel negotiations, the outlook for spelter is still obscure.

Sales of lead on the London Metal Exchange: 450 tons on Monday, against 750 tons last week; 850 tons on Tuesday, against 750 tons last week; 800 tons on Wednesday, against 550 last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £15 5s. per ton, compared with £15 1s. 3d. a week ago.

Sales of spelter on the London Metal Exchange: 525 tons on Monday, against 650 tons last week; 1,000 tons on Tuesday, against 1,200 tons last week; 475 tons on Wednesday, against 1,000 tons last week. Wednesday's quotation in East St. Louis was 4.85 cents per lb., against 4.90 cents the week before and 4.90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £13 18s. 9d. per ton, against £13 8s. 9d. last week.

TIN.—Prices showed a sharp recovery during the past week in anticipation of Thursday's meeting of the International Tin Committee. But when it became known on Thursday afternoon that the Committee had recommended an increase in the output quota from 85 per cent. of the standard tonnage to 90 per cent. in the third quarter of 1936, quotations declined sharply. The price of "spot" tin was marked down by £4 5s. per ton to £181 15s. per ton, but despite this fall "three months" tin was still £3 5s. per ton cheaper than "spot" tin, an indication that a further decline in prices is not improbable.

Sales of tin on the London Metal Exchange: 165 tons on Monday, against 325 tons last week; 295 tons on Tuesday, against 340 tons last week; 225 tons on Wednesday, against 200 last week. The New York quotation on Wednesday was 42.75 cents per lb., against 41.37½ cents a week ago and 45.87½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £185 10s. to £185 15s. per ton, compared with £180 to £180 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 708 tons, a decrease of 29 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was again quoted at £12 2s. 6d. per flask of 76 lb. as against £12 7s. 6d. per flask last week. Chinese antimony was quoted at £55 to £56 per ton ex warehouse, duty paid, the same as last week. Chinese wolfram for June-July shipment was quoted at 30s. 3d. to 30s. 9d. per unit, c.i.f., the same as last week. Platinum (refined) was quoted at £7 10s. per ounce, as against £7 last week.

TEXTILES

COTTON.—Manchester. —Owing to the further rise of raw cotton prices, yarn and cloth quotations have had to be advanced. Spinners and manufacturers have experienced much difficulty in getting buyers to pay more. Bullish advices have been received from the United States with regard to the progress of the new crop. Unsatisfactory conditions are prevailing, but demand for raw cotton remains active. From the statistical point of view, a distinct change has come over the situation during the last month or two. Over 1,000,000 bales of Loan cotton and 1,000,000 bales from the Producers' Pool have been absorbed.

The increase in the price of raw cotton has forced out a bigger inquiry in yarn and piece goods. Numerous buyers have refused to pay advanced rates, but in certain quarters a larger business has been done. In the cloth section the response of shippers to India to the dearer prices has so far been poor. On the other hand, freer operations have taken place for several smaller markets, including Egypt, South America, the Continent, the Dominions and the home trade. In the yarn market demand has been more active, some fair weights being put down in coarse American counts. Inquiry in Egyptian qualities has improved and some spinners have sold more freely.

COTTON PRICES

COTTON TRADE WAGES.—It seems probable that all the trade unions in the Lancashire cotton industry will demand an increase in wages within the next few weeks. A claim for an advance of 15 per cent. on current earnings and a minimum wage of 7½d. per hour equal to 30s. for a 48-hour week has already been made by the Operative Weavers' Amalgamation. The position was considered at a meeting of the Central Committee of the Cotton Spinners' and Manufacturers' Association held in Manchester on Tuesday last. Reports were received from the several local employers' associations, and it was decided to have a joint meeting with the representatives of the Weavers' Amalgamation next Tuesday. It is understood that on that occasion, on behalf of the employers, it will be stated that the demand cannot be considered as the trade in its present position cannot pay higher wages. There is considerable resistance against the minimum wage proposal, but such an innovation will not establish a precedent, as a minimum wage for six-loom weavers has been in operation for some time. At a meeting of the General Council of the Operative Spinners' Amalgamation at the end of last week, a resolution was passed unanimously in favour of taking immediate steps to terminate the wages agreement of November, 1932, and to press for the restoration of the reduction of 14 per cent. in wages which then took place. This reduction was equal to about 1s. 6d. in the £ on the earnings of the operatives. So far, the Card Room Operatives' Amalgamation has not taken any action, but it is likely that they will join hands with the Operative Spinners and make a united claim to the employers. The action of the trade union leaders is probably due to pressure from their members in view of the wage advances which have recently been obtained in other trades.

WOOL.—Bradford. —Although the wool market cannot be regarded as active, there is a remarkable feeling of confidence. Business in manufacturing circles is difficult. There is here and there evidence of a slowing down of consumption, but in general the industry is working well considering this is between seasons. There have been no outstanding developments during the past fortnight; but a series of sales is taking place this week and next at Brisbane, where 80,000 bales are being catalogued, which can be regarded as a fairly good test of prices. All cables are to the effect that prices are very good for warp combing wools, but faulty descriptions are irregular, with considerable withdrawals. This is not surprising, for no support is forthcoming from Japan, and Continental countries are only buying from hand to mouth. It is some satisfaction to know that there is a fair measure of activity on behalf of the home trade, which is helping to maintain prices for the best wools. The Australian Government has this week clearly defined its policy and has refused to accede to the requests of Japan regarding imports. If Japanese mills refrain from buying Australian merinos, they will be faced with serious difficulties. No doubt South African wools are good, but they will not produce exactly the same class of fabric as that made from Australian merinos. The Australian market, too, is so near at hand, and furnishes a much wider range of wools than South Africa. The latter country is benefiting at the moment by increased Japanese buying, and French houses holding stocks of unshipped wool at the Cape will be glad of this unexpected competition.

Home markets are fairly steady, but spinners in Yorkshire are not disposed to book new contracts for tops. The trade is now

looking forward to the opening of the next series of London Sales which begins on July 7th. In the meantime, business actually passing is of a hand-to-mouth order.

GRAIN MARKETS

WHEAT.—A sharp upward movement of prices occurred on the wheat markets during the past week. This was again traceable to crop news from North America. The United States spring wheat crop has suffered serious damage from hot, dry weather, and is expected to deteriorate further unless heavy precipitation occurs immediately. On the other hand, prospects in Canada are reported to be good. Russia has fared little better than the United States, but the outlook in other parts of Europe has undergone little change. On Wednesday last, "July" futures were quoted in Chicago at 95½ cents per bushel, against 88½ cents the week before and 83½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 33s. 3d. per 496 lbs., against 31s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 32s. 9d., against 31s. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 951,000 quarters, against 1,226,000 in the previous week and 943,000 quarters in the corresponding week a year ago.

FLOUR.—The improvement in demand, noted a week ago, has continued, and prices have begun to rise. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 28s. per 280 lbs., against 27s. a week ago; delivered inner London, 27s. 6d., as compared with 26s. 6d. a week ago. Manitoba patents, ex store, 26s. 6d. to 28s. 3d., against 25s. 3d. to 27s. a week ago. Australian, ex store, 22s. 3d. to 22s. 9d., against 22s. to 22s. 6d. a week ago.

BARLEY.—Little change in the position of the market has occurred during the past week. "July" futures were quoted at 39½ cents per bushel in Winnipeg on Wednesday, against 37½ cents a week ago and 36½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 22s. 6d., as against 22s. 6d. a week ago; "English malting" at farm, 25s. to 40s., against 25s. to 40s. a week ago.

OATS.—Prices remain firm. On Wednesday, "July" futures were quoted at 29½ cents a bushel in Chicago, against 26½ cents a week ago and 24½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 19s. per 336 lbs., against 19s. a week ago; "English White," at farm, 19s., against 19s. a week earlier.

MAIZE.—The market has been strong this week owing to unfavourable weather reports from Argentina, and the strength of wheat. There is now a shortage of maize in some parts of Europe, but the movement of Argentine supplies has been hampered by the prolonged spell of wet weather in that country. "July" futures were quoted on Wednesday at 67 cents per bushel in Chicago, against 62½ cents a week ago, and 60½ cents last month. Quotations in London, Wednesday: "Plate," landed, 20s. 9d. per 480 lbs., compared with 20s. 6d. a week ago; "Plate," ex ship, 19s. 6d. to 19s. 9d., as against 19s. 6d. a week ago; "Plate," "June," 19s. 3d., as against 19s. a week ago; yellow maize meal, ex wharf, was quoted at £5 5s. to £5 7s. 6d. per ton, as against £5 5s. to £5 7s. 6d. last week.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to June 20	49,891	83,862	116,452	81,355
42 weeks to June 20	8,418,871	10,439,385	12,893,545	12,890,108
Average price of English wheat per cwt.	s. d. 6 5	s. d. 5 6	s. d. 5 6	s. d. 6 8

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
June 18, 1932	Cwts. 68,107	Cwts. 3,081	Cwts. 11,941	s. d. 6 5	s. d. 6 9	s. d. 8 1
June 17, 1933	49,891	19,588	9,807	6 5	7 0	5 10
June 23, 1934	83,862	6,564	21,935	5 6	7 6	6 3
June 22, 1935	116,452	18,432	11,719	5 6	7 0	7 5
June 13, 1936	98,800	5,022	14,699	6 9	6 11	6 2
June 20, 1936	81,355	6,541	23,268	6 8	7 7	6 3

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	June 26, 1935	Dec. 31, 1935	June 17, 1936	June 24, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	81½	84½	78½	83½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	80½	75½	88½	95½

The visible supply of wheat in Canada amounts to 82,589,000 bushels, against 85,222,000 bushels last week, and 110,998,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—Bacon has been in steady request at firm rates. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 92s. to 94s.; Canadian, 85s.; Danish, 93s., as against 92s. to 94s., 85s. and 93s. last week. Arrivals in London last week included Danish, 13,341 bales; Canadian, 4,078; Dutch, 2,498; Lithuanian, 1,762; and Polish, 2,409, as against 14,393, 3,876, 2,453, 1,749, and 2,244, respectively, in the previous week.

BUTTER.—Demand was again quiet, with prices generally tending lower. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 106s.; Australian, choicest salted, 105s.; Danish, 114s. to 115s., compared with 108s. 107s., and 118s., respectively, a week ago.

CHEESE.—The market was again quiet, with New Zealand rather easier on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, factory, 56s. to 58s.; Canadian, finest coloured, 64s. to 68s.; and New Zealand, finest coloured, 58s.; against 56s. to 60s., 64s. to 68s., and 60s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 6½ cents per lb., as against 6½ cents per lb. last week. In London, on Wednesday last, good fermented new crop "October-December" was quoted 28s. 3d. per 250 kilos, c.i.f. Continent, against 28s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 6,758 bags; delivered, for home consumption, 4,810 bags; exported, 623 bags; stocks, 171,234 bags, against 185,612 bags a year ago.

COFFEE.—The London spot market has had a quiet tone, while prices in New York have been steady. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb. in New York, as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered, for home consumption, 76 cwt.; exported, nil; stocks, 10,363 cwt., against 16,631 bags a year ago. Central and South American, landed, 2,133 cwt.; delivered, for home consumption, 2,205 cwt.; exported, 1,145 cwt.; stocks, 121,542 cwt., against 115,346 packages last year. Other kinds, landed, 670 cwt.; delivered, for home consumption, 3,434 cwt.; exported, 1,114 cwt.; stocks, 169,814 cwt., against 120,375 packages last year.

EGGS.—The hot weather is reflected in the weakness of this market. Supplies have increased, and demand has flagged, with a consequent general easiness of quotations. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 11s. to 11s. 6d. per 120, as against 10s. 9d. to 11s. 6d. last week, while Danish (15½ lb.) made 8s. 9d. to 9s. 3d. per 120, against 9s. to 9s. 6d. last week.

FRUIT.—The Covent Garden market has been dominated by strawberries during the past week and prices of most other lines have suffered in consequence. But, according to *The Fruitgrower*, general business was well maintained. Kent cherries were marketed in larger quantities, but the total crop is not expected to be heavy. Green gooseberries have received rather more attention, good quality produce fetching satisfactory prices. Quotations for French red and black currants are well maintained, supplies being limited, but Spanish apricots are cheaper. Hothouse grapes, in heavier supply, have eased in price, while melons have sold steadily at firm rates. The abundant supplies of grapefruit are cheaper and oranges have also eased. Prices for lemons remain steady for the time being, but are expected to decline in the near future.

MEAT.—In response to the warm weather, demand at Smithfield has been slow, with beef substantially lower in price. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. to 3s. 8d. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. a week ago. New Zealand frozen mutton was 3s. to 3s. 8d. per 8 lbs., against 3s. to 3s. 6d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,498 tons, a decrease of 769 tons on the corresponding week last year. Beef and veal accounted for 4,885 tons, mutton and lamb 2,526 tons, and pork and bacon 640 tons, as compared with 4,682, 3,396 and 744 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 3 tons; delivered, 5 tons; stocks, 1,756 tons, against 2,143 tons a year ago. White, landed, 13 tons; delivered, 32 tons; stocks, 12,076 tons, against 18,775 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. ex warehouse on Wednesday, as compared with 8s. 9d. per cwt. a week ago. "June-July" in singles to Continent and U.K. was quoted at 7s. 7½d. per cwt., against 7s. 9d. last week. Movements in London during the past week were as follows: Landed, 98 tons; delivered, 152 tons; stocks, 1,668 tons, against 9,835 tons a year ago.

SUGAR.—The New York spot market developed an easier tone this week and part of the recent price rise was lost. In London, raw sugar was again a quiet market, prices being a shade easier. The spot price in New York on Wednesday was 3.75 cents per lb., as compared with 3.80 cents per lb. last week and 3.72 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "August delivery" at 4s. 6d. to 4s. 6½d., against 4s. 7½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 11,832 tons, against 7,273 tons last week and 15,426 tons in the same week of last year; deliveries, 21,976 tons, against 20,048 tons last week and 14,826 tons last year; stocks, 140,705 tons, against 150,849 tons last week and 108,159 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
June 20, 1935	d. 11-59	d. 11-82	d. 13-11	d. 10-05	d. 8-82	d. 10-15	d. 11-84
May 7, 1936	d. 12-79	d. 14-09	d. 15-67	d. 11-02	d. 10-54	d. 11-69	d. 13-65
May 14, "	d. 12-59	d. 13-66	d. 15-08	d. 10-89	d. 10-36	d. 11-86	d. 13-19
May 21, "	d. 12-41	d. 13-00	d. 14-21	d. 10-81	d. 10-21	d. 11-75	d. 12-81
June 11, "	d. 12-24	d. 12-73	d. 13-30	d. 10-22	d. 10-15	d. 11-48	d. 12-40
June 18, "	d. 12-20	d. 12-26	d. 13-13	d. 10-17	d. 9-95	d. 11-44	d. 12-25

This week's offerings at the public auctions in Mincing Lane comprised 49,040 packages of Indian and 25,184 packages of Ceylon tea. The easiness which has characterised the market in recent weeks appears to have been temporarily checked. Quotations for Indian descriptions were well maintained, while some Ceylon grades showed a slight advance under the influence of a strong demand.

VEGETABLES.—Green peas have been a prominent feature in the vegetable section at Covent Garden, states *The Fruitgrower*, and prices have eased this week. Asparagus, although finishing, continues to sell well at good prices. Tomatoes are now increasing in supply with prices tending lower. Despite the warm weather, business in cucumbers has been poor. Good cabbage holds its price and cauliflower remains dear. Demand for forced marrows has improved, and spring onions are in request, but mushrooms are easier. Meanwhile, supplies of new potatoes at the various London markets have continued to increase, with a consequent drop in quotations. At the Borough on Tuesday Jerseys ranged from 12s. to 14s. per cwt., against 21s. to 23s. per cwt. a week earlier, and no Spanish were quoted. Old crop English, best silt-land King Edward, were firmly held at 8s. to 9s. a cwt.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—A steady tone is maintained and in most sections prices have an upward tendency. Linseed is dearer on adverse reports concerning weather conditions in the United States and on the possibility that the yield will fall below expectations and that the U.S.A. will have to rely on Argentina to supplement domestic supplies. The statistical position remains sound as supplies are 200,000 tons below the actual shipments in the remainder of 1935. Argentine exports tend to increase. The quantity now afloat for Europe is 116,700 tons (including 26,700 tons from India) or 6,500 tons less than last week, and that for America and Canada 7,500 tons, against 30,000 tons a year ago. Crushers here are buying sparingly, while continental demand is restricted owing to the unsatisfactory situation in France and elsewhere. In sympathy with the firmness of seed, wheat and other commodities, linseed oil has advanced further, and is a firm market. Raw oil ex Hull mill for July-August delivery is now quoted at £26 per ton, with the last four months at a small discount.

Old crop Egyptian cottonseed is about exhausted and is held for 77 7s. 6d. A fair trade is reported in new crop, £6 13s. 9d. having been paid at Hull for September loading and up to £6 10s. for October. Trade in cotton oil is quiet and export demand almost negligible. Refined oil is held for full prices. Oilcakes are quiet but steady for home makes, and a good trade is reported in imported cakes.

TIMBER.—Imports of building and joinery woods, although still above last year's level, were comparatively light in May, and London dock stocks show a fall on the year. There has been activity in all spot departments of the soft wood market, and prices have risen; but, since European shippers' rates have also been marked up, the forward market has been slow. Demand on the Continent has shown little improvement, but it would, nevertheless, appear that the modest unsold balances of the smaller European cut available for export will be readily absorbed, especially in view of the fact that prices are still reasonable. Meanwhile, the demand for building purposes in this country remains active, and shows no signs of an immediate recession.

In the hardwood section, too, shippers' prices remain firm—especially for teak. Good auction clearances of mahogany logs of the lower grade timbers have been made in recent weeks; brokers are advising their shippers to send moderate consignments of British W. African and Honduras logs of good size and character—which can be disposed of at satisfactory rates. Large quantities of plywood continue to come forward.

RUBBER.—After a period of stagnation, the market was noticeably stronger this week and prices show a significant rise. The revival is traceable to a good trade demand, the belief that the devaluation of the gold bloc currencies has been staved off, the continued fall in stocks and the feeling that the removal of "sanctions" will ease the international political outlook. While some of the factors

contributing to the improvement of sentiment this week may possibly prove illusory, there has undoubtedly been an improvement recently in the statistical and technical position of the market. The spot price in New York on Wednesday was 15½ cents per lb., compared with 15½ cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., as against 7½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. to 7½d. for "October-December" shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 124,261 tons, against 127,366 tons a week earlier. A year ago stocks amounted to 170,954 tons.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader
Page of THE FINANCIAL NEWS are as follows:

MONDAY, JUNE 29—THE TREND OF COMMODITY PRICES.—Primary produce prices, both here and in America, have not shown more than a negligible upward movement over the past year, despite the fact that it is the avowed policy of the two economically most important Governments in the world, to raise prices. This article discusses the background of this seemingly strange contradiction.

TUESDAY, JUNE 30—AMALGAMATED BANKET AREAS.—Our special Mining Correspondent, "MINOTAUR," this week takes for analysis the position and possibilities of the Company which might reasonably be described as the "West Wits" of the Jungle. This article enquires whether the large developing areas under this Company's control might at any time justify anything resembling the enthusiasm which the great Rand development company has elicited in the market.

WEDNESDAY, JULY 1—COMPANIES AND THEIR PROFIT-EARNING CAPACITY, No. 18—BRITISH OXYGEN.—This Company has been chosen as the subject this week, of this further addition to our series of penetrating analyses of the business layout and prospects of leading industrial companies.

THURSDAY, JULY 2—CHILEAN BONDS.—This article analyses the recent improvement in the economic position of Chile, and discusses the prospects for the Bondholders under the current agreement, which received the tacit approval of the British Bondholders' representatives.

FRIDAY, JULY 3—THE OUTLOOK FOR WOOL.—The bullish viewpoint on wool prospects taken by "The Financial News" in a special article almost exactly a year ago, proved well enough justified. The weaker tendency during the last month or two, however, justifies a further consideration of the position in the light of the high price levels established during the past year, and the new factors which have come into existence.

SATURDAY, JULY 4—CHANGES IN BRITISH INDUSTRY.—This article provides a short and simplified survey of the changes in the relative and absolute importance of the different industries in this Country, as shown by the various volumes of the latest Census of Production.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issues and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

The Progress of a Great Financial Institution

Year by year, million by million, the assets of the Woolwich Equitable Building Society increase. Year by year these assets are wisely employed, helping thousands of people to the privileges of home ownership and earning interest for the shareholders.

The balance sheets and accounts of the Society show a healthy relationship between new capital received and mortgage advances to borrowers, while the reserve funds of the Society steadily increase as the Society's prosperity and income continue to grow.

Extracts from the Society's Balance Sheets:—

Year Ended	Share Capital	Advances	Reserve Funds	Total Assets
30th September, 1931	£17,940,524	£6,362,102	£785,000	£21,156,941
30th September, 1932	£18,841,138	£2,446,124	£830,000	£22,910,423
30th September, 1933	£18,059,543	£3,912,805	£935,000	£23,714,191
30th September, 1934	£20,003,823	£6,403,957	£1,040,000	£27,094,596
30th September, 1935	£21,633,676	£7,158,855	£1,200,000	£30,112,549

HISTORICAL DEVELOPMENT OF THE MOVEMENT

The first transaction in real property on borrowed money lies beyond the mists of antiquity and the Book of Genesis. The earliest "Society for Building" in Great Britain, however, of which contemporary records have survived, was founded on December 3, 1781, in Birmingham. It was a co-operative effort, and its object was indicated by its title. Its proprietors subscribed for shares, balloted for plots of land, and were entitled to have houses built for themselves according to the total value of their shares, for which they subscribed by instalments.

This society probably was not the earliest to be formed. The language of its initial announcement is not that of a pioneer enterprise, but rather of a new exemplar of a procedure with which readers were already familiar; and the advertisement of another Birmingham society, issued little over two months later, described its own method as "an improved and more advantageous plan than any hitherto established." That building societies—engaged, as their name suggests, in *building* and not merely in its finance—were fairly numerous in the North of England, early in the nineteenth century, is indicated by the tenor of isolated conveyances, legal decisions, etc., extant to-day. The first complete set of rules, however, which so eminent an historian as Sir Harold Bellman has been able to discover, does not relate to an earlier date than 1825.* The first Act of Parliament relating specifically to building societies was passed on July 14, 1836.

The present year is memorable, therefore, as the centenary of the movement's attainment of a comprehensive legal status. The Act's preamble admirably describes the objects and methods of the contemporary societies, which, it declares, had "been established in different parts of the Kingdom, principally among the industrious classes, for the purpose of raising by small periodical subscriptions a fund to assist the members thereof in obtaining a small freehold or leasehold property." The movement was evidently well regarded by the authorities, for the Act was specifically designed to afford the societies "encouragement and protection." It is clear that the movement was closely associated, from the outset, with the friendly society movement, whose development in the later years of the eighteenth and the early years of the nineteenth centuries, among the "industrious classes," was phenomenally rapid. By the same token, most of the early building societies were formed in the manufacturing towns in the North of England. The movement has always been particularly

strong in the textile districts of the West Riding of Yorkshire.

Shortly after the middle of the last century some 1,200 societies were in existence, with an estimated income of a little under £2½ millions a year. By that time, however, the movement was imperceptibly changing its character. The majority of societies were still localised "friendly" bodies, but a small number, with annual incomes running up to £50,000, were obviously of wider scope, financially and geographically. The original conception of a building society as a "society for building" had already been dropped, and the societies had restricted themselves largely to their present-day function of making advances for house purchasing, undertaken on the initiative of individual members.

Finally, the "terminating" society, whose duration was specifically limited to a fixed period of time or a defined objective, was giving place to the "permanent" institution. The latter was not only unlimited as regards its possible life; it also embodied the fundamental principle of differentiation between investing and borrowing members. An opportunity was afforded for the attraction of funds from a wider range of investors than those immediately interested in house purchase. This development marked a crucial stage in the movement's evolution. It gave the societies the distinctive character of "savings banking" institutions. It enormously increased the range of the movement's public appeal. Incidentally, it also opened the door to possible abuses. To check this possibility, a Building Societies' Protection Association was formed, and a Royal Commission appointed early in the 'seventies. The Report of that body was followed by the passing of the Building Societies Act of 1874, on which the present legal status of the movement largely rests.

When the Commissioners made their report, in 1872, they estimated that approximately 2,000 societies had total assets of over £17 millions and mortgage advances of over £16 millions. The statistical basis of these estimates is somewhat doubtful, but the broad impression they convey is probably reliable. In the northern industrial towns the bulk of the societies' members were "working men," but in London the movement had attracted greater middle-class support. Many societies, like their successors in the last few years, had found it advisable to protect themselves against a plethora of unwanted funds by much the same expedients as are in force to-day—reduced interest payments and other "braking" devices.

The Act of 1874 applied the basic principles of limited

* "The Thrifty Three Millions," page 13

liability and perpetual corporate succession to building society organisation. Recognition was given both to terminating and permanent societies, but the subsequent development of the latter has altogether outstripped that of the former, whose total assets to-day represent less than 1 per cent. of those of the entire movement.

From 1890 onwards, comprehensive building society statistics have been compiled officially by the Chief Registrar of Friendly Societies. Between that year and the last pre-war year, 1913, the number of societies had decreased from 2,795 to 1,550. The decline, however, was a reflection merely of the movement's closer organisation, on the disappearance of many terminating societies. Financially, the movement, during this period, made perceptible though undramatic progress. The total assets of all societies were £55 millions in 1895 and £65 millions in 1913. Outstanding mortgages showed a net rise, during the same years, from £44 millions to nearly £61 millions. New mortgage business was steady rather than progressive. In 1901, when the figures of new advances were first compiled, the year's total was £8,900,000. In 1913 it was £9,100,000. The number of members suffered a small net decline from 631,000 in 1895 to 617,000 in 1913.

During these years the movement's activity attained several minor peaks and suffered two unfortunate and undeserved setbacks. The Liberator Building Society failed in 1892 and the Birkbeck Building Society in 1911. Neither reflected the slightest discredit on the building society movement proper. The Liberator had abandoned legitimate building society business long before its failure. The Birkbeck had never been a building society except in name, and at the time of its failure its mortgage assets were under three-quarters of a million out of total assets of £12 millions. The effect of public misunderstanding, however, was damaging. Between 1891 and 1893 the number of building society members declined from 639,000 to 588,000, and the movement's total assets dropped from nearly £51 millions to under £44 millions. The strain imposed by the Birkbeck failure was even more severe, for between the end of 1910 and of 1911 the movement's total assets, which had reached a then "record" figure of £76½ millions, fell

by 23½ per cent. to £58½ millions. The Liberator failure was, indirectly, of positive value to the movement, for it resulted in the passing of the Building Societies Act of 1894, which conferred on the Registrar wide regulatory powers, including prescription of the form of building society accounts and the right to call for specified and detailed information regarding mortgage assets. The Act went far to reassure public opinion, and the years from 1896 onwards were years of steady development until 1910. Before the movement, however, had time to resume its accustomed rhythm, after the Birkbeck failure, the outbreak of the Great War completely changed the immediate outlook.

The post-war development of the movement will be discussed in detail in succeeding chapters. A tribute may be paid to the constructive part played, through the critical years of the movement's history, by the National Association. This representative body was the direct successor of the Protection Association to which reference has already been made. Its constitution, membership and policy are discussed in a subsequent section of this Survey (see page 23). Though it is essentially a "protective" body, it has interpreted its responsibilities in a liberal and positive sense. Both the Acts of 1874 and 1894 were facilitated by the existence of an articulate and forward-looking representative institution. To-day the National Association provides what is, in effect, a "Cabinet" on broad principles of contemporary policy and practice, through the regular meetings of its Council. It also provides a "Parliament," through its annual meetings of representatives, which serve to crystallise opinion and foster a corporate spirit.

To complete the picture, reference must be made to the movement's official organ, the *Building Societies Gazette*, an old-established monthly journal whose pages, produced with an attractive modern format, provide a forum for "public opinion" in the movement. Its present editor is a co-opted member of the Council of the National Association. The *Gazette* is responsible, also, for the publication of the movement's convenient and compendious work of reference, the *Building Societies Year Book*.

POST-WAR DEVELOPMENT OF THE MOVEMENT

In the preceding section we have briefly traced the history of the building society movement from its earliest days. We shall now analyse the effect of post-war conditions on its development. Changes since the war, indeed, have been so far-reaching as to deserve the term "revolutionary." The movement has not so much grown as been transformed. Before the war it experienced a normal succession of upward and downward movements, and met a steady public demand for its services. The proportion of the total national resources which came within its control, however, was not large, and its development was, for the most part, localised. The tradition of "commercial" management, active publicity and keen competition was scarcely existent. The movement, as a whole, was steady rather than progressive. In the decade 1904-1913 the total resources of the building societies of the country showed no upward tendency—thanks, in part, to the Birkbeck failure; they were, in fact, slightly reduced, from £66,953,622 to £65,387,147.

The pre-war antecedents of the movement have left their mark on its organisation under the greatly changed conditions of to-day. Although the movement's total resources at the present time may be put at nearly £600 millions, against the £65.4 millions of 1913, the small society has not been forced out of existence. In 1934 there were still 1,007 societies on the register, and their number had fallen by only 85 during the preceding decade. The growth of the great societies, working on nation-wide lines, has thrown the initiative in new developments into the hands of a minority of the total societies, by number; but while the latter may have a clear idea of the policy they would desire the movement to follow at any given time, the co-existence of large numbers of medium-sized and small societies acts as a constant brake on any tendency to

uniformity of practice. Within the same movement are institutions with resources running into eight—and in one case nine—figures, whose organisation and scope are nation-wide, and, at the other extreme, societies whose resources have never reached £10,000. It is as if the creation of the big five banks had been accompanied by the survival of a host of small local institutions, and many intermediate "district" banks. The whole movement, finally, has a legal status of a "friendly society" type. Building societies are governed, not by Company Law, but by statutes which make them analogous rather to the co-operative societies. In particular, their "capital" is withdrawable, usually at relatively short notice.

Though the development of the movement, on its modern scale, may not have been seriously embarrassed by these anachronisms, it may be well to recognise their existence. That they have not, so far, imposed any substantial check on the movement's ability to expand, is evident from a consideration of the annual returns since the war. The growth of the total assets of the movement is shown in the following table:—

End of Calendar Year	Total Assets of all Societies (Million £'s)	Increase during Year (Million £'s)
1913	65.4	1.2
1920	87.1	9.8
1924	144.9	20.2
1925	169.2	24.3
1926	193.9	24.7
1927	223.3	29.4
1928	268.5	45.2
1929	312.7	44.2
1930	371.2	58.5
1931	419.2	48.0
1932	469.3	50.1
1933	501.1	31.8
1934	555.0	53.9

With these figures we may compare those of total mortgages outstanding at the end of each year:—

Calendar Year	Balance due on Mortgages at end of Year (Million £'s)	Increase during Year (Million £'s)
1913	61.6	1.3
1920	68.8	10.9
1924	119.7	20.9
1925	145.9	26.2
1926	171.2	25.3
1927	197.7	26.5
1928	227.5	29.8
1929	268.1	40.6
1930	316.3	48.2
1931	360.2	43.9
1932	388.4	28.2
1933	423.5	35.1
1934	475.7	52.2

The movements in the two sets of figures since 1924 are shown in the chart opposite. Clearly, there is no comparison between the movement's size and scope in pre-war and in post-war years. Up to 1913, in something like 130 years, the movement had accumulated outstanding total assets of over £65½ millions. The amount of new house purchase financed by the movement since its inception was, of course, many times that figure, for the financial business of these societies is, normally, of a "revolving" character. Since the war, however, the total assets of all societies have increased, during a decade and a half, from £87 millions (in 1920) to £555 millions (in 1934), and the balance due to the societies on mortgages has risen from approximately £69 millions to £476 millions. There have been years, like 1930 and 1934, when the total net increase in the outstanding assets of the movement has been within hailing distance of the entire accumulated resources of the pre-war period. In the fourteen years between 1920 and 1934, total assets increased by 537 per cent., and total outstanding mortgages by nearly 600 per cent.

This is Progress—with a capital P—which has tended to gather headway in the later years of the period. The increase in total assets in the last complete pre-war year was £1¼ millions. In the four years between the end of 1920 and the end of 1924, the average annual increase was about £14½ millions. In the next three years the average annual increase was £26 millions. In 1928-29, immediately before the onset of national economic depression, the annual rate of increase rose to nearly £45 millions. This progressive tendency was quite unchecked by the depression. In 1930-32 the annual "increase" figure averaged £52 millions, and, after a temporary lapse to approximately £32 millions in 1933, it reached nearly £54 millions in 1934.

A similar movement has been typical of the mortgage total, though, as the accompanying chart shows, the two curves have not run exactly in parallel. In the earlier post-war years the annual increases in the mortgage balance coincided more or less with those of total assets. Since 1928, however, there has been a tendency, on the whole, for assets to increase somewhat faster, absolutely, than total mortgages. In 1928, for example, assets increased by £45 millions and mortgages by under £30 millions. In 1930, again, the net increase in mortgages was £10 millions less than the net growth in total assets, and in 1932 it was nearly £22 millions less. On the other

hand, in 1929, 1931, 1933 and 1934 the two sets of figures showed much the same absolute increase.

The net result was that, between 1924 and 1934, total assets increased by £410 millions and total outstanding mortgages by £356 millions. In 1924 some 83 per cent. of the movement's total assets were represented by amounts due on mortgage. In 1934, despite the smaller absolute increase in outstanding mortgages, their proportion of total assets was 85½ per cent. The inference is that the societies, as a whole (there are, of course, wide variations in practice between one society and another), have endeavoured to maintain a fairly constant percentage of their total funds in cash, gilt-edged securities, etc., and that this "liquidity ratio" has been in the neighbourhood of 15 per cent. The absolute increase in outstanding mortgages has been less than in total assets, but the relative proportions between the two have been fairly steady throughout the period of rapid expansion.

It is evident that the building society movement now ranks among the largest—or, more correctly, is itself the largest—of the institutions which cater mainly for the small investor. Its total assets of £555 millions, at the end of 1934, compared with a total of £355 millions in the Post Office Savings Bank, £393 millions in National Savings Certificates, and £96 millions in the Trustee Savings Banks. According to the figures given in a recent survey (included with the *Economist* of March 7, 1936) the total outstanding value of certificates issued by the fixed trusts was only £21 millions at the end of 1934 and is not greatly in excess of £50 millions to-day. The building society movement, in its origin, probably antedates the Trustee Savings Banks by at least 40 years, the Post Office Savings Bank by about 70 years, the National Savings movement by about 130 years, and the fixed trust movement by a century and a half. During the period of its greatest growth, however, which has been comprised within the last 15 years, its progress has been more rapid than that of any other of the "small savings" agencies.

BORROWERS AND INVESTORS

UNFORTUNATELY, official summaries of the number of shareholders, depositors and borrowers were not compiled before 1928. The subsequent figures are set out in the table which follows:—

INVESTORS AND BORROWERS				
End of Calendar Year	No. of Societies on Register	No. of Share Investors	No. of Depositors	No. of Borrowers
1928	1,035	1,130,066	356,549	553,884
1929	1,026	1,265,329	393,829	628,933
1930	1,026	1,449,432	428,343	720,443
1931	1,013	1,577,905	465,173	802,534
1932	1,014	1,692,167	545,648	868,794
1933	1,013	1,747,980	631,371	948,523
1934	1,007	1,856,491	694,042	1,066,327

If all the share investors and depositors were separate

individuals, about 8 per cent. of the total present-day population of Great Britain, or 11½ per cent. of the adult population, could be regarded as "investors" (using the term in its broadest sense) in building societies. Actually, many depositors are also shareholders, and individual investors may have accounts in more than one society. Moreover, some societies, in their returns, give the number of accounts, which may involve some duplication of individual members. It is evident, however, that the building society movement to-day may rightly claim to have a *clientèle* comparable in numbers, as in social significance, with such agencies as the National Savings Movement and the Post Office and Trustee Savings Banks.

Further analysis suggests that, in fact, the movement is

itself best regarded, on the investment side, as being largely of the character of a "savings" organisation. The exact dimensions of the average building society shareholder's or depositor's balance is difficult to determine, for the official summaries include "other creditors" with total liabilities to depositors, and it is debatable whether "profit and reserve," which are shown separately in the returns, should not, for purposes of calculation, be regarded as the joint property of building society members. If (a) "other creditors," whose amounts are usually small in relation to the total building society figures, are lumped together with the total standing to the credit of depositors; and (b) profit and reserve are regarded as belonging to shareholders, an approximate idea of the size of average investment balances, and of changes in the average during recent years, may be obtained from the following table:—

End of Calendar Year	AVERAGE DEPOSITS AND SHAREHOLDINGS				
	Liabilities to Depositors and other Creditors (Mill. £'s)	Liabilities to Share-holders (Mill. £'s)	Profit and Reserve (Mill. £'s)	Average Depositor's Balance (£)	Average Shareholder's Balance (£)
1928	41.4	213.2	13.8	115.9	200.9
1929	46.8	250.2	15.7	118.8	210.2
1930	50.8	302.8	17.6	118.6	221.1
1931	57.3	341.8	20.1	123.3	229.3
1932	66.8	380.9	21.7	122.3	237.9
1933	81.5	395.5	24.1	129.2	240.0
1934	104.0	423.8	27.2	149.9	242.9

On the assumptions made in the table, the average shareholder's balance increased by £42 (20.9 per cent.) and the average depositor's balance by £34.0 (29.4 per cent.) during the period under review. It is noteworthy, however, that during the greater part of the period the average shareholding increased much faster than the average deposit. It is a fair inference that, during these years, investors were attracted by the relatively high rates of interest obtainable on building society shares. From approximately the end of 1932 onwards, however, many building societies, in a period of low general interest rates, have been limiting the amount of new shares which they were prepared to receive. The result has been the diversion of a considerable part of the stream of new investment into deposits rather than shares. Between the end of 1932 and of 1934, the "average" share investment increased by only £5.0, while the average deposit rose by £27.6. It follows that the average rate of interest paid by the societies, on the whole *corpus* of funds obtained from the public, has been reduced to a somewhat greater extent than the published revisions of interest rates would suggest; since deposits, in return for their priority of status, are paid on a lower interest scale than shares.

The number of building society borrowers has always been less than the number of investors. This is certainly true, even after allowing for all "overlapping" by way of duplication of individual deposit and share accounts and of individual accounts with different societies. As between individual borrowing accounts there is little overlapping. The same individual rarely runs separate borrowing accounts with the same society or borrows from more than one society. A significant number of borrowers, however, are also investors with their societies. Taking all the figures in the aggregate, however, the returns given in an earlier table show that the total number of borrowing accounts was 37.2 per cent. of the total of investment accounts (depositors and shareholders combined) in 1928 and 41.8 per cent. in 1934.

Similarly, the average individual amount borrowed has always been considerably larger than the average standing to the credit of the individual investor. The relationship between the two is indicated in the following table:—

(1) End of Year	MORTGAGE BALANCES			
	(2) Balance due on Mortgages (Million £'s)	(3) Average per Borrower (£)	(4) Average Investment (Shares and Deposits Combined) per Investor (£)	(5) Proportion of (4) to (3)
1928	227.5	410.7	180.5	43.9
1929	268.1	426.3	188.5	44.2
1930	316.3	439.3	197.7	45.0
1931	360.2	448.5	205.2	45.7
1932	388.4	446.9	209.7	46.9
1933	423.5	446.3	210.8	47.2
1934	475.7	446.2	217.6	48.8

We may next consider the changes wrought in the internal structure of the building society movement by its rapid development in recent years. How far, for example, have its greatly increased resources been obtained by drawing in new investors, and how far by an expansion in the amount standing to the credit of the individual investor? Conversely, how far has the movement extended the area covered by its operations as a lender, and how far has the size of individual mortgages tended to grow? First of all, we may examine its recent actual rate of expansion. As a basis of measurement, it will be convenient to take the results for the year 1929, the last year before the depression which profoundly affected so many branches of the national economic life. This datum year, incidentally, lies almost half-way through the decade 1925-34. If certain significant aggregates of the building society movement be expressed on the basis 1929 = 100, the following results emerge:—

	TEN YEARS' PROGRESS (1929 = 100 throughout)				
	Liabilities to Share-holders (including Profit and Reserve)	Liabilities to Depositors and other Creditors	Balance due on Mortgages	Other Assets	Total Assets
1925	51.4	69.1	54.4	52.3	54.1
1926	62.0	59.5	63.9	50.8	62.0
1927	71.3	69.5	73.8	57.4	71.3
1928	85.7	88.4	84.9	91.8	85.7
1929	100.0	100.0	100.0	100.0	100.0
1930	118.6	120.5	108.4	123.0	118.6
1931	133.9	136.0	122.5	132.3	133.9
1932	149.9	151.3	142.7	181.5	149.9
1933	160.1	157.7	158.0	173.9	160.1
1934	177.3	169.5	177.5	177.9	177.3

The figures confirm the view, expressed earlier, that the movement has maintained a steady relationship between mortgages and other (mainly "liquid") assets. The rate of growth of these items has not been identical from year to year, but, broadly, it is true to say that mortgage balances and other assets both approximately doubled between 1925 and 1929, and increased by a further 77 per cent. (of the 1929 figure) between 1929 and 1934. The table, further, confirms the view expressed above that, up to 1932, liabilities to shareholders tended to increase more rapidly than liabilities to depositors, but that since 1932 the tendency has been reversed. Altogether, since 1929, total liabilities to shareholders (including profit and reserve) have increased by nearly 70 per cent. and liabilities to depositors and other creditors by 122 per cent.

