THE ECONOMIST

"Were all nations to follow the liberal system of free exportation and free importation, the different States into which a great continent was divided would so far resemble the different provinces of a great Empire. As among the different provinces of a great Empire the freedom of the inland trade appears, both from reason and experience, not only the best palliative of a dearth, but the most effectual preventative of a famine, so would the freedom of the exportation and importation trade be among the different States into which a great continent was divided."—ADAM SMITH.

instead of Friday, April 10th.)

(With this issue appears the Index to Volume CXXII of "THE ECONOMIST")

A DOOR TO PEACE

THE German reply which Herr von Ribbentrop brought back with him to London on Tuesday pushes open once again a door which promises to give us entry into an era of assured peace. The document reads on the whole like the offer of a man who is bent, not upon leading his people along the path of military adventure and aggression and domination, but upon doing his part, with the other statesmen of Europe, to bring about the kind of settlement that Europe needs and that the overwhelming majority of Europeans desire.

The reply begins, wisely, with the least agreeable and least promising thing that Herr Hitler has to say. He will not (as indeed we knew that he would not) accept the other Locarno Powers' communication of March 20th as a basis for treating with us. This refusal, however, is couched in language which shows a lively concern to make sure that the German Government's negative answer on this point shall not become the occasion for a breach; and on the other hand, Herr Hitler does make some important counter-proposals for a German contribution towards the tidying over of the interim period. He gives an assurance that (subject to reciprocity on the French and Belgian side) he will not reinforce his troops in the Rhineland during this period, and also will not move them closer to the French and Belgian frontiers. He proposes that these mutual assurances shall be guaranteed by a neutral commission—composed of representatives of Great Britain, Italy and some neutral Power—which will exercise supervision on the spot (naturally, on both sides of the line) during the interim period. He does not offer to refrain from fortifying his western frontier during this period; but it has been unofficially pointed out, on the German side, that, as the interim period is expected to be only four months long, the amount of fortifying that could be done in the time is negligible (the construction of the French frontier fortifications took five years).

This offer for the interim period goes some way towards meeting the Franco-Belgian demands; and if the French are

tempted to reply that the satisfaction is only partial, we would point out that France is now assured of a prompt beginning of the Anglo-Franco-Belgian military conversations which are to cover the interim period, and this is a direct reply to Germany's treaty-breaking which Herr Hitler must accept. The Germans are as sensitive about Anglo-French military conversations as the French are about the presence of German troops in the former demilitarised zone. The German note declares that the German Government "would regard it as seriously prejudicial if such arrangements between [foreign] general staffs were arrived at before the conclusion of the new security pacts." The Germans make it plain that they dislike these conversations extremely. It is the more noteworthy that they refrain from any suggestion or hint that, if the Anglo-French Staff conversations do take place, the negotiations between Germany and her neighbours cannot go ahead. We beg the French to mark this point—which is one of the plainest evidences of German sincerity—and we also beg them to respond by accepting Herr Hitler's offer for the interim period as a sufficient concession to warrant us all in going ahead with the general negotiations.

The German note proposes to divide the negotiations into three stages. During the first, which is to be limited to four months, the various non-aggression pacts are to be concluded as a matter of urgency—in order to provide the covering of security and confidence which will be needed for a more leisurely negotiation of the positive and constructive parts of the settlement. During the second period, the rest of the European settlement is to be completed. The third period is assigned to "desirable supplements to the work of peace in Europe (questions of disarmament, economics, etc.) which cannot and should not be exactly determined or limited as to contents or scope from the very beginning."

The non-aggression pacts envisaged are the same as before: on the West, a pact with Great Britain, France, Belgium and also Holland (if she cares to join in); on the

East and South, a series of pacts with all Germany's neighbours in these quarters. The Western security pact is to be distinguished from the others in four ways. It is to be multilateral instead of bilateral; Germany is willing to see Great Britain and Italy resume their rôle of guarantors; Germany is willing, in this pact, herself to assume obligations for mutual military assistance; and fourthly there is to be a West-European air pact.

Does this mean that Germany is not prepared to enter into arrangements for collective security except in the Locarno area, and that elsewhere she declines to go beyond the negotiation of bilateral non-aggression pacts with her immediate neighbours? If she did mean to draw this futile and anti-social distinction (so often drawn by British Governments!) between Western and Eastern Europe, our hopes of a European settlement, either in the East or in the West, would almost certainly suffer shipwreck over the indignant refusal of the East European States to be placed beyond the pale and left exposed to all the perils of international anarchy, while the Western Powers selfishly sought to provide for their own local security within a private Locarno paddock. Happily, this does not seem to be Herr Hitler's intention; for he once more offers to rejoin the League. He will rejoin it either at once or after the conclusion of the agreements, and, as before, he makes his offer unconditionally. He is content to express his expectation that, when Germany has become a League member again, then, "within a reasonable time and by means of friendly negotiations, the question of colonial equality of rights, and that of the separation of the Covenant from its Versailles setting, will be cleared up." For all the countries east of Germany, this German offer to rejoin the League is of capital importance, because it is an offer to enter into a common system of collective security with them as well as with Germany's neighbours on the West. Moreover, Germany proposes that all the agreements concluded shall be placed under the ægis of a specially constituted international court of arbitration.

The third chapter of the negotiations is to be concerned with economic problems and also with concrete problems of disarmament. Under this second head Herr Hitler offers a notable agenda: the prohibition of the dropping of gas, poisonous or incendiary bombs (*caveant Italici!*); the prohibition of dropping bombs of any kind whatsoever on open localities outside the range of the medium heavy artillery of the fighting fronts; the prohibition of the bombardment with long-range guns of towns distant more than 20 kilometres from the battle-zone; the abolition and prohibition of the construction of tanks of the heaviest type; the abolition and prohibition of artillery of the heaviest calibre.

Few people in England, France, Czechoslovakia or Russia will have the hardihood to deny that these proposals, if made and executed *bona fide*, do offer a basis for a lasting peace in Europe. We have to take a risk if we take Herr Hitler at his word. But without taking this risk—whatever it may amount to—there is no possible way of testing whether Herr Hitler is sincere or not.

As a matter of fact, the present German document carries a good deal of internal evidence of its sincerity; and we may take note of these points for our own comfort and encouragement. For example, Germany proposes the abolition of the heaviest weapons, though, from the technical military point of view, it might be in her interest to preserve these weapons in an armaments competition with countries like France or Russia, which are less well equipped industrially than Germany is. Again, Herr Hitler offers to rejoin the League and to accept the verdict of an arbitration court, in respect of the proposed new agreements, though he does not like either collectivism or the subordination of national sovereignty to international law. In the third place, he makes the highly significant offer to bind himself to non-aggression on his eastern and southern borders, and thereby to renounce the Rosenbergian dream of a great German dominion over Eastern Europe.

The door is open, our feet are on the threshold; and any European statesman or publicist who tried to drag us backwards and slam the door in our faces would be committing an unpardonable crime against his own people, as well as against the whole of European society.

THE NATIONAL BALANCE-SHEET

THE financial year 1935-36 has closed with a surplus of national revenue over expenditure. Exactly how large the surplus is reckoned, depends upon the definitions which are attached to the words "revenue" and "expenditure." The official figure is £2,941,000, but this calculation depends upon certain peculiar financial conventions. In the first place, in the Budget of 1935 no provision was made for any payments out of revenue to Sinking Fund. The provision for interest and management of the National Debt, however, proved to be £12,466,224 in excess of requirements, and this sum was applied to the New Sinking Fund in accordance with the Finance Act of 1928. But, in so far as this provision for debt redemption was an unexpectedly favourable result, it should be added to the surplus, thus making a figure of £15,407,224. On the other hand, however, the Budget estimate of "Miscellaneous Receipts" contained two receipts from the Road Fund. One of these, amounting to £2,530,000, was the repayment of a loan previously made to the Road Fund. This loan did not appear as expenditure when it was made, and it is clearly improper, on a strict analysis, to count it as current revenue when it is repaid. The other item of £4,470,000 represented a pure "raid" on the Road Fund, in the form of an appropriation of the Fund's free surplus. The case for excluding this item from revenue is not, perhaps, quite so strong, but it is clearly not ordinary current income. If capital items such as Sinking Fund are to be excluded from expenditure, it would be no more than logical to exclude them from revenue also. Accordingly, if these two payments were actually received (which is not entirely certain, in view of the fact that Miscellaneous Receipts produced £4,262,000 less than the estimate), the "true surplus" is reduced to £8,407,224. Even in this figure no account has been taken of accrued interest on National Savings Certificates, which amounted in 1934-35 to £8.8 millions.

Whatever its precise amount, however, to have produced any surplus at all in the past year is something of an achievement for the British taxpayer, since expenditure on the Supply Services was £21,500,000 more than was anticipated when the Budget was introduced. The buoyancy of the revenue which enabled this heavy increase in expenditure to be more than met is shown in the following table:—

REVENUE, 1935-36 (000's omitted)			
	Actual Receipts	Larger (+) or Smaller (-) than Budget Estimate	Larger (+) or Smaller (-) than 1934-35 Receipts
Income Tax	238,074	+ 5,574	+ 9,197
Sur-tax	51,020	- 480	- 145
Estate, etc., Duties	87,920	+ 7,920	+ 6,564
Stamps	25,800	+ 800	+ 1,690
Other Inland Revenue	2,085	- 415	- 985
Total Inland Revenue.....	404,899	+ 13,399	+ 16,321
Customs.....	196,642	+ 8,072	+ 11,546
Excise	106,700	+ 350	+ 2,100
Total Customs and Excise ...	303,342	+ 8,422	+ 13,646
Motor Vehicle Duties (Exchequer share)	4,977	- 23	- 123
Total Tax Revenue	713,218	+ 21,798	+ 29,844
Post Office (net receipt)	11,670	- 180	- 580
Crown Lands	1,360	+ 30	+ 40
Sundry Loans	4,934	+ 1,034	+ 562
Miscellaneous Receipts	21,738	- 4,232	+ 6,613
Total Ordinary Revenue ...	752,920	+ 18,450	+ 36,479

Total tax revenue, it will be noticed, was £26,718,000 in excess of the Budget estimate and £29,844,000 in excess of last year's yield. This excellent result was achieved in spite of tax remissions which were estimated to cost, in 1935-36, some £6,650,000. The largest increases, in comparison with the estimates, are shown by the income tax, the death duties and the Customs duties. The income tax yield, at just over £238 millions, is particularly encouraging, as it is an almost direct reflection of the expansion in the National Income. The rate of collection appears to have been speeded up very slightly in the last few days of

8 KING WILLIAM STREET, LONDON, E.C.4

the quarter, but there does not seem to have been any unusual pressure on taxpayers. The surtax yield, by contrast, is disappointing, and falls short of the estimate by nearly £500,000. Since this tax is collected on the incomes of two years previously, it would have seemed reasonable to expect some increase this year. The actual yield, however, is £145,000 less than in 1934-35. The estate duties, for the fourth year in succession, have yielded more than the estimate. The excess this year is the handsome figure of nearly £8 millions, and the total yield of these duties, at £87.9 millions, is the highest ever recorded. This result is presumably due, in part, to the continued high level of security prices. The volume of trading on the Stock Exchange has also been well maintained, as has the value of the securities dealt in. The yield of Stamps thus shows a small surplus over the estimate and an increase of £1,690,000 in comparison with the previous year's yield.

The customs duties have done extremely well, and have yielded over £8 millions more than the estimate, which itself was put at £3½ millions higher than the previous year's total. The excise duties have not made quite so favourable a showing, although they have realised the estimate with a small margin in hand. Lower net receipts from motor vehicle duties reflect the fact that 1935-36 was the first year in which the reduced rate of duties was in force for a full twelve months. The reduction in the net receipt from the Post Office is also to be ascribed to causes other than a falling off in activity. The total revenue of the Post Office has, in fact, increased by £3,750,000, but the recent vigorous "development" policy has necessitated heavier expenditure. The reward will doubtless appear in future years. The only unexplained items in the revenue table are the surplus of £1,034,000 on sundry loans, and the short-fall of £4,262,000 on miscellaneous receipts.

The next table gives similar data concerning expenditure and the self-balancing items:—

EXPENDITURE, 1935-36 (000's omitted)				
	Actual Issues	Budget Estimates	Final Estimates	Actual Issues
	1935-36	1935-36	1934-35	1934-35
Interest and Management of National Debt	211,534	- 12,466	- 12,466	- 123
Payments to N. Ireland ...	7,205	+ 455	+ 455	+ 387
Other Consolidated Fund ...	5,648	+ 1,948	+ 1,948	+ 2,038
Post Office Fund	1,127	- 3	- 3	- 1,164
Total Consolidated Fund	225,513	- 10,067	- 10,067	+ 1,137
Army, Navy and Air Votes	136,949	+ 12,649	- 451	+ 23,079
Civil and Revenue Votes (exc. Post Office)	375,051	+ 8,851	- 7,849	+ 16,761
Total Supply Services	512,000	+ 21,500	- 8,269	+ 39,840
Total Ordinary Expenditure	737,513	+ 11,433	- 18,336	+ 40,977
New Sinking Fund	12,466	+ 12,466	+ 12,466	+ 123
Total Expenditure	749,979	+ 23,899	- 5,870	+ 41,100

SELF-BALANCING REVENUE AND EXPENDITURE, 1935-36
(000's omitted)

	Actual Revenue or Expenditure	Budget Estimate, 1935-36	Larger (+) or Smaller (-) than Actual Figures, 1934-35
Post Office ...	66,080	+ 5,617	+ 4,330
Road Fund ...	25,775	+ 1,520	- 663
Total ...	91,855	+ 7,137	+ 3,667

Interest and management of the National Debt have cost a fraction less than the very low figure of the previous year, with the result that nearly £12½ millions has been spent in the redemption of debt. The Chancellor took powers in the Finance Act to borrow for the statutory sinking funds, but as these only amount to some £9 millions, it has not been necessary to make use of these powers. There has been a large increase in the expenditure for "Other Consolidated Fund Services," the reason for which is not apparent on the face of the returns.

The expenditure on the Supply Services shows a large increase in comparison with the Budget Estimates, and a still larger increase in comparison with the actual expenditure of the previous year. The largest increases were for the Defence forces, which have spent £12.6 millions more than was anticipated twelve months ago. This increase has been due in part to the special measures in the Mediterranean, and in part to the general acceleration of re-armament.

The final figures for the year 1935-36 do not greatly change the outlook for 1936-37, which was discussed at length in the *Economist* of March 14th (page 573). We already know that expenditure on the Supply Services will be £25 millions more than the actual expenditure in the year just closed. Moreover, there is the certainty of Supplementary Estimates both for the White Paper scheme of re-armament and also for the civil services (including such items as the continuation of the cattle subsidy after June, and payments to local authorities in compensation for the continued postponement of the second "appointed day" under the Unemployment Assistance Act of 1934). For these purposes at least £25 millions, and probably more, should be allowed. Expenditure on the Supply Services can, therefore, be expected to show an increase of at least £50 millions. Against this, the provision for the service of the National Debt might perhaps be reduced by £10 millions, making a net increase of £40 millions. To meet these demands further increases in the tax revenue can be expected. The increase in 1935-36, compared with 1934-35, was almost £30 millions. Is there any reason to expect a larger increase this year? Furthermore, the Chancellor will lose the capital sums taken from the Road Fund, which are non-recurring, and the cost of last year's tax remissions will now have to be met in a full year, at a loss to the revenue of £6 millions more than last year.

It is clear from these figures that Mr Chamberlain's task will not be easy. To balance this year's accounts he may need to draw upon any nest eggs that are available. And next year, when the full burden of re-armament will have to be borne, his task will be formidable indeed.

CANNED FOOD

IMPORTANT changes have occurred in recent years in the dieting of the British people. Foodstuffs formerly procurable only in their "natural" state, during a comparatively short season each year, may now be had by the consumer whenever he will. Since the disappearance of the widespread prejudice against preserved foods of all kinds, the industry producing them has shown a rapid expansion. The oldest and most important branch is concerned with the production of jams and marmalade; but it is the canning industry which has recently made most headway. Progress has been particularly rapid during the last seven or eight years and the range of foodstuffs covered has been considerably extended. Since it is impossible to can anything but produce of the highest quality, the growth of this new industry must be counted a sound point for modern science. A complete survey of the industry is rendered difficult by the inadequacy of available statistics, but certain broad facts emerge.

We may conveniently begin with the most important branch of the industry, the canning of fruit and vegetables. Originally fruit canning developed out of jam making, one of the pioneers in this section being Messrs Chivers and Sons. The movement was encouraged by the Ministry of Agriculture in the interests of the fruit grower. The season for each fruit is, of course, limited; but, where the whole range of soft fruits and orchard fruits is covered by one concern, the period during which canning may take place is extended to cover several months of the year. With the object of keeping their factories more fully employed, and thus reducing costs, a number of fruit canners took up the canning of vegetables as well. To-day there is hardly a single home-grown fruit or vegetable which cannot be purchased in tinned form. In the vegetable pack by far the largest single item is peas, of which two classes may be obtained. In one case the peas are canned fresh, just before they are ripe; in the other they are allowed to dry in the sun and are soaked in water before canning is undertaken. The latter method enables a larger weight of peas to be obtained from a given area of land, while the peas are said to possess a higher food value. At any rate, these tinned "processed" peas have almost ousted the once-popular packeted peas from the market.

The fruit and vegetable branch of the industry grew rapidly from about 1928 to 1933 and supplies appear in some cases to have outrun demand. The size of the pack showed little change in 1934, but fell sharply last year in consequence of unfavourable weather conditions; stocks were accordingly reduced to more manageable proportions. According to official figures which have recently become available,* the output of canned and bottled fruit in the United Kingdom rose from 315,000 cwts. (valued at £859,000) in 1930 to 550,000 cwts. (valued at £1,354,000) in 1933. In the latter year 499,000 cwts. of peas and 434,000 cwts. of other vegetables (valued at £895,000 and £775,000 respectively) were canned in the United Kingdom. From a publication of the National Food Canning Council it appears that there are over sixty fruit-canning firms, of varying size, in the country, of which about half are also engaged in the canning of vegetables; there are, in addition, a few firms canning vegetables but not fruit. Home supplies are still much smaller than imports of canned and bottled fruit, upon which varying duties are levied. Imports totalled 2,430,000 cwts. in 1930 and 3,691,000 cwts. in 1935. The bulk of these do not, however, come directly with British-grown varieties. Some 1,057,000 cwts. of canned vegetables were imported last year, of which the bulk (955,000 cwts.) consisted of tomatoes.

Overlapping the fruit and vegetable section is that concerned with fish and meat. There are about a dozen firms at present engaged in fish canning, about half of which (e.g. the Co-operative Wholesale Society and Messrs Crosse and Blackwell) are also interested in fruit or vegetables, or both. Herrings, which are canned in a variety of forms, accounted for 104,000 cwts. (valued at £220,000) out of a total of 124,000 cwts. (£275,000) for all fish canned

in the United Kingdom in 1933. Imports of canned fish consist mainly of sardines, salmon, crabs and lobsters, which are not canned in this country. Similarly, imports of canned meat mainly comprise corned beef, canned in areas where cattle can be produced cheaply on a large scale; the home canning industry is concerned with chicken, ham and other varieties of meat which can profitably be produced within our shores. According to the source already quoted, 138,000 cwts. of "preserved meat in tins, glasses, etc." (valued at £988,000), were produced in 1933; meat extracts and essences accounted for a further 105,000 cwts., with the much higher value of £3,019,000. In addition, the value of the 110,000 cwts. of meat and fish pastes produced in the same year was put at £1,128,000. There is a small export trade in canned meat and fish.

A branch of the canning industry not covered by the Import Duties Act Inquiry, and one for which no recent output figures are therefore available, is that producing tinned milk. A large proportion of the demand for this product is still satisfied from sources overseas, but home production of tinned skimmed milk was stimulated as an indirect consequence of recent changes in milk marketing. Under the Milk Marketing Scheme it is possible to buy milk for manufacturing purposes very cheaply. Milk purchased in this way and used for butter-making yields a residue of "skimmed" milk, which is now being tinned in increasing quantities and retailed at low prices in the poorer districts. Although such milk is lacking in fat content and therefore deficient in vitamin A, its food value is still considerable and it is much cheaper than fresh milk.

A more recent product of the canning industry, the sale of which is making rapid headway, is soup. In this case the manufacturers have almost created a new demand, for the value of soup was not appreciated here until recent years. The expansion in demand has, however, been extremely rapid. A considerable proportion of the demand is satisfied by a Canadian firm—Campbell's Soups, Ltd.—whose activities in the United Kingdom are confined to the marketing of this one product. Soup is also manufactured here by a number of firms, such as Crosse and Blackwell and H. J. Heinz and Company, who are interested in other branches of canning. The value of the soups produced in the United Kingdom in 1933 (including bottled soups, soup squares and powders) was estimated at £717,000, against only £412,000 three years earlier. There is little doubt that the 1935 census figures will disclose a further substantial advance in this section. A still more recent departure is the production of canned beer, which is being retailed in limited quantities—generally in half-pint cans. The process is still in the experimental stage, and it is not probable that a certain amount of public prejudice will have to be overcome before complete commercial success is achieved. Nevertheless, canned beer is being extensively produced in Germany and the United States, mainly for export, and a number of the older British brewery concerns are now experimenting with it.

The British canning industry, which probably accounts for over 10 per cent. of the home consumption of tinsplate, seems destined to play an even more important rôle in the national economy in future years. The demand for tinned foods is certainly on the increase, and there is no doubt that the industry can satisfy the demand; in many cases, indeed, it may itself create a new demand. The industry has already attained a high level of technical efficiency, and its products consequently make an increasing appeal to the human palate. Moreover, it is now possible to obtain complete meals in tinned form. The can-opener must surely be regarded as a sign of the times.

FIRE INSURANCE LAW

(BY A CORRESPONDENT)

In theory we all know the law. In fact, most of us are ignorant of it. Even the practising lawyer frequently knows no more than the whereabouts of a statement of the legal position. In this country the legal rules which regulate our daily lives are ascertainable from two sources: by reference to Acts of Parliament and by research among recorded judgments. Rules of law are to be gathered from legislation and the results of litigation.

Sir Frederick Pollock, many years ago, put his finger on one of the main defects of what is known as case law. In Britain, he declared, "the casual exigencies of litigation determine what parts of the law shall be filled up and what left incomplete. . . . All kinds of curious little questions receive elaborate answers, while great ones remain in a provoking state of uncertainty." The process of judicial decision, in the hands of capable and experienced judges, is an admirable means of introducing improvements gradually. It is, equally, an erratic and unsystematic method of establishing legal rules. Litigation frequently does not happen to raise the points which need to be decided, and the rules, even when they have been enunciated, must be collected by students from many scattered judgments. It is desirable, therefore, that when a number of principles have been worked out by the judges, the latter's pronouncements should, in turn, be superseded by the supreme authority of the Legislature—that the law, in short, should be codified.

The principal rules of our commercial law were created in the eighteenth century by the genius of a great Lord Chief Justice—Lord Mansfield. They have since been developed by later judges, and, more recently, the leading principles applicable to particular subjects have been translated into statutory form. Thus, the law of bills of exchange, partnership, sale of goods and marine insurance has been codified by successive Acts of Parliament—with laudable results. In each of these instances, however, the first step towards codification was due to personal initiative. Authorities like Sir Frederick Pollock and Sir Mackenzie Chalmers, recognising that codification was the scientific method of formulating the law, embodied the principles of these special "branches" in draft codes in their textbooks, and on those drafts were based Parliamentary Bills which eventually passed into law.

The earliest of these codifying statutes was passed over half a century ago. It is now thirty years since the latest of them—the Marine Insurance Act—reached the Statute Book—if we except the Companies Act of 1929, which was rather a consolidating than a codifying measure, in the strict sense of the word. In a recently published work on the law of fire insurance*, by Mr Sanford Cole, the leading provisions of the law were set out in a draft code. The text of that code has now been reproduced in a Bill to codify the law of fire insurance, which has been introduced in the House of Commons by Mr Dingle Foot, with the support of a small group of other members. Its introduction raises the question of the expediency of an extension of the process of codification to include fire insurance.

Such a development would be the natural sequel to the enactment of its predecessor thirty years ago. The principles governing fire insurance are closely akin to those which regulate the business of marine insurance. Historically, fire business developed upon the lines of the principles worked out by Lord Mansfield in his marine insurance judgments. Those principles still stand, though differences of subject matter have necessitated material variations in the actual rules of the law governing fire insurance. During the course of years a substantial body of case law applicable to fire business has come into being. The present Bill is drafted on lines similar to those followed in the preparation of earlier codifying measures. It proposes an improvement in the form of the law without altering its substance—except on one or two doubtful points which any draftsman must decide for himself one way or the other. This method has two advantages. It makes the substance of the Bill non-controversial, and it leaves open the door for the insertion, at a later stage, of any amendments deemed desirable.

Objection used sometimes to be taken to codifying projects on the ground that they stereotyped the law and hindered its further development. That argument, however, will scarcely bear close examination. In the introduction to his work on Bills of Exchange, Sir Mackenzie Chalmers pointed out that, however much we may codify the law into a series of seemingly self-sufficient propositions, these will be but a phase in a continuous growth. A codifying statute, if it is found to need amendment, can be amended like any other

statute. The Marine Insurance Act of 1906 was, in fact, supplemented three years later by a short amending Act. Codification, on the other hand, should certainly not be attempted at too early a stage. The object of a judge who follows in the footsteps of Lord Mansfield is to find out and declare a general principle, not only for the decision of a particular case, but as a guide for the future. A sufficiency of such principles is necessary as the foundation for a code. In the case of fire insurance, the judges have for many years been defining the variations from marine insurance principles which are characteristic of fire cases. There are some points which authority has not yet covered, but they are definitely of a lesser order. The broad principles have been settled, and only await formal enactment in orderly sequence.

At the very least the present Bill provides the first draft of a codifying measure. The next step should be its examination by those familiar with the insurers' point of view, by Chambers of Commerce and by other business organisations representing policy holders. If a satisfactory code can be hammered out, it will promote the general convenience by providing a statement of the law within the compass of a single statute. It might also lead, like some of its predecessors, to uniformity of a wide kind, since it might very conceivably be re-enacted in various British Dominions and elsewhere.

"FULL" EMPLOYMENT

IN concentrating attention on full employment as the proper aim of monetary and economic policy, Mr Keynes has done a valuable service. The most conspicuous defect of the contemporary economic system has not been its failure to accumulate capital or increase the output of goods, but its failure fully to employ the available agents of production. And few would now deny that the volume of employment is closely connected with the course of monetary policy in the broadest sense of that term. For, after the experience of the last fifteen years, it cannot be maintained that reductions in money wages alone are capable of curing unemployment. The expedient of mere reductions in wages was tried in Germany and the United States in 1929-32, and in the Gold bloc in 1933-35, and brought no relief. In Australia, on the other hand, the wage reductions of 1930 were accompanied by devaluation and cheap money, and led to recovery; while in the other sterling countries cheap money, without significant wage reductions, was enough to set recovery going. The experience of recent years consequently suggests that efforts to stimulate effective demand are more likely to succeed than efforts to reduce costs.

It is only, of course, "cyclical" unemployment that can be rapidly cured in this way. To criticise Mr Keynes' contention on the ground that British unemployment to-day depends mainly on special maladjustments, is to misconceive the problem. The different types of unemployment must be clearly distinguished. First, there is what may be called "normal minimum" or "frictional" unemployment, i.e. the unemployment which would exist in prosperous (though not inflationary) periods, owing to seasonal changes, the movement of labour from one job to another, and the existence of unemployables. The study of pre-war percentages, compared with those prevailing in the prosperous areas of Great Britain in 1927-29, suggests that this unemployment would probably amount to rather over 5 per cent. in a modern industrial community. Secondly, there is "special" unemployment due to peculiar causes such as a collapse in the demand for a particular group of commodities, so sudden that the labour cannot be transferred to other trades in a reasonably short period. Thirdly, there remains "cyclical" or "monetary" unemployment proper. It is clear that a very high proportion of British unemployment to-day, including nearly all that in the distressed areas, is "special." For this unemployment is due to the sudden loss of our export markets. The 1,000,000 unemployed; however, who have been re-employed since 1932 were evidently "cyclical" in the full sense. So, probably, is the bulk of the unemployment—still almost at its peak level—in America to-day, though some "special"

* "Report on the Import Duties Act Inquiry, Part I, 1935." His Majesty's Stationery Office. Price, 5s net.

* "The Law of Fire Insurance." By Sanford D. Cole. Pitman.

unemployment may exist among cotton producers and in certain capital goods industries.

"Full employment," therefore, in so far as it can be attained in a few years, must mean the absence of cyclical unemployment. The adoption of this criterion of policy would imply that monetary expansion should continue up to, but not beyond, the point of full employment thus defined. Only if prices continued to rise after this point had been reached could "inflation" be truly said to occur. In the world to-day this perhaps can be said to be happening in Japan alone. Such a criterion of policy is certainly far better than the mere maintenance of fixed gold parities, or exchange rates or even stable price levels. How far, however, should it be the absolute or only criterion? How far should one seek to create employment at all costs? There are clearly some conditions in which we should not. In Germany during the last three years, for instance, the volume of cyclical unemployment has been greatly reduced. But this has been achieved by expedients which nobody would regard as the ideal of monetary or economic policy. Credit has been created by the monetary authorities, and paid out to workers to manufacture roads and armaments, etc., but the total supply of consumers' goods has been kept stable by restrictions both on imports and on the expansion of plant in the domestic consumers' industries. There has consequently been no real increase in the community's income (apart from the "security" which may be alleged to accrue from the armaments), but merely a transfer, due to rising prices, from those formerly employed to those formerly unemployed.

Now this is certainly not the result contemplated by those who have advocated full employment as the proper criterion of policy. For they have tacitly assumed that full employment meant not merely the fullest possible utilisation of available productive resources, but also the fullest possible increase in consumption. Or, to put it another way, they have assumed that the spending of the new incomes given to those engaged on public works would be allowed to have its natural effect in increasing the output and import of consumers' goods. If this is deliberately prevented, the benefit of the increase in employment is almost entirely lost; and there is only a gain in so far as the advantage of one man having a job outweighs the disadvantage of another man having less to consume. The argument for full employment, therefore, is clearly being abused, if expenditure on, say, armaments is advocated as a method of curing unemployment, but at the same time that very expenditure necessitates the purchase of so many non-consumable imports that supplies of consumers' goods must actually be reduced as a result.

Full employment is accordingly only valid, as a criterion, if the supply of consumers' goods, domestic and foreign,

is allowed to expand. Indeed, the whole case for monetary expansion rests on this hypothesis. For the old-fashioned prejudice against monetary expansion of any kind in any circumstances was based on the belief that a mere increase in the quantity of money could not increase the production and consumption of goods. To this it has been quite rightly replied that, if labour and capital are unemployed on a large scale, then an increase in the volume of spending will lead to an increase in the actual consumption of goods. For this reason, as Mr Keynes points out, a monetary expansion operated by merely giving people money to dig holes in the ground may lead to a real increase in wealth. But if the monetary expansion is to be accompanied by a restriction of the supply of consumers' goods, the case for it entirely collapses.

Moreover, provided that a country's currency is not overvalued, there is no reason why an expansion of employment due to increased investment should not be safely accompanied by rising imports of consumers' goods. Indeed, this has happened in the great majority of the sterling countries during the last four years. Low interest rates have led to increased employment, and increased employment has been accompanied by an increase in imports and consumption. In particular, in Sweden and South Africa, where unemployment in 1932 was almost entirely "cyclical," full employment has been achieved without any restriction of the supply of consumers' goods. In Sweden, unemployment has been reduced from 160,000 at the end of 1932 to 58,000 at the end of 1935; and imports have increased from 1,148 million kroner in 1932 to 1,468 millions in 1935. In South Africa unemployment has virtually disappeared; and imports have risen from £31,272,000 in 1932 to £75,300,000 in 1935.

Great Britain has followed the same policy of low interest rates, tempered with comparatively moderate restrictions on imports. But she has her special problem of distressed areas and distressed industries which monetary policy cannot quickly cure. Full employment in this case can only be quickly attained by special measures designed to employ the labour left derelict in these industries, combined with measures of transfer; though the transfer will naturally be assisted by an expansionist monetary policy, which promotes prosperity outside the distressed area.

In general, therefore, the criterion of full employment may be accepted as a guide, so long as "cyclical" and "special" unemployment are carefully distinguished, and measures are not adopted which necessitate a restriction of consumption. For, as long as these conditions are fulfilled, the "creation" of employment is not an end in itself, but a means, and a necessary means, to a rise in the standard of living.

NOTES OF THE WEEK

This put the tables, or both, Herrings, Captain Margesson proposed that the of forms, accounted for 100 ve the chair, and Mr Attlee: that the out of a total of 124,000 cw the Mr Baldwin at first refused to Report on the Import D ment on the ground that the business His Majesty's Stationery Office, carried on. But after an interval in principles were invoked and a 1923 pre-

cedent quoted, he changed his mind, and the House duly adjourned. The original vote was obviously not one which would be regarded as a question of confidence, and the Government will presumably see that it is revoked at an early date, and that back-bench "discipline" is duly strengthened. Nevertheless, the first Parliamentary defeat of the National Government will tend to raise the question whether Mr Baldwin's influence over his supporters is quite what it was.

Cabinet Tremors.—Lord Eustace Percy's resignation this week, close on the heels of rumoured Cabinet divisions on foreign policy, has also set people wondering what is wrong with Mr Baldwin's team. Actually Lord Eustace Percy's resignation had nothing to do with foreign policy. It was rather, as his letter to Mr Baldwin made clear, his own personal position with which he had become dissatisfied. Last summer, when the Cabinet was reshuffled and Mr Baldwin replaced Mr MacDonald as Prime Minister, Lord Eustace Percy was given the post of Minister without portfolio, and it was hinted that he would have special

charge of schemes for relieving the distressed areas. These schemes did not materialise, however, and it was later understood that Lord Eustace Percy was occupied with defence problems. It was natural, therefore, that he came to be regarded as a possible candidate for the new Ministerial task of co-ordinating the defence services; and his resignation, following the appointment of Sir Thomas Inskip, is not very difficult to understand. Although the motives influencing Lord Eustace Percy, however, may have been personal rather than political, the feeling will certainly spread that Mr Baldwin is losing the capacity he once had for holding his supporters together. Much has been heard lately of a group of Conservative malcontents, headed by Sir Austen Chamberlain and Sir Robert Horne, whose main bond of unity is said to be distrust of Mr Baldwin's leadership. The Hoare-Laval affair, the unexpected appointment of Sir Thomas Inskip, and now Lord Eustace Percy's resignation, have all created an impression of tension in high Conservative circles. Whence has this tension arisen? It is nothing short of remarkable that Mr Baldwin, who for five years and more withstood the united onslaught of the Right Wing Tories, and particularly Mr Churchill's attack on the India Bill, and who, in the week after last November's General Election, stood, by common consent, in a position of almost unique authority, should by now appear to have less influence over his supporters than at any time since his leadership began. Is it that all political combinations tend to disintegrate with age? Or did the apparently successful reshuffle of last summer leave behind personal resentments which have rankled? Or is it that at least a section of the Conservative Party was at heart in favour of the Hoare-Laval plan, and, in secret anger at its defeat by public opinion, turned on Mr Baldwin as a scapegoat? Or has the general belief spread abroad that Mr Baldwin dislikes vigorous action and vigorous colleagues, and consequently appoints neutral persons to makeshift offices merely to propitiate public criticism? If this last explanation gains credence, the demand for renewed vigour in the Government will not long be denied.

Italian Barbarism.—Recent events in Abyssinia suggest that the Italian commander-in-chief has received orders to shrink from no risks, and spare no frightfulness, in a supreme effort to bring the Emperor of Ethiopia to his knees before the campaign is suspended by the rains. Public opinion in Great Britain has been appalled by the latest news of Italian bombing of undefended Abyssinian towns and the alleged gassing of the population. The *pièce de résistance* has been the bombing of Harrar from the air last Sunday morning, March 29th, when, according to an official report from H.M. Consul, some 18 aircraft, flying at about 6,000 feet, dropped approximately 300 bombs on the town and its precincts. Three bombs fell in the Swedish mission compound, 50 in that of the Egyptian Red Cross, 14 on the Catholic mission, four on the French hospital and agency, and four on the Harrar Red Cross. Ten fires were started, but the population had, fortunately, received early warning and the town had been evacuated. This barbarous exploit was carried out despite the fact that, last December, the Abyssinian Government conveyed to the Italian Government a notification that the city had been demilitarised and was being used solely as a hospital base. The bombing is presumably a prelude to an attack upon the Harrar province by General Graziani's army; and already some heavy fighting has been reported in the neighbourhood of Sasa Beneh. On the northern front, Marshal Badoglio is pressing on southwards and south-westwards all along the line, from the brow of the eastern escarpment of the plateau, on his left wing, to the jungle-covered lowlands along the Sudan frontier on his right. By the time this issue of the *Economist* is published, an Italian flying column may be in Gondar, the chief city in the basin of Lake Tana. On the road from Amba Alaji to Dessie Marshal Badoglio claims to have met and defeated, after heavy fighting, the Imperial Bodyguard commanded by the Emperor in person. It would seem that the Italians have now set themselves to conquer the whole of the Ethiopian Empire, and are anxious to accomplish this immensely

New Mortgage Business	

The Survey will contain, *inter alia*, a special analysis of the returns of 110 of the largest societies

ambitious war aim at a single stroke, before the rains descend upon them. The most daring of Marshal Badoglio's recent moves is the advance of an independent column from Assab into the heart of the Sultanate of Aussa, in the neighbourhood of the lower course of the River Hawash. This Italian force, isolated and unsupported, is setting itself to march across the broadest part of the terrible Danakil desert. One wonders if Signor Mussolini has realised that, even if he were to compel the Emperor to sue for peace, and were to occupy the whole of his dominions, he would have to keep at least a quarter of a million troops permanently on the spot to hold down a hostile population.

And Its European Implications.—Meanwhile the nations of Europe are watching one of their number prosecuting a criminal war of aggression by methods of barbarism which will recoil upon Europe as a whole if the conscience of Europe does not rouse itself. We are looking on while our fellow-Europeans are bombing open towns and killing or crippling a defenceless civil population, far away from the scene of military operations, by dropping bombs—including, it is alleged, poison gas bombs—upon it from the air. The bombardment of open towns is a breach of the long-accepted usages of European warfare; the use of poison gas would be a breach of an international convention which the Italian Government signed in 1925 and ratified—without exceptions or reservations—in 1928. We cannot dispose of the question by throwing justice and humanity to the winds and proclaiming that Signor Mussolini may do what he pleases in Africa because we need his support in Europe. A policy does not become *Realpolitik* merely by being immoral. The present Italian attempt to impose European rule on Africa by the prostitution of European science in the service of frightfulness could only be justified—even on sheer Machiavellian grounds—if Europe were so indissolubly united that there was no danger of Europeans turning these devilish weapons against each other. One thing can be prophesied with assurance: if Europe does destroy itself in another war at home, the Africans will rise up as one man to shake off a European domination which has subjected them to atrocities which they could never have invented for themselves. These grave questions were raised by Lord Cecil and by the Archbishop of Canterbury last Monday night in a notable debate in the House of Lords. And it was significant that Lord Mottistone—hitherto a disinterested advocate of the Italian case—made it clear that he must thrice up his brief if the reports of the Italian use of gas were to be true.

Railway Wages.—A new railway wage agreement now seems to be within reach. After five months' negotiations, the terms of a proposed settlement were announced this week by the four main line companies, the National Union of Railwaymen, the Associated Society of Locomotive Engineers and Firemen, and the Railway Clerks' Association. In substance it is proposed that the 2½ per cent. reduction in wages, surviving from the original 5 per cent. cut in 1931, is to be replaced by a 1½ per cent. cut. So far, therefore, the employees will gain a further quarter of what they originally lost. There is to be no change, however, in overtime, Sunday or night rates, all of which were curtailed in 1931. Altogether the employees will gain another £1,100,000, and thus receive their second share in the increase of the national income resulting from general recovery. Actually, it will be a share which will leave them, relatively to the stockholders, better off than before the depression. For the railways' net revenues last year were still £4,800,000 below the 1930 level. If the men, as is generally expected, accept the proposals, the unions will have done well for them. The truth is that the railway unions are in an exceptionally strong bargaining position. For, on the one hand, the loss to the companies from a strike would be immediate and irrevocable, and, on the

other, the two largest railways, which alone are earning nothing at present on their ordinary capital, have already forfeited the trustee status of their senior stocks and have less incentive than before to maintain preference dividends. The unions, meanwhile, have used their bargaining strength with the moderation that brings success.

Coal Mining Results.—The coal mining industry experienced an appreciable improvement towards the end of last year. The Statistical Summary (Cmd. 5138), issued by the Mines Department, shows that the profit per ton of commercially disposable coal in the last quarter of 1935 was higher than in any quarter since January-March, 1924:—

Period	Tonnage Disposable (Mill.)	Costs per Ton		Proceeds per Ton	Profit per Ton	Output per Man-shift	Earnings per Man-shift †
		Wages	Total net

† Excluding allowances in kind.

Apart from seasonal influences, the expansion of production was due to increased industrial consumption of coal and to the re-stocking movement generated by the fear of a strike. Exports of coal, coke and manufactured fuel and shipments for the use of steamers actually declined from 14.2 million tons in October-December, 1934, to 13.7 million tons during the last quarter of 1935. The improvement in profits per ton may be largely ascribed to the coincidence of a fall in costs with a rise in the proceeds per ton. Mechanisation has made further headway, reflected in the increase in the output per man-shift, from 23.23 cwts. in the last quarter of 1934 to 23.89 cwts. in the corresponding quarter of 1935. It is noteworthy that all the districts separately enumerated in the Statistical Summary worked at a profit during the December quarter, the profit per ton varying between 1.07d. in Durham and 2s. 7.0rd. in South Derbyshire, Leicestershire, Cannock Chase and Warwickshire. Since production in the first quarter of 1936 was higher than a year ago, and as the recent increase in wages is largely borne by the consumer, the results for the past three months may show an improvement on the corresponding quarter last year.

The Electric "Grid."—The electrification of Britain, which proceeded somewhat slowly before the depression, has since made rapid headway. Thus, between 1929 and 1935, electricity generated by public supply stations in Great Britain rose by no less than 70 per cent., compared with an increase of 20 per cent. in world output. The expansion in the use of electricity was considerably accelerated in recent years by the general economic recovery and the phenomenal increase in building activity. It was, therefore, fortunate that the national scheme for co-ordinating the supply of electricity in Great Britain was conceived and put into operation just before the great expansion in demand. The eighth annual report of the Central Electricity Board shows that the co-ordination of the supply of electricity has already been justified by results. One of the principal advantages of the inter-connection of generating stations by a grid is that it is possible to operate safely with a smaller margin of

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

spare plant. The first effect of the construction of the "grid," therefore, was to release for revenue-earning purposes a large proportion of the generating plant which it had previously been necessary to hold in reserve. In the past year the saving in capital expenditure by the inter-connection of stations is estimated by the Central Electricity Board at £2.4 millions, while total savings since the inauguration of the "grid" amounted to £11.4 millions. Moreover, the "grid" made it possible to concentrate production in the most economical generating stations. As a result, the saving in fuel consumption between 1932 and 1935 amounted to 11 per cent., a reduction of £920,000 in the operating costs of the past year. The financial results, revealed in the C.E.B.'s annual report, are scarcely less satisfactory than the technical progress. The working profit of the Board rose from £6,570 in 1933 to £95,903 in 1934 and £1,087,287 in the past year. The profits of the Board—which in 1935 equalled 3½ per cent. on the two-thirds of its total capital (bearing a nominal rate of 4½ per cent.) on which interest must ultimately be paid from earnings—were somewhat above expectations. In this connection, it may be recalled that the original tariffs were planned to cover interest charges over a ten-year period, and that the Board was permitted to charge interest on the two-thirds of its capital invested in the "grid" to capital account in its early years of operation. It was not expected that the Board would, so soon, be covering so substantial a portion of its interest charge by earnings. Since the demand for electricity is likely to expand further with the general improvement in business activity, the earnings of the Board are also likely to continue their upward trend. Moreover, if the opportunities of the industry are fully realised during the next two years by further improvements in efficiency, and a reduction in costs, the Board will be able to face possible future depressions in a spirit of equanimity.

The Economist: Quarterly Volumes.—Beginning with this week's issue, volumes of the *Economist* will be numbered quarterly. The inexorable growth in the size of each weekly issue, and the increase in the number of special Supplements during recent years, have made our hitherto half-yearly volumes almost unmanageable in bulk. This is the first change in the volumes since the paper's foundation, ninety-three years ago. If any readers care to review the growth in the scope and contents of the *Economist* during its ninety-three years of existence, they will find that in 1843 a half-yearly volume measured 1 in. in width; in 1850 it had risen to 1½ in.; in 1875 to 2 in.; in 1900 to 3½ in.; in 1913 to 4 in.; and in 1935 to just on 5 in. To be "growing like a tree in bulk" is not necessarily a measure of merit. But in these days events crowd thicker and faster upon us than a mere generation ago. The *Economist* has had to expand in "an expanding universe."

UNITED STATES

FLOODS AND BUSINESS ACTIVITY

THE floods, which began about two weeks ago, appear to have passed their height. Two areas were principally affected—the Connecticut River Valley and the Allegheny Mountains. The Connecticut River was swollen beyond any records since the settlement of the country, and much of the business section of the city of Hartford (Conn.) was submerged. The largest area of damage was the Allegheny Watershed, which on the west empties into the upper confluents of the Ohio, and on the east into the Potomac and the Susquehanna. The greatest damage occurred on the western slope, near Pittsburgh. The dead number about 150; some two or three hundred persons are said to have lost their homes temporarily or permanently; and the property damage is roughly computed at \$500 millions. In the affected areas, business activity was greatly disturbed, and manufacturing operations were for a few days almost completely suspended in the Pittsburgh region. Simultaneously with these accounts of floods in one section, there were reports of dust storms in the west. This fact recalls the diversity of conditions, including weather, in the American Continent. On the whole, however, there is still reason to expect crops above the average of recent years, so far as weather is concerned.

Consideration of the tax Bill was interrupted by the long-expected supplementary relief Budget message asking for \$1,500 millions. This sum, added to something over \$1,000 millions in the January emergency Budget and certain unexpended funds from previous years, bring the total relief Budget for the fiscal year 1937 to the record figure of about \$3,500 millions, none of which, of course, is to be covered by taxation. Unlike other years, the relief message contained no suggestion of changes of programme. It is not easy for an individual to appraise the public attitude toward the Works Progress Administration. The one fact which baffles him is the contrast between the visible recovery in business, which in certain lines is booming, and in many lines prosperous, and the undiminished number on the relief rolls and the undiminished demands for appropriations for relief.

The slow progress of the tax Bill is quite understandable. The President's proposal contemplated a complete change in our scheme of corporate taxation. The three existing corporate taxes—the corporate income tax, the capital stock tax and the excess profits tax—were to be entirely eliminated and replaced by (a) the subjection of dividends to the normal 4 per cent. tax on individual incomes and (b) an unspecified tax of about 30 per cent. upon undistributed corporate earnings. So sweeping a change merits deliberation; the general impression is that other important changes will be introduced into our tax scheme at the present session, but the precise form is no clearer than it was a month ago.

GHOST OF THE BLUE EAGLE

The ghost of the Blue Eagle has been seen again in Washington. Major George Berry, who is the successor of General Hugh Johnson and Mr Donald Richberg in the defunct N.R.A., has submitted a formal report recommending what is virtually the re-enactment of the National Recovery Act. This recommendation appeared almost simultaneously with the President's relief message, in which the latter more than hinted his desire for some such plan in case employment did not, as the phrase goes, keep step with production. Neither reference to N.R.A. has as yet found an echo either in the Press or in Congress.

So much of the expectancy for 1936 has rested on the building industry that every item relating to it is watched with acute interest. The F. W. Dodge Corporation reports that in the seven States east of the Rocky Mountains

construction contracts awarded were double those of the first two months of 1935. Non-residential building surpassed residential building, the increase being 110 per cent., compared with 76 per cent.; but residential building is believed to have been retarded by the weather. The non-residential figure mostly represents public works, but awards for industrial plants were also up 100 per cent., although the absolute figure is still small. Great as these increases are, they still leave the first two months below the level of the period of 1931.

The February merchandise trade figures showed a substantial increase in both imports and exports compared with February, 1935, the increase in imports being especially great, and sufficient to give a small import surplus:—

IMPORTS AND EXPORTS (\$000,000)				
Merchandise				
	Imports	Exports	Export Surplus (+) Import Surplus (—)	
February, 1935	152	163	+ 11	
February, 1936	192	183	— 9	
	+ 40	+ 20		
Gold				
February, 1935	123	...	— 123	
February, 1936	7	24	+ 17	
	— 116	+ 24		
Silver				
February, 1935	16	2	— 14	
February, 1936	18	...	— 18	
	+ 2	— 2		

The net result of two months' merchandise trade is exports of \$380 millions and imports of \$380.3 millions. But the change in the gold movement is even more extraordinary. In the first two months of 1935 net gold imports amounted to about \$272 millions, and that rate was pretty well maintained through the year. The gold imports in 1936 for two months have amounted to \$29 millions, and February showed a net export—a very rare phenomenon in recent years. Silver imports dropped abruptly, from \$58 millions in January to \$18 millions in February, but even at that they slightly exceeded the imports of February, 1935.

NEW YORK, March 24.

FRANCE

"NO DEVALUATION OF THE FRANC"

THE authorisation to increase the limit of the Treasury Bill issue by another 6,000 million francs, the appearance of the last weekly Bank of France return, which showed a new increase in the bill portfolio of 1,000 million francs to nearly 11,000 millions—a total never reached since November, 1935, and which cannot be explained by an expansion of commercial needs—the information that the English credit of £40 millions had been entirely transferred—all these factors accelerated last week a flight from the franc which had already begun as a result of the electoral prospects and the German coup. The gold point against the gold bloc currencies, as well as against the dollar and the pound, was soon reached.

The sudden jump in the forward rate which took place on Saturday last decided the Bank to raise its rediscount rate by 1½ per cent. to 5 per cent. The decision surprised the market, since the last Bank return had shown no drain of gold, and a moderate raising of the rate was not expected before the next Thursday. It seems that the first aim of this swift action by the Bank was to reassure

BANKERS TRUST
COMPANY

NEW YORK

London Office:

26 OLD BROAD STREET, E.C.2
(Incorporated with Limited Liability in the U.S.A.)

GERMANY

NINETY-NINE PER CENT.

THE Reichstag election brought a greater success for the Government than optimists, and even pessimists, predicted. A mere 95 per cent. victory would have sufficiently advertised Herr Hitler's increase in popularity since the last election, and would have had the advantage of leaving a margin for a still greater success in the next election. Ninety-nine per cent., indeed, threatens the embarrassing choice in the future of either adding a few more per cent. and invoking the elastic New Arithmetic, or descending to 98 per cent. and admitting a decline in support. Even without that dilemma, cavillers see disadvantages in a 99 per cent. vote. Adherence to a political system, they remark, ceases to have meaning when it ceases to imply any distinction or differentiation; and it is no more noteworthy that 99 per cent. of Germans hold Nazi tenets than that 99 per cent. of them possess noses. That is the disappointing result of coercion. Citizens are brought to the voting stations against their wills, or by the warning that if they do not turn up an official will call to ask the reason why. For their own candidates they may not vote, and their votes against the Party's candidates are formally annulled as "invalid."

The election return gives no notion of the proportion of Germans who support or oppose Herr Hitler. In German politics, indeed, the words "support" and "oppose" are meaningless. The Nazi system seems to have declined in popularity since the events of June 30, 1934, and since the economic pressure became severe. The German National element is more hostile than two years ago, and there is no reason to think that the Social-Democrats and Communists are less hostile. There is also the new factor of the resentment of nearly all Catholics. Outside the vast class of officially employed or uniformed Nazis, the one certainly strong, Hitlerite element is the group of lawyers, notaries, doctors, dentists, and some other *Mittelstand* persons who have gained financially from the exclusion of Jewish and non-Jewish competition. The farmers are doubtful, certainly discontented, and perhaps hostile. It is therefore hard to say where the 99 per cent. came from; but it is probable that many persons who allowed themselves to be forced to the polling stations voted "yes" under the same kind of compulsion.

The Nazi Government does not care about the moral constitution of its vote if only the magnitude is imposing. A citizen is indeed sometimes a Hitlerite because he believes in Herr Hitler, but sometimes only because he is so labelled. If he wears the Nazi label, he need not trouble any further. The labelling of citizens is the great work of the Ministry of Propaganda and of other Party organs. The labelling always succeeds—outwardly; because it is hard to exist and almost impossible to pursue any organised social activity without displaying a label. If young men found a rowing club, they must from the first consent to be labelled as Nazi sportsmen; for they are officially compelled to adopt standard club regulations which prescribe that their "bodily exercises" shall be conducted in the Nazi spirit; and when a charwoman's son reaches the age of ten years he is compelled to provide himself with a uniform and an "honorary dagger." The club regulations and the honorary dagger are labels, but they imply nothing more.

domestic opinion against various rumours of an embargo on gold or the establishment of a control over purchases of foreign stocks.

The Bank's decision, however, was opportunely supported by a strong statement from M. Marcel Régnier, the Minister of Finance, denouncing "speculation" and giving an emphatic denial to the rumours of an approaching devaluation. He also laid stress on the existing signs of business revival. The recent votes "humanising" the *leccre-laws*, M. Régnier added, would cost the Budget more than 200 millions.

The next few days will prove the effects of this official counter-attack. Its principal aim is to stop speculation, and it will not affect the great mass of small holders of francs. Indeed, the public fears a suspension of payments by the State far more than devaluation; and M. Régnier did not omit, therefore, to state that the Treasury is in a position to meet all demands that may be made since it has been authorised to issue 6,000 millions more Treasury bills.

The entering of these bills in the portfolio of the Bank will naturally enlarge the volume of francs on the market, while the raising of the rediscount rate of the Bank aims at contracting it. But the maintenance of the *sang-froid* of the country is at the moment most important; and the action of the Bank and the Government must be considered as chiefly designed to produce a psychological effect. Moreover, the opportunities of speculation are always limited by numerous factors, such as the collaboration of the London, New York and Paris authorities and the feeling that every possible measure will be taken to maintain the present gold parity during the electoral period.

Moreover, an embargo on gold exports would necessitate an Act of Parliament, an inopportune gesture in the midst of an electoral campaign, even if it were defended as a necessity for safeguarding the War Treasury represented by the gold stock of the Bank. The Bank has also repeatedly stated that it would be opposed to such an embargo unless its gold reserves fell to near the legal minimum of 30 per cent. At present it stands at 70 per cent.

AFTER THE ELECTIONS

But after the elections? Will the new Chamber devalue? To give any answer would be premature. But it may be remarked that the new Chamber will encounter on this subject the same perplexities as the old—which maintained regularly under various Governments the same "orthodox" persons at the Finance Ministry. The new Chamber will have to consider the financial problem at once. It will note that advances by the Bank of France to the State, which were suppressed by M. Poincaré, have reached nearly 14,000 millions; i.e. 5,000 millions under the Flandin law, 3,000 millions by the British loan, and 6,000 millions by the latest Parliamentary authorisation. A devaluation of only 25 per cent. would hardly be sufficient to reimburse these advances, and therefore would not put new financial resources at the disposal of the State. Such resources, however, would be necessary for launching a new recovery programme (public works, etc.). But it seems that, since the recent recovery of prices, the economic situation calls for no more than a devaluation of that extent.

The alternative would be to reimburse the whole or a part of these advances by the launching of a great consolidation loan; a policy which must be preceded, however, by a recovery of the rentes and the State's credit. Would that be an impossibility in a country where 40,000 million francs might be disordered? And is a policy of new economies and Budgetary improvement more inconceivable than in the past, now that economic recovery seems to be reaching France and fiscal receipts are increasing with the inflation of prices? The turnover tax yield, for instance, shows a progressive rise. The excess over the same months of 1935 was 4.2 per cent. in February and 6.7 per cent. in March.

The answer is not an affair of sentiment for or against the "dear old franc," but will more and more result from a solution of a mathematical problem. It will also manifestly depend, however, upon the evolution of the coming international negotiations.

PARIS, April 2.

In the same way the citizen is required to flag his windows, and this perfunctory Party enthusiasm supplies him with another label.

In consequence it is impossible to distinguish between genuine party zeal and indifference, or even hostility. The only persons who escape being labelled are, curiously enough, the Jews, who, as they are forbidden to vote or to display flags, are not obliged to falsify their feelings; and, indeed, good Aryans, labelled against their wills, have been heard to express regret that they could not be promoted to the rank of Jew.

The Institute for Trade Research, in its quarterly report, comments on the slackness of consumption as compared with the great activity in investment goods industries. The shortage of dwellings, it adds, will constitute an opportunity for future investment when State work-creation measures slacken. Despite considerable building, the deficit of dwellings has increased since 1933.

The German-Belgian coal agreement, which expired on March 31st, has been prolonged for another six months, Germany's monthly delivery ration being 180,000 tons. A new agreement for exchange of coal has been concluded with Czechoslovakia. The Harpener Coal Company is to resume dividend payments, and its shares have advanced sharply on the Bourse. Harpener will acquire an unstated quantity of shares of the Essener Steinkohlenbergwerke A.G., which the Steel Trust is selling in order to obtain cash for the repurchase of its shares from the Reich. The shareholders' meeting of the trust was informed that present ingot steel output is 25 per cent. above the level of the same period of last year. An increase this month in International Steel Cartel export prices has been taken for granted since the introduction of export licences by Belgium, whereby "dumping" will be checked.

INCREASE IN MOTOR EXPORTS

Internal trade in finished textiles has somewhat recovered. Exports of leather have sharply increased and are nearly twice as high as a year ago. Exports of motor cars are also rapidly increasing, and were in the first two months of this year more than 100 per cent. above those of 1935. Very large increases took place in these exports to some South American countries, and British South Africa multiplied its purchases tenfold. It seems that foreign currency conditions do not always affect German exports as might theoretically be expected; for whereas manufactured exports in 1935 to countries officially classed as having "stable money" (full gold value) declined from Rm. 953 millions to Rm. 823 millions, this kind of exports to countries with depreciated currencies rose from Rm. 2,303 millions to Rm. 2,595 millions. This may be due to the trade stagnation in the gold bloc countries and to the subsidising of German exports to the depreciated currency group; indeed, the official report refers to "the greatness of the inevitable price sacrifices" involved in exporting.

The food situation has much improved. Pork, butter and eggs are at present obtainable without limit, at least in Berlin. The New Plan has caused a radical displacement in the grain import trade, and the proportion of imported hard wheat, which in 1934 was 80 per cent. of all wheat imports, has fallen enormously. By the beginning of this year 605,416 farms had been registered as "hereditary farms" under a law passed 2½ years ago which restricted the alienation and mortgaging of agricultural land. About 700,000 farms is the maximum expected.

The Reich Budget for 1936-37 was sanctioned by the Cabinet on March 31st, subject to the later determination of certain unstated items. The Budget is apparently to remain secret, like that of 1935-36. A supplementary Reich Budget for 1935-36 was simultaneously approved. On March 30th a law was passed amending the financial relations between the Reich and the States, in view of the Reich's advance burdens for work-creation. A new Reich loan from the insurance companies is also announced, in the form of bonds and Treasury bills, both at 4½ per cent. The sum borrowed will be the same as that brought in by the loan of 1935, apparently Rm. 350 million. The Winter Help in the three years 1933-36 has brought in 1,055 millions, partly from voluntary contributions, but in great part by means of a compulsory contribution levied on the Rocky

more detailed official report on public finance has appeared, in which no reference is made to the expenditure on rearmament.

Money has been in heavy demand, and the day loan rate rose yesterday to 3½-3¾ per cent. The Commerz-und Privat Bank has declared a 4 per cent. dividend. The bank's foreign currency debts declined in 1935 by Rm. 36 millions to Rm. 131 millions.

BERLIN, April 1.

SWITZERLAND

SIGNS OF RECOVERY

THERE was a small improvement in Swiss economic conditions during the second half of February. The number of unemployed dropped by about 4,000, out of a total of 100,000. But international complications resulting from the denunciation by Germany of the Locarno Treaty at once checked the slight progress recorded. In February imports were Frs. 87,088,088 and exports Frs. 64,010,765, a rise of 3½ millions over January, but a decrease of 3 millions over February, 1935.

The accounts of the Swiss Confederation for 1935 are far better than had been expected. Revenue totalled Frs. 485,300,000 and expenditure Frs. 503,800,000, thus leaving a deficit of Frs. 18,500,000. This was Frs. 23 millions less than the Budget estimate of the deficit. This is all the more gratifying as, during 1935, extraordinary expenditure—which was not included in the Budget—reached Frs. 55 millions. The Consolidated Debt, which stood at Frs. 1,763,840,000 at the end of 1934, was brought down to Frs. 1,752,855,000 at the end of 1935, a drop of Frs. 447,650,000 over 1924, when the Debt reached its highest figure. Moreover, since 1933, the Swiss Confederation has wiped out all its external debts. In 1935 the service of the Consolidated Debt involved an expenditure of Frs. 119,255,000, while that sum will be reduced to Frs. 71,479,875 in 1936.

The Federal Government issued on March 11th a loan of Frs. 100 millions at 4 per cent. for the conversion of an electrification loan of the Federal Railways repayable on August 1, 1936. The issue was over-subscribed; and in order to meet the demands of the subscribers its amount will be raised to Frs. 135 millions. The improvement in the finances of the Confederation resulted in a rise of Swiss Government securities, some of which are now well above par, while they were at 95 and 96 per cent. in January.

The watchmaking industry is continuing its slow but steady progress, and its exports—during the first two months—showed a rise of nearly Frs. 2,000,000 over 1935. Recently the Federal Government refused to give their assent to a contract for supplying Soviet Russia with machinery for manufacturing certain types of watches, on the ground that, although the contract might, at the beginning, give employment to several hundred Swiss workers, it would in the end create dangerous competition from abroad. A small improvement was also recorded in the engineering industry, the exports of which showed an increase of about Frs. 1,000,000 during the first two months.

DECLINE OF THE EMBROIDERY INDUSTRY

On the other hand, the embroidery industry, which was for twenty years one of the most flourishing in Switzerland, is now on the verge of ruin. In 1910 that industry—which is concentrated in Eastern Switzerland, in the Cantons Saint Gallen, Thurgau and Appenzell—employed 72,000 workers, and its annual exports reached Frs. 215 millions. In the record years 1919 and 1920 exports ascended to respectively Frs. 426 and Frs. 412 millions, but since then the drop has been uninterrupted, and, last year, embroidery exports hardly totalled Frs. 9,000,000, while only 6,000 persons were employed. During the same period the number of looms fell from 15,671 to 2,012. This drop is due, on the one hand, to high production costs and foreign competition and, on the other hand, to the fact that fashion is nowadays disinclined to the use of embroidery. The Confederation tried to help the industry, in the first place, by raising Customs duties on foreign embroideries, which resulted in

a rise in foreign duties on Swiss embroidery; in the second place, it helped the industry by means of State subsidies, which, from 1922 to 1935, aggregated Frs. 9,000,000, the major part of which was used for eliminating unnecessary looms. A further Frs. 1,500,000 was paid in the unemployment insurance fund, making Frs. 10,500,000, which did not suffice to save the industry. The Government is now asking for an authorisation for another Frs. 1,000,000, which would make it possible to eliminate a further 600 looms and help the embroidery workers to be trained for employment in another industry.

GENEVA, March 25.

INDIA

EDUCATION DEFICIENCIES

THE annual report of the Educational Commissioner of the Government of India for 1933-34 has just been issued. The Commissioner warns the reader that justice cannot be done to the educational situation merely by considering it from year to year; a wider view is desirable, say over the past twenty years. On that basis, Provinces long regarded as backward have in many ways come up to the level of the more advanced. Communities, which had no pupils beyond the primary stage, now have considerable representation in the Universities. Education has made progress among the depressed classes as well as among women. Trained teachers have become more numerous and the necessity of training more appreciated.

But, of course, this does not mean that there is not something seriously wrong with the educational system in India. In the words of the Educational Commissioner, "Universities are over-crowded; secondary education is too stereotyped; primary education is still too little related to the surrounding conditions of life; and unemployment presents a grave problem." Though it is generally agreed that far too many people are entering the universities who are unable to profit from the courses, the flood still goes on. In 1933-34 alone, 4,000 more students joined the Calcutta University, while there were 1,000 more entering the Punjab and the Bombay Universities. It is unfortunate that education in the Universities in India intensifies the belief in the indignity of manual or technical labour.

One of the troubles of primary education in India is that the child as a rule does not proceed through the course. In the whole of British India, out of every 100 boys entering Class One only twenty-one are to be found in Class Four, and only thirteen in Class Five; the percentage varies considerably among the individual Provinces. There has been no improvement in the all-India figure during the past thirteen years. The Commissioner explains that there cannot be a rapid percentage improvement when the total enrolment figures have so largely increased, particularly in the lowest classes.

The Bombay Government's finances have been improved by the separation of Sind, but there are so many demands on Government funds that this improvement cannot be used for tax reduction. The Budget for 1936-37 allows for Rs. 68 lakhs improvement in revenue from the separation of Sind to be available, but this is already earmarked to meet the deficit for 1935-36 and some additional charges in 1936-37. The cuts in educational grants imposed a few years ago are being slowly revoked. There was a partial restoration in 1933-34 of Rs. 6½ lakhs, and the same amount is to be restored this year for primary and secondary schooling. The grave feature of the Bombay Budget, as of other Budgets, is the increasing cost of pensions.

The report recently issued by the Labour Office of the Bombay Government on retail trade throws interesting light on the subject. It had been assumed that there were about 20,000 shops in Bombay City, but it is now evident that there may be as many as 40,000, including the little stall in the market in which the whole stock is within arm's reach of the proprietor. The number of shop assistants in Bombay City may be anything between 75,000 and 100,000; and contrary to general expectation there appears to be very little employment of children.

BOMBAY, March 16.

BULGARIA

MILITARY LEAGUE DISSOLVED

THE recent dissolution of the Military League, the organiser of the *coup d'état* of May, 1934, was received with evident relief by public opinion. Most Army officers are well satisfied with this action of the Cabinet. They are disillusioned at the dissensions in the Army and the unfortunate effects of its interference in politics. It is generally believed that the Army is withdrawing from the political field and that the King has once again become master of the situation. A new Government, formed by the two big political groups in the country, may be expected, under the presidency of a neutral person, to whom will be entrusted the task of carrying out the elections. This, it is hoped, will give the country the tranquillity it desires.

The new State Budget is as follows:—

	1935	1936
	(million leva)	
Revenue	5,695	6,164
Expenditure	5,695	6,164

The increase in revenue, as well as in expenditure, is due to the inclusion on both sides of the various State funds up to a total of 377 million leva and to the discounted increase in the State revenue. These estimates, however, are greater than the actual revenue in 1935, which was only 5,155 millions. Indeed, the estimated increase of about 700 millions, if we leave out of account the various State funds, will hardly be realised; for the new Excise duties and the new income taxes will not produce an increase of over 200 millions. The estimates, therefore, allow for fictitious revenue of about 500 million leva.

The increase in expenditure is explained by the inclusion of about 370 million leva, and the estimate of 200 million leva, for the partial repayment of the floating debt. Allowing for the remaining increases in expenditure, one may forecast that the new Budget will close with a deficit of about 650 million leva at the best.

The Budget for the past year, although not definitely closed, already shows a deficit of some 600 million leva, as against 400 million leva for 1934. The separate Budget of the State railway administration has been reduced from 1,545 millions for 1935 to 1,393 millions for 1936. The last Railway Budget closed with a deficit of about 100 million leva, but it is expected that this year's results will be better.

SOFIA, March 20.

LETTER TO THE EDITOR

FOOD AND INCOMES

TO THE EDITOR OF THE ECONOMIST.

SIR,—I have only just read your fine article on "Food and Incomes," based on Sir John Orr's Report.

You conclude by upholding the suggested expenditure out of the Budget of £5,000,000 a year—particularly on milk—as the beginning of a national food policy.

It occurs to me that this £5,000,000 could be better provided by the earmarking for this special purpose of an extra direct tax on super-tax payers. The tax would then be borne by that section of the community best able to bear it, and at present spending 14s. per week per head on food; whereas a mere appropriation of £5,000,000 out of the Budget would mean that the whole body of income-tax payers would be providing this sum, and this might well involve, indirectly, the payment of tax by even the comparatively under-nourished section of the community.

That something should be done, and done quickly, is evident from Sir John Orr's astounding statement that exactly half of our population is suffering from an insufficiency of food, caused by poverty.

Yours faithfully,

KATHLEEN N. BURFIELD.

28 Bassaleg Road,
Newport, Mon.

BOOKS AND PUBLICATIONS

THE CASE FOR COMPETITION

THERE are few writers on economics as penetrating, fertile and original as Professor F. H. Knight. He has a quite remarkable power of getting to grips with a difficult intellectual problem and not leaving it alone till it is solved. He is already well-known as the author of the standard theoretical work "Risk, Uncertainty and Profit," but his subsequent writings have been mainly scattered in the pages of various learned or quasi-learned journals. This book* contains a collection of eleven essays, not selected by Professor Knight personally, practically all of which are reprints. About half of these will be of interest mainly to professional economists, including those on "The Limitations of Scientific Method in Economics," "Marginal Utility Economics," "Statics and Dynamics," "Cost of Production and Price over Long and Short Periods," and "Fallacies in the Interpretation of Social Cost." The rest, however, including the last, hitherto unpublished, essay of nearly 100 pages on "Economic Theory and Nationalism," are extremely readable and rich in pointed and arresting judgments.

Throughout the book Professor Knight constantly returns to the question what justification there is, if any, for a free competitive price system. He is most careful, however, to keep distinct the questions how such a system works, and whether it is better than any other system. We cannot prove the system desirable or undesirable, he thinks, by demonstrating how it works, but only by the ethical judgment that the freedom or equality, or lack of them, that it produces are in themselves good or bad. "There is no intellectual solution of conflicts of interest." In general Professor Knight believes that apologists for the system have been mainly right in their orthodox analysis of how it works, but wrong in their inference that it has thus been shown to be somehow ideal; while its critics have made the mistake of attacking the orthodox analysis instead of the moral and political judgments based upon it.

In short, Professor Knight does not believe economic reasoning able to show that free competition produces an output "ideal" in any sense other than that it is the ideal output under free competition (when competition is free). In two extremely enlightening essays on "Ethics and the Economic Interpretation" and "Economic Psychology and the Value Problem," he shows that the conception of units of "utility" as a basis of the motives of economic conduct is ludicrously inadequate. There is no calculus which demonstrates that a free price system must produce the "maximum of utility" for society as a whole. Having made this point, however, Professor Knight does not fly to the opposite extreme of denying the possibility of comparing different people's needs, or making general judgments about poverty and wealth. "An explanation which stops short at facts of consciousness is idle and useless." Instead, he concludes, in the chapter on "The Ethics of Competition," from which the book takes its title, that the justification of competition depends, not on its effectiveness in satisfying money demand, but on the worth or worthlessness of the social results achieved:—

The money value of a product is a matter of the "demand," which in turn reflects the tastes and purchasing power of the buying public. . . . All these factors are largely created and controlled by the workings of the economic system itself, as already pointed out. Hence their results can have in themselves no ethical significance as standards for judging the system. On the contrary, the system must be judged by the conformity to ethical standards of these facts of demand rather than by the conformity to demand of the actual production and distribution of goods. And the final results diverge notoriously from the ethical standards actually held.

That is not to say that Professor Knight regards the competitive system as worse than the possible alternatives. On the whole he thinks it likely to prove rather better. Critics of competition, as he justifiably observes, "generally underestimate egregiously the danger of doing vastly

* "The Ethics of Competition, and Other Essays." By Frank Hyneman Knight. Allen and Unwin. 359 pages. 12s. 6d.

worse." Nevertheless, he considers that an enormous amount might be done, particularly by heavy redistributive taxation, to alter the inequitable legal framework within which the competitive system works. "The ownership of personal or material productive capacity is based upon a complex mixture of inheritance, luck and effort, probably in that order of relative importance."

Professor Knight's final conclusion, however, is gloomy. He thinks that the power accruing to the propertied minority as the result of the inequality of wealth will be used to prevent any real redistribution, and that at the same time the appeal to "freedom" as a justification of the system will fail in face of the continuation of gross and blatant inequality. Bearing this in mind, as well as the tendency towards monopoly and the enormous obstacles to a rational and disinterested operation of the monetary system, Professor Knight finds himself left with the fear that the Western world will relapse into the chaos of "Fascist-nationalism," which he tells us he is "second to none in hating."

SHORTER NOTICE

"Rand Riches and South Africa." By Sir Harry Graumann. Simpkin Marshall. 235 pages. 10s. 6d. net.

This volume of personal recollections, freely interspersed with anecdote and *obiter dicta*, is a notebook of the author's active life on the Rand in mining and politics, rather than the incisive analysis of Rand personalities undertaken in Mr Paul Emden's recent book. For that reason, its value to the student of South African economics and politics is the more limited, and even the general reader will be apt to tire at the author's occasionally discursive style.

Two chapters towards the end of the book—on new party alignments and the eternal problem of agriculture *v.* the mining industry—touch on movements of great current importance. The author's early experience in working in co-operation with Dutch representatives in local government affairs leads him to support Coalition, with emphasis on the dangers of extreme Nationalist and Dominion ideas. This seems wise; but whether his agricultural policy would be so welcome is open to some question. Sir Harry leaves no doubt, however, about his views on the need for lower mining taxation and Government encouragement of the industry.

MONEY AND BANKING

THE FRANC AND ITS BACKGROUND

TOWARDS the end of last week a new run on the franc developed. Though sudden, it could hardly be called unexpected, for all the circumstances of the moment favoured a fresh flight of funds from France. The German re-entry into the Rhine had aroused considerable nervousness in the east of France, which found reflection in extensive local withdrawals of funds from the banks, while the French Government had gone to the Chamber for power to issue an additional six milliard francs of Treasury bills. Though it was carefully explained that this money was needed for new defence measures and to tide the Treasury over the elections, critical observers were prone to relate the new borrowing to the empty state of the Treasury cupboard and to conclude that the new bills would, in fact, be taken up by the Banque de France. To these uncertainties was added the approach of the elections.

The immediate consequences were painfully obvious. The Banque de France reported only Frs. 240 millions of gold losses during the fortnight ended March 20th, but the note circulation rose by Frs. 1,700 millions, private deposits fell by Frs. 250 millions and rediscounts increased by Frs. 1,700 millions. All these are familiar symptoms of hoarding or the exportation of capital. It was also believed that while France was gaining gold from Italy, she was losing it to the United States, to the British Exchange Equalisation Account, and, most unusually and significantly, to Belgium, Holland and Switzerland. Last week-end, the French authorities applied the orthodox "remedy" by raising Bank rate from 3½ to 5 per cent. This step was quickly followed by a declaration by the Finance Minister that the Government were not contemplating devaluation and would continue their resolute defence of the franc. For the time being, the outflow of gold has been checked and pressure has been somewhat relaxed, but the ultimate fortunes of the franc are still a matter of debate.

To understand the background to France's financial troubles, it is first necessary to consider the relation of the franc to the pound and the dollar, together with French internal prices and the course of French internal and external trade. These facts are illustrated by the following table, which shows the course of British, American and French prices, and the trend of French internal and external trade, during the past fifteen months, so far as the necessary data are available. The index numbers of prices and production are shown on the base August, 1935 = 100, for reasons which will be subsequently explained:—

Average for Month	Wholesale Prices			French Imports	French Exports	French Production Index
	U.K.	U.S.A.	France			
1935 January.....	98.2	96.4	102.2	Frs. mill.	Frs. mill.	100.0

March.....	104.8	98.4	112.5	...	...	...

* The returns up to February 18th include the Saar, and are therefore omitted.

Last August, French wholesale prices stood at their lowest level of the year—indeed, at the lowest point since the war. It was not entirely a coincidence that in August last the over-valuation of the franc, against the pound and the dollar, was least in evidence since the British suspension of the gold standard ushered in the present period of disequilibrium. In succeeding months, however, French wholesale prices have risen by 12.5 per cent., while British wholesale prices have risen by only 4.8 per cent. and American prices have actually fallen.

As a first consequence of these divergent movements, the over-valuation of the franc has again been intensified. Whereas by last August equilibrium of purchasing power had been nearly restored, to-day the lack of balance is again in evidence. It is true that this recent sharp rise in French internal prices has been accompanied by—or has stimulated—a moderate expansion in French production, but the latter tendency has probably been fully paralleled in Great Britain. On the other hand, the effect of renewed disequilibrium on French external trade is very noticeable. Since last August, imports have risen by Frs. 351 millions—i.e. by 20 per cent.—while exports have increased only by Frs. 67 millions—or by 5.7 per cent. As compared with a year ago, imports are higher by about 20 per cent., while exports are unchanged.

These facts point to an increased over-valuation of the franc, coupled with a very limited internal recovery. We may proceed more fully to investigate the causes of these changes. In this connection, the financial data given in the following table are relevant:—

End of Month	Banque de France				Commercial Bank Deposits	Savings Bank Deposits	Price of 3% Rentes
	Gold	Discounts	Note Circulation	Private Deposits			
1935 January.....	Frs. mill. 81,879	Frs. mill. 4,226	Frs. mill. 83,344	Frs. mill. 14,564	Frs. mill. 30,846	Frs. mill. 61,284	Frs. 83.80
February.....	82,195	4,219	83,745	14,346	30,611	62,155	82.60

March 20th.....	65,700	11,114	82,681	7,843	...	...	67.65

This table shows how the Banque de France has lost gold and has had to rediscount additional bills, which can only represent fresh Government borrowing. The commercial banks in their turn have lost deposits, while their cash reserves, represented by private deposits at the Banque de France, have also been depleted. Finally, rentes have fallen in price by nearly 20 per cent.

All these indications point to a flight of funds from the banks, combined with inflationary borrowing by the Government. As matters stand, therefore, the French Government has been spending more than it has been able to collect, and indirectly much of the deficit has been financed by the central bank. The development has already had serious consequences. It has frustrated the Government's previous efforts to restore equilibrium by means of deflation, and it has abruptly reversed the trend of prices and trade. To that extent France has gained relief, but at a significant cost. The over-balance of the franc has been intensified, the external trade balance is being upset, and the faith of the people in the Government's credit has been diminished. The effect of successive exchange "crises" must be largely cumulative. Gold once lost has so far not been regained, and the time may come when a French Government may ask whether the gold reserves have not fallen to the lowest point compatible with national security.

Present indications, however, are that no decisive step will be taken until after the elections. Whether, ultimately, France will devalue in a night, like Belgium, or impose exchange restrictions like Germany, or merely prohibit gold withdrawals from the Banque de France and let the exchange ride free—all this is to-day a matter of guess-work. One thing, however, appears certain. If and when France leaves gold, other gold bloc countries will be likely to follow, and Germany may well reconsider her position. Such a series of decisions would clearly open a new and decisive chapter in the world's currency annals.

FINANCIAL NOTES

Sir Ernest Harvey's Retirement.—The changes in the Bank of England, referred to by us a week ago, have now received the formal approval of the Court. Mr Montagu Norman enters upon his seventeenth year of office, and the three new directors have been duly elected. In the City, however, this week will be remembered for the retirement of the old Deputy-Governor, Sir Ernest Harvey, and the election of Mr B. G. Catterns in his place. It is no reflection upon Mr Catterns to say that Sir Ernest Harvey's departure will be regretted. After many years' service as an official of the Bank, during which he held the important posts of auditor, chief cashier and comptroller, Sir Ernest was the first Deputy-Governor to be appointed from the staff of the Bank. During his seven years of office he did much, both at home and abroad, to establish the basic principles of central banking in the modern sense of the term. Both in Australia and before the Macmillan Commission he laid down in simple language the functions of a central bank, and he helped to carry them into practice during a period of unprecedented strain and disturbance. During all this time there were many in the City who regarded him as a friend and adviser, and all will regret that he is no longer at his post. No one, however, will grudge him his well-earned rest, and all will have their sense of loss tempered by the knowledge that in his successor they will find just as helpful and courteous a friend.

The Bank Return.—Wide changes are recorded in this week's Bank return, but they are all seasonal in character, and similar movements occurred last year and the year before. The note circulation has risen by £6.5 millions as a result of currency withdrawals for the end of the month, for quarter day and in anticipation of Easter. The Bank's gold holdings are slightly higher, and the reserve has fallen by £6.3 millions.

The banking department bears evidence of heavy Government disbursements, financed in part by borrowing on Ways and Means. Public deposits have gained £19.0 million, while in spite of the current reduced by £8.3 millions; payments on April 1st accounted for £15.6 millions; there were also heavy Treasury conversions. Loan dividend day. The explanation of the movement is that three months ago, applications for maturities on the same date to be paid for on Treasury bills were largely refused, that is, immediately

The Money Market.

easy all the week. There was a little heavier than usual shortage of funds on Monday and Tuesday, when Government disbursements for Treasury bills were plentiful. The following day made no clearing bank calling,

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

On March 27th, £40.0 millions of Treasury bills were allotted, and as the week's issue included bills maturing at the end of the half-year, competition was very keen. The average tender rate was only 10s. 0.23d. per cent., or practically ½ per cent. This week the banks have been keen buyers of Treasury bills of all dates up to the middle of June at their minimum rate of ½ per cent.

The Foreign Exchanges.—The London market was very active over the week-end. There were heavy offerings of French francs, and the British Control intervened first at Frs. 75½, and later at Frs. 75½. Three months' franc were also thrown on the market and at one time the discount rose above Frs. 4. The increase in the French Bank rate from 3½ to 5 per cent., followed by the French Government's declaration that devaluation was not imminent, has for the moment steadied the market. Offerings of spot francs diminished, and the Control was able to intervene less frequently. The discount on three months' francs also narrowed at one time to Frs. 2½, but has since widened to Frs. 2½-3. The Paris-New York cross-rate was at one time at the gold point, but it has since come back to Frs. 15-15½. Spot dollars were quoted Thursday afternoon at \$95½. A fair number of dollars were offered against francs by New York during the week, and some London operators suspected that the American Control was at work. There was a fair demand for Swiss francs, and the spot rate in Paris has been up to the gold point, at which gold can be sent to Switzerland. The general impression left by the week's dealings is that the 5 per cent. French Bank rate frightened some of the weaker bears of French francs and caused them to cover. This created a certain amount of buying of francs, but last Thursday no one expected it to last for more than a few days.

The Eastern Exchange.

C. T. Saunders. (London) 311 pages. 1 net. The Eastern Exchange, which links up the Indian and Far East with the outside world, is a big exchange. The Eastern Bank, which has now held their meetings. On the whole, the Eastern Bank chairmen take an optimistic view, but they agree that trade restrictions, the keen competition for the small amount of exchange business available, and the low level of interest rates in India have made it very difficult for bankers to earn an adequate profit. In fact, they all pay a high tribute to their local managers for the skilful way in which they have enabled profits to be reasonably well maintained. Lord Catto, at the Mercantile Bank meeting, roundly stated that the present level of Indian import duties was much too high, and imposed an intolerably heavy burden upon the agricultural classes. Mr Langford James, deputising for Sir Charles McLeod, at the National Bank of India meeting, said that the monsoon had been fair. After an allusion to the difficulties in the jute industry, he said that the Bombay cotton mills were suffering from new competition from mills which were being erected in close proximity to the cotton-growing areas. At the Eastern Bank meeting, Mr J. S. Haskell described the marked improvement in India's financial position, which had permitted the conversion of both rupee and sterling loans to practically a 3 per cent. basis. Sir William Foot Mitchell, speaking on behalf of Mr Willis, explained to the shareholders of the Chartered Bank of India, Australia and China how the sterling value of the bank's resources had been affected by the fall in silver. He was not too happy about China's recent abandonment of the silver standard for a managed currency, his misgivings arising from the unbalanced state of the Chinese budget, the contraction in customs duties and other revenue, and the political unsettlement in North China.

THE STOCK EXCHANGE

RAND MINING TAXATION

judge by market movements during the past ten days, investors generally have received Mr Havenga's revised scheme for taxing the gold mines of the Rand with approval, if not with enthusiasm. A similar attitude was seen last Monday at the annual meeting of the Transvaal Chamber of Mines by Mr W. A. Mackenzie, the retiring president. This first official expression of the industry's approval was based on the increased simplicity of the new taxation scheme. This factor is of no small importance, there are certain points in the Excess Profits Duty scheme introduced last year which have not been cleared by the industry itself to this day.

Mr Mackenzie, however, had definite criticisms to make of the new taxation scheme, not the least of which was that, so far from reducing the burdens of the industry, it would probably add to them. Under the new dispensation, we explained in last week's *Economist*, the mines will be liable to a normal income tax of 15 per cent., and a special tax equivalent to 35 per cent. of their gross revenue, minus 40 per cent. of their operating costs. On this basis the total sum payable by the industry, other things being equal, would be approximately the same as that paid last year. Before calculating the profits for the purpose of the normal tax, however, each company is permitted to make an allowance for the amortisation of its capital expenditure over the life of the mine, as estimated in conjunction with the Government mining engineer. These estimates have hitherto been based on a price of 85s. per ounce for gold. The industry is in entire agreement that this assumption is now obsolete and that the price of gold should be taken as, say, £7 per ounce. As a result, however, the official estimates of the lives of the mines will be increased and the annual allowance for amortisation will be correspondingly reduced. As this allowance is not only deducted from profits before charging the normal tax, but may also be added to costs in calculating the formula tax, its reduction must result in an increase in the total liability of the industry for taxation. It is possible, however, that Mr Havenga may yet make some adjustment which will compensate for this extra impost.

The significance of the abandonment of the idea of 85s. as the price of gold is not confined to the official estimates of the lives of the mines. Since the end of 1932, taxation of the Rand gold mines has been based on the assumption that 85s. per ounce is the "natural" price for gold, and that the premium over this price at which the metal is quoted in the market represents a "gift" conferred on the industry by the South African Government, by its abandonment of the old gold parity of the currency. Mr Havenga has, consequently, justified the imposition of increased burdens on the industry, at a time when taxation in other forms of South African enterprise was reduced, by the plea that he was only taking away, with one hand, half of the excess profits which the Government had presented to the industry with the other. This obviously untenable thesis has been abandoned. Mr Havenga, like many a Finance Minister before him, can now justify the enormous differential taxation of the gold mines only on the grounds of expediency.

Heavy taxation of the gold mines is no longer, even in theory, a temporary expedient to meet a special situation. The new scheme has all the appearance of permanence. The industry can at least find some consolation for this act in its improved ability to plan for the future. Since the Budget speech was delivered successive commentators have discovered various mathematical methods of expressing the new taxation scheme. The official Government version of the formula is:—

$$\text{Taxation percentage} = 15 + 40 - \frac{500}{x}$$

where x is the ratio of profits to recovery. Other publicists, in a love of simplicity exceeding that of the South

African Finance Ministry, have reduced this formula to the simpler statement that the new tax will take 50 per cent. of profits less 5 per cent. of costs, with a minimum rate of 15 per cent. Under this scheme the initial 50 per cent. of profits is regarded as a fixed quantity, and it is suggested that in future the proportion of costs which may be deducted will be varied in order to arrive at the required revenue. It is hoped, in fact, that this deduction may be increased in the not very distant future. During the next few years some fifteen new mines will reach the production stage, and when they begin to contribute to taxation, the total received by the Government should increase materially. It may sincerely be hoped that, when this stage is reached, the Government will see its way to reduce the rate of tax.

In this connection, the time element is important. Under the present system, the new mines will be liable to pay taxes as soon as they begin to earn profits; and in the case of the Rand Leases property, at least, this stage should be reached in a matter of months, if not of weeks. Hitherto, approved capital expenditure has been allowed as a set-off against excess profits duty, which has been waived until the liability under this head exceeded the sum expended for capital purposes. The industry has agreed to the abandonment of this privilege as far as the producing mines are concerned. Those properties, such as City Deep, Durban Deep, Luipaards Vlei, New Kleinfontein and Nigel Gold, which will be chiefly affected, should quickly find compensation in the results of their capital expenditure. New mines, however, have been looking forward to several years of exemption from taxation, after their production started, by virtue of the privilege of setting off their expenditure on initial development against liability for taxation. Under the present scheme, they will be allowed only the amortisation of this expenditure over the whole life of the mine as a set-off to taxation. This will obviously tend to bear hardly on those who have sunk money in these undertakings, and the industry is hoping that they will receive some compensation from Mr Havenga. If this hope is fulfilled, the expansion in the Government's total revenue will inevitably be less rapid. It may even be entirely offset in the next few years by the demise of the few mines which are nearing exhaustion, and by the falling off in the profits of those which have passed their zenith. In the more distant future, there is the possibility of some rise in costs, which will reduce the profitability, and therefore the taxable capacity, of the mines. Investors, therefore, might be ill-advised to budget for a reduction in the rate of taxation in future years.

Faced with so comparatively simple a formula, statisticians have not been slow to calculate the effect which the changed taxation scheme will have on the liability of the various mines. In general, the low-grade properties stand to gain by the change. The chief beneficiaries, apparently, may be arranged somewhat in the following order:—Witwatersrand Gold (Knights), Nourse, Modderfontein Deep, East Rand Proprietary, New State Areas, Geldenhuis, Modderfontein East, Rose Deep and Witwatersrand Deep.

Such simple calculations, however, omit the all-important factor of adjustments which may now be made in the grade of ore milled. The last taxation scheme was designed to encourage the milling of low-grade ore. It succeeded so well in its purpose that in certain anomalous cases it forced mines to mill almost barren rock in order to increase their tonnage and not to allow their profit per ton to place them in too high a category for excess profits duty. Under the new scheme, if the grade of ore milled is raised, the Government will take only half the increased profit, and the other half will be retained by the shareholders. Actually, it would pay a mine to raise its grade, even if this involved an equal rise in costs and no increase in the margin of profit. Under such a condition, the proportion of costs which could

be deducted from profits to arrive at the taxable income would amount to a higher figure, and the company would be better off. In practice, however, there are probably few cases where this policy would be regarded as sound from the mining point of view. The main effect of the new taxation policy will be to leave each mine free to mill ore of the grade most profitable economically.

The calculation of ore reserves is, generally speaking, based on this assumption. It may thus be anticipated that, other things being equal, the mines will in future mill ore of a grade approximating that of their reserves. Where they are at present mining poorer ore, owing to taxation anomalies, an early change in policy may be expected. In the majority of such cases no great technical difficulty should be involved in the change of grade, which it should be possible to effect fairly rapidly. In the following table the scope for a raising of the grade is shown for certain properties where this factor is of special relevance:—

	Ore Reserves Dec., 1935 (Dwt.)	Grade Milled Feb., 1936 (Dwt.)	Potential Increase (Dwt.)	%
City Deep	6.4	3.7	2.7	73.0
West Springs	4.8	2.9	1.9	65.5
Geldenhuis Deep	3.8	2.8	1.0	35.7
Witwatersrand Deep	5.2	3.9	1.3	33.3
New Kleinfontein	4.8	3.7	1.1	29.7
Brakpan	6.3	5.0	1.3	26.0
Durban Roodepoort Deep	5.1	4.2	0.9	21.4
East Rand Proprietary	5.3	4.4	0.9	20.5
New Modderfontein	5.3*	4.4	0.9	20.5
Randfontein	4.2	3.5	0.7	20.0
Consolidated Main Reef	4.8*	4.0	0.8	20.0
Modderfontein "B"	4.0	3.4	0.6	17.4
Luipaards Vlei	4.8	4.2	0.6	14.3
Rose Deep	4.1	3.6	0.5	13.9
West Rand Consolidated	4.4	3.9	0.5	12.8
Langlaagte	3.6	3.2	0.4	12.5
Modderfontein East	4.7*	4.2	0.5	11.9
Daggafontein	6.6	5.9	0.7	11.9
Crown Mines	5.3	4.8	0.5	10.4

* As at June 30, 1935.

In certain of these cases, such as City Deep, Durban Roodepoort Deep and New Kleinfontein, technical considerations may militate against a raising of the grade which would appear feasible on paper. As usual, those in the best position to judge the possibilities are the controlling finance houses, which will doubtless take advantage of their specialised knowledge in framing their investment policy. The outside investor may well consider that the shares of these companies offer the best medium for participation in the benefits which the changed taxation scheme may confer on individual mines.

INVESTMENT AND COMPANY NOTES

Course of Share Values.—Last month, after equity share values had had an uninterrupted run for five months, and, in the course of it, had put on something like 18 per cent., Herr Hitler played the part of *diabolus ex Machina*. March, consequently, was a month of regression, with only a slight recovery in values before its close. As is shown by the chart given on this page, the setback in prices as a whole has not yet attained as much as half the dimensions of the August-September reaction on the "League sanctions crisis." Even in America, European events caused a slight tremor in a market which had been progressively rising for a full year. The vitality of prices, and of industry generally, in a Presidential election year is, indeed, most significant, but it is arguable whether the time may not be ripe for a breath-taking pause similar to that, e.g. of last December, though possibly of greater extent. In London, meanwhile, it is obvious that last month's decline was chiefly psychological and "technical." Armament shares fell with the rest, and the open position generally has been much reduced. Though Hitler's reply, this week, was well received in the markets, the prospect of an uncomfortable interim period, to be followed, possibly, by protracted international negotiations, is not in itself appe-

tising. The Budget is another fence which must be cleared in the near future, though the full extent of the taxpayer's eventual bill will not be known for some months to come. On a strict analogy with last autumn, the recession in market prices has still to run part of its course, and restricted, quiet, dull and non-committal dealings may be indicated for the immediate future. The market's tune, however, is still being played on a pedal-point of rising industrial activity. If the outbreak of actual hostilities, therefore, can be ruled out in any area north of Abyssinia and west of Mongolia, the time for a major reversal of the trend of

equity values may be not yet. The course of gilt-edged prices, on the other hand, in conjunction with the fact that the queue of new corporation borrowers has been stationary for the last three weeks, suggests that the outlook for fixed interest securities is somewhat uncertain. According to the Actuaries' index, the "pure long-term interest rate"—i.e. the yield on 2½ per cent. Consols—is now 2.95 per cent., against 2.89 per cent. at the beginning of the year. During the same period the average value of the 178 ordinary shares in the Actuaries' Index (December 31, 1928 = 100) moved from 81.7 to 82.8, and the average yield figure from 3.59 per cent. to 3.66 per cent. Recent changes in component groups are shown below:—

Group (No. of Securities)	Prices (Dec. 31, 1928 = 100)			Yields (%)

* December 31, 1935, for fixed-interest groups.

Broadly, the conclusion is that, even after last month's events, gilt-edged stocks remain below, and equity shares above, the levels of three months ago.

Rubber Manufacturers' Shares.—The past decade has seen the consolidation of two leading groups in the British rubber manufacturing industry, which now overshadow the rest. Dunlop, much the larger of the two, has overhauled its own internal arrangements and consolidated its

widespread activities, while greatly improving its finances. The British Tyre and Rubber Co., the second and smaller group, has continued the process of acquiring existing rubber businesses, and by an arrangement which secures a still greater independence from its American founder concern, the Goodrich Co., it has acquired the character of an independent British concern. The internal organisation of the industry is thus fairly good for these reasons. Externally, the Dunlop Co. is particularly strongly placed as a result of international agreements, although the other concerns with American connections are well covered also. Nevertheless, competition has continued with considerable intensity. During the earlier stages of recovery, its effects were somewhat obscured by the rapid improvement in sales of finished products, combined with the continued cheapness of raw materials. The accompanying table reveals that the principal concerns were able to improve profits vigorously. This phase continued into 1934, for although a sharp advance in rubber prices occurred during that year,

* And 40 per cent. capital bonus from reserve.

existing stocks and forward contracts allowed manufacturers to maintain low raw material costs. By 1935, however, the higher costs had to be met, involving an increase of approximately 100 per cent. in the price of raw rubber. At this point, competition emerged most strongly, since about the beginning of last year a number of manufacturers happened to introduce improved tyres, such as the Dunlop "go" and the Goodyear "G3." These claimed a higher price as *de luxe* products, but their introduction involved difficulties in advancing the price of standard products to the full extent of the increased costs of rubber and other raw materials. That this influence was already beginning to check profits during 1935 is shown in the accompanying table, while the interim announcement of Dunlop last September suggested its intensification. For non-tyre rubber manufacturers the same problems have not arisen, and recovery has been more consistent. The troubles of the tyre makers, however, are essentially transient in nature, and may be expected, sooner or later, to give way to the undoubted long-term expansion of the industry. The industry, largely under the lead of Dunlop, is increasing the range and utility of its products, and is already linked with industries which themselves offer a steadily expanding demand—motors and transport, electricity and engineering. Rubber manufacturing shares, therefore, may be considered useful long-term investments, but the liability of profits to fluctuate with movements in the raw commodity has been demonstrated both on the fall and on the rise, and must always be borne in mind.

I.C.I. Profits.—The Court of Appeal on Wednesday delivered the reasons for its judgment, announced on March 12th, dismissing the appeal of a group of deferred shareholders in Imperial Chemical Industries against the unfavourable decision of Mr Justice Eve on their petition against the scheme for the reduction of the company's capital (see the *Economist* of December 28, 1935, page 1320). The Court of Appeal's judgment declared that the Court was satisfied that the company had taken power in its articles to reduce its capital; that the meetings held in connection therewith were in order; and that, broadly, on the question whether it was worth while for respective classes of shareholders to accept modification of their rights, the Court believed that shareholders acting honestly were much better judges of what was to their commercial advantage than the Court could be. Meanwhile, the preliminary statement by the company of its results for the year to December 31st last has served to point the moral of the directors' statement of policy and prospects at the time of the scheme's formulation. The company's gross income has risen by £387,392 to a new "high record," but the dividend on the ordinary capital remains at 8 per cent. Some £1,000,000 is allocated to Central Obsolescence and Depreciation Fund, for the fifth year in succession, and general reserve receives £1,000,000 for the third consecutive year. The results of the last three years are summarised below:—

	1933	1934	1935*
Total gross income	7,663,945	7,965,038	8,352,430
Income tax	662,340	615,931	645,891
Central obsolescence and depreciation	1,000,000	1,000,000	1,000,000
Pension fund	Nil	Nil	150,000
Preference dividend	1,588,803	1,588,897	1,590,738

To general reserve	1,000,000	1,000,000	1,000,000
To contingent dividend reserve ...	...	...	217,366
Total carried forward	566,139	608,451	638,740

* Preliminary figures.

† For ordinary, after consolidation of deferred shares.

Some of the proposed dividend arrangements are contingent on legal possibilities. A final dividend of 5½ per cent. is to be paid on the £43,759,759 original ordinary stock, and a dividend of 4 per cent. on the further £5,434,141 of ordinary stock resulting from the conversion and consolidation of the 21,736,564 deferred shares of 10s. each. These payments are "firm." The directors also recommend a further dividend of 4 per cent. on the converted stock, contingently on the time for the lodging of an appeal to the House of Lords by the dissatisfied shareholders, or the refusal of leave to appeal. An allocation of £217,366 has been made, which will be sufficient to pay this last-mentioned dividend on a date to be fixed by a later resolution of the board. In the latter event, the total payments to "original" ordinary shareholders will have been unchanged at 8 per cent., while the erstwhile deferred share-

holders will have received a total dividend of 8 per cent. on their new capital, equivalent to 4 per cent. (against 2 per cent. for 1934 and 1 per cent. for 1933) on the nominal value of their old capital. The market now values I.C.I. stocks in terms of a "gilt-edged equity," whose dividends are well covered but devoid of elasticity. At their present price of 39s. 3d. the £1 ordinary units yield £4 1s. 6d. per cent.

Morris Motors Prosperity.—The specialist industrial investor must often regret that the ordinary shares of this prosperous concern, like those of Vauxhall, are outside the market's ken. The past year found Morris profits restored to the high levels which prevailed from 1927 to 1930. The average total income after depreciation for those years is, in fact, a few thousand pounds lower than the latest results. Gross profits have jumped from £1,044,595 to £1,650,636—58 per cent. in one stride. After somewhat lower provision for repairs and increased sundry income, the total net income is 104 per cent. higher at £1,315,533. The following table analyses the spectacular recovery in earnings during the past three years:—

	Years to December 31,		
	1933	1934	1935
Gross profit, including net earnings from subsidiaries	731,446	1,044,595	1,650,636
Repairs	221,142	336,929	271,833
Depreciation of property and plant	160,733	156,698	176,154
Staff funds	6,537	6,996	8,280
Net profit	343,034	543,972	1,194,369
Investment and other income	119,514	99,785	121,164
Total income	462,548	643,757	1,315,533
Preference dividend	225,000	225,000	225,000
Income tax	102,546	90,898	147,798†
Ordinary shares (tax free):—			
Earned	135,002	327,859	942,735
Paid	100,000	200,000	340,350
Earned %	6.8	16.4	41.5
Paid %	5	10	15
Reserve fund	150,000	600,000	600,000
Carried forward	258,287	236,145	238,531

† Includes £70,000 transferred to reserve for income tax.

There is no sign that higher steel prices, of which the chairman has complained on earlier occasions, have affected the company's earnings. The balance sheet is as strong as could be desired. Of the total of £9.9 millions, cash amounts to £1.6 millions and gilt-edged and corporation stocks to £3.1 millions. The corporation stocks, indeed, have increased by as much as £600,000 during the year. The fixed-interest holdings, however, have required £42,962 for depreciation during the year. The results complete the record for a year which was already known to have provided the organisation with business well above the average for the industry. The horse-power tax reduction may have ensured the success of ten and twelve horse-power models introduced last May, and 1935 undoubtedly benefited from the factory reorganisation effected in the previous year. The 7½ per cent. cumulative preference shares are quoted at 32s. 6d. to yield £4 12s. 6d. per cent. They are adequately secured on present earnings levels, although the market—for all its sighing for the ordinary shares—has not forgotten 1933.

Lever Brothers' Results.—Though the report of Lever Brothers is never an expansive document, this year it contains several significant items. Profits, which include the full share of the subsidiaries' undistributed profits and deduction for losses, have made a remarkable jump from £6,302,875 to £6,951,187, the latter figure being a comfortable record. The ordinary dividend, again maintained at 15 per cent., is payable on a total issue increased by the £2,000,000 stock which Unilever was allotted last May. It was anticipated that the 15 per cent. distribution would be maintained when the issue was made, and there is, before, little in the way of a new pointer to the Unilever gains in the Lever dividend. Since Unilever increased its dividend at the same time by the issue of £2,000,000 5 per cent. preferred shares, the net increase in its earnings will

be £200,000, equivalent to 1½ per cent. on Unilever ordinary stock. Its total equity, moreover, is enhanced by the fact that the rate of Lever equity earnings last year was nearly double that of the dividend, as the following table shows:—

	Years to December 31,		
	1933	1934	1935
Profits, after debenture interest	6,200,698	6,302,875	6,951,187
Preference dividends	3,380,780	3,380,780	3,380,781
Preferred ord. dividends	1,357,462	1,357,462	1,357,465
Ordinary Shares			
Earned	1,462,456	1,564,633	2,212,943
Paid	975,000	975,000	1,275,000
Earned %	24.0	26.7	29.2
Paid %	15	15	15
Co-partnership dividend	46,639	48,823	50,069
Contingencies reserve	250,000	250,000	250,000
General reserve	250,000	250,000	250,000
Reserve against shares in allied companies	300,000	300,000	300,000
Carried forward	265,970†	306,779	394,653

† After charging allowance of £475,523 to Niger Company for writing off debenture discount and issue expenses, and crediting £300,000 from Exchange Reserve.

An additional reserve item, against shares in allied companies, requires £300,000, and after maintaining other provisions, the balance carried is again substantially increased. The proceeds of last May's issue have been largely employed in advances to subsidiary companies, which have increased from £153,727 to £1,962,465. The advance in profits suggests that the Unilever report, which will be issued later in the month, should be distinctly favourable. The public's investment interest in Lever Brothers is limited to the galaxy of high-dividend preference and preferred shares, on which present yields range between 4½ and 5 per cent.

English Electric Recovery.—A further substantial recovery is reported by English Electric. The latest advance in profits to £262,519—against £172,215 for 1934, and the heavy loss of £175,681 in 1933—puts the results of the previous ten years to rout. The residual earnings, after paying debenture interest, were short of wiping out the debit balance by £115,000. The liquidation of a subsidiary, however, has yielded a surplus of £137,689, and the modest credit balance of £22,463 is therefore carried forward—overshadowed, perhaps, by the massive debits of earlier years, but of greater promise than any corresponding figure of the last decade. The three-year analysis which follows reveals that the company actually earned its preference dividend—approximately £73,800—nearly twice, and the balance available for the ordinary shares, on this basis, was equivalent to 6.5 per cent.:—

	Years to December 31,		
	1933	1934	1935
Profit	Dr. 175,681	£172,215	£262,519
Fees	3,396	3,065	2,860
Depreciation	Nil	50,000	53,500
Rent and interest	27,319	26,727	15,932
Debenture interest	61,441	60,521	60,185

Earned for dividends	Dr. 267,837	31,902	130,142
Carried forward	Dr. 277,270	Dr. 245,368	22,463†

† After crediting £137,689 surplus from Willans and Robinson liquidation.

The report is distinctly hopeful regarding the prospect for the current year. Demand has been fully maintained, and the state of the order books at the opening of the year was sufficiently good to permit the directors to anticipate the results of the current year with confidence. The substantial rise in stocks gives some support to this hopeful view. Some two years' preference arrears, however, now amount to approximately £147,600, and if the payments are to be brought up to date total profits must again increase by some £85,000. The debenture conversion operation, on which we comment on page 27, will save £10,000 in a full year, but only half that amount during 1936. On this showing, the prospect of resumed ordinary dividends must be postponed for two more patient years. The 6½ per cent. preference shares at 25s. 6d. offer a hypothetical yield of £5 13s. per cent. if next year's chickens are hatched.

MINING NOTES

Union Corporation Group Results.—The three producing subsidiaries of the Union Corporation group last year treated record tonnages of ore—resulting, in the cases of the East Geduld and Geduld Proprietary, from additions to the treatment plant. *East Geduld* milled 1,152,300 tons, as against 972,500 tons in 1934; the revenue averaged 44s. 5d., in place of 47s. 1d.; while the working cost ratio, at 18s. 5d., was exactly the same as before. The Union Government's share of the profits (apart from the increase in taxation) required only £58,800, as against nearly £143,000 but taxation was £113,070 higher at £508,070. Capital expenditure absorbed £120,000 in place of £145,000 and after dividend payments, the slightly reduced balance of £63,900 was carried forward. The expansion in the ore reserve tonnage resulted despite a reduction of 2,360 feet to 38,200 feet in the development footage. During the current year an expenditure of £96,000 is expected for the completion of the company's extension programme. *Geduld Proprietary* reported only a small increase in tonnage, and the averages show no material change compared with those of the preceding year. The decision of the company to pay an increased dividend is justified by the increased dividends received upon its holding in East Geduld and by the reduction in amounts required for purchase of shares, which fell from £69,470 to £21,160. The balance of £296,290 carried forward exceeds the amount brought in by £20,700. Taxation last year absorbed £706,623, or £118,900 less than in 1934. On the basis of last year's dividends, the gross yield on East Geduld is about 4½ per cent. and on Geduld Proprietary just over 6½ per cent. The former company is in the comparatively early stages of its career, while the latter is fully fledged. The following table gives the significant features of the latest reports and also that of Modder Deep. For the two latest years the estimates are based on a gold price of 130s. against 120s. for 1933:—

	Working Profit	Dividends Amount	Per cent.	Ore Reserves Quantity Tons	Value dwt.
East Geduld:					
1933	1,023,170	553,500	35	4,750,000	7.3
1934	1,394,270	691,880	41½	7,000,000	6.6
1935	1,500,720	776,880	43½	7,950,000	6.5
Geduld Prop'ty:					
1933	1,202,590	821,730	56½	5,900,000	6.7
1934	1,413,060	986,080	67½	9,000,000	5.4
1935	1,466,050	1,022,600	70	9,000,000	5.2
Modder Deep:					
1933	961,270	600,000	120	1,162,000	5.9
1934	899,550	600,000	120	900,000	4.6
1935	613,920	450,000	90	800,000	3.3

The outstanding feature in the *Modder Deep* report is the small decline in ore reserves, accompanied by a considerable reduction in grade. As nearly 700,000 tons of ore were taken out of the mine last year, it appears that exploration to discover lower grade material has been successful. The consulting engineers' report states that 84,000 tons of ore having an average assay of 2.3 dwts. were developed on the Kimberley reef, and it is anticipated that additional payable ore will become available from this source during the current year. While the remaining life is obviously short, the indications are that the mine will last longer than appeared likely a year ago. A market estimate places the break-up value of the shares at about 12s. On the properties in the course of development, some 4,100 feet of work were carried out on the *Grootvlei* property by East Geduld under the existing arrangements. Of the 2,920 feet sampled, some 2,375 feet, or 81 per cent., were payable, having an average assay value of 11.4 dwts. over 38 inches. The scale of operations should be increased during the coming year, as the headings from the No. 2 shaft of the East Geduld are approaching the common boundary. The *Grootvlei* shaft has reached a depth of 2,100 feet, about halfway to the estimated position of the reef. The production stage is therefore still several years ahead. Capital expenditure during the past year amounted to £232,500, and at December 31st the net cash holdings amounted to nearly £880,000. *Marievale Consolidated*, was not floated until May, and only pre-

liminary work has so far been accomplished. On December 31st the surplus cash assets amounted to £373,300, and 9s. remained uncalled upon 335,130 shares. The *Union Corporation* accounts, received as we go to press, show realised net profits of £604,920. The investment holdings now total £2,311,312, at or under cost, and show a very substantial surplus on book values.

Anglo-American Corporation.—The accounts for 1935 show that the increase in the dividend from 10 per cent. to 20 per cent. is associated with a reduction in reserve appropriation to £200,000, compared with no less than £600,000 in 1934. The net profit for 1935 amounted to £89,800, being some £10,000 lower than the previous year's total. The report contains the usual summary of the results of the company's gold mining subsidiaries, discussed in last week's *Economist*, page 721. The investment portfolio has risen by £334,000 to £5,645,100, while cash holdings now amount to £3,185,500, as against £2,735,300 at the end of 1934. Deposits by affiliated and other companies have decreased by £465,600 to £4,597,400. As usual, the assets are taken into the balance sheet at or under cost. On the basis of the 1935 dividends a yield of 5½ per cent. is afforded at current price. As the outlook for the company's diamond and Rhodesian copper interests has of late undergone a distinct improvement, this may be regarded as reasonable.

"Johnnies" Group Results.—Examination of last year's results for the Johannesburg Consolidated Companies must allow for the realisation of 48s. per ounce more for gold and the valuation of ore reserves on the basis of 140s. per ounce, as compared with 130s. in 1934 and 120s. for 1933. The outstanding feature of the group is the progress reported by *Randfontein*. This company, of course, was severely hit in 1933 by the taxation then in

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

force. It has since increased the capacity of its treatment plant, simultaneously reducing both costs and grade, with distinctly satisfactory results. Last year 4,327,000 tons of ore were crushed, compared with 3,791,000 tons, the yield averaging 24s. 6d. against 26s. 9d., while the cost average was 17s. 3d. instead of 19s. 7d. Taxation in 1933 absorbed no less than £1,063,370, but in 1934 was reduced to £219,500. Last year taxation totalled £452,430, the increase being due to the expansion in profits and to the imposition of the surtax. Capital expenditure was again heavy, although amounting to no more than £239,150 against £441,000 in 1934. The sinking of a new shaft is in progress, and capital expenditure will therefore continue on a somewhat substantial scale. After payment of the increased dividends the carry-forward is £81,650 higher at £355,700. The 1935 ore reserve estimate had a marked effect upon *Government Areas* shares two months ago. The difference of $\frac{1}{2}$ dwt., or 3s. 6d. per ton, was obviously significant. The Union Government's share of profits last year was slightly under £2,200,000, against £2,392,100 for 1934. The decline in profits is attributable to a reduction of about 2s. 6d. in average yield. The results for the constituent mines in the group are set out below:—

	Working Profit	Dividends		Ore Reserves	
		Amount	Per cent.	Tonnage	Value Dwt.
Government Areas	1933 4,241,920	1,680,000	120	11,318,000	7.8
	1934 4,131,570	1,750,000	125	11,782,000	7.3
	1935 3,873,250	1,680,000	120	11,457,000	6.8
Langlaagte Estate	1933 640,820	303,970	22 $\frac{1}{2}$	1,090,000	4.2
	1934 400,080	341,960	22 $\frac{1}{2}$	1,383,000	3.9
	1935 353,950	304,000	20	1,230,000	3.6
New State Areas	1933 1,930,600	378,510	25	3,860,000	7.7
	1934 1,909,930	416,360	27 $\frac{1}{2}$	4,212,000	7.3
	1935 1,891,370	378,510	25	4,114,000	6.8
Randfontein	1933 2,008,910	406,360	10	9,019,000	5.1
	1934 1,352,310	558,740	13 $\frac{1}{2}$	13,007,000	4.7
	1935 1,581,500	812,710	20	14,895,000	4.2

	1934 615,610	388,990	32 $\frac{1}{2}$	3,384,000	4.2
	1935 584,220	359,070	30	3,443,000	4.0
Witwatersrand Gold	1933 125,920	93,930	20	954,000	3.4
	1934 139,010	70,440	15	1,204,000	3.3
	1935 150,680	93,930	20	1,471,000	3.3

Langlaagte reports a reduction in the balance available for 1935, resulting from increased taxation and a decline in revenue per ton, although this was in some degree offset by a reduction in costs. Last year's revenue averaged 24s. 3d., against 27s. 2d., the cost average falling from 19s. 2d. to 17s. 10d. The recent rumour that a new "life" computation gave the mine a much greater "expectation" lacks any confirmatory data. Primary development has now been virtually completed. The latest ore reserve estimate of *New State Areas*, which also showed a decline of $\frac{1}{2}$ dwt., was promptly reflected in the share market. The recent recovery has been based on hopes that the company may benefit from the new basis of taxation. Last year the effect of an increase of 331,000 tons to 1,353,000 tons in ore crushed, accompanied by a saving of 1s. 9d. per ton in costs, was more than offset by a drop in average revenue, the latter amounting to no more than 46s. 8d., against 54s. 6d. Taxation therefore absorbed the slightly reduced amount of £180,160. The Government's share of profits was little changed at £1,227,450. Capital expenditure, including redemption of the balance of the debentures, totalled £130,870 in place of £77,920. *Van Ryn Deep*, which benefited from taxation scales in 1934, did not fare quite so well last year. Treatment of a larger tonnage—resulting from additions to the plant—was offset by a decline of 3s. 1d. in average yield. Provision for taxation was slightly reduced to £215,700, but capital expenditure took £33,500 in place of £7,850, and the balance forward declined further. *Witwatersrand Gold* last year milled an increased tonnage of ore; and with average results little changed a higher profit was earned. Taxation took rather more than in 1934 and sundry revenue was slightly reduced. Capital expenditure, however, accounted for no more than £8,220, as against £22,070, and the company carried forward a credit of £48,440, as compared with £61,800 brought in.

General Mining Results.—The preliminary statement for 1935 shows a profit of £361,390, as against £371,890 in 1934. Since market conditions last year were much less favourable than in 1934, the decline in earnings must be accounted surprisingly small. African and European Investment, by contrast, earned only £600,006 last year, against £863,168 in 1934, although the dividend is maintained at 15 per cent. The balance dividend of 12 $\frac{1}{2}$ per cent. declared by General Mining maintains the total at 20 per cent., as for the two preceding years. An amount of £100,000 is again transferred to reserve, raising the fund to £400,000. While the market outlook for the current year must be regarded as more doubtful, it is certain that the company will obtain a return upon its holding of deferred shares in West Rand Consolidated. These are entitled to one-quarter of the divisible profits after the ordinary shares have received £1,500,000 in dividends—a position which has now been virtually attained. The extent of the return on the deferred shares can scarcely yet be gauged, but present indications appear favourable. On the basis of the actual dividends of the past three years, General Mining shares yield slightly over 4 per cent.

Rand Mines.—In the light of market conditions prevailing last year, the increase in the total income of Rand Mines from £889,160 to £925,530 may presumably be attributed to larger receipts from the company's holdings, and in particular from 127,800 City Deep shares, which received 10 per cent. after an absence from the list for seven years. The amount applied to reserve for fresh purchases again shows a considerable decrease, but the net amount written off investments amounts to £54,440, against £11,190. A comparison of profits is given below:—

	1933	1934	1935
Total income	787,110	899,160	925,530
Administration expenses	22,770	27,030	25,030
Net profit	764,340	862,130	900,500
Dividends	690,240	785,840	811,870
Rate per cent.	135	150	155
Earned per cent.	138.9	148.2	169.4
To reserve account	264,290	193,330	106,010
Carried forward*	517,600	400,500	383,700

* Including forfeited dividends refunded.

The surplus of liquid assets over liabilities amounts to £383,700. During the year the company's holdings of East Rand Proprietary, Rose Deep, "Sallies" and Transvaal Lands were slightly increased, and an interest in Marievale Consolidated was acquired. The principal change in the investments, however, lies in the Vogelstruisbult holding, which is increased from 398,800 to 500,600 shares. This reflects the new issue made by that company towards the close of the year. As usual, all shares and investments appear at or under cost, and their market value largely exceeds book value. The position of the company's interests is generally satisfactory, although exceptions are found in the Spanish railway and the North Venezuelan petroleum undertakings. On the basis of last year's dividend, the yield on the 5s. shares at 8 $\frac{1}{2}$ is approximately 4 $\frac{1}{2}$ per cent.

Other Company Results.—The accounts of 59 additional companies are analysed in our usual table on page 56. The results clearly indicate that the tide of increased earnings, for industrial concerns, is still running strongly. Unfortunately, this statement does not apply to concerns dependent upon traditional export business, as the results of *Amalgamated Anthracite* clearly indicate. Profits have fallen from £253,703 to £121,136, and other coal results make a poor showing. *Coltress Iron* earned £259,131 against £217,850, and the dividend has been raised to 2s. 9d. per share. The results of *Royal Mail Line* and *Elder Dempster Line* have greatly interested the market, although the direct advantage of the increased dividends to holders of the two Realisation Company issues

would easily be exaggerated. *Royal Mail* increased its profits from £437,961 to £634,935, and re-entered the dividend list with a 3 $\frac{1}{2}$ per cent. payment, while *Elder Dempster* increased its profits from £351,547 to £450,503, and the dividend from 3 to 5 per cent. This increase suggests that the British and African Steam may be in a position to meet its obligations, and that the Realisation Company may recoup the value of its shares sold by the B. and A. creditors. Among the week's industrial results, improved profits are reported by *Reyrolle* (£114,336 against £103,303), *Joseph Travers*, *British Quarrying* and *Rolls Razor*. *Smithfield* and *Argentine Meat*, despite a fall in profits from £165,771 to £125,236, has increased its dividend from 6 to 6 $\frac{1}{2}$ per cent. Two newspaper results, *Daily Mirror* and *Sunday Pictorial*, show very small improvements, the dividends being maintained. *M. B. Foster* net profits have advanced from £27,775 to £39,055, the dividend being raised to 17 per cent. Rubber company earnings are lower in most cases, those of *Gula-Kalumpang* having been reduced from £34,502 to £28,419. Further results, including *John Barker*, *Upsons* and *Meakers*, show a fair degree of stability. *Steel Brothers*, the merchant and trading concern, reports a fall in profits from £284,613 to £228,492, accompanied by a sharp reduction in the ordinary dividend. *Potteries Motor Transport* reports a sharp rise in profits from £29,226 to £75,620. The *Ford Motor* dividend is unchanged at 5 per cent.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Chartered Bank of India, Australia and China, Mercantile Bank of India, National Bank of India, Halifax Building Society, London Life Association, Law Land, International Nickel of Canada, British Insulated Cables, General Refractories, Associated Electrical Industries, Associated Portland Cement, British Aluminium, Maple and Company, and Nundydroog Mines. Sir William F. Mitchell, presiding at the Chartered Bank meeting, declared that the Government of India Act marked a great advance towards the solution of India's difficulties. Lord Catto, reviewing the course of India's economic progress at the Mercantile Bank of India meeting, compared India's exports of 261 crores of rupees of gold since 1931 with imports since 1910 of 400 crores at present values. At the National Bank of India meeting Mr R. Langford James attributed the unsatisfactory condition of Bombay cotton mills not to Japanese competition, which is restrained by tariff and quota, but to growing decentralisation of the industry. The chairman of Associated Portland Cement Manufacturers reviewed the increased demand and higher domestic prices which accounted for the company's higher profits last year. Mr Frank S. Russell, of General Refractories, reviewed domestic and overseas expansion of the company's business, and anticipated great benefits from the re-armament programme. He hoped for a record year in 1936. The chairman of Law Land Company reported very few vacancies in the company's properties. Sir Enoch Hill, at the Halifax Building Society meeting, disclosed that the society had developed new business in residential flat property. The proportion of total assets represented by mortgages had increased to 79.5 per cent. Sir Alexander Roger, in a full review of the British Insulated Cables business, referred to the amicable arrangements which prevailed with the International Automatic Telephone Company, and to the progress of the cable and copper refining business. At the London Life meeting, Mr Reginald B. Jacobb stated that life business increased by £302,000 to £2,805,000 last year. Mr Robert C. Stanley at the International Nickel meeting stated that conversion of the company's prospects were as promising as at any previous time in history. The chairman of British Aluminium referred to new uses for aluminium, and stated that the Lochaber Works power plant had worked to full capacity last year. At the Associated Electrical meeting, Sir Felix Pole declared that the amount of work actually turned out last year constituted a record. The president of Maple and Company stated that the Bank of England, the "Queen Mary" and the "Orion" had been among the company's customers. The chairman of Nundydroog described the results of the past year's working.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

TICKET
APRIL 21

SETTLING DAYS

ACCOUNT
APRIL 23

THE long three-week account opened, as everyone expected, in almost unrelieved gloom. Ninety-nine per cent. in Germany suggested an uncompromising German reply, and some pessimistic students of politics in the "House" were openly anticipating international breakdown. These fears were unfounded, however, and the Stock Exchange made a prompt response to the conciliatory aspects of Herr Hitler's reply. The technical condition of the market, in fact, was highly receptive to good news, and the Budget surplus had the usual psychological effect in a gilt-edged market which had for some time lacked real encouragement. New orders were not liberal, but in a market denuded of normal supplies they produced a modest all-round response in prices and sentiment.

The opening quietness in the gilt-edged market induced a further fall in quotations, but late on Tuesday there was an obvious change for the better, which came into further prominence after the publication of the revenue figures. War Loan provided the main feature, and was assisted by anticipatory purchases before the interest payment at the end of the month. Old Consols and Local Loans also shared in the improvement, which was well maintained on Thursday.

Conditions in the foreign bond market remained difficult. German issues were particularly weak at the opening, but recovered appreciably on Wednesday when the favourable nature of Herr Hitler's reply was confidently expected. After a further improvement on Thursday, however, the market reacted slightly. Japanese bonds suffered an initial fall owing to budgetary problems and frontier incidents, but responded to investment support later. French rentes fluctuated in uncertain fashion, for the rise in the Bank rate

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:

MONDAY, APRIL 6—GERMANY'S TRADE PENETRATION INTO SOUTH AMERICA.—Last week a special article in THE FINANCIAL NEWS showed how Germany has used her exchange control to get shipbuilding and other business at the expense of competitors. This article, in its turn, shows how Germany has used the same weapon to effect a huge improvement in her trade with South American countries.

TUESDAY, APRIL 7.—Continuing his series of articles on Base Metal Companies, our Special Mining Correspondent, "MINOTAUR," deals with the position and prospects of that youthful giant of the Copper world—RHOKANA.

WEDNESDAY AND THURSDAY, APRIL 8 AND 9—COMPANIES AND THEIR PROFIT-EARNING CAPACITY—NO. 12—PAINT COMPANIES.—Reports recently submitted by Companies engaged in the Paint Industry have been uniformly encouraging. On WEDNESDAY the market for industrial paints and the vast overseas trading organisations of PINCHIN JOHNSON will be reviewed. THURSDAY'S article will cover the demand for paints from domestic and marine users and will deal with such well known concerns as LEWIS BERGER and INTERNATIONAL PAINT.

THE EASTER HOLIDAYS

THE FINANCIAL NEWS will not be published on Good Friday or on Easter Monday, but it will appear as usual on Saturday, April 11.

Place a standing order with your newsagent TODAY

THE FINANCIAL NEWS

(Twopence Daily)

On sale at all railway bookstalls and good newsagents everywhere

failed to reassure some holders. The Austrian Phoenix difficulties caused uncertainty in the bond market. Brazilian loans were rather friendless.

Home rail stocks had the distinction, on Monday, of relieving the market from complete monotony. The terms of the suggested wage settlement were well received, and expectations of another batch of bumper traffics assisted business. L.M.S. 1923 preference and Southern issues were at first most prominent, but the traffics were no more than good, and disappointing for the Southern. In the foreign rail market a further fall was shown by Argentine issues on Monday, and conditions subsequently became very idle.

In the industrial markets, little week-end business had accumulated, owing to the political situation, and the approach of Easter. A few firmer features were recorded on Tuesday, and in the brighter mid-week conditions professional operators took the opportunity to cover their bear positions. Among the features were electrical equipment issues, including Associated Electric and British Insulated. Staveley Coal and Iron maintained their recent improvement, but iron and steel shares were not in buoyant mood. Stewarts and Lloyds were depressed on dividend fears, but recovered in mid-week.

Rolls Royce lost ground initially, but airframe issues improved after the opening. In the motor group, Austin provided a feature, and Thomas Tilling advanced further. The Morris results, discussed on page 22, induced higher quotations for the preference issues. The market was initially disappointed with the maintenance of the Ford dividend at 5 per cent., but subsequently recovered.

Movements in the Stores group were not wide, although there was a general mid-week improvement. Provision shares, under the lead of the Unilever issues, opened dull, but a number of issues shared in the mid-week improvement.

Miscellaneous industrial leaders opened slightly lower. London Brick, however, opened with good support on the high yield basis of the shares, and continued active during the week, while the cheerful speech at the General Refractories meeting attracted wide consideration. The motor and aviation components group again received attention, J. Brockhouse in particular being an active market. The leading cement shares improved on statements at the Associated British meeting. In the mid-week recovery, British Oxygen, Murex, Turner and Newall and Imperial Chemical were firmer. Cables and Wireless issues responded to hopeful dividend estimates.

Business in the oil shares market, after passing a dull week, improved somewhat after the closing of the national accounts. Earlier in the week the main support had come from Paris, where internationals were bought as a hedge against devaluation. The mid-week improvement was assisted by closing of bear positions which had developed in the previous days, but marking up of prices led to a curtailment of activity. In the rubber shares market the slight mid-week improvement was limited to a cessation of the small selling orders which have depressed the market for some time past. There was practically no business during the week, although the price of the commodity continues to be steady. Falling off in American demand led to a slight increase in world stocks. Conditions were very similar in the tea shares market, where business was negligible.

Kaffir shares passed a varied week. The immediate reaction to the new taxation programme was favourable, but second thoughts were doubtful of specific benefits to individual companies, and prices declined. At the opening of the new account conditions were still poor, but tended to improve later, helped by satisfactory financial results announced during the week. Paris came forward with substantial support. West Africans recovered at the end of last week from their previous lethargy, only to suffer a relapse at the opening of the week, but they caught something of the better tone in the Kaffir market in mid-week. Rhodesian issues were equally uncertain at the end of last week, but improved satisfactorily since. The proposed capital reorganisation of Union Minière led to demand for "Tanks" issues. Tin shares have been dull and irregular.

FOREIGN STOCK EXCHANGES

NEW YORK

WALL STREET has taken its shocks in an encouraging manner for those who are bullish about future prospects. The combination of European troubles, domestic flood disaster, and seasonal recession in business activity would have been very disturbing to an undecided market, particularly when doubts concerning the position of the franc, and some consequent withdrawal of gold bloc funds from New York, are becoming more urgent. Prices on Wall Street have certainly fallen slightly, but the main reaction has been a drastic shrinkage in turnover to below the million mark for the first time in six months. Signs of business recovery continue to be good, and it may well prove that not even the politicians of the world can now restrain the upswing. Market operators have found the improvement in railway conditions of particular encouragement. The *Iron Age* estimate of steel mill activity at 62.5 per cent. of capacity indicates that there has been rapid recovery from the effects of the floods. The chief domestic restraint is now found in the uncertain outcome of the new taxation proposals. firmer tone developed in mid-week, with motor shares the lead. This spread to the bond market, partly on pacific interpretation of Herr Hitler's reply to the Locar Powers' proposals.

* Two-hour Session.

PARIS

The Bourse has passed a much more satisfactory week than of late. Interpretation of the political situation seemed at first to be favourable, in spite of the fulminations of the politicians against Germany; but distraction appeared in the renewed fears for the franc. As a result, there was widening activity during the second half of last week, in which shipping and industrial shares benefited, together with internationals, while rentes inevitably suffered. The renewed assurance by the Minister of Finance that the franc would be defended to the last ditch evoked renewed support for rentes, and industrials continued in demand this week. The mid-week improvement in Wall Street assisted the firmer tendency on the Bourse. German Young Loan improved over 9 points, when forecasts suggested that the German reply might be conciliatory, a movement in marked contrast to the almost hysterical indignation of the Paris press. On the Coudisse, diamond issues lost ground at the opening, but improved again later.

BERLIN

Share quotations last week moved irregularly, but the great majority advanced, and certain favourites gained substantially. Farbenindustrie touched 160 last week and 162½ in the present week. There was heavy speculative buying of the shares of construction companies, Berger and Holzmann, and also, on resumption of dividend payment, of Harpener Coal shares. Bemberg Rayon suffered a sharp setback in expectation of passing the dividend. Steels and the other standard industrials rose 1 to 2 points; but bank issues were not affected by the dividend declarations, and shipping shares were little changed, despite the new capital cut. On Monday this week steel issues were sold, but on Tuesday were very firm. Home bonds were steady; industrials and Reich inscribed loan firm. With exception of the dollar group, foreign currency bonds were very

OTARD'S

ESTABD 1795

THE BRANDY WITH A PEDIGREE

active. On Wednesday the industrial group was very active, but shipping and banking shares were dull.

AMSTERDAM

A quiet close to last week was relieved mainly by purchases of Royal Dutch on French account. This week opened with a reaction, as Paris responded to the higher French Bank rate and the evidence of support for the franc by selling Royal Dutch. On Tuesday there was a slight improvement as the foreign exchange market settled down, and Hitler's proposals announced later in the week had no effect. In mid-week rubber shares were steady and sugars slightly higher, but Philips Lamps reacted 4 points.

CAPITAL ISSUES

A SPATE of new issues this week appears to herald the near approach of Easter rather than a resounding improvement in market conditions. The slight opening of the valve reveals, in fact, considerable pent-up pressure in the market. The leading issue is of *Gas Light and Coke* 3½ per cent. debenture stock at par, the proceeds of which will be applied to development purposes. The terms afford the most convincing evidence of the company's high status. The *English Electric* conversion offer, of 4 per cent. stock at 98, marks a further stage in the company's rehabilitation. On the earnings of the past year the stock is well covered, and there is ground for anticipating further improvement. Of the industrial issues, London Industrial Finance Trust, Ltd., sponsors no fewer than three, which are analysed below. The offer for sale of *British Bedaux* shares will probably be regarded as the *locus classicus* of high earnings, low physical assets, and very high goodwill. The company sells its specialised services as industrial consultants, and does so with £7,500 of fixed assets. The purchase price of £299,900 thus includes as much as £292,400 for goodwill. On the latest profits—which have been fairly consistent since 1931—a yield of some 16 per cent. would be shown for the ordinary capital. The six years purchase price of earnings, however, cannot be considered ungenerous. The shares will appeal to the investor who is prepared broadly to follow the earnings theory of investment, for they offer only negligible protection in asset values. In an issue of this type, however, terms might well be arranged which did not involve the imposition of a further 20 per cent. premium in the issue price. The *Trussed Concrete Steel* mixed offer—the ordinary shares at 40 per cent. premium—shows that the company has had a fluctuating profits record since 1931, but has achieved high earnings during 1934 and 1935. This scale of fluctuation is not uncommon in the building construction trades, but the company's technical direction is of high standing. *Marshall, Sons and Company (Successors)*, the third in the group, acquires an engineering business established in 1848, which is being nursed to recovery. No revenue figures are given for 1934 or 1935, nor is any estimate available.

(Continued on page 30)

(a) Interim dividend. (b) Final dividend. (c) Last two yearly dividends. (d) Based on a dividend of 22½ per cent. (e) Also special non-recurring bonus of 50 per cent. free of tax paid out of a surplus on assets realised. (f) Includes 1½% from capital accretions. (g) Including bonus 5% free of tax. (h) Also bonds 300 per cent. from reserves in A shares. (i) Calculated on basis of 7½ annas dividend per share paid for 1934-35. Taken at 16 annas to one rupee. (j) Annas per share. (k) Free of Income Tax.

Slough Gas and Coke.—Tenders for the £37,200 ordinary stock and £20,000 4 per cent. perpetual debenture stock were opened March 31. For the ordinary stock the tenders sent in amounted to £89,705, at prices ranging from £160 ls. down to the minimum of £152. Lowest price to secure allotment was £155 11s., and average obtained was £159 8s. 9d. Tenders sent in for the £20,000 4 per cent. debenture stock totalled £50,000, and ranged from £107 10s. d. down to the minimum of £103. Lowest accepted price was £104 2s. 6d. The depression of the market for gas and coke, and the consequent depression of the balance of trade in India, has caused a depression of 70 crores of rupees in the value of trade in merchandise, and that the difference was made

CALLS DUE APRIL 6 TO APRIL 11, 1936

The grand total of calls in April, 1936, is £91,181,311, which compares with £7,848,585 in April 1935.

COMPANY MEETINGS, &c.

THE MERCANTILE BANK OF INDIA, LIMITED

REVIEW OF PAST YEAR'S OPERATIONS

PROFIT AND DIVIDEND MAINTAINED

GREATLY IMPROVED POSITION IN INDIA

THE BURDEN OF TAXATION

LORD CATTO'S VIEWS

The forty-third annual general meeting of the Mercantile Bank of India, Limited, was held, on the 31st ultimo, at Winchester House, Old Broad Street, London, E.C.

The Right Hon. Lord Catto of Cairncatto, chairman of the bank, presided.

Mr J. B. Crichton (chief manager) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Ladies and Gentlemen,—You will collect that last year we had the pleasure of having Mr Ryrie preside over us, but that in his address he indicated it might be necessary for him to retire at an early date as he felt his

health could no longer stand the strain of the chairmanship. I doubt if any of you fully realise how exacting and onerous is the work of the chairman of an institution such as the Mercantile Bank of India, Limited. It not only necessitates giving a great deal of time to the problems of the bank, but it requires continuous and close touch at all times with the chief manager and the other executive officers. In Mr Ryrie the bank had the chairman who devoted himself with wholehearted enthusiasm to its affairs and who, by his knowledge and experience, guided it for many years with conspicuous success; in addition he earned the respect and the affection of all his colleagues. I am glad to be able to tell you that, relieved of the strain of the chairmanship, he remains a member of the board, where his long experience and intimate knowledge of the bank's affairs are of the utmost value. (Applause.)

TRIBUTE TO DEPUTY-CHAIRMEN

Your directors did me the honour of electing me chairman in succession to Mr Ryrie. At the same time Sir Charles Innes and Sir Thomas Smith were elected deputy-chairmen. I would like to-day to pay a personal tribute to them both for the great help they give to me in the work of the bank; indeed with my many other business and public activities the chairmanship would be almost too much for me were it not for the great assistance and co-operation I receive from all the members of the board and especially from the two deputy-chairmen.

I have also to report with regret the retirement of Mr Charles Hambro, who had been a director on the bank for twelve years. During the whole of that period he has been a most valuable member of our board, and we shall sorely miss his advice and guidance, but he has so many calls upon his time that he felt compelled to reduce some of his activities. I am sure you would wish me to convey to him your thanks and appreciation of his services to the bank. (Applause.)

I have to apologise on behalf of Sir Charles Barrie that he is unable to be with us to-day. He has had a very serious illness, but I am glad to be able to report that he is now convalescent and expects to be back again with us in the near future. I am sure you would like me to send to Sir Charles a message of your good wishes for his complete and early recovery. (Applause.)

RETIREMENT OF MR STEUART

I must also refer to the retirement on December 31st last of Mr James Steuart from the position of chief manager. Mr Steuart began his service with the bank so far back as 1889, and for the past twelve years he has held, with distinction and success, the principal executive position of chief manager. (Applause.) Mr Steuart has earned the respect and personal regard of us all, and it gave us special pleasure to invite him to join the board to fill the vacancy created by the retirement of Mr Hambro. We are sure Mr Steuart will be a valuable colleague, and it is a happiness to us all to feel that his retirement from the position of chief manager will not sever his connection with the bank and that we shall continue to have the benefit of his long experience and wise judgment as a member of the board of directors. (Applause.)

Mr James Bain Crichton, for many years London manager, has succeeded Mr Steuart as chief manager. Mr Crichton needs no introduction to you. The board have a very high opinion of him, and he brings to the position all those qualities of ability and experience which will enable him to maintain and increase the high traditions of the bank and of the position of chief manager. As the principal executive officer of the bank his position is one of great importance and responsibility, and I am sure that in his new post Mr Crichton will have your good wishes. (Applause.)

Mr Algernon Robert Linton, for eight years sub-manager in the London office, also retired on December 31st last, after long and loyal service to the bank extending over 42 years. I am sure I am interpreting your wishes in sending to Mr Linton our thanks for his long service and our best wishes for his health and happiness in his well-earned retirement. (Applause.)

To fill the positions left vacant by the promotion of Mr Crichton and the retirement of Mr Linton, we have appointed Mr Eric Waldemar Paton, who for some years has been inspector of Eastern branches, and Mr William Arthur Cruden, lately our manager in Bombay, to assist Mr Crichton as managers at the head office in London. I have dwelt on these head office changes at some length as they are of the utmost importance, and it is essential you should know who the men are in these senior executive positions, for on them depend in very large measure the success and the prestige of the bank. (Hear, hear.)

REPORT AND ACCOUNTS

The report and accounts have been in your hands for some days, and I presume, as usual, you will permit me to take these as read. (Agreed.)

In Eastern banking the year 1935 showed no substantial improvement over the previous year and our net profits are approximately the same as for 1934—namely, £174,266, against £173,398. The various items of the balance sheet require little comment from me, as there are no changes requiring special explanation. The allocations of the profits are the same as last year—namely, £12,000 to the pension fund, £10,000 to bank premises account, and £25,000 additional provision for contingencies; and after providing for the same dividend as in the previous year the balance to be carried forward is £174,097 5s. 1d., compared with £172,830 17s. 2d. for the year 1934. You will notice that the figure of our investments stands at £6,630,425, and it may interest you to know that of this 57 per cent. is British Government sterling securities, 3 1/4 per cent. Indian Government sterling securities, 2 1/4 per cent. Indian Government rupee securities, and 10 per cent. Straits and Hong Kong dollar securities and a small amount of Siam Government securities.

GENERAL REVIEW

You may recollect that in addressing you at our annual general meeting in March, 1934, I referred then to the enormous reduction in recent years in the volume and value of the overseas trade of the countries in which we work. I am glad to be able to report some slight improvement in this respect during

p. mainly by the net exports of gold, which amounted to 43 crores. We should of course all like to see the visible balance of trade in favour of India derived entirely from merchandise, but failing this and so long as such exports are necessary to enable her to meet her external obligations, I see no reason why India should not continue to export gold for a good many years without serious harm to her economic well-being, for the bulk of the gold India has exported was hoarded gold and therefore immobilised so far as any good to the country is concerned. The figures of the net export of gold from India since 1931 are, of course, impressive. The total comes to a value of 261 crores, but it must be remembered that since 1910 India has imported more than 43,000,000 ounces of gold, which at present-day values would equal about 400 crores; and if the vast accumulations of gold in India prior to 1910 are taken into account, we may well agree with the remark of the Controller of Currency in India in his latest report, that "only a small fraction of India's total gold holding has been realised so far."

The general improvement in Indian conditions is reflected in the Budget figures recently submitted to the Indian Legislature by the Finance Member, Sir James Grigg. In 1934-35 there was a surplus of 495 lakhs, in 1935-36 a surplus of 242 lakhs is expected, and for 1936-37 the Finance Member is budgeting for a surplus of more than 200 lakhs. In these difficult times there are few countries in the world which can show such a record, and the figures indicate how carefully the Government of India has conserved the finances of the country. The improvement is due partly, no doubt, to the quieter political conditions, and I am sure you will agree with me that these are the result of the present Viceroy's wise and firm administration. (Hear, hear.) Lord Willingdon has guided the country through five strenuous and difficult years, and when he leaves India in a few weeks' time he will carry away with him the gratitude and appreciation of the peoples of India and of all associated with that great country. (Hear, hear.) His successor, the Marquess of Linlithgow, is shortly proceeding to India, and our best wishes go with him in the great and arduous task which he has undertaken with such splendid public spirit.

SIR JAMES GRIGG'S VIEWS

Sir James Grigg attributed the improvement in the Budget figures to "the recovery in India's economic position having set in more strongly than could have been foreseen a year ago." Sir James Grigg, of course, has access to wider sources of information than we have, and we are glad to have this assurance from him, because so far as Eastern exchange banking is concerned we have little evidence of any substantial improvement. No doubt he was referring mainly to the figures of internal trade. International trade, for reasons which I analysed in my address to you in 1934, remains at a comparatively low ebb, though it did in 1935 show some improvement; the sea-borne trade of India reached its post-war low-water mark in value at 263 crores of rupees in 1933; it was valued at 296 crores of rupees in 1935, or only 33 crores of rupees more than the low figure of 1933, and only about half of the figure for 1928, which was 580 crores.

The task of an Indian finance member is always a difficult one. I congratulate Sir James Grigg on the courage and independence of thought he has shown in dealing with India's financial problems. I realise how difficult it is for him to contemplate anything that might appear to sacrifice revenue, but I believe myself that economic recovery in India would be greatly stimulated if he could do something to remedy three evils:—

(1) In the first place, the general level of import duties, in my opinion, is much too high. The burden of these falls mainly on the agricultural classes who make up so large a proportion of the population. They are notoriously poor, and in these days they are more impoverished than ever by the low prices they are getting for their produce. I am convinced what India needs now, above all things, is a well-thought-out and courageous future policy directed to holding the balance more evenly between the agricultural and industrial interests.

(2) I have no doubt indeed that taxation all round in India is too high and too complicated, and I am sorry that in his recent Budget the Finance Member did not take the bold course and abolish all that remains of the emergency sur-charges on income tax and super-tax.

(3) Finally, I must refer to company super-tax. The business community in India has always objected to this tax, and I have no doubt that it hinders the normal course of India's industrial development by joint stock companies. I should like to see it abolished altogether as it has been abolished in England. In any case I see no justification whatever for the retention of the anomaly

whereby in many cases the same profits may be assessed company super-tax over and over again. (Hear, hear.) The Indian Taxation Inquiry Committee recommended many years ago that this anomaly should be rectified, and it is high time that the Government of India should give effect to this recommendation. We know the Finance Member has courage. Now is the time to use it and remedy these evils. The eventual effect would be to reduce revenue but rather to increase it by greater prosperity.

BURMA

Next year Burma is likely to be separated from India. I doubt whether there is any country in the world which suffered more than Burma from the depression of the past years. It is the economic weakness of the country that prosperity is bound up almost entirely with one commodity—rice. Burma exports more rice than any other country, and the best index of the well-being of the Burman lies in the price he can get for his "paddy." In the ten years ended 1929 the price was high, probably too high, but when the slump came the price dropped rapidly till, in the 1934 season, it had fallen to below Rs. 60 per 100 baskets. Such a price did not cover the cost of production, and the effect on the prosperity of the country, the finances of the Government was deplorable. I am glad to be able to tell you that in 1935 prices took an upward turn, and the latest price is approximately Rs. 85 per 100 baskets. This has done something to restore prosperity to the country. There have also been improvements in the price of certain commodities, notably in teak, rubber and tin. As a result the Government of Burma have at last been able to balance their Budget, and I hope brighter prospects are opening out for the country.

OTHER COUNTRIES

SIAM.—Siam's favourable trade balance shrank in value in 1934 to almost half of what it was in 1933. There was a considerable export of rice to India, and that country seems on the way to become an established market for Siamese rice.

BRITISH MALAYA.—Conditions in Malaya have continued to improve, due to higher prices for tin and rubber. The price of the latter recently touched 7½d., as compared with an average price of 3½d. in 1933 and 6½d. in 1934.

CHINA AND HONG-KONG.—The general position is not so obscure than it has been for some years, and the trade of the country is suffering considerably. The figures of the foreign trade of China for 1935 are given as: imports, \$919 millions, against \$1,029,000 in 1934; exports, \$575 millions, against \$535 million in 1934.

MAURITIUS.—The trade of the island substantially improved in 1935, due to the much larger sugar crop, which produced 280,000 tons of sugar—the highest on record—against 177,000 tons in 1934 and 260,000 tons in 1933. These improved figures were reflected in the business of our branch there.

SERVICES OF THE STAFF

In conclusion I would like to pay a tribute to the staff. No institution is better served by its staff at home and abroad. We owe our thanks to the chief manager, to the managers, to the chief accountant, and to all the members of the staff at head office. To the managers and to the staff of all our branches in the East we owe special thanks for their loyal work, often carried on under conditions of climate that are both difficult and trying. (Applause.)

Ladies and Gentlemen,—I have much pleasure in proposing the following resolution: "That the report of the directors, with the audited statement of accounts and balance sheet at 15th November 31, 1935, presented to this meeting, be and the same are hereby received, approved, and adopted, and that a final dividend on the 'A,' 'B,' and 'C' shares of the bank of 6 per cent. be paid, making 12 per cent. for the year, less income tax, as recommended in the report, and the same is hereby confirmed."

Sir Charles A. Innes, K.C.S.I., C.I.E., seconded the resolution, and it was carried unanimously.

RE-ELECTION OF DIRECTORS

Mr J. M. Ryrie.—Ladies and gentlemen.—A very pleasant duty has been placed in my hands, and that is to propose the re-election of Lord Catto and Mr Sheldford to the board, but, before doing so, I should like to acknowledge with gratitude the very kind remarks which Lord Catto has made in reference to my services

chairman. I am quite sure you will all wish to congratulate him warmly on his well-deserved promotion to the peerage for public services. (Applause.)

It was with great regret that owing to ill-health I felt it was time to retire from the chairmanship. The support and assistance which I received from Lord Catto as deputy-chairman and my colleagues, and also from Mr Steuart, made the work much easier than it would otherwise have been, and it also made the of a very agreeable nature. I wish particularly to stress the valuable help I received at all times from Lord Catto, and I am more than pleased to find that he, with his close acquaintance with India and his wide experience of banking generally, had agreed to succeed me. I therefore feel very happy about the prospects of the bank with Lord Catto as chairman and Charles Innes and Sir Thomas Smith as deputy-chairmen, the management being of such importance, I think we are fortunate in having as a successor to Mr Steuart, Mr J. B. Innes as chief general manager—(applause)—and I am quite confident that Mr Crichton will receive every assistance from Mr Innes and Mr Cruden as managers. (Hear, hear.) I have now much pleasure in proposing: "That in accordance with Articles 116 and 117 of the articles of the association, Lord Catto and Mr W. H. Sheldford, the directors retiring from the bank by rotation, be re-elected directors of this bank." Of Mr Sheldford I may say that apart from his other qualifications his intimate knowledge of Malaya is of the greatest value to the bank. (Hear, hear.)

Mr Charles Innes seconded the resolution, and it was carried unanimously.

The Chairman then proposed:—"That in accordance with Article 97 of the articles of association Sir Thomas Smith and Mr Steuart, who have been appointed directors since the last general meeting, be re-elected directors of this bank." He is sure that all of you who have had any connection with the bank will know Sir Thomas Smith's name and his eminence in all circles in that country. (Hear, hear.) It is to us a very great pleasure, and I am sure it will be a very great advantage to the bank, to have his services as one of the directors.

Mr R. Chalmers seconded the resolution, and it was carried unanimously.

Mr A. P. V. Cogar proposed and Mr R. G. Bamford seconded the reappointment of Messrs Cooper Brothers and Company and Messrs W. A. Browne and Company as auditors, and it was carried unanimously approved.

SIR ALFRED WATSON'S TRIBUTE

Sir Alfred Watson.—Lord Catto, ladies and gentlemen, that cannot wholly conclude the proceedings. I have to move: "That this meeting records its appreciation of the services of the directors and staff during the past year." Each year there falls to one shareholder the very pleasant duty of moving this resolution. Never was it better deserved than to-day. India has only partly recovered from the depression of the past, and the figures before us to-day could not have been achieved without devotion to the interests of the bank not only on the part of the directors but also by every member of the staff.

I am sure I shall have the concurrence of both directors and shareholders in warmly congratulating our chairman upon the honour conferred upon him this year. (Applause.) It came within a few months of his acceptance of the chairmanship of this bank. It is certainly *post hoc*; we should like to think that it was in a sense *propter hoc*. (Laughter and applause.) We recognise, however, that his peerage was conferred after a long range of national service very modestly given. (Hear, hear.)

He has had the privilege of knowing Lord Catto for a number of years. I met him first in India in days of political and commercial difficulty. The deepest impression that he left on my mind was his unquenchable courage and his refusal to be depressed by circumstances which he regarded as temporary, and also the inspiration he gave to those who served with him. Those are qualities of inestimable value in a commercial man. I have great pleasure in moving:—"That this meeting records its appreciation of the services of the directors and staff during the past year." (Applause.) Will somebody second that?

Mr Cogar seconded the resolution, and it was carried unanimously.

THE CHAIRMAN'S REPLY

The Chairman.—Sir Alfred Watson, ladies and gentlemen,—I am somewhat overwhelmed by the kind things that have been said about me, first of all by my old friend and colleague, Mr

Ryrie, and then by Sir Alfred Watson. I thank you all for the kindly way in which you received this vote of thanks, but the men who really deserve your thanks are not the chairman, the deputy-chairmen, or the members of the board. We guide, but the men who really run the bank are those who in London and in the East work day by day and deal with the problems that arise.

My colleagues and I do our best, and I can assure you that I do my work as chairman not for the modest fee which that position carries, but because it is a happiness to me to be of help to the bank, and above all to contribute what I can to help the interchange of trade between this country and the East, and especially with India, by providing adequate banking facilities.

The proceedings then terminated.

BRITISH ALUMINIUM COMPANY, LIMITED

INCREASED PROFIT—LARGER TONNAGE MARKETING

The ordinary general meeting of the British Aluminium Company, Limited, was held, on the 31st ultimo, at Winchester House, London, E.C.

Mr R. W. Cooper, M.C., J.P. (the chairman), said that the total profit of £486,448 was greater by £97,270, but the trading profit had increased by £102,555, there having been a reduction in interest receipts. The further reduction in prior charges accounted for the greater part of the increase in the profits, but the balance was due to their having marketed a rather larger tonnage of aluminium. The volume of metal imported into the country was considerably larger than in the previous year, and competition had been thereby intensified.

The popularity of cycling had evolved a new type of rider who was not content to expend his energy pedalling unnecessary weight, and the day might not be far distant when the all-aluminium bicycle would become a standard commercial production.

SHIPBUILDING ACTIVITY

Activity in shipbuilding was a favourable feature, because both in naval and merchant vessels their metal was incorporated. As to others of the old-established applications of aluminium, its use in the electrical industry continued steadily. A rather newer application, the use of "anodised" aluminium in architecture and decoration was making considerable progress. Their sales for decorative purposes were expanding and the business was not confined to work on land, the new P. and O. liner "Strathmore" being one example of the aluminium decorative schemes included in a number of the latest first-class vessels. It was also no longer a secret that the "Queen Mary" likewise incorporated aluminium decorations in certain of her public rooms. In efficiency in reflection of light or radiant heat aluminium was essentially superior to other metals that had hitherto been generally adopted and a new process of the company enabled the high efficiency of the reflector surface to be maintained indefinitely, and they anticipated an extended use in this field.

Their various works had operated satisfactorily throughout the year, and Lochaber Works continued to realise the directors' expectations, the whole of the power plant having worked to full capacity for the first time last year. He wished to make it clear that they had no surplus water available for any other purpose than availing themselves rapidly of any increase in the demand for aluminium as it arose, beyond possibly a restricted supply for a limited period.

BURDEN OF LOCAL RATES

In connection with the Lochaber Works he had to record the addition of a financial burden by reason of a large addition to the valuation of the Works and considerable increase in local rates. The gross valuation had been increased from £7,575 to a gross valuation of £143,816, subject, so long as the Derating Act operated, to the deduction allowed in arriving at the net rateable valuation. The valuation of lands and heritages in Scotland was based on an Act of 1854, when hydro-electric works were unknown, and it appeared anomalous that to-day tunnels, dams, conduits and other costly civil engineering works should be rated on the same basis as industrial buildings.

A change in the law was overdue, and failing such a change no further hydro-electric development was likely to take place in Scotland.

Trading this year had commenced favourably, and they had every hope that it would continue to maintain at least the same volume as in last year.

The report and accounts were unanimously adopted, and a dividend of 7½ per cent. on the ordinary shares declared.

NATIONAL BANK OF INDIA, LIMITED

SATISFACTORY RESULTS—DIVIDEND OF 18 PER CENT.

MR. R. LANGFORD JAMES REVIEWS TRADE CONDITIONS IN INDIA

The ordinary general meeting of the National Bank of India, Limited, was held, on the 31st ultimo, at the Wesleyan Hall, Bishopsgate, London, E.C. Mr R. Langford James (deputy chairman) presided, in the absence through ill-health of the chairman, Sir Charles C. McLeod.

The Chairman, in the course of his speech, said: From the accounts you will have observed that the capital and reserve fund remain unaltered. Current, fixed deposit and other accounts at £29,382,940 are higher by £679,898 than they were at the end of 1934. Bills payable are less by £95,931, and acceptances for customers are higher by £56,955. On the assets side, cash on hand, money at call and at bankers, together with bullion, total £4,608,315, or £538,826 higher than a year ago. Indian Government Rupee Securities at £5,021,262 show but little change. British Government and other sterling securities at £9,789,004, are higher by £266,826. House property account is less by £50,000, which sum was provided out of profits last year. Bills of exchange at £4,427,068 are up by £146,340, and discounts, loans receivable, etc., at £10,283,643 are down by £231,953.

The net profits for the year amount to £457,568 18s. 11d., as against £460,309 15s. 8d. for the previous year, which, with the sum of £250,099 13s. 8d. brought forward, provide a sum of £707,668 12s. 7d. available for disposal, and, considering the difficult times we have been passing through, I trust you will consider the result of the year's working as satisfactory. We have already paid an interim dividend at the rate of 18 per cent. per annum, less income tax, absorbing £180,000, and we now propose to pay a final dividend at the same rate, costing £180,000; to add £50,000 to the staff pension fund, to place £50,000 to contingencies account, and to carry forward £247,668 12s. 7d. I trust that you will approve of our recommendations. I may add that all bad and doubtful debts have been fully provided for.

MONEY RATES

Money was in fairly good demand, although at low rates, during the first half of last year, particularly in Bombay, where funds were required to finance large stocks of silver, etc., but subsequently this demand fell away and for some time past money has been almost unobtainable. This, together with the prevailing restrictions on international trade, which are reflected in our exchange business and the substantial fall there has been in the return on our investments, both here and in India, are, of course, very important factors in the profit-earning capacity of the bank which you will no doubt bear in mind. Prospects are definitely far from bright, and the best for which we can hope is that, in the centres in which we are established, we shall continue to attract a fair share of what business is passing. That this will be the case I think you may rest assured, and I say this with the greater conviction in that I have just returned from a visit to India and Ceylon where I have had an opportunity of seeing the bank's business in action at a number of important centres.

The figures for the sea-borne trade of India for the past year show some improvement on those for the previous year. Exports of merchandise, including re-exports, were valued at Rs. 161 crores, being an increase of Rs. 9 crores over those of 1934. Imports were valued at Rs. 136 crores, also an increase of Rs. 9 crores. Exports to the United Kingdom were valued at Rs. 47 crores, as against Rs. 48 crores in the previous year, and imports from the United Kingdom were valued at Rs. 53 crores, as against Rs. 51 crores in 1934 and Rs. 47 crores in 1933. The favourable balance in merchandise was Rs. 25 crores, the same as in 1934, and the total balance of trade in favour of India was increased to Rs. 72 crores by net exports of gold valued at Rs. 44 crores, and of silver valued at Rs. 3 crores.

GOLD AND SILVER

Gold was exported to the extent of 4,732,000 oz. of a value of about £167,000, as against 6,685,000 oz. of a value of £45,000 in 1934. The total of gold exports from India from September, 1931, up to December 31, 1935, amounted to 32,183,000 oz. of a value of about £200,000,000. This leaves a net balance of gold imported into India from April 1, 1910, up to the end of last year of 43,641,000 oz. The position prior to that is somewhat a matter of guesswork. The silver market in India was much more

active than it has been for some years, on account of speculation due to a material rise in price. Spot silver stood at 24½ d. ounce at the beginning of the year, touched 36½ d. on April and closed at 22½ d. at the end of the year. Private import silver bullion, apart from silver coin, were valued at Rs. 1,17,00,000, and exports at Rs. 3,45,00,000. The Government of India also exported silver bullion to a value of Rs. 6 crores.

Having referred to speculation in silver in Bombay, and as may have read in the newspapers some time ago that considerable sums were lost by certain operators in the silver market there may not be out of place to mention that this institution was involved. It is not the business of this bank to finance speculative transactions, and though at times we have to see men going past us on that account, we set our faces resolutely against any participation in such risks and we are satisfied that the policy we pursue is to the advantage of our shareholders.

Bengal was hit last year by the weather, a poor monsoon, excessive flooding at times. Generally speaking, however, monsoon was a fair one, and India maintains her rate of recovery from the worst days of the trade depression. Although in 1935 exports were valued at Rs. 161 crores only, as compared with Rs. 407 crores in 1925 and a pre-war average of Rs. 224 crores there has been a progressive increase in value during the past years, the figures for 1932 to 1935 having been in crores of Rs. 138, 147, 151 and 161.

INDIAN TRADE OUTLOOK

The Finance Minister, when introducing the Indian Budget to the Assembly on February 28th, expressed an optimistic view of the prospects for the next few years. For the fiscal year 1936-37 the revised estimates showed a surplus of Rs. 242 lacs, against an original estimate of Rs. 6 lacs, and the estimates for the 1936-37 show an anticipated surplus of Rs. 205 lacs. These figures are very satisfactory, indicating as they do that the financial position of the country is sound. For the fiscal year ending to-day the Government came into a windfall of about Rs. 10 lakhs in the receipts from the import duty on sugar, which was in excess by this amount over the estimate of only Rs. 175 lakhs that source. Gold and silver have continued to help the position, and though exports of the former have declined, there is a great reservoir of imported gold in the country.

The principal event of the purely banking world in India of the year was the coming into being of the Reserve Bank of India on April 1st when that institution took over the paper currency department of the Government of India. On July 1st it commenced the functions of a bankers' bank when it became necessary for the other banks, commonly described as scheduled banks, to keep a percentage of their deposits with the reserve bank. These deposits no interest is paid to the depositors, and in normal times this would represent a not inconsiderable loss to the scheduled banks. At present, money being in such small demand, this loss is not important.

Last year jute, raw and manufactured, took first place in the exports from India with a value of Rs. 36,61,00,000, as against Rs. 31,20,00,000 in 1934. The exports of raw jute increased in value from Rs. 10,25,00,000 to Rs. 13,43,00,000, and of jute manufactures from Rs. 20,95,00,000 to Rs. 23,17,00,000. The quantities were higher in both cases, as also were prices. The export duty collected amounted to Rs. 3,81,00,000, as against Rs. 3,32,00,000 in 1934.

POSITION OF JUTE INDUSTRY

The jute industry is at present in a somewhat uncertain state. The member mills of the Indian Jute Mills Association, some years ago, resorted to working short time, only 40 hours a week, and sealed up 15 per cent. of the Hessian looms, in an attempt to keep the supply of manufactured goods within the demand. This has led to the erection of new mills, outside the association, which are working without any restrictions whatsoever.

This outside competition has become so serious that the Jute Mills Association—with which are associated, as signatories to the short-time agreement, certain of the "outside" mills—approached the Government of India with a request for legislation to protect the industry. This request has been refused and the

outlook for the whole industry in Bengal is not encouraging. It is greatly to be hoped that some solution of the difficulty will be found, once the outside mills have felt the pressure of reduced output represented by the unsealing of all looms and an increase in the working hours of the association and allied mills to such an extent, which is to come into force to-morrow. Jute is virtually monopoly of Bengal and its adjacent provinces, and in view of its universal use as a container it should not be an impossible task for this important industry, possibly with help from the Government, to evolve some scheme for profiting from what is almost, if not quite, a unique position. While the imposition in many countries of tariffs—to protect local mills spinning jute—probably means the definite loss to the mills of these markets, the position is not helped by the imposition of an export tax on the manufactured article by the Government of India while the Government of Bengal, with the view of protecting the jute-growing peasant from too low a price for his produce, has been and is prosecuting a vigorous campaign to restrict sowings.

COTTON PROSPECTS

Exports of cotton and cotton goods came next to jute, with a value of Rs. 34,70,00,000, or a decrease of Rs. 90,00,000 compared with the previous year; 3,144,000 bales of raw cotton, of a value of Rs. 31,85,00,000, were exported, as against 3,424,000 of a value of Rs. 33,14,00,000 in 1934. Prices were generally higher. Cotton manufactures were exported to a value of Rs. 2,85,00,000, as against Rs. 2,46,00,000 in 1934; 10,000 bales of raw cotton were exported to the United Kingdom, against 361,000 bales in 1934, and 1,709,000 bales were exported to Japan, as against 1,844,000 bales in the previous year. Exports of raw cotton showed a large increase, from 626,000 bales in 1934 to 1,000,000 bales. The value increased from Rs. 3,93,00,000 to Rs. 11,80,00,000. Imports amounting to 253,000 bales from East Africa showed an increase of 96,000 bales.

Exports of cotton piece goods and yarns were valued at Rs. 85,00,000, as against Rs. 20,39,00,000 in 1934. Imports from the United Kingdom showed a falling off of Rs. 1,66,00,000, from Japan an increase of Rs. 31,00,000. The import duty on raw cotton amounted to Rs. 60,62,000, as against Rs. 1,98,000 in 1934; on piece goods Rs. 5,39,00,000, against Rs. 1,96,00,000, and on yarns Rs. 39,34,000, as against Rs. 6,60,000.

Imports of Indian cotton into this country show a satisfactory increase, the value in 1933, 1934 and 1935 having amounted to Rs. 1,000, £3,117,000 and £3,493,000 respectively. There is in the country a generally expressed hope that the United Kingdom will materially her purchases of raw cotton from India, and it is unreasonable to presume that, by so doing Lancashire would diminish her case for considerate treatment in the matter of the export of her goods into India. The position of the Bombay cotton mills is still far from satisfactory and but few of them are working at a profit nowadays. Imports of goods from Japan are recovered by an ad valorem duty of 50 per cent. in addition to the quota imposes a limit on the quantity that country may import into India. It is not so much, therefore, competition from Japan that is affecting the results of the working of the Bombay mills as the fact that the industry is becoming decentralised. Practically wherever cotton is grown new mills are being erected which purchase their raw cotton on the spot and sell their goods locally. This would appear to be a condition of affairs that has come to stay, and undoubtedly it presents a serious problem for our mill-owners in Bombay.

TEA AND RUBBER

The regulation scheme for controlling exports of tea is entering shortly on its fourth year, and the International Tea Committee have decided that the 1936-37 quota for export shall remain 82½ per cent. of the standard export. The scheme has had the desired effect of reducing stocks to a more reasonable level. At the end of September 31 last they stood at 265 million lbs., as compared with 302 million lbs. at the end of the previous year. The exports of tea from India last year amounted to 324,700,000 lbs., valued at Rs. 20,07 crores, as against 320,320,100 lbs., valued at Rs. 20,41 crores, in 1934.

While prices have been on a level which, under normal working conditions, would not be unsatisfactory, it has to be remembered that restriction increases materially the cost of production and consequently 1935 profits are likely to be on a modest level. The fall in stocks and the knowledge of the extent of the imports that can be expected from regulating countries appear to have encouraged exporters, with the result that there has been some improvement in market conditions since the turn of the year.

As regards rubber, the average price for 1935 was 6d. per lb., against 6½d. per lb. for 1934, but the market has of late shown an improving tendency.

The total exports from Eastern ports last year amounted to 855,083 tons, whereof 68,595 tons were exported from Ceylon, India and Burma. The comparative figures for 1934 were 1,003,000 tons and 90,500 tons respectively. It would appear, therefore, that the international restriction scheme is beginning to take effect.

In Ceylon the tea industry is enjoying moderate prosperity, while prospects for rubber growers show improvement. So far as the native population is concerned, by far the most important product is the coconut and the recent improvement in the market for copra is very welcome, coming, as it does, after an extended period of depression.

CONDITIONS IN EAST AFRICA

Conditions in East Africa can scarcely be said to have shown much improvement during the past year. Maize, which at one time was looked upon as an industry with a future before it, is now unprofitable to cultivate generally speaking, owing to the large production in the Argentine and consequent low prices which prevail. Coffee has not been doing too well, owing to unfavourable climatic and market conditions. Sisal, however, has shown a remarkable recovery in price, and those growers who were able to maintain their planting during the lean years which they have passed through, are now able to make quite satisfactory profits. Gold mining may be said to be only in its infancy so far, but encouraging reports come from Tanganyika. The cotton crop in Uganda mounted to 247,000 bales, as against 279,000 bales in 1934, and this season's crop is expected to be about 300,000 bales. Nearly all of this crop is exported to India.

THE OUTLOOK

I mentioned, at the beginning of my remarks, that I have just returned from a visit to India, and you may be interested, perhaps, to have my impressions. Many people, Indians included, were inclined to doubt the advisability of thrusting on that great country the present system of popular government, and it is at least open to question whether some system better suited to people who from time immemorial had been accustomed to autocratic government could not have been evolved. However that may be, the responsible European community in India, whether official or commercial, has striven from the outset to make the reforms a success. Having been a member of the Bengal Council from the inception of those reforms, until my return to this country in 1923 and having been in close touch therefore with Indian sentiment, it was peculiarly interesting to me to see the advance that has been achieved in the interval. I think that in the early days of the reforms Indians as a whole could scarcely resist the thought that there must be a "catch" somewhere about these concessions, which were being presented to them, and it is a matter of common knowledge that many charges of base motives were levelled at this country by the extremists. Gradually, it seems, these suspicions are dying, and it is being recognised more and more that our motives are what we have always claimed for them, entirely honest. This recognition has had its natural effect. European and Indian are being drawn closer together, and while what I have said regarding the reforms refers particularly to those who take politics seriously, the repercussions, as you will appreciate, are felt in the business world. I have come back with the feeling that relations in India have improved definitely in the past few years, and I view the future with great hope. Doubtless there are and possibly there always will be "diehards" on both sides, but they are of little account when mutual good will pervades the mass of the races.

TRIBUTE TO THE STAFF

Let me conclude by assuring the staff, from the latest joined recruit to the general manager, that we—and I know you too—appreciate the good work they do for the bank, many of them under anything but pleasant conditions climatically, and in thanking them once again for their efforts on our behalf I should like to assure them that this is no perfunctory expression of our sentiments. That we have an excellent staff in the East is proved, not indeed that any proof is required; by the many remarks on the subject made to me during my tour by people brought into touch with our men. We know our staff at headquarters sufficiently well to render any such testimony unnecessary.

The report and accounts were unanimously adopted, and a vote of thanks to the chairman, directors, general manager and staff terminated the proceedings.

CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

IMPROVED RESULTS

DIFFICULT TRADE CONDITIONS

SIR W. FOOT MITCHELL'S REVIEW

The eighty-second ordinary general meeting of the shareholders of the Chartered Bank of India, Australia and China was held, on the first instant, at the bank's premises, 38 Bishopsgate, London, Sir William Foot Mitchell presiding.

Mr A. H. Ferguson (chief manager) having read the notice convening the meeting and the auditors' report,

The Chairman said: Ladies and gentlemen,—As one of the senior directors of the bank, I have been asked by my colleagues to preside at this meeting in the unavoidable absence, due to illness, of Mr Willis, our chairman. In January this year your directors invited Mr M. M. S. Gubbay to join our board, and you will be asked later on to confirm this appointment. There is one other item of domestic interest—namely, the retirement on pension of Mr Crockatt, our late chief manager. Mr Ferguson, who has had a long and varied experience of the bank's business in the Orient, has been appointed chief manager.

THE BANK'S BALANCE SHEET

In accordance with our usual practice, I propose to make a few comments upon the balance sheet. The total figures compared with 1934 show a decrease of just over £2,000,000, but it is only necessary to point out that the accounts of our agencies in the East are kept in their various local currencies, and in converting these into sterling, the latter will vary with the ruling rates of exchange. As you are aware, the silver exchanges, especially in Hong Kong, have fallen severely during the past year, and this fall in value accounts for the decrease in the sterling total of the balance sheet.

Turning to liabilities, current accounts and fixed deposits, which form, so to speak, the foundation of our business, show only small decreases, but, as explained above, this is a matter of exchange. Loans payable show a decrease of about £1,580,000, but this item must show considerable variation when we realise that often a large portion of these loans borrowed in the cheapest market available is required by our widespread agencies to finance exchange operations only when they can be made to show a profit.

Upon the assets side the changes are more numerous; cash in hand and at bankers shows a reduction of almost £1,500,000—a more normal figure—and in this connection I would explain that, in accordance with an ordinance of the Hong Kong Government passed last year, we were compelled to hand over to them the silver dollars held locally in accordance with our charter, as cover for our note issue, in exchange for that Government's certificates of indebtedness. Bullion on hand and in transit shows a reduction of £1,120,000 approximately, reflecting smaller movements of gold and silver between the countries in which we operate at the date of our balance sheet as compared with a year ago. Government and other securities show an increase of just over £2,000,000, an increase caused solely because there is at the moment no other available outlet for our resources.

PROFIT AND LOSS ACCOUNT

Turning to the profit and loss account, it is pleasing to be able to show, in spite of all these difficulties, an increased profit for the year of over £32,000.

Here I would refer you to the alteration in the wording of the profit and loss account, and in connection therewith I would remind you what the Chairman said last year with regard to a loss which occurred after the close of our financial year. He said: "I do not anticipate future profits will be affected by this failure."

The wording now adopted covers the transfer required to meet the loss referred to, as far as it is ascertainable at the moment.

Including the amount brought forward from last year of £177,394, the net profits for the year amount to £676,037. The interim dividend, paid in September last absorbed £210,000, leaving £466,037 16s. 1d. to be dealt with.

We propose to pay a final dividend of 14 per cent. for the half-year, to allocate £50,000 to the officers' pension fund, to

utilise £25,000 in reduction of bank premises, and to forward the balance of £181,037 to next year.

WORLD TRADE

You will have gathered from a perusal of the chair speeches at the annual general meetings of the big British that the recovery in domestic trade—which during the past year or so has principally revolved round the building-trade and ancillary industries—has been well maintained.

A welcome activity in steel and shipbuilding became apparent towards the end of last year, and this activity should in volume in these and their allied industries when the Government's new rearmament programme is put into full effect.

Due to the many quotas, exchange restrictions and currency troubles throughout the world, international trade, I am to say, has not shared in prosperity to the same extent as domestic arena.

As was pointed out in the Press the other day, the overseas trade of the United Kingdom for 1935 was £800 millions less than in 1929, and a good deal of this tremendous shrinkage may be laid at the door of the numerous restrictions to which it is just called attention.

It must be obvious, therefore, that the British overseas and the shipping companies, which depend so largely on international trade, are the worst sufferers from the many obstacles now put in the way of the free movement of goods through the world.

The competition for the exchange on the restricted trade is keener than ever, and margins are now whittled down to a fine point that, at the end of the year when we can strike a balance, the result is often very disappointing indeed.

It says much, therefore, for the acumen and capability of our overseas managers that their operations continue to enable them to maintain our present dividend.

The British Government's declared policy, as you know, is to try to arrive at mutual agreements between the various countries in the world with a view to the revival of international trade, but that they are finding many obstacles in their path, without saying the principal one being currency uncertainty, is a fact of the world over.

ESSENTIALS TO RECOVERY

I regret I can see little hope of a revival in world trade until returns to the Councils of the Nations, and to artificial bolstering of crops and industries—the product of which would be quite uneconomic without this assistance—way to a more rational policy of apportioning the production of goods to the countries which are best suited to produce them.

I am afraid, however, in the present temper of the world, time is some distance off, but it should be the aim of all of us who are interested in world trade to-day to do everything possible to assist the attainment of the object I have just mentioned.

In his speech last year Mr Willis dealt very fully with regard to trade in general in the various countries throughout the East, where this bank is represented, and the reviews received from our Eastern managers at the end of last year indicate no material change in the situation. I shall, however, endeavour to give you a short review of other matters of importance in which the bank is interested.

INDIA'S FUTURE

The Government of India Bill, which was recently passed, marks a great advance towards the solution of India's difficulties. At the moment, India is one of the countries which might be described as relying on self-sufficiency, and only a very small proportion—about 8 to 10 per cent.—of her total production is exported. Her economy is still overwhelmingly agricultural, and must so continue; although it took a considerable time for the slump to affect the Indian cultivator, his income during the past four years or so has steadily declined, with the result that pur-

chase of consumption goods have only been accomplished by recourse to the money-lender, or trenching on savings, which, from ancestral custom, have taken the form of hoarded silver and ornaments in these metals.

Exports of gold from India, since the United Kingdom went off the gold standard in 1931, have now reached the astonishing figure of £203,000,000; the phenomenal rise in the price of silver last year, due to America's silver policy, had the result of making large exports of the white metal from India to the world market—for the year 1935 the figure being 32,000,000 ozs. In Government finance continues to be very skilfully handled. There have been balanced Budgets now for several years, and the credit of India is higher than ever, while the glut of money—which is such a marked feature of the financial situation in this country—has resulted in interest rates which are nearly as low as in London.

Reference has been made from time to time with regard to the use of Indian cotton, and it is interesting to note that the United Kingdom imports of Indian cotton in 1934-35 amounted to 394,000 bales, compared with 350,000 bales in the preceding season and 230,000 bales in the year 1932-33.

Textile mills in Lancashire have now made adjustments to their machinery and equipment to enable them to use Indian types of cotton, and a large number of new market connections have been opened.

This is of comparatively recent growth, and now that Lancashire has shown this "beau geste" it is to be hoped that on her part may see her way to reciprocate by giving preference to the higher grade goods which she does not produce herself, but which Lancashire, by reason of her long-established technique, has made popular among the well-to-do in the peninsula.

CHINA AND SILVER

Mr Willis, in his speech last year, referred to China's currency problems and to the steps taken by the Chinese Government to meet the effect of the rising silver prices upon exchange quotations. At the same time the Government had endeavoured to avert a serious depletion of the country's monetary and financial resources by imposing an export tax on silver. Illicit trade, however, continued on a large scale. Currency scarcity, aggravated by the uncertainty of exchange, caused an abnormal rise in rates of interest, with consequent heavy falls in real values and in all investment securities. This in turn affected the stability of the smaller Chinese banks and financial institutions and some failures occurred.

On November 3 last the Government of China issued a currency law, the main provisions of which were:—The nationalisation of all stocks of silver, including those of private banks, and prohibition of the use of silver as a means of payment.

By making the notes of the three Government banks full legal tender, and by attaining the stability of the exchange level of the Chinese through the Government banks buying and selling foreign exchange in unlimited quantities at certain fixed differences.

Through the sliding scale arrangements in force a year before that China's currency had become detached from silver, and of decree nisi, the above pronouncement indicated that China had absolutely divorced herself from silver, but that she had adopted a managed currency.

For many centuries silver had been a very intimate factor in China's economic structure, although we have the strange anomaly that China is not a producer of that metal. Nevertheless, China had come to look on silver as her standard of value; it had been the medium of settling deficits and surpluses in her overseas trade, and the surplus wealth and the savings of her people had been invested in the metal as a matter of course.

It is naturally not without misgivings that we view this momentous change to a managed currency instigated by her Government. The principal reasons for these misgivings may be briefly summarised:—

- (1) The Budget remains unbalanced.
 - (2) Customs duties and other Government revenues are declining.
 - (3) The political situation in North China is very unsettled.
- The heavy import duties which have been imposed on a variety of commodities have had the effect not only of raising prices to such an extent that consumption has been curtailed, but also of making smuggling more attractive. Government revenue has consequently suffered.

It is, therefore, very necessary for the Government, to take steps either to augment their income, which may be difficult, or to effect radical economies in expenditure.

The great essentials for the success of a managed currency are integrity of the Budget and an efficient Currency Board or Reserve Bank which will effectively oppose demands for inflation in any form or disguise. Only thus can complete confidence in a paper currency be fostered and maintained.

A severe fall in the world price of silver would, of course, prejudicially affect the value of the silver reserves held against the note issues and might necessitate a readjustment of exchange parities. That in itself need not, however, adversely affect the scheme.

The present stabilised rate of exchange on a low level has already given a stimulus to the export of China produce, so that China's balance of trade shows a more favourable tendency in recent months.

In view of the close trade relationship between China and Hong Kong it was inevitable that the Hong Kong Government should follow China. Silver stocks held by the banks in Hong Kong have been taken over by Government and the exchange value of the Hong Kong dollar has been allowed to fall in closer approximation to the Chinese dollar.

The Hong Kong Government have not yet, however, announced the rate of exchange at which they are prepared to stabilise the local dollar. In order that there may be an alignment between the two currency units, it is only natural that Hong Kong should wait for China to give a fixity value to their dollar which savours of permanency.

PROSPECTS OF RUBBER

The production of rubber, as you are all aware, is controlled by an international committee under a scheme which was started in June, 1934, and which embraces all the principal producing countries. Taking all the many difficulties into consideration, I think it can be said that much good progress has been made towards placing the planting industry on a sound and healthy basis.

The year 1935—the first complete year of control—was a rather disappointing one from the producers' point of view, as the average price over the twelve months was only 6d. per lb., the highest price reached being 6½d., and the lowest 5½d. Moreover, in order to achieve this price, it was necessary to decrease production by 5 per cent. during each succeeding quarter of the year from 75 per cent. for the first quarter down to 60 per cent. for the last—an average production of 67½ per cent. over the whole year. A much more cheerful note can be discerned when the relative position of supply and demand at the end of last year is examined. Here we find that the recorded stocks of rubber in the world have declined during 1935 by about 100,000 tons, while consumption has been well maintained, and in some quarters notably increased.

Since the beginning of this year the price of rubber has risen to the neighbourhood of 7½d. per lb., and the prospects for 1936 are much more encouraging.

Siam has been passing through a very difficult period during the past few years, but the finances of the country continue to be well managed.

Our business in the Philippine Islands has been well maintained during the past year, and we continue to finance our fair share of the principal exports of the islands—namely, sugar, copra and hemp.

JAPAN

Japan's record of recovery and trade expansion since she abandoned the gold standard continued during 1935. Money was cheap, foreign exchanges steady, and exports reached the highest point in her history. Commodity prices continued to rise slowly, but this welcome improvement did not affect raw silk.

Alongside this record of trade expansion and recovery there was a continuance of heavy armament expenditure, but the gap in the budget (defence now accounts for 46 per cent. of Japan's expenditure) was met by domestic loans, which continue to be absorbed without any apparent difficulty, but one begins to wonder when saturation point will be reached.

An increase in the price of raw cotton would, I think affect Japan more seriously than Lancashire, owing to the greater devaluation of the yen, but this again would probably be offset by the steady and ample supplies of intelligent labour which Japanese industrialists have at hand, and to the lower standard of living of the workers. The continued depression on the land forces a steady flow of labour from the farms to the factories, which prevents wages from rising, and the main food of the workers, which is produced in Japan, is still comparatively cheap.

The report and accounts were unanimously adopted.

LONDON LIFE

CLERGY MUTUAL AND METROPOLITAN

FUNDS NOW £27,430,000

THOROUGHLY HEALTHY POSITION

GROWTH OF NEW BUSINESS

THE MINIMUM PREMIUM PLAN

MR REGINALD B. JACOMB'S ADDRESS

The ordinary general meetings of the London Life, the Clergy Mutual and the Metropolitan Companies were held, on the 1st instant, at 81 King William Street, London, E.C.4, Mr Reginald B. Jacomb (President of The London Life Association, Limited) being in the Chair.

In moving the adoption of the Report and Accounts, the Chairman said:—I have first to call your attention to the increase in the Total Funds to £27,430,000. Only two years ago I commented on the fact that the round figure of £25,000,000 had been passed, and we are thus nearly half-way towards the next milestone, namely Total Funds of £30,000,000.

ALTERATION OF VALUATION BASIS

The most important domestic event of our year has been the alteration in the Valuation Basis. Last year I indicated that a change in the rate of interest assumed was in contemplation, and we have now reduced the rate from 3½ per cent. to 3¼ per cent., the mortality as before being assumed to follow the Eastern Counties Rural Districts Table. As a net rate of interest of 4½s. 9d. per cent. was earned in 1935 on the Valuation Liability, there is a substantial margin of 15s. 9d. per cent. over the revised valuation rate. This margin is higher than would normally be required for a Bonus Reserve valuation, but the events of the last few years and the uncertain outlook ahead indicate that estimates of future interest earnings must be made with great caution.

The position in regard to Income may, in all the circumstances, be described as thoroughly healthy. The Annual Premium revenue has improved by £43,000 to £1,801,000, while the gross Interest revenue is up by £32,000 to £1,254,000. The latter increase should, I think, be regarded as particularly satisfactory in view of our investment difficulties.

The Expense Ratio was 45s. 7d. per cent. of the premiums, or 2d. per cent. less than last year. The mortality experience was again favourable in relation to the Eastern Counties Rural Districts Table upon which we base our valuation.

INCREASE IN SUMS ASSURED

The Sums Assured under new Life Assurance contracts effected during the year were for £2,805,000, representing an increase of £302,000 over the previous year. The tendency for the proportion of non-profit business to diminish has continued.

The Directors are particularly gratified by the response given to the reintroduction of the Minimum Premium plan. During its first complete year, assurances for nearly £200,000 have been completed. I feel confident that this figure will be largely exceeded when the advantages of the plan are more widely known and appreciated. The scale of premiums does not exceed the average of rates charged by other companies for similar non-participating contracts, and yet there is participation in profits by way of reduction of premium, which, starting in a small way at the end of seven years, may become very substantial in later years.

The older Reduction of Premium plan, of which the Minimum Premium plan is an offshoot, is still popular with intending policyholders, but, in view of the undoubted attractions which it offers, it is a matter of some surprise to the Directors that the volume of business written is not larger. If we take the typical case of a young married man of 30, the Annual Premium for an Assurance of £1,000 payable at death is exactly £30. This premium is subject to substantial and increasing reductions after the first seven years, and it is anticipated that in 25 to 30 years it will have ceased altogether by the rate of reduction reaching 100 per cent.

ADVICE TO YOUNG MAN

Now the point I would like to emphasise is that this young man has a reasonable expectation that, however long he may live, his total premium payments are not likely to exceed about

one-third of the Sum Assured. I am purposely putting contract, from an investment point of view, in its least favourable light, for clearly, if death occurs at a young age, a much proportion of the Sum Assured will have been spent in pre-
I know of no other form of investment where a man can, by making annual savings, have equally good conditions of securing, as a minimum, a figure approaching 2 per cent. appreciation on such savings for the benefit of his and family.

REDUCTION OF PREMIUM FUND

The total surplus of the year, excluding investment was £501,800. In the case of the London Life Reduction of Premium Fund the Directors are glad to be in a position to declare an increase of three in the rates of reduction follows five successive years in which increases of two have been declared, but it was never contemplated—even under the unfavourable conditions—that increases should invariably be limited to two. The Reduction of Premium Fund is in a position and, without looking too far ahead or making promises, the Directors anticipate that it should be possible to give three or four increases of three during the next dozen years.

The Reversionary Bonus Fund has had to provide a very large amount for strengthening of its valuation basis, but in this the Directors are again able to declare a Reversionary Bonus of 35s. per cent., calculated upon Sums Assured existing Bonuses.

You will remember that this Fund was started on July 1, 1914, and that almost immediately it became involved in all the difficulties and uncertainties created by the Great War. From a severe test it emerged successfully, and it has continued to make rapid strides ever since, until now, after a life of only 22 years, the Fund amounts to well over £5,000,000 and the total Sums Assured with vested Bonuses to over £11,000,000.

REMARKABLE GROWTH BY BONUS ADDITIONS

It may interest you to know that a policy for £1,000 in 1914 and still in force will have increased by bonus to nearly £1,500 upon its anniversary in 1936. This adds practically 50 per cent. to the original amount of £1,000, which is equivalent to the result which would have followed level rate of Bonus of 44s. per cent. throughout, *calculate the Sum Assured alone*. Over the period in question this is an excellent comparative showing, when due allowance is made for the exceptionally low rates of premium charged by the Association for these contracts.

For Clergy Mutual policyholders we have again declared a Bonus of 44 per cent. for Whole Life and Endowment Assurances with an increase for Whole Life policies of 4s. for each year attained over the age of 65. This makes the fourth successive year that a bonus on this scale has been declared, but it is fairly evident that, in the absence of a marked change in the situation, the average bonus rate over the next few years is to be nearer 43s. 10s. per cent. than 44s. per cent., subject of course to corresponding increases for ages over 65 in the case of Life policies.

METROPOLITAN'S CENTENARY

The celebration by the Metropolitan of its centenary during 1935 was thought by the Directors to justify a special distribution provided that circumstances were favourable. The Board has declared a special increase of ten in the rates of abatement which compares with four in each of the two preceding years. Metropolitan Members will, of course, bear in mind that this year's distribution is exceptional in character. There are, however, good grounds for anticipating that they will continue to receive yearly increases of not less than four for some years to come.

I hope that the facts and figures which I have been able to lay before you may speak for themselves, and that no further words of mine are needed to convince you of the inherent stability and continuing prosperity of the three Offices.

The Report was adopted, other ordinary business was transacted, and the proceedings terminated with a vote of thanks to the Chairman.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

THE HALIFAX BUILDING SOCIETY

SUBSTANTIAL DEVELOPMENT AND PROGRESS

SIR ENOCH HILL'S ADDRESS

Eighty-third annual general meeting of the Halifax Building Society was held, on the 30th ultimo, at Halifax, presided over by Sir Enoch Hill, J.P., F.C.I.S., president of the society.

The president, in proposing the adoption of the annual report and statement of accounts, said:—Turning to the operations of the society, the figures show that the total number of new accounts in all departments was 101,210, showing that new investors or depositors joined the society at the rate of approximately 2,000 per week. After allowing for withdrawals, the total number of investors' and borrowers' accounts open at the end of the year was 659,509, an increase of 37,186 accounts.

Total receipts for the year, excluding the amount received by way of redemption of investments, amounted to the large sum of £1,486,000, and the share and deposit funds have increased by £113,000, and now amount to £103,374,717.

The demand for new mortgage loans was exceedingly satisfied and the directors had to deal with a phenomenal number of applications for advances, mainly for the purpose of buying or building houses for the personal occupation of the borrowers. The number of new mortgages granted was 35,166, and the total amount advanced £21,712,318, which is a total not previously

reached. The amount now due upon mortgage securities stands at £328,000, an increase in the year of £7,843,242, and the total of borrowers is 214,455, being 15,533 more than a year ago.

It has always been the settled policy of the directors to give every possible encouragement and preference for applications for loans to assist in the acquisition of smaller homes on easy terms, and this object has been steadily kept in view.

The indication that the society's funds are being used mainly for the benefit of this class of borrower I would observe that in 1935 of 168,320 of the mortgages, the amount owing is less than £100,000 on the whole of the mortgages, including the large amount of average amount owing is only £400 each.

Total assets have increased to £108,087,466, an addition of £153 to the preceding year's total.

SURPLUS PROFIT OF £529,362

Surplus profit for the year, after providing for all expenses and income tax, amounted to £529,362. Out of this surplus the directors recommend the distribution, in addition to interest, of a dividend of 10s. per cent. to paid-up shareholders, Class 1, which is a dividend restricted to shares completed by monthly subscriptions, and a bonus of 1s. per cent. to the monthly subscribing shareholders. This distribution will make a total dividend for the past year to Class 1 shareholders of 11s. 6d. per cent. and to the subscription shareholders of 11s. 6d. per cent., free of income tax. This yield will, I have no doubt, give every shareholder satisfaction. They also recommend that £30,000 be added to the staff superannuation fund and that £50,000 be added to the office properties account.

It is interesting to note that the operations of the society during the past year have had the effect of improving, by the interest and bonus allowed, the financial position of investors and depositors to the extent of £3,260,483.

A source of strength and stability is the degree of liquid assets which now amount, including cash in banks, to £21,363,698.

STRIKING FIGURES

Throughout the 300 working days of the year the average daily receipts last year amounted to £129,600. In a period of eight years the amount due to shareholders has increased by £34,881,907, or 93 per cent.; the amount due to depositors has increased by £22,972,529, or 274 per cent.; the reserve funds have increased by £2,956,743, or 202 per cent.; the mortgage assets have increased by £47,179,137, or 121 per cent.; the open accounts have increased by 330,285 accounts, or 100 per cent. The proportion of assets represented by office properties has decreased from 1.2 to 0.7 per cent., and the liquid funds in trustee investments have increased from 11.4 per cent. to 15.2 per cent., whilst the cash in the bank has been practically stationary, moving from 4.9 per cent. to 4.6 per cent.

Under the provisions of the Housing (Financial Provisions) Act, the society has granted applications for mortgage loans to the value of £3,151,881 in respect of 10,213 houses.

Mortgages now completed under this heading amount to £9,582 in respect of 8,400 houses.

The past year has seen rates of interest upon capital generally assume a lower level and the rates applied by the society to both investors and borrowers have conformed very closely to present-day monetary values. This process has been achieved by gradual steps, and the average rate of interest to all classes of investors, exclusive of bonuses, payable by the society in 1936 is 5s. 9d. less per cent. than in 1935, and, on the other hand, the average rate of interest chargeable to borrowers in 1936 is reduced by 9s. 7d. per cent. compared with the rate charged in 1935.

There has been for the last year or more increasing evidence that the peak of the demand for houses by occupying owners has been reached, and that the prospect in the early future would be that these houses would be required at a less rate than for some time past. The directors have been in constant touch with the surveyors and valuers of the society, and have been adjusting values, having regard to the present and future circumstances.

RESIDENTIAL FLATS

It must be recognised also that there is an increasing tendency for urban populations, particularly in London and the larger cities and towns of the country, to adapt themselves to residential flats. This practice is very largely on the increase, and appears to be influenced to a great extent by the difficulties of transport from the centres of large towns to suburban areas, where independent houses would otherwise have to be erected. It is also due, to some extent, to considerations of employment, education, shopping, etc. This constitutes a revolution in housing policy, and it appears not unlikely that some part of the savings of building societies, which in the past have been invested in separate houses, may be employed in collective housing under satisfactory conditions.

The directors have, after careful inquiry and rigid valuation, accepted a limited number of these securities, which appear to be winning favour in public esteem.

Referring to the question of income tax, I would like to mention that the arrangement between the Building Societies' Association and the Inland Revenue for the payment by societies of all income-tax liability upon investment interest at a compounded rate has been renewed for a further period of years. It is interesting to note that during the past year the society has borne income tax to the amount of £503,454.

The society's reserve fund has been substantially increased, and, including the special reserve No. 2, which has been provided to meet losses arising from the sale of properties in possession, and which has never yet been drawn upon, of £691,854, and including the surplus profit of the year, £529,362, amount to a total reserve or undivided profit of £4,417,943. This profit remains after providing for all interest due and bonus allotted up to January 31, 1936. The proportion of the total reserve to the total liabilities amounts now to 4.36 per cent., compared with 3.89 per cent. a year ago. Ample reserves have also been built up for income tax and contingencies.

EMPLOYMENT OF FUNDS

There has been a better employment of funds during the year, the amount of cash in the bank having been reduced from £6,389,221 at the beginning to £4,966,727 at the end of the year. The proportion of total assets, represented by mortgages, has increased from 75.97 per cent. to 79.51 per cent., and the proportion of liquid funds, consisting of loans to corporations and local authorities, has been reduced from 17.03 per cent. to 15.17 per cent. It may therefore be said, with confidence, that the society has not only enjoyed a year of substantial development and progress, with a satisfactory profit factor and a largely increased membership, but that the quality of its business, on the whole, has never been of a higher character than at present.

Whilst the future progress of building societies may be checked to some extent by the circumstances of the times, the movement is of such importance to the nation and appeals so strongly to the instinct of home ownership on the part of our people, that it is likely to continue to extend substantially, if not so rapidly as in the past. Whilst it is incumbent upon me to adopt a cautious and prudent policy, yet I have sufficient optimism to think that there will still be room for great usefulness by building societies and that the Halifax will continue to bear a great and honourable part.

The report and statement of accounts were approved.

ASSOCIATED PORTLAND CEMENT MANUFACTURERS, LIMITED

INCREASED PROFIT AND DIVIDEND

MR P. MALCOLM STEWART'S SPEECH

The thirty-seventh ordinary general meeting of the Associated Portland Cement Manufacturers, Limited, was held, on the 30th ultimo, at River Plate House, Finsbury Circus, London.

Mr P. Malcolm Stewart (the chairman of the company), who presided, in the course of his speech referred with deep regret to the loss sustained through the death in October last of Sir John Pybus, who for more than 10 years had been a director of the company, and reported the retirement from the board of Lord Meston, owing to pressure of other business, and also of Sir William Firth.

BALANCE-SHEET FIGURES

Dealing with the accounts, he said: The total amount of the debenture stocks redeemed during the year amounted to £52,551. Reserves for taxation and contingencies have been increased through the trading account by £62,500 and now stand at £282,500. There has been added to the fixed assets account £185,913, but we have deducted £417,150 in respect of depreciation reserves for the year and also £65,359 in respect of debenture stock sinking funds. These two deductions, amounting to £482,509, leave the fixed assets at £5,940,761, a reduction of £296,596 on last year's figure.

Our investments in subsidiary companies at £2,383,334 show an increase of £235,897, this being due to the taking up of our proportion of the ordinary shares issued by the British Portland Cement Manufacturers, Limited, in November last. Other investments at £49,095 are up by £1,112. Investments in Government and other liquid securities at £429,656 show an increase of £244,160. These liquid investments, together with cash in hand at bankers and on deposit, amount to £1,272,214, or £476,799 more than a year ago.

The increase in our holding of ordinary stock of the British company is particularly noteworthy. That company in November last issued at par to its ordinary stockholders, *pro rata* to their existing holdings, the balance of its unissued ordinary share capital. This amounted to £320,000, of which our proportion was £242,851. Our total holding of the British company's ordinary stock exceeds £1,500,000, and represents 75 per cent. of its issued capital of £2,000,000.

We are in the happy position that the figure at which this investment stands in our books is some five millions less than its market value. Here is a potential reserve which does not figure in the balance sheet, but it cannot be omitted from any calculation determining the financial position of the company which, I am sure you will agree, is strong and sound.

The profit on trading at £1,041,693 compares with £810,037, an increase of £231,656, chiefly accounted for by a much improved turnover and by a somewhat higher average selling price. Interest and dividends on the total of the investments at £475,462 show an increase of £99,481. The total revenue for the year at £1,518,256 again establishes a record in the history of the company and is £331,352 more than last year.

After making provision for general depreciation, etc., there remains a balance of £857,728, out of which have been paid the half-year's preference dividend, £68,750, and an interim dividend on the ordinary stock of £175,000, leaving a balance available of £613,978. This permits the recommendation of the payment of the final dividend on the preference stock and of a final dividend of 15 per cent. on the ordinary stock, making 20 per cent. for the year. There remains a balance of £20,228 to be added to the carry-forward, which will then stand at £192,048.

BENEFITS OF PAST POLICY

When I last addressed you I dealt with the progress made since the reorganisation of the management, and referred to the policy laid down and reported to the shareholders in 1925, a policy which was designed to improve and extend the earning power of the fixed assets so as to make them more closely represent the figure at which they stood in the books. I can safely state that the fixed assets could not be created to-day for the sum at which they stand in the balance sheet. In addition to the cement plants with large areas of freehold and leasehold properties, having ample reserves of minerals, numerous houses and cottages, they include gas lighters, barges and motor lorries and many plants for the

manufacture of a variety of building materials, all of which contribute their quota of profit to the trading account.

In addition, the future has been made secure by the acquisition of further large areas of freehold and leasehold chalk and clay lands. We are also benefiting through having cancelled old contracts for the supply of river clay, which were an inheritance of the past. Thus we can use greater quantities of cheaply won and conveniently situated raw materials, a factor which favourably influences our cost of production.

While in a sense we have closed a chapter in the history of the company, the book remains open for more chapters to come. Some are already written. Realising that civil engineering and public works, which have been in a depressed state for some years, despite the boom in house-building, were likely to improve, we completed towards the end of the last year an important extension at our Swanscombe Works. Others are under construction, and will be operating in a few months. These will fully take care of our share of such increased demand as can be foreseen to-day. Indeed, the productive capacity of the country is more than equal to all requirements. There will be no shortage of cement.

FACTORS BEHIND BETTER RESULTS

Two factors stand out as the main contributors to the good results obtained; firstly, we enjoyed a much improved demand and made record deliveries, both in the home trade and as a total. There was but little change in the volume of the export trade, which was only maintained by determination to hold our markets regardless of the prices realised. Our export department bravely carries on a desperate fight against the difficulties generally associated with international trade, for which at the moment no solution appears to be forthcoming. The second factor was the moderate improvement in home trade selling prices secured for the increased deliveries. But there was another influence at work which should not be overlooked, and that was the coincidence of these two favourable factors at a period when the advantages accruing from the policy outlined was being fully felt. The persistent precautions taken in the past of providing liberal reserves and of wisely writing down have brought their reward. The thoroughness with which this policy had been carried out made it not only possible but reasonable that we should recommend to our stockholders a substantial increase of dividend on their ordinary stock. Not only have we made liberal allocation from the profit and loss account to reserves, but I can assure you that every one of the many items comprising the trading account has been dealt with by the application of the same old-established principles observed over many years. Thus have we obtained results dealt with the result accruing from a record year of favourable trading.

The sound co-operation which exists in the trade through the medium of the Cement Makers' Federation was effective during the past year, and successfully regulated prices on what I believe to be a fair and equitable basis as between manufacturer and consumer, and I look for this co-operation to continue. The council of the Federation does not neglect the interests of the consumer, and in December last reduced prices in certain markets where conditions justified so doing.

EMPLOYEES' PENSION SCHEME

Last year we made two advances in wages to our employees. We also agreed conditionally to an advance in the price of coal contracted for. After careful consideration the board has decided to institute a contributory pension scheme for the employees, the works, wharves and depots. The details of this scheme are now being worked out, and we hope to have it in operation by July 1st.

In concluding, I would say that while the demand for cement was fairly widespread arising from the improvement in the building and constructional trades, there is still headway to be made up in respect of civil engineering and public works. There are I am glad to say, distinct signs of revival in these important sections of the industry. Then there is the increased demand to be looked for from the further revival of industrial activity. I am therefore confident that the prospects are favourable, provide peace reigns, and anticipate submitting to you satisfactory results when, all well, we meet next year.

The report and accounts were unanimously adopted.

BRITISH INSULATED CABLES, LIMITED

Manufacturers of all types of bare and insulated cables and overhead conductors for the transmission and distribution of electrical energy, including allied accessories and house wiring systems, also aluminium and copper sheets and sections, electric resistance welders and rivet heaters, lead strip and glazing sections, meters, rail joint bonds, static condensers, etc.

FURTHER INCREASE IN PROFITS AND TURNOVER

SUBSTANTIAL ECONOMIES EFFECTED

WIDE RANGE OF ACTIVITIES

SIR ALEXANDER ROGER'S INTERESTING REVIEW

VALUE OF STRONG RESERVES

We need not refer to or emphasise the inflammable state of the world to-day, nor need we draw a picture of the chaos which would ensue if the European crisis were to be allowed to drift into war. Even if this instability were out of the way and the 25 years much-wanted peace commenced in Europe, we must do everything we can to avoid depleting our reserves. Kept in a strong position—and they can scarcely be too strong—they act as a deterrent to attack on the business of the company; further, they serve the useful and desirable purpose of being available to equalise the dividend in bad years.

BALANCE-SHEET ITEMS

Turning now to the items in the balance sheet, there are only a few comments I need make.

General creditors and contingent reserves have increased from £445,603 to £575,431, reflecting our additional turnover and requirements in connection therewith.

On the asset side you will observe we have raised the allowance for depreciation to £125,000. We deemed this expedient in view of the greatly increased size of our plant, and of the ever growing rate at which plant new and old becomes out of date through advance in technique and the necessity of keeping our factories in the forefront of every development. In addition to this provision, we spent last year £72,920 in repairs and renewals.

After adding the capital expenditure during 1935 and deducting £125,000 for depreciation, land, buildings, plant and machinery stand at £1,713,923, a net increase over the previous year of £26,145.

Investments in, loans and current accounts, and advances to, subsidiary companies at £1,164,207 are down by £98,554. The difference is mainly due to repayment of certain advances to subsidiary companies.

TELEPHONE INTERESTS REVERT TO BRITAIN

Other investments aggregate £1,497,433, an increase of £350,521, which is accounted for mainly by an important investment which we have been able to make.

As you are aware, this company many years ago transferred its telephone business to a separate concern called the Automatic Telephone Manufacturing Company, but remained connected with it by interlocking directorships and close business associations.

The Automatic Company, however, through its holding company, the International Automatic Telephone Company, became controlled by American interests who in turn undertook to provide the company with a guaranteed amount of business. In addition, they undertook to provide technique, patent experience and general world support.

These undertakings were handsomely carried out, and with the great development in telephony and allied businesses the two companies referred to are now in a prosperous condition.

It has been our ambition to see these companies again entirely owned by British interests, and owing to the new orientation of American business, following the crisis of 1928 and 1929, it became possible to negotiate, and last year we were able to acquire the share capital remaining in American hands. The shares are the "A" deferred shares of the International Automatic Telephone Company, which carry 50 per cent. of the votes of that company.

Throughout these negotiations our American friends met us in a way which made it well worth our while to acquire these shares, and we gratefully acknowledged their spirit of fairness, and the many pleasant and helpful relationships throughout the years of our close connection.

I may say that our association, however, is not terminated. We remain in close touch for the exchange of technique, patent and general commercial information—an interchange which is prudent.

PROFIT AND ALLOCATIONS

The profit amounts to £672,591, compared with £558,760 for the previous year. Adding the balance brought forward, amounting to £301,387, this gives us a total of £973,978. After deducting £95,118 for debenture interest, dividend on the two classes of preference shares, the interim dividend already paid on the ordinary shares, and directors' and trustees' fees, there remains the £778,860 to be dealt with.

We have allocated £125,000 to depreciation and propose to set £100,000 to reserve account. Out of the remaining balance of £53,860 we recommend that a final dividend of 10 per cent. be paid on the ordinary shares, making with the interim dividend already paid 15 per cent. for the year, and in addition, a cash bonus of 5 per cent., both, of course, subject to income tax and carrying forward to next account £303,860, a trifle more than as brought in.

DIVIDEND MAINTAINED FOR 17 YEARS

We have been able to maintain a dividend of 15 per cent. on the ordinary shares, through good and indifferent times, for 17 years, and in view of the increased earnings this year feel justified in recommending this bonus distribution of 5 per cent. We hope that the results of the company's operations in future years may enable us at times to repeat this gratifying departure from regularity.

I need not remind you, however, that we are a trading company, subject to variations of demand, and the prices we can command for our manufactures. It cannot be too strongly emphasised that a large proportion of our business is done on a small percentage of profit, and consequently you must realise that results such as we are now submitting can only be achieved if the volume of our turnover largely exceeds the amount of capital upon which a dividend has to be paid. A comparatively small fluctuation in the margin of profit rate, or the volume of turnover, can have an exaggerated effect up or down on the balance of the aggregate profit available for the ordinary shares, and it is our policy, as I am sure you would wish it to be, to stabilise the rate of dividend as far as possible.

In some quarters it has been suggested that we might have declared a share bonus, but with a full knowledge of all the surrounding circumstances, your board do not consider this would be prudent.

think will be most helpful to both sides in the business of international telephony and communications generally.

As I have stated elsewhere, an all-British group with combined assets of approximately £12,000,000 has been thus established in the electrical and communications world, embracing cable manufacturing and network construction, telephone manufacturing and network construction, telephone operating and financing.

INCREASING TURNOVER

As regards our general list of investments, we are satisfied as to their nature and character, and their beneficial effect on our business, and further that they are worth more than the amount at which they stand in the company's books.

Stocks and work in progress show a considerable increase due to a further rise in prices of material and the increasing amount of turnover we are doing.

Debtors and bills receivable amounting to £800,993 show a decrease of £36,589. This, of course, is essentially a fluctuating item. I might add that our bad debts only amounted to £3,388.

Finally, cash in banks and in hand at £279,229, although less than a year ago, is adequate to our normal current requirements.

WIDE FIELD OF ACTIVITIES

The long list of our manufactures, set out on the second page of the report, serves to give you some idea of the wide field covered by our activities. We pursue the policy of widening the base of our business in every direction, which is cognate to the transmission of electrical energy and the production in largest quantity of manufactures of the highest quality at the lowest possible cost.

That much abused idea known as rationalisation, heralded a few years ago as a panacea for all ills, has certain features of merit, if rightly applied, and in our case if exercised within the ambit of our own group of factories and subsidiary and associated companies. We are in course of dealing in this manner with certain of these, being convinced that we can thereby both lessen the cost of manufacture and also save a considerable annual sum in administrative charges.

Such a step as this, while ultimately to the benefit of the profit and loss account, involves temporarily additional expenditure and the need for writing off some capital items. This is being borne in mind, and due provision made accordingly.

We continue to collaborate with other companies in the industry to our mutual benefit, and in many technical developments which, far from diminishing, show signs of becoming more numerous.

"GRID" DEVELOPMENTS

The National Grid, which is a great tribute to the Central Electricity Board and its most able administrators, is functioning admirably, and great expectations have been aroused by the labours of the Committee, presided over by Sir Harry McGowan, engaged in considering aspects of distribution.

The initial cost of installing light and power in old houses and in many of the new houses which are being built throughout the country, prevents occupiers from enjoying the benefits of electricity which, in most cases, is within reasonable reach of their own doors. We have recently taken an active interest and have invested considerable capital in a company which is financing the wiring of domestic premises on the hire-purchase system. The operations of this company convince us that it fills a felt want. It has made a good start, and we are getting a share of the orders for cables and wires required for the purpose.

MULTIPLE WIRELESS RECEPTION

With a view to increasing the usefulness and earning power of the huge power distribution network throughout the country, we have also, during the past few years, spent a considerable amount of time and money in the design and development of a system whereby wireless broadcast programmes could be transmitted over the ordinary lighting and power cables.

This system has been perfected to a stage in which it has been demonstrated, by courtesy of the Liverpool Corporation, that it is perfectly possible to receive five or more wireless programmes in one's house merely by plugging in a simple apparatus to any ordinary electric light socket.

Practical application of the system has been prevented by the fact that electric supply authorities are not authorised to supply wireless services. Parliamentary powers to remove this disability were not applied for, pending the report of a Government Committee which has been considering the whole subject of wireless.

The report of this Committee has now been issued, and it will be seen therefrom that they recommend that the responsibility

for the whole of the relay wireless services in this country—matter if they are effected by the use of separate wires or the existing telephone or power cables—should be handed over to the Post Office.

If this recommendation is accepted by Parliament it will, of course, remove any chance we may have had for the exploitation of our system. We shall, therefore, put the results of our experiments at the disposal of the B.B.C. and the Post Office, hoping that at least through these authorities we shall witness the developments in which we ourselves had hoped to take a part.

BRITISH COPPER REFINERS

The result of the working of British Copper Refiners, Limited continues to justify financially your company's enterprise in the undertaking. The special quality and properties of the copper produced is creating an increasing demand, and in consequence we are adding to the capacity and scope of the refinery so as to be able to meet the substantial requirements of buyers outside the cable industry.

RAILWAY ELECTRIFICATION

On a former occasion I referred to the urgent need for the electrification of the railways in this country, particularly in the suburban districts. The success which has attended the enterprise of the Southern Railway in electrification leaves little room for doubt that electrification in other highly developed areas will be correspondingly successful. It is gratifying, therefore, that recently an impetus has been given to this work with Government help, and we are hopeful that as we have done much work of the same kind both at home and abroad, we may be awarded a share in this development.

PRESCOT UNDERTAKING

On previous occasions I have referred to the proposed sale of our electricity undertaking at Prescott to the Liverpool Corporation.

The agreement embodying the terms of transfer was signed some time ago, and the delay in completion has arisen from the necessity of holding a public inquiry by the Electricity Commissioners, and carrying through other formalities. Following on this the Parliamentary Order has now been drafted and signed by the Minister of Transport and is at present, in accordance with official procedure, lying on the table of both Houses of Parliament for ratification. We confidently expect that early next month we will be in a position to complete the transaction.

FOREIGN CONTRACTS

Our foreign business, in spite of all the well-known difficulties associated with it, remains reasonably good and indeed shows signs of expansion, and I may mention that we have at present two very considerable contracts in connection with railway electrification in course of construction, one in Brazil and the other in Poland. These contracts are being carried out in conjunction with the Metropolitan-Vickers Company, our portion consisting of the supply and erection of overhead track equipment.

OUTPUT RECORDS ECLIPSE

In many departments last year our output eclipsed all previous records, which is all the more remarkable when one considers the variety of our products. As you will realise from the list given in our report, it would be impossible to refer in detail to the various departments. Nearly 100,000 tons of manufactures passed through our gates, ranging from the heaviest cable work down to a length of enamelled winding wire sufficient to girdle the earth at the equator more than 125 times. Some of this wire, carrying five separate coats of enamel, has a diameter of half that of a human hair. Each coat of enamel is so fine that 250 coats would be required to produce the thickness of the paper on which our accounts are printed.

The prospects for the immediate future still remain good. Our order book so far shows an improvement on last year, and almost without exception the many manufacturing departments within our organisation are working to capacity.

WORKPEOPLE AND MANAGEMENT

As regards our workpeople, we are glad to be able to tell you that a spirit of goodwill and amity pervades all our factories. We study their interests and they respond loyally in willing service. We have recently decided, in conjunction with other cable-making companies, to raise the male adult rate of wages by 2s. per week, as a token of goodwill.

It gives me much pleasure also to record our great appreciation of the loyal and efficient service rendered by our officers and staff under our managing director, Mr G. H. Nisbett, whose activities and resourcefulness, I am glad to say, are unabated, and to whom personally the company owes so much of its success.

I now beg to move that the report and accounts be received and adopted, and that the dividends and cash bonus therein recommended be paid. (Applause.)

Mr J. Ferguson having seconded, the report and accounts, together with the dividends and cash bonus therein recommended, were approved.

The Chairman proposed, and Mr G. H. Nisbett seconded, the re-election of Mr J. Ferguson, Mr Eric Taylor and Mr D. Johnstone Sinclair as directors, and this was carried.

On the proposition of Col. D. Bates, seconded by Col. J. Tennant, the auditors, Messrs Chalmers, Wade and Company, were re-appointed.

In proposing a vote of thanks to the chairman, directors and staff, Mr J. McKay made the proposal that the portrait of Mr G. H. Nisbett, the managing director, should be painted and hung in the board room as a recognition by the company of his long and eminent services. The proposal was unanimously approved by the shareholders.

MAPLE AND COMPANY, LIMITED

SUBSTANTIALLY IMPROVED RESULTS

The forty-sixth annual general meeting of Maple and Company, Limited, was held, on the 27th ultimo, on the company's premises, Tottenham Court Road, London.

Mr Charles C. Regnart (the president) said:—I am pleased to tell you that both the volume and value of sales have not only increased during the year but are the best for the past five years.

The purchasing power of the public is still limited since no relief from taxation was given them in the last Budget. However, higher dividends are being received generally, and this should be reflected in our future turnover and resulting profits.

With regard to the foreign subsidiary companies, these, as a whole, are not making a substantial contribution to the profits of your company.

With regard to your company at Cheltenham, prices for contract work are still very cut owing to the keen competition existing. The factories, however, have been kept busy with many important works, including various contracts for the s.s. *Queen Mary*, s.s. *Orion*, Bank of England, and several town halls, etc., whilst they have on hand an important order for the decoration of the whole of the first-class public rooms on the new passenger vessel *Awatea*.

Other contracts include the decoration and furnishing of the saloons on the second of two ships for the Furness Red Cross Line, the first of which we recently completed, and six other vessels for British Tankers, Limited.

With the aid of our studio, which compares favourably with any other in the trade, we are manufacturing furniture which both from the standpoint of design and workmanship represent all that can be desired by those wishing to furnish their homes in the most artistic manner.

As to the future I think we may look forward with confidence to a steady expansion in the spending power of the public, and if the European situation is settled satisfactorily, your company should continue to increase in popularity with its ever extending clientele.

The directors recommend the payment of a final dividend of 1½ per cent., making a total distribution for the year of 7 per cent. The report and accounts were unanimously adopted.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To The Publisher, "The Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Address.....

INTERNATIONAL NICKEL COMPANY OF CANADA, LIMITED

RECORD SALES AND PROFITS—PROMISING OUTLOOK

Mr Robert C. Stanley, president of the International Nickel Company of Canada, Limited, addressing the shareholders at the annual meeting of the company, held on March 31st in Toronto, said that 1935 was an outstanding year in the history of the company. More nickel, copper and platinum metals were produced and sold than ever before, and net profits were substantially greater than in any past year.

While nickel was and would doubtless remain their most important product, it was of interest to note that the world copper industry was now recovering from a long period of trade depression. Consumption was increasing in the countries to which their copper was exported, particularly in Great Britain, where he believed the activities of the Copper Development Association had demonstrated the great value of an organisation of this character in expanding the market for this essential metal.

Notwithstanding certain extraordinary expenditures the company had gained in financial strength since the last meeting. Furthermore, net profits of \$26,086,527.47 had exceeded those of the previous high year 1929 by \$3,850,530.60.

DIVIDEND RATE TWICE INCREASED

Referring to the management's policy of dividend disbursements on the common stock, he might point out that the rate was twice increased during the past year. This record should assure the shareholders that in determining the dividend policy the directors were guided by the company's financial position and its progress. The amount paid on the common stock in 1935 was \$10,933,626.75, comparable with \$7,289,084.50 distributed during the preceding year. Dividends paid during the year on the 7 per cent. cumulative preferred stock amounted to \$1,933,898.75. The disbursement made last month was the 121st paid on these preferred shares, which now had an unbroken dividend record of more than thirty years. Suggestions were received from time to time that this issue should be retired in whole or in part for cash, or that the shares be converted into some other form of security carrying a lower dividend or interest rate. In this connection he might say that, careful consideration having been given to these suggestions, it had been deemed that it was not at present in the interest of the company or its common shareholders to retire or convert the preferred shares.

The business as now constituted had been built and was maintained upon the basis of an assured supply of nickel which necessitated at all times the maintenance of reserve productive capacity and adequate inventories of readily accessible stocks in the principal metal-consuming countries. In pursuance of this policy the management decided last year to increase smelter capacity at Copper Cliff by approximately 30 per cent. and to enlarge the Clydach nickel refinery in Wales by approximately 40 per cent.

NICKEL NOT A MUNITIONS INDUSTRY

During the past year in an address delivered at Birmingham, and in a letter accompanying the financial statement for the first six months of 1935, he endeavoured to make it clear that the business of mining, refining and selling nickel should not be classed as a munitions industry. Unquestionably a small percentage of their nickel output, in common with other metals, entered into the manufacture of armaments, and a war would temporarily increase demand for supplies of this character. Such a demand would be temporary only, and might be followed by a disastrous interruption of the company's well-established efforts in the great fields of peace-time industry. The experiences of this company in the aftermath of the world war need only be recalled to realise that war demand was neither desirable nor profitable for the nickel industry.

Sanctions prohibiting the sale of nickel to Italy have been imposed by Great Britain and Canada, and your company accordingly took prompt steps to avoid any breach on its part of such sanctions.

From the report submitted it was evident that the company had made substantial progress. This progress had been due to active sales development and research, supported by well-equipped mines and modern plant facilities directed by an experienced organisation. The nickel industry, from the standpoint of diversified usage of the metal, was comparatively new and its field for further expansion was still extensive. General business in the countries which provided the company's best outlets for nickel was improving and the copper industry as well was recovering from a long period of depression. Thus it would appear that to-day the prospects for a continuation of the company's growth were as promising as at any previous time in its history.

GENERAL REFRACTORIES, LIMITED (SHEFFIELD)

A YEAR OF CONTINUED PROGRESS

RECORD PROFITS

DIVIDEND INCREASED TO 15 PER CENT.

MR FRANK S. RUSSELL'S REVIEW

The thirty-sixth annual general meeting of General Refractories, Limited, was held at Sheffield, on the 31st ultimo.

Mr Frank S. Russell (chairman and managing director), in the course of his speech, said:—The year under review has been one of continuous progress, resulting in a record profit of £55,392, with sales 25 per cent. higher than ever before. I will, on this occasion, proceed first to review the accounts, though indeed they are presented in such full detail that there is very little to be added.

THE ACCOUNTS

The profit compares with £42,672 for last year, an increase of £12,720. The nominal capital was increased during the year by £100,000—mainly to provide shares and cash for use in the acquirement of other businesses—and stands in the balance sheet at £350,000. The issued capital was increased during the year by £94,000 to £325,000, 100,000 shares being offered to and taken up by the shareholders at 18s. 6d. each. Not all the new capital was employed for the full year, and in several cases the concerns purchased with it have not during 1935 advanced their re-equipment programme in time to pay dividends to us. We are looking for substantial yields in 1936.

The sums payable by the company are shown this year at £77,522 and—for the first time—have the final dividend, £22,669, included. Deducting this, the total is £54,853, which compares with £45,302, an increase of £9,451. The difference is a reflection of the larger trade done during the year and a small set-off against the increase in the sums due to the company. The reserve accounts now total to £119,856, as against £65,938 last year.

The profit and loss account shows a credit balance of £20,983 after deducting £12,000 appropriated to reserve accounts, as against £9,000 last year, and also—for the first time—the final dividend, £22,669. It compares, therefore, with £15,265 last year. Our land, buildings, plant, etc., now stand at £182,470, as against £155,093, £27,377 having been spent mainly on new plant and machinery, land and buildings. Investments and endowments, which stood last year at £80,644, are now more than doubled at £178,512, principally by the acquirement of the shares of further subsidiaries. "Sums receivable by the company," which stands at £129,174, as against £90,254—an increase of £38,920—is to a large extent another reflection of the enlarged sales made during the year.

The "Cash Account," which stood last year at £16,823, now stands at £24,015. The stock-in-trade has only increased from £28,118 to £29,190. We aim to keep stocks of goods ready for instant dispatch. Our ability to give quick delivery has secured many important orders. The "Balance of Assets over Liabilities," which was quoted last year at £94,630, is now £140,839, after regarding the final dividend as a liability. This year's balance is £68,878 higher than last year's.

FINAL DIVIDEND FOR 1935

The board recommends the distribution of a final dividend of 9 per cent., less income tax, making, with the interim dividend, 15 per cent. for the year, as against 12½ per cent. for 1934.

This has been decided. I shall issue a progress report on July 31st next, and the grammes in it are that we shall be able to accompany it with an to any ordinary dividend.

Practical application. I am interested to know that our combined output of wireless services, for the bricks of all kinds is now no less than 26,000,000, a figure which has been a matter of works, mines, quarries, etc., we control is. The report of this Committee is, and that the expenditure by the group on seen therefrom that was not less than £102,320, as against £73,246 last

that our expenditure in this direction consideration by the railway companies of refractories, and I take this

opportunity of thanking them for their considerable support in this way during the year.

This seems an appropriate moment to point out that we are wholehearted supporters of rail transport. Our expenditure on road haulage is a triviality, and I wish to place on record our appreciation of the efficient service rendered us by the railways during the year.

NO PRIOR CHARGES: A TRIBUTE TO THE BANK

Before leaving the accounts I will just point out that they show no debentures nor preference shares, no item of goodwill, and no indebtedness to our trusted financial counsellors, the National Provincial Bank, to whom we shall always be grateful for their support of our enterprises.

It is a pleasure to acknowledge the helpful services that such a bank can and does render to industrialists.

CONSOLIDATION OF ACCOUNTS

We have under consideration the advisability next year of either presenting consolidated accounts of our group or accompanying our own accounts with supplementary consolidated accounts showing the position of the subsidiaries.

The importance of some of our recent mergers seems to render some such movement advisable, and it would enable the shareholders to realise that the sum we receive from a subsidiary by way of dividend may be vastly different from the earnings of that company. As a matter of fact, in the year under review our receipts from allied companies are little more than a third of their earnings.

BRITISH SUBSIDIARIES

You will be glad to hear that the progress exhaustively reported on July 31st last was continued during the latter half of the year. We have, within the last few days, completed negotiations for a merger with the world-famous Glenboig Union Fire Clay Company, Limited, of Scotland, and for the purchase of another silica brickworks with an excellent profit record.

NO MONOPOLY

The directory printed monthly in the *Refractories Journal* shows no fewer than 307 concerns engaged in the industry in the country, and of this total our group forms a very small proportion. Our customers need have no fear, therefore, of our establishing a monopoly.

There is probably no trade in this country which, in proportion to its size and importance, contains so many scattered units, many of whom would be better off in every way if associated with a central organisation.

POLICY OF THE COMPANY

Our policy is to help purchase and instal in the works of each of those who join us the best labour-saving plant available to assist in the selection of the best processes with which to produce the most useful articles that can be made from the raw material available, and to give them the benefit of our widespread sales organisation, and our central scientific, publicity, engineering, financial and technical service.

Having thus helped them to produce a really useful article economically, we assist them to make it known to the people who need it in their daily work, a service of equal benefit to consumer and producer alike. It is our intention to continue to work on the lines defined.

NEW PRODUCTS

A recent issue of the interesting technical journal, *The British Steelmaker*, contained a suggestion that the output capacity of British Open Hearth Furnaces is only limited by the quality of the refractory materials of which they are built.

This emphasises the need for continued research in our industry, and we can assure the steelmakers of this country that we are

leaving turned no stone that might be made into a still better refractory.

A NOTABLE ADVANCE IN BASIC REFRACTORIES

Our most recent contribution to the forward movement is the Saxpyre Brick—a brick of entirely new character that, while withstanding the most intense heat, will also resist the action of basic slags and corrosive atmospheres without spalling or cracking. It fills a want long felt by basic steelmakers and we commend it to their notice.

In "Fused Refractories" we have done useful work during the year.

In "Diatomite" products we have made progress. The re-equipment of our works at Ambergate for the production of "Insulite" bricks and cement is now almost completed, and we have for several months been producing insulating materials of the very highest quality.

REDUCING COSTS BY HEAT INSULATION? A REMEDY FOR DEAR COAL

There is no section of our business that has during the year shown more signs of progress than that of heat insulation. Slowly but surely users of heat are beginning to see the folly of allowing the heat to be wasted by escaping into the atmosphere instead of doing the work for which it was intended. The actual and expected increases in the price of coal have had a remarkably stimulating effect in this direction, and have produced a great spurt in the interest shown in the use of insulation for reducing the consumption of fuel.

The fact that the presence of a layer of Insulite bricks behind a wall of firebricks saves as much as 20 per cent. of the coal, gas, or oil used in the furnace is so obvious and important that it is beginning to be regarded as a matter of course that insulation should be used. It is plainly wise for a user of expensive fuel to provide himself with the means of keeping his heat—which has cost so much—in the actual space where it can do its work. Why make it merely to waste it? There are no bricks in the world which prevent the passage of heat better than Insulite bricks do. Low-grade insulating bricks cost just as much to instal and do not save fuel like the highest grade bricks of all—"Insulite Bricks."

INTERNATIONAL DIATOMITE COMPANY, LIMITED

In my review of a year ago I said that we had secured rights over an important deposit of Diatomite and that arrangements had been made for the formation of a company titled as above, having for its object the exploitation of Diatomite for purposes outside the sphere of our own company. I referred to its value for the making of partition slabs, plaster boards, and the like, because of its extreme lightness and its sound and heat insulating properties, and to the wide field open for such products. During the year the best investigations into the available sources of supply of various types of diatomite have been made, and have resulted in the discovery of a further and more cheaply worked deposit of apparently suitable quality.

International Diatomite Company, Limited, has been registered as a pioneer company to study further developments in this field. Negotiations with regard to this inexpensive additional source of supply are in hand, and it is proposed to proceed with this enterprise if, and as soon as, satisfactory arrangements can be concluded.

OVERSEAS EXPANSION

We have been active during the year in the appointment of agents abroad, and are now newly represented in Newfoundland, India, Yugoslavia, Barcelona, Italy, Sao Paulo, Palestine, and Jamaica. The sales of our overseas department again constitute a record.

The works of our Belgian subsidiary are being extended to produce more varieties of refractories, and are being very well supported. They have now commenced to show a profit, and we are looking for good results this year. In Greece we have formed a subsidiary company to take charge of our many interests there, and particularly of the supplies of raw materials we draw from that pleasant country.

REARMAMENT AND WAR SCARES

I referred last year to the "armaments race" which was obviously commencing, and said that the consequent activity could not do other than increase the demand for steel. We now know that the nation is to spend £300,000,000 on its protection, and a large part of it will be spent on steel in various forms. There is no steel without refractories, and the demand for our output must in consequence be increased.

It is a matter of regret that this additional demand for their products should have been made upon our good friends the steel-

makers just at a time when they are so fully occupied with civil work, but "needs must when the devil drives." The great resources of our company—constantly being expanded—with its immense reserves of raw materials, efficiently organised and properly equipped, are at their service, and provide a unit under one control in every way more powerful and effective than any in operation during the Great War.

BUY BRITISH REFRACTORIES

We had all hoped gradually to be allowed to forget that calamity, but it appears that Europe will not allow us. A well-known writer says: "The memory of the Man in the Street is proverbially short, and one advantage of the recent incident is that it serves to remind us of the wisdom of encouraging the production of all essentials at home." With this we can only agree very heartily and draw the attention of British buyers of refractories to the fact that heavily protected industries owe to home producers—who help to consume the buyers' output—a positive duty of support, and to the further fact that the British refractories industry is not protected against foreign competition and that it can provide everything refractory that the nation needs.

THE OUTLOOK

In my opinion the prospects for this year are good. The business done in 1936 is well in advance of that done in the corresponding period of last year. Several subsidiaries which yielded us nothing in that way last year are expected to pay us dividends this year.

The selling prices of several of our products, which have for several years been sold at a very small margin of profit because of the unrestricted competition of a variety of small producers fighting for their existence in times of slump, have recently been advanced to a further level. Re-equipment and the installation of cost-saving plant and devices proceed on every hand, while the turnover of the business has now become so great that a small percentage of price increase or cost reduction has an important effect on annual profits.

Generally speaking, the outlook shows no reason for other than confidence, and I trust we may be spared to meet here 12 months hence to celebrate still another record year.

The Chairman concluded by moving the adoption of the report and accounts, which was seconded by Mr R. A. Kirby and carried unanimously.

At an extraordinary general meeting held subsequently the capital of the company was increased to £500,000 by the creation of 300,000 new shares, 70,000 of which are to be offered to shareholders on the register at March 31st on bonus terms in the proportion of one to 10.

Our New Information Service

The Intelligence Branch of the *Economist* has now been enlarged to meet the growing demand for economic and statistical information. The Department has been able to secure the services of a number of experts, and is prepared to supply information and reports on any branch of industry and finance as well as on international relations at a fee proportionate to the work involved.

LAW LAND COMPANY, LIMITED

INCREASED GROSS REVENUE

MR M. E. F. CREALOCK'S SPEECH

The fifty-third annual general meeting of the Law Land Company, Limited, was held, on the 1st instant, at Brettenham House, London, W.C.

Mr M. E. F. Crealock (the chairman) said: Ladies and Gentlemen,—It has probably proved a matter of interest to many shareholders to account for a reduction in the balance available of some £10,000 compared with last year in spite of an increase in gross revenue and the fact that the Board recommends no addition to the general reserve from this year's profits, this reserve being considered adequate at 50 per cent. of the total capital. The explanation is simple. I have to account to you for roughly £30,000, which is arrived at as follows:—Increase in gross revenue, £17,000; expenditure carried to suspense, £3,000; difference in profit, £10,000.

The items which go to make up this total are increases in repairs and renewals, £10,500; service and lighting expenses in connection with new and old properties and other matters, £7,500; rates, taxes and insurance, £6,500; interest, finance costs, revaluation and ground rents, £5,500.

As you see, the largest item to be dealt with is that of the cost of Repairs and Renewals. Your Directors have always paid special attention to the necessity for heavy expenditure under this heading and I have frequently directed your attention to this point and explained our policy which leads to an increased expenditure almost annually, but we look forward to having to do slightly less work in 1936—since 1935 was an exceptional year, during this period we had a number of leases expire entailing exceptional expenditure on the premises. I can assure you that we have no intention of allowing our properties to become old-fashioned or out of date in any respect. We could have taken some portion of our expenditure from the special reserve for depreciation of flat properties, but we have no hesitation in recommending to you the advisability of not only leaving the account intact but of adding to it as much and as frequently as possible until it has reached a more substantial figure.

RATING INCREASES

The next figure to be referred to is that relating to Rates, etc. It will be remembered that the London County Council some twelve months ago made enormously increased demands of local authorities and consequently local rates went up. This item alone cost us over £4,000 and we are now faced with a further substantial rise. The remaining £2,500 is due almost entirely to our new properties.

A considerable part of the higher Service expense is also due to the new properties, but in addition we have improved our service arrangements and are employing more men and women. It is increasingly difficult to find boys or very young men suitable for our work, consequently we have to employ older men at higher wages, but we are fully maintaining our standard of employees, which is a high one, although at a slightly higher cost.

You will, I hope, agree that enough has now been said of the past year and I will, therefore, proceed to tell you of our hopes for the future.

In the first place perhaps I should say that the result of the recent Quinquennial Valuation is as satisfactory as could be on the whole have been anticipated. Mr Ford has given very special and careful attention to this subject and the effect of his efforts will be felt very strongly for the next five years. His skill and experience have proved of great advantage to us and we owe him our gratitude for an enormous amount of work and its results. Considerable savings under this heading are assured.

EMPTYES ALMOST NEGLIGIBLE

Mr Durran and Mr Tarlton with their assistants have with considerable patience and tact, to say nothing of hard work, secured a great number of tenants of a very high standard. At the present time we have in our older office buildings so few emptyes as to be almost negligible and we are finding difficulties in providing additional accommodation for those of our tenants who are desirous of expanding. It is a very satisfactory feature that not only have we maintained our rents, but in a number of cases obtained higher rentals. Brettenham House is entirely let with the exception of a portion of the first floor. The shops as a whole must await the completion of Waterloo Bridge, though we have let those at the North end of the building which will not be very seriously affected by the work.

Of our Flat properties, I am very glad to be able to tell you that we have let to the best class of tenant and have very few on our hands, and the rents we are obtaining are satisfactory.

This state of affairs has only been brought about by carefully considered expenditure and admirable work. Although I have no wish to weary you with figures I feel sure that you will be glad to know that new lettings completed since we last met will bring in a total annual income of £55,598 and tenancies at rentals reaching £21,013 per annum have been renewed. Our properties are in great demand in spite of ever-increasing competition.

We need have no anxiety as to our income and with a close watch upon expenditure we can have no fears as to our dividend; though I have previously warned you that your Directors may not always be able to recommend a dividend at the present rate, the outlook at present is distinctly encouraging.

Just one word on the Balance Sheet. It will be observed that our properties have reached a figure of £1,985,205 6s. 11d. I should like to remind you that none of our properties have been "written up" and the figure at which the properties stand in the Balance Sheet may be taken as below the present market value. The Leaseholds Redemption Account is steadily increasing and is calculated to replace the purchase price of each building as the leases expire. The old mortgages are rapidly being paid off and the new ones will also be reduced each year. Temporary borrowing, particularly from our Bankers, has been on most reasonable terms and has enabled us to finance our new properties with unusual economy. It has not been necessary permanently to charge either Brettenham House or Carrington House and I am sure you will regard the Balance Sheet as showing a very sound state of affairs.

Finally, I want to express the very sincere appreciation of the Board to every member of the staff for their loyal work during the past year.

I may add that the call on employers to give facilities to their staffs to join Territorial and other defence corps which appeared in a number of newspapers had been contemplated by this Company a very long time before. We have always encouraged our staff in this direction.

The report and accounts were unanimously adopted, a final dividend of 5 per cent., making 9 per cent., the same as last year was declared, and the proceedings terminated with a vote of thanks to the chairman, directors and staff.

NUNDYDROOG MINES, LIMITED

DIVIDEND MAINTAINED AT 67½ PER CENT.

The fifteenth ordinary general meeting of this company was held on the 1st instant, at Southern House, London.

Mr V. Herbert Smith (the Chairman) said that an increased quantity of current ore was treated during the past year, amounting to some 17,000 tons; as the grade was 17 grains per ton, lower the production of gold from the current ore was practically the same. They were able to treat more than double the tonnage of old tailings, but the yield from this source averaged 21 grains per ton, compared with 35 grains per ton, and the production therefrom was only increased by 629 ounces. The total production from the mine showed a net increase of 621 ounces, being 111,7 ounces fine gold as against 110,536 ounces for 1934. In previous year's accounts, however, 1,577 ounces were included from the Balaghat reserves, only a portion of the profit from which belonged to the Nundydroog Company.

As a result of the better prices obtained and the small increase in production the value of the bullion produced was £23,081 greater, but the costs, largely owing to the increased tonnage were up by £24,060. It was satisfactory to know, however, that the cost per ton came out at 1s. less. A larger amount of development was done, the cost of which, compared with the quantity of ore milled, gave an increase of 4½d. per ton. The profit for the year was £317,563, a decrease of £3,312 on 1934. A final dividend of 4s. per share had been declared, payable on the 3rd instant, the total dividend amounting to 6s. 9d. per share, or 67½ per cent., the same as for the previous year. They had transferred £50,000 to income tax account, £15,000 to reserve fund, and £6,000 to insurance and contingency fund. Their subsidiary company, Indian and General Mining Trust, whose capital had been reorganised, reported a profit for the year 1935 and paid a dividend on the 27th ultimo of 6d. per share, free of income tax, which would be credited to the Nundydroog account for 1936.

Mr Kenneth Taylor gave a brief account of the development work done during the past year, and said that the net result of it had been the very satisfactory increase of more than 57,000 tons in the estimated tonnage of ore reserves.

The report and accounts were unanimously adopted.

ASSOCIATED ELECTRICAL INDUSTRIES, LIMITED

INCREASED PROFITS AND DIVIDEND

The thirty-sixth annual general meeting of Associated Electrical Industries, Limited, was held, on the 2nd instant, in London.

Sir Felix J. C. Pole (the chairman) said that a year ago he pointed out that the dividend of 6 per cent. was double the amount paid twelve months previously. This year the directors had the satisfaction of recommending a dividend of 8 per cent., after taking from the profits the sum of £103,635, being the whole of the premium paid on redemption of the mortgage debenture stock last July. The amount to be carried forward to the next account was also substantially greater.

With regard to the accounts, cash and Government securities now stood at £637,157, a decrease of £678,881, due to the necessity of providing funds for the redemption of debentures. The total amount of depreciation provided in 1935 by all the companies in the Associated Group was £349,593. During the past five years the Metropolitan-Vickers Electrical Company alone put to depreciation of plant a total of £420,000, or an average of £84,000 per year. The British Thomson-Houston Company's figure was even larger.

Shareholders might ask why such amounts as these were applied to depreciation instead of allowing them to remain in the profits available for distribution as dividends. The answer was that many years' experience in the engineering industry had shown that substantial depreciation of plant from year to year was essential, and that it was in the ultimate interest of the shareholders, and the directors were convinced that the carrying out of such a policy was a matter of supreme importance. The profit made during the year, including dividends from subsidiary companies, which dividends in the aggregate, after providing for contingencies, were less than the profits earned by the respective companies, amounted to £828,519, an increase of £241,637. The directors recommended a dividend on the ordinary stock at the rate of 8 per cent. per annum, less income tax, leaving to be carried forward £165,405, an increase of £52,069.

WORKS WELL EMPLOYED

All the company's works were well employed during the year. Output was maintained at a high level, and the volume of orders received was satisfactory, compared with previous years. Orders in hand on December 31, 1935, were on a higher level than at the end of 1934, and for the first three months of this year orders received were materially greater than in the first quarter of last year. The orders received by the Metropolitan-Vickers Electrical Company last year were the second largest in the company's history. At the point of view of money value the record year was 1920, at that time prices were much higher than they were to-day, here was no doubt that the amount of work actually turned out year constituted a record.

As regards apparatus of which manufacture was completed last year, special reference should be made to the 105,000 k.w. turbo-nator set for the Battersea station of the London Power Company—the largest ever made in this country, and it was interesting to know that the efficiency of the Battersea station had reached over 29 per cent. The 24,000 k.w. turbine, operating at a pressure of 1,900 lbs. per sq. inch, for the Thermotechnical Institute, Russia, had been installed and was operating satisfactorily. Two 75,000 k.v.a. transformers were completed for the Fulham station of the Fulham Corporation. These units were amongst the largest in the world. Many important orders were received during the year both at home and from overseas. The largest of these was the contract from the Brazilian Government for the electrification of a portion of the Central Railway of Brazil in and around Rio. From the South African Government they had had an order for 25 electric locomotives for the Natal Railway extensions. Business had been better at home and in the export market. This was especially the case in South Africa, while there was also an increase of activity in Australia, India and New Zealand.

In addition to making the largest apparatus such as turbo-alternator sets, etc., the companies of their group also made many varieties of electrical devices, including motors, welding equipments, electrodes, etc., and for domestic use appliances for refrigeration, heating, cooking and washing, and they had recently developed at Trafford Park a new material which should be extensively used in building schemes, in the manufacture of furniture and for other purposes. This was known as Traffolyte. Also they had three of the best-known and most popular brands of electric lamps on the market—Cosmos, Royal Ediswan and Mazda. Their lamp business continued to expand, and it was interesting to note that three out of four lamps installed in the s.s. "Queen Mary" were supplied by companies of the Associated Electrical Group.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the ten days ended March 31, 1936, amounted to £24,649,000, against ordinary expenditure of £13,396,000. After allowing for an increase in Exchequer Balances of £248,000, the operations for the week, as shown below, decreased the gross National Debt by £10,289,000 to approximately £7,909† millions.*

UNION CORPORATION, LIMITED

(Incorporated in the Union of South Africa.)

ABRIDGED REPORT OF THE DIRECTORS

In submitting to the Shareholders the Accounts of the Corporation for the year ended December 31st, 1935, the Directors state:—
The accounts are drawn up in Union of South Africa currency, English currency being taken at par.

The realised net profit for the year is £604,920 6s. 4d., to which £126,175 6s. 0d. brought forward from 1934 has to be added, making a total of £731,095 12s. 4d. An interim dividend of two shillings and sixpence per share was paid on November 22nd last. The Directors have set aside a sum of £40,188 18s. 10d. to the credit of Reserve Account, thus bringing that Account to a total of £1,280,000, and they have declared a final dividend of five shillings and sixpence per share, making a total distribution of eight shillings per share, or £560,000 for the year, and the balance of £130,906 13s. 6d. is carried forward to new account.

In dealing with the accounts for the past year, your Directors have deemed it advisable to provide for contingencies by reducing the book cost of some shareholdings both below cost and below market price. Your Directors have also thought it desirable to set aside a sum of £25,000 as a Reserve in respect of the Staff Pension Fund and for cognate objects not covered by that Fund. Suitable provision has been made for liabilities and contingent liabilities in respect of taxation in the United Kingdom and in other countries.

Holdings of Shares, Debentures and other securities have been taken into the Accounts at cost or under, but in no case above the market price of December 31st last, or, where no market price exists, above the Directors' valuation. At present market prices, these holdings show a very substantial surplus over the amount at which they stand in the Balance Sheet.

The operating results of the EAST GEDULD MINES have been as follows:—

	Tons milled	Gold output (and per ton)	Average price per oz.	Working costs (and per ton)	Working profit (and per ton)	Dividends (and per share)
1934	972,500	2,289,679 (47/1)	138s.	885,411 (18/5)	1,394,268 (28/8)	691,875 (8/3)
1935	1,152,300	2,560,088 (44/5)	141s.	1,059,373 (18/5)	1,500,715 (26/0)	776,875 (8/9)

The ore reserves at December 31st last were again estimated on a price for gold of 130s. per oz. fine, and on this basis amounted to 9,000,000 tons assaying 5-2 dwt. per ton over a stopping width of 59 inches.

The results of development work continued to be satisfactory.

The Company has an important shareholding in the neighbouring Grootvlei Proprietary Mines.

The operating results of the GEDULD PROPRIETARY MINES have been as follows:—

	Tons milled	Gold output (and per ton)	Average price per oz.	Working costs (and per ton)	Working profit (and per ton)	Dividends (and per share)
1934	1,116,000	2,239,639 (40/2)	138s.	826,579 (14/10)	1,413,060 (25/4)	986,078 (13/6)
1935	1,160,300	2,303,587 (39/8)	141s.	837,533 (14/5)	1,466,054 (25/3)	1,022,600 (14/0)

The ore reserves at December 31st last were again estimated on a price for gold of 130s. per oz. fine, and on this basis amounted to 9,000,000 tons assaying 5-2 dwt. per ton over a stopping width of 57 inches.

In addition to the profits earned from its own operations the Company during the year

received revenue from other sources amounting to £314,162, which figure includes dividends on its shareholding in East Geduld Mines.

The operating results of the MODDERFONTEIN DEEP LEVELS have been as follows:—

	Tons milled	Gold output (and per ton)	Average price per oz.	Working costs (and per ton)	Working profit (and per ton)	Dividends (and per share)
1934	568,500	1,333,991 (46/11)	138s.	434,446 (15/3)	899,545 (31/8)	600,000 (6/0)
1935	573,000	1,080,723 (37/9)	141s.	466,800 (16/4)	613,923 (21/5)	450,000 (4/6)

The ore reserves at December 31st last were again estimated on a price for gold of 130s. per oz. fine, and on this basis amounted to 800,000 tons assaying 3-3 dwt. per ton over a stopping width of 59 inches. Included in the 800,000 tons are 84,000 tons of ore assaying 2-3 dwt. over 56 inches, which were developed on the Kimberley Reef from two shallow prospecting shafts.

City, or to the London office of the National City Bank of New York, 36 Bishopsgate, E.C.2.

A SOUTH YORKSHIRE COLLIERY MERGER SCHEME.—A scheme has been prepared for the partial amalgamation of six of the leading colliery companies of South Yorkshire. The companies involved are: Denaby and Cadeby Main Collieries, Rossington Main Colliery, Dinnington Main Coal, Maltby Main Colliery, Stratford Collieries, and Darton Main. The proposed new company will be known as Amalgamated Denaby Collieries. The scheme has been formulated by the six companies in conjunction with Yorkshire Amalgamated Collieries, which has a controlling interest in the first four companies mentioned. An application is being made to the Court of the Railway and Canal Commission for confirmation of the scheme.

KREUGER AND TOLL COMPANY.—A review of activities of Kreuger and Toll Secured Debenture Committee from April, 1932, to March, 1936, has just been issued. The secretary to the committee is Tristan Antell, 52 Broadway, New York, U.S.A.

ELDER DEMESTER LINES.—Gross profit for 1935, £615,288, compared with £522,103 for 1935. Expenses £155,561, against

£167,037. Depreciation provided for £275,000, against £240,000. Ordinary dividend 5 per cent., absorbing, £96,875 against 3 per cent. absorbing £58,125. To reserve, £75,000, against nil. Carry-forward, £113,322, against £119,694. The report states that the future for West Africa is more hopeful than it has been for many years.

AMALGAMATED ANTHRACITE COLLIERIES.—Trading profits of Amalgamated Anthracite Collieries amounted to £272,310 in 1935, after providing for profits and losses of subsidiary companies. This compares with £409,166 in the previous year and £361,517 in 1933. After paying debenture interest, etc., the net profit is £143,112, against £292,183. Provision for the redemption of debenture stock and funding certificates and interest on the funding certificates requires £136,112, leaving £144,547 to carry forward. The directors have decided not to pay any dividend on the preference shares for 1935. Meeting, Hotel Victoria, W.C.2, April 6th, at 12.15 p.m.

ROYAL MAIL LINES.—Gross revenue in 1935 of Royal Mail Lines showed an expansion from £792,467 to £936,414. After providing for expenses, fees, etc., profits were over £144,000 higher, at £534,935. Depreciation on the fleet of £343,600 has been allowed, against £331,025 in 1934, and, in addition, £130,000 is provided for fleet replacement "in view of the high average age of the vessels." A first dividend of 3½ per cent. is to be paid on the 4,000,000 £1 shares, and £12,136 is carried forward, against £59,301. Trade investments, in the balance sheet, have risen from £7,037 to £93,900, owing to certain trade investments formerly owned by Royal Mail Steam Packet Company having been acquired. Investments in gilt-edged and corporation stocks appear at £878,253, against £602,877. Cash has risen from £321,697 to £456,453.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE quietude which has recently characterised the majority of the principal commodity markets shows no signs of lifting, and trading was generally featureless this week. Price movements remained rather irregular, no general tendency being discernible.

Business in iron and steel continued active at firm rates, but quotations for non-ferrous metals were again irregular. Copper scored a marked improvement, mainly in consequence of a more active demand; while tin was again dearer owing to the continued scarcity of the metal; it appears that both Bolivia and Nigeria are still experiencing difficulty in producing their quota. By way of contrast, spelter suffered a setback this week on the absence of definite news regarding the resuscitation of the Zinc Cartel, and lead was slightly easier. The coal trade remained patchy, and conditions in South Wales and in Durham leave much to be desired.

The statistical position of rubber improved further, and trade demand was steady. But the uncertainties of the international outlook caused liquidation in some quarters, and prices consequently showed no net change on the week. The market in oils and oilseeds was dull, but the downward movement of prices was checked. Wool remained a firm market, and American cotton rose in price. Egyptian cotton, on the other hand, lost ground this week; quotations for other textile fibres were mainly unaltered.

The sagging tendency of prices on the London Provision Exchange was checked, bacon, butter and cheese being dearer than they were a week ago. The market in sugar was also strong, but considerable irregularity was displayed at the Mincing Lane tea auctions, and quotations for certain grades declined. Liverpool wheat futures are practically unchanged, although London spot quotations were rather lower. The rise in maize prices has halted.

Meanwhile American prices remained stagnant. Thus Moody's index of the dollar prices of staple commodities stood at 169.8 on Wednesday, against 169.6 a week earlier, 169.4 a month ago and 151.7 on the corresponding day last year.

COAL

SHEFFIELD.—The brisk call for best Yorkshire steams is a feature of the situation. Secondary quality steams are a little easier. Export demand for prompt shipment is quieter, but more forward inquiries are coming in, and it is hoped that these will materialise. Prices are not quite so firm as they have been. Sales of most classes of fuels continue on a heavy scale to the inland market, and there is no "free" blast furnace coke. The output of the ovens just suffices to meet requirements under contract. The quotas for April have been reduced by 2½ per cent. for output and inland trade and 5 per cent. for export.

Quotations:—Best South Yorkshire hards, 19s. to 19s. 6d.; Derbyshire do. 17s. 9d. to 18s. 3d.; screened gas coal, 19s. to 20s. 6d.; coking smalls, 14s. 6d. to 15s.; slacks, 10s. to 13s. (all f.o.b.);

best South Yorkshire house, 23s. to 24s.; Do., Derbyshire, 22s. to 23s.; blast furnace coke 18s. to 18s. 6d. (at pits and ovens).

NEWCASTLE-ON-TYNE.—Northumberland steam collieries are working regularly and have little coal available until the end of April. Large screened steam coal is in active demand from the Scandinavian countries and smalls have a ready sale to Public Utility Companies in the home market. The position of manufacturing coal produced in Durham is unfortunately much different, the trouble being that although the home market is very brisk and absorbing increased quantities, the export market is dead, and does not give any indication of improvement. Idle time, through lack of export trade, is now frequent among coking collieries. Coke continues to be a very firm market, and at the moment supply is below requirements.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 16s.: smalls, 13s.; Howards, Bentinck, Newbigin, screened, 15s. 6d.: smalls, 13s.; Tyne Prime, large, 14s. 6d.: smalls, 12s. 6d.; Hartley Main, large, 14s. 9d.: smalls, 12s. 6d. **DURHAM.**—Lambton/South Hetton, screened steam, 15s.: smalls, 13s. 6d.; Special gas, 15s.; Holmside, Ryhope, Best, unscreened, 14s. 8d.; second-class gas, 13s. 6d.; coking, unscreened and/or smalls, 13s. 3d.; prime unscreened bunkers, 15s.; second-class unscreened bunkers, 14s.; prime foundry coke, 24s.; Newcastle and District gas coke, 24s. 6d.

GLASGOW.—A bright feature in the Scottish coal market during the past few days has been the firmness of washed nuts. Foreign buyers have been showing increased interest in these qualities, and as inland and coastwise demands remain brisk, high prices are secured for any business arranged, the collieries being reserved in contracting far ahead in view of pending selling arrangements. Little fresh export business is passing in round coal, but here also home requirements are still good, and the position all round is fairly satisfactory, although Lothian producers would welcome orders.

Shipment prices f.o.b. district ports:—**LANARKSHIRE.**—Ell best, 17s. 6d. split best 19s. 6d.–20s.; splint second, 17s.–18s.; navigation, screened, 15s.–15s. 6d.; navigation, unscreened, 14s.–14s. 6d.; steam, screened, 15s.; trebles, 15s. 6d.; doubles, 16s.; singles, 15s. 6d.; pearls, 13s. 6d.–14s.; dross, 12s. 6d. **FIFE.**—Best unscreened navigation, 13s. 3d.–13s. 6d.; unscreened navigation, 13s.; first-class steam, 14s. 9d.–15s.; third-class steam, 14s.–14s. 6d.; trebles, 15s.–16s.; doubles, 15s.–15s. 6d.; singles, 14s. 9d.–15s.; pearls, 13s. 6d.–14s. **LOTHIANS.**—Best splint, 14s. 6d.; prime steam, 13s. 6d.–14s.; secondary steam, 12s. 9d.–13s.; unscreened navigation, 14s.; trebles, 15s.; doubles, 14s. 3d.–14s. 6d.; singles, 14s. 3d.; pearls, nom. **AYRSHIRE.**—Best unscreened navigation, 15s. 6d.–16s.; steam, 14s.; trebles, 15s. 6d.; doubles, 15s.; singles, nom.; pearls, nom.; dross, nom.

CARDIFF.—There has been practically no change in the position on the Cardiff coal market during the past week, and again the restricted volume of business has been insufficient to absorb the quota allowances of the collieries. Many of the pits have been working part time. There is a glut of large coal, but the scarcity of small and sized grades has been accentuated by the reduced production of large coals, and quotations for these grades have further strengthened. The market for coke continues strong, and there is a moderate inquiry for patent fuel, but pitwood prices have eased under the reduced requirements of the collieries. The French import quota of 58.5 per cent. is to remain in operation during April. The French authorities have agreed to the transfer of the control of licences from Paris to London, and some of the practical aspects of this change in the administration of the licensing system are to be considered at a conference between representatives of British colliery owners and French importers in Paris on Friday. British exporters are perturbed by this new arrangement, and have appealed for the intervention of the Executive Committee of the

The Full Report and Accounts, with general plan of pr A. MOIR & CO., 4 London at 11.4.36, but lower grade teas were generally easier in price.

VEGETABLES.—At Covent Garden prices of vegetables have the London generally shown an easier tendency on heavier arrivals, states The Fruitgrower. This applies to cucumbers, which, however, continue to encounter a fair demand. Tomatoes have made a

FLOUR.—Prices show little alteration. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 29s. 6d. per 280 lbs., against 29s. 6d. a week ago; delivered London, 28s. 6d., as compared with 28s. 6d. a week ago. Manitoba patents, ex store, 26s. 6d. to 28s. 3d., against 27s. 3d. to 29s. a week ago. Australian, ex store, 22s. to 22s. 6d., against 22s. 3d. to 22s. 6d. a week ago.

BARLEY.—Prices of feeding barley have shown a tendency to harden this week. Supplies of English malting descriptions in growers' hands are now of small dimensions and business is therefore limited. "May" futures were quoted at 38½ cents per bushel in Winnipeg on Wednesday, against 38½ cents a week ago and 39½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 21s. 6d. to 23s., as against 22s. 6d. to 24s. a week ago; "English malting" at farm, 25s. to 40s. against 30s. to 40s. a week ago.

OATS.—Demand remains quiet, and prices have shown little alteration this week. On Wednesday, "May" futures were quoted at 25½ cents per bushel in Chicago, against 25½ cents a week ago and 28½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 17s. to 19s. per 336 lbs., against 17s. to 19s. a week ago; "English White" at farm, 17s. to 19s., against 17s. to 19s. a week earlier.

MAIZE.—Although demand has turned rather quiet, prices have again recorded an advance on the week. "May" futures were quoted on Wednesday at 60½ cents per bushel in Chicago, against 58½ cents a week ago, and 61½ cents last month. Quotations in London, Wednesday: "Plate," landed, 19s. 6d. per 480 lbs., compared with 19s. 3d. a week ago; "Plate," ex ship, 18s. 6d., as against 18s. 3d. a week ago; "Plate," March, 18s. 6d., as against 18s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £5 5s. per ton, as against £5 2s. 6d. to £5 5s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to March 28	155,384	152,463	265,111	251,142
30 weeks to March 28	7,194,318	8,781,136	10,808,425	11,024,102
Average price of English wheat per cwt.	s. d. 5 1	s. d. 4 4	s. d. 4 8	s. d. 6 5

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Mar. 26, 1932	Cwts. 81,082	Cwts. 42,701	Cwts. 29,198	s. d. 6 1	s. d. 8 1	s. d. 7 5
Mar. 25, 1933	155,384	94,059	37,902	5 1	6 3	5 10
Mar. 31, 1934	152,493	31,031	23,851	4 4	8 5	6 0
Mar. 30, 1935	265,111	89,553	38,449	4 8	7 4	6 11
Mar. 21, 1936	294,868	93,960	44,257	6 4	7 9	6 0
Mar. 28, 1936	251,142	101,407	37,553	6 5	7 7	6 0

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Apr. 3, 1935	Dec. 31, 1935	Mar. 25, 1936	Apr. 1, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	86½	84½	82½	81½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	96½	101½	96½	96½

The visible supply of wheat in Canada amounts to 112,300,000 bushels, against 113,923,000 bushels last week, and 108,539,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—The official quotations were advanced all round last week-end, and demand has subsequently been rather quiet. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 87s. to 95s.; Canadian, 88s.; Danish, 96s.; as against 86s. to 94s. a week ago, respectively, a week ago. Arrivals in the market are rather light, but the market is not quite so firm as they have been. Sales of most of the week's output on a heavy scale to the home market, and the output of blast furnace coke. The output of the ovens just sufficient requirements under contract. The quotations for April have been advanced by 2½ per cent. for output and 5 per cent. for trade and 5 per cent. for export.

Quotations:—Best South Yorkshire, 19s. to 19s. 6d.; Derbyshire do, 17s. 9d. to 18s. 3d.; screened gas coal, 19s. to 20s. 6d.; washed coking smalls, 14s. 6d. to 15s.; sacks, 10s. to 13s. (all f.o.b.); appeals.

11s. 5d. in March and 11s. in the same month of last year. The curers will also pay to the Pigs Marketing Board 2d. per score or every pig delivered and accepted during this year, to form a pool out of which will be paid the bonus on pigs delivered during the first four months of the year, in accordance with the 1936 Bonus Scheme.

BUTTER.—Colonial makes have been less freely offered this week and have risen in price. Danish butter has, however, realised lower rates. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 87s.; Australian, choicest salted, 87s.; Danish, 112s.; compared with 80s. to 81s., 80s. to 81s., and 120s., respectively, a week ago.

CHEESE.—The tone of the market has been firm, and prices have scored a recovery. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 72s. to 86s.; Canadian, finest coloured, 63s. to 64s.; and New Zealand, finest coloured, 53s., against 70s. to 80s., 63s. to 64s., and 50s. 6d., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. In London Accra cocoa has been a steady market this week. On Wednesday, last, good fermented new crop, "April-May," was quoted 23s. 6d. per 250 kilos, c.i.f. Continent, against 23s. 4½d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 12,770 bags; delivered, for home consumption, 5,402 bags; exported, 109 bags; stocks, 137,984 bags, against 198,119 bags a year ago.

COFFEE.—The London spot market remains steady. In New York demand has been quiet, but spot quotations are unchanged on the week. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 32 cwt.; delivered, for home consumption, 106 cwt.; exported, nil; stocks, 11,600 cwt., against 13,664 bags a year ago. Central and other South American, landed, 11,246 cwt.; delivered, for home consumption, 2,855 cwt.; exported, 1,459 cwt.; stocks, 100,173 cwt., against 93,859 packages last year. Other kinds, landed, 9,415 cwt.; delivered, for home consumption, 3,501 cwt.; exported, 1,425 cwt.; stocks, 159,421 cwt., against 115,085 packages last year.

EGGS.—In Tooley Street on Monday the market was quiet. Prices were generally easier owing to an increased home production coupled with larger imports of cheaper varieties. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb. realised 8s. 6d. to 9s. per 120, as against 9s. 3d. to 9s. 9d. last week, while Danish (15½ lb.) made 8s. to 8s. 3d. per 120, against 8s. to 8s. 3d. last week.

FRUIT.—According to *The Fruitgrower*, a good demand has been experienced for all kinds of fruit at Covent Garden during the past week. Apples continue to receive most attention. The first consignment of Australian were in quite good condition and encountered a steady inquiry. South African apples are showing better form and colour this season. South African pears are selling at steady prices, while plums from the same source are not finishing. English forced strawberries, which are now of better size and colour, are realising from 12s. to 30s. per lb. Although selling at lower prices, South African grapes are a prominent feature. Bananas have improved in price, while quotations for grapefruit have also hardened. Lemons, in short supply, are very dear. Business in oranges remains active, but prices have eased on heavier arrivals.

MEAT.—Demand at Smithfield Market has been irregular this week, prices showing little alteration. On Wednesday last Argentine chilled hindquarters were quoted at 3s. 2d. to 3s. 6d. per 8 lbs., as compared with 3s. 2d. to 3s. 6d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. 2d. per 8 lbs., against 3s. 4d. to 4s. 2d. a week ago. According to the Smithfield Market office report, supplies during last week amounted to 8,915 tons, an increase of 546 tons on the corresponding week last year. Beef and veal accounted for 4,789 tons, mutton and lamb 2,512 tons, and pork and bacon 1,028 tons, as compared with 4,503, 2,522 and 1,089 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed 4 tons; delivered, 8 tons; stocks, 1,685 tons, against 2,307 tons a year ago. White, landed, 13 tons; delivered, 99 tons; stocks, 12,699 tons, against 19,404 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. ex warehouse on Wednesday, as compared with 8s. 6d. per cwt. a week ago. "April-May," in singles to Continer and U.K., was quoted at 7s. 7½d. per cwt., against 7s. 7½d. per cwt. for March-April a week ago. Movements in London during the past week were as follows: Landed nil tons; delivered 33 tons, stocks, 1,240 tons against 1,523 tons a year ago.

SUGAR.—A firm tone has been displayed on the London market this week. In New York a similar tendency was in evidence as prices have scored a substantial gain on the week. The spot price in New York on Wednesday was 3.75 cents per lb., as compared with 3.60 cents per lb. last week and 3.45 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "May delivery" at 4s. 10½d., against 4s. 9½d. to 4s. 10½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 9,976 tons, against 9,402 tons last week and 3,095 tons in the same week of last year; deliveries, 15,134 tons, against 15,155 tons last week and 17,500 tons last year; stocks, 230,912 tons, against 236,070 tons last week and 184,042 tons last year.

NEW STATE AREAS, LIMITED.

(Incorporated in the Union of South Africa.)

Issued Capital - £1,514,037 in Shares of £1 each.

DIRECTORATE.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on an Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
1935	d.	d.	d.	d.	d.	d.	d.
1936	11-10	12-74	16-18	9-31	8-25	9-63	12-24
.....	13-12	13-14	15-02	10-74	10-55	12-03	13-40
.....	13-07	13-12	15-17	11-05	10-33	11-94	13-29
.....	13-23	13-17	14-93	11-09	10-53	11-76	13-50
.....	12-96	13-75	14-90	11-15	10-77	11-97	13-34
.....	12-97	14-05	15-45	11-06	10-73	12-04	13-49

The quantities catalogue for this week's public auctions at Mincing Lane included 47½ and for the Indian grades was only packages of Ceylon tea. Demand for medium and common sorts—fair and quotations—especially today's Ceylon auctions, considered were frequently lower. At Tu Best qualities were in demand at higher rates, but lower grade tea.

VEGETABLES.—At Covent Garden prices of vegetables have generally shown an easier tendency on heavier arrivals, states *The Fruitgrower*. This applies to cucumbers, which, however, continue to encounter a fair demand. Tomatoes have made a

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets for oilseeds and products have a rather better tone, but business is still impeded by the unsettled political situation and the possibility of currency changes. Linseed has been in more active demand, particularly Indian, in which a fair business is reported. Plate linseed, however, is neglected, but is receiving support from Continental crushers. Prices are a shade lower on the week but are steady. Argentinian shipments are rather heavier and more is soon expected to be shipped by India now that the new crop is ready for export. A quantity afloat for Europe is 140,100 tons (including 21,100

better showing this week, while lettuce is an increasing item. Asparagus and house-grown beans are easier, while rhubarb has eased with larger arrivals of outdoor produce. Increasing supplies of spring greenstuff have brought prices down from the abnormal level of recent weeks. Meanwhile, Spanish and Canary Island new potatoes have become more prominent. Trading in old potatoes at the London market has been quiet and prices in some instances show an easier tendency. At the Borough on Tuesday, however, best siltland King Edward were unchanged at from 8s. to 8s. 6d. per cwt.

A Puzzled People	65
Poisoner or Policeman?	66
Changes in British Industry	67
Progress in Australia	68
Ex Cathedra	70

reet seems to be something like this. In the first place he is vehement in his opposition to war. He is neither anti-German, nor anti-French, nor perhaps even anti-Fascist; but simply anti-war. He remembers the last war; and he is extremely doubtful whether anything at all was achieved by it. Secondly, he has a fervent belief in the abstract principle of justice and fairness. Almost certainly up to last summer the plain man believed that the League of Nations meant simply peace, and he signed the Peace Ballot in this belief. Similarly, the indignation aroused by the Hoare-Laval Plan seems to have been much more a protest against the gross injustice of a few Great Powers cynically dividing up a small and helpless country than the conclusion of a chain of reasoning establishing the validity of the idea of collective security. It was a feeling akin to that which Canning and Gladstone used to arouse.

The professional student of foreign affairs has long ago faced the practical problem involved, and has seen that war can only be prevented by a joint threat of forcible resistance against the aggressor. Among intellectuals therefore we find a division into a handful of extreme pacifists—like Mr Lansbury, Lord Ponsonby, Lord Arnold, Mr Aldous Huxley and others—on the one hand, who do not admit the legitimacy of force in any circumstances; and the majority, on the other hand, who believe that collective international force can alone prevent international disorder, just as collective domestic force can alone prevent disorder at home.

But the man in the street has not faced this issue. He has not even realised the acute danger that exists. He is enjoying his holiday and the return of spring and the prospect of better and better employment and continuing Budget surpluses. And when he does consider the situation for a moment, he finds himself sadly puzzled. For the militarists and isolationists are advocating "peace." The Labour Party is advocating sanctions and disarmament. And the Government seems to be advocating at once rearmament, sanctions, collective security and bargaining with the aggressor. Most of these apparent contradictions are, of course, the reflection of the underlying dilemma that peace cannot be achieved by a refusal ever to use force. But the ordinary man, not having faced this, is puzzled; and his bewilderment is paralysing an already irresolute Government. Only Mr Eden shows any convincing sign of resolution; and no Minister at this moment probably commands more respect in the country.

If, however, his resolution is to be translated into national action, the present perplexities will have to be unravelled; for international affairs will clearly dominate the scene for some time to come. We have all, therefore, Government and public, to make up our minds on the fundamental issue. In order to preserve international law and justice, are we, or are we not, prepared to accept the ultimate implications of adherence to the collective system? It is not a pleasant question to answer in the midst of an English spring.

POISONER OR POLICEMAN?

AN accident in the game of party politics in the House of Commons gave the opportunity for a debate on foreign affairs last Monday, on the eve of Mr Eden's departure for Geneva. That debate has served appreciably to strengthen Mr Eden's hands. The speeches opportunely brought to light a real division of opinion between a Prime Minister and Cabinet who have been making a virtue of irresolution, and a rapidly growing band of indignant and impatient critics who are convinced that this almost deliberate lack of a foreign policy is as dangerous for a great empire in the present state of the world as it is dishonourable for a great nation in any circumstances whatsoever.

In the attack last Monday, Sir Austen Chamberlain found himself fighting on the same side as Mr Churchill, as well as Mr Attlee and Sir Archibald Sinclair. Between them, these critics are widely representative. They may have struck a chord in the hearts of a majority of the Government's supporters. In that case we may hope soon to see some reconstruction of the Government which will give more power to Mr Eden's elbow by putting into other key positions new men who also have the will-power to choose a definite policy and carry it out.

Meanwhile, Mr Eden, now at Geneva, is making his voice heard in a controversy to determine whether Italy is to be regarded—and treated—as a poisoner or as a policeman.

The League's Committee of Thirteen has met this week to examine two things: the Ethiopian and Italian replies to the League's last proposal for conciliation; and the charge, under which Italy lies, of having broken yet another of her international engagements—the Treaty of 1925, under which she, like all the rest of us, has bound herself not to resort to poisoning as a method of warfare. Mr Eden has told us that this second question was put on the agenda, and an early meeting demanded, at the instance of the British Government; and Sir Eric Drummond is understood to have made representations on the subject to Signor Suvich last Monday. The Italian Government, on their side, have not denied the charge. It has been substantiated beyond any possibility of reasonable doubt. Instead, they only question the Committee of Thirteen's competence to deal with the matter, and have inquired at the same time whether the Committee are also proposing to take up the Italian charge that the Abyssinians have been using dum-dum bullets. The naked and unashamed resort by Italy to such atrocities has followed on her acceptance in principle of the League's request to her to enter into peace negotiations. In accepting "in principle," Italy has studiously refrained, so far, from giving the undertaking—for which she has been rightly asked—that she will negotiate within the framework of the League and on the basis of the Covenant. And, as if to taunt the League Council, Signor Mussolini convoked his Cabinet at the same time as the Committee of Thirteen met, and declared his intention to proceed forthwith utterly to annihilate Abyssinia's defending armies.

At the same time, "on the margin of" the Committee of Thirteen, there is to be a meeting of the Locarno Powers—other than Germany, but not other than Italy! This meeting is being held on the French Government's initiative, and M. Flandin's proposal was that it should be held in Brussels while the Committee of Thirteen was in session at Geneva. No doubt the choice of a different meeting place, but of the same date, was deliberate. Had the French proposal been accepted in its original form, it might have sensibly diminished the diplomatic pressure on Italy. It would at the same time have underlined the tacit French thesis that the Italian invasion of Abyssinia is no atrocity worth speaking of, whereas the German reoccupation of Western Germany is an atrocity about which one ought never to stop talking. This indecorous proposal was firmly quashed by Mr Eden; but the Foreign Secretary compromised by agreeing to a simultaneous meeting at Geneva. The compromise may have been unavoidable. The diplomatic paradox and the moral enormity remain. The man who is being put on trial as a poisoner in one room is being sworn in next door as a policeman. This is an outrageous and impossible procedure; and the time has come to tell our French friends so in blunt terms.

France, indeed, must understand that she cannot play fast and loose with the Covenant, the collective system, the sanctity of treaties, and the vindication of law, order and justice in international relations. If she wishes other nations to join with her in upholding the Covenant against Germany—supposing that Germany were to violate it—then she must join sincerely and effectively with other nations in upholding the Covenant against Italy, who is violating it here and now with all her might, and was duly declared an aggressor six months ago. If the Locarno Pact is to be enforced, then the Covenant and the Anti-Poison-Gas Treaty of 1925 must be enforced with equal energy. The French Government do not seem, even yet, to have faced this fundamental and vital point. To-day they are as eager to stop conciliation and start coercion against Germany as they are bent on watering down and staving off coercion against Italy by staging one conciliation scheme after another. Is this political realism? We hope that Mr Eden—who knows his British public, and understands what they can and cannot be induced to do—will have told M. Flandin this week, in plain language, that the policy of France is no more realistic than it is reputable.

This French policy is unrealistic because there is no practical possibility of persuading the British people to line up

on the broken Stresa front, side by side with Italians who are still prosecuting their war of aggression as hard as they can, and using methods of barbarism which they have pledged themselves never to employ. A restoration of the Stresa front on such conditions is a *tour de force* which is quite beyond the powers of the most subtle French diplomacy. We cannot stop France, if she so wishes, from doing everything in her power to help Italy conquer Abyssinia in violation of a Covenant which France has sworn to uphold. We could not even stop her, if she so chose, from taking off sanctions—as far as she herself is prepared to join in Ecuador's reported decision to that end. But if France does this, she destroys the League, explodes the sanctity of treaties, and makes nonsense of the idea of collective security.

The French Government must make their choice. If they decide that the military collaboration of Italy in a future Franco-Italian war with Germany is worth more to them than all moral considerations and material assets, then nobody can stop them from enlisting an outlaw and a poisoner to be their private hired assassin. But in that case they must put all their money on the chance of the hired assassin turning out a trusty servant; for they will have to rely on Italy alone. They will have destroyed the League; they will have driven Great Britain into isolation; and they will have forced Yugoslavia, and perhaps others among the present friends of France in Central and Eastern Europe, to follow in Poland's footsteps.

We speak plainly because we are eager to have the French pause and think before they take any such disastrous and irretrievable step. M. Flandin must surely see that the French policy towards the Italo-Abyssinian conflict stultifies, in advance, every item in his new agenda for the organisation of collective security in Europe. Does he not understand that he will never persuade the British to undertake fresh commitments in Europe if he turns the League into a farce? What is being asked of the British people in any case involves a reversal of traditional British policy. It is conceivable that we may bring ourselves to take this momentous new departure if we believe that we are contributing to a new constructive policy for handling the new international situation which has been produced by the formidable application of science to warfare. But we shall certainly not take the plunge as long as we think that the French request for further British contributions to collective security in Europe is really nothing but a demand that we should join in an anti-German military alliance in order to keep the balance of power in Europe permanently tilted against Germany.

Which of these entirely different things are the French asking us to do? In our eyes, the touchstone of French policy is the French attitude towards Italy. Are the French prepared to create the possibility of Franco-British co-operation in Europe by co-operating with us now to frustrate the Italian aggressor in Africa? There is still time, though it may now be the eleventh hour. Our common duty is not only to maintain the present sanctions but to intensify them. The oil sanction must be imposed at last; the shipping boycott should be added; and the poisoner should be effectively isolated. The sanction-taking countries ought to have broken off diplomatic relations with Italy last October. That weapon is still rusting in their armoury.

CHANGES IN BRITISH INDUSTRY

THE volume of statistics bearing on economic developments in the United Kingdom is slowly increasing. Until recently, for example, detailed information concerning changes in British industrial production has been available only at five-yearly intervals, whereas in the United States it has been the practice for some time to take a Census of Production in alternate years. Under the Import Duties Act of 1932, however, the Board of Trade is empowered to obtain information concerning (a) the quantity and value of output, (b) the quantity and cost of materials used, (c) the quantity and cost of fuel and electricity consumed, and (d) the number of persons employed, in the case of "goods of a class or description which, if they were imported into the United Kingdom, would be chargeable with a duty of

customs under s. 9 of this Act." Under the Finance Act of 1933 the provisions of s. 9 of the 1932 Act were extended to certain classes of goods not dutiable under s. 1 of that Act. The Board of Trade has already made use of its powers under the 1932 Act, and the limited Census of Production taken in respect of 1933 and 1934 may thus be welcomed as a useful addition to knowledge of changes in British industry. The results of the 1933 Inquiry have already been published,† and some of the preliminary results for 1934 have been issued in recent numbers of the *Board of Trade Journal*.

The scope of the inquiry under the Act of 1932 is limited to factory trades. In order to facilitate comparison, the inquiries taken in respect of 1933 and 1934 were designed to correspond as closely as possible with those of the Census of Production taken in 1930. Returns were required only in respect of concerns at which more than ten persons were employed, on the average. Moreover, of the total number of trades engaged in the manufacture or processing of goods, listed for the purposes of the 1930 Census at 107, only 71 are covered by the Board of Trade Inquiry for 1933. The following trades were not included in the 1933 Inquiry:—

INDUSTRIES EXCLUDED FROM INQUIRY*

Motor vehicles.†	Tobacco.
Shipbuilding.	Petroleum refining.
Carriage, cart and wagon.	Match.
Watch and clock.†	Printing, bookbinding, stereo-
Flock and rag.	typing, engraving, etc.
Textile packing.	Printing and publication of
Fellmongery.	newspapers and periodicals.
Tailoring, dressmaking, mil-	Manufactured stationery.
linery, etc.	Cardboard box.
Fur.	Pens, pencils and artists'
Bread, cakes and pastries.	materials.
Cocoa and sugar confectionery.	Furniture and upholstery.
Bacon curing and sausage.	Cane and wicker furniture and
Sugar and glucose.	basketware.
Fish curing.	Wooden crates, cases, boxes and
Ice.	trunks.
Brewing and malting.	Coopering.
Spirit distilling.	Manufactured fuel.
Spirit rectifying, compounding	Scientific instruments, appli-
and methylating.	ances and apparatus.†
Aerated waters, cider, vinegar	Musical instruments.†
and British wine.	Cinematograph film printing.†
Wholesale bottling.	

* The cycle, biscuit and coke and by-products trades, which at the Census were combined with three of these trades, are included in the 1933 Inquiry.

† Trades included in the 1934 Inquiry.

The information required from certain trades, finally, related only to part of their total output. While the limited annual Census of Production thus by no means affords a complete picture of industrial changes in the United Kingdom, it is most useful as an indication of developments in some of the principal industries. The trades included in the 1933 Inquiry covered about 62 per cent. of the value of the total net output (excluding excise duties) and 69 per cent. of the total number of persons

† Report on the Import Duties Act Inquiry (1933); 2 vols., H.M. Stationery Office, 9s. net.

employed in the factory trades of the United Kingdom in 1930. The results of the Inquiry, together with comparable statistics for 1930, are shown below. The aggregate figures recorded at the 1930 Census in respect of those trades which were omitted from the Inquiry are given in italics:—

BRITISH INDUSTRIAL PRODUCTION

Industry	Gross output (selling value of goods made and value of work done)	Cost of Materials used and amount paid for work given out	Net output (excess of Col. 1 over Col. 2) (b)	Average number of persons employed (except out-workers)	Net output per person employed

(a) Figures recorded at the 1930 Census of Production in respect of trades which were omitted from the 1933 inquiry. (b) Excluding estimated Excise duty.

It may be recalled that 1930 was the first year of the depression and 1933 the first year of recovery. The value of the net output of the industries covered by the 1933 Inquiry was 6 per cent. below the level of 1930. This figure compares with a decline in our index of business activity (published in our Monthly Trade Supplement), of 5.2 per cent. during this period. Our index, however, is designed to measure quantitative changes in general business activity, whereas the Board of Trade Inquiry is limited to certain factory trades. Industrial efficiency appears to have been slightly increased during this period, for the average number of persons employed fell by 6.4 per cent. and the net output per person employed rose from £197 in 1930 to £198 in 1933.

With the exception of the food, drink and tobacco, chemicals, and paper, printing and stationery industries, the value of the net output of the related groups of trades shown in the table all registered a decline between 1930 and 1933. The decline was most marked in the capital equipment trades, namely, engineering and iron and steel, where production had fallen to a lower level than in the consumers' goods trades. In 1934, however, the net output of the iron and steel trades rose well above the level of 1930. According to the preliminary report of the results of the Import Duties Act Inquiry for 1934, the value of the net output of the iron and steel industry in that year amounted to £103.7 millions, compared with £84.6 millions in 1933 and £91.9 millions in 1930. Despite the increase in the output of the iron and steel industry, the average number of persons employed in 1934 was only 497,564, compared with 494,295 in 1930. As a result the net output per person employed rose from £186 to £208 during the period under consideration.

Apart from iron and steel, textiles are the only other group for which the results of the 1934 Inquiry are available. Exclusive of excise duty, the net value of the output of textiles, after declining from £145.1 millions in 1930 to £143.5 millions in 1933, rose slightly to £147.9 millions in 1934. On the other hand, the average number of persons employed in the textile trades in 1934, at 1,025,916, was still slightly lower than in 1930, when 1,045,140 persons were employed. So far as changes in industrial efficiency are concerned, variations in the net output per person employed in the twelve industrial groups were by no means uniform. Seven of the groups registered an increase, but five, including engineering, leather, clothing, timber and miscellaneous trades, showed a decrease.

In general, the results of the Board of Trade Inquiry for 1933, though illuminating, do not throw much light on the profound changes which have occurred in the structure of British industry since 1929. Those changes, however, should become more clearly discernible when the results of the complete census of production in 1935 become available a year hence. Meanwhile, it is to be hoped that the Board of Trade will be able to hold such inquiries every year.

PROGRESS IN AUSTRALIA

AUSTRALIA is one of the few countries that took counsel with their economists in the depression and followed their advice. One of the first to enter that depression, Australia was among the first, if not the first, to emerge from it. From 1929-30 to 1931-32 the sudden fall in export prices, the cessation of overseas borrowing and heavy Government deficits reacted so unfavourably upon Australia's national income and balance of payments that widespread default on public and private indebtedness, both at home and overseas, was threatened. The retail prices of manufactured goods which primary producers had to pay in face of a steep decline in export prices were unduly high. Moreover, the onset of depression put a stop to the financing of Australia's interest payments by fresh overseas borrowing and compelled her to find the funds out of the proceeds of her exports, themselves falling rapidly in value.

The table below shows the magnitude of the fall in values of production and export, and the growing burden of overseas interest payments during the worst period of the depression, in comparison with 1928-29:—

(Values in £ millions sterling)

Year	Production	Exports of Merchandise	Overseas Interest Payments	Per cent. Interest to Production	Per cent. Interest to Exports
1928-29	447.8	138.6	27.5	6.1	19.8
1929-30	389.5	98.2	27.5	7.1	28.0
1930-31	319.7	76.6	28.3	8.9	37.0
1931-32	305.0	75.5	28.6	9.4	38.0

It has been estimated that between 1928-29 and 1930-31 the national income fell from £645 millions to £459 millions, and it fell further in 1931-32. Unemployment among trade union members rose from 11 per cent. in 1928 to a peak of 30 per cent. in the second quarter of 1932.

The first attempts to deal with the crisis were a series of emergency measures. In order to redress the unfavourable commodity balance of trade, Customs duties were increased, some imports being altogether prohibited; the exchange with sterling was unpegged, the official rate rising to 130 in January, 1931, to be stabilised at 125 at the end of the year; and gold was exported from reserves. These expedients, though they helped to solve the more pressing problems, were inadequate in face of further falls in export prices, continued drift in public finance, rigid costs, and rising unemployment. These burdens showed little sign of lifting when the Premiers' Plan, on which subsequent policy was based, was formulated and adopted in June, 1931. Under the Plan the principal measures, designed to bring about the gradual balancing of Budgets, and to distribute more equitably among all sections of the population the fall in national income, were: (a) reduction of 20 per cent. in all "adjustable" Government expenditure, (b) conversion of the internal debts of the Governments on

the basis of a 22½ per cent. reduction in interest, (c) increase in taxation for revenue purposes, (d) reduction in bank rates, of interest, and (e) relief to private mortgagors.

One of the most useful results has been an improvement in the financial position of primary producers, through the narrowing of the "spread" between prices of primary and secondary commodities, and the reduction of their interest burdens. The improvement in the budgetary position can be seen from the following table:—

COMMONWEALTH AND STATES—DEFICITS BEFORE AND AFTER THE PLAN

(Values in £ millions Australian currency)

	1930-31 Actual Deficit	1931-32 Estimated Deficit (a)	1931-32 Actual Deficit	1932-33 Actual Deficit	1933-34 Actual Deficit	1934-35 Actual Deficit
Six States.....	14.6	20.6	20.8	8.0	6.7	3.8
Commonwealth	10.7	20.4	+1.3	+3.5	+1.3	+0.7
Total	25.3	41.0	19.5	4.5	5.4	3.1

(a) Before Melbourne Conference.

Signs of recovery are to be found in the increase in railway revenues. Net earnings have risen to £10.3 millions, or 3.17 per cent. of capital costs in 1933-34, compared with 2.12 per cent. in 1930-31. There has also been an increase in new building permits; a steady fall in unemployment figures; and increasing numbers have been taken on in factories, together with a rise in the volume of output and in industrial profits. Between 1931-32 and 1933-34, the number of factory hands employed rose by 69,300, or 20 per cent.; the value of output by 17 per cent.; and the estimated net profits of 32 representative manufacturing firms by 40 per cent. This development, however, has not been wholly beneficial. The increase in the number of small manufacturing units during the depression—a movement encouraged by the high tariff still in force and by the protective effect of the exchange discount—casts some doubts upon the efficiency of these new small concerns.

Of more importance, however, at the moment is the position of those industries which have played a large part in restoring the favourable trade balances of the years 1933-34 and 1934-35—£30½ millions and £9½ millions sterling, respectively. Chief of these are the wool, butter, meat, wheat and flour, and gold-mining industries. In 1934-35 these accounted for three-quarters of total exports from Australia.

Since 1929 there has been a substantial increase in the livestock population. The total of sheep rose from 104½ millions to 114½ millions in 1934; and of cattle from 11.2 millions to 13½ millions in 1933. This has enabled pastoral industries producing for export to take immediate advantage of the upturn in prices which began in 1933, gathered force in 1934, and, with some setbacks, has continued up to the present. Wool, butter and frozen meats accounted in 1934-35 for 54 per cent. of all exports. The table below shows the slow growth in wool exports, and the striking increases in butter and meat, which have taken place during the depression period. The export price index is estimated to have fallen from 100 in 1928-29 to 45 in 1932-33, rising to 59 in 1933-34 (sterling values); which gives some measure of the slump and recovery:—

AUSTRALIA—EXPORTS OF PASTORAL PRODUCTS (Quantities in thousand centials)

Year	Volume				Value	Per cent. of Total Exports Merchandise
	Wool	Butter	Mutton and Lamb	Beef	Wool, Butter and Meats	
1928-29	8,105	1,024	849	1,890	£4. mn.	53.4
1929-30	7,443	1,076	1,004	1,567	48.3	49.6
1930-31	8,145	1,631	1,092	1,558	44.3	49.5
1931-32	8,340	2,016	1,832	1,658	47.1	49.4
1932-33	9,276	2,363	1,667	1,539	49.6	51.9
1933-34	8,141	2,442	1,745	1,730	70.6	63.0
1934-35	8,576	2,625	1,961	2,120	55.6	54.0

The increase in butter and meat exports has been accompanied by a growing dependence on the United Kingdom market as other European countries restricted their purchases. In the 1934-35 season, 94 per cent. of butter exports, 91 per cent. of beef exports, and 98 per cent. of mutton and lamb exports went to the United Kingdom.

EXPORT

The Documentary Credit, whereby the Exporter is assured that he will receive payment immediately his goods are shipped for transit abroad, is the subject-matter of *A Brief Survey of the Financial Machinery of Exports and Imports*, copies of which may be had by asking at any local branch of the Westminster Bank

WESTMINSTER BANK LIMITED

41 LOTHBURY, LONDON, E.C.2

A factor of great importance for the future of the Australian cattle industry, the magnitude of which it is difficult to gauge at the present time, is the shipment of chilled beef from Australia (and New Zealand) which has recently been made possible by technical improvements. Before full advantage of this discovery can be taken, improvements in breeding and in methods of grazing and fattening must be made. Yet in the 1934-35 season, imports into the United Kingdom of chilled beef from Australia amounted to 134,000 cwts., compared with only 6,400 cwts. in the previous year.

Wheat growers have gone through a more difficult time than the pastoralists; and, as a result, wheat now occupies a somewhat less important place in the export trade than in the years preceding the depression. Unremunerative prices since the 1928-29 season, and poor prospects in the future, have resulted in the curtailment of acreage sown to wheat. Growers have had to be assisted by Government subsidy. Since the peak year of 1930-31, the acreage under wheat has fallen from 18.1 millions to 12.4 millions in 1934-35, and to 11.9 million acres in the 1935-36 season. Since 1931-32, some £12½ millions have been distributed in direct relief to wheat growers, up to and including the crop year 1934-35. The difficult financial position of wheat farmers has been analysed in the Reports of the Royal Commission on the Wheat, Flour and Bread Industries. In these, it is shown that the rural debts of wheat farmers amount to about £150 millions, and that even with the price of wheat at 3s. a bushel—the actual average for the 1934-35 season—only about 40 per cent. of the wheat farmers could carry on and pay interest in full. The Commonwealth has since made a further £12 millions available for debt adjustment; and other remedial proposals are being investigated.

Gold production has, through rising prices and increased output, been a source of additional help to the export trade in the past few years. Production has increased from just under £2 millions in 1929 and in 1930 to £7.5 millions in 1934.

Recovery, though more advanced in Australia than most other countries, is not, of course, complete. Part of it has been dependent upon the maintenance of internal Government borrowing in place of the former loans from overseas. This gives rise to some uncertainty whether the pace of recovery can be maintained if world prices and international trade do not show more of an upward movement. Between 1931 and 1935 the public debt (Commonwealth and States) increased by a total of £86 millions—the same increase as was recorded for the previous five years, 1926 to 1930. Uncertainty over the future is chiefly on account of Australia's markets, and particularly of the commercial and agricultural policy of the United Kingdom. The livestock industries, which are almost incapable of adjustment to short-term price fluctuations, and slow in adjustment to long-term trends of demand, need, above all things, greater

stability of prices and a minimum security of markets before Australia's undoubted capacity to produce more meat, wool and dairy produce than ever before can be realised profitably. Until these desiderata can be attained it would be unwise to view continuous internal borrowing for public works, including rural rehabilitation, as "sound finance."

EX CATHEDRA

(BY A CORRESPONDENT)

"Who are these ignorant clergymen who presume to give His Majesty's Government advice on foreign affairs?"—Mr Duff Cooper at Birmingham.

It is altogether fitting that one of our younger statesmen should assume the duty of putting certain impertinent intruders from Liverpool Cathedral in their place and of announcing to the world that the British Cabinet neither needs nor brooks advice from beyond its walls. The men who brought this dignified rebuke on themselves happened to be clergymen, but that was only accidental. Mr Duff Cooper declares himself a loyal member of the Church of England and to clergymen as clergymen he takes no objection. What he does resent is that one specialist should cross over into another specialist's zone and presume to give advice on what he finds when he gets there. Zones, in Mr Duff Cooper's view, are to be respected, and it is not right that an expert in one should handle matters that are the monopoly of a fellow-expert living in another.

He takes, in fact, the same stand as was taken some years ago by a gentleman who conducted a pea-nut stall in New York under the shadow of the National City Bank's building: "The National City Bank," said the pea-nut expert, "don't sell no pea-nuts. I don't lend no money." So Mr Duff Cooper to the Liverpool clergymen: "I don't sell religion. You don't sell foreign politics." And just as the pea-nut seller made it plain to the bank that a unilateral breach of their pact would provoke sanctions, and that if the bank started selling pea-nuts he would begin to lend money, so Mr Duff Cooper warns the clergy that an intrusion into the demilitarised zone lying between religion and politics cannot be tolerated, and if the clergy of Great Britain begin to talk politics to His Majesty's Government, His Majesty's Government will hold itself at liberty to talk religion to the clergy of Great Britain. There must be bilateral observance of the rules of the game and outsiders must not presume to advise His Majesty's Government on foreign affairs.

Mr Duff Cooper's argument promised to be both interesting and powerful, and it is a pity that he was prevented from developing it as it might have been developed in his Birmingham speech. God forbid that we should sink to the level of the Liverpool clergy and presume to give advice to a member of His Majesty's Government, but we should much like to try our hand at the argument ourselves and so help to fortify Mr Duff Cooper against the next time he reverts to this theme in a public utterance—to do for him, in fact, what Mr Pickwick did for Mr Peter Magnus. As Pickwick sketched out a scenario for Mr Magnus' proposal to Miss Witherfield, we venture on a scenario for the undeveloped portion of Mr Duff Cooper's Birmingham speech.

First, then, we should insist on the advantage that a professional has over an amateur and disparage the value of any views held outside, in contrast with those held inside, His Majesty's Government. To illustrate the point we should dwell on the success in the sphere of foreign affairs that has attended our professional politicians in our lifetime. We should not go back too far. We should not, for example, include in our survey the diplomacy that led to the war of 1914, and we would touch but lightly on the Treaty of Versailles, the American debt and our dealings with the Bolsheviks from 1918 to 1922. It would be enough to start from 1931 and emphasise the gratifying improvement that has taken place since Mr Baldwin and Mr MacDonald first pooled their professional skill and experience, holding up to the admiration of our audience the glories of our foreign policy in the years of Sir John Simon's secretaryship—Germany, Japan, Italy, Geneva—and contrasting the state of Europe trembling on the verge of war when he took office with the deep peace in which she slumbers to-day. This

would lead naturally to our main thesis that the duty of the common man is to be silent and admire the technique of the professionals until such time as the professionals call on him to enlist for active service.

It may perhaps be argued that advice from outside is salutary and necessary to ensure that all points of view are regarded and all opinions given their proper weight before a government finally determines its policy. Years ago that argument might have had some force, but, as modernists, we can dispose of it without difficulty. We should point out that the old-fashioned politician was the slave of what he grandiloquently called his principles, and the old-fashioned cabinet was composed of men all in slavery to the same set of principles. In any one cabinet only one point of view would normally find expression and one line of policy be followed from the beginning to the end of its career. But all that has been changed to-day, and the weakness of a servile consistency to principle has been eliminated. Under modern conditions not only is a cabinet's policy the product of many opposing and contradictory lines of thought within itself, but it is elastic and adaptable, varying from week to week or day to day as the wind inside the cabinet shifts a point or two from right to left or back from left to right. If any example were needed to enforce this clear and unmistakable argument, we could call in aid, amongst other matters, the various British attitudes to Russia and the smoothness with which a Foreign Secretary can first denounce trade relations with the Bolsheviks as a protest against the workings of Soviet justice and then a few months later renounce his own policy and bring the trade relations back without any known change having taken place in the Soviet's attitude towards its own Courts of Law. We would recall, too, our Abyssinian policy and the ease with which the professional statesmen were able first to swing over from their election speeches to the Hoare-Laval programme and then to jettison both Sir Samuel Hoare and M. Laval and re-orientate their own policy in less than seven days. What need have such statesmen for outside advice? In the multitude of counsellors there is confusion, and a modern cabinet can supply as much of that as is wanted without calling for amateur aid.

Later on in the speech we might be conscious of a logical difficulty, and in honesty and fairness we should somehow have to face it. Our difficulty is that sometimes when one wishes to support the professional who has a right to give advice, and silence the amateur who has none, it is not easy to make out which is the professional and which is the amateur. They are apt to look as though they had been mixed up—and never more so than when the politician takes a hand in other people's affairs and directs men in the management of their own business. Then we are confronted with the same perplexity that inspired the old rhymester:—

God bless the King, God bless the faith's defender.
God bless—no harm in blessing—the Pretender.
But who Pretender is and who the King—
God bless us all, that's quite another thing.

The thing that bothers us at the moment is the relation between the Treasury and the City. When the Treasury gives advice to the Money Market or the Stock Exchange, is it a professional advising ignorant amateurs, or an ignorant amateur presuming to give advice to professionals? The point is not easily determined, and in helping Mr Duff Cooper with his speech it has to be faced, because he himself only a short time ago was actively engaged in the work of the Treasury. Until he went there his chief contribution to the world's thought had been a brilliant biography of Talleyrand; and an old hand in the money market, irritated by the advice that flowed from Whitehall to Lombard Street, was heard to cry aloud: "Who is this ignorant biographer who presumes to give advice to the City on Finance?"

At the moment we are not clear how this difficulty will be handled; but the solution will come in time. And, meanwhile, England has the satisfaction of knowing that a member of the British Cabinet has allied himself with the great authoritarians of history—the specialists who tolerate no advice from the common man—Hitler, Mussolini, Lenin, Bismarck, Napoleon, the churchmen and the dynasties of the middle ages, right back to those professionals who asked the most famous question of all: "Who is this ignorant carpenter who presumes to give advice?"