The figures are eloquent of the scale on which the movement's activities have grown in recent years. How far has this epoch-making development been *extensive* and how far *intensive*? The next table throws light on this question.

	NUMBER OF INVESTORS, ETC.; AVERAGE INVESTMENT AND AVERAGE MORTGAGE (1929 = 100)				
	No. of Share Investors	No. of Depositors	No. of Borrowers	Average Shareholding (including Profit and Reserve)	Average Deposit (including Mortgages)
1928	89.3	90.6	88.1	95.8	97.8
1929	100	100	100	100	100
1930	114.6	108.6	114.5	105.3	99.9
1931	124.8	118.0	127.6	109.1	103.8
1932	133.8	138.6	138.1	113.2	103.0
1933	138.2	160.2	150.8	114.2	108.8
1934	146.8	176.2	169.5	115.7	126.2

The table shows, first, that, up to 1931, the number of share investors tended to increase rather more rapidly than the number of depositors, but that subsequently the latter has shown much the more considerable rate of growth. Secondly, the increased funds at the movement's disposal have been obtained mainly by drawing in new "investors." The balances standing to the credit of individual investors have increased concurrently, but at a much lower rate. Thus, between 1929 and 1934, while the average shareholding (including profit and reserve) increased by 15.7 per cent., the number of share investors increased by 46.8 per cent.; and while the average deposit (including

amounts due to other creditors) rose by 26.2 per cent., the number of depositors increased by 76.2 per cent. Thirdly, on the "lending" side, the increased activity of the movement has been due almost entirely to the demand for the societies' services from an increased number of mortgagors.

SOCIETIES AND THEIR ASSETS

THE phenomenal growth of the building society movement since the war has been accompanied by the development of competitive business methods on "commercial" lines. Although the legal status of the movement has not changed, its traditions and organisation have moved perceptibly away from those of "friendly society" days. The pace is set in the movement, to-day, not by localised bodies formed for mutual self-help in a given direction, but by powerful units whose organisation is analogous to that of the commercial corporation. Their affairs are directed by whole-time officials, assisted by large staffs. Though their head offices, not infrequently, may be located outside the Metropolis, their branches and agencies cover urban and other areas in many different parts of the country. In short, the development of a system of "branch-banking" has been paralleled by that of "branch-building society" development. At the same time, many societies of moderate size continue to function, with credit and success, in many towns and the rural areas surrounding them; and a considerable number of societies with relatively small resources, and a sharply defined area of operations, attest the survival of the movement's original aims and organisation.

There is a certain element of change within the movement by way of the entry, each year, of new societies and the closing down of others. Broadly, however, the movement, at present, has both a low birth-rate and a low rate of mortality. During the year 1933, for example, only 21 societies were removed from the Register, out of a total of 1,014 in existence at the beginning of the year. Of these, five united with or transferred their managements to other societies. During the same year 15 societies were incorporated. Neither figure covers as much as 2 per cent. of the total number of societies in the movement. As all the "births and deaths" affected societies of relatively small size, the proportion of the movement's total resources affected by entrances and exits can be regarded as almost negligible.

Of far greater interest are changes within the framework of the existing societies. Building societies are divided into two classes: "permanent" and "terminating." The latter are now relatively unimportant in relation to the work of the whole movement. At the end of 1934 some 150 of these "terminating" societies, out of 1,007 building societies in Great Britain, had total assets of £1,919,196, representing no more than 0.3 per cent. of the £555,028,811 of the entire movement. An analysis of the 1933 figures shows that of the "permanent" societies, the largest—the Halifax Building Society—had total assets exceeding £92½ millions. The second largest—the Abbey Road Building Society—had assets of nearly £42 millions. The assets of 9 other societies exceeded £10 millions each. Those of 32 other societies ranged between £2 millions and £10 millions, while 22 other societies had assets of £1 million to £2 millions. These figures account for a total of £411,123,853 under the "larger" societies, leaving £89,945,741 to cover the "medium" and "small" societies. The latter group, it will be seen, still accounted for 93.6 per cent. of the whole, by number. The latest available data regarding assets are given in the table on page 14.

How are the assets of the movement divided between societies of varying size? To what extent have the relative proportions attributable to different groups changed in recent years? The following figures afford the material for an answer to these questions. They are based on the Registrar's figures for three different years—namely, 1924, when the increase in building society activity was beginning to gather headway; 1929, the last year before the recent econo-

mic depression; and 1933, the latest year for which, as yet, comprehensive and detailed records are available. We have added, however, a preliminary estimate of our own for 1934, based on the figures for 110 societies which form the subject of a special analysis in a later section of this survey.

Number of Societies whose individual assets are				
	1924	1929	1933	1934
£50 millions or over	1	1	1	1
£25 " to under £50 millions	1	4	9	7
£10 " " £25 " "	13	19	32	36
£2 " " £10 " "	16	21	22	23
£1 million " £2 " "	1,082	788	789	787
Under £1 million	1,082	788	789	787
Total permanent societies	†	833	854	857
" terminating societies	†	193	159	150
Total societies	1,112	1,026	1,013	1,007

† Terminating societies not separated.

Our figures for 1934 may be accepted as accurate, since the analysis on which they are based includes all the societies (70 in number) which had assets of £1,000,000 or more on December 31, 1934; while the figures for the whole movement (and, consequently, the residual totals for societies with assets of under £1,000,000), are based upon the preliminary official returns of the Registrar.

It will be seen that the growth of the movement, since 1924, has brought one society into the highest asset category (£50 millions or over) and three into the second group (£25 millions to under £50 millions). In 1924, no society had assets of as much as £25 millions, and only one society had assets exceeding £10 millions. The subsequent amalgamation of the two "Halifax" societies is reflected in the fact that the largest of present-day societies had total assets, at the end of last January, of £108 millions. In the main, however, it is to the growth of the movement itself that one must attribute the existence, at the end of 1934, of as many as eleven societies with individual assets exceeding £10 millions, and the increase in the number of societies with assets exceeding £1,000,000 from thirty in 1924 to seventy in 1934. It will be observed, moreover, that a large part of this development occurred during a period of national depression. Between 1929 and 1933, the societies with assets exceeding £1 million increased from 45 to 65.

The extent to which the large societies dominate the movement is strikingly revealed by the next table, which should be read in relation with the numerical table above:—

DISTRIBUTION OF ASSETS BY SIZE OF SOCIETIES (Million £'s)				
Total Assets held by Societies falling in groups named				
	1924	1929	1933	1934
£50 millions or over	...	59.4	92.6	102.8
£25 " to under £50 millions	...	...	41.9	98.0
£10 " " £25 " "	16.6	53.9	144.4	106.7
£2 " " £10 " "	50.3	91.7	102.9	120.7
£1 million " £2 " "	22.3	32.0	29.3	32.5
Under £1 million	31.7	73.5	88.0	92.4
Total permanent societies	†	310.5	499.1	553.1
" terminating societies	†	2.2	1.9	1.9
Total societies	120.9	312.7	501.0	555.0

† Terminating societies not separated.

Even in 1924, the societies with individual assets of less than a million pounds, and the terminating societies, together controlled only 26.2 per cent. of the movement's total assets. Ten years later, when the total assets had increased 4½ times, the "smaller" societies controlled no more than 16.6 per cent. of the total resources. If the distribution of the movement's assets among societies of different

sizes be shown on a percentage basis, the following results emerge:—

PERCENTAGE DISTRIBUTION OF ASSETS BY SIZE OF SOCIETIES				
Total Assets held by Societies falling in groups named	1924	1929	1933	1934
£50 millions or over.....	%	19.1	18.5	18.5
£25 " to under £50 millions	%	13.7	17.2	28.8
£10 " " £25 " "	%	41.6	29.3	20.5
£2 " " £10 " "	%	18.5	10.2	5.8
£1 million " £2 " "	%	26.2	23.5	17.6
Under £1 million				16.6

" terminating societies	†	0.7	0.4	0.3
Total societies	100	100	100	100

† Terminating societies not separated.

In 1924, societies with £10 millions or more of individual assets held together some 13.7 per cent. of the total assets. By the end of 1934 the proportion held by societies in this category had increased to 55.4 per cent. The recruits to the ranks of the "very large" societies have come from the immediately preceding group, in our scale of magnitude. This group (£2 millions to under £10 millions) has obtained, in its turn, new recruits from the next lower group, but it is clear that these incomers "at the bottom" have been much smaller, on the average, than the societies which have passed out "at the top." This group held 13 societies in 1924, with average assets of £3.9 millions, but the average for the 36 societies which it embraced in 1934 was only £3.3 millions. If the "medium-sized" category be extended to include all societies with assets of £1 million to under £10 millions, its share in total assets in 1924 was 60.1 per cent. In other words, it was the predominant group, so far as asset ownership was concerned. In 1934, the proportion of total assets attributable to this "medium-sized" group had fallen to 27.7 per cent., i.e. to a little more than one-fourth of the whole.

How have these changes affected the size of the average society? The table opposite throws direct light on this question.

The smallness of the size of the *average* building society may come as a surprise to many readers. The average terminating society has no more than £10,000 of assets. The average permanent society, despite the existence of many

societies with resources running into seven and eight—and of one society running into nine—figures, has assets of only a little over half a million pounds.

From the tables adduced in this section it is clear that the rapid progress of recent years has not merely increased the movement's resources, but has significantly changed its centre of gravity. All societies, with very few exceptions, have increased their size, but the larger societies have secured much the more important share of the new business. It is true that the smaller societies, and those in the "medium-sized" group, have not been squeezed out. Many of them, rather, have earned "promotion" to higher groups, and in individual instances their *rate of progress* may compare favourably even with that of the largest societies. The assets of the smallest societies, however, are, relatively, so small, and those of the largest societies so large, that even an equal *percentage* growth in the two cases must increase the *absolute* resources of the larger societies to a far more considerable extent than those of the former.

Two conclusions, therefore, emerge from the present chapter. The first is that the recent phenomenal expansion of the movement has sharply accentuated the anomalies inherent in its structure, and has widened the gulf separating the larger and the medium-sized societies from the smaller institutions. The second conclusion is that the influence and, consequently, the responsibility of the larger societies, as "keepers of the purse" and custodians of the movement's traditions, has very considerably increased.

GEOGRAPHICAL DEVELOPMENT

FROM what has been said in earlier sections of this Survey, it will be clear that the building society movement, as we know it to-day, has been evolved from a number of bodies who owed their formation, in the first place, to local initiative. The evolution of the nation-wide building society, with its wide ramification of branches, and centrally organised policy, was a comparatively late development. It has been suggested further, that even to-day the majority of existing building societies, by number, are still localised institutions. To that extent, the development of the organisation of joint stock banking has outstripped that of the building societies, for the small country bank has practically disappeared in Great Britain.

Some of the largest of the present day building societies had their birth outside London—just as the Midland Bank, for example, of the "Big Five" was originally a Birmingham institution. The joint stock banks of England and Wales, however, have for the most part (with certain important exceptions) established their headquarters in London, whereas the head offices of many of the largest building societies are still domiciled in the provinces. The largest building society of all bears the name of, and has its head offices in, a Yorkshire town. The prominent part which the West Riding, and the county of Lancaster, have played in the history of the movement, indeed, is attested by the names and location of many important societies to-day. Since the war, however, there has been a well marked tendency for the centre of gravity of building society operations—as of many other forms of economic activity—to move southwards. There have always been sound and enterprising building societies in and about the metropolis, but the rise of the London-domiciled societies

to their present position of undoubted importance is almost entirely a post-war development.

Inevitably, the official returns of the movement do not afford a complete picture of the geographical distribution of building society activity. Individual societies whose operations cover a wide area do not publish separate returns of their business in different regions. Consequently, the entire figures for a great society like the Halifax, which holds 18.5 per cent. of the total assets of the entire movement, are allocated in the returns to the "North of England" area; while, conversely, those of the Abbey Road Society, which has branches as far afield as Penzance and Aberdeen, are all credited to "London and the Home Counties." Nevertheless, in view of what is known of the broad trend of the movement's geographical development in recent years, it is possible to draw important conclusions from the data given in the returns. It is fairly safe to assume, throughout, that the post-war figures somewhat understate the relative proportions of actual business in the south. With this proviso in mind, we may consider the following figures:—

GEOGRAPHICAL DIVISION OF TOTAL ASSETS (1913 and 1925, permanent and terminating; 1929 and 1934, permanent societies only) (Million £'s)				
	1913	1925	1929	1934
North of England	29.0	92.1	155.8	255.9
Midlands	9.3	26.3	42.5	69.4

† Including terminating societies.

THE National Building Society, founded 87 years ago, one of the pioneers of the great Building Society Movement, has throughout its existence maintained a steady record of unbroken progress. It has contributed enduring benefits to the Nation by providing a simple and convenient way to house ownership and by offering a sound investment for capital. "The National" continues to go forward always with the same steady purpose—Security for Investors, Service for House Purchasers.

The NATIONAL BUILDING SOCIETY

Founded 1849

Assets exceed £28,000,000.

Reserves £1,290,000.

NATIONAL HOUSE, 12-18 MOORGATE, LONDON, E.C.2. Metropolitan 8410

GENERAL MANAGER: R. BRUCE WYCHERLEY, M.C., F.C.I.S.

The inclusion of terminating societies in the figures for 1913 and 1925 does not markedly affect conclusions drawn therefrom. As we have already shown, the total assets of all the terminating societies to-day are under £2 millions. Taking the figures as they stand, it will be seen that the rise of the "London and Home Counties" societies is one of the most striking features of the post-war history of the movement. It is a phenomenon, moreover, which has been largely confined to the last decade. Between 1913 and 1925, the net progress of the "London" societies, as measured by the increase in their total assets, was, in fact, *slower* than that of most other areas. The assets of the "London" societies at the end of 1925 were 1.9 times the 1913 figure for the same area. The corresponding figures for the "North of England" societies had increased 3.2 times, those of the "Midlands" societies 2.8 times, and those of all societies in Great Britain 2.6 times.

In the last ten years, however, the severity of depression in many northern industrial areas, the rapid development of housing estates in the more prosperous Greater London area, and the tendency of certain of the larger "London" societies to go well afield in extending their operations—all these conditions are reflected in a remarkable rise in the importance, both in finance and prestige, of the London-domiciled institutions. Actually, between the end of 1925 and of 1934, the total assets of the "London and Home Counties" societies increased 5.3 times, while those of societies domiciled in the North of England increased 2.8 times, and those of all societies in Great Britain 3.3 times. In fact, during the later years of the decade, the tendency of the "London" and the southern societies generally to outstrip those of the "North of England" was arrested, and even reversed, as we show in a subsequent section dealing with the geographical distribution of new advances (see page 11). The general results of the last decade, however, taken as a whole, have impressive significance, as a corollary of the much-discussed "southward trend" of British economic activity.

The following tables show (a) the percentage increase of building society assets in different areas since 1913; and (b) the proportionate share of each area in total assets. In both cases the figures cover the same years as in the preceding table:—

(A) PERCENTAGE INCREASE IN DIFFERENT AREAS
(1913 = 100)

	1913†	1925†	1929	1934
North of England	100	318	537	882
Midlands	100	283	457	746
London and Home Counties ..	100	193	493	1,029
Southern and Western England ..	100	198	314	596
Rest of England and Wales	100	185	265	396
Scotland	100	111	147	326
Total—Great Britain	100†	259†	475	846

† Includes terminating societies.

(B) PERCENTAGE DISTRIBUTION OF ASSETS, BY GEOGRAPHICAL AREAS IN EACH YEAR

	1913†	1925†	1929	1934
North of England	44.3	54.5	50.1	46.3
Midlands	14.2	15.6	13.7	12.5
London and Home Counties ..	27.1	20.2	28.1	32.9
Southern and Western England ..	7.5	5.7	5.0	5.3
Rest of England and Wales	4.0	2.8	2.2	1.9
Scotland	2.9	1.2	0.9	1.1
Total—Great Britain	100†	100†	100	100

† Includes terminating societies.

Broadly, while the total assets of the entire movement, at the end of 1934, were 8.5 times as large as in the last pre-war year, those of the "North of England" were 8.8 times and those of the "London" societies 10.3 times as large. Societies in other areas, taken as a whole, showed less than the average rate of growth. If the comparison be limited, however, to the period from 1925 to 1934, a somewhat different picture is presented. Let the figure 100

represent the assets of societies in each area at the end of 1925. Then the corresponding figures for 1934 are 327 for all societies in Great Britain, 532 for the "London and Home Counties" societies, 301 for the "Southern and Western England" societies, 278 for the "North of England" institutions, and 264 for societies domiciled in the "Midlands." The "London" societies, which in 1925 held only one-fifth of the total assets of the movement, held nearly one-third at the end of 1934. The percentage of the "North of England" societies, during the same period, declined from 54.5 to 46.3. Table (B) shows, somewhat strikingly, the unequal distribution of building society assets—or, perhaps more correctly, of head offices—over the length and breadth of the country. The next table, showing the number of societies registered in the different areas, confirms this impression:—

NUMBER OF SOCIETIES IN EACH AREA

	(Permanent societies)			
	1913*	1925*	1929	1934
North of England	469	329	284	283
Midlands	213	165	142	144
London and Home Counties ..	421	302	183	218
Southern and Western England ..	205	136	95	99
Rest of England and Wales	134	87	66	66
Scotland	110	82	50	47
Total—Great Britain	1,552	1,101	820	857

* Includes terminating societies.

The tables given throughout this section are, possibly, a better guide to the geographical origin of the more important societies than to their present territorial scope. It is not without significance, however, that societies whose head offices are in the industrial North, in the Midlands and around the Metropolis, hold between them more than nine-tenths of the present-day assets of the movement, while societies located in the rest of the country, and in Wales and in Scotland, together mustered, in 1934, only 8.3 per cent. of the total assets. In fact, the societies domiciled in the "active" areas are not only more numerous, but, on the average, more "wealthy" than those in the rest of the country:—

AVERAGE ASSETS PER SOCIETY, BY GEOGRAPHICAL AREAS

	(Permanent societies)			
	(£000)			
	1913*	1925*	1929	1934
North of England	61.8	279.9	548.6	904.2
Midlands	43.7	159.4	299.3	481.9
London and Home Counties ..	42.0	113.2	476.5	835.3
Southern and Western England ..	23.9	71.3	162.1	294.9
Rest of England and Wales	19.4	55.2	104.5	156.1
Scotland	17.3	25.6	56.0	132.0
Total—Great Britain	42.1	153.7	378.7	645.6

* Includes terminating societies.

The "average assets" figures are affected by the inclusion of the largest society in the "North of England" returns, and of the second largest society in the "London" totals. The variations in average size are, nevertheless, striking. It will be perceived, further, that the average assets of the "London" societies, which were well below the average for the whole of Great Britain ten years ago, now significantly exceed it. The "North of England" societies, however, have retained their historical pre-eminence, despite the challenge from the South.

Both areas appear to have secured their advance, in part, by extending their business into other areas, and all "geographical" conclusions must needs be qualified by the caveat regarding "overlapping" entered at the beginning of this section. So far, however, as the inspiration for a forward policy in management may be regarded as originating from the head office of a society concerned, the figures suggest that a significant part of the driving force behind the development of the last few years has come from the North of England and from the London area.

NEW MORTGAGES

ALTHOUGH figures of total assets and total outstanding mortgages are the most convenient indices for measuring the progress of the building society movement as a whole, over periods of years, they do not afford a satisfactory measuring-rod of the movement's aggregate contribution to activity in the building trade. They are *net* figures, arrived at after allowing for withdrawals, as well as for new investments in shares and deposits and after taking account of repayments on old mortgages, as well as of advances made on new mortgages. The part played by the building societies in financing house purchase can most readily be appreciated by consideration of the *gross* amounts advanced on mortgage each year.

The following table sets out the total sums thus advanced, in 1913, and in every year of the decade 1925-34:—

NEW MORTGAGE ADVANCES				
(1) Year	(2) Advanced on Mortgage each Year	(3) Same, 1929 = 100	(4) Increase in Balance due on Mortgages (end of each year as compared with end of preceding year)	(5) Column (4) as percentage of column (2)
1913	£ 9,131,017	12.2	£ 648,808	7.1
1925	49,822,473	66.7	26,112,193	52.4
1926	52,150,941	69.8	25,363,696	48.6
1927	55,886,803	74.7	26,527,335	47.5
1928	58,664,484	78.5	29,784,682	50.8
1929	74,718,748	100	40,608,624	54.4
1930	88,767,426	118.8	48,172,103	54.3
1931	90,253,133	120.8	43,863,300	48.7
1932	82,142,116	109.9	28,200,676	34.3
1933	103,195,663	138.1	35,134,492	34.1
1934	124,214,655	166.3	52,181,256	42.0

The figures deserve close inspection, since they reveal a number of features which have not yet received wide discussion. The annual rate of increase in new advances on mortgage is a remarkable testimony to the recent growth of the demand for facilities for house purchase and to the societies' ability to satisfy it. The amount advanced in 1929 was more than eight times as great as in 1913 and one and a half times as great as in 1925. Throughout the subsequent depression the annual figures continued to increase—the year 1932 alone excepted—and with the coming of industrial recovery in 1933-34 the pace was greatly expedited. The total of new advances made in 1934 was 13.6 times the figure of 1913, 2.5 times that of 1925 and 1.7 times that of 1929.

In the ten years 1925-34 the societies advanced, in all, the stupendous sum of £779,816,742 for the purchase of properties. The part they played in the house-building activity of the country can be fairly closely measured. Between 1919 and September 30, 1934, some 2,484,848 houses were built in England and Wales, of which some 776,174 were erected by local authorities. It has been estimated by Sir Harold Bellman that, of the remaining 1,708,674 houses, some 1,300,000 were erected or purchased with the help of building society finance.

What types of house were mainly financed by the societies? In the work cited at the beginning of this Survey, Sir Harold adopts the classification of the Marley Committee on the Rent Restriction Acts. The Ministry of Health's figures of post-war houses erected in England and Wales to September, 1932, showed that some 21.5 per cent., by number, were Class A houses (selling at over £1,300 in London and £1,000 elsewhere); some 42 per cent. were Class B houses (selling between £600 and £1,300 in London and between £400 and £1,000 elsewhere), and the remaining 35.8 per cent. were Class C houses (selling at £600 or under in London and £400 or under elsewhere). Sir Harold regards it as a very probable assumption that the building societies provided finance for the great majority of houses in Classes A and B, but only "a proportion" of those in Class C. Sir Harold and other authorities would probably agree that this proportion was not particularly considerable—in other words, that the societies' contribution to the finance of the smallest type of working-class dwelling has not, hitherto, been of major importance.

Building society activity, in fact, has been restricted, mainly, to owner-occupier properties, and has not, in the past, gone much beyond the fringe of the problem of providing dwellings for the numerically large "poorer" sections of the population. The growth in the volume of the

societies' advances may be attributed partly to the steady rise in the "real wages" of workers in employment during recent years, and partly to the *availability* of the movement's resources and the energy with which the societies have sought to extend their mortgage business. It is reasonable to assume that, in the absence of readily accessible building society resources in a period of "forward" policy in the movement itself, many of the Class A and B houses erected during the last decade would never have been built at all. The decline in interest rates, in a cheap money period since 1932, may have tended to intensify and possibly to prolong, this phase of expanding building activity and house ownership. But the main movement started much earlier, for our index number of new annual advances, shown in column (3) of the table above (1929 = 100) had increased from 66.7 in 1925 to 118.8 in 1930, *before the downward movement in interest rates was inaugurated.*

Building Society finance takes due account of the fact that, in any given year, while new advances are being made, part of the principal of old advances is being repaid. Its funds are, to a considerable extent, "revolving" funds, which can be re-applied, so to speak, over and over again. It will be seen, by comparing columns (2) and (4) of the table above, that the increase in the *total outstanding on mortgage* at the end of each year has consistently been much less than *total new advances made* during the year. Throughout their period of greatest expansion, the societies have, on the average, financed more than half their new business by the re-investment of capital sums repaid by borrowers (and, to a small extent, by minor receipts, such as interest on security holdings). To put the matter another way, they have been able to finance new house purchase to more than twice the amount of new shares and deposits obtained from the public. From 1926 to 1929, there was a tendency for the ratio between the increase in mortgage balances and the amount of new advances to rise. Subsequently, the ratio has fallen somewhat sharply, with a moderate rise in 1934.

Building society borrowers repay their advances by relatively constant instalments. In the later years of a mortgage, therefore, the amount attributable to repayment of principal tends steadily to rise, and the amount attributable to interest to fall. As the advances made in the earlier part of the period of greatly increased post-war activity are now attaining "seniority," whilst each year's repayments are based on a higher outstanding total principal than the last, it follows that aggregate annual repayments during the next few years will be on a sharply upward curve. Unless the demand for new advances continues indefinitely to maintain the dramatically rapid rate of expansion it has attained in the last few years—which is most improbable—and provided that there is no increased tendency to lengthen the average period of repayment, it follows that the movement will require annually a decreasing amount of *new* money from the public. The consequences of such a tendency may be far-reaching.

We may next inquire which areas have provided the larger part of the new mortgage business. No categorical reply can be given. The nearest approach to an answer is provided by the following table, which divides the new mortgage figures according to the location of the head offices of the societies which made the actual advances:—

AMOUNTS ADVANCED ON MORTGAGE
(By Societies located in Various Areas)
(000's omitted)

	North of England	Midlands	London and Home Counties	Southern and Western England	Rest of England and Wales	Scotland	Total
1925	£ 27,631	6,870	10,826	2,778	£ 1,410	309	49,822
1926	27,582	7,390	12,747	2,882	1,194	357	52,151
1927	27,488	7,590	16,230	2,897	1,298	384	55,887
1928	25,196	7,396	21,123	3,179	1,391	380	58,665
1929	30,267	8,775	29,819	3,725	1,601	531	74,719
1930	35,750	9,078	37,424	4,419	1,380	717	88,767
1931	37,384	9,469	35,893	5,103	1,469	936	90,253
1932	38,107	10,926	24,870	5,193	1,692	1,015	82,142
1933	50,133	11,873	31,585	5,845	2,014	1,423	103,196
1934	57,751	15,282	39,205	8,060	2,208	1,390	124,215

Note.—Divisional figures 1932 to 1934 relate to permanent societies only. The total for the three years includes amounts for terminating societies of £338,000, £318,000 and £319,000, respectively.

Two features of this table attract immediate attention—the large proportion of the total business done by societies with head offices in the North of England and the Midlands; and, in the last decade, the rapid rise in the figures for the societies located in London and the Home Counties generally. As the following table shows, the "North of England" societies still do nearly half the total "advance" business, and the "London" societies about one-third:—

PERCENTAGE AMOUNTS ADVANCED ON MORTGAGE
(Geographical Distribution)

	North of England	Midlands	London and Home Counties	Southern and Western England	Rest of England and Wales	Scotland	Total
1925	55.5	13.8	21.7	5.6	2.8	0.6	100
1926	52.9	14.2	24.5	5.5	2.2	0.7	100
1927	49.2	13.6	29.0	5.2	2.3	0.7	100
1928	43.0	12.6	36.0	5.4	2.4	0.6	100
1929	40.5	11.8	39.9	5.0	2.1	0.7	100
1930	40.2	10.2	42.2	5.0	1.6	0.8	100
1931	41.5	10.5	39.8	5.6	1.6	1.0	100
1932	46.4	13.3	30.3	6.3	2.1	1.2	100
1933	49.7	11.5	30.8	5.6	2.0	1.4	100
1934	46.5	12.3	31.6	6.5	1.8	1.1	100

Although the "North of England" societies increased their annual advances from £27.6 millions in 1925 to £57.8 millions in 1934, their percentage of the total advanced by societies declined during the same period from 55.5 to 46.5.

ANALYTICAL SURVEY OF NINETY-EIGHT SOCIETIES

So far we have reviewed the history and development of the movement, particularly in its post-war phase, on the basis of the comprehensive official figures compiled by the Registrar of Friendly Societies—supplemented, in some instances, by the results of our own investigations. We now propose to bring the results up to date from a special survey of building society trends, undertaken under our own auspices. For this purpose we have prepared a ten-year analysis of the figures of 110 societies which in 1934 had assets of over £500,000 each. We have been greatly assisted in our work by the ready co-operation of the societies concerned and by the Registrar of Friendly Societies and his staff, whose help we gratefully acknowledge.

The tables which follow on pages 14 and 15 present part of the information which we have compiled. In those tables will be found "key" figures, relating to total assets, shares, deposits and mortgages outstanding for significant years from 1925 to 1935, and particulars of new share subscriptions, deposits and mortgage advances during these years. Throughout the tables we have adopted the convention of entering figures relating to years up to March under the date of the preceding calendar year. The latest figures for certain societies whose reports had not been published by our closing date have necessarily been excluded from our final comparative tables. Since the information for previous years is given, however, readers may readily adjust our calculations in the light of subsequent information.

For further analysis of the figures it is necessary for comparative purposes to eliminate from our totals the information relating to those societies whose latest reports up to March 31st have yet to appear, and also to exclude in the summary tables a few societies whose records are not complete over the period, owing mainly to changes in constitution. After making these adjustments, we are able to present comparative results for 98 societies, whose total assets amounted in 1935 to £500.7 millions and in 1934 to £464.5 millions. Compared with the total assets of £555 millions of all societies included in the Registrar's latest report for 1934, our sample may thus be regarded as adequate and comprehensive, since it covers 84 per cent. of the total assets of the movement. Further, as many as 53 societies are included in this number whose assets exceed £1,000,000, out of a maximum total of 74 societies of this size. These societies, further, cover 1,510,500 shareholders, 574,250 depositors and 971,150 mortgage borrowers. Conclusions based on the sample are therefore likely to be strictly representative of the movement as a whole.

There have, however, been two clearly discernible phases in this movement. From 1925 to 1930 the tendency of the Northern societies to lose ground *relatively* (i.e. for their new business to increase less rapidly than that of the building society movement as a whole) was unchecked. During these same years, the percentage of the "London and Home Counties" societies rose from 21.7 to 42.2. In 1930 the "London" societies, for the first and only time on record, actually advanced more money for house purchase than the "Northern" societies. Subsequently, the trend has been reversed, possibly as a result of the tendency of the speculative "estate building" boom on the fringes of Greater London to overrun itself, and, possibly, to some extent, as a reflection of differences in lending policy on the part of different societies. In 1933, the "North of England" societies' percentage of new advances had risen again to 48.7, while the "London" percentage had fallen to 30.6. In 1934, there was a slight movement the other way once more. For the rest, the "Midland" societies have held their relative position fairly steadily throughout the years of expanding business, their proportion varying from one-eighth to one-tenth of the whole. Societies located in the remaining areas together are responsible for less than one-tenth of building society new business. Scotland's proportion has increased, but the importance of the building society movement north of the Border is still small.

Before proceeding to discuss in detail matters relating to the results obtained for these societies, it may be desirable first to present a summary of part of the results of our inquiry for the 98 societies for which consistent information is available. This table accordingly follows:—

PARTICULARS OF 98 BUILDING SOCIETIES
1925-1935
(Amounts in £'000)

	1925	1929	1932	1933	1934	1935

§ Excluding interest as far as possible.

From the information summarised above, it is possible to reach up-to-date conclusions on several important matters. The figures are sufficiently comprehensive to provide a

A WORLD'S RECORD

OVER TWENTY-ONE MILLION POUNDS ADVANCED DURING 1935

Mainly upon security of dwellinghouses acquired by borrowers for their own occupation. This large sum has established a new record; it being greater than the total amount advanced by the Society in any preceding year.

Extracts from the Statement of Accounts for the 83rd year, ended January 31st, 1936:—

TOTAL ASSETS - - - £108,087,466
INCREASED BY £5,289,853

MORTGAGE ASSETS - - - £85,942,328
INCREASED BY £7,843,242

RESERVE FUNDS - - - £4,417,943
INCREASED BY £564,433

OPEN ACCOUNTS - - - 659,509
INCREASED BY 37,186

MORTGAGE LOANS - - - £21,712,318
INCREASED BY £18,117

reliable indication of the trend of progress in each different department of building society administration. The growth of mortgages in relation to new share subscriptions and deposits can be examined, and from 1931 onwards it is possible closely to estimate the effects of depression upon the movement and the repercussions of changes in interest rates. For this constant number of societies it is possible to reach conclusions regarding variations in the average size of new mortgages, and also regarding the average rate at which mortgages are repaid. There is, further, much information on the important question as to how far the resources of the building societies are revolving funds, and the extent to which they have become self-financing through the re-investment of mortgage repayments. Similar problems arise on the investing side. What is the relation between shares and deposits? Have there been any significant changes in the relationship during recent years, due to changes in interest rates? From the computation of average rates on mortgages and investment balances it is possible to make tentative estimates of variations in the last decade of great importance in considering the problem of fixity of rates during periods of considerable changes in interest levels. These questions form the principal matters for discussion in the pages which follow.

GENERAL TRENDS, 1925-35

We may examine first the growth in total assets of these 98 societies in relation to their shares, deposits and mortgages outstanding at the end of each year. These movements are set out in the first four entries in the summary table. In the following composite table the yearly totals above are first shown on the basis 1925 = 100, and secondly the relationship of shares, deposits and mortgages to total assets is calculated:—

	1925 = 100				Relation to Total Assets		
	Total Assets	Shares	Deposits	Mortgages	Shares	Deposits	Mortgages
1925	100	100	100	100	(%)	(%)	(%)
1929	188	210	140	187	74.0	15.5	88.8
1932	292	325	236	276	82.3	11.5	84.6
1933	309	343	295	301	82.5	12.6	81.2
1934	344	357	390	338	82.1	14.8	83.4
1935	370	372	466	377	77.0	17.7	84.5
					74.5	19.5	81.2

Since 1925 the aggregate size of these 98 societies has increased almost three and three-quarter times. Their growth,

comparable with that of the movement as a whole, has been consistent, and indeed dramatic. Total assets had nearly doubled between 1925 and 1929. In the next three years they increased by more than the 1925 total. Between 1932 and 1935 they increased by two-thirds of the base figure. Only between 1932 and 1933 has there been any check to the rate of increase, when some of the larger societies temporarily pursued a very cautious policy on the investment and mortgage sides of the business, owing to the difficult financial conditions of the time.

Comparable movements are reflected in the share and deposits and mortgage figures. The rate of increase in the shareholders' balances has in fact exceeded that of total assets, but the measures which have been taken to limit new share receipts are responsible for a rise of only 47 points in the index figure since 1932. The rise in deposits, however, is spectacular. It should, of course, be remembered that deposits form a limited proportion of the movements' total resources. In 1932, as the second part of the table shows, they were equivalent to about one-eighth of the total, and in 1935 were still under one-fifth. Since 1932, however, depositors' total balances have nearly doubled, since societies have in many cases suspended the issue of fresh shares and deflected new investment business to deposits, at a lower rate of interest. This has particularly affected the Southern societies, who have been accustomed, until recent years, to do less deposit business than some larger societies centred in the North. The mortgage index figures, inevitably, keep fairly close pace with the growth in total assets, although it must be remembered that, since the dimensions of the movement are continually enlarging, this implies a larger absolute amount invested in current assets loaned to local authorities or maintained in cash.

These changes are broadly reflected in the second part of the composite table. The increase in shares outstanding has actually kept pace with the general increase in the resources of the societies examined, despite the fall during the past two years, which have seen an equally impressive rise in deposits. Over the period, however, the proportion of mortgages to total assets has remained remarkably constant. In normal years the proportion varies only slightly from 85 per cent. of the whole, and the apparent fall in 1932 may be attributed to the fact that, in a year when total resources had rapidly increased, the societies wisely restricted the customary re-lending proportion on the argument that part of the new funds were in all probability only temporarily deposited.

CHANGES IN INTEREST RATES

By common consent, changes in interest rates have presented the movement with one of its most difficult problems during recent years. The rapid fall in interest rates from 1931 onwards led directly to the "bad money" problem, since many investors faced with the conversion of War Loan placed large amounts with the building societies to earn over 4 per cent. tax free on shares and 3½ per cent. on deposits. The inevitable result was the restriction on the investment business imposed by most societies, whose extent has already been examined. Between the fall in interest rates and the reduced terms of mortgage borrowers there was a fairly long interval. Early last year adjustments became unavoidable, although unfortunately their announcement was precipitate and their terms not uniform.

It is, however, difficult to discuss interest margins in relation to one or even a dozen societies' published rates. We have, therefore, devised a method which, it is hoped, will give a more representative impression of the trend of rates for the investment and mortgage branches. For each of the years examined in this Survey we have taken the mean of the opening and closing totals for shares, deposits and mortgages, as being the most representative figure to which the totals of share, deposit and mortgage interest apply. The computed rates per cent. give as far as possible the average effective rates for each case. It should be noted that complete accuracy is not obtainable by this method—nor by any other—for interest on deposits some-

times includes items for loan interest, while in the case of shares, in earlier years, the rates include bonus payments. In the great majority of cases, however, these sums do not affect the figures significantly. The calculations are set out in the following table:—

	Average Outstanding (£'000s)			Interest Paid (£'000s)			Effective Rates (per cent.)		
	Shares	Deposits	Mortgages	Shares	Deposits	Mortgages	Shares	Deposits	Mortgages
1925	96,928.6	18,793.5	100,179.3	4,242.2	724.7	5,857.4	4.38	3.85	5.85
1929	194,645.7	28,344.0	199,144.8	8,786.3	1,110.7	11,491.7	4.51	3.92	5.78
1932	309,053.5	44,607.4	309,059.8	13,883.7	1,658.9	18,184.3	4.49	3.71	5.88
1933	334,680.5	55,795.6	334,809.5	12,837.1	1,927.6	18,732.2	3.84	3.46	5.60
1934	350,592.0	72,024.6	370,883.6	12,930.5	2,013.1	20,326.1	3.69	2.80	5.48
1935	365,211.7	90,009.0	414,530.9	12,970.0	2,670.9	21,556.7	3.55	2.97	5.20

The table clearly suggests that a steady trend of falling rates has been in progress during the last six years. Since 1929, in particular, the average rates on shares and deposits have fallen by nearly 1 per cent. The greater part of the fall dates from 1932 onwards, when the societies took special steps to stem the influx of funds. On the mortgage side, for reasons which are discussed later, the fall in effective rates has been more moderate, but it has been no less steady. From 1929 the rate has fallen from 5.78 per cent. to 5.20 per cent., and the latter rate is presumably higher

Invest IN A HOUSE

Since its foundation in 1854, the Temperance Building Society has advanced over £25,000,000 for the purpose of helping many thousands of people to buy their own houses. It is one of the oldest and best-known Building Societies in the country, and has provided a constant example of sound business management and equitable dealing.

The Society recognises that security and stability are important to the borrower as well as to the investor and the fact

that in no circumstances does the Society increase the rate of interest as is provided for by many Building Societies when there is a rise in the Bank Rate has been a continual source of confidence and appreciation to the borrowing public. Although the choice of a property may vary according to individual needs, there can be no question that every purchaser wishes to borrow on the most advantageous terms, and in this connection it is suggested that application be made to the managers for particulars.

ASSETS £13,000,000—RESERVES £700,000

than the average now prevailing. While the societies' margin has tended to increase on a larger volume of business, it must be remembered that part of that increase has been wisely applied to strengthening reserves, and part has inevitably been absorbed in higher management charges. To-day, the house purchaser is accustomed to think in terms of mortgages at 5 per cent. or less. A decade ago, as the table suggests, the basic level was nearer 6 per cent. The reduction of the interest burden, and the consequently shorter effective life of the mortgage when it is arranged on "constant payment" terms, has undoubtedly been an important factor in the further vigorous increase in mortgage advances during the past year.

BUILDING SOCIETY POLICY

We may next turn to discuss the questions of policy which arise in a period of changing interest rates. The movement has in recent times attempted to restrict the influx of unwanted funds by curtailing facilities for investment. Strict limits have been imposed on new deposits, and in a number of societies the share investment branches have been temporarily closed. The movement, too, has reduced the rates offered on deposits and shares, down to a point at which the former in many cases carry only $2\frac{1}{2}$ per cent. and the latter 3 per cent. Even these rates, however, are not ungenerous when allowance is made for income tax, since they amount respectively to 3.225 and 3.87 per cent. on a "gross" basis at the standard rate. The movement's policy, during the phase of low interest rates, bears some points of resemblance to that of maintaining a currency at an artificial external value. In order to maintain the existing volume of shares and deposits, apparently, full flexibility of interest rates has not been adopted. Yet a rate which is just sufficient to maintain a given volume of resources over the long period may be more than generous to those who seek a short-term haven for their funds. To do justice to existing depositors, and to protect themselves from an embarrassing influx of funds, the societies imposed their system of quantitative limitation, and only during recent months has the throttle been opened slightly.

Is the policy wise as well as expedient? *Laissez-faire* arguments might suggest that, during a cheap money period, the societies should remain open to receive unlimited funds at sharply reduced rates of interest. This argument, however, hardly recognises two factors of paramount importance in the building society equation. The first is the necessity to maintain a given volume of resources in order to maintain a given volume of mortgages. The latter may be of fifteen or twenty years' duration, whereas shares and deposits, in most cases, may be withdrawn on short notice. No society therefore can afford to reduce its rates to a level at which the maintenance of this volume of funds is endangered. Nor does it welcome funds which seek a short-period home, whose re-investment in mortgage advances might leave the society "unliquid" before many months had passed. The custody and reinvestment of such funds in short-dated and low-yielding securities is a thankless and unremunerative task.