NOTES OF THE WEEK

A Critical Week.—A week which might have been expected to prove a lull after the last three eventful weeks has turned out as decisive and critical as any. Question time in the House has elicited one clear assurance after another from the Prime Minister and Foreign Secretary that the consultations between the French, Belgian and British General Staffs, now fixed for April 15th in London, will be kept rigidly within the framework laid down by the Government; and Notes received from the Belgian and French Governments to H.M. Government clearly state that no political understandings or commitments are thereby to be implied, other than are clearly laid down in the Locarno Treaty. Parliament has manifested growing disgust at Italy's methods of warfare in Africa; and this reflects the swelling tide of popular resentment in the country at large. This indignation has been increased by yet another studiously moderate and moving appeal for assistance to the League from the Emperor of Ethiopia. Sir Thomas Inskip, Minister for Co-ordination of the National Defences, has been forced to make one or two attempts to answer searching inquiries about his powers and duties—unconvincingly and uninformatively. Members of Parliament have become concerned about our food supplies in wartime; and some have suggested that negotiations with Canada should be begun forthwith for the establishment of large wheat stocks in this country. And the Minister for War has announced that all three Services will closely co-operate in the spring manoeuvres this year. Meanwhile, Mr Eden left for Geneva on Tuesday, and Lord Halifax on Wednesday; and the Committee of Thirteen, convoked to examine Italy's methods of warfare and to discuss procedure, met on Wednesday morning, only to adjourn owing to M. Flandin's insistence that they should ask the Red Cross authorities about it, and examine Italy's counter-allegation that the Abyssinians are using dum-dum bullets. This unprincipled behaviour of the French has been aggravated by persistent rumours that Ecuador, a member of the Committee, has decided unilaterally to raise sanctions against Italy now that Italy has agreed to discuss the League's invitation to put forward conciliation proposals. Geneva is thus again at stalemate as a result of French manoeuvres.

The French Plan.—As we go to press the French plan for the establishment of European peace during the next 25 years has been published in Paris. It consists of 22 sections. The first part lays down five principles: equal national rights, respect for international engagements, respect for international law, absence of any national hegemony over the comity of nations, and guarantees of these fundamental principles of civilised society. The second part, entitled "Political Measures," is based on the principles of collective security, mutual assistance, disarmament and European organisation. This part proposes the establishment of a European sub-committee of the League for handling European affairs and the problem of European peace—a welcome reversion to M. Briand's conception of European unity; organised measures of mutual assistance in Europe to guarantee the 25 years of peace; the setting up of an international land, sea and air force at the disposal of the League Council, maintained in national units; and international control of national armaments. The third part proposes principles of international economic co-operation, including provisions for access to raw materials and colonial markets, the establishment of an exchange tribunal, monetary stability, extension of international credits, and expansion of markets. The plan is accompanied by a second document: a detailed reply to the German plan, in which the French epitomise the real European issue: "As a League Member, France is unable to conceive a settlement for Western security for which she has to ignore the security of the rest of Europe." Non-fortification of the Rhineland is made the touchstone of Germany's genuine acceptance of the principle of collective security; and the startling proposition is advanced that no territorial change of the European *status quo* should be made, even by consent, for 25 years. The French state that "fidelity to treaties is the fundamental principle of French policy."

But the French plan, in itself, only serves to emphasise the fundamental weakness of French foreign policy; the attempt to connive at the successful aggression on a League Member in Africa in order to keep the aggressor by the side of France in Europe. Such a two-faced policy prevents the French plan from commending itself, as a whole, to British public opinion.

Signor Mussolini's War.—Last week there was another prolonged pitched battle in Abyssinia—this time in the neighbourhood of Lake Ashangi. On the Abyssinian side the Imperial Guard was engaged, and the Emperor himself was in action. It was the Abyssinians who attacked—against the wishes of the Emperor, according to Marshal Badoglio. Tactically, no doubt, this was a serious error; for a pitched battle always gives the Italians an opportunity of getting the utmost advantage out of their overwhelming superiority in equipment. Though this battle seems to have been the hardest fought in the war up to date, it ended in the inevitable Abyssinian defeat with heavy losses. The Italians are making haste to represent this as the end of the war; and the French may be counted upon to echo the Italian claim. For the French are eager to dismiss the East African war as an unimportant passing episode, in order to give themselves an excuse for taking off sanctions, setting Italy financially on her feet again, and making sure (so they imagine) that the Italian army will fight on the French army's side in any future war in Europe. Every French move in this direction must be strenuously resisted by the Government of this country. It would be as stupid as it would be base to let ourselves be persuaded that we have already let the Abyssinians down so completely that we may as well now give up the whole business as a bad job. We have let them down, indeed. But the very factors in the situation which make it easy for the Italians to win victories make it difficult for them to finish the war off. They may perhaps now have made it impossible for the Abyssinians to fight another pitched battle or to dispute their advance. They may occupy Dessie and Harrar and Addis Ababa. But this will merely compel the Abyssinians to confine their operations, at last, to those guerrilla tactics which suit their own genius and the nature of the country. The Abyssinians can stand losses which would knock a European army out; and the Emperor's personal participation in the fighting will have raised his men's *moral*. If he can now induce them to lend themselves to de Wet's and Botha's tactics, he still has the whole vast south-west, from Gojjam to Kaffa inclusive, in which to manoeuvre. Signor Mussolini cannot win the war by defeating the Emperor in the field, nor even by taking his capital. He will not have won until he has (a) been able to bring home the bulk of his 300,000 men whom he is maintaining far from Italy at a terrific cost; (b) induced the League Powers to take off sanctions; (c) obtained a foreign loan to salvage his own wrecked economic and financial structure at home. If the Emperor can see to (a), the rest of us can see to (b) and (c). We surely cannot turn a deaf ear to the Emperor's latest moving appeal for effective sanctions. The aggressor can still be defeated on the sanctions front.

The Supreme Court Again.—The United States Supreme Court on Monday delivered another judgment on the legislation of the New Deal, which, though not of great immediate importance, may prove to be of considerable historical significance. The immediate case in question concerned the action of the Securities and Exchange Commission in summoning before it a certain Mr Jones who was seeking permission to trade in "oil royalty participation certificates." On receiving the summons to appear, Mr Jones had promptly withdrawn his application, but this had not deflected the Commission from its purpose of interrogating him. The Court did not question the advisability of investigating the nature of this gentleman's business, but it did deny the right of the Commission to hale

him, or any other citizen, before it without the option of declining the invitation. If the Commission thought such arbitrary action was necessary, it should have applied to the Courts for its exercise. The Supreme Court proceeded to generalise, and delivered itself of a root-and-branch condemnation of "administrative law," that is, of the interference by executive organs with "the fundamental rights, privileges and immunities of the people." This judgment will be very welcome to a certain powerful, if not overwhelmingly large, section of opinion, although the dissent of Justices Cardozo, Stone and Brandeis shows that it will not be palatable to the Liberals. If there is any one single factor which is more responsible than another for the blind, furious and largely incoherent opposition of "business" to the Roosevelt Administration, it is the fear that the rapid proliferation of "alphabetical agencies" at Washington, all of them with large undefined powers, is beginning to subject American business to the domination, not of laws, but of arbitrary and irresponsible bureaucrats. It may be that such a development is inevitable—after all, the "new despotism" is not confined to America—but that does not make it any the more agreeable to a community which has always prided itself upon its rugged individualism, upon being ruled by "a Government of laws, not of men." This latest judgment of the Supreme Court must, therefore, be taken as lending powerful aid to the conservative opposition, even though its practical effect in limiting the operations of the Administration will be very small. It is beginning to look, however, as if the opposition will need much more powerful aid than this if they are to defeat the President. Just as his stock was perceptibly, though inexplicably, falling at the end of last year, so it is now, by unanimous report, rising. The latest tax plan has evoked no enthusiasm either in Congress or in the public. But by the same token it has not aroused a storm of protest. If the President can, in election year, make a substantial gesture in the direction of a balanced budget, without estranging any large block of votes either by new taxes or by reduced expenditure, he will once more have demonstrated that he is a political strategist of no mean order.

Spain Drops President Zamora.—The political situation in Spain is still fluid and opaque. The electoral victory of Señor Azaña and his party over a month ago finally dissolved the almost universally hated, and in any case ineffectual, association of Lerroux Radicals and Right-wing C.E.D.A. groups led by Gil Robles. In the meantime, violence and sectionalism have reared their heads; the Azaña Government have hesitated to meet violence with violence; peasants' committees in many regions have confiscated and appropriated land; clear evidence of corrupt electoral practices by the Right-wing groups has accumulated; and the Right-wing C.E.D.A. have announced their policy of non-co-operation in the Cortes. The situation was rendered more complicated because President Alcalá Zamora's position had been brought into the political arena as a result of his having repeatedly delayed the exercise of his constitutional right to dissolve the Cortes a second time during his term of office. The Socialists had long clamoured for a second dissolution because of the ineffectual and reactionary coalition Governments of Radicals and Right-wing groups—the Radicals led by the C.E.D.A. President Zamora naturally hesitated; for he had previously dissolved one Constituent and one ordinary Cortes, and the Constitution only says that the President may dissolve "two Cortes"; so that it was not clear whether he could legally again dissolve the ordinary Cortes. On January 7th last, however, he did so. The success of Señor Azaña and his Popular Front at the polls, and the reactionary excesses of certain Right-wing elements, had their sequel on Tuesday night when the new Cortes—the C.E.D.A., Radicals and Catalanian *Lliga* abstaining—censured the President of the Republic by 238 votes to five, for the way he had been executing his powers. Under Art. 81 of the Constitution this vote immediately dismisses the President from office. Officials of the Cortes called at a late hour on the dismissed President to acquaint him of these events, but he refused to receive them then. They thereupon drew up a protocol of the facts, and the Cortes

elected their speaker, Señor Martínez Barrio, temporary President in accordance with the Constitution. It is too early to say how the news will affect Spanish opinion; but that opinion is at present so hopelessly disintegrated and sectionalised that the Government will probably gain on balance by this gesture of firmness and independence. Meanwhile the economic situation is deteriorating; and the *Frente Popular* Government will soon need funds for their development and agrarian reform schemes. How they will raise them is still problematical; for leading financiers and *rentiers* are likely to maintain their boycott of the Socialist Government. We hope that, after the last few weeks of chaos and disorder, some guiding lines of policy will be thrown out by Señor Azaña and his colleagues.

Conscription in Austria.—On April 1st Herr von Schuschnigg announced to the Austrian National Assembly that he was introducing a bill imposing compulsory service on all male Austrian citizens between the ages of 18 and 42. The bill was promptly passed by acclamation; but it remains to be seen whether the Austrian Chancellor may not have been making April fools of the Little Entente countries. For the new Act provides that the service is to be "with or without arms." Is it to be simply a compulsory labour service of the kind invented by Bulgaria and imitated by Germany? If no more than that, it would presumably remain within the letter of the Treaty of St. Germain, as the Austrian Government contends that it does. But the discretion given to the Government leaves open "a serious door" (as they say in Whitehall) for doubt; and the Little Entente have decided that this door must be walked through. Last Monday, the Czechoslovak, Yugoslav and Roumanian Ministers made a joint protest in Vienna; but this common action appears to cloak a certain diversity of views. The Czechoslovak Government, for example, began by taking a fairly tolerant attitude, whereas the Czechoslovak press, as well as both press and Government in the two allied countries, immediately took a more militant line—with which the Czechoslovak Government has since conformed for fear of opening a breach in a carefully preserved common front. Evidently the Czechoslovak Government, if it had only had itself to think of, might have been disposed to regard the new Austrian conscription Act as a bulwark against the danger of the *Anschluss*. On the other hand, the Yugoslavs and Roumanians regard it as a breach of treaty which may not be very objectionable in itself, but which offers a direct incentive to Hungary and Bulgaria to follow suit. As a matter of fact, Hungary is reported to have re-established compulsory military service long ago *de facto*, without trailing her coat by introducing any legislation for the purpose; and as for Bulgaria she is not yet in a militant mood. Nevertheless, the Yugoslavs and Roumanians are upset; and as evidence that they are justified, they can point to the fact that the Italians are gratified at what Herr Schuschnigg has done. Perhaps Signor Mussolini has hinted to his Austrian protégé that his motto must be *Austria farà da sé* now that Italy is so heavily committed to an African adventure. If Herr Schuschnigg really does conscript his young men wholesale, it will be a token of confidence that he has the country behind him. It seems more likely, however, that the conscription will be selective. For to arm and organise the Austrian Nazis would be to play Herr Hitler's game rather than that of Signor Mussolini.

On the Roads.—With the Easter Holiday there is a great rush to the roads, and this year the large number of "learners" is obvious for all eyes to see. How far is the Minister of Transport's eighteen months' campaign for road safety beginning to bear fruit? In the Ministry's road accident return of last week-end 90 deaths from accidents were shown, compared with 108 in the previous week and 100 a year ago. Since November the chart of road deaths has been continually lower than that of a year ago. In the last few weeks, however, it has begun to rise to last year's level once more. The reduction during the winter months seems to show that the campaign has had some substantial effect;

for the number of cars and lorries on the road is, of course, steadily increasing. Whether the highway code and the institution of driving tests has had any influence on the actual standard of driving, is very hard to estimate. Observation suggests that human nature among motor drivers is very hard to change. The great majority, of course, are careful; but the reckless and incompetent few still seem to be with us. Indeed, it may be doubted whether the accidents that occur on open stretches of road through faulty overtaking, and so forth, will ever be much diminished. Probably more progress has been made, and will be made, by the construction of pedestrian crossings and of adequate warning signs at blind corners and cross-roads. The Ministry has clearly been right to build numerous "roundabouts," and more will have to be built before long. The "major-road-ahead" sign has also been generally adopted, and should go far to reduce the most avoidable kind of accidents. In some cases where a very small road directly crosses a very large one, it might be worth altering the lay-out so as to prevent the small road from having a straight run across. This has already been done successfully in a few cases. There has also been some success in tackling the "dazzle" problem; but it is still a long way from complete solution. Altogether the Ministry must be congratulated on its persistent and well-directed efforts. One could only wish that as great an attempt had been made to protect the appearance of our country roads as to enhance their safety. The "Ribbon-building" Act ought to be applied with all possible speed if we are to preserve the national asset, and the opportunity for normal recreation, that road traffic offers.

Income-Tax Law.—Codification of our income-tax law is a task that might have appalled a Theodosius or a Justinian. In the 125 years which have elapsed since our income-tax legislation was first drawn up, over fifty separate Acts have been passed, embodying about 800 statutory provisions, and interpreted and encompassed by roughly 1,800 judicial decisions; these have come to comprise the law by which anything from one-fifth to two-thirds of a citizen's annual income may be appropriated by the omnipotent—and often omniscient—Commissioners of Inland Revenue. Indeed, evasion of income tax in this country is probably so rare, compared with other countries, because the law is so intricate, and the problem of worrying a hole in the net too troublesome and hazardous for the "small man." Codification was long overdue when Mr Winston Churchill, as Chancellor, appointed a Committee in October, 1927, to draft a Bill for it. By the beginning of 1932, the Committee's labours had involved the expansion of the Committee by the appointment of Lord Macmillan as Chairman. On Monday of this week they presented their unanimous report—an imposing document in two volumes, the first containing the 450 pages of the report proper (Cmd. 5131, 8s.), and the second, the draft of the proposed Bill (Cmd. 5132, 4s. 6d.). This is not the occasion on which to comment in detail on the results of their labours; we intend to revert to them in a forthcoming article; but Lord Macmillan's able chairmanship—already proved by the famous "Macmillan Report" on Finance and Industry, of 1931—has produced a laudable set of proposals for codifying the vast and amorphous mass of legislation, case-law, administrative orders and Inland Revenue practice which constitute our income-tax law, and replaced by fifteen classes of income. Income arising and "received" from abroad—a term subject to continually disputed interpretations—is to be clearly divided from income arising in this country. "Receipt," "total income," "assessment," and "residence" are other terms to which clearer—and, we trust, more durable—definitions are given. The way in which "trading profit"—a great bugbear to all industrialists, directors and accountants—is to be defined is laid down; and, most important of all, the Committee recommend (slightly, but commendably, beyond their terms of reference) that the allowance in respect of wear and tear of machinery or plant used in a business should be "treated as one of the allowable deductions in computing the statutory profits for the year of computation in which the wear and tear takes place." This

is notable advocacy of a reform which has often found commendation in these columns. Income-tax law in this country should be at least clearer, if not a model of clarity, once the Government proceed to implement the admirably detailed proposals of Lord Macmillan and his colleagues.

A New Cost of Living Index.—The very welcome announcement was made by the Minister of Labour in the House of Commons on Tuesday that his Department is to undertake the construction of a new cost-of-living index number. The preliminary inquiry into family budgets is to begin at once, and the Ministry of Labour is to be assisted in it by "a small advisory committee which will include representatives of employers and trade unions." This decision is long overdue. The existing index number is based upon a family budget inquiry which was made as long ago as 1904, and since the consuming habits of the population have been changing very rapidly in the intervening decade, the results shown by the official index can hardly fail to be gravely distorted. At the same time, there are almost insuperable difficulties in the way of any private organisation which attempts to construct a cost-of-living index. It is to be hoped that the new index will be a much more comprehensive and elastic affair than the present one, and that it will make provision not only for variations in consumption between different grades of the working population, but also for variations in the same grade from time to time.

Trend of Gold Production.—The annual report of the Union Corporation—which, in its investment aspects, is discussed in a Company Note on page 91—contains its usual and authoritative survey of the world output of gold. The total world production rose from 19,586,000 fine ounces in 1929 to 27,770,000 fine ounces in 1934 and to no less than 31,000,000 fine ounces in 1935. Moreover, this increase was entirely achieved outside South Africa, as the absolute output of the Rand has risen by only 362,000 fine ounces and its relative share in world production has fallen from 53.2 per cent. in 1929 to 34.8 per cent. in 1935. This is very largely due, as the report points out, to technical causes, and the increase in South African production as a result of the rise in the price of gold is still to come. The Union Corporation states that the increase should begin in 1937, and that within five or six years South African output may approach the 15,000,000 oz. mark, more than 4,000,000 above the 1935 output. In addition, large prospective increases in Russian production are claimed. If it be assumed that production increases as expected in these two countries, but not elsewhere, "then the world production of gold in 1940 may well exceed 40 million ounces per annum, as compared with about 30 million ounces in 1935, 20 million ounces in 1925 and 3½ million ounces in 1850."

Future Gold Supplies.—To appreciate the full significance of these figures, it is necessary to quote the conclusions of two further tables in the report. The first of these shows that, since 1929, net consumption of gold in the industrial arts has declined, while the net absorption of the East has been turned into a net release. The result is that the balance of the annual production available for monetary uses has increased from 13.6 million ounces in 1929 to 34.3 million ounces in 1935. The second table shows that the total world stock of monetary gold has increased over the same period from 553.6 to 734.3 million fine ounces. Moreover, the monetary value of each ounce

BRITANNIC ASSURANCE COMPANY, LIMITED

has, in the majority of countries, been increased, actually or potentially to the extent of some 60 or 70 per cent. by devaluation. If gold production increases as expected, it is to be presumed that the bulk of the increase will go into monetary use. We must therefore apparently look forward to a very rapid expansion of our stock of monetary gold. What a change has come over the outlook for gold production since the Gold Delegation reported only six years ago! The new figures must not be taken as demonstrating the incorrectness of the Delegation's estimates (which largely came from the same source); for if the price of gold had remained at 85s. an ounce, the Delegation might not have been very far out in their calculations of an approaching shortage of gold. What has been shown is the amazing elasticity with which the supply of gold responds to a change in its price. The monetary significance of the figures hardly needs to be pointed out. For, though gold has lost its dominance over the foreign exchange markets, the Central Banks of the world still avidly purchase the metal and use it as the quantitative base of the currency and credit structures. The existence of a super-abundant supply of gold can hardly fail to have its effect upon the quantity of money in existence and upon the credit policies pursued by the various national monetary authorities.

An Employment Record.—The state of employment at the end of March shows a very marked improvement compared with February and January; and unemployment is only a few thousands higher than at the beginning of December. This is rather more than a seasonal movement, although an improving tendency is always noticeable at this time of the year. Almost all branches of industry have shared in the increased activity. Building and allied industries show the most marked change, as a reaction from the deep depression which always characterises the winter months. But unemployment in the distributive trades and in the metal and textile manufacturing industries has also decreased very substantially. Coal-mining alone records an increase of over 14,000 in the number of insured workers unemployed. Even this, however, is 40,000 less than at the end of March last year.

INSURED PERSONS UNEMPLOYED IN GREAT BRITAIN

	Mar. 25, 1935	Feb. 24, 1935	Mar. 23, 1936

Public works contracting	123,192	129,764	120,745
Distributive trades	235,260	235,926	223,614

All industries (persons on register) ... 2,153,870 2,025,021 1,881,531

The changes noted above are also reflected in the geographical distribution of unemployment. Wales shows an increase of 1,451 since February, while all other divisions record sharp declines, ranging from 14,867 in the South-West to 30,013 in the North-East. The total decrease in the number of unemployed on the registers between February and March was 143,490, of which men accounted for 107,000 and women and juveniles each for about 18,000. It is estimated by the Ministry of Labour that there were 10,630,000 insured persons aged 16-64 in employment in Great Britain on March 23rd. This was 155,000 more than a month earlier; 411,000 more than in March, 1935; and is a new "high" record.

The Shrivvenham Accident.—The Ministry of Transport's official inquiry into the railway accident on the Great Western main line at Shrivvenham last January confirms much of what we suggested at the time. The brake-van and last five wagons of a goods train broke away and were

run into by an express train which was following behind. The inquiry established that the collision was due first to delay on the part of the guard of the goods train in going back to lay down detonators to protect his train; and second to the failure of two successive signalmen to observe that the goods train had passed without a tail-lamp. These last duties of course are elementary, but the inspecting officer was careful to say that once the first signalman concerned had realised his blunder he took prompt steps to stop a third train which otherwise might have added to the collision. The report points out that continuous track-circuiting throughout the whole section would have been the only certain safeguard, and confirms our earlier view that the Great Western system of automatic train control had no bearing on the accident. In view of the cost, the report does not recommend the universal adoption of continuous track circuiting, but its tenor suggests that the inspecting officer is not entirely convinced on this point. Another matter which he might have emphasised is that a signalman should be forbidden to answer the telephone while a train is actually passing his box. It is conceivable that a rule such as this might have prevented the accident.

The Jute Crisis.—The difficulties of the jute industry in India, described in the *Economist* of March 28th, have now come to a head; for the Indian Jute Mills Association has failed to secure the adherence of the "outside" mills to the scheme of restricting working hours. Consequently the members of the Association are now at liberty to carry out their threat of December 30th to increase working hours from 40 to 54 per week. It is understood, however, that the associated mills will regulate output in accordance with their order books. It is estimated, therefore, that production will be increased by about 16 per cent., compared with the level of output prevailing before March 31st. But while the estimated increase in the production of the member mills is below the expansion permitted under the agreement of December 30th, it will suffice to prolong the depression in the jute market and, incidentally, to reduce the profit-earning capacity of the jute manufacturing industry in this country.

Shipping Freight Index.—As measured by our monthly index the general level of whole cargo shipping freights fell by 0.9 per cent. during March, following a fall of 3.6 per cent. in February. The current figure of 89.8 compares with 82.1 in March, 1935, and 83.7 in March, 1934. Details of the index number are as follows:—

	Average, 1913	March, 1935	January, 1936	February, 1936	March, 1936
European waters	110.0	88.2	96.7	88.3	85.7
North America	113.1	81.4	92.8	89.0	90.4
South America	123.4	76.1	86.1	85.1	85.4
India	106.3	92.3	102.5	99.7	97.0
Far East and Pacific	117.4	81.3	93.5	90.9	87.9
Australia	127.9	73.0	92.6	90.8	92.6
Total	116.3	82.1	94.1	90.6	89.8

Business has been consistently dull throughout March. Hull reports restricted inquiry and easy rates. At Liverpool, homewards from the River Plate there has been a limited demand for early loading. Demand has decreased at Newport, while at Swansea exporters have placed very few orders for tonnage, and coasting inquiry has been small. Glasgow reports that a few orders are quoting from the Baltic at steady rates. Movements of the various sections are as follows:—

	Index No.	Inc. or Dec. Points		Index No.	Inc. or Dec. Points
Home trade	79.4	-3.2	South America:—		
Bay—outwards	100.9	-1.9	Outwards	61.7	-0.2
Bay—homewards	87.1	-4.8	Homewards	109.1	+0.7
Mediterranean:—			India—Outwards	80.0	-4.2
Outwards	78.0	-3.3	India—Homewards	114.0	-1.2
Homewards	89.6	+1.2	Far East, etc.	87.9	-3.0
North America	90.4	+1.4	Australia	92.6	+1.8

Expressed as a percentage of the average for 1913, the complete figure of our index number for March is 77.2, compared with 77.9 for February and 70.5 for March, 1935.

FRANCE

THE ELECTION CAMPAIGN

FRANCE will vote on April 26th and May 3rd. And a fortnight before the General Election the political and economic activities of the country are at a deadlock. The policy of the Government, is, on every issue, including that of the franc, no more than the strict maintenance of the *status quo*. But what will happen after the elections?

Recent speeches of M. Daladier, the leader of the great Radical-Socialist Party, have shown that the general division into a Left Wing and a Right Wing *bloc* in French politics has survived the "great reconciliation" of parties on December 6th and even the aggressive actions of Hitler. In these speeches M. Daladier argued that there have been two periods in the recent history of France—before and after February 6, 1934—with a favourable financial and economic evolution before that date and a catastrophic relapse thereafter—a relapse which could have been easily foreseen, in his opinion, as an inevitable consequence of the "stupid deflation." Yet the various Cabinets governing France before and after February 6th have had the same Ministers of Finance, men attached to the same deflationary policy—M. Germain-Martin and M. Marcel Régnier.

Right Wing candidates are answering this campaign in the same spirit, and the country is being invited to vote "bloc against bloc" at the polls. These circumstances partly explain the latest flight from the franc. Certain parallels between political events in Spain and in France have been depicted on the hoardings by disquieted capitalists, who already paint the future in the darkest colours. Hitler's coup precipitated the flight from the franc.

The Government is visibly resentful of M. Daladier's attacks. It sees itself as having taken the helm as a Government of "truce and union" for the period up to the elections; and though a few days after its formation it was supported in the vote on the Franco-Soviet Pact by the Communists, the leader of the first Republican Party in the Chamber is now making attacks which complicate the foreign and financial situation. To these attacks replies have been made by a leader of the Right Wing of the Radical-Socialists, the deputy and mayor of Reims, M. Marchandeu. He called for political "reforms" which would be supported not only by the Right Wing of the former Chamber but by sixty or seventy members of the Radical Party; and it seems that, if confirmed by the authority of M. Herriot, this campaign would render impossible the appearance in the Chamber of a Popular Front majority. This resistance to the Popular Front derives its strength from the farmers, as a result of the rise in agricultural prices, notably of wheat and wine, and perhaps also as a result of Hitler's move.

REACTIONS TO THE GERMAN PLAN

But it is difficult to estimate even approximately the opinion of a country which tends to vote against dictatorship, but at the same time for a *rapprochement* with Germany. The latest proposal of the Führer, however, to organise a plebiscite and a truce of the Press in France was badly received even in Conservative circles, so that the German dictatorship has provoked a Front Commun against itself. For this reason the French Government can hardly enter into new negotiations before the General Election is over and the public atmosphere cleared. The British Rhine guarantee has already been much appreciated in France. If, however, the French Press now admits more readily than a few days ago the necessity of negotiating with Berlin, it is observed that these steps must be very carefully weighed. To French observers English public opinion seems to be dangerously seduced by the German proposals to "humanise" war; others are reluctant to introduce into the negotiations Italy, whose

military successes are said to be arousing resentment in London.

The output of the French coal mines during February, 1936, was 3,928,304 tons in 25 working days, against 4,172,186 tons in January of this year (26 working days) and 3,803,793 tons in February, 1935 (24 working days). The average daily output was therefore 157,133 tons, against 160,469 tons in January and 158,492 tons in February, 1935. The number of men employed was 223,680 at the end of February, against 223,524 at the end of January and 230,827 in February, 1935. The output of coke in the coke plants of the coal mines was 329,786 tons in February, against 348,573 tons in January and 316,387 tons in February, 1935.

PARIS, April 6.

GERMANY

DR. SCHACHT'S POSITION

THE position of Dr. Schacht, and the future of his economic policy and of his Reichsmark, were again the subject of rumour and conjecture last week. Rumour said that Dr. Schacht was to go; his foreign trade and currency measures were to be abandoned or altered; the demonstratively advertised but entirely fictitious gold parity of his mark was to be thrown overboard. Dr. Schacht's enemies had triumphed.

The significance of these rumours is not easy to estimate. Political differences, which in most countries come to public knowledge through parliamentary or platform utterances or through the Press, in Germany never attain an overt existence. Officially, Germany has no politics but only policy. It is therefore concluded that the intrigues and animosities which have forced a Minister to take, in pre-war phrase, a "flight into publicity" must have gone very far. Several times of late Dr. Schacht has taken such flights into publicity; first, in declaring for a reconciliation with Russia; secondly, in avowing his dislike for the provocative Rhineland demilitarisation; now, a third time, in retorting to attacks made upon him by persons who are in touch with the very highest official spheres. This summary of Dr. Schacht's attitudes can be made, it must be admitted, only after a good deal of reading between the lines. Dr. Schacht does not sign the articles which he inspires. His flights into publicity proceed through a dim irreligious glimmer rather than through the fierce light that beats on Ministers in untolitarian lands.

Antagonism to Dr. Schacht among extremist Nazis, and that means most leading Nazis, is strong. It is not the Minister's errors, if he has any, but his merits and good fortune that provoke anger. The idealistic Third Reich is not entirely free from a very human desire for office and salary; and the Minister of Economy, by virtue of ability and industry in a world of vacuous demonstrations, has attained both, pushing into the background numerous aspirants of more moderate talents and less moderate ambitions. Partly by merit, partly through the particular character of his work, Dr. Schacht is the most prominent person in Germany. Where concrete achievements requiring ingenuity are concerned he overshadows Herr Hitler. Other Ministers display energy without effect, but Dr. Schacht's energy always has an effect. Other Ministers create labyrinthine bureaucratic organisations which regulate everything from the determination of ancestral blood to the registration of young ladies of twelve who play the game of ping-pong (a literal fact). But after a first appearance in the Press, filling colonnades of columns, the organisations and super-organisations retire into a monkish obscurity and few citizens ever hear anything more of them. Indeed, most of the millions of citizens whose affairs are so minutely regulated by Nourishment Corporations and Labour Fronts have no notion of what these giant organisations are.

Dr. Schacht's labyrinthine organisations are also not publicly understood, but at least they are always in the public eye. Accordingly, in the end, Germans get the impression that there is no Ministry of Finance, of Labour, or of Agriculture, but only a certain Economic Policy which is known to be the same thing as Dr. Schacht. Further, Dr. Schacht is necessary, in so far as any man is necessary; he alone can provide the ingenuity and suppleness which the typical Nazi magnate does not possess and at heart despises as mere intelligence. In short, the virtue of Aristides was not more offensive to Athens than the virtue of Dr. Schacht is to Berlin—and all this from a man who six years back was hand in glove with Manchester Liberals, Marxists and International Pacifists.

It is natural that stout Ministers in uniform who fifteen years back were fighting beside, or at least talking beside, the Führer should dream of Dr. Schacht's disappearance. That is the meaning of the Press attacks; for no Third Reich citizen would dare to write a book against a Minister unless some exalted rival of the Minister had given inspiration and promised support. In his retort in *Der Deutsche Volkswirt* Dr. Schacht minimises the attacks, but thereby he advertises them. The attackers, he says, criticise his Reichsbank policy, demand the abandonment of the fictitious gold parity, recommend "private clearing," which means the selling of the limited supply of foreign exchange to the highest bidder (that is automatic depreciation), and recommend the "debureaucratisation" of the trade control and currency control systems. Dr. Schacht rejects all these complaints and recommendations. He denies that any change in general policy is to be made, and denies in particular the story that he is to go.

Dr. Schacht's reasons against changing the currency and exchange regulations seem to be very sound. The overvaluation of the mark has very little, if any, influence on the trade balance. On the one side is the influence of the price subsidy system, which keeps up exports; on the other side is the New Plan which almost completely rations imports. In practice the trade balance is therefore virtually determined in advance. Against the decontrolling of foreign exchange, which naturally could not be achieved without depreciation, Dr. Schacht brings the new objection that 12,000 million to 20,000 million marks (probably an overestimate) of Jewish capital would flow out of Germany.

DEVALUATION OF THE DEBT

His adversaries retort that the export subsidy system constitutes a very heavy tax; and that it is not clear where, after the levy of 1935 has been exhausted, money is to come from. Another consideration is the public debt. The incidence of this, it is pointed out, depends on internal prices; when the Government reveals the amount of the debt, as it will some day have to do, there will be no way of meeting it so easily as by devaluation and a rise in prices. The extinction of the 90,000 millions war debt in 1919-23 is not forgotten. On this the comment may be made that the present German price level has hardly any relation to those of other countries. It is already on a depreciated mark basis, and it is therefore hard to foresee the effect on prices of formal devaluation. It is probable that the present devious currency system could be indefinitely maintained on the basis of the two factors: mark inconvertibility and control of foreign payments; and the system presents certain specious advantages for State finance. The threat to Dr. Schacht lies therefore not in the alleged failure of his system, for which his critics have no practicable alternative, but rather in the very real animosity provoked by his prominence and power.

The Budget for 1936-37 is apparently to remain secret. The text of a brief Budget Law has appeared. It prescribes that the Budget Law of March 29, 1935 (for the financial year 1935-36), which also appeared without estimates of revenue and expenditure, shall remain in force for the new financial year with some minor alterations. The Minister of Finance is authorised to give guarantees for furthering foreign trade up to Rm. 200 millions, for the regulation of the egg market up to Rm. 40 millions, for the provision of credits for the flax and hemp industries up to Rm. 10 millions, and for work-creation measures on the land up to Rm. 100 millions.

A preamble to the law altering the financial relations between Reich and States gives as ground for reducing the States' shares in the tax yield the circumstance that current gross tax revenue much exceeds the estimate of February, 1935, when this matter was last regulated; and that the main cause of the increase was Reich expenditure on work creation and on re-armament, in consequence of which the Reich's current expenditure and debt have both risen.

Reichsbank credits and investments in the last week of March increased by the large sum of Rm. 615 millions, as against Rm. 513 millions in the corresponding week of 1935. The explanation, besides the normal heavy quarter-end demand, was the growing need of business, as the spring seasonal activity has set in rather earlier than usual. A substantial part of the cash raised was left on deposit, and total deposits rose by the large sum of Rm. 94 millions. The Reichsbank note circulation at the quarter-end was Rm. 4,627 millions, as against Rm. 3,664 millions last year; total circulation was Rm. 6,269 millions, against Rm. 5,846 millions. Immediately after the turn of the month money again became plentiful. The promissory note circulation on March 31st was Rm. 750 millions, against Rm. 716 millions a month earlier. Day loan rates declined to around 3 per cent. at the beginning of this week.

BERLIN, April 7.

SWEDEN

INCREASED DEFENCE EXPENDITURE

THE occupation of the Rhineland by German troops has naturally caused considerable excitement in the Scandinavian countries. The Press does not give very much attention, however, to discussions of the moral or legal aspect of Germany's act, but is chiefly concerned with ways and means of keeping the Northern countries out of political complications arising from the Locarno Treaty. As long as the British Government follows its present policy of mediation and conciliatory efforts, it will doubtless receive the whole-hearted support of the Scandinavian States. A policy foreshadowing possibilities of economic sanctions against Germany would, on the contrary, meet with very little success in these countries, which have obligations under no other political instrument than the Covenant.

The darker the political outlook grows the stronger becomes the agitation in Sweden for increased national defences. The Opposition political parties are criticising the Socialist Government's plan for the reorganisation of the country's defences, although that plan provides for military expenditure exceeding Budgetary provisions by Kr. 13.5 millions.

Foreign trade in February was still rising, with substantial increases both in imports and exports if compared with the corresponding figures for February, 1935. The value of Sweden's foreign trade during the two first months of the current year is shown by the following table:—

	1935 (In million kronor)		1936	
	January- February	February	January- February	February
Imports	208.1	99.0	248.5	115.0
Exports	163.4	80.0	195.7	90.0
Import surplus	44.7	19.0	52.8	25.0

The outlook for the principal Swedish staple industries is reported as favourable. Timber sales have further improved both in volume and value, and by the middle of March total timber exports of the current year amounted to 410,000 standards, against 250,000 standards a year ago. About 50 per cent. of Swedish timber exports were absorbed by the British market. The pulp market was still better, and about 85 per cent. of the current year's sulphite production and 90 per cent. of sulphate production have been already sold. Iron ore shipments in February considerably exceed last year's figure. The demand for pig iron and steel is satisfactory, particularly on the home market, with prices unchanged at home but rising on foreign markets.

Reports from the labour organisations reveal a decline in the number of unemployed during February from 62,000 to 58,000, compared with 90,000 a year ago. Good demand is reported from the workshop industries. The wholesale price level remained unchanged in February, while the cost of living displayed a slightly rising tendency, particularly for foodstuffs.

Money is still extremely abundant. Indeed, owing to increased demands for credit, there has been a substantial rise in advances to trade and industry. Deposits showed, on the other hand, a slight contraction, with a marked shift from sight to time accounts.

The Bank of Sweden's gold reserve, which during 1935 grew from Kr. 351 millions to Kr. 408 millions (gold kronor), grew further during the first quarter of the current year. On March 14th it was Kr. 445 millions. The total currency reserve of the Bank of Sweden and the joint-stock banks declined in February by a few millions, though the fall was partly offset by the rise of the gold reserve.

The bulk of Swedish joint-stock banks and a great number of Swedish industrial concerns have now published their annual reports, which in most cases reflect the general business expansion in Sweden during 1935. Business on the Stock Exchange has been brisk.

STOCKHOLM, April 6.

ROUMANIA

THE GOVERNMENT ACCUSED OF NAZI SYMPATHIES

THE latent dissension in the Liberal Party between the younger section, the followers of the Prime Minister, M. Tatarescu, and the old Liberals and supporters of the Party Leader, M. Constantin Bratianu, developed into an open quarrel on the occasion of the nomination of some high officials in the administration of the National Bank of Roumania at the annual general meeting of the bank. Although this split will speedily be bridged, it will undoubtedly weaken the Party. This lack of unity in the principal parties is obscuring the political horizon. The National Peasant Party has been victorious in a few by-elections, in which the Government was accused of having made common cause with pro-Nazi elements. The Party, however, is by no means as strong and united as it used to be, whilst its alliance with the Radical, Dr. Lupu, may give its policy a decided inclination towards the Left.

The British Board of Trade mission to Roumania, which arrived at the end of January to negotiate a new agreement for the payment of Roumania's commercial debts to Great Britain, left after a short stay without achieving any result. The Roumanian Government was not prepared to apply more than 5 per cent. of the yield of exports to the United Kingdom to the payment of the debt arrears; and this was considered insufficient by the British delegation. British interests insisted on the immediate payment of the £270,000 due on December 1st last under the old agreement, which expired at the end of January. Roumania, on the other hand, wished to apply the immobilised British balances in this country to industrial investment, a suggestion which was not within the competence of the British delegation. Nevertheless, the delegation gathered information which will be of assistance in the negotiations now being carried on in England for a new agreement. Meanwhile, hardly any permits for imports from the United Kingdom are being granted at the moment, except for essential raw materials.

Owing to the considerable decline in Roumanian exports to France during recent years, it has become impossible since August, 1935, to transfer sufficient funds for the payment of the coupons on Roumania's foreign loans, and the commercial arrears owing to France also remain unpaid. As, furthermore, Roumania intends to place large armament orders in France, it had become imperative to make a new arrangement succeeding the existing clearing system, which had proved unsatisfactory. A financial

agreement has at last been concluded. The agreement assures Roumania a slight increase in import quotas for barley, maize and some other agricultural produce amounting to about 6 million to 7 million francs per year. Roumania will also be permitted to export petrol for the use of French aeroplanes to the value of 12 million francs annually. The agreement is dependent upon the conclusion of a contract for the sale of the royalties due to the Roumanian Government from the petroleum companies for a period of 12 years, during which a maximum quantity of 750,000 tons of petroleum is to be exported annually to France.

ORDINARY BUDGET BALANCED

The ordinary Budget for the financial year beginning on April 1st is expected to reach about 22,000 million lei, a slight increase over the current year. The Minister of Finance is confident that the ordinary Budget for 1935-36 will be balanced, while the armament budget will show a deficit of only 30 million to 40 million lei. If it should be found necessary to increase the estimates for armaments further, as seems very likely in view of the German Government's denunciation of Locarno, the Government will be obliged to impose a fresh increase in indirect taxation.

The dry weather during the autumn has interfered with grain sowings. The area sown was as follows:—

Wheat ...	2,671,000 hectares or 91 per cent.	} of the average autumn sowings during 1930-34
Rye ...	314,000 " 83 "	
Barley ...	53,000 " 63 "	

The deficiency may be partly compensated for by the unusually mild winter, which has left the fields in an extremely favourable condition. Spring cultivation has already begun and promises well. Nevertheless, it is not expected that the harvest will exceed in quantity that of 1935; and the amount available for export will probably not show an advance on the last few years.

BUCHAREST, April 2.

THE CHARTERED BANK OF INDIA, AUSTRALIA AND CHINA

Incorporated by Royal Charter 1853

CAPITAL - £3,000,000
RESERVE FUND - £3,000,000

Drafts issued on the undermentioned Agencies and Branches, Bills of Exchange bought and received for collection, Letters of Credit issued, and every description of Banking business undertaken.

The Bank also undertakes Trusteeships and Executorships.

BRANCHES AT

Alor Star (Malay States), Amritsar, Bangkok, Batavia, Bombay, Calcutta, Canton, Cawnpore, Cebu, Colombo, Delhi, Haiphong, Hankow, Harbin, Hongkong, Iloilo, Ipoh, Karachi, Klang, Kobe, Kuala Lumpur, Kuching, Madras, Manila, Medan, New York, Peiping (Peking), Penang, Rangoon, Saigon, Semarang, Seremban, Shanghai, Singapore, Sitiawan (F.M.S.), Sourabaya, Taiping (F.M.S.), Tientsin, Tongkah (Bhuket), Tsingtao, Yokohama, Zamboanga (Philippine Islands).

HEAD OFFICE: 38 BISHOPSGATE, LONDON, E.C.2

SOUTH AFRICA

THE NEW MINING TAXES

THE high hopes that had been centred in the Union Budget, with the assured prospects of substantial surpluses on both general revenue account and railways, have scarcely been justified. In each case the expected surpluses of over £3,000,000 were duly announced, but except for a few relatively insignificant reductions in Customs duties—altogether disproportionate to the expectations encouraged by the somewhat drastic findings of the Customs Tariff Commission which recently reported on the burden thereby added to cost of living—very little relief is afforded.

The gold-mining industry seems once more to have been handed the thick end of the stick. On an unbiased reading of the exhaustive report of the Departmental Committee which has investigated the incidence and economic effects of the former basis of mining taxation, there was every justification for expecting a substantial measure of actual relief, and indeed at a first reading of the Finance Minister's speech in introducing the new proposals they would seem to warrant the optimism that was reflected in the next morning's Stock Exchange operations. With more mature consideration, however, it was realised that what advantages the new scheme offered were in its administrative aspects and in a possibly more equitable allocation of the taxation as between mine and mine, though in the aggregate the Government would not be relinquishing any of the revenue derived from the gold-mining industry as a whole.

How large this contribution is, will be recalled from the year's figures recently published. But a computation embodied in the annual report of the Chamber of Mines presents the Budget's dependence on the gold mines in a new aspect in relation to the more fortunate experience of the gold producers of other countries. The comparison may be set out as follows:—

	Rate of Tax (% of Profits)
South Africa.....	42
Rhodesia	23
Australia	18
Canada	13-19
United States	14-18
West Africa	12

In general, the Union's Budget reflects the very satisfactory state of the country's finances, and indeed industrial development on every hand furnishes irrefutable evidence of the continued prosperity the country is enjoying.

Another significant figure is to be found in the latest returns of the Reserve Bank. At March 20th the gold holding had risen to the record high level of £29,162,485 valued at the statutory level; at the current price of gold the value would exceed £48,000,000. Government deposits had advanced in the week by nearly £600,000 to £7,657,692, and bankers' deposits at £26,201,991 also showed a slight increase.

JOHANNESBURG, April 1.

JAPAN

THE MILITARY INSURRECTION

THE Okada Ministry, which had obtained a fresh mandate in the General Election on February 20th, was forced to resign *en bloc* by a military insurrection which broke out in the early morning of February 26th and continued for four days. The *coup* was an outburst of the so-called "Young Officers' Movement," which has gained influence in military circles and aimed at a decisive repudiation of the "Elder Statesmen *bloc*," political parties, "new bureaucracy," and big business interests. The rebellion was suppressed, and the insurgent officers are to be court-martialled for high treason; but the mutineers' claims found expression in the Army's attitude towards the choice of

ministers in the succeeding Government. After four days' conversations with the military authorities, Mr Koki Hirota, the Foreign Minister, formed the new Cabinet on March 9th, himself holding the portfolio of Foreign Affairs together with the Premiership, and with Mr Eiichi Baba, Chairman of the Japan Hypothetic Bank, as Finance Minister. The two major Parties, the Minseitō and the Seiyūkai, are each represented by two members.

Despite the predominance of the Services in the new Government, no sudden radical departure in the general line of financial and foreign policies should be envisaged. But the Stock Exchange, which reopened on March 10th after a fortnight's closing, reacted on fears of increased taxation, although it was much less nervous on the following day. The money market, on the other hand, remained quiet throughout the incident and thereafter, and the commodity markets, reopened on March 2nd, have been placid.

The recent trend in foreign trade continues. The February returns show that, compared with the corresponding month of last year, imports, at 251,643,000 yen, decreased by 2,191,000 yen, or 0.8 per cent.; while exports, at 194,395,000 yen, increased by 15,883,000 yen, or 8.9 per cent. The chief declines in imports are in raw cotton, iron and steel, and machinery, whereas raw wool alone on the leading list recorded a notable advance. Although further gratifying progress was made by the export trade as a whole, the record of staple products, particularly textile goods, was generally disappointing, and the expansion was accounted for largely by a number of lesser exports. Cotton piece-goods exports were again substantially smaller both in value and volume. Raw silk increased slightly in value, but decreased in volume.

THREE YEARS' INDUSTRIAL ADVANCE

Other economic indices for February show the continuance of the trend in recent months. The Bank of Japan's wholesale index number for February registered a further drop of 0.4 per cent. on the month, mainly due to the continued depression in the grain and the textile groups. The price index for the month of February of all shares listed on the Tokyo Stock Exchange moved up by 4.3 points to 133.4, as against 129.1 a month earlier. Output of cotton yarn during February totalled 118,176,000 lbs., or an increase of 5,549,000 lbs. over January; while rayon yarn production during last month amounted to 18,514,000 lbs., or 191,000 lbs. less than in January.

There is further evidence of domestic recovery during last year. The official index of industrial production in 1935 shows a rise of 10.6 per cent. and 25.3 per cent. respectively as compared with 1934 and 1933. The following table gives a comparison of the index numbers (average of 1931, 1932 and 1933 = 100) for output of the principal products for the past three years:—

	1933	1934	1935
Cotton yarn	109.7	122.9	126.0
Raw silk	95.7	99.1	100.9
Rayon yarn	134.5	205.0	299.0
Cotton piece-goods	113.1	127.4	131.7
Rayon piece-goods	113.8	143.3	203.9
Pig iron	125.0	151.5	165.2
Steel products	124.5	156.0	181.9
Machinery and tools	121.9	159.5	187.7
Cement	118.3	118.5	132.1
Sulphate of ammonia	107.0	122.3	144.1
Caustic soda	143.9	222.0	287.3
Refined sugar	104.5	100.2	112.9
Total of manufacturing industries	113.3	129.1	143.3
Gold	106.5	114.7	140.7
Silver	107.8	124.3	147.5
Sulphur	132.1	160.4	192.9
Coal	110.1	121.0	127.9
Total of mineral industries	106.7	115.4	124.1
Grand total	112.5	127.4	141.0

All the staple products show an improvement compared with the preceding year. The expansion of production during the past year was most marked in the case of rayon, iron and steel, machinery and tools, and heavy chemicals, while the growth was not so large in the case of most textiles, with the possible exception of rayon yarn and fabrics.

TOKYO, March 20.

ARGENTINA

FALL IN EXPORTS

THE export figures for the first two months of 1936 compared with those for the same period of 1935 were as follows:—

	QUANTITIES EXPORTED, IN TONS		Per cent.
	First Two Months 1935	1936	
Livestock products	213,805	228,631	+ 6.9
Agricultural products.....	2,709,194	1,996,538	-26.3
Total (all products) ...	3,020,992	2,302,206	-23.8

	VALUES OF EXPORTS		Per cent.
	First Two Months 1935	1936	
Livestock products	\$ 103,727,539	\$ 122,752,664	+18.3
Agricultural products.....	189,718,729	137,715,716	-27.4
Total (all products) ...	306,810,888	273,030,442	-11.0

The volume of exports was the lowest since 1930, but thanks to better prices the value exceeded that obtained in 1931, 1932 and 1933. This heavy falling off in the export trade was due entirely to reductions in the amount of wheat, barley, rye, linseed and oats shipped. Some of these exports were reduced by over 80 per cent. Maize shipments are up by 76.7 per cent. There is no doubt that exports for 1936 will not approach the 1935 figure in tonnage, but with a continued improvement in prices the drop in values may not be very pronounced. Meat exports show an upward tendency, but the immediate future of the meat trade depends to a large extent on the outcome of the negotiations about the renewal of the Roca Agreement with Great Britain.

Harvest conditions in the south of the Province of Buenos Aires are favourable for wheat; but in many other districts wheat has been lost owing to drought. Linseed is expected to be considerably below last year's figure practically throughout the country owing to unseasonable weather and locust invasions. The one really bright spot in the harvest is the abundant maize crop which is now assured. It remains, however, to be sold; and this may prove none too easy unless a sacrifice in the price is made.

On the whole the harvest is disappointing. This is due in the main to the continued drought during the late winter and spring of last year, which in some regions left the ground so hard that ploughing was not possible.

The Ministry of Agriculture have recently published their first forecast on the maize harvest, which they estimate will yield some 9,650,000 tons. This is considerably less than was at first expected, owing to losses caused by drought and locusts, but it is none the less a very satisfactory harvest.

BUENOS AIRES, March 20.

LETTERS TO THE EDITOR

STALIN

TO THE EDITOR OF THE ECONOMIST

SIR,—The review of Sidney and Beatrice Webb's "Soviet Communism" which recently appeared in the *Economist* raised the question of Stalin's position in the Soviet State, discussing whether he is an "autocrat," a "leader" or simply a "member of a committee." That his position is a distinctly exalted one may be judged from the following typical excerpts from the never-ending stream of adulation in the Soviet Press. Stalin, according to a group of workers in a motor-car factory, is "our great sage, the leader, teacher and dearest friend of the people not only of the Soviet Union, but of all countries." A group of military cyclists address a letter to Stalin, "greatest thinker and leader of the Socialist era in the development of humanity." Other laudatory characterisations are "the greatest of all men," "the great leader of the people of the world," "the greatest leader of the greatest class" and "the greatest strategist of the world Communist revolution."

The prize for this sort of thing seems to belong to an author named Avdyenko, whose hymn of praise to Stalin reaches heights that may well be envied by the most perfervid eulogists of Mussolini and Hitler:—

"Centuries shall elapse and the Communist generations of the future will deem us the happiest of all mortals that have inhabited this planet throughout the ages, because it is we who have seen Stalin the leader-genius, Stalin the sage, the smiling, the kindly, the supremely simple. When I met Stalin, even at a distance, I throbbed with his forcefulness, his magnetism and his greatness. I wanted to sing, to shriek, to howl from happiness and exaltation."

To read Avdyenko is to be reminded of Byzantine and mediæval Russian models of court flattery and to recall the wise old proverb: "Plus ça change, plus c'est la même chose."

Tokyo, Japan.
February 22, 1936.

Faithfully yours,
WILLIAM HENRY CHAMBERLIN.

CHERRIES AND MR ELLIOT

TO THE EDITOR OF THE ECONOMIST

SIR,—You have frequently criticised the Minister of Agriculture and Fisheries as regards sugar, and I should much appreciate a word *re* cherries.

The working class cannot buy cherries at 1s. 6d. a pound, and this is what Mr Elliot's policy has achieved. What is this imaginary French cherry disease? Years ago, for at least a month, cherries could be bought in England at 3d. a pound, and each year in France and Spain delicious fruit can be had for this equivalent.

Who are the English cherry growers who are unable to supply their produce below 1s. a pound? Will protection—or prohibition—ever help them?

It is, in my opinion, high time the working classes were enabled to buy something better than tinned, bottled, dried or "preserved" fruits.

Yours faithfully,
178 Anlaby Road, Hull. H. G. WATSON.

BOOKS AND PUBLICATIONS

THE ST. LAWRENCE WATERWAY

PEOPLE in Great Britain—indeed, everywhere outside the economic basin of the St. Lawrence and Hudson River systems—often wonder why so much public concern, and so much political turbulence, have been caused by the project of constructing a deep waterway to carry vessels of ocean-going size from the head of the Great Lakes to the tideway. Mr C. P. Wright's book* answers their question many times over. The characters in this historical drama of modern capitalism are the giants of the stage we live upon—vested interest, sectional agitation, political corruption, the war between rival means of transport, between public and private control of utilities, and the friction engendered by jealous nationalisms.

* "The St. Lawrence Deep Waterway: A Canadian Appraisal." By C. P. Wright. (Toronto) The Macmillan Co. of Canada. 450 pages. 18s.

It is an almost incredible tale that Mr Wright tells. The possibility of building a deep waterway along the St. Lawrence, by canals and locks to circumvent the falls and rapids, was mooted as far back as the 'nineties and even earlier. Rivers have been the arteries of North America since the first settlements, and the history of Canada in particular is the tale of their exploration and navigation. It was natural that as the West was developed a demand should come for a means of transporting grain and other produce by water between the Great Lakes and the sea without transshipment. But it was not until just after the war of 1914-18 that the project as a whole was brought near to actuality. The sharpest stimulus at that time was the acute shortage of railway rolling stock and the consequent delays and losses when the crops were moved. Then came the collapse of primary prices, while transport costs remained disproportionately high.

Although these conditions were themselves evanescent,

practically the whole of the subsequent discussion of the project's economic merits was based on the facts and estimate of that period. Still more remarkable was the way in which the official investigations were instigated, and fed with evidence, by a propagandist organisation—the Great Lakes-St. Lawrence Tidewater Association. Later inquiries accepted and repeated much of the vital material of the earlier ones, and when at last a treaty embodying the project was signed, it was quite impossible to say that it had received either in Canada or in the United States the detailed and unbiased expert examination that so vast an enterprise demanded. Its most notable protagonist on the American side, Mr Herbert Hoover, was *parti pris* from the beginning.

In Canada there was never the same enthusiasm or agitation, and certain aspects of the scheme gave off an unpleasant savour to a public critical after the notorious Beauharnois Power affair. Hence Canadian opinion as a whole was not bitterly disappointed when the United States Senate rejected the treaty, although one of the most compelling reasons behind the Senators' vote was a jealous feeling that Canada had got the better of the bargain.

The fault of the treaty, on Mr Wright's showing, was that it was nurtured in prejudice; and prejudice of another kind secured its rejection. Mr Wright's trenchant and thorough book is constructive as well as critical, and anyone in authority who has to consider these questions in the future will be well advised to read it, and take its moral to heart.

SHORTER NOTICES

"Social Democracy in Britain." By H. W. Lee and E. Archbold. Social-Democratic Federation (London). 208 pages. 3s. 6d.

Many people may be surprised to hear of a social-democratic movement in Great Britain, yet here is a book with the subtitle "Fifty Years of the Socialist Movement," devoted to the history of the Social-Democratic Federation.

It is interesting to read again the history of the Labour Movement from the dogmatic angle. The name of the "S.D.F." goes back to 1884, an almost legendary period of Hyndman and William Morris. It began, typically enough, with a split. Morris threw his energies into the new Socialist League, and the Federation failed to see eye to eye with the Fabian Society—neither with "revolutionary action" nor with "permeation." About 1900 various socialist and labour societies, trade unions and other organisations met to form a "Labour Representation Committee" (L.R.C.) to attain common legislative and political ends. The S.D.F. could not induce this committee (the L.R.C.) to adopt the principle of recognising the class war, together with the other S.D.F. proposal that they should resolve to support any party that promoted legislation for the socialisation of the means of production, distribution and exchange. Instead, the L.R.C. accepted a more practical resolution of the I.L.P. to back a Labour group in Parliament. Thereupon, the S.D.F., at Harry Quelch's initiative, withdrew from the L.R.C.

In 1911 a new fusion took place whereby the S.D.F. became a part of the British Socialist Party. This was a disastrous step, for three reasons. The B.S.P. (they all had a passion for initials) was isolated by dogmatism from the general Labour movement, and in this isolation it attracted the outcasts of many sects—Anarchists, Syndicalists and Impossibilists. Secondly, the Labour Party had been recognised by the International Socialist Bureau as the only active proletarian participant in the class struggle, and this recognition removed in advance the *raison d'être* of the B.S.P. Thirdly, the Great War split the party.

The S.D.F. group thus left the B.S.P. in the bitter years of the war. The name "S.D.F." was not revived until 1920, and for four years they carried on under the now shameful name of "National Socialists."

No story could more precisely illustrate the difficulties of a left-wing organisation. On the one side reformers feel the danger that their initial idea will be destroyed by modification if they allow themselves to become implicated with men not previously of their own way of thinking. On the other side is the risk of never co-operating and so becoming an upright, narrow and ineffective clique. The S.D.F. had the peculiar misfortune to run on to not one but both horns of this dilemma, sometimes even at the same time. Nevertheless, it preserved an intellectual honesty that has made it one of the schools of British Socialism.

"The Theory of Monetary Policy." By B. P. Adarkar. P. S. King and Son. 125 pages. 7s. 6d. net.

The present work comprises a series of short discussions of the theorems of monetary policy which derives from the various concepts of "natural," "equilibrium," "normal" or "real" rates of interest. No attempt is made to build a systematic theory. The author takes a primarily Keynesian viewpoint on the subject. His own view of Mr Keynes's theory is, however, a very simplified version.

Mr Adarkar maintains that the "true natural rate" is that rate which equalises savings and investment in one of the Keynesian senses, or the supply of and demand for "current social money savings." This rate, he asserts, must maintain an equilibrium between costs and prices and thus prevent abnormal profits or losses. By definition, therefore, if the market rate (or complex of rates) equalled this natural rate, equilibrium would be obtained.

It is doubtful if this really advances our knowledge much farther. For the only way of knowing in practice whether the market rate of interest is diverging from the "natural" rate is to observe that costs and prices are out of equilibrium—i.e. that unemployment is increasing or decreasing. And when unemployment is increasing, alteration of the rate of interest is not necessarily the only remedy.

MONEY AND BANKING

DEVALUATION IN PRACTICE

(BY A CORRESPONDENT)

IN a recent number of the *Weltwirtschaftliches Archiv* of Kiel there appeared a symposium of the very greatest interest to students of monetary policy. Its purpose was to assemble data concerning the effects of devaluation in those countries which since 1931 have either chosen a new gold parity, or have joined the sterling *bloc*. To this symposium well-known writers in various countries contributed. The effects of devaluation in Britain, the Dominions, the Scandinavian countries, and the United States have been much canvassed and are by now fairly well known. The more recent and very interesting experiments in Czechoslovakia and Belgium have received less attention, but their results may easily be decisive in influencing countries with exchange restrictions on the one hand, and the gold *bloc* countries on the other hand, to follow their example. The following account of these experiences is based partly on the above-mentioned symposium and partly on independent data.

Towards the end of 1931 Czechoslovakia, like so many other Central European countries, adopted a system of exchange control, maintaining in no more than a purely nominal sense the gold parity which she had established only so recently as 1929. Under this regime her foreign trade suffered in exceptional measure the paralysis common to countries with blocked currencies. At the beginning of 1934 its value had shrunk to barely a quarter of the 1929 level. Industrial production had fallen by 40 per cent., the output of the metal industries and of textiles by two-thirds, and that of glassware by a half. Unemployment had very nearly doubled. In these circumstances, in February, 1934, Czechoslovakia decided to devalue by the arbitrary fraction of one-sixth, re-establishing practically overnight an effective gold standard at the new parity. The effect, both on internal activity and on foreign trade, was instantaneous. At the time there were many who prophesied that the prevalence and rigidity of import restrictions would be found to have rendered the ordinary methods of price adjustment, upon which, after all, devaluation relies, completely inoperative. These prophecies were falsified. The favourable trade balance, which had shrunk to zero in 1932 and 1933, at once recovered. In the ten months following devaluation, from March to December, 1934, exports exceeded imports by 17 per cent., while for the whole of last year the excess was 10 per cent. Moreover, the total monthly value of this foreign trade rose almost at once by about 50 per cent. An investigation of the directions in which exports expanded most is interesting. In 1934, compared with 1933, exports to the gold *bloc* expanded least, to the extent of only 4 per cent.; to the group of countries with exchange restrictions they expanded 17 per cent.; while to the sterling area they expanded 31 per cent. Part of this expansion, particularly to the second group of countries, may perhaps be accounted for not so much by the fact that Czechoslovakia was able to quote lower prices, as by the growing desire of Central Europe to re-arm, a desire which manifested itself about the time that Czechoslovakia decided to devalue.

A sharp rise in commodity prices was greatly feared as the consequence of devaluation but, during the following twelve months, wholesale prices rose by only 5 per cent. and the cost of living remained unchanged. The progress of internal recovery did not fully accord with expectation. Certainly, in the first few months after devaluation there was considerable improvement, affording clear evidence of release from deflationary pressure. Between February and July, 1934, industrial production rose by almost 10 per cent. and unemployment declined by a third. But recovery was uneven, and by midsummer, 1934, it had ceased and a new decline had set in. The consequence was that by February, 1935, things were back much where they had been at the time of devaluation twelve months before. Textiles were even worse off, though metal production

showed some improvement on balance, due no doubt to the demand for war material. A year after devaluation the foreign trade returns were the only economic indices which had shown sustained improvement. But Czechoslovakia had not much longer to wait. By the spring of 1935 recovery was again well under way, and the country has since enjoyed its full share of the revival in world activity. By the end of 1935 employment was about half-way back to normal.

In the case of Belgium it is too early yet to dogmatise about the results of devaluation, for the experiment is still barely a year old. The history of her case differs essentially from that of Czechoslovakia in that she maintained a fully effective gold standard at the old parity right up to the moment of devaluation. Measures against speculators there may have been, but the belga was always a free market for commercial transactions. It can hardly be said, however, that Belgium was forced off the gold standard, for when devaluation came the sight liabilities of her central bank were covered as to 65 per cent. by gold. Nor can it be said that public opinion demanded devaluation; indeed quite the reverse, for so successful had the semi-official propaganda against devaluation become that when devaluation was undertaken acute disgust was felt in many quarters. Nevertheless, the Belgian experiment must count among the most successful Europe has so far seen.

A number of circumstances combined to produce the measure of just over a year ago. The failure of the Banque Belge du Travail in January made it necessary for the Government to come to the rescue of the commercial banking system at a time when great anxiety was felt about the budgetary situation, and especially over the impossibility of reducing by conversion the interest burden of the National Debt. The last straw came in the middle of March with the refusal of the French to help Belgium's languishing export industries with tariff concessions. Devaluation was therefore decided upon. Practically overnight the gold content of the belga was cut by 28 per cent. The reasoning which lies behind this apparently arbitrary figure is interesting. The Belgian authorities performed a purchasing power parity calculation along the following lines. They assumed that in 1928 Belgium had been in equilibrium with world conditions, but that the pound sterling was overvalued by 20 per cent. at that period. They proceeded to measure the relative movement of the cost of living in Britain and in Belgium since 1928, and found that in order to make the relation between the two costs of living what it should have been in 1928, a devaluation of about 25 per cent. was indicated. The figure of 28 per cent. was chosen in order to be on the safe side. The profit on revaluation was used to establish an Exchange Fund.

The effects of devaluation, both on foreign trade and on the internal situation, have been very marked. Like Czechoslovakia, Belgium experienced a sharp recovery in foreign trade. Both imports and exports reached a minimum in the first quarter of 1935; the value of both had been reduced almost to a third of the 1929 average. Since devaluation, both have been increasing steadily, and in January of this year were still increasing. In the last nine months of 1935—the nine months immediately after devaluation—the total value of Belgian foreign trade had risen by 30 per cent. as compared with the last nine months of 1934. The trade balance, on the other hand, did not show the same improvement. Belgium normally has a slight excess of commodity imports, and for the year 1934 this excess was about 2 per cent. In the nine months following devaluation, however, this excess increased to 10 per cent, for while exports increased, imports increased still more. Last year invisible exports were, of course, much swollen by the Brussels Exhibition, so that the balance of payments did not suffer as much as these figures would suggest. Various reasons are given for the absence of

improvement in the visible trade balance. Home industrial activity needed increased raw material imports, while not only did the Government attempt to dissuade exporters from cutting prices in terms of gold, but many of Belgium's exports are cartelised. In Belgium, as in Czechoslovakia, a rise of internal prices was greatly feared. Between March and December, 1935, wholesale prices rose by 25 per cent. and retail prices by 14 per cent. This was evidently a more substantial rise than in Czechoslovakia, though by now the trend of world prices was upward.

As regards the internal situation, unemployment reached a maximum of 223,000 in January, 1935, immediately before devaluation, and has since declined to 170,000 in January of this year. Improvement in the home market industries was general and rapid, especially in textiles and building. It became possible to balance the Budget, and in May the interest on the National Debt was reduced from 6 to 4 per cent. Moreover, Belgium has not so far experienced any setback comparable to that experienced in Czechoslovakia some six months after devaluation. Perhaps this is accounted for by the fact that Belgium did not devalue until world recovery was already in full swing. It may be that devaluation allows a country to take advantage of any recovery which is in progress but is a less certain method of inducing recovery independently of conditions elsewhere. At any rate, the economic history of Belgium during the last twelve months has been in very marked contrast to that of her nearest neighbours, Holland and France.

FINANCIAL NOTES

The New Zealand Reserve Bank.—The Labour Government in New Zealand has now introduced its bill for the complete nationalisation of the Reserve Bank. It provides that the State is to buy the existing shares in the Bank at the price of £6 5s., plus accrued dividend, per £5 share. The Governor and Deputy-Governor will continue in office under the terms of their original appointment, but as the remaining directors retire in rotation their places will be filled by the Governor-General in Council. In order to carry out the monetary policy of the Government the bank is charged with the duty of regulating and controlling internal currency and credit, the transfer of moneys to and from New Zealand, and the disposal of moneys derived from the sale of New Zealand produce and for the time being held overseas. The bill also removes the existing limit upon the amount of Government securities purchasable by the bank; empowers it, with the authority of the Governor-General in Council, to underwrite any Government loans; enables it to grant overdrafts to the Government or to a statutory marketing authority to finance the purchase and marketing of new Zealand produce; and increases the amount that may be borrowed from the bank on Treasury bill security from six months' to a year's estimated revenue of the Consolidated Fund, exclusive of produce marketing overdrafts or purchased securities. The Minister of Finance is also given power to suspend absolutely or conditionally the duty of the bank to exchange its notes for sterling. The Governor of the bank is empowered, with the authority of the Minister of Finance, to vary the present requirements upon the trading banks to maintain balances with the Reserve Bank, provided that the present requirements of 7 per cent. of demand liabilities and 3 per cent. of time liabilities shall not be reduced. Mr Savage, the Prime Minister, had, prior to the introduction of the bill, disclaimed any intention of resorting "to the printing press," but the whole tenor of the measure is to emphasise the fact that monetary policy is essentially an attribute of the Government of the day. Yet the value of an independent central bank as a disinterested adviser to the Government is far from negligible. The fact that New Zealand now proposes to dispense with this safeguard makes it all the more necessary for her Government to follow a wise and consistent monetary policy.

Italy's Gold Reserves.—At last week's meeting of the shareholders of the Bank of Italy certain details were given of the Bank's position at the end of the year. These are reproduced below, together with comparative statistics for earlier dates:—

	Dec. 31, 1934	June 30, 1935	Oct. 20, 1935	Dec. 31, 1935
		Lire millions		
Gold	5,811	5,589	3,936	3,027
Foreign balances	72	295	379	367
Note circulation	13,145	13,029	15,271	15,457

October 20, 1935, was the last date for which the complete bank return was published. It was stated at this week's meeting that "the end-of-year requirements having been met," the note circulation had been gradually reduced to Lit. 14,490 millions by March 20th. Between October 20th and December 31st last year the Bank of Italy had lost Lit. 909 millions of gold. The outflow was at a slightly lesser rate than during the period from June 30th and October 20th. Since December 31st, Italy's losses of gold must have been considerable, and may amount to over Lit. 1,000 millions. On the other hand, it was announced at the Bank of Italy meeting that gold offered by the public and credits and foreign securities taken over under the September decree were held at the disposal of the Treasury and not by the Bank. Allowance must be made for these in estimating Italy's gold and foreign exchange reserves. At a rough guess, her total reserves are still well in excess of Lit. 2,000 millions, and so are not within sight of exhaustion.

March Clearing Bank Averages.—The March return of the ten English clearing banks again reflect the progress of revenue collection and seasonal redemption of Treasury bills. Deposits are reduced since February by £23.6 millions, cash by £11.8 millions, and discounts by £42.5 millions. Call and short loans, on the other hand, are higher by £5.2 millions, so that it looks as if a few more bills are being held by the discount market instead of by the banks.

(a) Excludes District Bank.

(b) Includes District Bank.

Evidence of a further increase in the rate at which money is circulating is found in the rise of £4.1 millions in the omnibus item "balances with other banks and cheques in course of collection." Advances have risen by £27.3 millions. This big increase is partly seasonal, as the building trade begins its year's borrowings in the late spring; but it is large enough to point to a further expansion in general trade. There is a small increase of £6.1 millions in investments.

The Floating Debt.—The following table shows the composition of the floating debt at the end of the financial year, on March 31st last, comparative figures being given for previous relevant dates. Treasury bills are divided into those issued by tender and those issued "through the tap," the latter going mainly to public departments and other authorities. The floating assets of

the public departments, etc., consist of the combined total of tap issues of Treasury bills and Ways and Means Advances from public departments:—

	Dec. 31, 1934 £ mill.	Mar. 30, 1935 £ mill.	Dec. 31, 1935 £ mill.	Mar. 31, 1936 £ mill.
Treasury bills outstanding:				
(a) Tender issues	449.6	360.4	565.0	498.0
(b) Tap issues	450.1	438.9	300.9	265.1
Ways and Means Advances:				
(a) By Public Depart- ments	27.3	34.1	33.0	19.1
(b) By Bank of England Floating assets	5.5	...	37.0	...
	477.4	473.0	333.9	284.2
Total, Floating Debt ...	932.5	833.4	935.9	782.2

During the past quarter the floating debt was reduced by £153.7 millions. A year ago the reduction was only £99.1 millions, but this year the seasonal collection of revenue has been reinforced by the new cash received on account of the debt refunding operations of last December. On the other hand, last quarter witnessed a substantial reduction of £49.7 millions in the floating assets of the public departments and other bodies, due partly to the Exchange Equalisation Account's purchases of gold and partly to the payment of calls on account of the new Funding Loan held by various public departments. Also on December 31st last £37.0 millions of the floating debt consisted of an advance from the Bank of England. The net result is that, in spite of the bigger reduction in the floating debt, the past three months' contraction in tender issues of Treasury bills was only £67.0 millions, against £89.2 millions in the spring of last year. Tender issues are now £137.6 millions greater than a year ago, although the total floating debt is £51.2 millions smaller.

The Money Market.—Money remains easy, and at the moment there is a good deal of outside money available at $\frac{1}{2}$ per cent. Although on April 3rd the final call of £73 millions on the new Funding Loan was paid, this did not occasion the slightest shortage of funds, and the market was of the opinion that much of this money was found by Public Departments. All this money has at the moment been used in redeeming Treasury bills, but once more the market remained unaffected. The tender issue has only been reduced from £498 to £493 millions and is rising again this week to £498 millions. The tap issue, on the other hand, has fallen from £265.1 to £203.9 millions, and this movement supports the view that the Funding Loan call has been largely paid from "inside." On April 15th, £44.0 millions will be disbursed in repayment of the 3 per cent. Treasury bonds, but matters are obviously being arranged so carefully that it is doubtful if this operation will affect the market.

	Mar. 19, 1936 %	Mar. 26, 1936 %	Apr. 2, 1936 %	Apr. 8, 1936 %

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity: 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity: and other collateral, respectively.

Last week's average tender rate for Treasury bills was 2.78d. per cent. £40.0 millions of bills were allotted. This week there was a good demand for May and June Treasury bills at the banks' minimum buying rate of $\frac{1}{2}$ per cent. By April 7th the banks were taking all dates until practically the end of June.

The Foreign Exchanges.—The Banque de France's return for March 27th showed gold losses for the week of Frs. 114 millions and a further increase of Frs. 125 millions in rediscounts. The note circulation rose by Frs. 516 millions. The following week's return was not available

when we went to press, but as it embraced a week of heavy pressure on the franc, it may well show gold losses of at least Frs. 1,000 millions, and an increase in rediscounts which may be as big as Frs. 2,000 millions. The franc has been offered all this week against practically every other stable currency. The British Control has given steady support and on Tuesday managed to pull the spot rate back from Frs. 75 $\frac{1}{2}$ to Frs. 74 $\frac{3}{4}$. The Paris-New York cross-rate has been kept just inside the gold point, but, it is suspected, only by French official sales of dollars against transfers of gold under ear-mark to the American authorities. Both the Swiss and Dutch exchanges have been at the export gold point, regarded from the French point of view. The present impression of the London market is that devaluation is not imminent, but this is mainly because the Banque de France is determined to maintain the gold standard, while the French Government has no settled policy. Meanwhile three months' francs were quoted this week in London at Frs. 4 $\frac{1}{2}$ discount, or 16 $\frac{1}{2}$ per cent. per annum, which shows the general state of nervousness. On Wednesday the pressure became a little easier and forward francs moved back to Frs. 3 $\frac{1}{4}$ discount, but the strain is by no means at an end.

The Bank of Scotland.—The accounts for February 29, 1936, show that deposits have risen during the preceding year from £36.1 millions to £39.5 millions, the latest figure being a record in the history of the bank. Advances have risen from £10.6 millions to £12.3 millions, but the report contains the warning that this increase may be of a temporary character, especially as other Scottish banks have recorded decreases. There is a big expansion in acceptances from £535,000 to £1,856,000, which illustrates the success with which the bank has extended its foreign exchange business. Investments have risen from £22.3 millions to £24.3 millions. Net profits for the year were £316,000, against £311,000, which is a very satisfactory improvement. The directors have also found it unnecessary to repeat the previous year's appropriation of £50,000 to inner reserves. Instead £30,000 is allocated to the officers' pension fund and £25,000 to heritable property suspense account. Altogether this bank has had a very encouraging year.

INSURANCE NOTES

Beacon Insurance.—The triennial valuation of the assets and liabilities of this company was made as at December 31st last, and the results are given below. The bases used in the valuation were the same as on the previous occasion:—

	1930–1932	1933–1935
Surplus earned	288,012	235,515
Investment profits realised	3,631	3,736
Brought forward	7,039	32,941
	298,682	272,192
Allocations:—		
To Bonuses to policyholders	238,241	241,977
„ Staff pension fund	15,000	5,000
„ Shareholders' account	12,500	10,000
„ Carried forward	32,941	15,215
	298,682	272,192

The rate of reversionary bonus has been reduced from 40s. per cent. for whole-life policies and 38s. per cent. for endowment assurances (both calculated on the sum assured) to 36s. per cent. and 34s. per cent. respectively. Even so, the payment of these rates has entailed a considerable draft on the carry-forward. The new business increased from £878,000 to the new record figure of £1,049,000 and the rate of interest fell by 3s. 6d. per cent. to £4 3s. 4d. per cent. Of the total assets of £4,440,000, the amount invested in mortgages in this country is £1,796,000; a large proportion of these mortgages have been effected in connection with the purchase of their houses by policyholders.

The investments are fully set out in the annual report, and during the year there has been no noticeable change in investment policy. In addition to life assurance, the company transacts a small fire and miscellaneous business, under which the premium income last year was £65,700, against £57,700 in 1934.

* * *

Provincial Insurance.—The underwriting results of this non-tariff company in the past two years are shown below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	23,889	13.1	25,261	13.4
Employers' liability.....	48,949	6.4	43,547	4.9
Marine	2,715	3.0	4,339	4.7
	70,123		64,469	
Less items debited to profit and loss	45,608		39,488	
	24,515		24,981	

In each of the three separate accounts—fire, general and marine—there was an increase in premium income, the total figures being £1,162,000, against £1,035,000 in 1934. Almost the whole of the increase took place in the general account; in view of the increasing importance of motor insurance it would be an advantage if a separate published account were given for this class of business. The marine fund now amounts to 108.5 per cent. of the premium income, compared with 107.4 per cent. in 1934. Some £40,000 has been transferred to general reserve, which now totals £400,000, contrasted with total assets of £1,793,000. The aggregate market value of the investments is stated to be largely in excess of the corresponding book value. The cost of the dividend, which has been raised from 25 per cent. to 35 per cent., is £13,562, compared with £9,688.

* * *

Scottish Amicable.—The 1935 Report contains a resume of the results of the quinquennial valuation of the assets and liabilities as at December 31st last. The rate of interest assumed in the valuation of the liabilities has been reduced from 2½ per cent. to 2½ per cent. for the life assurance contracts, and the opportunity has been taken to adopt the new mortality table published by the Institute and Faculty of Actuaries. The new valuation basis has resulted in a considerable strengthening of the reserves, but the exact amount is not given. The surplus shown below is, therefore, arrived at after meeting this cost:—

	1926-1930	1931-1935
Trading surplus earned during quinquennium	1,144,498	1,314,234
Brought forward	189,024	161,686
	1,333,522	1,475,920
Allocations:—		
To Bonuses to policyholders	1,071,836	1,188,679
„ General reserve	100,000	...
„ Writing down securities	...	120,000
„ Carried forward.....	161,686	167,241
	1,333,522	1,475,920

The rate of bonus has been reduced from 42s. 6d. per cent. to 40s. per cent. per annum, calculated on the sum assured and existing bonuses. From the figures given above it is clear that the same rate as on the previous occasion could have been declared, but the directors have felt that in the existing outlook in regard to the rate of interest it would be a sounder policy to make a moderate reduction. Their confidence in the maintenance of the bonus is expressed, however, in the interim rate of bonus, which will be 40s. per cent. in the case of claims by death or survivorship before December 31, 1940. The sum of £120,000 has been applied towards writing down all redeemable securities to their maturity values. The bonus record

of this society is exceptionally good, and the present distribution is in accordance with the tradition of the office. Last year's new business, at £1,964,000, established a fresh record for the society. The net rate of interest, at £4 os. 8d. per cent., is only 6d. per cent. below the 1934 figure. The amount paid in death claims is the smallest for many years and is stated to be only 77 per cent. of the amount expected under the new valuation table. This result must be considered extremely favourable. It is of interest that out of the 260 deaths during 1935, eleven took place at ages over 90 and fifty at ages over 80; the deaths over age 60 were 68 per cent. of the total, while the average age at death of the whole of the claims was just over 66 years. Total assets increased during the year from £12,113,000 to £12,464,000, but no particular change took place in the classification of the investments. The general reserve remains at £200,000 and the aggregate market values are stated to be substantially in excess of the corresponding values shown in the balance sheet.

* * *

Equity and Law Life.—This society is one of the most progressive of the life offices. Each year sees fresh record figures established in various directions. In the last ten years the total insurances in force have increased by more than 100 per cent. and funds have risen from £6,900,000 to £20,800,000. The total of the new sums assured last year was much the largest in the history of the society, and amounted to £3,931,000, against £2,910,000 in 1934. Consideration money for immediate annuities reached the formidable total of £2,399,000, compared with £2,056,000. Last year we dealt in some detail with the bold policy adopted by the society in the amount of annuity business transacted; before 1931 the annuity business was relatively negligible, but the amount now payable per annum in annuities exceeds £600,000. There is special interest in the chairman's statement that the experience of the last five years has justified the belief of the directors that the annuity business should prove profitable. The net rate of interest earned on the funds excluding reversions was £4 7s. per cent., compared with £4 11s. 8d. per cent. in the previous year. Total assets increased during the year from £17,832,000 to £21,559,000. Loans on property in this country rose by no less than £781,000 to £3,544,000, but policy loans fell sharply from £2,126,000 to £1,736,000. British Government securities fell, but India and Colonial Government securities were considerably greater. Exclusive of holdings in subsidiary companies, debenture, preference and ordinary stocks totalled £3,180,000, £1,927,000 and £3,271,000 respectively, compared with £2,415,000, £1,068,000 and £1,747,000, respectively, in 1934.

* * *

World Marine and General.—The premium income of this company, which belongs to the "Northern" group, was slightly greater last year than in 1934 in the fire and accident branch, but in the marine account there was a further fall from £114,000 to £107,000. The amount transferred from the latter account was £15,000, following six successive annual transfers of £20,000. The results of the last two years are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire and accident.....	5,816	5.2	4,216	3.7
Marine	20,000	17.5	15,000	14.0
	25,816		19,216	
Less items debited to profit and loss account	1,701		7,500	
Net trading surplus...	24,115		11,716	

The dividend is again at the rate of 40 per cent., free of tax, costing £40,000, compared with interest income of £30,600. Total assets were practically unchanged at £986,000. The financial position is very sound. In addition to adequate departmental reserves there is a general reserve fund of £300,000; the market value, as at December 31st last, of the investments in the balance sheet is £155,000 in excess of book values.

THE STOCK EXCHANGE

BRITISH BUILDING SOCIETIES

THE special Survey of the history, achievements and outlook of the British building society movement, which is included with this week's issue of the *Economist*, needs no apology. It is by this time a commonplace that one of the main pillars of Great Britain's economic recovery in the last three years—which has brought so much additional grist to the Stock Exchange's mill—has been the phenomenal development of the building trades. In this development the building societies have played a leading rôle. They have effectively canalised a significant part of the nation's savings, and have re-lent them to potential house purchasers, mainly of the owner-occupier type. In the process, the size and scope of the movement itself have expanded out of all recognition. The first building society of which records exist was founded in 1781. By 1913, after 132 years, the movement had accumulated total assets of £65½ millions. To-day the total is in the neighbourhood of £600 millions. In other words, the movement has accumulated, in little more than a decade and a half since the war, ten times the resources which it obtained during nearly a century and a half. To-day it is the largest "thrift" organisation in the country. It controls an aggregate amount of money more than ten times as large as the total outstanding certificates of all the fixed trusts. Without the financial facilities which it has provided in so large a measure it is safe to say that much of the "unassisted" building of residential properties, during the last few years, would not have been undertaken. It has, in fact, been computed that, out of 2,484,848 houses built between the end of the war and September 30, 1934, at least 1,300,000 were erected or purchased with the help of building society finance.

The following table contains a few significant figures, culled from our Survey, which throw light on the extraordinary rapidity of the movement's post-war evolution:—

ALL SOCIETIES IN GREAT BRITAIN

	1913	1925	1929	1934
Number of Societies	1,550	1,092	1,026	1,007
Total assets (million £)	65.4	169.2	312.7	555.0
Total balance due on mortgage (mill)	61.6	145.9	268.1	475.7
Advanced on mortgage during year (million £)	9.1	49.8	74.7	124.2
Average shareholder's balance* (£)	...	...	210.2	242.1
Average depositor's balance† (£)	...	...	118.8	149.9
Average outstanding mortgage (£)	...	...	426.3	446.2
Proportion of Total Assets, held by Societies with Individual Assets of:—		(a)		
Over £10 millions (%)	...	13.7	38.3	55.4
Over £1 million, to £10 m. (%)	...	60.1	39.5	27.7
Under £1 million (%)	...	26.2	24.2	16.9
Proportion of Total Assets, held by Societies with Head Offices in:—				
North of England (%)	44.3	54.5	50.1	46.3
London and Home Counties (%)	27.1	20.2	23.1	32.9
Rest of England (%)	28.6	25.3	21.8	20.8
Proportion of New Advances, made each year by Societies with Head Offices in:—		(b)		
North of England (%)	...	55.5	40.5	46.5
London and Home Counties (%)	...	21.7	39.9	31.6
Rest of England (%)	...	22.8	19.6	21.9

* Including profits and reserves. † Including liabilities to other creditors.
(a) Figures below refer to 1924. (b) Figures below refer to 1925.

It will be seen that the total amount due on mortgage to the building societies throughout the country was £476 millions at the end of 1934 against £62 millions in 1913. In the pre-war year the societies advanced £9 millions on new mortgages; the corresponding figure for 1934 was £124 millions. This progress has been achieved, not by the establishment of new societies, but, for the most part, by the expansion and consolidation of the pre-existing institutions. Actually, the number of societies on the register fell by one-third between 1913 and 1934.

The average reader, after paying his meed of admiration to the energy and enterprise of the societies, will be inclined to ask two questions. How far has the rapidity of the movement's recent growth tended to produce, or to accentuate, any tendency towards unequal development

between its different parts? And how far is the movement prepared to cope with any future change, such as a downward turn in the "demand curve" for owner-occupied houses?

The answer to the first question is that inequalities within the movement have been accentuated rather than reduced during the last few years. The figures for 1934 (the latest available for the entire movement) show that, at the end of that year, one society held 18.5 per cent. of the movement's total assets. Two societies, between them, held 36.2 per cent. Eleven societies together held 55.4 per cent. of the whole, and 47 societies between them held 77.2 per cent. In other words, less than 5 per cent., by number, of the total societies held more than three-fourths of the total assets; and the remaining 95 per cent. held less than one-fourth between them. Although all societies have shared, to a greater or less extent, in the expansion of the last few years, its net result has been to make the large societies larger.

In the geographical sense, also, the development of the movement has been uneven. To-day a little under one-half the total assets, and approximately the same proportion of each year's new advances, are credited to the accounts of societies whose head offices are in the North of England—especially in the West Riding of Yorkshire and the industrial towns of Lancashire. About one-third of the assets, and of the advances, are credited to societies with headquarters in London and the Home Counties. Societies domiciled in all the other areas of the country hold only about one-fifth of the total assets between them. The figures, it is true, afford no conclusive guide to the manner in which building society business is spread over the country, for the great "branch building societies" have extended their operations through the length and breadth of the land. Nevertheless, it is evident that building society operations are far from being distributed in uniform fashion geographically.

Similarly, the advances made by building societies tend to be concentrated on the smaller and medium-sized types of mortgage. This fact, *inter alia*, is brought out by the following table, which summarises certain of the results of a detailed analysis of the latest figures for 98 societies (holding more than four-fifths of the movement's total assets) which appear in our Survey:—

FIGURES FOR SAMPLE OF 98 SOCIETIES
(Holding 84 per cent. of total assets of movement in 1934)

	1925	1929	1934	1935
Approximate Average Effective Rate of Interest on:—				
Shares (%)	4.38	4.51	3.69	3.55
Deposits (%)	3.85	3.92	2.80	2.97
Mortgages (%)	5.85	5.78	5.48	5.20
Proportion of Total Outstanding Mortgages:—				
Under £500 (%)	46.8	44.5	43.5	44.3
£500 to £1,000 (%)	30.7	36.1	42.3	41.4
£1,000 to £3,000 (%)	13.7	12.2	8.5	7.5
Over £3,000† (%)	8.8	7.2	5.7	6.8
Proportion of Repayments‡ to New Advances (%)	59.8	63.3	76.2	78.7

† Including other classes. ‡ Including certain amounts for interest.

It will be seen that, at the end of last year, some 44 per cent. of the total outstanding mortgages were for amounts under £500 and nearly 86 per cent. of the whole was composed of mortgages for under £1,000.

What does the future hold for the building society movement? Our investigations suggest that the rôle of low interest rates in the house-building "boom" may have been over-stressed by some commentators. The phenomenal rise in building society business antedated the present low interest regime by more than a decade. Low rates of interest may well have inconvenienced the societies by compelling them to find methods of checking the inflow of unwanted "bad money," seeking a temporary refuge. On the other hand, it has certainly compensated them by increasing their

potential margin between interest receipts and expenditure. According to the figures of the 98 societies summarised in the table above, the average effective rates paid on shares and deposits (subject to certain minor qualifications which need not be discussed here) have fallen to a greater degree than the average rate of interest obtained on outstanding mortgages. Between 1929 and 1935, according to the table, the average rate of "share interest" declined by 0.96 per cent. and the average rate of "deposit interest" by 0.95 per cent.; but the average rate earned on outstanding mortgages dropped only by 0.58 per cent. Further, a somewhat larger proportion of the total funds, held by the societies on behalf of the public, is in the form of deposits (carrying a lower rate of interest than shares) to-day, than in earlier years.

If, as is generally agreed by its own leaders, the movement may be facing far-reaching environmental changes in the next few years, it is conceivable that these will take two inter-related forms. In the first place, the demand for middle and upper working class owner-occupied dwellings may show signs of saturation. In the second place, the opportunities for intensive development of building society business in new fields—the finance of new "class C" houses letting at low rents, of slum clearance, of large urban blocks of flats, and of "business" properties—may claim an increasing share of the movement's attention. How far have the movement's past experience and present technique fitted it for extension into fields where the "risks" may be very different from those to which it has hitherto been accustomed? It is important that the movement's policy should continue to be governed, not by its ability to obtain new resources, but by its ability to employ them. A movement whose funds are withdrawable at relatively short notice must strenuously resist any tendency to "force" its new advance business, by resorting to devices which, directly or indirectly, may encourage an unsubstantial type of borrower. If demand from the owner-occupier were to show signs of flagging, there might be a strong case for consolidation, rather than for indefinite extension, of the ground which the movement has recently gained.

In such an event, it would be doubly desirable that canons of sound policy, agreed upon by representative opinion, should be applied by all societies, without distinction of size or domicile. The problem of securing effective unity of action may, indeed, be the most urgent question before the movement. So far, there has been little attempt to effect amalgamation. In its organisation, the movement resembles the British banking system of pre-war days; and the parallel in function, which still obtains, may suggest a parallel in control. The Clearing Banks Committee to-day sets a standard of procedure, affecting rates, etc., which is followed without question by bankers throughout the country. The National Association of Building Societies might provide comparable standards of practice, granted the willingness of the individual societies to acquiesce in concerted action. Not by threats or cajoling, however, is this support to be won; it can only be achieved by the realisation that the welfare of the movement is the welfare of each individual society. No friend of the movement would willingly see it pass through testing fires before co-operation is achieved. Nor is this inevitable, for the prestige of the larger societies, wisely employed, carries great weight in the counsels of the movement. Observers who have, in the past, been inclined to deprecate the slow advance towards co-operation will look for tangible signs of progress in the future, particularly in view of the support consistently and wisely given by the movement's leading personalities.

INVESTMENT NOTES

Advisory Committee for New Issues.—For some years past important sections of the London new issue market have been under effective official "control." Foreign loans were subject to a virtual "embargo" at the time of sterling's return to gold in 1925, and again in 1931. The system of regulation was extended to other branches of the market at the end of June, 1932, ostensibly

in voluntary compliance with the Chancellor's request for the avoidance of issues which might compete with the conversion of the 5 per cent. War Loan. Regulation was subsequently extended and modified from time to time. Actually, the market has been subjected to a species of financial dictatorship, for which the Treasury has had no shred of Parliamentary authority. It is now announced that a Committee will be set up to advise the Chancellor, both generally upon the scope of restriction and also upon particular applications. The Committee's personnel will be representative and well informed. Its chairman will be Lord Kennet, formerly Sir E. Hilton Young, who has been Financial Secretary to the Treasury and Minister of Health and has represented Great Britain on many missions and conferences, financial and otherwise. Its members will include Mr B. G. Catterns, Deputy-Governor of the Bank of England; Mr R. P. Wilkinson, the Deputy-Chairman of the Stock Exchange Committee; Mr A. A. Jamieson, director of a well-known merchant banking company, and, *inter alia*, a member of the London Committee on League Loans and a director of Vickers; Lieut.-Colonel J. Beaumont Neilson, chairman of the English Steel Corporation, deputy-chairman of Vickers and Vickers-Armstrongs and vice-chairman of Baldwins; Sir Austin Harris, chairman of the National Bank of New Zealand, deputy-chairman of Lloyds Bank, and a director of Commercial Union Assurance and Alexanders Discount Company; and Mr Thomas Frazer, secretary of the North British and Mercantile Insurance. The Committee will have an office in the City, where it will deal directly with all applications for new issue facilities coming within the scope of "regulation."

Implications of Treasury "Control."—Whether, in due course, the Committee will be empowered to consider any modification in the scope of "control" remains to be seen. For the present, however, a Treasury statement makes it clear that the new departure is not intended to relieve the market of its Old Man of the Sea, but only slightly to shift his weight. At present, restriction applies both to foreign issues and also to optional conversions of trustee securities involving underwriting or cash subscription from the public; while trustee borrowers generally are required to take their place in a queue at the Bank of England. The ban on foreign issues can be regarded, in a sense, as complementary to the work of the Exchange Equalisation Account. The regulation of the market for domestic trustee issues, however, has long been interpreted in the City as having wider implications, as an executive "arm" of the Treasury policy of maintaining cheap money. From this week's official statement, it would appear that the objectives of the foreign loan embargo are to be more sharply defined and, in the process, appreciably extended. The Committee, in forming an opinion on any application for a foreign loan, are to have regard to exchange considerations and the movement of international Stock Exchange securities between London and other markets. Control, however, goes much further. It is to be used, in fact, as an adjunct to politico-commercial trade policy. Empire borrowers are to have favourable consideration, and preference will be extended to loans which will finance additional British exports or assist British-owned enterprises abroad. "Capital required for development in the United Kingdom," however, is not to be "restricted by excessive lending abroad." That the embargo may even be designed as a retaliatory weapon is suggested by the direction to the Committee to take account of the "treatment accorded to British-owned enterprises by the foreign country concerned." On the whole, the City of London will welcome the substitution of considered decisions by a Committee drawn from its own representative institutions for the *ipse dixit* of a Government official. The decision, however, appears to contemplate the indefinite perpetuation of what has hitherto been, in theory at least, a purely temporary expedient. If so, it appears to us most desirable that the Government should secure Parliamentary sanction for a far-reaching departure from tradition and practice, in a market which has attained paramount international status under a regime of freedom. The Committee seems designed to serve as the counterpart, on

the financial side, of the Import Duties Advisory Committee in the industrial sphere. The latter's recommendations, however, are specifically subject to approval by Parliament. The time has come, in our opinion, for a comprehensive review of the entire system of capital regulation by the same tribunal.

The Stock Exchange Report.—A prominent feature of the Stock Exchange report is the absence of any significant increase of new members despite the improvement in business conditions which has been experienced in recent years. Net membership at the end of the financial year 1935-36 was only seven higher, at 3,995, than twelve months earlier. The number of clerks having admittance to the "House" also increased by the modest number of twenty-five to 2,103. Mere maintenance of membership, however, would be sufficient to produce an improving subscription revenue, for in each year that elapses the average subscription automatically increases. This results from the custom that members continue to pay annual subscriptions at the rate ruling when they originally took up their membership. Thus during 1935-36 there were still thirty twenty-guinea subscriptions, while at the other end of the scale there were 603 paying at the rate of 100 guineas a year, the present level for three-deckers. The present average subscription exceeds the lowest current level for new entrants—50 guineas—by a few shillings only. A large proportion of revenue, however, is represented by entrance fees, and these in 1935-36 showed a reduction of 14 per cent., being only £74,376, as compared with £86,241 in the preceding year and comparing with an average of £81,466 for the three-year period 1934-36. In fact, the 1935-36 level is only £2,989 in excess of the average for the three years ending March 25, 1934, which included a number of sub-normal years. As entrance fees account for 25 per cent. of net revenue, the reversal of the upward tendency of the four years ended March 25, 1935, is worth noting. Net revenue shows a credit balance of £291,839, an improvement of £4,682, which is due to a reduction by £5,000 (to £10,000) in the provision of buildings replacement. Total receipts at £484,640 were some £10,874 higher, but the improvement was offset by increased expenditure. Without taking credit for the buildings replacement allocation the £14 dividend was earned with a surplus of £11,838, representing a further 15s. per share, less tax.

Wall Street Movements.—The behaviour of the markets on Wall Street during the European crisis has encouraged the holder of American securities. The market has been well shaken out, and the response to Europe's complications has been mainly a contraction of activity. The phase of the crisis which is uppermost in the American mind is the prospect of a devaluation of the franc, followed by an outward flow of refugee funds. This is a movement of which statistical measurement is difficult to obtain, but it seems unlikely that in the long run it can have any serious effect upon the American market. The position is now technically very sound, and the buoyancy of the markets illustrates their eagerness to shake off European influences and continue their advance. The Dow Jones index of industrial securities closed nearly 5 points higher last week. Business indices continue encouraging, and Wall Street operators have been particularly pleased by the continued firmness of railroad stocks, combined with rising estimates of steel activity, and the prospect of increased spending by the beneficiaries of the veterans' bonus commencing in June. The chief political factor which may cause a disturbance is the new taxation programme which is making heavy way in Congressional Committees, although the prospect of forced distribution of surpluses by corporations is interpreted bullishly by the markets. The programme is rightly criticised since it makes no allowance for an equalisation reserve to even out good and bad periods; nor do the proposals allow companies to deduct previous

losses, and the new programme may therefore tend to make booms higher and depressions deeper. Apart from European troubles, most arguments suggest a renewed upward movement in the markets before long.

Stock Exchange Official Year Book.—This indispensable volume* grows each year in size and usefulness. The work now runs to nearly 3,500 pages, full but never cramped, and this year's volume contains notices of nearly 400 new loans and companies not included in the 1935 Year Book. That it moves continuously with the times is shown by the fact that particulars of all the existing fixed trusts are included. The special chapters dealing with Government and Municipal finance in every part of the world are invariably of great service to bondholders and students of public finance. The present volume, in short, fully maintains the reputation of the work for authority and comprehensiveness.

Industrial Profits in March.—Last month, which contained its customary quota of important company reports, brought an increase in profits comparable with the advance of a year ago. The February set back in the rate of increase proved only temporary, as suggested here a month ago, for the percentage advance for 236 companies is 17.39 per cent. compared with 9.00 per cent. for 205 companies in February. Figures for recent months are set out below:—

Reports published in	No. of Companies	Rise or Fall in Profits*	Reports published in	No. of Companies	Rise or Fall in Profits*
1935—		%	1935—		%
January	111	+ 14.15	September...	77	+ 9.28

* After payment of debenture interest.

The reports of the month disclose net profits amounting to £33,391,656, compared with £28,443,308 in the preceding year. The iron, coal and steel group, including 20 companies, showed the greatest advance in profits from £2,980,154 to £4,293,085. A pronounced recovery is revealed by the finance and land group. The building materials and electrical equipment groups have again reported satisfactory profits, and the aggregate net revenues of eighteen electric power concerns increased by £381,000 to £6,821,000. Since as many as 51 companies in the

* "The Stock Exchange Official Year Book, 1936." Published by Thomas Skinner and Company. £3.

miscellaneous group out of the total of 236 companies have achieved an advance of £1,350,000 to £5,175,000, the advance has been widely spread. Of the remaining groups, however, it is remarkable that only one shows a variation running into six figures.

COMPANY NOTES

Multiple Store Companies.—The multiple store principle may be applied either to purely retail businesses or to the retail outlets of a concern which is primarily interested in manufacturing. Of the first class, Woolworth, International Tea Company's Stores, and Austin Reed are examples, since though each of these concerns may manufacture part of the goods sold in its shops, manufacturing is not their main business. Of the second type, the Cash Chemists subsidiaries of Boots Pure Drug, or the retail shops of Montagu Burton, or those of J. Sears boot and shoe group, are examples. J. Lyons and Company fall intermediately between the two groups since, though they manufacture the greater part of the goods sold in their shops, the essence of their business is in the retail refreshment trade rather than in manufacturing. Though the multiple shop business has grown very rapidly during this century and even during the past decade, the rapidity of its expansion has not been due to any exceptional openings for profits in the business, but rather to the fact that, once the principles of efficient shop management have been mastered in one or two centres, expansion of the business is a relatively simple affair of multiplying units. The inducement to "plough back" earnings into the business is

‡ Broken period equated to 12 months.

consequently much greater than in the case of manufacturing concerns which have to create new products, or new openings for existing products, before retained earnings can usefully be reinvested. This principle is best illustrated in the Boots Cash Chemists subsidiaries, which for a number of years past have distributed only a very small portion of their earnings to the parent company, applying the retained profits to the expansion of their chain, and borrowing to a moderate extent from the bank in anticipation of future retained profits. The qualities required for successful management of multiple store business include a knowledge of real estate, a sound eye for shopping centres and shop design, an efficient building and maintenance department, and a high degree of organisation, buying capacity and sensitivity to public demand. The recent meagre profits of even so large and strongly backed a group as the Home and Colonial Stores and its associates, contrasted with a

record of, say, International Tea Company's Stores, suggest that "management" is a highly important element in what is far from an easy trade. But once a concern has established the soundness of its management (of which the profits record is the best working index) its shares offer both the stability which is associated with retail distribution and the steady expansion which comes from profits ploughed back in a business particularly suited to reinvestment of earnings.

Railway Wages Concession.—The market in Home Railway stocks has been in quite good fettle this week, despite Mr William Whitelaw's statement of opposition to the proposals, reported in the *Economist* a week ago, for the restoration of a further portion of the wage and salary cuts imposed in 1931. The market takes the view that gradual concessions to the unions are necessary if the danger of trouble is to be avoided, and that consequently the present offer, which seems likely to be accepted, is a satisfactory way out of a difficult situation. It provides for the halving of the flat 2½ per cent. cut in all earnings to 1¼ per cent. The cut rates of payment for overtime, Sunday work and night work will, however, remain. The new arrangement should come into force on July 1st, and there would be no further alteration for another twelve months. The proposals mean, in effect, that in 1936 stockholders will secure most of the benefit from the rating reductions. In a full year, the cost of the offer is estimated at £1,200,000. In the current year, the concession would be approximately equivalent to one-quarter of 1 per cent. on L.M.S. ordinary, L.N.E.R. 4 per cent. second preference, and Great Western ordinary and rather less than that amount on Southern deferred. Making this allowance, and assuming that the companies will achieve savings on rating on the lines suggested by their respective chairmen, the present level of traffics suggests that earnings on these stocks are running at about ¾ per cent., 1¼ per cent., 2¼ per cent. and ½ per cent. respectively. Consequently, the covered junior preference and preferred stocks would still appear to have some prospects, particularly if the traffics can maintain regular increases on this week's impressive scale. It must be borne in mind, however, that these wage figures must be regarded as minima—they may yet be revised in an upward direction. Moreover, on a longer view it may be that the companies will be willing to make further concessions. The ability of the railways to raise new capital under Government guarantee may reduce, *pro tanto*, the incentive to safeguard earnings when wage negotiations are in progress.

Hadfields and Stewarts and Lloyds.—The results of two important steel companies have appeared this week—the full Hadfields' accounts, which provided a fillip for armament shares, and the preliminary Stewarts and Lloyds' profit figure, which was decidedly disappointing. Hadfields, as might have been expected from the big increase in the Admiralty expenditure on naval ammunition in 1935, and the rapidly growing demand for mining and other machinery, has had a very successful year. Gross profits, after "ample provision for depreciation," totalled £158,993, compared with the profit of £140,183 in 1934, which included no allowance at all for depreciation. It seems likely that, in fact, profits increased by about 75 per cent. Debenture interest, too, cost less than it did a year ago, so that net profits made the best showing since 1927. Earnings for the 10s. ordinary shares amounted to 14.7 per cent., and the dividend to 7½ per cent. less tax. These shares are quoted at 26s., at which level the yield is less than 3 per cent. This price, however, does not appear unduly to discount the obvious prospect of expanding profits when the "White Paper" programme gets properly under way. Stewarts and Lloyds, on the other hand, is essentially a "peace-time" company and is, moreover, largely dependent upon exports of tubes. The international tube market, however, is the one section of the steel industry which is not controlled by last year's agreement. The International Tube Cartel broke down a year ago, and efforts to revive it have failed. Export prices have consequently weakened, and the 1935 profits of Stewarts and Lloyds have had to bear the full

brunt of the decline. The dividend, therefore, has been merely maintained at 5 per cent., and profits, after payment of an extra £33,500 for debenture interest and provision for taxation, have apparently fallen from £1,004,982 to £800,534. The extent of the fall surprised the market, and the shares were marked down to 32s. In the long run the company's prospects are good, for by developing the Corby works it has secured a strong strategic position in the industry. In the short run, however, the prospects of increased dividends depend very largely upon conditions in the export market. The latest trade returns show no sign of improvement in tube prices, although the volume of exports is very well maintained.

Ford Motor Accounts.—The full accounts of Ford Motor have again produced a distinctly more favourable impression than the dividend announcement. Five per cent. for the second post-depression year is still a modest return, but the dividend is again conservative. Trading profit and other income (which, however, excludes the profits earned and dividends paid by subsidiary companies) has increased from £1,429,263 to £1,514,331, and net profits from £483,663 to £597,153. The latter figure is struck after providing £714,370 for depreciation and obsolescence, some £95,000 more than in the previous year. On balance, overseas conditions have been more favourable, and the latest accounts are free of those exceptional burdens which affected the 1934 results. The special provision of £152,755 for the Cologne company for 1934 was one of these exceptional items, but only £22,500 was required to meet the losses of the Near Eastern branch last year. Exchange losses, which required £84,830 in 1934, have, in fact, yielded a credit of £63,106 during 1935. The influence of these large items, therefore, greatly affects the comparison between the two latest reports. Two large compensating items, charges for adapting new plant (£92,044) and a new allocation to the Employees' Benefit Scheme (£71,500), have been brought into the year's accounts, which are analysed below:—

Years to December 31	1933	1934	1935
Trading profit and other income	943,070	1,429,263	1,514,331
Losses on overseas business	Dr. 14,250	Dr. 167,762	Dr. 22,500

† 4.6 per cent. before crediting exchange profit.

‡ After loss on exchange and writing off German company's debt.

§ 7.7 per cent. before crediting exchange profit.

The desirability of a consolidated form of accounts is not reduced by the latest report, although it leaves a satisfactory impression regarding the position of the group. Liberal provision, for example, has been made for depreciation; home trade has expanded and a further improvement in efficiency has been realised. Despite obstacles, export trade has developed; the value of the investments exceeds the book value; the total volume of trade enjoyed by subsidiary and associated companies has expanded and profits have been satisfactory. Investors may conclude from these statements that the company and its affiliated concerns are enjoying the fruits of recovery on a satisfactory scale, but that these are slow to fall into shareholders' hands from the overseas groups. Exchange difficulties and the provision of adequate internal finance—as in Egypt and Roumania last year—evidently justify the company's caution. The ordinary shares are quoted at 33s. 9d. to yield £3 rs. per cent.

Rolls-Royce Profits.—The preliminary profits statement of Rolls-Royce is satisfactory, but hardly a resounding pointer for the short-period speculative follower of the shares. Total profits amount to £349,802, a figure which compares, it would seem, with £291,611 for 1934, after providing for depreciation, obsolescence and writing off capital provided for a subsidiary. The total dividend for 1935 is raised from 20 to 22½ per cent. by the addition of a 2½ per cent. cash bonus. The results are satisfactory, but perhaps less expansive than some optimistic quarters had been anticipating. The increase in profits—almost exactly 20 per cent.—is a "recovery" result rather than a "re-armament" bounty, on which hopes had been placed. The market must await the report and chairman's statement before the causes are established; meanwhile the results suggest that even engine-makers are subject to the same careful scrutiny by the Air Ministry contract officers. Since the £1 ordinary stock units are quoted at 168s. 9d., the present yield is only £2 14s. 5d. per cent. The further expansion in the Air Force foreshadowed in the White Paper suggests a further expansion of total profits and dividends, but a fairly considerable period may be involved.

Harland and Wolff and Colvilles.—Apparently recent activity in Harland and Wolff 6 per cent. first cumulative £1 preference shares has been related to the Colville deal. It is interesting to inquire how far the shareholders' position has, in fact, been affected. It was disclosed in the 1932 scheme that Harland and Wolff held 171,510 shares of £10 each in David Colville & Sons, Limited, now in liquidation. The liquidators of the latter company disposed of 2,929,969 shares in Colvilles, Limited, at 27s. 5d. per share, forming the principal part of the block recently offered for sale at 29s. David Colville and Sons has an issued capital of £969,000 6 per cent. preference and £2,700,000 ordinary, and the net amount realised from the disposal of the Colville shares was rather more than £4,000,000. An important holding still to be

DOUBLE SHELL

LUBRICATING OIL

officially
approved
by

Vauxhall

realised is that of Archibald Russell and Company, the colliers, the value of which, at one-third of the paid-up capital could probably be taken at £500,000 without involving a major error for the present calculation. Other net assets, including 65,000 Colville preference, 8,229 Union Castle 6 per cent. "A" preference, etc., could also be reasonably stated at £200,000. If £1,260,000 be deducted in respect of preference capital and gross accrued arrears the surplus of approximately £3,440,000 emerges for David Colvilles ordinary capital, representing between £12 and £13 a share, or approximately £2,250,000 for Harland and Wolff's interest. The market, however, does not appear to have given adequate consideration to the rather alarming toll of deferred creditors' certificates and *pari passu* liabilities. Deferred creditors' certificates outstanding at December 31, 1934, totalled £4,332,687, while matured bills of exchange and guarantees in respect of which holders or claimants were entitled to rank *pari passu* totalled £5,977,028. In addition to this capital total of £10,309,715 there were, at the same date, accrued arrears of interest at 5 per cent. from January 1, 1932, on these obligations, amounting to £1,448,006. At present the accrued liabilities ranking ahead of share capital may exceed £12,000,000. If account is taken of the company's parallel claims against associated companies and its participation in its own indebtedness, and excluding interest accumulations, the net liabilities figure must still be of the order of £10,000,000. The best figure for available profits in any of the five years ending December 31, 1929, was £216,747. Whether this reflects the company's earning capacity may be open to question, since before the R.M.S.P. collapse the company was "spoon fed" with group business and also subject to various group and related "disabilities" which may have impaired its open market efficiency. For all practical purposes, the business is still owned by the creditors, and the prospective proceeds from the Colville interests, substantial as they are, cannot radically change this position. In the circumstances a price which capitalises the Harland and Wolff first preference issue at £2,000,000 appears generous. The Colville deal is also significant for the Lampport and Holt debenture holders, who have a stake through a shareholding of approximately £400,000 in David Colville and Sons. An estimate on similar lines to those given above puts the eventual break-up value of the now outstanding remnant of the original issue at 75 to 80 per cent.

Rubber Share Outlook.—For some weeks rubber has been hovering uneasily around 7½d. a pound on Mincing Lane and market interest in rubber shares which ran high during the early part of this year has now almost completely evaporated. A number of special factors have contributed to the current dullness, apart from the inevitable reaction following a period of busy trading. The re-emergence of the perennial Dutch native rubber problem was attested by the considerable excess of native shipments in February over the permissible quota, and this factor administered the first significant check to upward moving rubber prices. More recently, much apprehension was aroused by unofficial reports that the present registration of native areas in the Dutch East Indies would reveal a potential capacity far in excess of previous estimates—the estimate of one million tons per annum being freely canvassed. On the consumption side, the strike at the Good-year Tyre Works seriously affected United States' demand and, as a partial consequence, end-month figures for world stocks outside regulation areas showed a small increase in February for the first time since last summer. The European political crisis, finally, completely discouraged all speculative activity, while the renewed pressure on the gold *bloc* again aroused fears of the possible consequences of guilder devaluation for Dutch support to the international restriction scheme. Despite this formidable array of difficulties the steadiness of the rubber market in recent weeks has faithfully reflected an underlying strength resulting from the excellent trade demand. Some improvement in the general situation has, moreover, already taken place. The threat of excessive Dutch exports has been adequately

met by a severe, if tardy, increase in the duty on native shipments. The accuracy of the alarming estimates of native rubber capacity has been completely denied in authoritative quarters, while assurances have also been forthcoming that individual restriction of native growers is to be introduced before the end of this year. Failing any real improvement in the international situation, however, a new advance in rubber prices is hardly likely till a further substantial fall in world stocks has taken place. For rubber companies, however, the most favourable prospect lies not so much in a further rise in prices as in an improvement in the statistical position which would allow an increase in export quotas above their present tightly restricted level of 60 per cent. of standard tonnages. The price outlook is already sufficiently favourable to suggest, in the absence of

any untoward developments, a return at least 1d. or 1½d. a pound in excess of the realisations for 1935. "Highly-gear" companies, whose output of rubber per unit of capital is considerable, should show the most substantial gains from this improvement. At the same time, if conditions are thought suitable, later in the year, to call for an increase in the quota, companies whose costs are relatively low will reap the greatest benefits. The appended table gives a selection of companies which combine relatively low costs with a low capitalisation per unit output. It should be remembered that the yields shown are mainly based on dividends for 1934, and since in most cases 1935 results will probably be less favourable, it would appear that current prices already discount a fair improvement in earning capacity.

Textile Companies' Results.—Textile shares are still a dull market and prices have shown little life. The recovery which began in Lancashire last autumn has not been maintained. The future trend of cotton prices is still uncertain, and the Spindles Bill has concluded its passage through the House of Commons. At this stage its likely effects upon profits, cannot yet be predicted with any real assurance. The woollen and worsted trades, on the other hand, are decidedly making progress, but here again there are no new factors to attract attention. The prices of such shares as Salts (Saltaire) already discount any immediate increase in profits very adequately. This dullness of the share market has been encouraged by the appearance during the last few weeks of a series of company results which give

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this Journal with this week's Issue is invited to fill up the attached: To The Publisher, "The Economist Newspaper Ltd.," 8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

the very definite impression that the recovery, so far, has had very little effect upon the fortunes of the shareholder. The following table shows the profits, after depreciation and debenture interest, of a number of concerns representative of a wide group of textile industries:—

Company (and accounting date)	Profits		Dividends		Stocks or Shares	Price Mar. 4, 1936	Yield %
	1934	1935	1934	1935			
Bradford Dyers (Dec. 31)	Dr. 9,332	Dr. 66,347	Nil	Nil	5% pref. £1 ord.	11/9 8/9	£ s. d. Nil Nil
McIntyre, Hogg & Marsh (Nov. 30) ..	37,519a	33,109a	15	15	£1 ord.	50/-	6 0 0
J. Crossley (Dec. 31) ..	79,434	56,588	6½	6½	£3 ord.	52/6	4 16 0
English Velvet & Cord Dyers (Dec. 31) ..	Dr. 31,996b	Dr. 25,977b	Nil	Nil	£1 ord.	3/9	Nil
William Hollins (Dec. 31) ..	17,887c	3,857	Nil	Nil	£1 ord.	13/9	Nil
Wolsey (Dec. 31) ..	860	34,028	Nil	Nil	£1 ord.	7/6	Nil
Woolcombers (Dec. 31) ..	125,504	123,135	26½	26½	£1 ord.	9	2 18 5
Mather and Platt (Dec. 31) ..	139,274	178,017	7½	10	£1 ord.	48/9	4 2 0

(a) In addition, a profit of £8,116 on the sale of investments in 1935, and £8,516 in 1934. (b) These losses were reduced by profits of £14,065 on the sale of investments in 1935, and £3,964 in 1934. (c) After transferring £19,500 from stock reserve to meet exceptional fall in wool prices.

Of these eight concerns, only *Mather and Platt* and *Wolsey* have done appreciably better in 1935 than in 1934. *Mather and Platt*, moreover, probably made its extra profit in its non-textile machinery-making business, which is substantial. The business of other textile machinists is not improving tangibly. With *Wolsey*, too, there are special influences at work. *Woolcombers* maintained a very steady level of profit, and paid the usual dividend and distributed the usual bonus. The other companies in the list are connected with various branches of the finishing trade. *Bradford Dyers* have failed to stem the gradual downward trend in profits, despite their new shrinking processes, and despite "recovery" in America. And the other three specialists, *McIntyre, Hogg and Marsh*, who make shirts and collars, *John Crossley*, the carpet manufacturers, and the *English Velvet and Cord Dyers' Association*, a producer both of luxury and of utilitarian goods, have either reduced their profits or again suffered heavy loss. The only bright spot, indeed, is the decidedly optimistic report of *William Hollins* (the makers of "Viyella" fabrics), which pointed out that conditions improved during the second half of the year and that the current year had begun well. If this is a sufficiently wide sample of the textile industry to enable a judgment to be made, the conclusion would appear to be that if there is any recovery in the industry, it will be a long time before any real benefit is felt by the various types of finishing concerns.

MINING NOTES

Union Corporation.—Brief reference was made last week to the report of this company, whose net profit for 1935 amounted to £604,920, compared with £565,820 in 1934 and £452,060 in 1933. After repeating the dividend of 8s. per share, and placing the increased sum of £40,190 to reserve, the balance carried forward is about £4,500 higher at £130,900. The position of the company's various Rand interests, except Van Dyk, was discussed on page 23 of last week's *Economist*. On resampling 15,870 feet of the old workings of the former Van Dyk Proprietary Mines, 45 per cent. were found payable, averaging 11½ dwts. over 22 inches. A main haulage shaft has now been started, and additional capital has recently been raised to provide for development. The Union Corporation balance sheet reveals the customary strong financial position, cash at December 31st standing at £4,230,200, as against £2,470,900 twelve months ago. The reduction in gilt-edged securities from £1,944,608 to £730,727 has attracted considerable interest. The report as usual presents an authoritative discussion on the world's gold position, to which further reference is made on page 73. The output for 1935 is estimated at 31 million ounces, against 27.8 million ounces for 1934, the British proportion of the total

again being lower at 55.3 per cent. and the South Africa at 34.8 per cent. Although the immediate repercussion of the higher price of gold was a reduction in the grade of ore treated, and consequently of aggregate Rand production, it is thought that by 1937 increased plant capacities and the first output of new mines will reverse this trend, and that within five or six years the Union output may approach 15 million ounces. On the basis of the dividends of the past two years the yield on Union Corporation shares is 4.8 per cent.

East Rand Proprietary.—Moderate progress was recorded last year by this undertaking, which is one of the largest producers on the Central Witwatersrand. Revenue and costs averages were little changed, and the increased treatment of some 200,000 tons of ore brought an increase of £97,500 in working profit. This amount, although by no means negligible in itself, was insufficient to permit any increase in dividend, which is maintained at 27½ per cent. Taxation absorbed £560,570, against £269,780, while capital expenditure amounted to £360,800, compared with £400,860. It will be recalled that last year an issue of 600,000 shares was made at 45s. for the purpose of carrying out a programme of plant extension and development. Out of net proceeds amounting to £1,310,800 some £582,280 of accumulated capital expenditure to December, 1934, was re-transferred to appropriation account, permitting a credit balance of £539,700 to be carried forward. The further amount estimated for completion of the present programme is £1,210,000. When the additions are completed the treatment plant will have a capacity of approximately 2,460,000 tons, or about 150,000 tons more than the amount treated last year. Following the example of Robinson Deep, the company is installing an air-cooling plant for the purpose of improving the working conditions in the lower levels. The report of the consulting engineer gives no confirmation of the rumours current some time

FIRST RECOVERY TRUST

aims at securing
CAPITAL APPRECIATION
from Trade Recovery

Unlike the majority of Fixed and other Trusts, First Recovery Trust concentrates on prospects of substantial capital appreciation—not on immediate yield. The permitted investments of First Recovery Trust include the securities of 64 leading companies, all of which stand to benefit considerably by continued Industrial Recovery. In order to secure the full benefits of market movements, the Trust includes the latest technique in flexibility. The Managers have full power to select and vary the composition of the Trust within the permitted list, which includes such companies as:—

Cammell Laird & Co. Ltd.	Southern Railway Co.
Hadfields Ltd.	British Home Stores Ltd.
Vickers Ltd.	Debenhams Ltd.
R. & W. Hawthorn, Leslie & Co.	Bradford Dyers' Association Ltd.
Ruston & Hornsby Ltd.	British Celanese Ltd.
International Nickel Company of Canada Ltd.	Calico Printers' Association Ltd.
De Havilland Aircraft Co. Ltd.	Furness Withy & Co. Ltd.
Fairey Aviation Co. Ltd.	Smith's Dock Co. Ltd.
Ford Motor Co. Ltd.	African & Eastern Trade Corporation Ltd.
Rover Co. Ltd.	United Molasses Co. Ltd.

For full details, please apply to your Stockbroker, to the Managers, or to any office of Martins Bank for Booklet E.C.4.

Trustee: MARTINS BANK LTD.

ago regarding rich developments in the Cinderella section, and mentions merely a "slight improvement." In the central portion of the mine, however, results were again satisfactory, and a slight increase in values accompanies a marked expansion in the quantity of the reserves. On the basis of the dividends of the past two years, a gross yield of just over 4 per cent. is indicated. The company should benefit from the new taxation basis, but will be adversely affected by the provisions regarding amortisation of capital expenditure.

* * *

Robinson Deep.—The disappointment caused by the reduction in the June dividend to 1s. 6d. on Robinson Deep B shares compared with 2s. for each of the two previous distributions was accentuated by the further cut to 1s. 3d. in December, for no such reduction in payments had been suggested by the monthly returns. A larger amount was required for taxation, while the financial position, on which we commented a year ago, restrained distribution policy. Capital expenditure last year absorbed £118,480, against £140,090, while taxation required £429,880, compared with £361,150. Against a deficiency of £15,740 in the cash position at the end of 1934 there is now a surplus of £60,910. Progress during the past three years is analysed in the following table:—

	Years ended Dec. 31		
	1933	1934	1935
Tons milled.....	1,187,000	1,200,000	1,215,000
Yield, dwt. per ton.....	5.380	5.017	4.983
Working costs per ton.....	19/3	19/3	20/4
Working profit	£857,986	£925,051	£911,210
Dividends.....	£372,330	£440,950	£326,570
Rate per "B" share.....	3/3	4/-	2/9
Carried forward	£63,980	£37,080	£60,910
Development footage.....	55,838	57,138	55,870
Ore reserve, tons.....	4,565,000	5,846,000	6,032,000
Ore reserve, value dwt.....	5.3	4.9	4.9
Average net price for gold, per ounce	125/2	138/1	142/-

The small decrease in last year's yield in dwts. was rather more than offset by increase in the gold price, but as costs rose the profit fell off slightly, both in aggregate and per ton. The consulting engineer reports that development results during the year "continued to be highly satisfactory, particularly in the Western section of the mine." Exploration of the three subsidiary ore bodies is to be carried out. The air-cooling plant, which came into operation in August, has produced a slightly lower temperature at depth during the summer months than normally experienced during the winter. In view of the satisfactory position of the mine the capacity of the treatment plant is to be increased by 10,000 tons per month, calling for an issue of 170,250 "B" shares at a price to be fixed. The company should benefit from the change in taxation. Towards the close of this year the additional plant should be in operation, although this will be used mainly for the treatment of ore below the average of the reserves.

* * *

Kolar Group Results.—The operations of these four gold mining companies operating in Mysore brought rather mixed results last year. Increased dividends were paid by two companies, while one was unchanged and one was reduced. The earnings of the *Champion Reef* expanded satisfactorily, owing to the treatment of a larger tonnage and to the higher gold price realised—approximately 140s. 6d. against 137s. 6d. The depth of the mine is nearing 8,000 feet, for which the existing machinery and shafts were designed. The directors have decided to carry the workings down to at least 10,000 feet. The work outlined will occupy approximately four years and is estimated to cost £226,000, and accordingly an issue of 130,000 shares is to be made at 35s. A net cash surplus of £70,600 is indicated by the balance sheet. During 1935, *Mysore* improved its position, and paid £47,040 in royalties as against £43,130. The net cash balance at the end of the year

amounted to £292,600. Key figures relating to the four companies are given in the following table:—

	Working Dividends			Ore Reserves		
	Profit	Amount	Per cent.	Tons	Value	dwt.
<i>Champion Reef</i>	1933	121,560	84,500 32½	334,020	12.00	
	1934	148,160	104,000 40	405,490	11.77	
	1935	169,990	110,500 42½	448,240	11.86	
<i>Mysore</i>	1933	209,050	137,250 22½	406,000	14.72	
	1934	221,150	152,500 25	431,000	13.60	
	1935	254,450	167,750 27½	422,000	13.10	
<i>Nundydroog</i>	1933	390,490	240,550 85	473,500	14.42	
	1934	320,870	191,030 67½	435,210	14.59	
	1935	317,560	191,030 67½	492,660	14.07	
<i>Ooregum</i>	1933	34,020	30,040 5	130,710	9.99	
	1934	54,100	57,100 12½	139,400	9.38	
	1935	60,840	48,080 10	176,370	9.57	

The earnings of *Nundydroog* declined, but not in sufficient degree to involve any alteration of the dividend. The royalties were practically unchanged at £91,660. At the end of the year the company had a net cash balance of £218,000. Some disappointment was caused by the reduction in the *Ooregum* dividend. Apparently the point was overlooked that the 1934 revenue was swollen by a non-recurring item of £22,060 profit on sales of investments and shareholdings. Last year's working profit, in fact, exceeded that of 1934 by a small amount. As in the case of *Nundydroog* a considerable increase in the ore reserves is reported, and the cash balance amounted to £190,700. On the basis of current market prices and last year's dividends, the yield on *Champion Reef* shares is 8½ per cent.; on *Mysore* 10 per cent.; on *Nundydroog* 11½ per cent., and on *Ooregum* 10½ per cent. There seems nothing in the position of the mine to account for the exceptionally high return on *Nundydroog*; nor for the exceptionally low yield on *Champion Reef*. The latter offer the prospect of larger profits later on; but the directors do not anticipate more than maintenance of the recent rate of dividend on the increased capital during the period of construction.

* * *

Simmer and Jack.—Last year was again a period of transition for this company, for operations—in particular the working cost ratio—were affected by preparations for the increase in milling operations. A slightly larger tonnage was crushed than in 1934. Revenue averaged 33s. 9d. against 31s. 9d., the grade as well as price received being slightly higher than in the previous year. Owing to an advance of nearly 2s. per ton in expenses, however, the working profit was only a trifle higher at £548,000. The two half-yearly dividends of 3d. per share absorbed £150,000, against £137,500, additional capital ranking as from the middle of 1934. Following the issue of 1,000,000 shares made towards the end of 1934 the capital expenditure account now shows a credit balance of £98,040. Taxation for last year required £164,490, as against £138,380, and a slightly higher balance of £59,200 is carried forward. Despite the slightly increased development footage, a moderate decline occurred in the ore reserves, the value also being slightly lower than before. It is anticipated that the additional unit, bringing the milling capacity up to 110,000 tons per annum, will be in operation during May, when "profits on a substantially higher scale may be anticipated," to quote the consulting engineer's report. The current quotation of about 15s. 6d. for the 2s. 6d. shares, however, clearly discounts a higher dividend than that paid in recent years.

Other Company Results.—On page 108 will be found a summary table of the results of 41 other companies. Nineteen of these are in the rubber group, and most of the results reflect the difficult conditions of the past year. In many cases it has proved impossible to reduce working costs in spite of lower rubber prices in 1935 than in 1934, and companies have had to rely on increased profits from other lines of business to offset reduced rubber profits. Only six of the companies listed have been able to maintain

last year's rates of dividend, and for the others reductions range from ½ per cent. in three cases to 5 per cent. for *Sungei Salak*, whose profit is reduced from £11,351 to £5,917. The only increase in net profit is reported by *Ayer Kuning*, whose profit from palm oil and kernels amounted to nearly £3,000, compared with a loss last year of £400. The good retail trading conditions have enabled *United Drapery Stores* to increase their dividend to 4 per cent. compared with 3 per cent. last year. Reports of three more investment trusts show good results, and *Alliance Trust*, which alone does not raise its dividend, reports higher profits at £316,893. *Brown and Eagle*, wool and tea warehouse keepers and wharfingers, report lower wool stocks owing to increased demand and pay 10 per cent. dividend with a 20 per cent. capital bonus. Satisfactory trading results enable *British Timken*, ball and roller bearing manufacturers, to increase the dividend to 10 per cent. Although *Goldsmiths and Silversmiths* pay no dividend, profits are up from £9,747 to £16,963. *Jurgens and Van den Berghs'* results suggest interesting possibilities for the forthcoming Unilever accounts. The profits of *Edward Lloyd* have advanced from £195,155 to £250,036, the distribution being maintained at 7 per cent. tax free. *Marconi International* profits are reduced from £120,892 to £90,118. *Hudson's Bay Company* reports a substantial recovery in profits from £40,980 to £144,717. It is proposed to repay 30s. of each £5 preference share on July 1st next. The *Barry and Staines* dividend has been raised from 10 to 12½ per cent., and *British Celanese* announce the payment of one year's 7 per cent. preference dividend, bringing the payments up to October, 1935. *Spillers* maintain the ordinary and deferred dividends at 15 per cent. and *Bryant and May* pay 25 per cent., tax free.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Scotland, Wesleyan and General Assurance Society, River Plate Trust Loan and Agency, English Electric, Anglo-Portuguese Telephone, Vickers, Sunday Pictorial Newspapers (1920), Daily Mirror Newspapers, British Enka Artificial Silk, Apollinaris and Presta, John Barker, Mysore Gold Mining, and Moss' Empires. The chairman of the Bank of Scotland reviewed improvements in heavy industry business, and said that there was no evidence of any substantial increase in the general demand for loans. Mr G. H. Nelson reported on important orders received by the English Electric Company, and said orders since January 1st of this year were greater than for the corresponding period of last year. British Enka Artificial Silk Company obtained higher working profit last year by lower working costs. The chairman of Anglo-Portuguese Telephone Company discussed expanding business, and said the company expected to make additional capital expenditure of £800,000 over the next five years. Colonel J. J. Gillespie announced larger profits during last year for Moss' Empires, due to general prosperity and entertainment tax concessions. The Daily Mirror Newspapers made slightly higher profit than in the previous year, and the chairman said the circulation of the *Daily Mirror* on the King's funeral was a world record for daily newspapers. During the past year Sunday Pictorial Newspapers increased its holdings in Albert E. Reed and Company and in the Daily Mirror Newspapers. The chairman of Apollinaris and Presta discussed the arrangement now before the Courts for reducing the company's prior charges. Investments of the Wesleyan and General Assurance Company increased by over £600,000 in the year. Sir Sydney M. Skinner reviewed the rebuilding progress of John Barker and Company, and criticised increased assessments. Mr Walter W. Parish, at the meeting of River Plate Trust Loan and Agency, reviewed harvest conditions in Argentina. Sir Hubert A. Lawrence, at Vickers, Ltd., meeting, said the prosperity of the company was largely dependent upon its ability to secure armament work at home and abroad. Seventy per cent. of the turnover at their Sheffield works and 100 per cent. at Birmingham and Trafford Park was commercial. At the meeting of Mysore Gold Mining Company it was stated that the experience at the great depth of Kolar would be repeated in the Mysore mine.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS

TICKET
APRIL 21

ACCOUNT
APRIL 23

THE markets, having consolidated their technical position towards the end of the preceding account, opened the second week of the holiday account in a mood of quiet confidence. Speculative interest in the market was restricted, a natural accompaniment to the approaching holiday, but business in most sections of the market could fairly be described as steady. Last week's indications that the market was shedding some of its political anxiety were broadly confirmed this week, and neither the Geneva meeting nor Monday's debate was a market pointer of any great importance. The employment figures, therefore, were allowed to do their work unimpeded, and they produced some prompt movements in the building materials group.

The gilt-edged market was not active, but the underlying tone remained consistently firm, with War Loan attracting further support, while the "undated" group recorded modest fractional improvements. Home corporation issues were also firmer, after their period of several weeks' relief from new issues. Dominion stocks were not active, but Canadian Provincial and City stocks were marked down following the Alberta default and further developments in Montreal.

In the foreign bond market, Italian bonds made a nominal advance on her reported military achievements. Greek issues found supporters in anticipation of the debt negotiations. Brazilian loans were slightly higher, and the Japanese group also improved.

The home rail market at first remained firm without attracting a great deal of business, but the publication of some quite impressive traffics on Wednesday afternoon encouraged buyers, particularly of London and North-Eastern issues. The Argentine group remained lifeless, but American issues made a further advance.

Business in the industrial market remained on a limited scale, but the tone was firm. In the steel group, Hadfields responded to a favourable report, but Stewarts and Lloyds reacted on the sharp fall in profits. The results of these two companies are discussed on page 88. Among motor shares, Standard were an early feature, and interest broadened after the publication of the Ford report (analysed on page 89). Leyland were also in good demand in the commercial section. Electrical equipment issues, led by Enfield, were satisfactorily supported. The aircraft group claimed few consistent adherents, and Rolls-Royce (whose preliminary statement is discussed on page 89) fluctuated considerably when it was known that a share bonus was not to be distributed.

The leading stores shares received quiet support, and in the provision group Cerebos was prominent. Unilever, however, became slightly easier. In the breweries list, South African fluctuated after the directors' statement regarding the E. K. Green position. In the miscellaneous section, building issues responded promptly to the employment figures, with their further evidence of building improvement. Cement shares, as recently, took the lead, but London Brick began to lower their high-yield basis. Good features were evident in the light engineering section, J. Brockhouse responding to the resumption of interim dividends.

Activity in oil shares declined with the approach of the holidays, but the tone of the market remained good, and prices were very firm in anticipation of better results which are shortly expected from most companies. In the rubber share market business continued restricted, and company reports continue to reflect the poor conditions of the past

year. Selling of tea shares by the public continued, although on a diminished scale, but professional operators appeared willing to absorb most selling orders. The Indian group fared much better than the Ceylon, in which most price movements were downward.

Kaffir shares, which had been inclined to hold their ground at the end of last week, began to move downward this week, under the influence of sales from the Cape and indifference from Paris, but activity was slight. Finance descriptions were fairly steady this week, but there was a marked setback in Rand Mines. Business was equally restricted in West Africans, and profit-taking left Ashanti and Bibiani lower this week. The copper share market was firm, with many improvements, but tin issues continued irregular.

FOREIGN STOCK EXCHANGES

NEW YORK

The past week has shown a very encouraging resilience in American security prices. Apart from irregular movements last Friday the week closed with new highs in many sections, and on Monday, in spite of some profit taking, the upward movement continued. It was followed later by marking time, induced by renewed fears of devaluation of the franc. Industrials, utilities, railroad and steel shares all joined in the rise, although at the beginning of the week some ground was lost by liquor and rubber shares. The bond market continued firm, and the Norwegian Government \$31,500,000 4½ per cent. issue had a good reception. The political controversy over the new tax proposals has little reflection in the markets. The latter are in the mood to make the best out of everything if Europe will let them, and business reports are very satisfactory. Bank clearings in the week ended April 1st were 13.1 per cent. over the figure for a year ago, and there was an increase in brokers' loans to over the \$1,000,000,000 mark. Freight car loadings increased from the low level caused by the floods, but are still lower than for last year. Automobile output is up on the week, and estimates for April are slightly higher than for last year. According to income-tax returns, taxable corporate income for 1935 was 25 per cent. higher than in 1934.

PARIS

Business eased off at the end of last week, and rentes in particular lost ground on fears of devaluation, although easing of the pressure led to a slight improvement on Saturday. Internationals were good on Wall Street's strength, but domestic industrials reacted somewhat after their recent improvement. The new week opened dull, and weakness in Spanish issues—particularly Rio Tinto—overcast the market, although rentes continued to benefit from the slackening of pressure against the franc. Bank of France issues were adversely affected by the annual report. Sentiment improved later although internationals were quiet. On the Coudisse there was little activity, and diamond and gold issues were neglected.

BERLIN

The share market continued to be firm last week, favourites being Farbenindustrie, bought with blocked marks, Siemens und Halske, Mannesmann, and shares in the paper pulp and potash groups. Reichsbank issues rose slightly, but the commercial banks were little changed, and shipping shares were weak. The opening of the new week was irregular, with advances in electrical issues, in particular General Electricity, and in public utilities, and declines in some coal and steel stocks; and late on Monday prices in general tended lower. The slow advance in Reichsbank bonds which began early in March continued. Dollar bonds moved irregularly, but certificated issues closed last week firm. On Tuesday prices moved upward, and electrical issues were particularly strong.

AMSTERDAM

Last week closed very quietly, with practically no business, and no price movements, although previously Unilever N.V. had been a feature on the good dividends from Jurgens

and Van den Berghs. A further decline in Philips Lamps to 167½ exercised a very depressing influence on business this week, and movements were generally downward, with Unilever N.V. lower and Dutch Fords off 6 points at 217½. There was a similar lack of support for rubber, sugar and tin issues.

CAPITAL ISSUES

HOLIDAY influences have not prevented the ready—and even eager—absorption of this week's industrial new issues. The 5s. ordinary shares of *Pressed Steel Company* offered at 22s. 6d. attracted the greatest interest, and the offer was heavily "staggered." The company manufactures metal motor bodies and parts, and is progressive and prosperous. The ordinary shares have not received a dividend during the last three years, but earnings have steadily grown and last year were equivalent to 34½ per cent. on the ordinary capital. On the issue price, therefore, the earnings yield would amount to £7 13s. per cent. The presence of an item of £440,000 in the balance sheet for patent rights, however, may suggest the temporary possibility of somewhat limited dividend distributions, while purchasers should recognise that the issue price contains a goodwill component amounting to 350 per cent., apart from accumulated reserves. The *Blackburn Aircraft* prospectus primarily relates to an issue of 5 per cent. redeemable preference shares at 5 per cent. premium, but the marketing of a block of ordinary shares is also apparently contemplated. The proceeds of the preference issue will be utilised for the reopening of the Leeds factory, and the earnings cover for the issue, after making a number of specified adjustments, is not unduly large for this type of concern. The shares rank in a semi-speculative industrial category. *A. Peachey and Company* has been formed to acquire a building and public works contracting business which has shown characteristic expansion during recent years. The 2s. shares, issued at 2s. 3d., therefore carry a building equity risk. The only "statement for information" of the week has been published on behalf of *Newman Industries*, an engineering business established in 1924.

PUBLIC OFFERS

Blackburn Aircraft, Ltd.—Issue of 200,000 5 per cent. cumulative £1 preference shares at 21s. Redeemable in whole or part from September 30, 1941, on three months' notice, at 23s. per share. Acquires share capital of Blackburn Aeroplane and Motor Company formed in 1914 and North Sea Aerial and General Transport, Ltd. Fixed assets acquired, £304,966, exclusive of stock in trade and goodwill. Other assets, £134,536. Purchase price, 760,000 10s. ordinary shares and 50,000 5 per cent. cumulative £1 preference shares. Combined profits, after depreciation, years to June 30th: 1933, £38,116; 1934, £37,796; 1935, £40,443. Lazard Brothers have agreed to purchase 120,000 10s. ordinary shares at 20s. each free of stamp duty up to £1,200 and of transfer fees. Lists closed 9.5 a.m., April 6th. Oversubscribed.

Peachey (A.) and Company, Ltd.—Issue of 520,000 2s. ordinary shares at 2s. 3d. Acquires builders' and public works contractors' business of similar name, founded 30 years. Net assets acquired £54,732 for £48,000, £20,000 in cash and allotment of 280,000 2s. shares. Profits, before depreciation and income tax, years to April 30: 1933, £6,008; 1934, £11,393; 1935, £13,844. List closed 9.5 a.m., April 7th. Fully subscribed.

BY OFFER FOR SALE

Pressed Steel Company, Ltd.—Offer for sale of 1,980,000 5s. ordinary shares at 22s. 6d. per share. Incorporated in England 1926. Manufactures pressed steel parts and accessories for motor cars; owns patents and 34½ acres of freehold land at Cowley, Oxford. Total assets, December 31, 1935, £1,750,302. Profits after depreciation, before debenture interest: 1933, £136,373; 1934, £177,725; 1935, £244,390. Messrs J. Henry Schroder and Company acquired 1,330,380 shares at 21s. 4½d. and 649,620 shares at 21s. 2½d. They pay 6d. per share commissions and all other expenses. List closed 9.5 a.m., April 7th. Oversubscribed between ten and twelve times.

BY STOCK EXCHANGE INTRODUCTION

Newman Industries, Ltd.—Issued capital 450,000 2s. ordinary shares and 180,000 6 per cent. cumulative 5s. preferred ordinary shares entitled to share in any balance of profits up to an additional 2 per cent. Electrical and mechanical engineers with works at Yate, Bristol. Established 1924. Net assets (excluding goodwill) £53,079, acquired for £52,000, of which £25,000 will be paid in cash and the remaining £27,000 by allotment of 2s. ordinary shares. Profits, after depreciation, but before income tax, years: 1933, £3,451; 1934, £8,208; 1935, £11,643. Messrs. Moy, Davies, Smith, Vandervell & Co. have purchased 178,706 5s. preferred ordinary shares for cash at par and 178,706 2s. ordinary shares at 2s. 3d. per share payable in cash free of commission.

BONUS ISSUE

St. Austell and District Electric.—The directors of St. Austell and District Electric Lighting and Power Company have decided to recommend the issue of a free bonus to all ordinary shareholders of one fully-paid £1 ordinary for every five held.

ISSUE TO SHAREHOLDERS ONLY

Ford (Louis G.).—217,405 ordinary shares of 1s. are offered to ordinary shareholders at 2s. per share in the proportion of two new shares for every five shares held on March 23.

CONVERSIONS AND REPAYMENTS

Hudson's Bay Company.—The results for the year ended January 31, 1936, show a net profit of £144,717 (compared with £40,980 for the previous year), making, with the amount brought forward, a balance on profit and loss account of £214,451. The Governor and Committee will propose at the annual general court that there be repaid to the preference shareholders on July 1, 1936, 30s. of each of the 5 per cent. cumulative preference shares (£5 each), together with the full arrears of dividend on this repaid capital for the six years to June 30, 1936. This will involve a total repayment of

capital of £600,000 from capital reserve account, and a payment of dividend less tax which (at the existing rate of 4s. 6d. in the £) would amount to £139,500 (net) or 6s. 11½d. (net) per share approximately.

It is anticipated that the report and accounts for the year to January 31, 1936, will be issued about the second week of May next, and that the annual general court of proprietors will be held later in the same month.

Bradford 6 per cent. Stock.—Bradford Corporation will redeem at par on July 1 its £2,000,000 6 per cent. redeemable stock, 1936-46.

Cammell Laird and Company, Ltd.—It is proposed to convert into ordinary stock on May 1, 1936, all the 6,300,000 ordinary shares in the company which at that date will have been issued and are fully paid up, and also to take powers to convert into ordinary stock all the unissued share capital of the company which may thereafter be issued in the form of ordinary shares as soon as it is issued and fully paid up.

Dominion Cannery.—Dominion Cannery is to redeem its outstanding \$892,500 6 per cent. first mortgage thirty-year sinking fund bonds on October 1, 1936, at 110 per cent. and accrued interest.

Mann Egerton and Co.—Shareholders have authorised the subdivision of the 64,611 issued shares of 11s. each and the 85,389 unissued shares of £1 each into 1s. shares.

State of Parana 7 per cent. Consolidated Bonds.—Lazard Brothers & Company, Limited, announce that certain sterling funds have reverted to the State, which has decided to utilise them for redemption by tender of its 7 per cent. consolidated bonds of the sterling and dollar issues. Tenders for the sale of bonds at a price to be stated in the tender must be lodged not later than noon, April 29, 1936 (1) if for sterling bonds at the offices of Lazard Brothers & Co., Limited, 11, Old Broad Street, London, E.C.2, or (2) if for dollar bonds at the offices of the Chase National Bank of the City of New York, 11, Broad Street, New York.

Taunton 3 per cent. Stock.—The Taunton Corporation will redeem its 3 per cent. redeemable stock on April 1, 1937.

Virginian Railway.—The Virginian Railway Company will pay on May 1, 1936, all the outstanding 5 per cent. first mortgage fifty-year gold bonds, series "A," and 4½ per cent. first mortgage fifty-year gold bonds, series "B," at 110 per cent. in the case of bonds, series "A," and 102½ per cent. in the case of bonds, series "B," together with accrued interest.

Japanese 5 per cent. Exchequer Bonds.—With regard to the conversion of 5 per cent. Exchequer bonds (internal loan), amounting to about 373,000,000 yen, which will mature in the course of the financial years 1936 and 1937, the operation will take place on May 1, 1936. The terms of the new bonds, which will be wholly accepted by the Bank of Japan, are as follows: Amount to be issued, 381,000,000 yen; rate of interest, 3.5 per cent.; period of redemption, 12 years; issuing price, 98 yen; yield, 3.7 per cent.

FORTHCOMING ISSUES

Preston Breweries.—It is expected that an issue will be made April 20th of 200,000 5½ per cent. cumulative 10s. preference shares at par and 500,000 4s. ordinary shares at 5s.

OTHER RESULTS OF ISSUES

British Bedaux.—Lists for issue of 300,000 5s. ordinary shares at 6s. closed 9.5 a.m. April 2. Heavily oversubscribed.

Bowmaker.—The issue of 500,000 5 per cent. cumulative preference shares of £1 each at par has been heavily oversubscribed. Subscription lists for town and country were closed at 9.5 a.m. April 3.

Cowburns and Scotts.—Lists for the issue of 525,000 ordinary shares of 4s. at 4s. 6d. each were closed at 9.5 a.m. April 3.

English Electric Company.—Lists closed for cash applications for £1,250,000 4 per cent. debenture stock at 9.5 a.m. April 2. Oversubscribed. Application for conversion will be accepted up to 4.30 p.m. April 16.

Gas Light and Coke Company.—Issue £700,000 3½ per cent. debenture stock 1956 at par. List closed 9.5 a.m. April 3. Oversubscribed.

Marshall and Sons (Successors).—Subscription lists for the issue of 1,600,000 shares of 5s. each at par were closed at 9.20 a.m. April 3 owing to over-subscription.

"Romac" Motor Accessories, Limited.—The directors announce that the recent issue to shareholders only of 56,000 shares of 5s. each at par has been heavily over-subscribed.

Trussed Concrete Steel.—Application lists for the offer for sale of 100,000 6 per cent. cumulative preference shares of 10s. each at 10s. 9d. per share and 220,000 ordinary shares of 5s. each at 7s. per share were closed at 9.5 April 3 owing to very heavy over-subscription.

CALLS DUE APRIL 13 TO APRIL 18, 1936

The grand total of calls in April, 1936, is £91,181,311, which compares with £7,848,585 in April 1935.

OIL OUTPUTS

LOBITOS OILFIELDS, LTD.—The production of the Peruvian Company for March is cabled as 25,993 tons.

ANGLO-ECUADORIAN OILFIELDS, LTD.—The production for March is cabled as 20,136 tons.

PHOENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix Group for March was 87,668 tons.

THE ATTOCK OIL COMPANY, LTD.—Production for March was 10,692 barrels.

several branches has been completed, including the chief office in Dundee, our Albert Street branch there, and the branches at Marchmont Road, Edinburgh, Calton, Glasgow and Peebles. In addition, various properties have been acquired as premises and as houses for agents. Notwithstanding the expenditure involved, the bank's premises and let property remain at the same figures in our balance sheet as previously. It will be readily understood that in our property account we have a large surplus.