MORTGAGE TRENDS FOR NINETY-EIGHT SOCIETIES

THE analysis of the detailed mortgage business figures for 98 societies during the past decade reveals several important features. The following table summarises the relative movements of new mortgage advances and repayments, in comparison with the average volume of mortgages outstanding in each year:—

	Average Mortgages Outstanding	New Mortgage Advances	Repayment of Advances	Proportion New Ad- vances to Average Outstanding	Proportion Repayments to Average Outstanding	Proportion Repayments to New Advances
1925	£100,179.3	£1,526.0	£24,858.5	41.5	24.8	59.8
1929	199,144.8	62,823.0	39,723.0	31.6	19.9	63.3
1932	309,059.8	66,117.3	61,310.9	21.4	19.8	92.8
1933	334,809.5	83,539.9	73,390.9	25.0	21.9	87.8
1934	370,883.6	102,944.7	78,392.6	27.8	21.1	76.2
1935	414,530.9	106,243.9	83,635.7	25.6	20.2	78.7

The policy of paying a somewhat artificially high price for funds during a low-interest phase, coupled with restrictive devices, may not be scientifically satisfying, but as part of a long-term programme it may have some justification in expediency. Whether all societies have legislated with these considerations in mind may, perhaps, be doubted. The leading societies, however, appear to have resisted the temptation to indulge in over-expansion of mortgage advances by a hasty reduction in interest rates at the expense of the depositor. It must be remembered, further, that the movement has not experienced any wholesale desire on the part of shareholders and depositors to withdraw their balances. Precipitate reduction of rates allowed on these balances might have involved a rate of withdrawal greater than that at which new funds were offered. In any succeeding phase of rising interest rates, equally prompt reversal of this "open-door" policy would be necessary. New mortgage borrowers, whose original advances dated from the low-interest period, might feel some grievance if rates rose sufficiently far to compel revision. On the cyclical argument, therefore, there is something to be said for a policy of relative stability of rates, both for borrowing and lending.

If, however, this theory is invoked to meet the case of secular changes of rates it wholly fails to apply. No unit in the financial organisation, of course, is on sure ground in arguing the case regarding secular changes of interest rates. In this matter, it is a case of Mr Keynes *versus* the rest of the world. The ordinary building society, in its day-to-day business, can hardly be expected to cast its span so far. But it may nevertheless be forced, sooner or later, to acquiesce in any semi-permanent change, and last year's adjustments themselves may eventually prove to be part of this process. There is little doubt, however, that in a period of rapidly falling interest rates the building society movement tends to be "inelastic" in the sense that, other things being equal, the rates paid on shares and deposits and the rates charged for mortgage advances are both "high," having regard to the willingness of lenders to take and the eagerness of would-be borrowers to pay lower rates, at that time. Similar difficulties, however, are met whenever interest rates rise appreciably. Depositors and shareholders, who may immediately withdraw their funds in search of more remunerative openings, compel any society who must keep its resources intact to raise its interest payments forthwith. An immediate advance in mortgage rates is, therefore, inevitable.

The question finally resolves itself into a judicious compromise inherent in a business of the "borrowing short—lending long" kind. Our analysis, in fact, suggests that a gradual process of adjustment has been in train during the past decade, on which the more spectacular changes of recent years have been super-imposed. Finally, it may be pointed out that, unless the movement continues to maintain, indefinitely, its recent dramatically rapid rate of increase in new mortgage advances, it should require, in future, a decreasing amount of new money from shareholders and depositors, for reasons described on page 19.

It will be seen that new mortgage business has tended to become "stabilised" at about one-quarter of the ever-increasing average of mortgage loans outstanding. In earlier years, when new mortgage business was increasing at a higher annual rate than recently, the proportion was frequently much higher, but the recent stability of the proportion might have been expected from the relative constancy of the proportion of regularly growing total assets represented by mortgages. The figures reveal a "kink" for 1932, on which we have previously commented, when the proportion of new advances to the average amount outstanding fell as low as 21.4 per cent., but subsequent trend shows that this low level merely coincided with a temporary defensive policy which was not unwise in the circumstances.

The figures for repayments must be handled with caution. Expressed as a proportion of the average volume

of outstanding mortgages, they show only slight variation above and below 20 per cent. during the past six years. In the majority of cases, however, the amounts repaid also include interest, and it is impossible precisely to separate the two items as the accounts are at present drawn up. Again, sums are frequently included as amounts repaid which have been derived from sales of property in possession. Even if deduction be made for gross interest charged to borrowers during the year, the extent of such proceeds cannot be ascertained and allowed for. It is possible, however, to put forward figures, with some reserve, which at least separate the gross interest charged to mortgagors from their repayments. These can be obtained by deducting the effective mortgage interest charge per cent., as set out in the table on page 16, from the percentages shown under column 5 in the above table. For the respective years the computed rates of mortgage repayments, expressed as a percentage of the amount outstanding, are calculated as follows:—1925, 19.0; 1929, 14.2; 1932, 13.9; 1933, 16.3; 1934, 15.6; 1935, 15.0. The rate has thus remained reasonably close to 15 per cent. of the amount outstanding in each year. The average life of each mortgage advance can therefore be put, roughly, at six and two-third years. The whole life of the mortgage, therefore, would usually be of something over thirteen years' duration. It would not appear, from these estimates, that any fundamental changes of practice have been introduced during the last six years, although it is interesting to note that in 1925 the proportion of repayments seems to have been a good deal higher. It should be emphasised that calculations of average life of mortgages must be affected by any change in the average age composition of the total amount outstanding, since the older the mortgages on the average, the greater will be the proportion represented by a given volume of repayments. Where repayments, further, are calculated on the basis of constant regular repayments, of which a declining amount represents interest on a declining capital balance outstanding, this factor is even more pronounced. The calculation of average life may be affected by rapid growth of mortgage business and changing interest rates, but it is not unduly conjectural.

The last column of the table above throws light on a further problem. Granted the maintenance of a given volume of deposits and share balances, how far are the funds of the building societies to be regarded as revolving funds? This question can be put in the alternative form: What proportion does the volume of repayments on old mortgage business bear to the finance of new mortgage business? Here again the answer is complicated by interest included in the repayments. The final column in the table gives the percentages on a gross basis. The same calculations, after eliminating all mortgage interest from the figures, may be given as follows:—1925, 46.0; 1929, 44.9; 1932, 65.3; 1933, 65.4; 1934, 56.4; 1935, 58.4. The actual truth, therefore, lies somewhere between these limits. In a year of very rapid expansion, apparently, the movement can count on repayments of existing mortgages for well over half of its new mortgage advances. In more "normal" years—if we may so designate the mortgage position in 1932 and 1933—the minimum proportion approached two-thirds. The significant comparison, however, is with the figures for 1925 and 1929, when, in each case, the proportion was well under one-half. During the decade new business has expanded in remarkable fashion, but each successive year brings in a greater volume of repayments which can, other things being equal, be applied to new advances without calling upon new funds from the investment branches. The re-investment of mortgage repayments is becoming one of the chief functions of the movement. An examination of the trends of the past decade suggests that the societies may, in the future, have less inducement to expand in the investment branches, provided that they can maintain their investment balances broadly intact, and may have to concentrate more on the re-investment in each year of an increasing volume of repayments. If, for any reason, a slowing down of new mortgage business were gradually to set in for a period of several years, this problem of "giro finance" might be met fairly soon. The scale of new house construction may perhaps involve, in the not far distant future, important changes of internal policy.

DISTRIBUTION OF MORTGAGES

The social and economic significance of the building society movement during the past decade is fully displayed in the growth of mortgage and investment business, to which earlier reference has been made. An important subsidiary inquiry, however, also arises. How has the average mortgage varied in size, and what significant changes as between different groups have occurred? The basis for the answer to these questions is given in the following table, which has been based on the figures given in the main table on pages 14 and 15. The information relates to outstanding balances, and not to original loans:—

ANALYSIS OF MORTGAGE BALANCES, 98 SOCIETIES

	1925	1929	1932	1933	1934	1935
Under £500:						
Average per mortgage (£)...	316	268	277	283	289	295
Total as % all mortgages	46.8	44.5	40.8	42.1	43.5	44.3
£500-£1,000:						
Average per mortgage (£)...	621	673	669	659	652	646
Total as % all mortgages	30.7	36.1	42.9	43.0	42.3	41.4
£1,000-£3,000:						
Average per mortgage (£)...	1,459	1,368	1,357	1,420	1,415	1,423
Total as % all mortgages	13.7	12.2	10.9	9.7	8.5	7.5
£3,000-£5,000:						
Average per mortgage (£)...	3,820	3,844	3,763	3,717	3,476	3,876
Total as % all mortgages	3.1	2.3	1.8	1.8	1.3	1.9
Over £5,000:						
Average per mortgage (£)...	9,537	10,643	10,755	11,281	11,769	13,065
Total as % all mortgages	5.5	3.8	3.2	3.1	3.1	3.7

This analysis covers all mortgages of the group of societies, with the exception of "scheduled mortgages" where the society has been over twelve months in possession or where repayments are more than twelve months in arrears and also, in certain cases, mortgages from non-members. It will be found that in each year there is a small difference between the total as shown by the analysis and the aggregate figures for mortgages shown in the main table arising from these differences. Obvious social importance attaches, first, to the major proportion of outstanding mortgages, which have an average value below £1,000. In 1925 these represented $77\frac{1}{2}$ per cent. of the total; last year the proportion had increased to over $85\frac{1}{2}$ per cent. Yet the two classes, up to and exceeding £500, show striking differences of trend during the decade. The former still rank in proportion to the whole value of outstanding mortgages below the level of 1925, but it must at once be pointed out that the average value of each balance has fallen in greater degree. In terms of absolute numbers, the number of mortgages under £500 for these 98 societies has increased during the past decade from 172,055 to 655,026, and the total of the balances from £544 millions to over £193½ millions. The preponderant part of building society mortgage business, both in extent and value, is now transacted in this class, although the total in the next class—£500 to £1,000—runs very close. Since 1929 the value of mortgages under £500 has tended steadily to increase, from £268 in that year to £295 in 1935. This trend may be associated with the general increase in purchasing power since recovery set in, and also with improvements in house construction, which have coincided with reductions in costs. It is, apparently, not uncommon for a house purchaser to be willing to increase his total commitments by, say, 10 per cent. in order to obtain a type of house which, a few years earlier, might have been outside his means. It may also be considered to reflect, in some measure, the operation of the "pool" system for mortgage advances, whereby the purchaser, being relieved from providing part of the usual immediate cash deposit, may therefore be encouraged to buy a somewhat larger house than would otherwise be the case.

The average mortgage in the £500-£1,000 group has fallen steadily since 1929. Some part of this movement, however, may be explained by the gradual repayment of advances made some years ago which may have been near, or over, the £1,000 limit. By numbers and value, however, the mortgages in this group have shown a greater rate of expansion than in any group, during the decade, having increased by 387 per cent. from 57,365 to 279,330, and by 407 per cent. from £35.6 millions to £180.6 millions, running neck and neck with the total for mortgages up to £500. The gradual reduction in the average value of balances in this class from £673 in 1929 to £646 in 1935 may account, to a substantial extent, for this rate of progress.

In the remaining three classes, over £1,000, the past decade has witnessed an almost uninterrupted decline in importance. In 1925, these groups accounted for as much as 22.3 per cent. of the whole mortgage business. By last year, the percentage had dropped to as little as 13.1. Mortgages between £1,000 and £3,000 have, in fact, little more than doubled since 1925, although there is evidence of further growth in the two higher classes during 1935. Mortgages over £5,000, in particular, increased from nearly £12½ millions at the end of 1934 to over £16½ millions at the end of 1935, and the average value of each mortgage in this class has for some years been tending to increase. Sir Enoch Hill's recent address to members of the Halifax Building Society disclosed that a number of advances had been made in respect of residential flat property, during the past year, on a careful basis. Such advances may tend to affect the figures to a larger extent if the flat-dwelling movement increases in large cities.

The necessity for a stringent basis of valuation in the case of business exceeding £5,000 is recognised in statutory form of building society accounts. All mortgages where the present debt exceeds that sum must be separately listed in Part 1 of the mortgage schedule. The 98 societies whose accounts for 1935 are available have 1,248 mortgages over £5,000, whose present debt now totals £16,305,300. Their original value amounted to £28,936,300, and the amounts

originally advanced totalled £20,034,400. A first mortgage for about 69 per cent. of the original valuation shows that a greater safety factor is demanded than that which applies to smaller mortgage business. It is to be expected that any increase in large mortgages which might, for example, follow quieter conditions in the owner-occupier house mortgage business will be subjected to equally stringent safeguards.

In essence, however, the building society movement limits its interests very closely to the owner-occupier, and has recently done 85 per cent. of its mortgage business with the man who can afford a house up to £1,000. A recent extension of possible mortgage business, under the 1933 Housing Act was originally intended to encourage the societies to advance, on 4 and 4½ per cent. mortgage, up to 90 per cent. of the value of Class "C" houses built to rent, the balance over 70 per cent. being jointly underwritten by the Government, the local authority and the building society concerned. The plan has not, so far, been very fruitful. Many spokesmen for the movement have expressed their anxiety to encourage this form of business, and to co-operate with local authorities and with builders who may have plans for the erection of such houses. They point out, however, that the finance of such business would leave little margin above average interest costs, although societies with a considerable volume of deposits at lower rates might well be in a better position to finance it.

TRENDS IN INVESTMENT BUSINESS

A TABLE on page 16 based on the returns of the 98 societies which form the subject of the present detailed analysis, shows that, on the basis 1925 = 100, their share balances grew from 210 in 1929 to 372 at the end of 1935, while the corresponding figures for deposits were 140 and 466. Deposits, which amounted to slightly over one-fifth of the share balances of these societies in 1925 had increased to over one-quarter of a substantially higher share total last year. Since 1932 the share balances of these societies have increased by £50 millions; the increase in deposits, at one-half per cent. lower interest in most cases, has been only £2,000,000 less. During the period of falling interest rates few factors have been of greater significance than this growth in deposits.

The table which follows confirms this movement, for during last year nearly as much was subscribed in deposits as in shares for the societies concerned, whereas up to 1932 the proportion was not greatly in excess of one-third, even in the most comparable years. In the table, the amounts subscribed in shares and deposits and repaid from members' balances are expressed as a proportion of the average outstanding in the respective years:—

	Subscribed during Year		Proportion of Average Outstanding		Repaid during Year		Proportion of Average Outstanding	
	Shares	Deposits	Shares	Deposits	Shares	Deposits	Shares	Deposits
	£'000	£'000	%	%	£'000	£'000	%	%
1925	29,383.8	10,638.1	30.3	56.6	15,072.3	8,706.5	15.6	46.3
1929	54,152.8	12,421.4	27.8	43.9	28,458.3	13,891.1	14.6	49.0
1932	61,958.2	23,278.9	20.0	52.1	36,742.3	14,720.2	11.9	33.0
1933	33,387.5	28,251.4	10.0	50.7	32,935.2	15,192.7	9.8	27.2
1934	45,628.8	38,928.2	13.1	54.1	30,150.8	20,300.5	8.6	28.2
1935	41,337.6	40,169.8	11.3	44.6	22,887.3	26,187.6	6.3	29.1

The percentage figures give a useful impression of the extent to which the building society movement provides a cloak-room for members, and how far it is used as a savings bank. The growth of the movement has clearly slowed down the average velocity of circulation of its total resources. In 1925, some 15 per cent. of the average volume of shares outstanding was received net, after repayments had been off-set against new receipts for shares. Apart from the exceptional circumstances of 1933, when the two amounts nearly balanced each other, the proportion of the net retained share subscriptions steadily declined until last year it was no more than 5 per cent. In a normal year, in fact, it is not unusual to find that about one-half of the

total of new share subscriptions is off-set by shares withdrawn.

In the deposit branch, where the totals involved are considerably smaller, the proportionate turnover of funds has always considerably exceeded that in the share branch. In recent years, however, withdrawals of deposits have tended to rise in proportion to the whole. There has been plenty of scope for the net growth in the volume of deposits, but although new deposits have increased from £28½ millions in 1933 to £40.2 millions in 1935, the balance retained has increased only by £1,000,000 in the latter year. Since, on the latest figures, new subscriptions are very close in each branch and withdrawals are heavier in the deposit branch, it would appear that the more rapid turnover in the deposit branch reflects, not merely the smaller volume of funds kept on deposit, but also the terms governing them, as regards interest and withdrawal. The deposit branch, to which new investment business has been deflected in recent years, must now take care of "cloak-room" deposits—a somewhat distinct change, it would seem, from its original status. In the share branches, on the other hand, restrictions have been only slightly lifted, and holders would therefore be anxious to preserve their balances, at not unattractive rates under present conditions, while they could employ alternative funds for current investment or expenditure.

On the whole, the experience of the past decade suggests that the members of these societies make a fairly constant annual call upon them for the repayment of shares and deposits amounting, very broadly, to about £50 millions. It is of interest to note, therefore, that the societies as a whole maintain adequate reserves for the prompt settlement of these demands—apart from new subscriptions—in the form of short loans to local authorities, cash and other investments. The totals for these items are set out in the table on page 12. In recent years they have tended to amount to between £60 and £70 millions in total. For the movement as a whole, relying on the regular liquidation of outstanding mortgages, this volume of quick assets in relation to total assets is not unreasonable, although there are certain societies whose position could be strengthened in this respect. The movement, however, has steadily increased its reserves, which amounted in 1925 to nearly £4½ millions for the 98 societies analysed, and had grown to £19½ millions last year. There has also been a considerable growth in Reserve No. 2, which has been adopted by a number of societies to form a special provision against losses arising from the disposal of properties on

EXPERIENCE IS WISDOM . .

Supported by a long tradition of usefulness and a sound knowledge of public needs the efficiency of the Westbourne Park mortgage service ensures every satisfaction.

WESTBOURNE PARK BUILDING SOCIETY

OFFERS SECURITY TO INVESTORS AND THE LOWEST POSSIBLE RATES TO BORROWERS

Assets exceed £11,900,000

Reserves exceed £707,000

which borrowers have defaulted. The total at the end of 1935 was £2.4 millions, which appears ample in relation to less than £500,000 of mortgages which are in possession or in arrears of more than one year. It should be noted, however, that most societies take prompt steps to keep properties out of the schedule "twelve months in possession." These are more frequently cleared either by outright

sale, or by transfer to a receiver. The end-year figures, therefore, may in some cases underestimate the extent of properties which come into this category during any given year. For many societies the balance carried forward on profit and loss provides an effective reserve account. The total of such balances for the 98 societies has grown from £698,800 in 1925 to £4,159,500 last year.

HOUSE PURCHASE FINANCE AND THE "POOL" SYSTEM

As the building society movement has expanded enormously during the post-war period it was hardly to be expected that its pre-war technique would be entirely adequate to the changed conditions. It is a very different matter to advance £8-£9 millions per annum—the immediate pre-war figures—and upwards of £100 millions per annum—the figure for the past few years; and it is in fact on the mortgage side of the societies' operations that the most noteworthy changes have occurred.

Before the war the average society advanced, say, 75-80 per cent. of the valuation of a given property. If approved collateral security could be provided—the title deeds of another property, trustee securities, etc.—the proportion of the advance could be increased, but the average borrower was content with the 75-80 per cent. proportion and provided the balance from his own cash resources. There were, of course, some variations of this arrangement, but in the main it represented the traditional practice.

In the first phase of the post-war expansion it remained, on the whole, the principal method of making advances. As time passed, however, an arrangement developed which, while ensuring a due margin of security to the societies, enabled a wider public to take advantage of the societies' mortgage service without providing a personal stake of 20-25 per cent. of the valuation of the property. The tendency for builders to develop large estates and the pressure of public demand for the houses gradually resulted in the "pool" system.

This system, however, represents a refinement in degree rather than a fundamental change in the character of building society mortgage technique. It is still true that very few societies are in any way concerned in the provision of building finance. The builder carries out the initial stages of development—the purchase of land, the erection of the first houses, etc.—either from his own cash resources, with the assistance of a bank loan or with an advance from a specialist building finance company. In other words, the building society is not usually involved financially in the initial stages of a building scheme, and no call is made upon its mortgage service until houses are actually erected and a purchaser has been obtained. This procedure, of course, applies to houses built for sale, which constitute the bulk of building society business.

When specimen houses have been erected, the builder may approach a building society. He will provide full particulars of his scheme and as a first step the estate will be inspected by the society's surveyors. They will report on the estate, indicating the valuation which they place on the houses and calling attention to every relevant factor. With this report before them, the society's board will then advise the builder what advance could be made, and under what conditions, to any approved purchaser. The society's relations are still essentially with the individual purchaser, but the board, realising that the builder desires to assist his prospective purchaser as much as possible, indicates in detail the lines on which the builder can co-operate with the society in rendering the purchaser this assistance. This is the essence of the "pool" system.

Primarily the builder desires to sell his houses on terms which enable the purchaser to obtain possession without depositing the customary 20-25 per cent. margin; in other words, the purchaser requires an advance in excess of the normal. If the builder had approached, for instance, one of the larger Metropolitan societies an arrangement would probably have been suggested on the following lines. The society, in the first place, would regard 80 per cent. of the purchase price or its valuation (whichever were lower) as its normal advance under the scheme, and on the

first few houses the builder would be required to deposit with the society cash equivalent to the amount by which the advance exceeded this 80 per cent., subject to the purchaser providing an agreed minimum personal stake. On further houses, the society, having regard to the extent of the business, would probably agree to accept, in the aggregate, cash to the extent of only a proportion of the individual advances in excess of its normal. At the same time, however, it would require guarantees for the full excess in each case, with recourse to the total amount deposited, i.e. the "pool," in the event of default. An actual example may clarify the working of this arrangement. Assuming a house valued and selling at £650, the society would normally advance 80 per cent. of this figure, or £520. But after allowing for the agreed minimum personal stake the builder may desire the purchaser to receive the maximum advance, which in this case is £600. Thus, assuming a maximum advance, the builder would be required to deposit cash for the difference between £520 and £600, or £80 in respect of, say, the first three houses in his programme. The next few advances may be made without the deposit of cash, but the builder would be required to give a guarantee covering the whole amount—in this instance £80—of the excess advance in each individual case. A cash deposit would be required covering all further excess advances, the amount to be deposited probably being equivalent to one-third the amount of the excess advance, and would only be less where the size of the pool and other circumstances were held to justify the concession. In no circumstances would the cash deposit be less than one-quarter of the amount of the excess advance. The minimum personal stakes, it is understood, vary according to the purchase price of the house, and range from 5 to 10 per cent.

The circumstances relating to the cash deposit and the builder's guarantee require a further word of explanation. In every case the builder enters into a personal agreement guaranteeing the whole amount advanced in excess of the normal and giving the society a lien on his cash deposit (which constitutes the "pool") until the loan on a given property has been reduced to a sum not exceeding two-thirds of the valuation, the society meanwhile paying interest on the builder's deposit account. Under this arrangement the builder may be called upon, if the borrower defaults, to repurchase the property from the society. On any loan being reduced to not more than two-thirds of the original valuation the deposit lodged in respect of that advance may be withdrawn, provided the society is satisfied that the circumstances generally justify the release.

The society makes full inquiry into the credit standing of the builder concerned, and the estate is carefully watched to see whether, and if so why, undue default is taking place. The builder's general financial position is also followed closely. Every individual house is surveyed when the prospective purchaser makes an application for an advance; every individual application is considered on its merits, and the society has the protection of the borrower's personal covenant. On any large estate a society often limits its commitments and the business is shared by several societies.

The foregoing procedure, it was indicated, was more or less typical of the mortgage service offered by a large Metropolitan society. It does not follow that an identical service is offered by every society in the country. Indeed, in the working of the "pool" system there is considerable variation between society and society, and some smaller provincial societies do not undertake this business. The

larger Metropolitan societies, however, have for several years worked in close co-operation in offering standardised minimum terms (within certain broad limits) relating to mortgage business involving the pool system. At various times efforts have been made to extend the scope of this co-operation, but hitherto a conspicuous measure of success has not rewarded these efforts. To some extent, however, the existence of these standardised terms has undoubtedly exercised a steadying influence, and they have no doubt tended to restrain the granting of extreme concessions. At the time these terms were originally agreed the builder was, as a result of the competition between societies, beginning to assume a disproportionate influence upon the terms of business. The object of the agreements was to reverse this order and "to secure"—to quote the words of one intimately concerned in their negotiation—"that the limits of prudent lending were not exceeded." The agreements, it would seem, broadly relate to the amount of the normal advance, minimum personal stakes, the basis on which cash is to be deposited in respect of excess advances to form a pool, rates of interest, maximum period of repayment, etc. The terms of this co-operation have apparently been varied from time to time as conditions have required, but their general character and main purpose have remained unchanged. During recent months a renewed attempt has been made to extend the range of

co-operation, but at the moment there is no official indication of the probable outcome of these discussions, though it would appear that there is a prospect of definite progress during the present year. Apparently this more general co-operation would substantially take the form of that already in force between the larger Metropolitan societies, with variations on points of detail.

There is no official information regarding the extent to which business is transacted on the pool system for the movement in the aggregate, and while it appears very considerable, it by no means accounts for all building society business. There are other methods by which, for instance, advances in excess of the normal may be obtained, as by way of an insurance company's guarantee policy or a guarantee by a local authority under one of the Housing Acts. Some indication of the relative significance of pool business to certain individual societies, however, may be obtained from their balance sheets. Thus the recent accounts of one progressive Metropolitan society shows liabilities to "Guarantors, as per Account 3 (Collateral Security from Builders, etc., for Mortgages)" at £902,362. Possibly this collateral security might cover excess advances originally amounting to round about £2 to £3 millions. The various societies, however, would no doubt show marked variations in comparison with this example.

THE NATIONAL ASSOCIATION OF BUILDING SOCIETIES

The National Association of Building Societies has a long record of active service to the movement. It was constituted on its present basis in 1869. Its objects include the watching of Parliamentary proceedings referring to Building Societies, and other matters affecting the interests of members and the furthering of the "interests, privileges and advantages of such Societies, and to take legal action to render legal aid where the general interests of the Societies

are involved." Membership consists of permanent building societies subscribing to its funds on a scale based on their total assets. Its Council has 24 elected members (of which Sir Harold Bellman is chairman) and a co-opted member, Mr G. E. Franey, the editor of the *Building Societies' Gazette*. The Council elects a number of smaller committees, dealing with executive matters, finance, income-tax, housing, public relations, and the Building Societies'

DON'T SPECULATE with your Savings but INVEST them and keep your Capital intact!

Enquiry Bureau. A number of District Associations which are affiliated with the National Association have been established for many years in the Provinces.

The National Association has a membership of rather over one-third of all the societies in the country (369 societies at the end of 1934, compared with 638 non-member societies), but it is overwhelmingly representative of the movement, since its members administered, at the end of 1934, as much as 95 per cent. of its total assets. On all matters, therefore, the Association is fully qualified to speak authoritatively. In negotiating income-tax arrangements with the Inland Revenue authorities, for example, the Association's authority is invaluable; for the agreements regarding compounded rates are beneficial alike to the movement and to the Inland Revenue authorities. The arrangement reached last year—which, incidentally, provides for an adjustment of the compounded rates on any change in the standard rates of tax—is a prominent example of wise compromise, for the societies have always been anxious to retain the principle of tax free payments of interest, and have been prepared to make some sacrifice to that end.

In other matters also the Association has an active record. During 1935, for example, the movement made representations in connection with the Housing Bill, regarding the operation of the Small Dwellings Acquisition Acts. The Status Enquiry Bureau, again, has increased the safeguards against light-hearted borrowers, who in the past have endeavoured to proceed from one society to another, leaving a trail of default behind them. Credit protection arrangements are of greater importance in a movement which measures transactions in hundreds and not tens of pounds. The Bureau's dossier, which produced over 15,000 "registered warnings" by last spring, has been further expanded, and has helped towards eliminating a risk which comes from the heedlessness of a small minority, and involves the Societies and their regular members in inconvenience and loss.

On matters of internal policy, however, it has often proved more difficult to obtain agreement. The competition experienced in recent years between local societies and the larger units in the movement has been accompanied by the emergence of certain differences of view. To outside observers, it has long seemed that, in important matters of policy, some measure of general agreement should be possible in order that the movement might pursue a concerted policy. Unfortunately, it has proved difficult to achieve a working code of co-operative conduct. A major misunderstanding between some societies last year severely threatened the preparations which had been carefully made for a common "code" for the movement and involved a laborious rebuilding of the whole fabric. It was originally contemplated that the conditions governing new investment

and mortgage business would be defined from time to time. One outstanding point of difficulty arose regarding the control of mortgage business, and the fact that negotiation over three years had been required to evolve the framework of the "code" suggests that the varied interests of individual societies, operating under differing local conditions, involved corresponding difficulties in obtaining a reasonable degree of uniformity. It may be assumed that the question of rates, *inter alia*, still awaited final solution at the beginning of last year. The serious misunderstanding, however, developed during March last year, when the independent action of certain societies in reducing mortgage rates was regarded by other societies as conflicting with the provisional undertakings—implied or expressed—regarding the draft "code" of rules. This untoward occurrence, which was happily cleared up by frank explanations from both sides of the table, inevitably shook the confidence of the movement in the prospects of co-operation, and involved a delay of about a year in the further consideration of the draft. As amended, however, the rules were lately submitted for the vote of the affiliated societies, and their replies indicating a substantial majority in favour of their adoption were recently considered at a meeting of the Council of the Association.

This recital of recent events suggests one thing clearly. Owing to the relatively late emergence of large scale units in the movement, and the continued operations of a substantial section of the movement largely on a parochial basis, there still exist considerable differences of policy and methods of operation between individual societies. Again, a large degree of rugged provincialism still persists in the movement, for many societies remain conscious that local administration has brought prosperity and made a substantial contribution to local well-being. Such an attitude is not lightly to be criticised, for it lies at the root of the original conception of the building society—an institution for voluntary thrift of a distinctly localised character, whose administration was as keenly conscious of citizenship and social virtues as of the strictly impersonal canons of business procedure. The movement, however, has tended progressively in recent years to outgrow this limiting conception of its operations. The larger societies have, as we have shown, spread the scope of their operations through branches up and down the country. The effects of the movement as a whole on economic conditions and in particular on the general level of building activity are undisputed. The movement, in short, is national in scope and economic importance, but its individual units remain, as yet, only loosely federalised in the central Association, and are apt to be jealous of any suspected encroachment of their autonomy, or of any interference with methods of business which, in their particular localities, may have stood the test of decades.

INTERNATIONAL ASPECTS OF THE MOVEMENT

THE fifth international Congress of building societies, which was held in Austria last September, brought impressive evidence of the growth of the movement in the

Dominions, America and Europe. The common origin of the movement abroad may be found in the first societies formed over 150 years ago in this country, but progress has

been by no means uniform in all countries. The American movement, for example, took root just over a century ago. On the Continent progress was at first slow, but the rate of expansion in the post-war period has been remarkably fast, although in some cases methods of mortgage financing have been more adventurous than those of the English movement.

The extent of the movement abroad may be estimated from reports submitted to the International Congress, and summarised in the *Building Societies Gazette* of October, 1935. In Austria, at the end of 1934, some 16 societies were in operation, having total assets valued at Sch. 61.4 millions, of which mortgage assets represented Sch. 54.4 millions. The total loans granted by the Austrian societies during the decade from 1925 to 1934 amounted to Sch. 107.6 millions. In Germany the total at the end of 1934 was provisionally estimated at Rm. 415 millions, of which 345 millions were advanced on mortgages and loans. The total resources of the Swiss societies amount to around Frs. 38.8 millions, of which mortgage assets are valued at 30.9 millions. These figures, although evidencing considerable growth, do not match the figures for the United States, where the total assets at the end of 1934 were estimated to amount to \$6,468 millions, having been as high as \$8,829 millions in 1930. During 1933 the United States movement felt the worst impact of the depression, both in the sharp fall in new mortgage business and the extent of failures in the movement. The extent of the latter, however, does not appear to have exceeded one-tenth of the total involved in bank failures, even in the worst year of the depression. One of the first recovery measures introduced by the Roosevelt Administration was to encourage the circulation of idle deposits by house mortgage business under a system of regular repayments. This suggests that the importance of house finance as a recovery measure was appreciated at an early stage. Whether, in fact, the Administration fully considered the suitability of the purely banking institutions for transacting this type of business need scarcely be examined, in view of the prevailing emergency situation. Supervision, however, was increased at the same time, and the Federal Home Loan Bank system, which was inaugurated towards the end of 1932, introduced the principle of detailed supervision of the movement in the United States by the Federal authorities, which in the view of

qualified judges undoubtedly strengthened the movement, and provided safeguards against over-rapid expansion.

THE BUILDING SOCIETY OUTLOOK

FROM the facts and figures we have discussed in the course of this Survey, one fact stands out with crystal clarity. The rise of the building societies has been one of the major social and economic developments of the post-war epoch. Since the war the British societies have increased their resources by nearly ten times the amount accumulated during the preceding century. To appraise the movement by traditional quasi-friendly society canons, applicable before the War, would to-day be inappropriate. The building societies of 1936 are not merely enlarged editions of the societies of 1906, or even of 1926. We must judge the movement by the greatness of its resources, the breadth of its scope, and the gravity of its responsibilities at the present moment. It does not follow that organisation and technique which have done yeoman service for a hundred years are necessarily the best obtainable to-day. The movement has greater sums of money in its care than any single one of the great national "thrift" organisations. Its total assets are equivalent to approximately 25 per cent. of the entire assets of the clearing banks.

The movement has shown conspicuous energy and enterprise in developing its unique opportunities since the War. Its recent history resembles that of a mine which, after a century's modest exploitation of a steady ore-bearing reef, has suddenly struck a new vein of unexampled richness. The Great War left the nation's housing sadly in arrears. Its social consequences put a premium on owner-occupancy in the middle and the upper wage-earning classes, at a time when imponderable economic changes had produced a wider "spread" of the national income and the closing of many pre-war investment channels had concentrated the stream of

new domestic "capital" predominantly on the home market. The building society movement rose to its opportunity. It says much for the system built up by the Acts of 1874 and 1894, that its foundations were sufficiently strong to carry the weight of the new edifice, whose proportions could never have been foreseen by the pioneers of the movement.

Scientific observers will congratulate the movement on its record of solid achievement. They will ask, however, whether the very magnitude of its progress has not brought, inevitably, new problems in its train. In earlier post-war years, for example, the stimulus to building society expansion came undeniably from the public's demand for new houses. Is it possible that, at present, the demand for certain types of property is being stimulated by the activities of the societies themselves? Is the movement being carried forward, to any extent, by its own impetus? These are far-reaching questions, of whose importance, we are assured, the leading personalities of the movement are fully seized.

In the nineteen-twenties, the societies whose development was most rapid obtained extensive new resources from the public. Their ability to obtain them was due to enlightened and progressive modern "publicity," and partly to the security, accessibility and ready-withdrawal facilities they were in a position to offer—combined with an average rate of interest appreciably higher than that of other "thrift" agencies. The Great Depression did not check the movement's progress. On the one hand, its reduced price and cost of living levels were accompanied by a less

than proportionate decline in wage rates, which left employed workers with higher "real wages." On the other hand, it witnessed a decline in general interest rates, with a superfluity of floating resources, which made investment in building societies doubly attractive.

Step by step, the societies reduced their rates, to safeguard themselves against the danger of being made a cloak-room for "bad money." But their policy in this respect was bound to be affected, to some extent, by a natural reluctance to make any sudden and spectacular reduction in rates charged to new mortgage borrowers. In the first place, they had very large amounts of outstanding mortgages effected at higher interest rates. In the second place, many responsible authorities were distrustful of the permanency of the low interest "cycle." The structure of building society interest rates, consequently, despite successive reductions, has never been brought down to the level at which new shares and deposits, without restriction, would just meet the new demand for mortgages. Instead, individual societies have imposed quantitative limitations on the amounts of new money which they were prepared to receive from individual shareholders and depositors. In fact, the movement, taken as a whole, has offered a reduced but still attractive "price" for new resources, but has limited the amounts it has been prepared to "buy."

It is not our present purpose to discuss the case for and against such a policy. The building society case, in this regard, has already been outlined in this Survey. Many "price control" schemes, accompanied by "restriction" are in operation to-day in the commodity markets and elsewhere; and it may be argued, with some force, that stability is an asset worth taking pains to ensure, particularly for the building societies which, like the banks, depend so intimately upon the maintenance of their credit with the general public. But the ultimate success of restriction schemes hinges, proverbially, on the ability of those concerned to make restriction's writ effective throughout their entire body. The existence of even a minority who do not abide by the rules may have a disproportionately damaging effect.

It is chiefly for this reason that the movement's well-wishers are anxious that its methods should be based on a common policy, and that its internal structure should have maximum strength and cohesion. Although less than a hundred societies hold between them five-sixths of the movement's total assets, there are approximately 900 more of relatively small average size. Such diversity of structure does not necessarily make for unity of policy. In the banking world, the disappearance of the small country bank, and the growth of the nation-wide branch banking institution, has facilitated the adoption of a common code of banking canons, which have proved their soundness in a period of stress and strain. The value of a similar code for the building society movement would be unquestionable. But the obstacles encountered by the enlightened efforts of influential members of the National Association to that end, recently, suggest that its attainment will not be altogether easy. There is room within the movement's orbit for the smaller society, with its local traditions, though the trend of future economic policy may well favour the larger undertaking, with its extensive reserves, trained personnel and ability to transfer resources from areas of abundance to areas of active demand. It would appear an imperative condition of co-existence between the two groups, however, that agreed criteria of sound policy should be common to both. This is the first corollary of the movement's present public importance.

Unity of purpose is the more desirable because the movement, on the admission of its own far-sighted leaders, may be on the eve of great and far-reaching changes. Is the present "housing boom"—in which the building of Class A and Class B properties has played so significant a part—destined to slacken, say, in 1937 or later? Even the most optimistic commentators agree that it cannot possibly maintain its contemporary pace indefinitely. Should the movement be considering, even now, how best it may prepare itself for new conditions?

If so, a clear understanding of the maximum proportion of total assets which should be held in the form of mortgages, and of the percentage of liquid "reserves," is an obvious desideratum. At present, these percentages vary, between different societies, within wide limits. Another matter for consideration is whether individual societies should endeavour to maintain, or to increase, their new mortgage business by expedients which enable the speculative "estate developer" to dispose of houses to purchasers whose initial stake may be small, and whose resources may afford doubtful security for a long-term contract. There are obvious objections to devices which may leave individual societies apparently well covered, while holders of second and other mortgages, or those which have put up collateral security, carry the immediate risk. It is not in the interests of the movement, or of the community, that an insubstantial class of client should be attracted to house purchase at a time like the present.

Conversely, it is most certainly in the movement's interest to discourage the entry of new societies which owe their origin less to their desire to serve potential house-purchasers than to their anxiety to share in the financial fruits of a "boom." Since there is no limit to the rate of interest which can be secured on bad mortgages, the rates offered to lenders by such organisations may be dangerously attractive to the uninitiated. Recollection of the unmerited damage and difficulty inflicted on the movement by the "Liberator" and "Birkbeck" failures is still sufficiently pertinent to put all reputable societies, large and small, on their guard against such intruders. We have reason for our belief that this matter is under close and continuous review in high quarters.

There are many other questions which will doubtless engage the movement's attention in years to come. Should some part of building societies' capital, in the future, be made non-returnable, like that of industrial and commercial undertakings registered under the Companies Act? The effective resources of some of the largest building societies rival in magnitude the issued capital of such great industrial concerns as Imperial Chemical Industries or Courtaulds. It may be argued that the analogy is a little misleading, and that a truer comparison would lie with the banks, the greater part of whose working resources is provided, not by their "issued capital" but by the "deposits" of their customers. It may be further contended that the business of the building societies, like that of the banks, is "self-liquidating." But, in fact, the banks very largely avoid "long" lending. The life of an average bank transaction is very much shorter than that of a building society mortgage.

Finally, the movement is aware that, with the increasingly wide satisfaction of the type of demand for which it has catered so usefully and successfully in the last ten or fifteen years, new avenues of "service" may need to be explored. Should the movement endeavour to extend its facilities, on a considerable scale, to such fields as the financing of the building of large residential flats, or of the smaller types of non-owner-occupied dwellings, or of commercial and industrial premises? Has the movement a conspicuous part to play in the great national task of slum clearance, and the provision of ample accommodation, under healthful conditions, for large numbers of the population's poorer members? These questions involve the public interest, as well as the movement itself.

Not the least of the movement's achievements has been its ability to produce men of intellectual stature proportionate to its own growth. It will be for them to take the lead in forming opinion inside the movement on this all-important matter. Should building society objectives be broadened in the near future? And if the answer is affirmative, what are the best means of devising a prudent, balanced and practicable technique for the movement's activities in fields in which, as yet, it has had little opportunity to acquire extensive first-hand experience? That is a question which may well engage the movement's attention in years to come.

Invest at NO CAPITAL DEPRECIATION

3 1/2% TAX FREE EQUAL TO **4 1/2%**

Capital invested in the Brighton and Sussex Building Society does not depreciate. Rarely to-day can an investment assure such security and offer the high yield of 3 1/2% Tax Free, equal to 4 1/2%. This excellent position is due to the sound securities of the Society which consist of small, good class South of England property and trustee securities.

For 73 years the Society has made steady progress and to-day you can invest from £1 to £4,995 with complete confidence and the assurance of prompt, regular dividends.

HOUSE PURCHASE *by*
ENDOWMENT ASSURANCE

OF ESPECIAL APPEAL TO THE BUSINESS
AND PROFESSIONAL MAN

Those who are qualified to give
shrewd judgment to others in
the practical conduct of life and
affairs will unhesitatingly choose
for themselves the Huddersfield
Building Society's Scheme of

House Purchase by Endowment Assurance.

Evolved in close co-operation with the Law
Union and Rock Insurance Company, this
scheme offers maximum benefits to the
borrower. In addition to the facilities for
easy house purchase combined with life
protection, there are obtained all the Income
Tax reliefs and allowances available to tax-
payers in respect of assurance premiums and
mortgage interest.

The scheme is clearly outlined in a booklet
entitled "House Purchase by Endowment
Assurance," which will be gladly sent to you
free upon request.

THE NATIONAL ACCOUNTS 1935-36	1	LOCAL AUTHORITIES	10
REVENUE	2	SOCIAL SERVICES	10
EXPENDITURE	5	INFORMATION ON PUBLIC FINANCE	11
THE NATIONAL DEBT	8	THE GENERAL OUTLOOK	11

THE NATIONAL ACCOUNTS 1935-36

The financial year 1935-36 closed with a surplus of national revenue over expenditure (excluding sinking fund allocations from the latter) of £15,407,224. In the Budget of 1935 no special provision was made for redemption of debt and powers were taken to borrow for the statutory sinking funds. But the Chancellor put the cost of interest and management of the National Debt at a figure (£224 millions) which in the previous year had left £12,433,000 over for redemption of debt. The interest charge on the debt did not, and was certainly not expected to, rise by this amount, so that there was a surplus during the year on the fixed debt charge of £12,466,223. This was applied to Sinking Fund. Counting this as expenditure, the surplus on the year's working was therefore £2,941,000. The corresponding figure in 1934-35 was £7,561,879.

It must be remembered that this surplus was achieved at the expense of a "raid" on the free balance of the Road Fund, which realised £4.5 millions. But in view of the fact that the supply services have cost £13,600,000 more than was anticipated in the Budget, the achievement of even such a surplus is a remarkable tribute to the elasticity of the revenue and to the cautious budgeting of the Chancellor. The following table compares the receipts for the year with the Budget Estimates and with the figures for the preceding year:—

REVENUE, 1935-36 (000's omitted)			
	Actual Receipts	Larger (+) or Smaller (—) than Budget Estimate	1934-35 Receipts
Income Tax	238,074	+ 5,574	+ 9,197
Surtax	51,020	— 480	— 145
Estate, etc., Duties	87,920	+ 7,920	+ 6,564
Stamps	25,800	+ 800	+ 1,690
Other Inland Revenue	2,085	— 415	— 985
Total Inland Revenue	404,899	+ 13,399	+ 16,321
Customs	196,612	+ 8,072	+ 11,546
Excise	106,700	+ 350	+ 2,100
Total Customs and Excise	303,342	+ 8,422	+ 13,646
Motor Vehicle Duties (Exchequer share)	4,977	— 23	— 123
Total Tax Revenue	713,218	+ 21,798	+ 29,844
Post Office (net receipt)	11,670	— 180	— 580
Crown Lands	1,360	+ 30	+ 40
Sundry Loans	4,934	+ 1,034	+ 562
Miscellaneous Receipts	21,738	— 4,232	+ 6,613
Total Non-Tax Revenue	39,702	— 3,348	+ 6,635
Total Ordinary Revenue	752,920	+ 18,450	+ 36,479

Total tax revenue was £21,798,000 in excess of the Budget Estimate and £29,844,000 more than the previous year's yield, in spite of tax remissions which were expected to cost (in 1935-36) some £6,650,000. Income tax, Customs and Stamps all show an expansion which is a direct reflection of increased industrial, commercial and financial activity. The record yield of death duties, though partly due

to the continued high level of security prices, is also partly accounted for by the accidents of mortality. Surtax, on the other hand, shows a fall of £145,000 compared with last year, which is surprising as it is based on incomes of the first year of real recovery—1933-34. In non-tax revenue there has been an unexplained excess of over £1 million from Sundry Loans, but a shortfall of £4,232,000 from Miscellaneous Receipts.

Similar details for the expenditure side of the account and for the self-balancing items are given in the next table:—

EXPENDITURE, 1935-36 (000's omitted)				
	Actual Issues	Budget Estimates 1935-36	Final Estimates 1935-36	Actual Issues 1934-35
Interest and Management of National Debt	211,534	— 12,466	— 12,466	— 123
Payments to N. Ireland	7,205	+ 455	+ 455	+ 387
Other Consolidated Fund	5,648	+ 1,948	+ 1,948	+ 2,038
Post Office Fund	1,127	— 3	— 3	— 1,164
Total Consolidated Fund	225,513	— 10,067	— 10,067	+ 1,137
Army, Navy and Air Votes	136,949	+ 12,699	— 447	+ 23,079
Civil and Revenue Votes (exc. Post Office)	375,051	+ 4,911	— 7,822	+ 16,761
Total Supply Services	512,000	+ 13,600*	— 8,269	+ 39,840
Total Ordinary Expenditure	737,513	+ 3,533	— 18,336	+ 40,977
New Sinking Fund	12,466	+ 12,466	+ 12,466	+ 123
Total Expenditure	749,979	+ 15,999	— 5,870	+ 41,100

* An extra £4 millions was included for the restoration of cuts.

SELF-BALANCING REVENUE AND EXPENDITURE, 1935-36 (000's omitted)				
	Actual Revenue or Expenditure	Budget Estimates 1935-36	Final Estimates 1935-36	Actual Figures 1934-35
Post Office	66,080	+ 2,010	+ 140	+ 4,330
Road Fund	25,775	— 455	— 455	— 663
Total	91,855	+ 1,555	— 315	+ 3,667

Owing to the continued low level of money rates, to a small reduction in the average level of the floating debt throughout the year and to repayments of Treasury bonds last summer, the cost of the National Debt has fallen slightly below even the low level of last year. Details of changes in its composition are given in a later section of this Supplement. Expenditure on the Supply Services was £13,600,000 more than the Budget estimates, although £8,000,000 had been provided for the restoration of cuts and for other foreseeable liabilities. Of the Supplementary Estimates of £29,879,000 passed during the year, approximately £4,000,000 were for the restoration of cuts, £6,917,000 for Special Measures arising out of the Italo-Abyssinian dispute, £5,413,000 for the extension of the defence forces and £6,135,000 for grants to local authorities

in respect of Public Assistance payments. The defence forces have used almost the whole of their allowances, but in the civil departments as a whole there has been a saving of nearly £8,000,000 compared with final estimates for the year. Additional expenditure by the Post Office has been necessitated by the policy of expansion of this service inaugurated in 1934.

The payments made on sinking fund account are analysed in greater detail in the section of this Supplement dealing with the National Debt.

The final table shows the aggregate receipts and outgoings during the last seven years and in 1913-14. These figures include the self-balancing items:—

REVENUE

BEFORE proceeding to examine the salient features of the trend of revenue under its various heads, we show below a comparison of realised receipts during the past four years with those of 1929-30 and 1913-14:—

REVENUE (£ millions)						
	1913-14	1929-30	1932-33	1933-34	1934-35	1935-36
Customs.....	35.5	119.9	167.2	179.2	185.1	196.6
Excise.....	39.5	127.5	120.9	107.0	104.6	106.7
Total.....	75.0	247.4	288.1	286.2	289.7	303.3
Income Tax.....	43.9	237.4	251.5	228.9	228.9	238.1
Surtax.....	3.3	56.6	60.7	52.6	51.2	51.0
Estate, etc., Duties.....	27.4	79.8	77.1	85.3	81.4	87.9
Stamps.....	10.0	25.7	19.2	22.7	24.1	25.8
E.P.D.	...	2.3	2.2	1.8	2.3	1.3
Corporation Profits Tax.....	...	0.9	0.8	0.8	0.8	0.8
Land Tax, etc.	3.4	...	...	...	...	...
Total Inland Revenue.....	88.0	402.7	411.5	392.1	388.6	404.9
Motor Vehicle Duties.....	...	4.9	5.0	5.2	5.1	5.0
Tax Revenue.....	163.0	655.1	704.6	683.5	683.4	713.2
Crown Lands.....	0.5	1.3	1.2	1.2	1.3	1.4
Sundry Loans.....	1.6	32.6	5.1	4.7	4.4	4.9
Miscellaneous.....	2.3	36.4	22.9	22.1	15.1	21.7
Post Office, Net.....	6.2	9.0	10.9	13.1	12.3	11.7
Non-Tax Revenue.....	10.6	79.3	40.1	41.1	33.1	39.7
Total Ordinary Revenue.....	173.6	734.4	744.8	724.6	716.5	752.9
Self-balancing Revenue:						
Post Office.....	24.6	58.9	59.3	59.3	61.8	66.1
Road Fund.....	...	21.9	22.9	25.5	26.4	25.8
Total Revenue.....	198.2	815.2	827.0	809.4	804.7	844.8

The amount collected in Inland Revenue is now slightly more than in 1929. The yield of Income Tax and Stamp duties are about the same, and a steady increase in the yield of Death Duties since 1931 has more than counteracted the equally steady decline in Surtax receipts.

Revenue from indirect taxes has, on the other hand, risen by some £55 millions since before the depression, largely due to the imposition of a protective tariff in 1932. Excise receipts showed a sharp drop between 1932 and 1933 owing to the reduction of the beer duty, but have recovered slightly this year. Customs duties have expanded rapidly and continuously, and this increase is largely responsible for the changes shown in the following table in the proportions of revenue derived from direct and indirect taxes respectively:—

DIRECT AND INDIRECT TAXES			
	Direct	Indirect	
	£ million	% of Total	% of Total
1913-14.....	78.0	47.8	52.2

* Includes allocations to Sinking Fund.
† Excluding war debt payment to America, and the deficiency of £15.3 millions in the allocation originally made for sinking fund.
‡ Disregarding war debt payments of £3.3 millions to America.

Customs and Excise.—While the yield per penny of Income Tax levied was only very slightly higher in 1934-35 than in 1932-33, receipts from Customs and Excise, which more directly reflect expansions of income and of trade, are £15½ millions higher than three years ago, when the Import Duties Act came into force. The following table shows the course of Exchequer receipts in recent years:—

	1929-30	1932-33	1933-34	1934-35	1935-36
Customs.....	119.9	167.2	179.2	185.1	196.6
Excise.....	127.5	220.9	107.0	104.6	106.7

Estimates of receipts from Customs for the last two years have been £183.7 millions and £188.6 millions respectively. The excess of actual receipts in both years has been due to the very marked expansion of the import trade. Excise receipts have not shown the same elasticity. The estimate in both years of £106.4 millions has been barely exceeded this year, and it looks as though the reductions in Entertainment duties introduced in the last Budget have cost the Exchequer something like the £2 millions anticipated. The only other legislative change in force this year has been the increase of the duty on heavy oil from 1d. to 8d. per gallon. This was expected to yield the Exchequer £800,000 in 1935.

The following table gives details of net receipts from the more important individual items up to 1934-35:—

CUSTOMS AND EXCISE DUTIES—NET RECEIPTS ('000's omitted)

* There was no duty on hydrocarbon oils in 1913-14, but the motor spirit duty (repealed finally as from January 1, 1921) yielded in that year £841,000, which is included with "Other revenue duties."
† Including British wine, table waters, cider and perry, cocoa, coffee, chicory and substitutes, dried or preserved fruits, betting duty, railway passenger duty, patent medicines, other licences, and miscellaneous.

No important legislative changes in excise or import duties were made in the Finance Act of 1934, but in July, 1934, the silk duties were revised on the recommendation of the Import Duties Advisory Committee at an estimated cost to the Exchequer of £2 millions. Receipts from these duties fell, indeed, by about that amount owing to the reduction of imports and to the lower level of Excise duties levied on home products. Receipts under the Import Duties Act rose by somewhat less than was expected, but McKenna duties, especially on motor vehicles, Ottawa

duties and duties on Irish Free State goods all exceeded the Budget estimates by substantial amounts. The only revenue duties to show a marked deficit compared with estimates were those on spirits, which were also the only important dutiable article which showed a reduction in consumption. The slight fall in the revenue from the beer duty was due to its reduction in 1933, which in 1934-35 was expected to cost the Exchequer a further £2 millions. The fall in the yield of both the tea and sugar duties is not due to a reduction of consumption, as is shown in the following table, but to an increase in the proportion of the total coming from the Empire and enjoying preferential rates of duty. In the case of sugar an increase in the amount of home-grown sugar consumed also affects the revenue, owing to the lower level of the Excise duty. Total consumption was divided between home-grown, Empire and foreign sugar in the following proportions in 1933-34: 21.9, 38.3 and 36.0 per cent. In 1934-35 these proportions had changed to 28.1, 40.1 and 28.3 per cent. The following table shows consumption of the main dutiable articles in the past two years:—

(In millions)			
	1929-30	1933-34	1934-35
Spirits..... proof galls.	12.2	9.8	9.4
Beer..... standard barrels	20.7	15.8	16.7
Tea..... lbs.	401.7†	427.2	431.4
Sugar..... cwts.*	35.7	37.8	39.7
Tobacco..... lbs.	151.5	152.2	159.0
Artificial silk—home-made... lbs.	56.0	89.5	97.5
Light hydrocarbon oil..... galls.	903.0	1,130.7	1,192.0

* Quantities are equivalent of refined sugar. † 1928-29.

The fall in the consumption of dutiable spirits shown in the above table is more than compensated by the increased use of non-dutiable spirits in industry. All other articles show a marked expansion. In the case of tobacco, the rise of 4½ per cent. may be due in part to the abandonment of the coupon system, but is mainly a sign of increased general prosperity, reflected also in the increased receipts from Entertainment tax.

Inland Revenue.—Inland Revenue taxes yielded £404.9 millions in 1935-36 compared with an estimate of £391.5 millions and receipts in 1934-35 of £388.6 millions. This latter figure was the lowest for eleven years, but the jump in revenue from income tax and death duties has again brought the total up to the 1929 level. Surtax, however, is still lower than for many years.

Income Tax.—Once again Exchequer receipts from income tax have far exceeded the Budget estimate. The excess last year was £9½ millions; this year it is £5½ millions. The increase in the total from £228.9 millions in 1934-35 to £238.1 millions indicates a very marked expansion in taxable income, as concessions were made to taxpayers in the 1935 Budget in respect of allowances which were expected to cost the Exchequer £10 millions in a full year. The course of receipts under this head for 1913-14 and 1929-30 onwards, together with the standard rate of tax for each year, is shown below:—

INCOME TAX*							
Year	Exchequer Receipts	Standard Rate of Tax in the £	Net Yield† per Penny	Year	Exchequer Receipts	Standard Rate of Tax in the £	Net Yield† per Penny
1913-14	£ Mn. 43.9	s. d. 1 2	£ Mn. 3.11	1932-33	£ Mn. 251.5	s. d. 5 0	£ Mn. 4.16

1930-31	256.0	4 6	4.58	1934-35	228.9	4 6	4.17‡
1931-32	287.4	5 0	4.58	1935-36	238.1	4 6	...

* For 1913-14 the United Kingdom; from 1929-30 onwards, Great Britain and Northern Ireland only.

† Calculated on basis of net produce of tax.

‡ Estimate.

In 1934 the standard rate of tax was reduced from 5s. to 4s. 6d., but receipts showed practically no change. This stability was due to the increase in incomes from wages, salaries and business, which were lowest in 1933. Nevertheless incomes from all sources except the ownership and

occupation of land, houses, etc., in 1934-35 were still below the 1931 level, which partly accounts for the increased yield of income tax in 1935-36. The next table analyses "actual" income (i.e. gross income less exemptions and deductions for depreciation, etc., but before deducting "earned" and other personal allowances) coming under the review of the Inland Revenue in recent years:—

ANALYSIS OF ACTUAL INCOME					
Schedule	Income from	1913-14	1932-33	1933-34	1934-35 Estimates
A	Ownership of lands, houses, etc.....	(£000) 175,662	(£000) 296,242	(£000) 297,844	(£000) 300,500
B	Occupation of lands, etc.....	5,373	28,326	28,441	28,500
C	British, Dominion and Foreign Government Securities.....	47,776	157,817	151,865	156,000
D	Business, Professions, etc.....	584,346	801,653	756,405	800,000
E	Salaries of Government, Corporation and Public Company Officials and Employments.*	137,884	783,150	766,402	780,000
	Ditto, weekly wage-earners	...	486,469	504,116	520,000
	Total.....	951,041	2,553,657	2,505,073	2,585,000

* Prior to 1923-24, employments (including weekly wage-earners) were assessed under Schedule D.

In 1934-35 allowances of £1,385 millions were deducted from the "actual" income of £2,585 millions, leaving total taxable income of £1,200 millions compared with about £1,160 millions in 1933-34. It is estimated that the total number of persons chargeable with income tax was 3,500,000, against 3,450,000 in 1933 and 1,130,000 in 1913-14.

Surtax.—Exchequer receipts last year totalled £51.0 millions, as compared with a Budget estimate of £51.5 millions. The number assessed to surtax (as revised at September 30, 1935), the total chargeable income (including the first portion on which no surtax is payable), and the Exchequer receipts in 1913-14 and since 1929-30 are shown below:—

SURTAX (1913-14 United Kingdom; thereafter Great Britain and Northern Ireland)				
Year	Income Limit	Number Chargeable	Total Income Chargeable	Exchequer Receipt
1913-14†.....	£ 5,000	14,008	£ Mn. 176	£ Mn. 3.32
1929-30.....	2,000	108,891	593	56.39
1931-32.....	2,000	93,361	467	76.70
1932-33.....	2,000	86,044	422	60.65
1933-34.....	2,000	81,562	400	52.59
1934-35.....	2,000	*	*	51.17
1935-36.....	2,000	*	*	51.02

* Not available.

† Super-tax.

The decline in receipts from this tax is due to the decline in the number of persons assessed, as shown above, and also to a fall in the aggregate of annual incomes of over £2,000 from some £550 millions between 1924 and 1930 to only £400 millions in 1933.

Income and Surtax Combined.—With the changes in allowances introduced in 1935 the incidence of direct taxation on different incomes has changed considerably, and the lower income levels have enjoyed substantial relief. The concessions, however, have not yet restored the pre-1931 position. The personal allowance for married men was increased from £150 to £170; in 1931 it was £225. The children's allowance was increased from £50 for the first child and £40 for any others to £50 for each child; in 1931 the first child received £60. The taxation of the first £175 of taxable income at half the standard rate was replaced by taxation of the first £135 at a third of the standard rate; in 1931 the first £250 was taxed at the half rate. And, finally, the minimum unearned income subject to tax was raised from £100 to £125. No change has been made in surtax since it was increased by 10 per cent. in 1931. The effects of these changes on incomes of various kinds are shown in the following table. 1929-30 is given as a pre-depression

year and 1933-34 as representative of crisis taxation, before the standard rate was reduced to 4s. 6d. in 1934:—

INCOME TAX AND SURTAX																		
Total Actual Income	Married Couples with Three Children																	
	Earned Income						Investment Income											
	1929-30			1933-34			1935-36			1929-30			1933-34			1935-36		
	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.	£	s.	d.
300	...	...	...	...	...	...	...	...	...	...	...	...	2	10	0	...	...	...
400	...	...	...	5	0	0	...	...	...	...	...	...	15	0	0	6	0	0
500	3	3	4	15	0	0	...	...	...	11	10	0	33	2	6	20	5	6
1,000	67	3	4	108	2	6	87	15	0	100	10	0	158	2	6	132	15	0
2,000	230	10	0	333	2	6	290	5	0	300	10	0	408	2	6	357	15	0
5,000	1,081	15	0	1,420	0	0	1,272	0	0	1,131	15	0	1,495	0	0	1,363	0	0
10,000	2,981	15	0	3,852	10	0	3,637	0	0	3,031	15	0	3,927	10	0	3,670	0	0
50,000	22,106	15	0	28,290	0	0	27,303	0	0	22,156	15	0	28,365	0	0	27,108	0	0

Except in the case of a single man earning £150, who now pays £1 10s., taxation begins at approximately the same point as in 1930-31. But on earned incomes up to £500 per annum it is proportionately heavier now on married than on single men.

Death Duties.—The Exchequer received £88 millions from death duties in 1935-36, as compared with a Budget estimate of £80 millions. The following table shows the receipts in 1913-14 and since 1929-30:—

ESTATE, ETC., DUTIES (In Million £'s)			
Year	Exchequer Receipts	1932-33	Exchequer Receipts
1913-14	27.36	77.14	77.14
1929-30	79.77	85.27	85.27
1930-31	82.61	81.36	81.36
1931-32	65.00	87.92	87.92

Receipts from death duties are difficult to estimate with accuracy, and in the last three years expectations have been repeatedly exceeded. This is due in part to accidents of mortality, for, as will be seen from the following table, a few large estates can radically affect the total amount of revenue. In 1934-35 over a quarter of the total of estate duties came from 35 estates of over £500,000 each. The £5 millions from estates of over £3 millions each was the second instalment from the Ellerman estate:—

ESTATE DUTY, 1934-35						
Small Estates Net Value £	Numbers		Net Capital Value		Net Receipts	
	Per cent. of Total	Thous. £	Per cent. of Total	Thous. £	Per cent. of Total	Thous. £
Exceeding Not exceeding

1,000	67.122	49.85	107,695	20.18	2,955	4.13
5,000	7,596	5.64	57,951	10.86	2,299	3.21
10,000	5,689	4.21	90,290	16.92	6,145	8.58
25,000	1,908	1.42	69,086	12.94	8,004	11.18
50,000	858	0.63	59,374	11.13	10,009	13.98
100,000	330	0.24	46,264	8.67	10,113	14.13
200,000	137	0.10	39,948	7.49	11,363	15.87
500,000	21	0.02	17,240	3.23	5,872	8.20
1,000,000	13	0.01	21,710	4.06	9,598	13.41
3,000,000	1	0.00	10,161	1.90	5,149	7.19
Settlement Estate Duty	...	...	...	...	15	0.02
Total	134,659	100.00	533,691	100.00	71,591	100.00

Comparable figures for 1933-34 of the total number of estates, their net capital value and net receipts were 134,193, £523,987,000 and £75,488,000 respectively.

The legacy duty yielded £8.49 millions in 1934-35. The total capital taxed was estimated at £227.9 millions, of which £118 millions was taxed at the minimum rate of 1 per cent. (for legacies to husband, wife or lineal descendant or ancestor) and £36 millions at the maximum rate of 10 per cent. Revenue from the succession duty amounted to £1.1 millions on capital of some £38.8 millions.

Stamps.—Receipts from Stamp Duties in 1935-36 amounted to £25.8 millions, compared with a Budget estimate of £25 millions and actual receipts in 1934-35 of £24.1 millions. The unexpected increase in revenue from this source has been due to a marked increase of activity on the Stock Exchange, particularly in the latter part of the year, and probably also to an increase in land values. The

following table shows receipts under the main heads in 1913-14 and in recent years:—

STAMP DUTIES: NET RECEIPTS (In Thousand £'s)				
	1913-14	1929-30	1933-34	1934-35
Land and property	1,879	4,774	4,733	5,101
Stocks and shares, etc.	3,125	7,270	8,658	9,221
Company capital duty	698	3,771	852	1,140
Cheques and bills	2,322	4,837	4,172	4,384
Receipts	669	2,686	2,456	2,547
Other	955	1,915	1,767	1,851
Total	9,648	25,253	22,638	24,244

Revenue from stocks and shares rose very rapidly in 1933-34 and in the following year was above the 1929 level. The number of companies registered has risen steadily from 8,841 in 1930 to 13,210 in 1934-35. In spite of the decrease in the company capital duty in 1933, receipts from this source were higher than in 1930-31 owing to the large number of new issues in the year.

Motor Vehicle Duties.—Receipts from these duties in 1935-36 amounted only to £30,752,000, compared with a Budget estimate of £31,230,000, and receipts in 1934-35 of £31,538,000. The reduction relatively to 1934-35 was due to the reduction in the horse-power tax from January, 1935, which was only effective during a short part of 1934-35. The following table shows changes in this source of revenue in recent years and payments to the Road Fund:—

MOTOR VEHICLE DUTIES (000's omitted)			
Year	Exchequer Receipts	Payments to Road Fund	Exchequer Appropriations
1929-30	26,802	21,882	4,920
1932-33	27,910	22,910	5,000
1933-34	30,712	25,512	5,200
1934-35	31,538	26,438	5,100
1935-36	30,752	25,775	4,977

During 1934-35 receipts into the Road Fund amounted to £26,975,000 (an increase of £1.2 millions compared with the previous year), while expenditure amounted to only £19,958,000 (a decline of £1.1 millions). The result was a cash balance at the end of the year of some £7 millions. The rise in revenue during 1934-35 was unexpected in view of the reduction in the horse-power tax on motor vehicles from January, 1935, and indicates a considerable increase in the number of registrations. The main cause of the fall in expenditure was the reduction of grants for special employment schemes from £2.2 millions to £911,000.

In April, 1935, the remaining £2.5 millions of advances from the Exchequer to the Fund were paid off and included under the heading of Miscellaneous Receipts, in the Budget for 1935-36. In his Budget speech, however, the Chancellor, in order to balance his accounts, expressed his intention of also appropriating the remaining £4,470,000 of the Road Fund's balance, and including it in Miscellaneous Receipts. This manoeuvre took no account of the accrued deficit of the Fund on March 31, 1934, amounting to £2,084,000, which would still remain outstanding.

Receipts from Sundry Loans.—Receipts under this head amounted to £4.9 millions in 1935-36, compared with a Budget estimate of £3.9 millions and actual receipts of £4.4 millions in 1934-35.

RECEIPTS FROM SUNDRY LOANS (000's omitted)

Anglo-Iranian shares	3,934	2,036	1,238	1,101
Other receipts	32,640	5,125	4,655	4,372

Since the general postponement of international debt payments under the Lausanne Agreement receipts under this head are not of very great importance. Changes are mostly due to repayment of loans, which cannot easily be predicted.

Other Non-Tax Revenue.—This section includes the net profits from the Post Office, net income from Crown Lands and Miscellaneous Receipts. In 1933 it was decided that the Post Office should pay a fixed sum of £10,750,000 into the Exchequer, and that any further surplus on its year's working (after certain adjustments explained in last year's Supplement) should be paid, in the following year, into a Post Office Fund to be used for development purposes. The net profit of the Post Office in 1935-36, at £11,670,000, was £180,000 less than the Budget estimate and £580,000 less than last year, but this decrease will not in the long-run affect the Exchequer, as it will merely

reduce next year's contribution to the Post Office Fund. Receipts from Crown Lands amounted to £1,360,000, and were slightly higher than last year or than the estimate for 1935-36. Miscellaneous receipts, on the other hand, once more fell far short of the estimates. The total of £21.7 millions was £4.2 millions less than had been anticipated, but exceeded receipts last year by £6.6 millions. In 1934-35 the Post Office Savings Bank accounted for revenue in this class of £4.3 millions; repayments of Road Fund advances for £3.1 millions; and payments from the Bank of England on account of profits from the Note Issue for £2.8 millions.

EXPENDITURE

NATIONAL expenditure has been rising steadily in the past three years, and in 1936-37 will exceed the high level of 1932-33 and be within a few millions of the record post-war expenditure of £881 millions in 1930-31. While no provision is now being made for sinking funds, and the annual cost of the National Debt, owing to conversions and the low rate of interest on Treasury bills, is now more than £50 millions less than in 1932-33, expenditure on defence has risen by over £50 millions and the cost of civil services has increased by over £20 millions. In the following table expenditure for the last three years is compared with that for 1913-14 and 1929-30 and estimates for 1936-37 are given. Where these are not available, last year's figures are put in brackets:—

EXPENDITURE (£ millions)						
	1913-14	1929-30	1933-34	1934-35	1935-36	1936-37 (Est.)

Grand total	197.5	829.5	778.2	797.1	841.9	869.7*

* Without provision for eventual Supplementary Estimates.

Consolidated Fund Services.—The main item under this head is the cost of the National Debt, which is analysed in a later section on page 9 of this Supplement. In 1935-36 there was an increase of £1.9 millions in Other Consolidated Fund Services over the final estimates and of £1,261,000 compared with issues in 1934-35. The payment to the Post Office Fund fell from £2,291,000 to £1,127,000, but payments to Northern Ireland rose from £6,818,000 to £7,205,000. Other items under this heading in past years have been the Civil List, advances for North Atlantic Shipping, interest on Royal Mail guaranteed loans and other issues under the Trade Facilities Acts.

Defence Services.—Expenditure on the defence Services in 1936-37 is estimated at £158,211,000, as against actual expenditure in 1935-36 of £136,949,000. This figure, however, makes no allowance for any expansion of services entailed by the programme outlined in the recent Government White Paper; nor does it include, except in the case of the Army, any possible extra expenses which may be incurred owing to the Abyssinian dispute. This required supplementary estimates of some £6,917,000 in 1935-36. Both these important items will again be covered by supplementaries in the current year.

Expenditure on the defence Forces is now more than twice what it was in 1913-14. It is true that there was no Air Force before the war and that this arm accounts for the larger part of the increase during the past two years. But

expenditure on the Navy has increased by 40 per cent. since 1932-33, compared with an increase of 52 per cent. between 1908-09 and 1913-14, when the construction of

DEFENCE SERVICES EXPENDITURE (EXCHEQUER ISSUES) (000's omitted)				
	Navy	Army	Air Force	Total
1913-14	48,833	28,346	...	77,179
1931-32	51,060	38,520	17,700	107,280
1932-33	50,010	35,880	17,100	102,990
1933-34	53,500	37,591	16,780	107,872
1934-35	56,580	39,660	17,630	113,870
1935-36	64,900*	44,900*	27,596*	136,949
1936-37*	69,930	49,281	39,000	158,211

* Budget estimate.

capital ships was completely unrestricted, while the cost of the Army increased in these two periods by 16 and 6 per cent. respectively. The number of effectives, however, as is shown in the following table, is some 20,000 less than in the pre-war year:—

	Navy (a)	Army (b)	Air Force (b)
1913-14	142,960	185,600	...
1931-32	92,449	148,800	30,263
1932-33	89,667	148,700	29,520
1933-34	89,863	148,700	28,470
1934-35	91,351	149,500	28,780
1935-36 (estimate) (c)	97,982	152,200	45,000
1936-37 (estimate) (c)	99,095	158,400	50,000

(a) Exclusive of Royal Marine Police.

(b) Establishment exclusive of India.

(c) Maximum for year.

NAVY.—The Navy Estimates for 1936-37 amount to £69,930,000, an increase of £9,880,000 compared with the original estimates for 1935-36. The Supplementary Estimate of £4,850,000 voted in February was required mainly for "Special measures" arising out of the Italo-Abyssinian dispute.

(000's omitted)					
	1931	1932	1933	1934	1935* (Estimate)
Average number of effectives	92,449	89,667	89,863	91,351	97,982
Wages, etc., of Officers and Men	13,433	12,636	12,514	12,689	13,128
Victualling and clothing	3,146	2,981	3,182	3,147	3,453
Medical Establishments, etc.	379	361	376	366	404
Fleet Air Arm	1,126	1,025	1,089	1,338	1,993
Educational and Scientific Services	671	661	650	650	671
Royal Naval Reserves	394	347	373	342	351
Shipbuilding, Repairs, Maintenance, etc.	15,566	15,882	18,449	20,929	25,799
Naval Armaments	3,326	3,319	3,767	4,034	5,696
Works, Buildings and Miscellaneous	3,083	2,936	2,816	2,622	2,730
Admiralty Office	1,114	1,086	1,079	1,106	1,157
Non-Effective Services, Civil Superannuation, etc.	8,775	8,928	9,145	9,393	9,508
Total Expenditure	51,015	50,164	53,444	56,616	64,900

* Including supplementary estimate of £4,850,000.

The main increases are £1 million in the vote for the Fleet Air Arm, £1.5 millions for the Maintenance of the Fleet

(mainly due to the speeding up of present programmes of construction), and £1.4 millions for naval armaments. £400,000 of this last figure is for guns and £800,000 for projectiles and ammunition, so that the vote for these two items is almost doubled.

ARMY.—The Army Estimates for 1936-37 are put at £49,281,000, an increase of £5,731,000 on the original estimates for 1935-36. £1.55 millions of this is accounted for by the Italo-Abyssinian dispute. The rest is due to the mechanisation and modernisation of the Army and to some expansion in its establishments.

(000's omitted)						
	1931	1932	1933	1934	1935* (Estimate)	1936 (Estimate)

Net Expenditure	38,624	36,137	37,540	39,692	44,900	49,281

* Including Supplementary Estimate of £1,350,000.

The total establishments of the Regular and Territorial Armies and of the Reserve Forces are to be raised from 518,000 to 537,000 at an additional cost of £1,670,000. Unless there is some improvement in recruiting, however, this may not prove possible, for in January last the total effective strength of the Army at 457,354 (including 55,200 troops in India) was some 80,000 less than required by the War Office. But the main increase in the estimates is in "warlike stores," especially in gun ammunition and motor transport.

AIR FORCE.—The Air Estimates for 1936-37 at £39 millions show an increase of £18,350,000 compared with the original estimates for 1935-36. If this sum is added to the Supplementary Estimate voted last July, the programme inaugurated last summer will have cost about £23 millions by March, 1937. The Chancellor has announced that a Supplementary of some £10 millions will be required for the new programme in the current year.

Net Expenditure	17,869	17,057	16,701	17,671	27,596	39,000

* Includes Supplementary Estimates of £5,335,000 voted in July and £1,611,000 in February, mainly on account of the Italo-Abyssinian dispute.

The main increases in the above estimates are over £5 millions for aeroplanes, £1.5 millions for armaments and £2.2 millions for new works. These latter include permanent accommodation at seven new stations, three new armament training camps and further work on the air base in Iraq. The first-line strength of the Fleet Air Arm is to be raised by 27 aircraft to a total of 217 by the end of the financial year. The expansion of the first-line establishment of the Royal Air Force to 1,750 should be completed in 1937 or 1938 and is entailing the training of 2,500 pilots (of whom

800 still need to be recruited) and 22,000 airmen in two years.

Civil Estimates.—Expenditure in 1936-37 on Civil Departments, excluding Revenue Departments and the Post Office, is estimated at £365,254,000. This is £4,417,000 less than the final estimate for the previous year, but £20 millions more than actual expenditure in 1934-35.

A considerable part of the increase on all the votes in 1935-36 was due to the restoration of the second half of the 10 per cent. salary cuts in July, 1935. But there were other reasons for the additional expenditure on "Labour" and "Other Heads." The former class, which consists mainly of the cost of unemployment, is analysed in detail in a later section. "Other Heads" included in 1935-36 grants to local authorities of £6,135,000 on account of Public Assistance expenditure, which should have been taken over by the Central Government under the second part of the 1934 Unemployment Act. Moreover, the tramp shipping subsidy was introduced and the cattle and milk subsidies and grants for agricultural development were all increased. In the present year additional expenditure may be expected under these headings, as no provision has been made for payments to local authorities, and the cattle subsidy has been put at only £1,000,000 instead of the £4,000,000 voted last year. With these additions expenditure in 1936-37 is likely to be quite as high as in the previous year.

We show below the course of expenditure, divided into its main heads, during the last six years:—

CIVIL SERVICE EXPENDITURE							
	Education	Health	Pensions		Labour	Other Heads	Total
			War	Others			
1930-31	£ Mn. 52.7	£ Mn. 22.0	£ Mn. 52.0	£ Mn. 45.8	£ Mn. 36.8	£ Mn. 98.1	£ Mn. 307.4
1931-32	53.0	22.0	49.6	47.9	47.7	99.9	320.1
1932-33	49.4	22.1	46.9	50.7	77.9	95.9	342.9
1933-34	51.1	21.6	45.2	55.7	71.8	93.3	338.7
1934-35	52.9	22.4	43.5	58.0	66.5	102.3	345.6
1935-36*	55.9	23.6	42.6	60.6	73.8	113.2	369.7
1936-37†	58.0	25.1	41.7	62.6	68.7	109.2	365.3

* Final estimates. † Budget estimates.

CENTRAL GOVERNMENT (Classes I, II and III).—The following table shows expenditure in the first three classes of the estimates:—

	1933-34 Actual	1934-35 Actual	1935-36 Estimate	1936-37 Estimate
I. Central Government and Finance	£'000 1,905	£'000 1,922	£'000 2,134	£'000 2,146
II. Foreign and Imperial	8,432	8,044	8,756	9,400
of which—				
F.O., Diplomatic and Consular Services	1,351	1,398	1,457	1,426
League of Nations	172	157	224	272
Irish Free State Services	2,280	2,294	2,294	3,043
Dominion and Colonial Services	2,096	1,565	1,692	1,637
Colonial Development Fund	400	500	900	900
India Services	1,634	1,614	1,667	1,619
III. Home Department	15,742	16,234	17,343	18,362
of which—				
Home Office	448	467	593	1,019
Police	11,309	11,706*	12,532	12,996
Prisons	1,068	1,123	1,206	1,292
Total	28,079	28,200	29,233	29,908

The increase in Class II is entirely due to the increase of £750,000 in the Irish Free State services, which include substitutions for amounts due from the Irish Free State on account of land purchase and of the Local Loans Fund. The increase in the Home Office vote is accounted for by an estimate of £500,000 for air-raid precautions.

EDUCATION.—The estimate of expenditure on education in 1936-37 is put at £58,044,527, compared with an original estimate for 1935 of £54,103,959 and a final estimate of £55,913,434. Actual net expenditure in 1934-35 was £52,938,482. Universities and colleges are to get £550,000 more than in 1934. But the main increases are for public education in Scotland (estimate of £7.5 millions, compared with expenditure of £6.9 million in 1934) and for the Board

of Education (of which details are given in the following table):—

ENGLAND AND WALES					
	Board of Education Estimates		Total Expenditure by L.E.A.s†		Cost per Elementary Pupil
	Total Vote	Grants to L.E.A.s	Elementary Education	Higher Education	
1913-14	£ Mn. 14.7	£ Mn. 12.8	£ Mn. 25.6	£ Mn. 4.4	s. d. 95 2
1930-31	45.5	42.6	64.7	16.4	262 6
1931-32	48.4	45.2	63.2	16.4	252 5
1932-33	42.9	39.0	61.2	15.8	242 7
1933-34	42.1	37.8	61.9	16.0	244 6
1934-35	43.6	41.3	64.6	16.8	263 5
1935-36	46.1†	43.6	64.9*	17.1*	272 5*
1936-37	47.7†	44.9	68.8*	18.2*	294 8*

* Provisional. † Including proportion borne by the rates.
‡ Budget estimate.

The estimated increase of £5 millions in total expenditure on public education in England and Wales compared with original estimates for the current year is due as to £3 millions to the restoration of the second half of the 10 per cent. cut in teachers' salaries during a whole year. Expenditure on higher education has also been increased owing to the rise in the number of pupils from 448,000 in March, 1934, to 477,700 in October, 1935. Considerable increases are planned for elementary education on special services such as nursery schools, medical services, etc., the provision of meals and reorganisation. These are, however, partly offset as far as the Exchequer is concerned by the automatic decrease in the Exchequer grant by £381,000 owing to the reduced numbers of pupils in attendance and to the increased yield of a 7d. rate, which affects the Exchequer grant formula.

HEALTH, LABOUR AND INSURANCE (Class V).—The estimates for 1936-37 under these heads show an increase of £2 millions over last year's original estimate of £160.8 millions. Supplementaries of £6.9 millions were voted during the year, but £6.1 of these were for grants to local authorities for which no corresponding provision has been made this year. Total expenditure in the coming year is therefore likely, in fact, to be somewhat higher than in 1935-36. A decrease of £6 millions in the estimated cost of unemployment has been to some extent offset by a vote of £3 millions for the Special Areas Fund, for which no provision was made last year, and by an automatic increase of £2 millions in the cost of pensions. Details of expenditure are shown in the following table:—

HEALTH, LABOUR AND INSURANCE						
	Ministry of Health*	Pensions		Ministry of Labour	Other Items	Total
		Old Age	Widows', Orphans', etc.			
1930-31...	£ Mn. 22.0	£ Mn. 36.8	£ Mn. 9.0	£ Mn. 36.8	£ Mn. 3.1	£ Mn. 107.7
1931-32...	22.0	37.9	10.0	47.7	3.7	121.3
1932-33...	22.1	39.7	11.0	77.9	4.0	154.7
1933-34...	21.6	40.4	12.0	71.8	7.0	150.7
1934-35	22.4	41.8	13.0	66.5†	7.1	150.8
1935-36†	23.6	43.3	14.0	73.8†	13.0	167.7
1936-37‡	25.1	44.3	15.0	68.7†	9.6	162.7

* Including Scottish Department of Health. † Final Estimate.
‡ Including Unemployment Assistance. § Budget Estimate.

Health.—Expenditure under the Ministry of Health has shown a steady rise since 1933. The increase of £1.5 millions this year is due to a rise of £639,000 in housing grants (mainly for slum clearance) and of £569,000 in the grant-in-aid to the National Health Insurance Fund (including a grant of £400,000 to the Unemployment Arrears Fund under the 1935 Act). Grants for the provision of rural water supplies are also to be increased. Of the total of £25.1 millions, administration of the Ministry of Health accounts for £2.1; housing grants in England and Scotland for £16.0; and Health Insurance grant for £6.3 millions.