OFFICERS' PENSION FUND

The bank's pension scheme in terms of which pensions are paid to every member of the staff who qualifies by length of service, or incapacity through ill-health, was established in 1881 and during the intervening fifty-five years has worked with perfect smoothness. The directors after due consideration decided during the past year to constitute, as at March 1, 1935, a separate fund for the payment of pensions in future, the fund to be vested in trustees nominated by the board. They allocated to it as at the date mentioned a substantial sum. They propose to allocate from time to time such further sums as they regard as expedient, and you will observe that they have set aside for this purpose £30,000 out of the year's profits now declared. As far as the members of our staff are concerned there will be no apparent change in the pension arrangements hitherto in force.

The directors consider that the establishment of such a fund will be of advantage both to the bank and to the staff, and they are confident that the step they have taken will meet with the entire approval of the proprietors.

BANK STAFF

Once again it is my pleasant duty to express on behalf of the Court of Directors our thanks for the excellent services rendered by the executive, managers, agents and staff throughout the year. We do not fail to recognise to what extent the favourable results shown depend upon the efforts of the various members of our personnel, and we gladly acknowledge the spirit of co-operation and loyalty to the interests of our institution which prevails throughout the service. In this connection I would also refer to the good work which continues to be done by the staff joint council and the helpful suggestions which we receive through the elected representatives of the staff.

DIVIDEND

I have pleasure in moving that the report and balance sheet as submitted be adopted and that a dividend for the past half-year at the rate of 18 per cent. per annum, less income tax, be now declared, payable on 15th current, making with the dividend paid in October last 18 per cent. for the year, less income tax, being the same as paid for the previous year.

The motion was agreed to.

The Lord Elphinstone, K.T., and The Lord Henry Scott were unanimously re-elected Governor and Deputy-Governor respectively for the current year. Sir Robert Tuite Boothby, K.B.E., and Mr. John Parker, Watson, W.S., were re-elected ordinary directors.

Mr H. L. Usher, C.A., and Mr R. Arthur Morrison, C.A., were re-appointed to conduct the audit of the books for the current year, and a vote of thanks to the chairman terminated the meeting.

ANGLO-PORTUGUESE TELEPHONE COMPANY, LIMITED

ANOTHER SUCCESSFUL YEAR

The forty-ninth ordinary general meeting of the Anglo-Portuguese Telephone Company, Limited, was held, on the 3rd instant, at the Incorporated Accountants' Hall, Victoria Embankment, London.

Sir Alexander Roger, the chairman of the company, presided, and in moving the adoption of the report and accounts said that the operating revenue for the year had amounted to £291,372, compared with £273,151, the gross profit to £117,268, and after charging debenture stock interest, less interest and income tax, there was a net profit of £84,634—an increase of £5,222. Dividends of 8 per cent., less tax, for the year on the ordinary and "A" ordinary shares would absorb £61,380, leaving a carry-forward, after transferring £20,814 as a special allocation to reserve for renewals, of £25,698, as compared with £23,258 brought in.

COMPANY'S PROGRESS

The company's progress continued along sound lines. At December 31, 1928, the stations numbered 23,016, and the share and loan capital employed was £808,200. In 1935 the stations were 41,240 and the capital employed £1,448,190—an increase of 79 per cent. in each case. The board regarded that expansion as satisfactory, and it had to be remembered that, even during the period of depression in Portugal and also in this country, they had never ceased building up the company's property by expending large amounts of capital in their determination to give the public a first-class telephone service. The increase in stations during 1935 was equivalent to a growth of 6.75 per cent.

In November last he, the chairman, with Mr Kerr and Lord Hinchingbrooke, had had the pleasure of visiting Portugal, and had found ample confirmation of reports of the country's development. From their own personal observations of the company's business shareholders could be assured it was on an excellent footing. The company's relationship with Government and municipal departments, and also with its subscribers and the public generally, was on a most cordial and friendly basis. The company's service did not stop at the provision of excellent telephonic communications. The Government enjoyed free telephone service valued in 1935 at £14,127, and, in addition, were paid royalties amounting to £9,432. Those contributions represented about 2½ per cent. on the issued ordinary share capital of the company and were an operating charge on its revenue. Further, the municipalities of Lisbon and Oporto were supplied with telephone service at 33 per cent. under the normal charge. The company also provided direct employment to over 1,700 people in Portugal, of whom 99 per cent. were of Portuguese nationality, and indirectly it employed many others through material and equipment manufactured in the country. Lisbon and Oporto were not only developing commercially, but the former city particularly had a widening residential attraction, and had become a favourite centre for tourists. Development of the telephone generally might perhaps not be so spectacular as of recent years, but, provided no unforeseen circumstances intervened, he thought they could look forward to steady growth with every confidence.

EXTENSIONS, PRESENT AND PROSPECTIVE

First-class telephone service could only be given by continually overhauling the plant and reconstructing old exchanges, or installing new ones of the latest type. The company was constantly carrying out that process, and in the year under review £164,000 had thus been spent. There were now approximately 1,600 call offices in service. Extensions to their Trindade and Norte automatic exchanges which would considerably increase their capacity were under consideration, and the board had recently purchased a large building in the Estrella district of Lisbon, where it was proposed to install a new exchange. If present estimates of further general growth were realised, the board expected that additional capital expenditure over the next five years might amount to some £800,000.

It was interesting to note the great changes which had taken place in systems of communications throughout the world since 1928. Wireless telephony had grown apace, and the automatic telephone had been adopted in almost every country. Because of the ever-increasing variety of service thus made possible to the individual subscriber, the message rate system of payment was becoming widely adopted. The change from flat rate to message rate in their own case would be gradual, but when completed would remove the unfair incidence of the present unsatisfactory dual system of flat rate and message rate tariffs.

The report and accounts were unanimously adopted.

SUNDAY PICTORIAL NEWSPAPERS (1920) LIMITED

CONTINUED PROGRESS

The sixteenth ordinary general meeting of Sunday Pictorial Newspapers (1920), Limited, was held, on the 6th instant, at the Memorial Hall. Mr John Cowley, who presided, in the course of his speech, said:—

Before we begin the business of the meeting I feel I must make reference to the death of our friend and colleague, David Sidney Middleton. Only a year ago you confirmed his appointment as a director of this company. He was a young man full of promise, and we deeply regret the loss of his counsel and loyal service. He was known personally to many of our shareholders, and his passing will be regretted on both sides of this table.

The profit for the year ended February 29, 1936, after providing for income tax, working, office and other expenses, contingencies, etc., amounted to £216,696 8s. 4d., slightly higher than the profit of the previous year. From this sum £20,000 has been placed to the reserve account and £5,000 has been applied as a provision for pensions. We have paid interim dividends totalling 12½ per cent. on the ordinary shares, and after providing for the dividend on the preference capital there remains £91,215 7s. 5d. to carry forward, against a figure of £70,768 19s. 1d. brought in from last year.

Our capital, both authorised and issued, remains unchanged. The item sundry shareholders for dividends does not call for comment. The reserve account has been made up to £260,000 by the addition of the £20,000 I have just mentioned, and the provision for pensions has been increased from last year's figure of £50,000 to £55,000. The investment reserve remains at £190,000. Creditors and reserve for contingencies including loan from associated company, £736,049 18s. 11d., needs a little explanation. Included in the item is £300,000, the balance of an amount loaned to us by The Daily Mirror Newspapers, Limited, in 1933, in connection with our purchase of £700,000 Nominal Anglo-Canadian Pulp and Paper Mills, Limited, debentures. Just after the date of our balance sheet we paid to the Daily Mirror Company a sum of £50,000 under the arrangement made when we agreed to purchase the debentures. The greater part of the balance of the creditors item is in the nature of reserves.

On the other side of the balance sheet the first item is goodwill and copyright £200,000, which, as I have mentioned in former years, we regard as a very valuable asset. Our stocks are very small—£541 11s. 9d., against £431 odd the previous year. Investments at cost or under total £2,465,223 12s. 6d., an increase of over £89,000. During the year Messrs Albert E. Reed and Company, Limited, a company in which we have a considerable holding, made issues of shares. We took up the number to which we were entitled, and the shares are quoted to-day at a figure considerably over the price of issue. We are very satisfied with our interest in the business of Albert E. Reed and Company, Limited, regarding that company as one of the most progressive and enterprising in the trade, under very able direction and management. We have also during the year increased our holding in the Anglo-Newfoundland Development Company, Limited, and in the Daily Mirror Newspapers, Limited.

The debtors' figure at £107,609 7s. 8d. is not greatly different from that shown a year ago. Cash at bankers and in hand at £124,645 6s. 5d. compares with an amount of £181,315 odd a year ago. The reduction of about £56,670 must be considered in connection with the increase shown in our investments.

The issue of the *Sunday Pictorial* of March 15th was the twenty-first anniversary of the first issue of your newspaper. It was on March 15, 1915, and during the war, that the *Sunday Pictorial* made its first bow to the public. It came of age, therefore, on the date mentioned, and fittingly celebrated its majority. During the twenty-one years of its existence the paper has grown yearly in power and influence, and it is the intention of your directors to maintain the dignity of its features and picture presentation, to seek all possible improvement and extend even further the paper's great appeal to the public. Naturally, in our enterprise we incur extra costs, but by giving full value to our readers we believe we are bound to reap the benefit. If it were possible to exhibit to our present-day readers copies of the first issues of the *Sunday Pictorial* to compare with our present production everybody would see at a glance what wonderful improvements have been made. Of course, over that period of twenty-one years great progress has been made in every phase of newspaper production. Paper has vastly improved; so has ink. Types are better and bolder, photography and the transmission of photographs have been revolutionised. Details in regard to engraving, plate casting and machining have been bettered—all these improvements have contributed vastly towards present-day successful production of the *Sunday Pictorial*.

The report and accounts were unanimously adopted.

DAILY MIRROR NEWSPAPERS, LIMITED

CONTINUED SUCCESS—ENCOURAGING PROSPECTS

The sixteenth ordinary general meeting of the Daily Mirror Newspapers, Limited, was held, on the 8th instant, at the Memorial Hall, Farringdon Street, London, E.C.4.

Mr John Cowley (the chairman), in the course of his speech, said:—The profit of your company for the year ended February 29 last, after making provision for depreciation of plant and machinery, etc., and interest on debenture stock, amounted to £315,325 5s. 2d., slightly more than the profit of the previous year. We have again placed £20,000 to reserve account and allocated £10,000 as a provision for pensions. After payment of interim dividends on the ordinary shares totalling 15 per cent. and providing for the dividend on the preference shares as set out in the appropriation account there remains £83,465 10s. 7d. to be carried forward, against a figure of £72,140 brought in from last year.

Turning to the balance sheet, the reserve account, with this year's appropriation, has been raised to £280,000 and the provision for pensions to £110,000, both very satisfactory amounts. The next item is "Capital Profit being surplus on Sale of Investments." Last year we transferred an amount of £1,400,000 to this account, and during the year distributed £105,000 to our shareholders. We have now transferred a further sum of £105,000 from our surplus on sale investments and again made up the figure of £1,400,000, from which we propose to distribute a total of £140,000 on the dates mentioned in our report during the present financial year.

On the other side of the balance sheet the first item is the goodwill of the *Daily Mirror*, standing at the sum of £1. Although I refer to this every year, I feel I need not apologise for again saying that we regard this as a most important asset of very great value although it stands at a nominal figure. Our investments at cost or under stand at £4,820,314 14s. 7d., an increase over last year of round about £146,000. We have made a number of new investments and have increased our holding of shares in Albert E. Reed and Company, Limited. That company, in which we have a considerable interest, made, during the year, issues of shares on favourable terms, and we took up the number to which we were entitled.

Going back for a moment to the matter of the company's capital profit, the further sum of £105,000 transferred to that account brings the total amount distributable to £1,400,000, which, as you know, is an amount equal to the ordinary share capital of the company.

Adequate supplies of newsprint paper of the right quality and at the right price, as you all know, is a matter of supreme importance to every newspaper company. Your company has three sources of supply. During the past twelve months we have been using an increasing quantity of paper manufactured by the Anglo-Canadian Pulp and Paper Mills, Limited, in which company we are so largely interested. I am glad to say that the prospect of our investment in that company is somewhat brighter than it has been for six years.

Now in regard to the *Daily Mirror*, it is proved by many signs that your paper to-day makes a stronger appeal to the public than at any previous time. When we last met, I was able to say it was a vastly improved paper, and it is generally admitted that to-day, as a complete summary of all the latest news—both in news and pictures—it shows a further improvement on the *Mirror* of a year ago. During the year under review, two national events occurred which gave proof of the esteem in which your paper is held by the general public. Of course, the first was in May, when we reproduced the Jubilee Day pictures. On that occasion we issued no fewer than 1,969,515 copies. In January last, the regret and sorrow shown by the public at the death of the King was reflected in the demand for your paper, for the issue containing the pictures of the funeral of his Majesty numbered 3,247,695. This figure constituted a record print of any daily newspaper of any kind in the world.

The *Daily Mirror* as an advertising medium becomes a greater and greater force with national advertisers, and I am pleased to say that most firms who use the columns of your paper realise the importance of having prepared attractive advertisements—advertisements which strike the eye by the excellence of their get-up and general appeal.

As you will have gathered from my remarks, we regard the position of your company as being encouraging, and trust when we next meet, to be able to record further progress.

The report and accounts were unanimously adopted.

BRITISH ENKA ARTIFICIAL SILK COMPANY, LIMITED

INCREASED PROFIT

The eleventh ordinary general meeting of British Enka Artificial Silk Company, Limited, was held, on the 3rd instant, at 20 Aldermanbury, London, Mr C. T. Pott presiding.

Mr J. H. Jennings, F.C.I.S., on behalf of the Secretaries (Union Corporation, Limited), read the notice convening the meeting and the auditors' report.

The Chairman, in the course of his remarks, said:—The working profit for the year as shown by the profit and loss account is £101,297, an increase of £24,549 on the previous year's figure; the net profit at £44,880 shows an increase of £43,675. The improvement in the gross profit has been achieved by reduction of costs consequent upon the modernisation scheme carried out in the previous year and greater production from the increased plant.

The rayon industry has shown further expansion in nearly every country in the world, the most impressive increase being that of Japan. In our own country, leaving out the item of staple fibre, in which we ourselves are not interested, there is an increase in consumption of 28 per cent. The increase in our own manufacturing capacity has not been sufficient to enable us to take full advantage of this increased consumption. We considered that our best policy was to consolidate and improve on what we had already done.

LOWER PRODUCTION COSTS

Only a comparatively short time ago rayon, owing to its high cost, was regarded merely as a possible competitor to pure silk. However, as the result of increased efficiency and greater production, costs have been brought down to such a low level that it now enters into competition with other fabric yarns. At present British rayon is selling at about 30 per cent. of the price of twelve years ago. Apart from this the general quality has improved enormously and the industry has long since passed the experimental stage. Although demand has increased to a remarkable extent, it does seem that, with the possibilities of further technical improvements and increased uses, saturation point has not yet been reached, although of course the curve may not always be an ascending one. The expansion has been helped recently by a stable price position as the result of which consumers have been able to make their arrangements and place their orders with confidence, and we are of the opinion that it is very desirable that this position should continue.

We are, therefore, all the more sorry to see that there is again a tendency in the trade to depart from a policy of stability of prices. Nobody will dispute that selling prices should be as low as possible; nevertheless, the price should leave a sufficient margin over cost to enable well-equipped and well-run producers to make adequate provision for depreciation and obsolescence of plant, maintain a good level of wages for those employed in the industry, and give a reasonable return for the capital employed. Our plant is a thoroughly efficient and modern one, and we believe we are in a good position to achieve satisfactory results.

AN UNJUST AND DETRIMENTAL TAX

It is still our opinion that the removal of the Excise duty would be of general benefit to the trade, but we are in agreement with our customers that it should be taken off in such a way that their loss and ours should be as low as possible. Unfortunately, no reasonable scheme has yet been devised upon which everybody can agree, although there has been much useful co-operation between the various sections of the trade. Since the Chancellor has now deferred any possible removal until 1937, we hope that the whole trade may come to some agreement whereby it should be possible to remove this unjust and detrimental tax without undue loss to anyone. The new duties introduced by the Chancellor in 1934 have worked well and preserved the home market while giving good and cheap articles to the consumer.

We are again pleased to say that we have been able to maintain the high standard of our product, and in some respects even to lead the way. Our technical department is continually giving its attention to the improvement of our manufactures and to the reduction of cost, in close collaboration with our parent company, the A.K.U., who are always ready to come to our aid. We are well established and have the good-will of many regular customers. During the past year we could have sold much more than our production; and the trade readily looks to us for supplies. These are factors that give us confidence.

The report and accounts were unanimously adopted.

MOSS' EMPIRES, LIMITED

SUCCESSFUL RESULTS

The thirty-seventh general meeting of shareholders was held, on the 8th instant, in the London Hippodrome.

Colonel J. J. Gillespie (chairman) stated, *inter alia*:—

(1) Alterations in the debenture debts have simplified the balance sheet and improved the company's financial position.

(2) Reserve account stands at £440,223, after providing for all expenses of debenture issues, repayment of 6 per cent. debentures, and a loss on realisation of a property no longer required for the company's business, and now adding to reserve a net sum of £4,000, after capitalising bonus to ordinary shareholders.

(3) The surplus over the book value of properties stands in the balance sheet at £428,149, exclusive of goodwill.

(4) Trading profit is £160,139, being an increase of £17,700 over 1934. Charges against profits are £2,300 down. Balance of profit carried to balance sheet, £114,105, as compared with £75,692.

(5) Prosperous trading of 1935 contributed to by a greater measure of prosperity in the country, with larger spending power on the part of the public, Entertainment Tax concessions, and continued close association with the Gaumont-British Picture Corporation, whose agreement has been extended.

(6) After paying full year's dividend on the preference shares and an interim dividend of 2½ per cent., actual, on the ordinary shares, balance of £79,277 at credit of profit and loss account. Final dividend of 5½ per cent. now to be paid, making 8 per cent., less tax, for the year. In addition, a capital bonus of 2½ per cent., free of income tax, to be distributed amongst the ordinary shareholders, representing allotment of one new ordinary share, issued as fully paid, for every forty ordinary shares presently held. Amount required to make the bonus distribution, £21,000, to be taken out of reserve, after transferring £25,000 from profit and loss account.

(7) No change of policy foreshadowed, but arrangement with Howard and Wyndham, Limited, has been terminated. Profits already earned during 1936 show substantial improvement.

The report and accounts were adopted.

An extraordinary general meeting was held at the close of the ordinary meeting, when the appropriate resolutions in connection with the issue of bonus shares, including alterations in the articles of association and increase of capital, were passed unanimously.

VICKERS LIMITED

PROGRESS IN ALL DEPARTMENTS

The annual general meeting of Vickers, Limited, was held, on the 3rd instant, in London.

The Chairman (the Hon. Sir Herbert A. Lawrence, G.C.B.), in the course of his speech, said that the net profits for the year were £928,105, an increase of £314,844, compared with 1934. After transferring £242,009 to reserve, the directors recommended the payment of a dividend of 8 per cent. on the ordinary share capital.

Considerable progress, both as regards orders booked and work completed, had been made during the year in all the shipyards and works of the company and its subsidiaries and associated companies. They were still pursuing their policy of bringing all the production plant of the various works and companies up to a condition of full efficiency. One important result of that modernisation was that they were confident that the company could undertake such work entrusted to them under the Government defence programme in a well ordered manner.

They had continued during the year to develop their commercial engineering business and had executed large orders for cement machinery at Barrow Works, where also they had executed many orders for heavy mechanical parts of winders for South African gold mines. Another important commercial engineering product was that of condensing plants for large power stations. At Elswick, in addition to the manufacture of naval and military equipments, they had executed large orders for heavy mechanical presses.

Further marked progress had been made by the English Steel Corporation. For the first time in its history the Corporation had paid a dividend—7 per cent. on the preferred ordinary shares and 20 per cent. (free of income tax) on the deferred ordinary shares.

STAINLESS STEEL INTERESTS

The fusion of the stainless steel interests of the Corporation with those of Thos. Firth and John Brown, Limited, had resulted in a satisfactory return, a dividend having been received during the year at the rate of 12½ per cent. on the capital invested.

APOLLINARIS AND PRESTA, LIMITED

FURTHER PROGRESS OF PRESTA

The thirty-ninth annual general meeting of Apollinaris and Presta, Limited, was held, on the 7th instant, at the Holborn Restaurant, Lord Lurgan presiding.

In presenting the directors' report and accounts for the year ending December 31, 1935, Lord Lurgan referred to the continued difficulties occasioned by the high German exchange and the German transfer moratorium. The company could not continue to pay out £51,000 per annum in respect of its prior charges when they were not earning the money.

HEALTHY FINANCIAL POSITION

A scheme of arrangement had accordingly been entered into with the debenture holders and debenture deferred interest certificate holders, and was now before the Court for sanction, for it was essential to safeguard the financial stability of the company. The cash position was still very good, and so long as the company's finances were maintained in a healthy state, and there was a demand for the excellent articles which the company sold, shareholders need not lose courage.

INCREASED SALES

In seconding the adoption of the report and the accounts, the Managing Director (Mr Francis J. Schilling) referred to the continued good demand for Apollinaris, both at home and abroad, and to the constant increase in the sales of their Presta minerals, fruit squashes and cordials. The new factory at Edenbridge in Kent covered the South of England and supplied the shipping companies, most of which stocked Presta. All advertising expenditure on this new branch of the business had been paid for out of the profits which it earned.

There had been a moderate increase in the profits for the year under review, and they hoped Presta would help to tide the company over the present period of adversity.

The report and accounts were unanimously adopted, and the proceedings terminated with a vote of thanks to the chairman and the staff.

MYSORE GOLD MINING COMPANY, LIMITED

BEST DIVIDEND SINCE 1917

The fifty-sixth annual general meeting of the Mysore Gold Mining Company, Limited, was held, on the 8th instant, at Southern House, London.

Sir George E. Barnes, K.C.B., K.C.S.I., who presided, said that the results of the fifty-sixth year's working of the company might be contemplated with considerable satisfaction. Compared with the year 1934, 12,000 tons more had been milled, the production of gold showed an increase of 2,205 ounces, the average price realised for the gold was 2s. 11½d. per ounce higher, the total revenue showed an increase of £27,775, while the total working costs, although there had been a substantial increase in the expenditure on development, showed a net decrease of some £8,000. After charging the additional royalty payable to the Mysore Government, the year's operations had resulted in a profit of £254,150, which was £33,298 in excess of the previous year. It had therefore been possible to increase the amount of the dividends to 27½ per cent., as against 25 per cent.—the largest distributed since 1917, while maintaining a strong financial position.

The larger expenditure on development in the mine was attributable to the increase in the amount of work carried out, represented by 23,111 feet opened up as against 16,652 feet, while, with regard to the ore reserves, the increase in the tonnage milled had not affected those very materially. After milling 189,004 tons, the reserves of 422,000 tons of 13 dwt. ore showed a decline of 9,000 tons. On the other hand, the probable ore of low grade, estimated at 283,000 tons, had been increased by 41,000 tons.

Mr Kenneth B. Taylor, M.C., said that with regard to development in depth, as they went down, the ground was becoming more and more favourable for the recurrence of ore shoots. With the experience before them of the Champion Reef company, their neighbour to the north, who were developing at depths considerably below them with such excellent results, he could but feel confident that the experience of Kolar of the recurrence of ore shoots in depth would be repeated in the Mysore mine.

The report and accounts were unanimously adopted.

Owing to the extended use of stainless steels the volume of business undertaken by the new company, Firth-Vickers Stainless Steels, Limited, had increased to such an extent that extensions to the plant had already become necessary.

It was true that the prosperity of Vickers, Limited, was largely dependent upon its ability to secure armament work at home and abroad, but it had to be borne in mind that at their Vickers Works in Sheffield, belonging to the English Steel Corporation, at least 70 per cent. of the turnover was on commercial account, while at Birmingham and Trafford Park 100 per cent. was commercial.

The one hope for the future was that the League should be re-constituted on an economic basis to include those great countries like Germany, Italy, Japan, and the United States of America, and that the nations of the world should unite in seeking a solution of the problem which impeded the recovery of international trade. That was the only sure road to peace in the world to-day, and it was a peaceful world which in the end really benefited great trading concerns like Vickers.

The report was approved.

WESLEYAN AND GENERAL ASSURANCE SOCIETY

CONTINUED PROGRESS

The ninety-fifth annual general meeting of the members of the Wesleyan and General Assurance Society was held, on April 7, 1936, at the Central Hall, Corporation Street, Birmingham, Mr John B. Field, the society's chairman, in the chair.

The Chairman, in the course of his speech, said:—

The new business transacted during the year has been well maintained.

In the ordinary department the total of £1,799,398 new sums assured was a record for the society, and exceeds that for the previous year by over £200,000.

In the industrial department the total issue of 203,041 policies assuring £3,845,010 is very satisfactory.

Annuities were granted securing £4,052 10s. per annum, which is well in excess of the amount granted in any previous year.

The claims and surrender values paid, in all departments, during the year exceeded £1,329,000, making a total payment, since the establishment of the society, of over twenty-four million pounds.

SURPLUSES AND BONUSES

After valuing on more stringent bases, the surpluses in the various departments are as follows: Ordinary £192,023, industrial £253,198, annuity £8,412, sickness £1,334, and capital redemption £8,181. In total the surpluses amount to £463,149. After all allocations have been made, surpluses amounting to £175,470 are carried forward undivided.

In the ordinary department the directors have declared a bonus of 44s. per cent. of the sum assured on whole life assurances, and 38s. per cent. of the sum assured on endowment assurances. These high rates of bonus should give full satisfaction.

In the industrial department we have decided to make additions to the sums payable on claims arising either by death or maturity between April 7, 1936, and April 5, 1937, inclusive. All the society's policies (except certain specified classes) upon which premiums have been paid for ten complete years and over will be entitled to benefit. The additions will be 2½ per cent. of the sum assured for policies of ten years' duration, increasing by ½ per cent. for each subsequent year's duration up to a maximum of 10 per cent. for policies of 40 years' duration and over. The sum of £54,492 has been applied to provide these additions.

INVESTMENTS

The society's assets now exceed £13,800,000, there having been an increase of over £600,000 in the year. A large portion of this new money and of repayments of existing securities has been invested in mortgages, debenture stocks and freehold ground rents, the amounts of which have increased by approximately £250,000, £100,000, and £100,000 respectively. Substantial increases are also shown in municipal securities in the United Kingdom and in Colonial Government and Provincial securities. The yield on the total of the departmental funds is the high rate of £4 15s. 2d. per cent.

The society is a mutual enterprise with no share capital, and it has been built up to its present magnitude by careful administration and the gradual accumulation of its funds.

The report and accounts were unanimously adopted.

N 30.12.3

ENGLISH ELECTRIC COMPANY, LIMITED

INCREASED PROFIT—IMPORTANT ORDERS

The seventeenth ordinary general meeting of this company was held, on the 6th instant, in London, Mr G. H. Nelson, M.I.E.E. (chairman and managing director), presiding.

The Chairman, in the course of his speech, said that the excess of liquid assets over current liabilities had increased from £1,278,640 at the end of 1934 to £1,390,938 at the end of 1935.

The trading profit was £262,619, against a trading profit of £172,214 in 1934, and the net result, after providing for prior charges and for depreciation of £53,500, was a credit balance to profit and loss account of £22,463.

Important orders had been received from the Southern Railway for their requirements of electrical train equipment for the next ten years. Of the order for 145,000 h.p. of water turbines, etc., from the Galloway Water Power Company, the first section had been completed and had operated entirely satisfactorily. From the Metropolitan Borough of Fulham for the main switchgear of the Fulham central sub-station, from Sheffield Corporation for a second 30,000 kw. steam turbo alternator, and from Blackpool and Northern Ireland Road Transport Board orders for "luxury tramcars" and omnibuses respectively. The London Passenger Transport Board had given a considerable order for trolley-bus equipments.

Abroad, the Victoria Falls and Transvaal Power Company had given an important order for three 55,000 k.v.a. banks of single-phase transformer units, with on load tap changing gear fully insulated and tested at 180 kw., which is believed to be the highest voltage for which such gear has yet been designed in this country. New Zealand Government Railways had ordered eight large passenger and freight locomotives, each of 1,240 h.p. An order had been received from the Bermuda Electric Light and Power Company for a 3,500 h.p. Diesel engine, which is the largest Diesel engine to be manufactured in this country for industrial purposes.

Since January 1st orders received had been of a greater value than those for the corresponding period of 1935. There were indications that this flow of work would at least be maintained. The outlook, both for the industry and for the company, appears at present more favourable than for many years past.

The report and accounts were adopted.

JOHN BARKER AND COMPANY, LIMITED

STRONG POSITION—GOOD PROSPECTS

The forty-third ordinary general meeting of John Barker and Company, Limited, was held, on the 7th instant, at the company's premises, Kensington High Street, London.

Sir Sydney M. Skinner, J.P. (chairman and joint managing director), in the course of his speech, said:—The year under review has marked an epoch in the company's history in that it has witnessed the demolition of the first section of the main Barker block of buildings. The work of demolition and rebuilding will proceed in sections, and as far as the first section is concerned I am happy to say that the work has proceeded without any setback, and in accordance with the well thought out plans and provisions for the scheme.

In order to accommodate those departments disturbed by the demolition, spacious showrooms have been prepared, fitted and furnished in the new Ball Street premises.

Those showrooms have been liberally stocked with the latest merchandise, and are functioning very satisfactorily. It has been our endeavour to minimise as far as possible any inconvenience to our customers and also any disturbances to our trade during the period of rebuilding. The service given will, we think, continue to justify the company's slogan of "Value for money," and these temporary rearrangements are also in the nature of a happy voyage of discovery for our customers.

As regards trading conditions generally, there was during the year an undoubted improvement. The General Election, however, with its consequent uncertainties, somewhat negated for a time the steady upward trend, but trade quickly recovered from this temporary setback, and subject to unforeseen events the barometer would appear to be at "set fair."

As a practical summary of the situation, I will give you what we may term the "liquid assets position," that is, the balance between the total of our temporary investments, book debts, cash and stock, and the total liabilities to trade and sundry creditors, etc. The balance this year is £924,641, as compared with £809,185. The acid test of the position of a company such as yours is its "liquid assets position," and if favourable, its ability thereby

to take full advantage of any large offers of merchandise on the basis of a "cash down" arrangement.

The gross profit earned during the year was £1,563,223, as compared with £1,500,944. Increases in salaries, wages, commissions and staff maintenance absorbed about £15,000; and rent, rates, taxes, and insurance approximately another £18,000. During the year there was an increase of something like 15 per cent. in the amount of rates levied upon the company. I am not speaking of the additional assessments in respect of the increased space occupied, but of the increase in the actual rate in the pound. I think that you will agree with me that this increase is a serious additional charge upon the income of the company, weighted as it is already with its quota of rates and taxes, and I do hope that the authorities concerned will recognise what a burden these local and Imperial demands are upon industry, and in the near future afford us some amelioration.

The final result of the year's operations is a net profit of £386,791, as compared with £384,338, or an increase of £2,453. Having regard to the circumstances obtaining during the year I hope you will think this result satisfactory.

The directors recommend that we write £50,000 off fixtures, fittings, plant and machinery, that we place £150,000 to rebuilding and modernisation reserve and £10,000 to the pension and benevolent fund; further, that we declare a final dividend on the ordinary shares of 10 per cent., making, with the interim dividend already paid, 15 per cent. for the year. These recommendations, if approved, will leave a balance of £223,791 to be carried forward to the new account, as against £259,123 brought in from last year.

The report and accounts were unanimously adopted, and a vote of thanks to the chairman, directors and staff terminated the proceedings.

RIVER PLATE TRUST LOAN AND AGENCY COMPANY, LIMITED

INCREASED NET PROFIT

The fifty-fifth ordinary general meeting of the River Plate Trust Loan and Agency Company, Limited, was held, on the 6th instant, at the offices of the company, 52 Moorgate, London.

Mr Walter W. Parish, the chairman, presided, and in moving the adoption of the report and accounts said that the net profit for the year amounted to £175,342, or £4,000 higher than the preceding twelve months. The board recommended the payment of ordinary dividends on the same basis as a year ago—namely, 12 per cent. on the "A" shares and 3 per cent. on the "B" shares, adding to the carry-forward £10,300 and increasing that figure to £265,959. That record was the result of the continuation of the policy inaugurated and maintained by Mr Anderson, the far-seeing father of the River Plate Trust Loan and Agency Company, and it was the policy to which the strength of the company's financial position to-day was due. The total of the reserve fund and carry-forward now amounted to £1,565,959. The fall in the company's revenue was solely due to a reduction in the income earned in Argentina, but an offset was provided by an improvement in the income from investments which, coupled with a credit from properties foreclosed, as against a loss a year ago, brought down the net decrease in gross revenue to £4,500; expenses were down by £9,000.

With an estimated income in the current year from British Government funds and debenture stocks equal to that of the past year, and after deducting all expenses in London and interest on the debenture stock, and adding the estimated income from investments in preference and ordinary stocks and shares, there would be, as had been the case a year ago, a comfortable surplus from the estimated investment income towards the dividend on the "A" and "B" shares quite apart from revenue earned in Argentina.

CURRENT YEAR'S HARVEST

The year 1935 had been difficult for cattle breeders, while though maize had provided a bumper crop, the wheat harvest during the past year had hardly fulfilled expectations. It was, however, in the current year's harvest that interest was now centred; it was feared that the export tonnage of wheat in 1936 would show a heavy falling off compared with 1935, while a disappointment had come with the first official estimate of the current maize crop, which was now put at 9,650,000 tons, as against 11,480,000 tons in 1935. In that connection he would like to submit a point for the consideration of shareholders—namely, that the present most complicated and difficult exchange position was the outcome first and mainly of the fall in the world-price of primary commodities on which Argentina was so greatly dependent,

dent, and, second, on the convention between this country and Argentina entered into in 1933. To suggest there was an unlimited amount of exchange at the disposal of Argentina available to meet the demands of all and sundry was an entire misunderstanding. He hoped that before the close of the current financial year the present convention between the United Kingdom and Argentina would have been reconsidered and extended to the advantage of both countries, but until the present convention ran out he did not anticipate any material lessening of exchange difficulties—rather, perhaps, that as a result of anticipated reduction in the total grain export tonnage, the free market rate would become less favourable than to-day.

Economic conditions, however, had a habit of changing more quickly in a country which produced the prime necessities of life than in an industrial country, and a recovery in the Argentine economic position would most assuredly come.

Mr James Anderson seconded the adoption of the report and accounts, which was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the four days ended April 4, 1936, amounted to £11,302,000, against ordinary expenditure of £25,011,000. After allowing for an increase in Exchequer Balances of £58,513, the operations for the week, as shown below, increased the gross National Debt by £13,650 to approximately £7,923 millions.*

TREASURY BILLS BY PUBLIC TENDER

Tenders for £40,000,000 Treasury bills were opened on April 3, 1936, and the total amount applied for was £76,280,000. Tenders were accepted for Treasury bills at three months dated Monday to Thursday, and Saturday, at £99 17s. 5d., about 56 per cent., and above in full. The average rate per cent. was 10s. 2.78d. The amount allotted was £40,000,000. The following table shows the weekly record at various dates:—

Date	Amount Offered	Total Applications	Amount Allotted	Average Rate %

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period April 1st to 10th at 138.78 per cent. The previous rate was fixed as from March 21st at 139.11 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	"Export" market selling rate fixed at 50 bolivianos per £ as from April 1, 1936.
Colombia.*	Sight rate, 175 pesos per 100 United States dollars on March 17, 1936. This rate applies to holders of permits buying in the "open" market.
Ecuador.	Sight selling rate on New York was maintained in February at 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
Salvador.	Sight rate on March 26, 1936, 2.51 colones per United States dollar.
Venezuela.	Sight rate on New York, 3.97 bolivares per United States dollar, on March 24, 1936.

* Exchange controls are operative in these countries.

MITCHELLS AND BUTLERS, LTD. (BIRMINGHAM).—The directors declared on April 2nd the following interim dividends, which will be paid on May 14, 1936: (1) On the "A" and "B" preference shares at the rate of 3 per cent., less income tax, on account of the year ending September 30, 1936; (2) on the ordinary shares 6 per cent., free of tax, on account of the year ending September 30, 1936; (3) on the 7 per cent. maximum ordinary shares at the rate of 3½ per cent., less income tax, on account of the year ending September 30, 1936.

THE INDO-CHINA STEAM NAVIGATION COMPANY, LTD.—Annual general meeting will be held in Hongkong April 22nd. Loss on working of steamers for 1935, £27,347 11s. 6d.; general charges, £7,637 17s. 5d.; pensions (debit), £10,490 17s. 7d.; interest (debit), £9,507 11s. 10d.; depreciation, nil. After taking into consideration the above, together with £676 0s. 3d., brought forward from year 1934; exchange adjustment, £20,461 4s. 3d.; transfer fees, £37 8s. 11d.; net gain on units sold, £131 2s.; charges over-provided previous year, £7,000, and transfer of £28,000 from general reserve, there is a balance of £1,321 17s. 1d. to carry forward. The transfer books will be closed from April 15 to May 6, 1936, both days inclusive.

BANQUE FRANCO-SERBE.—The accounts for the year 1935 of this bank (which is an affiliation of the Ottoman Bank and the Banque de Paris et des Pays-Bas) show a profit of Frs. 604,391.06 making, with the amount brought in from the previous year, Frs. 1,508,738.73 available for distribution. After the transfer to legal reserve, it is proposed to place Frs. 1,000,000 to a special provision account and to carry forward Frs. 478,519.18. The annual general meeting has been fixed for April 27, 1936.

STEWARTS AND LLOYDS, LTD.—The profits of the company after providing for debenture interest and taxation, but before providing for depreciation for the year ending December 31, 1935, amount (subject to final audit) to £800,534. The directors have decided to recommend payment of the following dividends:—(1) On the 6 per cent. cumulative first preference shares of £1 each at the rate of 6 per cent. per annum for the half-year ending December 31, 1935, less income tax. (2) On the 10 per cent. cumulative second preference shares of £1 each at the rate of 10 per cent. per annum for the half-year ending December 31, 1935, less income tax. (3) On the 5 per cent. cumulative third preference shares of £1 each at the rate of 5 per cent. per annum for the half-year ending

December 31, 1935, less income tax. (4) (a) On the deferred shares a dividend of 1s. per share for the year ending December 31, 1935, less income tax. (b) On the liaison deferred shares a dividend at the same rate relatively as the deferred shares. The annual report will be issued on or about May 4, 1936.

THE UNION STEEL CORPORATION (OF SOUTH AFRICA), LTD. (Incorporated in the Union of South Africa).—The directors have declared a dividend of 8 per cent. on the cumulative participating preference "A" and "B" shares for the year ending December 31, 1935, and a dividend of 2½ per cent. on the ordinary shares. The transfer books will be closed from April 17 to 20, 1936, both days inclusive, and the dividend warrants will be posted May 29, 1936, to shareholders registered of April 16, 1936.

W. G. FRITH AND COMPANY, LTD.—The profit for the period November 1, 1934, to February 29, 1936, after deduction of directors' remuneration and fees and depreciation amounted to £10,995 1s. 6d. The directors have decided to appropriate the sum of £1,026 14s. 4d. to extinguish preliminary expenses; £1,675 1s. 4d. to the reduction of goodwill; and at the annual general meeting to be held on May 6th at Winchester House, to recommend a dividend at the rate of 6½ per cent. less tax on the 5s. ordinary shares, leaving a balance of £1,125 4s. 7d. to be carried forward. The warrants will be posted on May 7, 1936.

CIVIL SERVICE SUPPLY ASSOCIATION, LTD.—The net profits for the year ending February 29, 1936, subject to final audit, are £62,971 10s. 9d. against £52,069 18s. 5d. for the previous year. After paying debenture interest, etc., there is left £60,993 11s. 5d. against £50,055 19s. 9d. last year. It is proposed to recommend a dividend on the "A" shares of 4 per cent. against 2½ per cent. last year, to write £16,919 16s. 8d. off the cost of the recent debenture conversion, to transfer £4,000 to reserves, and to carry forward £25,916 against £33,775 last year.

BARRY AND STAINES LIMELOUM.—A final dividend of 7½ per cent., less tax, is announced by Barry and Staines Limeolum. This makes 12½ per cent., less tax, for the year to January 31st last, compared with 10 per cent. in the previous year. An allocation of £25,000 is again made to special reserve, leaving the carry-forward up from £83,764 to £85,295.

REPORTS AND NOTICES

BANKS

GUARANTY TRUST COMPANY OF NEW YORK.—Statement as of March 31, 1936, shows deposits \$1,488,284,606.87, as compared with \$1,268,883,103.48, at the corresponding quarter a year ago, March 31, 1935. The Company's total resources are \$1,812,633,568.65, as compared with \$1,581,795,947.01 a year ago. Capital and surplus remain unchanged at respectively \$90,000,000.00 and \$170,000,000.00. Undivided profits are \$7,317,042.28, as compared with \$7,131,578.78 on March 31, 1935.

BROWN BROTHERS HARRIMAN AND COMPANY.—The financial statement, dated March 31, 1936, shows an increase in both deposits and loans and advances as compared with the position at the end of 1935. Total deposits, at \$43,898,704, compare with \$43,733,519 on December 31, 1935, demand deposits increasing from \$38,400,613 to \$38,808,940. Loans and advances, at \$16,181,732, compare with \$12,336,196 three months ago. Capital and surplus have increased from \$11,167,837 to \$11,409,427. Total assets at March 31, 1936, were \$72,780,499, against \$74,119,082 at the year-end.

MINES

DE BEERS CONSOLIDATED MINES, LTD.—The report for 1935 discloses an unappropriated balance at end of 1934 of £1,038,313. The diamond account amounted to £1,520,111. Add £1,369,100 for interest and dividends on investments. Profit on investments realised £79,142. Income from other sources £7,579, making total £4,014,243. Expenditure £853,570, leaving £3,160,673. Deduct premium on debentures redeemed £60,365. Blue ground purchased from Koffyfontein Mines (written off) £195,125. Six months' preference dividend to June 30, 1937, £400,000. Reserve for allowances to retired employees £596,908. Reserve for expenditure on machinery and plant £251,252. General reserve £1,602,180. Unappropriated balance at end of 1935 £54,843.

MISCELLANEOUS

FIRST CO-OPERATIVE INVESTMENT TRUST, LTD.—Accounts for the half-year ended January 31, 1936, show a net revenue, after providing for all expenses, interest, preference dividend and income tax, and crediting £2,000 from a reserve not now required, of £24,565 2s. 11d. The directors recommend a final dividend of 2 per cent. (actual) on the ordinary shares, making 3 per cent. for the year (the same as a year ago), and the amount carried forward

is increased over the year from £8,108 4s. 7d. to £10,183 17s. 5d. According to a valuation of the investments as at January 31, 1936, the depreciation (after allowing for reserves and carry forward) was 36.76 per cent. (compared with 40.30 per cent. a year ago). More than 97 per cent. (in value) of the investments have a published quotation.

UNITED STATES STEEL CORPORATION.—Balance of undivided surplus, December 31, 1934, exclusive of profits earned by subsidiary companies on inter-company sales of products on hand in inventories, per annual report for 1934, \$258,575,627.88; less net deficit in year 1935, \$6,058,913.69. Balance of earned undivided surplus, December 31, 1935, exclusive of profits earned by subsidiary companies on inter-company sales of products on hand in inventories, \$252,516,714.19. Total preferred dividend, 2 per cent., \$7,205,622.00. Cumulative dividend arrearages on preferred stock to the date of the latest payment amount to 16½ per cent., or \$58,545,678.75. No dividend declarations have been made on common stock since that paid March 30, 1932.

SUNDAY PICTORIAL NEWSPAPERS.—Sunday Pictorial profits for year ended February 29, 1936, after an unstated allocation to contingencies reserve, amount to £216,696, against £212,339. Provision for pensions is again £5,000 and the ordinary dividend is repeated at 12½ per cent. for the year. Reserve receives £20,000, the same as in 1934-35, and £91,215, against £70,769, is carried forward.

A. REYROLLE AND COMPANY, LTD.—A. Reyrolle and Company, Ltd., reports a total profit for 1935 of £182,573, and a net profit of £114,336, compared with £178,913 and £103,303 respectively for 1934. The ordinary dividend is unchanged at 12½ per cent., but the allowance for development expenditure is £30,000, against £20,000, and the carry-forward £118,893, against £115,858.

TANKERS' SCHEME WITHDRAWN.—At a meeting of Tankers, Ltd., held March 31st, it was decided to withdraw the reorganisation plan without recourse to voting. A committee was appointed representative of all classes of capital, viz., preference shares, funding certificates and ordinary shares, with powers to consult with the board of directors in formulating fresh proposals.

PORTMAN BUILDING SOCIETY.—The report for 1935 states that the business transacted during the year has again proved highly satisfactory, notwithstanding the various adverse conditions with which building societies in general have had to contend. Share capital stands at £2,881,026. Total assets, £4,384,978; deposit balances, £1,095,634; mortgage assets, £4,319,273; general reserve, £225,000; number of accounts, 24,200.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE majority of commodity markets were featureless during the past week owing to the approach of Easter.

The improvement in the markets in provisions and meat, noticeable last week, was maintained. At the Mincing Lane tea auctions there was some evidence of a better demand. On the other hand, quotations for raw sugar and wheat tended to sag.

Business in iron and steel materials was as active as ever, and there were no signs this year of the usual lull in activity before Easter. Home demand for coal continued above last year's level, but export business remained dull. Among non-ferrous metals, the market in copper was firm, but lead, spelter and tin were cheaper than a week ago. The market in vegetable oils was dull, but quotations for rubber were firm. Prices of textile raw materials varied within narrow limits. Quotations for jute manufactures remained depressed owing to the prospect of increased production in India as a result of the failure of the Indian Jute Mills Association to secure the adherence of the non-member mills to the restriction of working hours. Demand for Lancashire goods showed a slight improvement.

The trend of quotations for primary products in the United States was downwards. Thus Moody's index of the dollar prices of staple commodities stood at 168.8 on Wednesday, against 169.8 a week earlier, 170.0 a month ago and 152.5 on the corresponding day last year.

COAL

SHEFFIELD.—The market for best steam coal continues strong, but the position of other sorts is rather easy despite the reduced quota. Export trade is slow, shippers being reluctant to place forward business at the current high prices. There is, however, a fair inquiry for prompt shipment. Demand for house coal is less brisk. The revision of quotations has checked forward business in blast-furnace coke, but current production is being taken by the ironmasters.

Quotations: Best South Yorkshire steams, 19s. to 19s. 6d.; Derbyshire steams, 17s. 9d. to 18s. 3d.; washed coking smalls, 14s. 6d. to 15s.; screened gas coal, 19s. to 20s. 6d.; slacks, 9s. 6d. to 13s. (all f.o.b.); best South Yorkshire house, 23s. to 24s.; Derby-

shire house, 22s. to 23s.; blast-furnace coke, 18s. to 19s. (at pits and ovens).

NEWCASTLE-ON-TYNE.—Export trade of North East collieries is no better but coastwise shipments are good. Northumberland steam collieries are comfortably booked for the next few weeks, the colder weather of the last few days having given a stimulus to domestic consumption. Durham coking and gas collieries continue to have difficulty in working regularly owing to the lack of export trade. Local industrial demand is brisk, and this is of great help to certain collieries. Coke of all descriptions is very firm, home requirements absorbing all available supplies.

Current f.o.b. prices for export: NORTHUMBERLAND.—D.C.B. screened, 16s.; smalls, 13s.; Howards, Bentinck, Newbigin, screened, 15s. 6d.; smalls, 13s.; Tyne Prime large, 14s. 6d.; smalls, 12s

Lambton/South Hetton screened steam, 15s.; smalls, 13s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon unscreened gas, 14s. 8d.; second-class gas, 13s. 6d.; coking, unscreened and/or smalls, 13s. 3d.; Prime unscreened bunkers, 15s.; second-class unscreened bunkers, 14s.; Prime foundry coke, 24s.; Newcastle and District gas coke, 24s. 6d.

CARDIFF.—The approach of the Easter holidays has not led to any material expansion in the volume of coal shipments from South Wales docks. Last week exports in the foreign and coastwise trades totalled 305,300 tons, compared with 290,000 tons the previous week, and 356,085 tons in the corresponding week last year; but although market conditions are listless, the tonnage in dock at the beginning of the present week was slightly greater than it was a week ago. The only favourable feature is the strength of sized, washed and other small coals, and because of the shortage of supply it has been decided to establish a uniform price both for summer and winter deliveries to Ireland. The threatened stoppage in the anthracite coalfield has been averted, and it is hoped that the new conciliation machinery for the settlement of local differences will lead to a permanent improvement in the relations of employers and workmen. It is now officially confirmed that the French Government has agreed to transfer the control of licences from Paris to this country and the necessary arrangements are being made. The proposed draft scheme for the central control of selling has met with opposition both from colliery firms and the Mines Department, and it is not likely to be ready for submission for the approval of the Board of Trade till towards the end of the present month.

Current approximate quotations: Best Admiralties, 19s. 6d. seconds, 18s. 9d. to 19s. 3d.; best dries, 18s. 6d.; Black Veins, 18s. 3d.; Western Valleys, 17s. 6d. to 17s. 9d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; best small steams (washed), 13s. 6d. to 14s.; seconds, 13s. to 14s.; coking smalls, 14s. 3d. to 14s. 6d.; anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s. 9d.; rubbly culm, 11s. 6d. to 12s. 6d.; special foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship, French 24s. 3d.; Portuguese 21s. to 21s. 6d.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that demand is so active that the usual slowing down of business before the Easter holidays has not been noticeable this year. Practically all departments of the steel trade are busy and have orders in hand which will keep them well employed for some months to come.

In the pig iron department the situation is difficult, for demand is in excess of supply and stocks have been seriously depleted. Producers are not anxious to add to orders in hand, since in most cases production is sold till the end of the half-year. Consumers are well covered; but there is a considerable business offering in small supplementary parcels. Business in semi-finished steel is held in check by the inability of the British manufacturers to accept all the orders. Despite increased supplies of Continental semi-finished steel which have been made available for the home market, demand is not entirely satisfied. Few manufacturers are able to accept orders for near delivery, and most of the business passing of late has been in the renewal of contracts. In the finished steel section, works are operating practically at capacity and a heavy tonnage of steel is passing into consumption. Export business has shown some improvement lately; but demand from overseas has been irregular.

MIDDLESBROUGH.—The iron market continues strong. Supplies of foundry iron are strictly limited, whilst the price of hematite is understood now to be official for No. 1 grade at 77s. per ton delivered locally. An additional furnace has been started on basic iron, and one furnace transferred from the production of basic to hematite iron.

No increases have so far been made in finished steel prices. The demand for all classes continues unabated and further orders for new ships, placed recently on the East Coast, are benefiting the steel departments producing shipbuilding material. Heavy steel scrap is quoted at 57s. 6d. per ton delivered works, whilst good Durham blast furnace coke is now called 24s. per ton delivered here.

SHEFFIELD.—Apart from certain alloy steels, which do not constitute a tonnage trade, the steel industry has registered further expansion and the present output of the works and the booking of orders exceed those of any previous time in Sheffield's history. Nearly every kind of rolled and forged material is in short supply. Scarcity is the prevailing condition and the problem is no longer one of securing business but of executing orders. Prices tend to harden, but there have been no considerable increases. Production is being hindered by the short supply of skilled men in rolling, forging and engineering processes. The ranks of these craftsmen have been seriously depleted by years of slack trade and there are but few learners. Overtime and week-end working are fairly general. Makers of tools are producing at their maximum capacity and considerable quantities of precision engineers' small tools are coming from the United States and Germany. Nevertheless, users cannot get supplies promptly. The output of the open-hearth furnaces goes immediately into consumption and there is no surplus. An enormous quantity of scrap is being consumed but home supplies are being supplemented by large imports from America. There is, consequently, no scarcity and prices keep steady. Demand for silver and plated goods has improved slightly in anticipation of the resumption of social functions. The position of cutlery is rather patchy and order books are not well filled as a rule.

GLASGOW.—Further substantial orders have been placed with Clyde yards. In addition to the Admiralty work, which it is understood will be placed almost immediately, orders for motor tankers have been placed with other yards. Consequently, there is every prospect of regular employment for a long time to come for a substantial proportion of the workers in the industry. Steel-makers are as busy as ever, with much work on hand and a large volume of inquiries. In the sheet trade, home business is exceedingly good and plants are running near capacity. In practically all branches of the iron and steel trade the bulk of the business is on home account. Demand for wrought iron, which has been in evidence for some time, continues to increase and the various works in Lanarkshire are fairly busy.

CARDIFF.—Conditions in the South Wales iron and steel trades are unchanged. On the Swansea Metal Exchange on Tuesday transactions were comparatively few, but no little apprehension was expressed concerning the reported intention of Richard Thomas and Company, Ltd., to instal new tinplate works on the site of the Northamptonshire iron ore field recently acquired from the Ebbw Vale Steel, Iron and Coal Company. Prices of tinplates, galvanised sheets, and steel bars are unaltered. At the Swansea docks last week shipments of tinplates totalled 62,586 boxes compared with 44,524 boxes at the corresponding period last year, while stocks in warehouses and vans totalled 132,497 boxes as against 172,734 boxes.

OTHER METALS

COPPER.—The improvement recorded last week was well maintained and, at the close on Tuesday, prices showed a further gain on the week. After the holidays, demand from consumers is expected to expand; stocks are not large and a restocking movement would appear to be inevitable when consumption experiences its normal seasonal increase. The decision to prolong the restriction scheme—mentioned here last week—had a favourable influence upon the sentiment of the market, and last week's fall in official warehouse stocks had a similar effect.

Sales on the London Metal Exchange: 1,750 tons on Monday, against 1,850 tons last week; 1,150 tons on Tuesday, against 2,700 tons last week. Domestic spot was quoted at 8-87½ cents per lb. in New York on Tuesday, against 8-85 cents a week ago and 8-82½ cents a month ago. Tuesday's official closing price for standard cash in London was £36 12s. 6d. to £36 13s. 9d., compared with £36 8s. 9d. to £36 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 65,237 tons, show a decrease of 2,287 tons, while stocks of rough copper, at 7,535 tons, show a rise of 385 tons on the week.

LEAD AND SELLER.—Under the influence of heavier offerings and a slackening demand, the price of lead suffered a considerable decline; prospects, however, remain favourable. Spelter prices also eased, owing to the absence of any definite indication of an early renewal of the International Cartel. It is learned, however, that negotiations to this end may shortly be resumed.

Sales of lead on the London Metal Exchange: 950 tons on Monday, against 950 tons last week; 1,150 tons on Tuesday, against 1,100 tons last week. The New York quotation on Tuesday was 4-60 cents per lb., against 4-60 cents a week ago and 4-60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 2s. 6d. per ton, compared with £16 7s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 200 tons on Monday, against 400 tons last week; 100 tons on Tuesday, against 200 tons last week. Tuesday's quotation in East St. Louis was 4-90 cents per lb., against 4-90 cents the week before and 4-90 cents a month earlier. Tuesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 7s. 6d. per ton, against £15 12s. 6d. last week.

TIN.—Prices hardened slightly at the end of last week, but there was a reaction on Tuesday. Meanwhile, turnover remains moderate and stocks in this country continue their downward trend. It is understood that the members of the International Tin Committee had conversations in London on Monday and Tuesday regarding the prolongation of the scheme after the end of the year. Although nothing is officially known concerning the results of these discussions, it is learned that no agreement has yet been reached as to the terms upon which Siam and the Belgian Congo would enter the scheme. Meanwhile, exports of tinplate scrap from the United States are prohibited from April 16th to July 1st. After the latter date exports will be permitted under licence. This measure affords fresh evidence of a desire in the United States to foster the domestic tin smelting and de-tinning industry. Hitherto, exports of tinplate scrap from the United States have been consigned almost exclusively to Japan, where wages in the de-tinning industry were about ten times smaller than in America. New de-tinning processes have recently been developed in the United States, which are stated to be much more economical than those employed hitherto. But it is evident that the ban on exports of the scrap is due to the intervention of the War Department.

Sales of tin on the London Metal Exchange: 330 tons on Monday, against 85 tons last week; 335 tons on Tuesday, against 240 tons last week. The New York quotation on Tuesday was 47-12½ cents per lb., against 47-55 cents a week ago and 48 cents a month ago. Tuesday's official closing quotation in London for standard cash was £212 10s. to £212 15s. per ton, compared with £213 to £213 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 369 tons, a decrease of 42 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickels

for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 12s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £62 to £63 per ton ex warehouse, duty paid, the same as last week. Chinese wolfram for April-May shipment was quoted at 33s. 9d. to 34s. 3d. per unit, c.i.f., the same as last week. Platinum (refined) was maintained at £7 per ounce.

TEXTILES

COTTON.—Manchester. — There has been no noticeable change in market conditions. The feature in the raw cotton market has been the announcement by the United States Government that 1,000,000 bales of "loan" cotton is to be released. The price of cotton which came under the 12 cent per lb. loan scheme will not be less than 11½ cents per lb., and that of cotton which came under the 11 cent loan scheme will not be less than 10½ cents per lb. Under this plan the Government may lose 10 million dollars. The arrangements seem likely to "peg" the price for the time being. The spot position in Liverpool remains tight, and certain qualities of cotton cannot be easily obtained. Trade is being impeded, however, by the discount on new crop futures. Future prices are, of course, a good deal dependent upon the weather in the belt during the growing season.

There has been more activity in the cloth market and some manufacturers have booked slightly larger orders than recently. Conditions generally in the weaving branch, however, remain very irregular. Wide looms are fairly well engaged, but demand remains poor for narrow cloths. India has provided an increased inquiry in light bleaching descriptions and a fair turnover has resulted. There has also been a little more demand in prints and fancies. Dyed goods have moved off fairly well for Java and Singapore. Miscellaneous sales have been put through for Egypt and the Near East. Most of the demand for South America has been for finishing styles. A mixed business has been done for the Dominions and the Crown Colonies. Home-trade buying has been rather patchy.

There has been more price testing in American yarns and sales have about equalled current production. Quotations remain steady. Egyptian yarn prices continue irregular, and spinners cannot obtain any relief.

COTTON PRICES

	1936				Corresponding Date	
	Mar. 18	Mar. 25	Apr. 1	Apr. 7	1934	1935
Raw Cotton—Mid. American per lb.	6-30	6-33	6-51	6-47	6-41	6-54

JUTE.—Dundee. — The failure of the Indian Jute Mills Association to come to an agreement with the non-member mills, discussed in a Note of the Week, has caused keen disappointment. Although the Indian Jute Mills will require additional supplies of raw jute, amounting to about one million bales in a season, prices for the fibre have shown a sagging tendency. This may be ascribed to the fact that weather conditions for the sowing of the new crop are favourable this year, though it is reported that a vigorous attempt is being made in the growing areas to make the crop restriction scheme effective. The price of Daisee-2/3 has fallen to £19 10s. per ton, the lowest point for many months past, with four at from £18; Tossa-2/3 is offered at £20 10s., and four at from £19 5s., April-May. Good First Marks were reduced to £23 per ton and good Lightnings to £21 5s., April-May. Only very small quantities are being bought by spinners, who have still to secure a fair proportion of their supplies for the season. Jute yarns are very quiet, but spinners are reluctant to make concessions on their quoted prices. Common 8 lb. cops still rule lowest at 2s. 0½d., and 8 lb. spools at 2s. 1½d., concessions being refused. Twist is maintained at 3½d. for 3 ply 8 lb., and sacking yarns remain at 3½d. for 8 lb. chains and 2½d. for 24 lb. weft. Rove is steady at £20 10s. for 48 lb. and £16 5s. for 200 lb., and the finer yarns are unchanged at from 2s. 8½d. for second quality 8 lb. warp, 2s. 5½d. for third and 2s. 3½d. for fourth.

Only trifling lots of jute cloth are being bought, and production is being seriously curtailed. Looms are being closed down and unemployment is increasing. Manufacturers are refusing to reduce their prices further, owing to the losses which would be made. Prices, therefore, are steadily maintained at 2½d. for 10 oz. 40 in. and 2½d. for 8 oz. Linoleum hessians and heavy goods are also quiet but unchanged.

Calcutta goods are varying slightly around the recent low levels of 17s. 1d. to 17s. 2d. for 10 oz. 40 in. and 13s. 10d. to 13s. 11d. for 8 oz.

GRAIN MARKETS

WHEAT.—Another week of quiet trading has been experienced, with prices in London and Liverpool tending easier. On North American markets similar conditions have prevailed. On Tuesday last, "May" futures were quoted in Chicago at 94½ cents per bushel, against 96½ cents the week before and 99½ cents a month ago. Quotations in London, Monday: No. 1 Northern Manitoba (Vancouver), ex ship, 32s. 6d. per 496 lbs., against 33s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 32s. 3d., against 33s. a week ago.

FOREIGN AFFAIRS

45 East 65th Street, New York, N.Y.

FLOUR.—Monday's London quotations (excluding quota payments) were: Straight run, delivered country, 29s. 6d. per 280 lbs., against 29s. 6d. a week ago; delivered London, 28s. 6d., as compared with 28s. 6d. a week ago. Manitoba patents, ex store, 25s. 9d. to 27s. 6d., against 26s. 6d. to 28s. 3d., a week ago. Australian, ex store, 22s. to 22s. 6d., against 22s. to 22s. 6d. a week ago.

BARLEY.—"May" futures were quoted at 38½ cents per bushel in Winnipeg on Tuesday, against 38½ cents a week ago and 39½ cents a month ago. Quotations per 448 lbs. in London on Monday were: "English feed" at farm, 21s. 6d. to 23s., as against 21s. 6d. to 23s., a week ago; "English Malting" at farm, 25s. to 40s. against 25s. to 40s. a week ago.

OATS.—On Tuesday, "May" futures were quoted at 26½ cents per bushel in Chicago, against 25½ cents a week ago and 27½ cents last month. Quotations in London, Monday: "English Black," at farm, 18s. to 19s. per 336 lbs., against 17s. to 19s. a week ago; "English White" at farm, 18s. to 19s., against 17s. to 19s. a week earlier.

MAIZE.—"May" futures were quoted on Tuesday at 60½ cents per bushel in Chicago, against 60½ cents a week ago, and 60½ cents last month. Quotations in London, Monday: "Plate," landed, 19s. 6d. per 480 lbs., compared with 19s. 6d. a week ago; "Plate," ex ship, 18s. 9d., as against 18s. 6d. a week ago; "Plate," April, 18s. 6d., as against 18s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £5 5s. per ton, as against £5 5s. a week ago.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat	Cwts.	Cwts.	Cwts.	Cwts.
1 week to April 4	133,958	221,277	235,416	204,620
31 weeks to April 4	7,328,276	9,002,413	11,043,841	11,228,722
Average price of English wheat per cwt.	s. d. 5 2	s. d. 4 5	s. d. 4 9	s. d. 6 5

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Apr. 2, 1932	Cwts. 111,390	Cwts. 51,510	Cwts. 31,694	s. d. 6 1	s. d. 7 11	s. d. 7 5
Apr. 1, 1933	133,958	57,826	28,179	5 2	6 3	5 11
Apr. 7, 1934	221,277	37,683	26,303	4 5	8 5	5 11
Apr. 6, 1935	235,416	60,682	29,128	4 9	7 2	6 11
Mar. 28, 1936	251,142	101,407	37,553	6 5	7 7	6 0
Apr. 4, 1936	204,620	71,760	40,706	6 5	7 6	6 1

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934:—

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Apr. 10, 1935	Dec. 31, 1935	Apr. 1, 1936	Apr. 7, 1936
Winnipeg (No. 1, Manitoba)	65½	82½	89½	84½	81½	79½
Chicago (No. 2 Winter)	84½	98½	96½	101½	96½	94½
Cents per 60 lb.						

The visible supply of wheat in Canada amounts to 111,746,000 bushels, against 112,300,000 bushels last week, and 107,790,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—Prices show little alteration, but demand became very quiet before the holidays. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 88s. to 94s.; Canadian, 86s.; Danish, 96s.; as against 87s. to 95s., 88s. and 96s., respectively, a week ago. Arrivals in London last week included Danish, 13,930 bales; Canadian, 3,737; Dutch, 2,893; Lithuanian, 1,585; and Polish, 3,039, against 13,026, 3,729, 2,525, 1,561 and 2,652 bales, respectively, in the previous week.

BUTTER.—The market was again firmer for Colonial descriptions, but Danish suffered a further decline in price. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 90s.; Australian, choicest salted, 89s.; Danish, 110s.; compared with 87s., 87s. and 112s., respectively, a week ago.

CHEESE.—Demand for cheese has improved this week, but prices show little alteration. Quotations (per cwt.) on the London Provision Exchange on Monday were as follows: English, finest farmers', 72s. to 86s.; Canadian, finest coloured, 64s.; and New Zealand, finest coloured, 54s., against 72s. to 86s., 63s. to 64s., and 53s., respectively, a week ago.

COCOA.—The spot quotation in New York on Tuesday was 5½ cents per lb., as against 5½ cents per lb. last week. In London Accras have again risen in price. On Tuesday last, good fermented new crop, "April-May," was quoted 23s. 7½d. per 250 kilos., c.i.f. Continent, against 23s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 20,479 bags; delivered, for home consumption, 9,195 bags; exported, 1,059 bags; stocks, 148,209 bags, against 196,045 bags a year ago.

COFFEE.—The London spot market ruled quietly steady. In New York, quiet conditions have also prevailed and prices remain unchanged. On Tuesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 245 cwt.; delivered, for home consumption, 117 cwt.; exported, nil; stocks, 11,728 cwt., against 18,759 bags a year ago. Central and other South American, landed, 9,598 cwt.; delivered, for home consumption, 2,178 cwt.; exported, 1,124 cwt.; stocks, 106,469 cwt., against 97,394 packages last year. Other kinds, landed, 9,123 cwt.; delivered, for home consumption, 4,901 cwt.; exported, 1,350 cwt.; stocks, 162,293 cwt., against 115,391 packages last year.

EGGS.—In Tooley Street on Monday the market was steady. Continental selections were in fair demand while business in English was active. At Smithfield on Tuesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 8s. 9d. to 9s. per 120, as against 8s. 6d. to 9s. last week, while Danish (15½ lb.) made 7s. 9d. to 8s. per 120, against 8s. to 8s. 3d. last week.

MEAT.—Business at Smithfield Market showed some improvement before the holidays. Demand was good for fresh-killed meat, but frozen mutton and lamb were in only moderate request. On Tuesday last Argentine chilled hindquarters were quoted at 3s. 2d. to 3s. 6d. per 8 lbs., as compared with 3s. 2d. to 3s. 6d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. 2d. per 8 lbs., against 3s. 4d. to 4s. 2d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,245 tons. A decrease of 362 tons on the corresponding week last year. Beef and veal accounted for 4,934 tons, mutton and lamb 2,703 tons, and pork and bacon 1,079 tons, as compared with 4,957, 2,844 and 1,119 tons, respectively, in the same week of 1935.

PEPPER.—Tuesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 17 tons; delivered, 7 tons; stocks, 1,695 tons, against 2,211 tons a year ago. White, landed, 5 tons; delivered, 123 tons; stocks, 12,581 tons, against 19,528 tons a year ago.

POTATOES.—The Potato Marketing Board is continuing its campaign to secure the re-introduction of import duties on foreign maincrop potatoes. The removal of the duties a fortnight ago has rendered the markets rather less buoyant. At the Borough Market in London on Tuesday ample supplies encountered a fair trade, with imported potatoes showing an easier tendency. Best siltland King Edward were, however, firmly held at 8s. to 8s. 6d. per cwt.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. ex warehouse on Tuesday, as compared with 8s. 6d. per cwt. a week ago. "April-May," in singles to Continent and U.K., was quoted at 7s. 10½d. per cwt., against 7s. 7½d. per cwt. a week ago. Movements in London during the past week were as follows: Landed, 1 ton; delivered, 318 tons; stocks, 923 tons against 1,377 tons a year ago.

SUGAR.—The London market in raw sugar has had a rather quiet tone. Prices in New York remain steady at the higher level reached last week. The spot price in New York on Tuesday was 3-75 cents per lb., as compared with 3-75 cents per lb. last week and 3-50 cents per lb. a month ago. Tuesday's sales of raw sugar in London included "May delivery" at 4s. 10½d., against 4s. 10½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 7,748 tons, against 9,976 tons last week and 5,556 tons in the same week of last year; deliveries, 16,367 tons, against 15,134 tons last week and 15,647 tons last year; stocks, 222,293 tons, against 230,912 tons last week and 173,951 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ending	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Apr. 4, 1935	11-13	13-57	15-77	9-33	9-10	9-91	12-25
Mar. 5, 1936	13-07	13-12	15-17	11-05	10-33	11-94	13-39
Mar. 12, " "	13-23	13-17	14-93	11-09	10-53	11-76	13-50
Mar. 19, " "	12-96	13-75	14-90	11-15	10-77	11-97	13-34
Mar. 26, " "	12-97	14-05	15-45	11-06	10-73	12-04	13-49
Apr. 2, " "	12-91	13-33	15-84	10-86	10-47	11-98	13-43

The quantities catalogued for this week's public auctions at Mincing Lane included 25,505 packages of Indian and 21,402 packages of Ceylon tea. Competition for the Indian grades was more active and any change in prices was in sellers' favour. At Tuesday's Ceylon auctions demand became rather quiet. Low medium and medium grades were rather easier, but quality teas were distinctly dearer on the week. Export demand was good. The next series of auctions will commence on April 20th.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Markets are steady but not very active, as buyers can only proceed with great caution in the present unsettled outlook. Indian linseed is in improved demand, and £13 has been conceded for June shipment to Hull. The new crop in India is now on the move and something like 30,000 tons is afloat for Europe, while total shipments to date this year have amounted to 54,600 tons, against only 8,600 tons a year ago. Plate linseed is neglected here, but continues to receive support from the Continent. Shipments are at a fair level. In the first three months of the year Argentina exported to all destinations 468,000 tons, or 221,000 tons less than in the same quarter last year. Shipments to the United States were only 87,000 tons, against 175,000 tons.

It is estimated that Argentina has still available for export 832,000 tons, while 187,000 tons is expected from India—together over a million tons, or 300,000 tons less than actually shipped in the remainder of 1935, when Argentina had a crop 50 per cent. greater than the present one.

Linseed oil is steadier and in some demand in near positions. The current price ex Hull mill is around £26 per ton for April delivery, and £26 5s. for May–August. Cottonseed is easier and slow, and export demand for refined cotton oil less active. Crude Egyptian is steady at £25 per ton ex Hull mill and refined is quoted at £27 5s., prompt. Oilcakes are in fair demand and keep steady.

RUBBER.—After exhibiting a steady tone for some days the London market became firm on Tuesday, owing to the reserve of

sellers. The upward movement of prices has been resumed. Meanwhile, the steady decline in United Kingdom stocks continues. Rather quiet conditions have prevailed on the New York market, where prices show no net change on the week.

The spot price in New York on Tuesday was 15½ cents per lb., compared with 15½ cents per lb. a week ago and 15½ cents a month earlier. Tuesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. to 7½d. per lb., as against 6½d. on the corresponding day a week ago. In forward positions, business has been done at 7½d. for July–September shipment, as against 7½d. to 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 147,557 tons, against 148,899 tons a week earlier. A year ago stocks amounted to 163,359 tons.

THE PROOF OF THE TYRE is IN THE RUNNING...

READ THESE EXTRACTS

● "I would like to place on record my appreciation of Dunlop '90' tyres. Their trouble-free performance more than substantiates the claims made. My congratulations on having once more kept abreast of the arduous requirements of modern motoring."

● "Just over a year ago I purchased a Morris 8 fitted with Standard Dunlop '90' tyres. I have now completed 24,000 miles—a good deal of the mileage over very bad roads. I must congratulate you on evolving such a splendid tyre."

● "I purchased a car on March 15th, 1935, fitted with Dunlop Standard '90' tyres. I have enjoyed every mile on account of the non-skid properties and splendid way they are wearing."

● We find that Dunlop '90' tyres fitted to this Company's motor car fleet have given us approximately 50% more mileage."

● "Many of our customers are now using the Dunlop '90' tyres and have nothing but praise for them. The writer drove a Sports car fitted with '90' tyres and was impressed by their holding qualities on bends."

● "My car, fitted with Dunlop '90' tyres is used under severe conditions. In the past twelve months the tyres have acquitted themselves splendidly and have more than justified all that you claim for them."

● "I have had the opportunity of thoroughly trying out Dunlop '90' tyres. The wearing qualities have been sustained. On a 10 h.p. saloon car the wear after many thousands of miles appears to be negligible. When travelling at speed the tyres are perfectly silent and the car holds the road extremely well on wet and loose surfaces."

● "We are not much given to writing testimonials, but we do believe in giving praise where praise is due and we think you are to be congratulated on Dunlop '90' tyres. They hold the road well under all conditions and we find that the tread pattern lasts longer than on any other tyre we have tried. The slogan 'The World's Master Tyre' is justified in every way."

WHO IS TO LEAD?

THE skein of European politics has by now become desperately tangled; and it can only be unravelled by unremitting concentration on the main thread: the League of Nations.

The recent rapid advance of the Italian dictator's armies over the territory of a fellow State-member of the League in flat defiance of his treaty obligations; the bolt from the blue which the German dictator launched upon the Rhineland, also in flat defiance of his commitments; the nervous inclination of the French Government, before a General Election, to compound Italy's African felony against the League, in order to retain Italy by their side in the event of future German aggression in Europe—here are reasons enough for the tangled skein of European diplomacy. Add to them the negotiations on the French, German and British "plans" for a European settlement after the profound shock in the Rhineland, and the threads become immeasurably more intertwined. Yet the main thread—the League, is there; and the condition of a sound and secure future for Europe is that it should not be broken. Germany has quitted the League. Italy, still a member despite the imposition of economic sanctions against her by fifty of her fellow members, continues to levy a war of wanton aggression upon a fellow-member of the League. Upon France and Great Britain, therefore—the two remaining members of the Stresa front, and the two Great Powers who remain faithful members of the League—devolves the duty both of preserving the League intact, and of rendering truly effective that machinery for collective security against the aggressor which is still in its trial stages.

This plain duty invests the discussions at Geneva this week with decisive importance. For while the Italian armies were rapidly advancing into Ethiopia—we comment on the progress of the campaign in a Note on page 121—Baron Aloisi had arrived in Geneva on Wednesday to discuss with Señor de Madariaga the procedure by which Signor Mussolini would be prepared to make peace with the Emperor. This meeting, indeed, had only been achieved by continued delays and postponements of the convocation of the "sanctions" Committee of Eighteen—mostly at the request of the French Government—in order to tighten the

sanctions screw upon Italy. Both Italy and Abyssinia had agreed once more to "talk peace"; but whereas the Emperor had stipulated that such a peace should be within the framework of the League and upon the basis of its Covenant, the Italian reply to the Committee of Thirteen's invitation studiously refrained from any reference to the League itself.

Baron Aloisi's instructions this week have prevented him from discussing anything but the procedure by which the aggressor and his victim should discuss peace. And it is reported that the Italian preliminary "terms" for the bare discussion of a peace include the immediate lifting of the League's sanctions, the disarmament of Abyssinia (with the invaders on her territory), and that any peace negotiations must take place directly between Italy and Abyssinia—that is, outside the purview of the League. If these "terms" represent the limit to which Signor Mussolini, in the flush of his military ardour, is prepared to go, then the League's Committee of Eighteen—the "steering Committee" on sanctions—should be convoked at once to intensify the League's economic constraint of the aggressor. Mr Eden originally suggested a 48-hour time limit within which Italy should categorically and clearly reply to the League's inquiry about mediation. That limit has been extended to more than six weeks. If Italy now makes it plain beyond a peradventure that she requires absolute submission of Abyssinia, under pain of what Signor Mussolini himself last week called "annihilation," then British public opinion can have no doubts what should be the League's next steps: the oil and shipping sanctions. Here, however, is the crux, and the danger for the League and for all the smaller States-members. Is France prepared loyally to co-operate with Great Britain in preserving both an effective and an intact League in the face of a European aggressor in Africa? It is reported that, after a Cabinet consultation in Paris, the French Government are prepared to do so if they are satisfied about the British attitude. Let us look at the alternative before we decide what that British attitude should be.

We have the impression that French minds are still under the delusion that they can make a mockery

of the League in Africa and at the same time make it serve their turn in Europe: that they can sabotage British policy and outrage British feelings about the Italo-Abyssinian dispute, and at the same time dope the British Army, Navy and Air Force into a grand anti-German alliance, for the benefit of France, in Europe. At this eleventh hour, we beg the French to believe—what is the truth—that, if these are really the calculations on which they are acting, they are acting in a complete fool's paradise. In the first place, French diplomacy cannot bamboozle British public opinion by playing fast and loose with the League. If France does cause the League to come to grief over the Italo-Abyssinian dispute, the British people will not be deceived. They will know well enough that, under the hollow mask of a League which has ceased to be a reality, the French will be simply inviting them to join themselves and the Italians in keeping the European balance of power tilted against Germany. If they mean to pursue their present policy to the bitter end, they may possibly carry Mussolini with them, but they will certainly not carry us. And it is doubtful if they will carry many of their other old friends. Honour bids France uphold the Covenant of the League; interest counsels her not to throw away the friendship of Great Britain. The time is perilously short; for all these issues will have come to a head at the meeting of the Committee of Thirteen on Thursday night.

Upon what understanding would France be prepared to collaborate with this country—and, be it noted, with every smaller State-member of the League—in preserving the League's integrity, by rendering it absolutely effective not only to restrain the Italian war of aggression in Africa, but also to prevent the economic and political enjoyment of the spoils of that war by the aggressor? The understanding, assuredly, is that this country should be prepared to adopt the same attitude, the same sanctions, and, if necessary, even military measures, to restrain any aggressor by force in Europe. If the French pose so plain a question to Mr Eden in Geneva, we hope and trust His Majesty's Government will have empowered Mr. Eden to reply with an unequivocal affirmative. The Government have maintained that their attitude over the Italo-Ethiopian dispute was dictated solely by concern for the League Covenant and the principle of collective security which it enshrines. It should not be difficult to assure France that any British Government, and the opinion it represents, will not differentiate flagrant aggression in Africa from its counterpart in Europe. There is, however, one clear condition. No British Government could give such an assurance—for British public opinion would reject it as unhesitatingly, and for the same reasons, as it rejected the Hoare-Laval "peace plan"—except in the name of the League Covenant, within its framework, and with the aim of realising the collective security envisaged therein. If France fears imminent German aggression against Austria or Czechoslovakia or Lithuania, the answer is that collective security in Europe, and the British participation which it presupposes, can only be achieved through the League, to which Herr Hitler has offered to return.

This emphasises the importance of the steps which the Locarno Powers have been taking at Geneva *pari passu* with the proceedings of the Committee of Thirteen. In brief, they have commissioned Mr Eden to take up with the German Government a number of queries which Herr Hitler's memorandum suggests, and to report back to them during the next session of the League Council, due on May 11th—that is, after the French General Election. Till then the French have fallen in with the Belgian and British desire that they should suspend any proposals for coercive action against Germany (with a quite reasonable reservation, on the French side, "in the event of any material changes occurring in the present situation in the Rhineland zone" while the British inquiries are taking place). Meanwhile, the staff discussions between the Locarno Powers other than Germany—for tiding over the interim period, not for establishing a permanent military co-operation—began in London on Wednesday.

So far, so good. We gladly acknowledge the concession on the part of France, implied in M. Flandin's consent to suspend coercive action. And the British inquiries are a happy stroke. The British Government is the right Government to make them; and the question of the

bilateral treaties which Germany proposes to make with her eastern and southern neighbours is the right question to have picked out as the first point on the agenda of an Anglo-German elucidatory discussion. In all this, we are setting our feet well on the road to a settlement between Germany and the rest of us; and, if the goal is reached, this achievement will relieve Europe in general, and France in particular, of the fear that now overhangs them. If France refuses to allow the League to exercise its function of bringing Mussolini to book, she will be destroying the only possible basis for any common action between herself and England in dealing with Hitler. The League is fighting for its life. The fate of Europe, no less than the fate of Abyssinia, hangs on that issue.

BUDGET WEEK

ON Tuesday afternoon, Mr Neville Chamberlain is to present the Budget for 1936-37. It will be the fifth Budget of his Chancellorship and the third since he announced that "Bleak House" had given place to "Great Expectations." There is a singular lack of great expectations this year. Indeed, it is many years since the general public has manifested so little interest in the beginning of a new financial year. This apathy is easy to understand; for what excites public anticipation and leads a string of deputations to the Chancellor's door is the prospect of tax remissions. Two years ago there was a fierce pre-Budgetary struggle between the advocates of 6d. off the standard rate of income tax, the sponsors of a restoration of allowances, and the civil servants with their demands for the reversal of economy "cuts" in salaries. In his last two Budgets, the Chancellor has contrived to find something for each of these classes. Of the tax increases and expenditure reductions of 1931, almost all have now been restored. The chief exceptions are the payers of death duties and surtax and the patient, inarticulate, indirect taxpayer.

This year there is no excitement because there is no prospect of tax remissions. That, in itself, is a surprising thing; for, with the lag that always intervenes between a change in the economic circumstances of the country and the corresponding change in the financial condition of the Exchequer, we have only had two fully-fledged "Recovery Budgets," although Recovery is very nearly four years old. Nor has there been any falling tendency to be observed in the Revenue. Last year's collection, in spite of the tax remissions of twelve months ago, was £36 millions in excess of the previous year. Income tax has regained the 1929 level (albeit with a higher standard rate of tax), while the death duties have brought in more than ever before. The fact that has put an end to any more "Great Expectations" has not been any failing in the taxable capacity of the country, but a startling rise in the level of expenditure.

The materials for a thorough survey of Great Britain's present Budgetary position will be found in the annual Budget Supplement which is issued with this week's *Economist*. Figures are there collected from their manifold hiding places in the official returns and arranged in such a way as to make possible a historical study of public finance in the last decade. Such a study is highly necessary at this moment; for, like all good history, a glance backward over the last few years sheds considerable light on the prospects for the future. And the light it sheds is not particularly cheerful.

Mr Chamberlain has a severe problem before him in balancing the Budget he will introduce on Tuesday. The expenditure side of the balance sheet is usually tolerably clear by this time. The cost of the Consolidated Fund services, it is true, is not revealed until the Budget speech is made, but the possible variation is not very large. For the Supply Services, Parliament and the public have already had the Estimates before them and should, in theory, know the worst before the Chancellor rises. But for the last two or three years, the Estimates have presented only part of the picture. This has been due to several causes. In the first place, many of the financial expedients with which the Government has had to come to the rescue of industry, agriculture and local authorities, have been temporary in form, and have been granted for periods which have not

EUROPEAN REPRESENTATIVE'S OFFICE:
8 KING WILLIAM STREET, LONDON, E.C.4

coincided with the financial year. The cattle subsidy this year, which has only been authorised until the early summer, is an excellent case in point. It would be unconstitutional for the Treasury to submit an Estimate for expenditure which has not yet been approved in principle by the House of Commons. Accordingly, the Estimates include enough for this subsidy for three months only, although the probability of its extension is very high. In the second place, since the restoration of cuts in pay has taken its place in the last two Budgets alongside tax remission as a possible object of Budget "concession," its cost could not be revealed until the Budget speech. This year, there is the added difficulty that the Government either cannot, or will not, estimate the cost, even within the next twelve months, of its re-armament programme. The result is that, with the publication of the Estimates, the taxpayer knows the best, rather than the worst, that can happen to him. He knows that expenditure on the Supply Services will not be less than £537 millions, which is £25 millions more than last year's expenditure. But he does not know how much more than that figure it will be. Speaking in the House of Commons on Friday last week, the Chancellor would only say that Supplementaries would certainly be needed for all three of the fighting services, and that for the Air Force alone the addition could be provisionally fixed at £10 millions. There will probably also have to be some Civil Supplementaries. By the time 1936-37 has ended, expenditure on the Supply Services may well be £50 millions, or even more, in excess of the already swelling figure of 1935-36.

The chief interest in Tuesday's speech will attach to the disclosure of the methods by which the Chancellor intends to fortify the revenue to match this ominous increase of expenditure. He can expect some assistance from the normal expansion of the revenue. Last year's receipts, even in spite of tax remissions, were £36 millions in excess of the previous year. Several capital items, however, contributed to this total, and these particular items will not recur this year. Moreover, the partial restoration of income-tax allowances a year ago will cost more in 1936-37 than it did in 1935-36. On the other hand, it is surely time to expect some recovery in the yield of surtax, without any pause in the consistent rise in the yield of the income tax and the death duties. But even supposing that the Chancellor is optimistic enough to budget for an increase in revenue this year equal to that of last year, he is still some £15 millions short of a balance. His resources are not, however, exhausted. There may be other capital nest-eggs which can be brought into account. It would be possible to suspend even the vestigial and accidental sinking fund of the last three years by reducing the provision made for the service of the debt. In one way or another the Chancellor will doubtless contrive to balance his accounts without imposing any substantial new taxation.

The public is, therefore, probably correct in its expectation that the Budget will have nothing to give the taxpayer and nothing additional to demand from him. But to balance this year's Budget without any change in taxation will not by any means solve the country's financial

problem. In the last section of our Budget Supplement an attempt is made to look a little further than March 31, 1937. The conclusion is reached that expenditure "looks like exceeding even the highest estimate of revenue that can be made, with any regard to caution, on the basis of the present rates of taxation." This is the state to which we are reduced, through the necessity of re-armament, although we have suspended the sinking fund, defaulted on the American debt, and reduced the rates of interest on the short-term debt almost to vanishing point.

Very little is being said in public about the seriousness of the Budgetary position in the next few years. But that it is serious a glance at the figures in our Supplement will show. Twelve months from now Mr Chamberlain, or his successor, will be rising to open a Budget in which he will have to propose either an increase in taxation or else the deliberate courting of a deficit. The choice between these two alternatives is not one that can be quickly made. Our present burden of taxation is not so insignificant that an increase can be either easily contrived or lightly contemplated. On the other hand, to finance the current expenditure of peacetime out of borrowings, when nothing is being provided for the reduction of an enormous National Debt, would be both unsound and uneconomic. The present Government resisted most strongly the proposal to raise money by loan for expenditure on useful capital works, at a time when such action would have given a most valuable stimulus to lagging recovery. It cannot now, in consistency, advocate borrowing to cover expenditure which is not capital, except by courtesy, nor useful by any stretch of language.

Mr Chamberlain will be doing the country a real service if he devotes part of his speech on Tuesday to an outline of the way in which the Government proposes to meet the grave financial problems which its policy is evoking.

INDUSTRIAL PROFITS

OUR computations of industrial profits in the first quarter of each year are of special interest for two reasons. They afford the latest available indication, on the eve of the presentation of a new Budget, of the trend of industrial earning power; and, of our four quarterly "samples," they are among the most representative. The majority of the companies concerned close their books on December 31st. They include many of the larger British concerns in their number, and their operations are carried on predominantly in the home market. Actually, the reports which have reached us during the last quarter account for 35.7 per cent. of the industrial profits, recorded in our analyses for the past twelve months.

Of all the phenomena of trade recovery, industrial profits are among the latest to register changes of trend. To the industrialist and the shareholder alike, they are a species of "harvest home," after increased orders have been translated into higher business activity, and the latter's fruits, in turn, have been gathered. How far have

the depression of 1930-32 and the subsequent recovery in national prosperity affected industrial earning power? An answer will be found in our customary detailed analysis of published figures on page 160 of this issue. In the following article we propose to discuss some of the more significant conclusions which emerge from a study of the first quarter's figures for several years past.

In the first place, our analysis shows, beyond peradventure, that the revival in industrial earnings which was inaugurated inconspicuously in 1933, and made gratifying headway in 1934, maintained its impetus last year. In the following table the total profit figures (after debenture interest) of the "first quarter" companies have been related to the calendar years for which, for the most part, those profits were earned. As the companies in our sample are not identical from year to year, we have constructed a "chain index," shown in the last column of the table, whose figures afford a reasonably accurate indication of the trend of earnings.

INDUSTRIAL PROFITS INDEX (“First Quarter” Companies)				
Reports of “First Quarter” Companies covering profits earned in*	No. of Companies	Net Profits (after Debenture Interest) Year stated	Same Companies preceding year	Chain Index (1929 = 100)
1929	...	£	£	100.0
1930	596	67,736,226	75,816,474	89.3
1931	548	54,314,815	63,403,727	76.5
1932	562	52,046,133	57,105,291	69.7
1933	547	55,751,307	52,922,902	73.4
1934	592	67,137,496	58,577,585	84.1
1935	569	75,731,976	66,839,644	95.3

* Reports published during first quarter of next succeeding year, in each case.

It will be seen that in three years, between 1929 and 1932, the index fell by 30.3 per cent. In 1933 the index recovered from 69.7 to 73.4 and in 1934 to 84.1. The re-ascent from Avernus continued last year, and profits are now within 5 per cent. of the pre-depression level. Unlike our index of business activity, however, the profits index has not yet surpassed the 1929 average. In view of the time-lag between activity and earnings, however, the vigorous upward movement in industry through last year, which has continued up to the moment of writing, should be duly reflected in a rise in profits this year.

The improvement in earnings during the last period is common to almost all industrial groups. The only trades, indeed, which recorded a decrease—according to the lengthy analysis on page 160—were oil, rubber and tea, all of which carry on their main operations overseas. Some of the "Home" groups registered spectacular increases; the financial, land and investment companies, for example, showed an increase of 44.1 per cent. in their latest reports, the iron, coal and steel companies an increase of 43.3 per cent., the shipping companies of 38.6 per cent. and the electrical equipment concerns of 34.9 per cent. In some of these instances, e.g. shipping, a large percentage increase on a low earnings figure for the previous year left profits still at a "depressed" level, but this condition scarcely applies to a prosperous trade like electrical equipment manufacture, or to such groups as building materials (which showed a 22.1 per cent. increase in their latest year), to food, confectionery and drink (19.1 per cent.), or to the motor, cycle and aviation companies (18.8 per cent.). The large residual group of 94 "miscellaneous" concerns recorded a rise in earnings of 15.2 per cent., or slightly more than the average of 13.3 per cent. for 569 companies included in our sample.

How far have the rare and refreshing fruits of recovery been passed on to shareholders? After debenture interest has been met, the payment of preference dividends is, in many cases, necessary before the ordinary shareholder can measure his "earnings fund." Of the £75.7 millions of total profits recorded by the companies included in our analysis in their latest year some £14.5 millions (19 per cent.) was required for preference dividends. The residuum, "earned for ordinary," was equal to 12.6 per cent. of the ordinary capital of the companies concerned. A year ago the figure for a slightly larger sample was 11.0 per cent. At the nadir of depression the corresponding figure was 8.9 per cent. and in 1929 it was 13.0 per cent. The following table gives a complete picture of the

trend of earnings, dividends, and "reserved" profits during the past seven years.

Year*	ORDINARY SHARE RATIOS			
	Total Ordinary Capital (£'000)	Earned for Ordinary (%)	Paid on Ordinary (%)	"Ploughed Back" (Ratio to Ord. Capital) (%)
1929	383,642	13.0	10.0	3.0
1930	494,000	10.7	8.5	2.2
1931	430,189	9.9	8.7	1.2
1932	443,645	8.9	7.5	1.4
1933	441,919	9.8	7.5	2.3
1934	483,029	11.0	8.3	2.7
1935	484,890	12.6	9.2	3.5

* Figures relate in each case to years in which profits were earned, not to date of publication of reports.

The percentage figures are shown graphically in the annexed chart. The complete data on which they are based will be found in the tables given on the later page of this issue and in earlier numbers of the *Economist*.

The results suggest that ordinary dividends have fluctuated, both in depression and recovery, much less widely than earnings. Directorial policy, in fact, acts as a species of buffer, tending to protect shareholders from the worst effects of changes in earning power. The "retained margin" between earnings and dividends (shown with black shading in our chart) tended appreciably to contract in the bad years, and has been steadily expanding since 1932. Our figures, however, reveal that directorial policy

is actually more conservative to-day than before the depression started. This fact is strongly brought out by the following table, in which the percentage rates for earnings, dividends, and retained earnings for each year are re-expressed on the basis 1929 = 100:—

“DIVIDEND POLICY” (1929 Percentage Figures equated to 100 in each case)			
	On Ordinary Capital		
	Earnings	Dividends	Retained
1929	100	100	100
1930	82	85	73
1931	76	87	40
1932	68	75	47
1933	75	75	77
1934	85	83	90
1935	97	92	117

In the worst year, 1932, the rate of ordinary earnings was only 68 per cent. as high as in 1929. The corresponding figure for dividends was 75, and the "retained" figure fell to 47. In 1933 earnings increased slightly, but the "dividend" index remained stationary, and the "retained" figure jumped to 77. The dividend index subsequently has lagged steadily behind that of earnings on the upward trek. Consequently, while the most recent earnings index figure is 3 points below that of 1929, the

"retained" index is as many as 17 points above the pre-depression level.

What percentage share of each year's total earnings (after debenture interest but before preference dividends) has actually been added to the working capital of industry? The figures are given below:—

PROPORTION OF TOTAL PROFITS ADDED TO RESERVE, ETC.			
Percentage “Reserved”		Percentage “Reserved”	
Year in which profits earned—		Year in which profits earned—	
1929	18.3	1933	18.4
1930	16.2	1934	19.4
1931	9.6	1935	22.2
1932	12.2		

The "reserve" percentage fell from 18.3 in 1929 to 9.6 in 1931. Since then it has been steadily rising, and has now reached the level of 22.2 per cent. The inference is that industry is financing itself internally, to a more considerable extent than before the depression. Something between one-fifth and one-fourth of last year's total profits was "ploughed back" by the companies included in our analysis. This is a portentous phenomenon, which should be read in conjunction with the fact (discussed in the *Economist* of March 28th last, page 695) that new market issues of capital for British industry have, so far, been lower this year than last. Our survey suggests, in short, that, to-day, in a period when high earnings are coincident with low interest rates, British industry is "liquid" in a dual sense.

THE CLAIM TO COLONIES

THE colloquial classification of the leading nations of the world into "have" and "have-not" Powers has rapidly become sanctified by mere habit. So unquestioning an acceptance of a convenient, but all-too-loosely employed, classification is bound to engender misunderstandings. We need make no apology, therefore, for further examination of a question which has already formed the subject of an article in these columns.*

Widespread use of the terms "have" and "have-not" Powers is confined to discussions of the claim to colonial possessions by certain Powers—notably Italy, Germany and Japan. It followed closely upon Sir Samuel Hoare's offer to the League of Nations, on September 11th last, of British co-operation in an inquiry into the *distribution of colonial raw materials*—in order that "all fear of exclusion or monopoly may be removed once and for all." Between that date and March 7th last, when Herr Hitler's Memorandum to the other Locarno Powers expressed Germany's "expectation that, in the course of a reasonable space of time, the problem of colonial equality of rights . . . will be clarified," a profusion of well-meaning counsels has obscured all appraisals of the purely economic—as opposed to the political, strategic or psychological—bases upon which the claim to colonies is thought to repose.

The first, and crudest, ground for the claim is "pressure of population." This expresses itself in Germany in the cry: *Volk ohne Raum*, "a people without breathing-space." Italy and Japan have echoed that cry with greater reason; for while Italy and Japan had respectively 133 and 135 inhabitants per square kilometre at the last census dates, against Germany's 140, only one-tenth of Germany is uncultivable or uneconomic land, against a fifth in Italy, England and Wales, and France, and three-fifths of Japan. Compared with Germany, England and Wales has 264 inhabitants to the square kilometre, Belgium 266 and Holland 232. "Pressure of population," in itself, is no obstacle to high standards of living. Though the recent raising of barriers against immigrants has severely hit countries like Italy and Japan, which could regularly count on losing hundreds of thousands of emigrants per annum before and after the war, it has hit much more severely countries like Poland, Greece and Bulgaria. Even Great Britain—despite her often envied position as a Power "possessing" a vast Empire—now suffers a net annual *increment* of population because of a surplus of British

* *Economist*, November, 16, 1935, p. 950. "The 'Necessity' for Colonies."

immigrants returning from the Dominions and Colonies. Finally, be it noted, in Italy and Germany, the totalitarian State continues to levy differential taxation on celibacy and award premiums for large families.

It is instructive to observe that in the period 1904-13—a period of regular and rapidly rising prosperity in Germany—Germany's annual average increase of population was 733,500 persons. But on an annual average only 25,624 Germans emigrated to all countries, only 33 going to the German colonies. Yet on January 1, 1913, there were only 19,696 Germans—men, women and children—in all Germany's pre-war colonial possessions, of whom 3,105, or 15.8 per cent., were German soldiers and police. The Americas and the British Dominions proved more attractive to German emigrants. On the other hand, since the war, in the period 1925-34, the annual average increase of the German population was only 354,500 persons, while total emigration in the period was 38,343. This is a clear indication that economic prosperity conditions emigration; and that pressure of population need not *cause* economic depression.

As we pointed out in the earlier article, "access to raw materials" has never been denied to non-colonial Powers. Consider the position of the raw-materials-producing countries since the fall in raw materials prices began in 1928-29. They produced too much. If Germany, Italy or Japan had had colonies producing raw materials during these years of depression their financial and trading position might well have been much worse; for, as it was, they could buy at prices brought very low by breakneck competition among primary producers to sell. Indeed, Japan herself can be under no delusions on this score; for her principal export is raw silk, and her experience in that respect has been devastating. "Dependence on imports," by itself, means almost nothing. All countries "depend" on certain necessary imports. The following table shows the relative "dependence," per head of population, of various countries on imports before the depression:—

(In £ at gold parities in 1929 and 1930)				
Country	Imports of Foodstuffs and Raw Materials (inc. Semi-finished goods) per head		Total Imports per head	
	1929	1930	1929	1930
Germany	8.7	6.7	10.5	8.1
Italy	4.3	3.4	5.9	4.8
Japan	3.3	2.5	4.2	3.2
EUROPEAN COUNTRIES				
(a) With Colonies:—				
United Kingdom	19.6	16.6	24.8	21.3
France	9.6	7.8	11.7	10.2
Belgium-Luxemburg	18.2	15.2	24.9	21.7
Netherlands	17.7	14.5	29.9	25.9
(b) Without Colonies:—				
Sweden	9.2	7.7	16.4	15.3
Norway	10.2	8.9	21.2	21.1
Denmark	16.4	14.4	27.3	26.2
Switzerland	15.0	13.9	26.7	25.3
Czechoslovakia	5.7	4.5	8.4	6.7
Austria	8.7	7.2	14.4	11.9

Source: Germany, *Statistisches Jahrbuch*, 1931 and 1933.

This brings us to a much more important reason for the claim to colonies: the need for "guaranteed" markets. The colonial Powers themselves can never count on their own territorial markets; for in a depression colonial purchasing power falls. What they can do, and what this country set out to do at Ottawa, is to secure more trade with their Empire. Though this does not prevent foreign suppliers from jumping the colonial tariff, it renders it more difficult and costly. In this respect, the so-called "have-not" Powers have a legitimate grievance against the "haves." But a grievance is surely no right to commit a second wrong. Any claim to colonies as markets for the "have-nots" must, in these circumstances, be seen for what it is: a claim to create yet another "closed-door" economy in the world, with the aim of achieving the largest measure of self-sufficiency. Does economic sanity, prosperity and progress in the world lie along that road? Lack of colonial markets has never impeded the furthest and most rapid strides in national economic development; witness the historically uninterrupted advancement of Switzerland, Norway, Sweden and Denmark to the highest levels of European economic standards. Germany's colonies before the war took only

0.6 per cent. of Germany's total exports in each of the years 1912 and 1913; and they provided only 0.5 per cent. of all Germany's imports in each year. Thus these pre-war German colonies were negligible markets for Germany's exports, and even less significant sources of her imports.

It would seem that at least one semi-economic justification for the claim to actual possession of colonial territories follows from the *political* assumption that, in future, the nations must inevitably confine their commercial exchanges to their own territories or to defined areas aiming at self-sufficiency. If the world's economic and political procedure is to be so perverted, the so-called "have-nots" can legitimately claim a share in it. Such a world would be bent upon its own economic destruction. The political distortion of the world's conduits of capital and commerce, and the national and international stresses and strains set up by more rabid self-sufficiency programmes than those we now observe, would prove productive only of political animosities, violence and disorder. More than a little of the world's present political disorder is directly attributable to the fruits of economic nationalism.

Is there a more excellent way? If there is, assuredly it must lead backward from the precipice towards which our feet are tending. The British Government have renewed their offer, in their recent White Paper, to examine, *au fond*, the economic ills which afflict the world, as well as the grievances of the so-called "dissatisfied" Powers. On this offer our eyes should be focused; for this country—with its colonies and great possessions—in common with all the leading Powers of our industrial civilisation, has made grievous economic mistakes; and the sands are fast running out. The essential prerequisite of a successful conference on the world's economic ills is that some hard thinking should be done beforehand. Before we, who desire the return of economic and political sanity to a world grievously distraught, are offered schemes for sharing-out economic nationalism, let us remind ourselves what it is that all the nations should "have," and how best they may all share in its increase.

"SELECTIVE" RAILWAY ELECTRIFICATION

It is five years since the Committee on Main Line Railway Electrification, presided over by Lord Weir, came to the unanimous conclusion that "the [British] railways should examine new methods of reducing the cost of railway transportation." The Committee outlined a comprehensive scheme for the electrification of all lines (except certain branch lines) over a period of fifteen to twenty years, at a capital cost, to the railways, of approximately £261 millions, to produce an estimated return of 7 per cent. Since the Committee reported, the matter, for all practical purposes, has been in abeyance. One of the four railway companies, the Southern, has proceeded on its own initiative with the electrification of its suburban lines and its "shorter" main lines, to South Coast terminals like Brighton, Worthing and Eastbourne. The financial results, on the chairman's showing, have been highly gratifying, and the company intends to apply part of its share in the recent Treasury-guaranteed "railway loan" in extending its electrified lines to Portsmouth. Another project, to be financed from the same loan, embraces the electrification of the London and North Eastern line from Sheffield to Manchester, but no scheme for the electrification of the great trunk lines between England and Scotland, or between London and the West, has as yet been seriously proposed. For this failure to implement the Weir Committee's proposals there are two main explanations. In the first place, the suggested expenditure of something approaching £260 millions, for any purpose except national armaments, appears terrifyingly large; and in the second, railway opinion is itself divided on the merits of electrification on the grand scale.

An increasing number of transport users, however, are anxious that the community should not wait indefinitely while the railway technicians are fighting their battle and the national authorities are satisfying themselves that the financing of the whole of the existing system will be a

commercial proposition. Does the choice lie between electrification of virtually the entire existing system and no electrification at all? Is there not a middle way? The writer of a letter appearing on page 130 of this issue would reply that such a way certainly exists. This correspondent starts from the assumption that the contemporary network of British main and branch railway lines is less a "plan" than an empiric system. It is the legacy of an era of inter-company competition which has passed away. If the community is unprepared immediately to commit itself to the expense of electrifying the whole, let it take first things first, and concentrate on the electrification of a great trunk route between North and South. The suggested main artery, as will be seen from the map on this page, would run from London (Euston) to Rugby, over the well-engineered curves and gradients of the old London and North-Western main line. Thence its western arm would pass through Birmingham, Crewe, Preston and Lancaster, while

its eastern arm would follow the former Great Central route through Leicester, Nottingham and Sheffield, and, after passing through Leeds, would effect a junction with the western arm at Low Gill. Thence the route would lie over Shap to Carlisle and, by Carstairs junction, to northern termini at Glasgow and Edinburgh. "Branch" lines would run to Liverpool, Manchester and Newcastle, and connection would be made with the electrified sections of the Southern Railway by a loop over the famous "West London" line from Willesden to Clapham Junction.

The main points in the case for such a "selective" electrification plan are obvious. Under such a regime, as our correspondent points out, traffic which is now split up over two or more lines—formerly competitive, but already effectively non-competitive under the present-day "pooling" arrangements—could be concentrated on a single electrified route. The non-electrified lines could be reserved for existing local trains, for a light service of semi-expresses, and for "relief" goods traffic. Electrified services would be brought to all the populous centres of the north. On the electrified main lines, a half-hourly service of high-speed expresses—similar to those, e.g. run by the Pennsylvania Rail Road from New York—might prove economically feasible. The plan, indeed, would be based on principles

analogous to those of "rationalisation" in industry. It would concentrate activity on sections of the existing "plant" calculated to produce a maximum return. For this purpose, it would treat the railway lines of the country as a whole, ignoring such distinctions of current ownership as are mere anachronistic survivals of the pre-grouping epoch. It would honour the principle that a high density of traffic is essential to the optimum operation of an electrified line. From the viewpoint of capital cost, it would be decidedly economical, for it would involve the initial electrification of only 750 double track miles out of a total for the four chief railways of 19,267 route miles.

We commend our correspondent's suggestion to the railways, to transport users, to the Government—to all, in fact, who are concerned, in different ways, with the objects it seeks to achieve. Numerous objections, technical and otherwise, may doubtless be advanced. It may be urged, for example, that the scheme leaves outside its purview the whole of Western England, the Eastern Counties, North and

South Wales, and Scotland north of Edinburgh. The answer is that it is avowedly a first step, based on the assumption that both financial ability and willingness to electrify *all* routes are absent at this stage. Experience gained by operation of the suggested "trunk" system would, in fact, be invaluable, if and when the question of further electrification came to be considered in due course. Railwaymen, doubtless, will have points of their own to urge. It would be well that they should clearly formulate them, so that public opinion can discover how far they are based on sound technical considerations and how far on conservative adherence to "steam" traditions.

The plan would appear to have at least one logical merit. Given the desirability of future electrification, *per se*, its accomplishment would obviate the danger of piece-meal development. Lack of co-ordination was the bane of railway construction in its early days. The record of British railway electrification so far suggests the danger that history may repeat itself in the present century.

NOTES OF THE WEEK

Unemployment Assistance.—The introduction of the new unemployment assistance system must be an episode almost unparalleled in British administrative history. In January, 1935, a brand new system, prepared over a long period and fully discussed by Parliament, was set going—only to be abandoned within six weeks in response to widespread protest. The public was then told that an inquiry would be held into cases of hardship, a report issued, and a revised new scale of assistance introduced. Since then one Minister of Labour has gone, and another, Mr Ernest Brown, has announced that the promised report would be in the hands of Members of Parliament "in the spring." In last Thursday's debate Mr Brown repeated this undertaking, and added that the "House would not have to wait long after Easter." The problem is, of course, an extremely intractable one. At least three major issues of policy have to be decided: what is to be the status of the Unemployment Assistance Board, whether the household means test is to be retained, and what the scales are to be. Both the Labour and Liberal Opposition urged on Thursday that the Board should be made responsible to Parliament and that the household means test should be abolished. Mr Ernest Brown, in reply, emphasised the enormous difficulty of substituting a standard system for local poor law rates that may have been established for generations. There is clearly substance in this; but it only makes the public wonder more than ever why responsible administrators had not allowed for it before the new scales were introduced 15 months ago. The abolition of the household means test also presents difficulties, though its almost universal unpopularity is not in doubt. Has the Ministry considered the possibility of granting a fixed sum as of right to an unemployed worker whose insurance benefit has expired, and to his wife and children, and instituting a means test for assistance beyond that sum? Some practical compromise has to be reached, and reached soon. The promised report will consequently be awaited with very great interest.

Easter Politics.—For those who will, the Easter conferences provide an opportunity to keep politics alive over the holiday. This year the discussions were most alive at the Co-operative Party and I.L.P. conferences. The Co-operative Party decided, after an important secret meeting, to reject complete amalgamation with the Labour Party, but to preserve the "closest and most harmonious relationship with it." The *status quo* is thus to be maintained. On foreign affairs, opinion among the co-operators was strongly in favour of sanctions and full support for the League. Mr W. H. Green, M.P., said that "it was idle and hypocritical for them to claim allegiance to the League and say at the same time that they could not support sanctions." Mr A. V. Alexander wished it to be made absolutely plain to Germany that military aggression would

range this country effectively on the side of the League. "It is perfectly plain," he said, "that Hitler, with his great control of the German people, is engaged in a diplomatic policy which is far more clever than our Foreign Office appeared to have realised." The I.L.P. conference, on the other hand, though divided into various splinters, was predominantly opposed to League sanctions. It even appeared that the inner executive of the national council had passed a resolution also opposing "working-class sanctions"—i.e. strike action—against Italy, on the ground that there was nothing to choose in aggressiveness between Signor Mussolini and the Emperor of Abyssinia. This was too much for Mr Fenner Brockway, who declared himself "astonished," and the conference only refrained from passing a vote of censure on the national council by 70 votes to 57. These discussions can hardly fail to weaken the I.L.P.'s already waning influence still further. A party so impractical as to advocate the maintenance of peace by general strikes, in a world where the Fascist dictators have destroyed organised trade unionism, is hardly likely to appeal to the practical sense of the British public.

War and Diplomacy.—Marshal Badoglio has been forging ahead so rapidly with his mechanised divisions on the Northern front in Abyssinia that his forces entered Dessye, until a week or two ago the Emperor's headquarters, on Wednesday. At the same time a new offensive by General Graziani's southern forces, directed against Harrar, is reported. The Italian armies are now at the Dessye terminus of a good lorry-road to Addis Ababa; and the southern offensive looks like bringing the Italian pincers closer together towards the Addis Ababa-Djibuti railway. Moreover, at the week-end Italian troops reached Lake Tsana and hoisted the tricolor there; while another force reached the Sudan frontier at the extreme north-west tip of Abyssinia. This week's news, therefore, provided a discouraging background for the negotiations over procedure for an armistice, which Baron Aloisi and Señor de Madariaga began on Wednesday. Even so, the unopposed advance of the Italian armies in Abyssinia does not spell victory for Italy. The Italian lines of communication are ominously lengthening, and their defences becoming attenuated, all along that great central Abyssinian escarpment; and in the lateral valleys which pierce it are secreted the armies of the Emperor, Ras Ayelu and Ras Imru. Moreover, the rains are now increasing in volume. Even if the Italian armies proceed unmolested, their position must become more vulnerable. They have a very long way to go yet before they enter Addis Ababa; and if they do that, Italy's real task and her gravest economic problems will begin. She will have to administer the territory in her possession, provision all the troops necessary to stamp out guerilla warfare over a vast area, and find all the money for it. The moral for

the League Powers of Italy's recent military advances in Abyssinia is that the economic sanctions against her must be redoubled in intensity. Her real struggle—as we pointed out at the outset of her adventure—is with the League, not with one small and defenceless Member of it. She has not yet defeated the League.

* * *

Turkey Asks for Revision.—At the end of last week, the Turkish Government took the long-expected diplomatic step which they have foreshadowed on many occasions. They put forward a formal request for the negotiation, in the near future, of a fresh agreement for regulating the regime of the Straits. This request has been addressed simultaneously to two sets of States: in the first place to Turkey's co-signatories of the Straits Convention of 1923, which is the basis of the present regime of demilitarisation; and in the second place to all States members of the League. It has been addressed to the League partly because the League is explicitly involved in the terms of the Convention of 1923, and partly because Turkey is now asking, in virtue of Article XIX of the League Covenant, for the revision of a treaty which, in her opinion, has become inapplicable. In choosing the path of negotiation, instead of presenting the world with a *fait accompli*, Turkey is showing herself a good citizen of international society. The terms of the Straits Convention of 1923 have, indeed, been made obsolete and unworkable by the terrible change for the worse in the international situation during the intervening thirteen years. In 1923, Turkey agreed to leave unfortified the narrow seas which insulate her European from her Asiatic territories, and which provide a water-route from the Mediterranean and the Black Sea to the heart of Constantinople. This sacrifice was asked of her because these Turkish territorial waters are at the same time the sole means of maritime communication between the other countries with sea-boards on the Black Sea—Russia, Roumania and Bulgaria—and the outer world. The Turks only consented to make this concession for the benefit of their neighbours on condition that these neighbours undertook, on their part, to fill, if necessary, the resulting gap in Turkey's security. An integral condition of the Straits Convention was a guarantee by four Great Powers—Great Britain, France, Italy and Japan—to carry out jointly any measures prescribed by the League Council for Turkey's defence in the event of the demilitarised zone of Turkish territory being subjected to any threat of aggression. To-day, as the Turkish note points out, Japan is no longer a member of the League and Italy has been condemned as an aggressor. Re-armament is in progress everywhere. And Italy (though on this point the Turkish note is discreetly silent) has had, ever since the Great War, her own designs of expansion at Turkey's expense. The Dodecanese is only an hour or two's distance by air, and not many more hours' distance by sea, from the mouth of the Dardanelles. As the Turkish note puts it, uncertainty has arisen in the Mediterranean, in contrast to the now reassuring situation in the Black Sea. Assuredly the League signatories—other than Italy—of the Straits Convention, cannot ask the Turks to continue to expose themselves to the risk of being treated like Abyssinia.

* * *

Five Years of Republican Spain.—The Spanish Republic was five years old last Tuesday. Some disorders occurred during the anniversary processions in Madrid; and the killing in a Madrid street of Don Manuel Pedregal, the magistrate who recently passed a severe sentence on the would-be assassin of the Socialist professor, Jimenez Asua, adds yet another to the distressing tally of political murders. It is clear that the revolutionary impetus of 1931 is by no means exhausted. Like Russia in 1917, the Republic in Spain represents a political and a social rebellion in one. The deposition of the President last week by Parliament in its passion—one cannot say wisdom—is symptomatic. It is announced that the first phase of the Presidential election—the choosing of *compromisarios* to form an electoral college with the assembled deputies—will take place on April 26th; and the actual presidential election on May 10th.

Thus, no time is being lost. The renewal of diplomatic relations with the U.S.S.R.—after an interval of seventeen years—must also be taken as evidence of a return to normality. What is painfully clear, however, is that, as a result of the clumsy obstinacy of Señor Alcalá Zamora, still more of the short-sightedness of the Catholic and Radical elements who were in the ascendant from October, 1933, to the end of last year, the original Jacobin spirit has been perverted to revolutionary violence. Señor Azaña's speech in the Cortes on April 3rd was sensible and statesmanlike. But for all the extenuating phrases he uttered for the "hungry multitudes" fresh from prison and repression, he pronounced many more solemn warnings that the present dispensation represents the last chance for reconstruction by evolutionary and Parliamentary methods. Yet Señor Azaña is quite right when he regards present violence as something endemic and temperamental, having no inherent connection with social revolution as preached by Communists. Spain is going her own revolutionary way.

* * *

A United Arabia?—The Wahhabis are proving as good diplomatists as fighting men. In 1934, Ibn Saud crowned his victory over his tiresome neighbour, the Imam of Sana, by granting him peace terms as moderate as the result of the seven weeks' war between the Yemen and Saudi Arabia had been decisive. Ibn Saud not only left the Imam's dominions intact, he also concluded with him "a treaty of Islamic friendship and Arab brotherhood" which included all the provisions that are common form in post-war European treaties of non-aggression and arbitration, and which at the same time improved upon this model by adding provisions for reciprocal demilitarisation on either side of the frontier and for providing a common front to threats of aggression from abroad. Another treaty, on the same basis, has now just been concluded between Saudi Arabia and Iraq, and it is hoped that the Yemen, too, will become party to it. It is a remarkable spectacle to see the programme of Arab solidarity thus overcoming dynastic rivalries, tribal feuds and sectarian religious differences. Hitherto, the Arab world has been torn in pieces by the alienation of Shii from Sunni and of the Wahhabi fraction from the rest of the Sunni community; by the perpetual raids across the frontiers between Saudi Arabia and its several Arab neighbours—Iraq, Transjordan and Yemen; and by the triangular hostility between the three princely houses of Hashim, Saud and Sana. This picture of disunion and weakness will have been entirely transformed if the reconciliation between Arabia, the Yemen and Iraq is now cemented into the *entente*. It will then be only a question of time when Transjordan, Syria and Palestine come into the new *entente*. Even Egypt is reported to be beseeching her neighbour to improve her relations with the Wahhabi Power. The *entente* in the direction of Arab union have been made possible by the statesmanlike moderation of King Abdul Aziz Al Saud. Having made himself, by his life-long prowess, by far the strongest of the Arab Powers, he has had the wisdom to reject the ambition of unifying the Arab world by force under his own sceptre. Instead, he has chosen the way of peace, conciliation and fraternisation; and it looks as though he were going to have his reward by becoming leader of all the Arabic-speaking peoples in Asia, and perhaps of those in the Nile Basin as well. Here is an Arab counterblast to Signor Mussolini's declared intention of re-establishing the Roman Empire—a project the more formidable to Arabs and Turks because it is expressly limited to Asia and Africa. Mussolini's dream may be forestalled by Saudian statesmanship.

* * *

The Effect of Sanctions.—A provisional estimate of the effect of the economic sanctions imposed on Italy has been prepared by the experts appointed by the League Committee of Eighteen. Figures are given for Italian trade in November and December, 1935, and January, 1936; and some incomplete figures for February, 1936, are added. These figures were compiled from replies made to the League by the countries imposing sanctions, and from the official trade returns of certain other countries. The countries for which returns were made covering November and

December, 1935, accounted in 1932 and 1933 for 92 per cent. of total imports into Italy and 93 per cent. of total exports from Italy. For January the percentages, based on a smaller number of countries, were 87.5 and 88. The falling-off in Italy's trade since sanctions were imposed may accordingly be summarised as follows:—

	Exports from Italy (⁰⁰⁰ gold dollars)	Imports into Italy (⁰⁰⁰ gold dollars)
November, 1934	20,872	28,578
November, 1935	25,230	29,817
(47 countries)		
December, 1934	20,972	27,549
December, 1935	16,739	21,441
(47 countries)		
January, 1935	17,600	22,899
January, 1936	9,505	13,884
(39 countries)		
February, 1935	10,755	14,650
February, 1936	5,666	8,230
(23 countries)		

In interpreting these figures it must be remembered, first, that the effect of sanctions is cumulative, since goods paid for *en route* before the imposition of sanctions were excluded from their operation; and, secondly, that the figures include not merely the sanctionist countries, which take about 70 per cent. of Italy's exports, but a number of non-sanctionist countries as well. It will thus be apparent that the falling-off in Italy's total exports has been very large indeed. In January it was already around 50 per cent. It is clear, therefore, that Italy has not nearly been able to make up for the embargo imposed by the sanctionist countries by means of sales to non-sanctionist countries. The reduction in Italy's imports, resulting from the embargo on exports, has also been very great. Naturally it has not been as great as that in exports, since Italy has been depleting her gold reserve in order to secure imports at any price. The above figures taken as a whole, however, show that the strain on Italy's economy has already become very severe and is likely to become even more severe as time goes on.

* * *

Anglo-Italian and Franco-Italian Trade.—Information is also given by the League experts about changes in the trade of individual countries with Italy. Anglo-Italian trade has shrunk in the following manner:—

BRITISH IMPORTS FROM ITALY (⁰⁰⁰ gold dollars)			
	1934-5	1935-6	
November	2,225	2,789	25%
December	1,880	930	50%
January	1,942	70	96%

BRITISH EXPORTS TO ITALY (⁰⁰⁰ gold dollars)			
	1934-5	1935-6	
November	2,625	855	33%
December	2,784	301	11%
January	2,875	155	5%

It will be seen that Great Britain has faithfully carried out her sanctions obligations and reduced her imports from Italy to almost nothing. Italy has evidently at the same time made great efforts to organise a counter-embargo against British exports. French imports from Italy also fell from 2,183,100 gold dollars in November, 1935, to 159,400 gold dollars in January, 1936; but French exports to Italy only fell from 2,874,100 gold dollars in November, 1935, to 734,600 gold dollars in January, 1936. It is also interesting that imports into the United States from Italy actually fell off by about 50 per cent. between November and January.

* * *

British Shipbuilding.—The rush of new orders for mercantile tonnage during the last quarter of 1935 subsided early this year. The gross tonnage of merchant vessels commenced in Great Britain and Ireland, as shown in *Lloyd's Register Shipbuilding Returns*, declined from 311,000 tons in October-December, 1935, to 233,000 in the past quarter. Despite this decline, however, the gross tonnage begun

Sun Life Assurance Company of Canada

(Incorporated in Canada in 1865 as a Limited Company)

The Company has been rendering service to the public in Great Britain for more than 41 years by enabling prudent men and women to safeguard their own and their families' future, through comprehensive Life Assurance and Annuity plans.

Sums assured by new, paid-for Life Assurance policies issued during 1935 in Great Britain and Ireland total

£5,500,000

Total Assurances in force at November 15th, 1935, in Great Britain and Ireland

£69,500,000

H. O. LEACH (General Manager), 2, 3 & 4 COCKSPUR ST., LONDON, S.W.1

during January-March was substantially higher than during the corresponding period a year ago, when it was 144,000 tons. As a result of the improvement over a year ago, the gross tonnage under construction rose from 556,000 tons at the end of March, 1935, to 743,000 at the end of December and 842,000 at the end of the past month. The spurt in orders towards the end of last year is not yet reflected in launchings, which amounted to 194,000 gross tons in January-March, 1936, against 106,000 gross tons a year ago. While the present position of the shipbuilding industry is appreciably better than three years ago, activity remains well below the level of pre-depression years. In January-March, 1930, for example, the gross tonnage launched was 75,000 tons, work was begun on 427,000 gross tons, and the tonnage under construction at the end of that quarter was 1,615,000 gross tons. The increase in the tonnage under construction was most marked on the Clyde, in Newcastle and in Sunderland. Work on hand in Belfast continued to decline, amounting to 86,980 gross tons at the end of March, against 140,800 gross tons a year ago. The mercantile tonnage under construction abroad also continued to increase between December and March, from 800,000 gross tons to 978,000 gross tons. Of the total mercantile tonnage under construction abroad at the end of March, Germany accounted for 317,000 gross tons, Japan for 151,000 tons, Holland for 146,000 tons, Sweden for 113,000 tons, and Denmark for 55,000 tons. Provided the stimulus to the replacement of old vessels is not entirely nullified by increasing costs of production, there is no reason to suppose that the British shipbuilding industry has reached the limit of recovery.

* * *

A Shock for British Shipping.—Competition among the world's shipping companies is rapidly becoming competition between the Governments that are subsidising them. "Free enterprise" in the big liner services of the world is fast becoming non-existent; for the payment of subsidies to shipping from the taxpayers' pockets, in order to undercut the rates offered by free enterprise, renders such enterprise unprofitable. In 1934 this country was forced to ward off the subsidised attacks on British tramp shipping by a subsidy of £2,000,000 for an initial year; it has just been renewed. The French and German trans-Atlantic liners are now operating largely on State subsidies to cover deficits; whereas the Cunard-White Star line have so far remained competitive at North Atlantic Conference rates without direct Government assistance. Yet even here the Government has had to lend financial aid for the raising of the money to build the "Queen Mary"—which, be it noted, has been the cause of a re-classification of liners and rates in the North Atlantic Conference. Now comes bad news from the Pacific. After fifty years the Union Steam Ship Company of New Zealand announced on Wednesday the discontinuance at the end of this year of its Union Royal Mail line between Sydney, Wellington and San Francisco. The line had recently been running at a loss of about

£50,000 per annum, owing to acute subsidised competition from American liners. A warning has already been given that the Canadian Australasian Line, Ltd., owned by the Union Steam Ship Company of New Zealand and the Canadian Pacific Company, and operating between Vancouver and Australasian ports, will have to be discontinued; for the recent losses have apparently been even greater—about £100,000 per annum, excluding depreciation allocations. This announcement, though understandable, comes as a great shock; for at the Empire Shipping Conference now meeting in London considerable progress had been made towards agreement on co-operation between all Empire lines in the Pacific against subsidised American competition. It was understood that both Australia and New Zealand were prepared to make proportionate contributions to maintain the Pacific services; and that all the other British lines concerned—perhaps "with a lively sense of favours to come" from the Government—had agreed on a "forward" competitive programme. The P. & O. company is to withdraw its branch line vessels from the Australian service as they arrive home and replace them by two modern Vickers-Armstrong-built vessels of the "Strathmore" type. And the Union Steam Ship Company of New Zealand has just ordered the latest type of motor cargo vessel for the New Zealand coasting trade. The American Matson line, however, is replying with two new turbine carriers for the Hawaiian service. The question at issue now is: Are new vessels to be built at their owners' expense, if their running can only be rendered profitable to the owners by the grant of Government subsidies? If the American system is to continue, it will become a fight between Exchequers; for British Governments cannot acquiesce in the driving of British ships off the seven seas by the money of other nations' taxpayers. Even so, the problem of deciding the amounts of Government assistance, if any, will need all "the lore of nicely calculated less or more," if British taxpayers, in their turn, are not to be mulcted by the shipping companies. That is the danger of the subsidies game.

Sterling and International Prices.—Narrow changes in world whole sale prices have been recorded during the past three weeks. The *Economist's* complete British index number has risen by 0.3 per cent., but primary products have fallen by 0.4 per cent. In the United States the Irving Fisher general index number is unchanged, but primary products have risen by 0.6 per cent. Owing to Easter, the latest French and German index numbers are not available. Previous figures indicate that the advance in French prices has for the moment been arrested, but that the German price-level remains firm.

Details of the group indices comprising the complete

Economist index number on the date of our suspension of the gold standard and for recent dates are given below:—

	"ECONOMIST" INDEX (1927 = 100)			
	Sept. 18, 1931	Mar. 11, 1936	Mar. 25, 1936	Apr. 15, 1936
Cereals and meat	64.5	70.8	72.0	73.1
Other foods	62.2	59.7	60.0	59.5
Textiles	43.7	60.5	60.3	59.9
Minerals	67.4	84.2	83.2	83.1
Miscellaneous	65.8	78.1	78.1	78.6
Complete index ..	60.4	70.8	70.9	71.1
1913 = 100	83.1	97.4	97.5	97.8
1924 = 100	52.2	61.2	61.3	61.4

In the cereals and meat group, wheat prices were irregular, and bacon cheapened. Otherwise the general trend was upwards. The main movement among other foods was a sharp drop in butter. Tea was appreciably dearer and there were small advances in refined sugar and cheese, and small decreases in coffee and coco-oil. In the textile group, Egyptian cotton is slowly falling from its previous high level, but American cotton was higher in price, and yarn and cloth advanced in sympathy. Flax and jute prices were lower. In the minerals group there was a small advance in lead and declines in tin, copper and spelter, the last of these movements being appreciable. In the miscellaneous group, Swedish timber and hides, linseed oil, rubber, sulphate of ammonia and creosote were all a little dearer.

Overseas Trade in March.—The outstanding feature of our overseas trade last month is the continued increase in our imports. They were £7.4 millions higher than a year ago, and £5.7 millions more than in February. Exports, on the other hand, only just maintained the February level. The small increase of £1.6 millions in the March exports figure was due to the extra working day last month. Complete figures are given below:—

	OVERSEAS TRADE Month of March (000's omitted)			
	1934	1935	1936	Change between 1935 and 1936
Total imports	£61,942	£60,507	£68,052	+ £7,545
British exports	33,069	35,952	36,510	+ 558
Re-exports	5,631	4,472	5,900	+ 1,428
Total exports	38,700	40,424	42,410	+ 1,986
Excess of imports over exports ..	23,242	20,083	25,642	+ 5,559
Transshipments under bond	2,045	1,913	2,255	+ 342

The increase in imports is more marked in raw materials and manufactured articles than in foodstuffs. This is a welcome sign of increased industrial activity. Figures for the whole of the first quarter, which are given in the following table, show the same characteristics:—

	OVERSEAS TRADE First quarter (000's omitted)			
	1934	1935	1936	Change between 1935 and 1936
Total imports	£185,718	£178,419	£200,321	+ £21,902
British exports	94,718	105,498	106,081	+ 583
Re-exports	14,906	13,912	15,862	+ 1,950
Total exports	109,625	119,410	121,943	+ 2,533
Excess of imports over exports ..	74,107	59,009	78,378	+ 19,369
Transshipments under bond	6,421	5,746	6,700	+ 954

Re-exports of both raw materials and manufactured goods have risen substantially. The comparatively small increase of 2 per cent. in total exports, however, is not altogether unexpected, in view of the unsettled state of international affairs and of the economic sanctions against Italy. The increase of 33 per cent. in the passive balance of trade compared with 1935 is partly explained by the slump in imports at the beginning of last year. During all the depression years, exports have recovered rather better than imports. Total imports at £200 millions compare with £210 millions in the first quarter of 1931. Exports at £122 millions compare with £121 millions in that year. The passive trade balance is therefore still £11 millions lower than before the devaluation of sterling.

A "Boomlet" in Copper.—Last Wednesday the price of copper in London reached £37 3s. 9d. per ton (standard cash), the highest level since 1933, while the New York export price, at 9.30 cents per lb., was higher than for nearly five years. The strength of the copper market is partly due to the seasonal revival of consumption. Consumers who have been out of the market since the termination of the "war boom" in October last are forced to restock. There are no weak "bulls" in the market and stocks in official warehouses in this country have decreased from 87,302 tons at the end of last year to 70,369 tons at the end of last week. Producers, on the other hand, are selling substantial quantities of copper direct to large consumers and thus have little metal available for the London Metal Exchange. Under these circumstances the rising trend of prices is scarcely surprising. Moreover, the position in the United States copper market was clarified on Tuesday by the increase in the domestic price of the Kennecott Copper Corporation from 9.25 to 9.50 cents per lb. As will be remembered, the two other large United States copper concerns (Anaconda and Phelps-Dodge) had increased their prices to 9.50 cents per lb. on February 15th. The Kennecott group at that time refused to follow suit, because it saw no justification for the increase. In the

meantime, the American domestic market has improved to such an extent, that the Kennecott concern found it necessary to bring its price into line with those of Anaconda and Phelps-Dodge. Sales in the United States market, which had declined from 79,300 short tons in February to 34,000 short tons in March, totalled no less than 100,000 short tons in the first half of April. All of this copper has been purchased at the lower price level and it would therefore not be surprising if American demand would show a decline in the near future. At the present rate of consumption, however, the market should settle down around the present price level within a comparatively short time. There is another "bull point" for the market. At the recent annual meeting of the International Nickel Company the chairman commended co-operation among copper producers. Moreover, the fact that the large Canadian concern is now developing its Creighton mine (which contains less copper than nickel) may be due to the more friendly attitude of the Inco towards the copper scheme. In general, the position of the copper market is now healthier than it has been for several years. Prices may therefore show further improvements in the near future. There are, however, no prospects of startling rises in the price of copper as the co-operating producers are much more in favour of raising consumption than of raising prices.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

"PROSPERITY"

FOR the first time for years business men in general admit that business is good. To be sure, there are depressed areas and unhappy industries, but, broadly speaking, the American economy can now be described as prosperous. This prosperity is most evident in the industries that supply goods to individuals and families, rather than to corporations. The present phase dates clearly from the autumn of 1934. It was preceded by the ephemeral revival of the autumn of 1932 and the stronger upturn that began in the spring of 1933, and, after a meteoric rise, was followed by a slow relapse from July of that year through the third quarter of 1934.

The following table is based on the Federal Reserve Board's indices of business activity, and employs the data unadjusted for seasonal variation:—

	AVERAGES						
	Mfg.	Mining	Res. Bldg.	Other Bldg.	Factory Em- ploy- ment	Factory Pay- rolls	Car Load- ings
Sept., 1934—							
Feb., 1935	78.5	87.6	11	38	79	62.5	61
March, 1935—							
Aug., 1935	87	85.5	23	43	81.5	68.7	61.5
Sept., 1935—							
Feb., 1936	95	98	23	69	84.3	74	66.5

Each of the past two six-month periods has thus shown an increase in manufacturing production over the preceding period, and the increase has been of the order of 10 per cent. The business cycle, in fact, has been for the past eighteen months on the up-grade, and in that time, while there have been periods of statistical hesitation, there has been nothing like a setback. In September, 1934, manufacturing activity was well above the average of 1932 (63); but it was still depressed. In February, 1936, it was 95 per cent. of the base period of 1923-25.

Still using the unadjusted indices, the following table shows selected indices in February, 1936, compared with the averages of the year 1928.

BUSINESS INDICES (UNCORRECTED)

	Average, 1928	February, 1936
	1928	1936
Textiles	107	107
Food products	98	82
Automobiles	113	94
Leather and shoes	102	115
*Petroleum Ref.	152	170
Tobacco	124	135
Simple average	116	117
Iron and steel	119	87
Cement	120	29
Building contracts	135	45

* January; February figures not yet available.

The low level of food products (it is lower now than in February, 1933, just before the bank closing) cannot be taken as evidence that people are eating less; it means no more than that they are eating less of the limited kinds of food represented in the index—e.g. meat. One might add that the textile index omits rayon, which is now of far more importance than it was in 1923-25. But, taking these indices as they stand, the simple average in February was 117; the average of the same groups for the year 1928 was 116. It may be presumed that the population has increased between 5 and 10 per cent. since 1928; on the other hand, 1928 was distinctly a prosperous, even a boom, year. Hence the inference is justified that if those enumerated industries are typical samples, the consumers' industries are somewhere between prosperity and boom. Among these data the contrast lies in building, which is at one-third the average of 1928, in spite of the W.P.A.

It is not easy to reconcile the index of manufacturing at 95 and the average of consumer goods activity at peak levels with the unemployment figures. One might discount the disparity between the index of factory employment (85) and the index of pay-rolls (75) by reference to a lower cost of living. On the other hand, the active demand for consumers' goods is in part attributable to the fact that of the estimated unemployed the 3,500,000 on the Federal rolls are in receipt of incomes averaging about \$50 a month.

The data above illustrates the importance of reviving the building industry if the American economy is to attain a substantially higher level. It will be noted in the first table above that residential building during the winter held the level of the previous six months, while non-residential

building, under the influence of W.P.A. contracts, surpassed it. It is reasonable to suppose that the winter was adverse to the former; but it is not impossible that W.P.A. contracts have passed their peak.

The Tax Bill is making slow headway. As reported by the House Committee, it would yield substantially less than was required to balance the regular Budget at the time the President made his proposals. Meanwhile, Congress has added generously to its appropriations. If the regular Budget is to be balanced, it would appear either that new additional taxes must be devised or the proposed rates materially increased. The present Bill represents the first serious effort by Congress to effect a considerable increase in Federal revenue, and it does not find the task easy. In the course of the depression State taxes have been enormously increased and many promising taxes have been preempted by local government. For example; a good many States have created or increased income taxes, and in New York State, in many instances, the State income tax equals or exceeds the Federal income tax, whereas as late as two years ago it was a nominal impost.

BIG REDUCTION IN "EXCESS" RESERVES

Since December the Reserve system has undertaken one of the largest "open-market" operations in its history. In December the Board of Governors rejected the arguments of the Federal Advisory Council, but reduced the excess reserves, as the Treasury transferred about \$500 millions to its deposit in the Reserve Banks; in the same day, the statement of March 18th showed an increase in the Treasury deposit with the Reserve Banks from \$391 millions to \$1,067 millions, accompanied by a reduction of member bank reserve balances of \$642 millions to \$5,144 millions, followed the next week by another shift of nearly 100 millions, which brought the member bank reserve to 5,069 millions, which is almost exactly \$1,000 millions below the maximum reached early last December.

This is a most significant action of control; for it has reduced excess reserves by about one-third (since in the interim gold imports have been small), and it has been accomplished without the slightest visible disturbance of money rates. This method has been pursued apparently in such a way as to permit a selective reduction of reserves as shown by the following table:—

MEMBER BANK RESERVES (\$000,000)			
Reserve Bank	Dec. 11, 1935	March 25, 1936	
Boston.....	366	294	- 72
New York.....	2,947	2,301	-646
Philadelphia.....	267	290	+ 23
Cleveland.....	348	326	- 22
Richmond.....	180	195	+ 15
Atlanta.....	112	116	+ 4
Chicago.....	920	713	-207
St. Louis.....	170	142	- 28
Minneapolis.....	114	100	- 14
Kansas City.....	178	161	- 17
Dallas.....	124	122	- 2
San Francisco.....	312	300	- 12
Total.....	6,040	5,059	

It will be noted that the principal reduction has been effected in New York and Chicago, as would be expected from the mechanism employed. The procedure has not been costless to the Treasury, which has, of course, borrowed the funds used for the purpose, but the current cost of Treasury borrowing is small. On the other hand, it is questionable if the Treasury intends permanently to immobilise so large a sum, in view of the deficit plus the bonus.

With the unconstitutional A.A.A. replaced by the S.C.A. (Soil Conservation Act) there is increasing evidence of a desire to devise a successor to N.R.A. Some months ago committees were appointed to explore the possibilities, and these committees have rendered their reports. In substance, the report recommends measures to abolish child labour and provides schedules of maximum hours and minimum wages. This report has not as yet been made the basis of any legislative proposal, although several Bills providing something like a resurrection of N.R.A. are before Congress, though they have received little attention there this session. Some action in this direction is forecast, and next year is given as the more probable time.

NEW YORK, April 6.

FRANCE

ELECTION PROSPECTS AND GERMANY

NEVER has the preparation for a General Election been so calm. Parties and candidates realise that order and peace are the first desire of the country, and the quietest platforms seem to be those of the "revolutionaries," i.e. the Communists, who are calling for "Peace, Bread and Liberty," and Colonel de la Rocque, the leader of the "Croix de Feu."

War and the crisis are naturally the main items emphasised in election manifestos, and war comes first of all. The "French plan" was generally welcomed by public opinion; but in some circles it was regarded as an electoral manifesto designed to benefit the Left rather than a constructive plan offered to Hitler. M. Laval's most recent speech, on the other hand, called for peace in Abyssinia, the restoration of the Stresa Front, and direct negotiations with Berlin. For the French public, the first danger lies on the Rhine, and the Press every day underlines the alleged contradictions of Geneva policy—with severe sanctions against Italy and an incomprehensible indulgence for the treaty-violation by Germany. These "contradictions" are injuring the League's prestige here. At the same time, the desire for an approach to Germany, which appears to be derived from a fear of war with Germany, now outweighs hatred of Hitler. Yet it remains a sentimental manifestation, similar to the now perceptible annoyance with British policy.

The advocates of direct Paris-Berlin negotiations, however, after having expounded their aims, are at a loss to discover how to realise them, for they are far from accepting the policy of leaving Hitler free to do anything he likes in the East. It can thus be said that the "ideas of Geneva," of collective security and of the necessity for Franco-British collaboration, are not dead—all the more so as in informed circles it is realised that the frontiers of France and England are not only on the Rhine but also on the shores of the Mediterranean.

On the economic problem the electoral manifestos are naturally divergent, but perhaps mostly on the surface. M. Herriot recently declared himself a staunch supporter of the present parity of the franc and of deflationary economies. Devaluation, he contended, would provoke a rise of industrial prices without any equivalent rise of agricultural prices. A French devaluation, he also suggested, would be followed by a new devaluation of the pound and the dollar; and the re-valuation of the gold stock of the Bank of France would not produce a benefit of more than 15,000 millions for the State. Questioned if he was a supporter of the Popular Front—of which the leader of his Party, M. Daladier, is the head—M. Herriot answered that "Prudence was to be recommended."

PROGRESS OF BUSINESS RECOVERY

Meanwhile, M. Germain-Martin, the former Minister of Finance in the Herriot, Doumergue and Flandin Cabinets, and the "man of deflation," does not disavow the economies and decree-laws. But he also wishes to organise a better "collaboration" between industry, agriculture and trade under the auspices of a "National Economic Council." This suggestion is also on the right limit of the programme of M. Maurice Violette, of the "Union Socialiste et Républicaine," who denounces deflation and declares that competition with cheap machine-made and foreign products must not lead to the ruin of producers and their wages, and that the public must be organised against monopolistic abuses. This last proposal is very close to the programme of the Rassemblement Populaire of the Left Front.

Wheat prices have now risen from 40 francs a bushel at their lowest to 100 francs, and wine prices from four francs to 7.50 francs. This rise has extended to all farm products, and has been accompanied by a general business revival. The following indices have just been published by the Statistique Générale de la France.

Industrial production	Feb., 1935	Dec., 1935	Jan., 1936	Feb., 1936
General Index.....	93	96	97	99
Engineering.....	96	96	97	99
Iron and steel.....	76	83	83	84
Textiles.....	62	71	71	71
Mines.....	101	101	101	101
Building (adjusted figures).....	76	66	67	69
Leather (" ").....	87	89	91	93
Paper (" ").....	132	118	123	135
Rubber (" ").....	763	873	909	970
Motors (" ").....	400	406	422	454

In the motor industry, 12,336 automobiles and 1,421 lorries were put on the road in February, compared with 10,886 and 1,363 respectively in January. The figures for the cotton industry are as follows:—

	Nov., 1935	Dec., 1935	Jan., 1936	Feb., 1936
Spinning (average per spindle in kilograms):—				
Production.....	1,599	1,617	1,748	1,601
Deliveries.....	1,660	1,667	1,794	1,681
Stocks.....	1,983	1,809	1,802	1,798
Unfulfilled orders.....	5,772	5,025	5,330	5,412
Weaving (average per loom in pieces of 100 metres):—				
Production.....	5,07	5,19	5,44	5,14
Deliveries.....	5,28	5,36	5,47	5,15
Stocks.....	8,69	8,12	8,16	8,09
Unfulfilled orders.....	21,28	19,72	20,78	22,47

The most recent unemployment figure was 457,750, a fall of 31,889 since the seasonal maximum of 489,639 on February 22nd. For the corresponding week of 1935 the figure was 475,437, following a maximum of 503,502 on February 23rd.

PARIS, April 16.

GERMANY

SHARE PRICES AND DEVALUATION RUMOURS

DURING the five weeks since the new international crisis was precipitated by Herr Hitler's speech to the Reichstag on March 7th the Berlin share market has been consistently firm, apart from temporary profit-taking reactions. The speech of March 7th, delivered during Bourse working hours, caused an immediate advance. But the market for fixed-interest securities has been dull, and average bond prices are no higher than in early March. Shares advanced considerably in the first half of 1935, but declined in the second half; and in the first two months of the new year recovered only a little. The recent average gain has been very considerable; indeed, about the biggest in any equivalent period of the past two years.

In view of the insecurity felt owing to the Abyssinian dispute, a satisfactory solution of which, it is here considered, has receded into the background, and of the confusion in the Locarno quarrel, there seems to have been no political reason for speculative optimism. It is true that for three years past those heavy industry concerns which benefit from re-armament have increasingly tempted speculators; indeed, in the moderate advance of the share market since 1932, the re-armament concerns, steel, motor, engineering and cement, played a disproportionately great rôle. Such shares might naturally get a new impulse from the prospect of fortifications in West Germany, and this they needed because a certain saturation in armaments orders had been reached before the Locarno coup. But the new advance of shares has not been primarily in the armaments group; indeed, steels, the chief armaments shares, have been relatively quiet. Investors and speculators have gone into other, hitherto neglected, groups; in particular, into certain public utilities and potash companies, and some textile shares have risen in spite of new complaints of a scarcity of raw materials. The tendency, indeed, is to buy the securities of solid companies without regard to the return on capital. At the same time, there has been a revival in real estate buying, and the prices of city apartment houses have consequently risen. These facts, and the simultaneous neglect of bonds and shares in banks and in other undertakings whose chief assets are mere Reichsmark currency, indicate that a new "flight into real values" is under way. This can only be attributed to the revived talk of mark

devaluation and to the attacks that are being made by prominent Nazis on Dr. Schacht's anti-devaluation policy.

The dividend prospects of German industrial companies are not very good. The capital investment law restricting dividend payments expired at the end of March, but the later loan stock law of December, 1934, remains in force. Under the former law those parts of declared dividends that might not be paid out to shareholders were payable into a loan stock managed by the company itself. Under the latter law undistributed dividends had to be deposited with the Gold Discount Bank, which formed therewith its own loan stock.

The question of the sale by the Reich of industrial and bank participations, acquired since the 1931 crisis, is discussed in Dr. Schacht's Press organ. This journal pronounces against the management of business concerns by bureaucrats, and adds that present policy aims at freeing business from dependence on State crutches; but it approves of State ownership in cases where mere management, and not risk-taking enterprise, is involved. Municipal conduct of business concerns is in general preferable to Reich conduct. The present private desire to acquire "real values" (for the reasons mentioned above) is a factor in State policy; for when undertakings founded with heavy financial sacrifices by the Reich during and after the war were sold to private interests, these interests acquired substantial real values in return for depreciated currency.

THREE YEARS' "RECOVERY"

The *Frankfurter Zeitung* has begun publication of the results of a private enquiry into the profit-earning capacity of industry. The movements of various important cost factors between 1932 (depth of the depression) and 1935 are given as follows:—

Prices of raw materials, +3 per cent.; prices of home-produced raw materials, +38 per cent.; imported raw materials, +13 per cent.; average hourly wage of men, -5 per cent.; payments for wages and salaries, +21 per cent.; social insurance contributions, +24 per cent.; interest rates on short credits, -20 per cent.; volume of bank credits taken, -25 per cent.; interest sum paid on credits, -39 per cent.; taxes paid, +58 per cent.; freight payments to railways corporation, +34 per cent.; industrial output, +64 per cent.; output of production goods, +113 per cent.; that of consumption goods, +14 per cent.; volume of exports of finished goods, +13 per cent.; prices of exports of finished goods, -35 per cent.; value of finished exports, -25 per cent.; prices of all finished goods, +1 per cent.; gross value of industrial output, +53 per cent.; profits, +23 per cent.

The partial return to profit-earning during the three years 1932-35 was mainly due to a decline of average production costs in consequence of fuller utilisation of plant. While the gross value of production, as shown above, increased 53 per cent., payments for wages and salaries increased only 21 per cent. Rationalisation made considerable progress, not so much in improvement of plant as in organisation, and the ratio of labour to output declined considerably. This phenomenon hardly agrees with the familiar statements, confirmed indirectly by many company reports, that large numbers of men for whom no work was available were forced into nominal employment by the official recovery campaign. The heavy decline in the interest burden of industry was due not only to reduction of rates but to increased self-financing by use of newly gained profits and by the realisation of stocks of goods. In general, profit-earning capacity remains lower than before the depression. Total profits earned in industry and trade were Rm. 12,000 millions in 1928, Rm. 6,000 millions in 1932, and Rm. 7,300 millions in 1935.

The number of unemployed declined in March by 578,000, as against a decline of 363,000 in March, 1935. The number of unemployed is now 1,937,000, against 2,402,000 in March, 1935. Retail turnover in February was 13 per cent. above that of February, 1935, and that of the department stores 3.1 per cent. above. Textile industry reports for March mention local shortages of raw materials; Bavaria complains that the supply of Brazilian cotton has ceased, and adds that the new fibre wool cannot be obtained. For the first quarter of 1936 the Steel Trust reports pig-iron output of 1,483,600 tons, against 1,436,200 tons in the preceding quarter. Ingot steel output was 1,534,500 tons, against 1,516,800 tons. The rapid expansion of steel output seems to have ceased.