Labour.—The position with regard to the financing of the cost of unemployment is still unregulated owing to the postponement of the day when the Government was to

take over the administration of all Public Assistance from the local authorities. In 1934 the cost to the State of unemployment was about £59.6 millions, made up of contributions to the Unemployment Insurance Fund of £13.4 millions (after deducting expenses incurred by the Ministry), transitional payment grants of £45.6 millions and £600,000 for the cost of the new Unemployment Assistance Board. From the beginning of 1935 transitional payments were replaced by Unemployment Allowances, which will cover all payments of relief in respect of unemployment other than genuine insurance benefit, when the second part of the 1934 Unemployment Act comes into force. In 1935-36 contributions from the Exchequer in respect of insurance benefit amounted to £18.6 millions, grants for unemployment assistance allowances (excluding expenses) to £48.3 millions and the cost of the Unemployment Assistance Board to £2.1 millions—making a total cost of £69 millions. For 1936-37 these items are estimated to cost £18.0, £42.9 and £2.0 millions respectively—making a total of nearly £63 millions. The increased cost of unemployment last year was therefore due in part to the cost of administering the new scheme, in part to the rise in the numbers of insured persons in respect of whom contributions were payable by the Exchequer and in part to the increased scales of benefit and of assistance. The relief to local revenues envisaged in the new scheme adds a further burden to the central budget, which in 1935-36 amounted to over £6 millions. But, as this is merely a transfer of responsibility, it constitutes no additional charge on the national finances as a whole.

Expenditure on training and employment schemes is to be increased by some £800,000 to £2.2 millions.

TRADE AND INDUSTRY (Class VI).—The total estimate for this class amounts to £15.8 millions, compared with an original estimate last year of £11.4 millions and a final estimate of £18.2 millions. The Supplementaries last year included £4 millions for the cattle fund, £2.8 millions for the beet sugar subsidy and smaller additional grants in respect of the herring industry, the drainage of land, animal diseases, etc. This year the only obvious Supplementary which will be needed will be some £3 millions for the cattle fund, for which only £1 million has so far been provided as its continuation has only been sanctioned by Parliament until the end of June. Otherwise expenditure is on the same lines as last year. The milk subsidy has been reduced by £426,000 and the beet subsidy increased by a similar amount. The total cost of subsidies (including £4 millions for cattle) will be about £10 millions, compared with £11 millions last year, £8½ millions in 1934-35 and £5 millions in 1933-34. Expenditure on research and development (including land settlement) is put at half a million higher than in 1934.

WORKS, STATIONERY, ETC. (Class VII).—The estimate for Common Services in 1936-37 amounts to £8,552,340—an increase of £208,857 compared with the previous year, in spite of the non-recurring item of £50,000 spent last year for the Jubilee.

PENSIONS (Class VIII).—This estimate at £44,988,108 shows a net decrease of over £1 million, owing to the further reduction in the number of pensioners.

EXCHEQUER CONTRIBUTIONS TO LOCAL REVENUES (Class XI).—This vote covers the payments from the Exchequer to Local Revenues made under the provisions of the Local Government Acts of 1929 and 1933 for general purposes. The total for 1936-37 is estimated at £45,199,427—of which £39.5 millions is for England and Wales and £5.7 millions for Scotland. This is £89,000 less than in 1935-36.

Revenue Departments.—The cost of the Revenue Departments in recent years is given in the following table:—

(£000's omitted)					
	1913-14	1933-34	1934-35	1935-36 Estimates	1936-37 Estimates
Customs & Excise	2,431	5,200	5,490	5,672	5,837
Inland Revenue...	2,052	6,945	7,160	7,528	7,654
Total	4,483	12,145	12,650	13,200	13,491

The cost of collecting Inland Revenue, after falling between 1928 and 1932, had risen by 1934-35 to 1.89 per cent. of the total amount collected, compared with a cost in 1925-26 of 1.53 per cent. The cost in the present financial year is likely to show little change owing to the exceptionally high level of receipts. Customs and Excise receipts, on the other hand, have increased so much that the proportionate cost has fallen considerably and is now somewhat lower than that of Inland Revenue duties.

Post Office.—The progressive policy of expansion of the Post Office services has so far been amply justified by results. In 1934 the number of air mail services was increased and the charges simplified; telephone trunk calls at night were reduced to a universal charge of 1s. for three minutes anywhere on the mainland and overseas services were extended. In 1935 telegram rates were reduced from 1s. for the first twelve words to 6d. for the first nine words; parcel rates were also lowered. From May, 1936, the maximum charge for telephone trunk calls anywhere on the mainland of Great Britain is lowered to 2s. 6d. for three minutes with other reductions for distances between 35 and 200 miles, which are not affected by this concession.

Owing to the resulting increase of business, expenditure by the Post Office has increased from £61,750,000 in 1934-35 to an estimated figure for 1936-37 of £69,344,000. This increase has not so far been quite compensated by increased revenues, but there seems every reason to believe that receipts will rise more than proportionately in time. After making all allowances for interest charges, etc., there was a surplus in 1934-35 of £11,945,000, compared with £12,308,000 in the previous year. Owing to the restoration of half the pay-cuts in July, 1934, the postal services showed

a smaller surplus than in 1933-34. The volume of letter business was larger, but there was less parcel traffic. The telegraph service, although its deficit was the smallest since the war, failed to maintain the improvement of business shown in 1933. Telephones, on the other hand, showed an increased surplus, in spite of the concession to night callers. The total number of calls increased by 100,000 (7 per cent.) during the year; compared with 1922-23 the increase is 950,000—130 per cent.

Expenditure in 1935-36 (excluding work done for the Post Office by other departments and *vice versa*) amounted to £66,080,000—£4.3 millions more than in 1934-35. About £1,000,000 of this is due to the complete restoration of pay-cuts in July, 1935; £750,000 is accounted for by the extra engineering materials needed mainly for the extension of telephone services; over £300,000 more was required for air mail services and another £300,000 for payments to the B.B.C. The net receipt of the Exchequer for the year is £11,670,000, compared with £12,250,000 last year. This still leaves nearly £1,000,000 to be paid into the Post Office Fund after payment of the statutory contribution of £10,750,000 to the Exchequer. This will bring the Fund up to nearly £4½ millions.

The estimates for the coming year show a further increase in expenditure of £3.3 millions. Salaries are to cost £1,829,000 more—partly owing to increased pay, but mainly to the increase in personnel from 226,717 in January, 1934, to 232,654 in 1935 and 242,388 in January, 1936 (5,000 of the increase was in engineering staffs). Air mails are expected to cost an additional £200,000; the grant to the B.B.C. is raised by £250,000; engineering materials are put at £250,000 more than last year and motor vehicles, mostly mail vans, at £140,000 more.

THE NATIONAL DEBT

As far as the Budget is concerned the important question about the National Debt is not so much its capital amount as its annual cost. This cost is to some extent dependent on the prevailing level of interest rates, especially in the case of the short-term or floating debt. But it is still more determined by the composition of the National Debt at any time and its distribution between securities of different maturities. This distribution in turn has important repercussions on interest rates in both the long- and short-term money markets, as was amply demonstrated by the effect on the markets of the Government's large conversion in 1932. The size of the National Debt has not changed substantially since March, 1934, but the annual charge has fallen by about £4.8 millions owing to the substitution for maturing issues of securities with lower interest rates. A further reduction will be realised in 1936-37 from conversions carried out during the past winter.

In the following sections we first analyse the composition of the National Debt, we then show changes in the cost of the debt, and finally we give figures of nominal and actual debt redemption.

Nominal Value.—The accompanying table divides the Debt into internal and external debt; and subdivides internal debt into categories according to dates of maturity. Funded Debt includes all loans with no date of maturity or callable at the Treasury's option only. Unfunded Debt covers all loans with definite dates of maturity, and the subdivision of Floating Debt includes liabilities maturing within a few months.

The year 1922-23 is given for comparison, as it was the year when the post-war peak was reached. The main decrease in the total at March 31, 1935, compared with a year earlier, was in the floating debt, and was accounted for by the larger surplus of revenue over expenditure. But in other unfunded debt there was an important change during the year in the repayment of £105 millions of 4 per cent. and £44 millions of 3 per cent. Treasury Bonds and the issue of £148.8 millions of 3 per cent. Funding Loan. This was equivalent to a conversion of over £100 millions of the National Debt from 4 to 3 per cent.

NOMINAL VALUE OF NATIONAL DEBT AT MARCH 31ST (£ millions)

	1923	1932	1933	1934	1935
INTERNAL DEBT					
FUNDED DEBT:—					
Pre-war Funded Debt	314.2	313.4	313.4	313.3	313.3

National War Bonds	953.1	...	...	...	...
Treasury Bonds	411.0	494.2	415.8	394.2	294.3
Savings Certificates	353.8	382.5	388.2	393.7	397.4
Other Debt	2.0	1.8	1.8	1.8	...
Total of (a)	4,795.3	4,375.8	2,508.6	2,677.4	2,671.7
(b) Floating Debt:—	...	...	...	...	...
Treasury Bills	618.0	604.5	775.9	799.8	799.3
Ways and Means Advances	193.9	7.5	34.6	44.9	34.1
Total Floating Debt	809.9	612.0	810.5	844.7	833.4
Total Unfunded Debt	5,605.2	4,987.8	3,319.1	3,522.1	3,505.3
Total Internal Debt	6,616.7	6,466.6	6,707.3	6,908.6	6,885.6
EXTERNAL DEBT	1,155.7	1,090.8	1,060.4	1,036.5	1,036.5
TOTAL DEAD-WEIGHT DEBT	7,772.4	7,557.4	7,767.8	7,945.2	7,922.1
Funding Loan and Victory Bonds held by National Debt Commissioners	30.2	123.5	124.0	122.9	121.7
NET TOTAL DEAD-WEIGHT DEBT	7,742.2	7,433.9	7,643.8	7,822.3	7,800.4

† Includes £4.4 millions of 4 per cent. National Savings Bonds.

The above table does not give a complete picture of the State's net liabilities, as it takes no account of borrowing for the acquisition of capital assets, notably for the Post Office and for housing, nor of the accrued interest on Savings Certificates, which increased by £8.8 millions during the year 1934-35. On the other side, moreover, must be put the State's capital assets. These items are added in the following table.

DEADWEIGHT DEBT, OTHER LIABILITIES AND ASSETS (£ millions)

	Mar. 31, 1923	Mar. 31, 1932	Mar. 31, 1933	Mar. 31, 1934	Mar. 31, 1935
Net total deadweight debt (as above)	7,742.2	7,433.9	7,643.8	7,822.3	7,800.4
Accrued interest on savings certificates	65.0	98.0	90.5	98.5	107.3
Other liabilities	70.3	214.0	215.9	208.1	102.0
Total	7,877.5	7,745.9	7,950.2	8,127.7	8,009.7
Estimated assets	121.0	254.4	419.1	620.7	517.1
Net total	7,756.5	7,491.5	7,531.1	7,507.0	7,492.6

A reduction of £106.7 millions in Other Liabilities and in Assets is due to the taking over of the Unemployment Insurance Fund Debt by the Unemployment Fund. The State has certain contingent liabilities in the form of guaranteed loans, for example, which cannot be estimated, and no account is taken of non-financial assets such as public buildings. With these qualifications the above figures give as accurate an estimate as possible of the net capital liabilities of the State.

Changes in the National Debt, 1935-36.—The Chief changes in the National Debt during the past year were as follows:—

RECEIPTS	£	ISSUES	£
2½% Funding Loan, 1956-61	121,564	Treasury Bills (net reduction)	36,239
1% Treasury Bonds, 1939-41	98,000	Ways and Means Advances (net reduction)	15,005
Repayments of Issues under Land Settlement Acts	141	National Savings Certificates (net reduction)	1,400
Revenue Surplus	2,940	Treasury Bonds repaid	160,113
		Issues under North Atlantic Shipping Act	1,536
		Issues under British Shipping Act	536
		National Savings Bonds repaid	64
		Old Sinking Fund	7,562
		Exchequer Balances increased	190
	222,645		222,645

The issues of £220 millions of 2½ per cent. Funding Loan and 1 per cent. Treasury Bonds made in the last quarter of the financial year are part of total issues of £300 millions, for which the cash subscription will amount to £291 millions. Of this, £150 millions was used to repay the outstanding 2 per cent. Treasury Bonds in March, and notice has been given to repay the outstanding £44 millions of 3 per cent. Treasury Bonds on April 15, 1936. This transaction will leave the Exchequer with a cash surplus of some £97 millions, which in the first place will go to reduce the floating debt. The position at the end of the year is shown below:—

FLOATING DEBT (000's omitted)			
	Mar. 31, 1935	Mar. 31, 1936	Change
Ways and Means Advances outstanding:—			
By Bank of England	Nil	Nil	— 15,005
By Public Departments	34,060	19,055	— 15,005
Treasury Bills Outstanding	799,320*	763,115*	— 36,205

Total Floating Debt outstanding

* Includes £6,000 in 1935 and £40,000 in 1936, the proceeds of which were not carried to the Exchequer during the period of the account.

The reduction of over £51 millions in the total of the floating debt has been accompanied by a marked transfer of ownership during the year. Treasury Bills issued by tender rose from £360.4 millions to £498.0 millions, which means that the market is now better supplied with bills. On the other hand, bills issued direct to Public Departments and other similar bodies fell from £438.9 millions to £265.1 millions, partly, it is to be presumed, owing to the fact that the Exchange Equalisation Account has recently exchanged its holdings of bills for gold on a considerable scale. Public Departments may also be holding larger quantities of other Government securities in place of Treasury Bills, as a result of the recent issues.

The Debt Charge.—In his Budget of 1928 Mr Churchill introduced the principle of a fixed debt charge, which should include both interest and sinking funds. This charge he put at £355 millions. In the second Budget of 1931 this principle was abandoned and separate provision was made for interest and sinking funds. For the last three years no provision has been made in the Budget for sinking funds, but in fact the sum provided for interest and

management has in every year been sufficiently in excess of the actual requirement to provide for at least the Statutory Sinking Funds. The reduction of the Budgetary provision for the Debt from £355 to £224 millions, however, is not entirely due to the omission of a sinking fund. Over £50 millions of the reduction is due to the fall in the interest charge, which is shown in the following table:—

NATIONAL DEBT INTEREST (£ millions)

	Treasury Bills	Savings Certificates	Total of (1) & (2)	Other Interest Charges	Management and Expenses	Total Interest, Management, etc. (3) to (5)
	(1)	(2)	(3)	(4)	(5)	(6)
1930-31	12.5	16.1	28.6	263.3	1.3	293.2
1931-32	20.7	15.3†	36.0†	251.6	1.9	289.5†
1932-33	5.9	15.0†	20.9†	259.2	2.1	282.2†
1933-34	4.1	11.1	15.2	200.0	1.1	216.3
1934-35	3.5	9.0	12.5	198.1	1.0	211.7

† In 1931-32 these figures were exclusive of £8,430,922 and in 1932-33 of £2,655,995, paid as interest on Savings Certificates in excess of provision in the Permanent Debt Charge.

The reduction in the cost of Treasury bills is largely due to a fall in the average rate, which has continued this year. The reduction in other interest charges is accounted for by certain small conversion operations, which have already been described. The cost of interest and management of the Debt in 1935-36 has shown a further slight fall to £211.5 millions, leaving £12.5 millions from the fixed debt charge for Sinking Fund.

Debt Redemption.—The composition of the nominal sinking fund during the six years 1929-35 is shown in the following table:—

	1929-30	1930-31	1931-32	1932-33	1933-34	1934-35
Specific Sinking Funds						
Principal of Terminable Annuities	£ 968	£ 939	£ 932	£ 909	£ 920	£ 928
Sinking Fund for—						
3½% Conversion Loan	16,113	15,692	15,302	7,503	...	...
4% Consolidated Loan	10,000	10,000	10,000	2,310	...	...
4% Funding Loan	3,162	3,308	3,451	3,591	3,726	3,868
3% Funding Loan	...	...	...	...	...	1,135
4% Victory Bonds	2,610	2,714	2,823	2,936	3,053	3,175
U.S.A. Government Loan	5,548	5,753	...	9,091*	...	...
Deficiency on Funding Loan and Victory Bonds surrendered for Death Duties	9,347	12,084	...	...	...	...
Total of above	47,748	50,490	32,508	26,330	7,699	9,106
Balance	...	16,340	...	...	51	3,237
Nominal Sinking Fund	47,748	66,830	32,508	26,330	7,750	12,343

* This represents proportion of total payment made on December 15, 1932, which would normally count as repayment of capital, although H.M. Government has reserved the right to treat the whole sum on this occasion as a capital payment.

The total of the Sinking Fund, however, does not necessarily indicate the actual debt redemption in any year. Budget surpluses or deficits have to be added or subtracted, as the case may be, and in addition there are borrowings and repayments for special purposes. In 1935-36 the Budget surplus of £2,941,000 must be added to the Nominal Sinking Fund of £12,466,000—making a total sum available for debt redemption of £15,407,000. The following table shows the adjustments to be made in each of the years 1930-31 to 1934-35:—

ACTUAL DEBT REDEMPTION (£000 omitted)

	1930-31	1931-32	1932-33	1933-34	1934-35
Nominal Sinking Fund	66,830	23,508	26,330	7,750	12,343
Budget Surplus	...	364	...	31,148(e)	7,562
Total	66,830	32,872	26,330	38,898	19,905
Deduct—					
Budget deficit	23,276	...	23,188(c)	...	...
Borrowing by Unemployment Fund	36,440	39,610	...	8,310(f)	910(f)
Borrowing for interest on Savings Certificates	3,500	8,431	2,656	...	...
Capital funds brought into the Revenue	...	8,750(a)	...	10,000(g)	...
Conversion Loan expenses	...	...	23,232	...	...
Total deductions	63,216	56,791	49,076	1,690	910(f)
Net redemption of debt	3,614	23,919(b)	22,740(d)	37,208(e)	20,815

(a) Dollar reserve fund. (b) Net increase of debt; but owing to conversions, the accrued interest on savings certificates was reduced by £26.5 millions. (c) Including as interest the sum of £19.9 millions paid to the United States. (d) The British Government reserved the right to regard this as a repayment of principal. (e) Net increase of debt. But see Note (c). (f) Treating as interest the sum of £3.3 millions paid to the United States. See Note (c). (g) Repayment of borrowing. (h) War Loan depreciation fund.

To the figure for 1934-35 should be added a further £7,500,000 representing repayment of war debt by South Africa. This payment, however, also entails a corresponding reduction of assets, so that it implies no change in the net position of the National Debt.

One further item still requires special mention—the treatment of National Savings Certificates. Interest on these certificates is only paid on maturity and is therefore included in the capital item. If encashments of certificates exceed sales in any year, the Treasury has to borrow for these interest payments, as is shown in the above table. But in other years the proceeds of sales are used for the payment of interest, which should be a separate transaction. This is tantamount to a loan for this purpose, and should strictly be deducted from debt redemption. Moreover, the increase in the outstanding accrued interest during the year, which is shown in the second table on page 8, should also properly be set against the figure of net debt redemption. This would reduce the redemption of debt in 1934-35 to £12.0 millions.

The final table summarises the above figures, showing the nominal value of the National Debt, the net redemption of debt and the interest charge in 1913-14 and in recent years:—

THE NATIONAL DEBT, 1913-1935 (£ millions)			
Financial Year	Net nominal total Deadweight Debt outstanding at end of Financial Year	Interest, Management, etc.	Net Re- demption of Debt†
1913-14	649.8*	19.3	5.2
1930-31	7,413.3	293.2	3.6
1931-32	7,433.9	289.5	23.9¶
1932-33	7,613.8	282.2	22.7¶
1933-34	7,822.3	216.3	37.2
1934-35	7,800.4	211.7	20.8
1935-36	7,807.0†	211.6	15.4

* Debt at beginning of year. † Estimate. § The discrepancies between the figures in this column and the movement of the figures in the first column is explainable chiefly on the ground that the first column takes no account of movements in net assets. But see also qualifications to the figure for net redemption in the preceding paragraph. ¶ Net increase of debt.

LOCAL AUTHORITIES

COMPLETE returns analysing the finances of all local authorities in England and Wales are unfortunately very belated in their appearance. Expenditure on income and capital account during the last four years for which figures are available was as follows:—

	(£ millions)		
	1930-31	1931-32	1932-33
Revenue account	432.7	435.0	430.3
Capital account	110.9	116.8	84.8
Total expenditure	543.6	551.8	515.1

Rate fund services in 1932-33 involved gross expenditure on income account of £320.8 millions, of which education accounted for £82.6 (decrease of £2.5 millions, largely owing to reduced salaries), housing for £41.6 millions (an increase of £1.6), highways and bridges for £46.8 millions (a decrease of £5.1 millions) and health services for £57.0 millions (an increase of £1.2 millions). Of the total revenue of £321.1 millions to cover these services, rates provided £146.3 millions (46 per cent.), fees, rents, etc., £53.0 millions (17 per cent.), general Exchequer grant under the 1929 Act £45.0 millions and specific Government grants for education, housing, police and highways and bridges, £74.9 (37 per cent. in all). Trading services, which are just self-supporting, cost £117.2 millions in the year, of which £35.7 was for loan charges—mainly as usual for water and electricity undertakings. In addition to expenditure on services, £20.5 millions were allocated to sinking funds by local authorities during the year.

Capital expenditure showed a very marked decrease compared with the previous year. Expenditure on housing fell by £18.3 millions, on highways and bridges by £8.5 millions, and on education by £4.3 millions to totals respectively of £21.2 millions, £11.1 millions and £6.0 millions. Most of this money was raised by loans, but the Government contributed grants of £5.2 millions out of a total of £7.4 millions for the acquisition of small dwellings, and

£6.5 millions out of a total of £12.8 millions for highways, bridges and private street works. At March 31, 1933, the net loan debt of local authorities in England and Wales amounted to £1,300.4 millions, an increase of £34 millions, of which £85.1 millions was on account of rate fund services and £449 millions of trading services. Sinking funds at that date for these two types of service were £60 millions and £33 millions respectively. Pension funds had over £42 millions standing to their account. The following table shows gross debt outstanding on different accounts before allowance has been made for sinking fund allocations:—

LOAN DEBT OF LOCAL AUTHORITIES IN ENGLAND AND WALES AT MARCH 31ST (£ millions)					
	1914	1930	1931	1932	1933
Education (elementary and higher)	52.1	56.8	65.4	71.4	75.0
Sewers and sewage disposal	44.1	59.3	65.2	70.2	74.8
Housing	12.5	444.7	423.1	448.5	466.7
Trading services	363.4	453.1	462.7	471.5	475.6
Other undertakings	90.5	210.8	287.4	295.2	301.5

Total 562.6 1,224.7 1,303.8 1,356.8 1,393.6

Later complete figures of local government finances are not available, but the amount raised by rates in England and Wales in 1934-35 was £152.9 millions, compared with £147.7 millions and £146.2 millions in the two previous years. The average rate was 10s. 8½d. in the £—a decrease of ½d. compared with 1933-34 and of 1½d. compared with 1932-33.

Loans (excluding those for housing) sanctioned by the Government in 1934-35 amounted to £26.0 millions, an increase of £5.7 millions compared with 1933-34. Of this £8.2 millions was for health (an increase for public parks, etc., of £1.4 millions), £4.5 millions for education (an increase of £500,000) and £4.3 millions for trading concerns. Housing loans of £20.8 millions were also sanctioned. Borrowing by local authorities during 1934-35 was concentrated in the first ten months of the year, and the rate varied between 3½ per cent. and 2½ per cent. at prices from 96½ to 101. The Exchequer grants under the 1929 derating Act amounted to £45.4 millions for 1934-35; while specific grants came to over £80 millions.

SOCIAL SERVICES

If the above figures are added to National Expenditure it will be found that net total expenditure by Local and Central Governments amounted in 1932-33 (the latest year for which complete figures are available) to some £1,170 millions. We now analyse the part of this total expenditure accounted for by "Social Services." In 1932-33 the figure was £490 millions (about 42 per cent. of the total), and in 1933-34 it had fallen by £11 millions to £479.3 millions. Expenditure on National Debt services, however, fell by nearly £60 millions in that year, so that the proportion of social service expenditure must have risen considerably. The actual decline was entirely due to the reduction of £16 millions in unemployment benefit payments. But the relief consequently enjoyed by the Exchequer, which had previously had to bear the whole burden of the Insurance Fund deficit as well as paying all transitional benefits, was gained to some extent at the expense of local authorities, who had to spend £2 millions more on poor relief.

	(£ millions)

* Includes widows', orphans' and old age contributory pensions under the Act of 1926.

† Including expenditure on hospitals, maternity and lunacy.

‡ Year ended March 31, 1933 for England and Wales.

§ Calendar years 1924, 1931, 1932, 1933 and 1934.

Changes in the cost of pensions are purely automatic, and for some time to come the decrease in war pensions will continue to counteract the increasing cost of old-age pen-

sions. With the increase in the average age of the population, however, this item will become steadily larger. The increased expenditure on housing and miscellaneous services is the most encouraging evidence of a more liberal attitude to constructive social services. The following table shows the sources of revenue for the different services:—

	Expenditure	Receipts from			Total Receipts	Number of persons (a) benefiting directly (Millions.)
		Local Rates	Parliamentary Votes or Grants	Other Sources (Fees, etc.)		
Unemployment Insurance benefit.....	49.3	...	19.7	39.5	49.2	11.5
Transitional benefit.....	52.2	...	52.2	...	52.2	
Health Insur.....	36.0	...	6.2	32.8	39.0	18.4
Pensions:						
Widows, etc.	42.2	...	...	22.9	22.9*	2.0
Old Age	41.1	...	41.1	...	41.1	1.7
War	42.8	...	42.8	...	42.8	1.0
Education.....	102.3	46.5	47.2	8.7	102.4	8.1
Housing	44.8	3.9	14.7	26.2	44.8	...
Poor relief.....	46.1	42.7	0.2	3.2	46.1	1.8
Other.....	22.6	19.7	0.3	2.5	22.5	...
Total	479.3	112.8	224.4	135.8	462.8	...

* Exchequer contribution of additional £12,000,000 to Treasury Pensions Account.

The significant feature of the above figures is a further increase in the proportion of Social Service expenditure borne by rates from 22 to 27 per cent. This was partly due to the expense of poor relief and partly to the increase from 44 to over 45 per cent. of the cost of education borne by the local authorities.

INFORMATION ON PUBLIC FINANCE

THE figures of the national accounts are to be found in a variety of official publications. Taking the series chronologically, the first to appear are the *Estimates*, which are published from four to six weeks before the financial year begins on April 1st, and contain a detailed review of esti-

mated expenditure on the Supply Services during the coming year. The Estimates are published under five heads—Army, Navy, Air, Civil Services and Revenue Departments; and the Civil Estimates are further subdivided into nine classes.

The estimated expenditure on the Consolidated Fund Services is revealed by the Chancellor of the Exchequer in his Budget Speech in April, and the *Financial Statement* which is issued at the same time contains complete estimates of total revenue and expenditure, as well as the results of the previous year's working.

Returns of Revenue and Expenditure are published weekly throughout the year and appear in every Wednesday's newspapers. Returns are also published at the end of each quarter. *Supplementary Estimates* for expenditure not included in the original Estimates are issued as White Papers as occasion requires in the course of the year.

After the financial year is concluded, the Chancellor of the Exchequer usually reviews its main features in his Budget Speech. In the following September the *Finance Accounts* are published, giving more detailed summaries of expenditure and revenue and of transactions relating to the National Debt and to the position of Sinking Funds. Finally, detailed accounts of expenditure, audited and commented upon by the Comptroller and Auditor-General, appear in the *Appropriation Accounts* and in the *Abstract Account of the Consolidated Fund*. Full details of revenue can be found in the *Annual Reports* of the Commissioners of Inland Revenue and of the Commissioners of Customs and Excise. Details regarding the National Debt over a series of years appear in two returns giving *Aggregate Liabilities and Cash Transactions of the State* and *Dead Weight Debt*, respectively. Other information is to be found in the *Post Office Commercial Accounts*, *Road Fund Accounts* and *Trading Accounts and Balance Sheets* (which refers to Trading and Commercial services of the Government).

Certain special aspects of public finances are to be found in a return entitled *Public Social Services* and in an annual report on *Public Departments, Gross and Net Cost*. Details of local authorities' finance may be found in the annual reports of the Ministry of Health and the Department of Health for Scotland.

THE GENERAL OUTLOOK

THE final section of last year's Budget Supplement was devoted to an attempt, under the heading above, to look both backwards and forwards ten years in British budgeting. It had to be recorded that the hopes of 1925 had been disappointed. Expenditure had not declined and revenue had not increased to the extent then expected, and substantial remissions of taxation had not been possible. Looking forward, we concluded that, in the decade 1935-45 "it is hard to foresee any reductions in expenditure; on the contrary, it is highly probable that there will be a moderate increase, which may be of the order of 5 per cent., plus whatever sinking fund we may decide to impose." On the side of revenue, some natural increases could be expected, but "buoyancy of the revenue is clearly not going to leave any very large margin over a rising total of expenditure for reductions of taxation. . . . So far as we can foresee the next decade, the fiscal barometer points to 'No Change.'"

After only twelve months, this forecast, cautious and conservative when it was penned, begins to have an optimistic air. Faced with the position of to-day, few prophets would venture even to breathe the possibility of reductions of taxation. Many would find the prospect of increases in taxation more worthy of discussion. This change has not been brought about by any failure of revenue. On the contrary, the increases in revenue in the past twelve months have been surprisingly good. The change has been entirely produced by a rapid increase in expenditure. The 5 per cent. increase which was anticipated for the whole decade has been achieved in a year—with the certainty of more to come.

The following table shows the movement of expenditure, under its main heads, during the past ten years. The years shown in the table have been selected as the most significant turning-points in recent British fiscal history. The first, 1925-26, besides being ten years prior to the year that has just closed, was also the first year of the post-war gold standard. The year 1929-30 marks the highest point reached by the very exiguous "prosperity" which Great Britain achieved while the pound remained on gold. The next year, 1931-32, is the "crisis year," when expenditure and revenue reached their peak. Finally, the table shows the last two completed years and the estimates—so far as they are available—for the current year.

EXPENDITURE, 1925-26 to 1936-37.
(£ millions)

	1925-26	1929-30	1931-32	1934-35	1935-36	1936-37*
National Debt services ..	355	355	360	224	224	(224)
Other Consolidated Fund....	9	9	9	13	14	(14)
Defence services	113	113	111	124	137	168†
Civil services (including tax collection)	272	272	319	358	375	379
Total expenditure	749	749	799	719	750	785

* Provisional. Figures in brackets are 1935-36 expenditure; other figures are original Estimates.

† Allowing £10 million for Supplementary Air Estimates, as forecast by the Chancellor of the Exchequer in the House of Commons, April 9, 1936.

The lessons of the table are all too clear. Expenditure has almost reached its 1931-32 peak. Moreover, this is after allowing only £10 millions for Supplementary Estimates in 1936-37, although much more than this is clearly in prospect. By the time 1936-37 closes, the expenditure will

almost certainly be higher than at any time since the years immediately after the war, when the war's legacy of high prices and free spending was still unexhausted. This increase in expenditure has been produced in spite of a fall of from £130 to £135 millions in the debt charge, due to the fall in interest rates, the disappearance of the payments to the United States and the suspension of the sinking fund. Compared with the "crisis year" 1930-31, both the defence and the civil services have increased their expenditure by about £60 millions. Compared with 1925-26, the increase is £55 millions and £105 millions respectively.

The increase in defence expenditure is proportionately the larger of the two and it is here that further increases can be expected. The public has not given the slightest sign of being prepared to submit to reductions of civil expenditure. But without such reductions an increase of total expenditure over £800 millions is a certainty in the immediate future. If rates of interest rise, and still more if a sinking fund is reinstated, a rise to above £850 millions will be difficult to avoid.

How are these enormous sums to be raised? It is conceivable that Parliament may be content to budget deliberately for a deficit, and finance it out of a Defence Loan. Such a procedure may, indeed, be inevitable if revenue is insufficient to meet expenditure. But necessity will not make such a policy any less unsound. There is no justification to be found in theoretical economics, and still less in the body of empirical precepts known as "sound finance," for financing rearmament in peace time by loan. We ought at least to make an effort to find the necessary sums out of revenue. "Out of revenue" means, virtually, out of taxation; for the non-tax revenue of the Treasury is only some £40 millions and, if receipts from loans be excluded, is unlikely to increase significantly.

The following table gives a ten-year comparison for tax revenue similar to that already given for expenditure:—

TAX REVENUE, 1925-26 to 1935-36
(£ millions)

	1925-26	1929-30	1931-32	1934-35	1935-36
Inland Revenue:					
Income Tax	258	238	288	229	238
Surtax	68	57	77	51	51
Death Duties	61	79	65	81	88
Stamps	25	25	17	24	26
Other Inland Revenue	15	3	3	3	2
Total Inland Revenue ...	427	402	450	388	405
Customs and Excise:					
Customs	103	120	136	185	197
Excise	134	128	120	105	107
Total	237	248	256	290	303
Of these:					
Sugar	19	14	16	12	
Tobacco	53	63	63	71	
Alcohol	135	124	113	96	
Entertainment	6	7	8	10	
Petrol	...	15	29	42	
All other duties	24	25	27	61	
Motor Vehicle Duties (Exchequer share)	4	5	5	5	5
Total tax revenue	668	655	711	683	713

* Details of Customs and Excise revenue for 1935-36 are not yet available.

It will be noticed that total tax revenue has also reached the peak of 1930-31, when higher rates were first imposed upon what were still, in the case of income tax and surtax at least, the incomes of semi-prosperity. The change that has come over the revenue during the past decade is very clearly visible from the table. Total tax revenue has increased by £45 millions. But the Inland Revenue has fallen by £22 millions, while indirect taxes have increased by £66 millions. Income tax is being threatened in its premier position as a revenue-getter. Ten years ago customs duties brought in only 40 per cent. as much as income tax. In 1935-36 the proportion had risen to nearly 83 per cent. Customs and excise together, from producing £21 millions less than income tax alone, now produce £14 millions more than income tax and surtax together.

This change has certain very important effects upon the incidence of taxation. But we are at present more concerned with yields, prospective as well as past. The income tax last year produced almost exactly as much as in 1929-30. The yield was still, however, £50 millions below that of 1931-32. But in that crisis year, the standard rate

was 6d. higher, and the exemptions and allowances were smaller than in either 1929-30 or 1935-36. In addition, five quarters' tax was collected on certain schedules. It would clearly be unwise to expect an increase of anything like £50 millions in the yield of income tax, without a rise in the rate, for many years to come. The yield of surtax in 1935-36 was still at the lowest figure recorded in the table. It was £6 millions below 1929-30, although the rates were increased by 10 per cent. in 1931. The time lag between the receipt of incomes and the payment of surtax on them is as long as two years. But even so, the failure of last year's receipt to increase is disappointing. To expect a return to the £77 million yield of 1931-32 would be very optimistic. The death duties, in contrast to surtax, show an almost continuous increase, in which the 1931 rise in rates has undoubtedly played some, but not the dominating role. A further increase can be expected, though it will undoubtedly be small.

Summing up on the Inland Revenue, the 1931-32 figure of £450 millions (an increase of £45 millions on last year) is the most that can, even with some optimism, be expected with the present rates of tax in the next few years. Even in 1921-22 the Inland Revenue (excluding Excess Profits Duty) only produced £489 millions. And that was with the standard rate at 6s., a much higher level of prices and the Irish Free State still within the United Kingdom.

How much more can be expected of Customs and Excise? The table above includes figures of the yield of the chief indirect duties. The most striking feature is the decline in the yield of duties on alcohol. Much the largest constituent of this, of course, is the beer duty, and the experiment of a few years ago appears to have demonstrated that even higher rates of duty will not produce a higher revenue. We must apparently reconcile ourselves to further declines under this head. On the other hand, the yield of the tobacco duty is still increasing. Since 1932-33 it has even displaced beer from the position of largest yielder, and there is probably still more revenue to be got out of tobacco, even without raising the rate. The population has, it is true, virtually stopped increasing; but the number of adults will continue to increase for some time to come. The petrol duty should also be able to show continued increases. The reduction in the motor licence duties, by encouraging the purchase of larger cars, may well result in increased purchases of petrol per car, apart altogether from the still rising number of cars on the road. Finally, there is the item of "all other duties," which includes, as its major constituents, the revenue resulting from the Import Duties Act, the Ottawa Duties and the Irish Free State Duties. The last-named may disappear, but the two former are apparently permanently with us. They should show some "natural" increase as trade revives, but the present indication is that their yield is not likely to be swollen by any increase of rates. Increase of rates might, indeed, have the effect of reducing the yield.

It is difficult to reach numerical conclusions on the probable future yield of Customs and Excise duties, as there is no past experience, over a large part of the field, to guide us. But for the purposes of a rough guess we may suppose that the tobacco, petrol and "all other" duties will each produce £10 millions more in the next few years, and that the alcohol duties will decline by another £5 millions. This very approximate calculation gives a total yield of Customs and Excise, without any increase of rates of duty, of about £330 millions. We may now add in the Exchequer share of the Motor Vehicle Duties (stabilised at £5 millions) and non-tax revenue, and we get a maximum figure for total revenue in the next few years of £825 millions. It goes without saying that all these calculations presuppose no onset of serious depression.

These, then, are the dimensions of Great Britain's budgetary problem. Expenditure, even without a sinking fund, looks like exceeding even the highest estimate of revenue that can be made, with any regard to caution, on the basis of the present rates of taxation. Unless the alarming increase in defence expenditure can be arrested—which involves considerations far wider than are appropriate to a Budget Supplement—the indications are that we shall soon have to choose between increased taxation or deliberate deficits.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, APRIL 25, 1936

No. 155

THE STATE OF TRADE

ALTHOUGH the expansion of business activity in recent weeks exceeded the normal seasonal improvement at this time of the year, recovery from the recession between December and January was not complete by March. The momentum of recovery appears to have temporarily lost some of its force, due partly to the growing uncertainty concerning European political stability, but there is no evidence that the upward movement has exhausted itself. While the Budget provides no encouragement to enterprise, the latest reports from industrial centres point to steady progress in the majority of industries.

Recent changes in business conditions are revealed by the chart on this page, based on our Index of Business Activity. It will be seen that despite a rise in February and March, the index for the past month still remained two points below the December peak. All the group indices for March are higher than in the corresponding months a year ago. Between February and March all but four indices, including those relating to the consumption of coal, electricity and iron and steel as well as to building activity, registered an increase.

As in February, the increase in employment in the past month was more marked than usual. Indeed, employment reached a new peak on March 23rd, the total number of insured workers aged 16 to 64 in employment in Great Britain, at 10,360,000, showing an increase of 155,000 over February, and one of 411,000 over the corresponding month a year ago. The proportion of insured persons unemployed in March was 14.4 per cent. and, if the normal seasonal movement continues, the percentage is likely to fall well below 14 by May. The improvement between February and March was well distributed geographically, for unemployment showed a decline in all districts with the exception of Wales. Among other general indicators of business activity, our indices of the consumption of coal and electricity showed a decline, but those relating to the volume of imports of raw materials and of exports of British manufactures registered a rise. The increase in imports of raw materials is particularly encouraging as an indication of increased activity in the future. Industrial progress in the past month is also reflected in an increase in bank clearings and in the advances of the London clearing banks.

There is, however, one important factor limiting the scope of progress which has as yet received little attention, namely, the uneven incidence of recovery. Thus, while the capacity of a number of industries is unequal to meet demand at current prices, others, including coal and cotton, continue to suffer from an excess of plant and labour supply. The capacity of certain sections of the iron and steel industry, for example, is quite insufficient to meet requirements at current prices. Complaints of a shortage of pig

iron and of arrears in deliveries of semi-finished steel as well as of the difficulty of placing contracts for near delivery are growing more insistent. Again, progress in the engineering industry is hampered by a scarcity of skilled mechanics. The position has been aggravated by the fact that the nature of Government contracts enables manufacturers of armaments to offer higher wages than others can afford.

As our summaries of developments in individual branches of activity show, progress continued uneven. Demand for iron and steel and for the products of the engineering industry remains as active as ever, and in certain sections output is only limited by capacity. New orders for mercantile shipping tonnage in the first quarter of 1936 were somewhat smaller than in the previous quarter, but the volume of work on hand showed a further increase. It is noteworthy, however, that our index of building activity has not reached the level of December since the beginning of this year. The value of building plans passed by 139 local authorities in March was actually 8.3 per cent. below the level of a year ago.

The majority of consumers' goods trades experienced a seasonal improvement in recent weeks. Unemployment declined in the textile industry as a whole as well as in the clothing, leather and leather goods and food, drink and tobacco trades. The cotton and jute trades have

made little headway in recent weeks, but the wool textile industry remains active. The output of motor vehicles continues above last year's level, but exports of private cars in March showed a substantial decline on the corresponding month a year ago.

Abroad, the setback in activity in the United States during January and February was followed by an improvement in March which has since gained momentum. In Europe, most countries, with the exception of Holland and Switzerland, have either maintained the previous improvement or experienced further progress. Following the gradual decline in German business activity, that country has experienced a marked seasonal revival in March. Although France's financial difficulties are by no means solved, her industrial production continues to expand.

There has been no serious deterioration in the position of the majority of Latin-American countries. Activity in Japan remains at a high level and China's foreign trade has recently shown a tendency to expand. Reports from Empire countries reveal steady progress in Australia and South Africa, while Canada, after the setback in January and February, has since been forging ahead. Although the domestic recovery of the principal industrial countries has not been accompanied by a corresponding expansion of the international exchange of commodities, the latest statistics of world trade, published by the League of Nations, reveal a small measure of recovery.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of April. In the remainder they relate to the month of March.

COAL

On a daily basis, production showed a slight decline in March, although remaining above last year's level. This decline is reflected in the employment position, and the gradual increase in the number of persons employed at the coalfields, noticeable since last October, was reversed in mid-March. Meanwhile the output of industrial fuels is well absorbed, mainly on contract account, and the market in coke remains very strong. The house coal trade became slack towards the end of March, but April's unseasonable weather has caused a sharp increase of business in this section. But while conditions on the home market generally are not unsatisfactory, the export situation leaves much to be desired. Exports declined further last month and remained below the 1935 level. Little improvement has been recorded in recent weeks; a number of forward inquiries have been circulating, but exporters are unwilling to commit themselves too far ahead.