The money market early last week was fed by repayment of Gold Discount Bank promissory notes, and the supply of money was abundant. Later the demand increased. The Reichsbank's return for April 7th showed a decline in credits of only Rm. 90 millions, although credits in the preceding week had risen by the large sum of Rm. 615 millions.

BERLIN, April 15.

HOLLAND

SHIPPING DEPRESSION

At the recent annual general meeting of the Netherlands Shipowners' Association the chairman gave a lucid exposition of the difficulties affecting the Netherlands Mercantile Marine. Operating costs in the Netherlands, he said, exceeded by far those applying in other maritime countries, and trading was in general only possible at a pronounced loss. The call for practical and vigorous Government support had therefore become very urgent. For 1935 some 8,200,000 guilders were voted for assistance to Dutch shipping, and for 1936 the sum of 8,000,000 guilders has been granted. The Netherlands Shipowners' Association has deemed it imperative to appeal to the Government that this assistance be increased by 4,000,000 guilders in view of the arrears which have accrued in the necessary writing off for depreciation of the fleet.

Apart from shipowning firms, the Dutch shipbuilding yards are passing through difficult times. Although the yards, generally speaking, happen to be well provided with work for the time being, orders in many cases are so unprofitable that they do not yield enough to permit of the necessary writing off. These circumstances have led to closer collaboration and the joint foundation of a new limited company, the object of which is to buy up and demolish superfluous and obsolete shipyards in and around the Rotterdam area.

INTERNATIONAL TEXTILE INDUSTRY IN THE NETHERLANDS

The establishment of a cotton textile industry in the Netherlands East Indies has been under discussion for some time, and investigations have been conducted into its possibilities. It is now reported that the establishment of an experimental weaving works is to be undertaken as soon as possible. Indies materials and services are to be used as far as possible for the building and equipment. It has also been decided to proceed with the founding of the N.V. Java Textiel Mij., which is to manage the experimental weaving establishment.

The Government of the Netherlands have decided to grant assistance amounting to about 4,000,000 guilders to coffee-growing in the Netherlands Indies, by means of a levy on all coffee imported for consumption in the Netherlands.

The Amsterdam foreign exchange market has quietened down again, and the rates of exchange are now following their normal course. All the same, the Amsterdam investment market remains depressed. It is hardly likely that this is attributable to the situation on the money market; for the latter has been more liquid than in the preceding quarter, as will be evident from the following table setting forth the average rates per cent. for prolongation funds:—

	1931	1932	1933	1934	1935	1936
January	1.596	2.341	1.000	1.000	1.000	2.331
February	1.0625	1.094	1.000	1.000	1.000	1.629
March	1.0443	1.048	1.1129	1.000	1.000	1.681
1st quarter	1.2342	1.725	1.039	1.033	1.000	1.879
April	1.5333	1.021	1.000	1.854	3.517	...
May	1.035	1.026	1.709	1.217	2.952	...
June	1.0025	1.000	2.008	1.000	3.582	...
2nd quarter	1.3939	1.019	1.574	1.357	3.284	...
July	1.4153	1.000	2.677	1.000	1.746	...
August	1.270	1.000	2.677	1.000	4.718	...
September	1.096	1.000	1.000	1.000	5.621	...
3rd quarter	1.954	1.000	2.111	1.000	4.348	...
October	3.065	1.000	1.000	1.000	5.008	...
November	1.758	1.000	1.000	1.000	3.008	...
December	1.0176	1.000	1.000	1.000	3.185	...
4th quarter	2.1797	1.000	1.000	1.000	3.733	...

The cause of the depression on the investment market has to be sought in the policy being pursued by the Government, the Bill dealing with permanent burdens of property owners, the constant increase in the floating debt, and so on. The state of the national debt on December 31st was as follows (in guilders):—

	1934	1935
Consolidated debt	2,700,305,850	2,705,648,400
Floating debt	661,997,053	753,374,505
Total	3,362,302,903	3,459,022,905

For amortisation 37,096,657 guilders were available in 1935, besides 24,024,000 guilders for redemption by drawing out. The interest due on the consolidated debt was 95,912,729 guilders in 1935, as compared with 111,290,618 guilders in 1934.

AMSTERDAM, April 10.

POLAND

"CONTROLLED DEMOCRACY"

THE first ordinary session of Parliament under the new Constitution, which assembled on December 5, 1935, adjourned on March 28th after voting the Budget estimates for the fiscal year which began on April 1st. These estimates provide for a total revenue of 2,221,289,440 zlotys and expenditure of 2,221,204,017 zlotys—without any borrowing and with provision for the service on all outstanding internal and external indebtedness.

The supposition that the new "No-Party" Parliament which was elected and/or appointed under an entirely novel electoral system would be completely subservient to the Government's will has not been realised. The Sejm on several occasions during the session now closed, and particularly in dealing with a private member's Bill for the abolition of ritual slaughtering of cattle, which raised questions of vital importance for Poland's 3,500,000 Jews, not only showed that it has a will of its own, but showed it in a manner that gave considerable encouragement to those who had feared that a nation steeped in the traditions of independence and democratic liberties had within a decade lost all respect for Parliamentary Government. The natural instinct of the Poles to drift into opposition has transformed a hand-picked Sejm into a lively debating society which showed no disposition at all to pass measures merely because the Government proposed them.

The Bill for the abolition of ritual slaughter was finally passed by a majority of only seven, with a Government amendment which will enable the Jews, in communities where they exceed 3 per cent. of the population, to continue to slaughter cattle in the manner prescribed by the ancient ritual, but only for their own consumption of meat. The 30,000,000 Gentiles will no longer be required to eat "Kosher" meat, and the Jewish monopoly over the nation's meat trade will be broken.

COLLECTIVE SECURITY—OR?

Polish scepticism of the value of the collective security system has been somewhat less in evidence since the return of Colonel Beck, the Foreign Minister, from his fortnight's visit to London in the middle of March, and it is surmised that he came back with the impression that the British Government's support of the collective system has greater realism and depth than many Poles suspected it of having six months ago. While it is not expressed in the newspapers, there nevertheless is a disposition here to resent the implications so frequently made in British political discussions of late that Great Britain is being called upon for a supreme act of altruism in guaranteeing everybody's security, and to suggest that "der Tag" might not be very far off when Great Britain herself would derive benefit from the armed support of a host of "small States"—or even from their neutrality. It would be very naïve to suppose that the ultimate aims of a Great Power would be to collect economic liabilities like Memel, Danzig or Austria, any more than that Signor Mussolini would be content to collect deserts.

The observation can safely be made that there would have been much less talk of Poland ultimately finding her way into a revisionist bloc, if the Poles had felt sure about Great Britain; and there would be none at all, if they were reasonably sure that the collective system would work promptly and effectively.

Two grave doubts appear at this moment to be uppermost in the Polish mind—first, can the collective system be made to work effectively against a Great Power? And, secondly, would it work quickly enough? Poland was much too close to the picture ever to forget that in 1917 a collective system which included the United States and Japan did not save Czarist Russia from revolution.

Whether the prevailing political confusion is the result of the economic crisis, or *vice versa*, is debatable. But it would be foolish to suppose that one problem could be solved without the other, and Poland is presumably not the only country which feels that the "money Powers" have not been playing the game—or playing it far too selfishly—during the past six years, and that Sir Samuel Hoare's declaration at Geneva last September, and the Locarno Powers' "peace proposals" of March 19th will have to be implemented in a broader sense than has perhaps yet been realised.

The official Polish attitude so far on the Locarno denunciation is that it is a matter for the Locarno Powers themselves to worry about, and not something to be deposited surreptitiously on the doorstep of the League. The Poles feel that there will be plenty of time for them to take stock of their own position after the Locarno Powers have made up their minds what they believe in, and what the depth of their conviction is.

Industrial recovery has been further retarded during the past month by a series of strikes which, in several centres, have led to disorders and shooting. There have been complaints that the police, and those directing them, have been unnecessarily harsh in dealing with strikers and unemployed demonstrators; but the authorities apparently feel that this is not a time to show weakness on the home front. Economic distress is very acute throughout Poland, and the Government's "new economic programme" is not making any noticeable headway, though the normal seasonal improvement is close at hand.

WARSAW, April 10.

FINLAND

FAVOURABLE BUDGET RESULTS

THE Budget accounts for 1935 have now been completed and show a favourable result. The principal figures, compared with the corresponding results for 1934 and 1933, are as follows:—

	1933	1934	1935
Revenue:—	Mill. mks.	Mill. mks.	Mill. mks.
Current revenue	2,872.6	3,366.9	3,482.2
Loans	200.0	503.6	860.0
Other capital revenue	227.9	265.2	217.1
Total	3,300.5	4,135.7	4,559.3
Expenditure:—			
Current expenditure	2,543.6	2,599.2	2,872.7
Redemption of loans	68.9	394.2	815.3
Other capital expenditure	634.7	1,107.3	845.4
Total	3,247.2	4,100.7	4,533.4
Surplus	53.3	35.0	25.9

Apart from the increase in both revenue and expenditure that was caused by the considerable conversion of loans, it will be seen that the current revenue and expenditure have increased, while the capital revenue and capital expenditure have been slightly reduced. In reality revenue was 85.9 million marks in excess of expenditure, but in accordance with the decision of the Government 60.0 millions of the surplus were transferred to the Budget Equalisation Fund, so that the final surplus, according to the finance accounts, is 25.9 millions. A slight seasonal tightening of the money market has been felt, though the dominating tone of unusual easiness has not been affected.

The combined credits granted by the joint stock banks and the Bank of Finland increased in January and February by 217.0 million marks in comparison with 180.0 millions during the same months of 1935. Deposits in the joint stock banks, savings banks and other credit institutions grew by slightly over 200 million marks, i.e. by about the same amount as last year.

Between January 1st and March 23rd the Bank of Finland increased its gold reserve from 472.0 to 501.3 million marks, and its reserve of foreign currency from 1,266.9 to 1,292.5 millions. Grants of credit increased from 781.9 to 990.2 millions. As the notes in circulation have, as usual, increased appreciably since January, the note reserve has fallen off from 861.0 at the end of last year to 779.1 millions. These are seasonal movements due to intensive lumber work in the forests.

INCREASED IMPORTS AND EXPORTS

Foreign trade was very lively during the first months of the year. Imports for January and February amounted to 832 million marks, against only 637 millions last year; and exports to 798 million marks, against 653 millions. The heavy imports are partly explained by the fact that the duty on sugar, rye and wheat was reduced at the beginning of this year, so that the import of considerable quantities of these commodities was postponed from December to January. There were also considerable imports of metals and metal goods, machinery and apparatus, means of transport, spinning materials and other classes of goods. The increase in exports is due to the shipments of plywood, mechanical and chemical pulp and paper having been larger than in any previous year.

In January and February there was an import surplus of 34 million marks, compared with an export surplus of 16 millions last year.

HELSINKI, April 1.

TURKEY

THE DARDANELLES

THE remilitarisation of the Rhineland has encouraged the Turks to hope for the remilitarisation of the Dardanelles. But there is no official desire to force the issue. Nevertheless, the anomaly of the present situation has only been emphasised by Hitler's action in similar circumstances. The Turks see that all the demilitarisation clauses are going everywhere, and they naturally demand that the demilitarisation handicap to their own national defence on the Dardanelles and the Bosphorus should go too. But they still hope that the common sense of the European nations will concede this shortly, rather than that they should be forced to take unilateral action.

At the moment, though Premier Ismed has stated that war scares do not concern Turkey very closely, the Government is taking every precaution to improve the national defences. The prolongation of the Russo-Turk Treaty for another ten years, bringing its duration up to 25 years, is both a defensive measure for peace and a pledge of further economic collaboration. It will probably mean that the second "five-year plan" now being devised—the first has been completed well under time—will tend to lean on Russia as much as the first did.

The Government's eye is partly on economics and partly on defence in most of its enterprises, and not least in its new railroad construction. The Premier has just opened a further section of line from Afyon towards Adalia, the southern port on the Mediterranean, which is expected to be reached after June next. This is the most important strategic addition yet made to Anatolian communications. Some 2,494 kilometres of new railway have now been built by the Republic.

There is an increase in the Budget estimates, just submitted, amounting to £1.11,880,000, and bringing the total expenditure up to close on £1.217 millions, which is not far from the 1929-30 record of £1.220 millions. Since the slump year of 1932-33 there has been a steady rise of £1.48 millions in the Budget estimates, and the Budgets have been kept balanced progressively.

Half the present increase is going to defence. Particular attention is being given to the development of the air arm, and the special air tax is expected to bring in £1.3½ millions. None of the crisis taxes are remitted or lessened, but there is no tax increase. Returns from business profits are calculated at a fast-augmenting rate.

ISTANBUL, April 11.

LETTER TO THE EDITOR

SELECTIVE RAILWAY ELECTRIFICATION

TO THE EDITOR OF THE ECONOMIST

SIR,—Prevailing low rates of interest afford a favourable opportunity for large-scale railway electrification. Despite the detailed findings of the Weir Committee on this subject, there is one aspect which does not appear to have been adequately considered.

Traffic densities on British main lines are already high enough to justify electrification in the majority of cases. They might be made even higher by suitable reorganisation. The optimistic expectations of a former generation have left the traffic split up over two or more competing lines between almost all our leading cities. Is there any reason why it should not be concentrated on a single electrified route? Under such a régime, only a light service of semi-expresses, plus existing local trains, would be required for intermediate towns on the lines whence long-distance traffic had been diverted.

Such a system would be adaptable to all conditions. Along the less densely worked sections, the necessary quota could be made up by passenger and goods trains. On the other hand, wherever it was desired to reserve the electrified tracks for an intensified passenger service, the goods traffic could be afforded a comparatively clear passage on the unconverted routes. Such segregation of traffic would be cheap and expedite this movement of freight, quite apart from the question of electrification. The pooling arrangements now in operation between the following companies would make it easy to carry into effect.

Many schemes of reorganisation might be suggested. I, personally, for several reasons, favour the plan suggested on the enclosed sketch-map. By the conversion of only some seven hundred and fifty double track miles:

(1) It would bring the electrified services to all the most populous centres of the North.

(2) It would enable full advantage to be taken of the beautifully-engineered curves and gradients of the Euston line, to which traffic could be diverted from as many as four competing routes. A careful analysis of pre-grouping statistics suggests that between Euston and Rugby electrification could be extended to all four tracks. There would almost certainly be sufficient traffic on this section to provide a saturation density of 10,000,000 trailing ton miles per track mile per annum for the goods lines—equivalent to a financial return of over 12 per cent. on the outlay—with a substantial overflow for the passenger tracks during quiet hours.

(3) It would place Birmingham on the main line from London to Crewe and the great cities beyond.

(4) It would afford maximum facilities for segregation of fast and slow traffic in the South or for cumulation in the North, where the severe gradients strongly favour electrification.

(5) Communications in the Midlands would be greatly improved by the convergence of long-distance services at Rugby.

(6) Towns off the electrified routes would enjoy ample communication therewith by means of branch lines.

(7) 100 m.p.h. services would be perfectly feasible with electric haulage.

(8) Trains from the North could be run into South London termini (via Kensington/Addison Road), or straight on to the South Coast if desired. Brighton could be made a suburb of the Midlands.

Such a scheme would be sound in the narrowest business sense. But it would bring benefits to the community over and above its return to railway stockholders. Incidentally, if the railway companies were to buy up land in the neighbourhood of their tracks, they might finance an appreciable part of the cost out of the increased land values alone.

If the companies are not in a position to carry out such a plan as I have outlined, I strongly suggest that the whole matter be investigated by a special committee, including representatives of the Government, the iron, electrical, and other interests concerned, and railway users. At all events, let us be spared the piecemeal planning that has cost the community so dear in the past.

I am, Sir,

Yours faithfully,

K. H. JOHNSTON.

99 Clifton Road,
S.E. 25.

March, 1936.

[We discuss Mr Johnston's suggestions in a leading article on page 120, on which page the map is also reproduced.—ED., *Econ.*]

BOOKS AND PUBLICATIONS

WICKSELL'S MONETARY THEORIES

THE appearance nearly two years ago of an English translation of the first volume of Wicksell's "Lectures on Political Economy" made accessible to students of economics in this country what is perhaps the best advanced text-book on pure economic theory so far written.

The publication in recent months of both the second volume of these lectures and Wicksell's earlier celebrated work "Interest and Prices" now makes possible for all a first-hand study of the monetary doctrines of the great Swedish economist.*

These two books are similar in character and cover much the same ground. As a text-book, neither achieves the standard of Volume I of the lectures. Because during the last thirty years monetary institutions have changed and popular interest shifted, part of the discussion inevitably dates. For example, the treatment of credit as the velocity of cash seems to-day a little pedantic. But though as text-books their value is limited, for other reasons they are indispensable. The second half of "Interest and Prices" contains the detailed exposition of

the doctrine of "money" and "natural" rates of interest which was to exercise such a profound influence on the development of monetary theory; the last chapters of the lectures include the modified, refined and shortened version which Wicksell later preferred.

The doctrine was developed by Wicksell as a solution to the long-standing controversy between the "currency" and "banking" schools and about the relation between banking policy and the price level. Wicksell agreed with Ricardo that easier credit conditions led to higher prices, and restricted credit to lower prices. But he was also impressed with the argument of the banking school that in actual fact rising prices were associated with higher interest rates and falling prices with lower interest rates. The solution to this paradox, Wicksell suggested, lay through the notion of the "natural" rate of interest. It was not the absolute movements of the money rates of interest which mattered but the relation of the money rate to the natural rate. If the money rate were below the natural rate, prices would rise; if it were above the natural rate, prices would fall. Thus a rise in the natural rate while the money rate was unchanged would cause prices to rise, and they would continue to rise so long as a difference between the two rates existed. This was the explanation of the coincidence of rising prices and rising interest rates.

The difficulty in the theory lies, of course, in the definition of the term "natural rate"—and here Wicksell was

ar from clear. In "Interest and Prices" he wrote:—

There is a certain rate of interest on loans which is neutral in respect to commodity prices and tends neither to raise nor to lower them. This is necessarily the same as the rate of interest which could be determined by supply and demand if no use were made of money and all lending were effected in the form of real capital goods.

But in the lectures he put it differently:—

The rate of interest at which the demand for loan capital and the supply of savings exactly agree, and which more or less corresponds to the expected yield on the newly created capital, will then be the normal or natural rate.

This lack of clarity has often been criticised by later writers. In particular, it has been pointed out that a rate which equates saving and investment would not be a rate which stabilised prices if output were increasing. It seems probable that Wicksell started with a conviction of the need for a stable standard of value and so believed that the conditions of monetary equilibrium which he afterwards discovered must somehow or other involve stable prices too.

Be that as it may, the significance of Wicksell's work for modern monetary theory is clear enough. The theory of savings and investment put forward by Mr Keynes in the Treatise on Money bears a close resemblance to Wicksell, as Mr Keynes, indeed, points out. Professor Mises and Professor Hayek, working on different lines and reaching different conclusions from Mr Keynes, also base much of their work on Wicksell. He is thus the progenitor of the two rival approaches to monetary problems most prominent to-day.

Professor Ohlin, in his exceedingly interesting introduction to "Interest and Prices," tells us something of the development of monetary theory in Sweden in recent years. It is to be hoped that before long some part of the work of the successors of Wicksell will also be available in English.

SHORTER NOTICE

Before the War: Studies in Diplomacy. By G. P. Gooch. Vol. I: The Grouping of the Powers. Longmans. 438 pages. 10s.

Among the historians who are occupying themselves with the study of the origins of the war, now that the archives of all the great European Powers except Italy have been opened, Dr. Gooch has a place all his own. There is no sign of his taking sides, and one has correspondingly all the more confidence in his judgments. What is equally remarkable is that he does not hesitate to make judgments, and they are as clear as they are compelling.

Dr. Gooch studies the diplomacy of the pre-war period through the minds and careers of the leading Foreign Ministers who were concerned with it. In this volume he gives us studies of Lansdowne, Delcassé, Bülow, Isvolsky and Aerenthal. In a second volume he promises to complete the picture with studies of Grey, Poincaré, Bethmann-Hollweg, Sazonoff and Berchtold. It may be said that the scheme is a complete, a surprising, success. It makes diplomatic history, ordinarily so insufferably dull, into live and interesting reading. There is not so much overlapping as might be expected, and what there is, is useful as enabling one to see complex issues and negotiations from more than one point of view.

Though all the studies are of equally high merit, that on Lansdowne, in any case of greatest interest to the English reader, is of outstanding importance. It gives the impression of covering original ground. It is hardly yet realised that Lansdowne's period at the Foreign Office was one of tremendous importance to this country. One hears so much more of Grey, very naturally, but it was in Lansdowne's time that the decisions were taken to depart from the long reign of isolation and to enter, with the Anglo-Japanese Alliance and the Anglo-Franco-Russian Entente, into the grouping of the Powers which preceded the war.

Next in interest and importance comes the full-length study devoted to Delcassé, whose period of office covered an almost equivalent change in his country's policy. The studies of Bülow and Isvolsky, though no less good, are of less interest for the reason that, owing to the publication of Bülow's Memoirs, the ground has been somewhat more traversed before. Dr. Gooch has, what may seem impossible, a sympathetic treatment of both Isvolsky and Aerenthal; it is clear that Bülow earns his disapproval, while Lansdowne emerges with the highest marks of them all.

MONEY AND BANKING

INDIAN BANKING TRENDS

THE end of March witnessed the first birthday of the Indian Reserve Bank. Thus, it is of interest to examine the Indian banking position. Broadly speaking, the New Reserve Bank has taken over the note-issuing functions formerly executed by the Paper Currency Reserve, and has also assumed the purely central banking functions of the Imperial Bank, such as the custody of public funds and the granting of Ways and Means advances to the Government. The two institutions, however, are working in close and cordial co-operation with each other, and in many centres where the Reserve Bank has not yet opened a branch, the Imperial Bank acts as its agent, conducting Government Treasury business on behalf of the Reserve Bank. The Imperial Bank, on the other hand, now finds itself free to undertake purely banking business, and while it will continue to concentrate upon financing home trade, it is also opening Trustee Departments and undertaking foreign exchange business.

The following table illustrates the progress of the Reserve Bank during the past year:—

RESERVE BANK OF INDIA RETURNS
(In crores of rupees)

	April 5, 1935	June 28, 1935	Sept. 27, 1935	Dec. 27, 1935	April 3, 1936
Liabilities					
Note circulation	167.0	162.4	156.3	172.1	169.8
Deposits—					
Government	18.4	22.3	13.4	7.1	7.9
Other	7.8	17.1	35.8	28.2	35.1
Assets					
Gold	44.4	44.4	44.4	44.4	44.4
Rupee coin	49.9	51.9	58.1	57.2	59.8
Balances abroad	11.9	18.3	15.8	18.0	22.4
Sterling securities	48.6	53.2	66.2	66.2	67.3
Indian Government rupee securities	43.1	38.5	25.5	25.5	24.4
Investments	5.0	6.0	5.4	5.2	5.1

The note circulation shows little change, and the fall in Government deposits may be fortuitous. Other deposits consist almost entirely of bankers' deposits. Under the terms of the governing Act, Indian Banks have to maintain minimum balances with the Reserve Bank, and these were duly established by the statutory date, July 1, 1935. One at least of the Exchange Bank chairmen suggested that this requirement might impair the profits of the commercial banks in times when a good rate could be earned on call or short loans, but there is so far no evidence of any increase in the total cash held by the Exchange Banks since the foundation of the Reserve Bank. All that has happened is a change in the composition of that cash.

On the assets side of the returns the main tendency has been to dispose of rupee securities, replacing them partly by rupee coins, but mainly by sterling balances and sterling securities. At present the note circulation has a gold backing of 26.2 per cent., while sterling balances and securities, which in practice are held by the Issue Department, provide a further 52.8 per cent. of cover. Thus for all practical purposes India is on a sterling standard.

It is very difficult to form a picture of the internal Indian banking position, for so much of the credit facilities required by the agricultural districts are supplied by the countless horde of indigenous bankers who employ their own resources and are entirely outside the main banking system. The Eastern Exchange Banks have their own local connections and branches in some centres, while the Imperial Bank has over 150 offices situated in practically every important town in India. Still, these only touch the fringe of the internal credit position, and little can be deduced except from the general trend of trade and prices. Here the Exchange Bank chairmen have recently spoken hopefully, although some of them rightly insist that the high tariff continues to lay a heavy burden upon the peasant classes.

The position of the Exchange Banks has not been entirely easy. Some own branches in Hongkong and China, and here the devaluation of these currencies has

affected the sterling value of their resources. The rupee itself has remained as steady as a rock. The merchandise export surplus was Rs. 25 crores in 1935, or the same as in 1934, while in 1935 there were also gold exports of Rs. 44 crores and silver exports of Rs. 3 crores. These were sufficient to cover India's external commitments, and the Reserve Bank's returns show how India's sterling resources have increased. The difficulties of the Exchange Banks have arisen from other causes. During all the year Bombay short-term rates were low, and in the latter part of 1935 there was practically no demand for short money; for the banks naturally refused to give any assistance to the "bull" movement in silver, which collapsed at the end of the year. Again, India has lately succeeded in converting part of her National Debt, and this has affected the income of the banks in common with that of other *rentiers*. Finally, the general restriction of world trade has reduced the volume of foreign exchange business, while the Imperial Bank is now appearing as a new competitor. Hence dealings in foreign exchange have been on a very competitive basis, leaving a very narrow margin of profit.

Nevertheless, as the following table shows, the profits of the Exchange Banks have been fairly well maintained:—

INDIAN BANKS' PROFIT AND LOSS ACCOUNTS
(£000's omitted)

	Year	Net Profits	Dividends	Contingencies	Pension Funds	Premises	Other* Allocations
Chartered Bank of India, Australia and China	1934 1935	466 499	420 420	50 ...	25 50	...	29 4
The Eastern Bank	1934 1935	130 125	90† 60	40 30	...	25	10
The Mercantile Bank of India	1934 1935	173 174	63 63	25 25	12 12	10 10	63 64
The National Bank of India	1934 1935	460 458	360 360	50 50	50 50	...	2 ...
P. and O. Banking Corporation	1934 1935	112 113	105 105	...	...	5	7 3

* Includes any change in amount carried forward.
† Includes "jubilee" bonus of £30,000.

Three of the five banks have recorded an increase, while the decline in the profits of the remaining banks is not at all serious. The Hongkong and Shanghai Banking Corporation is excluded from the table, as its activities largely lie further East than India. The dividends of the more purely Indian banks were maintained, except that the Eastern Bank has naturally not repeated its 1934 jubilee bonus. Allocations to contingencies are in most cases either unchanged or reduced, which is another good sign. Still, the chairmen of these banks only paid a well-merited tribute when they ascribed the maintenance of these profits to the unremitting care of their staffs.

The final table summarises the balance sheets of the Exchange Banks:—

INDIAN BANKS' BALANCE SHEETS
(£ millions)

		De- posits	Bills and Loans payable	Ac- cept- ances	Cash	Invest- ments	Bills receiv- able	Ad- vances
The Chartered Bank of India, Australia and China.	1934 1935	46.5 46.0	5.4 3.7	0.9 0.6	7.8 5.3	19.6 21.7	9.6 8.9	21.6 21.1
The Eastern Bank.	1934 1935	6.5 6.8	1.8 1.3	0.8 0.8	1.2 1.2	5.6 5.6	0.7 0.5	2.2 2.3
The Mercantile Bank of India.	1934 1935	13.0 13.9	0.5 0.5	0.2 0.2	1.8 2.0	6.1 6.7	1.8 2.2	5.9 5.1
The National Bank of India.	1934 1935	28.7 28.4	0.8 0.7	0.4 0.4	4.1 4.6	14.6 14.8	4.3 4.4	10.5 10.3
The P. and O. Banking Corporation.	1934 1935	6.4 7.2	5.2 5.9	0.1 0.1	2.0 1.8	6.8 5.4	2.1 3.7	2.7 3.1

On the whole, there are few definite changes to be found in the balance sheets. The real point is that these great

banks came into existence many years ago, to perform definite functions, namely, that of financing India's internal trade and also that of helping India to tap the world's available supplies of capital. They did this at a time when India's internal banking system was imperfectly developed and when the relations of the rupee to gold and sterling had by no means reached their present state of stability. India is now better able to fend for herself, while simultaneously international trade and finance have fallen to a low ebb. Further East, the Chinese dollar has been devalued and divorced from silver, and the banks are waiting to see if China can combine a managed currency with a precarious budget, dwindling revenue, and external pressure and unsettlement in the North. Hongkong, too, is playing a waiting game, for she cannot re-value her own dollar until she sees what happens to the Chinese dollar. Nevertheless, these difficulties should prove temporary, and there is still scope for a banking system whose function it is to link India with the outside world. Even though current conditions may not be easy, fresh assurance is gained from the fact that that banking system is in strong and capable hands.

FINANCIAL NOTES

The Money Market.—Wednesday witnessed a big turnover of funds. The outstanding £44.0 millions of 3 per cent. Treasury bonds were repaid, while there was a 55 per cent. call on the new Australian 3 per cent. stock off-set by the redemption of 5 per cent. New South Wales stock. On balance the Australian banks had to call some of their loans to finance these last two operations, and the Bank return suggests that the British Government had to borrow on Ways and Means to cover the Treasury bond repayments. Hence money has remained fairly comfortable all the week, but on Wednesday the clearing banks noticed a fair demand for loans.

	Mar. 26, 1936	Apr. 2, 1936	Apr. 8, 1936	Apr. 16, 1936

Short loan rate:—				
Clearing banks	1½-1*	1½-1*	1½-1*	1½-1*
Others	1½	1½	1½	1½
Discount rates:—				
Treasury bills	1½-1½	1½-1½	1½-1½	1½-1½
Three months' bank bills	1½-1½	1½-1½	1½-1½	1½-1½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

Last week's Treasury bill tender rate was 10s. 7.13d. per cent., and the banks this week have been ready buyers of Treasury bills maturing in May, June and early July, at their minimum buying rate of ½ per cent.; £45.0 millions of bills were allotted against maturities of £35 millions, so that the tender issue has risen from £498 to £508 millions. The low point for the year was £493 millions, on April 4th. Meanwhile, the payment of the final call on the 2½ per cent. Funding Loan on April 3rd is reflected in a steep drop in tap issues of Treasury bills from £265 to £197 millions. This looks as if part of the call has been paid from "inside." The Bank return, however, suggests that some at least of the maturing Treasury bonds were held "outside," so that apparently the Government and Public Departments have lost money on balance. Next week's floating debt statement will be unusually interesting, as it will reflect this week's repayment.

The Bank Return.—Easter currency withdrawals have raised the note circulation to £421.9 millions, but this figure is just below last Christmas' record. The Bank has continued to buy gold to offset the expansion in the note circulation, and £514,000 was bought on Thursday in addition to the acquisitions shown in the latest return. Nevertheless, the Reserve has fallen to £40.5 millions and the proportion to 26.7 per cent.

Proportion	40.7%	39.6%	32.2%	28.9%	26.7%

This week Government securities have risen by £11.5 millions. As Monday was a holiday, there were two days' Treasury bill maturities to be met on Tuesday against only one day's payment, so that on Wednesday evening the Government must have been short of funds. The authorities also had to cover Wednesday's Treasury bond repayments, so that they may well have had to borrow on Ways and Means. The release of these funds is reflected in an expansion of £10.5 millions in bankers' deposits, which more than offsets the effects of the previous week's currency withdrawals.

The Foreign Exchanges.—The London market has had a quiet week. The British Control continued to support the franc until mid-day on Thursday, when it found itself out-bid by the French authorities. The spot rate has been a shade under Frs. 75, with three months' francs at Frs. 3½ discount, or 17 per cent. per annum. The Paris-New-York cross-rate has been held by the French at just inside the export gold point, being Frs. 15.17½ on Thursday. Three months' guilders have strengthened to 6 cents discount, or under 4 per cent., and three months' Swiss francs to 16 centimes discount, or about 4 per cent. Spot dollars have been \$4.94½, and three months' dollars were offered at ½ cent premium. Following gold losses of Frs. 1,670 millions for the week ended April 3rd, the Banque de France reports losses of Frs. 950 millions for the week ended April 10th. The current week's losses may be between Frs. 800 and 1,000 millions. During the fortnight ended April 10th, rediscounts increased by Frs. 1,500 millions, while the note circulation rose by Frs. 635 millions. It is fairly certain that the French Treasury is seeking to raise a credit for Frs. 1,000 millions in Amsterdam, which suggests that the issue of Frs. 6,000 Treasury bills recently authorised is proving insufficient to carry the Treasury over the elections. Money is very easy in Holland, and there would be no technical difficulties in placing the credit. The authority of the Dutch Government, however, is needed, and it appears that Holland is anxious to secure certain commercial concessions from France in return for the loan. Hence the credit has not yet been definitely arranged, nor have we any knowledge of the proposed terms.

THE STOCK EXCHANGE

INVESTMENT TRUST PROSPECTS

Of the making of fixed trusts and their flexible successors there is, as yet, no end. A lusty infant favoured with good market conditions has become something of a prodigy. It refused, at first, to acknowledge its parentage; for the older investment trusts had half a century's experience of diversification of risks. To-day there is recognition, not least grudging from fixed trust managements, that fixity is inimical to successful long-period investment. An examination of recent managed investment trust trends may, therefore, be the more opportune.

The managed trusts have had less than their usual share of the limelight during the market recovery, but progress has been steady, measured by capital values and ordinary share earnings. During the past twelve months representative investment trust stocks, as measured by the Actuaries' Investment Index, have appreciated by about 15 per cent. According to our own records, the net revenues of 72 investment trusts whose reports were published during the first quarter of the year increased by 13.2 per cent. from £3,065,830 for 1934-35 to £3,470,180 during the latest year. This is a sensible improvement, but one which is no better than the average for the 560 companies reporting in the first quarter of the year, which are discussed in a leading article on page 117. The average return on the ordinary capital of these 72 trusts was 4.7 per cent., against 4.4 per cent. on a comparable though not identical group reporting twelve months earlier.

These are obvious marks of recovery, but so far the high-gear capitalisation of the investment trusts has not decisively affected equity earnings and dividends. Few investment trust stockholders, however, can reasonably hope for a return to the 1929 earnings levels. The intervening years have been littered by defaulted bonds. The consequences have been particularly severe for trusts whose

funds were so placed as to show the utmost geographical diversification in Europe and South America. The theoretical advantages of universal—as opposed to selective—geographical diversification have not withstood the test of a world depression followed by regional recovery.

Low interest rates, which have prevailed for nearly four years, have saddled the trusts with two further problems. Large-scale conversion of Government and industrial fixed-interest securities has effected a permanent reduction in investment trust incomes, unaccompanied in most cases by equivalent economies for the trusts themselves, since opportunities for converting their own debentures have been infrequent. The same factor has limited their opportunities to "switch" and has involved crucial decisions regarding the future maintenance of capital values. Add to these problems the despondent position of the Argentine railway companies, in which many pre-war trusts are largely interested, and the arguments against a resumption of 1929 earnings are conclusive.

What of the credit side of the account? The time-lag factor, obviously, is still working in favour of the trusts. If we compute that, on the average, payment of ordinary dividends occurs about nine months after the profits were earned, a further waiting period averaging somewhat over six months is involved before they are re-distributed to the investment trust stockholder. During 1935 the general increase in industrial profits was approximately 16 per cent. During the first three months of the current year a further increase of 13.3 per cent. was recorded, and the fruits of these profits will not, in the majority of cases, be included in investment trust dividends until 1937.

Meanwhile, the general rise in security values has effected considerable improvement in the capital position of the trusts. Where capitalisations are highly geared a compara-

tively small improvement in the market value of the portfolio can have a greatly magnified effect on the "break-up" value of the ordinary stock. This "leverage," however, is not a market factor of prime importance in London, and only rarely forms the pretext for market activity in a particular stock. Every increase in the market values, however, may reduce the incentive to provide larger capital reserves.

The accompanying analysis of changes in investments and break-up values during the past two years shows a number of significant movements. It may be regarded as a modest supplement to the detailed survey on investment trusts which was published with the *Economist* of December 1, 1934. The movements broadly illustrate the effects of "switching," but where the analyses are based on market values, natural changes in percentages result which are not due to re-distribution of investments. Distributions specifically stated to be based on valuation are shown in italics. The importance of this factor is clear when comparing the latest figures of the British and German Trust with those of the previous year.

The fairly consistent movement out of fixed interest stocks during the past three years is most marked among such Scottish trusts as Scottish Western and Caledonian. Re-investment, however, has not been exclusively directed to equity shares. Many of the trusts show a fairly considerable increase in preference share holdings, tempering their expectations of higher income with a margin of security to ensure the "cover" for their own prior charges. Thus, the Metropolitan Trust, whose holdings have always been weighted with prior charges, has made some exchanges between fixed interest and preference securities, leaving the equity portfolio little altered. Similar movements are shown by the London Border and General, which has more actively followed equity share investment. In most cases, however, the proportion of ordinary shares has increased considerably during the period. Scottish Northern now holds over three-quarters of its portfolio in ordinary shares, largely of an industrial character. The table suggests that progressive equity share markets have held definite though limited attractions for the trusts.

The second section of the analysis, by geographical divisions, brings evidence of the reduction in European holdings, largely represented by German issues. A movement from Central and South American investments has also occurred, while investments in Great Britain and the Empire have shown a modest increase. The limited nature of the movement into an area which has shown the most convincing recovery from depression may be attributed to the low yield basis on which ordinary shares have been valued for some time in London. A management trust seeking to increase current income has limited scope for purchasing high-grade ordinary shares which may discount prospects for twelve or even twenty-four months ahead.

America, quite obviously, has provided the main attraction to the trusts during the past two years. "Roosevelt's second bull market" explains the increase of over 10 per cent. in the dollar holdings of London Border and General, and London and Clydesdale. Some Scottish trusts, like Scottish Northern Investment, have remained faithful to Great Britain and the Empire; but there has always been a tendency, north of the Border, to take a larger interest in the United States. A rough sample reveals five Scottish trusts, in addition to those in the table, whose American holdings amount to more than 20 per cent. They include London and Holyrood (24.3); Scottish Investment (27.5); Second Scottish Investment (27.9); Second Clydesdale (23.2); and Third Caledonian (25.8). American recovery is in good swing, and may have gathered sufficient momentum to take the obstacles of a Presidential year in its stride. For the British holder, however, the dividend tax proposals announced four weeks ago might well involve serious delays in the receipt of part of their dividend income if they were eventually put into effect. The outcome of the proposals in Washington deserves careful attention from the British investor.

The third classification by public authorities and industries reveals that the fall in Government and municipal securities resulting from the reduction of foreign holdings and some modest sales of gilt-edged stocks have found their reflection in the industrial and utility totals. The

McN 609/1

steady fall in rail and transport stocks may be attributed to realisation of overseas rail stocks rather than British issues, which on balance—though not perhaps recently—may well have been increased during the past two years.

"Management" is a relative term, and is hardly to be judged by the trend of percentages during a mere two years. It involves decisions to leave investments undisturbed, as well as to "switch." Each exchange of investments must be such as to strengthen the portfolio; and the recurrent problem of current yield *versus* future prospects is continually involved. For these reasons investors would be wise to draw cautious inferences about effectiveness of management from the investment classifications. A more ready indicator, possibly, is provided by the steady improvement in break-up values which is shown in the tables, after making allowance for the gearing factor already discussed. At the end of 1933 five of the eleven trusts were unable to cover part or all of their equity capital. At the end of 1935 only one trust, in addition to the unhappy British and German Trust, still recorded a shortfall. And in such cases as United States and General, and Scottish Northern (which has £300,000 ordinary capital and £1,049,000 of fixed interest capital) the increase in assets "cover" has been spectacular.

A further recovery of investment trust fortunes is to be anticipated during the next twelve months, if world conditions prove favourable. The factors analysed in this article suggest, however, that it should prove as expansive—but no more so—than the recovery which has already occurred. At this stage of world recovery, investment trusts can but lament that the effects of highly-g geared capital structures, which involved them in difficulties during the slump, have brought only slight countervailing benefits after four years of progress from the trough of depression.

INVESTMENT NOTES

New Flexible Unit Trusts.—Three new trusts with different degrees of flexibility have recently appeared, which extend the activities of the unit trust movement into new fields. One is interested in general industrials, another specialises in aviation and associated issues, on the expectation of vastly increased expenditure on military, and eventually on commercial aircraft, and the third in the electrical industries. Allied Investors Fixed Trusts are managers of the Electrical Industries Trust, which has power to invest in the stocks and shares of 41 electrical manufacturing and supply companies which include, in addition to English and Scottish companies, Palestine Electric, Perak River, and Victoria Fall and Transvaal Power. Outside the listed companies, funds can only be invested in Trustee Securities. The trust is cumulative, with the right to distribute regularly recurring capital bonuses, and is formed for an initial period of 20 years. The initial fund is divided into 10,000 units, and may be expanded. The loading charge is 5½ per cent. plus ½ of 1 per cent. per annum on mean market value of the funds. The trustees are the General Accident Fire and Life Assurance Corporation. The Aviation and Universal Investment Trust has taken power to invest in some 68 companies

* Not shown separately.

† Includes shipping.

engaged in all branches of the aviation industry, but the managers are apparently empowered to transfer "as much of the funds as they consider advisable" (subject to limits on individual investments) to any "other securities" quoted in the official or unofficial daily lists of the London Stock Exchange. This provision apparently allows complete freedom to the management in investment policy. The Trust is cumulative and the service charge is "approximately 5 per cent.," plus an annual charge of $\frac{1}{2}$ d. per unit over its ten-year life. The trustees may be empowered to form a dividend equalising reserve fund, and nearly half of the service charge on the first million units is to be devoted to a special management reserve fund. The third trust, Keystone Flexible Certificates, has an "A" panel of 20 industrial and miscellaneous companies, and an alternative "B" panel of over 150 industrials, and the maximum number of sub-units is limited to 3,000,000. The life of the Trust is 15 years and the service charge is $7\frac{1}{2}$ per cent., added to cost. Bonus shares received by the Trust and considered as income will be distributed, but if considered as capital may be added to the trust or sold and the proceeds reinvested.

Insurance Share Index.—The further progress registered by our insurance share index, which ended the first quarter at 4,952—a new high level—compared with 4,811 at the end of 1935, proves, on inspection, to have been rather more irregular in comparison with the broad recovery of the previous quarter. The following table shows the course of the twenty-four component shares, assuming an original investment of £1,000 in 1913 in each case, and that all rights have been applied to purchasing an equivalent holding in the original shares:—

(1913 = 1,000 throughout)

Average	3,406	2,840	4,025	4,497	4,379	4,811	4,952

The table shows that in fifteen cases the component index numbers registered an advance, most remarkable in the case of Equity and Law, which appreciated by over 20 per cent. Where values declined, however, the recession was generally of small dimensions.

Tin Shares and Market Factors.—Since the International Tin Committee reduced export quotas for the second quarter of this year by 5 per cent. (a policy criticised in the *Economist* of February 29th, page 482) few significant movements either in tin prices or in share quotations have occurred. Developments in the tin market during this interval, however, have again focussed critical attention on the working of the present restriction scheme and the current policy of the controlling Committee. Despite the existence of a 90 per cent. quota for the first quarter of the year, world visible supplies at the end of March showed an increase of less than 1,000 tons over the February figure. On the supply side the chief factor responsible for this continued deficiency of available reserves is the failure of Bolivia to produce up to the level of her permissible quota.

Bolivian output in February, in fact, amounted to no more than 50 per cent. of her standard tonnage against an allowable 90 per cent., and the short-fall of the country to date is no less than 6,000 tons. Opinion is divided whether the deficiency is due to a shortage of labour and the impairment of mine equipment as a result of the Chaco war, or a deliberate curtailment of supplies pending the more favourable exchange agreement recently concluded between the Government and the Bolivian companies. There is, in either event, some force in the view that a time limit should be imposed on the validity of unused quotas, and that arrangements should be made for sharing the output of any participant unable to produce its allotted amount among other members more fortunately placed. On the demand side, a contributory cause of the current stringency has been the unexpectedly large volume of Continental demand, especially from Russia. But sudden and substantial variations in demand have always been characteristic of the tin market and recent movements merely emphasise the necessity of an ample visible supply to meet all contingencies. In addition, the need for a workable arrangement which would permit a more rapid expansion of output in response to a change in the export quota has also been amply demonstrated. At present, reserves of ore and concentrates which tin companies in British areas are allowed to keep at the mine-head are rigidly limited, and the interval between an expansion in permissible output and the appearance of new supplies on the market amounts in all to over two months. The suggestion that the mines should be allowed to keep in reserve about four months' supply of concentrates would increase the flexibility of the control to a marked extent, and enable fluctuations in demand to be met promptly. For investors in tin shares, however, the lesson of experience since last summer, underlined by the events of the past two months, suggests that no permanent stability in the tin market is to be expected while production is subordinated to the maintenance of price levels sufficiently high to permit the most expensive producers to operate profitably. High prices, higher costs, and curtailed output give no advantage to the low cost producers.

The Royal Mail House Sale.—At the end of last week R.M. Realisation shares bounded up several shillings on the news that Royal Mail House had been sold to Lloyd's. The amount involved in the transaction has not been officially stated, but there is every reason to discount heavily the figure of £1,500,000 which has been bruited about the market. In fact, a more reasonable figure would probably be well under seven digits. The entire properties of the Royal Mail, including Royal Mail House, various properties in Rio de Janeiro, Buenos Aires, Jamaica, etc., having a book value of £1,124,271, were authoritatively stated in 1932 to be worth less than the book value "so far as can be judged." As we pointed out in a leading article on the Realisation Companies (February 8, 1936, page 309) the subsequent trend of interest rates and general circumstances has been favourable, but there is no ground at all for extravagant estimates of changes in value. While the present operation will in due course provide substantial funds which will be available for part redemption of the Income Debenture stock, some months must be expected to elapse before completion actually takes place. It had been anticipated for some time that a property company would be floated to take over all the assets of this nature held by the Realisation Companies. This procedure would have provided the advantage of a substantial nucleus, in the shape of Royal Mail House, for the somewhat heterogeneous group of remaining property assets, whose realisation is now more likely to be a piece-meal affair.

Actuaries' Investment Index.—General holiday apathy has characterised the markets in the past week, and although movements in different sections have varied slightly, on balance the Actuaries' Index of 178 industrial equities remains unchanged. The index this week, as for last, is 83.6, compared with 82.7 a month ago.

(December 31, 1928 = 100). The yield for this week is 3.15 per cent., compared with 3.14 per cent. last week and 3.04 per cent. a month ago. Movements in representative sub-groups are tabulated below:—

Group (and No. of Securities)	Prices (Dec. 31, 1928=100)			Yield (%)		
	Month Ago, Mar. 17, 1936	Last Week, Apr. 7, 1936	This Week, Apr. 14, 1936	Month Ago, Mar. 17, 1936	Last Week, Apr. 7, 1936	This Week, Apr. 14, 1936
<i>Higher this Week</i>						
Building Materials (5)	97.7	101.0	102.0	4.69	4.77	4.73
Oil (5)	81.1	82.8	83.7	2.71	2.65	2.61
Electric Supplies (10)	131.4	133.5	135.2	3.71	3.73	3.69
Reweries and Distilleries (21)	141.1	144.1	145.2	4.07	3.98	3.96
<i>Lower this Week</i>						
Coal (7)	99.6	99.8	98.8	4.16	4.07	4.12
Cotton (8)	42.0	41.7	40.9	2.17	2.19	2.20
Iron and Steel (12)	74.5	72.0	71.7	3.04	3.14	3.15

Building materials continue to benefit from good trading reports and the maintenance of building activity and oil shares reflect the market's interest in the approaching dividend season. Despite the record March steel output iron and steel shares are slightly lower.

COMPANY NOTES

Newcastle Companies.—Although Newcastle is associated in the public mind with capital industries and the "Special Areas," and although some of the larger Newcastle concerns exhibit both the fluctuations and the long depression expected of such an area, the typical "Newcastle share" is remarkable for its consistency of dividend.

* Earnings shown after normal preference dividend. In fact, preference arrears were being paid off in each of these years, leaving no earnings available for the ordinary dividend.
† Tax free.

As may be seen from the accompanying table, this is due in part to a conservative tradition which has tended to keep distributions well within earnings, but to a large extent it is due also to relative stability of the earnings themselves. This stability is found in such diverse businesses as

NATIONAL 1171 (10 LINES)

Provincial Laundries, Northern Corporation (property), Northern General Transport, R. Hood Haggie (wire and other ropes), Carricks (caterers), Binns and Son (drapers, etc.), George Angus (belting, leather and hose), Tyne-Tees Shipping (coastal and North Sea shipping), Waste Heat and Gas Electrical Generating Stations, and Cleveland Bridge and Engineering. Each of these concerns shows a dividend record which, while not in all cases unvarying from year to year, is stable by the ordinary standards of commercial and industrial equities. Moreover, despite the problems of the "Special Areas," such brewing companies as Associated Breweries and Newcastle Breweries have not shown greater fluctuations of profits than breweries operating in many less depressed areas, and have recovered as vigorously as their fellows elsewhere. Investors who are seeking openings off the beaten track of the London market need not, therefore, hesitate to seek for them in Newcastle. The revival of shipbuilding and armament business has already raised many prices well above the levels current even a few months ago. But attractive yields are still to be found. Thus the ordinary shares of Seaham Harbour Dock (which has only recently paid off its preference arrears and returned to the dividend list) yield some 9½ per cent., Northern Corporation ordinary yield 10 per cent., Blackett and Son (stores) yield over 7½ per cent., Consett Spanish Ore yields over 6 per cent., and Provincial Laundries over 5½ per cent. None of these shares enjoy a very free market; but the interest of the investor who is seeking opportunities in the provinces is not necessarily in free markets alone, when adequate yield and security is to be had.

I.C.I. Report.—The full report of Imperial Chemical Industries should give investors most of the information they require, for it includes 25 pages of letterpress, five devoted to the accounts and four showing the group undertakings and the financial record of the company since its formation. The main interest in the accounts will be found in the balance sheet changes, for the revenue accounts contributed to the revenue of the company since its formation. The revenue accounts, which were analysed and discussed in *The Economist* of April 4th, page 21. The balance sheet shows a reduction of capital recently confirmed by the company, and, as a result, £5,434,141 has been added to the reserve. During the year the value of the company's subsidiary companies has increased from £72,270,734. Creditors and other provisions have increased from £1,000,000 higher. In addition to the new reserve of £4,160,000 on the pre-existing capital of £6,000,000 for the free reserve. The Central Reserve Fund, which again received £1,000,000 for the year, is now £3,365,000. In all, £1,400,000 has been added to the reserve and £775,000 from central obsolescence. The numbers applied in reduction of investments, reflecting the reduction of subsidiaries' assets. The relevance of the provisions on this scale, which formed one of the general reasons of the deferred shareholders' opposition to the reorganisation, is clearly evident in the general reduction of the year's trading conditions. The principal impression of vigorous recovery at home, assisted by the technical progress achieved in many departments of production, while in overseas markets satisfactory turnover has usually been achieved, although it has not always been possible to maintain selling prices against local competition. No less important to investors, however, is the evidence that capital expenditure is still required for expanding business and technical progress. The group reference is made to plant extensions in the last current year recently completed. They represent an integral part of the policy which the board has faithfully followed, to secure the highest technical efficiency and to share its benefits between consumers, employees and stockholders. The latest accounts are very satisfactory, but they do not detract from the view that the ordinary shares are regarded as a "gilt-edged" equity which offers great potentialities. The stock is quoted at £4 1s. per cent.

Johnson and Phillips' Progress.—Like the other cable manufacturers, Johnson and Phillips did not begin to feel recovery in the earliest stages of the movement, for their trading results were to some extent influenced by the completion of the special demand for the construction of the "grid" just as general recovery was beginning. Last year, however, business was again good, and, with the exception of 1929, the year's profits are the best for the past decade. This has permitted the restoration of the old 10 per cent. ordinary dividend (out of earnings of 11.5 per cent.) despite increases in capital both in 1934 and in 1935. The 1935 figures compare with those of the two preceding years as follows:—

	1933	1934	1935
Profit	84,628	128,849	157,351
Maintenance and depreciation.....	25,618	31,874	37,203
Fees and taxes	6,005	12,749	18,370
Debt service.....	15,929	18,000	22,000
Ordinary shares:			
Earned	37,076	66,226	79,778
Paid	30,000	50,000	75,000
Earned %.....	6.6	10.6	10.7
Paid %.....	5	7½	10
Reserve.....	5,000	15,000	5,000
Carried forward.....	101,134	101,387	101,165

The balance sheet reflects the expansion of business in the larger sums shown under debtors, stocks, subsidiaries and creditors. But the company has nevertheless been able to pay off the bank overdraft amounting to £54,000 which appeared in last year's balance sheet. It would thus appear that while part of the proceeds of last November's issue of shares (£200,000 gross) has been used for expansion of plant and holdings in subsidiaries, the greater part has been used for financing turnover. Although no specific information is available in the report it is reasonable to expect a good report of the electric supply undertakings at the annual meeting. The company has a considerable business in telephone cables, and it is no doubt securing a share of the enlarged Post Office business—a demand which seems likely to continue for some time. At 46s. 6d., cum the final dividend of 5 per cent., the shares yield approximately £4 8s., which by present standards is a fair return for a sound industrial.

New Aircraft Company Results.—Since publicity was given, some weeks ago, to the difficulties experienced by the aircraft industry in obtaining firm prices for current contracts with the Air Ministry, the aviation share market has lost a good deal of its bloom. Attention has recently centred upon the engine makers, and principally upon Rolls-Royce and Bristol Aeroplane. The Rolls-Royce preliminary profits statement, on which we commented last week (page 89) showed a satisfactory expansion in earnings, but no sign of vast re-armament profits. For the time being, investors must hold these shares, at a low current yield and without the solace of a share bonus, until the effects of the increased expenditure promised for air defence this year begins to filter through. This amount, if the White Paper expansion is realised in 1937 and 1938, will constitute a small instalment of the total. Meanwhile, considerable evidence of the technical and financial difficulties involved in bringing some recently formed aircraft concerns to the full production stage for military aircraft has been revealed. The first accounts of Phillips and Powis, formed last year to acquire a civil aviation concern, show a loss of £20,236 for the thirteen months to December last. Special reasons have been adduced for this result, for a major decision of policy to change from civil to military aviation was taken during the year. Further capital has also been required for repayment of bank loans and working capital. Some 500,000 3½ per cent. 5s. preference shares, convertible to ordinary shares within three years at 3s. premium, will be subscribed by unnamed interests, and the company will thereby "secure an association which should be of the greatest value." The first report of Boulton Paul Aircraft to October 31st last showed a loss of £6,935.

Compared with the latest trading results shown in the prospectus, the loss is not specially significant. It will be recalled that further shares were issued last September to finance extensions. The *General Aircraft* report, issued some weeks ago, disclosed a trading loss of £35,573 for the fifteen months to December last year, and *Airspeed* (1934), which has not yet issued its first accounts, has passed its preferred ordinary dividend. This general failure to achieve prospectus estimates in the initial trading periods shows that the smaller aviation concerns are finding the technical reorganisation to meet Air Force contracts an expensive business, while the lack of firm contract prices makes any estimate of future profits hazardous. Apart from official assurances that capital expended in plant extensions will be fairly protected, the industry's profit prospects are largely in the hands of the Air Ministry's contract officers and public opinion, and investors must perforce remain in ignorance, if not doubt. There seems little justification for a renewal of the speculative boom in airframe shares merely on the prospects of a large expansion of expenditure in 1937-38.

Amalgamated Metal Results.—The results of this holding company, which has extensive interests in the non-ferrous metal trade, indicate a further advance in profits to cover the increased ordinary dividend announced a month ago. As usual, the indicated earnings provide only a small surplus over the ordinary distribution. The detailed accounts—supplemented by consolidated statements of the assets and liabilities of the two subsidiaries, British Metal Corporation and Henry Gardner and Company, Ltd., and their subsidiaries—show a balance of profit earned by two constituent companies amounting to £21,602, compared with £309,238 for the previous year. Of this amount some £60,000 has been applied in writing off expenditure on the mining property included under "advances to allied companies." This mine, after lying dormant for some time, was entering production at the end of the year. After providing £54,000 for preference dividends and £274,187 for ordinary dividends, both of which are paid to the parent concern, a balance of £203,751 is carried forward by the constituent companies, against £170,336 brought in. The following analysis gives the allocation of the parent company's income during the past three years:—

	11 months to March 31, 1934	1935	Years to March 31, 1936
Gross dividends from subsidiaries and ordinary income	239,572	287,401	328,443
Expenses and taxation	4,754	7,778	5,487
Preference dividends	54,000	54,000	54,000
Ordinary shares:—			
Earned	180,818	223,623	268,956
Paid	177,432	221,790	266,147
Earned %.....	4.1	6.1	6.1
Paid %.....	4	5	6
Carried forward	23,654	25,487	28,296

The group balance sheet changes reflect the substantial improvement in the base metal markets last year. Stocks, of which 99 per cent. are covered by forward sales, have jumped from £2,464,919 to £4,329,419. After transferring £200,000 from reserve to write down the value of investments, the total stands in the British Metal-Henry Gardner combined balance sheet at £2,492,702. The further consolidated balance sheet for subsidiaries of the two constituent companies reveals a sound underlying position for the group. The group's interests extend from mine to consumer, but, since its primary activities are concerned with the trading branches, it should benefit further from increased turnover of metals at higher prices. The £1 ordinary shares are quoted at 26s. 9d. to yield £4 14s. per cent.

The Sofina Report.—The report of the Société Financière de Transports et d'Entreprises Industrielles indicates satisfactory progress during the past year. Income from shares and participations amounted to Frs. 123.5 millions, compared with Frs. 106.3 millions for 1934. The

distribution on the 5 per cent. preference absorbs Frs. 1 million, and the total ordinary raised from Frs. 400 per share to Frs. 475 per share. Analysis of the results of the principal companies shows that further progress has been achieved in almost every case, one exception being Nord de la France Company. The statistics of output of electricity provide a number of interesting comparisons. It is clear that industrial recovery has been marked in the gold bloc countries, and that the output of industrial consumption of electricity has in been limited. Striking differences are also shown in the rate of electrification in Europe and America. British electricity supply shares will find much of this section of the report. The general conclusion which precedes the report this year discusses the scope of geographical specialisation of industry, and concludes that international co-operation is essential for proper co-ordination of national development in areas. It concludes, however, on the somewhat gloomy note that economic disarmament is still to seek, and lessons of private business experience, which reanalysis, must first be learned before statesmen can effect an expansion of international trade.

De Beers Report.—In his speech at the annual meeting of the De Beers Dutoitspan Mine on March 18th, Mr. Oppenheimer explicitly foreshadowed the payment of a preference dividend arrears during the year, and further reference to the subject was made in the report dated March 5th. Shareholders therefore anticipating fuller details at the annual meeting to be held on May 2nd. A striking increase in the profits for 1935. Last year's revenue for the account totalled £1,520,100, against £900,300 only £297,400 in 1933. Investment income for 1935, £1,376,700, compared with £531,770—a substantial increase, even when allowance is made for the depreciation dividend of £750,000 included in the latest figures. Assisted by increased profits on investments realised, total income recorded an advance from £1,444,350 to £2,975,930. Mining expenses were increased, but net profit amounted to £2,122,360, as against £768,680. The bulk of the additional earnings, together with the credit balance, has been devoted to certain special appropriations, including £1,602,180 to general reserve. Payment of one instalment of preference dividend arrears absorbed £400,000, and only £58,840 is carried forward, compared with £1,000,000 brought in. Changes in the latest balance sheet are considerable. The Blue Ground Reserve on the company's property has been set off against Blue Ground on Fl. which no longer appears among the assets. The outstanding £2,416,600 5½ per cent. debentures were redeemed on December 31st. Investments in diamond companies, etc. have been reduced from £7,371,150 to £1,485,900. Some £360,250 has been provided from the surplus of realisation over acquisitions, a large amount of £4,238,860 from the

Appropriation for stabiliment of the diamond Trade," and the balance transferred to Investments and Open accounts. Two of the more important items in the previous balance sheet accordingly disappear. During the year Koffyfontein Estates and Koffyfontein Mines were acquired, their machinery and plant (£72,300) and Blue Ground (£195,130) being written off. General reserve is raised from £2,000,000 to £3,600,000, and the balance sheet total has been reduced from £15,490,000 to £11,004,250. The decks may be regarded as cleared for the resumption of operations on a more adequate scale this year. The Premier, a controlled undertaking, fared rather less well last year, but owing to non-recurrence of the appropriations for Trading Fund, the shareholders' proportion of profits amounts to £60,600, against £24,100. De Beers took over the Premier production quota, but an accumulation of common stones was realised. De Beers also acquired the New Jagersfontein quota, whose diamond sales for last year amounted to only £19,600, as against £70,100 in 1935, when the company's stock of diamonds became exhausted.

* * *

Other Company Results.—The summary of the week's profit and loss accounts, which appears on page 140, is again expanded by the large number of rubber companies reporting to December 31st last. As many as 48 additional companies appear in the table. *Melbourne Electric* shows increased profits of £94,240, but the dividend adjusted for the increased capital is fractionally lower. Results have been published by two new gas holding companies. *Severn Valley Gas* reports a profit of £32,682 for its first complete year of operations and maintains the 5 per cent. dividend rate. *United Kingdom Gas* disclosed a revenue of £22,460 for the period from Imperial Chemical December, 1935. The accounts, in most of the information months' working, since the first pages of letterpress, under August. The ordinary dividend, four showing company since its per annum. This week's record of accounts will be found in the evidence of main interest in the revenue accounts confirm the published sheet changes, which were analysed and discussed in the *Ministry* of April 4th, page 21. The balance sheet reflects the construction of capital recently confirmed by the Court of Appeal, and, as a result, £5,434,141 has been placed to capital reserve. During the year the value of interests in subsidiary companies has increased from £71,367,229 to £72,270,734. Creditors and other provisions and debtors and payments in advance are in each case approximately £900,000 higher. In addition to the new capital reserve described above, the reserve accounts now show a balance of £4,160,000 on the pre-existing capital reserve, and £6,000,000 for the free reserve. The Central Obsolescence Fund, which again received £1,000,000 for 1935, is £225,000 higher at £3,365,000. In all, £1,400,000 from general reserve and £775,000 from central obsolescence has been applied in reduction of investments, reflecting the writing down of subsidiaries' assets. The relevance of reserve provisions on this scale, which formed one of the contentions of the deferred shareholders' opposition to the capital reorganisation, is clearly evident in the general review of the year's trading conditions. The principal impression is one of vigorous recovery at home, assisted by the striking technical progress achieved in many departments of the undertaking, while in overseas markets satisfactory turnover has usually been achieved, although it has not always been possible to maintain selling prices against local competition. No less important to investors, however, is the repeated evidence that capital expenditure is still required to provide for expanding business and technical progress. In every group reference is made to plant extensions in prospect or recently completed. They represent an integral part of the policy which the board has faithfully followed, to maintain the highest technical efficiency and to share its fruits equitably between consumers, employees and stockholders. The latest accounts are very satisfactory, but they afford no ground for modifying the view that the ordinary stock is to be regarded as a "gilt-edged" equity which lacks high-gear potentialities. The stock is quoted at 39s. 6d. to yield £4 rs. per cent.

stabilisation of the financial position of the country and declared that the maintenance of a 6 per cent. dividend was a very satisfactory result and a tribute to the Bank's development. Mr Michael Falcon, chairman of the Norwich Union Life and Fire Offices, congratulated the former on the maintenance of record bonuses and of unimpaired reserves. The Fire Insurance Society's results also showed a general improvement, in spite of the narrow margins of profit on workmen's compensation and motor business. The chairman of the King Line pointed out that despite the minimum freight schemes in the major trade routes, which had been made possible by the British Shipping subsidy, the position of cargo shipping had shown little improvement during the year. There was indeed a danger, he said, that more tonnage would have to be laid up in the near future. The Sofina report is discussed on page 139. Mr M. Dewar, at the first annual meeting of British Timken, discussed the wide fields of demand opening up for the anti-friction bearings made by the company, particularly in the railway and steel industries. The chairman of Lanadron Rubber Estates said that income last year had been considerably reduced by lower prices for rubber, but that the outlook for the coming season was brighter. Mr G. H. Champion announced a dividend of 5 per cent. for Jasin (Malacca) Rubber Estates, but pointed out that 101,387 101,165 were lower than in 1934 owing to restricted crops. Mr H. A. expansion of business in the meeting discussed the order debtors, stocks, subsidiaries and prices and costs, the company has nevertheless been able to pay off the bank overdraft amounting to £54,000 which appeared in last year's balance sheet. It would thus appear that while part of the proceeds of last November's issue of shares (£200,000 gross) has been used for expansion of plant and holding in subsidiaries, the greater part has been used for financing turnover. Although no specific information is available in the report it is reasonable to expect a good report of the electric supply undertakings at the annual meeting. The company has a considerable business in telephone cables, and it is no doubt securing a share of the enlarged Post Office business—a demand which seems likely to continue for some time. At 46s. 6d., cum the final dividend of 5 per cent., the shares yield approximately £4 8s., which by present standards is a fair return for a sound industrial.

New Aircraft Company Results.—Since publicity was given, some weeks ago, to the difficulties experienced by the aircraft industry in obtaining firm prices for current contracts with the Air Ministry, the aviation share market has lost a good deal of its bloom. Attention has recently centred upon the engine makers, and principally upon Rolls-Royce and Bristol Aeroplane. The Rolls-Royce preliminary profits statement, on which we commented last week (page 89) showed a satisfactory expansion in earnings, but no sign of vast re-armament profits. For the time being, investors must hold these shares, at a low current yield and without the solace of a share bonus, until the effects of the increased expenditure promised for air defence this year begins to filter through. This amount, if the White Paper expansion is realised in 1937 and 1938, will constitute a small instalment of the total. Meanwhile, considerable evidence of the technical and financial difficulties involved in bringing some recently formed airframe concerns to the full production stage for military aircraft has been revealed. The first accounts of *Phillips and Powis*, formed last year to acquire a civil aviation concern, show a loss of £20,236 for the thirteen months to December last. Special reasons have been adduced for this result, for a major decision of policy to change from civil to military aviation was taken during the year. Further capital has also been required for repayment of bank loans and working capital. Some 500,000 3½ per cent. 5s. preference shares, convertible to ordinary shares within three years at 3s. premium, will be subscribed by unnamed interests, and the company will thereby "secure an association which should be of the greatest value." The first report of *Boulton Paul Aircraft* to October 31st last showed a loss of £6,935.

There was a fairly general reaction in the home rail market, due to end of account realisations which passed by the very good traffics, which were £96,000 better than for Good Friday week of last year. It was anticipated that the bad weather conditions over the holiday will be followed by bad traffics this week. Business in foreign rails was very slack, practically the only feature being a back in Cordoba Central issues. There was some profit-taking in American rails.

Industrial issues were inclined to sag when markets reopened after the holidays, but hardened and assisted in part by the recovery on Wall Street and good trade returns. Iron and steel shares, however, were irregular, with some later tendency to strengthen. Beardmore 7 per cent. debentures were marked up on news of intended repayment of part of the issue. Aviation issues were inclined to ease, and there was a general tendency to take profits. Motor issues did better, Leylands in particular benefiting from good trade reports which induced hopes of higher dividends. And electrical equipment issues were able to shake off dullness with the report that cable manufacturers have raised cable prices by some 20 per cent.

Although business was small, prices were well maintained in the brewery section, and Ansells were particularly favoured. Tobacco shares were dull, with most prominent issues losing ground slightly. The stores group did fairly well, Marks and Spencers holding up in anticipation of a good annual report, and Harrods and Harrods (B.A.) both improved. Profit-taking developed in provision and catering company issues, and among textiles Courtaulds and other rayon issues moved downwards. Insurance shares were one of the brightest sections of the market, in contrast to the miscellaneous industrial section where movements were small but erratic. Alpha Cement and Associated Portland issues improved slightly against a general background of slight losses.

Interest in the oil shares market was concentrated on Mexican and Canadian Eagles, particularly on reports that a rich new well has been brought in in Mexico. Shell and Royal Dutch issues were supported by Continental demand based on expectation of good dividends, but otherwise business was not very active. Rubber shares staged a marked recovery, after the holiday, from their past apathy, and although business was small prices were marked up all round. This movement was induced by the improvement in the commodity price, which it is hoped marks the first step towards a further advance in the near future. Malayalam were marked up on resumption of interim dividends for the first time since 1929. The tea shares market showed no such resilience, the very small volume of trading approached stagnation, and hopes of an improvement when the Mincing Lane auctions are resumed next Monday are slight.

In the Kaffir market, conditions were still very dull, and with no interest exhibited by the Cape or by Paris prices tended to fall off slightly. Union Corporation shares were an exception to this tendency and rose on investment buying. Interest was equally slight in the West African department, and not even the rise in the price of copper in the States could induce much activity in Rhodesian copper issues. Diamond shares provided the outstanding feature of the mining markets, with De Beers reaching a new high. There was very little change in the tin shares market.

FOREIGN STOCK EXCHANGES NEW YORK

THE markets are still paying divided attention to the successive indications of improving industrial and business conditions at home, to the politics of Europe, and to the troubles of the franc. An irregular movement before the holiday was continued at the opening of the week, and on Tuesday there was a pronounced setback after a fairly firm opening, but conditions improved considerably later. Copper shares have been well favoured on the improvement in price of the commodity, and steel shares received support on the increase in production. *Iron Age* estimates steel mill activity at 68 per cent. of capacity, compared with 66 per cent. last week. Power output for the week ended April 11th was 12.1 per cent. higher than for the corresponding week of last year, and bank clearings for the week ended April 8th were up nearly 11 per cent. on a year ago. An improvement in building construction contracts in March may be evidence of revival in that most depressed of industries, from which great improvement is expected in the current year. In midweek the bond market was inclined to be soft, with governments holding their ground.

but industrials falling off. The majority of rail stocks managed to hold their own in Tuesday's general decline, but much needed amalgamations and improvements in transport may be delayed if the Government accepts the demands of heavy compensation for employees who may be dismissed under the schemes proposed by the Federal Co-ordinator of Transport. Oil shares may benefit from the improvement of the gasoline price on the Pacific Coast, and oil men are hoping for a record consumption in the current year.

* Two-hour session.

PARIS

Before the holidays business was very small on the Bourse, with interest directed principally to Internationals, and to industrials which were supported on the Bank of France return. After the holiday the opening was uninteresting, but business became more active later, with support for Government issues and banking shares. Diamond issues improved on the Coudisse. The market seems to be encouraged partly by increasing signs of inflationary tendencies, and partly by favourable interpretations of the international political situation.

BERLIN

The Bourse was closed from Friday to Monday inclusive. Prices in the share market advanced last week, with a marked rise in potash issues as a result of the favourable annual report and increase of dividend by the Wintershall concern. Steel issues were quiet, Mannesmann alone showing activity; but motor cars, electrical and public utility shares rose, and some of the textiles gained considerably. Reichsmark bonds were dull, with quotations little changed. Dollar bond quotations were also unchanged. The market opened irregularly on Tuesday of this week, with a marked rise in lignite issues, but later in the day the whole market became firmer. The undertone was still firm on Wednesday, although there was renewed irregularity.

AMSTERDAM

The markets approached the Easter holiday in active mood, especially in the American section. Philips Lamps gained several points, but lost ground when the markets reopened this week. American issues held their own at first, but lost later in sympathy with Wall Street movements. Rubber shares were uninteresting, and tobaccos were lower, but Philips Lamps recovered slightly on bear covering.

CAPITAL ISSUES

The holiday in the corporation loan market has brought a welcome respite to borrowers, underwriters and investors. The resultant improvement in underlying conditions has cleared the way for a resumption of further issues, of which the Birmingham refunding operation, which has been sanctioned by the Treasury, will be first. The loan will be made on Monday next, and will consist of £4,882,700 3 per cent. stock, at 99, redeemable 1956-58. The terms show a reduction of as much as one point in the issue price compared with recent issues. The Tyne Improvement Commission conversion issue in 3½ per cent. stock with a 25-year life is a well secured investment, whose slightly higher yield offers some compensation for its want of trustee status. The only industrial issue of the week has been of the ordinary shares of Mitchell, Shackleton offered at par. This concern, which specialises in the manufacture of crank shafts, has experienced much improved trading conditions during recent years, and the earnings on the straight ordinary capital may be regarded as satisfactory at present levels. Particulars have been published this week of an issue of 3 per cent. stock of the Colony of Jamaica, of which £350,000 has been sold to the market and to Crown Agents at £99. The stock is redeemable between 1956 and 1961.

PUBLIC OFFER

Mitchell, Shackleton and Company, Ltd.—Issue at par of 360,000 10s. ordinary shares. Acquires from January 1, 1936, a business founded in 1900. Specialises in making various kinds of steel forgings mainly for gas and oil engines. Total net assets, excluding goodwill, £148,033, acquired for £175,000, payable in cash, including £26,967 for goodwill. Profits before depreciation and income tax, eleven months to December 31, 1933, £13,747. Year 1934, £28,640; 1935, £29,833. Lists opened only for two minutes.

BY STOCK EXCHANGE INTRODUCTION

Jamaica (Colony of).—Issue of £350,000 3 per cent. inscribed stock of which £200,000 has been sold to the market at £99 per cent., and the balance of £150,000 has been taken up by the Crown Agents on the same terms on behalf of other Colonial Governments. Secured on general revenues and assets of the Government of Jamaica. To be repaid at par, April 15, 1961, or after April 15, 1956, on three months' notice. For purpose of redemption a sinking fund of not less than 1 per cent. per annum will be formed in this country.

BY TENDER

South Essex Waterworks Company.—Offer for sale by tender of £200,000 5 per cent. preference stock (ranking *pari passu* with existing irredeemable preference stock) at minimum price of issue, £142 per £100 stock. The stock is a full trustee investment, maximum dividends on the existing stock having been paid for the last twenty-five years.

BONUS ISSUE

Anglo-Palestine Bank.—A free capital bonus by the transfer of £100,284 from reserve is to be distributed to holders of ordinary shares of this bank. In addition, powers are to be sought to issue 310,000 "A" £1 ordinary shares on advantageous terms.

ISSUES TO SHAREHOLDERS ONLY

Witwatersrand Nigel, Ltd.—Shareholders in Witwatersrand Nigel, Ltd., and Oceana Development Company, Ltd., are invited to subscribe to a new issue of 800,000 shares of 5s. at the price of 10s. each. The issue of 800,000 shares to the

OTARD'S
ESTABD 1795

THE BRANDY WITH A PEDIGREE

public at 10s. per share will be made at the end of the month, but shareholders in Witwatersrand Nigel, Ltd., are entitled to the preferential allotment in respect of their application in the proportion of one new share for every four held, and shareholders in Oceana Development, likewise, to one new share for every two held.

Rosterman Gold Mines.—An issue of 320,000 shares at par is to be made to shareholders in the proportion of one for every five held. New capital is required to finance a more comprehensive development programme.

The De Havilland Aircraft Company, Ltd.—In order to meet the expanding needs of the company the directors have resolved that the remaining unissued 100,000 ordinary shares shall be issued now at the price of 50s. per share to shareholders on the register on April 2, 1936, in the proportion of one new share for every five shares held. These new shares will rank *pari passu* with the existing shares.

Biting Rubber Estates, Ltd.—To provide the purchase money for the Balaardjoser Estate, situated in the Malang district of Java, Dutch East Indies, viz.: Gl. 225,000 (=£31,034 at Ex. 7.25) and additional working capital it is proposed to issue 722,363 ordinary shares of 1s. each (£36,118 3s. 0d.). The issued capital will then amount to £65,000. On this basis the capital cost per acre will be £28 17s. 3d., including approximately £10,000 represented by surplus liquid assets.

CONVERSIONS AND REPAYMENTS

Tyne Improvement 3½% Redeemable Stock, 1961.—Issue of £500,000 stock at par. To be repaid at par on May 1, 1961, unless previously cancelled by purchase or by agreement. Issue to repay £500,000 3½ per cent. stock, 1918-52. Total expenditure on capital account £7,773,615, total loan debt £3,205,123. Gross revenue: 1933, £485,054; 1934, £508,892; 1935, £495,265. Net revenue: 1933, £66,441; 1934, £102,530; 1935, £92,746. Appropriations to redemption fund: 1933, £86,807; 1934, £89,845; 1935, £92,990.

Société Continentale de Gestion (5 per cent. Sterling Bonds of 1933).—Messrs. N. M. Rothschild and Sons announce that the board of the Société Continentale de Gestion, Monaco, has decided to effect a capital repayment of 6 per cent. on the above-mentioned bonds on and after April 30, 1936, against surrender of the six capital coupons Nos. 29-34. Accrued interest on the amount repaid at the rate of 1 per cent. per annum from January 1, 1936, to April 30, 1936, will accompany this payment.

Mount Royal Tunnel and Terminal Company, Ltd.—Repayment of Royal Tunnel and Terminal Company

FORTHCOMING ISSUES

Birmingham Corporation.—Subscription lists will open April 20th for a new 3 per cent. loan, 1956-1958, for £4,882,700 at an issue price of £99 per cent. The issue will replace the outstanding £4,500,000 6 per cent. redeemable stock, 1936-46 which will be repaid on July 1, 1936.

The Eagle Star and British Dominions Insurance Company, Ltd.—An extraordinary general meeting will be held on April 21st to increase the capital by the creation of 144,044 ordinary shares of £3 each to rank *pari passu* with the existing ordinary shares, which will make the total authorised share capital £5,500,000. The directors are satisfied that the two issues of preference shares made in 1933 and 1934 respectively have proved to be in the interests of the company and of advantage to the ordinary shareholders and they consider that the opportunities still presenting themselves for using additional capital in the business and for making investments of an attractive character justify the creation of further ordinary share capital of the company.

Bristol Waterworks.—An issue by tender of £120,000 5 per cent. consolidated preference stock (or an amount which, with premiums, will be sufficient to realise £172,012 16s.) will be made shortly. The minimum price of issue is £143 per £100 nominal stock, yielding at that price £3 9s. 11d. per cent.

Smith's Potato Estates.—Smith's Potato Estates has been incorporated to acquire the Nocton Estate Farm, Nocton, Lincolnshire. Particulars relating to £350,000 4 per cent. first mortgage guaranteed redeemable debenture stock issue of £143,000, the company will be advertised early next week "for information only" and will show that both principal and interest are unconditionally guaranteed by Smith's Potato Estates, Ltd. (1928).

Furnishers, Ltd.—Underwriting has been completed, and the lists will open on April 21st for an issue of 50,000 6 per cent. ordinary shares of 2s. each at 3s. 10d. each at par and 200,000 ordinary shares of 2s. each at 3s. 10d. per share in Furnishers, Ltd.

OTHER RESULTS OF ISSUES

Sangers, Ltd.—Recent results of issues of 142,000 ordinary shares heavily oversubscribed. The 1936-37 issue of 142,000 ordinary shares was oversubscribed by 139% (1934) red 1% and 139% (1934) red 1%.

CALENDAR OF ISSUES APRIL 20 TO APRIL 25, 1936

The grand total of calls in April, 1936, is £91,181,311, which compares with £7,848,585 in April, 1935.

REPORTS AND NOTICES

GOVERNMENT, &c.

GREEK EXTERNAL LOANS.—The League Loans Committee and the Council of Foreign Bondholders announce that the Greek Government have arranged for a delegation to proceed to London for further discussions regarding the service of the Greek external debt. It is hoped that the discussions will commence on Monday, May 4, 1936.

RAILWAYS

THE PENNSYLVANIA RAILROAD.—The 89th annual report of the Pennsylvania Railroad Company covering operations for 1935 will be presented to the stockholders at the annual meeting on April 14, 1936. The report shows that total operating revenues increased over 1934 by \$24,143,487, or 7 per cent. (due in part to increase in freight rates), but continued subnormal, being 46 per cent. less than the annual average for 1925-1929. Operating expenses increased \$17,132,347 (due principally to higher wages). The company earned a net income of \$23,849,798 as compared with \$21,633,965 in 1934. Surplus for 1935 was equal to 2.8 per cent. upon the outstanding capital stock as compared with 2.5 per cent. in 1934. Surplus per share (par \$50) was \$1.38 as compared with \$1.23 in 1934.

Dividend of 2 per cent. (\$13,167,696) was paid on February 29, 1936, to stockholders and charged against net income for 1935. Stockholders can obtain copies of the annual report from J. Taney Willcox, Secretary, Broad Street Station Building, Philadelphia, Pa., U.S.A.

BANKS

ROYAL BANK LIMITED.—The directors announce that The Rt. Hon. Lord Balfour of Burleigh has been appointed a member of the Board.

BANK OF NEW ZEALAND.—Sir George Elliot has been elected chairman of the board of directors for the ensuing year. Sir George Elliot previously held the office of chairman from 1922-1931, and was associated with the London board during his visit to this country last year.

MISCELLANEOUS

CANADIAN NATIONAL STEAMSHIPS.—For the first time since the formation of the company operating results of the Canadian National (West Indies) Steamships, Ltd., show a surplus available for interest requirements, according to the report for 1935, tabled in the House of Commons, on March 23rd, by Hon. C. D. Howe, Minister of Railways and Canals. Gross revenues for the year amounted to \$3,816,245, an increase of \$306,507 over the revenues for 1934. Operating expenses for the year were \$3,616,214, as against \$3,606,416 for 1934. There was an operating profit for the year of \$200,030, as against an operating deficit in 1934 of \$96,678, a betterment of \$296,708. After payment of bond interest the income deficit was \$269,969, as compared with \$566,678 in 1934.

INSTITUTE OF CHARTERED ACCOUNTANTS IN ENGLAND AND WALES (Presentation to the late Secretary).—At the end of August, 1935, after 36 years' service, the Hon. George Colville retired from the secretaryship of the Institute of Chartered Accountants. As a mark of their esteem, the members of the council of the institute subscribed for a portrait to be painted by Sir William Llewellyn, G.C.V.O., which will be hung in the hall of the institute.

FURNESS, WITHEY AND COMPANY, LTD.—Mr Maurice C. Houlder, Mr Kenneth Stoker and Mr Robert Sargeant have been elected to seats on the board. Mr Houlder is a managing director of Houlder Bros. and Company, Ltd., Mr Stoker is managing director of Manchester Liners, Ltd., and Mr Sargeant has for many years been manager of the company's Liverpool office.

ALLIANCE TRUST COMPANY, LTD.—The report for the year ended January 31, 1936, shows the amount to be dealt with is £516,517, which includes £34,354 brought forward from the previous year. This figure compares with £528,477 for year to January 31, 1935, which included £54,433 brought in from the previous accounts. Interest on borrowed money absorbed £165,270, as compared with £175,779 for year to January 31, 1935. Preference dividends absorbed £76,180, compared with £77,394. The ordinary stockholders again receive a dividend of 22 per cent. for the year, absorbing £180,952. The sum of £50,000 is transferred to contingent fund, against an allocation of £60,000 for previous year, but the carry-forward is increased from £34,354 to £44,114. The report points out that the continued improvement in economic conditions has resulted in a number of increases in dividends, restoration of defaults and payment of arrears on the company's investments, and while there is a decrease in collections from the mortgage business, the accounts show a substantial increase in net revenue. The meeting will be held at Dundee, April 17th, at 12.30 p.m.

SOUTH AFRICAN DISTILLERIES AND WINES, LTD.—The following is extracted from a statement issued by the board of South African Distilleries and Wines, Ltd.: "We have been advised by cable that a summons was issued in South Africa, on the 1st instant against the former directors of E. K. Green and Co., Ltd., one of our operating companies, alleging the commission by those directors of breaches of the distilling law. None of the directors in question is now associated with that company. Should the case be proved, E. K. Green and Company, Ltd., may be under some liability for loss of excise duty, or otherwise, and as soon as full information is available shareholders will be notified." It is pointed out in the statement that, subject to audit, the trading profits of E. K. Green and Co., Ltd., for the twelve months ended February 29, 1933, show a substantial improvement over those of the previous year.

SOFINA

SOCIÉTÉ FINANCIÈRE DE TRANSPORTS ET D'ENTREPRISES INDUSTRIELLES, S.A.

INTERNATIONAL LABOUR PROBLEMS

DEVELOPMENT OF ELECTRICAL PRODUCTION THROUGHOUT THE WORLD

Extracts from the directors' report to the shareholders for the financial year 1935, approved by the board at its meeting of March 2, 1936, for presentation to the ordinary general meeting of April 23, 1936.

As on previous occasions the directors of Sofina devote a large section of their annual report to the shareholders, for the year 1935, to the examination of a problem of general interest. The preamble to the report deals with international division of labour. Last year the disproportion—which since has somewhat diminished—between the demand for durable goods and the supply of consumers' goods, was described as one of the chief causes of the present business depression; this is now shown, on broader lines, to be the natural result of an insufficient variety in the goods and services mutually offered and demanded, especially as between nations.

"The decline in international trade, which since 1929 has reduced the quantum of world commerce by one quarter, and its gold value by two-thirds, is often perfunctorily explained as being due to the raising of Customs barriers. . . . In order to diagnose the nature of the ailment it is necessary to get at the roots of the problem, to go back to the first principles that govern exchanges of goods or services."

QUESTION OF SPECIALISATION

The first points considered in the report are, therefore, the merits of specialisation and the countries in which it is possible. The question then arises: why does a man set out to supply one particular kind of goods or services rather than another? Local resources, individual abilities, and the force of habit bring about a rough and ready division of labour. This is modified by technical progress: "production that seemed to be the natural preserve of a particular region, locality or undertaking becomes practicable anywhere, in any season, and by anyone who pleases."

The distribution of occupations is improved by the reasoned endeavours of private management, which seeks to co-ordinate production in various manners. On the other hand, it is affected by Governmental measures, often "dictated by motives other than a desire to provide the best supplies at the lowest price."

However, in the national field the policy of Governments, as of private initiative, usually aims at a better division of labour; but at the same time it places obstacles in the way of international trade and consequently of international specialisation.

The reasons, good or bad, quoted in support of protection are examined at length; monetary instability is shown to be both a cause and a result of the trend towards national self-sufficiency.

INTERNATIONAL CO-OPERATION

The last chapter of the preamble is devoted to international co-operation, and leads to the following conclusions:—

"National activities must be co-ordinated in accordance with the principles that have proved successful in the grouping of individual undertakings; and this co-ordination is equally essential to the common welfare, since individual activities extend, combine and clash beyond national frontiers in spite of all vain dreams of self-sufficiency. Failing more generous motives a more enlightened form of "sacred" self-interest among peoples will seek a better division of labour, and this will induce all nations to international co-operation."

They will be led by the very force of circumstances to realise that, although charity may begin at home, it must go a step further: it must learn to give in order to receive.

The signs of the times certainly do not show much indication of international fellowship; economic disarmament seems as far

off as military and naval disarmament. Yet there are few statesmen who do not in their hearts hope for an expansion of international trade, in the very interests of their own countries. Perhaps their wishes would be nearer fulfilment if they would shape their policy in the matter of foreign trade with greater regard to the lessons of private business experience, as indeed they have begun to do when bringing more order into home trade conditions.

LESSONS OF PRIVATE BUSINESS EXPERIENCE

What are these lessons?

1. Every exchange presupposes knowledge of what is demanded and what can be supplied.

In spite of the ingenuity of private enterprise, assisted by consular services, knowledge of the supplies that one country can offer and that another might wish to buy is still very imperfect. The spreading of information of this kind needs to be organised; it requires international co-operation.

Moreover, Governments concentrate their thoughts to-day on what their countries might sell; much more attention should be given to what they might profitably buy.

If their consular services and the buying agencies established abroad under their patronage were to seek out the specialities their nationals might import with advantage, foreign nations would feel far more inclined to place those orders that are stintingly given when they are begged for or claimed as a right.

2. Every exchange presupposes division of labour.

There is much duplication in world production; firstly because the producers of one country are usually late in discovering what is being produced or is about to be produced elsewhere; and secondly because protection pays no heed to futile duplication.

Instead of encouraging such duplication, Governments should rather agree between themselves to prohibit additional undertakings when those already in existence suffice to meet the needs and new ones could not do so more efficiently.

3. Division of labour cannot be carried far unless exchanges are multilateral.

The return to barter in the form of "clearing" agreements or reciprocal quotas marks a step backward in international trading methods. Nations must revert to a regime enabling each country to use its foreign receipts in any other and on whatsoever expenditure it may deem to be most advantageous.

CURRENCY STABILITY AND TRADE

4. A common monetary standard, complete freedom to transfer money, and a well-organised credit system make for a better division of labour and expansion of trade.

The re-establishment of fixed parities between the principal currencies must to-day be one of the first aims of statesmanship. It is unreasonable to wait until each country is assured of maintaining without difficulty the stability of its currency on the basis of a favourable balance of trade; for it is impossible for all countries to have a credit balance at one and the same time. There must always be a debit, in the trade balance of one country or another, that cannot be covered except by loans or investments from abroad; and these adjusting transactions are impracticable when currencies are unstable in terms of a common standard, even though this instability may not be made the pretext for prohibiting capital transfers.

Fluctuations in world prices usually affect, directly or indirectly, the interests of all countries alike; it is seldom to the advantage of one country to arrest a rise while another is seeking to promote it. The data of the problem and its importance would seem to be sufficiently well known to enable the principal Govern-

ments to agree on a common monetary policy, and the leading central banks to come to an understanding regarding the mutual facilities to be granted in the event of an abnormal influx or efflux of funds. Moreover, such movements will become much less frequent when currencies themselves are no longer subject to speculation.

FINANCING OF FOREIGN UNDERTAKINGS AND INTERNATIONAL TRADE

5. *Financial and technical assistance whereby new or better supplies are placed on the market enriches both those who provide and those who receive it, and at the same time increases the well-being of the communities who acquire the supplies or benefit by the enrichment.*

At the present time there is on the principal money markets an abundance of liquid funds awaiting opportunities of investment; yet the financing of foreign undertakings is practically at a standstill. This is one of the chief causes of the decline in international trade, and especially in the demand for industrial equipment.

If foreign investments are no longer made, it is not merely because of the restrictions imposed thereon by some Governments in order to protect their currencies. It is also and chiefly because the risks have greatly increased: exchange losses and transfer difficulties are dangers to be feared much more than hitherto; and many public authorities in whose fair dealing there was entire confidence have since lapsed into arbitrary practices.

It is imperative that nations should, in their own interests, bind themselves to observe certain principles of law in regard to foreign capital. It should not be difficult to define these rules by an international convention, and to provide that they be enforced promptly by some international juridical body.

GOVERNMENT OBLIGATIONS

6. *Division of labour is improved through the grouping of undertakings for the production of homogeneous articles whose through the apportioning of specialities better output is similar.*

As already exist for some products and for national understanding, communication and intelligence services. This type of transport could be applied in a number of other fields, receiving grouping, mental encouragement and, if necessary, legal sanction. Each Government would have to see to it that agreements entered into by their nationals or by themselves on behalf of their nationals were faithfully carried out. An understanding covering a branch of production would place the entire output, or the part of it to be exported, under the control of an international committee; and, in order to preclude all suspicion of undue favour or leniency, the Governments concerned would agree to concur and participate in the imposition of penalties on defaulters guilty of unfair competition.

Under this regime the production of a given commodity might be suspended whenever advisable, or reduced in a particular country, so that the most favourable situated undertakings might have the exclusive right and duty to supply the needs of world consumption. In these circumstances fair compensation would be made to the persons affected (employers, employees and ancillary undertakings) through the intermediary of the authorities of the country whose production had been cut down, and at the expense of those whose output was maintained or increased.

7. *The whole community suffers when workers are unemployed or means of production remain idle.*

It is in the interest of all nations, and it is also their duty, to remedy unemployment to their utmost capacity, abroad no less than at home. Further, by providing other countries with opportunities of export they create outlets for work in their own countries.

Governments must come together to ascertain in what manner the various countries, and especially those where the general business depression is most severely felt, can best contribute to an expansion of international exchanges. As a result of these investigations they will encourage such exports as are recognised to be desirable. If need be they will grant financial aid to countries lacking sufficient capital to undertake these supplies.

Steps in this direction have already been attempted in Geneva: on the initiative of the late M. Albert Thomas various countries submitted schemes for productive public works that they were unable to finance out of their own resources. But desirable schemes have had to be postponed because the necessary foreign capital appeared to be exposed to excessive exchange risks or inadequately assured of proper legal protection.

We anticipate the objection that these general principles are easy to frame but impossible to put into practice.

Though we agree that they are merely the expression of common sense, we like to think that for this very reason they are not Utopian.

Some of them could be put into practice at once; others tentatively and gradually. The excellent bureaux that are the pride of the League of Nations would no doubt willingly prepare the ground if requested to do so.

Indeed, there is only one serious obstacle to the agreements that would lead to a better division of labour between nations: it lies in the feeling of distrust which causes each country to suspect the aims and motives of others. Yet honest attempts towards a better international division of labour would help to dispel these misgivings, and well-ordered specialisation would assist in preserving peace.

GOOD ELECTRICAL OUTPUT FIGURES FOR 1935

The directors then comment briefly on the company's accounts for the past financial year. Finally, before reporting on the progress of the undertakings in which Sofina has its principal interests, statistical data are given concerning the development of electrical production throughout the world. The figures indicate that the output of electric energy in 1935 has exceeded in most countries that of 1929, "a year whose prosperity would to-day appear almost unattainable."

"Until a more definite and pronounced business recovery sets in it is more particularly the demand for electric lighting and household appliances that is bringing about a rise in the consumption of electricity. . . .

Year by year this demand steadily increases, and its growth brings a two-fold advantage: on the one hand, the consumers' dwellings are better lighted and heated, cleaner and more sanitary, and domestic drudgery is considerably relieved; on the other electrical power, the production and distribution plants are more fully utilised. Consequently, the cost per unit decreases, the average selling price is reduced, services are improved, and the taxation derived from the increasing profits of the distributors affords a means of lightening the taxpayer's burdens.

UNJUSTIFIABLE CLAIMS

But the greater demand does not necessarily lead to these favourable results. The public, as well as governmental authorities, are inclined to believe that progress such as is shown in the table above implies an enviable or even excessive prosperity among electric supply undertakings. The public is urged to claim, and the authorities sometimes impose, unjustifiable or at least premature reductions in charges, regardless of the fact that the capital invested in the plant—the capacity of which must always be ahead of actual needs—has for many years yielded no return, and without considering the cost of the necessary renewals and extensions, or realising that the price at which energy can be economically supplied depends on the character of each customer's demand rather than on the aggregate annual or daily output.

True, the producer and distributor of electricity are most anxious to see an increase in the number of units sold, since theirs is an industry in which the fixed financial charges form the chief item in the cost price. But their undertakings cannot prosper, and consequently render to the public the services it is entitled to expect, if they are forced to sell at too low rates, or if their gross receipts are too heavily burdened.

The sixth Congress of Electric Power Producers and Distributors, at which the principal European power stations will be represented, will meet at Amsterdam next July, and a World Power Conference will be held at Washington in the autumn. At these meetings attention will be specially directed to the numerous ways in which electricity can contribute to the well-being of all, and the methods whereby consumers themselves can reduce the charge per unit, by taking advantage of carefully diversified and graduated tariffs."

COMPANY MEETINGS, &c.

BANK OF CZECHOSLOVAK LEGIONS, PRAGUE

DIVIDEND OF 6 PER CENT. MAINTAINED

The fifteenth general meeting of the Bank of Czechoslovak Legions, Prague, was held, on March 27, 1936, in the Banking Hall in Prague.

Dr. Raše, the chairman, stated: Before proceeding to the main points of our meeting, I am grieved to report the loss by death of the late general manager, Mr. František Šíp, the co-founder of our institute, who died on October 2, 1935. His life ended just at the time when his health seemed to be recovering. We feel grateful for the services he rendered.

One of the outstanding events of the past year has been the election of the second president, Dr. Eduard Beneš. We cannot but express our satisfaction because his election guarantees that our country will continue the policy laid down by our first president—The Liberator, Tomáš Garrigue Masaryk—the policy of democracy and peace.

A close observation of present conditions discloses the fact that the present economic and financial situation is now stabilised. The crisis is passed, though a rapid and immediate restoration cannot be anticipated, as the past two years have shown an improvement which was quite normal in the period before the war.

Once more I have pleasure in expressing our appreciation of the services rendered by the general manager, Mr. Josef Khyn, and by the executive, managers and staff throughout the year. We are glad to have at our disposal the services of a staff whose efficiency, loyalty and devotion to the interests of our institution are deserving of the highest praise.

The evidence of the bank's development is obvious from the balance sheet and a full explanation of its items has been given by the general manager, Mr. Khyn. He especially drew the attention of the shareholders to the fact that the open reserve funds of the bank have been reduced from 100,000,000 Kč to 65,000,000 in view of the savings in taxation in accordance with the law permitting a reduction of open reserve funds.

Taking into consideration the difficult conditions, the results of the bank are entirely satisfactory, and enable a dividend of 6 per cent. to be declared from a net profit of Kč 5,850,887.80.

Election of directors: The retiring directors, JUDr. Augustin Straka, Jaroslav Šejd, Josef Doležal, Pavel Varsík and Ing. Dr. Skorkovsky were re-elected. The members of the Auditing Committee, Mr. Václav Šál and Mr. Augustin Turka were also re-elected.

At the close of the general meeting, the Board of Directors re-elected Dr. Raše as president, Dr. Aug. Straka first vice-president and Mr. Stanislav Zavadilík as second vice-president.

STATEMENT OF CONDITION AS ON DECEMBER 31, 1935

NORWICH UNION LIFE INSURANCE SOCIETY

RECORD BONUSES MAINTAINED

The 128th annual general meeting of the Norwich Union Life Insurance Society was held, on the 15th instant, at Norwich.

Dr. Sam Barton (Senior Vice-President) presided in the absence, through indisposition, of the President, Mr Michael Falcon, and read his speech, in the course of which he said that if, from a British standpoint, the year 1935 might be regarded as one of restrained industrial progress, they must nevertheless confess that the recovery which had so far been achieved from the protracted period of trade depression did not admit of feelings of complacency or of any relaxation of effort. The road to national prosperity was uphill and difficult, and forward movements could only be made by stages as opportunities permitted. In this harassed world, with the international and political situations so electrified, we must count ourselves fortunate in comparison with other nations, but none the less it was regrettable that conditions still persisted which rendered necessary the continuance of restrictions tending to hamper international trade, upon which the prosperity of this country so largely depended. Money was certainly cheap, and while in theory this position should encourage commercial activity, there were unfortunately difficulties in the way which limited the practical results, and we were still left hoping for the time when the situation would have so far improved as to make possible some form of currency stabilisation and the introduction of measures for the greater development of foreign sales, so that trade statistics might indicate more rapid progress in directions outside what was customarily styled the home market.

HIGH SCALE BONUSES

Throughout the whole of the past five years those whose responsibilities included the supervision of large funds had had to contend with unsettled conditions accompanied by a decline in investment yields, and it would therefore be a matter of gratification to all policy holders that the Society had come through the ordeal in such a satisfactory manner. Not only were they enabled to maintain the same high scales of bonuses as those allocated in 1930, which were the largest ever declared during the Society's 65 years' history, but they commenced the new quinquennium with their reserves unimpaired, after having made provision for all contingencies.

A deduction had been made from the assurance and annuity funds at the close of last year owing to the cessation of the Society's activities in Switzerland and the transfer of their existing portfolio to a national company, "La Suisse" Society, of Lausanne. The annual premium income of the Society now exceeded £4,000,000, which was approximately the amount of the invested funds at the beginning of the century, as compared with funds to-day of £42,000,000. This was an indication of the development which had taken place, and while the funds had increased ten times during the period, the profits had increased in still greater ratio.

SATISFACTORY INTEREST RATE

The difficulties affecting all financial institutions, incidental to the investing of new money, showed no sign of abatement in 1935, and consequently a drop in the average earned rate of interest was not only to be expected, but was in fact inevitable. It was therefore a matter of great satisfaction that the average net rate of £4 10s. 2d. fell short of the corresponding figure of 1934 by only 1s. 8d. per cent. The claim payments by death were £1,041,330, or 64 per cent. of expectation. The average of the quinquennium worked out at 66 per cent., indicating a favourable mortality experience. He would explain, however, that the difference of 34 per cent. should not be regarded as a fit, but rather as representing the proportion of expected payments fortunately deferred, upon which, until the claims actually arose, the Society would receive interest and further premium.

It was self-evident that a progressive institution such as theirs, producing as it did last year new proposals amounting to £10,787,590, could not avoid the expenses necessarily involved in the acquisition of business, but this did not imply that so long as the results were good extravagance was permissible. The subject of expenses was constantly under supervision, yet over successive years variations in the resulting total could not altogether be avoided. Their level ratio last year was 15.03 per cent. of the premiums received, which was slightly under the percentage for 1934.

The report and accounts were unanimously adopted.

NORWICH UNION FIRE INSURANCE SOCIETY, LIMITED

GENERAL IMPROVEMENT IN RESULTS

The annual general meeting of the Norwich Union Fire Insurance Society, Limited, was held, on the 14th instant, at Norwich.

Dr. Sam Barton (vice-chairman), who presided in the absence through indisposition of the chairman, Mr Michael Falcon, said he was glad to be able to refer to a general improvement in the results. The fire premium income was £1,670,126, a reduction of £60,467 when compared with the previous year, of which more than half applied to their United States business, and the remainder was spread over the foreign field, the home section of the business showing a small increase. They had made a fairly good profit on the home account, and in the foreign field they had enjoyed a very much better experience than in the previous year. The result of the account was that they had a profit balance of £151,019, or 9.04 per cent., to transfer to profit and loss account, as against 6.04 per cent. in the previous year.

In the accident account there were two very marked features when compared with the preceding year. The first was a drop in premiums of £226,644, reducing the income to £1,453,562; the other was the improved result. As a result of the general manager's visit to America immediately after the last annual meeting, the board decided to reduce very considerably the volume of business, and the loss of premium income following this deliberate action exceeded the decrease he had mentioned. Taking the accident account as a whole they had a profit of £12,219, slightly less than 1 per cent., as against a loss of £88,739 last year, a turnover of £100,958.

THE MARINE ACCOUNT

The income in the marine account was £151,640, being an increase of nearly £10,000 over the previous year, but they were not making any transfer to profit and loss, as, although the fund of £153,990 was substantially in excess of all known or expected liabilities, the account for 1934 showed by itself an unfavourable experience. This was due to heavy losses sustained on certain special lines written in the United States. These had been removed from the books and they had no further commitments of this kind.

To the profit balances from the fire and accident departments there was to be added interest and dividends amounting to £162,695, less by £13,206 than in 1934, and the directors recommended the same dividend as in the previous year, leaving a balance of £400,232, an increase of £24,537 over the amount brought in.

Although they had had an improved experience in many directions during 1935, and had gone a long way on the road of stopping the drain of heavy losses from United States casualty business, they realised that their policy in dealing with the latter problem had involved a large reduction in income, and that the current year would be the same in this respect. Their efforts therefore were directed to replacing this unprofitable business by seeking to extend their connections at home and in those foreign fields from which profit might be expected. Unfortunately foreign business continued to be more and more difficult to transact, taxation and legislation detrimental to British companies being a progressive handicap.

INCREASING HOME BUSINESS

It had always been a matter of pride that this society had had relative to its total business a large proportion in the home field, and it was very satisfactory to know that it was increasing. Two sections of the business, however, were not free from anxiety. Workmen's compensation business yielded at best a very narrow margin of profit, and motor business was difficult to transact profitably under existing conditions.

The general political situation in Western Europe was necessarily a disturbing factor at the present time, but it was to be hoped that a satisfactory solution of the dangers and difficulties might be found. When this was done the clear indications of an improvement in trade in this country, and in a varying degree elsewhere, were an encouraging feature which they sincerely hoped would suffer no setback. This being so, they could feel some confidence in forecasting that the improvement in business shown by the accounts now submitted would continue during the current year. The board had confidence in the ability of the organisation, if not handicapped by circumstances beyond its control, to make the 139th year of the society one of further progress.

The report and accounts were unanimously adopted.

THE KING LINE, LIMITED

BENEFITS OF THE ASSISTANCE ACT

OUTLOOK FOR CARGO SHIPPING

SIR VERNON THOMSON'S SPEECH

The forty-seventh annual general meeting of the King Line, Limited, was held, on the 15th instant, at Winchester House, Old Broad Street, London, E.C.

Sir F. Vernon Thomson, K.B.E. (the chairman), presided.

The Secretary (Mr F. W. Matthews) having read the notice convening the meeting and the report of the auditors,

The Chairman said:—Gentlemen,—The report and accounts for the year 1935 having been duly circulated among the shareholders, you will, I hope, as customary, take them as read. (Agreed.) The profit on the company's trading for the year 1935, inclusive of subsidy and dividends, etc., amounts to £49,098. After deducting £14,051 interest, providing £3,000 for income tax, writing £3,500 off investments and applying £31,708 towards depreciation of the fleet, there remains a slightly reduced credit balance of £22,545 to be carried forward.

The company's seventeen vessels, of which nine are motor and eight steam ships, are of an average age of twelve years, and after deducting the reserve fund stand in our books at an average price of £5 9s. 4d. per ton deadweight. They have all been well maintained. The directors are not unmindful that owing to the world trade depression shareholders of this old-established company have received no dividend for the last six years, but the provision of adequate depreciation necessarily comes first in soundly managed shipping companies. The available balance of profit for the year was accordingly utilised in writing down the book value of the fleet.

SUBSIDY UPON VOYAGES

Our meeting is held about a month later this year than normally. This is to enable the exact amount of the subsidy upon voyages completed in 1935 to be included in the accounts now submitted. A shareholder having inquired the amount of the subsidy so included, I have pleasure in stating that it was £41,441 13s. 7d., and it may further interest shareholders to know that, this being in the nature of a windfall, for the year in question the managers have taken no commission on this item of the company's profits.

During the year 1935 the volume of the world's seaborne trade showed slight expansion and the freight markets of the world showed little improvement upon those of the preceding year. But for the beneficial effects of the British Shipping (Assistance) Act, which rendered possible the minimum freight rate schemes in the major maritime trade routes of the world, with world tonnage in excess of the demand and unrestrained competition, the year would have been much worse than the abnormally bad preceding year.

To restore prosperity to shipping a revival of international trade is necessary. It is generally recognised that this could best be promoted by two things:—(1) A reduction of trade barriers; and (2) currency stabilisation. These are beyond individual shipowners' power. In addition to meeting these revolutionary times with efficiency and organisation, we can but continue to emphasise these facts to all who appreciate the vital importance of shipping to Britain.

THE FUTURE

As to the future, notwithstanding the reduction of tonnage from vessels broken up and lost, aggregating 2,000,000 tons last year, the immediate outlook for cargo shipping in the present disturbed state of the world is unfortunately not encouraging; it seems likely that tonnage will again have to be laid up. However, I do not believe that in the long run the progress of the world with its international trade is to be arrested permanently in its development, and this company is well placed to take advantage of any improvement in trade.

I shall be glad to try to answer any questions, and now have pleasure in proposing:—"That the report and accounts for the year ended December 31, 1935, as submitted, be received and adopted," and I will ask Mr George Dodd to second that.

Mr George Dodd seconded the resolution, and it was carried unanimously after some congratulatory remarks by Mr A. Hunt, a shareholder.

The retiring director, Mr George Dodd, was re-elected, and the auditors, Messrs. James Brown and Sandeman, were reappointed.

BRITISH TIMKEN, LIMITED

ANTI-FRICTION BEARINGS

MR MICHAEL DEWAR'S SURVEY

The sixteenth ordinary general meeting of British Timken Limited, was held, on the 8th instant, at the company's office at 65 Cheston Road, Aston, Birmingham.

Mr Michael Dewar, chairman and managing director, said: This is the first annual general meeting since the public became interested in the company, and you may like to know something of the company and the anti-friction bearing industry of which it is a part.

Your company makes practically all kinds of anti-friction bearings, but the type with which it is most concerned is the very successful tapered-roller bearing.

Railways throughout the world have, in recent years, adopted anti-friction bearings in considerable quantities. In this country only the electrically-operated railways have taken up anti-friction bearings to any considerable extent so far. Experiments, however, are being conducted on locomotives, and one large London Midland and Scottish Railway locomotive has been completely equipped with your company's bearings on all axles, and is now on regular passenger work. One great advantage of anti-friction bearings for railway work is that they need very little attention.

The machine tool industry has also developed the use of anti-friction bearings, as considerable savings of power and greater accuracy of work are achieved.

ROLLING MILL DEVELOPMENTS

The British steel industry is at last coming into its own again and plants are being remodelled with new furnaces, rolling mill and other machinery. Your company expects to play a most important part in the equipment of these mills. We are placing at the disposal of steel producing firms, rolling mill managers and rolling mill builders our unrivalled experience of the use of large anti-friction bearings in steel works. More heavy rolling mills throughout the world have been equipped with Timken bearings than with any other make of anti-friction bearing. Your company has manufactured the largest anti-friction bearings ever made in Europe, weighing over three tons each, but these were destined for a Continental rolling mill.

SAVING OF POWER

The power saved through the use of anti-friction bearings may average about 35 per cent., and the capital cost of the accessor plant for rolling mills that have to employ motors of several hundred horse power is therefore considerably reduced. Further, the quality of the product of such mills and the speed of operation are both improved.

Turning to one of the oldest industries—namely, agriculture—we find that, according to a speaker at the recent Oxford Conference on mechanised farming, the horse has been given a new lease of life through axles equipped with pneumatic-tyred wheels mounted on anti-friction bearings. Most of these bearings are made by your company. Horses are now able to draw over rough ground a very much greater load than they can do with the type of wheels and axles.

MASS PRODUCTION FACTORY

In turning to the accounts, I should like to point out that you are interested in a company which owns a mass production factory. From the shareholders' point of view mass production only means reasonable profits provided the machinery is fairly fully employed. A drop in the volume of work means far more than commensurate drop in profits.

The net profit for the year, after charging depreciation of £61,121 19s. 8d., out of which there has been transferred to the reserve £13,500, and to general reserve £25,000, £22,621 19s. 8d., to which has to be added the balance forward from 1934—namely, £17,405 8s. 8d.—making available of £40,027 8s. 4d. The directors propose the payment of a dividend of 10 per cent., less tax, on the 250,000 shares, absorbing £19,375, leaving to be carried forward £20,652 8s. 4d. Cash in hand at £61,296 15s. 6d. was sufficient for our present requirements.

The report and accounts were adopted.

JASIN (MALACCA) RUBBER ESTATES, LIMITED

DIVIDEND OF 5 PER CENT.

The twenty-sixth annual general meeting of Jasin (Malacca) Rubber Estates, Limited, was held, on the 15th instant, at 19 Leadenhall Street, London, E.C.

Mr G. H. Champion (the chairman), who presided, said that the profit on estate working, at £2,693, compared with £5,302 earned in 1934. The reduction in profit was due partly to the smaller crop harvested as a result of restriction, and partly to an increase in expenditure. After adding interest and profit on sale of Government securities, the profit for the year was £3,121, and including £4,926 brought forward there was a total of £8,047 for disposal. The board recommended the payment of a dividend of 5 per cent., less income tax, leaving £5,047 to be carried forward.

The company's investment in Middleton Plantations, Limited, stood at £2,500. Although that company had not yet reached the dividend-paying stage, it was making good progress, and they regarded the shares as a satisfactory holding.

Latest reports indicated that the estate had been maintained in a satisfactory state of upkeep. The 100 acres shown as immature in the report might now be classed as mature, as they had this year received an assessment for standard production. Their young areas, which were planted between 1926 and 1931, had now all received an assessment, but they were not included in the tapping round, as their exportable allowance could be harvested more economically from the older rubber. Those young areas, which represented approximately one-third of the company's total planted acreage, had been budgrafted and they should consequently receive a high standard production assessment as they reached maturity.

There was no gainsaying the fact that the Rubber Regulation Scheme was gradually achieving the objects for which it was inaugurated, and it must be a source of satisfaction to all interested in the producing side of the industry that the recent strike in the U.S.A. and the present uncertain political situation had had so little effect on the market price of rubber. Given a satisfactory outcome of the present political negotiations there was every reason to expect a continuance of the progress so far attained.

The report and accounts were unanimously adopted.

LANADRON RUBBER ESTATES, LIMITED

BETTER MARKET OUTLOOK

The twenty-eighth ordinary general meeting of Lanadron Rubber Estates, Limited, was held, on the 15th instant, at 1-4 Great Tower Street, London.

Mr Eric Macfadyen (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that from a high level of 6½d. reached in January, standard sheet dropped to a low level of 5½d. in September, and although a gradual recovery occurred in the last four months, the London average price for the year worked out at slightly under 6d. The company obtained over the average price for the quantity they were permitted to export, but about two-thirds of a penny less than in 1934.

The market recovery which began during the latter part of 1935 had continued so far this year. This had been due to the increasing effectiveness of the regulation exports, and the outlook encouraged the belief that it might proceed further. Current trade absorption was good, and stocks everywhere were lower. In the circumstances, and in view of the company's sound financial position, the directors recommended a dividend of 3 per cent. That had not been fully earned in the year under review, but the money was available to pay it, as well as providing for depreciation on their usual conservative scale.

Last autumn he visited Malaya, in the course of which he inspected all the company's estates, and on the whole was well satisfied with all he saw. The directors had embarked upon a gradual renovation of this fine old estate. They were confident that it would grow a second crop of rubber as well as it had grown the first, and that its earning capacity would be multiplied several times.

The outlook for rubber, taking the longer view, was promising, and the immediate outlook was for a better season this year. If the present price was held for the remainder of 1936, he expected profits to revert to about the 1934 level at any rate, and the tendency of stocks appeared to justify anticipating at least that much. The prospects of better results in future years depended upon increased export releases, or a higher price, or both, and the growth of consumption, coupled with the smooth working of export regulation, appeared to justify a measure of optimism.

The report was unanimously adopted.

SUNGEI KRUIT RUBBER ESTATE, LIMITED

DIVIDEND OF 6 PER CENT.

The twenty-sixth ordinary general meeting of the Sungei Kruit Rubber Estate, Limited, was held, on the 9th instant, at 30 Mincing Lane, London.

Mr H. A. Barrett (the chairman) said that the year 1935 had been a testing period for the International Restriction Scheme. It had yet to attain its objective—the reduction of stocks to normal proportions—and, although the year 1935 had seen slow but steady progress towards that end, such progress had been made not, as they had all hoped, by increased consumption of rubber, but almost entirely by decreasing the supplies, while the successive cuts in the exportable allowances of the producing companies had not raised the price of rubber but had only served to maintain it at round about 6d. per lb.

Although they all recognised how ably the International Committee had handled a difficult situation, the result so far had been that without any compensating increase in price producers had had perforce to reduce their crops and yet maintain their labour forces, and that was the reason why this company, in common with most of the producing companies, had to present accounts which did not show such good results as those for the year 1934.

In the circumstances he thought they might congratulate themselves on having made a reasonable profit. Although for their reduced exportable crop they had not been able to cut down expenditure and had had to be content with the sale price of 6d. per lb., compared with 6.18d. for 1934, the profit amounted to £4,831. That permitted them to recommend a dividend of 6 per cent. They continued to receive satisfactory reports as to the condition of the property.

With regard to the current year, they had again a rather larger standard of assessment, 1,015,491 lbs., as compared with 988,636 lbs. for 1935, and with the steady improvement in the statistical position of rubber in the world market was now in a sounder position than it had been for a very considerable time. Should the 40 per cent. cut in exports be maintained, he feared their costs would remain on the high side, although he trusted that they might reasonably expect a higher price for their product.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the four days ended April 11, 1936, amounted to £7,220,000, against ordinary expenditure of £8,981,000. After allowing for an increase in Exchequer Balances of £156,638, the operations for the week, as shown below, increased the gross National Debt by £3,145,000 to approximately £7,926 millions.*

THE ANGLO-SOUTH AMERICAN BANK, LTD., has received telegraphic advice from the Madrid Branch that the gold surcharge for the payment of Spanish Customs duties has been fixed for the period April 11th to 20th at 139.25 per cent. The previous rate was fixed as from April 1st at 138.78 per cent.

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE ANGLO-SOUTH AMERICAN BANK, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of

that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	"Export" market selling rate fixed at 50 bolivianos per £ as from April 1, 1936.
Colombia.*	Sight rate, 175 1/2 pesos per 100 United States dollars on March 31, 1936. This rate applies to holders of permits buying in the "open" market.
Ecuador.	Sight selling rate on New York was maintained in February at 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official selling rate was established at 110 cordobas per 100 United States dollars on November 26, 1934.
Salvador.	Sight rate on March 27, 1936, 2.50 1/2 colones per United States dollar.
Venezuela.	Sight rate on New York, 4.04 bolivares per United States dollar, on April 15, 1936.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company write on April 8, 1936, as follows:—

The Bank of England gold reserve against notes amounted to £200,849,881 on the 1st instant, as compared with £200,614,855 on the previous Wednesday. Purchases of bar gold announced by the Bank during the week amounted to £300,047. In the open market about £1,400,000 of bar gold changed hands at the daily fixing. There was a good general demand from the Continent, which maintained prices at a good premium over gold exchange parities; the premium over French franc parity, however, tended rather to diminish.

Quotations during the week:—

	Per fine ounce	Equivalent value of £ sterling
April 2	140s. 7d.	12s. 1.03d.
" 3	140s. 7 1/2d.	12s. 0.99d.
" 4	140s. 7d.	12s. 1.03d.
" 6	140s. 7 1/2d.	12s. 0.99d.
" 7	140s. 8 1/2d.	12s. 0.90d.
" 8	140s. 10d.	12s. 0.77d.
Average	140s. 7.92d.	12s. 0.95d.

The s.s. "Viceroy of India," which sailed from Bombay on the 4th instant, carries gold to the value of about £379,000.

SILVER MARKET

A quietly steady tone has been maintained, prices showing only small variations during the week. Offerings on China and Continental account, with re-selling by speculators were met by buying for the Indian Bazaars, who also effected some re-sales.

The market has presented no new features and there is no indication of any appreciable change in the near future.

Quotations during the week:—

	IN LONDON	IN NEW YORK
Bar silver per oz. std.	Cash	Two Months'
April 2	20d.	19 1/2d.
" 3	20d.	19 1/2d.
" 4	19 1/2d.	19 1/2d.
" 6	19 1/2d.	19 1/2d.
" 7	19 1/2d.	19 1/2d.
" 8	19 1/2d.	19 1/2d.
Average	19.937d.	19.927d.

The highest rate of exchange on New York recorded during the period from April 2nd to April 8th was \$4.96 1/2 and the lowest \$4.94 1/2.

The following statistics of imports and exports of gold and silver for the week ended April 16, 1936, are issued by the Statistical Department of H.M. Customs and Excise.

Movement during year 1935

Movement during 1936 (January 1 to April 16, 1936, inclusive)

Movement April 29, 1925, to April 16, 1936 (inclusive)

Movement September 21, 1931 (gold standard suspended) to April 16, 1936 (inclusive)

GOLD MARKET

Writing on April 15, 1936, Messrs Samuel Montagu and Company say that:—

The Bank of England gold reserve against notes amounted to £201,149,928 on the 8th instant, as compared with £200,849,881 on the previous Wednesday. Purchases of bar gold announced by the Bank during the week amounted to £479,756. In the open market, business has been fairly active; about £1,240,000 of bar gold was disposed of at fixing, daily offerings being rather above the average during the three working days of the week under review. General demand from the Continent continued and prices have shown little change, although the premium over gold exchange parities tended to ease slightly.

OIL OUTPUTS

THE BRITISH BURMAH PETROLEUM COMPANY, LTD.—A cablegram has been received from Burmah reporting the production of crude oil by this company for the month of March as 48,132 barrels.

BRITISH CONTROLLED OILFIELDS, LTD.—Production for the week ended March 28th: Venezuela, 14,439 barrels; Trinidad, 26,062 barrels; total, 40,501 barrels. Production for March: Venezuela, 63,836 barrels; Trinidad, 110,747 barrels; total, 174,583 barrels. Shipments for March: Venezuela, 54,701 barrels; Trinidad, 106,532 barrels; total, 161,233 barrels. Production for the week

ended April 4th: Venezuela, 14,694 barrels; Trinidad, 25,308 barrels; total, 40,002 barrels. Production for the week ended April 11th: Venezuela, 15,139 barrels; Trinidad, 24,986 barrels; total, 40,125 barrels.

THE KERN RIVER OILFIELDS OF CALIFORNIA, LIMITED.—The total production during the month of March, 1936, amounted to 133,315 barrels, or approximately 19,045 tons.

THE MEXICAN EAGLE OIL COMPANY, LTD.—Production for the week ended March 21, 1936, was 514,000 barrels. Production for the week ended March 28, 1936, was 529,000 barrels. Production for the week ended April 4, 1936, was 508,000 barrels.

VENEZUELAN OIL CONCESSIONS, LTD.—Production for the week ended March 28, 1936, was: Bolivar district, 730,011 barrels; Maracaibo district, 30,079 barrels; total, 760,090 barrels. Production for the week ended April 4, 1936, was: Bolivar district, 703,027 barrels; Maracaibo district, 27,978 barrels. Total, 731,005 barrels.

TAMPICO OIL, LIMITED.—The total production from the company's properties in Mexico during March was 10,974 barrels, in respect of

which the royalty due to Tampico Oil, Limited, amounted to 823 barrels.

TRINIDAD LEASEHOLDS, LTD.—Oil produced during March, 45,072 tons; oil purchased during March from other companies, 59,290 tons.

ANGLO-IRANIAN OIL COMPANY, LTD.—Production in Iran for the month of March amounted to 663,000 tons, making a total of 1,964,000 tons for the first three months of 1936.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

A NUMBER of commodity markets remained closed during the past week, but next week business will be normal again.

The market in raw sugar improved on the announcement that the United States' import quota will be increased this year. There were no tea auctions at Mincing Lane this week. The general trend of quotations for provisions was downwards, bacon, butter and cheese showing a fall in price on the week. Wheat prices were marked up a little owing to the absence of selling pressure and the poor condition of the crop in the United States. Beef was also slightly dearer than a week ago.

The coal trade has benefited from the cold weather; inland demand continued brisk, but export business remained dull. Business in iron and steel materials, though interrupted by the Easter holidays, is expected to continue brisk. Meanwhile, the continued scarcity of certain materials indicates the existence of a number of bottle-necks in the industry. Among non-ferrous metals, copper continued to advance in price. The improvement in the copper position is discussed in a Note of the Week. The rubber situation underwent no change during the past week. The market in raw cotton was firm on reports of unfavourable weather in the United States. Raw wool prices remained firm, but quotations for jute tended to sag.

The downward trend of the prices of primary products in the United States was arrested last week. Thus Moody's index of the dollar prices of staple commodities stood at 171.0 on Wednesday, against 168.8 a week earlier, 170.6 a month ago and 157.2 on the corresponding day last year.

COAL

SHEFFIELD.—Demand for industrial fuel of all descriptions is well maintained. There is a scarcity of best steams and washed singles. Sales of house coal are at a fairly high level for the time of year. Export conditions show little change. Forward enquiry is fairly active, but high prices hinder the fixing up of definite contracts. Bunker coal is unchanged and there is little or no coke available for shipment. The blast furnaces are consuming the whole of the output of coke, none of this being available on the open market. High prices rule.

Quotations: Best Yorkshire steams, 19s. to 19s. 6d.; washed trebles, 18s. 6d. to 19s.; washed singles, 15s. 6d. to 16s.; washed smalls, 14s. to 14s. 6d.; screened gas coal, 19s. to 20s. 6d.; furnace coke, 22s. (all f.o.b.); best Yorkshire house, 23s. to 24s. (at pits).

NEWCASTLE-ON-TYNE.—All classes of steam coal are firm; Northumberland grades have a steady sale in the home coasting market, and Durhams have been sold in large quantities to the Scandinavian countries. Graded steam coals are steady and at present there is some enquiry for shipment over next year. Durham gas and coking coal is quiet, there being little foreign demand. The loss of the Italian market is now causing much idle time at collieries. Coke of all descriptions continues to be firm, demand for export being as good as home trade.

Current f.o.b. prices for export:—**NORTHUMBERLAND.**—D.C.B. screened, 16s.; smalls, 13s.; Howards, Bentinck, Newbiggin, screened, 15s. 6d.; smalls, 13s.; Tyne Prime, large, 14s. 6d.; smalls, 12s. 6d.; Hartley Main large, 14s. 9d.; smalls, 12s. 6d. **DURHAM.**—Lambton/South Hetton, screened steam, 15s.; smalls, 13s. 6d.; Wear Special gas, 15s.; Holmside, Ryhope, Boldon, unscreened gas, 14s. 8d.; second-class gas, 13s. 6d.; coking unscreened and/or smalls, 13s. 3d.; Prime unscreened bunkers, 15s.; second-class unscreened bunkers, 14s.; Prime Foundry coke, 24s.; Newcastle and District gas coke, 24s.

GLASGOW.—There is a strong demand for most sizes of nuts, both on land-sale account and for export. With the exception of trebles, supplies are now short and prices are nominal in some cases. Large coal is moving steadily, but prices of most sorts show an easier tendency. Shipping business during the past week was on a better scale.

Current export prices f.o.b. district ports:—**LANARKSHIRE.**—Ell best, 17s. 6d.; splint best, 19s.; splint second, 16s. 9d.—17s.; navigation, screened, 15s.—15s. 6d.; navigation, unscreened, 14s.—14s. 6d.;

steam, 15s.; trebles, 16s.; doubles, 16s.; singles, 15s. 6d.; pearls, 14s.; dross, 12s. 6d. **FIFE.**—Best unscreened navigation, 13s. 3d.—13s. 6d.; unscreened navigation, 13s.; first-class steam, 14s. 9d.—15s.; third-class steam, 14s.—14s. 6d.; trebles, 15s.—16s.; doubles, 15s.—15s. 6d.; singles, 14s. 9d.—15s.; pearls, 13s. 6d.—14s. **LOTHIANS.**—Best splint, 14s. 6d.; prime steam, 13s. 6d.—14s.; secondary steam, 12s. 9d.—13s.; unscreened navigation, 14s.; trebles, 15s.; doubles, 15s.; singles, 15s.; pearls, nominal. **AYRSHIRE.**—Best unscreened navigation, 15s. 6d.—16s.; steam, 13s. 6d.—14s.; trebles, 15s. 6d.; doubles, 15s.; single, nominal; pearls, nominal; dross, nominal.

CARDIFF.—The South Wales collieries were idle for the usual Easter holidays till the night shift on Wednesday, and on the Cardiff Exchange operations have been practically suspended since last Thursday. Loading was resumed at the docks on Tuesday, and with a fair supply of tonnage in dock, shipments are likely to be of normal proportions for a holiday week. Last week exports, foreign and coastwise, both totalled 331,800 tons, compared with 305,300 tons the previous week, and 349,703 tons in the corresponding period last year. Prices are nominally unchanged. The course of the wages dispute in France is being watched with considerable interest, as in the event of a stoppage of work at the French collieries South Wales is likely to be the foreign export district that will be most immediately affected. It was reported on Wednesday morning that some contractors had already been requested to accelerate deliveries. With the opening of the Canadian season the anthracite trade is showing greater activity, and a number of vessels have already been cleared, chiefly for Montreal and Quebec.

Current approximate quotations:—Best Admiralties, 19s. 6d.; seconds, 18s. 9d. to 19s. 6d.; best dries, 18s. 6d.; Black Veins, 18s. 3d.; Eastern Valleys, 17s. 3d. to 17s. 7½d.; Western Valleys, 17s. 6d. to 17s. 9d.; best small steams (washed), 13s. 6d. to 14s. 6d.; coking smalls, 14s. 3d. to 14s. 6d.; second steams, 13s. 6d. to 14s. 6d.; anthracite, best large, 36s. to 40s.; Red Vein, large, 22s. to 27s.; machine-made cobbles, 35s. to 51s.; French nuts, 35s. to 51s.; stove nuts, 34s. to 50s. 9d.; rubbly culm, 11s. 6d. to 12s.; special foundry coke, 42s. 6d. to 47s. 6d.; patent fuel (Crown), 21s.; pitwood, ex ship, French, 24s. 3d.; Portuguese, 21s. to 21s. 6d.

IRON AND STEEL

MIDDLESBROUGH.—There is still considerable difficulty in making new purchases of foundry pig iron in this area. Quantities of this class of iron are being brought into the district both by rail and by sea in order to keep the local foundries supplied. Local makers assert that their customers are being kept supplied with sufficient iron to cover their needs. The price for No. 3 Cleveland foundry pig iron is officially maintained at 70s. per ton delivered locally, but actually no business is being done. It is understood, however, that this figure will only apply until June 30th, and for supplies after that date it is understood that an increase of 5s. per ton is being asked. Production of hematite pig iron has been increased by the additional furnace which was transferred last week, making nine on hematite in the North-East Coast area now producing this quality. The price for No. 1 East Coast hematite pig iron is officially 77s. per ton delivered in the Middlesbrough area, but it is understood that this is limited to sales for delivery up to July 31st.

Shipments of pig iron from the Tees during March show the effect of the heavy demand from home users, the total quantity shipped during that month being 3,467 tons, of which 1,641 tons went coastwise, and the remainder to foreign destinations. The export trade in manufactured steel improved during March, the total quantity shipped from the Tees for foreign destinations being 19,680 tons, which, with 13,916 tons coastwise, give a total of the shipments of manufactured steel for the month of 33,596 tons.

Local demand for steel continues strong, shipbuilding, structural and railway steel being in better request. The supply of semi-manufactured steel is still insufficient to meet all requirements.

Only odd cargoes of foreign ore are changing hands based on best Bilbao rubio at 18s. 9d. per ton c.i.f. Tees, whilst blast-furnace coke is firm at 24s. per ton delivered at the furnaces. Heavy steel melting scrap is changing hands at 57s. 6d. per ton delivered works.

SHEFFIELD.—The Easter holiday in the steel trade has been the shortest for many years. Resumption was general on Wednesday, but many works restarted on Tuesday morning, and the big open-hearth plants were running throughout the holidays. The reason for this curtailment is the pressure for supplies of all sorts of steel material and the inadequacy of much of the plant. Re-rollers and forgers working for the trade cannot give the desired deliveries. There is a distinct scarcity of steel. Expansion in the foundry pig-iron section continues. An additional furnace at Renishaw,

THE PENNSYLVANIA RAILROAD

SUMMARY OF ANNUAL REPORT FOR 1935

THE 89th Annual Report of the Pennsylvania Railroad Company covering operations for 1935 will be presented to the stockholders at the annual meeting on April 14, 1936. The report shows that total operating revenues increased over 1934 by \$24,143,487, or 7% (due in part to increase in freight rates), but continued subnormal, being 46% less than the annual average for 1925-1929. Operating expenses increased \$17,132,347 (due principally to higher wages). The Company earned a net income of \$23,849,798 as compared with \$21,633,965 in 1934. Surplus for 1935 was equal to 2.8% upon the outstanding Capital Stock as compared with 2.5% in 1934. Surplus per share (par \$50) was \$1.38 as compared with \$1.23 in 1934.

OPERATING RESULTS

	1935	Comparison with 1934 Increase or Decrease
TOTAL OPERATING REVENUES were	\$367,812,186	I \$24,143,487
TOTAL OPERATING EXPENSES were	263,100,184	I 17,132,347
LEAVING NET REVENUE of	104,712,002	I 7,011,140
TAXES amounted to	25,234,425	I 1,502,999
EQUIPMENT, JOINT FACILITY RENTS, etc., amounted to	9,082,936	D 751,213
LEAVING NET RAILWAY OPERATING INCOME of	70,394,641	I 6,259,354
INCOME FROM INVESTMENTS AND OTHER SOURCES was	36,413,423	D 3,600,468
MAKING GROSS INCOME of	106,808,064	I 2,658,886
RENTAL PAID LEASED LINES, INTEREST ON FUNDED DEBT AND OTHER CHARGES amounted to	82,958,266	I 443,053
LEAVING NET INCOME (Equal to 3.6% of Capital Stock)	23,849,798	I 2,215,833
APPROPRIATIONS TO SINKING AND OTHER FUNDS, etc.	5,721,402	I 279,497
SURPLUS (Equal to 2.8% of Capital Stock)	18,128,396	I 1,936,336

Dividend of 2% (\$13,167,696) was paid on February 29, 1936, to stockholders and charged against net income for 1935.

Splendid work has been done by our employees in accomplishing the results recorded. The Company's stockholders and bondholders can materially aid by helping to secure additional traffic and thus increase revenue. The Pennsylvania Railroad cordially invites their active interest in getting people to travel and ship via the Pennsylvania Railroad.

Philadelphia, Pa., March 30, 1936

M. W. CLEMENT, President

THE PENNSYLVANIA RAILROAD

SHIP AND TRAVEL VIA PENNSYLVANIA

Stockholders can obtain copies of the Annual Report from

J. Taney Willcox, Secretary, Broad Street Station Building, Philadelphia, Pa.

Derbyshire, has just been put into blast. Prices of iron and steel generally are extremely firm, and those of low-carbon acid steel billets have been advanced 10s. Further advances are considered likely, although producers are reluctant to take any steps which might cause a check to the prevailing good trade. Perhaps the busiest shops in Sheffield to-day are those producing hand and engineers' small tools. Owing to the heavy home demand, less attention is being given to the export trade.

GLASGOW.—The Easter Holidays were scarcely observed at the various plants in the West of Scotland, but the influence of the holidays in other centres is felt and business generally is quiet. In the Clyde district works were closed on Monday only, and in many other areas in the West of Scotland there was no stoppage. While the amount of new business placed has been rather less than in recent weeks, there is plenty of work on order books, and in almost every branch plant is running to capacity. There is an exceptionally large number of tenders for important work in hand at the moment, including, among others, tank and plate work, steel structural work, and steel windows. There is every prospect that much additional work will soon be placed with the iron and steel industry of the West of Scotland.

CARDIFF.—Owing to the Easter holidays there was no meeting on Tuesday of the Swansea Metal Exchange, and at most of the works operations were suspended this week. Last week shipments were exceptionally heavy and totalled 100,072 boxes, compared with 62,586 boxes the previous week, and 94,639 boxes in the corresponding week last year. As supplies received from works were also below the average, stocks in warehouse and vans fell to 75,624 boxes, as against 132,497 boxes the previous week and 152,740 boxes a year ago.

OTHER METALS

COPPER.—Despite holiday influences, prices displayed a remarkable firmness during the past week. In the United States the domestic price of the Kennecott Copper Corporation was raised by 0.25 cents to 9.50 cents per lb., thus bringing the quotations of this group into line with those of Anaconda and Phelps Dodge. The present position and the immediate outlook for copper are discussed in a Note of the Week.

Sales on the London Metal Exchange: 3,000 tons on Tuesday, against 1,150 tons last week; 1,850 tons on Wednesday, against 1,250 last week. Domestic spot was quoted at 8.97½ cents per lb. in New York on Wednesday, against 8.85 cents a week ago and 8.75 cents a month ago. Wednesday's official closing price for standard cash in London was £37 3s. 9d. to £37 5s., compared with £36 13s. 9d. to £36 16s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 63,334 tons, show a decrease of 1,903 tons, while stocks of rough copper, at 7,035 tons, show a decrease of 500 tons on the week.

LEAD AND SELLER.—Lead prices have been slightly harder, and spelter quotations a shade easier, although the undertone in both markets shows little change. Demand is not unsatisfactory, but lead prices are held down by large offerings, while spelter remains rather depressed on account of the uncertainty concerning the revival of the Zinc Cartel.

Sales of lead on the London Metal Exchange: 1,650 tons on Tuesday, against 1,150 tons last week; 700 tons on Wednesday, against 1,150 last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 per ton, compared with £15 18s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 600 tons on Tuesday, against 100 tons last week; 900 tons on Wednesday, against 550 last week. Wednesday's quotation in East St. Louis was 4.90 cents per lb., against 4.90 cents the week before and 4.90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 1s. 3d. per ton, against £15 3s. 9d. last week.

TIN.—On account of the devaluation of the Bolivian currency, prices on this market have shown an easier tendency. It will be remembered that exports of tin from Bolivia are some 7,500 tons below the permissible level, owing to the shortage of labour. It is anticipated in market circles that the currency devaluation should enable higher wages to be offered; and that this will be sufficient to overcome the labour difficulty and enable Bolivia to catch up with her quota. Whether this expectation will be realised remains to be seen. Meanwhile, it does not appear that the discussions of the International Tin Committee have yet borne fruit in the shape of an agreement for the prolongation of the restriction scheme after the end of this year. Mr Thomas stated in the House last week that the negotiations "had not yet reached the stage where the question of renewing the agreement on behalf of the British dependencies concerned required the consideration of the Government."

Sales of tin on the London Metal Exchange: 100 tons on Tuesday, against 335 tons last week; 105 tons on Wednesday, against 250 last week. The New York quotation on Wednesday was 47.00 cents per lb., against 47½ cents a week ago and 48.25 cents a month ago. Wednesday's official closing quotation in London for standard cash was £209 10s. to £209 15s. per ton, compared with £211 to £211 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 442 tons, an increase of 73 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged.

Quicksilver, on the spot, was quoted at £12 12s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £61 to £62 per ton ex warehouse, duty paid, as against £62 to £63 last week. Chinese wolfram for April-May shipment was quoted at 33s. 9d. to 34s. 6d. per unit, c.i.f., the same as last week. Platinum (refined) was maintained at £7 per ounce.

TEXTILES

COTTON.—Manchester.—The Easter holidays have had the usual disturbing effect upon the market. Export demand remains disappointing, but quite a useful business has been done for the home trade. Favourable developments are being impeded by the uncertain political situation.

Sentiment in raw-cotton markets has tended to become more bullish. The strength of prices has been largely due to unfavourable weather reports from the United States belt. Persistent rains East of the Mississippi River are delaying crop preparations, whilst dryness continues in the South-West. It would be a mistake, however, to take these early reports as an indication of the yield as there is plenty of time for a change in the outlook. The turnover in piece goods has again consisted of numerous small lots and no foreign outlet has been really active. Makers with wide looms are generally busy, but many producers of narrow cloths are in need of fresh contracts. Miscellaneous sales have been arranged for the several outlets of India. Fancies and specialities have attracted more attention than staple makes. There has not been any development in the off-take for China, but useful lines have been booked in dyed goods for Java and the Straits Settlements. Certain fine fabrics have attracted a little more attention for the Continent, chiefly Switzerland and Scandinavia. There have been signs of rather more activity in home-trade cloths, but the unseasonable weather is an adverse factor. Business in the yarn market has been quiet.

COTTON PRICES

	1936				Corresponding Date

COTTON DOUBLING SPINDLES REDUNDANCY SCHEME.—In Lancashire trade circles it is fully expected that the Cotton Spinning Industry Bill will soon become law. In the meantime, further progress is being made with the scheme for dealing with the question of redundant plant in the doubling section of the cotton-spinning industry. A meeting of the special committee of the Federation of Master Cotton Spinners' Associations, appointed to deal with this matter, has been held in Manchester this week, when a summary of the results of the questionnaire recently issued to doubling firms was presented. After discussion, the committee decided to adjourn pending the receipt of further information. It is estimated that there are about 3,000,000 doubling spindles in Lancashire and Yorkshire and probably 30 per cent. are owned by the Fine Cotton Spinners' Association. It is significant that although redundancy in this branch of the textile trade is apparent, numerous mills are working two shifts.

WOOL.—Bradford.—Offices have been closed for two days this week and as the machinery in several of the mills is still idle, it is impossible to report much change in the market compared with a fortnight ago. The pressure of business has somewhat abated. The call for the delivery of tops against contract has slackened, though this is not altogether unwelcome, for tops have been going to the spindles without having had time to mature. Even with the present output there is every probability that as a result of foreign demand wool will continue to sell at higher prices than are realisable on a given day for tops. Sales of wool to Russia have been made within the past three weeks, that country having been unable to cover requirements during the March series of London sales. This demand is welcome to those who are carrying stocks of raw wool, but at current prices spinners are unwilling to buy tops for delivery more than two months hence. Even this cautious buying is unlikely to react prejudicially upon the next clip, for the current one will be nearly exhausted when the new one comes forward. The pressure on spinning machinery has slackened, for manufacturers have supplied most of their urgent orders for spring goods, and some mills, which a few weeks ago had more work than could be done with their own machinery, now find that it is unnecessary to put work out on commission. Some of the botany spinning machinery will be idle all this week instead of two days, which is the customary period for Easter. Spinners of coloured botany yarn are very busy, for there is a big demand for fancy yarns. Some have contracts on their books which will last about three months, and others will only take contracts for delivery eight to ten weeks hence.

In spite of the quieter tone all round, the position is sound, for employment is much better than a year ago, and nobody expects any serious reaction in wool prices. Prices for semi-manufactures

show a distinct lag compared with the cost of the raw material, but preparations are being made for the autumn and winter trade in cloths for ladies' and men's wear, and in spite of the extensive use of cotton and artificial silk, a large percentage of wool is used in the manufacture of these goods.

GRAIN MARKETS

WHEAT.—The wheat markets have been firmer during the past week and prices have recovered some of the ground recently lost. Although export offers of French wheat have been renewed, there is no selling pressure from Canada or Australia. Moreover, the market has been stimulated by an unexpectedly bullish official report on the American winter wheat crop. The indicated production of 493 million bushels compares with a total outturn of 433 million bushels a year ago, and is smaller than was anticipated; in addition, the condition of the crop falls short of expectations.

On Wednesday last, "May" futures were quoted in Chicago at 98 cents per bushel, against 94½ cents the week before and 97½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Vancouver), ex ship, 33s. 3d. per 496 lbs., against 32s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 32s. 9d., against 32s. 3d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 981,000 quarters, against 1,245,000 in the previous week and 1,237,000 quarters in the corresponding week a year ago.

FLOUR.—Demand for home-milled remains quiet, while imported flour is steady in price. Shipments of flour from North America last week totalled only 59,000 sacks, against 100,000 in the previous week and 84,000 sacks in the corresponding week last year. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered country, 29s. 6d. per 280 lbs., against 29s. 6d. a week ago; delivered London, 28s. 6d.; as compared with 28s. 6d. a week ago. Manitoba patents, ex store, 26s. to 27s. 9d., against 26s. 3d. to 28s., a week ago. Australian, ex store, 21s. 9d. to 22s. 6d., against 22s. to 22s. 6d. a week ago.

BARLEY.—The tone of the market in imported descriptions has been steady during the week under review. Meanwhile, weather conditions in this country have been unfavourable for seeding the new spring barley crop and a decrease in acreage is anticipated. Trading has been very limited during the past week. "May" futures were quoted at 38½ cents per bushel in Winnipeg on Wednesday, against 38½ cents a week ago and 38½ cents a month ago. Quotations per 448 lbs. in London on Wednesday were: "English feed" at farm, 21s. 6d. to 23s., as against 21s. 6d. to 23s. a week ago; "English Malting" at farm, 25s. to 40s., against 25s. to 40s. a week ago.

OATS.—Demand remains very quiet, but the recent improvement in prices has been maintained. On Wednesday, "May" futures were quoted at 27 cents per bushel in Chicago, against 26½ cents a week ago and 26½ cents last month. Quotations in London, Wednesday: "English Black" at farm, 18s. to 19s. per 336 lbs., against 18s. to 19s. a week ago; "English White" at farm, 18s. to 19s., against 18s. to 19s. a week earlier.

MAIZE.—Although the volume of business has naturally been small over the holiday period, the tone of the market remains steady. There has been no pressure to sell and the smallness of the crop movement in Argentina has been a supporting influence. "May" futures were quoted on Wednesday at 61 cents per bushel in Chicago, against 59½ cents a week ago, and 60½ cents last month. Quotations in London, Wednesday, "Plate," landed, 19s. 6d. per 480 lbs., compared with 19s. 3d. a week ago; "Plate," ex ship, 18s. 9d., as against 18s. 6d. a week ago; "Plate," 18s. 6d., as against 18s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £5 5s. per ton, the same as last week.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to April 11	117,426	160,232	203,393	95,341
32 weeks to April 11	7,445,702	9,162,645	11,247,234	11,324,063
Average price of English wheat per cwt.	s. d. 5 1	s. d. 4 4	s. d. 4 10	s. d. 6 5

The following is a statement showing the quantities sold and the average price of British corn in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Apr. 9, 1932	Cwts. 76,207	Cwts. 51,508	Cwts. 30,766	s. d. 6 0	s. d. 8 0	s. d. 7 3
Apr. 8, 1933	117,426	53,590	34,211	5 1	6 4	5 9
Apr. 14, 1934	160,232	20,158	24,154	4 4	7 11	5 11
Apr. 13, 1935	203,393	49,793	30,912	4 10	7 3	6 9
Apr. 4, 1936	204,620	71,760	40,706	6 5	7 6	6 1
Apr. 11, 1936	95,341	35,991	21,963	6 5	7 8	6 2

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934.

OVER ONE HUNDRED YEARS OF SERVICE

Winnipeg (No. 1, Manitoba) — Cents per 60 lb.	65½	82½	89½	84½	79½	81½
Chicago (No. 2 Winter) — Cents per 60 lb.	84½	98½	102½	101½	94½	98

The visible supply of wheat in Canada amounts to 110,611,000 bushels, against 111,746,000 bushels last week, and 107,375,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—After the official quotations had been lowered last week, demand failed to respond and the market has been slow. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 90s.; Canadian, 82s.; Danish, 92s.; as against 88s. to 94s., 86s. and 96s., respectively, a week ago.

BUTTER.—Butter has been in quiet demand during the holiday period and prices are lower on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 87s. to 88s.; Australian, choicest salted, 87s. to 88s.; Danish, 105s.; compared with 89s., 88s. to 89s., and 108s., respectively, a week ago.

CHEESE.—A quiet business has been transacted and prices show a slightly easier tendency. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 74s. to 86s.; Canadian, finest coloured, 64s.; and New Zealand, finest coloured, 53s.; against 74s. to 86s., 64s. and 53s. 6d., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. In London Accras have been a quiet market. On Wednesday last, good fermented new crop, "April-May," was quoted 23s. 6d. per 250 kilos, c.i.f. Continent, against 23s. 7½d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 6,299 bags; delivered, for home consumption, 4,954 bags; exported, 258 bags; stocks, 149,296 bags, against 195,041 bags a year ago.

COFFEE.—The London spot market has again been quietly steady. In New York a similar tendency has been in evidence. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered, for home consumption, 67 cwt.; exported, 4 cwt.; stocks, 11,657 cwt., against 18,615 bags a year ago. Central and other South American, landed, 9,472 cwt.; delivered, for home consumption, 1,799 cwt.; exported, 1,622 cwt.; stocks, 112,480 cwt., against 100,260 packages last year. Other kinds, landed, 6,572 cwt.; delivered, for home consumption, 3,700 cwt.; exported, 1,937 cwt.; stocks, 163,223 cwt., against 114,475 packages last year.

EGGS.—A fair demand has been experienced during the past few days, prices showing little alteration. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 8s. 9d. to 9s. per 120, as against 8s. 9d. to 9s. last week, while Danish (15½ lb.) made 8s. 3d. to 8s. 6d. per 120, against 7s. 9d. to 8s. last week.