IRON AND STEEL

The iron and steel industry remains as active as ever, and output is only limited by its capacity. Despite a further fall in exports in March, accompanied by an increase in imports, the stringency in certain sections of the industry persists; for example, the output of pig iron cannot be increased proportionately to the rise in demand owing to the shortage of coke. The existence of bottle-necks is hampering the industry. Moreover, its limited capacity prevents an expansion in exports. Although prices of iron and steel materials have tended to rise, a sharp upward movement has been prevented so far by the intervention of the British Iron and Steel Federation.

ENGINEERING

Activity in the engineering industry continued to expand in recent weeks; indeed, the current volume of output is probably not much below that of the pre-depression year. The strengthening of the fighting services is an important factor in the recovery. The value and volume of exports in March was higher than in the corresponding month a year ago. Imports also registered an appreciable increase, a reflection of the improvement in domestic demand. The improvement in recent weeks has been most marked in the manufacture of machine tools and oil engines and in the locomotive and marine engineering sections. There was also an improvement in the demand for agricultural and electrical machinery, and business in mining and lifting machinery continued good. Confidence is increasing throughout the industry, but the recovery in engineering has revealed a serious scarcity of skilled labour, which is hampering developments.

ELECTRICAL ENGINEERING

Home demand continued to expand during the past month, and the volume of orders for heavy electrical machinery in March showed a substantial increase compared with February. On the other hand, export business was slightly less active.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*
(1920 = 100)

Period	Home	Export	Total
1928—March	71	141	89
1929	88	126	97
1930	71	236	113
1931	62	126	74
1932	46	112	57
1933	68	65	64
1934	41	101	58
1935—March	102	134	113
April	105	135	115
May	110	128	117
June	109	124	115
July	101	123	109

September	71	135	93
October	70	141	93
November	79	150	102
December	89	141	106
1936—January	90	149	110
February	97	152	115
March	107	151	122

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

MOTOR INDUSTRY

On the home market progress has been well maintained. Thus during February 21,345 private cars were taxed for the first time, against 19,106 in 1935 and 15,549 in 1934. Registrations of goods vehicles also showed a satisfactory increase on the year, 6,277 new vehicles being licensed in February, compared with only 4,920 in the same month of last year. Imports of private cars remain below the 1935 level; the export position is less satisfactory, for overseas sales in March fell short of the 1935 figure. But exports of commercial vehicles remain above the level of a year ago.

CHEMICALS

Demand has been fairly active generally and prices have remained steady. Business in coal-tar products is quite active,

carbolic and cresylic acids and creosote being in good demand. Prices for wood distillation products are unchanged, and most items, except wood creosote and tar, have been good. The market in pharmaceutical products has shown a slight improvement, although most orders are for limited quantities. Bismuth salts, bromides and lactic acid have been good items. Exports in March were slightly below the level of the two previous years.

ELECTRICITY

INDEX OF GENERATION OF ELECTRICITY*

* Prepared by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association.
† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."
‡ Provisional.

COTTON

Available data suggest that, while the improvement over last year has been maintained, little progress was recorded last month. Thus, the number of workpeople employed and wages paid showed little change in March, but both are well above last year's level. Again, the percentage of spinning spindles in full production was unchanged at 81, compared with 70 at the end of March, 1935. On the other hand, the *Economist* index of cotton deliveries to spinners rose from 93½ in February to 96½ in March (1924 = 100), against 89½ in the same month last year. In recent weeks home trade buyers have been cautious, and both spinners and manufacturers have complained of the smallness of orders. The export situation showed no significant change last month, and sales overseas continue to be hampered by the uncertainties of the international situation. Demand for India is reported to have fallen off in recent weeks, and buying for other outlets has been irregular.

WOOL

Active conditions continue to prevail in the woollen and worsted industry. Employment continues good and a further improvement was recorded in March—especially in the woollen section. The position is much better than at this time last year, and a shortage of skilled operatives is reported from some districts. The pressure for immediate delivery of tops and yarns has abated somewhat, but demand remains active. Although some slackness was apparent over the holiday period, manufacturers report an active demand for the products of the industry, and order books are generally well filled. The export section is much less satisfactory. Exports of yarns and manufactures, although still above the 1935 level, recorded a slight decline last month.

JUTE

The depression in this industry continues. The Indian Jute Mills Association failed to secure the adherence of the "outside" mills to the scheme for restricting working hours, and some increase in the rate of production in India, coupled with a fall in prices, is regarded as inevitable.

RAYON

Business in yarns has been somewhat disappointing, confident forward buying by the weaving trade being absent. Some improvement in demand from the hosiery trade has, however, been recorded and certain special sections are active. But business generally has been affected by the unseasonable weather.

LINEN

Spinners have been purchasing considerable amounts of Russian flax and tow, mainly from merchants whose prices are below the official monopoly quotations. Supplies of Irish flax are limited and prices firm. Yarns have received more attention, while the demand for cloth remains seasonally quiet. Damask ranges and fine cambrics are, however, in more active request.

BOOTS AND SHOES

A further modest improvement in the footwear trades is reflected in an increase in employment and in wages paid. Exports recorded a slight increase in March and were above the level of a year ago.

POTTERY

Employment in this industry, although showing some improvement last month, remains slack in the main producing areas. Short-time is being worked by a high proportion of the operatives in North Staffordshire.

AGRICULTURE

Spring sowing is now in progress, but few plants are yet above ground. Autumn-sown crops improved in appearance during the latter part of March. The preparation of the land for potatoes is proceeding as rapidly as possible and planting of early varieties is progressing. Preparation of the land for sugar beet is very much in arrears. The fall of lambs amongst lowland flocks has been about average, but lambing prospects amongst hill flocks are not very favourable. Pastures are now showing signs of growth. Milk yields have been generally difficult to maintain, and all stock are showing signs of the trying winter.

SHIPPING

A further fall of 0.9 per cent. in our index of whole cargo shipping freights during March reflects the continuance of depression in shipping. The current figure of 89.8 (1898-1913 = 100) compares with 82.1 in the same month a year ago. Apart from

the movement of grain cargoes from the St. Lawrence, business has remained dull in recent weeks, the supply of tonnage being in excess of demand.

BUILDING

For the third successive month, our index of building activity in March failed to attain the peak level reached in December. Nevertheless, activity remains well above the 1935 level, and the current figure of 236 (1924 = 100) compares with 213 in March, 1935. Employment in the building trades showed a substantial seasonal improvement last month, and in some branches a shortage of skilled operatives was reported. The Ministry of Labour figure for the value of building plans approved by local authorities in March was below the corresponding total for 1935, the decline being in plans for dwelling-house construction. Plans approved for other purposes, however, continue their upward trend. Although the outlook is somewhat uncertain, no considerable decline in activity is yet anticipated.

RETAIL TRADE

Although the official figures are not available as we go to press, it appears likely that the improvement over 1935 was maintained in March. The termination of the period of national mourning is expected to give a fillip to sales in certain sections.

HOME TRADE STATISTICS—MARCH, 1936

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—A cable from the National Bank of Australasia states that favourable pastoral conditions exist, except in Western Australia and parts of Victoria, where rain is needed; butter production has rapidly declined. Meanwhile, gold production continues to expand, internal trade and building are active and competition was fully maintained at the closing wool sales. Foreign trade continues well above the previous year's level.

South Africa.—The progress of recovery continues. The Union Budget for the coming year reflects the highly satisfactory state of the country's finances, but the reliefs are extremely meagre. Meanwhile, foreign trade continues well above last year's level, the export position being good. Imports in March amounted to £6,910,000, against £6,093,000 in the same month of 1935, while exports, including gold, totalled £7,085,000, against only £4,365,000 in March last year.

Canada.—Abstracting from seasonal influences, business activity in Canada continues its gradual improvement. The movement is reflected in car-loadings and bank clearings, which remain well above last year's level, and also in the growth of building permits. Exports, at more than 60 million dollars, were greater in February than in any February since 1930, the gain over the previous year being 26 per cent. A moderate increase in imports also took place.

India.—The Bombay cotton market showed a strong tone during March, active buying by Japan being a feature of interest. Quotations for piece goods remain low, but the market is fairly steady at this level. The Calcutta jute market turned quiet towards the end of March, on favourable weather conditions. Some increase in the output of jute manufactures is expected owing to the failure of the Jute Mills Association to reach agreement with the outside mills.

EUROPE

France.—While the Government's financial difficulties have by no means been finally overcome, the trend of industrial activity remains upwards. It is interesting to note, however, that, according to a statement by the Minister of Finance, revenue from taxation last month exceeded the official estimates for the first time for nearly five years. Meanwhile the official index of industrial production rose from 97 (1913 = 100) in January to 99 in February, an increase of 6½ per cent. over the corresponding month last year. Moreover, with the exception of the figures for textiles and mining, all the group indices showed an improvement between January and February. The number of persons in receipt of unemployment benefit fell from 484,526 at the beginning of March to 457,750 at the beginning of April, a decline of 17,687 on the corresponding date last year. The upward trend of wholesale prices gave way to a downward movement at the end of March, and prices of industrial securities have not yet fully recovered from the setback caused by Herr Hitler's re-occupation of the Rhineland.

Germany.—Germany is in the midst of a seasonal improvement in business activity, reflected in the decline in unemployment from 2,514,900 at the end of February to 1,937,000 at the end of March. Coal production in March remained above the level of a year ago. Car-loadings increased from 124,100 per day during the first week in March to 131,500 per day during the first week in April. The value of imports rose from Rm. 334 millions in February to Rm. 355 millions in March, and exports increased from Rm. 374 millions to Rm. 379 millions. Consequently, the excess of imports over exports declined from Rm. 40 millions in February to Rm. 24 millions in March. The official index of wholesale prices remained practically unchanged in recent weeks, but quotations for industrial securities showed some improvement.

Belgium.—Belgium continues to make headway. The latest official statistics are, however, somewhat out-of-date. The index of industrial production rose from 66.9 in January, 1935, to 80.6 last January. Again, the number of wholly and partially unemployed workers declined from 381,706 to 266,941 during the same period. The improvement in business conditions has been accompanied by an appreciable expansion in foreign trade.

Norway.—Developments during recent weeks continued the favourable trend in evidence since the turn of the year. Foreign trade figures for February show an increase in the turn-over of nearly 15 per cent., compared with the same month last year, chiefly on account of heavy imports of raw materials. Industrial production and unemployment figures also indicate an appreciable improvement. The fact that the right of issue of notes of the Norges Bank has recently been raised by 75 million kroner may be ascribed to increased business activity.

Poland.—The gradual improvement in Polish business conditions has been maintained. The index of industrial production, calculated by the Polish Institute for Economic Research, rose from 67.3 in January to 68.6 in February, an increase of 6 per cent. over the corresponding month a year ago. Unemployment is lower, and the value of both imports and exports in February was appreciably higher than a year ago. During the past month recovery was retarded by a series of strikes.

UNITED STATES OF AMERICA

The latest evidence of business conditions in the United States indicates that the recession in January and February gave way to

a renewed upward movement in March. Thus, the *Annalist* index of business activity, after falling from 94.9 in December to 87.8 in February, rose again to 88.2 in March. The improvement continued in the first half of April, the *New York Times* index of activity rising from 94.0 during the week ended March 28th to 98.1 during the week ended April 11th. The principal branches of activity are all making headway; construction contracts awarded are appreciably higher than a year ago; production of steel and machine tools is increasing, and there has been a sharp upturn in the output of motor vehicles. But although industrial activity is once more on the up-grade, the future is still fraught with uncertainties, reflected in the sagging tendency of the prices of industries securities.

* Preliminary estimates made by Messrs Moody, subject to revision. † Federal Reserve Board Index of Factory Employment. ‡ Closing prices. § Partly estimated. || Compared with Feb., 1935.

LATIN AMERICA

Harvesting of the Argentine maize crop, officially expected to yield 9,650,000 tons, or 1,830,000 tons less than last year, is actively proceeding. Following publication of this estimate, the Government announced an advance in the basic purchasing price of the Grain Regulating Board for maize from 4.40 pesos to 5.00 pesos per 100 kilos. Export demand for grain continues poor, and there is the possibility of further drawings upon the Government's Exchange Profits Fund to offset losses of the Grain Regulating Board. Consequently, it appears doubtful whether the Government could contemplate further exchange concessions to British interests, notwithstanding their known desire to do everything possible to further the negotiations for the renewal of the Roca Agreement. Chile's foreign trade figures for January, 1936, made a satisfactory showing; exports rose in value to 54.5 million pesos of 6d. (gold), against 39.9 millions in December, 1935, while imports were reduced to 28.3 million pesos, against 31 millions. The improvement in Chilean internal conditions generally is maintained. Brazil's active balance of trade was reduced last January to a lower level than has been recorded for that month for many years, while export demand for coffee on the local markets continues restricted. In Venezuela, the coffee crop is poor, and there is temporary stringency in the foreign exchange market. The export of coffee from Colombia has been delayed owing to transport difficulties. While the crops of Central American coffee producing countries generally showed somewhat varied results, a large part of this season's harvest has already been sold.

THE FAR EAST

Business conditions in Japan show little change. The output of cotton yarn increased in February, but production of rayon declined. Quotations for rayon and cotton yarn have been steady in recent weeks, but raw silk was weak. The market in Government bonds and shares has remained steady and the new 3½ per cent. conversion loan is expected to be well received. Imports during March totalled 293 million yen and exports 223 million yen, against 235 and 224 million yen, respectively, in the same month of 1935. Meanwhile, China's imports rose to 79.18 million dollars in March, against 63.23 millions in February and 97.29 millions in the same month of 1935, while her exports recovered to 48.19 millions, compared with 46.36 millions in the previous month and 39.05 millions in March, 1935.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen and Unwin, Ltd.)

PRODUCTION (Thousands of Metric Tons)

Bank of Australasia	49		
Bank of New South Wales	49		

PROGRESS AND PROBLEMS OF BRITISH BANKS

THE YEAR'S RESULTS

BRITISH banks in 1935 shared to a not unsubstantial extent in the general economic recovery of the country. This is reflected in the profits disclosed; for though they are not yet anything like back to their 1929 level, they were rather better, as the following table shows, than in the early stages of recovery during 1932 and 1933:—

ENGLISH BANK PROFITS AND DIVIDENDS

	1929	1931	1932	1933	1934	1935
Barclays:—						
Net profit (£ thous.)...	2,332	1,795	1,574	1,605	1,708	1,784

* Also special centenary bonus of 2 per cent. † After providing for the centenary bonus to staff, pensioners, and widows. ‡ Prior to 1935 net profits were shown after deducting income tax other than income tax on dividend. The 1935 net profits are shown after making provision for all income tax, including that on dividends. In actual fact there has been an increase in net profits.

If it is legitimate to compile a total of the net profits of the banks included in this table, in 1929 the total was £13.5 millions. By 1932 it had fallen to £9.6 millions, and by 1934 it had recovered to £10.2 millions. The 1935 total was also £10.2 millions, but the comparability of the later figures is vitiated first by the District Bank's absorption of the County Bank, and change in its method of providing for income tax; and, second, by the fact that Westminster Bank paid its centenary staff bonus before striking its net profits. The 1935 figures of £10.2 millions, therefore, is to a small extent an understatement of profits on a comparable basis.

During the year 1935, earnings were assisted by the expansion in resources and earning assets which has occurred in comparison with previous years. On the other hand, short-term interest rates remain extremely low. Little or no profit can be obtained by taking deposits, either subject to interest or consisting of active current accounts, if the proceeds have either to be lent at call or invested in Treasury bills at ½ per cent. Long-term interest rates are much the same as in 1934, and, of course, a substantial proportion of the banks' investments were acquired before the big drop in long-term yields occurred. Finally, the 1935 increase in advances has brought with it additional income.

Other sources of profit and loss must also have remained favourable. The year 1934 was notable for the fact that comparatively little provision was needed for bad and doubtful debts, and, indeed, many debts which previously had been written off were recovered. The succeeding year must have proved equally favourable so far as writings-off were concerned, but it is doubtful if there was so much scope for further recoveries.

The next table shows the relation which net profits bear to capital and reserves, and also to total resources:—

PERCENTAGE RATIO OF NET PROFITS—(a) TO CAPITAL AND RESERVES. (b) TO TOTAL LIABILITIES

	1929	1931	1932	1933	1934	1935
Barclays:—						
(a).....	8.9	6.9	6.0	6.1	6.5	6.8
(b).....	0.61	0.48	0.38	0.39	0.41	0.40
Lloyds:—						
(a).....	9.8	8.3	6.2	6.0	6.8	6.8
(b).....	0.59	0.49	0.35	0.33	0.37	0.36
Midland:—						
(a).....	9.9	8.0	7.9	8.8	8.9	9.1
(b).....	0.60	0.50	0.44	0.50	0.50	0.48
National Provincial:—						
(a).....	11.5	10.0	9.1	9.2	9.4	9.5
(b).....	0.71	0.60	0.50	0.51	0.51	0.51
Westminster:—						
(a).....	11.6	9.5	8.9	8.7	8.2	7.5*
(b).....	0.65	0.52	0.44	0.42	0.42	0.38*
District:—						
(a).....	12.0	10.1	9.9	10.0	10.2	7.0*
(b).....	0.85	0.75	0.66	0.66	0.69	0.49*
Martins:—						
(a).....	9.6	10.1	9.1	9.1	9.3	9.5
(b).....	0.85	0.86	0.65	0.70	0.71	0.69
Williams Deacon's:—						
(a).....	10.3	10.2	9.9	10.1	10.2	10.3
(b).....	0.83	0.82	0.71	0.70	0.71	0.69

* See footnotes to previous table.

This table illustrates very clearly the effect of cheap money. In 1929, after paying their expenses and making all other necessary provisions, the banks were able to earn between 0.59 and 0.85 per cent. net on their resources. By 1932 this percentage had fallen to a range of 0.35 to 0.71 per cent., and it has since remained practically unchanged. Thus the recent improvement in total profits is mainly due to the expansion in resources. The proportion of net profits to capital and reserve has also shrunk. It is still adequate; but if allowance could be made for undisclosed reserves, which equally are the property of the shareholders, the proportion would be appreciably smaller.

The third table shows the changes in the resources of the English clearing banks during the current year. In January last the District Bank was elected to the Clearing House, and so since the New Year the aggregate returns of the English clearing banks comprise ten banks instead of nine. To facilitate the comparison with last year, the return has been compiled in alternative form, so as both to include and exclude the District Bank.

(a) Excludes District Bank. (b) Includes District Bank.

During this spring banking resources have followed their normal trend. Revenue payments have slightly reduced deposits, while the redemption of Treasury bills out of the seasonal revenue surplus has reduced discounts. Advances have been expanding. This movement is partly seasonal, for it is not everyone who can pay his income tax without help from his banker; while the building trades usually borrow more so soon as the spring

is far enough advanced to permit the more general resumption of outside work. Still the expansion in advances is sufficiently marked to indicate a continuance of the general recovery in trade.

In one sense 1935 may have been an uneventful year, and yet it contained several important landmarks in banking history. Last August the District Bank absorbed the County Bank. This not only confirmed it in its position of one of the three chief Lancashire banks, but also made it one of the seven biggest British banks. Its election to the Clearing House, which took effect in

January, was no more than a well-merited tribute to the new position, but it filled an obvious gap in the banking structure of the Kingdom. This year the Midland and Westminster Banks are celebrating their centenaries. Special bonuses were voted to shareholders, pensioners, and staffs, and a history of each bank is being published. It is true that these banks have reached their centenary when interest rates are low. Yet bank profits are adequate, and even a cursory examination of the history of these and other banks shows how the British banking system has developed into the strongest in the world.

BRITISH BANKING TRENDS

In analysing changes in the condition of the banking system of a country there are two main points to be borne in mind. The first is any change in the factors governing the total supply of bank credit, and this quickly reduces to changes in the supply of bank cash. The second is alterations in the demand for bank credit, and this introduces such matters as the quantity of bills and securities offered to the banks, together with the demand for bank loans.

In England the supply of bank cash is largely determined by the authorities—that is by the Government and the Bank of England, working in co-operation with each other. Bank cash consists, first, of the currency held by the joint-stock banks in their tills; and, second, of those deposits at the Bank of England, shown in the Bank return as bankers' deposits. Till-money as a rule is determined by the deposits at the joint-stock banks, for each branch usually carries currency equal to about 5 per cent. of its deposits. Hence the ultimate determinant of the size of both the joint-stock banks' deposits and earning assets is not the total amount of bank cash, but bankers' deposits at the Bank of England.

Bankers' deposits depend mainly upon four other large items in the Bank return, these being (a) the gold held by the Bank of England, (b) the size of the fiduciary note issue, (c) Government securities in the banking department, and (d) the size of the note circulation. Any increase in the first three of these items tends to expand bankers' deposits, while an increase in the note circulation contracts bankers' deposits. Other items in the Bank return affect bankers' deposits to a minor degree, and in particular an accumulation of funds to public deposits causes a contraction in bankers' deposits.

The first chart illustrates what has actually happened since recovery first began four years ago. To simplify the diagram, the securities represented by the fiduciary note issue and the Government securities in the banking department are added together:—

The main movement is the increase in gold, which, between the beginning of 1932 and July, 1933, rose from

£120 to £190 millions, and has since risen to just over £200 millions. The expansion in the combined total of the fiduciary note issue and Government securities in the banking department is more moderate, but nevertheless amounts to £35 millions as a whole. On the other hand, the note circulation has risen from £346 to £413 millions. This increase of £67 millions is due to more active trade and spending, partly to the expansion in bank deposits and so in till-money, and partly to foreign hoarding.

Over the period as a whole, gold plus fiduciary issue and Government securities have risen by £115 millions, and the note circulation by £67 millions. This left room theoretically for an increase of £48 millions in bankers' deposits, but the actual increase was only £28 millions.

The increase in clearing bank cash during the same period was £26 millions. Superficially this compares very closely with the increase of £28 millions in bankers' deposits, but the close correspondence is the actual result of two extraneous influences, which largely cancel each other out. Bankers' deposits, at the Bank of England, do not consist solely of clearing bank balances, but of those held by other British banks as well. On the other hand, about half the clearing banks' cash consists of currency in their tills, while only the remaining half is lodged by them at the Bank of England.

Theoretically, this increase of £26 millions in clearing bank cash permitted of an increase of £260 millions in deposits at the clearing banks. The actual increase was £288 millions, and the difference from the theoretical increase is insignificant. These last figures provide the measure of the past four years' increase in the supply of bank credit.

The demand for bank credit is determined largely by the authorities, and also by the general public. A single bank, acting by itself, cannot increase its own deposits by acquiring fresh assets. If it tries to do so, it will only end by losing cash. Yet if all the banks hold surplus cash and try simultaneously to turn it into remunerative assets, then the net result will be a general increase in bank deposits. This is illustrated in the following chart:—

Taking the past four years as a whole, the problem before the clearing banks was that of acquiring a net £262 millions of earning assets. To some extent the solution of the problem was beyond the banks' control. They could not force customers to borrow or prevent them from repaying their loans, and in many cases both banker and customer were only too glad that the trade revival in its earlier stages was reflected mainly in a liquidation of loans previously frozen. Nor could the banker prevent a customer from selling securities to the banking system outright instead of lodging them as collateral for loans. Something might have been done by reducing the interest charged on bank advances, as is suggested in an article on a later page, but here there is much to be said on both sides. It is not, therefore, surprising that up to the end of 1933 the trend of advances was downwards, or that the subsequent increase has not yet brought the curve back to its pre-revival level.

Nor could the banks determine the supply of bills, for in these days of exchange restrictions and attenuated foreign trade, bills largely mean Treasury bills. The banks' total holding of Treasury bills had to conform closely in its trend to that of the total tender issue of Treasury bills. For purposes of comparison we reproduce below the chart illustrating changes in the size and composition of the Treasury bill issue, which appeared in the *Economist* of March 21st last.

At that time we pointed out that the supply of Treasury bills issued by tender was conditioned not only by the state of the Budget or the progress of debt refunding, but also by the operations of Exchange Equalisation Account and the extent to which new Government stock issues had to be taken up "inside." Whether the Exchange Account is buying gold or the Departments are paying calls on new Government stock taken up by them, the payments have to be financed, and this entails the issue of fresh Treasury bills by tender. Conversely, when either gold or securities are being sold officially, tender bills can be retired out of the proceeds.

During 1933-34, when debt refunding was reducing the total supply of Treasury bills and when gold or *devisen* had at times to be sold in support of sterling, the volume both of tender Treasury bill issues and bank discounts fell heavily. During 1935 there was little further funding of the Floating Debt, while the Exchange Account turned a heavy buyer of gold. Tender issues

and bank discounts therefore increased. On balance the banks were holding about £50 millions more of bills in early 1936 than at the beginning of 1932, but the intermediate fluctuations had been very wide. Moreover, the small net increase in the supply of bills by no means kept pace with the big increase in banking resources and so in the potential demand.

This last fact had two consequences. First, it was the direct cause of the present era of ultra-low short-term interest rates. Second, it drove the banks into making very heavy additions to their investments, which rose during the period under review from £283 to £601 millions. This at once reacted upon the price of gilt-edged securities and so upon long-term interest rates. The decline in both short-term and long-term rates is illustrated in the following chart:—

The fall in short-term rates is by far the most pronounced, but the decline in the long-term rate has had the more important consequences. It facilitated the refunding and conversion of the National Debt, and it reduced the cost of capital not only to the Government, but to every borrower and entrepreneur in the country. Hence it was a potent cause of the trade revival, and it is hardly an accident that recovery began in 1932 immediately after the steeper part of the fall in the interest rate curves.

All the trends illustrated in the different charts point irresistibly to a common conclusion. It is that the banking system has been deliberately and successfully used by the authorities as a lever for recovery. This means that the banks have to some extent played an automatic part which has been thrust upon them from above. Yet they have played it adequately; and by their action they have not only helped the country, but have also added to their own resources, earning power, safety and liquidity. Net profits are increasing, the need for making due allowance for doubtful debts has been reduced, and while the ratio of investments to deposits is high, the risk of depreciation is well covered by inner reserves. Meanwhile the pound has remained stable internally and externally, capital has become cheap, and trade and employment continue to revive

BANKING COSTS

(BY A BANKING CORRESPONDENT)

IN the eyes of the general public the most visible development of banking over the course of the last twenty years has been the multiplication of bank branches. In 1915 the total number of offices of banks in the United Kingdom was 8,822. In 1934 there were 13,350—an increase of over 51 per cent. Less obvious than the horizontal growth of banking is its vertical development. Before the War, except among the trading community, the possession of a banking account was confined generally to people of substance, the professional class, large salary-earners and those whose incomes, however moderate, were derived mostly from investments. To-day almost every salary-earner keeps a banking account; large institutions have adopted the practice of paying salaries direct to the accounts of their clerical employees; and certain public bodies make all their payments, including wages, by cheque. The cheque is being used by an ever-widening public for periodical payments such as telephone subscriptions, and standing orders are accepted for instalment buying and a host of minor purposes.

The extent to which the use of the cheque has increased would be exaggerated if inferred from the growth in deposits, unless due allowance were made for the fact that in the period of credit expansion since 1932 a bigger proportion of the volume of deposits consists of inactive funds which are not being drawn upon. It may be hazarded from such evidence as is available that, apart from the increase in the actual number of accounts, while the average credit balance per account has expanded since 1932 by some 17 per cent., the number of transactions per account has been increased by nearly half that extent, or by about 7½ per cent.

Bankers are aware that the increase in the work which falls to them is due largely to the accretion of detailed business. In pre-war days, with fewer accounts, when it was customary for private individuals to maintain a higher average balance, and seldom to draw cheques of small denominations, banks could afford in most cases to transact the bulk of the services required of them free of charge. Shortly before the War, business had reached a point when bankers were obliged to recognise that many accounts on their books were being run at a loss unless a charge was made. The arrangement known as "country terms" some years ago provided for interest being allowed to the customer on his drawing account in conjunction with a percentage charge on turnover, but as in post-war years transactions became more numerous in relation to the size of accounts, a turnover percentage was sometimes found to be an unsatisfactory measure of the work involved in clearing cheques.

An alternative method sometimes used is on the basis that the cost to a bank of a cheque cleared upon it was formerly estimated at 6d. per item. This calculation covers, apart from the machinery of "inclearing," all operations relative to the "out-clearing" of cheques, etc., received for collection. It comprises the unassessed credit entries in the bank's books, but it ignores the legal risks incurred by the banker. According to this method the cost of a customer's account is estimated by setting off in his favour against the inclusive expense of the number of debit transactions during, say, a half-year, the value of the free credit balance from day to day within the period. A charge so computed covers, in addition to items cleared by the bank, all other services for which it is not customary to make a specific charge.

This practice of regarding each debit item or ledger folio as the unit of cost is admittedly unscientific, but it is analogous to the system followed by doctors and solicitors of charging a flat fee per "visit" or "letter," and, generally speaking, it is probably the fairest from the customer's point of view. From that of the banker, unless reluctantly he increases his charge per unit, it is

The Wisdom of Making a Will

The exceptional facilities of the Midland Bank Executor and Trustee Company, an affiliation of the Midland Bank, should strongly appeal to all who have not yet made a will or desire to revise existing plans for the care of their estates.

The Company acts in the following or similar capacities: ¶ executor or trustee under a will; ¶ trustee under a marriage or other settlement; ¶ trustee for any club, society, hospital or religious, charitable or other institution; ¶ manager of an estate; ¶ trustee for debentures or debenture stock. The use of its services ensures the following advantages:

CONTINUITY	Expense and trouble of appointing new trustees are avoided.
SECURITY	The Company is responsible for the acts of its officials.
EFFICIENCY	All officers have been specially trained for their duties.
EASY ACCESS	Co-trustees and beneficiaries may inspect their records at any time.
LOW FEES	The fees, fixed at date of appointment, are exceptionally low.
SECRECY	The staff are pledged to secrecy.

Solicitors, accountants, stockbrokers and estate agents named by testators or settlors are employed whenever possible.

A book describing the services and quoting fees or a brochure entitled "THE WISDOM OF MAKING A WILL" may be obtained free on application to any branch of the Bank, the Head Office of the Executor and Trustee Company in Poultry, London, E.C. 2, or its own branches in various provincial centres

COMPANY LIMITED

defective owing to the rise in the last few years in the cost of services and overhead expenses. To illustrate this last point, *The Times* recently stated that bank salaries had been approximately doubled since 1914 and that "it had been estimated that each cheque drawn upon a bank costs anything between 6d. and 9d."

There are probably few bankers who would care to base the charge required to cover an unremunerative account upon anything approaching the higher of the two figures mentioned by *The Times* estimate, even if the calculation allowed fully for the value of the customer's "free balance" from day to day at the current call rate. Yet they might fairly contend that since their charges are lower than those which are customary with any other banking system in the world, a protracted period of exceptionally cheap money has not only reduced the revenue from their earning assets, but has also increased the expense ratio to a level that cannot be maintained indefinitely.

It is said that in some cases a profit is not looked for from a new branch for many years, during which time connections are established and business is built up. If the neighbourhood throughout the period declines in commercial importance, certain branches opened by different banks may prove to have been redundant. If not, there will probably be room for all. Admittedly, it would be possible here and there for the "Big Five" to rationalise by the closing of redundant branches, but such a course would lay them open to criticism that banks were seeking to place themselves in a position of monopoly. As things are, free competition means that a customer who feels grounds for complaint against the services of one bank is free to apply for better terms from its friendly rival and hot competitor round the

corner. Where it is known that competition is keen, the public cannot feel just cause for complaint upon issues such as rates of interest, unwillingness to grant advances, or the rendering of services generally. In any case, the term "redundant" is inappropriate if applied to a branch at which business is still apparently in the course of development, although the profit-earning stage may be looked for some years ahead.

To their shareholders the justification that bankers could adduce for many new ventures in growing areas by citing evidence of the rapid development of business would surprise their critics, but beyond looking to the prospect of immediate profit it is their duty to estimate, as it is in every other business, the trend of future, as well as the existence of present, public demand for the services which the community calls for.

In present conditions the banker's problem of covering his costs is not easy. He deals with a public for which the very nature of his services is enveloped in mystery. The delusion of the lady who thought that the cost of keeping her account was amply covered by the 2d. per cheque due to the Revenue, and which she thought went to the bank, is by no means unique; nor is that of the customer in whose opinion interest calculated from day to day upon an overdraft should suffice to cover every duty he may call upon his banker to render. Although higher efficiency and up-to-date mechanical appliances may moderate service costs, bankers are faced with a dilemma: should they educate their growing public to pay adequately for the work they render, or should they rely upon the principle *solvitur ambulando* until such time that higher money rates come to the rescue, and the value of the average balance on the small account rises towards the cost of its keep?

BANK ADVANCES

AMONG the assets of British banks, advances to customers are always the most remunerative. That simple fact has been emphasised again and again by bank chairmen in recent years. The paramount influence of advances upon profits is the strongest refutation of the charge that the banks do not do their best to accommodate the business world. Within the limits set by British standards of liquidity and safety, all banks lend as much as they can.

British deposit banks must perforce keep a larger proportion of customers' resources in highly liquid form than do most banks on the Continent, where the cheque system is less fully developed. In good times a bank's deposits are normally employed roughly as follows—10 or 11 per cent. in "idle" cash; 9 per cent. in call money; some 30 per cent. divided between bills and investments; and about half, certainly not much more than 55 per cent., in advances.

The fact that a banker keeps at least 45 per cent. of his resources in "quick" assets is no licence to him to employ the remainder in "lock-up" securities or in ways which might cause loss of the shareholders' or customers' property. A banker must be sure that behind an advance there will be security in fact as well as in name. And a deposit banker must be sure, too, that he is granting only short-term accommodation. His job is to lend floating capital, not fixed capital. Strictly speaking, all his advances should also be "self-liquidating": the mere provision of funds should enable the borrower to procure the wherewithal for repayment when the loan is due. Even on these "purist" principles there are, of course, many other types of advance which are entirely legitimate, even though they are not technically self-liquidating. Many thousands of private customers, having deposited what is called "personal" security (such as a life policy), overdraw their accounts each quarter-day. Here the mere granting of the loan does nothing automatically

to guarantee its due repayment, but if the banker is satisfied with the standing of his customer, the advance is evidently both secure and liquid.

It is evident, then, that a banker will be guided by the circumstances of each case as well as by the general principles of lending. A wise discretion may bring in many millions of perfectly safe and liquid business which would be ruled out by purist principles alone. But a good banker will rigidly use those principles as the basis of discrimination when his resources are less than the demand for them. He should also recognise that a security is not always as good as it looks. Bankers may recognise, too, the need of watching the scale of a customer's commitments in relation to his capital, and of curtailing excessive credits even when the immediate security looks good; but, as recent experience on the Baltic and in Mincing Lane shows, they may not always be alive to the need for watching also the general scale of commitments in the market.

This defines the ideal duties of a branch manager and Head Office Controller regarding individual applications for loans. Head Office must also consider advances as a whole—both their "ratio" and their distribution. The general aim must be to secure the maximum of diversification, apart altogether from the individual security. If it seems that a given trade, or a given area, is beginning to decline, or is likely to face difficult times, then the bank must take steps gradually to shorten sail in that direction, irrespective of the apparent quality of the security offered.

How far is it possible to apply these various principles in practice? In active times, would-be borrowers are numerous, and the banks have both maximum scope and maximum need for the application of sound principles, for liquid resources are then comparatively strained. But it is also at such a time that there is the greatest risk that a banker may fail to detect inflated prices or excessive commitments, for in active trade

confidence runs high. In slack times, that risk will be negligible, but the banker will be severely handicapped by the need to maintain earnings. He will then consider types of advances which he would at other times reject, and he will be justified in so doing, for his position will then be very liquid.

This leads to another practical point—to the fact that, in the short run at least, the distribution of advances between different classes of business is determined much more by the nature of a bank's connection, and by the need for preserving it in the face of competition, than by any decision upon general policy. This raises problems which only extreme tact, patience and care can solve. In such matters the banks usually have to steer a middle course between rigid principles and the demands of customers. Some banks have been at pains to stress that in no circumstances do they undertake long term financing (such as house-purchase business), but it is noteworthy that, at the last meeting of Lloyds Bank, Mr Beaumont Pease remarked that "in my memory there never has been a time when we have been less critical on purely theoretical grounds as to the merits of applications for advances."

That is all to the good, for in times like the present the system should be elastic and should not interpret academic canons with undue rigidity. But the relaxation has brought only a slow growth in advances—even now, at £824.5 millions, they have risen by only 12 per cent. since their low point of £734.5 millions in January, 1934. This sluggishness in a period of rapidly reviving trade is not difficult to explain. First, there is the fact that recovery of international trade has lagged far behind that of domestic trade. Secondly, the traditional slump and post-slump wave of conversion and funding operations has been accentuated by the fact that an abnormally severe fall in interest rates has followed a very long period of more than usually high rates. Moreover, the wave of conversions and fundings has been prolonged by the official policy of keeping money cheap, and by the regulation of new issues.

Thirdly, in consequence of the rapid extension of rationalisation and cartelisation, a given volume of trade calls for a smaller amount of *direct* bank credit than it did a decade ago. In an industry of small units some will be in debit at their bankers while others are in credit; but if amalgamations are effected (without the over-capitalisation which sometimes occurs, but is not by any means a necessary feature of the process of amalgamation), many of the debits will be offset by credits, and bank loans will be repaid.

Moreover, a second type of "internal" financing of industry—by sales of securities normally carried as liquid reserves—has assumed great importance in recent years, and has probably exerted a greater effect on bank advances than any of the other influences just mentioned. It is, indeed, apparent that it is largely by this means that the credit created by the authorities has percolated through to the business world, for although there has been no major rise in the supply of gilt-edged securities, the banks' portfolios have risen enormously. In deciding to sell gilt-edged instead of borrowing, a company must naturally have been influenced by the high prices obtainable. But it may be questioned whether this "internal" financing would have assumed such dimensions had the cost of bank credit been lower—for the fall in the "standard" lending charge has been very small. Mr McKenna stated in 1934 that a 1 per cent. all-round reduction in loan rates would involve either a one-third cut in salaries or a suspension of dividends. But would it? Is it not possible that a 1 per cent. cut in rates would have enabled the bank substantially to increase their advances at the expense of lower-yielding investments? With no early restoration of international trade in prospect, and with rationalisation effecting a permanent change, it may be asked whether a new and bolder policy may not be necessary if advances are to be raised to anything approaching their normal ratio to the volume of trade.

DEPOSIT v. COMMERCIAL BANKING

(BY A CORRESPONDENT)

ALL banks have deposits. All banks, save those owned and run by the State, are commercial, in the wider sense. Why, then, this antithetical description of two kinds of banking—"deposit" and "commercial" (sometimes "industrial")—rather like the raging, tearing dispute exactly a century ago over the functions of central banks: Should they be regulated by "banking" or by "currency" considerations? Just as a central bank has to perform both currency and banking functions, so an ordinary bank has to perform both commercial (or industrial) operations, and also serve as a kind of safe-deposit for current purchasing-power.

In the specific sense in which "deposit banking" is opposed to the "commercial" (or "industrial") variety, these terms really refer only to two sets of criteria, by reference to which a bank's assets are invested. Thus, a "deposit" bank disposes of its assets in such a way that their liquidity is ensured, i.e. that the bank's clients, the depositors, can be as certain as possible of being able to withdraw their deposits at will. "Deposit" banking generally means liquidity, both of deposits and, necessarily, of assets. This excludes investment of bank assets in anything like a "lock-up," e.g. industry, unsecured loans for long and irregular periods, real property, etc. Commercial or industrial banking, on the other hand, while paying "reasonable" attention to the risk of immediate withdrawal of all deposits, is concerned rather to invest a proportion of bank assets in the financing of industrial or commercial activities for anything longer than the ordinary three-months' discounting of actual trade bills, and short-term advances against immediately realisable security. While "deposit" banking is the rule in England, it is rather the exception in France, Germany and many of the other highly industrialised countries with developed banking systems.

This difference in the relative liquidity of bank assets arouses several reflections. First, the difference is not as fundamental as one might suppose; for it is not so much a difference of kind in the functioning of the two systems of banking, as only one of the degree to which their assets are engaged at relatively long-term, i.e. are relatively frozen. A "commercial" bank must obviously maintain a certain minimum percentage of immediate liquidity in its assets, quite apart from cash holdings; and a "deposit" bank must equally obviously find remunerative employment for most of its resources, by investing them in assets of reasonable but not complete liquidity. Thus, when a general slump in business and a Stock Exchange panic coincide—as they did in August, 1914—the most scrupulously directed "deposit" bank may find its assets every bit as frozen as those of the more venture-some "commercial" banks; for its securities may prove unsaleable, its bills unpayable, and its depositors clamorous. Such a run on the entire national banking system will spare neither "commercial" nor "deposit" banks from default, for the liquidity of the latter would only suffice, in such a happily rare situation, if its legal tender resources were fully 100 per cent. of deposits. And if it were, the profit for a bank could only come from the charge to its customers for keeping their money in a kind of "safe-deposit" or cloakroom. At such a time, however, Government action is certain to be invoked; and while Government action could easily ensure liquidity for Government and other gilt-edged securities—by means of a rediscounting operation for the banking system as a whole—it could only ensure sufficient liquidity to the much more frozen industrial and longer-term assets of "commercial" banks by giving its guarantee or by other measures involving some risk to public funds. That would involve Government appraisal of the value of investments in various industrial ventures, of financing this trade or that section of it, and of calculating the less or more

which might ultimately be deemed realisable for the "commercial" bank. Thus, the "deposit" bank, come what may, can face a "run" with greater equanimity.