MILK.—Information relative to the operation of the Milk Marketing Scheme during March, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	Mar., 1935	Dec., 1935	Jan., 1936	Feb., 1936	Mar., 1936
Regional pool prices* (per gallon)	d.	d.	d.	d.	d.
Northern	13	13½	13½	14½	12½
North-Western	12½	13½	13½	14½	12½
Eastern	13½	14	13½	14½	13½
East Midland	13½	13½	13½	14½	13
West Midland	12½	13½	13½	14½	12½
North Wales	12½	13½	13½	14½	12½
South Wales	13	13½	13½	14½	12½
Southern	13½	14	13½	14½	13½
Mid-Western	12½	13½	13½	14½	12½
Far Western	12½	13	13	14	12½
South-Eastern	13½	14½	14	15	13½
Liquid milk price (per gallon, all regions)	16	17	17	17	17
Manufacturing price (per gallon, average)	6.23	6.022	5.947	5.942	5.793
Total sales under contract	72.21	65.76	67.23	65.22	74.05
For liquid consumption	48.01	45.70	46.12	44.71	47.54
For manufacturing	24.20	20.06	21.11	20.51	26.51

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries and for Grade "A" or special services are paid to the producers concerned in addition to the pool price. Transport charges are payable by individual producers and are deducted from accounts.

FRUIT.—Business at Covent Garden for the Easter holidays was generally good, with prices steady, states *The Fruitgrower*. Quieter conditions have, however, prevailed this week and warmer weather would now be welcome. Demand for apples remained active for the holiday trade, but quotations declined in response to the increase in available supplies. Pears were a good trade but Australian plums declined in price. South African grapes also eased in price, but sold well at the lower level of quotations. Forced strawberries were in evidence, but prices for these are now declining generally. Oranges sold well at steady rates, while lemons remained short and dear. Grapefruit have been a rather slow market.

MEAT.—Business at Smithfield Market was rather quiet after the holidays, prices showing little change from last week's level. On Wednesday last Argentine chilled hindquarters were quoted at 3s. 4d. to 3s. 8d. per 8 lbs., as compared with 3s. 2d. to 3s. 6d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. 2d. per 8 lbs., against 3s. 4d. to 4s. 2d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,281 tons, a decrease of 831 tons on the corresponding week last year. Beef and veal accounted for 4,972 tons, mutton and lamb 2,656 tons, and pork and bacon 1,131 tons, as compared with 5,426, 3,174 and 983 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper

in London during the past week were as follows: Black, landed, nil; delivered, 19 tons; stocks, 1,676 tons, against 2,186 tons a year ago. White, landed, 13 tons; delivered, 57 tons; stocks, 12,537 tons, against 19,594 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. ex warehouse on Wednesday, as compared with 8s. 6d. per cwt. a week ago. "April-May," in singles to Continent and U.K., was quoted at 7s. 10½d. per cwt., against 7s. 10½d. per cwt. a week ago. Movements in London during the past week were as follows: Landed, 162 tons; delivered, 82 tons; stocks, 1,003 tons, against 1,275 tons a year ago.

SUGAR.—The event of the week was the announcement from New York on Monday that the sugar quotas will be increased this year. Consumption in the United States is increasing by almost 5 per cent. annually, and, since the production of beet has been adversely affected by bad weather, Mr. Wallace announced an increase of 383,000 tons in the quotas of other producers. Cuba will be the chief beneficiary, for her 1936 quota has been increased by 130,000 tons. The total quota was originally fixed at 6,434,000 tons, but it is now estimated that 6,900,000 tons will be needed. Meanwhile, business on the New York market has been steady at unchanged rates. The London spot market displayed a quiet tendency until Wednesday, when a firmer tone was in evidence. The spot price in New York on Wednesday was 3.75 per cents per lb., as compared with 3.75 cents per lb. last week and 3.50 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "May delivery" at 4s. 11½d. to 4s. 11½d., against 4s. 10½d. a week ago. The movements of raw sugar at public warehouses in London and Liverpool last week were as follows: Imports, 10,841 tons, against 7,748 tons last week and 18,101 tons in the same week of last year; deliveries, 11,545 tons, against 16,367 tons last week and 15,537 tons last year; stocks, 221,589 tons, against 222,293 tons last week and 176,515 tons last year.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

A SELF-BINDER FOR The Economist

Week by week you keep your copies of "The Economist," and ultimately you either file them or bind them. Doubtless you are accustomed to the annoyance which attaches to the ordinary binder—the difficulty of reading half the left-hand page and the unwieldiness of the device generally.

We are able to offer our readers a binder which overcomes these irksome difficulties and is, in our opinion, the most efficient contrivance for the purpose we have yet seen.

It holds three months' issue and index, it has no wires, clips or metal contrivances, and each issue can be bound up in an instant in such a way that it can be read as easily as a well-bound book.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader Page of THE FINANCIAL NEWS are as follows:
MONDAY, APRIL 20—THE PROGRESS OF INDUSTRIAL RECOVERY. This article contains our regular monthly survey of the progress of recovery to date in British Industry as a whole and in the leading individual trades.

Important Notice.

This issue will include a special 32-page Supplement on
BASE METALS

which will be presented gratis. Base Metal Companies and share investments are fully dealt with.

TUESDAY, APRIL 21—Our Special Mining Correspondent "MINOTAUR," continuing his series of articles on leading Base Metal Companies, deals this week with the world's largest copper mining, refining and fabricating company—ANACONDA.

WEDNESDAY, APRIL 22—Companies and their Profit-Earning Capacity No. 13—INTERNATIONAL NICKEL.

THURSDAY and FRIDAY, APRIL 23 and 24—RUBBER AND RUBBER SHARES.

Thursday, April 23—THE OUTLOOK FOR RUBBER. Friday, April 24—THE RUBBER SHARE MARKET. These two articles investigate the background of the present revival of interest in the Rubber Share Market.

Our Rubber Market Editor, whose consistent scepticism of the soundness of the first bull movement after the introduction of the restriction scheme proved well founded, now returns to consider whether the present upward movement is firmly based.

In Friday's article he investigates the position in the share market and discusses current share prices in relation to the apparent outlook for the commodity.

"A BITTER DISAPPOINTMENT"

MR NEVILLE CHAMBERLAIN's fifth Budget, opened in the House of Commons on Tuesday afternoon, has reversed the process of relaxation which was started two years ago. What is worse, it is, only too clearly, the first of a series of re-armament Budgets. The Chancellor's "bitter disappointment" at this reversal of his hopes will be shared by millions of taxpayers throughout the country.

The villain of the piece is, of course, the enormous increase in expenditure on armaments. Mr Chamberlain flattered this expenditure by comparing it to the acquisition of fire-fighting appliances to ward off a fire whose heat could already be felt. It will seem to many people an apter metaphor to say that we are increasing our stock of powder at a time when men are running about with naked torches. The Budget is being strained and taxes are being increased to pay for nothing but the wickedness and the folly of mankind.

After estimating the probable expenditure of the coming year and the revenue on the basis of existing rates of taxation, and making a conservative provision for the Supplementary Estimates which will certainly appear in the course of the year, Mr Chamberlain found himself with a gap of £21,291,000 between revenue and expenditure. This prospective deficit would, indeed, have been smaller if he had seen fit to reduce the Fixed Debt Charge to the amount that has actually been spent on interest and management in the last two years. But the figure was left at £224 millions, which will, in all probability, provide another sum of the order of £12 millions for debt redemption. It is perhaps as well to preserve the principle of reducing debt out of revenue, even though the sum provided is so small, relatively to the total of the National Debt, as to be no more than a "token payment."

Mr Chamberlain decided to meet his deficit out of revenue. That decision is undoubtedly wise. Apart from the single factor of defence expenditure, this is one of the Treasury's fat years. The yield of taxation is increasing, interest rates are at their lowest and unemployment expenditure is declining. It cannot be expected that these conditions will last for ever. Within comparatively few

years we must expect a decline in revenue, an increase in interest rates and a higher burden of unemployment assistance payments. If we were to start budgeting for a deficit now, in what state would British public finances be when the lean years arrived?

Instead of making concessions, as in the last two years, the Chancellor thus found himself engaged on a search for sources of increased revenue. One small concession he did, indeed, make by increasing the income-tax allowances for married couples and young children. The married man, especially the father of a family, has borne a very heavy burden in recent times and this small relaxation will not be grudged him, even in this hard year. For the rest, the Chancellor found his increased revenue in four main sources: measures against the evasion of taxes; an increase of 3d. in the standard rate of income tax; an increase of 2d. per lb. in the tea duty; and a raid on the Road Fund. With the two former of these expedients it is hard to find fault. The taxpayer is fully entitled to search for legal methods of evading the intent of the tax laws. But the Treasury is at least equally entitled to stop the gaps that the taxpayer's ingenuity has disclosed. The increase in the standard rate is naturally unwelcome, especially, because of its odd amount, to accountants. But when increased revenue is wanted it is both inevitable and proper that it should be sought primarily in the income tax.

The two remaining methods by which the Chancellor closed the gap are, however, more objectionable. The tea duty was presumably selected for the precise reason that it enters every household in the country, in pursuance of the Chancellor's dictum that "what benefits all must be paid for by all." But even if it be accepted (which it cannot be without argument) that a contribution was required from the indirect taxpayer, in spite of the large increases in indirect taxes in recent years, the tea duty was a poor choice. It is one of the most regressive of taxes, since tea is one of the commodities, like bread, of which the poor family buys more than the rich. Raids on the Road Fund are, by now, almost common form. But this year's raid was no ordinary one, for the Chancellor announced his intention of bringing

the independence of the Fund to an end, of taking the whole of the yield of motor licence duties into revenue and meeting expenditure on roads out of the general Budget. Is this anything more than a device to permit future raids to be executed in secrecy? The income of the Road Fund comes from specific taxation raised from a special class of the community (already very heavily taxed for the benefit of the general revenue) and its expenditure goes in direct benefits to this community. Properly regarded, the Fund is not so much a matter of taxation and expenditure as a trading service. So long as it remained independent there was always the possibility of raising capital sums secured upon it, if particularly heavy expenditure upon the roads became advisable. The Chancellor's action will render impossible any such self-financing plan, precisely at a time when the very rapid increase in the number of motor vehicles on the roads is making capital development urgently necessary.

By these expedients the Chancellor has balanced his Budget for 1936-37. It is not impossible that revenue may once more exceed the estimates, although Mr Chamberlain seems to have estimated this year with less of his traditionally excessive caution. But it is certain that the present basis of taxation will not balance the Budget for 1937-38, and Mr Chamberlain's remarks on future budgetary problems formed the most significant—and ominous—part of his speech. He argued, in brief, that the present generation of taxpayers could not be expected to shoulder the full burden of an increase in armaments. Indeed, since the "benefits" of re-armament would inure in part to posterity, some part of the cost could legitimately be left to the future. Moreover, taxation must not be raised so high as to cripple industry. This led to the conclusion that, while the current maintenance of the defence forces should in any case be met out of revenue (and he warned the House that maintenance would cost more in future), some part of the emergency expenditure necessary to bring the defence forces up to the prescribed standard could properly be met by a loan.

We find this argument both fallacious and dangerous. The fallacy consists in the belief that the real cost of re-armament can, by any means other than foreign borrowing, be placed on the future. The National Debt can, indeed, be increased and future generations can be compelled to transfer larger sums from their tax pocket to their interest-income pocket, doubtless at considerable inconvenience to themselves. But increased armaments must come out of the current national income. If they are paid for by loan, the cost still falls on the present generation. If the loan is subscribed out of the normal savings of the public, the cost appears in a slowing-down of non-military capital development. If the borrowing involves an inflationary rise in prices (as it did during the war), the cost falls directly upon the standard of living of the people. If we want increased armaments we must provide them out of the resources available to us now, and the only valid consideration is how the necessary money can best be raised from the present generation of citizens, by taxation, borrowing or inflation.

The danger of the Chancellor's argument arises from the fact that the beginning of our heavy armament expenditure coincides with a fairly advanced stage in the present trade cycle. Difficult though our budgetary problem may be now, it will be very much more difficult in a few years' time. Great Britain owed much of her comparative monetary stability after the war to the fact that she financed a higher proportion of the cost of the war out of current taxation than any other European belligerent. The proper course now is to finance re-armament—"maintenance" and "emergency increase" alike—out of taxation as long as we can. Prematurely to talk of loans is to encourage the nation to blink the painful fact that re-armament is going to take an uncomfortably large share of the National Income in the next few years. We congratulate Mr Neville Chamberlain on his courageous decision to balance this year's Budget mainly by increased taxation rather than by spurious devices such as the appropriation of the profits of the Exchange Equalisation Account. But we believe that by hinting, thus prematurely, at the probability of large re-armament borrowing in future years, the Chancellor has done a grave disservice to the cause of sound finance.

THE PARTING OF THE WAYS

THE grim events at Geneva and in Africa this week have brought us to the parting of the ways. And this in more senses than one; for it may be a parting between England and France, as well as a choice between roads leading Europe, in her turn, to peace or war. Signor Mussolini, flushed with victories in Ethiopia, has rejected peace talks within the framework of the League; and, as we record in a Note on page 175, the League Council on Tuesday was only capable of passing a tame resolution of regret, which concluded with "a supreme appeal" to Italy—as ineffectual as all other appeals by France or the League. A war of wanton aggression by one League member on another draws to its climax, to the hideous accompaniment of Italian poison-gas and Italian aerial bombardment of civil populations.

The debate out of which this heartbreaking League resolution issued has served to bring the divergence between French and British policy to a head. Speaking for France, M. Paul-Boncour took the Laval line. The whitewash over the sepulchre of the Covenant must be preserved; but peace must be had in Africa on any terms, for the sake of liberating the Italian Army "to face the menace hanging over Europe." He disposed of Italy's poison gas by observing that "war will be war." Mr Eden declared that the seriousness of the consequences, for the League, of the events of the last seven months could scarcely be exaggerated; that the principle of collectivity offered the one hope of lasting peace; and that the British Government held it to be their duty as members of the League at least to maintain the existing financial and economic sanctions. He added that Great Britain was ready and willing to consider, together with her fellow members, the imposition of further economic and financial sanctions. As to the Italian use of poison gas, Mr Eden said that this concerned the inhabitants of every great city in the world. The Protocol of 1925 was their charter against extermination. If such a convention could be torn up, over and above the League Covenant, how could anyone any longer put any trust in any international engagement? He closed by telling his colleagues that the British Government believed in the League as the best instrument available to mankind for the preservation of international peace, and that they were prepared to act in accordance with that policy now and in the future—but this only as long as other nations were, and to the extent to which other nations were: no longer and no further. If, he concluded, as a consequence of the final outcome of the Italo-Abyssinian conflict, the authority of the League were so shaken that its future utility as the best instrument for the preservation of international peace were placed in doubt, then "we should each of us have to consider the policy which in the situation it would be our duty to pursue."

The contingency which the Foreign Secretary has conjured up in these well-weighed words is neither academic nor remote. For the Committee of Eighteen (the sanctions committee) has not been summoned; and, while international action is held up pending the outcome of elections in France—which, to judge by previous French elections, may bring a change of men without a change of measures—Italian gas and Libyan bayonets in Africa are, to all appearance, bringing Signor Mussolini's criminal enterprise rapidly to a triumphant conclusion. This is the fearful situation—the worst since 1914—with which we are faced this week. What are we to make of it?

If the League now breaks down the fault will lie between Great Britain, France and the United States. For these were the three Powers that had the destinies of the world in their hands after the Armistice of 1918. To apportion the blame between the three is as unprofitable an exercise as it is difficult. It is more useful to remind ourselves of the sins—of which all three responsible Powers have been guilty in differing degrees—through which this disaster has come about; for these sins are still being committed by all of us; and, if we abide in them, one disaster will follow upon another. The sins that have been fatal to the League are selfishness (which is really always myopic and never enlightened), indecision and cowardice. Whither are they now leading us?

The cardinal point to be faced is that a failure of the principle of collective security means the victory of another principle. And this other principle, if its now imminent victory is consummated, will be the death of civilisation; for it is the essence of everything that is anti-social. This evil thing, which is being allowed by us to beat down and destroy the League, is man's ancient enemy in his own household: the anarchic use of force, in violation of right and justice and in breach of plighted word, for utterly selfish, sectional purposes.

In our present post-war age—which will end in another war if it does not achieve a collectively maintained peace—this distinctive spirit of lawless force won its first successes, quite soon after the peace settlement, at Fiume, Vilna and Memel. But these outbreaks were on a small scale and in a corner, so we passed them over and hoped for the best. Far more serious was the Franco-Belgian invasion of the Ruhr, in breach of the Versailles Treaty and in the heart of Europe. Yet this time, too, we English hoped for the best; so we passed by on the other side, mumbling "We hope you are right." Next came the first direct challenge to the Covenant when the Japanese broke out in Manchuria in 1931. This time we flinched from our duty—nakedly and unashamedly. To-day, we are confronted with the Italian challenge; we know that the fate of the League hangs upon our response; and yet we are flinching again.

To judge by our behaviour, we might be thinking that each time we evade the issue we have made a "get-away" for good. The truth, of course, is precisely the opposite. Each time we shirk our duty we are directly inciting some more formidable gangster to commit some more shocking and more disastrous act of violence than the last. We have seen, so far, the first—assuredly not the last—of the Japanese and Italian strokes.

But there is a stronger and grimmer power on the war-path than either Italy or Japan. Germany has scarcely yet begun the course of violence to which she is being invited by the present French sabotaging of the Covenant and the present British acquiescence in it. Germany has yet to break out beyond her post-war frontiers; and while that may be a desperate venture for her, as well as for us, our cowardice, indecision and selfishness are giving her heart to put her fortunes to the touch. "Whoever is ready to stake his existence has still to-day a great advantage, even over somebody much stronger than himself who is not ready to risk his life." That is the moral of Mussolini's victory over the League as it is presented to the German public by the *Berliner Tageblatt*. It is a terrible moral for us.

On this showing (and who—we give the challenge—can show that the truth is not as we have stated it?), is it not a vital interest, as well as a supreme obligation in honour, for this country to pay the very highest price for the sake of snatching the League, at this thirteenth rather than eleventh hour, from the jaws of destruction? When the Italo-Abyssinian issue first arose, the *Economist* expressed the belief that the League was the British Empire's last, as well as first, line of defence. Everything that has happened during these last seven months has confirmed us in this conviction. It is impossible here to examine the ultimate political and strategical implications of the various threats to Britain and the Empire if the world drifts back into unrestrained, aggressive power-policies. At the present moment, we will merely pick out one point in which the British Empire stands to meet disaster if, through a breakdown of the League, the world falls back under the dominion of lawless and conscienceless violence.

Such a relapse would carry away with it, in ruins, the only sure basis of collaboration in foreign policy between the several self-governing States-members of the British Commonwealth. The choice here lies between a common League policy, such as we have all been pursuing in step with each other so far, or a parting of company in order to follow the several irreconcilable lines that will be dictated by purely selfish—and therefore recklessly short-sighted—interpretations of English, Irish, Canadian and South African national interests (Australian and New Zealand interests will be past praying for!). This enormous Commonwealth stake which we have in the Italo-Abyssinian issue is familiar to Englishmen who have been in touch with opinion in the Dominions. It will be brought

7, CHANCERY LANE, LONDON

home to a wider circle by the analysis of Canadian opinion in a letter of capital importance from Mr J. M. MacDonnell which was published in *The Times* on Tuesday.

In fine, the British Empire cannot survive if the United Kingdom persists in the policy, laid down by Mr Baldwin's Government, that we will not take the initiative in the international crisis. A heritage of greatness cannot be repudiated with impunity. For the English in 1936, "a craven fear of being great" means national suicide.

THE BUDGET ACCOUNTS

TUESDAY'S Budget Speech broke no traditions in its form. The Chancellor first surveyed the out-turn of the financial year just ended, then discussed the expenditure for the coming year and the yield of revenue on the basis of existing taxation. Then, having stated the measure of the problem with which he was faced, he turned aside, pending the closing of the markets, to smaller matters and finally returned to explain how he proposed to meet the deficit. For convenience of exposition, however, we may amalgamate the first two stages and consider first the expenditure for the two years together, and then the revenue on the basis of the existing rates of taxation. Accordingly, the first table compares the Budget estimates of expenditure with the Budget estimates, and with the actual issues, of last year:—

EXPENDITURE (£'000's omitted)				
	Budget Estimate 1935-36 (1)	Actual Issues, 1935-36 (2)	Budget Estimate 1936-37 (3)	Col. (3) compared with col. (2)
Consol. Fund Services:—				
Interest and Management of Debt	224,000	211,534	224,000	+ 12,466
Sinking Fund	—	12,466	—	— 12,466
Total Debt Services	224,000	224,000	224,000	—
Payments to N. Ireland...	6,750	7,204	7,500	+ 296
Other Cons. Fund Services	3,700	5,648	3,200	— 2,448
Post Office Fund.....	1,130	1,127	600	— 527
Total Cons. Fund Services	235,580	237,979	235,300	— 2,679
Supply Services:—				
Army Vote	43,550	44,647	49,321	+ 4,674
Navy Vote	60,050	64,806	69,930	+ 5,124
Air Vote	20,650	27,496	39,000	+ 11,504
Civil Vote.....	352,979	361,923	365,254	+ 3,331
Revenue Departments...	13,161	13,123	13,492	+ 364
Allowance for Supplementaries.....	8,000	—	25,600	+ 25,600
Total Supply Services (excl. P.O.)	498,390	512,000	562,597	+ 50,597
Total Ordinary Expenditure	733,970	749,979	797,897	+ 47,918

The Fixed Debt Charge is once more put at £224 millions. The Chancellor expects that a small Sinking Fund will be

provided out of this sum, as in recent years, unless interest rates rise. He made it clear that he does not regard £12 millions or so as an adequate provision for debt redemption, but in these abnormal times he is unable to provide more. The Estimates for the Supply Services already published were inadequate in two particulars. Nothing was provided for unemployment assistance payments to local authorities or for the cost of re-armament. For the former the Chancellor allowed £5,600,000. The latter cannot yet be calculated; but he thought it would exceed, rather than fall short of, £20 millions. However, allowing for the inevitable unspent balances on various Civil Estimates, he decided to allow that sum. These additions, together with the published Estimates, brought the total of expenditure up to £797,897,000.

The second table gives similar figures for revenue:—

REVENUE (£000's omitted)

	Budget Estimate 1935-36	Actual Receipts 1935-36	Estimate for 1936-37 on exist- ing basis of taxa- tion	Col. [3] compared with col. [2]
	[1]	[2]	[3]	
Inland Revenue:—				
Income Tax	232,500	238,074	248,000	+ 9,926
Surtax	51,500	51,020	54,500	+ 3,480
Death Duties	80,000	87,920	89,000	+ 1,080
Stamps	25,000	25,800	27,000	+ 1,200
Excess Profits Duty and Corporation Profits Tax	1,700	1,300	750	— 550
Land Tax	800	785	750	— 35
Total Inland Revenue	391,500	404,899	420,000	+ 15,101
Customs.....	188,570	196,642	204,000	+ 7,358
Excise.....	106,350	106,700	110,000	+ 3,300
Total Customs & Excise	294,920	303,342	314,000	+ 10,658
Motor Vehicle Duty (Ex- chequer share).....	5,000	4,977	5,000	+ 23
Total Tax Revenue...	691,420	713,218	739,000	+ 25,782
Post Office (net receipt)...	11,850	11,670	11,256	— 414
Crown Lands	1,330	1,360	1,350	— 10
Sundry Loans	3,900	4,934	5,000	+ 66
Miscellaneous Receipts ...	25,970	21,738	20,000	— 1,738
Total Non-tax Revenue	43,050	39,702	37,606	— 2,096
Total Ordinary Revenue	734,470	752,920	776,606	+ 23,686

SELF-BALANCING ITEMS (£000's omitted)

Post Office	64,070	66,080	69,344	+ 3,264
Road Fund	26,230	25,775	26,500	+ 725
Total	90,300	91,855	95,844	+ 3,989

The Chancellor felt justified in anticipating a considerable continued expansion in the yield of Customs and Excise, which he put at £10,658,000. The only items from which increased yields are not expected are the entertainments duty (owing to last year's reduction) and the Irish Free State duties (owing to the coal-cattle agreement). Income tax is expected to yield £10 millions more. The increase would have been larger if it had not been that half the cost of last year's concessions has still to be met. Surtax is expected to show its first increase in the coming year, and the Chancellor put it at the very considerable sum of £3,480,000 or nearly 7 per cent. of last year's yield. Death duties and stamps are both expected to show continued increases, founded upon the anticipation of a maintenance of prices and of the volume of trading on the Stock Exchange. Total tax revenue was, therefore, expected to show an increase of £25,782,000. Small falls in the estimated receipts from other sources of revenue reduce the net increase to £23,686,000.

The Chancellor's estimates of revenue seem to be less cautious than usual. The £10 millions' increase in income tax, for example, compares with an actual increase last

year of £9,197,000 (the two figures are roughly comparable). But the estimates are not excessive, given the major presumption of a continuance of recovery. Generous or not, however, they left the Chancellor with a deficit of £21,291,000 to meet.

It was at this point that Mr Chamberlain turned aside to mention his minor proposals. The most interesting of these was the announcement of a systematic attempt to check "legal evasion" of taxes. The transfer of money abroad

or the registration of one-man companies are no longer to provide means of escape. "Educational trusts," which have spread very rapidly in recent years, are to be prevented by a new provision that the income of an infant which derives from its parents is to be aggregated, for tax purposes, with the parents' income. The saving from this latter change, however, is to be returned to the generality of married men and fathers by an increase in the personal allowance for married couples from £170 to £180 and by an increase in the children's allowances from £50 to £60 per child.

There were also, in this section of the Speech, a few more minor announcements: changes in the methods of assessment for Estate Duty and for Schedule "A" of income

tax; a protective tariff on lager beer; extension of the key industry duties; foundation of the Special Areas Reconstruction Association, Ltd., a company to finance small businesses in the Special Areas with a partial State guarantee against loss.

Before continuing the main thread of his Speech, the Chancellor also made an important declaration of policy for the future—namely, that he considered it proper to raise part, at least, of the cost of expanding the defence forces by borrowing, although the rising cost of maintaining the defence forces should always be met out of revenue. This conclusion was justified on the double ground that the "benefits" of the new policy "will inure to posterity," and that taxation must not be raised to such a level as would seriously cripple industry. We discuss this declaration of policy in the first leading article of this issue.

There was one more item before the announcement of the new taxation. Mr Chamberlain has decided that the Road Fund must lose its autonomy. Its revenues are to be brought within the control of the Exchequer, and its expenditure is in future to be regulated by detailed Estimates and Votes in Parliament. For technical reasons, this change cannot be effected until next year; but as an earnest of his intentions, the Chancellor appropriated the outstanding surplus of the Fund, amounting to £5,250,000.

This raid on the Road Fund, and the savings from tightening up tax law, after deducting the cost of the concessions in income-tax allowances, still left a deficit of £15 millions. The gap was closed by an increase of 3d. in the standard rate of income tax, to produce £12 millions this year, and by an increase of 2d. per lb. in the tea duty, preferential and non-preferential alike, to produce £3,500,000. This brought the revenue up to £798,381,000, leaving a surplus over anticipated expenditure of £484,000. The final figures are shown in the table in the previous column.

The Chancellor's closing sentences were devoted to a recital of the evidences of material recovery since 1932, due, in his opinion, to "tariffs and cheap money," and to an expression of the "bitter disappointment" he felt at being compelled to reverse the process of concessions and to ask instead for new sacrifices.

CENTRALISED COAL SALES

(BY A CORRESPONDENT)

It is no secret that the coalowners of the United Kingdom are already finding great difficulty in framing schemes for the centralised sale of coal. Last autumn the Government stipulated that the new selling organisations must cover all coalowners in each district and must have a measure of permanency. These were also to prevent inter-colliery competition, and to render evasions impossible. The colliery owners agreed in principle to these stipulations. The task, however, of reconciling the interests of separate units in the various districts, and those of districts under the central scheme, is proving much greater than that of establishing the output and price control schemes which were brought into operation under the Coal Mines Act of 1930. The industry is under a promise to the Government to bring the new regime into operation as from July 1st next. In no district, however, has the progress made so far been sufficient to secure unanimity over the details to be submitted for the approval of the Board of Trade.

The outlines are available of the scheme formulated by the South Wales owners. When these companies agreed to the Government's proposal they stipulated that the scheme ultimately adopted should be fair and equitable both to large and small producers. The Mines Department acquiesced in this condition, but laid down three further stipulations. They insisted, first, that the scheme should be accompanied by rigid quantitative control; secondly, that the share of each colliery should be based upon actual trade and not on estimates (as under the output quota system); and, finally, that money compensation and penalties should be provided for under- and over-supply in relation to the "trade shares." The scheme has been drafted on the assumption that the quota system is to be retained and used

as a basis for the new "trade shares." These are defined as "the actual total trade of the district, or the class of coal, divided amongst collieries in proportion to their quotas." Any owner supplying over his trade share will pay a levy; and it is proposed that the owner supplying under his trade share will be entitled to compensation at the rate of 1s. per ton of inland supply, and of 6d. per ton of export supply. The main work of the Executive Board created under the original control scheme will continue. The Board will also ascertain the trade share of each colliery at the end of each quarter. It will appoint an independent Control Board "in order to prevent evasions and to ensure that the actual trade is divided among the owners upon as equitable a basis as possible."

Apparently the scheme is designed to cause the minimum of disturbance to the conduct of the trade in existing channels. Accordingly, the principal functions of the Control Board will be to issue supply permits to all owners for sale and supply; to control all sales and supplies through middlemen; and to assist the Executive Board upon matters connected with the sale and supply of coal. Its permits will apply to all coals, except, first, coal for working or for colliery consumption; secondly, royalty coal; and, thirdly, coal for use in any other part of the producing undertaking. The price of coal supplied for ancillary activities, however, will remain subject to the control of the Board. The Act of 1930 does not limit the discretion of the colliery owners in the disposal of their coal. In order, however, to ensure that the price is not frittered away among distributors by inter-competition, the scheme provides for the establishment of a register of distributors and sales organisations through whom coalowners may sell their coal. Consultations are, in fact, at present taking place between the Executive Board and the associated exporters. It is a condition of any agreement that may be reached that the exporters shall give adequate assurances of fidelity to the terms and conditions governing the sale of coal by the colliery owners themselves.

It is not yet known to what extent the schemes which are in course of preparation in the other districts conform to, or differ from, these main features of the South Wales scheme. The method of central selling proposed by the Welsh colliery owners differs fundamentally not only from that in operation in the Ruhr, but also from that which has been for some time in operation in the Lancashire coalfield. There are many standpoints from which it may be criticised. It must be borne in mind, however, that even in Germany, where central selling has been in force for a period of over 30 years, the method of operation has been subject to frequent revision, and is even at the present moment under reconsideration. Much experience, therefore, of centralised practices may be necessary before the most effective system can be discovered, and further integration may be found necessary. It may be claimed, however, that the experimental schemes now in course of preparation aim in the right direction. They should definitely close many of the channels of wasteful competition which have so greatly impoverished the finances of the industry in recent years.

SPAIN AND SOCIALISM

(BY A CORRESPONDENT)

"THE revolt of the masses"—to apply the title of Señor Ortega y Gasset's provocative book to his own country—is the most significant feature of Spain to-day.

Immediately after the General Election on February 16th there were prison riots, particularly at Cartagena. Fortunately the all-party Permanent Committee, the old Cortes in miniature, read the danger signals aright and promptly agreed that the amnesty decree, which had been promised in the Government's election programme, should be issued forthwith without Parliamentary sanction. Another decree of February 28th, providing for the reinstatement of those who took part in the insurrection of October, 1934, and of those dismissed on suspicion of revolutionary sympathies, rapidly took the sting out of labour discontent. The majority of the employers cheerfully accepted this hazard of political fortune, and only jibbed when they found that they were expected to pay compensation into the bargain. In the end the State will probably have to bear the charge, though disputes on this point are being referred to the conventional *Jurados Mixtos*, composed of representatives of employers and workers with a Government umpire. Then there has been "symbolical occupation" of land on the big estates in Badajoz—an orderly proceeding, but an eye-opener on the local strength of the (Socialist) Federation of Land Workers; for in Spain as a whole the Socialist General Union of Workers (U.G.T.) only controls about 15 per cent. of rural workers. As to sporadic outbreaks of arson and the sacking of political clubs, they have been the work of hooligans paying off private scores, evidence of that "moral decline," hand-in-hand with material impoverishment, which Señor Azaña lamented in his Ministerial declaration last week. They are hardly portents of a social revolution. Such incidents have been noticeably limited to certain provinces—Albacete, Granada, Murcia, Logroño, etc.—on the fringe of the central plateau, where the conditions of squalor and distress are worst. Virtually no disturbance at all has occurred in Catalonia or other provinces of the littoral, where the Left is actually much stronger. The Civil Governors of the provinces affected have been forthwith dismissed. In Spain, at the best of times, maintenance of law and order was a whole-time job.

Though this turbulence was spontaneous and unorganised, the various labour associations are, of course, out to exploit it. The better-known Labour leaders are racing to get in front of this workers' and peasants' movement, now on the march. At present Señor Largo Caballero, the septuagenarian trade union leader, has a long lead. His left-wing group has drafted a new party programme, shorn of all reformist and gradualist features, as a challenge to the moderates who control the Socialist national executive. This manifesto, which is supposed to have two-thirds of the party behind it, endorses the doctrine of the "dictatorship of the proletariat" as a necessary stage during the transition from the capitalist to the Socialist State. The Communist Party leaders, on the other hand, are more studiously moderate. Apparently, on the instructions of the Comintern, they are quite prepared to continue co-operation with the Azaña democratic regime.

For the time being the electoral Popular Front remains intact. The Socialists have complete confidence in Señor Azaña's undertaking, repeated in each big speech he makes, to fulfil the electoral programme to the letter. It includes a land reform on the principle "leave the right of private ownership intact, but limit the usufruct"; provision of agricultural credits; leasehold reform, etc.; reorganisation of the Bank of Spain, and measures of control to secure more liquid resources from the other banks; restoration of guarantees for labour, as laid down in the Constitution; and a new law making "debasement of wages" a criminal offence—apart from the amnesty and reinstatement of dismissed workers. But there is little Socialism about it. It is natural, therefore, that the Largo Caballero faction should be harking back to the idea of a Proletarian Front. Despite proud assertions to the contrary, working-class solidarity is still a dream.

As for the other Left groups, the goal of the F.A.I. (Iberian Anarchist Federation), which is the political organ-

of syndicalism, is described as "libertarian communism." Nobody quite knows what that means; but it is utterly opposed to the harsh discipline of Marxism; and its creed of "direct action" has an inordinate appeal to the emotional intensity and anarchical disposition of the Spaniard. Syndicalism has lost ground considerably in the past three years, owing to internal dissensions and to the firm attitude of the autonomous Catalan Government in its previous phase. But it is still strong enough to put spokes in the wheel of a Marxist revolution. Nor should the competition of the *Alianza Obrera*, representing Left-wing, or Opposition, Communism, be left out of account in weighing up the centrifugal forces which impede the progress of socialist revolution in Spain.

The general strike which paralysed Madrid for 24 hours on Friday of last week showed up the weaknesses of the Government and of the Left groups. It was declared against the orders of the executive of the Socialist U.G.T. But, as on one or two previous occasions, the active minority of syndicalist agents—the main strength of the rival National Confederation of Labour (C.N.T.) is still in Barcelona and among the agrarian proletariat of Andalusia—seized their opportunity to capitalise the *frondeur* spirit of the working class, which had long been exasperated by stories of Fascist provocation. It may be presumed, however, that Señor Largo Caballero and the other militant Socialists who control the Madrid branch of the Socialist Party brought strong pressure to bear on Señor Azaña. For a Government decree on the same day announced the dissolution of all Fascist groups and the winnowing of philo-Fascist elements from the police and civil guard. On Monday an emergency Bill, directed against possible "anti-Republican" activity by disaffected army officers—actually, the 11,000 or so who accepted a "disarmament dole" in 1931 rather than serve the Republic—was forced through the Cortes. So the tale of suppression of political opponents—the *leitmotiv* of Spanish politics—goes on.

This latest demonstration of the power of the "Marxist" forces is ominous. It is likely to have more serious consequences than, for instance, the recent emergency motion of Señor Prieto that ousted President Zamora—which, as a matter of fact, took the Government completely by surprise. Thus, twice within a fortnight the Azaña Government has been compelled by "thunder on the Left" to toe the line. In 1933 Señor Gil Robles, the C.E.D.A. (Confederation of the Right) leader, boasted that his party would not need to assume the responsibilities of office, but would "govern from beyond the political power." The Socialists now seem to be doing much the same, without prating of it. The apparent surrender of the Prime Minister to his electoral allies has once more shaken the confidence of the business classes, on which at present any Spanish Government must depend.

There is no doubt that the present effervescence in Spain is mainly the result of repression during the "black two years"—October, 1933, to December, 1935. The expedients of the Right-wing police-State have failed dismally. Señor Azaña is adopting different tactics. As much as was compatible with Republican stability he allowed popular irritation free rein. To Catalonia he restored forthwith all that was ever demanded by a nascent revolutionary nationalism. In the rest of Spain he proposes to turn the edge of discontent by a generous supply of money for public works, by speeding up land reforms, and by relying on the business classes' instinct of self-preservation to secure their acquiescence in the modest instalments of State intervention in economic affairs which may be required. There is no reason why the present Prime Minister of Spain should not win the race for leadership of the masses in revolt. One can appreciate the feelings of alarm in many middle-class homes. But so far there has been no tampering with the bourgeois framework of the State under the 1931 Constitution. And Señor Azaña is no more the type of man to fulfil the rôle of Kerensky than he is willing to carry out the social revolution demanded by the extremists. Careful examination of his two interventions in the short life of the present Cortes reveals an unrepentant Jacobin; a man who, though his heart be on the side of the lowly and oppressed, keeps a clear head in an atmosphere thick with passion and violence.

NOTES OF THE WEEK

Complaisant Mr Baldwin.—Mr Baldwin's speech at Worcester last Saturday was in characteristic vein: amiable, modest, penetrating, frank and detached. It will surely be attributed by some papyrologist of a future age (if the text is ever recovered, with the date of delivery but without the speaker's name, from beneath the ruins of some bomb-buried English city) to a Prime Minister of Switzerland, or Uruguay, or some other small country which was expecting, on the eve of Armageddon, to be looking on outside the *mêlée*, when the crash came and engulfed it. Mr Baldwin had the discernment to foresee, and the honesty to declare, that in another European war we should all then be using poison gas, and that, after this country had been gassed by the enemy, "the unfailing confidence and affection" of the Prime Minister's own political supporters in the Bewdley Division would be so violently upset that they would arise and cut his throat. But what is disconcerting about Mr Baldwin as a statesman—and, in present circumstances, gravely disturbing—is that his shrewd intellectual forecasts of coming events seem never to affect his imagination and his feelings sufficiently powerfully to move him to take even one hundredth part of the action which, if these things are true, it is his urgent duty to take. If the things that Mr Baldwin told us on Saturday are true (and who but the wilfully blind deny that they are?) then he, and no other, ought to have thrown himself long ago into "a raging tearing campaign" of far more than Gladstonian vehemence to touch the feelings and imaginations of his countrymen; wake them up to the situation; and rouse them to taking the action, and making the sacrifices, that are now necessary for salvation. How far a cry it is, though, from this true call of the hour to the policy—admirable as far as it goes—which Mr Baldwin did lay before us on Saturday. "We want the Covenant of the League to become the law of the world; and unless we are to abandon this hope we regard ourselves as bound to give our full support to the League when the Covenant is broken." Yes, but we have never given, and are not giving, our full support; and the hope is being blotted out! "Collective security will never work unless all the nations that take part in it are prepared simultaneously to threaten with sanctions and to fight, if necessary, an aggressor; and that means"—re-armament. Agreed; but, assuming that the country does give the present Government all the armaments that they are asking for, have Mr Baldwin and his colleagues the nerve to use these weapons for the establishment of the reign of order in the world? Why is it that the dictators, whose policies are unprincipled, wicked and destructive, have been the only successful politicians, so far, since the Armistice? Is it simply, as Mr Baldwin implied, that they are technically capable of taking prompter action than the democratic Governments (Mr Baldwin gave the democracies a handicap of two years). Or does what the Nazis call "capacity for action" involve a moral as well as a technical factor? Can Mr Baldwin inspire us to be as brave in a good, as the dictators have inspired their countrymen to be in a bad, cause?

The League and the War.—The League Council on Monday met to take formal note of Señor de Madariaga's report of failure in his attempt to find an agreed basis for peace by conciliation. Italy will only negotiate for peace with Abyssinia on three conditions: there shall be no armistice; the negotiations shall not take place at Geneva; and they shall be conducted by the two parties *à deux*, without the League's participation. The most that the Italians will concede is to report to the League occasionally on progress and results. The Abyssinian delegate at Geneva rejected the Committee of Thirteen's original invitation to negotiate "in the spirit of the Covenant and within the framework of the League"; and he asked his colleagues—not for the first time—to fulfil the whole of their obligations under Article XVI of the Covenant. The Council, however, thus brought right up against its duty at a moment when the victim of aggression is being threatened with utter and final

defeat in the field, has found itself stricken with a deadly paralysis. The Council resolution which was passed on Tuesday begins with a devastatingly accurate statement of the situation; but it continues with the no less devastatingly platonic declaration that it

"regrets that in these circumstances it has not been possible to bring about the cessation of hostilities, and that the war is continuing under conditions which had been declared to be contrary to the Covenant, and which involve execution of the obligations laid upon the Members of the League in such a case by the Covenant."

The resolution closes lamely with "a supreme appeal" to Italy, and a reference to the binding nature of the Protocol of 1925 renouncing the use of poison gas—a pledge which, Baron Aloisi admitted on Monday, Italy is violating. Meanwhile, in Ethiopia the Abyssinian northern armies have been reorganised, and the Italian advance has not proceeded beyond Dessye. The Dessye-Addis Ababa lorry road is being desperately destroyed by the Abyssinians; there has been an unsuccessful run on the Bank of Ethiopia, averted by prompt payments in silver; and all the indications at present are that the capture of the capital will not end the war. The Italian armies in the South are advancing on Harrar as fast as heavy rains and a desperate Abyssinian defence permits; that is, not as fast as the northern armies recently advanced. The Italian forces have much to achieve before the rains descend; and even if they accomplish it, a host of other troubles will beset them. The League may not make the way of the aggressor as hard as it could be made; but it is not easy; and it is likely to prove all too costly for Italy.

* * *

France at the Polls.—Twelve years have passed since the fatal French invasion of the Ruhr was condemned by a French General Election which swept the Left parties into power. Will the elections which are to take place this Sunday—and next, wherever second ballots are necessitated—visit the vials of French wrath upon the Radical and Socialist parties? The 1932 elections gave a working majority to no party or coalition. Alliance between M. Herriot's Radicals and M. Blum's Socialists would have settled a firm Left majority on France. But successive Budget crises, the maintenance of the franc's gold parity, rule by emergency decree, and the Stavisky scandal, led to the disorders of February, 1934; and a chain of international crises, which began with the advent of Hitler to power, and included the murders of King Alexander and M. Barthou, M. Laval's questionable agreement with Italy in January of last year, Germany's breach of the Versailles Treaty by her conscription decrees, the Anglo-German Naval Agreement (another breach of the Treaty), the Italo-Abyssinian war and Germany's tearing-up of the Locarno Treaty might well be expected to redound to the political advantage of the French Right Wing groups. Actually, the republican democratic tradition is strong in the French provinces; and Colonel de la Rocque's semi-Fascist cohorts have been mostly recruited in the big towns of a country in which a comparatively small percentage of the population lives in big towns. The Croix de Feu organisation, indeed, now that its military activities have become suspect and proscribed, has taken it upon itself to "ensure order" at the elections. This self-imposed honour will not commend itself to the French police, who are under the control of the retiring Sarraut Government. Many leaders of the Right, like M. Tardieu, who recently resigned the chairmanship of his group as a result of a difference of opinion over devaluation of the franc, have rendered themselves suspect by identifying themselves with the *Liges* of the Right. And on the Left, while M. Blum remains the Socialist leader, M. Herriot yielded his chairmanship of the Radicals to M. Daladier in January. Economic depression no longer exerts so great a strain on the people; so the election will turn mainly on foreign policy. This may not altogether harm the Left; for advocacy of an Italian alliance, even if it means France's quitting the League, is most loudly heard on the Right; and it is easy for the Left to show that such a

policy means the loss of all France's post-war allies, and the retreat of Britain into isolation, if not into a direct understanding with Germany, in exchange for a dubious alliance with an economically enfeebled Italy. The electors, especially those in the provinces, may well decide once more that safety lies on the Left of the road.

Two Viceroys.—Last week-end, Lord Willingdon, after meeting his successor, Lord Linlithgow, in Bombay, embarked on his homeward journey. Thus ends a Viceroyalty which has covered an unusually important period in the history of India. It has seen the subsidence—perhaps only underground—of the worst civil disorders of the previous period; the recovery of India, along with the rest of the sterling area, from economic depression; and the passage through the British Parliament of the new constitutional reforms. Lord Willingdon's reputation will rest on his claim to have furthered harmoniously the defence of order and the achievement of reform. He was not fortunate enough actually to supervise the erection of the new constitution, but the essential foundations have now been laid. How far we may congratulate him on the greater appearance of order presented by Indian politics during his reign is a matter for the verdict of history. Order, of course, there must be. But an "order" which depends on the imprisonment of most of the politically intelligent spirits in any community is not the best kind. Moreover, to the still pitifully impoverished masses of India, peasant and factory worker alike, a rise in the standard of living and education is probably the most important of all objectives. The new Viceroy must carry on Lord Willingdon's work; and he will have very great responsibilities in initiating the new constitution. But he will deserve best of India if he can contrive to spread the fruits of recovery as widely as possible.

Income Tax Allowances.—The increases, announced in the Budget Speech, in the income-tax allowances for married couples and for dependent children, carry a step further the policy enunciated by Mr Chamberlain last year of relieving the tax burdens of the family man of moderate means. Contrary to the very widespread opinion, the middle-class incomes as a whole—say those between £400 and £1,500—are not taxed very heavily in comparison with incomes either below or above those limits. But within this class of people it is undoubtedly true that the married man, especially where there are children, has been taxed more heavily in proportion to his capacity to pay than the bachelor or the childless couple of equal income. The new concessions tend to restore the balance. On paper, they do not look very large: an increase in the personal allowance for married couples from £170 to £180 and in the children's allowance from £50 to £60 per child. But, in fact, they are sufficient in the majority of cases more than to offset the simultaneous increase in the standard rate by 3d. in the £. A married couple will not have to pay more tax next year unless the earned income approaches £600. Below that figure, less tax will be payable. Fathers of families will have less tax to pay unless their earned incomes approach £900, £1,200 and £1,500 in the case of one, two and three children respectively. The Chancellor of the Exchequer, in his broadcast speech on the evening of Budget day, estimated that, as a result of these changes, 1,100,000 out of the 1,400,000 married income taxpayers would have less tax to pay next year. The following table summarises the changes that have been made in the income-tax allowances in recent years:—

Allowance	1930-31	1932-33	1935-36	1936-37
Earned income	1/6 of earned income	1/5 of earned income	1/5 of earned income	1/5 of earned income
Personal allowance—				
Single persons	£150	£100	£100	£100
Married couples	£225	£150	£170	£180
Children	£60 for 1st child; £50 for others	£50 for 1st child; £40 for others	£50	£60
Income taxed at lower rate	£250 at half rate	£175 at half rate	£135 at one-third rate	£135 at one-third rate

It will be seen that the children's allowance is now higher than before the crisis of 1931. A larger deduction is also allowed in respect of earned income. The other allowances, however, have not yet been restored to their pre-crisis level. The change in the method of assessing the portion of income chargeable at the lower rate has the effect of reducing tax on the lowest incomes.

Changes in Income Tax.—The new standard rate of income tax, at 4s. 9d. in the £, is the first since the War which has dealt in amounts smaller than 6d. For this reason, if for no other, it will be very unwelcome to all who are compelled to make computations involving income tax. The following table shows for the last pre-war and several recent years the standard rate and the Exchequer receipt. It should be borne in mind that the effect of a change in rate does not show itself in full until the year after the change is made. The table also shows the yield per penny of the standard rate, which is perhaps the best measure of the response of incomes to changes in the rate, although the figures are affected by alterations in allowances, etc. The table also gives the average realised rate of taxation on all incomes chargeable:—

Year beginning March 31	Standard Rate	Produce per penny tax	Av. Rate on actual inc.	Exchequer Receipt
	s. d.	£m.	d.	£m.
1913	1 2	3.11	10.98	43.9
1920	6 0	4.91	31.85	338.9
1924	4 6	5.06	27.29	273.8
1929	4 0	4.88	22.19	237.4
1930	4 6	4.58	23.76	256.0
1931	4 6	4.58	24.19	287.4
1931 (Sept)	5 0	...	...	...
1932	5 0	4.16	23.48	251.5
1933	5 0	3.99	22.96	228.9
1934	4 6	4.17	20.89	228.9
1935	4 6	...	...	238.1
1936	4 9	...	...	259.0*

* Estimate.

The table suggests the uncomfortable reflection that the rate of tax which is reached at the bottom of each period of relaxation is higher than the previous nadir. The lowest post-war figure was 4s. in the £, but the "irreducible minimum" in recent years has risen to 4s. 6d.

End of the Road Fund.—The Road Fund was set up in 1920 largely to administer the receipts from the new duty of £1 per h.p. imposed on motor vehicles and to apply them to the development of the country's road system on national lines. Since 1926-27, however, the Exchequer has appropriated a certain proportion of the annual receipts. In addition, it has become a habit with Chancellors to appropriate any surplus accumulated in the Fund on the year's working, over and above its statutory contribution of £5 millions to the Exchequer. Deficits, on the other hand, have been financed by temporary advances from the Exchequer. A curious principle of finance appears to have been applied to these advances. When made, they appear under capital transactions and form no part of expenditure; but when they are repaid they are included in revenue! Last year Mr Chamberlain obtained £7 millions from the Road Fund, of which £2.5 millions were repayments of advances and £4.5 millions the surplus of the Fund for 1934-35. The deficit of £2 millions left from the previous year is still outstanding. This year he has taken the surplus of £5,250,000 and announced that in future the expenditure of the Fund will not be independently decided, and financed out of the receipts from motor vehicle duties, but by Parliamentary vote out of the general revenue, the duties going to the Exchequer. This change has at least the virtue that now we know where we are. But apart from questions of financial orthodoxy or of the economic or social value of increased expenditure on roads, the motorist may well feel cheated by this curtailment of expenditure out of the Fund. For his burden of taxation has in recent years been very materially increased by the duty on hydrocarbon oils. The following table shows receipts from motor vehicle and petrol duties and total expenditure from the Road Fund.

This expenditure has fallen since 1930 by some £6 millions, instead of contributing, by an increase, to the reduction of road accidents and the alleviation of unemployment:—

	Motor Vehicle Duties (1)	Hydrocarbon Oil Duty (2)	Total Taxation (3)	Exp. of Road Fund (4)	Diff. betw. (3) and (4)
1913-14	...	841*	841	952	- 111
1925-26	18,056	...	18,056	16,988	1,068
1928-29	25,357	12,982	38,339	17,728	20,611
1929-30	26,802	15,042	41,844	20,569	21,275
1930-31	27,792	15,909	43,701	27,926	15,775
1931-32	27,490	29,277	56,757	23,941	32,816
1933-34	30,712	40,408	71,120	21,014	50,106
1934-35	31,538	42,359	73,897	19,858	54,039
1935-36	30,752	45,051†	75,803	21,678†	54,125
1936-37†	31,500	48,000	79,500	...	...

* Motor spirit duty repealed after the war.

† Estimates.

The duty on light oils, of which some 90 per cent. is paid by the motor industry, was imposed in 1928 at 4d. per gallon. In 1931 it was raised successively to 6d. and 8d. per gallon. In 1933 a tax of 1d. per gallon was put on heavy oils, of which about one-third are used in road vehicles, and in 1935 this was raised to 8d. At the same time, some relief was granted to motorists as from January, 1935, by the reduction of the motor vehicle duties from £1 to 15s. per horse power.

The Tea Duty.—In order that all classes of the population may share in the increased burden of taxation and contribute to the strengthening of the national defences, the Chancellor of the Exchequer proposes to raise the duty on tea by 2d. per lb. The present rates are 2d. for Empire tea, which forms about 90 per cent. of the whole, and 4d. for teas from other sources. The increase is therefore practically 100 per cent., and is on a commodity which is consumed in the largest quantities by the poorest people, including the unemployed. The following table shows changes in the duty and in receipts in various pre- and post-war years:—

	Main Duty d. per lb.	Ref. rate d. per lb.	Receipts £'000's	Percentage Empire
1913	5	...	6,499	...
1914	8	...	8,628	...
1915	12	...	13,962	...
1918	12	...	16,055	...
1919	12	10	17,747	92.0
1922	8	6½	11,144	88.9
1923	8	6½	10,731	88.5
1924	4	3½	5,971	84.2
1925	4	3½	5,780	87.1
1929	Repealed	...	...	...
1932	4	2	4,217	89.4
1933	4	2	3,935	88.5
1934	4	2	3,933	90.3
1935	4	2	4,077*	...
1936	6	4	7,650*	...

* Estimate.

The present increase is expected to bring the Exchequer an additional £3.5 millions this year and £3.7 millions in a full year. It is doubtful whether the whole of the extra tax will be directly passed on to the consumer; the quality of teas sold at existing prices will probably be lowered by blending with lower grade teas. But this is least easy to do in the case of the very cheap teas bought by the poorest classes. The burden of indirect taxation has already been disproportionately increased since 1931 by increases in Customs and petrol duties. This latest proposal is a grave infraction of the principle of equity, although the absolute burden of the tax is not very large.

The "Queen Mary's" Insurance.—The Queen Mary, as her trials end, leaves the building policy and comes on to her permanent ocean-going insurance. Her insured value is to be £4,800,000; the twelve months' rate for all risks is

The MERCANTILE BANK of INDIA

LIMITED.

EXECUTORSHIPS AND TRUSTEESHIPS ACCEPTED

25s. per cent.; so the gross cost of insuring the hull and machinery for one year will be £60,000. It is customary for ship-owners, after they have insured a vessel for all risks, to take out further policies at a lower rate against the risk of total loss only—a device by which they secure extra cover in the event of the major catastrophe, but at a lower proportionate cost. In the case of the "Queen Mary" no total loss formalities have been effected on these lines, because the value of the hull and machinery is so great that every inch of market is wanted for her all-risks cover; and the owners gave an undertaking to the market that no other policies would be effected, and consequently underwriters could write the fullest possible lines on the all-risks slip. It was believed on Wednesday night that £2,800,000 had by then been placed and it was expected that the earlier estimate of £3,000,000 would be reached. This total did not include any amounts of cover which might be placed in America or other countries. That would leave £1,800,000 for H.M. Government and foreign insurers to bear. The liability may thus be divided at least in the proportions of 62 per cent. to individual enterprise and 38 per cent. to the State. The whole transaction seems characteristic of the age in which we live. Perhaps the foreigner will help the Government out.

Overseas Trade in March.—The overseas trade figures for March showed a very marked increase in imports of all kinds of goods compared with a year earlier. Details for some of the main items are given in the following table:—

RETAINED IMPORTS—MONTH OF MARCH				
Item and measure	1934	1935	1936	
Wheat..... '000 cwts.	10,009	8,963	9,220	
Beef and veal '000 cwts.	1,090	1,099	927	
Mutton and lamb '000 cwts.	619	651	596	
Sugar (unrefined)*..... '000 cwts.	2,820	3,006	3,183	
Iron ore and scrap '000 tons	415	368	665	
Raw cotton '000 centals	1,109	868	1,062	
Sheep's and lambs' wool '000 centals	61	72	87	
Raw silk and waste '000 lbs.	717	423	675	
Flax, hemp and jute* tons	28,981	33,012	29,050	
Crude petroleum* '000 galls.	33,434	35,294	33,569	
Hides, wet and dry '000 cwts.	91	108	126	
Wood pulp..... '000 tons	139	126	120	
Rubber '000 centals	314	287	- 28	
Unwrought copper*..... tons	15,353	32,519	19,727	
Pig lead..... tons	22,665	29,910	22,678	
Tin:—				
Ore and concentrates tons	2,579	3,394	3,308	
Blocks, ingots, slabs and bars tons	1,012	797	655	
Iron and steel manufactures				
..... '000 tons	121	126	129	
Machinery..... tons	4,819	6,150	7,747	

* Total imports.

Imports of machinery in March reached a record level, and imports of nickel during the first quarter of the year were four times as high as in 1935. Demand for other metal goods did not show quite the same expansion. An increase in imports of tin and zinc was offset by increased re-exports of these commodities; while a rise in imports of steel was almost balanced by decreased purchases of pig iron abroad. There was a considerable increase in imports of all textile raw materials, except flax and hemp; but in the case of

cotton and silk, imports did not reach the levels of March, 1934. The extraordinary position of our rubber imports, shown above—a net export—is a result of the restriction scheme. Owing to the extreme shortage of rubber abroad, our re-exports in March were actually greater than the total of our imports; and even during the first three months of the year, retained imports amounted to less than 100,000 cents, compared with over a million cents last year. This implies a rapid depletion of consumers' stocks in this country.

British Exports in March.—The following table gives the details of our exports last month:—

BRITISH EXPORTS—MONTH OF MARCH				
Item and Measure	1934	1935	1936	
Coal '000 tons	2,943	3,198	2,626	
Iron and steel scrap tons	22,734	10,188	9,751	
Pig iron and ferro-alloys tons	10,478	8,250	7,526	
Railway materials tons	6,690	9,253	11,132	
Total iron and steel manufactures '000 tons	170	174	163	
Textile machinery tons	6,053	5,829	4,240	
Total machinery tons	25,343	32,199	32,834	
Cotton yarns '000 lbs.	11,910	11,667	11,339	
Cotton piece-goods '000,000 sq. yds.	170	183	173	
Wool tops '000 lbs.	4,565	5,338	4,543	
Worsted yarns '000 lbs.	3,108	2,764	2,290	
Woollen tissues '000 sq. yds.	5,779	6,200	7,077	
Worsted tissues '000 sq. yds.	3,003	2,979	3,149	
Linen piece-goods '000 sq. yds.	8,688	7,838	9,454	
Leather boots and shoes ... doz. pairs	47,983	35,116	36,803	
Leather '000 cwts.	16,841	23,163	22,509	
Paper and cardboard '000 cwts.	287	312	364	
Locomotives (complete and parts) tons	515	1,240	2,935	
Motor vehicles and chassis number	5,737	7,301	6,778	

Exports have shown an absolutely opposite tendency to that of imports. There were decreases in almost all categories compared with a year ago. The principal exceptions were spirits (mostly to America), railway materials, electrical goods and machinery, locomotives (to foreign countries), woollen and worsted tissues and linen piece-goods. The decline in exports of coal was almost entirely due to sanctions against Italy, but this factor does not explain any of the other large reductions shown in the above table. Demand for iron and steel goods and machinery from the Dominions continued to increase; but India bought less of these goods and of cotton piece-goods; and German purchases of woollen goods were considerably reduced.

Iron and Steel Production.—The expansion of home demand for iron and steel materials continued during the past month. Although the output of steel ingots and castings reached a new record last month, accompanied by a further decline in exports and an increase in imports, the stringency in certain sections of the industry persists. The shortage of pig iron, for example, is largely due to the scarcity of coke, and it is reassuring that steps are being taken to increase coke production. Thus a substantial proportion of the proposed development expenditure of the Cargo Fleet Iron Company and the South Durham Steel and Iron Company, expected to exceed £1 million, is to be devoted to coke ovens. This should ease the stringency.

The fact that the demand for a number of materials exceeds supply at current quotations, and the increase in the prices of the raw materials of the industry, including coal, is responsible for the rising tendency of iron and steel prices. Indeed, a sharp upward movement of quotations has only been prevented so far by the intervention of the British Iron and Steel Federation. To adjust demand to supply by a sharp rise in prices is possible, but would be short-sighted policy. On the other hand, an increase in the

capacity of the iron and steel industry, involving heavy capital expenditure, cannot be effected at short notice.

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929 " "	632.4	803.0	235.2	364.9
1932 " "	297.8	438.5	132.7	157.4
1933 " "	344.7	585.3	80.9	160.2
1934 " "	498.2	738.3	113.6	187.8
1935 " "	535.5	820.2	96.0	197.7
1935—February	483.1	769.5	103.3	171.2
March	554.2	841.9	126.0	173.7
April	526.3	808.7	62.7	210.9
May	558.9	853.3	86.4	213.9
June	529.3	770.0	98.2	195.1

1936—January	595.5	911.7	119.9	164.8
February	584.7	938.5	123.2	167.8
March	633.6	980.1	130.3	163.4

The steel industry is thus faced with a serious problem. Is the expansion in the demand for iron and steel likely to continue? And if so, for how long and in what proportions? There is considerable scope for expansion of foreign demand, and the extent of British participation in an expansion of iron and steel imports abroad will depend not only on the capacity but also on the efficiency of the industry in this country. Expenditure, having the latter end in view, may be highly profitable, technically and financially.

Mr Keynes on Jevons.—The centenary of Stanley Jevons was celebrated at the Royal Statistical Society on Tuesday with a paper on that great Victorian economist by Mr J. M. Keynes. There could be no better memorial to Jevons than Mr Keynes's fascinating and scholarly paper, written in the delightful historical style familiar to readers of his recent "Essays in Biography." Despite Jevons's intense interest in logic, Mr Keynes shows us, he was almost the founder of the empirical and statistical approach to economics. He devised index numbers, studied price and other data with amazing industry, and pushed his researches far back into the eighteenth century.

He would spend hours (Mr Keynes said) arranging his charts, plotting them, sifting them, tinting them neatly with delicate pale colours like the slides of an anatomist, and all the time poring over them and brooding over them to discover their secret.

And in his capacity for co-ordinating statistical inquiry with theoretical analysis, Jevons was head and shoulders above any other thinker of his time. His early investigations into the monetary aspects of the trade cycle seem to Mr Keynes to have been as important and original as his now famous discovery, the "marginal utility" theory of value. He was "so much struck with the enormous and almost general rise of prices about the year 1853" that he was "led to suspect an alteration of the standard of value." He concluded that the gold discoveries in Australia had "added to the wealth of the world" because the fall in the value of gold, i.e. general rise in prices, had "excited the active and skilful members of the community to new exertions." In discussing the trade cycle he suggested that the "remote causes of these commercial tides" might lie in "the varying proportion which the capital devoted to permanent and remote investments bears to that which is but temporarily invested soon to reproduce itself." If he had followed up this hint, Mr Keynes thinks, instead of becoming obsessed with his sunspot idea the world might have had to wait much less long for an understanding of the trade cycle. In general Jevons had a very clear and just opinion of the extent of his powers and the value of his work. Writing to his brother of his paper at the British Association in 1862 giving the first essentials of his "marginal utility" theory, he said:—

Although I know pretty well the paper is perhaps worth all the others that will be read there put together, I cannot pretend to say how it will be received.

Seldom can a man have written in such words of his own work, and with such truth.

OVERSEAS CORRESPONDENCE

From our Correspondents in each centre

UNITED STATES

BUSINESS ADVANCE MAINTAINED

CURRENT business data are on the whole better than those of the late winter, and confirm earlier hopes. The recovery in steel operations after the flood troubles has been surprisingly good; March retail sales of motor cars were far above February and almost at record levels; and residential building is reported as showing the seasonal influence, although the spring is slow in developing. Poor Easter weather may cause some disappointment in retail trade, but there is every reason to expect that this will be regained later. While the earlier statistics of the year were rather mediocre, owing to the exaggerated seasonal corrections for December, recent weeks have developed satisfactorily, and in consumers' goods generally the United States has reached a level justifying the title of prosperity.

The puzzle of prosperity and unemployment is more baffling than ever. In two industrial cities of New York State, one small, the other of moderate size, surveys have been made which disclose the fact that the current level of employment is higher than was reached in any year of the 'twenties, so far as the incomplete data can show; for the survey covered only the principal labour-employing industries. In both cities the relief rolls are also at higher levels, and relief disbursements are immeasurably higher than at the bottom of the depression.

THE PRESIDENTIAL CAMPAIGN

The primary campaigns are now in progress. Evidently no candidate will appear against Mr Roosevelt for the Democratic nomination; and this unanimity contrasts with the multiplicity of Republican aspirants. The personalities of the latter are more varied and more distinct than their speeches would indicate. There is a Republican Party, its organisation rather weak and demoralised, but still "in being." But that Party has no accepted corpus of principles or projects. It includes high protectionists and low tariff advocates. It includes extreme agrarians and urban consumers who are drifting into a kind of anti-agrarianism. It includes progressives who are further Left than the New Deal, and ultra-conservatives. It is, in short, a heterogeneous opposition, united on nothing; an opposition seeking a least common denominator. Hence the caution of the candidates—any outspoken utterance on any subject would antagonise some fraction of this motley, though numerous, aggregation.

It is now nearly four months (a) since the Reserve Board took steps to reduce excess reserves, and (b) since silver purchases and gold imports on a gigantic scale ceased.

Between December 11th and April 1st, the total reserves of the Reporting Member Banks declined from \$5,024 millions to \$3,866 millions—a decrease of \$1,158 millions. Between December 11th and April 1st, demand deposits (adjusted) fell from \$14,092 millions to \$13,578 millions, or \$500 millions. In this period domestic inter-bank deposits declined slightly, but Government deposits rose \$300 millions and time deposits \$50 millions. There was, therefore, a small decline in total deposits.

In the same period the banks increased their total loans and investments by \$1,100 millions. They added \$127 millions to their security loans, \$100 millions to other loans, \$550 millions to their Government securities, \$300 millions to other securities. In this period, then, while their deposits were falling slightly, they lost \$1,158 millions of reserves and added \$1,100 millions to their earning assets.

The changes in the four months December-April are in sharp contrast to the preceding four months' period. In the four months August-December, reserves increased by \$940 millions (compared with a decrease of \$1,100 millions); demand deposits (adjusted) increased by \$1,130 millions (compared with a decrease of \$500 millions); and total loans and investments increased by \$676 millions (compared with an

increase of \$1,100 millions). In other words, in the past four months, the banks have extended almost twice as much additional credit as in the previous four months, although their reserves are falling and their deposits stationary.

ITEMS OF THE REPORTING MEMBER BANKS (\$000,000)

	July 31, 1935	Dec. 11, 1935	April 1, 1936
Total Loans and Investments	19,845	20,521	21,621
On Securities	3,076	3,186	3,313
Other Loans	4,632	4,975	5,079
U.S. Securities	8,964	9,352	9,908
Other Securities	3,070	3,008	3,321
Reserve	4,084	5,024	3,866
Demand Deposits (adjusted)	12,962	14,092	13,578
Time Deposits	4,856	4,856	4,909
U.S. Govt. Deposits	552	452	774
Domestic Banks	4,734	5,458	5,430
Borrowings	17	1	22

Notwithstanding these developments, there has been no perceptible change in money rates.

The Workers Progress Administration, in an interim report for 1935, announces its total expenditure at \$1,672,394,306. Of this, only \$46,042,303 was spent on materials, supplies and equipment. These were as follows in round numbers: petroleum products \$7,000,000, machinery and equipment \$1,500,000, other iron and steel \$9,600,000, other materials \$24,400,000. About 85 per cent. of the purchases were for four types of projects—street and highways, public buildings, water supply and services, parks and playgrounds. At present 3,800,000 persons are on the rolls, supporting 10,450,000 dependents. An additional 5,750,000 persons depend on local relief.

The expenditure for materials is smaller than was supposed. However, few W.P.A. contracts were let before the closing weeks of 1935; and it is likely that expenditure on materials will be heavier in 1936.

NEW YORK, April 14.

FRANCE

M. HERRIOT AND DEVALUATION

EIGHT days before the elections the franc has recovered its stability. There can be no immediate devaluation, since all the political leaders are declaring themselves against it. But a sort of inflation already exists, since the Bank of France is agreeing to make loans against Treasury bills. Though both the Communist leader, M. Marcel Cachin, and the Conservative leader, M. Louis Marin, are staunch supporters of the present parity of the franc, M. Herriot, after recently declaring himself to be of the same faith, added that he "could not hinder devaluation if it had to come." As a whole, the prevailing faith in the gold parity may be considered primarily an electoral one.

A comparison of the returns of the Bank of France for May, 1932, and April, 1936, clearly shows the strain imposed upon the Bank by the Treasury. The gold reserve, for example, has fallen in that period from 82,000 millions to 62,000 millions, and "bills discounted" have risen from 4,000 millions to 15,000 millions, an increase which is represented by Treasury bills and advances to wheat and wine producers. The note circulation is practically unchanged at 83,841 millions, against 82,382 millions, and "liabilities at sight" have receded from 17,000 millions to 9,000 millions, notably as a consequence of the fall in bankers' deposits. The ratio is slightly lower at 67 per cent., against 71 per cent., but the legal minimum is 35 per cent.

At present, therefore, the technical position of the Bank is invulnerable and speculation against the franc powerless, so long as it is not reinforced by panic on the part of French holders of francs. The possibility of this depends on the Treasury. After the General Election, however, the Treasury will enter on a period of better revenue, and, on the

eve of the polls, the Finance Minister, M. Marcel R  gnier, is emphasising the more cheerful appearance of recent fiscal receipts. Indirect taxes in March yielded 125 millions more than in March, 1935, and 32,327,000 francs more than the estimates, so that the deficits of the two preceding months have been reabsorbed, and there is a surplus of 7,600,000 francs for the first quarter. During the past four years, monthly deficits in comparison with the estimates have ranged from 300 millions to 350 millions. This year, however, the Budget estimates have been confirmed and the ordinary Budget has been balanced.

THE RISE IN AGRICULTURAL PRICES

This improvement is a direct consequence of the rise of agricultural prices, and of other wholesale and retail prices, which has been going on for nearly a year. In a book just published on "France's Economy and the Decree-Laws" by an author in close relation with the Bank of France, it is shown that the former deflation of agricultural prices had reduced rural purchasing power by as much as 20,000 million francs between 1932 and 1934. This fall in purchasing power was much more due to this deflation of agricultural prices, it is argued, than to the deflation imposed by the decree-laws, and consequently the present revival should take effect rapidly as a consequence of the rising trend of prices.

As a result, the task of the new Chamber will become easier and will depend more on simple reforms than on revolutionary methods. The first of these reforms may consist in a reduction of fixed charges on production, and notably an alleviation of taxes designed to prevent a rise of retail prices accompanying the rise in wholesale prices.

Total foreign trade in March at 3,196 millions, compares with 3,290 millions in February and 3,231 millions in January, but shows an increase of 199 millions over March, 1935. The import surplus was 712 millions, against 808 millions in February and 821 millions in January. For the first quarter of 1936 the figures were as follows (in million francs):—

	First quarter of 1935	First quarter of 1936
Imports:—		
Foodstuffs	1,626	1,778
Raw materials	2,859	3,362
Manufactured goods	932	889
Total of imports	5,417	6,029
Exports:—		
Foodstuffs	623	551
Raw materials	1,130	1,053
Manufactured goods	2,302	2,075
Total of exports	4,055	3,679
Total trade	9,472	9,708
Import surplus	1,362	2,350

The number of unemployed fell to 452,818 last week, against 457,750 in the preceding week.

PARIS, April 23.

GERMANY

THE "DEFEAT OF BRITISH POLICY"

THE expert German view on the Abyssinian crisis, expressed even at the outbreak of hostilities, was that the outcome of the Abyssinian War would be determined by military operations on the spot. The victor would dictate peace. It was not thereby implied that the League, meaning in effect Great Britain and France, must be without influence on the outcome. Not being able to foresee League policy, which might conceivably have included effective sanctions, or still severer measures, Germans abstained from predicting that the League would prove helpless in the settlement. Until a couple of months back they believed that Italy, even if the League failed to embarrass her, could not break Abyssinian resistance within any practicable term. But they were convinced that League measures would have effect only in so far as they influenced the local military situation against Italy; and they attributed no practical importance to the League's protests, appeals, and efforts for peace.

Germans, to-day, believe that the League has been de-

cisively beaten. It has been much worse beaten, they hold, than if it had never tried to intervene; for in this event it might at least, as in the China-Japan and other disputes, have pretended that it would do better next time. The League here is therefore as much distrusted and despised as ever. But it cannot be said that it is more disliked. Official and Press attacks on it ceased when Herr Hitler made his conditional offer to re-enter the League. True, this offer was made rather as one of miscellaneous pacifist gestures designed to turn the edge of the Locarno repudiation than in a new conviction that the League might do good. Doubt about the League remained. But in the end the Abyssinian scandal will probably weaken Germany's aversion to rejoining the League. In the first place the three Great Powers which, as Germans see things, formerly had the League entirely in their single pocket, are to-day beneficially at sixes and sevens; and they are therefore no more likely to agree about Germany than about Abyssinia. In the second place, the main objection to the League was not that it was a mere committee of Great Powers, but that Germany, when nominally a member, was kept outside this committee. With Germany rearmed and the three League Great Powers quarrelling, the Berlin Government might expect to be treated as an equal in influence; and if so Germany would probably be stronger as a member than as an outsider.

The credit for these—for Germany—fortunate developments is fairly given to Great Britain. For Germans see that while Italy has had her way in the war, and France her way in impeding the League, England has been beaten everywhere; in her conflict with Italy, in her struggle against French ingenuity and obstinacy, and in her half-heartedly intermediary, half-heartedly anti-German, policy in the Rhineland dispute. It is not pleasant for British subjects to read what Germans say on these matters. Some weeks back important German newspapers, which are daily instructed by the Ministry of Propaganda to say certain things, and to say them in certain ways, began to enlighten their readers about the headlessness and lack of direction of British foreign policy, affirming that London had blunderingly got itself into certain dilemmas and was without the skill and the courage necessary for getting out.

This week the defeat of British policy is trumpeted from the house-tops. It would not, readers are told, be in good taste for Germany at the present to appear "as a hyena on the battlefield" and to "enumerate the wounds from which England is bleeding"—after which there nevertheless follow only too correct lists of the wounds. British official and Press excuses—the imperfection of the League, the ambiguous policy of France, British military impotence, and so on—are, of course, fairly reported; but it is asked with reason whether these impediments, if they really exist, were not known half a year ago when the British Government so frivolously guaranteed a peace settlement in the spirit of the League. Being themselves given to posing as more valiant than they really are, German rulers do not understand the Hamlet-like sighs of London that the world is out of joint and that tame Great Britain is merely the virtuous and despairing onlooker; and they have grounds for smiling when a British Prime Minister, in order to obscure a war-scandal in which the anti-German Powers are the culprits, informs the world that it is Herr Hitler who can best achieve pacification. They have very good reasons for concluding that Great Britain is afraid to fight, for her own, not to mention the collective, interest; and while they would admit that this is a reassuring, if a novel, condition in British history, they ask why, such being the shameful case, Great Britain expanded the purely local Abyssinian dispute in order to bring peril on herself and to set Europe by the ears.

INDUSTRIAL CONDITIONS

The result of the wages census in leading industries, held last December, has been published. This enquiry was not on the same basis as the earlier periodical wage returns, which ceased appearing in 1934, and in which employers' returns of wages of individual workmen were used; and it does not return collective-agreement rates. It gives average wages for employees of all ages (except apprentices) in a limited number of representative concerns. In heavy iron and steel concerns employing 151,200 men the average hourly gross wage was 86.5 pfennigs, average gross weekly

vage 44 marks 20 pfennigs. There were substantial differences in different places, and the gross hourly wage varied from 68.4 pfennigs in places with under 10,000 inhabitants to 92.7 pfennigs in places with more than 1,000,000 inhabitants. The highest hourly wage (for all localities) was 126.2 pfennigs, which was paid in the rolling and pressing mills. The average working time per week in iron and steel was 51.1 hours. Average legal deductions from the weekly wage (income tax, citizens' tax, and social insurance premiums) totalled 5 marks 48 pfennigs, or 12.4 per cent. The textiles industry return, embracing 197,100 employees, shows an average gross hourly wage of 54.8 pfennigs.

INCREASED COAL OUTPUT

The Ruhr Coal Syndicate reports sales in the business year ended March 31st (Ruhr and Aachen districts) of 70,440,000 tons, as against 65,620,000 tons in the preceding year. Coal dumps at the mines declined by 26 per cent. The Syndicate complains that public bodies buy foreign coal for price reasons, and it refers to the increase early this year in imports from Great Britain and Holland. Export conditions are described as favourable and coal is being increasingly exported in direct connection with increased imports of certain foreign raw materials. References in the report to international coke negotiations imply that not only a price convention but also a regulation of output is aimed at. Essen reports describe the negotiations as promising, and add that international regulation of coking coal is also possible. Pig-iron output in March was 1,250,600 tons, against 1,172,900 tons in February. The postponement of the increase in steel export prices has caused some disappointment.

The March foreign trade return shows an export surplus of Rm. 24 millions, as against Rm. 40 millions in February and Rm. 12 millions in March, 1935. Owing to a fall in prices, the volume of imports increased somewhat more as compared with February than the value of imports, while export prices remained unchanged. The increase in imports was mainly from overseas. The first quarter of the year shows an active balance of Rm. 82 millions, as against a Rm. 150 millions import surplus in the same quarter of 1935.

	('000,000 RM.)		
	Feb. 1936	March 1936	Jan.-March 1936
<i>Imports</i>			
I. Foodstuffs	125.3	143.4	406.1
(a) Livestock	6.6	8.8	20.1
(b) Animal foodstuffs	41.2	46.4	135.4
(c) Vegetable foodstuffs	77.5	88.2	250.6
II. Industrial goods	208.7	212.0	646.3
(a) Raw materials	119.1	120.9	373.3
(b) Semi-manufactured	60.8	60.0	184.8
(c) Manufactured	28.8	31.1	88.2
Total	334.0	355.4	1,052.4
<i>Exports</i>			
I. Foodstuffs	8.3	8.8	27.1
(a) Livestock	0.5	0.2	1.0
(b) Animal foodstuffs	0.7	0.7	2.4
(c) Vegetable foodstuffs	7.1	7.9	23.7
II. Industrial goods	365.2	370.2	1,107.1

(c) Manufactured	294.9	300.9	890.9
Total	373.5	379.0	1,134.2

Money this week is very plentiful, and the day-loan rate has declined to 2½-2¾ per cent. Last week, owing to large repayments of Reich and G.D. Bank promissory notes, there was a shortage of investments, and money went back into G.D. Bank notes. By April 15th, nevertheless, only one-third of the very large Reichsbank month-end credits of March, which totalled Rm. 615 millions, had been repaid.

BERLIN, April 22.

ITALY

DWINDLING GOLD RESERVE

THE report of the Governor of the Bank of Italy is well worth reading because for the first time since the decree of October 20, 1935, which suspended the publication of all economic and financial statistics, it has been deemed useful

to give the public authoritative statistical information on some aspects of the Italian situation. The statistics in the report are not so full as in past reports; but, as far as they go, they are most interesting. A comparison of the Bank's position may be made as follows:—

	('000,000 lire)		
	December 31, 1934	September 30, 1935	December 31, 1935
Gold	5,811.5	4,251.4	3,027.3
Foreign assets	71.7	392.5	367.4
Total	5,883.3	4,643.9	3,394.6

The total for December 31, 1935, does not include the gold offered by Italian subjects in December and January or the resources obtained from the compulsory sale to the Treasury of their foreign securities and credits. The amount of these two items is not disclosed; but as the Governor writes that "these sums, which together form a big special reserve, remain at the exclusive disposal of the State for meeting future needs in the interest of the country," we may infer both that they amount to several thousand million lire and that they are still (March 31) in the possession of the State.

The total note circulation in Italy includes, besides Bank of Italy Notes, 10-lire State notes and silver, nickel and bronze coins:—

	('000,000 lire)			
	Dec. 31, 1934	Sept. 30, 1935	Dec. 31, 1935	Mar. 20, 1936
Bank of Italy circulation ...	13,145.3	15,273.4	15,456.1	14,490.0
State circulation:—				
Paper (10-lire notes)	...	218.0	1,951.6	...
Silver (20-, 10- and 5-lire coins)	1,635.1	1,634.1	...	...
Nickel and bronze	508.9	511.2	510.0*	...
Total	15,289.3	17,636.7	17,917.7	...

* Estimated.

The figures for December 31, 1935, and March 20, 1936, do not include 840 million lire of banknotes, since the State note circulation forms part of the Bank's cash, which therefore must have been already included in the above totals. The present total circulation (Bank and State notes and silver, exclusive of nickel and bronze coins, which are an almost fixed amount), at about 16,500 million lire, is much lower than the two maxima of 22,000 and 21,500 millions reached at the end of 1920 and 1925 respectively. The Stock Exchanges were favourably impressed by the very moderate increase in the circulation.

Investors who were hesitating between industrial shares and Consols concluded that fears of inflation were unjustified. The present tone of the market is mediocre for industrials and very good for State securities. Treasury bonds are near to par. Joint stock companies are, in fact, contributing to the recovery in State securities, because in March and April most company accounts are closed and all excess of profits over 6 per cent. or past dividends must by law be invested in State securities.

Other interesting changes in the Bank of Italy's situation are as follows:—

	('000,000 lire)		
	Dec. 31, 1934	Sept. 30, 1935	Dec. 31, 1935
Discounts	4,005.1	4,559.6	4,897.6
Advances	2,449.7	3,006.8	4,090.5
Sundry debtors	639.4	1,654.5	1,547.6
Institute for industrial reconstruction	1,091.3	845.3	802.3

The transformation of the Bank of Italy into a Central Bank will not apparently have far-reaching effects on its activities. Direct discounts by the Bank, which are now to be abolished, amounted only to 600 million lire, not a big proportion of a total of 4,897 millions. On the

BRITANNIC ASSURANCE COMPANY LIMITED

(Established 1866)
Annual Income : : : : £3,000,000
Funds : : : : £250,000,000

All classes of Life, Fire, Accident,
Motor and General Insurances transacted

Chief Office: BROAD STREET CORNER, BIRMINGHAM

liabilities side the most important figures are the following:—

	('000,000 lire)		
	Dec. 31, 1934	Sept. 30, 1935	Dec. 31, 1935
Bank's cheques	415.4	586.2	1,090.3
Current account deposits	390.1	496.3	
Treasury current account	300.0	300.0	
Time deposits:—			
Private	273.7	107.0	285.2
Treasury	2,435.7	472.5	
Sundry creditors	703.5	838.7	
Net earnings at the end of the year	55.3	...	100.9

The Treasury account is at a low level. On the other hand, as the price of $3\frac{1}{2}$ per cent. redeemable Government stock is rising, it is becoming more and more advantageous to convert it into 5 per cent. stock by paying the 15 lire supplement. The amount of conversions up to the present day is not known, but it is probably over 40,000 millions.

TURIN, April 10.

SPAIN

ELECTING A NEW PRESIDENT

LITTLE interest is evinced by the public in elections for the "compromisarios," or commissioners, whose sole task will be to meet with Parliament on May 10th to elect the new President of the Republic. This system was adopted when the new Constitution was made in order to avoid the direct election either by Parliament or by the people of the head of the State. Direct election by the people would, it was felt, tend to give the President a power somewhat independent of Parliament.

The most likely Presidential candidate at present is Don Alvaro de Albornoz, former President of the Tribunal of Constitutional Guarantees. His action in giving up this post, to which he had been irrevocably elected for ten years with a salary of 100,000 pesetas annually, in October, 1934, when the Clericals were admitted to power, has given him an excellent standing in Left Republican and Socialist circles. He is an old Republican. Formerly in Lerroux's party, he was one of the founders of the Radical-Socialist Party in 1928. Of strong anti-clerical and anti-monarchist views, he is one of the very few Republican leaders who have the confidence of Socialists and Communists.

In Right circles, Sr. Azaña is favoured. This is partly in the belief that he will eventually turn against the Socialists and accept conservative aid, but even more because as the key-stone of the United Front his removal from the sphere of active politics would increase the possibility of dissension in this Labour-Liberal alliance.

The grave events of last week have overshadowed the Presidential elections. The spectacle of Army officers in uniform, large numbers of officers and men of the Civil Guard, and members of the rank and file of the Shock Police taking an active part in the tumultuous Fascist demonstration into which the funeral of an officer of the Civil Guard degenerated on Thursday last, was a shock for the Government. The attitude of the Civil Guards who refused to obey their chief, Inspector-General Pozas, when he ordered that the funeral should continue along the prearranged route and that the coffin should not be paraded down to the General Post Office, was something new in the history of the Civil Guard.

Many voices were raised for dissolution of this famous corps. A Cabinet Minister, discussing the matter with journalists, said: "There will be no dissolution, for it would not be fair to punish the whole corps for the subversive behaviour of a relatively small sector. We shall weed out Monarchists and Fascists and replace them by officers who are Republicans." Over 100 officers are believed to have been transferred or placed on the reserve. In reality the incident only revealed the high feeling running among no small sector of the officers of the Army and of the Civil Guard. This feeling is founded on the fact that within the next few weeks Parliament is expected to discuss the methods used during the repression of the rebellion in

Asturias and during the months following that episode while the region remained under martial law.

On Saturday night last fears ran high of a coup by military men, and 10,000 members of Socialist and Republican organisations kept vigil until dawn in Madrid. The Republic's life will probably be a little agitated until the question of Asturias is investigated once and for all, and there is likely to be many a night on which the Socialist militias will get little sleep. It is paradoxical that while much talk is going on in Spain and abroad of Socialism's menace to the Republic, this force is likely to be the mainstay of the regime until the thorny Asturias problem is out of the way.

MADRID, April 20.

[The position in Spain is further discussed in a Leading Article of page 174.]

HUNGARY

THE ROME AGREEMENT

THE renewal of the Rome Agreement and its extension in the political field into a permanent organ of reciprocal consultation between Italy, Austria and Hungary was received here with general satisfaction. The parleys between the Locarno Powers, though Hungary is not directly affected by the Pact, are also being followed with keen interest. It is believed that a political settlement among the Great Powers on the Rhine must necessarily precede any Danubian plan. The conciliatory efforts of Great Britain to remove the disabilities imposed by the Peace Treaties on the vanquished are greatly appreciated. The news of Germany's decision to remilitarise the Rhineland and those of the resumption of the compulsory military service in Austria are regarded here as symbols of the reassertion of national sovereignty, and as such they find a sympathetic echo in Hungary. Though the corner-stone of Hungary's foreign policy is to insist on equal treatment and also on sovereign rights in political as well as in military affairs, no immediate action to follow the Austrian example is contemplated, in spite of widespread rumours to this effect in the French and Little Entente Press.

The details of the commercial portion of the Rome Protocol are being negotiated by the experts of the Governments concerned. As about half of Hungary's foreign trade is conducted with Austria, Italy and Germany, it is natural that the official Hungarian view is that nothing can be attempted in the economic sphere without the active co-operation of Italy and Germany. Matters of trade policy are greatly complicated at present by the chaotic exchange position. No political sympathy can undo the harm done by the effects of quota and exchange restrictions between friendly nations. The Austro-Hungarian situation is a typical case in point. According to the agreement made in 1933, Hungary's merchandise exports should exceed her imports from Austria by 50 per cent. in value, in order to redress the import surplus on other items, such as tourist traffic, payments for services, loans, etc. The actual merchandise figures are, however, such that exports barely suffice to finance imports, with the result that Hungary owes about 20 million schillings to Austria for the other items. For this mutually inconvenient anomaly Hungarians blame the rigid quotas and Austrians the unsatisfactory exchange rate.

BUDGET DEFICIT AND FOREIGN DEBTS

On April 1st the Budget for 1936-37 was presented to Parliament. The deficit is estimated at 75.7 million pengő, as against 75.9 millions for the current fiscal year. Total expenditure for the Administration is estimated at 788.2 million pengő and expenditure for the State enterprises at 423.6 millions. Receipts are estimated at 771.6 million pengő for the Administration and 364.5 millions for the State enterprises. The deficit is actually less than was estimated, because the Budget provides in full for the foreign debt service, which cannot be transferred on account of the shortage of convertible exchange. For example, 28 million pengő are provided for the League Loan service, whereas the actual transfer of the service (half of the original interest) is covered by 8.5 million pengő.

The rest is met by depositing Treasury bills pending a settlement of Hungary's foreign debt problem.

The strength of Dr. Fabinyi's Budget is that the revenue estimates are based on the actual returns for the financial year 1934-35. Receipts in the current fiscal year are above those of 1934-35 by about 4 per cent.; and, bearing in mind the general economic recovery and the rising price level, one may hope that the revenue of the Administration will be around 800 million pengő, that is 30 million pengő more than was estimated. It must be pointed out, however, that expenditure usually exceeds the estimates.

The merger of the land mortgage institutes was favourably received, and it is hoped that it will be followed by the long-delayed fusions between other commercial banks. The banking situation, on the whole, has considerably improved, but credit is still very expensive and new credits, especially for long periods, very seldom granted. Business recovery continues, and crop prospects so far seem to be good. Stocks and bonds displayed a firm tendency in the new year. According to an official publication, the repatriated foreign bonds total in nominal value 421.6 million pengő, that is about £15 millions, which shows that about half of the mortgage and communal bonds floated abroad found their way back to Hungary.

BUDAPEST, April 15.

ARGENTINA

RISE IN BASIC PRICE OF MAIZE

THE Ministry of Agriculture have raised the basic price which they are prepared to pay for maize from \$4.40 to \$5 per 100 kilos. Their object in putting up the price, although world market prices are well below the new figure, is apparently to prevent the farmers selling at present prices, which, in their opinion, are unnaturally low. They base their opinion on the fact that the Argentine crop is not going to be nearly as heavy as was at first expected, and they also consider that world markets are, if anything, short of maize. Admittedly farmers who have been growing grain have, for the most part, had a bad year owing to the drought of 1935 and will have to rely on their maize crop to pay expenses. The increase in the basic price will certainly be of assistance to them; but they would be well advised to regard this assistance as purely temporary and to reduce the acreage under maize for the 1936-37 harvest. Otherwise the country may be faced with over-production and the Government find itself unable to continue assistance on the present scale.

The foreign trade figures for the first two months of 1936, compared with those for the same period of 1935, are not too encouraging. The export surplus is down by \$30 millions. Exports to the United Kingdom show a marked decline, and represent only 25.6 per cent. instead of 32.8 per cent. of the total as they did last year. Imports, although they show a decrease in value, are up in tonnage, and the 1936 figure is the highest since 1931. Argentina, however, has increased her imports from the United Kingdom, although total imports are lower. The detailed figures are as follows:—

	FOREIGN TRADE IN FIRST TWO MONTHS		Change
	1935	1936	
	\$	\$	%
Imports	192,954,525	189,438,201	- 1.8
Exports	306,810,888	273,030,442	- 11.0
Export surplus	113,856,363	83,592,241	

Exports according to country of destination were as follows:—

	FIRST TWO MONTHS			
	1935	1936	1935	1936
	\$	\$	%	%
United Kingdom	100,769,669	70,321,988	32.8	25.6
United States	37,636,531	27,317,335	12.3	10.0
Germany	32,310,695	25,732,135	10.5	9.4
Brazil	12,451,675	16,330,349	4.1	6.0
France	12,189,300	14,803,488	4.0	5.4
Belgium	25,392,382	11,219,499	8.3	4.1
Holland	36,245,357	5,081,016	11.8	1.9

The above figures are subject to revision, since some \$73 millions of exports are "on consignment." Their destination is, at present, unknown. It is possible, therefore, that

NATIONAL BANK OF GREECE

Established in 1841

Head Office: Athens

Branches and Agencies throughout Greece

Branches and Agencies in Egypt:
CAIRO, ALEXANDRIA, ZAGAZIG

Affiliated Bank:

HELLENIC BANK TRUST COMPANY
51 Maiden Lane, NEW YORK

Capital paid up and Reserves Drs. 1,205,000,000

the large decrease in exports to the United Kingdom may be accounted for under this heading.

Imports according to country of origin were as follows:—

	FIRST TWO MONTHS			
	1935	1936	1935	1936
	\$	\$	%	%
United Kingdom	38,946,386	43,577,673	22.3	22.9
United States	24,470,571	26,867,186	14.0	14.1
Germany	15,253,004	20,656,273	8.7	10.8
Belgium	12,123,975	15,177,691	6.9	8.0
France	8,387,164	9,920,481	4.8	5.2
Brazil	7,427,085	7,649,816	4.2	4.0
Japan	6,229,163	7,062,057	3.6	3.7

Imports from Japan continue to increase. These imports represent a very real menace to the British market in Argentina.

Latest figures indicate a further steady decline in bankruptcies, and this confirms other evidence of a general improvement in business conditions.

BUENOS AIRES, April 16.

CZECHOSLOVAKIA

REVIVAL IN HEAVY INDUSTRY

SINCE the Presidential elections internal politics have become calmer. A successor to Dr. Benes in the Ministry for Foreign Affairs has been appointed in the person of Dr. Krofta, an old collaborator of Dr. Benes. Closely following the visit of the Austrian Chancellor, Dr. Schuschnigg, to Prague a visit was made by Dr. Hodza to Vienna. Events in Germany are also being followed with very keen interest here. The revocation of the Locarno treaties and the occupation of the Rhineland are aggravating business uncertainty.

The Corn Monopoly, which guarantees fixed prices, has led to a surplus in cereal production, notably in wheat; and it appears that the mere order to restrict sowings will not remove it. It is expected that the Monopoly will have considerable stocks on hand before the next harvest. These stocks are estimated at 60,000 trucks of wheat. This would imply the danger of loss to the Exchequer. Yet the extension of the Monopoly, which otherwise should end in 1937, is being demanded for a further 15-20 years. The Minister of Agriculture is also to regulate the cattle and animal produce markets by means of a monopolistic cattle company.

A certain revival of industrial production has set in. The number of unemployed persons at the end of March was 795,530, or 64,689 less than in February and 9,000 less than a year ago. An improvement in the coal and iron industries is also apparent. Output of coal in February was 909,114 tons, against 829,576 tons in January; of lignite 1,275,055 tons, against 1,240,283 tons; and of coke 140,500 tons, against 118,300 tons. Production of iron in January and February was 173,000 tons, or 46 per cent. more than a year ago; and production of steel 215,000 tons, or 19 per cent. more than a year ago. In the metal and engineering

industries revival is also apparent. In the ceramic and glass industries, however, export difficulties persist, and the textile industry is still depressed. Building activity appears to be fostered by legislative measures. Sales of building materials and building plans approved have risen. The wholesale price index stood at 706 on March 1st, against 704 in February; and the number of loaded railway trucks was 334,032 for the first two months, against 300,915 a year ago. Imports for January and February amounted to Cz.K. 1,076.4 millions, against Cz.K. 830.9 millions a year ago; and exports to Cz.K. 1,097.5 millions, against Cz.K. 998.2 millions a year ago. Exports to the sterling countries rose by 18 per cent.

TRADE TREATY WITH AUSTRIA

The negotiations for a trade treaty with Austria were terminated on April 2nd. A treaty has been negotiated on the basis of far-reaching preferences for Austrian industrial products on the one hand and for Czechoslovakian agricultural products on the other hand, in accordance with the decisions of the Stresa Conference. This treaty also accords with the Supplementary Protocol of Rome, which allows bilateral agreements with other Danubian countries.

At the end of February and beginning of March there was held in Prague the usual meeting of the Economic Council, of the Little Entente, after which negotiations by experts on Central European questions were continued. Two principles have been laid down as a basis for further action: a proposal for a Customs armistice, with an obligation not to raise further Customs charges and not to limit imports between the Central European States; and a proposal to effect a joint organisation for marketing agricultural surpluses.

PRAGUE, April 15.

CANADA

THE UNEMPLOYMENT PROBLEM

THE legislation implementing the trade agreement with the United States was the chief accomplishment of the first half of the present session. The Government also secured the passage of a Bill which establishes a National Employment Commission, but it has not yet found a personnel for it. The Government wants to keep its expenditure for unemployment relief below the figure of \$75 millions which the Federal Treasury had to provide last year. But its decision to cut its grants for direct relief to the Provinces has aroused vigorous protests both from provincial administrations and municipal authorities. The Federal Government is prepared to embark upon a fairly generous programme of special public works for the absorption of some of the unemployed and is going to help the two railway systems to undertake extra maintenance and reconstruction work. Ministers frankly confess, however, that they are largely counting upon an expansion of foreign trade to stimulate the basic industries and create more employment.

Nevertheless, the Minister of Labour has admitted that at the end of February the number of Canadians receiving direct relief was 1,080,831, and that when people employed on public works, resident in the camps for single homeless men or coming under the farm replacement scheme were added, the total number dependent upon some form of State support was 1,310,423; the corresponding figures at the end of February, 1935, were 1,136,840 and 1,431,093.

Meanwhile the Government has had to take important decisions about the Provincial debt problem, and when Mr Aberhart, the Premier of Alberta, intimated that he was unable to conform to Mr Dunning's Loan Council scheme they refused to grant him the advance necessary to liquidate a bond issue of \$3,200,000, which matured on April 1st; and as a result Alberta achieved the distinction of being the first Canadian Province to default on its obligations. Mr Dunning, however, explained that the refusal of the loan was not inspired by a desire to kill the Social Credit programme of the Aberhart Ministry, and apparently he is laying down exactly similar conditions to Mr Pattullo, the Liberal Premier of British Columbia. It is highly doubtful

if, in the light of Mr Aberhart's rejection of the Loan Council scheme, Mr Pattullo can take the political risks involved in accepting it.

The Aberhart Ministry in Alberta professes to be undismayed by the situation in which it finds itself, and it has passed through the Legislature the Bill which authorises it to convert the Province's outstanding issues of bonds, which total roughly \$160 millions and bear an average rate of 5 per cent. interest, to a lower rate. Furthermore, it has secured legislative authority to proceed with the establishment of a provisional bank and the Opposition parties have endorsed the project. But the only steps taken about the Social Credit experiment are the passage of one Bill which provides for the appointment of a Royal Commission empowered to study the feasibility of such a scheme for Alberta and of another which sets up a code to govern retail trade and aims at regulation of the spreads between producers' and consumers' prices. The Aberhart Ministry will have to make application to Ottawa for a Federal charter for its projected bank, but it is difficult to see how this can be denied, as such charters have been granted to other Provinces in the past.

DEFAULT AND CONVERSION

Both the default and the conversion scheme of the Aberhart Ministry are viewed askance in banking and financial circles, particularly as the infection of Alberta's example has spread to Eastern Canada and a majority of the city council of Montreal have voted for a plan to convert the municipal debt issues, which now bear an average rate of 5 per cent., to a lower rate of 3 per cent. Various members of the city council expressed strong resentment over criticisms of their policy which had appeared in London papers, and pointed — as also did Mr Hepburn, Premier of Ontario, recently — to the precedent set by Britain in defaulting upon her war debt to the United States.

There has scarcely yet been time for the stimulus which spring usually gives to business in Canada; and the Bureau of Statistics' general economic index for the week ending April 4th at 106.1 showed a decline of nearly a point on the previous week. But it was 7.1 points above the figure for the corresponding date in 1935. The following are the data for three of the six components:—

Week ended	Car-loadings	Wholesale Prices	Bank Clearings
April 6, 1935.....	73.2	72.2	90.1
March 28, 1936.....	73.4	72.2	106.0
April 4, 1936.....	75.0	72.1	100.4

On April 1st the visible stocks of Canadian wheat were placed at 205,476,064 bushels, as compared with 208,398,448 bushels a week before and 229,752,159 bushels at the parallel date in 1935, and it is estimated that after allowing for seed and other requirements there is still available an exportable surplus of at least 220 million bushels.

Industrial conditions are more or less stationary, but the mining industry continues to be very active. Building also expects to benefit from various housing schemes which are under consideration, and the total value of new building contracts for the first quarter of the year at \$32,127,000 already shows a gain of roughly \$3 millions over the figure for the same quarter of 1935.

The foreign trade returns for February are: Exports (domestic and foreign) \$60,198,198, compared with \$47,677,418 in February, 1935; and imports \$41,597,398, compared with \$37,043,719.

The Government has introduced a Bill designed to alter the railway legislation passed by the Bennett Ministry. The most important change is the proposed substitution of a board of seven directors for the present board of three trustees; but the new directors are to be vested with the same powers as the trustees.

The annual report of the Canadian National System for 1935, just published, shows operating revenues at \$173,184,501, a gain of 5.2 per cent., and operating expenses at \$158,926,248, and claims a net operating surplus of \$14,258,253. But taxes, rentals and other cash requirements absorbed \$7,427,254, and interest on the funded debt held by the public \$53,468,792. So to meet the deficit the Federal Treasury had to provide \$47,421,464. OTTAWA, April 13.

BOOKS AND PUBLICATIONS

SEASONAL UNEMPLOYMENT

FOR most students the British unemployment problem is the problem of the trade cycle. Smooth out the cyclical fluctuations of business activity and the unemployment problem will take care of itself. Mr Saunders' book,* however, concentrates attention upon another factor which, although hitherto neglected, is by no means insignificant as a cause of unemployment.

Seasonal fluctuations in total unemployment are certainly small, but it appears that as many as 90 per cent. of the insured workpeople in this country are attached to industries which show some degree of seasonal variation. Since labour mobility between industries is very imperfect, the number of insured persons seasonally unemployed during the year, so Mr Saunders tells us, comprises on an average 2 to 2½ per cent. of the total insured population and accounts for from 10 to 20 per cent. of total unemployment. The importance of this factor is accordingly considerable.

For each separate industry, from July, 1923, onwards, Mr Saunders has calculated a monthly total of insured workpeople employed. Seasonal fluctuations in these series are isolated by the familiar method of taking an average of the percentage deviations of the monthly figures from a twelve-month moving average. (Incidentally, this is the method employed in the *Economist* Index of Business Activity.) The data are admittedly somewhat crude, but they are sufficient to permit of the construction of a highly interesting series of charts showing the amplitude and the pattern of the seasonal variation in each industry. By taking the difference between the numbers employed at the seasonal peak and at the seasonal trough, some idea may be gained of the number of persons affected by the seasonal swing in the demand for labour each year. And by aggregating these totals, it is possible to estimate the proportion of the total insured population so affected.

Seasonal variations in demand can generally be traced to natural phenomena, but these need not necessarily cause corresponding variations in production and employment. Much depends on the organisation of the industry and the nature of the product. Where fashion plays an important part, production ahead of orders is unsafe, and variations in supply must keep in step with those of demand. But the evil effects of irregular employment are such that the case for attempting to reduce seasonal fluctuations is strong.

About two-thirds of this book is devoted to a detailed examination of some of the more important seasonal industries; here the statistical tables and charts are most informative. In each case possible ways in which the demand for labour could be made more even are suggested. The author concludes by gathering these suggestions together under three main heads. First there are measures which will directly reduce fluctuations in the demand for labour: e.g. inducing customers to alter their buying habits or arranging that a seasonal demand shall be met by a regular supply. Secondly, there are such measures as the dovetailing of occupations and improvement in the organisation of the labour market which, while not affecting the seasonality of the industry, will reduce the irregularity of employment for the individual worker. Finally, the residuum of seasonal unemployment must be spread by short-time working or by other expedients which will reduce the burden on the individual.

Stabilisation, however, requires a good deal of anticipation of future movements of the market, and an essential condition of success is the possession of adequate knowledge—especially statistical knowledge. From this point of view published statistics are at present woefully inadequate. But, as a contribution towards the better appreciation of the factors involved, Mr Saunders' work is very valuable indeed.

SHORTER NOTICE

The Problem of Poverty. By John Rustgard. D. Appleton Century Co. 289 pages. 7s. 6d.

This book is dedicated to "earnest and thoughtful electors of America," presumably in the hope that they will replace Mr Roosevelt by someone who can be trusted not to indulge in any "pious schemes for the reformation of human society." The author has spent most of his life in the North-West and in Alaska, and his outlook is one of "rugged individualism" in its most extreme form.

The analysis which he gives of the economic situation is perfect in its simplicity. People are poor or unemployed because they have not worked hard enough in the past, and have preferred spending to saving. Austere thrift can therefore solve all difficulties. Unproductive middlemen and financial "barons" also meet with Mr Rustgard's disapproval, but his fiercest diatribes are reserved for labour unions. Organised labour imposes "unfair" standards of wages on the community from which the whole economic system suffers. Therefore, the solution of America's troubles is first and foremost to reduce the wage level of town workers down to that of the small farmers and agricultural labourers. His ideal wage system is apparently that of Japan; though Italy, where "Mussolini has put the proletariat in its place," also meets with approval. England, on the other hand, "has lost control of her man-power, and in that field has abdicated her sovereignty to the trade unions."

Although this book is completely valueless as a statement of American economic problems, it has a sort of interest as an example of a certain type of reaction to the New Deal. In the past we have been inclined to regard rugged individualism as being essentially democratic, whatever its other faults. Mr Rustgard, however, is a firm believer in aristocracy. This follows logically from the eccentric sociological doctrines put forward in his first few chapters. The following sentence is perhaps typical of much that is the real root of the opposition to Mr Roosevelt: "Twenty-five million people in the United States over ten years of age, with negligible exceptions, are fitted for nothing above common labour: they are by nature designed to be hewers of wood and drawers of water—for others." Fortunately, however, most Americans are still taught to believe "that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are Life, Liberty and the pursuit of Happiness." They also have votes.

MONEY AND BANKING

THE AUSTRALIAN PENDULUM

Two months ago the Commonwealth Bank of Australia made an attempt to establish a bill market by offering £1,000,000 of Treasury bills to private applicants as distinguished from the trading banks. These bills were offered at a discount rate of $1\frac{1}{2}$ per cent. As the rate then paid by the trading banks was only $1\frac{1}{2}$ per cent., several banks, led by the Bank of New South Wales, felt impelled to raise their deposit rates by $\frac{1}{2}$ per cent. Their primary motive was to prevent a depletion of their resources due to a transfer of funds from time deposits to investment in Treasury bills; and, possibly because of this increase in deposit rates, the Commonwealth Bank offer of Treasury bills proved abortive. Nevertheless this episode left behind it a feeling that the Commonwealth Bank had been worsted in a tactical encounter by certain of the trading banks, and a suggestion that Australia might be on the threshold of an upward trend in money rates. It has so happened that the first signs of both the great depression and the subsequent recovery appeared in Australia. Is the Commonwealth about to give the world another, and less welcome, lead? A study of the Australian banking and economic position may throw light on this question.

In the first place, Australia does not yet possess a money market. Most of her internal trade is financed either by bank advances or by direct discounting between banker and customer. There are few institutions or individuals outside the banks who desire to invest money in bills. The Commonwealth Bank, which performs many of the functions of a central bank, does not announce a rediscount rate and does very little rediscounting. Hence its attempt to establish a discount market by the simple process of offering Treasury bills was probably doomed to failure. Apart from this, when it fixed a definite discount rate, the trading banks could plausibly regard this as analogous to the announcement of a Bank rate, and could say that they felt bound to raise their deposit rates to a level conforming to the new Treasury bill rate.

How far this was merely an ingenious attempt to shift the onus back to the Commonwealth Bank it is impossible to say. The more vital fact is that the trading banks could not possibly risk losing deposits, for they are already lent up to the hilt. The following table gives an approximate picture of the position of the ten trading banks (including the Bank of New Zealand) during the past three years:—

	Deposits	Cash, etc. (including Treasury Bills)	Advances	Ratio of Advances to Deposits %
1933—1st quarter...	277.7	43.9	232.4	83.9
2nd " "	274.7	41.3	234.1	85.3
3rd " "	268.7	40.2	237.1	88.3
4th " "	278.7	42.7	239.3	85.8
1934—1st " "	291.3	47.8	235.2	80.9
2nd " "	297.0	53.3	237.0	79.8
3rd " "	290.1	51.7	242.3	83.7
4th " "	292.0	47.1	248.1	85.1
1935—1st " "	293.0	41.8	249.4	85.2
2nd " "	291.7	38.5	253.7	86.9
3rd " "	284.0	34.5	258.0	87.8
4th " "	289.6	33.6	260.8	87.4

In interpreting the recent rise in the advance ratio to 87.4 per cent., it must be remembered that 1935 was a year of rapid recovery and expansion in purchasing power. The first consequence was an increase in the home demand for credit. Another and more serious consequence was a rapid increase in imports, which not only impaired the Dominion's balance of payments, but reduced the banking system's supply of London funds. This was the more serious in view of the fact that, since the bulk of the Dominion's monetary gold reserves were transferred into

sterling in 1933, both the Commonwealth Bank's and the trading banks' cash reserves have consisted largely of London funds.

These facts are illustrated by the tables which follow. Below, we give approximate estimates of Australia's balance of payments:—

Year ended June 30—	1929	1930	1931	1932	1933	1934
Export surplus.....	9.7	10.7	14.9	33.4	23.7	33.9
Invisible exports.....	1.5	3.0	3.7	2.5	1.3	0.1
Interest and dividends payable	34.1	35.0	34.4	28.6	29.1	29.0
Final balance.....	-42.3	-72.7	-15.8	+7.3	-4.1	5.0

Complete estimates for later dates, unfortunately, are not available. The export surplus for 1934-35, however, was only £10.1 millions, and a final deficit of about £20 millions was therefore indicated. One consequence is suggested by the figures in our next table, which shows estimates of the London funds held by the Commonwealth Bank and the trading banks:—

	Trading Banks	Common- wealth Bank	Total
1933—March	18.1	16.0	34.1
June.....	17.1	14.7	31.8
September.....	11.8	12.5	24.3
December	18.3	13.1	31.4
1934—March	28.6	17.1	45.7
June.....	26.4	24.7	51.1
September.....	16.2	23.2	39.4
December	15.7	20.2	35.9
1935—March	19.6	15.4	35.1
June.....	19.1	19.0	38.1
September.....	10.8	17.1	27.9
December	13.4	15.6	29.0

Reference to a previous table shows a fairly close correlation between Australia's total London funds and the cash reserves of the ten trading banks. Since June, 1934, London funds have fallen by £22.1 millions and trading bank cash by £18.1 millions.

Australia is, to a marked extent, a land of extremes. A good wool year involves a large increase in the value of exports and a building-up of London funds. It adds to general prosperity and induces, in due course, expansion in imports. In view of the inevitable time-lag, however, a rise in imports may actually synchronise with a bad wool year. In that event London funds will be seriously depleted and the trading banks' cash reserves will be low, precisely at the moment when internal expansion is being reflected in heavier bank borrowing. On the whole, this has been Australia's recent experience. Between 1933-34 and 1934-35 exports fell by £8.5 millions sterling, while imports rose by £12.9 millions. Now, 1933-34 was a good wool year, the average sterling price in Sydney being (Australian currency) 15.8d. per lb., against only 9.7d. in 1934-35. The current year, 1935-36, is a better wool year. The pendulum of London funds and trading bank cash should, therefore, soon begin to swing the other way.

This suggests that, in fact, no serious rise in money rates and no permanent check to recovery need be feared at present. Australia is now at the most awkward point in the swing of the pendulum. There is neither need nor likelihood of such drastic remedies as a further depreciation of her currency or an intensified restriction of imports. Instead there has only been a very gentle application of the brake, for while bank deposit rates are $\frac{1}{2}$ per cent. higher there has been no general increase in advance rates.

There are, however, several general lessons to be drawn from recent events, some of which apply to other countries in the sterling area. The first is that Australia's supply of bank cash appears to be too closely dependent upon the

ebb and flow of London funds—i.e. upon her external balance of payments. Some stabilisation reserve fund is needed, either in Australia or London, analogous to the gold held by the British Exchange Equalisation Account, the object of this fund being to give some elasticity to the supply of bank cash and to make it more independent of short-term fluctuations in the balance of payments. Simultaneously, the work of transforming the Commonwealth Bank into a central bank should be completed. The central institution should cease to be a commercial or savings bank and should become purely the note-issuing authority, the Governments' and bankers' bank and the lender of last resort. In this last capacity it might publish a rediscount rate, and begin to establish a money market by announcing its willingness to rediscount Treasury and other approved bills. When placing Treasury bills, it might follow the British method and offer them by tender to the highest bidder, without discriminating between the trading banks and other applicants. The trading banks would then be able to protect their own deposits by the simple process of tendering for bills at competitive rates. Finally, the maintenance of the Australian pound on a sterling basis calls for close co-operation between London and Australia. It is possible that, at times, London institutions tend to forget that the sterling area needs nearly as much care and management as the relations between the pound and currencies outside the area. Australia's credit is good, and in return for her proved willingness to meet her external obligations this country can help to preserve her ability to make payments.

FINANCIAL NOTES

Recent Chinese Developments.—Sir Frederick Leith Ross, who is still in China, has answered by implication some of the doubts of China's ability to operate a managed currency, recently expressed at the Eastern Exchange Bank annual meetings. According to Sir Frederick, the balancing of the Budget would take time, and the Government was justified in borrowing within the limit of available savings. Meanwhile the devaluation of the dollar had restored elasticity to China's economic system, and the balance of payments was now probably favourable. The Government had still to carry out the promise to create an independent central bank, while in the long run it would pay China to improve her credit and to meet her foreign loan obligations. Some of these points were emphasised last February by Mr S. H. Dodwell, the chairman of the Hong-kong and Shanghai Banking Corporation, at the annual meeting of the bank. He, too, is anxiously awaiting full details of the constitution of the new independent central bank, and he also laid stress on the need for Government economy. The future of the note issue and the Exchange Equalisation Fund are further problems awaiting solution, but the real crux is the future of American silver policy. This is entirely indeterminable, and when account is also taken of the political situation in the Far East, it means that China is having to reconstruct her economic systems under uncontrollable and rapidly changing conditions. That is perhaps the chief doubt in China's economic and monetary outlook.

The Anglo-Palestine Bank.—The latest report of this bank reflects the commercial and financial expansion that is taking place in Palestine. The demands on the banking system were such as to justify the increase of the bank's capital to £550,854 by the issue of 250,000 $\frac{1}{2}$ per cent. redeemable cumulative preference shares, with no voting rights, in August last. This has now been followed up by the conversion of 310,000 unissued shares into "A" ordinary shares of £1 each, with no voting power but otherwise equivalent to ordinary shares. Some 100,284 were issued to the ordinary shareholders, mainly the Jewish Colonial Trust, by way of capitalisation of existing reserves, while the balance were taken up by the same ordinary shareholders at a price of 27s. 6d. per share. This week a public offer for sale of 300,000 of these shares is being made at a price of 37s. 6d. per share. This operation yields a nice

profit to the Jewish Colonial Trust, but the price of the shares does not appear to be excessive. The General Mortgage Bank of Palestine, in which the bank holds a controlling interest, continues to extend its activities, and the bank has also participated in the creation of the Agricultural Mortgage Company of Palestine, which has already commenced operations. The Anglo-Palestine Bank is one of the strongest banks in the country, and in conjunction with Barclays Bank (D.C.O.) saved numbers of the smaller banks from disaster at the time of the run caused last September by the political tension in the Mediterranean. Its latest balance sheet records a very liquid position, and it is obvious that the demand for banking facilities in Palestine is expanding with the rapid development of the country.

The Money Market.—Last Saturday's floating debt return has helped to show how the Government's April debt operations have affected the volume of credit. When the final call of £73 millions in the new Funding Loan was paid on April 3rd, the quantity of tap Treasury bills held "inside" fell by £66.2 millions. This showed that a large part of the Funding Loan was held by public departments and other authorities. On April 15th, £44 millions of Treasury "threes" were repaid, and last week's Bank return indicated that there had been a certain release of funds, financed by Ways and Means borrowing from the Bank. The floating debt return for April 18th now shows an increase during that week of £29 millions in tap Treasury bills, suggesting that about £15 millions of the Treasury "threes" were held outside and the remainder "inside." These estimates are all very tentative, but it is clear that over the period as a whole the Government has released to the market more than it has gained. To put itself straight, it has had to increase the tender issue of Treasury bills. This has risen between March 31st and April 18th by £20 millions, and there is a further increase of £10 millions this week.

	Apr. 2, 1936	Apr. 8, 1936	Apr. 16, 1936	Apr. 23, 1936
Bank rate.....	2	2	2	2
Clearing banks' deposit rate ...	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate:—				
Clearing banks	$\frac{1}{2}$ -1*	$\frac{1}{2}$ -1*	$\frac{1}{2}$ -1*	$\frac{1}{2}$ -1*
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$ - $\frac{3}{4}$	$\frac{1}{2}$ - $\frac{3}{4}$	$\frac{1}{2}$ - $\frac{3}{4}$	$\frac{1}{2}$ - $\frac{3}{4}$
* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.				

The analysis of the Bank return on this page explains this week's drop in bankers' deposits. As a result money was at times a little less plentiful than usual, and one or two clearing banks had to call a small amount from the market. The banks have been ready buyers of May, June and early July Treasury bills at $\frac{1}{2}$ per cent.

The Bank Return.—Since Easter £6.4 millions of notes have returned from circulation, and as the Bank's gold holdings have increased by a further £500,000 the Reserve is £6.9 millions higher.

	Apr. 24, 1935	Apr. 1, 1936	Apr. 8, 1936	Apr. 15, 1936	Apr. 22, 1936
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	192.6	200.8	201.1	201.6	202.1
Note circulation	393.2	413.0	421.4	421.9	415.4
Banking Department:—					
Reserve	59.9	48.6	40.5	40.5	47.4
Public deposits.....	7.6	9.7	9.6	9.9	13.2
Bankers' deposits	93.1	102.6	93.4	104.9	93.1
Other deposits.....	39.6	38.5	37.1	36.6	38.1
Government securities ...	87.7	95.9	93.9	106.7	93.2
Discounts and advances ..	5.8	10.1	9.8	8.8	7.5
Other securities	9.6	14.6	13.7	13.2	13.9
Proportion	41.1%	32.2%	28.9%	26.7%	32.8%

In the banking department, Government securities have fallen by £13.5 millions and bankers' deposits by £11.8

millions. This restores the position of a fortnight ago and confirms the view expressed last week that the increase in both these items was a temporary movement due to inequalities in Treasury bill payments and maturities, coupled with the redemption on April 15th of the 3 per cent. Treasury bonds. Excise duty payments explain part of the week's increase in public deposits. Otherwise the contraction in bankers' deposits would not have been so pronounced, as since a fortnight ago £6.0 millions of notes have returned from circulation.

* * *

The Foreign Exchanges.—The London market has been very quiet this week. There has been a tendency for French francs to strengthen. Very little support from the British Control has been necessary, though the Control has always been ready to intervene at Frs. 74½, and at one time three months' francs narrowed from Frs. 3¼ to Frs. 2¾ discount. Later in the week they went out again to Frs. 3 discount, and it was thought that the improvement was due to some special operation. There is as yet no real ground for a permanent recovery, especially as the first ballot in the French elections takes place at the end of this week. The Banque de France's gold losses for the week ended April 17th were Frs. 487 millions, reducing the gold reserve to Frs. 62,488 millions. As some observers are beginning to think that Frs. 55,000 millions would be regarded by the Government as the irreducible minimum, the margin in hand is no longer very great, but it should suffice for some time to come. The note circulation dropped between April 10th and 17th by Frs. 879 millions, in spite of the fact that Paris rentes fall due on April 15th. Hence the tendency to hoard French currency has for the moment been checked, but there is a growing desire to hoard American and British currency as likely to be immune from any future gold embargo. Rediscounts at the Banque de France have again risen by Frs. 429 millions, and on April 17th stood at Frs. 14,187 millions. Dollars have been strong in London at \$4.93½, while the Paris rate for dollars has risen to Frs. 15.18½, or practically to the export gold point. So far the Banque de France has kept the rate inside the gold point by buying francs against gold ear-marked over to American account, the object being to prevent a daily visible outflow of gold. Three months' dollars in London are now only 7½ cent premium, or at the lowest premium for a year. Three months' guilders and Swiss francs have again strengthened and are now quoted at 5¼ cents and 14½ centimes discount, respectively.

* * *

Agricultural Mortgage Corporation.—The latest accounts of this institution show that during the past year business has not continued to expand at the same rate as in former years, while earnings have definitely contracted. The total of mortgage loans completed up to March 31, 1936, was £11.6 millions, based on 798,324 acres of land valued at £18.3 millions. The corresponding figures for last year were £11.1 millions, based on 770,720 acres valued at £17.6 millions. Improvement loans have risen from £57,000 to £67,000. Repayments of loans totalled £537,000, against £658,000 for 1934-35. The profit and loss account, however, suggests that the general decline in long-term interest rates is beginning to affect the Corporation's income from investment and mortgage loans, which have fallen by £4,000. Reduced business is reflected in the contraction of £3,000 in "commissions and fees." A loss of £4,300 was also incurred on the realisation of investments. As a result, the net profit for the year is only £24,000, compared with £32,000 for last year, and the dividend of 2½ per cent. is not repeated. The position of the corporation is probably largely determined by the position of the farmers, who with the return of better conditions may no longer be availing themselves to the same extent of the mortgage facilities offered them by this institution, created for their benefit in the depths of the depression several years ago.

* * *

Norwich Union Life.—The 1935 report of this—the largest of the purely life offices—is of special interest, as it embodies the result of a quinquennial valuation of liabilities

and assets. As on the last occasion, the rates of interest assumed in estimating the future liabilities were 2½ per cent. assurances and 3 per cent. for maturities. In 1931, a net depreciation of £1,098,746 was written off through the revenue account; but although on December 31st the aggregate market value of Stock Exchange securities was much in excess of the book values, it has been decided not to write down these book values. The results of the last two valuations are given below:—

	1926-30	1931-35
Trading surplus earned during quinquennium	4,526,338	6,151,818
Profit or loss on securities	—338,334	—1,090,729
Brought forward	254,385	451,019
	4,442,389	5,512,108
Allocations:—		
To Bonuses to policyholders	3,991,370	5,098,327
„ Carried forward	451,019	413,781
	4,442,389	5,512,108

The method of dividing the surplus takes the form of reversionary bonuses varying with age at entry and duration, as well as with plan. The actual rates declared are the same as in 1930, and are on a generous scale; they vary from 54s. per cent. per annum to 95s. per cent. per annum for whole life policies and from 38s. per cent. per annum to 60s. per cent. per annum for endowment assurances. Nevertheless, the cost of the distribution is well within the amount of the trading surplus. As there are no shareholders, the whole of the surplus belongs to the policyholders. During the year new assurances were £10,788,000, compared with £10,172,000 in 1934, but annuity consideration money fell from £436,000 to £286,000. The net rate of interest was 1s. 9d. per cent. smaller at £4 10s. 10d. per cent. Total assets increased from £40,933,000 to £42,566,000. Mortgages on property and loans at £14,682,000 were slightly greater than in 1934, thus reversing the trend of recent years. British and Colonial Government securities showed a moderate increase, but foreign Government securities decreased. Debentures were £7,576,000, against £6,710,000, and preference shares increased from £2,316,000 to £3,126,000. The holding of Norwich Union Fire shares are again taken at cost, namely £6,088,000. Other ordinary shares amounted only to £150,000. During the year, due to difficulties in the way of development in Switzerland, the company transferred its existing business in that country to a local company; this action resulted in the transfer to the Swiss company of nearly three-quarters of a million from the combined life and annuity account.

* * *

Norwich Union Fire.—Although the fire premium income of this Society has fallen steadily from £2,256,000 in 1928 to £1,670,000 in 1935, the underwriting profit last year, at £151,000, exceeded the corresponding figure of any other year. In the accident and general branch, premium income in 1935 fell from £1,680,000 to £1,450,000, but a loss of £89,000 in 1934 was replaced by a modest profit of £12,000. Last year's improvement in both branches was doubtless due in part to better results in the United States.

	1934	%	1935	%
	Profit	Premiums	Profit	Premiums
Fire	104,432	6.0	151,019	9.0
Accident and general	88,739	—5.2	12,219	0.8
Marine	17,500		...

Less Taxes, etc.	61,636		78,275	
	—28,443		84,963	

Total assets of the Norwich Union and its subsidiaries fell from £5,796,000 to £5,721,000. There is a general reserve fund of £900,000, while stock exchange securities are taken at or under market values as at December 31st last. The rate of dividend on the whole of the shares, which are held by the Norwich Union Life, is 24 per cent. The cost of the dividend before deducting tax is £264,000 and, while more than met by the available interest earnings and the net trading surplus, is considerably in excess of the available net interest earnings (£149,000).

THE STOCK EXCHANGE

AIR TRANSPORT AND THE INVESTOR

SPECULATIVE excitement in the aircraft share market has, for the time, abated. The promise of largely increased air defence expenditure in 1937 and 1938 has been eclipsed, as a bull pointer, by recent uncertainty regarding contract prices. The industry is operating at high pressure under "instructions to proceed." In the absence of agreement on a fair price, it is possible, as the Under-Secretary of State for Air explained in March, that the final prices for Air Force work will not be determined until after a full examination of the contractors' books on the completion of the contracts. A number of firms, recently constituted for civil aircraft work, have changed over to military construction, and have found the change costly in their first year.

Meanwhile, one section of civil aviation activity—air transport—continues to extend, without attracting unduly wide interest from the investor. Imperial Airways has been recently confirmed as the Government's chosen instrument for the development of existing Imperial air routes. There are now twelve companies operating regular services in the British Isles, with a route mileage of over 5,000. The four railway companies jointly with Imperial Airways have formed Railway Air Services, which has operated services in the British Isles since May, 1934. Finally, the Hillman Airways concern, established in 1931 and known to the investor since the end of 1934, has transferred its assets to British Airways, Ltd., a new company which has also acquired the approximately equal assets of United Airways and Spartan Air Lines. The new company has inaugurated a daily mail and passenger service to Scandinavia within the last few weeks.

Technically, therefore, commercial air transport is making steady progress. The investor's direct interest in this development, however, is as yet stringently limited. The majority of services are either too recent to have achieved satisfactory earnings records, without the assistance of a Government subsidy, or are private companies in which there is no general investment interest. Any review of the investment aspect of the air transport industry must, perforce, be largely restricted to the record and prospects of Imperial Airways. This company was formed twelve years ago to amalgamate four concerns which had been competing against each other with the help of Government subsidies. Its subsequent progress has been rapid. In 1928 the number of passengers carried was 26,361; last year the total was 48,642 on European and 7,103 on Empire routes. Between 1931 and 1935 the number of miles flown more than doubled at 2.9 millions, against 1.3 millions; in the same period the total traffic ton-miles operated increased fourfold from 0.9 millions to 3.5 millions. The number of aircraft in service, nevertheless, has slightly fallen during the past four years. This argues a progressive increase in efficiency and a considerable increase in the scope of operations. The company has never disclosed the amount of subsidies received from year to year in its accounts. The development of Imperial air routes has more than a tinge of public policy, and similar considerations may influence the Board's decision in the matter of non-disclosure. It is possible, however, to glean some information from official sources. The main subsidy provisions are defined in Command Papers of 1928 (Europe and India), 1930 (South Africa), and 1933 (Australia). A new long-term agreement has been agreed with the Government, to supersede these arrangements, which are due to expire shortly; and an issue of new capital is to be made to finance the extension of the fleet, some 29 flying boats and 12 land planes being under construction or on order at October, 1935. Out of direct air transport subsidies of £561,000 for the year to March, 1935, analysis suggests that about £481,000 may have been received by Imperial Airways.

The revised agreement will take account of the new

trans-Atlantic services, which have been in preparation for some time past. Its terms have not been disclosed, but the Air Navigation Bill, whose second reading was taken at the end of last month, revealed that the Government sought power to increase the aggregate annual subsidy limit up to £1,500,000 until the end of 1953. On the revenue side, therefore, Government support appears assured. From the operational aspect, somewhat different considerations may be relevant. The progress of the company during the last five years with a fleet of unchanged size shows that economies of organisation, and the consequent increase of flying time per machine, have become increasingly important. These "economies of large-scale working" themselves change with the scale of operation, and it may, therefore, be some time before maximum efficiency is achieved with a larger fleet.

From the investment aspect, more importance attaches to the company's relations with the Government. For the year to March, 1935, the balance of profit, after charging working expenses and crediting subsidies, amounted to £366,446. For the eleven months to February, 1935, traffics totalled £1,412,000. If the undisclosed traffics for March were taken at £130,000, the estimated total revenue (including the £481,000 minimum subsidy receipts) could be put approximately at £2,023,000 for the year. Operating expenses would therefore amount to some £1,656,500. A similar estimate, given in the *Economist* of October 26th last, has not been challenged. It is significant that, for the nine months to December last, the increase in traffics amounted to £205,886, or 17.9 per cent. The reduction in subsidy provisions for the year just closed, as computed from official sources, amounted to £120,000. From an operating point of view, therefore, it would seem that Imperial Airways last year may have come close to, or even succeeded in, meeting its costs. During the current year provision has been made for the Bermuda-New York service and preliminary survey flights on the North Atlantic route. Imperial Airways remains the principal air transport share for general investment purposes, and has given shareholders a not unsatisfactory return. During 1933-34 and 1934-35 available profits were equivalent to slightly over and under 10 per cent. for the ordinary capital, the dividend having been raised progressively from 3 per cent. in 1931-32 to 7 per cent. for 1934-35.

Next in the hierarchy of air transport services known to the investor may be put British Airways. This concern is to be provided with a subsidy of £20,000 for the Scandinavian mail and passenger services during the current year. Hillman's Airways has a one-third interest in the concern, which has been sensibly based on an amalgamation of this and two other companies. So far, investors are in the dark concerning the new company's prospects, although it may well be true, as the Hillman's directors observed in December last, that the new company will reach the dividend-paying stage at an earlier period than the constituent companies operating alone. Fixed cost factors are so important in the air transport industry that the small unit is under a severe technical disability. Inevitably, much of the traffic is seasonal. To secure optimum results it is necessary to limit aircraft capacity closely to the peak summer load—or even a little below it. Air operators have two principal maxims: first, aircraft lose money on the ground. The type of commercial air liner operated on many internal services costs 10s. per hour on the ground. The average flying time for the Imperial Airways fleet was 1,810 hours for 1934-35. These aircraft—which are more intensively worked than those of other fleets—are standing for nearly four-fifths of the year. This explains the importance of the second maxim: "An aeroplane overhead is earning its overhead."

These operating factors seem the more important in

internal air services. Certain of these services are now regular mail carriers. But for passengers the inland air service is often not a decisive time-saver on balance. Many express trains are booked for an average speed of over 55 miles an hour. The average scheduled speed of regular internal services, from town centre to town centre, is 10 miles per hour below that figure, for the period occupied in surface transport to the landing-grounds severely reduces the average speed over short distances. The growth in air transport services since 1932 has nevertheless been remarkable. In that year regular air services were operated over 187 route miles in the United Kingdom; by 1934 the total had jumped to 5,591 route miles, and last year a further increase of 20 per cent. was probably achieved. Some services—including Jersey Airways—claim to have attracted a new class of air traveller. From the communications aspect, services to "John Bull's Other Islands" are important; for they save commensurately in time over surface travel. From the operational aspect, the key factor of seasonal payloads is still present, and this must necessarily limit the prospects of large profits. Progress has been made, however, in amalgamation to secure operating economies, and further schemes may be in prospect.

For the investor, therefore, internal air services are not of wide interest. Railway Air Services, in which Imperial Airways and the four main railway companies hold equal shares, has carried mails since August, 1934, and operates regular services on inland trunk routes, to Belfast, across the Bristol Channel and to the Isle of Wight; and Jersey Airways operates in connection with these services. The services are in an early stage of development, and have involved losses during the past two years on the following scale:—

	Total Receipts		Total Expenses		Loss	
	1934	1935	1934	1935	1934	1935
	£		£		£	
L.M.S.	2,904	12,626	10,148	39,902	7,244	27,276
G.W.R.	1,528	2,183	6,678	9,117	5,150	6,935
Southern	272	1,196	5,042†	10,184†	4,770	8,988

† Includes £3,286 and £3,694 subsidies paid 1934 and 1935 respectively.

The railways, perhaps with the experience of the road transport struggle fresh in their minds, have established their position in the air almost from the outset. It is, however, restricted to "inland" flying. The Southern Railway, for example, has no aerial reply to competition from the air on its cross-Channel routes. Considerations of prestige and the desire to establish aerial feeder services over difficult rail routes (e.g. cross-country journeys involving a sea crossing or *détour*) may justify development from the wider standpoint of maximum service to the rail user, which is the *raison d'être* for the provision of hotel and restaurant car facilities. Expectations that such services will yield considerable revenue must, however, be severely discounted for the time being.

The development of ground services has been largely left to the State and to municipalities. One public company—Airports Limited—has been formed to build airports at Gatwick and Gravesend. It is claimed for Gatwick that it lies directly on the continental route, outside the London fog belt, and that it is served by direct train service on the Southern Railway. Assistance is to be given by the Treasury over 15 years to enable the two proposed aerodromes to be used as alternative landing grounds in conditions of bad visibility. The prospectus for the issue of 840,000 5s. ordinary shares, made last June, referred to the directors' anticipation of a satisfactory return on the capital employed, after a reasonable period for development. Both centres, initially, will need to attract new or diverted services, but should be favoured by the rapid increase in civil flying generally.

Investors may conclude that, although technical progress in air transport is continuing, it offers somewhat limited avenues for investment under present conditions. Many of the inland services are the pioneer undertakings of private companies. Hillman's Airways is now only the "publicly held third" of a larger amalgamation. The railways' interests are largely strategic, and insufficient data are available to form any close appraisal of airport profits prospects. Some of the difficulties of internal air operation may be

inseparable from the permanent facts of British geography. Others may be solved with greater experience and co-ordination. For the investor, however, present choice is restricted almost completely to Imperial Airways. Important developments are in preparation which may involve new operating problems for this concern, but the progressive record of recent years may be resumed when initial difficulties have been satisfactorily overcome. Although the company is the chosen instrument of Imperial air development, it might be salutary if investors did not rank the prospects of dividend expansion too high, for the day of financial independence has yet to come.

INVESTMENT NOTES

The Stock Exchange and the Budget.—The stock markets had expected a "dull" Budget, with no immediate changes in taxation, but with ominous rumblings of unwelcome changes to come. Threepence on the income tax and twopence on tea came as a surprise, but did not shake confidence. Gilt-edged stocks opened about half a point lower on Wednesday, but no great volume of selling occurred, and at the close of business many prices had regained their pre-Budget levels. In the tea share market, there was an initial disposition to mark down the shares of some companies producing the finer quality teas, on the argument that retailers would probably choose to increase the proportion of the lower grades in their blends rather than pass on the new impost in its entirety. Industrial shares opened hesitantly, but closed with a fair appearance of strength. The Budget, in itself, provided few *points d'appui* for the speculative-minded, but there was a certain amount of buying of such shares as Barclay Perkins and Red Tower Lager, on the new duty on foreign light beers. Counters like Leyland Motor and Thomas Tilling, which had been fluctuating uncertainly, owing to fear of an increase in the heavy oil duty, were buoyant in its absence. For the same reason, London Transport "C" stock gained a full two points on Wednesday. The following table of prices suggests, however, that, on the whole, the Stock Exchange treated the Budget with indifference, and several of the small "pluses" below illustrate the slight improvement on Thursday afternoon:—

Stock or Share	Highest, 1935	Highest 1936, to date	Pre-Budget Price (Apr. 21)	Post-Budget Price (Apr. 23)	Change, since Budget

(a) On basis of a smaller capital.

Whether second and third thoughts will be identical with first impressions is, perhaps, more doubtful. The markets may rightly be regarding the maintenance of cheap money and trade recovery as of greater import than a small—almost a "token"—rise in the income tax. Maturer consideration, however, may lay greater emphasis on the implications of this year's Budget as the first of a series promising a permanent increase in expenditure and taxation, whose ultimate limit cannot, at the moment, be confidently measured.

Railway Rating Again.—From first to last, the British railways have been among the most influential clients of the legal profession. The litigation arising out of the Railway Rating Act of 1930 threatens to rival even *Jarndyce v. Jarndyce* in length and cost. At regular intervals the same piece is performed by the same actors in a different court. The question of the Southern Railway's rating assessment, having gone round and around, from the Assessment Authority to the Railway and Canal Commission, and from the latter court to the House of Lords, has now gone "below" again, and has re-appeared in the Railway and Canal Commission. The House of Lords' judgment on January 24th (discussed in an *Economist* leading article of February 1st, page 244) decided a matter of principle—namely that the Act of 1930 did not set up an entirely new basis of railway rating assessment, and that the established practice of prior deduction of an adequate allowance for interest, fair profit and business risk on a hypothetical "tenant's capital" was the "recognised one." The Lord Chancellor, however, in dealing with the matter, threw out something like a hint that the parties should take an opportunity of going back to the Railway and Canal Commission and asking that court whether, in its decision, it anticipated in all respects the view which the House of Lords had formed. The parties, therefore, find themselves back before the Commission to consider points of detail. On Tuesday, Sir William Jowitt, for the Assessment Authority, contended that in determining the allowance from replacement cost for depreciation, in the Southern's case, the court failed to make allowance for such factors as age, obsolescence, excessive number of types and unduly high initial figures of replacement costs. Secondly, it was contended that in determining the rate of interest to be allowed upon the tenant's capital, the court failed to have regard to a number of relevant matters. On Wednesday, Mr Justice Mackinnon declared—*apropos* of "an extremely complicated matter of fact"—that the Commission were being asked, twelve months after they gave their decision, to say whether, in a mass of

matters, they took one particular detail into consideration. "Perfectly frankly," said His Lordship, "I have not the slightest recollection." From the viewpoint of investors, any alteration made by the Commission in its earlier ruling on "matters of detail" might have far-reaching effects. As we showed in our article of February 1st, the substitution of 10 per cent. for a 15 per cent. allowance would more than double the Southern's revised assessment. The position is the more anomalous because two of the four railways—the Southern and the L.M.S.—have already increased their dividends for 1935 on the assumption that their rating assessment will be reduced. The sooner finality on the matter can be reached, the better for all concerned.

Income Tax "Multipliers."—Mr Chamberlain has reserved his unkindest cut, in this year's Budget, for the unmarried investment statistician who may, incidentally, be a consumer of tea or foreign lager beer, or both. For investors who may require to convert dividends calculated "before tax" to an "after tax" basis, or vice versa, a standard income tax rate of 4s. 9d. in the £ is a troublesome figure. There is only negative consolation in the prospect that the policy of financing expanding "maintenance" charges for new armaments out of revenue may involve a rise in the rate, next year, to the much more convenient mathematical figure of 5s. Every investor who receives dividends from securities on which income tax is deducted at the source is under the necessity of reducing "gross" rates to a "net" basis, in order to ascertain the residuum in hard cash which will be left to him in the annual "share-out" with the Exchequer. The reverse process, of converting "net" figures to "gross," will be required of him when he makes out his annual income tax return, since the authorities insist that receipts from dividends on which tax has been deducted at the

Preliminary Notice.

WITWATERSRAND NIGEL, LIMITED

(Incorporated in the Union of South Africa)

SHARE CAPITAL £1,100,000

divided in 4,400,000 shares of 5s. each, of which 3,618,900 are issued or to be issued, 600,000 are under option, and 181,100 are in reserve.

The London subscription list will open and close on April 29th, for an issue of 800,000 SHARES OF 5s. EACH AT 10s. PER SHARE

Preferential consideration will be given to applications from shareholders of the Company and of Oceana Development Company, Limited, or their respective nominees, and allotments will be made in response to such applications in the proportions of one share of this Issue for every four shares held in the Company by each of its shareholders on the register on the 18th day of March, 1936, and in the proportion of one share of this Issue for every two shares held in Oceana Development Company, Limited, by each shareholder of that Company on the register on the 18th day of March, 1936. In calculating the number of shares to be allotted, fractions of shares will be disregarded.

Allottees of the shares of this Issue will receive Option Certificates to Bearer entitling the holders:—

- (1) Until the 31st December, 1936, to subscribe at 12s. 6d. per share for one share in the Company in respect of every eight shares allotted to such allottee.
- (2) Until the 31st December, 1937, to subscribe at 12s. 6d. per share for one share in the Company in respect of every eight shares allotted to such allottee.

In calculating the number of shares comprised in these Options, fractions of shares will be disregarded.

The prospectus will show inter alia that:

- (1) The total mining area is 9,840 claims, nearly all of which are underlain by the Nigel Reef horizon;
- (2) An incline shaft has been sunk to 676 feet and two vertical shafts to 637 feet and 625 feet respectively;
- (3) Up to December 31, 1935, 7,360 feet of driving, wining, raising and cross-cutting had been completed. Of 4,108 feet sampled, 1,043 feet, or 25.4 per cent., was payable, having an average assay value of 11.8 dwts. over 26.7 inches, equivalent to 315 inch-dwts.

The Company has in hand approximately £130,000 in cash, and the present issue (which is guaranteed by East Rand Consolidated, Ltd.) is expected to produce a net sum of £350,000.

Prospectuses and Forms of Application are now available from

source shall be shown in the returns at a "gross" level. The readiest method of carrying out these operations is to use a "multiplier," which, for any given standard rate of tax, is constant. Thus, if an investor holds a shares of £1 in a company which declares a dividend of x per cent. subject to tax, the net amount receivable in cash, after deduction of tax, will be (in £'s): $ax/100 \times 0.7625$. Similarly, if an investor holds b shares of £1 in a company which declares a dividend of y per cent., free of tax, he should include in his income tax return, an amount (in £'s) of: $by/100 \times 1.3115$. In both instances, it is presumed that the standard rate of tax applies. In numerous cases, however, dividends may be subject to Dominion income tax relief, and the amount chargeable for British income tax may, therefore, be calculated at less than the standard rate. The following table may, accordingly, be convenient for reference. It shows the "multipliers" for effective rates at each 6d. between 2s. and 4s. and each 1d. between 4s. and 4s. 9d.

Effective Rate in £	To Raise "Net" to "Gross," multiply by	To Reduce "Gross" to "Net," multiply by	Effective Rate in £	To Raise "Net" to "Gross," multiply by	To Reduce "Gross" to "Net," multiply by
2s.	1.1111	0.9000	4s. 3d.	1.2698	0.7875
2s. 6d.	1.1429	0.8750	4s. 4d.	1.2766	0.7833
3s.	1.1765	0.8500	4s. 5d.	1.2834	0.7792
3s. 6d.	1.2121	0.8250	4s. 6d.	1.2903	0.7750
4s.	1.2500	0.8000	4s. 7d.	1.2973	0.7708
4s. 1d.	1.2565	0.7958	4s. 8d.	1.3043	0.7667
4s. 2d.	1.2632	0.7917	4s. 9d.	1.3115	0.7625

Taken in conjunction with the table of past changes in income tax rates (given on page 176 of this issue), the figures may be helpful to statisticians, accountants, etc., who may be required to compute gross and net dividends over a period of years. For effective rates in excess of 4s. 9d., the following "multipliers" are applicable.

Effective Rate in £	To Raise "Net" to "Gross," multiply by	To Reduce "Gross" to "Net," multiply by
4s. 10d.	1.3187	0.7583
4s. 11d.	1.3260	0.7542
5s.	1.3333	0.7500
5s. 6d.	1.3793	0.7250
6s.	1.4286	0.7000

This table, it may be devoutly hoped, will cover the requirements of statisticians for some years to come.

Actuaries' Investment Index.—The market on Tuesday closed in ignorance of the Chancellor's decision to increase the income tax. The Actuaries' Index of 178 industrial equities calculated on Tuesday's prices was virtually unchanged on the week at 83.7, compared with 83.6 a week ago and 83.4 a month ago. The yield calculations are 3.65 per cent. this week, 3.63 per cent. a week ago and 3.63 per cent. a month ago. Movements in representative sub-groups are tabulated below:—

Group (and No. of Companies)	Prices (Dec. 31, 1928 = 100)			Yield (%)		
	Month ago (24 Mar., 1936)	Week ago (14 Apr., 1936)	This Week (21 Apr., 1936)	Month ago (24 Mar., 1936)	Week ago (14 Apr., 1936)	This Week (21 Apr., 1936)
Higher This Week:						
Insurance (24)	131.7	132.2	134.1	3.21	3.20	3.16
Building materials (5)	97.4	102.0	102.7	4.86	4.73	4.70
Motors (5)	57.8	57.9	59.0	4.05	4.02	3.99
Oil (5)	83.2	83.7	85.2	2.66	2.61	2.54
Lower This Week:						
Coal (7)	100.3	98.8	97.8	4.12	4.12	4.17
Iron and steel (12)	73.8	71.7	70.6	3.03	3.15	3.18
Home rails (4)	68.7	72.1	71.7	1.60	1.54	1.57

The most marked increase in price is in the oil group, where great interest has been stimulated by the settlement of the Mexican Eagle lawsuit. The principal groups which lost ground were coal, home rails, and iron and steel.

COMPANY NOTES

Liverpool Companies.—It was as a market that Liverpool built up its greatness (and as a port well equipped to serve a great market), and even under the restricted trading conditions of to-day the Liverpool wheat and cotton markets are leaders among the few remaining international exchanges of the world. The Liverpool Stock Exchange would not claim to rival those far-famed exchanges of Liverpool. But its list reflects their influence clearly, if paradoxically, in the relative scarcity of purely "Liverpool" shares which it contains. The trader of Liverpool is not interested in providing a market for small local concerns in which interest must at best be limited. The shares in the Liverpool list are for the most part those of leading companies well known in London and to most other exchanges. Liverpool demands a free market. That, naturally, does not exclude local concerns drawn from a district which has provided some of the largest English companies. Cunard Steam Ship and Furness Withy, Cammell Laird, Platt Brothers, many of the leading textile shares, and Leyland Motor can each be claimed by Liverpool and its district. And the local general services are

represented by such companies as Liverpool Gas (which well illustrates the general tendency of the industry to meet stationary sales with substantial operating economies to produce growing net profits). Two other important utility concerns, Mersey Power and Lancashire Electric Light and Power, are also included. Transport includes Ribble Motor Services, the Mersey Docks and Harbour Board stocks, and the Leeds and Liverpool Canal. Lewis's, Limited, and Lewis's Investment Trust represent retail trade, and the list is rounded off with Peter Walker (Warrington), and Liverpool and London and Globe Insurance. Yet all of these shares are as well known in London as they are in Liverpool. Among the few shares which might be classified as "Liverpool shares" in the narrow sense are Wilson Brothers Bobbin Company, Liverpool Grain Storage and Transit Company, and Liverpool Warehousing—though the last company is officially quoted and quite frequently changes hands in London. Apart from these concerns, few shares are to be found which represent the many small units which exist in the industries for which Lancashire is famous. Liverpool has left it to Oldham to provide a market for them. The accompanying table gives brief particulars of a few companies which can best lay claim to the description of "Liverpool shares."