Secondly, however, the extent to which "commercial" banking increases in any country will clearly be a function of that country's capital market—of the extent to which the machinery for canalising savings into the country's capital equipment and industrial development has been perfected. A "commercial" bank engages in all kinds of industrial financing, from long-, to medium-, and to short-term investments. In France and Italy, and especially Germany, "commercial" banks fulfil the rôle of company promoter, issuing-house, and stock-broker, as well as banker, to new industrial concerns. If these companies fall on bad times, the commercial banks reconstruct ailing, or failing, undertakings; nominate directors and accountants for the enterprise; and supply its need of short- and medium-term, as they have already arranged for its supply of long-term capital. These operations involve the fortunes of the "commercial" bank with those of the particular enterprise, of the industry to which it belongs, and of the secular trend of the trade cycle, in a much more intimate way than those of a "deposit" bank. While the enterprise, or combination of them, in which a "commercial" bank may be interested, thereby enjoys greater command of capital resources during the ordinary swings of business activity, a far-reaching slump seriously affects the bank's liquidity, through the industrial connection. (This was notably the case throughout Germany and Central Europe after 1930.) Even then, however, the bank's liquidity depends on the extent to which the entire banking system is liquid or frozen; for if liquid, the other banks, or ultimately the central bank, can always "take over" and "carry" the frozen assets of the "commercial" bank in difficulties, provided only that the industrial assets promise to be of ultimate worth. (The history of the Kreuger financial clean-up has shown that where there were industrial investments, they have proved almost wholly sound, once the initial *crise de confiance* had been overcome.)

It may therefore be doubted if sound "commercial" banking incurs so many and more serious risks than "deposit" banking in a country where a comprehensive capital market is fully developed; for in that case the only type of real "commercial" banking will be that confined to medium-term financing of industry and trade, and to such short-term financing as is not viewed by the "deposit" banks as permitting a sufficiently high degree of liquidity. After all, in Great Britain to-day there is very little likelihood indeed of a general banking "run"; yet there is a wide sphere of industrial financing—the provision of medium-term capital for the installation of new machinery and equipment, big repairs, small extensions, etc.—which "deposit" banks must necessarily ignore, but for which a new issue of capital for public or private subscription would be either unsuitable, unsuccessful, or disproportionately costly.

It may well be that in countries with highly organised deposit banking systems and with specialised capital markets, the main need will be for the provision of the medium-term finance which more roundabout methods of production necessitate. For this purpose, soundly conducted "commercial" banks rather than an outgrowth from the Stock Exchanges, may play a useful intermediary rôle, without impairing the liquidity of the "deposit" banking system. They will need adequate capital resources, which means a high proportion of time-deposits; a wide "spread" of industrial investments; and higher returns on their advances than could be demanded by "deposit" banks. They would therefore have to offer a higher rate of interest on such time deposits; and in view of the lack of sufficient openings for long-term investment to-day, the accumulation of current savings, and the general preference for short-

term investment, the difference between the "deposit" banks' deposit-rate and the new "commercial" banks' deposit-rate might not need to be so great. The costs of running a "commercial" bank would be lower than those of a deposit bank; there would be fewer cheques to clear; and its deposit rate might be much the same as the "deposit" banks' average country-rate for time deposits—a rate settled in each case by negotiation. Such a "commercial" bank might usefully be-

come a kind of reservoir for medium term credit, fed by liquid funds, and supplying industry's new current needs without danger to the banking structure. The principles upon which it would operate would need to be stringently devised and scrupulously adhered to in execution. But there is no reason to view such requirements as insuperable obstacles, or altogether to doubt the feasibility of a sound and profitable "commercial" banking system.

SOME CONSEQUENCES OF EXCHANGE CLEARING

OF the many and complicated chapters now being written in the story of economic practice not the least interesting is that of clearing agreements and their correlated phenomena of "compensation" and barter trading. The great slump has produced a very fine crop of these devices, with almost every possible variation and degree of complication. The conditions giving rise to them in the first place are, of course, the same, namely, the plea of a debtor country that it has not a sufficient supply of foreign currencies or their equivalent to enable it to pay the sums which it owes to other countries. Accordingly it lays down that its creditors' claims can only be satisfied by payment in its own inland currency, whose transfer into the creditors' currency is either forbidden or made subject to severe restrictions, which involve a heavy loss for the foreign creditor. Such pleas seem plausible enough from the point of view of a debtor country which is unable by its exports and services rendered to foreigners to amass sufficient foreign means of payment to cover the service of its foreign indebtedness, as well as the cost of its own essential current imports. But they inevitably arouse indignation and anger in the creditor country to whom large sums are owed by way of service on loans, or even, as was the case when the Anglo-German Payments Agreement was concluded, in respect of goods shipped; for the creditor is not responsible for the lack of equilibrium in the balance of payments and may often have ground for complaint against the debtor country's monetary policy in general or even for charges of discrimination. In any case, where the visible balance of trade between the two countries is in favour of the debtor country the plea is most unlikely to be accepted.

At a first glance, the imposition of exchange clearing in such circumstances would appear a formidable weapon in the hands of the creditor country with which to enforce his will on the recalcitrant debtor and ensure

that he receives payment of his claims at least to the full extent that the creditor's own purchases from the debtor allow. The arrangements are relatively simple, inasmuch as it is no more troublesome for the citizen of the creditor country to settle his debt to the citizen of the debtor country by a payment in his own currency to his own central bank—or whatever other banking institution may have been appointed by his Government to run the clearing account—than it would be to pay the sum in accordance with the instructions from the party to whom it was owing: it may indeed be simpler. Similar arrangements are, of course, a necessity in the debtor country, as there will no longer be any question of remittances from the debtor country to the creditor country, all payments between the two being settled over the clearing accounts at the respective central banks. So long as the balance of trade remains approximately unchanged this is, from the point of view of the commercial community, clearly a great advantage, the procedure being simple and all the difficulties and labours connected with obtaining foreign exchange being obviated. It is worth while, however, to look a little more closely into this aspect of the matter, for if the method is not applied to all countries alike, it may produce quite unexpected results.

For example, the German importer, who wishes to purchase goods from a country with which Germany's intercourse is regulated merely by the general foreign exchange restrictions, has endless forms to fill in and permits to obtain before he is assured of the remittance to cover the cost of his purchase. If the foreign exchange shortage is acute and the article he wishes to import not on the essential list, he may be compelled to try to induce the seller to accept part payment in blocked marks, and as these are of depreciated external value, the seller will raise his price and the cost of the goods in marks will thus be increased. But if the importer is dealing with a country with which a clearing arrange-

ment is in force, this labour and difficulty is avoided. He makes payment in his own currency, and, moreover, that currency is accepted at its full face value. The result is that, quite apart from any action which might be taken officially to influence the direction of Germany's import trade, German imports from clearing countries naturally tend to increase as soon as a clearing scheme is inaugurated. Moreover, this tendency is furthered by the state of mind which the institution of a clearing tends to produce in the exporting community of the creditor country. There, the exporters are inclined to feel that the clearing gives some kind of a guarantee of payment, and they therefore relax their caution.

On the other side of the picture, exports from the debtor country to the creditor country tend to decline. For whereas, when no clearing exists, the importer in the creditor country has great opportunities of finding means of paying for his purchases with some kind of blocked and depreciated currency of the debtor country, which is already in his possession or which he can buy relatively cheaply, this opportunity ceases on the imposition of a clearing. Payment has then to take place through the prescribed official channels, namely, the banks operating the clearing account, and the currency of both countries is taken at the full official rate of exchange. The rapidity with which the favourable trade balances which Germany has traditionally had with a number of continental countries have been drastically reduced, if not altogether eliminated, soon after a clearing has been instituted, provides remarkable evidence of the truth of this theory. It is thus evident that clearing schemes have an inherent tendency to defeat their own ends. So far from being a reliable aid to the creditor country which is trying to collect the debts owing to it, they are in point of fact more likely to encourage the debtor country unnecessarily to increase its imports and thus to reduce the amount of foreign income available for payment of its foreign indebtedness and to delay the liquidation of arrears.

Another interesting example of the possibilities of profiting from adversity by clever manipulation is to be found in that development of barter which is known as compensation dealings and which is operated on a fictitious currency known as "compensation" or "Aski" marks. In this case, however, the speciousness of the advantages is more immediately apparent, for this system has one fundamental difference. The basic factor is not an impatient or nervous foreign creditor who sells

his claim at a discount, but the pressing need for raw materials, coupled with the fact that the higher price-level ruling inside Germany enables the manufacturer to work at a profit, even though he has to pay for his imported raw materials at a price considerably in excess of the equivalent in marks of the free world market price. Thus, for example, the Brazilian cotton shipper receives in payment for his cotton a sum in compensation marks considerably greater than the sum corresponding to the world price converted into marks at the official rate of exchange. These compensation marks can be used to pay for imports of German goods to the extent permitted by the German authorities. The high price paid by the German importer in compensation marks is sufficient to allow the Brazilian cotton shipper to sell these marks at a discount and yet realise a price for his cotton in his own currency at least as high, and perhaps higher, than the price he could have obtained by a sale on the free world market. On the other hand, the Brazilian importer of the German goods can afford to pay high prices in marks for his goods, for he is buying the marks cheap. Compensation marks and their kindred thus form a useful implement, both for encouraging German exports and for facilitating imports. Moreover, the value of this fluctuating currency can to a large extent be controlled by Germany, by limitation of the types or destinations of exports for which payment may be made in this currency. The effects are naturally highly disturbing to those who are competing for the export trade and have no such flexible and adaptable currency instrument to assist them. They may, however, be comforted by the thought that the cost of the subsidy is met not out of a sacrifice by foreign creditors, but by a rise in the cost of living inside Germany, and the system which is causing their discomfiture thus bears the seeds of its own destruction.

Still the main fact remains. So long as Germany and other countries seek to maintain an artificial parity with gold by means of exchange restrictions, clearing schemes and special kinds of currency dealt in at special exchange rates fixed according to each country's particular needs, these anomalies are bound to arise and to add to the difficulties and disequilibrium of world trade. The only real remedy is the fixation of new parities bearing some relation to current facts, accompanied by a general freeing of world trade and exchange. Until the world is ripe for these general remedies, it must reconcile itself to the continuance of these dangerous absurdities.

BANKING ABROAD

SIX MONTHS REVIEW OF AMERICAN BANKING

(BY A CORRESPONDENT)

IN the six months that have elapsed since the end of August, 1935, the trend of the items in America's banking system has not greatly differed from that of the previous period. There has in that time been no legislation, but there have been several major administrative changes. The Banking Act of 1935 is now in effect. A new Board of Governors have replaced the former Federal Reserve Board. Furthermore, the new Board, composed of seven (less one vacancy), contains only two members of the former Board, and of these but one has held that office for more than two years. It is also now technically correct to refer to the central banking system, for the new Board marked its inauguration by the removal of a number of officials of the several Reserve Banks, thus emphasising the end of the scheme of regional autonomy contemplated by the original Reserve Act.

RESERVE BANK AND TREASURY ITEMS (\$000,000)

	Feb. 27, 1935	Aug. 28, 1935	Feb. 26, 1936
Monetary gold stock.....	8,524	9,197	10,163
Gold certificates in reserve banks	5,543	6,482	7,670
Money in circulation	5,442	5,573	5,775
Bills discounted.....	6	9	7
Bills bought	6	5	5
U.S. securities.....	2,430	2,430	2,430
Member bank reserves	4,588	5,346	5,839
U.S. Treasury, general account	99	50	433
Federal reserve notes	3,139	3,352	3,735
Silver certificates*	718	860	1,059
National bank notes*	872	629	431

* End of month figures.

The continued influx of gold lifted the monetary stock by \$966 millions, compared with \$673 millions in

the previous six months. This increment is the more remarkable, as in the two months, January-February, the gold increment was only \$40 millions.

While the monetary gold stock increased \$1,639 during the year ended February last, the increase in the gold monetised through the issue of certificates to the Reserve Banks amounted to \$2,127 millions, or to \$488 millions more. This is explained by the use of a portion of the gold profit to retire the national bank currency, which declined by approximately the same figure.

The influx of gold occasioned, of course, an increase in member bank reserves, amounting to \$758 millions in the period between February and August and only \$493 millions in the six months between August and February. This relatively small increase was largely the result of positive action by the Treasury, for in place of its former practice of only carrying small balances at the Reserve Bank the Treasury has since December increased the balances to above \$400 millions. As a result, member bank balances have not since recovered their highest level (above \$6,000 millions) reached in early December, 1935. The current figures, however, represent reserves approximately double the required amount. The reserve account has likewise been influenced by the increased demand for currency. Money in circulation has risen in the past year by more than \$300 millions; and as the issue of silver certificates did not keep pace with the retirement of National Bank notes, the Reserve Banks were called upon not merely to make up the deficiency but to meet the increase. The expansion in the Federal Reserve note issues amounts to about \$600 millions, with a proportionate effect on member bank reserves.

REPORTING MEMBER BANK ITEMS (\$000,000)

	Feb. 27, 1935	Aug. 28, 1935	Feb. 26, 1936
Total loans and investments	19,581	19,839	21,006
Loans on securities	3,105	3,109	3,117
All other loans.....	4,956	4,808	4,842
U.S. securities	7,791	7,877	8,690
U.S. guaranteed securities	731	1,035	1,201
Other securities	2,998	3,110	3,156
Reserve with F.R. banks	3,643	4,354	4,788
Demand deposits adjusted.....	11,793	13,263	14,090
Time deposits	5,012	4,960	4,900
Government deposits	1,098	557	510

During recent years the increase in deposits has as a rule outdistanced the increase in total loans and investments. While gold imports seem to have been the major factor in increasing deposits, the increase in the public debt has been the principal (indeed, the sole) influence in lifting total loans and investments. Loans have only shown a slight increase. This is rather remarkable, as the period from February to February covered one of the great bull markets of American history, as will be noted, almost without any increase in direct credit to the stock market. In fact, the entire recovery in the American economy has taken place without any increase in loans, whether secured by stock market collateral or otherwise; and also, it might be added, without any appeal by industry to the capital markets for new capital as distinguished from refunding.

The next table compares 1936 with 1929 and 1933. The demand deposit figures are not comparable, because of the difference between "net demand deposits" and "demand deposits adjusted."

REPORTING MEMBER BANKS (\$000,000)

	Feb. 27, 1929	Mar. 1, 1933	Feb. 26, 1936
Total loans and investments.....	22,338	17,823	21,006
Loans on securities	7,573	4,234	3,117
All other loans.....	8,793	5,393	4,842
U.S. securities	3,042	4,908	9,891
Other securities	2,930	3,288	3,156
Reserve with F.R. banks	1,746	1,599	4,788
Borrowings from F.R. banks	712	488	3
Demand deposits	13,387	10,593	14,090
Time deposits	6,879	5,288	4,900
Government deposits	36	90	510

Bank credit extended to the public has contracted over the three years of recovery, secured loans are

reduced by 25 per cent., and commercial loans are lower by 10 per cent., while even the holdings of "other securities" have been slightly reduced. Conversely, the bank credit extended to the State has doubled, if one includes the holdings of "fully guaranteed" obligations; and just under 50 per cent. of the assets of these banks now consist of Government securities.

The "reflation" of bank credit was one of the objectives attributed to the Administration's programme, and the data show that this objective has been reached, so far as the reporting member banks are concerned. In fact, deposits subject to cheque are now substantially higher than in 1929. The three "reflationary" forces were, in rising order of importance, open market operations by the Reserve Banks, especially in 1932 and 1933; gold imports in 1934 and 1935; and the financing of the Federal deficit continuously from 1930 on. The process has completely altered the character of American banking. The function of commercial lending has shrunk until in the reporting member banks commercial loans of all sorts (exclusive of loans to banks) amount to only \$4,776 millions, compared with cash reserve balances of the same banks of \$4,788 millions. In some areas the disappearance of the commercial loan is almost complete. For example, the reporting member banks of Chicago (February 26, 1936) showed total loans and investments of \$1,980 millions, of which only \$275 millions were classed as commercial; while their holdings of Government and Government-guaranteed securities amounted to \$1,266 millions; indeed, for Chicago the combined total of Government securities plus balances with the Reserve Bank substantially exceeded the figure of demand deposits, adjusted. On the other hand, in the Boston district, commercial loans are larger than the holdings of Government securities.

In short, the variations in practice in different parts

THE CHASE NATIONAL BANK

OF THE CITY OF NEW YORK

(Incorporated with Limited Liability under the Laws of the U.S.A.)

HEAD OFFICE:

PINE STREET CORNER OF NASSAU, NEW YORK

The Bank offers complete facilities for the provision of all banking services and the handling of Anglo-American and foreign business. Current and deposit accounts are invited and consultation with the management is welcomed.

The Chase Banking Organisation has Offices in:
PARIS, HAVANA, SAN JUAN-PORTO RICO, PANAMA,
CRISTOBAL, COLON, HONGKONG, SHANGHAI and TIENTSIN

and Special Representatives in:
BERLIN, ROME and MEXICO CITY

CORRESPONDENTS THROUGHOUT THE WORLD

of the country are wider than differences between individual banks in a given section. The recognition of sectional variations has always been more or less a feature of American banking; and it was this fact that

introduced the theory of regional autonomy into the original Federal Reserve Act. The fact of sectional variation is perhaps more distinct and more relevant now than at any time in the past.

FRENCH BANKING AND CAPITAL EXPORTS.

(BY A CORRESPONDENT)

DURING the last year French banking was dominated by French political troubles, both internal and external, and also by the weak position of the Treasury, which has now avowedly become dependent upon the Central Bank's support. Enormous amounts of short-term funds were exported, not only by investors but mainly by holders of liquid balances, in May and November, 1935, and again in March, April and May, 1936; and they have not yet returned.

The net result of these successive storms is that between the end of March, 1935, and the 2nd of April, 1936, the gold reserve of the Bank of France has been reduced by Frs. 21,866 millions, while a further Frs. 3,000 millions is now customarily regarded as reserved against the London credit of February, 1936. In the face of a 27 per cent. depletion of the French gold stock, the time-honoured saying that the Governors of the Bank of France cannot bear the sight of a large gold outflow has been proved a fallacy.

The counterpart of this depletion of the metallic reserve, which leaves, however, the reserve ratio at 65 per cent., was not a contraction in the note circula-

tion (except during a short spell in December, when some hoarded notes were returned), but heavy and nearly continuous withdrawals at the banks. The four large banks alone lost over 4 per cent. of their deposits between January 1, and June 30, 1935, and another 7 per cent. from that date onward to the end of January, 1936. The proportion seems to have been generally larger in the case of the other banks, and these withdrawals must have proceeded at a greatly accelerated rate during the past few weeks. It is likely that part of the franc withdrawals does not appear in the balance sheets, having simply been converted into sterling or dollar accounts. Some of these conversions resulted in transfers from the Paris office of the larger French banks to their foreign branches. The marked rise in the "balances with other banks" item on the assets side of the banks' statements seems to reflect both these increased deposits with foreign banks (especially London agencies) and increased assistance granted by some of them to their French affiliates.

Another result of the shortage of francs on the Paris market was the exceedingly high rates which prevailed

for long periods. From August 8th to November 14th the discount rate stood at 3 per cent., but since then it has varied from 3½ to 6 per cent., and remained at 6 per cent. during the whole of December. The raising of the rates by the Central Bank usually followed the trend of the market (and in each case it was interpreted as an unequivocal sign that the Bank was prepared to fight for the gold standard), but when in January its own rates were lowered the Central Bank undoubtedly brought pressure upon the market in order to obtain an easing off of other rates, particularly those applying to Treasury bills and Bons de la Defense Nationale. Open discount and other banking rates followed parallel trends, but with narrower variations. Contango rates on the Stock Exchange went as high as 5½ per cent., which corresponds to a charge of about 11 per cent. for the borrower. As to francs borrowed on the forward exchange market, the rates were artificially increased by the reluctance of the Paris banks to lend in this manner. They reflect the existence of large speculative positions and follow closely the changes of opinion as to the future of the franc. This became obvious once more in March when one month's exchange commanded a proportionately higher premium than three months' commitments. These rates, which have since moved to still wider discounts, render prohibitive the cost of covering commercial exchange operations, and some traders have apparently preferred to run the exchange risk and finance themselves directly in foreign currencies. This would explain in part the marked increase in acceptances outstanding.

Deprived of an important part of their borrowed funds, the banks not only drew heavily on their balances with the Bank of France (thus reducing their cash ratio), but had to reduce their discount portfolio to quite a serious extent. As, however, the Central Bank is lending them its support in every possible form (30-day loans since February, 1935, and rediscounts of Treasury bills since June, 1935), the large French banks are assured that the Treasury paper held by them will be rediscounted, and that they could lose part of their deposits without impairing their liquidity. Their careful lending policies have, however, not changed, and the report of the Crédit Lyonnais complains of the difficulty of finding good commercial paper. As far as earnings are concerned, the high money rates should have proved profitable to most banks, and as a matter of fact nearly all large institutions announced slightly better results for 1935 than for 1934.

The present situation may thus be described as follows: the French banks remain safe in spite of the protracted depletion of their clients' deposits, but they have to look to the Central Bank for support whenever new withdrawals take place. The growing parallelism between gold withdrawals and increased rediscounts even suggests that the floating supply of short-term francs which may be converted into foreign currencies at call has been reduced to a minimum. In fact, however, the Central Bank has lent its assistance very liberally to the market.

Figures relating to what may be termed "Central Bank credit" rose by about Frs. 10,000 millions within the year, covered by the attached tables, Frs. 9,000 millions representing discounts. During the whole period from the end of 1934 until May 1, 1936, rediscounts alone increased by nearly Frs. 11,000. It should not be inferred therefrom that the amount of Treasury bills held by the Bank of France is exactly equivalent, for some of the increase can be ascribed to the rediscounting of other short-term assets previously held by the banks. It has sometimes been held that the Central Bank's policy would provoke inflation. That this policy bears an inflationary character cannot be disputed, but up to the present it has done no more than arrest inflation. Deposits with the commercial banks and the Central Bank have dwindled continuously, in spite of the fact that the Bank of France has replaced part—but part only—of its gold reserves by increased credits. The banknote circulation registered practically no change. Even the 2,000 millions of notes which were issued in March were not for circulation, but obviously for hoarding, as many people, remembering the banking moratorium of 1914, wished to keep their balances in cash and in their own safes.

Nevertheless, the Bank, by expanding its credit at the time when all commercial banks were suffering from withdrawals, on the one hand annulled in parts its own policy of franc protection, and on the other hand gained a strong hold on the market. The banks have for the moment ceased to be the primary source of credit in France, for the slow decline of their deposits has put them under the domination of the Central Bank. Should, however, for one reason or another, the exported capital flow back to France, the banks would again, thanks to their sound position, be able to increase their activity, and the extraordinary assistance granted to them by the Central Bank might well disappear as quickly as it has grown during the last twelve months.

GERMAN BANKING IN 1935

(BY A CORRESPONDENT)

FOR the first time since 1930 all the five leading German banks paid a dividend on their share capital. The Reichskredit Gesellschaft and the Berliner Handelsgesellschaft, which had never failed to pay, maintained last year's rate of 6 per cent., while the Dresdner Bank, the Deutsche Bank and the Commerz und Privat Bank paid a maiden distribution of 4 per cent. All three state that they paid because they had earned the money, and that full provision had been made for bringing every asset down to its proper value. In the case of the Dresdner Bank the shareholders received their money only after a beginning had been made of the repayment of the State Loan of 1932. Not much information is available concerning the re-sale of the banking shares in the Deutsche Bank, Dresdner Bank and Commerz und Privat Bank acquired by the State in 1932. It is believed that the majority of the shares in the Deutsche Bank are again in the hands of private individuals, but that the Reich still holds 90 per cent. of the capital in the Dresdner Bank and more than half of the capital in the Commerz Bank. In the course of the year the remainder of the advances made by the Acceptance Bank and the other State emergency institutions to the commercial banks were repaid. Thus, at least as far as the balance sheets are concerned, the process of reconstruction has come to an end.

This recovery of the German banks is entirely due to the continuation of the policy of credit expansion, which has been steadily pursued since the accession of the National Socialist Government to power. During 1933-34 the aim was to finance the Government's employment programme; during 1935 it served to finance the open rebuilding of the German Army. According to the *Frankfurter Zeitung*, credit expansion in 1935 was at least 50 per cent. above what it had been in the preceding year, and that paper estimates the rise in 1935 at between Rm. 2,500 millions and Rm. 3,000 millions.

The volume of new investments in 1935 exceeded that of the previous year by about 30-40 per cent. and about 60-80 per cent. of the total is accounted for by State orders against 20 per cent. in 1928. The increase found its outlet entirely through capital goods. The increase in the capital indebtedness of the State, which was to be financed by the new volume of credit, has in the absence of official figures long been purely conjectural. It is estimated to-day at anything between Rm. 40,000 millions and Rm. 50,000 millions, against Rm. 18,000 millions at the beginning of 1933. It is admitted that this rapid expansion, and also the preponderance of floating indebtedness, is causing the authorities increasing anxiety, and little progress has yet been made in funding this debt.

During 1934 the reduction in private indebtedness resulting from the general revival of home business enabled the banks and the credit institutions to re-invest the returned funds in Government paper. During 1935 this process was continued, but in the second half of the year it became apparent that the tide in the repayment of commercial and industrial indebtedness was again on

the turn. The demand for new credits exceeded loans repaid, and instead of placing the surplus cash funds with the banks, or investing them in Government paper, traders and manufacturers began to find new uses for them in their own concerns.

The banking figures reflect these developments. The fall in the item Debtors which had become apparent in 1934 continued until the latter part of 1935, and so did the rise in home and saving deposits. Foreign deposits decreased still further, and about Rm. 350 millions (against Rm. 500 millions in the previous year) were repaid under the standstill agreement, bringing the total down to Rm. 1,603 millions. Beginning with the last quarter of the year borrowing again increased, and there was no further rise in saving and deposit accounts.

The figures for 1935 are not strictly comparable with those of 1934, since under the new Banking Act book-keeping changes have taken place between various items, and very strict rules now prevail concerning the proper definition of all assets and liabilities. The figures, however, fail to give any idea of the continued change in the quality of the banks' assets. According to private investigations carried out by a number of banks, over 50 per cent. of the item Debtors is directly or indirectly due to Government orders, and in some cases the percentage is as high as 80 per cent. The volume of bills drawn in respect of the Government employment programme, and shown under the heading commercial bills, is probably now 50 per cent. of the total in the case of the commercial banks, and even more in the case of the so-called special banks and the Reichsbank. Since these bills carry sixteen to twenty renewal forms attached to them, they cannot be called short-term paper. As to Treasury bills, the development of the State finances shows that the probability of their repayment becomes steadily more remote.

In reviewing the German banking structure, the development of the special banks must be considered. They are the primary means by which the State finances its transactions, and their acceptances, quite insignificant a few years ago, now exceed those of the commercial banks by 50 per cent. and are discounted by them as commercial paper. Their assets are entirely dependent upon the ability of the State to meet its obligations, and their deposits and endorsements have now reached a total of Rm. 5,000 millions, although funding operations have since somewhat reduced this figure.

During the last few months of 1935 the German banking system has indubitably entered upon that stage in the inflationary cycle where demands for credit from industry are beginning to run concurrently with the demand for new loans from the State. The movement is gathering impetus, and although the State may be able for some time to keep the money market easy by increasing the volume of credit, the day cannot be far off when the race between rising prices and rising demands upon the credit structure will begin in earnest. In this connection it must be realised that the Reichsbank has given an

undertaking to re-discount bills drawn in respect of certain Government orders which are at present held by the commercial banks, savings banks and private individuals or firms; and that these holders have only discounted the bills on the strength of this undertaking. The estimated amount varies between Rm. 2,000 millions and Rm. 4,000 millions. The Reichsbank's bill holding already exceeds the note issue, and since gold and foreign exchange holdings still continue to decline, any further rediscounting of bills at the central institu-

tion can only be financed through an expansion of the note issue. This danger is particularly great, since in such an event funding operations could hardly be carried through except by legal enactments which would severely affect the confidence of the public. Only the balancing of the German Budget can arrest the disaster, but even if the Budget should be stabilised during the year, German banking will have to face a second task of reconstruction of far greater magnitude than was necessary during the 1931 crisis.

RECOVERY AND BANKING IN SCANDINAVIA

THE four Scandinavian countries—Norway, Sweden, Denmark and Finland—have enjoyed a striking measure of recovery since they abandoned the gold standard in the wake of the pound sterling, and, like Great Britain, followed a policy of internal credit expansion.

Sweden and Finland have benefited more than Norway and Denmark from the building, constructional and armaments boom in Britain and other European industrial countries—mainly by reason of a greatly increased export trade in iron ore, timber, woodpulp and paper; whereas Norway has been hit by the falling-off in demand for whale oil and shipping, and Denmark by the reduced British market for her agricultural exports. These specific dissimilarities apart, all four Scandinavian countries have quickly shown an abnormally high degree of liquidity, whether in banking, industry or the capital market. This greatly increased available supply of funds for investment, together with its consequences, low interest rates and expanding domestic trade, have been almost exclusively produced by national credit policies, easily executed by co-operation, existing or induced, between the central and commercial banks in all four countries. An examination of the chief items in the returns of the central and largest commercial banks of all the Scandinavian countries from 1929 to the end of last year is instructive; for it throws a light on the decisive rôle of credit and banking policy in their differing national economies.

In all four countries the note circulation and central bank deposits (save, in the latter case, that of Norway) reached their "lows" in 1931, after which the expansion to levels well above those of 1929 was striking. In Sweden and Denmark, deposits at the central banks rose by about the same percentage between 1929 and 1936; but in Sweden the expansion of the note circulation was much greater than in Denmark—or, indeed, than in any other of the Scandinavian countries—while the bulk of the expansion in deposits occurred between 1931 and 1933 in private accounts (those of commercial banks, etc.), after which there were two recessions. In Finland, deflation had been carried farthest by 1931; note circulation and deposits had then fallen to the deepest "lows," compared with 1929, of all four countries. Yet the expansion of the note circulation has been regular since 1933; and deposits have shown the greatest percentage rise of all the countries. In Norway, a very restrained central bank policy was pursued until 1934, when deposits reached a "low"; thereafter the note circulation rose sharply.

How have these four central banks secured these varying degrees of credit expansion? A glance at their chief assets gives varying answers. In Sweden, between 1931 and 1933 "all securities" recorded their greatest rise—from 4 per cent. of their 1929 level to 336 per cent.—of which the bulk lay in a vast increase in the volume and value of Swedish securities purchased. In the same period the bill portfolio was allowed to run dry; while, by reason of currency depreciation and improvements in foreign trade, balances abroad rose sharply. Securities were then steadily unloaded year by year, while gold, foreign Government securities and bills payable abroad were accumulated. This process diminished once more the liabilities of the Riksbank, which had been increased in the bad years. In Denmark foreign trading and exchange difficulties circumscribed central bank policy; but again, while gold and balances abroad were steadily reduced, security holdings were increased by big "open market" operations in 1932, and carried to a peak in 1934, after which these holdings were reduced. Consequently, deposits and, on the assets side, loans and discounts and securities, all show a peak in 1934. In Finland, financial stringency came earlier—in 1928—and the need for "open market" operations was lessened between 1931 and 1934 in virtue of the increasingly active balances of trade and payments, which steadily increased the holdings of balances abroad and foreign bills and the gold holdings in the central bank. In Norway, the security portfolio was increased up to 1934, and then reduced as in the other countries; but the movements in other assets were uneven, balances abroad showing sharp fluctuations.

Now what effects of these central bank operations can be traced in the variations of each country's commercial banking assets and liabilities? The following table has been constructed, representing 60 per cent. of the total assets of all commercial banks in Denmark, Sweden and Norway, and 86 per cent. of all those in Finland.

SCANDINAVIAN COMMERCIAL BANKS: INDICES OF BALANCE

1935	282.6	159.3	102.2	173.6	411.8	132.7	145.5

It is evident that Finland's earlier entry into the deflationary crisis, in 1928, enabled the measures which she then took in isolation from the rest of the world to place her in an extremely advantageous position as soon as the pound sterling depreciated. Clearly, the regular advance of total assets and deposits in the Finnish commercial banks reflects little else than the "double boom" in the country: that induced by the pre-1931 deflation, which, in the most primitive of the four countries, was carried very far; and that by currency depreciation. But in Finland, as a result of the freezing of all credits in 1931, it must be recalled that new banking laws in 1933 limited the opening of bank branches, prohibited any kind of banking participation in commerce or industry, limited bank investments to 10 per cent. of their funds, and laid down that there was to be a cash reserve of at least 20 per cent. of all sight liabilities. Hence, largely the greater increase in the cash holdings of the Finnish banking system. Thus Finland has travelled a road of banking experience essentially due to conditions quite other than those experienced in the other three countries.

There is more stability and regularity in the indices of movements in the assets and liabilities of Norwegian commercial banks than in those in any other of the Scandinavian countries. On the other hand, there is less evidence of an expansionist policy, either in the central bank's figures or in those of the commercial banks. Norway comes next to Finland for a low ratio of loans and advances to deposits (58 per cent. in 1929 and 59.4 per cent. in 1935); and the ratio of bills to deposits, unlike that of Finland, was the second lowest in 1929 (27.3 per cent.) and the lowest in 1935 (21.5 per cent.). On the other hand, the cash and call money ratio to deposits in the Norwegian commercial banks was only 12.5 per cent. in 1929, about the same as that of the Swedish banks, and the lowest of all—7.5 per cent.—in 1935, against the 11.7 per cent. of Finland, 11.6 per cent. of Sweden, and 29.4 per cent. of Denmark. And while the ratio of investments to deposits in the commercial banks of the other three countries has sharply risen, that of the Norwegian banks has fallen from 27.3 per cent. in 1929 (next highest to Denmark) to 21.5 per cent.

In Sweden and Denmark, despite the greater degree of industrialisation and the greater advantages of the foreign trade of Sweden, the commercial banks show broadly the same experience. Their cash holdings and their investments (especially in shares during 1935) notably increased as loans and advances were reduced; the bill portfolio was reduced in Denmark, but increased and maintained in Sweden; and, to offset it, money at call fell in Sweden and rose in Denmark. Recently, in Denmark, there is evidence of a greater demand for loans and advances. In both countries deposits have risen since 1931; though in both there has recently been a decline from the peak—which, in the case of Sweden, came as early as 1933. In both countries, again, the ratio of loans to deposits is the highest ratio of all the Scandinavian countries' banks. The ratio of cash and call money to deposits in Denmark rose from 24.9 per cent. in 1929 to the abnormal figure of 33.5 per cent. in 1933, falling to 29.4 per cent.—the highest of all four countries—in 1935. In Sweden, the same ratio fell from 12 per cent. in 1929 to as low as 7.8 per cent. in 1931, rising to 11.6 per cent. in 1934, where it remained in 1935. Neither in Sweden nor in Denmark was the ratio of bills to deposits greatly altered in 1935 from 1929—though in 1931 the Danish banks had to meet the crisis by enlarging their bill holdings. But the Swedish banks, concurrently with the fall in loans and advances, saw the ratio of investments to deposits rise from a mere 10 per cent. in 1929 and 9.9 per cent. in 1931 to 24 per cent. in 1934 and 1935. The Danish banks' ratio, which is higher, rose from 30 per cent. in 1929 to 34.4 per cent. in 1933.

Greater liquidity has developed in Finland and Norway, while there has been more of an expansionist policy in Sweden and Denmark. Nevertheless in all four countries there has been substantial progress. There is in fact a high degree of interdependence between British and Scandinavian prosperity, upon which the banking systems of both are alike largely dependent.

MACMILLAN

WAYS AND MEANS. A Study of the Economic Structure of Great Britain To-day.

Twelve Broadcast Talks.

By GEOFFREY CROWTHER. 4s. 6d.

SOVIET MONEY AND FINANCE

By L. E. HUBBARD.

shortly

This book is divided into three parts. The first gives a short historical survey of the evolution of Soviet finance and industrial organisation. The second is devoted chiefly to a more detailed description of the present organisation of banking and credit. The third Part consists of a critical study of Soviet financial theory and practice.

THE EXCHANGE CLEARING SYSTEM

By PAUL EINZIG.

8s. 6d.

"The information which he presents on clearing system developments is of the greatest interest and his argument in favour of their extension is a powerful one. . . . The author has not only provided material for argument but food for considerable thought."—*The Bankers' Magazine*.

THE STATESMAN'S YEAR BOOK

Statistical and Historical Annual of the States of the World for the Year 1936.

Revised after Official Returns.

Edited by M. EPSTEIN, M.A., Ph.D. 20s.

"There is no publication whatever that gives anything like the same range of information upon the Governmental aspects of the civilised world."—*The Observer*.

(ALL PRICES ARE NET)

MACMILLAN & CO. LONDON W.C. 2

PARIS AS A FINANCIAL CENTRE

By MARGARET G. MYERS

10s.

Describes the financial institutions of Paris as they have functioned during the years since the stabilization of the franc in 1928; the Bank of France, the Treasury, the little-known but powerful *Caisse des Depots et Consignations*, the banks, the Bourse, and the limited money market, with their inter-relations.

THE SYSTEM OF CHINESE PUBLIC FINANCE: A Comparative Study

By LEE CHOU-YING, Ph.D.(Econ.)

12s.

CONTENTS: PART ONE: The System of Chinese Public Finance: (I) The Financial Administration of China—(II) The Financial Legislation of China—(III) The Financial Judiciary of China.

PART TWO: A Comparison of the Financial System of China with the Systems of Certain Leading Countries and Suggestions for Chinese Reform: (IV) Administration—(V) Legislation—(VI) Judiciary—Conclusions.

TRADE AND TRADE BARRIERS IN THE PACIFIC

By PHILIP G. WRIGHT. With an Introduction by W. L. HOLLAND, Research Secretary, Institute of Pacific Relations.

18s.

North-China Herald: "Packed with well-prepared statistical tables, the whole book is of immense significance and it requires to be very carefully studied by all who have occasion to consider the political economy and social questions arising out of present conditions in the countries of the Pacific. In particular it throws a vivid light on the anxieties which have so great a bearing on Japanese policy at the moment."

LLOYDS BANK LIMITED

EXECUTOR AND TRUSTEE DEPARTMENT

Even if relatives or friends have the necessary knowledge and experience and are willing to act as Executor or Trustee, there is no certainty that they will be alive when their services are required. The responsibilities attached to these duties and the increasing reluctance of private individuals to undertake them have stimulated the demand for the appointment of a corporate trustee. Lloyds Bank has developed this service, and offers continuity, security and expert administration.

Full particulars may be obtained at any Office of the Bank.

Executor and Trustee Department: 39 Threadneedle Street, London, E.C. 2.

Branches of the Department are also established at 6 Pall Mall, S.W. 1, and in a number of the large provincial centres.

Head Office: 71 LOMBARD STREET, LONDON, E.C. 3

THE STANDARD BANK of SOUTH AFRICA LIMITED.

Bankers to the Imperial Government in South Africa and to the Governments of Northern Rhodesia, Southern Rhodesia, Nyasaland and Tanganyika.

CAPITAL AUTHORISED & SUBSCRIBED	-	£10,000,000
CAPITAL PAID-UP	-	£2,500,000
RESERVE FUND	-	£2,500,000
CAPITAL UNCALLED	-	£7,500,000

Head Office: 10, CLEMENTS LANE, LOMBARD STREET, and 77, KING WILLIAM STREET, LONDON, E.C. 4

LONDON WALL BRANCH: 63, London Wall, E.C. 2. WEST END BRANCH: 9, Northumberland Ave., W.C. 2
New York Agency: 67, WALL STREET. Hamburg Agency: 49, SCHAUBENBURGERSTRASSE.

Over 370 Branches, Sub-Branches and Agencies in South, East and Central Africa.

EXECUTOR AND TRUSTEE BUSINESS CONDUCTED.

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the world. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

NATIONAL PROVINCIAL BANK, LIMITED

(Member of London Clearing.)

Established in 1833 as the National Provincial Bank of England, and registered as limited in 1880; the Union of London and Smiths Bank was established in 1839, and registered as limited in 1882. Amalgamation took place under title of National Provincial and Union Bank of England, Limited, as from December 31, 1917, and on February 15, 1924, name changed as above. As from December 31, 1917, the Bradford District Bank, Limited, as from December 31, 1918, the Sheffield Banking Company, Limited, and as from December 31, 1919, the North-

amptonshire Union Bank, Limited, were acquired. From January 1, 1920, Messrs Coutts and Company became affiliated, December 31, 1919, Messrs Richards and Company, Llangollen, and June 30, 1920, Messrs Shilson, Coode and Company, St. Austell, and as from Aug. 23, 1922, Messrs Dingley and Company, of Launceston, and Messrs Dingley, Pearse and Company, of Okehampton, were acquired. December 31, 1923, the Guernsey Banking Company, Limited, and the business of Messrs Grindlay and Company were acquired, the latter undertaking being continued as a private limited company.

IRISH FREE STATE BANKS

BANK OF IRELAND

The governors and directors report that the net profits of the bank for the year ended December 31, 1935, after meeting all charges, and providing for bad and doubtful debts, interest due on deposits, rebate on bills not at maturity, pensions and other contingencies, amount to £386,594, to which must be added a sum of £89,911 brought forward from December, 1934, making a total of £476,505. Out of this total the proprietors declared an interim dividend of 6 per cent., less income tax, absorbing

£128,769. The governors and directors having transferred £100,000 to reserves for contingencies, now recommend that a final dividend of 7½ per cent., less income tax, be declared for the year ended December 31, 1935, which will absorb £160,961, making, together with the dividend paid on August 1, 1935, a distribution of 13½ per cent., less income tax, for the year, leaving a surplus of £86,775 to be carried forward.

THE HIBERNIAN BANK LIMITED

The directors' report shows that after providing for rebate on bills, interest on deposits, bad and doubtful debts and contingencies, the net profits for the half-year ended December 31, 1935, amount to £42,132, to which has to be added the balance of undivided profits from last account £25,689, making a total

of £67,821. The directors have transferred to the reserve fund the sum of £10,000 and they recommend that the balance be applied as follows: In payment of a dividend for the half-year at the rate of 12 per cent. per annum, subject to deduction of income tax, £30,000; in reduction of bank premises account, £5,000; to next account, £22,821.

MUNSTER AND LEINSTER BANK LIMITED

The directors' statement of the bank's affairs for the half-year ended December 31, 1935, shows that the profits, after deducting expenses, providing for interest on deposits, rebate on bills, and for all bad and doubtful debts, amount to £69,236, to which has to be added the balance from the last account

£43,494, making a total of £112,730. The directors recommend the payment of a dividend for the half-year at the rate of 12 per cent. per annum free of income tax £45,000, and after transferring to contingencies account £15,000, and applying in reduction of premises account £5,000, and placing to staff pension fund £5,000, there will remain to be carried to next account £42,730.

THE ROYAL BANK OF IRELAND LIMITED

The directors have to report that the net profits of the bank for the year ended December 31, 1935, after making provision for bad and doubtful debts, amounted to £45,583, which, with the amount brought forward from last year of £11,738, make together £57,321. From this an interim dividend at the rate of 8 per cent. per annum (less tax) for the first six months of the year, has been distributed to the shareholders, £9,300, leaving

a balance of £48,021, out of which the board have appropriated to reserve fund, officers' superannuation, and other contingencies £25,000, leaving available a balance of £23,021, which they recommend should be appropriated as follows: A further dividend at the rate of 10 per cent. per annum (less tax) for the six months ended December 31 last, £11,625; the balance to be carried forward to the credit of next year's account, £11,396.

Have you ever given consideration to

A HOLIDAY to NEW ZEALAND?

It would cost less than a Winter spent at Continental resorts

—and it is warm Summer in New Zealand
when Winter holds sway in Britain & Europe

ENQUIRE THE COST

Fares are greatly reduced, and the steamer services are the finest and most up-to-date available. The English £1 to-day is worth nearly £1:5:0 in New Zealand. Frequent sailings by various routes. Special return and round voyage tickets.

One of the MOST BEAUTIFUL AND INTERESTING COUNTRIES IN THE WORLD, New Zealand is rapidly becoming the popular tourist resort of the Empire. Of the people 99% are British who regard the Motherland with affection and will give you the warmest welcome.

No country has the same varied, grand and wonderful scenery in so small an area as New Zealand. MOUNTAINS, FIORDS, THERMAL WONDERS, FORESTS, LAKES AND CAVES.

There is incomparable TROUT FISHING and DEEP-SEA ANGLING FOR SWORDFISH.

THE GOVERNMENT TOURIST DEPARTMENT has offices in all of the Dominion's main towns, with staffs whose principal duty is to give all possible assistance to travellers. ALL INCOMING VESSELS ARE MET.

BANK OF BRITISH WEST AFRICA, LIMITED

The directors' statement of accounts for the year ended March 31, 1935, states that after providing for current charges (including contributions to the staff profit sharing fund and the provident fund), rebate on bills and appropriations to contingency accounts, out of which accounts provision has been made for all bad and doubtful debts, there remains a balance of profit for the year of £64,671. To this must be added £53,003 brought forward from last year, making a total amount available of £117,674.

Of this sum £18,000, being an interim dividend of 1½ per cent., has already been distributed, less income tax, and the directors now recommend the payment of a final dividend of 2½ per cent., absorbing a further sum of £30,000, less income tax, making a total distribution for the year of 4 per cent., less income tax. The directors also recommend a transfer of £15,000 to premises and furniture account, leaving a balance of £54,674 to be carried forward.

BANK OF AUSTRALASIA

The directors state that, after providing for rebate on bills current, for British, Australian and New Zealand rates and taxes, and making a transfer to the credit of Contingencies Account, out of which account provision for all bad and doubtful debts has been made, the net profit for the year ended October 14th last amounted to £273,857. To this has to be added £178,690 brought forward from the previous year's account, making a total of £452,547. From this, £122,062 was paid as an interim dividend

on October 4th last, and the directors have now appropriated a further sum of £148,219 to pay a final dividend of 4s. 3d. per share, less income tax at 4s. 6d. in the £, making, in all, £270,281 5s. 0d., equal to 7s. 9d. per share, less tax, and representing for the year a distribution at the rate of 7½ per cent., less tax. There will remain £182,266 to be carried forward to the next account.

BANK OF NEW ZEALAND

The directors state that the profits for the year ended March 31, 1935, after providing for expenses of management, and for all bad and doubtful debts, and other contingencies, and after making provision for the annual donation to the provident fund, are £585,224. From this has to be deducted interest on guaranteed stock, £6,476, leaving a balance of profit for the year, £578,747, to which has to be added balance brought forward from last year, £343,609, making a total of £922,356. From which has been paid: Dividend on preference A shares, £50,000; interim dividend on C long-term mortgage shares,

£7,031; interim dividend on D long-term mortgage shares, £17,578; interim dividend on preference B shares, £31,250; interim dividend on ordinary shares, £187,500, leaving available for distribution, £628,997. This the directors propose should be disposed of as follows: Dividend on C long-term mortgage shares at 6 per cent. per annum, £7,031; dividend on D long-term mortgage shares at 7½ per cent. per annum, £17,578; dividend on preference B shares (making £100,000 for the year), £68,750; dividend at rate of 5 per cent. on ordinary shares (making £375,000 for the year, equal to 10 per cent.), £187,500, leaving balance to be carried forward £348,138.

THE NATIONAL BANK OF NEW ZEALAND, LIMITED

The directors' statement of the bank's affairs as on March 31, 1935, states that the board have transferred £500,000 from currency reserve to exchange and contingency account to provide for the cost of capital transfers from New Zealand to London which have been or may be considered desirable. The net profit for the year, after making full provision for bad and doubtful debts, and transferring £30,000 to exchange and contingency account, amounts to £102,950, and to this amount has to be added £106,416 brought forward from the previous year, making

an available total of £209,366. The interim dividend at the rate of 4 per cent. per annum, free of income tax, paid in January, 1935, absorbed £40,000, and £14,000 has been placed to pension and gratuity funds, leaving £155,366 available for distribution. The directors propose to allocate this amount as follows:— In payment of a dividend at the rate of 4 per cent. per annum for the half-year ended March 31, 1935, making 4 per cent. for the year, free of income tax, £40,000; balance to be carried forward, £115,366.

THE EASTERN BANK, LIMITED

The directors state that the net profit to December 31, 1935, after providing for income tax, and after appropriations to the credit of contingency account, out of which account full provision for bad and doubtful debts has been made, and including the balance brought forward from the last account, amounts to £177,152. An interim dividend at the rate of 3s. a share

was paid in September, absorbing £30,000, and the directors now recommend a final dividend of 3s. a share, less income tax at the rate of 4s. 6d. They propose to set aside £30,000 on account of contingencies and write £25,000 off premises account, leaving a balance of £62,152 to be carried forward to the next account.

MERCANTILE BANK OF INDIA

The directors report for the year ended December 31, 1935, shows that the balance of profit and loss account for the year amounts to £174,266, and the amount available, after adding £172,831 brought forward from last account, is £347,097. From this sum has to be deducted £63,000, being the interim dividend of 6 per cent., less income tax, on the "A," "B" and "C" shares paid in September last. The directors have added

£12,000 to the officers' pension fund, written £10,000 off freehold banking premises, and made an additional allocation of £25,000 to contingencies account. They now recommend a final dividend on the "A," "B" and "C" shares of 6 per cent., less income tax (making 12 per cent. for the year), leaving a balance of £174,097 to be carried forward.

P. & O. BANKING CORPORATION, LIMITED

The directors report that the net profits for the year ended March 31, 1935, after providing for taxation, bad and doubtful debts and valuing investments at or below market rates, amount to £113,442 which, with £52,196 brought forward from last year, gives an available balance for disposal of £165,638. The

directors have written £5,000 off bank premises, and out of the balance of £160,638 they propose to pay a dividend of 5 per cent. less income tax at 3s. 8d., absorbing £105,496; carrying £55,142 to next account.

THE NATIONAL BANK OF INDIA, LIMITED

The directors' report for the year ended December 31, 1935, shows that the net profits, after providing for all bad and doubtful debts, amount to £707,669, inclusive of £250,100 brought forward from the previous year. An *ad interim* dividend at the rate of 18 per cent. per annum was paid on September

26th last, absorbing £180,900, and the directors now recommend a further dividend at the same rate less income tax. They propose to add £50,000 to the officers' pension fund and to transfer £50,000 to contingencies account, leaving a balance of £247,669 to be carried forward.

ANGLO-INTERNATIONAL BANK, LIMITED

The directors submit a report for the year ending December 31, 1935, which states that the net losses on the realisation of assets and sundry provisions amounted to £168,410, and expenses in connection with the liquidation of foreign branches amounted to £6,217, making a charge to profit and loss account of £174,627;

from this sum has been deducted the surplus of interest, dividends, commissions, etc., over general expenses and directors' fees, £8,279, leaving a debit balance for the year of £166,348, which, added to the balance brought forward from the previous year, £255,458, makes a total debit balance of £421,806.

THE ANGLO-SOUTH AMERICAN BANK, LIMITED

The directors submitted a report for the year ending June 30, 1935. The net profit, as shown by the profit and loss account, amounted to £37,020, to which must be added the amount of £158,962 brought forward from 1934, making a total of

£195,982. Out of this total the directors applied to legal reserves in Chile and Ecuador the sum of £7,793, and have transferred to contingency account £29,227, leaving £158,962 to be carried forward.

£158,962 brought forward from 1934, making a total of £1,120,167

COMMERCIAL BANK OF THE NEAR EAST, LIMITED

The following is a statement of the results for the year 1935: Profit for the year after making provision for bad and doubtful debts, rebate and directors' fees, £3,569; less balance of provision for depreciation of investments, £2,221—£1,348. Add balance brought forward from the year ended December 31, 1934, £1,628—£2,976. As well as the amount mentioned above, the sum of £5,000, transferred last year to contingency account

to provide for any subsequent depreciation in investments, has had to be appropriated for the investment reserve in order to reduce the value of the securities to market value as at the date of the balance sheet. In view of the unsettled international conditions which exist at present, the directors have decided to carry forward the above balance of profit and loss account of £2,976 to the current year.

HAMBROS BANK, LIMITED

The directors' report for the year ending March 31, 1935, shows that after payment of all expenses, making provision for rebate on bills discounted, bad and doubtful debts, and income tax, the accounts show a profit of £324,913. Deducting the directors' remuneration of £14,892, and adding the balance brought forward from last year of £92,270, there remains an available total of £402,291. After transferring £150,000 to contingency reserve account and allowing the sum of £50,375 for interim dividend

on the £10 shares and £9,300 for interim dividend on the £1 "A" shares paid on October 31, 1934, the directors now recommend the payment of a further dividend of 11½ per cent., less income tax, on the £10 shares, making a total of 18 per cent. for the year, less income tax, and a further dividend of 3 per cent., less income tax, on the £1 "A" shares, making a total of 6 per cent. for the year, less income tax, and that the balance of £94,191 be carried forward.

THE HONGKONG AND SHANGHAI BANKING CORPORATION, LIMITED

The directors report that the net profits for the year ending December 31, 1935, together with \$3,294,701 balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to \$15,383,543. They recommend writing off bank premises account the sum of \$1,000,000, in addition to a transfer already made from allocations accumulated in previous years for a contingency which

has now become non-existent. After deducting \$1,000,000, the interim dividend of £2 10s. per share, paid on August 12th last, viz.: £400,000 at 2s. 2½d.—\$3,622,641, and remuneration to directors, there remains for appropriation \$10,699,860, out of which the directors recommend the payment of a final dividend of £3 per share, viz., £480,000 which, at 1s. 3½d., the rate of the day, will absorb \$7,372,800. The balance \$3,327,060 to be carried to new profit and loss account.

THE IMPERIAL BANK OF IRAN

The profits for the year ended March 20, 1935, after making provision for expenses of management, general charges in London and at chief office and branches, income tax, and bad and doubtful debts, amount to £75,760, to which has to be added £49,058 brought forward from last account, making a total of £124,818. The assets and liabilities of the branches in Iran have been converted at the rate of exchange of Rials 66 per £ sterling,

being the rate on March 20, 1935. The rate last year was Rials 77. The directors now recommend payment of a final dividend of 7s. per share, and a bonus of 2s. per share, making with the interim dividend of 4s. per share a total for the year of 13s., free of income tax. It is also proposed to add £10,000 to reserve, which is thereby increased to £730,000, and to carry forward £49,818.

THE NATIONAL BANK OF EGYPT

The report for the year ending December 31, 1935, shows the following statement: Gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount, and for doubtful debts, amounts to £906,529. After deducting from this for directors' fees £15,223, and for

current expenses £464,621, the remainder is divided between the statutory dividend of 4 per cent., amounting to £120,000, and an additional dividend of 11 per cent., amounting to £330,000. By adding the balance brought forward from last year, £230,299, there remains £206,984 to be carried forward.

SOCIÉTÉ GÉNÉRALE Pour Favoriser le Développement du Commerce et de l'Industrie en France

The directors' report for the year ended December 31, 1935, states that net profits amount to Frs. 60,575,621. It was proposed to declare a dividend of 5 per cent., i.e., of Frs. 12.50, on 1,210,932 shares half paid up, and Frs. 25 on 39,068 fully-paid shares, amounting to Frs. 16,113,350. A statutory payment of Frs. 3,508,727 to the directors and auditors, leaves a surplus of Frs. 40,953,544, to which is added Frs. 27,136,853 carried forward from last year. A further dividend was proposed of Frs. 32.50, the same as last year, amounting to Frs. 40,625,000, leaving Frs. 27,465,396 to be carried forward.

SWISS BANK CORPORATION

After deduction of expenses and taxes, and making provision for bad and doubtful debts, etc., the net profit for the year ended December 31, 1935, amounts to S.Fcs. 7,116,142, which together with the amount carried forward from last year, viz., S.Fcs. 1,139,943, makes a total of S.Fcs. 8,256,085. The board propose to pay a dividend of 4½ per cent. on the paid-up capital, which will absorb S.Fcs. 7,200,000, and to carry forward S.Fcs. 1,056,085.

THE YOKOHAMA SPECIE BANK, LIMITED

The directors' report for the half-year ending December 31, 1935, shows that the net profit of the bank, after providing for all bad and doubtful debts, rebate on bills, etc., was Yen 16,760,937, inclusive of Yen 9,503,102 brought forward from last account. The directors propose that Yen 1,700,000 be added to the reserve fund, and recommend a dividend at the rate of 10 per cent. per annum, which will absorb Yen 5,000,000. The balance, Yen 10,060,937, will be carried forward to the credit of next account.

THE ECONOMIST TRADE SUPPLEMENT

New Series

SATURDAY, MAY 30, 1936

No. 156

THE STATE OF TRADE

THE expansion of business activity in recent weeks continued to exceed the normal seasonal improvement at this time of the year. Moreover, although developments abroad have given rise to some uncertainty, reflected in the sagging tendency of quotations for industrial securities, there is every prospect of a further increase in activity and employment, at any rate in the near future.

The general improvement is reflected in our index of business activity, which has risen steadily since the decline between December and January. As will be seen from the chart on this page, the index for April is only slightly below the December level. The steep rise of the index towards the end of last year may have been due to an intensification of activity in anticipation of a coal strike. With the exception of exports of British manufactures and shipping movements, all the group indices are as high as, or higher than, a year ago. Further, the indices of building activity and shipping movements alone show a decline between March and April.

Employment in Great Britain reached a new record last month and showed an increase of 82,000 over March and of 371,000 over the corresponding month a year ago. Moreover, the improvement appears to have been fairly general, for all districts of the United Kingdom, with the exception of the North-Eastern division, registered a decline in unemployment. The progress of recovery last month is also revealed in the latest returns of the London Clearing Banks. Excluding the District Bank, the deposits of the clearing banks rose from £1,940 millions in April, 1935, to £2,038 millions in March and £2,082 millions in April of this year. Again, discounts and advances increased from £974 millions in April, 1935, to £1,073 millions in March and £1,103 millions in April this year.

The incidence of recovery has undergone slight change, except that exports have gained little ground since last year. On a superficial view, the disappointing showing of exports may be attributed to the over-valuation of the £ in terms of other currencies and to the stagnation of world trade. But while the exchange value of the £ may have been partly responsible for the disappointing trend of the exports of cotton manufactures, for example, it certainly does not explain the decline in our exports of iron and steel and machinery. Actually, the average value of our exports of manufactures in the first quarter of 1936 was practically the same as in the corresponding quarter a year ago. The demand for iron and steel and for the products of the engineering industry has risen to such an extent that British manufacturers have in many cases been unable even to meet domestic requirements at current prices. In answer to complaints, the iron and steel and engineering industries point to the limits set by present capacity, which cannot be enlarged at a moment's notice, and to the

shortage of skilled labour at certain key points. And since the profit margin on exports is frequently lower, manufacturers prefer to satisfy internal requirements at the expense of foreign markets. For the same reason, imports, especially of industrial raw materials, semi-manufactured articles and machinery, have tended to increase recently.

For the fourth month in succession, our index of building activity has been below the December level. The Board of Trade index of the production of building materials and building for the first quarter of 1936 also showed a slight decline compared with the previous two quarters. Plans approved for private dwellings in 146 towns last month were lower than a year ago, but the decline has been partly offset by an increase in the value of plans approved for other forms of construction. But the absence of further progress in building activity has been more than offset by the expansion of the metal industries, stimulated by the increase of commercial (as distinct from dwelling-house) construction, and by the improvement in the engineering, shipbuilding, automobile and aircraft industries, partly

due to re-armament. Domestic demand for coal and for industrial chemicals remained above last year's level, but both industries registered a decline in exports.

Those consumers' goods trades which do not depend mainly on exports are also making headway with the increase in purchasing power.

Unemployment in the textile trades as a whole showed a slight increase between March and April, but a decrease in the clothing, leather and leather goods and food, drink and tobacco industries. The value of retail sales showed a seasonal rise in April, but the increase in sales compared with a year ago was somewhat smaller than in preceding months, partly as a result of inclement weather.

The international setting has undergone no improvement in recent weeks. Confidence has been somewhat shaken by political developments and by the uncertainty concerning the future of the franc and the currencies of the other members of the gold bloc. This uncertainty is reflected in the decline in the prices of primary products subject to international arbitrage. In Europe, the continued stagnation in Holland, Switzerland and, to a lesser extent, in Poland, stands in striking contrast to the recovery in other countries, including Scandinavia, Belgium, France and some of the Danubian countries. The recession of activity in the United States, which set in last January, was arrested in March and gave way to a renewed upward movement at the beginning of April. Domestic recovery continues in the principal South American countries. The news from the British Empire, and especially from South Africa, Australia and Canada, is also encouraging. In the Far East, industrial activity in Japan declined after the turn of the year, but is expected to increase again. China's foreign trade is gradually expanding.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of May. In the remainder they relate to the month of April.

COAL

The coal-mining industry experienced a seasonal contraction during April, when production in all areas showed a decline. The movement is reflected in a slackening of employment, which is now no better than at this time last year. A slight decline in the volume of exports was also recorded last month, shipments being somewhat smaller than in the same month of 1935. Forward business is, however, reported to have shown some improvement during the first half of May, although uncertainty regarding the course of prices is a limiting factor. Meanwhile, industrial fuels remain an active market, heavy deliveries being made against existing contracts; a continued shortage of some classes of coal is reported. With the advent of warmer weather the house coal trade has declined to summer levels, and the introduction of summer prices on May 1st appears to have had little effect as yet.

IRON AND STEEL

Activity in the iron and steel industry continued to expand. Production of both pig iron and steel in April was substantially higher than a year ago. Imports were nearly twice as heavy as in April last year, while exports were appreciably smaller. Yet, despite the remarkable expansion of home consumption, demand for pig iron and certain semi-finished materials exceeds supply at current prices and consumers complain of arrears in deliveries and of the difficulty in placing orders for near delivery. As compared with a year ago, production of structural steel, plates of a thickness of $\frac{1}{2}$ inch and over, and of tin, terne and black plates registered a marked increase. Meanwhile, there are no signs that the expansion of home demand has yet reached its limit.

ENGINEERING

The engineering industry continued to gain ground in recent weeks, and the proportion of unemployed workers in the industry fell below 10 per cent. in April. Meanwhile, new business is coming in well and activity is expected to continue its upward trend. The progress of certain sections of the industry has been hastened by the Government's re-armament programme. But recovery has revealed "bottle-necks" in the industry which hamper the rapid acceleration of the output of certain products. As a consequence, it is difficult to obtain quick delivery of equipment. It is not surprising, therefore, that imports of machinery continue to increase relatively to exports. In April, for example, imports were 10,211 tons, compared with 6,171 tons a year ago, while exports declined from 32,181 tons to 30,807 tons during this period. Among individual sections, machine tool makers are very active, and there has been an improvement in the manufacture of prime movers, especially oil engines, power equipment, agricultural machinery and marine engines. Business is better in sugar crushing and refining machinery, and fair in textile machinery. Demand for lighting and excavating machinery is quite good.

ELECTRICAL ENGINEERING

The past month witnessed a marked increase in the volume of new orders placed for heavy electrical machinery, both by home and overseas consumers.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*
(1920 = 100)

Period	Home	Export	Total
1928—April	70	122	84
1929 "	86	145	100
1930 "	72	210	108
1931 "	60	130	76
1932 "	49	110	59

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

MOTOR INDUSTRY

There are no signs of a slackening of activity in this industry, new registrations continuing to show a rising trend. During March, sales of private cars and of goods vehicles in Great Britain showed an advance of 6 per cent. and 16 per cent., respectively, over the 1935 level. Thus, the number of vehicles in use continues to increase. Imports of private cars during April were sharply reduced, compared with the same month of last year, while exports registered a significant improvement. Exports of commercial vehicles continue well in excess of the 1935 level.

CHEMICALS

A steady business has been transacted in most sections of the chemical market, although in some directions, particularly in pharmaceutical chemicals, demand has been rather limited. Wood distillation products have been quite active, and numerous inquiries have been received for coal tar products; but sales of naphthalene and cresylic acid are restricted owing to scarcity of supplies. The value of exports fell by £90,000 between April 1935, and the past month, while imports increased in value by £147,834 over the same period.

† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

COTTON

Continued stagnation in the export market and some improvement in home demand have been features of the cotton industry during the past month. Employment, although better than a year ago, showed practically no change in April and remained at an unsatisfactory level; short-time working is still common. In the spinning section the percentage of spindles in full production fell from 81 to 79 during April, against 70 at the end of April, 1935. On the other hand, the *Economist* index of cotton consumption, calculated on a daily basis, rose from 96½ in March (1924 = 100) to 104 in April. Exports of cloth during the first four months of 1936 amounted to only 650,658,000 square yards, against 704,563,000 square yards in the same period of last year. The contraction is due largely to a decline in shipments to India from 235,090,000 to 168,844,000 square yards over this period. But the warmer weather has stimulated the home demand for light fancy materials and sales of autumn goods have improved.

WOOL

Some seasonal slackening of activity became apparent during April, especially in the woollen section, where unemployment showed a rise in some districts. The employment position in the worsted branch showed little change. Both sections are considerably better off than at this time last year. Imports of sheep's and lambs' wool were rather smaller in April than in March. Meanwhile, export business is still hampered by exchange restrictions and other barriers in foreign countries. Nevertheless, shipments of tops and yarns were satisfactorily maintained last month, although exports of woollen and worsted tissues recorded a decline. Owing largely to the absence of foreign buyers, prices at the London wool sales early in May were barely steady. Manufacturers are now anticipating a period of rather quiet demand.

JUTE

Demand for the raw material and for jute yarns is quiet and prices are easy. In the manufacturing section unemployment remains as severe as ever. Meanwhile, the dispute over working hours in India remains unsettled and the extension of production has, consequently, had a depressing effect upon prices.

RAYON

Sales of yarns for weaving and hosiery purposes have been moderate, but orders have generally been for small quantities. Stocks of rayon fabrics are reported to be small, but yarn stocks are fairly substantial. In view of the probability of a large replacement demand for fabrics in coming months, yarn production is being maintained.

LINEN

Home flax markets are practically cleared of supplies and sales are restricted to actual requirements. The yarn and cloth markets have shown no special features during the past month, but home and export demand are well maintained. Damask and cambric goods have recently come in for increased attention.

BOOTS AND SHOES

The position of the footwear trades showed little change last month, employment being rather better than at this time last year. Conditions, however, remain patchy.

POTTERY

No new features were evident last month and employment showed little change, remaining slack on the whole. Little improvement has taken place since a year ago, and a high percentage of workpeople are on short time.

AGRICULTURE

The growth of autumn sown crops was retarded by cold weather, but corn crops generally are now improving in appearance. Germination of spring-sown corn has been slow. At the end of April there was a fairly large acreage of potatoes still to be planted. The preparation of the land for root crops is more backward than usual. The fall of lambs in hill flocks is stated to be below normal. Pastures made very little growth until the end of April. Cattle which were turned out to grass early have lost condition, and sheep—particularly hill sheep—have not made good progress. Milk yields were generally slightly below normal.

SHIPPING

After falling steadily for some months, the *Economist* index of whole cargo shipping freights scored a fractional advance in April. The movement of grain from the River Plate and the resumption of chartering for the St. Lawrence brought some slight

relief to the market. But the improvement has not been maintained during the past fortnight.

BUILDING

Evidence that the boom in residential building has reached its peak is accumulating. Thus, for the fourth successive month, our index of building activity in April fell short of the December level. Moreover, the value of plans approved last month by 146 local authorities was below the corresponding total for 1935. The competition of Government contractors has seriously affected costs in certain instances, and a shortage of skilled operatives is reported from some areas. Nevertheless, there is no reason to anticipate an immediate recession in the building industry. Any decline in residential building will be at least partially offset by increased construction for commercial purposes, while slum clearance and public works may also help to fill the gap. Meanwhile, unemployment was again reduced in April and is now appreciably below last year's level.

RETAIL TRADE

A seasonal expansion was recorded in April, when the money value of retail sales was 5 per cent. in excess of the 1935 figure. The increase was almost entirely in the food group, sales in the "non-food" section being hindered by the bad weather last month.

Unless otherwise stated, the figures represent authorised share issue of new joint stock companies at home, and the increase of capital of existing companies. Bonus shares are excluded from the figures of Roumania and Czechoslovakia. In the case of the Netherlands, Switzerland and the U.K. both bonus shares and conversions are excluded. *a* Excluding Treasury Bills. *d* Excluding large railway issues. *f* "Rivista Bancaria." *g* Issues exceeding 100,000 on the Dutch market including Colonial, and since Jan. 1925, foreign issues. *m* Since 1924, excluding amalgamations and conversions. Until end 1922 paper mark. *o* "Société de Banque Suisse," figures of net amount of new capital paid-up. *p* Compiled by "Commercial and Financial Chronicle." *y* Up to 1927, authorised issues, excluding western departments; since 1928 amounts actually issued, whole territory.

HOME INDUSTRIES AND TRADE

The following reports on British industry cover, in most cases, the period to the middle of June. In the remainder they relate to the month of May.

COAL

There was little change in the position of the coal-mining industry during May. Output was below the level of May, 1935, although unemployment was rather less severe than it was twelve months earlier. Exports showed no improvement last month, and business with France has since been rendered difficult by the port strikes in that country. In recent weeks industrial fuels have been in steady demand on the home market, deliveries against existing contracts being heavy and prices firm. Unseasonable weather has kept the demand for house-coal above normal for this time of year, but business is showing a steady decline. Coke remains in firm request for industrial purposes. Meanwhile, the coal selling schemes were discussed in the House of Commons last Wednesday and will come into force on August 1st.

IRON AND STEEL

The output of steel ingots and castings registered a slight decline between April and May, but production of pig iron continued to expand; there is still, however, a marked shortage of pig iron and, despite heavier imports of semi-finished materials in recent months, a satisfactory balance between supplies and requirements has yet to be achieved. Since last autumn the increasing pressure of home demand has been satisfied, in part, at the expense of export orders. Reports last month, however, showed an appreciable expansion, though the tonnage shipped was still below the level of May, 1935. As compared with a year ago there has been a sharp decline in exports of pig iron, plates and sheets (except tinplates) and wrought tubes, and an appreciable increase in shipments of railway material.

ENGINEERING

The demand for the products of the engineering industry continues to expand. The position of the industry is similar to that of the iron and steel industry in that it has been unable in recent months to meet the marked increase in home requirements. Consequently purchases abroad have tended to expand considerably, imports during the first five months of 1936 amounting to 41,129 tons, compared with 30,306 tons during the corresponding period a year ago. For the same reason the improvement in exports of machinery has been arrested, the volume of shipments declining from 160,152 tons in January-May, 1935, to 159,084 tons during the corresponding period this year. Meanwhile agreement was reached on June 17th for a further increase in wages of 3s. a week in three instalments of 1s. each, to become effective at the end of June, September and December. Nearly 1,000,000 persons will benefit under the agreement. The pressure for higher wages is likely to continue. Most individual branches of the industry have made further headway in recent weeks, but there has been a slight decline in business in the marine engineering and agricultural machinery sections.

ELECTRICAL ENGINEERING

While the volume of home orders for heavy electrical machinery declined slightly between April and May, foreign business showed a further expansion.

INDEX OF NEW ORDERS RECEIVED BY HEAVY ELECTRICAL MANUFACTURING INDUSTRY*

(1920 = 100)

* Copyright of the British Electrical and Allied Manufacturers' Association. The above index is a 12-month moving average of new orders received by the heavy plant section of the industry. It is based on the horse-power and not on the value of orders.

MOTOR INDUSTRY

Recent trends remained unchanged during April and May; business on the home market continued to expand and exports remained above the level of a year ago. New licences for private cars and goods vehicles during April amounted, respectively, to 28,303 and 5,863, against 25,554 and 5,620 in the same month of 1935. Exports of cars, chassis and commercial vehicles last month totalled 6,992 units (valued at £809,343), compared with 5,702 units (to the value of £724,421) in May, 1935. On the other hand, imports of private cars show a considerable fall over the year, the total for May being 859 (valued at £163,633), compared with 2,202 (valued at £331,192) a year ago. The outlook remains favourable.

CHEMICALS

Home chemical markets were fairly active during May, although business in pharmaceutical chemicals was still rather restricted. Trade in industrial chemicals and wood distillation products was good on the whole. In the coal-tar products section numerous inquiries were received for the finer distillates, but business was difficult owing to scarcity of supplies. Consumption of refined road tar was below the average on account of the unseasonable weather. Exports in May were £48,950 less than in May, 1935. May imports were valued at £65,401 more than in May, 1935.

ELECTRICITY

INDEX OF GENERATION OF ELECTRICITY*
(Great Britain, excluding London and Wales)
(Monthly Average, 1923-24 = 100)

May	292	115.0

* Prepared by the Economic and Statistical Department of the British Electrical and Allied Manufacturers' Association.
† Corrected for seasonal fluctuations, for the increase in electrification (trend), and for connections to the "grid."

COTTON

Home demand in May was slightly better than in the previous month, but exports were barely maintained. Employment showed an improvement on the month and was considerably better than in May, 1935, the expansion being common to all branches. The slackening of activity in the spinning section last month was of less than normal seasonal dimensions and the percentage of spindles in full production remained unchanged at 79. Consumption of raw cotton was substantially in excess of last year's corresponding figure. Allowing for the difference in the number of working days, exports of yarns and piece-goods registered a slight decline between April and May and were again smaller than in May, 1935. An important factor is the falling off of shipments to India. The report of the Indian Tariff Board has not yet been published and much uncertainty exists regarding India's import duties. On the other hand, some benefit has accrued to Lancashire in consequence of the recent change in Australian tariffs.

WOOL

Available data suggest that the woollen and worsted industry suffered a further slight contraction of activity in May, partly owing to the sagging tendency of raw wool prices. But business remained substantially better than a year earlier. Exports of tops and yarns and of woollen and worsted tissues were about maintained at the April level, and were well in excess of the corresponding figure for 1935. In recent weeks there has been a better demand for woollen than for worsted manufactures. Manufacturers are anticipating a good autumn season. Meanwhile, the decline of raw wool supplies in exporting countries is reflected in the import figures, which fell last month to below the 1935 level.

JUTE

The depression in the industry continues unabated and the employment position further deteriorated last month. Owing to the absence of orders, spinners and manufacturers have had to curtail production. Meanwhile, competition of jute goods from India remains severe, while exports of British jute manufactures continue to fall short of the 1935 level.

RAYON

An appreciable improvement has been apparent in certain sections during the past few weeks and there is now more business in warp yarns—especially viscose. Yarn stocks are still considered to be heavy and short-time working remains fairly common. But the general outlook is now more promising and export business in fabrics—especially with Empire countries—has improved.

LINEN

Business in flax is confined to current needs, neither sellers nor buyers being keen to operate. The weather throughout Europe has been unfavourable for growing crops. As is usual at this time of year, yarns and cloth have been rather neglected, although demand for dress goods, damasks and cambrics has been well maintained.

BOOTS AND SHOES

Although short-time working remains common, some improvement in the position of the footwear trades was apparent last month. Exports in May were slightly above last year's level.

POTTERY

A slight general improvement in the pottery industry in May is reflected in an expansion of employment and in the total of wages paid. Conditions in Bristol and Derby are, however, substantially better than in North Staffordshire.

AGRICULTURE

All corn crops are backward, and need both rain and warmth. First early potatoes appear to be satisfactory, although backward, while main crop potatoes and root crops were sown under favourable conditions. Hop vines are generally strong and healthy, but, owing to cold winds, growth has been retarded. The hay season will probably be late, with the crops lighter than usual. Grass was not plentiful during May, and both cattle and sheep made less than normal progress. Lambs have not done well, especially in hill districts. Milk yields were below the seasonal average.

SHIPPING

As foreshadowed a month ago, shipping freights suffered a further fall during May, the *Economist* index (1898-1913 = 100) standing at 88.8, against 89.9 in April and 83.7 in May, 1935. No improvement on the freight markets has been recorded in recent weeks and prospects remain unfavourable.

STATE OF TRADE OVERSEAS

BRITISH EMPIRE

Australia.—Although good general rains have improved agricultural prospects, some of the outer pastoral areas still need rain, states a cable from the National Bank of Australasia. It is anticipated that wheat crops will germinate late and that there will be some feed shortage. Meanwhile industry and trade show a seasonal recession, and the late autumn has checked the sale of cold weather goods and luxury lines in country districts.

South Africa.—There is no evidence of any setback to recovery in the Union. Railway earnings and revenue receipts continue to make a satisfactory showing, while mining remains prosperous. Farming conditions are favourable. A feature of recent months has been the phenomenal increase in building in Johannesburg, where there is now an acute shortage of skilled labour. Meanwhile, foreign trade shows a substantial gain over last year. Imports totalled £6,272,000 in May and exports (including gold) £13,268,000, against £5,880,000 and £12,687,000 respectively in the same month of 1935.

Canada.—Latest information suggests that business activity, which had recorded an expansion in April, was well maintained last month. Conditions are appreciably better than at this time last year. Employment continues to improve and foreign trade has been running well above the 1935 level. Money rates remain easy and wholesale prices have shown a sagging tendency.

India.—The Calcutta jute market displayed an easier tendency towards the end of May in response to more favourable crop reports; demand became more active at the lower level. The Bombay cotton market revived under American influence and prices rose. Trading in piece-goods was quiet at steady prices, while the yarn market also exhibited a quiet tone. The monsoon has advanced earlier than usual.

EUROPE

France.—The expansion of industrial activity which began last autumn was arrested in April; the official index of industrial production for April, at 101 (1913 = 100), was unchanged compared with March, but showed an increase of 8.6 per cent. over the corresponding month a year ago. The metal and building industries gained some ground, but activity in the textile trades declined in April. More recently, the commercial life of France was seriously dislocated by strikes, while the concessions given to the workers by the new Government will increase costs of production appreciably. Until the necessary adjustments have been made in the relationship of prices, prospects are not very bright, especially as the Government apparently wish to stave off devaluation as long as possible. The uncertain outlook is revealed in a sharp decline of security prices in recent weeks.

Germany.—The renewed expansion of business activity, which began in March, has since continued. The index of industrial production, calculated by the German Institute for Business Research, rose from 100 (1928 = 100) in March to 104.0 in April. A year ago the index stood at 94.7. Moreover, the decline in the output of consumption goods has been arrested, the index for April being 94.8 (1928 = 100), compared with 84.9 a year ago. A further improvement was noticeable in May, when the number unemployed declined from 1,762,800 to 1,491,000. The expansion of business activity is reflected in a rise of quotations for industrial securities. Wholesale commodity prices and the index of the cost of living are scarcely changed on the month. The metal industries continue very active. The machine tool section of the engineering industry, for example, is working almost to capacity; exports of machinery, especially to the United Kingdom, have increased appreciably. The building industry is active, largely on public orders.

U.S.S.R.—Although little information is available concerning the trend of business activity in recent months, further progress appears to have been made since last year. The index of industrial production for February (the latest available) is 351.9 (1929 = 100), compared with 269.0 in the corresponding month a year ago. Progress continued most marked in the capital equipment industries, but the output of goods for current consumption appears to have been accelerated since the beginning of last year. Foreign trade returns for February show an increase in imports, but a decrease in exports, compared with the corresponding month last year.

Norway.—Reports on financial and industrial developments during May indicate a favourable trend. Deposits with savings banks decreased somewhat, while deposits with joint stock banks showed a moderate increase. The index of industrial production for April was 115, against 109 a year ago and 118 for March, the fall from the preceding month being due to stoppage on account of a shortage of water. Foreign trade statistics indicate increased turnover during April. The number unemployed decreased by 18 per cent. between April and May. There was some improvement in the freight markets, and unemployed tonnage was reduced during the month by about 95,000 tons dw.

Greece.—Torrential rains and hail caused considerable damage to fruit and cereal crops. Export markets were hesitant. Foreign trade returns for April were higher than a year ago, but the unfavourable balance of trade showed an increase. Internal trade continued slack and wholesale prices declined. Foreign exchange reserves of the Bank of Greece declined in May; the Stock Exchange was dull, with prices lower or at best unchanged. Public revenue receipts up to and including April were satisfactory.

UNITED STATES OF AMERICA

Following a setback in the first quarter of this year, business activity resumed its upward course in April and has since made considerable headway. Thus the *Annalist* index of business activity rose from 92.7 in April to 94.3 in May, compared with 79.3 in the corresponding month a year ago. Contrary to expectations, there has been little evidence as yet of the usual seasonal decline in business activity during June. Industrial production actually increased during the first fortnight of the current month. Steel production is being kept at a high level, owing to the advance of prices which comes into force on July 1st, while automobile manufacturers are building up stocks in order that they might have a "breathing-space" for switching over to the new season's models. In general, recovery is gradually embracing a larger number of industries, but the capital equipment industries, though expanding, have still a long way to go before reaching pre-depression levels.

AMERICAN TRADE STATISTICS—MAY, 1936

LATIN AMERICA

It is now confirmed that the Argentine maize crop is large; but its quality has been adversely affected by recent rains, which have also delayed harvesting. An outstanding feature of the past month has been a fairly sharp rise in grain prices in Buenos Aires, wheat, maize, and linseed all being quoted substantially above the maximum basic purchasing prices of the Grain Regulating Board. Mainly on account of the reduced value of grain shipments, total exports in January-April, 1936, were 10.2 per cent. smaller than in 1935. A large increase is shown in volume of imports, although the aggregate value is fractionally lower. Brazilian coffee markets remain inactive, the regulations to be applied to the marketing of the 1936-37 coffee crop having not yet been made known. The outstanding consideration in Chile is the increased stringency in the exchange situation. The exportation of wheat and other products has been prohibited, and it has become virtually impossible to obtain the remittance of blocked sterling funds. Meanwhile, trade protests continue against the decision of the Exchange Control to prohibit the importation of luxury goods.

THE FAR EAST

There is no evidence of a recession of activity in Japan, and the country's foreign trade continues to make headway. Imports totalled 251 million yen last month, against 243 millions in April and 215 millions in May, 1935; while exports amounted to 228 million yen against 201 millions in April and 209 millions in May last year. Prices of cocoons rose sharply in recent weeks on a bullish estimate of the size of the crop. Silk firmed up, after a period of dullness, and the cotton yarn market was steady. Money rates remain easy and the Stock Exchange has had a quiet tone. Meanwhile, despite the recent political disorders, the slow progress of recovery continues in China, and the country's balance of trade shows further improvement. Imports last month were a shade lower at 85 million dollars, against 96 millions a year earlier, but exports were maintained at 54 million dollars, against only \$1 millions in May, 1935.

STATISTICS

In the following tables we give trade and other statistics for as many countries of the world as possible, our endeavour being to combine brevity with comprehensiveness. The greater number of the figures are taken from the *Monthly Statistical Bulletin of the League of Nations* (published by George Allen and Unwin, Ltd.)

PRODUCTION (Thousands of Metric Tons)