Unilever Results.—The maintained guilder rate of dividend on the Unilever, Ltd., ordinary shares came as something of a disappointment to the market, which had been inclined to attach importance to the favourable results reported by several of the English subsidiaries, without taking full account of the continuing difficulties on the Continent. One section of the group, once again, has given no reliable indication of the combined experience of the undertaking. The present report shows that almost every factor affects different sections in a disparate fashion. Increased prices for raw materials, it would seem, are difficult to pass on to consumers of margarine and soap. These commodities' profits were lower last year, but the oil and cake and plantation interests, which have found the rise advantageous, have come to their rescue. Difficulties in the margarine business, coupled with the continued burden and expense of exchange covering, has been largely responsible for the fall in Unilever N.V. consolidated profits by 7½ per cent., whereas the Unilever, Ltd., net consolidated profit has advanced by as much as 35 per cent. The guilder dividends are maintained, but the estimated sterling equivalent for Unilever, Ltd., is fractionally higher at 6½ per cent., comfortably covered by earnings of 10.9 per cent. Comparative results of each group are given below:—

(Years to Dec. 31)	Unilever, Limited		Unilever, N.V.	
	1934	1935	1934	1935
Consolidated net profit*	£1,805,533	£2,432,156	Fl. 14,684,846	Fl. 13,568,879

* Including companies' proportion of profits (less losses) of all concerns forming part of Unilever organisation. † This includes the results of subsidiaries and associates only to the extent to which dividends have been or are to be received therefrom. ‡ Includes dividend on new 5 per cent. preferred shares. § Assuming rate of Fl. 7.20 = £1 for final dividend.

The liquid position of the group, shown by a consolidated statement of working capital of the two concerns and their subsidiaries, at first or second hand, is still impressive. Net current assets are more than £1 million higher at £40,753,000, and further, if expensive, progress has been made in reducing the cash holdings in countries with restricted currencies. The changes in the respective balance sheets mainly reflect the "transfer" of part of the group's preference obligations to the English concern, at a lower rate of dividend. This arrangement, which was carried out last May, reflected the ingenuity with which the administration is fighting currency difficulties. No further arrangements, apart from those arising "normally" from trading conditions have been made. The effects of any currency changes in the future are not easy to assess. Devaluation might assist trade conditions abroad, but some rise in costs of raw materials purchased from sterling countries would be expected. Where the balance of advantage would lie is difficult to determine. And the present arrangement by which the Unilever, Ltd., dividend is determined would necessarily be altered. While the known factors in the Unilever equation appear slightly less unfavourable, the present price of 32s. for the British £1 stock units, offering a yield of £4 3s. per cent., suggests that recovery prospects are being cautiously valued.

Babcock and Wilcox.—This concern, famed the world over for boilers and heavy machinery, enjoyed a further impressive advance in profits last year. Total income increased from £424,590 to £525,657. In the space of two years, therefore, total profits have been doubled, and while the present rate of earnings is considerably below that of pre-depression years, the results are the best since 1931. In a year of sub-normal international trade and shipbuilding

SELF-DEPENDENCE

UPON your ability, upon your purely personal efforts, and above all upon your health, is founded the edifice of your own career, your future well-being and that of your family. If anything should happen to you — incapacitation by illness or accident; death — what then? Would everything you have built up collapse? Would you be dependent upon the charity of others? Would your family be condemned to fend for themselves and eke out the humiliating existence of "distressed gentlefolk"? Lay this anxiety by the heels once and for all—it is simple to accomplish.

All you need — all the protection you could desire is offered by the "Triple Income" Plan; a practical method devised to meet the special needs of professional people.

These are the benefits:

INCOME ON RETIREMENT INCOME FOR DEPENDANTS INCOME DURING DISABLEMENT

It would be difficult to find a plan which more amply fulfils the requirements of the professional man and so completely relieves him of an ever-present anxiety. Send to-day for full particulars and learn at what moderate cost this security may be achieved.

LEGAL & GENERAL ASSURANCE SOCIETY LIMITED

Head Office: 10 FLEET STREET, LONDON, E.C.4.

General Manager: W. A. WORKMAN, F.I.A.

Established 1836. Assets exceed £33,000,000.

activity, investors may regard improvement on this scale as satisfactory, but the directors strike a note of caution in their report when referring to the position in export markets. The chief encouragement at present comes from the home market, for which much of the rise in ordinary share earnings from £360,429 to £462,053 must be thanked. The dividend is maintained at 8 per cent., but is this year covered by a further 3½ per cent. An analysis of the profits for the last three years is given below:—

	Years to December 31		
	1933	1934	1935
Manufacturing profit	114,674	250,414	382,443
Other income	145,724	174,176	143,214

Ordinary shares:			
Earned	201,679	360,429	462,553
Paid	257,979	343,972	343,972
Earned (%)	4.7	8.5	11.5
Paid (%)	6	8	8

Dividend equalisation fund..... Dr.50,000 25,000 100,000
Carried forward..... 23,388† 44,406† 65,893†

† After credits from income tax account: 1933, £8,632; 1934, £29,561; 1935, £3,406.

The market's disappointment with the maintained dividend should be slightly alleviated by the increased allocation of £100,000 to dividend equalisation fund out of the year's higher earnings. It is evident, however, that the company is still in a recovery phase, and that increased requirements for mercantile and naval boilers give promise of a further expansion of business in due course. The grouping of the constituent undertakings clearly shows that the company's predominant recovery equity is in world markets. Under prevailing conditions the £1 shares, at 52s. 6d., offer only £3 1s. per cent., and evidently discount a substantial increase in dividends to come.

Cunard-White Star.—The report of the Cunard Steam Ship Company for 1935 is of particular interest, since it is accompanied by the results of the first full year's working of the Cunard-White Star Company operating the Atlantic services. For the full year gross revenue amounted to £5,956,929, compared with £3,306,756 for the period from June 20th to December 31st, 1934. Expenditure under all headings was on a considerably lower scale, amounting to £5,984,595, against a total of £3,706,753 for the previous six months. The operating loss has therefore been reduced from £399,997 for the second half of 1934 to £27,666. The report refers to a definite improvement in passenger movements in the Atlantic services, and that increased traffic contributed to the improved results. It may be assumed, therefore, that seasonal factors in the first half of last year were responsible for the lack of comparative gross revenue expansion. After provision for depreciation of plant, fees, and interest on £750,000 first debenture stock (issued to provide for part of the working capital) the debit balance for 1935 amounts to £61,769, compared with £408,090 at the end of 1934. This small operating loss is a favourable portent, but at present it is no bigger than a man's hand. No depreciation has been charged on the fleet, shown in the books at £18,114,783. This figure includes the cost of the "Queen Mary." The net loss on sales of ships of £1,416,940 has been provided from share premiums account, which from the first has been a purely *pro forma* reserve. The Cunard Steam Ship Company, which owns 62 per cent. of the share capital of Cunard-White Star, and controlling interests in Thomas and John Brocklebank and Anchor Line (Henderson Brothers), reports a net revenue of £25,535, slightly higher than the 1934 figure before crediting reclaimed income tax. The results make no provision for the losses experienced by Cunard-White Star. The results are analysed in the following table:—

	Years to December 31		
	1933	1934	1935

Carried forward.....	15,922	105,054†	130,590
† Including £64,691 income tax. ‡ Including formation expenses of Cunard-White Star.			

Slight improvement is reported from the Mediterranean cargo service, despite the effect of sanctions, and in the Liverpool-Havre trade. Lack of balanced cargoes, despite the increased outward trade on the Commonwealth and Dominion Line Services, has left the position of the company broadly unchanged. Investors will conclude that 1935 was a year of very modest improvement, which gives little promise, at this stage, of satisfactory earnings. The entrance of the "Queen Mary" into regular service at the end of next month is not, in itself, a clear investment pointer, and at 99½ the 5 per cent. debenture stock of Cunard Steam Ship is at least fairly valued.

Boom in Mexican Eagles.—One of the most remarkable movements in recent Stock Exchange history has been the rise this week in Mexican Eagle ordinary shares. In recent weeks these shares quietly appreciated from about 9s. 6d. on rumours that the Amatlan lawsuit was about to be settled. When the official announcement was made over the week-end that an opportunity had been taken to dispose finally of the lawsuit, the shares rose rapidly from 15s. 6d. to 22s. The present market price compares with a low level of 5s. 10½d. this year and 3s. 1½d. last year. Unofficially it is stated that a settlement has been made out of court with a payment of 12 million pesos, approximately £666,667. As the com-

pany has been reserving £2 millions—the sum in dispute—the shareholders will no doubt consider that the directors have made a good bargain. The official announcement also contains a statement that the difficulties with the Mexican Government in connection with concessions, titles, etc., were in a fair way towards settlement. This was interpreted as being an indication that the company would now open up the large reserves of oil which it has been proving in recent years. The output last year showed a rise of about 20 per cent. at 21,039,963 barrels. In the first fifteen weeks of this year, output has increased by 30.8 per cent. This improvement seems to suggest that the ordinary shares may be brought back to the dividend list this year. An early announcement is expected regarding the preference dividend arrears. The last payment on the 7 per cent. cumulative preference shares was made in November, 1933, for the half-year to October 31st. The first preference dividends of Mexican Eagle and Canadian Eagle are jointly guaranteed by the two companies, and each half-year the amount due to the preference shareholders has been reserved in cash. Actually the surplus liquid assets of Mexican Eagle are sufficient to cover the entire preference capital over three times. The financial position of the company is extremely strong—and if its oil reserves are as satisfactory as the market believes, the ordinary shareholders are entitled to look forward to better times.

Rio Tinto Position.—Shareholders in this concern must regret that the improved position has been more than counteracted by adverse political factors. Last year Rio Tinto enjoyed the recovery in copper and a maiden dividend of 12½ per cent. on its holding in Rhokana Corporation. The company also sold larger quantities of iron ore—although at low prices—and of brimstone, while the volume of its trade in pyrites was maintained. The cost of "relief work and of labour-maintained surplus to the requirements of production" in 1935 amounted to £88,500, the whole of which was charged to costs. In 1934 the expenses under this heading totalled £129,600, of which £101,630 was charged to production costs and the balance offset from provision for taxes. The sum of £72,500 for debenture redemption was applied in writing down plant. The results of the past four years are summarised below:—

	1932	1933	1934	1935
Trading profit	367,300	501,600	453,550	527,980
Net profit	58,500	103,540	55,110	174,280
Dividends (pref.)	81,250	81,250	81,250	81,250
Carried forward	380,570	402,860	376,720	469,750
Property and plant...	3,394,050	3,255,540	3,305,950	3,296,250
Investments	2,982,470	3,168,000	2,918,920	2,784,220

Twelve months ago the company's investments in Rhodesia showed a depreciation of £138,920. The latest report shows that the book value of £2,448,420 was more than covered by market values of £2,662,660 at December 31st last. The ordinary shares have received no dividend since 1930, for the cash position is not closely related to the sum at the credit of profit and loss account. The future position of the Spanish part of the undertaking under the new Government has created some uneasiness, and the Rhodesian interests consequently assume an increased importance. Rio Tinto £5 ordinary shares have touched 22½ this year—some £2 above the best of 1935. The slump to the current quotation of about £14½ is, of course, primarily due to the political situation in Spain. Another company operating in Spain, Tharsis Sulphur and Copper Company, which now concentrates on the first product, showed an improvement in profits last year to £76,420; but the difference did not permit of any advance in the 2s. dividend. Investments at or under cost figure in the balance sheet at the slightly reduced amount of £167,420. The shares have fallen recently from £4 3s. 9d. to a current quotation of about £3½ for the £2 shares.

Other Company Results.—Our usual table on page 222 includes the results of 62 additional companies, including those of several important industrial concerns. Among these will be found *Brent and Max*, whose profits have

advanced from £579,809 to £634,952, the dividends remaining unchanged. The *Cerebos* accounts show a rise in profits from £283,514 to £353,724, although the latter total was earned during thirteen months to December last. The cash dividend is maintained at 40 per cent., and a capital bonus of 33½ per cent. was announced a week ago. *J. and J. Colman*, also well-known where investors dine, has increased net profits from £462,111 to £500,239, the dividend on the new capital being 16 per cent. *Reckitt and Sons* report a slight fall in profits to £1,015,653, the maintained dividend, of course, being comfortably covered. *Ault and Wiborg*, the printers' suppliers, have achieved a sharp rise in profits, from £28,252 to £52,801, the dividend being raised to 12 per cent., while *Garrard Engineering* profits are £10,000 higher at £31,646, which covers a sharp increase in the dividend from 7½ per cent. to 16½ per cent. In the brewery group, the *Charrington* profits and dividend were well received, while among motor concerns *Albion* has made further useful progress. Men's outfitting and store results show some improvement. The investment trusts report modest increases in net revenues, but dividends are largely maintained. A further large batch of rubber company results has been published. In most cases, they reveal a fall in profits for the past year, accompanied by some slight reductions in dividends. *Grand Central (Ceylon)* reports a fall of profits from £45,961 to £15,287; *London Asiatic* has fared relatively well, for profits have been reduced from £69,837 to £55,449, entailing a reduction of the dividend from 8 to 7 per cent. *Malacca* reports net profits of £38,640, against £45,272, and in fact resumes dividend payments with a distribution of 2½ per cent. *Mendaris* and *North Malay* have also experienced less favourable conditions, but *Cheviot* has broadly maintained the previous earnings level. The tea plantation results show a rather irregular experience, but the largest concern, *Ceylon Tea Plantations*, reports a fall in profits from £60,100 to £54,725 and in dividend from 12½ to 10 per cent. Among the week's dividend announcements, a satisfactory reception has been given to the maintained rate of 15 per cent. on the increased capital of *British Oxygen*. *Gaumont British Picture Corporation* has decided to defer consideration of the interim ordinary dividend. *Forestral Land* reports a balance of profit of £364,803 against £146,410, and 6 per cent. against nil is paid on the ordinary capital. *Ever-Ready (Great Britain)* announces net profits of £482,781, against £449,579, the dividend being maintained at 35 per cent. The total profits of *Spillers* are £46,235 lower at £491,110.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Hongkong and Shanghai Banking Corporation, Anglo-Palestine Bank, Alliance Trust, Agricultural Mortgage Corporation, Eagle Star and British Dominions Insurance, Royal Exchange Assurance, State Assurance, Amalgamated Metal Corporation, Olympic Portland Cement, Army and Navy Stores, Argentine Estates of Bovril, Strand Electric Holdings, Ford Motor, Oxendale and Company (Proprietors), Champion Reef Gold Mines of India, and Ooregum Gold Mining of India. Mr S. H. Dodwell, at the Hongkong and Shanghai Banking Corporation meeting, made an extensive review of economic conditions in China and made some well-pointed remarks on the consequences to China of the American silver policy. At the Royal Exchange Assurance meeting, the governor reviewed satisfactory results in all departments and pointed out that the company's duties as trustee to certain fixed trusts did not imply any responsibilities for management. Similarly prosperous conditions were reviewed by Sir Edward Mountain at the meeting of Eagle Star and British Dominions Insurance Company. At the Alliance Trust Company meeting the chairman reviewed the general economic recovery in Great Britain and its beneficial effect on the company's position. Sir Harry Goschen said that the Agricultural Mortgage Corporation was making a loss on a basic lending rate of 4½ per cent., and new loans have not been quite sufficient to enable the company to keep pace with repayments. The State Assurance Company, said Sir Charles H. Morton, had excellent results in the past year. Sir Percival Perry reported an output of Ford cars in the domestic market greater than for any

TIZER LIMITED

(Incorporated under the Companies Act, 1929.)

Points relating to a recent

OFFER FOR SALE OF

575,000 Ordinary Shares of 5s. each,
at 20s. per share.

(1) The Company incorporates the following well-known businesses:—

F. Pickup, Pickup & Co.,
Tizer Co., Limited, Radiant Table Waters,
Limited.

engaged in the manufacture and distribution to the retail trade of Mineral Waters and other non-alcoholic beverages.

(2) The combine constituted by these four concerns, built up from small beginnings almost entirely out of profits, is now one of the largest in this class of trade.

(3) The trade is conducted almost entirely on a cash basis and the incidence of bad debts is therefore practically non-existent. The Company has over 100,000 customers on its books, the majority of whom are served weekly throughout the year.

(4) Profits, after charging depreciation, and providing for Management Remuneration and Directors' Fees, have been as follows:—

1933	...	...	£63,272
1934	...	...	£64,189
1935	...	...	£64,450

(5) The combined average annual profits for the three years ended 31st December, 1935, were equivalent to approximately 32 per cent. on the issued capital of the Company.

(6) Service agreements have been entered into which ensure continuity of management. The Chairman of the Company who has been associated with the business since its inception expresses the view that there are good prospects of increased profits being achieved and that ample scope exists for the continuation of the policy of expansion and development which has characterised the business in the past.

previous year; the event of the season was the introduction of the first £100 fully equipped saloon car. He stressed the importance of revising the present horse-power tax, and pointed out that less than half the £540 millions collected in motor and petrol taxes in the last fifteen years had been devoted to road improvements. Mr A. Stanley Smith referred to the growing turnover of Oxendale and Company (Proprietors), Ltd. At the meeting of Strand Electric Holdings, Ltd., the chairman reviewed recent contracts for stage and lighting work in various theatres and in the "Queen Mary." Army and Navy Stores secured increased profits during the past year, through both increased turnover and greater operating economies. The chairman of Argentine Estates of Bovril discussed results of the subsidy scheme to improve the price of cattle in northern Argentina. At the Ooregum Gold Mining Company meeting the chairman said approaching exhaustion of the dump of old tailings was being anticipated by vigorous development work. Of outstanding credits of the Anglo-Palestine Bank 31 per cent. were granted to trading firms, 16 per cent. to industry, 11.1 per cent. to the orange industry, 2 per cent. to agriculture, 8.3 per cent. to local credit institutions, and 31.6 per cent. to miscellaneous trades. The chairman of Olympic Portland Cement Company referred to favourable experience with cement roads during the recent frost and floods in the Eastern States of America. At the meeting of Champion Reef Gold Mines of India justification was given for the scheme to carry the mine workings to greater depths. The chairman of Amalgamated Metal declared that results in the current year were very satisfactory.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

TICKET
MAY 5ACCOUNT
MAY 7

THE Budget account opened quietly, with the international political situation more obscure and uncertain than ever, and with Mr Chamberlain's Budget to finance re-armament hanging over the heads of the taxpayers. The Budget disclosures were accepted on the whole without dissatisfaction. Gilt-edged suffered slightly, but other groups were firm, and operators were not blinded by the Budget to the mid-week recovery of prices on Wall Street. Some disappointment was expressed at the necessity for increased taxation to pay for re-armament, but the economic implications of the huge re-armament programme ahead were not an obvious market factor. In their present mood, markets have accepted the primrose path of loans for re-armament without inquiring too closely into its implications.

Gilt-edged securities were helped by bear covering operations before the Budget. After being marked down initially on the increase in the income tax, the market displayed a firmer tendency later in the week. Home corporation issues were undisturbed by the Budget, and the market was apparently able to digest the Birmingham Corporation issue on Monday, and the underwriting of the Croydon issue later in the week. India stocks moved in sympathy with gilt-edged, while colonial issues were a little steadier.

A steady demand was maintained throughout the week for Chinese bonds, particularly railway issues, based in part on Sir Frederick Leith-Ross's confidence in the ability of China to operate her currency system. Japanese issues have moved in sympathy, and among South American bonds Brazilians have been well supported, partly by American buying. The March trade figures led to some support for German issues, but in mid-week there was general softness in European bonds.

Home rail issues have been in fair demand throughout the week, and demand was stimulated by the good Easter traffic returns compared with the Easter Monday week of last year. L.M.S. were in the lead both in traffic results and in market demand. Foreign rails were dull at the end of the last account, but showed up better this week. Sao Paulo improved on the dividend announcement, and American issues were better after Wall Street's recovery on Wednesday.

General conditions in the industrial market were satis-

factory both before and after the Budget speech, and a stronger tendency was apparent on Thursday. Early in the week Richard Thomas issues fell off on rumours of disagreements in the Tinplate Cartel, Babcock and Wilcox gained on the report of highest profits since 1931 (discussed on page 193), and Whitehead Iron improved in anticipation of good trading results. Richard Thomas staged a mid-week recovery, and iron and steel shares in general were steady. Aviation issues attracted but little attention. Satisfaction with the unchanged oil duty led to demand for Leyland and Tillings motor issues. Standard motor issues were in demand early in the week, but reacted later.

Electrical equipment shares were supported in anticipation of good dividends, but business in supply shares was very idle. In the stores group, Woolworths were prominent in a general improvement, and there was considerable activity in Harrods B.A. shares on the capital reorganisation scheme. Unilever issues were firm on publication of the reports. In the brewery section the imposition of a duty on foreign imported lager beer led to demand for Barclay Perkins and Red Tower Lager issues, but other movements were irregular. There was very little business done in textile issues, although Courtaulds hardened slightly in mid-week.

Satisfactory business was done in the miscellaneous industrial section, although movements were small and at times slightly irregular. Murex shares lost ground on the interim dividend declaration, but recovered later, and Allied Cement gained sharply in mid-week. The oil share market has been extremely active throughout the week, with attention focused on Eagle issues as a result of the reported settlement of the Amatlan lawsuit on terms favourable to the company, discussed on page 194. Mexican Eagle, which were quoted on Monday morning at around 16s. 4d., touched 22s. by mid-week, and Canadian Eagle shared in the improvement. Interest spread over the whole market, and improvements were made in Shell, Royal Dutch, Anglo-Iranians and Trinidad issues.

In the rubber shares market a reactionary movement in the price of the commodity undermined the active support which the market enjoyed for a very short period, and although prices were fairly well maintained the volume of business shrank rapidly. In the tea shares market the Chancellor's impost of 2d. for the benefit of re-armament was not well received, for it was expected that the increased duty would have to be passed on to the consumer and that consumption would be reduced or quality of blends lowered. There was a slight improvement in shares of common tea producers, but shares of quality tea producing companies declined.

The Kafir market suffered after the Budget by a general distraction of attention to the oil and industrial markets, and business was restricted with price movements inclined to be irregular. In mid-week there was a slight improvement, with Cape support for East Rand and Randfonteins. There was similar improvement in tone in the West African section, with particular support for Gold Coast Banket shares as a result of recent property developments, Rhodesians were fairly steady, with good demand for Rhodesian Selection Trust. In the tin shares section Mawchi rose sharply on the past year's results, and there was a slight general improvement.

FOREIGN STOCK EXCHANGES NEW YORK

REACTIONARY prices and a restricted volume of business during the past week have marked the longest setback on Wall Street for over a year, and yet most news of American business conditions is extremely encouraging. Most of the blame for Wall Street conditions is put on European political uncertainties, and the prospect of franc devaluation, and until the future of Europe can be foreseen for a month or so irregularity may continue to characterise Wall Street movements. Two domestic events have contributed to the unsettled conditions; the acceleration of political manoeuvres in the Presidential campaign and the slightly disappointing nature of first-quarter returns for a number of companies. All the market leaders seem to have shared in the reaction, together with speculative bonds, whilst Government and other gilt-edged bonds have remained fairly steady. In mid-week there was a change for the better, although the appearance of the new Tax Bill drawn up by the Ways and Means Committee promises a period of protracted uncertainty, while the measure is threshed out. The market found satisfaction in the good recovery shown by rail issues. Steel mill activity this week is put by *Iron Age* at 68 per cent. of capacity, unchanged from a week ago, and it is hoped that although demand from the automobile industry may be near its peak, demand from the railroads and from the construction industries may continue to improve. Power output is still well above figures for last year, and freight car loadings show continued improvement. The oil industry is particularly encouraged by the firmness of the price structure, although warnings are made against dangers of excessive output.

THE
KEYSTONE
GROUP
have pleasure in
ANNOUNCING
A
NEW SERIES:—

KEYSTONE FLEXIBLE CERTIFICATES

THE SPECIAL FEATURES OF THIS NEW
TRUST INVESTMENT
ARE SUMMARISED AS FOLLOWS:—

- 1 The Managers are complying with the Constitution of the Association of Fixed and Flexible Trust Managers, of which they are Members.
- 2 Keystone Flexible Certificates, as the name implies, are a Flexible Trust Investment framed to meet the increasing demand for an investment which overcomes the limitations hitherto existent on Fixed Trust Investments.
- 3 The Underlying Security of Keystone Flexible Certificates is confined to the Ordinary & Deferred Shares & Stock of British Industrial Companies which have outstanding dividend-paying records and/or have excellent future prospects.
- 4 The Trust is constituted in such a manner as to take advantage of all possible improvements and measures calculated to benefit Investors in the future.
- 5 The Yield on Keystone Flexible Certificates is obtained without the inclusion of High Yielding Shares of Gold Mining or Gold Mining Finance Companies and without including Capital Bonuses and Rights, and is based on the last complete year's cash dividends paid by the Companies, whose Shares form the Underlying Security.

PARIS

On Friday of last week a marked burst of activity ended the general quietness, which was expected to last until after the General Election, and fairly good gains were registered, by rentes and bank shares, and by some leading industrials. Suez Canal gained among Internationals, and De Beers were in demand on the Coudisse. Some of Friday's gains were consolidated on Saturday, but there were already signs of a reaction which spread round the market this week and wiped out most of Friday's gains. The nearness of the election, political difficulties at Geneva, the fate of sanctions, disturbances in Spain, the troubles of the French Treasury in spite of an increase in receipts from indirect taxation, and fears of a Nazi disturbance in Austria are all found sufficient reason, taken singly, to prevent any continued buoyancy on the Bourse, and taken all together almost inevitably maintain a feeling of depression. In mid-week there was a slight improvement in rentes, and a rise in Italian rentes indicated the market's expectation of the outcome of the next sanctions meeting at Geneva.

BERLIN

Owing apparently to profit-taking sales, share prices fell last week, but the undertone was fairly firm, and prices recovered on Saturday. Mansfeld and Otavi, the two copper concerns, moved up against the general tendency, and gains were registered by some wire, cable, building and textile shares (in particular Stöhr wool). Farbenindustrie, Siemens, Mannesmann and other standard industrials weakened. The advance was resumed early in the new week, the chief demand being for steel and paper-pulp issues. Potash shares were steady to firm. Tuesday witnessed heavy buying of Laurahütte, Berliner Maschinen, Deutsche Kabel, and Deutsch-Asiatische Bank, the last gaining five points. Bonds were dull, and prices little changed. The official share price index (1924-26 = 100) for March was 93.31, against 93.76 for February. On Wednesday most banking issues improved and industrials were firmer.

AMSTERDAM

The Bourse has passed a depressed week and has looked on the gloomy side of the international political situation, of the Wall Street relapse and of the British Budget. At the end of last week Unilever N.V. lost ground on the dividend announcement, but rubber issues held their ground and Philips Lamps and Royal Dutch both gained. Philips lost as the new week opened and rubber shares were dull; Royal Netherlands Steamship fell 3 points on the reorganisation scheme. The increase in British tea duty acted as a severe damper on leading tea shares.

	Apr. 15, 1936	Apr. 20, 1936	Apr. 22, 1936		Apr. 15, 1936	Apr. 20, 1936	Apr. 22, 1936

CAPITAL ISSUES

THE resumption of corporation borrowing, on which we commented here last week, has apparently proved successful on the revised terms, although the result of the Birmingham loan was not known as we went to press. The fact that identical terms had been arranged for the Croydon issue suggested, in fact, that the market had made a satisfactory response. Further opportunity for participating in the rapid economic development of Palestine is afforded by the Anglo-Palestine Bank £1 "A" ordinary shares, which are offered by Messrs Robert Benson and Company at 37s. 6d. The bank has a progressive record in recent years, and while the country it serves has special political and economic problems, the shares offer an interesting holding and a satisfactory return to the investor in the circumstances. Only half the issue was available to the public, for applications on underwriting terms had been accepted in full for 150,000 shares. The prospectus of *Furnishers, Ltd.*, comprises a small £1 preference share issue at par and a 2s. ordinary share issue at 50 per cent. premium. For a total capital of £95,000, a "straight" ordinary capitalisation might have seemed more desirable both from the market and the investment aspect. This observation applies to several recent industrial issues, and may be commended to the attention of those responsible for issues of this type. The offer for sale of *Tizer* 5s. ordinary shares, at 20s. per share, reveals that the average earnings of the past three years are equivalent to 8 per cent. on the issued price, while the prospective dividend yield is 6½ per cent. Such yields must be regarded as no more than reasonable, for the company's mineral water business is dependent upon weather conditions and on successful distribution in competition with other producers. *Hetty (Wholesale Gowns)* has a 4s. participating preference and 1s. ordinary share capital, the latter being issued at 2s. per share. The business has been successful, but the purchase consideration appears generous, and the capital structure gives the shares a speculative character which is not appropriate for general investment purposes. The only statement "for information" has been published this week by *Smith's Potato Estates*, giving particulars of £350,000 4 per cent. debenture stock, guaranteed by Smith's Potato Crisps (1929).

BY TENDER

Bristol Waterworks Company.—Issue by tender of £120,000 5 per cent. consolidated preference stock (or of such amount as will with the premiums thereon be sufficient to realise the sum of £172,012 16s.). Minimum price of issue £143 per £100 nominal stock, yielding at that price £3 9s. 11d. per cent. The object is to provide for expenditure already incurred, including a new reservoir and works to meet increasing demand, and for the general requirements of the company.

BONUS SHARES

Tilling and British Automobile Traction.—The directors propose the capitalisation of part of the reserves by the issue of bonus shares to the ordinary shareholders in the proportion of one new ordinary share for every three ordinary shares held.

ISSUES TO SHAREHOLDERS ONLY

Hobson Components.—The directors are offering 100,000 shares to shareholders at 12s. 6d. each in the proportion of one for every six held.

Peco, Ltd.—Issue of £30,000 5 per cent. first mortgage debentures at par in debentures of £100 each.

Eagle, Star and British Dominions Insurance Company.—The directors propose to issue 66,919 ordinary shares of £3 each, fully paid, at £20 per share. These will be offered to the existing ordinary shareholders in the proportion of one new for each four fully-paid ordinary shares and *pro rata* in respect of the amount paid up on the partly-paid shares (ignoring fractions).

CONVERSIONS AND REPAYMENTS

Birmingham Corporation.—Issue of 3 per cent. stock at 99 per cent. to be redeemed at par on July 1, 1958, or after July 1, 1956, on three months' notice. Issue for purpose of conversion of £4,882,700 Birmingham Corporation 6 per cent. stock 1936-1946. Rateable value £6,756,520. Net debt, March 31, 1935, £52,811,000, of which £39,675,000 was in respect of reproductive undertakings. Estimated population 1,033,000. Cash list remained open all day on April 20th. Lists of conversion applications closed April 24th.

Croydon Corporation.—Issue of £1,500,000 3 per cent. stock 99 per cent. to be redeemed at par July 1, 1958 or after July 1, 1956, on three months' notice. Purpose of issue to repay £1,000,000 Croydon 6 per cent. stock 1936-1946 and £500,000 Croydon 6 per cent. stock 1937-1947. Population 1931 census 233,032, now estimated at 240,600. Rateable value £2,285,000. Rate levied for 1936-37 10s. 6d. Product of 1d. rate £8,950. Net debt March 31, 1935, £6,505,828, made up as follows: Reproductive £1,887,168. Housing £2,183,652. General rate services £2,435,008.

The Bengal Iron Company, Ltd.—The seventh annual drawing of the 7 per cent. first debentures took place on April 3rd when debentures amounting to £29,600 were drawn for repayment at 102½ per cent. on June 30, 1936.

London Brick Company and Forders, Ltd.—At an extraordinary general meeting held April 20th, the resolution converting the recently issued 200,000 ordinary shares into stock was passed unanimously.

London County Freehold and Leasehold Properties.—An extraordinary general meeting is called for May 19th to consider resolutions that: (1) The capital be increased to £4,000,000 by the creation of 2,000,000 additional shares of 10s., and that such shares may be issued as either preference or ordinary shares; (2) all shares issued subsequently to April 16th shall, when fully paid, be converted into stock of the appropriate class; and (3) the articles of association be amended. It is

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

dividends, account being taken of any change in the value of the securities.

the intention of the board, as soon as the capital has been increased, to make the ordinary stock transferable in units of 10s.

Sociedad Anonima Cia. Hidro-Elctrica de Tucuman.—The Royal Exchange Assurance, as trustees for the holders of the Sociedad Anonima Cia. Hidro-Elctrica de Tucuman 5 per cent. first mortgage debentures are prepared to receive offers of 5 per cent. first mortgage debentures for purchase in accordance with the provisions of the trust deed securing such debentures. Forms of tender may be obtained on application at the offices of the Royal Exchange Assurance, Royal Exchange, London, E.C.3. Tenders must reach the offices of the trustees not later than May 11, 1936.

State of Parana 7 per cent. Consolidated Bonds.—Holders of the above bonds are reminded that the period for lodging tenders for their bonds under the redemption scheme recently announced will expire at noon on April 29th. Tender forms can be obtained on application from Lazard Brothers and Company, Ltd., 11 Old Broad Street, E.C.2.

FIXED TRUSTS

Trust of Bank and Insurance Shares.—Progress Report No. 1, which covers actual working period October 10, 1935, to March 31, 1936, shows that the rate of distribution will be 3.8475 pence per unit, free of income tax, equivalent to 4.9645 pence gross, if tax be added at the standard rate of 4s. 6d. in the £1. The opening price of Bank-Insurance units was 19s. 3d. The price on April 15, 1936, was 21s. 3d., ex-dividend.

FORTHCOMING ISSUES

Fulford, Trumps & Co., Ltd.—A public issue of preference shares is expected shortly.

Hartley (William P.), Ltd.—An offer for sale of preference and ordinary shares will be made next month by the Charterhouse Investment Trust Limited.

Nuro (Biggleswade), Ltd.—A public offer of ordinary shares is expected next month.

Woodheads Canonbury Brewery, Ltd.—It is reported that arrangements are being made to market the preference and ordinary shares of this concern.

Smethwick Drop Forgings, Ltd.—An offer for sale of 600,000 ordinary 5s. shares at 20s. is expected shortly.

Follsain Metals, Ltd.—250,000 6 per cent. cumulative preference shares of 10s. each in Follsain Metals, Ltd., will be issued shortly.

Bradford Refunding Loan.—A special meeting of the Bradford City Council has authorised the raising of a refunding loan of £1,744,000. The loan is needed to pay out holders of £2,000,000 6 per cent. stock, which is to be redeemed on July 1, 1936. The balance is in sinking fund.

Associated Chocolate.—It is expected that an offer for sale of preference shares of the Associated Chocolate and Confectionery Company, Dublin, will shortly be made.

County Cinemas, Ltd.—An issue by this company is expected next week.

Hills (F.) and Sons.—An offer for sale will be made shortly by this plywood and aircraft manufacturing concern of Stockton-on-Tees and Trafford Park, Manchester.

Alpha Cement Company.—It is reported that this concern will shortly make an issue of capital to finance its acquisition of the Metropolitan Cement Company.

Witwatersrand Nigel Ltd. (Incorporated in the Union of South Africa).—Share capital £1,100,000. The London subscription list will open and close on April 29th for an issue of 800,000 5s. shares at 10s. per share. Preferential consideration will be given to applications from shareholders of the Company and of Oceana Development Company, Ltd. Proportion one share for each four held in the Company and one for each two held in Oceana Development Company. The prospectus will show a total mining area of 9,840 claims, nearly all of which are

underlain by the Nigel Reef horizon. An incline shaft has been sunk to 676 ft. and two vertical shafts to 637 ft., and 625 ft. Up to end of 1935 7,360 ft. of driving, wining, raising and cross-cutting has been completed. The Company has cash resources of about £130,000. The present issue is expected to produce a net sum of £380,000.

Whiteley, Stevens (Holdings).—An issue of 100,000 6 per cent. cumulative £1 preference shares and 200,000 5s. ordinary shares will be made next week.

Guildhall Development Company, Ltd.—An issue of £250,000 5 per cent. guaranteed debenture stock at 99 will be made on April 29th.

Yates and Thom, Ltd.—Arrangements are being made for a public offer of shares by this company.

Switchgear and Cowans, Ltd.—Arrangements are being made for the marketing of this company's shares.

Aeronautical Corporation of Great Britain.—Arrangements have been completed for an issue next week of 560,000 5s. shares at par.

OTHER RESULTS OF ISSUES

The English Electric Company, Ltd.—£1,250,000 4 per cent. Debenture Stock.—The list for applications to exchange 5½ per cent. sinking fund first mortgage debentures and 6 per cent. debenture stock was closed April 16th, and Lazard Brothers and Company, Ltd., announce that applications for conversion in respect of 60 per cent. of the aggregate outstanding amount of the old stocks were received and accepted. In consequence, allotments in respect of cash applications exceeding £100 each have had to be considerably scaled down.

CALLS DUE APRIL 27 TO MAY 2, 1936

The grand total of calls in April, 1936, is £91,181,311, which compares with £7,848,585 in April, 1935.

COMPANY MEETINGS, &c.

THE HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in the Colony of Hongkong. The Liability of Members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony.)

FEATURES AND PROBLEMS OF THE PAST YEAR

REPERCUSSIONS OF CHINESE GOVERNMENT'S MONETARY POLICY

THE FALL IN THE VALUE OF THE HONGKONG DOLLAR

IMPROVED STATE OF INTERNATIONAL BALANCE OF PAYMENTS

GOVERNMENT'S WORK IN ECONOMIC RECONSTRUCTION

MR S. H. DODWELL ON THE POSITION AND OUTLOOK

The ordinary yearly general meeting of the shareholders of The Hongkong and Shanghai Banking Corporation was held in Hongkong on February 22nd last.

Mr S. H. Dodwell presided.

The chief manager having read the notice convening the meeting,

The Chairman said:—Ladies and gentlemen,—The report and statement of accounts having been in your hands for some days, I will, with your permission, take them as read.

After making full provision for losses and contingencies the net profits for the year amount to \$12,088,841.75, to which must be added \$3,294,701.30 brought in from the previous year.

After deducting the interim dividend, paid at 2s. 2½d., and directors' remuneration there remains available for distribution \$11,699,860.03, which it is proposed to deal with as follows:—

To pay a final dividend of £3 per share (subject to deduction of income tax) ...	\$7,372,800.00
Transfer to bank premises account ...	1,000,000.00
Carry forward to new account ...	3,327,060.03
	\$11,699,860.03

Your directors deeply regretted having to reduce the interim dividend by 10s., and it may be as well to explain that they did so to meet in part a substantial loss sustained by the disgraceful failure of an important firm in Bombay. I may say that our loss was but a small fraction of what other banks suffered, but in view of the rising price of silver during the first half of the year, which was doing so much damage to China, your board decided that it was only common prudence to keep the bank in a thoroughly sound position and distribute the greater portion of the loss among the shareholders.

BALANCE-SHEET CHANGES

Comments on changes in the balance-sheet figures are again difficult owing to the different rate of exchange compared to the previous year. The total figures are down some £12,000,000, while the dollar equivalent is up some \$100,000,000 compared to 1934.

Speaking roughly, we can say that there is a reduction in the amount of current accounts, fixed deposits, and note issue on one side, which is counter-balanced on the other side by a reduction in cash and bullion, the cause of which will be seen when I refer later on to Hongkong exchange.

You will notice little or no change in the total of our bank premises account, though we credited the account last year with \$1,000,000 and charged it with about half the cost of our new building. Towards the end of the year it became apparent that provision we had made in past years for certain contingencies would not be required, so your directors decided that as the fund so accumulated was in no way profit earned during the year it should be used to write down the new building, which now stands in our books at a very reasonable figure.

POLITICAL FACTORS

A few weeks ago at the annual meeting of one of the big banks at home the remark was made that in recent years there had been one important change in the position of banking in that nowadays

consideration had to be taken of the many uncertain political factors which are the most incalculable of the risks a banker has to estimate.

In our case the political factor is no new thing, but it is true that year after year it seems to become more and more dominant in the Far East. The past year has been particularly under the influence of political changes, and business in the forthcoming year looks just as likely to be under the same influence.

I do not propose to weary you with a long dissertation on world conditions. I will merely say that the rise in commodity prices in 1935 was the most promising factor in the world economic situation, and that while the improvement continues slowly in most countries there is still a considerable lack of equilibrium which cannot be righted while economic nationalism and un-stabilised currencies remain the order of the day. The unsatisfactory state of international affairs due to the Abyssinian war is unfortunately only too likely to have unfavourable repercussions on trade sooner or later.

MONETARY PROBLEMS

I will turn without further delay to the subject which has, I feel sure, been uppermost in your minds, as it has in ours, during the past year. I mean, of course, the monetary problems of China and Hongkong. The difficulties which we have had to face in Hongkong are only too well known to you.

We opened the year with exchange at 1s. 8½d., which advanced steadily through the spring, the peak of 2s. 6½d. being reached towards the end of April. From then onwards silver and exchange declined and there began a remittance of the large amount of funds which had accumulated here over the past two or three years; these operations necessitated the sale of an enormous amount of silver which had been held as cover. The movement gathered pace in the autumn, with the result, as you all know, that the Hongkong Government followed the example set by China and an embargo was declared on the further export of silver after November 9th, by which date exchange had fallen to 1s. 4½d. From that date for about three weeks followed a period of uncertainty, during which the figure rose again to over 1s. 6d., but by the beginning of December measures were promulgated to control exchange, and since then we have had a period of comparative rest from extreme fluctuations. We trust that this will be for the good of the Colony in that one of the nightmares of merchandising has been removed.

THE LOCAL DOLLAR

The sudden drop in the value of our local dollar, I am afraid, hit the Government rather badly, and it is feared that their Budget estimates, which were formed before the heavy decline set in, will be considerably out of gear, so we may be grateful that they started the year in an extremely sound position. At the same time, it is to be hoped they will remember that merchants, shipping and docking companies and others have had a pretty lean time for a considerable period and are not in a position to bear additional taxation; to meet the situation the proper course should undoubtedly be to curtail expenditure.

In Shanghai our manager, Mr Henschman, whom we are glad to have with us to-day, has been struggling through very trying

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached: To The Publisher, "The Economist Newspaper Ltd."

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name.....

Address.....

times. All through the year he kept in close touch with the Chinese financial authorities, and, like the other leading foreign bankers, co-operated with them as and when possible. But circumstances were too formidable to prevent what finally occurred. Right from the beginning of the year the exchange situation was critical, confidence in the currency was lacking, and interest rates were therefore almost prohibitive. There was a continual danger of panic flights from the dollar. The steady rise in silver from 24½d. at the beginning of the year to its peak of 36½d. in April, and the continued uncertainty as to where the United States silver policy was going to lead, were perhaps outstanding factors. But there was also the uncertain political situation in North China and the difficulties into which a number of Chinese banks got, as well unfortunately as the crash of the Raven Group and certain realty companies in Shanghai.

THE GOVERNMENT CURRENCY DECREE

I am glad to say that we ourselves were not directly affected by these failures, but they helped to aggravate the unsatisfactory state of affairs, and matters were made worse by the very large-scale smuggling of silver and the exchange operations of well-placed speculators. It was these operations, following months of tension, which eventually brought about the sudden enforcement of the Government decrees of November 4th which made China another adherent of the managed currency policy which is the fashion of these days.

Sir Frederick Leith-Ross, the Chief Economic Adviser to H.M. Government, was fortunately in Shanghai at the time. He had been examining the financial situation, and it is understood that he was preparing a detailed scheme of financial reform for submission to the interested Powers whose collaboration was desirable. But the dollar exchange degenerated so rapidly that the Chinese Government felt compelled to take action before detailed plans could be completed or international support assured. Sir Frederick Leith-Ross was therefore not responsible for the decision actually taken by the Chinese Government, but his presence gave them an opportunity to obtain his advice regarding their currency changes, which we sincerely trust will eventually prove to be of great benefit to China and to foreign traders. There are, of course, causes for apprehension.

POLITICAL UNCERTAINTY

The political situation is an unpredictable and ominous factor; the problems raised by a managed currency require great technical knowledge and experience, and full details about the establishment of the promised independent Central Reserve Bank are anxiously awaited. Moreover, Government expenditure will have to be mercilessly pruned if the Budget is to be balanced, but so far the only known action in this direction has been the somewhat arbitrary alteration of the domestic loan system recently announced. There is also the problem of the note issue and the maintenance of a substantial equalisation fund, together with the uncertainty surrounding America's future silver policy. These are some important considerations upon which the long-term success of the new currency scheme is dependent, and a false step in any of them may lead at any time to a recrudescence of speculation and to a serious flight from the dollar.

But I do not want to be thought entirely pessimistic, and one good feature of the present situation is that according to reliable authorities the state of the international balance of payments is much improved. This should help the Government to pull through in spite of its difficulties. It is, of course, impossible to get more than a general idea of the position, as treasure smuggled outwards and commodities smuggled inwards have reached considerable proportions, but the excess of imports has now dropped to 343,000,000 dollars, about one-third of what it was in 1931, and it seems possible that the balance of accounts is adjusted.

UNITED STATES AND SILVER

Senator Pittman has suggested that China will before long go back to a silver standard. All I can say is that it will need a very different silver policy in the United States before this is likely to come about. It is true that after the heavy purchasing of silver by the United States Treasury in the first half of the year, the so-called "permissive clause" was carried out from September to early in December in such a way as to keep silver steady around 65½ cents an ounce, and, indeed, at one time it began to be said that the United States Government were doing their best to avoid causing further difficulties to China as a result of their silver policy.

However, on the definite abandonment of the silver standard by both China and Hongkong in November, they suddenly withdrew their support from the London silver market. What the next step will be no one knows. The statement attributed to the Secre-

tary of the United States Treasury himself that the monetary policy of his Government is on a 24-hour basis shows just how far we can look ahead in regard to this matter. But the question is not purely a domestic one for the United States, and it is particularly unfortunate for China that America first raised the price of silver to an extent which forced China to alter the basis of her currency, and then allowed the price to drop before China had been able fully to establish the new system. The United States have always been animated with good will to the Chinese people, and we can only hope that they will appreciate their responsibility for the present difficulties and assist China to overcome them.

RELATIONS WITH JAPAN

A review of the political situation in China during 1935 can be little more than a review of the relations between China and Japan, and it is a troubled and confused picture.

The year opened with desultory fighting on the Charhar-Jehol frontier, and the year ended with similar trouble which does not yet seem to have come to a close. The situation in North China has not been easy to follow. The Japanese claim that the Chinese have failed to carry out the unpublished terms of certain agreements made during the past year or two. Whether this is so or not, it is anyway not within our province to express an opinion on the rights and wrongs of the case; we can merely express our regrets at this unfortunate state of affairs.

The friction in the North has been a continual source of danger; things just drifted on without a settlement until on November 1st a dastardly attempt was made to assassinate Mr Wang Ching-wei. General Chiang Kai-shek then took over the reins of government, and though he showed a stiff front to proposals that an autonomous Government of the five Northern Provinces should be formed, he nevertheless indicated his desire to come to a working arrangement with Japan. Thus when the Government was reorganised after the Fifth National Congress of the Kuomintang in December, he chose as his Cabinet Ministers largely men who had been educated in Japan, and were, therefore, in close touch with Japanese feeling. The establishment at Peiping of a Hopei-Charhar Political Council was also a compromise measure. I believe that General Chiang Kai-shek is doing his utmost to come to a proper understanding with Japan, and I am sure that we all hope that an agreement on main principles will soon be reached.

The relations between Nanking and Canton have changed little; Outer Mongolia and Sinkiang remain largely under the influence of Soviet Russia, but Inner Mongolia is a danger spot which may well lead some day to trouble between Russia and Japan, involving China as well.

It is heartening to be able to report that the Communist bandits who have given so much trouble during the past few years have generally speaking been kept on the run, although they are far from being properly liquidated. The campaign in the early part of the year resulted in General Chiang Kai-shek obtaining control over Szechuan province, and this brought about a considerable betterment of conditions there.

CHINESE REFORMS

But elsewhere also there are cheering signs to be observed, and the Chinese Government must be given credit for the work done in the last few years in connection with certain forms of economic reconstruction. Wide areas have been put under better administration and internal reforms are progressing in spite of local difficulties and instability. The progress in road building and public health has been striking, but it is almost more desirable that the Civil Service administration and the judiciary should be the subject of reform. Agriculture is also a most pressing problem. But here certain steps have already been taken to effect improvements especially in the case of the cultivation of cotton, rice and wheat and in the production of raw silk. The disastrous floods which swept over the country during the summer unfortunately checked some of the progress.

It is a rare occurrence for China's two great rivers, the Yangtze and Yellow River, both to overflow in the same year. The precautions taken at Hankow prevented a recurrence of floods on the same magnitude as in 1931, but in parts of Shantung and North Kiangsu the overflow has seldom been paralleled, and few realise how bad conditions still are in those areas. The reorganisation of the conservancy system of the country on modern lines is a matter of great urgency. Unfortunately there has in the past been much overlapping in the many departments dealing with this problem.

INTERNAL TRADE CONDITIONS

My references above to the currency difficulties, the financial stringency, the political uncertainty, and the droughts and floods with which China has been afflicted during the past year will not lead you to expect a bright picture of trade. Nevertheless the

indications are that, generalising broadly and taking the year as a whole without regard to the considerable fluctuations that have occurred, internal trade conditions have not really deteriorated as much as might have been expected. The floods seriously affected the cotton crop along the Yellow River as I have already remarked, and the rice crop also suffered in the Yangtze Valley, but the production of wheat appears to have increased slightly. The Customs gold unit values of imports show a drop of only 5 per cent. on 1934, while exports have improved 7 per cent. in terms of the local currency. The indications are that, largely as a result of the monetary crisis, Shanghai has been affected more seriously than other ports. Thus the foreign trade figures for all the larger ports excepting Shanghai and Canton show increases. British merchants are having a considerable struggle to maintain their position in face of keen competition from Japan and Germany. British imports have dropped some 17 per cent., but the British Empire has slightly increased her share and remains the supplier of one-quarter of all imports into China, while she takes an even larger share of all exports. There has been a remarkable change in the Customs figures relating to trade with the United States. Taking the gold unit values, imports have dropped about 30 per cent., largely as a result of much decreased shipments of raw cotton, wheat and leaf tobacco, while exports from China have increased 50 per cent. owing to the improved demand for wood-oil, seeds, silk and egg products. Germany has also increased her purchases from China in like proportion, but her trade is on a smaller scale.

The fact that both in quantities and in value a number of China's most important export commodities have increased appreciably shows that some interior districts are probably beginning to benefit by the higher commodity prices now obtaining and by the better demand from abroad. It is true that the purchasing power of the people remains deplorably low, but improved conditions in some parts have counterbalanced the deterioration in others, such as the flood-ridden areas.

GOVERNMENT'S FINANCIAL POSITION

Considerable development continues to take place in regard to railways, and the Government is determined to push ahead with the plans for building new lines in Central China. The formation of an influential Chinese Railway Bondholders' Committee in London and subsequent exchange of views regarding the outstanding railway debts will, we trust, lead to a satisfactory settlement.

As regards the actual financial position of the Government, no complete statement has been published covering a date later than June, 1934, but the salt revenues are reported to have improved in 1935, though it is doubtful if the central authorities have benefited thereby. The Customs revenues declined \$19 millions last year, leaving only a small surplus available for the Government, but it must in fairness be pointed out that this was largely due to the average higher rate of exchange which adversely affected conversion of the Customs gold unit into local dollars. With the rates fixed as at present, the dollar income ought to improve this year if imports do not fall off.

The situation as regards the Customs offices in North China has been ominous, but Sir Frederick Maze has, as usual, shown great tact in dealing with the matter and so prevented any interference with the existing administration. We hope that both sides will take a realistic view of the position and that the integrity of the Chinese Maritime Customs will be observed at all costs. Sir Frederick Maze deserves the confidence and support of all concerned. It is of interest to note that according to official statements issued by the financial authorities in Manchukuo the latter are setting aside each year a sum of money equivalent to their quota of the foreign loan and indemnity services, which was formerly paid by the Customs offices in the Manchurian ports.

FUTURE OF MANCHUKUO

On the subject of the trade and future prospects of Manchukuo there exists a considerable diversity of opinion, but unquestionably many improvements have been effected there during the past four years. Last year the harvest was good, and though the area under the cultivation of crops was much below the average of former years, the higher prices obtainable have been of benefit to the farmers; as a result of this as well as of monetary stability and of less disturbed conditions in the more important rural districts, the general trend has been better.

In March the Chinese Eastern Railway was formally transferred to Manchukuo by Russia and renamed the North Manchuria Railway. The running efficiency of this line is said to have already improved. New railway construction still continues on a

rapid scale and further large sums have been earmarked for this purpose in the present year. The import trade of the country again expanded slightly during 1935, once more due to increased business with Japan, but exports are slightly down. The Manchurian currency has recently been linked to the Japanese yen, and in December a Foreign Exchange Control Law was enforced with a view to curbing speculation, which it was feared might endanger their attempt at currency stabilisation.

JAPAN'S TRADE EXPANSION

The foreign trade of Japan continues to expand in a remarkable way. The combined figures of exports and imports show an all-time record, that is, in the depreciated yen and not in gold, but, nevertheless, considering the difficulties of restrictive quotas and tariffs in many countries, it is a noteworthy achievement. Industrial production has continued its rapid expansion, and it is significant that machinery is quickly coming to the fore as one of the leading export commodities. During the second half of the year the advance in silk prices, coupled with a recovery in rice, brought about a great improvement in the position of the farmers. The invisible trade balance is believed to be quite favourable, due largely to the prosperity of the shipping companies and good tourist traffic. There are, however, certain factors which make the picture appear less rosy. There is considerable over-production, and the curtailment of output has had to be enforced in the case of some important industries, including that of textiles. The financial position of the country also gives rise to some misgiving. The burden of military and naval expenditure remains abnormally heavy, and the continued deficit of revenue is still being made good by the issue of domestic loans. However, each year sees some reduction in the amount of these new issues and the favourable conditions in the country have so far enabled their absorption.

PHILIPPINE ISLANDS

I will only say a few words about the other countries in which we have branches.

In the Philippine Islands the inauguration on November 15th of the Commonwealth Government was a notable occasion. Full independence when it comes in ten years' time will bring about the culmination of a long period of political agitation. Our bank has seen many changes in the sixty-three years we have been established in the Islands, and we wish the new Government every success. The foreign trade of the country has benefited considerably from the leading part we have taken in its financing, and we hope that this situation will continue for many years to come. There are, of course, dangers ahead, but the public debt of the Islands is small, the Budget is healthy, and the principal exports are flourishing, so the outlook is satisfactory. This time last year reports regarding the sugar industry were inclined to be pessimistic, but it appears that the Sugar Control Act has in fact fulfilled a useful purpose and the great majority of producers are in a sounder financial position than for some years. A recent development is the rapid progress made by the goldmining industry, which in 1935 took second place to sugar in gold export values.

INDIA AND MALAYA

In India nearly all industries have shown an improvement during the past year, and there has been a marked increase in the production of many commodities, while piece goods touched a record level. The cotton crop was about 33 per cent. higher than in 1934, and with satisfactory prices growers have benefited materially, but the mill industry has suffered from overproduction and price cutting. Generally speaking conditions are favourable, and there are good prospects of further development this year.

In Malaya the trade figures do not show much of an improvement, but nevertheless conditions are still on the mend. Rubber restriction has not much affected world stocks yet, and there has been difficulty in controlling the output in the Dutch East Indies. The tin quota has now been moved up to 90 per cent. of standard assessment, and tin exports have increased appreciably.

THE BANK'S NEW BUILDING

Ladies and gentlemen, that concludes my review of conditions in the countries in which we are mainly interested, but I have not yet referred to the fact that we are to-day using our magnificent new building for the first time at an annual meeting. In my opinion this—the 120th meeting of the Hongkong and Shanghai Banking Corporation—is thus almost an historic occasion. I do not of course presume to claim that we are making history for China or even for Hongkong, but in the not uneventful

and not uninteresting history of "Wayfoong" to-day is unquestionably one which marks an event of some importance and of some significance. It is important because the building is thoroughly modern, spacious, convenient and therefore fully suited to provide increased efficiency, and it is significant because it shows that in spite of apparent difficulties and transient storm clouds our faith is still strong in the future outlook for China and Hongkong.

We cannot be blamed for showing pride in the stately and dignified appearance of these premises, and who is more justified in doing so than our chief manager, Mr Grayburn, whose name will be identified with the building so long as it stands? To him and to our principal executive officers as well as to all the staff of the bank we again owe thanks for the continued good work they have done for us under conditions often without precedent, and which political factors seem to make more and more difficult as the years go by.

With these remarks, ladies and gentlemen, I beg to propose the adoption of the report and accounts as presented, and after they have been seconded I shall be pleased to answer any questions that may be asked, to the best of my ability. (Applause.)

SIR W. SHENTON'S SPEECH

In rising to second the report, the Hon. Sir W. Shenton said:—Mr Chairman, ladies and gentlemen,—The year under review has undoubtedly been difficult, probably one of the most exacting in the bank's history, and it is a matter for satisfaction and a great tribute to our directors and chief manager that it has been eminently successful.

I do not think I shall be alone when I say that I have had some difficulty in interpreting the balance sheet, but I note with pleasure that the carry-forward is substantially greater than that of last year.

When the gyrations of the sterling value of the dollar, both in China and Hongkong, are considered, over the period of the past eighteen months, the great difficulty of trading under such conditions can be easily understood.

Our chairman has stated that the political factor has become of paramount importance, and this must certainly be so if the future of foreign trade in the Far East is concerned largely with the supply of capital goods and finance as many trade reports lead us to infer. It is clear that a close contact with China politically and socially is of the utmost importance, especially when it is realised the extent to which Government authority in some shape or form is now so often interested.

ATTITUDE OF FOREIGN BANKS

I can say from personal knowledge that the foreign banks are always prepared to support sound and practical propositions.

As in other parts of the world excess population is the root of many problems, so in the Far East it is often the cause of our difficulties. Industrialisation is regarded as a solution in some quarters, but what China, being mainly agricultural, needs is an improvement in the lot of her peasant population; this undoubtedly is, and for some time past has been, receiving the careful attention of her Government.

Excess population is, of course, one of Japan's major considerations.

It must be obvious to everyone interested in China and her many problems that one of her principal requirements is a uniform and stable currency. The past year has seen a herculean effort to attain this end, and to many outside observers she appears to be well on the road to success. It is interesting to note the support the Central Government has experienced in the provinces.

In Hongkong we have also seen important and far-reaching developments in our monetary system. It has always been regarded as fundamental that the colony's currency should be in line with that of China. This has largely been accomplished by legislation with which we are all familiar, but we hope that when it is feasible to do so the Government will make a clear declaration as to future policy which would engender confidence and be of great assistance to merchants and all who are interested in the Far Eastern trade and commerce carried on in and through this Colony. I think our subsidiary coinage still requires further consideration, but we are certainly appreciative of the foresight of those who were responsible for a plentiful supply of one-dollar notes when the crisis arose.

TRIBUTE TO CHIEF MANAGER

Not only those with a financial interest in our bank but the Colony as a whole should be grateful to our chief manager. For

many months, when the price of silver was following a most erratic course, he had a most difficult task in controlling our exchange and keeping it near silver parity, and when at last the situation got out of hand and the Government took command, he joined the currency board and whole-heartedly placed his great knowledge of exchange at their disposal, thereby creating an atmosphere of confidence in a situation fraught with much uncertainty and great difficulty.

It is, I think, a matter for congratulation that such drastic changes have been carried out both in China and Hongkong with so little disorganisation, and undoubtedly beneficial results are already discernible. The recent expansion of the Hongkong note issue is a happy indication of better times. As far as Hongkong is concerned, it was fortunate that we had Mr Norman Young of his Majesty's Treasury with us to assist the Colonial Treasurer, who is chairman of the currency board, to whom as a whole a grateful tribute is due.

The opening to through traffic of the Hankow-Canton Railway this year, after many vicissitudes, is a matter of first importance. The trends of trade under such circumstances are always difficult to prophesy, but whatever they are conditions will adapt themselves to an economic basis in which foreign trade will certainly benefit. Another result of the opening of that railway will, I think, be a further step in the unification of China.

I must lay particular emphasis on the importance which civil aviation is assuming in the Far East, and strike a warning note that British interests in this respect do not appear to be receiving the attention they should.

THE NEW HEAD OFFICE

The completion of the new head office marks another milestone in the history of our corporation. No commercial undertaking in any part of the world could but be proud of such a magnificent building.

We strongly endorse the decision of the persons responsible for the bold policy of rebuilding, and heartily congratulate those entrusted with the plans and the execution of the work.

When the former head office was in the course of construction many people, I am given to understand, thought Sir Thomas Jackson was far too optimistic in reference to the future, and I believe many people have expressed similar views in regard to this building. Sir Thomas Jackson was proved not to have been in advance of his times, and we have every hope that our board of directors and chief manager are correct in their prognostications of our future requirements.

The cost of the building has undoubtedly been great, but we deduce from the cryptic paragraph in the directors' report "for a contingency which has now become non-existent" that adequate provision has already been made, and we are informed that this property stands in our books at what a banker regards as a reasonable figure. It is, I believe, a fact that a very large proportion of the materials used have been produced within the British Empire.

SERVICES OF DIRECTORS, OFFICIALS AND STAFF

In conclusion, I should like to express, on behalf of the shareholders, our great appreciation of the valuable services we have received from our directors, the chief manager, and the staff, and we congratulate them on their success. (Applause.)

May I in seconding the report and accounts state how much I appreciate the honour of having been asked to do so on this historic occasion.

The Chairman:—There being no questions, as proposed by myself and seconded by the Hon. Sir W. E. L. Shenton the motion now before the meeting is the adoption of the report and statement of accounts as presented.

The report and accounts were unanimously adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

*The Reporting Manager,
THE ECONOMIST,
8 Bouverie Street,
Fleet Street,
London, E.C.4.*

THE ANGLO-PALESTINE BANK, LIMITED

CONTINUOUS GROWTH OF BUSINESS

NEW ISSUE OF CAPITAL APPROVED

The thirty-fourth annual general meeting of the Anglo-Palestine Bank, Limited, was held, on the 21st instant, in the bank's offices, Brook House, Walbrook, London.

Mr L. Istoric (one of the directors) presided.

The Chairman, in moving the adoption of the report, said:—Gentlemen—It is with much regret that I have to open the meeting by referring to the great loss which the bank suffered in September last through the death of its chairman, Mr Isaac L. Goldberg. Mr Goldberg gave the bank over twenty years of unstinted and devoted service. His sound practical judgment, his unparalleled knowledge of Palestine and its conditions, and his unusual capacity for hard work proved of the utmost value to the bank, and his great kindness and straightforward character endeared him to his colleagues. The directors have not yet taken a decision in the matter of electing a chairman, and in the meantime Mr L. Braudo is, at the request of his colleagues, acting as chairman of the bank.

Conditions in Palestine continue to be favourable. The figures quoted in the annual report bear testimony to the fact. It is true that there was a slight setback in the month of September, caused by the political unrest prevailing in the Mediterranean, but the country's economic structure showed powers of resistance and a capacity for recuperation which had surprised outside observers. Those who were in close touch with local conditions were in no way surprised, as they had learned to appreciate the soundness of the foundations on which the country's prosperity is being built up. If the events of September have induced those who were, perhaps, inclined to get too elated with success to take a more sober view and to appreciate more correctly the many obstacles that will still have to be overcome, this is all to the good.

CONSPICUOUS SERVICES TO PALESTINE

The bank was able to render conspicuous services to Palestine during the recent period of stress. The smaller credit institutions, which suffered from withdrawals of deposits, were generously supported, and such measure of credit to commerce and industry as was considered necessary and sound was granted in all the bank's branch offices. It is a source of great satisfaction to the directors that all these credits, without any exception, have proved perfectly justified. They have in the meantime been repaid, or are adequately secured. There has been no failure of any importance, and none is expected.

Members will be interested to hear some particulars about the distribution of the bank's credit business over the various fields of economic life. On analysing the figures of the balance sheet it was ascertained that 31 per cent. of the credits outstanding on December 31, 1935, were granted to trading firms, 16 per cent. to industrial concerns, 11.1 per cent. to the orange industry, 2 per cent. to agriculture, 8.3 per cent. to local credit institutions, and 31.6 per cent. to miscellaneous trades.

The results of the year's trading, as the accounts show, have been satisfactory. An amount of £134,969 5s. 9d. remains available for distribution after due provision has been made for the dividend on preference shares and for various contingencies.

As members will have seen from the report, the directors are recommending the payment of a dividend of 8 per cent., free of tax, on the ordinary shares.

In view of the continuous growth of the bank's business, the directors have arrived at the conclusion that further working capital is required. Arrangements have been made for the issue of 209,716 "A" ordinary shares, and an extraordinary general meeting is to be held immediately after the close of this meeting, in order to pass the necessary resolutions for the purpose of the creation of those shares.

CAPITAL BONUS

It is also proposed to capitalise a sum of £100,284, forming part of the undivided profits of the company standing to the credit of the reserve fund, and to distribute the same by way of capital bonus among the ordinary shareholders, and this matter will also be dealt with at the same meeting. The directors also propose to transfer out of the present balance of available profits an equal amount to the reserve fund, thus bringing it up again to the figure at which it stood prior to this appropriation.

The effect of the new issue and of the various proposals before the members would be that the bank's paid-up capital would in future amount to £860,000, and its reserve fund and undivided profits to £225,000.

The report and accounts, together with the dividends and appropriations, therein recommended, were approved, and the proceedings terminated with votes of thanks to the chairman and the staff.

An extraordinary general meeting was subsequently held, at which the proposals referred to in the chairman's opening speech were approved.

CHAMPION REEF GOLD MINES OF INDIA, LIMITED

GOOD RESULTS—INCREASE OF CAPITAL APPROVED

The ordinary general meeting of the Champion Reef Gold Mines of India, Limited, was held, on the 22nd instant, at Southern House, Cannon Street, London, E.C.4, the Hon. A. T. J. Fraser, D.S.O. (the chairman) presiding.

The Chairman, in the course of his speech, said that they had had a most successful year with a total recovery of 68,067 ozs., the total value being £479,117, an increase of £21,477. The profit of £169,987 was an increase of £21,824, and the dividends equalled 42½ per cent. against 40 per cent. in the previous year. The development results had been equally satisfactory, resulting in a considerable addition to the ore reserves, which now amounted to 448,241 tons of an average grade of 11.86 dwts. of gold per ton, an increase of over 42,000 tons. There was also an increase of almost 30,000 tons in low grade ore, which now amounted to a probable tonnage of 107,000.

The bottom of the mine was now looking so promising that the directors and managers were fully justified in taking a long view and adopting measures to ensure their ability to carry the mine to considerably greater depths. There was no doubt that they were justified in reorganising the whole hoisting and ventilation position at a very considerable cost both in time and money. Gifford's shaft, which was now used for hoisting from the 40th level to surface would be sunk a further 2,695 ft. and connected with the 70th level at a depth of 6,556 ft. A new plant would deal with the hoisting in one lift from this great depth. A new engine would be installed at the 70th level, Heathcote's shaft and the old engine at the 40th level dismantled, and this shaft, from the 70th to 40th level would not be used for hoisting but would become the main up-cast for ventilating this section of the mine.

MR SYDNEY TAYLOR'S REMARKS

Mr Sydney E. Taylor, D.S.C., after dealing with development results, said that after considering many alternatives it had been agreed that the scheme now before the shareholders for providing facilities to carry the mine to considerably greater depths was the one that should be adopted and was fully justified by the favourable outlook in the mine. It was a bold and costly scheme, but he was sure they would never regret having decided upon it. Perhaps the most important requirement for a deep mine was adequate ventilation. By sinking Gifford's shaft to the 70th level an adequate down-cast airway would be provided, and an important feature of the scheme was that the upper part of the Heathcote shaft would be made available for a main up-cast airway through that part of the mine where it was most needed. Such a scheme would involve a large amount of construction work which would have to be carried on without interfering with the normal output. For that reason it was estimated that it would take four years to complete the whole scheme. It was most satisfactory that the mine was in such a favourable position that, barring accidents, they could look with confidence to the gold returns being fully maintained during this construction period.

The report and accounts were unanimously adopted.

A special resolution altering the articles of association was carried unanimously, and, in proposing a second special resolution for the increase of the capital of the company to £325,000 by the creation of 130,000 additional shares of 10s. each, the Chairman said that the method of finding the sum of £225,000 required had been very carefully considered, and in fixing the figure at which the issue was to be made there had been borne in mind, first, the actual sum to be required; secondly, that the issue price had to be low enough to allow of a satisfactory bonus to each shareholder to assure the issue being fully taken up, and, thirdly, to restrict the number of new shares to a figure at which they felt they were justified in stating that they had every hope that no reduction in dividends would be necessary. In arriving at the figures of 130,000 shares, i.e. one for four at 35s., they had reconciled those three factors.

The resolution was unanimously adopted.

THE ALLIANCE TRUST COMPANY, LIMITED

DIVIDEND OF 22 PER CENT. MAINTAINED

PROGRESS OF ECONOMIC RECOVERY

MR DAVID PIRIE ON THE POSITION AND OUTLOOK

The annual ordinary general meeting of The Alliance Trust Company, Limited, was held, on the 17th instant, in the company's registered office, Meadow House, 64 Reform Street, Dundee.

The chair was taken by Mr David Pirie, and after formal evidence of the proper calling of the meeting had been submitted, the secretary (Mr John P. Bruce) read the auditors' report to the shareholders.

The Chairman, in moving the adoption of the annual report, said:—I assume that you will, as usual, hold the directors' report and accounts as read, and it is now my duty to submit them for your adoption. I think you will regard the results shown as satisfactory.

You will find the appropriation of the year's revenue at page 3 of the report, and observe that after paying the dividend of 22 per cent. on the ordinary stock, and, of course, excluding the amount brought forward, we have a net surplus for the year of £59,759. Now that is a substantial surplus, but it is right that I should explain that included in it is a sum of nearly £20,000 representing arrears, etc., which have been paid during the year, and which, however satisfactory the future prospects of the concerns involved, cannot in the nature of things recur. There are other reasons, which I need not detail, why we are impelled to regard the surplus in a spirit of conservatism, and I am sure you will agree with our action in adding £50,000 to contingent fund and increasing the carry-forward from £34,353 to £44,114.

CAPITAL POSITION

Turning to the capital position you will observe the statement on page 4 that a valuation of our bond and stock investments at January 31st showed a value in excess of the amount at which they stand in our books. We do not think it appropriate to include in the formal report any exact figures as to such a fugitive and elusive thing as appreciation in market values, though a different practice may be followed when a depreciation is shown, and when, therefore, we cannot assure you that the amount shown in the balance sheet is represented by market values.

Now, that very substantial appreciation reflects a great and important fact in the history of our country—viz., the economic recovery which has taken place in the last three years, and which made its most striking progress in the year under review. In addressing you two years ago, and reviewing the events of 1933, I pointed out that for the first time trade was showing all-round signs of recovery, and I added, "If, as we hope, this wide improvement is really the beginning of our rise from the great depression, 1933 will be a year of much significance to us all." Indeed, it has proved so. The recovery continued strongly through 1934. At the close of that year leading authorities were doubting the basis of our prosperity and advising us to prepare for a backward movement, but the facts paid no attention to the authorities, and, as I have indicated, the movement widened and deepened during 1935, and the close of the year found us with increased prosperity and increased confidence.

EVIDENCE OF PROSPERITY

Some facts and figures in a statistical table published by *The Times* last month are illuminating. If we take the production of our manufacturing industries in 1930 as 100 per cent., we find that in 1931 that had sunk to 91 per cent., while in 1935 the figure is nearly 117 per cent., and a particularly gratifying confirmation of these figures is found in another part of the table where the number of insurable workers in employment is shown to have increased by over a million in the last three years. Another excellent figure which harmonises with the other evidence of prosperity is found in the amount of Post Office Savings Bank deposits on December 31st last, which at £390,000,000 is over £100,000,000 greater than at December 31, 1931.

All the figures relating to our industrial activity point the same way, and it is interesting and perhaps important to notice how our newer industries have contributed to this. The motor-car industry now ranks as the third largest manufacturing activity in the country, and never has it sold so many cars; the aircraft industry's output was larger than it has ever been since the war, and rayon broke all previous records both in production and consumption.

EFFECT ON INVESTMENTS

The natural result of all this recovery in industry has been a number of increases in dividends, restoration of defaults, and payment of arrears, although the effect of this on our revenue showing has been to a certain extent offset by the repayment of profitable investments in the form of high-yielding debentures. On the capital side we have seen a general appreciation in Stock Exchange prices, particularly in ordinary stocks.

The rise in gilt-edged received a check; indeed, we find the record prices in this section as far back as January, 1935, but the public turned its attention to industrial and commercial shares, and these have almost without material exception risen strongly during the year. And, as I have indicated, this rise was based on actual results.

The *Economist* in January last made a calculation based on the average price levels of 158 industrials which showed that the average yield figure on the old and the new price levels was virtually unchanged, having moved from 3.67 per cent. to 3.68 per cent. That yield may be small, but rising prices have merely kept pace with rising dividends, and the position has a stability absent from booms such as the last American one when present earnings were disregarded and wild and disorderly rises were followed by still more wild and disorderly falls.

IMPROVEMENT IN THE UNITED STATES

With regard to the United States, the natural recovery forces are operating with remarkable power and momentum, and the average price of common stocks given in *The Analyst* shows an advance from 36.37 to 54.66 during the year. Recently, widespread fears among industrialists as to the effects of pending tax and other legislation caused a check in confidence, but recovery has surged ahead again, and it is impossible not to be impressed by the arguments for its continuance. On the other hand, when we read of the wonderland finance which prevails and compare the position of the United States Budget with that which our own Chancellor will submit next week, we must recognise the elements of instability and the need for conservatism and caution in operating under such conditions.

Unfortunately, the recovery so prominent in industry has not extended to American agriculture, and with regard to our interest in the mortgage business, which still represents fully 10 per cent. of our invested funds, I can add little to what is contained in the relative paragraph of our report. The difficulties with which we are faced in our policy of liquidation do not tend to decrease, and at present the outlook has changed for the worse. We must face the fact that on this part of our assets we may eventually have to realise a definite capital loss. Against this and other contingencies, however, it is a satisfaction to know that by conservative practice the company has built up a reserve fund of over two millions, and that the appreciation on the market value of its bond and stock investments amounted at the close of the year to nearly one and a half millions.

WORLD CONDITIONS

Turning our eyes to world conditions generally we find much that gives cause for regret and disquiet. The position of international trade is thoroughly unsatisfactory and the whole situation is shadowed by the menace of war. The cause is, of course, the spirit of selfish nationalism which seems ever to extend and deepen. It is this spirit which inspires every form of hampering trade restriction and which forbids the hope of success to conferences concerned to find plans for the common good.

Gold moves about the world, not in the healthy and moderate flow required for its natural function—the settlement of trade balances, but in huge blocks to defend national currencies against attack, and currency stabilisation is rendered impossible. No treaty obligation which conflicts with selfish national aims is sacred—the very foundation on which our modern civilisation is built is threatened. And as the natural result of such madness the threat of war again looms ahead of us. But one cannot help feeling that through all the folly, sense will finally prevail, and that the nations will prefer the road to peace and prosperity rather than that which leads to disaster and utter destruction.

Once again let me pay tribute to the loyal and effective co-operation of our staff.

I shall not detain you further, but conclude by moving that the directors' report and accounts be adopted, and that final dividends be declared as therein recommended, viz.:—On £700,000 preference stock at the preferential rate of 4½ per cent. per annum; on £650,000 preference stock at the preferential rate of 4 per cent. per annum; on £750,000 preference stock at the preferential rate of 5 per cent. per annum; on £100,000 "A" preference stock at the preferential rate of 4 per cent. per annum; and on £1,050,000 ordinary stock at the rate of 22 per cent. per annum, all subject to deduction of income tax.

The report and accounts were adopted, and resolutions declaring dividends, re-electing the retiring director, and appointing auditors were unanimously passed.

ARGENTINE ESTATES OF BOVRIL, LIMITED

A YEAR OF CONSIDERABLE IMPROVEMENT

Speaking at the twenty-eighth annual general meeting of Argentine Estates of Bovril, Limited, held, on the 22nd instant, in London, Lord Luke, K.B.E. (Chairman), said that with the shareholders' permission he would take the report and accounts as read; if they would turn to the balance sheet, on the assets side they would find "Land, Factories and Buildings, etc.," at £957,379, an increase of £2,837. The larger part of this small addition was for watering-places, fences, etc.

The "Machinery, Plant, Furniture, etc.," at £254,225, showed a reduction of £2,341.

"Stocks, including Cattle and Stores in South America," stood at £556,598, an increase of £45,242 on the year.

Under "Sundry Debtors" there was an increase of £26,031, whilst the "Cash in Hand," at £132,386, was £52,308 more than in 1934.

These last two increases taken together about balanced the increase in the "Sundry Creditors" item on the liabilities side of £76,752.

They would note that the floating assets and liabilities in the Argentine had been taken into the balance sheet at \$15 paper to the £, which was the official rate, instead of at the rate of 36d. to the gold peso, as in the previous year's accounts.

As regards "Reserve for Depreciation," this was £5,036 higher at £204,121.

The "Profit and Loss" account showed a considerable improvement on that of the previous year. This was attributable to Estancias section accounts—for some years these had been showing losses owing to the very low price of cattle, but in 1935 cattle prices in the North of Argentina improved sufficiently to provide a profit on the Estancia account.

Last year the preference dividend was paid by the guarantor, but this year the company had been able to pay 3 per cent. on these shares out of profits.

RESULTS OF THE SUBSIDY EXPERIMENT

At last year's meeting he had told the shareholders that when he was in the Argentine towards the end of 1934, cattle in the northern parts of Argentina were still at an exceedingly low price and quite unremunerative to the Estanciero. He had mentioned, too, that in January, 1935, the Ministry of Agriculture in Argentina desired to improve the price of northern cattle and made the company an offer of a subsidy equal to one-third of the cost of the cattle bought by the company for the Santa Elena works during 1935, provided that the company paid to the cattle owner a fixed minimum price for the cattle including this subsidy. The company had accepted this, and put about 60,000 head of cattle through the works on those terms. There would be no profit in this business so far as the works were concerned, because, on the sale of the products, if a profit was made it had to go towards the refunding of the subsidy above mentioned. This action of the Ministry of Agriculture had removed surplus cattle and started a rise in prices in Northern Argentina, and ever since then they had continued to rise.

There could be no doubt that His Excellency the President of the Republic and the Ministry of Agriculture desired to maintain the meat trade on a satisfactory basis both to the cattle owner and to the eventual consumer. The satisfying of the latter was, of course, very essential if the largest beef export business in the world was to continue and prosper.

The report and accounts were adopted.

THE STATE ASSURANCE COMPANY, LIMITED

AN EXCELLENT YEAR

STRONG POSITION

SIR CHARLES MORTON ON GROWTH OF BUSINESS

The forty-fifth annual meeting of The State Assurance Company, Limited, was held, on the 20th instant, at the head offices of the company, State Insurance Buildings, Liverpool.

Sir Charles H. Morton, J.P., chairman of the company, presided. The Chairman, moving the adoption of the report and accounts, said:—We have had an excellent year and the results attained represent one of the most satisfactory year's trading in the history of the company. There has been a pleasing expansion in revenue from all departments.

FIRE DEPARTMENT

In the fire department we have benefited by the favourable conditions which have prevailed during the year. There has been an improvement in our claims ratio in almost every quarter in which the company is operating, with the result that the fire losses, paid and outstanding, for the year show a percentage to premiums of 47.3, being 3.2 per cent. less than the previous year. It is many years since we had such a good experience. There is available for transfer to profit and loss a sum of £45,700, which is well above the company's average earnings from this department.

ACCIDENT BUSINESS

I have previously referred to the steady progress made year by year in the volume of accident business transacted by the company. I am pleased to report further expansion again this year. The claims experience has been good, the ratio of losses to premiums of 48 per cent. being 1.4 per cent. less than the previous year. There is also a slight reduction in the ratio of expense, and the sum of £24,492 available for transfer to profit and loss is a record for the department.

MARINE ACCOUNT

From the marine account there is available £10,837 for transfer to profit and loss, which represents a profit of £9,174 earned on the 1932 account, plus the interest of £1,663 on the marine fund. I am sure you will agree that this is a very satisfactory result, and I am glad to tell you that there is every indication that the 1933 account will show even more favourable figures.

PROFIT AND LOSS

Reviewing the operations of the company as a whole, the transfers from the various trading departments to profit and loss, together with interest not credited to other accounts, amount in the aggregate to £99,940, being £21,667 in excess of the earnings of the previous year. After deducting the various items of depreciation and other charges in the profit and loss account, providing £15,000 for accruing taxation and general contingencies, and transferring £5,000 to the staff pension fund, the credit balance carried forward is £195,889. This represents an increase of £39,673 in the balance brought forward from the previous year's account.

STRONG BALANCE SHEET POSITION

Turning to the balance sheet, you will agree that it discloses a strong position. Once again I am pleased to place on record that the value of the assets as at December 31 last exceeds by a substantial amount the figure at which it appears in the balance sheet. No credit, of course, is taken in the account for this appreciation. There has been a further strengthening of the reserves and the total assets now well exceed the three million mark.

It has been my privilege to submit highly satisfactory reports and accounts on many previous occasions, but I feel that the report and accounts now presented for your adoption give cause for special gratification. It has indeed been an excellent year. The company, as it exists to-day, has never been stronger, either financially or in the general constitution of its business. I am sure we have every reason to look forward to the future with confidence.

The report and accounts were adopted.

AMALGAMATED METAL CORPORATION, LIMITED

ADVANCE IN CONSUMPTION AND PRICES OF METALS

MR CHARLES V. SALE'S REVIEW OF ACTIVITIES

The seventh ordinary general meeting of Amalgamated Metal Corporation, Limited, was held, on the 22nd instant, at 20, Aldermanbury, London.

Mr Charles V. Sale (the chairman), in the course of his speech, said:—Several alterations have been made in the presentation of the accounts, notably in the addition of a consolidated balance sheet of the various subsidiary and allied concerns in which the constituent companies hold an interest of 50 per cent. or more. The figures interlock with those of the combined balance sheet, and the results of the whole undertaking are transferred, in small type, to the accounts of the Corporation. In this manner you now have a complete statement of the affairs of the entire group.

Turning to the combined balance sheet, you will observe that while current liabilities are greater by £790,000 than in the previous year they are covered by an increase of £894,000 in current assets. These figures accompany a larger volume of business, and I may specially mention stocks of merchandise—£4,329,000, or £1,860,000 more than in December, 1934. Of this large total over 99 per cent. was held against forward sales.

CHANGES IN THE INVESTMENT GROUP

There are several changes to be noticed in the investment group, which now stands at £2,492,000 compared with £2,761,000 last year. To begin with, a transfer of £200,000 from general reserve has been applied in reducing the book value of investments which had depreciated during the long and difficult years of depression. The declining values were duly taken into consideration in the valuations mentioned to you at these annual meetings, but the book values remained without change. This transfer clarifies that situation. Next in importance is the purchase by the British Metal Corporation, Limited, of certain investments previously held by a subsidiary company, resulting in the net increase under the sub-heading of investments, and a decrease in amounts owing by subsidiary companies from £541,000 a year ago to £56,000 in the present accounts.

Following in sequence is the application of £20,000 from revenue and £40,000 from reserve for contingencies in writing down the book value of amounts owing by allied companies to £260,000. This reduction concerns the mining property which, as I have mentioned on several occasions since 1931, could not be profitably operated at the then prevailing prices. Late in the year, however, arrangements were made to reopen the mine, which is now in production, and made its first operating profit during the month of March. Pending further development, however, we have considered it prudent to make this provision.

VALUATION OF INVESTMENTS

Lastly, I come to the valuation of all the investments and shares in subsidiary companies, which at the end of 1935 and after the transfer already mentioned shows a margin of £311,000 on the right side. The book cost and valuation of our German securities—holdings in Metallgesellschaft and Norddeutsche Affinerie—are fully set out in our report, and I need only add that the position of both companies is very strong, while the efficiency of their plants is second to none in the world. We do not forget the exchange influences which may arise, but their assets are nearly all of a nature likely to equate with gold—that is to say, land, buildings, plant, ores in process, and metals in stock. With these factors we naturally take into consideration the dividends receivable and the importance to your Corporation of the community of interests with which the investment is associated.

On the other side of the combined balance sheet you will observe that the allocation of £40,000 from contingency reserve for writing down assets was replaced by a similar sum from the profits of the period, leaving the fund unchanged. The total profits of the year were about £43,000 better than the comparable figure for 1934, and the proposed dividend of 6 per cent. will leave a balance on the whole undertaking of £232,000 to be carried forward, against £195,000 a year ago.

ADVANCE IN METAL PRICES

Prices of non-ferrous metals had risen in the last nine months of 1935. The rise in copper was partly due to the restriction

scheme, under which copper produced outside the United States was to be reduced by 240,000 tons per annum. The rise in lead and spelter was largely due to the change in the Ottawa duties, which also had a marked effect on the turnover on the London metal exchange. The moderate duties now imposed, combined with the drawback on exported lead products, gave Empire producers a small preference in the home market without impairing our export trade. Activity in the building trade has also assisted the prices of these metals.

The indices of consumption present several interesting features: 1929 was the last year of great prosperity as 1932 was the one of greatest depression. In each succeeding year consumption has increased under every heading, though markedly less in the United States than elsewhere. The increasing demand in the United Kingdom for copper, lead, and spelter has made an important contribution to the total revival, surpassing all its records in 1935. The same may be said of the world outside the United States, and it is noteworthy that in both directions copper consumption is growing even faster than that of lead.

In spelter, however, the United Kingdom does not show the same relative increase, and this may be attributed to the declining exports of galvanised sheets. The same is true as regards tin, due to intense competition for the export trade in tinplates, which must now be shared not only with the United States but with newcomers—Germany, Italy, and Japan. Thus, the exports of tinplates from the United Kingdom have fallen from 580,000 tons in 1929 to 346,000 tons in 1935. There is little in the world index figures to support the contention that tin, in the aggregate, is losing its place in relation to other metals.

RUBBER DEPARTMENT

The rubber department of Henry Gardner and Company continues its importance in both volume and revenue. The arrangements between the Governments concerned for co-ordinating production and controlling exports from the Far East were only sanctioned in May, 1934. There were many administrative difficulties in the initial stages, and at times during the first twelve months these gave rise to some disappointment. The Dutch authorities found it necessary to arrange an increased quota for their native production, but with adjustments in this and other respects the control is now operating satisfactorily.

MAIN ACTIVITIES OF THE CORPORATION

Now, in summing up as we have been doing the results of our trading over a period of years, it seems appropriate that I should again give you some conception of the main business of your Corporation. It is the marketing and distribution of the base metals and ores and such of the precious or semi-precious metals as are usually associated with them. All its other activities are the servants of this master. They are designed either to secure commercial contracts with producers or consumers or to improve and expand the services which are already performed for them. These services cover a wide range—actual sales, research into new markets, and uses for metals. As an instance of this last I may mention that the sale of cadmium was first developed on a commercial scale in Europe by one of the constituent companies, rising from less than 100 tons in 1922 to over 900 tons in 1935. Finance—which, of course, not only covers advances made against metals and ores moving into consumption but extends even as far as the placing of securities on behalf of our customers. In this connection I may also say that our investments are made to secure commercial contracts or to form financial links with those with whom we already have contracts.

Again our services include shipping, transport, and insurance—the importance of which is great owing to the very large tonnages which are handled, often in small lots, into consumers' works; statistics—to show the trend of production and consumption of the metals and how world influences are likely to affect them; technical—and I may say that it is essential to be able to call upon the experience of mining and metallurgical engineers—this we do through companies closely associated with the group: the British (Non-ferrous) Mining Corporation, Huntington Heberlein and Company, Colliery Engineering, and Lodge Cottrell—in all of which we have substantial holdings.

It is our intention to improve and expand all these services in the hope that they may strengthen the co-operation between producers, consumers, and merchanting interests. In conclusion, it will interest you to know that the trading results of the constituent companies for the four months of the present year are very satisfactory.

The report and accounts were unanimously adopted.

THE AGRICULTURAL MORTGAGE CORPORATION, LIMITED

BETTER CONDITIONS AND GREATER CONFIDENCE

SIR HARRY GOSCHEN'S SPEECH

The seventh ordinary general meeting of The Agricultural Mortgage Corporation, Limited, was held, on the 17th instant, at Stone House, Bishopsgate, London, E.C.

Sir Harry Goschen, Bt., K.B.E., the chairman, presided.

The Secretary (Mr C. B. Palmer) read the notice convening the meeting, and the General Manager (Mr S. A. Bonner) read the report of the auditors.

The Chairman, in the course of his speech, said: Further loans to a total of £466,830 were completed during the period under review, bringing the total amount advanced by the corporation since its inception to £11,590,913, granted on the security of nearly 800,000 acres of land, which, with the farmhouses and buildings, has been valued on our behalf at over £18,000,000. In addition, advances of a further £148,665 have been duly sanctioned.

The total of improvement loans completed has increased to £67,028, secured on land of an estimated rental value of £46,184 per annum.

We have accepted during the year in addition to the ordinary contractual reductions special capital repayments totalling £462,406, so that our grand total of loans outstanding is some £70,000 less than last year.

You will remember that two years ago we reduced our basic lending rate from 5 per cent. to 4½ per cent., and although over £1,000,000 has been lent in new loans since the reduction was made this has not been quite sufficient to enable us to keep pace with the repayments.

It must be borne in mind that £8,500,000 of the money we have lent was borrowed on debenture stock of the corporation carrying interest at 5 per cent. per annum and not redeemable, at the earliest, before 1959, while the greater part of the proceeds of our last issue of £2,000,000 4½ per cent. stock, which was issued at 95, is still in hand and is temporarily invested to give a return much below its annual cost.

It will be quite obvious to you that we are making an actual loss in lending at the present time on a 4½ per cent. basis, but we have considered it to be in the spirit of the Act, in pursuance of which the corporation was brought into being, that our main consideration should be to grant all the assistance in our power to farmers requiring long-term credit, while at the same time not in any way imperilling the stability of the corporation itself.

I am glad to report once again that the contractual payments of interest and principal continue to be promptly met and 93 per cent. of the amounts falling due in the year up to March 24, 1936, had been received by the close of the financial year.

During the year 1935 we have seen further developments in the regulation of the production and sale of agricultural produce, and largely as a result of the various marketing schemes prices have been stabilised to a great extent and farmers as a whole have been able to make a moderate living.

The weather conditions were not entirely favourable, but the mild, open weather of the early months of 1935 assisted in the wintering of cattle out of doors and lambing conditions were good. The summer was exceptionally dry and conditions were good for hay-time and harvest, but with parched pastures and dried up ponds and streams, stock farmers experienced an anxious time.

Most of the corn and root crops showed a lower return than in the previous year, but the corn yield, though not so good as in 1934, was higher than the average for the past ten years. The acreage under wheat again showed an increase in 1935, but the total production was 125,000 tons less. The drought adversely affected the crop in many of the best barley areas and the yield fell by 71,000 tons. Root crops generally were light; 520,000 tons less potatoes were produced, and sugar beet, with a reduced acreage and difficult lifting conditions, was generally disappointing.

Dairy cattle have made good prices, but beef producers have experienced little improvement in the value of their stock. Once again sheep have provided the bright feature of the live stock section, and the upward tendency of prices for breeding stock at the autumn fairs reflects confidence in the future of the sheep industry.

A spirit of returning confidence in agriculture is manifesting itself in many ways. Purchases of new and up-to-date implements have increased considerably, and more intensive stocking of the land and the employment of extra labour are all signs that farmers are adapting themselves to the new and better conditions.

I should now like to direct your attention to the balance sheet and profit and loss account. I have already mentioned the slight drop in the balance of loans outstanding, and, against this figure, you will notice an increase of nearly £100,000 in the other investments. In this connection I might perhaps draw your attention to the fact that the market value of our investments on March 31 last was over £280,000 more than the figure at which they stand in the balance sheet.

Our profit and loss account, after a transfer of £5,000 to contingencies account, and the requisite provision for income tax, shows a balance of £28,347, which figure is some £10,000 lower than last year. The difference is largely accounted for by lower receipts from interest on our mortgage loans, due to the fact that a number of 5 per cent. loans have been repaid and the money, to a large extent, re-lent on a 4½ per cent. basis. In addition, receipts from fees this year are some £3,000 below last year on account of the rather smaller amount of our earlier loans, which have been redeemed on payment of the 5 per cent. redemption fee. The income received from investments also is slightly lower, although the amount invested is some £100,000 greater.

Full provision has been made from contingencies account to cover all bad and doubtful debts and, in addition, to provide a sum sufficient to cover all interest payments due up to December 31, 1935, and not received by the end of our financial year.

The balance of profit and loss account after bringing in £4,634 4s. 5d. from last year is £28,347 7s., which has been carried to the balance sheet and allocated as follows:—

	£	s.	d.
Transferred to special reserve	...	...	2,664 0 0
Transferred to general reserve	...	...	10,000 0 0
Written off expenses of the issue of £8,500,000 5 per cent. debenture stock and £2,000,000 4½ per cent. debenture stock	...	...	5,000 0 0
Written off discount on the issue of £2,000,000 4½ per cent. debenture stock	...	...	3,333 6 8
leaving a balance of £7,350 os. 4d., which the directors propose to carry forward.			

I much regret that it has not been possible for us to continue the dividend of 2½ per cent. which we have paid to the shareholders for the past five years, but I am quite sure that the great banks which subscribed our share capital will support the policy we have adopted of consolidating our position while at the same time giving the greatest assistance in our power to the individual farmers during these difficult times in agriculture.

The report and accounts were unanimously adopted.

OOREGUM GOLD MINING COMPANY OF INDIA, LIMITED

INCREASED ORE RESERVES

The ordinary general meeting of this company was held, on the 17th instant, at Southern House, London.

The Hon. A. T. J. Fraser, D.S.O., who presided in the absence, through illness, of the Hon. Lionel Holland, chairman of the company, said that the developments of the year showed a notable improvement, resulting in a substantial addition—over 25 per cent.—to the reserves of ore. The total reserves at the end of the year were estimated at 176,372 tons, averaging 9.57 dwt. per ton, in addition to 94,000 tons of probable ore of low grade payable at the present price of gold.

The latter part of the year, however, did not maintain the promise of the early months, more especially in Bullen's section of the mine, where the lode was disturbed by intrusions of pegmatite. There was nothing new in these occurrences, which had frequently taken place in the mine for some years past, to be followed by a return to normal conditions when the pegmatite was passed through.

The tonnage of ore milled and old tailings retreated was practically the same as in the preceding year. The total return of fine gold was 2,041 oz. more, and they had benefited by the higher price of gold to the extent of 3s. per ounce. The total income was £20,920 greater, and working costs (including royalty on profit paid to the Mysore Government) had increased by £14,187. This increase was due to the important work of exploration and

opening up of the ore shoots as rapidly as possible and to the establishment of a substantial stock of ore at surface.

From the profit and loss account it will be seen that the operating profit added to the amount brought forward from the last account, together with dividends received on shareholdings, make a total credit of £72,501. Appropriations for income tax reserve, machinery and plant, and insurance and contingency fund amounted altogether to £15,000. With the balance dividend which we now recommend, payable on April 25th, the distributions for the year will amount to £48,077, and after allowing for the percentage payable on the dividend on the ordinary shares £8,702 remains to be carried forward.

The dividends of 2s. per share on the preference and 1s. per share on the ordinary shares are 3d. per share less than the amounts paid for 1934, when, however, it will be remembered, a profit of £22,000 was realised on the sale of certain investments, distinct from the ordinary profit of working the mine.

A satisfactory financial position is maintained, the surplus of liquid assets, after allowing for current liabilities and the amount distributed in dividend, remaining undiminished.

With regard to the operations underground, development work had been vigorously pushed ahead, and that was of more than usual importance, in view of the approaching exhaustion of the dump of old tailings. The yield from the re-treatment of those tailings for the past ten years had been a source of considerable revenue, which would come to an end in about 12 months' time, and it was their aim to build up the ore reserves as much as possible to meet the increased call upon them when the dump of old tailings became exhausted.

The report was unanimously adopted.

EAGLE, STAR AND BRITISH DOMINIONS INSURANCE COMPANY, LIMITED

LARGER PROFITS, ASSETS AND DIVIDEND

INCREASE OF CAPITAL APPROVED

Presiding at the annual general meeting of the Eagle, Star and British Dominions Insurance Company, Limited, held, on the 21st instant, in London, Sir Edward Mountain, Bart, J.P., in moving the adoption of the Report and Accounts, said they continued to feel the increasing prosperity of the country, and he thought they would agree the results of the past year were good.

LIFE DEPARTMENT

The Life Department had shown excellent and progressive results. New policies were issued numbering 2,454 for sums assured of £2,854,936, of which £100,256 was re-assured and £2,754,680 retained. These figures compared with £2,404,263 retained in 1934, an increase of £350,417. Their Life business was confined to the United Kingdom, with a trifling exception in South Africa. The current Life Assurance and Annuity Funds expanded during the year by over £411,000 and now stood at £6,357,479, while the premium income of the Current Fund exceeded that of last year by over £19,000. The average rate of interest earned was 4 1/4 per cent., after deduction of Income Tax, which he was sure they would consider favourable.

The number of schemes handled by their Group Life and Group Pensions Department continued to increase. For several years the number of new schemes had exceeded the previous year's figures and 1936 had started extremely well. The valuations of the two Closed Funds of the Eagle and English and Scottish were made at December 31st last, with very good results. In the case of the Eagle Fund, the surplus revealed enabled the declaration of a simple reversionary bonus at the remarkable rate of 10 per cent. per annum, whilst in the English and Scottish Fund a compound bonus of 3 per cent. had been declared. The bonuses allotted to English and Scottish policies since the date of the amalgamation with the Eagle Star Company ranged from 75 per cent. to 95 per cent. of the sums assured and bonuses existing at that time. As would be seen from the Profit and Loss Account, the Shareholders' proportion of the profits from these Funds recently declared amounted to £72,275.

FIRE DEPARTMENT

In the Fire Department the premium income amounted to £808,087. The incurred loss ratio was 40 per cent., the ratio to premiums earned being 39.77 per cent. These percentages were 2.76 per cent. and 3.11 per cent. lower than in 1934. The profit for the year was £70,139, or 8.68 per cent. of the premium income,

the total reserve being £423,235, which amounted to 52.37 per cent. of the premiums.

ACCIDENT AND GENERAL DEPARTMENTS

In the Accident Department, after providing for claims paid and outstanding and setting aside the usual reserve of 40 per cent. for unexpired risks in connection with the ordinary annual premium income, £8,809 was transferred to Profit and Loss Account.

In the General Insurance Department the premiums amounted to £424,118, an increase of £26,000. Claims paid and outstanding amounted to £117,080, and after setting aside the usual reserve of 40 per cent. in respect of unexpired risks, the sum of £110,676 was transferred to Profit and Loss Account. These results were the best the Company had so far experienced in the General Account.

In the Motor Department the premium income amounted to £1,465,318, which showed an increase of £322,271. After providing for the outstanding claims and the usual reserve of 40 per cent. for unexpired risks the sum of £17,661 was transferred to Profit and Loss Account. These results proved that the public were being extremely well catered for and were getting their insurance at approximately cost price or under.

MARINE DEPARTMENT

In the Marine Department they were able to transfer to Profit and Loss Account the sum of £25,000, and the Marine Fund at the end of the year stood at £309,675, which equalled the very satisfactory percentage of 145.58 per cent. of the premium income.

PROFIT AND LOSS ACCOUNT

The Credit Balance brought in from last year was £214,138, and the net interest on investments amounted to £230,431. Trusteeship and other fees were £6,816, and the net profit on the sale of investments totalled £56,111. The Shareholders' proportion of the Eagle and English and Scottish Funds Valuation profits was £72,275, which, with the profits from the various trading departments, £236,502, made a grand total of £816,273.

After providing for British and other Taxation and Expenses not charged elsewhere, they had paid an increased dividend on the Ordinary Shares of 25 per cent., which with the dividends on the Preference and Preferred Ordinary Shares, absorbed £228,426 net. It would be thus seen that the total dividend on all classes of shares was more than covered by the net interest from investments alone and more than twice by the total net profits.

Of the balance remaining they decided to write off the cost of Life Businesses acquired the sum of £100,000, reducing that item now to £145,000, and to transfer £100,000 on account of provision for Pensions, leaving a credit balance to be carried forward of £257,264, being an increase of £43,127 on the amount brought in.

The total premium income for 1935 amounted to £4,089,433, as compared with £3,774,535 in 1934, an increase of £314,898, while the total assets of the Company and its subsidiaries stood at £23,691,499, an increase of £1,057,387.

PROPOSED ISSUE OF SHARES

The Ordinary Shareholders had received a Notice convening an Extraordinary General Meeting of the Company to be held that day, the object of which was to give the Directors powers to issue additional Ordinary Shares, the powers of the Directors to issue new shares now being nearly exhausted. It was the intention of the Board to issue in the immediate future part of those new shares on terms which, in their opinion, would be advantageous to the present Shareholders. As probably they were aware, the Directors were amongst the largest Ordinary Shareholders themselves.

In conclusion, he stated the financial position of the Company was outstandingly strong, that the new year had opened very promisingly, and that he looked forward with every confidence to the future.

The Report and Accounts were unanimously adopted, and the retiring Directors having been re-elected and the Auditors re-appointed, the proceedings closed with votes of thanks to the Chairman, Directors, Officials and the Staff.

At an Extraordinary General Meeting of the Ordinary Shareholders subsequently held, the resolution authorising the increase of capital by the creation of 144,044 Ordinary Shares of £3 each to rank *pari passu* with the existing Ordinary Shares was approved. The total authorised share capital will then stand at £5,500,000. The fully subscribed capital will be £5,245,049, the paid up capital £3,088,439, and the Reserve Fund approximately £2,450,000.

ROYAL EXCHANGE ASSURANCE

A YEAR OF PROSPERITY

The two hundred and sixteenth annual general Court of the Royal Exchange Assurance was held, on the 22nd instant, at the head office of the corporation in the Royal Exchange, London.

Mr Vivian Hugh Smith (the Governor), reviewing the work of the various departments, said: In our life department the net sum assured was £4,350,000, as against £3,750,000 in the previous year. The total premium income of the life department was £1,194,000, which is again an increase over that received in 1934, and the claims paid and outstanding totalled £676,000, as against £638,000 for the previous twelve months. The number of policies completed was 8,712, an increase over 1934 of 2,337. The life assurance fund now stands at £11,791,000. The year, as you know, has been the final year of the quinquennium, and the directors decided that the corporation could well maintain a reversionary bonus at the rate of 2 per cent. compound for the five years ending December 31st last.

The trustee and executor department has this year been able to transfer from revenue account to general profit and loss account an amount approximating £19,500. This is some £7,000 higher than the amount transferred last year, and reflects the satisfactory working of this department.

It will interest you to know that the total funds in hand and under the administration of the department at the end of the year exceeded £151,000,000, being an increase of over £34,000,000 as compared with the total funds at the end of 1934.

I should like to take this opportunity of referring to the position of this department in its capacity as trustees to certain of the fixed trusts. I feel it my duty to point out to the general public that, in instances where the name of the Royal Exchange Assurance appears as trustees, this should not be looked upon as any guarantee on our part of the stability of the value of the underlying securities. Our duties are confined to those of trusteeship as distinct from the responsibilities of management.

FIRE RESULTS

I am sure you will have received the results of our fire department this year with a good deal of satisfaction. The underwriting profit of £189,000 constitutes a record for this department in the history of the corporation.

After having taken credit for £40,673, being the net amount of interest received, a total of £229,964 has been transferred to general profit and loss. The fire premium income shows a small but welcome increase in each of the main fields of our world-wide business, and at the same time a reduction in both loss and expense ratios can be recorded.

In our marine department we again transfer £25,000 to our general profit and loss account, while our marine fund stands at £822,000, representing nearly 138 per cent. of the premium income.

I am pleased to be able to give you a better account from our accident department this year. Net premiums amounted to £1,172,000, and after taking credit for £42,000 interest, dividends and rents an amount of approximately £75,000 has been transferred to our general profit and loss account. This sum exceeds the average of the amounts transferred from the accident department over the last ten years. The improvement in the results of the department is gratifying and has been brought about partly by a reduction in our commitments abroad.

DIVIDEND

I now come to the general profit and loss account of the Corporation for the year 1935. The total income for the year brought into this account amounts to £510,735. The net result is that the balance of profit and loss account now amounts to £1,269,728. Your directors have already notified you of their proposal to ask you to approve a final dividend of 19 per cent. for the year 1935, payable by the corporation on May 6th; this, together with the interim dividend of 11 per cent. paid on November 6th last, will make a total dividend paid by the corporation of 30 per cent. (less income tax) on the capital stock of the corporation for the year 1935.

If you compare the profit and loss account with that of 1934, you will find that each single item brought in on the income side shows an increase over that of last year, with the exception of the allocation from the marine department, which remains the same. I can hardly give you better evidence of a year of prosperity than that, and I think, gentlemen, we can each one of us congratulate ourselves upon the result.

The report and accounts were unanimously adopted.

OLYMPIC PORTLAND CEMENT COMPANY, LIMITED

STRONG POSITION—DIVIDEND MAINTAINED

The twenty-fifth annual ordinary general meeting of the Olympic Portland Cement Company, Limited, was held, on the 17th instant, at the registered offices, 7 Gracechurch Street, London, E.C., Mr John Lawson (chairman of the company) presiding.

The Secretary (Mr Thomas Rose) having read the notice convening the meeting and the report of the auditors,

The Chairman, in the course of his speech, said:—The profit for the year shows a reduction on the preceding year of about £4,000, due to the smaller quantity of cement sold and delivered. After writing off £10,000 depreciation the balance at credit of profit and loss account is £37,921 os. 10d. The directors now recommend the payment of a 5 per cent. dividend, which will absorb £9,947 19s. 2d., leaving to be carried forward a balance of £27,973 18s. 8d., against £28,160 5s. 8d. brought in from last year.

Although the production of clinker last year was somewhat less than in 1934, the manufacturing cost of finished cement was practically unchanged. This is satisfactory because nearly one-half of the clinker produced was of the special quality required for the Coulee Dam, which costs rather more than standard cement.

Turning to the balance sheet, there is very little to be said at this time. Property account has been increased £12,557 by the addition of the slurry tanks and quartz deposit referred to in the report. Stocks are about £8,000 higher than in 1934. But, on the other hand, investments and cash are down by about £17,000. While the liquid assets of the company total about £127,000, liabilities under sundry creditors only amount to about £9,000. I think you will agree that the balance sheet shows a sound and strong position.

The production of cement in the United States of America last year was 76½ million barrels, or about 1½ million less than in 1934. In the company's territory very little State work was undertaken, beyond a few road contracts. The Federal Government's relief works plan overshadowed other State work, and it was not until the latter part of the year that the cement contract for the Coulee Dam project was arranged. A contract of 4½ million barrels of cement was placed with the cement companies in Washington in September of last year. As mentioned in the directors' report, the Olympic's portion of the contract is 770,000 barrels, deliveries to be spread over two years. As you would naturally expect, the price for a large contract of this type was keenly cut, and while the business will assist in keeping the factory running during the next two years nearer to its capacity than has been possible for some time past, the profit to the company will be almost negligible.

As regards the prospects of the present year, the outlook is better than it was when I addressed you last. Federal and State funds to be made available for highway programme during this year are said to total 1,800 million dollars, of which 700 millions are for construction and 175 millions for maintenance, exclusive of what will be spent by Federal projects on farm roads and streets. There is now greater optimism among those concerned with highway development than has been evident during the past five years. It is hoped that the State of Washington will benefit by this programme and that some considerable amount may be spent on road work.

The housing programme in the United States took longer to get under way than in this country, where the brick and cement trades have been very busy, but the Department of Labour at Washington estimates that there is an increase of residential building for February, 1936, over February, 1935, of 189 per cent., and for buildings of all kinds an increase of 86 per cent.—for the same period. Your works being situated in one of the chief lumber regions of the country much demand cannot, however, be expected for your production in connection with house building.

One interesting feature as affecting the use of cement for road-making has been the result of the unusually severe winter in the Eastern States of America. A report covering thirteen Eastern States shows that the main highways, which were constructed of cement, have withstood the severe test of alternate frost and thaw better than any other types of road surfacing. This is an important recommendation for the use of cement. It is likely that some of the repairing work necessary in the Eastern States will be carried out with cheaper types of surfacing. Officials of cement companies, however, and other informed sources express the belief that all major repairing will probably be done with concrete, as this type of surfacing has demonstrated greater resistance to climatic conditions.

Mr L. B. Stoddart seconded the adoption of the report and accounts, which were carried unanimously.

ARMY AND NAVY STORES, LIMITED

INCREASED TURNOVER AND PROFITS

The annual general meeting of the Army and Navy Stores, Limited, was held, on the 22nd instant, on the company's premises, Westminster, London.

Brig.-Gen. Sir Frederick Gascoigne, K.C.V.O., C.M.G., D.S.O. (the chairman), in the course of his speech, said: I was able to tell you last year that trade had shown an improvement on the previous year, which itself had shown an improvement on its own predecessor. I am glad to be able again to report a satisfactory increase in the turnover, which has resulted in increased profits, brought about not only by the increased turnover but by various economies which it has been found possible to establish without loss of efficiency. It is encouraging and significant to know that these increases have been contributed to by nearly every section of the business, both in regard to the money value and to the number of orders.

The improvement I mention can be fairly described as a general all-round improvement; no abnormal conditions to account for it, and one, therefore, which it may reasonably be hoped will continue at a gradually increasing ratio, provided that no outside influences cause a check.

We always seem to hold our meeting either just before or just after the Budget, but we could anticipate little hope of any assistance from the Budget this year, and so it has proved to be. The Budget will not help us nor could we expect it to do so in view of the many calls upon the public exchequer, at any rate in respect to releasing cash to be spent in the shops. Let us hope that the additional sense of security, for which the Budget provides, will create an air of optimism and cause people to spend more freely such meagre surpluses as a 4s. 9d. income tax—and super tax to match—leaves in their pockets; rather than to hoard it against an even more evil day which we hope will never come.

PROFIT AND DIVIDEND

With regard to the profit available, you will see that there remains for distribution a sum of £235,742 after deducting £34,166 already paid as interim dividend, and after adding the amount brought forward last year, namely, £120,966. It is proposed to pay a final dividend of 10d. per share, making a total dividend of 1s. 3d., or 12½ per cent., the same as last year.

The improvement in India was maintained, and, though it is very uphill work carrying on business in that country owing to the competition of the bazaars, where the prices of merchandise, whether proprietary or otherwise, are cut to ribbons, we are fulfilling a want out there, I hope and think to the satisfaction of our customers. Moreover, the gross profit we make is a direct help to our overhead expenses, and so long as we can hold our own as satisfactorily as we are doing at present, the maintenance of our business out there is well worth while.

As regards the London stores, we have well considered plans in hand for the opening out and regrouping of many of the departments, and when these plans have materialised it will be easier for those who are not so accustomed to the Stores as are most of those present to find their way about.

GREATER FACILITIES FOR CUSTOMERS

I referred last year to the greater facilities—in the way of improved telephone service and increased motor deliveries—we were giving to those living in the outer suburbs and the Home Counties, and the results have fully justified our efforts. More and more members resident in those districts are realising the economy and convenience of dealing with the Stores for the greater portion of their daily needs. Summarised, these advantages are:—One order; one delivery; one account.

We are thinking all the time of "service," for we realise it is good "service" all the time that the customer wants. He wants good quality, too, and through the lean times we have kept up our quality and refused to be tempted to use the lure of false cheapness by changing our quality to the second rate.

I told you last year that you had a sound balance sheet before you and that the Society was in a strong financial position. I have no hesitation in saying on this occasion that you have a still sounder balance sheet before you and are in a still stronger financial position.

Nearly three months of the present financial year have gone, and our progress continues, and I express the hope that unless anything unforeseen occurs we shall be able to show you even better results at the end of the current year, and I rely confidently on your support to see that this hope is fulfilled.

The report was unanimously adopted.

OXENDALE AND COMPANY (PROPRIETORS), LIMITED

NEW HIGH RECORD ESTABLISHED

The ordinary general meeting of Oxendale and Company (Proprietors), Limited, was held, on April 21st, in London.

Mr A. Stanley Smith, the chairman of the company, who presided, said that the object of the alteration in the articles of association approved at the previous extraordinary meetings was to enable the dividends on the preferred ordinary shares to be paid on May 1st and November 1st instead of on March 1st and September 1st, as at present.

Dealing with the accounts, the chairman said the increase of £6,060 in sundry creditors was partly due to the expansion of trade in the month of February and partly to additional provision for income tax necessitated by the higher profits earned during the last year; the reserve accounts had been increased by £3,000 to £58,500.

The necessity of providing for a growing turnover and of safeguarding profits against rising prices had resulted in an increase of £5,595 in stock to £43,906; the balance at the bank—£19,916—was evidence of ample liquid resources. The profit and loss account, including a dividend of £3,000 from the subsidiary, showed a trading profit for Oxendales of no less than £38,356, which enabled the Proprietor Company to pay the full dividend of 10 per cent. on the ordinary share capital.

The result was particularly encouraging to the directors, representing as it did another step towards the culmination of a definite plan; during the years of depression the board had had to take a very long view, and the steady advance had been very encouraging.

Another high record had been established in sales, which was all the more satisfactory, as unfavourable weather had completely spoiled the pre-Whitsuntide trade last year and caused a serious loss of turnover. Particularly good progress, also, had been made by the subsidiary—the Manchester Mutual Trading Association, Limited as regarded the current year, there did not seem to be any reason why further progress should not be made; the rising tide of employment was in their favour, and prospects generally appeared good.

The report and accounts were carried unanimously, and the meeting closed with a vote of thanks to the chairman, directors and staff.

STRAND ELECTRIC HOLDINGS, LIMITED

IMPORTANT ORDERS SECURED

The statutory meeting of Strand Electric Holdings, Limited, was held, on the 16th instant, at the Demonstration Theatre of the Strand Electric and Engineering Company, London, W.C.

Mr F. L. Blow, J.P. (the chairman), said that the revenue of the company would be derived entirely from profits made by the Strand Electric and Engineering Company, Limited, and its constituent concerns, all the shares of which were held by this company, and the directors would be enabled to declare a dividend at an early date covering twelve months' trading. Mr Phillip Sheridan, the managing director, had spent a lifetime in pioneering electrical work of a specialised nature. The premises were equipped and stocked to meet every requirement for stage work, indoor and outdoor illumination, flood-lighting and general electrical engineering.

NUMEROUS CONTRACTS ON HAND

Enquiries came from all parts of the world, and the fact that the company had been entrusted with the work of installation of stage equipment for the "Queen Mary" was a practical recognition of the outstanding position which the company held in the electrical engineering world. The contract had also been secured for equipment for the lighting of the new television studios of the B.B.C. at the Alexandra Palace. A considerable amount of work had also been carried out for H.M. Office of Works and the Department of Overseas Trade, for whom an order was in hand for the Empire Exhibition at Johannesburg.

Recent contracts included numerous theatres and cinemas throughout Great Britain, extensions to Covent Garden Opera House, the Shakespeare Memorial Theatre, Stratford-on-Avon, and work under C.B. Cochran control. Other contracts included work on flats in Grosvenor Square and other important buildings and factories in distant parts of the country. The forthcoming Coronation of His Majesty King Edward would give the company a unique opportunity of display work, and a very busy time was expected. The electrical industry might be said to be still in its infancy. There was an ever-widening field for the operations of well-directed enterprise such as theirs. The directors looked forward to the future with the utmost confidence.

Ford Cars and Fordson Trucks—
proved by the past—improved for the future

FORD MOTOR COMPANY LIMITED
ANNUAL MEETING

THE Seventh Ordinary General Meeting of the Ford Motor Company, Limited, was held on the 22nd inst., at Dagenham, Essex.

Sir Percival Perry, K.B.E. (the Chairman), said: Sales in the Domestic Market during 1935 were considerably in excess of the preceding year and constitute the largest output in the Company's history. The outstanding event of the season was our introduction to the world markets of the first £100 fully equipped saloon car. This car, known as our "Popular" model, maintains for quality and performance the highest Ford traditions. The new 22 h.p. V-8 is doing much to bring luxury car ownership within the means of those of modest income.

Commercial vehicle sales have been satisfactory in spite of the many restrictions and persecutions with which motor transport is afflicted. Improvement in agriculture has created extensive demand for Fordson Tractors.

Parliament continues to overtax domestic users and impede the progress of exports by the application of the absurd horsepower tax. It is high time that our laws were brought up to date.

In spite of the many difficulties encountered, your Company's export trade during 1935 showed a considerable increase, and all the Associated Companies, in which we have predominant interest through the medium of our Holding Company, earned profits during the year.

PROFIT AND DIVIDEND

The Company's entire plant and equipment have been maintained in a high state of efficiency and adequate provision to the extent of £714,370 has been made for depreciation and obsolescence. Excess of liquid assets over liabilities amounts to £2,094,532. The net profit amounts to £597,153 and the Directors recommend a dividend of 5 per cent. The recommendation is in accordance with the consistent and conservative policy always exercised by your Directors.

Our products are designed exclusively for peaceful pursuits. This opportunity is taken of denying in toto the rumours which have been circulated to the effect that we are developing aeroplane engines, mechanical warfare appliances or any other description of munitions of war.

Our interest in Associated and Subsidiary Companies is through our Holding Company in Luxembourg, which has again earned a profit. During the year the Holding Company became entitled to receive as dividends declared during 1935 by Associated Companies approximately £156,000. These dividends are not brought into the accounts of this Company, but the operating loss, viz., that incurred by the Near Eastern Branch, has been fully provided for. The Scandinavian group of companies showed improved results.

DEVELOPMENTS IN GREAT BRITAIN

The market for cars of small horsepower is extending rapidly to those who were formerly users of motor-cycles, and our Company is playing a considerable part with its £100 saloon car. There is still a large potential market to be explored.

I stress again the importance of the revision of Horse Power Taxation, both because it is unfair and because it is not devoted to the purposes for which it was imposed. Of the £540,000,000 contributed during the last 15 years by motor licence duties, petrol taxes and other impositions, less than half has been devoted to road improvements. More must be done to improve road conditions in this country, not only in order that motoring may become more economical and of more service to the entire community, but so that the safety of all road users may be assured.

The report was adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended April 18, 1936, amounted to £12,623,500, against ordinary expenditure of £11,939,000. After allowing for an increase in Exchequer Balances of £42,870, the operations for the week, as shown below, decreased the gross National Debt by £577,000 to approximately £7,925 millions.*

GOLD MARKET

Messrs. Samuel Montagu and Company write on April 22, 1936, as follows:—

The Bank of England gold reserve against notes amounted to £201,629,685 on the 15th instant as compared with £201,149,928 on the previous Wednesday. Purchases of bar gold announced by the Bank during the week amounted to £514,310. In the open market about £1,600,000 of bar gold changed hands at the daily fixing and was absorbed by general demand. Movements in the premium over gold exchange parities the tendency has been for this to decrease slightly.

Quotations during the week:—

	Per fine ounce	Equivalent value
April 16	140s. 10½d.	12s. 0.73d.
" 17	140s. 10d.	12s. 0.77d.
" 18	140s. 10½d.	12s. 0.73d.
" 20	140s. 10d.	12s. 0.77d.
" 21	140s. 9½d.	12s. 0.82d.
" 22	140s. 11d.	12s. 0.69d.
Average	140s. 10.25d.	12s. 0.75d.
April 23	141s. 0½d.	12s. 0.56d.

The s.s. "Strathmore," which sailed from Bombay on April 18th, carries gold to the value of about £688,000.

SILVER MARKET

The market has been active during the past week and persistent demand from the Indian Bazaars both for prompt shipment and forward delivery, together with some speculative inquiry, caused prices to advance sharply until 20½d. for both deliveries was reached on the 18th instant.

However, on the 20th instant with less resistance to the continued offerings on China account and speculative re-selling, prices fell sharply to 20½d., but in view of the rapid advance this reaction was not unexpected. Quotations recovered ½d. yesterday, but there was a further decline to-day to 20½d.

The tendency at the present level is uncertain, especially in view of the fact that it was officially stated in Washington that, in spite of the advance in London and New York prices, the United States Treasury silver price remains at 45 cents.

Quotations during the week:—

IN LONDON		IN NEW YORK	
Bar silver per oz. std.	Cash Two Months' delivery	Per Ounce	Per 999 fine
April 16	20½d.	April 15	45
" 17	20½d.	" 16	45
" 18	20½d.	" 17	45½
" 20	20½d.	" 18	No quotation
" 21	20½d.	" 20	46
" 22	20½d.	" 21	45½
Average	20.562d.		
April 23	20½d.		

The highest rate of exchange on New York recorded during the period from April 16th to April 22nd was \$4.94½ and the lowest \$4.93½.

DANIEL WILLARD President.

years, he regarded the outlook for copper as really optimistic—a statement which had a reassuring effect upon the United States market.

Sales on the London Metal Exchange: 1,350 tons on Monday; 1,400 tons on Tuesday, against 3,000 tons last week; 675 tons on Wednesday, against 1,850 last week. Domestic spot was quoted at 8.95 cents per lb. in New York on Wednesday, against 8.97½ cents a week ago and 8.70 cents a month ago. Wednesday's official closing price for standard cash in London was £37 2s. 6d. to £37 3s. 9d., compared with £37 3s. 9d. to £37 5s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 62,739 tons, show a decrease of 595 tons, while stocks of rough copper, at 6,973 tons, show a decrease of 62 tons on the week.

LEAD AND SELLER.—After exhibiting signs of weakness, both metals showed some improvement and the market closed on Wednesday with a better tone. Although political uncertainties are adversely affecting the initiative of consumers, demand now appears to be on the increase. No news has been forthcoming this week regarding the renewal of the Zinc Cartel, but it is learned that discussions to this end may be resumed in a month or so. Stocks of spelter in the United States increased by 4,324 short tons in March to 79,841 short tons, chiefly in consequence of a sharp increase in production from 36,228 to 42,483 short tons.

Sales of lead on the London Metal Exchange: 750 tons on Monday; 1,150 tons on Tuesday, against 1,650 tons last week; 600 tons on Wednesday, against 700 last week. The New York quotation on Wednesday was 4.60 cents per lb., against 4.60 cents a week ago and 4.60 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £16 per ton, compared with £16 a week ago.

Sales of spelter on the London Metal Exchange: 550 tons on Monday; 1,200 tons on Tuesday, against 600 tons last week; 625 tons on Wednesday, against 900 last week. Wednesday's quotation in East St. Louis was 4.90 cents per lb., against 4.90 cents the week before and 4.90 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £15 2s. 6d. per ton, against £15 1s. 3d. last week.

TIN.—Prices eased this week, mainly in response to the expectation that Bolivian shipments will increase as a result of the recent currency devaluation. Considerable quantities of ore are believed to have been held back by Bolivian mines in anticipation of the devaluation; this belief induced the International Committee at its Wednesday meeting to postpone fixing the quota for the third quarter of the year until May 26th. While there is some justification for this decision, supplies will be very scarce in coming weeks, should the anticipated increase in Bolivian supplies not be forthcoming. But Bolivia was in arrears at the end of March to the extent of about 7,730 tons.

Turning to the demand side, it must be remembered that tinplate mills in the United States are now working at 85 per cent. of capacity so that requirements will be rather large in coming weeks. Moreover, European consumers are poorly supplied and will continue to need considerable amounts of tin. Last week's increase of 116 tons in home warehouse stocks (to 558 tons) will thus afford little relief, while the freer offerings of the past few days provide no grounds for anticipating an immediate return of the market to normality. As has frequently been the case immediately before important meetings of the International Committee, the bulk of recent offerings came from the "group brokers." In view of Wednesday's decision by the International Committee, it would not be surprising if these offerings were now to cease.

Sales of tin on the London Metal Exchange: 200 tons on Monday; 175 tons on Tuesday, against 100 tons last week; 50 tons on Wednesday, against 105 last week. The New York quotation on Wednesday was 46.75 cents per lb., against 47.00 cents a week ago and 47.50 cents a month ago. Wednesday's official closing quotation in London for standard cash was £206 10s. to £206 15s. per ton, compared with £209 10s. to £209 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 558 tons, an increase of 116 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, at £200 to £205 per ton, remains unchanged. Quicksilver, on the spot, was quoted at £12 12s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £60 to £61 per ton ex warehouse, duty paid, as against £61 to £62 last week. Chinese wolfram for April-May shipment was quoted at 33s. 6d. to 34s. per unit, c.i.f., as against 33s. 9d. to 34s. 6d. per unit last week. Platinum (refined) was maintained at £7 per ounce.

TEXTILES

COTTON.—Manchester.—Business has given very little satisfaction to producers. Turnover has again consisted of small lots to meet urgent wants and buyers have not been any more disposed to anticipate future requirements. Raw cotton prices have tended to harden. Although the American Government is now releasing more material there are no signs of the level of prices being adversely affected. Business is being checked by the discount on prices for new crop futures in Liverpool. Weather advices from the American belt have been slightly better, but climatic conditions as a whole remain unsatisfactory.

There has been no expansion in business in piece goods. Trade has been of a miscellaneous character. There have been numerous attempts at transactions for India, and some fair lots have been booked in mulls and jaconets for Karachi, light whites for Calcutta

and dyed fancies for the up-country markets. Operations for China have been practically at a standstill, but further buying has taken place in dyed materials for Java and Singapore. A mixed business has been done for South America, chiefly in finishing fabrics. Certain fine goods have been in request for the Continent, especially Switzerland. Quite a useful business has been done for the Dominions and the Crown Colonies. Home trade purchases have been restricted and many cases have been reported of wholesale houses asking manufacturers to hold back deliveries.

Quotations for yarn have been firmly held. Not more than necessary buying has occurred in American and Egyptian counts for home consumption. A little more activity continues to show itself in fine yarns for India.

COTTON TRADE WAGES.—The Operative Weavers' Amalgamation, representing over 100,000 workers in the manufacturing section of the Lancashire cotton industry, have made an application to the employers for a wage increase of 15 per cent. on current earnings, and a minimum of not less than 7½d. an hour, equal to 30s. per week. The application was considered at a meeting of the Wages Committee of the Cotton Spinners' and Manufacturers' Association in Manchester on Tuesday last, and at the close it was announced that arrangements had been made for a joint conference with the representatives of the trade union on May 5. During the last six months the operatives have been agitating for an advance in wages, and the leaders, in addition to carrying out an extensive propaganda campaign, have taken a census of weavers' earnings which showed that at least 50,000 were in receipt of less than 30s. a week. It may be mentioned that since the war the weavers have suffered wage reductions on seven occasions, the last time being in July, 1935. The present rates of pay were legalised last July by the Minister of Labour under the Cotton Manufacturing Industry (Temporary Provisions) Act. The negotiations between the employers and the operatives with regard to this wages demand may be of a protracted character. It is admitted that the earnings of many weavers are very low and, if the union officials press the demand, there is a possibility of some advance being secured. The employers, however, will resist very strongly the establishment of a minimum wage.

JUTE.—Dundee.—Inactivity in the jute yarn and cloth markets is leading to further curtailment of production. The outlook for the home jute industry is anything but bright at the moment. The failure of the Indian Jute Mills' Association to secure agreement with the non-member mills on the question of working hours has resulted in the prolongation of low prices for jute goods made in India, and this naturally affects the level of quotations in other producing centres. Imports of these cheap Calcutta fabrics into this country, which are duty free, are increasing by leaps and bounds. Since the beginning of this year, the total quantity of Calcutta goods arriving in Dundee was approximately 13,000 bales, compared with an average of 18,000 bales during the previous six complete years. Efforts are being made by manufacturing interests in Dundee to secure tariffs on these jute goods imported from India. A tax on cloth and bags from foreign countries has proved very successful, and imports from the Continent are now very small.

Prices for raw jute have been very well maintained, with a firm undertone prevailing. Daisee-2/3 was reduced to £18 15s. for the full group, but recovered to £19 for April/May shipment, with new crop available at £18 17s. 6d., October/December. Old Crop Tossa-2/3 is quoted at £20 2s. 6d. and new crop at £19 17s. 6d. for full group, with fours at from £19, old crop, April/May. First Marks are offered at £22 12s. 6d. and Lightnings at from £20 17s. 6d. April/May, while new crop Lightnings are named at £21 10s. and Hearts at £20 7s. 6d., August/September. Spinners have bought very little during the past fortnight.

Jute yarns are very quiet and there is a tendency for prices to decline. Common 8 lb. cops have been sold at 2s. 0d. and 8 lb. spools at 2s. 1d.; below these rates spinners are refusing to sell. Twist is obtainable at 3½d. for 3-ply 8 lb., and sacking yarns are rather easier at 2½d. for 24 lb. weight and 3½d. for 8 lb. chains. Rove is down to £20 for 48 lb. and £16 for 200 lb., while the finer yarns are more or less neglected at 2s. 8½d. for second quality 8 lb. warp, 2s. 4½d. for third and 2s. 3d. for fourth. Carpet yarns have had a good spell at from 3½d. to 3½d. for 14 lb. warp.

Only trifling quantities of jute cloth are being bought as a rule, with few orders of note being received. Manufacturers are refusing to consider lower prices, as the loss already being made would be increased. Production is being curtailed and several establishments may close down in the near future if conditions continue as dull as they are at the moment. The price of 10 oz. 40 in. is 2½d. and of 8 oz. 2½d., but owing to keen competition good orders might be taken at something less.

Calcutta goods have improved during the past week, hessians gaining about 6d. by fractional daily increases. Negotiations for a settlement between the parties to the dispute in India are still proceeding.

GRAIN MARKETS

WHEAT.—The improved tone noted a week ago has been well maintained, prices on United Kingdom markets responding to the strength of Chicago and Winnipeg. These, in turn, have been stimulated by the continuance of drought in the growing areas and by political uncertainty abroad. The American winter wheat crop is reported to be deteriorating rapidly and the position of the Canadian Wheat Board has been correspondingly strengthened.

On Wednesday last, "May" futures were quoted in Chicago at 101½ cents per bushel, against 98 cents the week before and 96½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba (Vancouver), ex ship, 33s. 6d. per 496 lbs., against 33s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 33s., against 32s. 9d. a week ago. According to the *Corn Trade News*, total shipments of wheat and flour last week totalled 811,000 quarters, against 981,000 in the previous week and 1,328,000 quarters in the corresponding week a year ago.

LOUR.—The market is very steady in response to a better demand for home-milled, and has been stimulated by the strength of wheat. Shipments of flour from North America last week totalled 148,000 sacks, against only 59,000 in the previous week and 100,000

at 64½ cents per bushel in Chicago, against 61 cents a week ago, and 58½ cents last month. Quotations in London, Wednesday, "Plate," landed, 19s. 6d. per 480 lbs., compared with 19s. 6d. a week ago; "Plate," ex ship, 18s. 9d., as against 18s. 9d. a week ago; "Plate," "April," 18s. 9d., as against 18s. 6d. a week ago; yellow maize meal, ex wharf, was quoted at £5 7s. 6d. per ton, as against £5 5s. last week.

COMPARATIVE AVERAGES OF GRAIN.—The following table gives the estimated sale of home-grown wheat during the harvest years 1932-33 to 1935-36:—

	1932-1933	1933-1934	1934-1935	1935-1936
Estimated sales of home grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to April 18	85,580	182,286	145,394	154,083
33 weeks to April 18	7,591,282	9,344,931	11,992,628	11,478,146
Average price of English wheat per cwt.	s. d. 5 2	s. d. 4 5	s. d. 4 10	s. d. 6 6

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding week in each of the years from 1932 to 1935:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
Apr. 16, 1932	Cwts. 121,798	Cwts. 38,634	Cwts. 32,857	s. d. 5 11	s. d. 7 10	s. d. 7 5
Apr. 15, 1933	85,580	30,850	14,944	5 2	6 4	5 10

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-36, with comparative figures for 1934.

NEAREST FUTURE	Jan. 3, 1934	Jan. 2, 1935	Apr. 23, 1935	Dec. 31, 1935	Apr. 15, 1936	Apr. 22, 1936
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	65½	82½	88½	84½	81½	82½
Chicago (No. 2 Winter) —Cents per 60 lb.	84½	98½	99½	101½	98	101½

The visible supply of wheat in Canada amounts to 111,378,000 bushels, against 110,611,000 bushels last week, and 106,463,000 bushels in the corresponding week last year.

OTHER FOODS

BACON.—Prices again showed a sagging tendency at the end of last week, but demand has since improved somewhat and the tone of the market has become more steady. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 84s. to 88s.; Canadian, 80s.; Danish, 92s., as against 86s. to 90s., 82s. and 92s., respectively, a week ago. Arrivals in London last week included Danish, 13,666 bales; Canadian, 3,774; Dutch, 2,849; Lithuanian, 1,726; and Polish, 2,960.

BUTTER.—A quiet tendency was in evidence during most of the period under review, quotations being barely steady. On Wednesday, however, the market firmed up once again. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 87s. to 88s.; Australian, choicest salted, 87s.; Danish, 103s.; compared with 87s. to 88s., 87s. to 88s. and 105s., respectively, a week ago.

CHEESE.—Business has been moderate and prices show little change on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers', 80s. to 86s.; Canadian, finest coloured, 63s. to 64s.; and New Zealand, finest coloured, 53s. to 53s. 6d.; against 74s. to 86s., 64s. and 53s., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 5½ cents per lb., as against 5½ cents per lb. last week. In London, the market in Accra cocoa has had a firm tone, prices being higher on the week. On Wednesday last, good fermented new crop, "April-May," was quoted 24s. 1½d. per 250 kilos, c.i.f. Continent, against 23s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 11,795 bags; delivered, for home consumption, 4,284 bags; exported, 15 bags; stocks, 156,792 bags, against 190,990 bags a year ago.

COFFEE.—In London on Monday the spot market was quiet, pending the resumption of public auctions on Tuesday. Very little interest was shown at the latter, and the bulk of the offerings was withdrawn. The New York market has been quiet, with prices unchanged. On Wednesday, Rio No. 7 (cash) was quoted at 6½ cents per lb., as compared with 6½ cents per lb. last week and 6½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered, for home consumption, 138 cwt.; exported, nil; stocks, 11,519 cwt., against 18,456 bags a year ago. Central and other South American, landed, 7,791 cwt.; delivered, for home consumption, 1,943 cwt.; exported, 776 cwt.; stocks, 117,552 cwt., against 104,780 packages last year. Other kinds, landed, 11,377 cwt.; delivered, for home consumption, 2,886 cwt.; exported, 703 cwt.; stocks, 171,016 cwt., against 124,084 packages last year.

EGGS.—In consequence of shorter supplies, the Tooley Street market was firm on Monday. At Smithfield on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 9s. 3d. to 9s. 6d. per 120, as against 8s. 9d. to 9s. last week, while Danish (15½ lb.) made 8s. 6d. to 8s. 9d. per 120, against 8s. 3d. to 8s. 6d. last week.

FRUIT.—Business at Covent Garden showed an improvement towards the end of last week, states *The Fruitgrower*. New season apples continue an active sale, prices maintaining a good average. Pears have been doing very well, with all arrivals clearing readily at rather higher rates. Australian plums have encountered a fair inquiry, while South African pineapples are more plentiful. English forced strawberries are in increasing supply and show good condition and colour; but cold weather has restricted demand and prices of this fruit are easier. Grapes are not selling so well as recently. Oranges have generally deteriorated with the advance of the season and have eased in price. Lemons are a little easier, and grapefruit have been only a moderate trade at slightly lower rates.

MEAT.—Only a moderate business has been transacted at Smithfield Market this week, chilled beef having eased in price. On Wednesday last Argentine chilled hindquarters were quoted at 3s. 8d. to 4s. per 8 lbs., as compared with 3s. 4d. to 3s. 8d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. 2d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,199 tons, a decrease of 572 tons on the corresponding week last year. Beef and veal accounted for 4,303 tons, mutton and lamb 2,327 tons, and pork and bacon 1,059 tons, as compared with 4,807, 2,498 and 977 tons, respectively, in the same week of 1935.

PEPPER.—Wednesday's spot price for black Lampung (in bond) was 2½d. per lb., against 2½d. a week ago. Movements of pepper in London during the past week were as follows: Black, landed, 30 tons; delivered, 6 tons; stocks, 1,700 tons, against 2,157 tons a year ago. White, landed, 4 tons; delivered, 49 tons; stocks, 12,492 tons, against 19,761 tons a year ago.

RICE.—The spot price of Burma No. 2, cleaned, new crop, was 8s. 6d. per cwt. ex warehouse on Wednesday, as compared with 8s. 6d. per cwt. a week ago. "April-May," in singles to Continent and U.K., was quoted at 8s. per cwt., against 7s. 10½d. per cwt. a week ago. Movements in London during the past week were as follows: Landed, 54 tons; delivered, 80 tons; stocks, 977 tons, against 1,336 tons a year ago.

SUGAR.—The London spot market has been quietly steady this week, while the New York market has exhibited a similar tendency. The spot price in New York on Wednesday was 3-75 cents per lb., as compared with 3-75 cents per lb. last week and 3-60 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "May delivery" at 5s., against 4s. 11½d. to 4s. 11½d. a week ago. The movements of raw sugar, at public warehouses in London and Liverpool last week were as follows: Imports, 23,357 tons, against 10,841 tons last week and 10,083 tons in the same week of last year; deliveries, 14,370 tons, against 11,545 tons last week and 14,169 tons last year; stocks, 230,576 tons, against 221,589 tons last week and 172,429 tons last year.

TEA.—The week's offerings at the public auctions in Mincing Lane comprised 45,876 packages of Indian and 22,103 packages of Ceylon tea. When sales of Indian grades were resumed on Monday and Wednesday a good general demand was in evidence, prices for low grade and medium sorts showing a hardening tendency; but previous prices for the better kinds were not maintained. At Tuesday's Ceylon sales, on the other hand, cheaper teas were barely steady, but higher-priced teas were in active demand at advancing rates. The advance of 2d. per lb. in the tea duty, announced by the Chancellor on Tuesday, is expected to stimulate the demand for cheaper teas.

VEGETABLES.—The acute shortage of kitchen greenstuff continues, states *The Fruitgrower's* Covent Garden report, and anything of good quality is dear. Salads, however, have been in slow demand on account of the cold weather. Thus, cucumbers show a considerable drop in price, while tomatoes are not selling well; lettuce is very slow. Forced marrows are dearer, but house-grown beans and green peas are in increasing supply and have fallen in price. Forced rhubarb is doing rather better on account of the scarcity of outdoor. Carrots are scarce and parsley dear. New potatoes encounter a steady demand at the rather easier prices ruling, Malaga making about 15s. to 16s. and Mataro 21s. to 22s. per cwt. Meanwhile, business in old potatoes shows no new features and best siltland King Edward realised from 8s. to 8s. 8d. per cwt. at the Borough on Tuesday, against 8s. to 8s. 6d. last week.

MISCELLANEOUS COMMODITIES

RUBBER.—The market has been steady, with prices generally unchanged. The statistical position continues slowly to improve and the restriction scheme is clearly taking effect. In this connection it may be noted that a meeting of the International Committee is to be held on Tuesday next; some apprehension has been expressed in market circles concerning the possibility of a relaxation of the quotas and a decision to maintain these at the current level would probably have a stimulating effect on the market. The spot price in New York on Wednesday was 15½ cents per lb., compared with 16 cents per lb. a week ago and 15½ cents a month earlier. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 7½d. per lb., the same as on the corresponding day a week ago. In forward positions, business has been done at 7½d. to 7½d. for July-September shipment, as against 7½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 143,337 tons, against 144,275 tons a week earlier. A year ago stocks amounted to 165,247 tons.

VEGETABLE OILS AND OILSEEDS.—Quiet but steady conditions prevail. Demand for oils for both technical and edible purposes is fair, but is confined to immediate requirements. Support is forthcoming from the sustained demand for oilcakes. Linseed oil remains steady and unchanged on the week and with slight fluctuations has been at the same level for two months. The current price, ex Hull mill, for April delivery is £26 5s., while May-August and later positions are at a small premium. Export demand for refined cotton oil has fallen off and quotations are easy around £26 15s. per ton ex Hull, while crude Egyptian is offered freely at £24 5s. prompt. There was some further appreciation in soya oil, which is now protected by the 20 per cent. import duty.

In the market for linseed demand is principally for Indian, and for Calcutta May-June to Hull £12 12s. 6d. has been conceded. Plate is in slow request and largely nominal, but a little trade has been done on Continental account. Crushers, however, appear to have current requirements fairly well covered by seed afloat. Shipments from the River Plate last week were comparatively small. The quantity now afloat for Europe has been reduced to 149,500 tons (including 31,900 tons from India), or 18,700 tons less on the week. That destined for America is 37,500 tons, against 61,100 tons a year ago. Cottonseed is quiet, with business in black Egyptian afloat and April loading at £6 17s. 6d. For new crop, October shipment to Hull, £6 7s. 6d. has been paid.

THE FINANCIAL NEWS

Special articles due to appear next week on the Leader
Page of THE FINANCIAL NEWS are as follows:

MONDAY, APRIL 27—ARMAMENT METAL COMPANIES.
—This is the first of three articles, to appear on successive
Mondays, which will survey the investor's opportunities in the
Companies which produce the alloy metals used for armament
and engineering steels. This first article will deal with
Tungsten and Cobalt, both of which have experienced a heavy
increase in demand during the past two years. Companies in
this field include: Beralit Tin & Woolfram, Kramat Pulai and
Mawchi Mines.

TUESDAY, APRIL 28.—Continuing his series on Base Metal
Companies, this week our Special Mining Correspondent,
"Minotaur," deals with the second largest copper mining and
fabricating concern in the World: KENNECOTT.

WEDNESDAY, THURSDAY AND FRIDAY, APRIL 29
and 30, and MAY 1—Companies and their Profit-Earning
Capacity—No. 14—THE AUTOMOBILE INDUSTRY.—
Continuing our special series on leading Companies and
their profit-earning power, we start this week on a full scale
analysis of the private and commercial motor industry, and
the individual concerns operating it. This series will cover
individually all motor manufacturing firms and the principal
ancillary companies in which there is investment interest.

This week's three articles provide a general introduction to
the study of prospects for the Companies and their Profits.
Wednesday, April 29—The Automobile Industry—Its back-
ground and its prospects.

Thursday, April 30—The Private Car Industry.

Friday, May 1—The Commercial Motor Industry.

In the following week, companies' prospects will be con-
sidered specifically, including Austin, Morris, Ford, Standard, etc.

SATURDAY, MAY 2—THE PLASTIC INDUSTRY.—A
Special Correspondent reviews the growth and prospects of
an industry which is widely expected to be one of the key
industries of the future.

A SELF-BINDER

FOR

The Economist

Week by week you keep your copies of
"The Economist," and ultimately you either
file them or bind them. Doubtless you are
accustomed to the annoyance which attaches to
the ordinary binder—the difficulty of reading
half the left-hand page and the unwieldiness
of the device generally.

We are able to offer our readers a binder which
overcomes these irksome difficulties and is, in
our opinion, the most efficient contrivance for
the purpose we have yet seen.

It holds three months' issues and index, it
has no wires, clips or metal contrivances,
and each issue can be bound up in an instant
in such a way that it can be read as easily
as a well-bound book.

IF THE LEAGUE DIES

THE 11th of this month will be a prominent date in the history of our civilisation. On that day the Council of the League of Nations is to reassemble; and the real question on its agenda will be whether the League is to live or die.

If the League is to live, Italy will have to be prevented at last from achieving her aims in the war of aggression that she is waging in breach of the Covenant. Now that things have been allowed to drift to the edge of Niagara by the inaction of the French and British Governments, a last effort to save the situation will entail drastic measures. Probably, by now, the League can only be saved by our closing to Italian shipping the maritime approaches to the Suez Canal; and obviously this action, just because it would still be effective, would involve us in a serious risk of having our next war to-day instead of to-morrow. The risk would be restricted, of course, to a minimum if Great Britain and France agreed to take it together; for then the other sanction-taking Powers would almost certainly follow this Anglo-French lead, while Italy might hesitate to turn and attack so formidable a posse of constables. Whether France will be ready after next Sunday's elections for so great a change we cannot yet say. We certainly cannot count upon it. And, if not, what should England do?

By the terms of Article XVI of the Covenant, it is not only our right but also our duty to fulfil our covenanted engagements on our own, whatever our fellow States-members may or may not do. Our duty here is certainly also our interest, since the collective system of security which is embodied in the League is (it cannot be repeated too often) the last as well as the first line of defence for the British Empire. At the same time, we have to face the prospect that Mr Baldwin's Government will let the League die on the 11th for the sake of putting off the risk of war from to-day till to-morrow. If they take this fateful decision and make it a question of confidence, they can almost certainly count on a majority in the House of Commons. And by so doing the League's doom will be

sealed. So we have to face the possibility that the League may be *in articulo mortis*, and to ask ourselves: "Little man, what now?"

In general terms, the answer is patent. If the League dies, then we shall all revert to the traditional beggar-my-neighbour game of seeking our security through the use of armaments as instruments of national policy. This is a policy which always defeats itself. Its most potent weapon is an alliance; and if the Power of which we are afraid arms itself with allies, we can no more afford not to do likewise than we can afford not to lay down battleship against battleship, or bombing plane against bombing plane. Accordingly, when States are arming competitively against each other, they cannot help lining up in two opposing systems which quickly clash in a general war. And so, if the League dies, who will dare scoff at the forecast, made by Mr Churchill in the Budget debate on Thursday of last week, that the next European war will come "within the lifetime of the present Parliament"?

If this should be the fate in store for us, who will be fighting whom in the new bout of international anarchy? The first point which we must frankly recognise is that the answer will scarcely depend at all upon our own choice. If once we abandon our great post-war effort to bring international relations under the control of a moral and rational order, we shall place ourselves once more at the mercy of blind, inhuman, mechanical forces. We shall be in the grip of the goddess whom our Communist contemporaries call "historical necessity," and whom the Greeks (when she was destroying them) called *Fortune*. Tyche's other name is *Kali*: the black goddess with the necklace of skulls.

Who then, if the League dies to-day, will side with whom in the war of to-morrow? Will France and England fight Germany and Italy? Or will Italy and France fight England and Germany? The French, of course, and that France, Italy and England will all be on the

against Germany; while Mr Baldwin and his supporters are perhaps hoping that, when France and Italy fight Germany, England will be able to "get by" once more—as she is "getting by" so splendidly in the Italo-Abyssinian War—by remaining neutral with a benevolent inclination towards the Italo-French *bloc*. But it is all too probable that the English hope of preserving neutrality in the future European war will prove as illusory as the French hope of fighting it with a reconstructed Stresa Front. Can we rule out the possibility that one of the first two alternatives may be the final choice?

Of course, the French and English will not give up their anaesthetising illusions without a struggle. If the League dies on May 11th, its cowardly betrayers will vie with one another in protesting that the League is still alive; that the blow dealt to it by Mussolini has not been fatal; that Great Britain has suffered neither national defeat nor diplomatic humiliation; and that, after giving Abyssinia a hasty burial, the Stresa Powers can settle down together again as though nothing unpleasant had ever happened to disturb their harmony. We venture to predict with some assurance that this is not the way in which—if the League dies—the next chapter of history will unfold.

We may be asked: Why should Britain not swallow pride and humiliation alike, and after a decent interval bury the hatchet with Italy? There is a conclusive answer. The people of this country are, by now, fully seized of the importance of Japan's and Italy's acts of wanton aggression. If a British Government asks them peaceably to lie down with one proven aggressor, in the hope of turning away the covetous eyes of another, the same shrewd indignation will arise as almost swept the Government from its seat four months ago. Even considerations of power-policy show that Britain's interests can in no way be served along that path. For the conquest of Abyssinia, which France has made possible for Italy by sabotaging the League, is only a first step towards Mussolini's intended re-acquisition of the African and Asiatic provinces of the Roman Empire. His next step will be to extend his dominion over the whole of the Mediterranean and the Nile Basin and the Red Sea.

That can only be done at the cost of the British Empire. Will the English be willing to pay Mussolini's price for letting us off a war to-morrow as well as to-day? His price for that will be the surrender of Malta, Cyprus, Egypt, the Sudan, Palestine, British Somaliland, Aden, and perhaps Kenya into the bargain, and the setting back of the eastern bounds of British sea-power from Singapore to Gibraltar. This Italian bill is so huge that, long before it is presented, the Government at Westminster may prefer to pay the smaller bill which will be presented by Hitler (just the restoration of the former German colonies) as his price for fighting our battle against Italy with German blood.

But is it certain that the dictators must necessarily find themselves in rival camps? Honest men, they say, enjoy their own as long as thieves fall out. But when thieves put their heads together the outlook for men of property is grim. The assumption that Fascist Italy and Nazi Germany are, in the very nature of things, bound to perpetual enmity because of an independent Austria, the Brenner frontier, and thousands of Teutonic folk in the South Tirol may well prove an illusion if the "hungry ones" should agree to eat up the weaklings, morsel by morsel. Germany and Italy are incalculable Powers. Their systems are based on principles which are fundamentally incompatible with democracy, and which decry the sanctity of international obligations and commitments. He would be a bold democrat, indeed, who reposed absolute trust in either the one or the other in a struggle for the security and peaceful development of Europe; and it may yet prove that, if international law be jettisoned, the final struggle will become a struggle between dictatorship and liberty. The alternatives, indeed, are between the knees of the goddess Kali.

Only one thing is certain. Rapid re-armament based purely on "British interests" are but us in conflict, sooner or later. For on any side of our "interests," which we are feverishly preparing to protect without reference to the League, with those of hungry aggressors is bound to occur. And what comes after that? *La Jacquerie*. Is not the salvation of the League after all more worth fighting for? At any rate, it is being the cheaper fight.

ARMS AND INDUSTRY

"RE-ARMAMENT Budget No. 1" has come and gone. We have returned to £800 million Budgets, with the certainty of Supplementaries amounting this year to a further £15 millions for armaments and perhaps another £10 millions for civil subsidies. Our armaments expenditure will this year be equivalent to almost a quarter of the Budget; and we are committed to an increase from the envisaged minimum of £173 millions this year to annual minima of £200 millions in each of the four succeeding financial years, 1937-38 to 1940-41. Will re-armament expenditure stimulate recovery further; or will it force investment into less reproductive channels, under Government aegis? And how will it affect industry?

The estimated extra expenditure on re-armament, over and above the 1934-35 level, amounts to about £60 millions this year and to about a minimum of £75 millions in each of the years 1937-38 to 1940-41. Much of this increased expenditure will be for personnel, clothing, barrack equipment, etc.; but the rest will necessarily be confined to a narrow section of the national productive machine, e.g. in the main to a few aircraft manufacturing concerns, to three or four steel and armament firms, and to one or two naval shipyards. The mainstay of our domestic recovery, hitherto, has been the "housing boom." We may not be far wide of the mark if we put the value of net new investment, in dwelling houses alone, in the neighbourhood of £50 millions in 1932 and £110 millions in 1935. Municipal and industrial constructional activity, more recently, has shown signs of expansion to offset a possible falling-off in dwelling-house construction. Inevitably, the necessity of concentrating significant annual increments of Government-controlled expenditure on a few elements in the national economy involves the risk that the normal development of the trade cycle may be replaced by a "jam" at the points most affected.

In British industry as a whole, while "bottle-necks" may occur here and there, there is no question but that the industrial machine could meet the immediate increased demand for munitions, etc., without distortion. No capital ships can be laid down till next year; then only two are scheduled for building. Yet in 1933 we were building four-times the amount of mercantile shipping we are now engaged on, and constructing eight new capital ships into the bargain. Shipbuilding requires steel plates—a form of steel only used in ships. There is no doubt that when the real increase in naval building begins a shortage of crude steel, or a diversion of it from civil demand (e.g. for building purposes) may develop. But that time is not yet; and when it arrives the expected slackening of the "housing boom" may set free capacity for armament purposes. Meanwhile there is every reason to say that the current small increase in armaments expenditure—only "small" relative to the total output of industry—need not occasion a general rise of prices as the result of a "jam" in the iron and steel industry. Nor need it occasion more than a temporary shortage of skilled labour and a consequent rise in certain wages.

Yet it is only wise to issue a warning about certain aspects of the Government's current and future increased expenditure on their re-armament programme. It is notorious, for example, that during the war years unreasonable obduracy on the part of the Admiralty in insisting upon priority for naval requirements held up the supply of munitions for the land forces, who were in greater immediate need of them. We trust the Government have instructed the Minister for the Co-ordination of the National Defence Services to set to work at once to obviate any recurrence of such sectionalism. The Navy, at its bases, even in the worst possible foreseeable emergency, should be able to be fully equipped with munitions, without upsetting the allocation of contracts in the re-armament programme as a whole. Nor should the present concentration on Air Force requirements be permitted to oust all considerations of the other Services' needs, nor, *a fortiori*, of normal industrial requirements. Again, the "housing boom" has spread to all kinds of industrial activity all over the country; but the manufacture of arms, munitions, aircraft, engines, warships, etc., is highly specialised. Nazi Germany, starting her rapid

8 KING WILLIAM STREET, LONDON, E.C.4

re-armament "from scratch" in 1933, was fortunate enough to have a surplus capacity in all sections of her heavy industries. This surplus capacity had been created in part, ironically enough, by loans from overseas designed to improve her ability to pay reparations. In Great Britain, on the other hand, since the devaluation of sterling and the rapid raising of new protective duties on imports of iron and steel products, machinery, tools, etc., the national capacity to turn out production goods has been increasingly occupied by the recovery in domestic demand. A sudden concentration of Government orders (enjoying "priority" rights) on one or two key points—e.g. machine tools, munitions, aeroplane engines and certain machinery—is bound to cause some dislocation in these particular industrial, raw material, or labour markets, with a consequent tendency for certain prices to rise, and for civil deliveries to fall into arrears.

"Bottle-necks" in industry are already apparent in the metal trades—chiefly in machine tools and certain sections of engineering. Their existence is evidenced by the inability of commercial firms to secure deliveries from certain "key" producers in a reasonable time. Moreover, the Government have adopted the ill-starred system of "deferred price-fixing" in awarding contracts, under which contractors are required to proceed with work on the understanding that contract prices will be fixed when sufficient work has been completed to enable a "fair price" to be determined. Consequently, wherever a scarcity of labour or materials is encountered, Government contractors are enabled to bid up prices sufficiently to guarantee them their supplies. Complaints are already being heard from purely commercial firms in the engineering industry that their costs are rising, and their limited supply of skilled mechanics is being depleted. Certain branches of the commercial aircraft industry, notably the equipment section, aptly exemplify this tendency. Again, there is little doubt that the output of blast-furnace coke, pig iron and various semi-finished products is below demand at current prices. Export trade is being neglected; for armaments and home trade have first claims on the output of machine tools, engines, machinery, etc., though it is in our export trade that most unemployment still remains. Even firms which need these articles for "civil" purposes are beginning to complain of arrears in deliveries, and of difficulty in placing new orders for completion at current prices within a reasonable period.

As far as the prices of iron and steel are concerned, there is a cogent moral in all this. High duties on imported iron and steel, secured without the reorganisation in the industry demanded by the Chancellor and the Import Duties Advisory Committee, plus a low quota for imports, secured by the hard bargain imposed (with the Government's active support) last year on the Continental steel cartel, may go far to entrench the unco-ordinated iron and steel producers in a monopoly position. This may bear heavily for a time on "civil" industry.

One thing at least is clear. The Government have incurred responsibility for increasing the demands upon the capacity of certain sections associated with those heavy

trades which condition the costs of British industry. The corollary of that responsibility should be a readiness to take and exercise power to prevent monopolistic exploitation, and to ensure a minimum disturbance in these industries. The country will not allow sectional profiteering to ensue from the country's needs, without more than a murmur. Whether the Government will, ultimately, be driven to adopt further measures in the sphere of monetary policy to keep "civil" recovery going is another question, whose answer may well depend on the way the re-armament programme, in fact, impinges on industry. The authorities, in short, may find it anything but simple to maintain and control, in double harness, two "booms"—"civil" and "military"—which differ radically both in nature and origin.

THE DIESEL ENGINE

THE development of the diesel engine, like that of the majority of mechanical devices, has been the result of the omnipresent human desire for increasing convenience, at reduced cost. The first commercial diesel engine made its appearance in 1897, at a time when the majority of engines of the internal combustion type were driven by gas. The development of the gas engine relieved its users of the necessity to light fires and raise steam many hours before the beginning of each day's operations, and eliminated the banking of fires, the cleaning of furnaces, the removal of ashes, and the multitude of other duties involved in the generation of steam. The gas engine could be started at relatively short notice; it used its fuel while in service, and no longer; and, once started, it needed far less attention than any steam plant.

The early oil engines were developed to bring the conveniences and economies of the internal combustion engine to agriculturists and others outside the areas in which town gas was obtainable. The initial fuel was lamp oil, for which, even in early days, distributive facilities were well organised. The process of starting was more protracted with oil than gas. The modern petrol engine starts at the touch of a button, but the vaporiser of a paraffin engine required preliminary heating by a blow-lamp for about 15 minutes. The earliest types were not altogether economical—or, as engineers would say, they were not thermally efficient. They tended to "soot up" badly, and required frequent cleaning, or "decarbonisation." Nevertheless, increasing demand for these engines, at home and abroad, prompted extended experiment and research to secure improvement of their performance.

Coincidentally with the development of the internal combustion engine using liquid fuel, the whole of Great Britain became equipped with electrical generating stations. It was in this particular field that the diesel engine of to-day was largely developed. One of its attributes, which encouraged its adoption by electrical and other authorities, was its ability to use the products of the commercial distillation of petroleum, other than lamp oils or the lighter petrols. It could be fed with the heavier distillates, which,

at that time, were obtainable at a price less than half that of paraffin. When it was realised, moreover, that "compression-ignition," with a smaller space in front of the engine piston, produced an increase in "thermal efficiency" approaching 100 per cent., the application and development of this type of oil engine proceeded by leaps and bounds.

The diesel, or compression-ignition, engine requires no preliminary heating. It can be started and put on full load in less than a minute. Its cycle of operations is simple, whether on the four-stroke or the two-stroke principle. The four-stroke-cycle engine operates somewhat on the lines of the automobile engine, except that the out-going piston draws in atmospheric air only (not air and fuel), through an admission valve which is mechanically closed at or just after the end of the out-stroke. The inward movement of the piston, by the continued rotation of the flywheel, causes the air which has just been admitted to become highly compressed and heated, in the same way as the air in a bicycle or motor pump becomes heated when a tyre is being blown up. At, or just before, the completion of the compression stroke, a fuel valve is mechanically opened and the liquid fuel is injected into the heated air in the form of a fine mist or spray. Ignition and "internal combustion" ensue immediately and the consequent generation of heat creates the force which drives out the piston and rotates the engine crankshaft. Just before the end of this "combustion" stroke, the exhaust valve opens, and during the next instroke of the piston the hot residual gases are expelled, before the re-admission of air for the beginning of the next "cycle." In the two-stroke-cycle engine the same sequence occurs, but the combustion stroke and the compression stroke are each slightly shortened, in order that exhaust of residuals and admission of fresh air (under pressure) can be completed in the short interval between the end of one and the commencement of the other. Thus, in a two-stroke engine, each cylinder gives an impulse at every revolution of the crankshaft; whereas, in a four-stroke engine, each cylinder gives but one impulse in every two revolutions.

During recent years, the compression-ignition engine has been made simpler mechanically by the use of a highly efficient fuel feed pump for injection purposes. This eliminates the use of an integral compressed air unit, formerly considered necessary for pulverising the fuel and introducing it to the cylinder at a pressure considerably higher than the compression pressure attained by the movement of the engine piston. The need for high pressure air receivers and "intercoolers" has also been eliminated. Compressed air is still required for starting the engine from a standstill, but this air does not need to be highly compressed. The success of the compression-ignition engine with "airless," "mechanical," or "solid" injection, as it is variously called, has been mainly due to the work of British engineers. Such a method was in fact, patented by Stuart Akroyd, of Bletchley, before Diesel wrote his famous treatise on the principles of the engine now coupled with his name.

The rapid technical progress of the diesel engine has been accompanied by a steady extension of the fields of its employment. Unfortunately, statistical evidence on this point is somewhat meagre. The mercantile marine, however, has for years past favoured the motor-ship in preference to steam-propelled vessels, as is revealed in the annual reports of Lloyd's Register of Shipping:—

WORLD MERCANTILE TONNAGE CLASSED BY LLOYD'S REGISTER
(In thousands of gross tons)

1935-1936	63,727	43,360	9,062	11,305

Many vessels propelled by steam use oil fuel for various reasons, including ease of handling, avoidance of the clinking of coal fires in rough weather with its inevitable risk to stokers, lessened difficulties of bunkering, etc. In such ships diesel engines are used for generating electric current for lighting, pumping, ventilating, refrigerating and a multitude of auxiliary services. In submarines, the diesel engine has proved to be the most suitable means of propulsion. On land, the use of the diesel engine has also increased rapidly. For example, the compression-ignition engine imposes a useful check upon the price charged for electricity from the "Grid." It is being increasingly installed in steam-driven electric power stations for emergency use, to operate the multiplicity of subsidiary but vital apparatus, which must be made available before the complicated system of steam generators, feed pumps, condensers and turbo-driven alternators can be put into normal service. For water pumping, whether for drinking and industrial purposes, or for dealing with a sudden influx of storm water to prevent flooding, the diesel engine is desirably immune from failure at inopportune moments. For reasons of public health, sewage pumping is similarly free from outside interference if operated by diesel engines.

In road transport diesel engines are tending to displace the petrol engine from certain uses. Despite the increase in the taxation of heavy oil for traction purposes, the municipal and public transport services are adopting the diesel engine in ever-increasing numbers. A committee of the Municipal Tramways and Transport Association (Incorporated) give the following figures:—

CHANGES IN THE TYPES OF OMNIBUSES OPERATED BY THE ASSOCIATION BETWEEN 1933 AND 1935 (21 MONTHS)

Type of Vehicle	Sept., 1933		June, 1935		Change
	Number	Per cent.	Number	Per cent.	
Petrol Omnibuses	5,206	93	4,718	73.5	- 488
Diesel Omnibuses	389	7	1,707	26.5	+ 1,318
Total	5,595	100	6,425	100	...

The Germans have already solved the technical problem of producing a diesel aero engine which gives a longer range of action for a given weight of fuel.

It will be seen that the application of the diesel engine has already made great strides. Its possibilities, however, are far from being exhausted. In a number of fields, including mercantile shipping, the use of the compression-ignition engine has made more rapid headway abroad than in Great Britain, which has an abundance of domestic coal supplies. But its use may well increase with further reductions in the cost of producing oil from coal.

GERMANY RE-VISITED

(BY A CORRESPONDENT)

IN Germany to-day there are, broadly speaking, two parties and two issues. The dominant party is, of course, Herr Hitler's own, which mainly consists of low-brows not more than thirty or less than ten years younger than their Führer (who celebrated his forty-seventh birthday last week). The other party (which, it goes without saying, is overwhelmingly outnumbered) consists of high-brows who are either older than Hitler or less than ten years younger—using "high-brow" in the sense of a person who has a religious soul or a cultivated mind, or both. In the Dark

Ages the two qualities are apt to go together. While these are the two parties, the two issues are the education of the younger generation and foreign affairs.

The educational issue is the more acute; and this not only because it comes nearer home, here and now, to every man, woman and child in the Reich, but also because both sides are equally convinced—and, in the case of Germany, at any rate, the belief is justified—that the way in which the rising generation is brought up is going to determine the answer to every other question of the future. In this context, "education" must, of course, be understood in the broadest sense as meaning the whole upbringing of the child—bodily as well as spiritual, and moral as well as intellectual. It includes everything that contributes to a *Weltanschauung*—and the Nazis are determined that the present rising generation in the Third Reich, and all its successors after it, Reich without end, shall take the impress of the Nazi *Weltanschauung* and shall have none other gods but Blood and Soil. If they have their way—and they rightly regard this battle as more vital for their cause than any other on either the home or the foreign front—then, thirty years from now when the last surviving representatives of the high-brow species will have died off, there will be no high-brows in Germany ever again. Your German will be a Nazi from the age of fourteen, when he enters the youngest grade of the tribal organisation, until his dying day: a veritably Spartan *Lebenslaufbahn*.

In this systematically and intensively inculcated neo-barbarism there is much that is superficially attractive and something that is solidly good. If you visit, for example, one of those settlements of girls who have volunteered for six months' labour service on the land—to help the farmers to gather in their harvests and the farmers' wives to look after their children—you will see an idyllic picture (not wholly false) of health, faith and innocence. It is an innocence which would be proof against any revelation of the things which the Leader and his lieutenants have had to do in order to fight their way to power and that they still have to do in order to hold their dizzy position. If you told them the truth, the young people would reject nine-tenths of the facts as sheerly incredible, while they would defend the remaining tenth (which would, of course, be the least damaging) as a regrettable but necessary commission of a little evil for the sake of securing a tremendous good. Whatever enormities may be committed in the future by the neo-barbarian totalitarian state the great majority of the tribeswomen and tribesmen will assuredly be as healthy, loyal and innocent as these young girls. Even the young men who loyally respond to their tribal education by getting themselves burnt to death in dropping poison and explosives upon the tribal enemy (whoever he may be) may be admirable and even lovable creatures in their way!

But which *Weltanschauung* is actually going to capture the rising generation in Germany? The neo-barbarism of the Nazis? Or the old-fashioned ways of life represented by Christianity and by Liberalism (Communism in Germany has gone to earth)? To-day, undoubtedly, the Christians, as well as the Liberals, are despondent, while the Nazis are confident. "The Nazis," a Christian will tell you "are deliberately, and successfully, making martyrdom impossible for us. They always avoid frontal attacks which would justify an uncompromising resistance. And even if we did bear witness unto death, the Secret State Police and the Propaganda Ministry between them would take care that nobody ever heard about it." The prosaic truth is that martyrdom implies publicity; and, in a latter-day totalitarian state, all the means of production—or restriction—of publicity are monopolised by the tyrant and his henchmen.

And what about the question of peace or war? To this question, too, the opponents of Nazidom in Germany give a pessimistic, and the Nazis an optimistic, answer. The high-brows expect war within a year or two; the Nazis are looking forward to peace.

What kind of a peace, though, is it that Hitler expects and means to have? *Ex hypothesi*, it is not the Peace of Versailles, for one of Herr Hitler's twin rôles on his home stage is that of Germany's liberator from "the Versailles Diktat" (his second rôle is that of Germany's, and Europe's, rescuer from the jaws of Communism). Nor, again, is Herr Hitler's peace the peace of Moltke's collective security. In von Moltke's famous phrase, Herr Hitler

would assuredly say of this collective kind of peace—supposing that he were speaking frankly—that "it is a dream, and not even an agreeable one." For Hitler, the Covenant is primarily Chapter I of the Versailles Treaty—a device for enlisting the ex-neutrals in the defence of the ex-victors' war gains. Having now succeeded in tearing up all the other non-territorial chapters of the Treaty, Herr Hitler is willing to rejoin the League—with a request to us to show him the courtesy of publicly divorcing Chapter I from the remainder of the odious and obsolete Versailles instrument. He is willing, but he is not enthusiastic; and he will not be so hypocritical as to conceal his satisfaction if the present system of collective security is successfully broken up, and the principle itself discredited, by Mussolini.

What is the peace, then, that Hitler wants? Substantially, his notion of peace is the same as Mussolini's, which is recorded in the original Italian version of the subsequently watered-down Four-Power Pact. Like Mussolini, Hitler wants a joint armed hegemony of the four European Great Powers. The Big Four are to stand back to back; and to turn their arms outwards only. The two sated partners, England and France, will not be called upon to do any of the fighting or to make many of the sacrifices, but they will be expected loyally to do their duty by their two hungry comrades; and this loyalty, which is asked of us, means giving the two hungry and willing Powers a free hand to serve as Europe's champions against outsiders—with the corollary that the labourer is worthy of his hire. Nazi Germany, as well as Fascist Italy, has her social mission, for if it is Mussolini's mission to spread the European light of Fascism in darkest Ethiopia, it is Hitler's mission to defend the eastern marches of Europe against the Russian flood of Communism. Hitler is as genuinely shocked to see France betray his Europe by making a pact of mutual assistance with the Soviet Union as Mussolini is shocked to see England betraying Mussolini's Europe by taking the lead in applying the Covenant for the benefit of a black Abyssinia!

In striking this posture of Europe's warden of the Russian marches, Hitler is unquestionably sincere. He has proved his sincerity by at least one immensely difficult and unpopular act—his pact with Poland, which means renouncing the Corridor and Upper Silesia for the next eight years. This is Hitler's contribution (and it is a heavy one) to his self-assigned task of consolidating Europe's anti-Russian front. But does he really believe in this Russian menace, when to our eyes it is patent that Soviet Russia to-day is as pacific—and as apprehensive of herself being attacked—as *bourgeois* France? Well, Hitler is not a man of science, but a histrionic artist. He does not ask himself: "Is Russia aggressively-minded or not?" He simply says to himself: "I, Hitler, the little man commissioned by powers higher than myself, am intuitively conscious of my mission to be Germany's—and Europe's—saviour from the Communist menace; and, obviously, if Saint George is Saint George, the Dragon must be the Dragon."

Then does Hitler mean to attack Russia in the name of defending Europe, and so, as his reward for this European service, to win for his Third German Reich a Rosenbergian Empire extending from the Gulf of Finland to the Sea of Azov? It is extremely unlikely that Hitler's conscious ambitions to-day are on anything like so grandiose a scale. It is only the *Anschluss* of Austria that, in some form or other, he means, and expects, to secure—and that is really not an unreasonable ambition, however upsetting it might be for the present European balance of power.

On this showing, Hitler is not looking towards war, even on his eastern frontiers. But is he travelling towards it, so, the same? Unhappily, one cannot feel at all sure that he is either going where he is looking, or looking where he is going. For he cannot, with impunity, go on and on repeating these violent anti-Russian speeches and gestures which German rôle on the home stage requires of him. Hitler's pious, which is driving the Russians to make counter-attacks at most business gesticulations; and this is forcing all the little states to choose between Germany and Russia to take sides in a view of the a conflict which, if it comes, will, for that, in foreign trade virtually impossible to localise. This is the danger which Germany's domestic system, a propaganda evokes in Europe.

POLITICS AND LIBEL

Of late years our English Law Courts have been suffering from a libel-complex, for which many a plaintiff has had cause to be grateful. Juries seem to have grown more and more tender-hearted; and some of His Majesty's judges, taking an increasingly serious view both of the wickedness of criticism and the sordid motives of the Press, have employed on the Bench the art of advocacy which they learned at the Bar to stimulate the jurymen to award swingeing damages. Comments which less judicial minds would regard as harmless or justifiable have been treated by the judges as gross defamation; and plaintiffs, encouraged by the prevailing fashion, have brought actions that in earlier generations would have been laughed out of Court. A gentleman who is described as a company meeting agitator has the wound salved by the application of £2,500, and a singer who is criticised as making use of the intrusive H—of saying pi-hilot when he means pilot—receives a trifle of £2,000. Solicitors and counsel, noting the growing generosity of the Courts, advise their clients accordingly, and all negotiations between plaintiffs and defendants are tuned to the appropriate key.

Hitherto this habit of mind has been concerned mainly with matters of personal criticism, but there has been an obvious danger of its spreading, with grave results, into public life and political criticism. That danger is now developing. The fashion of bringing actions for unfavourable comment is invading the field of politics. Last year, the *Morning Post* printed as a headline the words "Italy Climbs Down." Lord Kilmaine, a member of the House of Lords, considering (as he had every right to do) that the words were ill-timed, asked the Government whether they were not an abuse of the freedom of the Press, and suggested a form of censorship. The *Morning Post*, considering (as it had every right to do) that the attack on it was unjustified, retorted with the following comment:—

Lord Kilmaine, an Irish representative Peer, whose part in our political life has hitherto escaped notice, emerged from obscurity to deliver quite irrelevantly an attack on the *Morning Post*. Though the questions agitating our politics of recent years have failed to stir Lord Kilmaine from a no doubt prudently imposed silence, a headline has at last broken down his reserve. . . . Possibly those who drew the brief were afraid of overloading their advocate who, it is evident, knew nothing of his subject. . . . Lord Kilmaine's impertinent intrusion would not deserve notice . . . but to take a charitable view we must assume him to be only the unwitting tool of others who needed a not too sophisticated agent for their ends.

The tone of this passage may not, perhaps, suit everybody's taste. So far, however, as the charges contained in it are concerned, a simple analysis shows them to be that (1) Lord Kilmaine is an Irish representative Peer; (2) his political life has been obscure; (3) he seldom speaks; (4) he was probably advised and stimulated to deliver his criticism; (5) his intrusion was impertinent; and (6) he is unsophisticated. On the strength of these six accusations the plaintiff pleaded that he was charged with abusing his position as a member of the House of Lords and of making statements on subjects on which he was incompetent to express any considered opinion. For this he was awarded £2,000 damages.

That is as fair a summary of the case as we can achieve. Taking it as our standard, let us try to estimate the damages-value in an English Court of the ordinary small change of political controversy. Let us first go back a century or so, and hear what *The Times* of our great-grandfather's day had to say of Lord Brougham:—

The speaker has hit himself off with singular truth. Perhaps the portrait may be a little strengthened in likeness, dictating substituting quackery for ignorance, though persons kneed into with the furniture of Lord Brougham's mind. Only that it is like the specimens of an upholsterer's show-piece, a lumber of fineries, odds and ends, at which, and less necessary to the fitting of any one into the understanding.

La Jacque, remarkably like Lord Kilmaine's. The

defendant by his statement meant that the plaintiff (1) was a quack; (2) was ignorant; (3) had a mind ill-balanced and ill-furnished; and (4) was unworthy of his membership of the House of Lords and incompetent to express a considered opinion on matters which he had in fact debated in their Lordships' House. But the science of litigation being at that period of our history only partially developed, neither the infamy of the criticism nor its possible cash value occurred to Lord Brougham's ill-upholstered mind.

Now we move on a hundred years and come to contemporary criticism. To be fair, we will not grub round in anthologies of abuse, but will take down from their place on the shelves two books of modern history—chosen at random as the first two that come to hand and skimmed at random over a few pages. First, "The World Crisis," by Mr Winston Churchill. Much of this remarkable history is devoted to the Dardanelles, and the Government's decision to evacuate is naturally criticised. That decision was arrived at on the advice of General Monro, who was sent to investigate conditions on the spot and report. This is what Mr Churchill has to say of the General:—

General Monro was an officer of swift decision. He came, he saw, he capitulated. He reached the Dardanelles on October 28th; and already on the 29th he and his staff were discussing nothing but evacuation. . . . Without going beyond the Beaches, he familiarised himself in the space of six hours with the conditions prevailing on the 15-mile front and spoke a few discouraging words to the principal officers. To the divisional commanders he put a question in the following sense: "On the supposition that you are going to get no more drafts can you maintain your position in spite of the arrival of strong reinforcements with heavy guns and limitless German ammunition?" . . . He returned to Imbros. He never again set foot on the Peninsula during his command.

On the Kilmaine analogy, what pleadings could we have drawn? The defendant's statement, we could have pleaded, meant that the plaintiff failed in his duty as a soldier (1) by being eager to capitulate; (2) by neglecting to look at the front he was sent to inspect; (3) by deliberately lowering the fighting spirit of his officers; (4) by purposely angling for an unfavourable reply; and (5) by leaving the fighting front and staying away from it. An ordinary man might consider Mr Churchill's argument as the stuff of everyday criticism, but if Lord Kilmaine's £2,000 is the norm, for what might not the General have hoped?

We turn to book number two: Mr D. C. Somervell's "Reign of King George the Fifth." Mr Somervell is no admirer of Mr Lloyd George, and does not pretend to be:—

Cavour once said something to the effect that in order to lead his country through the crisis of war to victory he had to play the part of a great rascal. Mr Asquith was not a great rascal, and nothing would make him one. Mr Lloyd George was in almost every respect the opposite of Mr Asquith. He eagerly took personal credit for every thing to which he could lay claim and shifted discredit on to other shoulders. He assiduously built up his own legend. We need not like his performance, but perhaps we ought to be grateful for it.

(1) A great rascal; (2) eagerly taking personal credit; (3) shifting discredit on to others; and (4) assiduously building up his own legend. If Mr Lloyd George was either thin-skinned or a gold-digger, imagine the pleadings and conceive of the damages. Indeed, if on every violent criticism launched against him during his career Mr Lloyd George had brought an action and been given damages on the Kilmaine scale, he would by now be the richest man in the country—even after he had set off, against credit entries, the damages which would have been recovered from him by those whom, in speech and in writing, he has on special occasions ventured to criticise.

The plain truth is that judges and juries with their fantastic attitude to libel are setting up a new censorship which, if developed, will kill that freedom of discussion which is vital to democracy. The law is intended to protect men from genuine defamation of character. It is being used to shelter them from criticism. It stifles comments that ought to be made. It breeds litigation. If not checked, it will in time breed, too, a race of thin-skinned politicians whose first thought, as they open their daily paper, will be to look for something actionable about themselves.

NOTES OF THE WEEK

The Budget Debate.—An unexpectedly interesting Budget was followed this week by an unusually lively Budget debate. In general, given the Government's past failures in foreign policy, members accepted the necessity for some increase in military expenditure. Mr Churchill, indeed, flourishing impressive estimates of Germany's re-armament bill, argued that our own expenditure should have been actually larger. More criticism, however, was concentrated on the methods by which Mr Chamberlain proposed to secure the money. The raising of the income tax and the proposal to tighten up methods of collection were on the whole approved, though one member was found to defend evasion; and the abolition of the Road Fund found defenders as well as critics. The sharpest attack on Mr Chamberlain was consequently reserved for the weakest point in his Budget—the increase of the duty on tea. And the apologies for this increase made by Mr Chamberlain and his supporters this week are most unconvincing. To argue that even the poorest section of the community should pay for re-armament is to assume that the burden of taxation was fairly distributed before the imposition of the new taxes. But, after the large increase in indirect taxation in the last five years, it cannot be maintained that this is so. Mr Chamberlain's supporters this week have repeated the old allegation that the poorer sections of the community contribute much less in indirect taxation than they receive in social services. This would not be a valid argument, even if true. But in fact it is untrue. Total expenditure on unemployment, health, pensions, education, housing and other services out of Parliamentary votes or grants in 1933-34 (the latest year for which complete figures are available) was £224,400,000. In that year the total revenue from Customs and Excise was £286,455,000. If we accept the usual estimate, therefore, that the working classes contribute from three-fourths to four-fifths of the total raised in indirect taxation, we must conclude that that total is almost certainly not less than the Budget contribution to the social services. There is a strong case, therefore, for believing that the increase in the tea duty makes an already inequitable tax system even more inequitable.

—And the "Leakage."—The news that extravagant premiums had been paid on the eve of the Budget for insurance against rises in the tea duty and income tax gave rise to anxious questionings during the week's debate. Mr Chamberlain stated that the Government were determined to have the matter probed, and added that the chairman of Lloyd's would investigate it thoroughly. He refused Mr Atlee's suggestion of a Select Committee, however, on the ground that a leakage had not yet been proved. There is unfortunately little doubt in the market that some exceptionally well-informed persons were engaged during the week-end before the Budget in insuring against rises in the income tax and tea duties. The income-tax orders began to come in before the week-end, soon after the Cabinet meeting at which the Budget was discussed; and the premium rose from ten or fifteen to forty guineas. The tea order was received after lunch on Budget day. Other circumstances suggested special information. This being so, it is not surprising that prominent names are being widely mentioned. Clearly, if the chairman of Lloyd's is unable to discover or publish the source of the alleged leakage, it will be the Government's duty to do so.

The Questions to Germany.—This week will probably see the despatch to Berlin of the questions which the British Government is to address to the German Government, with a view to the elucidation of a number of important points left obscure in the German memorandum on Herr Hitler's "peace plan." That the questions should be formulated and despatched to Herr Hitler by

Mr Eden, and not by the Quai d'Orsay, was arranged by agreement between the French, Belgian and British Governments. On the German side, during the last few days, there has been a regrettable disposition to take exception to the whole procedure, on the *a priori* ground that it is beneath the dignity of a Great Power like Germany to submit to being cross-examined, and that, in putting his questions, Mr Eden is serving up the old dish of "inequality" with a new sauce. The Germans should think better of this line before they commit themselves to it too deeply for them easily to draw back. As a matter of fact, the request for elucidation of a document is one of the regular customary procedures of international diplomatic intercourse. Even the Government of the Weimar Republic, in the days when Germany was labouring under "the Versailles Diktat," was sometimes known to put questions of the kind to England and France—for example, in the negotiations that led up to the conclusion of the Locarno Pact and to Germany's application for entry into the League—and this precedent proves, on Herr Hitler's own hypothesis, that to ask diplomatic questions cannot really be regarded as a hectoring assertion of a superiority of status over the party to whom the questions are put. We reasonably want more light on Herr Hitler's policy towards the eastern and southern neighbours of the Third Reich. Has the Führer really renounced "the Rosenberg Plan" of winning a huge empire for Germany over vast non-German populations and territories in Eastern Europe? Is it only with the German Uitlanders under non-German rule that he is now concerned? And, if his hopes and cares and demands are thus limited, what are the permanent solutions that he envisages as satisfactory, from his own point of view, for the welfare of German populations outside Germany's frontiers? He cannot reasonably refuse to discuss such questions.

Dr. Schacht and General Göring.—Dr. Schacht's mouthpiece, the *Deutscher Volkswirt*, published last week an attack on certain Nazi Party influences and tendencies in finance, and demanded the appointment of a supreme controller of expenditure. On April 27th the appointment was announced of the Prussian Prime Minister, General Göring, as a kind of foreign exchange and raw materials dictator, who—formally—was given supreme authority over everyone in these domains, including Dr. Schacht. General Göring is entrusted with "the examination and regulation of all necessary measures arising out of raw material and foreign exchange questions and he is empowered to give orders to all departments and Party bodies, to require the assistance of Reich Ministers and to employ them as his representatives. Our Berlin correspondent writes that the new measure is liable to various interpretations in view of Dr. Schacht's new attack on Nazi partisans, of their increasing hostility to him, and of their prominence in Herr Hitler's entourage. As far as is known, the anti-Schacht faction, which is practically the whole Party, with the exception of a few neutral Nazi Ministers, not only dislikes Dr. Schacht as "capitalist," but is resolved to push the old Party policy of inflation and devaluation, claiming incidentally that this would settle in a natural way problems of foreign trade which is at present kept going by burdensome levies. Also Dr. Schacht's abilities are an offence in the eyes of persons to whom intelligence of any kind is a vice. Formally, the new measure removes from the competence of Dr. Schacht practically everything that matters in the German economy. The foreign exchange and raw materials, which are Dr. Schacht's special domain, embrace most business problems: the control and rationing of industrial production, price regulation, foreign trade and (in view of the interests of the Nourishment Corporation in foreign trade also agriculture. In addition, Dr. Schacht's functions as President of the Reichsbank are involved.

A Disappointment for Nazis.—Of late, the Nazi Party has campaigned even more openly against Dr. Schacht than he against it. Shortly before he took the offensive in the matter of finance he had been viciously attacked in the Press organ of the extremist Herr Himmler. Uninitiated persons might therefore at first sight have concluded from the appointment of General Göring that the Party had overcome the Minister of Economy and had transformed an almost omnipotent Minister (under a law of two years ago the Minister of Economy can override laws and ordinances) into the underling of an inept Party magnate. It seems, however, that so far from Dr. Schacht going, he intends to remain, with reduced formal authority, but with increased power to put his policies through. In the struggle between the different departments for foreign exchange (Defence being one of the most clamorous) General Göring can ensure compromise. But as the expert still Dr. Schacht it is probable that he will frame the compromise. If so, the only new factor will be that a Minister with high Party prestige and with police authority, whom the wildest men would scruple to attack, will henceforth see that necessary measures shall not be wrecked. Indeed, the official communication expressly refers to the "numerous State and Party instances" which have to co-operate in raw material and foreign exchange matters. This passage is a mere commonplace unless the purpose of the new measure is to establish order between the warring interests. It is very likely that Dr. Schacht, who, through efficient means, has repeatedly shown his impatience with the present anarchy, himself devised the remedy. If so, no change in currency, foreign trade, raw material or industrial regulation can be expected; and the Party will have suffered a defeat.

* * *

The First French Ballot.—The voting in France last Sunday was orderly and the polling heavy; but the results of the first ballot are inconclusive. Only 183 candidates succeeded at once in obtaining an absolute majority; in 433 constituencies there has to be a second ballot, which will be taken to-morrow; and it is virtually impossible to conjecture what the outcome will be, in these constituencies, of the electors' second thoughts. The most prominent feature is the striking progress of the Communists—mainly at the expense of the Socialists. How will this affect the solidarity of the *Front Populaire* on the second ballot? The principle of the *Front Populaire* is that, while every Communist, Socialist and Radical-Socialist elector votes in the first ballot for his own Party candidate, he is asked by his Party organisation—in virtue of an agreement between the three Party organisations concerned—to vote in the second ballot for whichever Left-Wing candidate has obtained the largest number of votes in the first ballot, in order to ensure that the final victory in the constituency shall be secured by the candidate of one of the Left-Wing Parties, whichever it may be. The question is: How many of the Socialist-Radical electors who have to vote again to-morrow will follow their leaders' instructions by voting for the Communist candidate—supposing this to be, in their case, the course which the electoral understanding requires them to take? The electoral agreement between all three Left parties is reported to be holding firm; so that a Leftward swing on Sunday, and a Government of the Left, seem probable. This may be a good omen. In terms of foreign policy, a Communist-Radical entente will mean that France will trust to the League and her alliances with Russia and the Little Entente; while an entente between the Radicals and the Right will mean that she will continue to stake everything on her understanding with Italy.

* * *

Ferment in Austria.—While it appears, for the moment, that the reports of heavy German concentration of troops on the Austrian and Czech frontiers were exaggerated, it seems none the less certain that there were serious reasons for the Austrian Government's despatch of troops to Salzburg and the Tirol. These reasons lie in the relations between two sections of the Government: the

Fascist wing, led by Prince Starhemberg and supported by the Heimwehr; and that small section of the Cabinet, headed by Dr. Dobretsberger, the young and able Minister for Social Welfare, which has recently been impressing on Chancellor Schuschnigg the need for an entente with the workers. The workers, especially those in Vienna, nurse bitter memories of the Heimwehr's savage onslaught upon them in the fateful February of 1934. Prince Starhemberg, though he secured the recent dismissal of Major Fey from the command of the Vienna Heimwehr, has lately had to bear "a brother near the throne"; for the Chancellor has, in contravention of the Treaty of St. Germain, introduced conscription for the regular army; and it is reported that the Government have even called up 50,000 men already. This challenge to his potential eminence as supreme leader of Fascist Austria's praetorian guard seems to have caused Prince Starhemberg some chagrin. Last week-end he delivered himself of a speech at Horn in which he warned "authoritative persons," who had openly hinted at the assimilation of the Heimwehr, and the Chancellor's own Catholic *Sturmscharen*, to Austria's new and increasing regular army, that they would only be permitted to accomplish their aims over his dead body. Thus, while Nazi propaganda in Austria is now battenning on the published list of payments to eminent associates of the Heimwehr and of the Government out of the ill-fated Austrian Phoenix Insurance concern, Dr. Schuschnigg's Government is a prey to serious internal dissensions. Prince Starhemberg's speeches usually give off more heat than light; but his latest utterance seems ominous. It may well bring to a head the inevitable conflict of wills between, on the one hand, a Chancellor and his supporters who want to see Mgr. Seipel's dream of a tolerant Austria realised, and, on the other, a young Prince who sees himself and his henchmen as the paladins of Austrian Fascism. The incompatibility is self-evident. But it may cost Austria, and Europe, dear if the Heimwehr remove their support from the Government and look indulgently towards the Nazis.

* * *

Russia and Japan.—There will be no new Russo-Japanese war in the Far East if the Russian Government and the civilian element in the Japanese Government have their common way—the way of peace. At a dinner given in Moscow the other day in honour of a retiring Japanese military attaché, the Japanese Ambassador and the principal Russian guest—the Soviet Commissar for Defence, Marshal Voroshilov—exchanged some after-dinner observations. These were so closely concordant in matter and manner that it was obvious the speakers were aiming their shafts, not at one another, but at the Japanese officer who was on the point of returning home to report. Mr. Ohta, who spoke first, expressed the opinion that, in spite of misunderstandings, there were no disputes between the two countries that could not be settled by peaceful means. He added that the Japanese Government agreed with the Soviet Government in not wanting war. Marshal Voroshilov, in reply, declared himself in agreement with all that the Ambassador had said; but he went on to point out that the Soviet Government had repeatedly pressed the Japanese Government to conclude a non-aggression pact with it; but so far without obtaining any response. He then referred to the recent increase in the frequency of frontier conflicts. The Soviet Government, he said, expected that the Japanese Government, if they really wished for peace, should try to put an end to the activities of elements which were provoking bloody frontier affrays. These elements, of course, are the fanatically fascist-minded young Japanese officers who bully the senior officers—who pass the punishment on by brow-beating the civilian authorities. With ups and downs, the struggle in Japan between the berserkers and the civilians has been going on ever since the explosive military *émeute* of September, 1931. On the whole the civilians seem, unfortunately, to be fighting a losing battle. For example, while the *Putsch* in Tokyo, two months ago, was nominally disavowed and suppressed, a good deal of the mutineers' programme was achieved as a result of their outbreak. On April 24th it was announced that the "unification"

of Japanese foreign policy was now to be promoted by the institution of an informal weekly conference on foreign affairs between the Foreign Minister on the one side and the Ministers for the Army and the Navy on the other. By the Japanese constitution, the two latter Ministers have to be a senior military officer and a senior naval officer respectively. It is to be feared that "unification" means compelling the civilians to adopt the policy which the fighting-men want. Marshal Voroshilov's speech comes most aptly upon its hour.

* * *

King Fuad.—King Fuad of Egypt has been almost unique among the hereditary sovereigns of Islamic countries in keeping his throne. While in Turkey the Ottoman Dynasty has given way to President Mustafa Kemal, and the Qajar Dynasty in Persia has been supplanted by another *novus homo*, Riza Shah Pehlevi, the dynasty of Mahomet Ali has survived in the person of King Fuad and will continue to reign in the person of his successor. In general, since the war, the only hereditary Islamic sovereigns who have shown survival-power have been those who have taken on the job of being their own dictators, and so have occupied the key position themselves before it could be seized by some upstart. That is one explanation of the success of King Abdul Aziz Ibn Saud. (The prescription does not always work—witness the fall of King Amanullah of Afghanistan, who lost his throne for overdoing the part of the young man in a hurry.) King Fuad, of course, has been in a peculiar position owing to the anomalous relation in which Egypt still stands—at the end, as at the beginning, of his reign—to Great Britain. But for the British connection, King Fuad would never have come to the throne at all; for he had no natural expectations of stepping into the shoes of his relative and predecessor, Abbas Hilmi, the last Khedive. It was the Khedive's Turcophil sentiments that cost him his office at the beginning of the War, when he openly took sides with Turkey and the Central Powers. In that emergency the British Government declared a protectorate over Egypt, and put Fuad into the Khedive's place with the title of Sultan—a higher title than Khedive (which is an antique Persian term for a viceroy), but nevertheless a title which still, in itself, implies a delegated power. It was not until the famous British recognition—with four reservations—of the independence of Egypt in February, 1922, that King Fuad took the royal style and title in token of the fact that, at any rate in theory, he had now become a completely independent sovereign. It might have been distinctly awkward for the King if he had ever found himself left face to face with the Wafd, with no British army of occupation to rule out the possibility of a revolutionary replacement, in Egypt, of the traditional autocracy by a single-party oligarchy of the post-war Turkish pattern. There were times when he had to bow the neck and submit to the ultra-democratic constitution of 1923; and there were other times when he was able to re-establish "palace government" over the Wafd, and even revise the constitution. In steering his own way through these troubled political waters, King Fuad showed an intellectual ability which also found another, and perhaps worthier, field in the patronage of Arabic literature and scholarship.

* * *

Italy's Economic Plight.—Further information about the effect of economic sanctions on Italy has now been given in a letter set to the League Committee of Eighteen by the chairman Senhor de Vasconcellos. Imports from Italy and Italian colonies into thirty countries during the four months November to February are shown to have declined from 17,025,000 gold dollars to 5,860,000 gold dollars. Exports from these countries to Italy and her colonies for the same period declined from 18,511,200 gold dollars to 10,022,800 gold dollars. The chairman of the expert committee (M. Westman) has also stated that the full effect of the export embargo is becoming gradually more complete. By January Italian exports had fallen off by 46 per cent. (compared with January, 1935), and imports had fallen off

by 39 per cent. The countries applying the full embargo against Italy's exports had reduced their purchases by January to 16 per cent. of the 1935 figure and by February to 6 per cent. Illuminating information is also given about the depletion of Italy's gold reserve. It had been stated in the Italian Press (compare our Turin correspondent's letter of last week) that the gold reserve of the Bank of Italy was reduced by 909 million lire between October 20th and the end of 1935. In January net exports of gold from Italy to countries supplying information to the League amounted to 517 million lire. Gold exports of 315 million lire in February have already been reported to Geneva. For March complete data is not available; but according to Press reports a single consignment of 260 million lire passed from Italy into Switzerland. This suggests that Italy has exported at least 1,092 million lire since the end of 1935. Since the Bank's holding of gold and foreign assets was 4,316 million lire on October 20th, it follows that Italy has lost practically one-half of her reserve in the six months since that date. Besides this loss the amount obtained by the internal collection of gold is quite negligible. Indeed, it becomes clear that Signor Mussolini's one chance of final success is to destroy the Abyssinian armies in the first six months' campaign at any cost and then persuade the League to lift sanctions at once on the ground that they no longer have any purpose. If the League stands firm, it is difficult to see how Signor Mussolini would be able to support his Abyssinian armies many months longer, even if Addis Ababa were captured.

Poland Gives up Deflation.—The announcement this week of the impending institution of exchange restrictions in Poland means that Poland at long last has given up the attempt to achieve recovery by deflation. For years Poland claimed to be the one country that had carried deflation to its logical conclusion, and had both refrained from devaluation and enabled recovery to begin unhampered by exchange restrictions. Indeed, it seemed at one time that Poland had performed what has elsewhere proved impossible on the scale required by post-war conditions, and had deflated her costs down to the lower level of prices without provoking a revolution. Wholesale prices actually fell in Poland (1929 = 100) from 103.8 in 1928 to under 55 in 1935, and the cost of living was reduced from 100 in 1929 to 63.0 in 1935. Industrial production fell from 100 in 1929 to 53.9 in 1932. After that it recovered to 70.0 by the end of 1935, and it consequently appeared for a time as though the deflationary remedy might have succeeded. The beginnings of recovery have shown, however, that even so drastic a deflation as that of Poland is not sufficient to offset the present over-valuation of the pre-1931 gold parities. For in recent months Polish imports have shown a tendency to increase in relation to exports, and the Bank of Poland has been losing gold. More important, however, the "savage" deflation of the last seven years has produced acute though semi-articulate economic distress in a country whose standard of living was already low; and discontent among the unemployed has finally led to widespread riots in the last few weeks. Whether Poland has been wise to choose the path of exchange restriction rather than devaluation plus free

exchanges, may well be doubted. But her experience has driven home the moral once again that deflation of costs cannot be carried beyond a certain point without provoking an intolerable social situation.

* * *

The B.B.C. and Its Critics.—The debate on the Ullswater Committee's report on the future of the British Broadcasting Corporation on Wednesday was remarkable for two things: the almost complete unanimity in the House on the need to mitigate authoritarianism in the B.B.C.'s organisation, and the open confession by the Government that, even in so uncontroversial a domestic matter, they had evolved no policy of their own whatever. Thus the spectacle of a full-dress debate, as a "sounding-board," without the faintest hint of any Cabinet policy was offered to a surprised House. Lack of Government policy, however, was taken for granted; and the debate was informed and constructive. Mr Lees-Smith, with distinguished moderation, and Sir Stafford Cripps, with less moderation, for the Labour Party; Sir Francis Acland for Liberals; and Lt.-Col. Moore-Brabazon for Conservatives, all eloquently testified to the House's concern over the autocratic internal administration of the B.B.C. Lt.-Col. Moore-Brabazon rightly demanded at least one debate on the B.B.C. a year. Much of the debate was on the future of the "relay services." These private systems for relaying centrally selected and diffused programmes by wire to weekly subscribers were recommended by the Ullswater Committee for compulsory absorption within the B.B.C.-Post Office monopoly. The Committee's view was ably set forth in the House by one of its members, Major Astor. The B.B.C.'s monopoly must certainly be preserved if an efficient public service is to be achieved, rather than a congeries of efficient commercial "broadcasters." But Wednesday's debate showed that, while disposed to confirm the B.B.C. in its complete monopoly, the House will jealously regard any abuse of the authority conferred.

* * *

Women as Diplomats.—The Government have decided not to admit women to the Consular or Diplomatic services. This decision follows the report of the Inter-Departmental Committee on the Admission of Women to the Diplomatic and Consular Services appointed in 1934. The majority report was against the admission of women to either service; but one minority report, signed by Sir David Schuster and Sir James Rae, advocated admission to the Diplomatic Service for a trial period of seven years. The other minority, which recommended admission to both services, consisted wholly of women. Chief among the actors influencing the majority of the Government against any change was the reluctance of public opinion in foreign countries to take the idea of women diplomats seriously, and this will seem to many people in this country a sufficient reason for at least deferring the change. The exclusion of women from the Diplomatic Service may involve some hard cases. But women are already admitted to the Home Civil Service; and the demand for extension seems to spring more from a desire for a demonstration of "sex quality" than from any genuine and immediate need felt either by women or diplomats.

* * *

The Road Traffic Act.—This Act came before the courts again last week with another problem for H.M. judges. By the terms of the Act no car may be driven unless (a) a policy of insurance is in force and (b) a certificate of insurance has been delivered to the person by whom the policy is effected. A Mr Starkey was convicted and fined £2 because the certificate of insurance had been delivered not to him but to his hire purchase company, which retained it. Mr Starkey was asked for the certificate by a policeman, and it was sent to the police within five days, but not by him. It was posted to the police by the hire purchase company. That was the offence. The insurance was apparently valid and the certificate was in existence; but because it was in the possession of a party

who was neither the insured nor his agent, Mr Starkey was punished. To the layman his offence would appear to be an unimportant technicality, but the police thought it worth while to prosecute and a Divisional Court upheld the conviction. One puzzling thing about the official attitude is this: the Act says that there must be in existence a policy or covering note and a certificate—two distinct documents. But motorists constantly drive on temporary certificates which are a combined certificate and covering note—one document only. That appears to be a technical breach of the Act, but for some reason the police wink at it while they take resolute action against a man guilty of Mr Starkey's equally technical offence. The need for certificates is a general nuisance. A simpler and more economical method of keeping a check on the insurance of cars could easily be devised, and it may be suspected that the reason for the police attitude has little or nothing to do with insurance. A statement of their reasons for the whole elaborate business would be welcome.

* * *

Finance and Reform in India.—It will be recalled that the inauguration of the Constitutional Reforms in India was made subject to a Report to Parliament on the finances of the Centre and of the Provinces respectively, and on the allocation to the latter of the resources needed to enable them to meet the financial obligations which will be imposed upon them. Sir Otto Niemeyer, who was entrusted with the task of making an independent inquiry on this problem, has now reported to the Secretary of State. In his opinion the recovery in the finances of India has been such that Provincial Autonomy can, from the financial point of view, come into effect in April, 1937. From India's point of view this is a very satisfactory conclusion. It means that one more Budget will be presented (in March of next year) under the existing regime, which will presumably make the necessary provisions for implementing Sir Otto Niemeyer's proposals; and it will enable the new Autonomous Governments to take office without immediately having to wrestle with the troublesome problem of making both ends meet. On the other hand, the plan will not delay preparations for reform. The new provincial elections will be carried through according to plan during the forthcoming winter; the new parliaments will be constituted; and all will be ready for the transfer of powers in the new financial year.

* * *

India's Provincial Budgets.—There are two problems specifically discussed in Sir Otto's Report. The first is the assistance required from the Centre by certain of the Provinces to enable them to balance their expenditure, and secondly the time-table for the transfer to the Provinces of part of the proceeds of the income tax as provided in the Constitution. The subventions required to enable the "deficit" Provinces to make a fair start amount to 4½ crores of rupees (nearly 3½ million pounds). Of this amount, one crore is to be in the form of remission of the debt charges now paid to the Centre by the chief deficit provinces. Half a crore will come from the proposal to raise to 62½ per cent. (from the present 50 per cent.) the share in the jute duty which is to go to the producing areas; and the rest will be in the form of direct subvention mainly to the new Provinces of Sind and Orissa and the North-West Frontier. Of the 4½ crores needed, 2½ have already been provided in the present Budget. This leaves a further 2 crores to be found, and to this 2½ crores must be added in respect of the loss of revenue to India which will be caused by the separation of Burma. Four and three-quarter crores is a substantial sum to find at one blow, but Sir Otto is satisfied that it can be done. He does not, however, think that anything further can immediately be allocated to the Provinces from the income tax receipts. He therefore makes the following proposal: first, that the percentage of income tax ultimately to be transferred should be fixed under the Act at 50 per cent. This will mean in the end a loss of some 6 crores to the Centre. The Act, however, permits a period of grace during which the Centre may retain the whole or part of the share which is ultimately to go to the Provinces. Sir Otto proposes that for the first five years the Centre should retain the whole of the provincial

share or such share as is needed to bring into the Central Exchequer, from the income tax and from the railways combined, a total of 13 crores. This is a simple device to give to all concerned an inducement to expand the yield of the income tax and to bring about an economical administration of the railways. Finally, Sir Otto, in the absence of any simple test of the basis on which this income tax should be distributed, submits a scheme of distribution, largely based on population, which he thinks will broadly do justice to the financial claims of the different provinces. Sir Otto's Report is satisfactory within the limited sphere which it covers. It leaves unsolved the long range problem how, and by whom, the much larger provincial revenue is to be raised which is needed for the betterment of the health, social and economic conditions of the Indian people.

"Safeguarding of Industries."—A Committee appointed by the President of the Board of Trade has just reported, conveniently close to Budget day, on the advisability, "in the interests of Imperial Defence, and having regard to the provisions of the Import Duties Act," of continuing, varying or extending in scope the duties imposed under Part I of the Safeguarding of Industries Act, 1921. These duties, amended by the Finance Act, 1926, were due to expire on August 19th of this year. They were originally imposed to ensure adequate national supply of certain articles which the 1916-18 Committee on Commercial and Industrial Policy After the War deemed "key" or "pivotal," owing to their decisive importance as "bottle-necks," for the "quick adaptation or expansion of the staple industries of the country to defence purposes." The War-time Committee concluded that these "key" industries "should be maintained in this country at all hazards and at any expense," even by Government manufacture; and that they should be under Government supervision. Accordingly they were protected by an original "key industry" duty of 33½ per cent., renewed for 10 years in 1926, when some of the duties were increased, and the schedule of "key" products enlarged. It now covers such articles as all synthetic organic chemicals; optical and scientific instruments; electrical and wireless components; tungsten, molybdenum and vanadium; hosiery latch needles; and, finally, arc-lamp carbons. The duty on the latter product was altered from an *ad valorem* to a specific duty of 1s. per lb. in the Finance Act of 1926, and increased to 5s. per lb. in the Finance Act of 1934. The Board of Trade's Special Committee now state (Cmd. 5157) that after receiving considerable evidence from producers and consumers of these articles, the Service Departments, and the Department of Scientific and Industrial Research, they are satisfied, "with some minor exceptions," that research is being continuously undertaken, and that this has been encouraged by the duties. "The Service Departments . . . were unanimous in desiring the continuance of the present procedure." The Committee therefore recommend the prolongation of the duties for a further 10 years at not less than existing rates; but they also recommend an alteration of procedure to enable manufacturers of articles liable to safeguarding duties to apply to the Import Duties Advisory Committee for an increase of duty, who, in turn, should be empowered to advise and report on the matter. The powers of the Board of Trade over amendment of the lists of goods subject to these duties should also, in the Committee's view, be enlarged. Finally, they recommend that carbon compounds and articles, manganese metal and chromium, and several wireless components should be added to the list of dutiable goods. It is clear that the industrial exigencies of "national defence" become ever more comprehensive; and, after the Government's broad acceptance of protectionism, many will wonder that it has been found necessary still to retain the "key industries" excuse for duties which are as protective as our entire tariff.

* * *

Retail Trade in March.—The progress of economic recovery continues to be reflected in the official returns of retail trade turnover. The seasonal downward trend of retail trade between December and February gave way to a marked improvement in March, when the total monthly value of sales, given in this week's *Board of Trade*

INDEX OF VALUE OF RETAIL SALES, GREAT BRITAIN
(Average Daily Sales in 1933 = 100)

Period	Food	Other Merchandise	Total
1932	102	99	101
1933	100	100	100
1934	103	103	103
1935	111	108	109
1935—February.....	106	83	95
March	107	92	100
April	110	112	111
May	110	112	110
June	110	108	109
July	105	113	109
August	107	81	94
September.....	110	99	104
October	112	114	113
November	116	115	115
December.....	133	160	146
1936—January.....	115	118	116
February.....	116	88	102
March	117	97	108

As compared with the corresponding month in 1935, sales of food and perishable articles last March showed an increase of 9.3 per cent. and sales of other merchandise one of 6.2 per cent. With the exception of piece-goods, sales of all the items of general merchandise registered an improvement. Thus, sales of hardware and of sports and travel goods rose by 9.9 per cent., and those of women's and men's and boys' wear by 7.0 per cent. and 6.8 per cent. respectively. The increase in sales was well spread geographically, amounting to 9.6 in South England, 7.7 per cent. in Suburban London, 7.6 per cent. in Scotland, 7.4 per cent. in North England and 6.0 per cent. in Central and West End London. As far as the efficiency of retail distribution is concerned, it is significant that the value (at cost) of stocks rose only by 0.3 per cent. during the past twelve months, compared with an increase of 7.9 per cent. in the value of sales. Since business activity is still on the upgrade, the improvement of retail trade may be expected to continue.

* * *

Foreign Ships and Coastwise Trade.—Complaint is being voiced, in some quarters, over the growth of foreign shipping in British coastwise trade. The trade and navigation returns for the past quarter show a pronounced increase in the arrivals of foreign ships with cargoes, the quarter's total being 143,708 net tons, against 71,429 for the same quarter of last year and 82,280 net tons in the first quarter of 1934. Departures of foreign tonnage with cargoes aggregated 144,177 net tons, compared with 71,963 and 75,972 respectively. In the trade between Great Britain and Northern Ireland, the increase in foreign tonnage this year is proportionately greater, foreign arrivals being 4,264 net tons against 856 net tons last year and 974 net tons in 1934, and departures 4,254 net tons, against 984 and 974 net tons. The total foreign figures, however, are small compared with the very considerable British annual tonnage in our

coasting trade, for they amounted to only 148,000 net tons in comparison with 6,900,000 net tons for the quarter. A demand for measures to "protect" British coastwise shipping against the redoubtable foreigner would therefore appear to be a little premature at this stage.

Sterling and International Prices.—While the past fortnight has witnessed a slight fall in world wholesale prices, there has been very little change, especially in England, during the past two months. It would be wrong to assume that a genuine equilibrium has been established, especially as the franc remains over-valued, so that French wholesale prices are high in relation to those of other countries. Still there has been a temporary *de facto* equilibrium during recent weeks. During the latter half of April, the *Economist's* complete British index number fell by 0.3 per cent., while the primary products index fell by 0.4 per cent. The principal constituent in these movements was this week's drop in the price of rubber consequent upon the increase in the quota. In the United States, primary products fell by 1.3 per cent., while the complete Irving Fisher index number fell by 0.2 per cent. French wholesale prices have declined fractionally for the second fortnight in succession. Apparently the inflationary advance which began last summer has for the moment been arrested. The German index number is unchanged, and there is no indication even of the very moderate recession which has occurred elsewhere.

Details of the group indices comprising the complete *Economist* index number on the date of our suspension of the gold standard and for recent dates are given below:—

	"ECONOMIST" INDEX (1927=100)			
	Sept. 18, 1931	Mar. 25, 1936	Apr. 15, 1936	Apr. 29th, 1936
Cereals and meat	64.5	72.0	73.1	73.3
Other foods	62.2	60.0	59.5	59.0
Textiles	43.7	60.3	59.9	59.6
Metals	67.4	83.2	83.1	83.1
Miscellaneous	65.8	78.1	78.6	78.1
Complete index ..	60.4	70.9	71.1	70.9
1913 = 100	83.1	97.5	97.8	97.5
1924 = 100	52.2	61.3	61.4	61.2

In the cereals and meat group, maize, rice and English wheat were all higher, but oats and barley have fallen. Potatoes were dearer, while meat was inclined to be cheaper. Among other foods, there were declines in tea and butter. In the textiles group, most items fell slightly, but there was a small advance in jute. Non-ferrous metals were a little lower, but there was a rise in the price of house coal. In the miscellaneous group, hides and Swedish timber advanced in price, but there were decreases in rubber, tallow and creosolite.

Increased Rubber Quota.—The International Rubber Regulation Committee may be commended for its decision, last Tuesday, to raise the proportion of the estimated capacity of the restricting countries which may be exported during the second half of 1936 from 60 per cent. to 65 per cent. The decision is an earnest of the Committee's intentions to balance supply and demand at a reasonable price rather than to squeeze the market at a time of increased demand. Although the price of rubber and the quotations of rubber securities declined immediately after the announcement, the setback was short-lived. Immediately before the decision the quotation for spot rubber was 7½d. per lb. It subsequently fell to 7¼d. per lb., but on Wednesday the quotation recovered again to 7½d. per lb. In any case, the slight increase in exports under the higher quota is unlikely to arrest the improvement in the rubber situation. According to an estimate made by Messrs Symington and Wilson, world shipments during the current year will be about 850,000 tons. But as consumption last year was about 948,000 tons and may be expected to show a further increase this year, world stocks will probably decline by more than 100,000 tons during 1936. Stocks of crude rubber at the principal centres outside the regulated areas declined from 553,000 tons at the end of 1934 to 493,000 tons at the end of the past year, and will probably be well below 400,000 tons at the end of 1936. Thus, there seems no reason to expect a further fall in prices.

Industrial Production in 1934.—The results of the limited census of production taken in respect of 1934 are gradually becoming available. Volumes V and VI, issued with recent numbers of the *Board of Trade Journal*, cover the food and leather and clothing trades. The following table shows the gross value of production in these industries, as well as the net output (gross value of output less cost of materials and payments for work given out) and the net output per employee, together with comparable figures for 1933:—

FOOD, LEATHER AND CLOTHING TRADES				
Trade	Gross Output (selling value of goods made and value of work done)	Net Output	Average Number of Persons Employed	Net Output per person Employed
(a) FOOD TRADES				
Grain Milling	1933 56,206 1934 57,010	1933 11,043 1934 11,116	28,297 28,379	390 392
Biscuit	1933 14,654 1934 15,115	1933 8,233 1934 8,261	37,975 39,897	217 207
Preserved Foods	1933 35,389 1934 35,173	1933 15,483 1934 15,397	48,305 48,903	321 315
Butter, Cheese, Con- densed Milk and Mar- garine	1933 20,577 1934 21,902	1933 5,650 1934 6,335	11,616 12,986	486 488
Cattle, Dog and Poultry Foods	1933 7,602 1934 9,021	1933 2,677 1934 3,288	7,542 8,051	355 408
Total	1933 134,428 1934 138,221	1933 43,086 1934 44,397	133,735 134,216	322 321
(b) LEATHER AND CLOTHING TRADES				
Leather (Tanning and Dressing)	1933 23,325 1934 23,336	1933 6,940 1934 6,863	28,842 29,432	241 233
Leather Goods	1933 4,629 1934 4,951	1933 2,115 1934 2,255	14,861 15,733	142 143
Boot and Shoe	1933 38,073 1934 37,012	1933 17,342 1934 17,066	113,926 112,637	152 152
Hat and Cap	1933 10,295 1934 10,558	1933 4,614 1934 4,693	30,097 30,016	153 156
Glove	1933 2,694 1934 2,991	1933 1,214 1934 1,314	8,135 9,191	147 143
Umbrella and Walking Stick	1933 324 1934 301	1933 352 1934 328	2,903 2,570	121 128
Total	1933 79,941 1934 79,749	1933 32,577 1934 32,519	198,764 199,579	164 163

The gross output of the food trades was rather smaller in 1933 than in the preceding year, but net output is practically unchanged. Both gross and net output of the leather and clothing trades was well maintained, but there was no expansion in production. All these industries make consumption goods, so the absence of any progress in the early stages of our domestic recovery is not surprising.

UNITED STATES

BORAH, KNOX AND LANDON

SENATOR BORAH, capitalising a life-time of insurgency within the Republican Party, set out this year to liberate the Party from Eastern control. Despite his seventy years, and the lack of any organisational support, he announced his candidacy for the presidential nomination. It was not his objective to be nominated, but to win enough delegates at the Republican convention to be able to threaten a destructive split if the right man was not chosen and the right platform written. By the right platform he meant one that demonstrated that the Party was no longer serving primarily the financial and industrial interests of the East. In Senator Borah's favour with influential Republicans was his reputation as a constitutional authority and his defence of the Supreme Court. Greatly to his disparagement in the East was his reputation as an inflationist. The East at first did not appreciate that he had much power, and laughed away his campaign as of no importance. Then it became frightened by his increasing popularity in the Middle West and awoke to the possibility that this man, while not strong enough to assure a Republican victory in November, might of himself be strong enough to assure a Republican defeat.

The Illinois primaries, held in the middle of April, were the test of Senator Borah's strength. There he was pitted against Colonel Frank Knox, publisher of the *Chicago Daily News*, who, though a comparative newcomer in the State, was running as "favourite son," and had the Republican machine behind him. Senator Borah, an Illinois native, had been assured by his friends that he would sweep the State, carrying enough votes outside Cook County to overcome the Party machine in Chicago. He had no workers, he made only a few speeches, and spent in all about \$100. The primaries also were a test for Colonel Knox's aggressive and well-financed campaign for the nomination. Before the vote it seemed certain that one of the two must be eliminated. But the outcome turned out to be curiously fatal to both of them. Colonel Knox won in Chicago and Cook County by a large vote, also in two down-State districts. Senator Borah won in thirteen out of twenty-five districts and was able to boast that though Knox had carried Chicago he had carried Illinois. Colonel Knox will have thirty-one delegates at Cleveland and Senator Borah twenty-six, figures which, however, mean little, as under the Illinois law delegates are "advised," not pledged, and after the first ballot can vote as they please.

No doubt the result is the end of Colonel Knox's chances, unless in Cleveland he might win as a compromise candidate after a prolonged deadlock. If Colonel Knox could not carry his entire State with the backing of the machine, he could not be ranked high as a vote-getter. But the result also defeats the larger part of Senator Borah's aspirations. He retains his right to speak for Republican farmers, but Illinois put an end to his hope of becoming the champion of rank and file Republicans everywhere. The Cleveland convention no longer need fear him if it makes sure of nominating someone equally popular with farmers. And it has been truly remarked that the real victor in Illinois was Governor Landon of Kansas, who did not enter the contest. For his task is now defined: he has only to continue to represent farming interests and to strengthen somewhat his reputation as a mild liberal to achieve the rank-and-file leadership which Senator Borah has missed.

Governor Landon has remained in the background, and let the movement for him rise of its own momentum—which it has done to a remarkable degree. He has made few speeches, all of them irritatingly vague. So far the strategy has been successful, though not without danger. For he is a "discovery" of Mr William Randolph Hearst, and on this account such liberalism as he professes is

under acute suspicion. Added to this handicap are insinuations that though an independent oil operator, he represents the great oil combines with which he has competed in his business career. Certainly the attempt will be made to link him with the oil interests if he is nominated. Yet if Governor Landon repudiates Mr Hearst he loses his support in California where it is crucial, as well as the friendly publicity in Mr Hearst's newspapers and magazines, of great benefit to a man whose name was nationally unknown a year ago. And he is helpless in combating the odour of oil; for it is of no use simply to deny that he has any connection with the "interests."

So Governor Landon has chosen to remain quiet in the belief that his best line is to refrain from internecine warfare. If the Republicans have any chance of victory, it is as a united Party. And he is avoiding making unnecessary enemies. Mr John Hamilton, the Kansas member of the Republican National Committee, now in charge of his campaign, is certainly no outstanding liberal; but he also is no urbane politician of the pattern of Mr Charles Hilles, so long the prototype of Eastern domination. Mr Hamilton no doubt sees the problem more in terms of power than philosophy. If Governor Landon is nominated, he becomes National Chairman, and ruler of the Party in 1940 when victory is more probable than this year. So he is ready to play up the Governor as a liberal if that is the better game.

Governor Landon certainly is more liberal than the aid of Mr Hearst and the aspersions about oil would indicate, and before the Convention he will make this more clear. Whether or not, as his workers promise, he is sure of nomination on an early ballot remains to be seen. Nominating conventions are difficult to predict, and all that can be safely said is that Governor Landon is well ahead at the moment, with no one in sight to head him off. With the same reservations the Republican Party can be expected to write a mildly progressive platform not differing greatly in social philosophy from Mr Roosevelt's, though the emphasis will be on sound money, economy and the balanced Budget.

WASHINGTON, April 21.

A "CONSUMERS' CREDIT BONUS"

In considering the recovery in American business activity, observers give too little attention to the influence of the reinstatement of consumer credit. Indeed, it is often said that the revival has occurred without the use of credit other than that supplied to the Treasury to finance the deficit; and such a statement is then supported by reference to the loan figures of the Reporting Member Banks. In these banks, collateral loans are actually \$1,000 millions less than at the end of 1932; and the items formerly classed as "other loans, chiefly commercial" are about \$900 millions lower. But the data of the Reporting Member Banks, although the sole current credit statistics, have perhaps ceased to be indicative of the state of credit in this country.

Accurate current data on consumer credit does not exist, but it is estimated that it may run as high as \$7,000 millions, and only a portion of this seems to be included in the bank statements; although banks are making energetic efforts to enter a field where the return generally exceeds 10 per cent. The financing of consumer credit is, however, a specialised type of business, and the field is well occupied by established and experienced concerns.

The significance of the sum of consumer credit, whether it is the figure given above or another, lies in its relation to some time in the past. Instalment sales dropped severely between 1929 and 1932-3; but it is now estimated that in the past three years the volume of consumer credit outstanding in 1929 has been reconstituted. If more precise data were available, it would throw a great deal of light upon the character of the recovery, for it is obvious that it is those industries whose product is marketed against consumer credit which are now booming; and while the

Government spending programme probably contributes basically to the conditions which encouraged the restoration of consumer credit, the present activity can with justice be described as a consumer goods boom based upon consumer credit.

While it is the consumer industries which are booming, activity in the heavier lines is considerably above last year. Steel operations at 70 per cent. of rated capacity represent a very fair production; for since 1928-29 steel capacity has been largely increased. While the mainstay of the industry is the motor-car, steel production has this spring been able to move independently; there have been railroad purchases much above recent years, a good demand from implement makers and from miscellaneous users. At current rate of output the steel industry is operating at a rate which if maintained over a period would compare favourably with any except the best years of the past.

The machinery of the bonus payments is turning as rapidly as the multiplicity of details would permit. Some 5,500,000 veterans are entitled to payment; of these almost all have borrowed against their certificates. The \$300 millions of farm cheques under the old Agricultural Adjustment Act are now ready for distribution, and it is expected that a good part of the initial \$440 millions of Soil Erosion cheques will be paid out within the next few months. Altogether it appears that the individual incomes of several million persons will be materially augmented during the summer by these distributions, compressed within a few weeks and superimposed upon an economy which, so far as goods for individual use are concerned, is already highly prosperous.

A REVIVAL OF N.R.A.

The possible revival of N.R.A. has long been discussed. In his presentation of his special message on relief, the President referred briefly to the theme of distributing the unemployed in industry; and this was more explicitly mentioned in his latest speech at Baltimore, in which he definitely proposed that the young should not be permitted to enter industry (presumably through child labour legislation) and the old should be pensioned off, while jobs would be provided for those in between through a shortening of hours—one of the basic concepts of N.R.A. Several measures looking in the direction of a revival of N.R.A. in diverse forms are before Congress, while the Guffey Act (sometimes called the Little N.R.A. for coal) is now before the Supreme Court. Of the bills before Congress, none can be regarded as assured; but the Ellenbogen Bill seems to have a chance of adoption. This Bill provides for a Commission with authority to fix hours and wages in the textile industry.

NEW YORK, April 22.

FRANCE

A MOVE TO THE LEFT

THE results of the first General Election ballot on Sunday conform in general to expectation. The voting was unusually heavy. The very large number of candidates—4,800 for 618 seats—means that nearly 440 seats will not be filled until after the second ballot of Sunday next. The election went well for the Communists, as was foreseen, and for the Conservatives, which was more of a surprise. This preference of the electors for extremists suggests that the move to the Left was dictated less by the attraction of the programmes of the Left Parties than by the growing public dissatisfaction with the economic situation, and with the failure or slowness of former Governments to deal with the crisis. The Socialists, the Unified Socialists and the Radicals are the principal victims of this move to the Left. The first ballot results, however, do not justify any assumption about the final results, which will be influenced by hard bargaining—all the more so as the Radicals and Socialists have been successful in their allies and public opinion is disorganised. The results of the first election in the Stock Exchange were mixed.

Notwithstanding these results, therefore, the speech which M. Sarraut, the Prime Minister, delivered on the eve of the polls has not lost any interest. For M. Sarraut peace in Europe and political concord in France are the first conditions of the now indispensable economic reforms. The French economy, M. Sarraut pointed out, is under the influence of international markets and "in a near future" an international economic conference will have to find adequate measures to stop the stupidities of economic nationalism. But, until then, France must reform its own economy and organise a closer co-operation with its colonial Empire, and a closer co-operation between internal producers by means of a "Conseil National Economique," or sort of corporative parliament. Moreover, the present favourable trend of business should allow Parliament to achieve real measures of tax reform, which would accentuate the business revival. All these measures, however, would necessitate a "Reform of the State."

The revival of business was also emphasised in the annual reports of the big banks. These banks have just held their annual meeting for approving the year's results, the chief of which were as follows:—

	(francs)		Dividend per share	
	1934	1935	1934	1935
Crédit Lyonnais	82,884,674	82,960,593	100.00	100.00
Société Générale	60,217,237	60,575,620	57.50	57.50
Comptoir National d'Escompte	39,054,359	44,213,300	50.00	50.00
Crédit Industriel et Commercial	5,607,737	5,596,012	35.36	29.02
Banque Nationale pour le Commerce et l'Industrie	5,457,691	6,144,980	20.00	20.00
Banque de Paris and des Pays-Bas	787,938	1,005,115	nil	nil

The banks, however, are deploring the instability of politics and the fluctuations in the rediscount rate of the Bank of France, the consequence of which is a diminution of their deposits and an increase in the difficulty of maintaining liquidity. Moreover, they allege, the public savings banks, with their excessive rates of interest, the social assurance institutes, and the repeated State loans, are absorbing funds and provoking high interest rates, against which the Government protests almost daily. Total Government loans subscribed during 1935 (middle-term Treasury bonds excluded) amounted to 18,000 million francs, or 30 per cent. less than in 1934. The State and railway loans absorbed 80 per cent. of the total, against 25 per cent. in 1933.

This situation renders more urgent a reform of the French money market, designed to delimit more clearly the respective functions of the Bank of France, the big banks and the public institutions. Both politicians and employees of private banks are unanimous in demanding a revision of the Statute of the Bank. The "200 families" who, according to the election posters, "govern the country," are identified with the 200 main shareholders of the Bank, who elect the "Regents." But reform of the Bank would entail—if it meant a real improvement—bidding the Bank to discount commercial paper directly, while conceding to it a better control over the money market. Such a reform would also have to revise the position of the public institutions, such as the Caisse des Dépôts. It would necessitate legislation, and consequently a delicate discussion in Parliament; so that its realisation would seem to be difficult unless it were part and parcel of a more comprehensive reorganisation, such as might be provoked by new, yet unpredictable, financial or monetary events.

PARIS, April 30.

GERMANY

INTRIGUES IN THE PRESS

THE "Press war" (discussed in a Note on Dr. Schacht on page 237) in reality a campaign of intriguing by officially protected private writers, has in considerable measure revolved around Defence, from the viewpoints of both finance and currency. Dr. Schacht's Press organ discusses the "Defence Economy" (*Wehrwirtschaft*) at great length,

and his protests against the prevailing financial extravagance are made palatable to good Nationalists by references to the financial needs of re-armament. Naturally, his intervention in finance is regarded by the Party as an intrusion. But as he is, by his credit and capital control measures, the real supplier of cash for armaments, the intervention seems to be justified. Dr. Schacht certainly makes out a good case for complaint. The inspired article of April 24th in his organ opens by paying a certain lip service to the principles underlying recent Reich finance; the "advance financing" (*Vorfinanzierung*) by credit is endorsed as a means for reviving trade in the expectation that the credits will be repaid out of a resulting increase in revenue; the needs of defence are duly mentioned; and there is a characteristic gibe at "the intellectual" in finance.

But the article proceeds to expose the dangers of "pyramiding" the "advance financing" in the delusion that its alleged success justifies its indefinite expansion. Not only are the Reich departments, States, municipalities and churches criticised for grasping cash, but also—this being the gravamen—the "organisations and associations" are reproached for the same thing. The "organisations" are the Nazi Party's innumerable corporate bodies, whose wastefulness is visible to all and whose accounts are visible to nobody. As reformer an "Expenditure Commissary" with adequate power is suggested. That one new dictator would simplify the confusion of the present numberless dictators, however, is not obvious. A better remedy would be to publish the Reich Budget, and the Budgets (if they exist) of the Party organisations; to resume full publicity about control and auditing; and to remove the terrorism which at present makes it impossible for citizens to criticise, expose and complain.

The question of foreign exchange has lost most of its importance since the Reichsmark became a mere internal currency. For this is its present status. The Reichsbank has no motive for replenishing its reserve. Replenishment plans indeed played a rôle in the discussions accompanying the first default on the long-term loans; but it is now seen that any substantial increase in the reserve would remove the excuses given for default. The real question is whether current exports will pay for raw materials and for the much reduced necessary imports of foodstuffs. It is believed that Dr. Schacht favours an increase in imports of raw materials in the interests of export manufacture, and that he favours a reduction of food imports, or imports of cheaper and inferior foods.

CAUSES OF RAW MATERIAL TROUBLES

Disadvantages inevitably arise out of Dr. Schacht's own system of selective raw material imports, the aim of which is to balance trade accounts with individual countries. This involves the import of inferior raw materials (cotton, etc.) and also the payment of inordinately high import prices, of which some striking instances appear in the Press. In this way the balance of payments is harmed, too much is paid for imports, while the ability to export is weakened. The increased subsidising of export is a consequence; but by ignoring the important consideration of national economic profit or loss, it seems possible at present to attain whatever trade is desired.

Since September, 1933, no official figures have appeared of the movement of the foreign debt. In a book on foreign trade Herr Rudolf Eiche, director of the Reichsbank, estimates the total in the early part of this year at Rm. 13,000 millions. The pace of decrease has of late slackened owing to the relative stability of non-gold foreign currencies, but it amounted in the last two years to a round 1,000 million marks. The highest point of the debt was reached in 1930, a year before the bank crisis, when it was Rm. 26,800 millions. This also was an estimate, since the first official debt census was taken later. Changes in the foreign debt in recent years have been as follows:—

	(Thousand million marks)			
	Long-term	Short-term	Total	Total Debt
		of which		
		"Standstill"		
July, 1931	10.7	13.1	6.3	23.8
September, 1932	10.2	9.3	4.3	19.5
September, 1933	7.4	7.4	3.0	14.8
February, 1934	7.1	6.8	2.6	13.9
January, 1936	6.5	6.5	1.5	13.0

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.

Write for prospectus to the Manager

EQUITY & LAW LIFE ASSURANCE SOCIETY

18 Lincoln's Inn Fields, W. C. 2
Established 1844 Funds exceed £21,000,000

The total debt has therefore fallen by more than half. Not included in the table are a small unstated sum for blocked accounts (*Sperrguthaben*) proper and the Rm. 4,000 millions of foreign investments in real estate and securities. Dr. Eiche puts the interest transferred in 1935, mostly by way of clearing, at Rm. 250 millions, as against Rm. 1,100 millions in 1932.

BERLIN, April 28.

BELGIUM

M. VAN ZEELAND'S FUTURE

THE General Election for the House of Representatives and the Senate will take place on May 24th. Meanwhile the van Zeeland Government, which was expected to resign before the elections, will remain in power in order to assure the continuity of Belgian foreign policy. What will happen after the elections? M. van Zeeland will probably remain as long as the present international negotiations continue. Afterwards he will resume his place at the National Bank of Belgium.

At the beginning of April the Government issued a report on the development of economic affairs during the previous twelve months. The Government was instituted at the time of the devaluation a year ago, on the tacit understanding that it remained in power for a year, which was the period of the special powers granted by Parliament at the end of March, 1935. The report describes what has been done by the Government since the devaluation of March 30, 1935, and traces the different stages of recovery. The main symptom is, of course, the 40 per cent. reduction in unemployment.

Secondly, after twelve months the unweighted retail price index has only risen 9 per cent. and the weighted index of the cost of living has increased about 12 per cent. Even this movement has been partially due to the rise in the world prices of certain foodstuffs. In Parliament the Government was received enthusiastically when the report was discussed. A vote of confidence was passed almost unanimously by the members of Parliament present after a very short discussion. Numerous representatives, who voted against the Government at the time of its constitution and of the devaluation, now voted in its favour.

The public finances in recent months have conformed to the Budget estimates for the fiscal year 1936. The Budget is in equilibrium. Receipts from the tax on transactions in real estate have not yet reached the anticipated figures; but the sales tax, which is influenced by the business trend, has yielded a surplus over the estimates.

The re-occupation of the Rhineland by the German Army was injurious to the business trend in Belgium. In the eastern part of the country the population believed at certain moments that a new German invasion was at hand. A diminution in orders for consumers' goods resulted, and

local unemployment rose a little. But this movement is not traceable in the general statistics, which show a seasonal fall due to the recovery of the building industry.

Meanwhile company results bear witness to the general and striking improvement in the financial situation of the Belgian industry. Both in the coal and steel industries, the trend has markedly changed, and dividend distributions are likely to be more abundant in the coming months.

At the end of March the Government confirmed the 28 per cent. devaluation of the currency as a definite one. It had been allowed to fix the rate at between 25 and 30 per cent. The present stabilisation, which conforms to the wishes of the National Bank of Belgium, is not approved by those observers, daily more and more numerous, who would like to see the Belgian franc linked to the pound sterling.

The definitive stabilisation on a devalued gold basis of 28 per cent. means a further windfall for the Treasury. The gold reserve of the National Bank had only been revalued on a basis of 25 per cent. The revaluation "profit" is thus increased by about 600 million francs. In all it has yielded to the State 4,300 million francs. It was also officially announced on March 31st that the revaluation profit was still completely available; it had not been employed either for the ordinary Budget or for the extraordinary Budget. It constitutes a fund which will very likely be used in the course of 1936 for the financing of public works.

LOUVAIN, April 20.

AUSTRIA

ARMAMENTS AND SANCTIONS

It is often said that Austria's economic recovery is due principally to the international armament trade—a view which seems to have become current since Austria stood aloof from sanctions against Italy. In the first two months of this year exports to Italy amounted to 20 million schillings, against 13 millions in the same period of last year. This made a great difference to certain branches of Austria's economy, such as the iron and steel industry and timber trades; but it was not sufficient to bring about a general revival. Of greater interest is a survey of the transit trade to Italy, in which a sharp decline has clearly taken place. Wagon loads in transit from Austria to foreign countries have changed as follows:—

	Italy	Germany	Jugoslavia
January, 1934	1,481	3,546	1,223
February, 1934	1,358	2,464	1,617
January, 1935	1,174	3,345	1,391
February, 1935	1,408	4,073	1,427
January, 1936	877	3,922	1,616
February, 1936	950	3,612	1,862

It is true that direct trade with Italy has not shrunk very seriously. Nevertheless, the export boom which Austrian industry continues to enjoy is in general "peaceable," a fact which can be ascertained by a glance at the list of articles in which the greatest increases have been achieved this year. In the first two months of the year as compared with the corresponding period of last year gains were shown in Austrian exports of hemp and jute yarn of 30 per cent.; in spun silk of 15 per cent.; in iron goods of 30 per cent.; and in automobiles of 43 per cent.

The seasonal fall in unemployment has been very large this year. In the second half of March the total of persons receiving benefit fell by 15,600 to 298,700. This level was reached only at the middle of April last year. Retail trade turnover in Vienna has been very satisfactory during the last few weeks, and many enterprises report that their turnovers up to the middle of April were 20 per cent. above last year. Purchasing power has increased noticeably as a result of the improvement on the labour market, of the gradual appearance of business profits consequent on the export boom, and investment boom (also reflected in the many increases of dividends) and of money made on the Stock Exchange. On the other hand, among retarding factors are the steady tendency to curtail the incomes of regular employees, the law for the abolition of pensions, the serious

cuts in the salaries of insurance company employees and the threatened dismissal of the greater part of the clerks at the Phoenix Insurance Company.

In the immediate future two other factors will be likely to help towards recovery. The one is the recently concluded trade treaty with Czechoslovakia, which will grant a number of export facilities to Austria, the value of which is estimated at 20 per cent. of present exports, or about 17 to 18 million schillings. The treaty will come into force on July 1st, and in the interval the consent of the most-favoured-nations to the preference agreements arrived at will be obtained.

The other factor which promises a stimulating effect is the introduction of general compulsory military service. The carrying out of this law will not only relieve the labour market and reduce the cost of supporting the unemployed but also bring public contracts for the provision of barracks, uniforms, etc. The yield of revenues is also developing surprisingly well. Revenue from taxes amounted in January to 102 million schillings, against 92 millions last year; and revenue for February is estimated at about 10 per cent. higher than that of February last year.

THE PHOENIX COLLAPSE

The discovery of the fact that the premium reserves in the Austrian business of the Vienna insurance company Phoenix were insufficient to the extent of 250 million schillings led the Government to introduce a consolidation measure designed, on the one hand, to protect the claims of persons insured with the Phoenix, and, on the other hand, to execute an important reform of the Austrian insurance system. This is thoroughly comprehensible and necessary; for life insurance in Austria, partly on account of the large scale and, as it now appears, rather wild propaganda carried on by the Phoenix, has grown to a volume far in excess of insurance in most other Central European countries. An insurance fund is accordingly being formed to issue a bonded loan of 250 million schillings, and hand it to the Phoenix to build up the premium reserve again. The yearly debt service of about 15 million schillings will be covered and paid into the fund out of managerial savings effected by all the insurance companies and also by an increase on premiums, not yet laid down but probably in the neighbourhood of 4 per cent., or by a corresponding curtailment of claims on the insurance companies. This appears to meet the requirements of people in Austria insured with the Phoenix.

The general reform of insurance is still more important. The Austrian insurance companies have 5,400 employees, of whom 1,400 are with the Phoenix. The salary list is estimated at 50 million schillings, which is very high in comparison with the level of all other categories of regular employees. In the first place, the cost of acquiring new business and particularly the agents' commissions, will be cut down greatly. These measures will be supplemented by regulations about minimum premiums, for the infringement of which serious penalties will be imposed.

VIENNA, April 20.

[This week's events in Austria are discussed in a Note on page 238.]

JUGOSLAVIA

CONSOLIDATING THE OPPOSITION

A SERIOUS attempt is now being made by the non-Parliamentary Serbian opposition to formulate a joint policy and to create a definite bloc with Dr. Macek, the leader of the Croats. The negotiations have also been joined by that section of the Radicals who do not support the Government. Hitherto the weakness of the non-Parliamentary opposition has been its vaguely defined policy and the lack of a definite organisation capable of taking over responsible government. The present greater willingness of Dr. Macek is by some attributed to his becoming conscious that continued passivity may also cause many of his supporters to drift towards extremism.

In spite of this, it is too early to say whether the present attempt will succeed. First, because some of the Serbian Radicals are connected in the public mind with corruption. Second, because Dr. Macek has stated that he cannot consider himself definitely bound until after free elections have made it clear who is the real representative of the Serbian part of the nation. If successful, however, the formation of such a bloc would be the most important step towards democracy since the establishment of the dictatorship.

Foreign trade figures for the first two months of the year are as follows:—

	1935		1936	
	Exports	Imports	Exports	Imports
January	Tons 210,600 Mill. din. 267.8	Tons 56,886 Mill. din. 256.7	Tons 151,700 Mill. din. 288.8	Tons 97,848 Mill. din. 342.4
February	Tons 189,000 Mill. din. 237.4	Tons 50,100 Mill. din. 228.9	Tons 117,800 Mill. din. 215.0	Tons 57,700 Mill. din. 293.7

Although there are no remarkable differences as compared with last year, these figures are not so favourable as they appear. Firstly, while imports increased, exports fell slightly in value and markedly in volume. This was largely due to the imposition of sanctions against Italy, which was an important buyer of Yugoslav exports. The concessions granted by Great Britain, and to a lesser extent by France, have by no means compensated for the loss of markets. Exports to Italy fell from 50 million dinars in January, 1935, to 4 millions in January this year, and imports thence from 36 millions to 0.1 millions. In the second place, exports to Germany do not represent cash receipts, but merely credits on the clearing account. A third indication of the real position is the index, which shows that the prices of agricultural products are steadily dropping.

Dissatisfaction is general among the peasants, and in Croatia they have made a definite attempt of their own to raise the price of their livestock by an organisation which refuses to sell below an agreed level. So far they have achieved a certain success, and the movement is spreading to other parts of the country.

INCREASE IN GOVERNMENT REVENUES

Government receipts show a general increase over last year. They were in December 878 millions, compared with 851 millions in 1934; in January 766 millions, compared with 707 millions in 1935; and in February 814 millions, compared with 727 millions in 1935. The rise was spread fairly evenly over all branches of revenue: direct and indirect taxation and monopolies. The new Budget strongly emphasises the Government's policy of encouraging economic activity and subsidising public works. Currency regulations have been modified in order to give some relief to exporters and to promote trade, and the quota of foreign bills derived from export trade which must be handed to the National Bank has been reduced successively from 80 per cent. to 50 per cent., and now to 33 per cent.

The employment figures for January showed 548,300 persons in work, compared with 506,500 in January, 1935, but the larger total was offset by a slight drop in the average daily wage since November.

Interesting figures have just been published showing the number of civil servants and State pensioners. These now number 422,000 and cost the State 7,086 million dinars a year, a rise of 300 millions in the last three years. In fact, it is calculated that of the Yugoslav population of 14 millions, 2 millions are living on State allowances, either as civil servants or pensioners.

BELGRADE, April 18.

IRISH FREE STATE

FURTHER ECONOMIC RECOVERY

CONDITIONS in the Irish Free State have generally improved since last year, in spite of the continuance of the "economic war" with Great Britain. The great endur-

ance and resilience of the economic structure of the Free State are remarkable in view of the extreme dislocation which it has experienced. The statistics of external trade exhibit a marked recovery:—

12 months ending	Imports	Exports	Import Surplus
Feb., 1935	38,569,208	17,461,683	21,107,525
Feb., 1936	37,941,247	20,060,877	17,880,370

The increase in exports resulted largely from the so-called "coal-cattle pact" with Great Britain early in 1935, and there is every reason to believe that a further improvement will be experienced this year as a result of the new agreement reached in February.

The reduction in the import surplus is reflected in the statistics showing the movements in the sterling assets of the Free State banks:—

EXCESS OF STERLING ASSETS OVER STERLING LIABILITIES OF IRISH FREE STATE BANKS
(£'000)

Last quarter 1932	88,275
" " 1933	82,983
" " 1934	75,455
" " 1935	74,470

The diminution in the rate of decline in the banks' sterling assets is a satisfactory indication that the tendency of the Free State to dissipate its external assets is slowing down. The country is in a strong creditor position on invisible account; but many of its invisible exports—for example, emigrants' remittances, British pensions and the takings of the sweepstakes—are precarious.

The general improvement is reflected in the public accounts:—

Year ending	Revenue	Expenditure	Deficit
March 31			
1934	30,229,182	31,550,298	1,321,116
1935	28,770,688	31,203,499	2,432,811
1936	30,601,620	31,106,840	505,220

The increase in revenue is general in all branches of taxation, direct and indirect, and the realised revenue is £1,215,620 in excess of the estimated revenue for the year. The deficit is apparent rather than real, as substantial capital expenditure was met out of current revenue. The amount of public expenditure shows no sign of reduction in spite of the Government's emphasis on the need for retrenchment. Indeed, when to the current national expenditure is added the expenditure of borrowed money and the outlay by local authorities, the total expenditure by public authorities has risen markedly in the last few years. Net public disbursements by State and local authorities have been as follows in recent years:—

	£ million
1933	32.00
1934	38.75
1935	44.00

The Government remains true to its declared policy of self-sufficiency in agriculture and industry, and every effort is being made to replace imports by home products. In a country with such a narrow range of natural resources as the Free State the practical limits of such a policy are soon reached, and imports cannot be much further reduced except at the expense of the standard of living. The encouragement of domestic production involves the raising of prices to the consumer, and the spread between the cost of living in Great Britain and the Free State is becoming gradually wider.

While it is true that attention is still paid to fostering agricultural exports, it is no less true that the primary emphasis is laid on the development of the home market. No doubt this orientation of policy is partially dictated by the pressure of external forces, but it is also, to some extent, the result of deliberate choice. It is impossible to avoid the reflection that a golden opportunity of strengthening the Irish farmer in the British market has not been utilised to the best advantage. The development of new ideas about the importance of the provision of nourishment as an essential social service, and the growing desire in Great Britain to become less dependent on overseas supplies of food, are factors which, in the ordinary way, would augment the demand for Irish farm products.

DUBLIN, April 20.

EGYPT

THE ANGLO-EGYPTIAN CONVERSATIONS

THE Anglo-Egyptian conversations are proceeding in an atmosphere of close privacy which tends to maintain a good deal of uncertainty about their outcome. This feeling has partly spread to the field of home politics, following the disagreement of the various parties over the distribution of seats in the new Parliament. Meanwhile, as often happens in Egypt, Maher Pasha's Ministry, which was set up as a stopgap, is taking initiatives which are usually associated with a fully established government.

The network of transport and communication is now expanding at a rate unknown in Egypt since the war. Several railway lines have lately been laid out or improved. But it is in roadmaking that the greatest measure of progress has been achieved. More work has been accomplished during the last ten months than in the preceding decade. The Egyptian Administration had always shown great reluctance to develop new means of communication capable of competing with the State-owned railways. Motor traffic, in particular, has had to contend with heavy odds. When, after lengthy negotiations with the Capitulatory Powers, Egypt succeeded in 1934 in imposing a new tax on all motor vehicles, it had been understood that part of the proceedings would be assigned to roadbuilding. However, no serious activity was evident down to the time of the Ethiopian crisis, and the present sharp change has been brought about almost solely by strategical considerations. While 12 months ago macadamised roads outside the perimeter of the main towns totalled barely 370 kilometres and desert roads 6,500 kilometres, the figures have now risen to 1,000 and 8,400 kilometres respectively.

AFTERMATH OF THE IMPORT BOOM

Importers are now experiencing the aftermath of the war scare of September last, when goods on the spot changed hands at rapidly rising prices and vast orders were passed abroad. Liquidations have now reached their peak and during the past few weeks a series of unusually important failures were recorded which have affected the entire import market.

The Stock Exchange has not suffered from these developments. On the contrary, the decision of the Mixed Court of Appeal upholding directly or indirectly the gold clause

in bank and State bonds has eliminated a long outstanding uncertainty and heartened the Bourse. Freed from the threat of a sudden increase in its commitments, the principal mortgage bank has been able to reimburse a part of its bonds which bear the highest interest.

These concessions have been rapidly followed by a new move on the part of the Minister of Finance designed to reduce the maximum legal rate of interest, which has stood for a very long time at 9 per cent. Conversations are proceeding with the Governor of the National Bank and other high officials. A new era of still cheaper money is therefore probable in Egypt. The Minister of Finance is credited also with the more ambitious project of founding a State Bank to take over the issuing business of the present National Bank, and Sir Otto Niemeyer, who has been in Cairo, has been consulted on the matter.

ALEXANDRIA, April 20.

[The situation created by the death of King Fuad is discussed in a Note on page 239.]

LETTER TO THE EDITOR

WICKSELL'S MONETARY THEORIES

TO THE EDITOR OF THE ECONOMIST

SIR,—No doubt your reviewer is right in saying that Wicksell's doctrine of "money" and "natural" rates of interest has exercised a profound influence on the development of monetary theories; and no doubt the work of Mr Keynes, Professor Hayek and others in this field has been directly or indirectly influenced by Wicksell. But when it comes to the question of the distinction between saving and investment and the withholding of purchasing power, it is by no means clear what position Wicksell has in this matter; and the suggestion made in this connection that he is "the progenitor of the two rival approaches to monetary problems most prominent to-day," seems to be distinctly far-fetched.

Yours faithfully,

A. H. ABBATI.

22, Austin Friars,
London, E.C.2.

(Our review was not intended to suggest that Wicksell's theories were in all respects the progenitors of those of Mr Keynes and Prof. Hayek.—Ed. Econ.)

BOOKS AND PUBLICATIONS

PRIVATE OR PUBLIC MONOPOLY?*

In the preface to this book Professor Levy states that he is neither an individualist nor a planner, and thus prepares the reader for an impartial survey of those aspects of the industrial system which are only too often described from the political rather than from the scientific point of view. The spread of industrial concentration is for him mainly the outcome of technical factors and not of political or psychological forces. Transportation technique, the international supply of raw materials and the location of the factors necessary for the various stages of productive processes are shown to be the underlying and primary causes of horizontal and vertical combinations, and their development is illustrated by a variety of examples. To the reader unacquainted with the details of post-war industrial developments in Germany the numerous references to particular problems in a book on the industrial system of that country may appear superfluous and even confusing. In my opinion the fundamental approach is undoubtedly sound. Development depends primarily on changes in and commercial technique, and commonly other than follows legal and political changes such as tariffs and the like. It may be granted that technical efficiency may be granted, there remains another equally important problem. Can a productive system based on private ownership operate as efficiently with monopolistic or imperfect competition as with reasonably free competition? Professor Levy would like to answer "Yes," and is at pains to show that concentration need not entail monopoly, and that in any case monopolies do not always extract excessive profits. But this surely misses the real point. It is perfectly true that under conditions of quasi-monopoly there may be no monopoly profits in the strict sense; but this may be merely because all the remaining firms in the industry are carrying surplus capacity; so that monopoly prices may exist even where there is some degree of competition. This is a real dilemma, which all efforts to encourage concentration by way of cartellisation must face. Another difficulty is that a satisfactory technical plant and a satisfactory balance-sheet position by no means always go hand in hand—witness the British cotton industry. These problems are implicitly recognised in the section on the supply of capital. Promoters' profits may encourage mergers and amalgamations far beyond the requirements of actual industrial technique. But this in itself is hardly a sufficient reason. A thorough understanding of its causes would require an investigation into British company practice similar to that carried out in the United States by Berle and Means, tracing the full implications of the "divorce of ownership from control" in the modern economic system. Professor Levy more than once tilts at the "orthodox" economist. In basing his explanation of industrial concen-

tration on the requirements of industrial technique, he fully makes his case, and in emphasising the importance of weighing actual economic circumstances before approving or condemning particular schemes of amalgamation, lays the foundations of a correct approach to the problem. But once he leaves the purely technical aspect his case is far less strong, and this may be caused by his reluctance to envisage the State as a regulator of monopoly. The aims of individualism and of political democracy cannot be to reduce State action in the economic sphere, but rather to ensure that the powers of the State are used for universal and not for sectional interests. Only if this is done can the waste of monopoly be avoided.

It is unfortunate that such a stimulating book should be marred by faults in style and vocabulary. Many of the technical terms used are simply non-existent in English; and it is to be hoped that Professor Levy will arrange for his next book to be presented in a form more attractive to English readers.

SHORTER NOTICES

"The Economic Development of the British Overseas Empire." Vol. III. "The Union of South Africa." By L. C. A. Knowles and C. M. Knowles. Routledge. 341 pages. 10s. 6d. net.

After Sweden, South Africa has perhaps overcome the depression—by devaluing her currency—more successfully than any other country. The publication of a book on South Africa's economic development at this moment is consequently timely.

The authors, however, have hardly taken full advantage of their opportunities. The present unique situation of South Africa is partly due to the importance of her gold-mining industry, though it must be remembered that devaluation helped South Africa's other export industries just as surely as the gold mines. This book devotes 130 pages to farming and only 50 to mining, including diamonds and coal as well as gold.

The authors state that "South Africa has since 1919 been a country enjoying a 'gold premium.'" But this is scarcely correct, since from 1925 to 1932 there was no "gold premium" in South Africa. The authors go on to say, however, that "the departure of the Union from the gold standard . . . brought a new era of prosperity to the gold mines in 1934."

Instead of basing their survey on the influence of the gold mines alone, they have thus preferred to sketch South Africa's economy within the same framework as that used for other countries. This method has some advantages. Without it the authors could scarcely have presented so exhaustive a survey of South African agriculture. The latter is particularly interesting, if only as a record of perseverance against the difficulties encountered in the production of one new product after another. Indeed, after perusing the chapter on "drought, plagues and pests," the reader will doubtless subscribe to General Smuts' recently expressed view that for many years to come South Africa must depend for her livelihood on her mineral industry, and, in consequence, must develop her base metals.

The authors are obviously more in their element in their most interesting discussion of the relationships of the black and white races in the sub-continent; and in their survey of the development of its railways, in which they seem to admit, almost against their will, the importance of Johannesburg as the "lodestar." There are signs, however, that the book is not quite up to date.

"Modern Government as a Busybody in Other Men's Matters." Allen and Unwin. 245 pages. 6s.

Sir Ernest Benn, who writes many books, has but a single thought. Almost all evils, he believes, are due to Government interference with the natural and beautiful harmony of unregulated competition. In this book he even disapproves of the State attempting to provide decent housing for the working classes. "Leaving aside the higher ethical considerations," he says, "and the moral degradation of something for nothing"—does Sir Ernest know how much the working man pays in indirect and municipal taxation?—"the theory of free housing will not stand the practical test." The problem of the slums "settles itself if it is left alone." The inhabitant of the slums will, we suspect, be content if the Government gets on with the work of slum-clearance and leaves Sir Ernest Benn alone in the contemplation of the higher ethical considerations.

"Denmark in 1935": An Examination of her Economic Position, with Special Relation to Agriculture and Anglo-Danish Trade. Economic League, London, S.W.1. 63 pages. Price 6d.

This book gives an interesting survey of Denmark's daily economic life, based on first-hand impressions. To those who are not familiar with Denmark the book will supply much valuable information, though an exhaustive account naturally cannot be offered in 63 pages.

The chapter on agriculture provides a vivid picture of the chief features of Danish farming: the scientific methods employed, and the predominant influence of the co-operative societies, which are now buying feeding-stuffs, etc., as well as marketing standardised products in the most economical way. A whole chapter is devoted to "Carlsberg—A National Institution," and it is shown how the capital and profits of a large industrial undertaking are devoted to the furtherance of science and art.

One misses, however, an analysis of the Danish foreign exchange problem and the functions of that ingenious device, the Exchange Control Office, by means of which it has been found possible to economise the scanty foreign exchange resources of the country without lowering the people's standard of living. On the whole, however, Mr White's book is pleasantly objective and well-informed.

MONEY AND BANKING

BRAZIL'S EXCHANGE PROBLEMS

BRITISH commercial creditors of Brazil now have before them the definite offer of settlement of their debts based upon the arrangements embodied in the Anglo-Brazilian Payments Agreement of March 27, 1935. This is the second occasion within a few years upon which the Republic has been obliged to submit a funding arrangement for the liquidation of commercial credits on foreign account, which have become "frozen" through the lack of adequate foreign exchange resources.

The latest arrangement, like the previous scheme which came into effect in May, 1933, runs parallel with that concluded with United States creditors of Brazil. The 1933 and 1936 arrangements are similar, inasmuch as while cash payments are provided for the liquidation of small debts, the bulk of the commitments are to be met in instalments—either in notes or bonds—spread over a period of years. By unilateral action through the Aranha scheme of February, 1934, the Brazilian Government has already reduced the cost of the service on its external bonded debt to an amount equivalent to some £8,000,000 sterling per annum, which was officially stated at the time to represent the maximum annual remittance payable across the exchanges. The existing international political situation is held to be mainly responsible for the present poor demand from Europe for Brazilian coffee. It is therefore opportune to examine the general exchange position.

Brazil has a paper milreis which lacks both metallic guarantee and the basic support of a modern central banking system. Exchange control has been operative since May, 1931, and the foreign exchange markets have been subject to continual disturbances through sudden changes in the control regulations. Ultimately, in May, 1934, the Government "recognised" the "free" exchange market. The immediate outcome was a substantial depreciation in the effective exchange value of the milreis, which provided a natural check to imports. The "free" exchange market, at first, dealt only in exchange other than that derived from export bills, but successive modifications in the regulations brought about the establishment of the present position, which has remained materially unchanged since February 11, 1935. Foreign currency bills covering all exports (except certain "minor" exports, which secure 100 per cent. of "free" exchange) must be sold in the "free" exchange market to the authorised banks. The latter deliver 35 per cent. of the resultant exchange to the Banco do Brasil at a stipulated official rate to meet the Government's requirements, including its expenses abroad and the service of its external debt. The balance of 65 per cent. represents the resources of the "free" market. Exchange to pay for goods cleared through the Customs after February 11, 1935, is obtained in the "free" market. Goods cleared, however, through the Customs between September 11, 1934, and February 11, 1935, inclusive, have been entitled to 60 per cent. of the relative foreign exchange at the "official" rate; and all goods cleared before September 11, 1934, have been entitled to the full 100 per cent. of official exchange.

It was in regard to the payment of goods cleared up to and including February 11, 1935, that special arrangements were embodied in the Anglo-Brazilian Payments Agreement of March, 1935. The arrangements finally made under the terms of that agreement, however, go further. They provide means, in fact, for the settlement of all approved commercial debts due to British nationals to date. Under an offer made on March 13th last, all such debts, due up to and including June 15, 1935, are to be satisfied in cash if more than £100, and as to 15 per cent. (or more if the greater) in cash and the balance in Brazilian Government sterling stock, if the debt is £100 or more. Debts due after June 15, 1935, are to be with 4 per cent. stock. Arrangements of a similar character have been concluded in New York for the liquidation of the blocked American funds.

On June 28, 1935, restrictions were again imposed in Brazil on the supply of exchange to cover remittances abroad. Export exchange quotas of 35 per cent. and 65 per cent. are still maintained. Under the previous arrangement, however, remittances abroad, between February 11, 1935, and June 28, 1935, could be met out of the 65 per cent. quota of "free" exchange without the necessity of prior authorisation. The position has now reverted to that obtaining before May, 1934, and the authority of the Exchange Control is once more necessary before remittances abroad can be made. It follows that the disposal of the 65 per cent. of so-called "free" exchange is in fact no longer free, but is controlled by the Fiscalisation Department. Normal exchange transactions covering imports are effected without difficulty, but the procedure in respect of other exchange requirements may be complicated.

It has been calculated that the cost of effecting the annual remittances called for under the original 1933 Payments Agreement with Great Britain and the United States is in the neighbourhood of £2,000,000 sterling per annum. The new Sterling Stock issue is limited in amount to £5,000,000. It is redeemable at par within five years, and will require for interest and amortisation an annuity of £1,200,000 sterling. This annuity, however, will be increased to £2,053,000 sterling as soon as all payments under the June, 1933, arrangement have been finally liquidated, and so long as any of the 4 per cent. Stock remains outstanding.

It is clear that the capacity of the Brazilian Government to meet its commitments turns on two factors, namely, the yield of the Government's 35 per cent. quota of export exchange, and the extent of imports, both visible and invisible, in relation to the value of exports. The total value of Brazilian exports in the year 1935 was £33.0 millions (gold), in respect of which the Government's exchange requisition of 35 per cent. would have yielded £11.6 millions (gold), equivalent to some £19.2 millions sterling. On the face of it this would appear adequate to meet Government requirements under all heads, including Government expenses abroad. The total value of imports into Brazil last year, however, was £27.4 millions (gold), or some £6 millions more than the 65 per cent. of export exchange, amounting to £21.4 millions, available for that year to the "free" market. The export figure for January, 1936, was £3.0 millions (gold), but this was reduced in February to £2.6 millions (gold). No recovery is expected in March, for the export demand for coffee is still inactive, and prices obtainable are no better. If the January-February average were maintained, the aggregate value of exports for 1936 would be £33.8 millions (gold), while the Government's exchange quota would be £11.8 millions (gold), and the total left available for imports £21.9 millions (gold). Imports on the January-February basis would cost for the year £25.8 millions (gold). In view of probable requirements for cover for "private" remittances, such as dividends, railway earnings, etc., it would seem that—failing an upswing in export values and trade—there are two possibilities. The flow of imports must be restricted in the near future, either by trade regulations or through the depreciation of the free rate, or the question may arise of modifying the 35 per cent. quota of export exchange sequestered by the Government.

Finally, an important new factor has arisen in the Brazilian import markets during the past few months due to the competition from Germany through the "compensation" mark system. This enables the "Aski" mark to be quoted at a heavy discount in South America, although it is accounted at its full parity with the Reichsmark in the supply of the goods to the Brazilian importer. Parallel with the heavy decline in British trade with Brazil, both on import and export account, there has been a big expansion in German trade. This adds a new complication to an exchange system which already afforded sufficient difficulty both to British traders and British creditors of Brazil.

FINANCIAL NOTES

Gold Bloc Vicissitudes.—While the dollar has remained steady at \$4.93½, the gold bloc currencies have given the London foreign exchange market a series of minor shocks. The result of the first ballot in the French elections was received fairly calmly, and three months' francs have remained at just under Frs. 3 discount. Early in the week, however, came the news that Poland was about to impose exchange restrictions. So far, London banks have received no details, but it is understood that they are free to dispose of both their own and their customers' balances up to the end of this week. Then on Wednesday, the spot rate for Swiss francs suddenly weakened from Frs. 15.15 to Frs. 15.25, returning on Thursday to Frs. 15.21. This created some nervousness, and it was suggested either that Switzerland was proving susceptible to this week's Austrian news, or that Continental speculators found it cheaper to bear gold bloc currencies through the medium of the Swiss franc than through the French franc. As the discount on three months' Swiss francs was only 3 per cent., against 15½ per cent. per annum for French francs, this view appeared tenable, but it was disproved by the fact that there had been no real widening in the discount on three months' Swiss francs or any serious offering of spot or forward guilders, which were equally open to attack in this way. A more likely suggestion is that the Italian authorities have been selling Swiss francs against sterling through Paris. The Swiss francs would be derived from the mobilisation and sale of Swiss securities owned by Italian nationals, while any resultant weakening of French francs against the pound would be taken up by the British Control. Incidentally, it has recently become far less easy to detect the Control's intervention, especially as it now frequently operates abroad. A further report is that the fall in the Swiss franc was due to a single large commercial transaction on a bare and narrow market. Generally speaking there has been no real justification for the strength of the Swiss franc in Paris, ever since the completion of certain loan repayments from France to Switzerland as long ago as March 15th, and some London operators have been surprised that the Swiss franc should have since remained nearly at the import gold point. If so, this week has witnessed a natural reaction. Nevertheless, the Swiss franc is still above the theoretical export gold point. There has been no recent change in the general Swiss economic position, and this week's movement is probably just one more symptom of the nervousness which afflicts the gold bloc currencies.

Argentine Central Bank.—The first report of this institution describes the execution of the banking reforms authorised by the legislation of March, 1935, and also the central bank's own operations from May to December last year. The revaluation of the nation's gold and subsidiary coinage yielded a profit of \$663 millions, which was used in such a way as to avoid inflation, while reinforcing the cash reserves of the commercial banks. These last increased in consequence during 1935 from \$485 millions to \$827 millions, while the ratio of cash to deposits rose from 14.0 to 24.7 per cent. The exact details of this work of reconstruction are fully described. During the Central Bank's inaugural year there were naturally wide changes in its assets and liabilities. Broadly speaking, progress has been made in the liquidation of foreign balances previously blocked in the commercial banks, while the Exchange Control's funds, now held in public deposits at the Central Bank, have increased as the result of the year's profitable operations. Certain Government bonds have been transferred from the Central Bank to the commercial banks, while the Instituto Mobolizador, formed in March, 1935, to take over the frozen assets of certain commercial banks, has now drawn upon its resources at the Central Bank in order to perform its functions. The net result of these operations is an increase in public deposits, a decrease in bankers' deposits and in the Central Bank's securities, and the disappearance of the Instituto's reserve balance. The

Central Bank itself earned a profit of \$3.7 millions. After paying the maximum dividend of 5 per cent., \$1.6 millions was appropriated for various reserves and \$1.7 millions was paid to the Government. Altogether the new Central Bank has made an auspicious start, and has already done much to place Argentine banking and finance upon a sounder and more liquid basis.

Italian Banking and Sanctions.—The accounts of the Banca Commerciale Italiana for December 31st, 1935, throw an indirect but illuminating light on the effect of sanctions. At the end of 1933 commercial acceptances, which mainly relate to the financing of foreign trade, stood at Lit. 174.8 millions; and a year later they were up to Lit. 191.9 millions. By December 31st last, economic sanctions were in operation, with the result that the commercial acceptances of this bank had fallen to Lit. 24.3 millions, or to exactly one-eighth of their total value of the preceding year. This is a very rough measure of the effect of sanctions upon Italy's external trade. Meanwhile the total resources of the bank have also fallen during the past year, for deposits are reduced from Lit. 7,840 to Lit. 6,960 millions; cash from Lit. 461 to Lit. 365 millions; bills receivable, Italian Government securities and money at call from Lit. 5,164 to Lit. 4,657 millions; and current debtor accounts (i.e. advances) from Lit. 2,601 to Lit. 2,298 millions. These movements may indicate a shrinkage in general business activity, but they certainly do not suggest any inflation of the commercial banking system. A further indication of the status of the lira is now being afforded by the inception of the tourist lire system. The initial quotation, which has now been in force for about ten days, is Lit. 82.10 to the pound. This compares with the official exchange rate of Lit. 62½ to the pound, so that tourist lire are quoted at a discount of nearly 24 per cent.

The Bank Return.—The end of the month has brought with it the usual small increase in the note circulation, but this is partly offset by a further addition to the Bank's gold stocks, so that the Reserve has only fallen by £0.8 million.

The postponement until Friday of the bulk of the week's payments for new Treasury bills left the Government rather short of funds with which to cover maturities in the earlier part of the week. Public Deposits have therefore fallen by £5.8 millions, while the increase of £8.1 millions in Government securities may indicate borrowing on Ways and Means. Conversely Treasury bill maturities left the banks and the market well supplied with funds in the middle of the week. This explains the increase of £11.6 millions in bankers' deposits.

The Money Market.—This week the money market has been disturbed by the inequalities of the calendar. Treasury bills issued and paid for on Friday, May 1st, provided the Government with an extra day's funds, and so the bulk of this week's new Treasury bills were allotted on that day. Meanwhile old Treasury bills have been maturing every day this week, so that as the Bank return shows, up to Friday the Government was steadily paying out money to the banks and the market was getting very little in. This made money very easy on Wednesday and

Thursday, but on the first two days of the week some calling was noticeable.

	Apr. 8, 1936	Apr. 16, 1936	Apr. 23, 1936	Apr. 30, 1936

Three months' bank bills	1½-1½	1½-1½	1½-1½	1½-1½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral, respectively.

As bill brokers only needed funds on Friday, most business in bills this week was of a forward character, namely for delivery and payment on that day. The banks bought early July Treasury bills at 1 per cent. on that basis. The rate for three months' bank bills is unchanged.

The Union Bank of Scotland.—The accounts of this bank for the year ended April 2, 1936, provide further confirmation of the progress of Scottish banking. Net profits for the latest year were £316,600, against £313,500 in 1934-35, while the disclosed appropriation to contingencies has been reduced from £50,000 to £25,000. On the other hand, there is this year an allocation of £25,000 to the widows' fund, which will help to solve any problems which may have arisen from the fall a few years ago in the long-term rate of interest. The dividend is unchanged at 18 per cent. The bank's resources are larger than a year ago, for deposits have risen from £29.9 to £32.0 millions. Advances are unchanged, and the extra funds have been lodged in bills and investments. Thus the bank is experiencing the common difficulty of all British banks in finding a sufficiency of willing and credit-worthy borrowers. In these circumstances the bank has done well to improve its net earnings, and it has obviously added to its strength and liquidity.

INSURANCE NOTES

Motor Union.—This company transacts a large motor insurance business, the figures in relation to which are included in its accident branch accounts. Premium income increased from £182,000 to £188,000, and £1,537,000 to £1,606,000 in the fire and accident branches, respectively. The results of the last two years are given below :—

	1934	1935
	Percentage of Amount of Profit	Percentage of Amount of Profit
Fire	14,159 7.8	26,480 14.1
General	61,821 4.0	94,898 5.9
	75,980	121,378
Less items debited to profit and loss account	35,204	52,464
	40,776	68,914
To general reserve	104,000	69,000

Total assets amount to £2,637,000. The market value of the investments are more than £150,000 in excess of the book values, without taking into account the investment reserve of £233,000. There is also a general reserve of £493,000. The dividend has been increased from 26 per cent. to 32 per cent. and costs £50,000, compared with available interest earnings of £73,000. The shares are held by the Royal Exchange.

London Assurance.—The year 1935 marked the close of another quinquennial period in the life department. The result of the valuation of the assets and liabilities is given below, together with that of 1930. On this occasion the new mortality table A 1924-29 was used for assurances, and the rate of interest assumed was reduced from 2½ per cent. to

2½ per cent. In no case, however, was the net premium used greater than 87½ per cent. of the office premium for non-profit business or 75 per cent. for with-profit business. For annuities the assumptions as to mortality and interest (2½ per cent.) were the same as before :—

	1926-30	1931-35
Trading surplus earned during quinquennium	870,840	940,943
Brought forward	192,823	106,911
	1,063,663	1,047,854
Allocations :—		
To Bonuses to policyholders	578,402	771,457
„ Shareholders	96,350	107,242
„ Strengthening of actuarial reserves.....	282,000	...
„ Carried forward	106,911	169,155
	1,063,663	1,047,854

In respect of policies issued before 1911, a cash bonus has been given at the rate of 55 per cent. of the premiums paid in the quinquennium. For policies issued subsequently, compound reversionary bonuses at the very satisfactory rates of 45s. per cent. per annum for whole-life and 40s. per cent. for endowment assurances have been declared; at the last valuation the rate was 45s. per cent. under both plans. As will be seen, the cost of the bonus, including the shareholders' proportion of profits, is amply covered by the trading surplus, which, it should be noted, is arrived at after providing for the increased stringency in the reserves. The valuation is on a very strong basis, and places the office in a particularly favourable competitive position as regards future profits. During the year new assurances for £2,764,000 were issued against £2,376,000 in 1934, while annuity consideration moneys increased from £129,000 to £212,000. The net rate of interest in the life fund fell by 10d. per cent. to £3 17s. 9d. per cent. The premium income of the company, including the associated companies, increased in the fire branch from £2,075,000 to £2,094,000, and in the accident branch from £1,163,000 to £1,253,000; marine premiums fell from £690,000 to £646,000. The underwriting profit has expanded considerably, as will be seen from the following table :—

	1934		1935	
	Amount of Profit £	Percentage of Premiums	Amount of Profit £	Percentage of Premiums
Fire	146,678	7.1	186,164	8.9
General accident	60,837	5.2	120,043	9.6
Marine	73,017		72,011	
Life	20,000		20,000	
	300,532		398,218	
Less items debited to profit and loss account	236,378		141,739	
Net trading surplus ...	64,154		256,479	

Available net interest earnings, which fell in 1934 by £24,000, increased last year from £184,000 to £216,000. These fluctuations can no doubt be accounted for by the varying effect of foreign remittances. The dividend is again 45 per cent., and absorbs £231,000. Total assets, including those of the associated companies, increased from £16,622,000 to £18,610,000, and aggregate market values of Stock Exchange securities are stated to exceed book values.

World Auxiliary Insurance.—This Corporation transacts various classes of insurance other than life, and the total premium income last year was £273,000, against £287,000 in 1934; the underwriting results of the last two years are given below :—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	£6,169	7.0	£5,350	6.0
Accident and general	6,321	7.6	4,442	5.6
Marine	19,887	17.3	15,048	14.5
	32,377		24,840	
Less items debited to profit and loss account	23,561		10,461	
	8,816		14,379	

Out of the above surpluses some £15,000 was transferred to the reserve fund in 1934, and £10,000 in 1935. The

assets amount to £1,176,000 and Stock Exchange market values are about £84,000 in excess of book values. Reserve funds aggregate £250,000, while the profit and loss account is £125,000 after payment of the 1935 dividend, which is again at the rate of 7½ per cent. free of tax and costs £22,500, against interest earnings of £29,600.

London and Lancashire.—Apart from the life department, which is administered by the Law Union and Rock, the premium income of this company last year was £6,042,000, compared with £5,894,000 in 1934. The underwriting profits were again very satisfactory.

	1934	1935		
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	387,950	13.7	443,789	15.8
Accident and general ...	77,816	3.8	72,716	3.3
Marine	133,936	13.1	185,508	17.8
Life	17,078		17,078	
Capital redemption	1,010		1,467	
	617,790		720,558	
Less items debited to profit and loss	141,836		183,106	
	475,954		537,452	

In 1934, £100,000 and £200,000 were transferred from profit and loss to strengthen the additional reserves held in the marine and accident departments respectively, and last year £500,000 was transferred to general reserve. These entries are not included in the above profit and loss items. The departmental reserves are very strong; in addition to the usual 40 per cent. of premium income for unexpired risk, further reserves are held which, at £2,400,000 and £1,000,000, amount to 85 per cent. and 46 per cent. of the fire and accident premiums respectively. The marine fund amounts to 136 per cent. of the 1935 premium income. Due to the £500,000 credit mentioned above the reserve fund is increased from one and a half to two millions, while profit and loss balance, after providing for the 1935 dividend, is £2,134,000. Total assets, excluding the life assets ("Law Union and Rock"—see page 254), amount to £16,888,000, and the aggregate market value of the securities as at December 31, 1935, is in excess of the amount appearing in the balance sheet. The dividend is once more 50 per cent. and costs £582,000, compared with available net interest earnings of £474,000.

London and Provincial Marine and General.—This company is a subsidiary of the Yorkshire. Premium income in the Fire and Accident Branch is now slightly greater than in the Marine Branch, which was formerly the only class of business transacted. As usual, marine results were very satisfactory; and, though not so good in 1935 as in the previous two years, they enabled a transfer to be made to profit and loss of £20,000—equal to 20.3 per cent. of the premiums received in the year. The total assets exceed £1,500,000, and the market values of the Stock Exchange securities are in excess of book values. The reserve funds amount to £690,000 and there is a profit and loss balance of £106,000. The dividend is again 10 per cent., free of tax, and costs £30,000, compared with the interest earnings of £44,000.

Marine Insurance Company.—Premium income fell further last year from £530,000 to £521,000, but the claims experience was very favourable. Expenses and the first-year claims amounted to 29 per cent. of the premium income, compared with 29 per cent. and 30 per cent. in 1934 and 1933 respectively. The 1933 account is closed by the transfer to profit and loss of £132,000, equal to 23.2 per cent. of the premiums of that year; the corresponding figures in the previous year were £144,000 and 22.5 per cent. Total assets amount to £2,665,000, against £2,730,000, and the financial position is very strong. The reserve fund is £700,000 and the profit and loss balance is £466,000. The dividend is again at the rate of 40 per cent. and costs £186,000, compared with interest earnings of £92,000.

General Accident, Fire and Life.—A quinquennial valuation of the liabilities of the life assurance contracts was made as at December 31st last, and resulted in the same rate of simple reversionary bonus as in 1930—namely, 52s. per cent. per annum for policies originally effected with the Corporation. All assurances taken out in the last decade have been effected with the General Life; the rate of bonus of that office has been reduced from 35s. per cent. per annum, calculated on the sum assured, to the very modest rate of 30s. per cent. per annum in respect of policies issued since January 1, 1926, and from 30s. per cent. per annum to 25s. per cent. per annum for policies previously issued. No details of the basis of valuation or the distribution of surplus are given; the report states that full particulars on these points "will be furnished in due course in the returns to the Board of Trade." Evidently, but there seems no good reason why the report now issued should not accord with the general practice of offices. As a result of the 1930 valuation £56,000 was transferred to profit and loss from life and capital redemption accounts, but the corresponding figure on this occasion is less than £10,000. New life assurances were £2,884,000 against £2,840,000, and the net rate of interest was 2s. 7d. per cent. less at £4 3s. 1d. per cent. On the other hand, fire premium income increased from £593,000 to £642,000 and accident premiums from £6,852,000 to £7,946,000, while marine premium income was £25,000 greater at £164,000. The results of the last two years are shown below :—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	£136,456	23.0	£139,396	21.7
Accident and general ...	260,248	3.8	184,514	2.4
Marine	—3,694	2.6	—1,911	—1.2
Life	...		8,229	
Capital redemption.....	...		1,350	
Profit on sale of invest- ments	11,771		...	
	404,781		331,578	
Less items debited to profit and loss	225,422		286,910	
	179,359		44,668	
To reserve	150,000		125,000	
Net trading surplus ...	29,359		—80,332	

During the year the capital was increased by the issue of 50,000 £5 shares with £1 5s. paid up. The issue price was £18 15s., so that the total issue premium was £875,000, which, together with £125,000 from profit and loss, has been transferred to general reserve. From that reserve £200,000 has been transferred to create an additional reserve in the accident and general department, and as a result the general reserve has been increased by £800,000 to £1,700,000, while the profit and loss balance after payment of the year's dividend is £539,000. Total assets in the General Accident and its subsidiaries amount to £16,780,000. During the year the chief changes among the investments were increases of £417,000 to £1,240,000 in British Government securities and of £545,000 to £1,668,000 in foreign Government securities. The rate of dividend is 64 per cent. compared with a dividend of 60 per cent. and a bonus of 4 per cent. in 1934, and costs £250,000 on the increased capital, compared with available net interest earnings of £265,000.

Royal Exchange Assurance.—The quinquennial valuation of the assets and liabilities was made as at December 31, 1935, but the information given in the report is insufficient to enable us to compile our usual formal statement; even the rate of bonus recommended finds no mention. It is difficult to understand this departure from common practice and from the course followed by the office itself five years ago. New life assurances, which increased by £742,000 in 1934, rose by a further £601,000 to £4,350,000. Annuity consideration money was also greater, being £312,000, compared with £281,000, and the net rate of interest earned on the combined insurance and annuity funds at £4 6s. 8d. per cent. was 1s. 3d. per cent. less. Death claims and surrenders at £288,000 and £101,000

respectively, were practically the same as in the previous year. In the other branches premium income was well maintained and underwriting profits were distinctly satisfactory. The results of the last two years are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire Department.....	142,408	9.9	189,292	12.8
General Department	— 3,785	—0.3	32,490	2.8
Marine Department	738	0.1	2,957	0.5
Life Department	26,151		30,445	
Annuity Department	10,450		11,174	
Capital redemption Department	2,293		1,288	
Trustee and Executor Department	12,353		19,463	
	190,608		287,109	
Less Items debited to Profit and Loss Account	127,841		138,694	
Net Trading Surplus.....	62,767		148,415	

Strong departmental reserves are held; thus in the fire account, in addition to the usual reserve of 40 per cent. of the premium income for unexpired risks, there is an additional reserve of £600,000; while the marine fund amounts to 138 per cent. of the premium income. Total assets, excluding those of affiliated companies, increased from £21,073,000 to £21,984,000. Mortgages on property and loans increased further by £445,000 to £2,855,000. British Government securities fell by £324,000, but increases took place in debenture, preference and ordinary shares. The dividend is at the same rate as in 1934, namely 30 per cent., and its cost is covered by the available interest earnings.

* * *

The State (including the British Equitable) Assurance.—The premium income of this company, which is owned by the Royal Exchange, showed some increase, and improved underwriting profits were obtained.

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	23,988	4.4	36,167	6.6
Accident	8,339	4.1	20,326	9.5
Marine	10,601	15.6	9,175	11.0
Life	1,814		1,814	
	44,742		67,482	
Less Items debited to profit and loss account	36,653		40,891	
	8,089		26,591	

The company does not yet transact life business, but the accounts include the figures of its subsidiary, the British Equitable, which operates in life assurance as well as the miscellaneous classes of assurance. New life assurances increased from £787,000 to £866,000. The net rate of interest increased by the substantial amount of 2s. 3d. per cent. to £4 7s. per cent. The total assets of the State and its affiliated companies increased by £53,000 to £3,066,000. The rate of dividend was again 25 per cent. and costs £19,375, compared with available interest earnings of £32,456.

* * *

Wesleyan and General.—In the ordinary branch new business amounted to the record total of £1,799,000, against £1,589,000 in 1934, while the net rate of interest was 2s. 9d. per cent. less at £4 5s. 4d. per cent. In the industrial branch new assurances fell by £240,000 to £3,845,000 and the net rate of interest was 3s. 6d. per cent. smaller at £4 15s. 7d. per cent.; the expense ratio showed a further reduction from 38.7 per cent. to 38.2 per cent. of the premium income. The customary annual valuation of liabilities and assets was made as at December 31st last, and the results are given below. In the ordinary branch the valuation basis was strengthened by the use of interest at 3 per cent. instead of 3½ per cent. for without-profit policies. In the industrial branch the same basis of valuation

was used as in 1934, but greater strength has been attained by allocating £30,000 to a special reserve.

The rate of bonus in the ordinary branch was 44s. per cent. for whole life assurances and 38s. per cent. for endowment assurances, calculated on the sum assured. In each case 4s. per cent. of the bonus was provided from the surplus arising in the industrial branch. The corresponding rates in 1934 were 46s. per cent., 40s. per cent., and 6s. per cent. respectively. Profit-sharing in the industrial branch was instituted in 1927, under which policy-holders receive 60 per cent. of the divisible profits, and under this scheme approximately £500,000 has been allocated to make the premiums under whole life policies cease at age 65. For 1935 a new method of distribution has been adopted, under which an addition is made to the sum payable on claims by death or maturity in the year commencing April 7, 1936; the amount of the addition varies with the duration of the policy, commencing at 2½ per cent. of the sum assured where the policy has been in force for ten years, and increasing to a maximum of 10 per cent. where the duration is 40 years or over. Total assets increased from £13,200,000 to £13,869,000. An increase of £260,000 to £3,417,000 on mortgages on property reflects the popularity of the house purchase schemes of the Society.

* * *

Law Union and Rock.—When allowance is made for the disappointing nature of the quinquennial bonus distribution at the close of 1934, the new business was very well maintained at £2,455,000, compared with £2,681,000 in 1934 and £2,365,000 in 1933. The net rate of interest, however, fell from £3 17s. 4d. per cent. to £3 14s. 4d. per cent. Death claims at £373,000 were £46,000 smaller. The Law Union and Rock is concerned mainly with life assurance, but transacts fire and accident business also, from which the premium income last year was slightly higher at £691,000. Underwriting profits were very satisfactory. The results of the last two years are given below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Life	17,078		17,078	
Fire	87,046	18.8	94,245	21.0
Accident and general	21,791	9.9	31,343	13.0
	125,915		142,666	
Less Items debited to Profit and Loss.....	32,352		30,775	
	93,563		111,891	

The dividend is again 16s. per share, and costs £141,000. The available net interest earnings were £48,000.

Legal and General.—New life assurances other than decreasing term and group assurances fell from £7,092,000 to £6,381,000. Decreasing term assurances, issued chiefly in connection with building society loans, and group assurances, increased from £7,549,000 to £9,383,000. In addition, new sums assured under sinking fund policies were issued for £1,176,000 against £1,422,000. The amount of business transacted in connection with group pensions showed a large expansion, but annuity consideration moneys fell from £1,737,000 to £1,188,000. In connection with the reinsurance treaty with the Phoenix of Vienna, new sums assured of £520,000 against £560,000 in 1934 were accepted. It is understood that the recent crisis in the affairs of this company will not involve the Legal and General in any additional liability; however, the book values of the treaty, which in the 1934 balance sheet stood at £39,000, and the book value of the society's shares in the company, amounting to £11,000, have been entirely written off. The net rate of interest earned on the life fund, excluding from that fund the whole of the amount invested in reversions, was £4 3s. 11d. per cent., compared with £4 6s. per cent. in the previous year. Annuities paid increased further by £82,000 to £369,000. The combined fire and accident premium income was £558,000 against £530,000, and the underwriting profits were more satisfactory. Transfers to profit and loss from the life, sinking fund and permanent sickness accounts are made only on the occasion of the quinquennial valuations.

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	23,675	7.6	33,265	10.3
Accident.....	— 32,882	—15.2	—13,220	—5.7
	— 9,207		19,945	
Less items debited to profit and loss	— 6,000		10,000	
	—15,207		9,945	

Of realised investment profits of £381,000 some £181,000 was applied to write down investments, and £200,000 was transferred to the investment reserve fund, which now stands at £850,000. The general reserve fund is unchanged at £350,000. The total assets increased from £33,467,000 to £36,690,000. The book value of the Stock Exchange securities is £15,647,000, which is stated to be £1,254,000 less than the market values on December 31st last, after allowing for accrued interest in the prices. Loans of all kinds increased from £12,872,000 to £13,082,000. British Government securities at £5,862,000 showed an increase of £666,000 and British municipal securities increased from £307,000 to £1,085,000. Increases also took place in debenture, preference and ordinary stocks. The dividend, including bonus, is again 52½ per cent., free of tax, and costs £105,000 against net interest earnings on the funds, other than the life fund, of £75,000.

* * *

Eagle Star and British Dominions.—In the Life department new policies were issued for £2,755,000, against £2,404,000 in 1934, while the net rate of interest remained unchanged at £4 3s. 5d. per cent. The valuation of the assets and liabilities of the closed funds of the "Eagle" and "English and Scottish" was made as at December 31st last, and as a result £72,275 has been carried to Profit and Loss. In 1934 the corresponding credit from the Life fund was £18,158 arising out of the valuation of the "Sceptre." In the Motor branch premium income increased from £1,143,000 to £1,465,000, while the accident premium income in the other miscellaneous accounts showed some increase. The underwriting results are shown below. Among the items debited to Profit and Loss is the sum of £100,000 set aside as provision for staff pensions and a further £100,000 written off the cost of "life businesses acquired." The acquired businesses referred to are the "Eagle," "Sceptre," "Star" and "English and Scottish" Companies. The original cost was £606,000, but this sum has now been written down to £145,000, an amount

which bears but little relation to the profit earning capacity:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	45,825	5.6	70,139	8.7
Accident	5,954	7.5	8,809	10.2
Employers liability	3,950	2.5	3,671	2.2
General	84,676	21.2	108,474	25.6
Motor	18,055	1.6	17,662	1.2
Marine	25,000		25,000	
Life	18,158		72,275	
	201,618		301,030	
To reserve	100,000		100,000	
	101,618		201,030	
Less items debited to profit & loss account	32,507		160,453	
Net trading surplus...	69,111		40,577	

The interest income, after providing for Preference and Preferred Ordinary dividends, increased from £137,000 to £159,000. The dividend has been increased from 22½ per cent. to 25 per cent. and costs £156,000 compared with £140,000 in 1934. Total assets of the Company, its closed funds and subsidiaries, amount to £23,691,000, of which £15,881,000 relates to the Life department. There was some decrease in mortgages and British Government securities, while moderate increases took place in Debentures, Preference and Ordinary Stock. The General Reserve Fund remains unaltered at £1,350,000.

Atlas Assurance.—New life assurances increased last year by £319,000 to £3,564,000, and annuity consideration money by £18,000 to £596,000. The net rate of interest was a few pence higher at £4 10s. 4d. per cent., while death claims fell by the substantial sum of £38,000 to £245,000. Although the surplus is distributed to policyholders only at triennial intervals, an annual valuation of the liabilities and assets is made. The valuation on December 31st last, made on the same basis as in the previous year, has brought out very satisfactory results, and £90,000 has been applied to strengthen reserves. Fire premiums fell by £17,000 to £1,759,000, but in the accident and general branches an increase took place from £496,000 to £546,000; in the marine branch there was a small decrease of £3,000 to £112,000. The marine fund now amounts to over 3½ times the premium income. Underwriting profits are shown below:—

	1934		1935	
	Amount of Profit	Percentage of Premiums	Amount of Profit	Percentage of Premiums
Fire	165,962	9.3	181,564	10.3
Accident.....	46,999	9.5	39,375	7.2
Life	26,858		27,154	
	239,819		248,093	
Less Items debited to profit and loss	172,881		88,207	
	66,938		159,886	

The total assets of the Atlas and its subsidiary companies increased from £17,039,000 to £18,315,000; the assets of the life department alone increased from £11,277,000 to £12,392,000. Of the life assurance assets the chief changes were an increase from £2,376,000 to £3,161,000 in mortgages on property and loans and a decrease of £312,000 in British Government securities; Stock Exchange securities have been taken at cost or under and are stated to be in total below market values on December 31, 1935. The dividend is again 32 per cent., free of tax, and costs £176,000, compared with available net interest earnings of £118,000.

THE STOCK EXCHANGE

BRITISH POWER AND LIGHT CORPORATION

The British Power and Light Corporation is one of the youngest of the large electricity supply companies of Great Britain. It is, however, by no means the least interesting to the investor. Formed in 1929, it has, unlike many companies in other industries, established in that era of optimism, succeeded in establishing itself on a firm and relatively prosperous basis.

The Corporation was formed with the commendable object of acquiring a number of electricity companies which were apparently being hampered by lack of capital and efficient management, and of turning them into profitable undertakings. The task has taken much longer than was anticipated, but the Corporation appears amply to have justified its existence. There is little doubt that in its absence the individual undertakings would have been much less profitable and would have provided a less satisfactory service to their consumers.

The following table shows the growth in the sales of current by the Corporation's subsidiaries and the number of new consumers obtained each year. It is indicative of the successful development of the undertakings, from the consumers' point of view:—

UNITS SOLD (Millions)							
	1929	1930	1931	1932	1933	1934	1935
North Wales Power Co.:							
To general consumers ...	46.0	50.2	52.5	60.3	68.5	80.8	92.0
Electricity Distribution of North Wales and District English distribution companies*	1.9	3.0	4.0	5.9	7.5	9.3	11.8
	0.6	1.5	2.6	4.3	6.6	7.8	10.3
* Excluding supplies in bulk.							
TOTAL CONSUMERS							
Electricity Distribution of North Wales and District English distribution companies	7,005	10,002	12,363	15,047	18,310	23,791	28,618
	2,284	3,714	6,053	8,259	10,666	13,144	15,999

The main interests acquired by the Corporation in 1929 were (1) the *North Wales Power Company, Limited*, which owns the exclusive rights of supply for power and bulk purposes over an area of approximately 4,000 square miles, with a population of 800,000, covering the counties of Anglesey, Carnarvon, Denbigh, Flint, Merioneth and Montgomery; and (2) the *Electrical Distribution of North Wales and District, Limited*, which supplies in retail in certain parts of the Power Company's area totalling some 1,500 square miles, with a population of about 300,000. The Distribution Company was a relatively new undertaking, whose capital construction work started only in 1926. The Corporation now holds over 98 per cent. of the share capital of the Power Company, and the entire capital of the Distribution Company.

In addition, the Corporation acquired the entire share capital of the following five small and scattered electric supply companies in England, with a combined area of supply of some 400 square miles and a population of 100,000. As a result of subsequent extensions, these figures have since been approximately doubled.

East Suffolk Electricity Distribution Company, Limited.
South Somerset and District Electricity Company, Limited.
Trent Valley and High Peak Electricity Company, Limited.
West Hampshire Electricity Co., Limited.
Ringwood Electric Supply Company, Limited.

3,845,000 the English companies were relatively new undertakings at £4 1/2 began to supply consumers in 1928, except the other reduction company, which gave supplies in 1925. premium income anticipated that all these undertakings would be assets fully by the provision of adequate capital results are given by an efficient centralised management basis was stre. The most important subsidiary, the cent. instead of 3 1/2 company, had increased its sales of in the industrial branch in 1921 to over 42 millions

in 1928. Its trading results, however, had remained unsatisfactory, owing to shortage of working capital and lack of adequate generating plant, which necessitated reliance on purchased current. In 1928, however, the company had, with the assistance of a £2,000,000 Treasury Guaranteed Loan, completed the construction of the Maentwrog Hydro-Electric generating station. In the following year it acquired from the Aluminium Corporation its hydro-electric station at Dolgarrog. The effect was to increase the installed generating capacity from 5,500 kilowatts to 38,700 kilowatts, with a total potential capacity of 44,000 kilowatts. The distribution companies, both in North Wales and in England, were, in 1929, still largely in the developmental stage, and had not achieved any serious earning capacity.

The event did not fully bear out all the expectations of the promoters of the Corporation. In the first two years of the Corporation's existence, earnings on the ordinary capital did not exceed 2 1/4 per cent. Subsequently, as the following table shows, earnings were maintained at the meagre level of around 4 per cent. for another three years, whereas the prospectus estimated that by 1932 the earnings on the ordinary capital would exceed 9 per cent.:—

CONSOLIDATED EARNINGS					
	1931*	1932*	1933*	1934	1935
Total revenue from sale of energy	362,966	416,153	476,305	633,606	738,126

* Years ended March 31st in following year.

† For nine months actual, equivalent to 5 per cent. per annum.

The disappointing results, up to 1933, were attributable to two sets of causes. In the first place, the original estimates proved optimistic as to the rapidity with which the load could be developed, even under the most favourable circumstances, and failed, it would seem, to allow for the amount of new capital expenditure which would be involved. It would appear, also, that insufficient allowance was made for the inevitable difficulties of establishing a system of centralised management for undertakings of widely varying types. The Corporation, moreover, encountered a number of adverse factors which could hardly have been foreseen at the time of its formation, and, in the aggregate, were almost equally responsible for its indifferent results. The first of these factors was the depression which began in 1930 and became increasingly acute up to 1933. During part of the same period the North Wales Power Company was subject to unfavourable weather conditions. A deficiency of rain in 1929 left the company short of water reserves and the consequent necessity of purchasing current from outside sources cost it over £17,000. In 1932 and 1933 there was a repetition of this state of affairs, the rainfall in the latter year actually being the lowest recorded for the area. At the end of 1933, when the water in store should have been at almost its peak—i.e. an equivalent of 22 million units—the actual storage amounted to only two million units. The additional cost of buying current in 1933 amounted to approximately £25,000.

A further adverse factor was a sharp rise, over the period from 1931 to 1933, in the rates payable by the Corporation's subsidiaries, as a result, largely, of the somewhat illogical method of assessing hydro-electric plants for rating purposes on the same basis as steam-generating plants—i.e. without making any allowance for the much greater capital expenditure required per kilowatt of generating capacity. Finally, the North Wales Power Company's contract with the Central Electricity Board, which was expected to become effective at the beginning of 1931 and to produce a minimum revenue to the company of £70,000 a year, did not, for various reasons, actually come into operation until three years later. Taking all these factors, outside the control of the Corporation, into account, failure to realise the prospectus estimates was not altogether surprising.

In the past two years, however, there has been a relatively rapid improvement in the company's fortunes. Earnings on the ordinary capital, in 1935, amounted to 8.8 per cent., against only 3.7 per cent. in 1933. This rapid improvement, however, is, in a sense, as deceptive as the poor results in the preceding years, and it would be dangerous to assume that earnings in the future will necessarily increase with the same rapidity. Earnings, in fact, have been favourably affected by a combination of circumstances. In the first place, the drought conditions which prevailed in 1932 and 1933 have not persisted, and earnings of the North Wales Power Company have, consequently, been relieved of the substantial burden incurred in the purchase of current from outside sources.

At the beginning of 1934 the contract with the Central Electricity Board finally came into operation. The North Wales Power Company immediately obtained an important increase in revenue from this source. Further growth, however, is likely to be much slower. A new 6,000 kilowatt generating set and pipe line were installed at Maentwrog and came into operation in November, 1934. The contract with the Central Electricity Board enabled the Power Company to derive the maximum advantage from this increase in generating facilities. A new generating set is being installed at Dolgarrog, and when completed may be expected to provide another rapid increase in earnings on a small scale. This, however, will practically exhaust the potential generating capacity of the North Wales Power Company on the basis of its existing dams and storage capacity.

Finally, the Corporation, within the past two years, has obtained the benefit of the refunding of its subsidiary companies' obligations, and has secured a consequent saving in interest charges amounting, in a full year, to over £24,000.

The increase in earnings, resulting from these various factors, should certainly be maintained. Its stimuli, however, are non-recurring, and further improvement must depend largely on the normal growth of load. From the nature of the areas of the various subsidiary undertakings, this can hardly be other than relatively slow and expensive. The greater part of the areas are rural, and, in North Wales, sparsely populated. During the past seven years of intensive development, the Corporation has probably succeeded in obtaining the lion's share of increased business which is readily available, and further increments of load may be more difficult to obtain.

The company's ordinary stock, at 32s. per £1 unit, yields only 3 1/4 per cent. Last March, the company made an issue of ordinary shares on bonus terms, stockholders being entitled to subscribe for one new ordinary share at 25s. for every £5 of stock held. A further issue on bonus terms is scarcely likely within the near future. In view of the increased ordinary capital, earnings this year may not show any appreciable increase over the 8.8 per cent. achieved last year.

On the other hand, the company is pursuing what is, for this industry, a relatively conservative dividend policy, since less than three-quarters of the earnings available for the ordinary capital are being distributed. Since its inception, the company has provided annual depreciation on what appears to be an adequate basis. It appears, in fact, to be using the same method of charging depreciation as has been employed in previous articles on other companies in the *Economist*, as a test of the adequacy of their depreciation. It may be taken, therefore, that the apparent margin of earnings is, in fact, a real margin, and could be distributed to shareholders. Even without any further substantial in-

crease in earnings there would appear to be no reason why the dividend should not be increased to at least 7 per cent. in the near future.

Two reservations may, however, require to be made on this score. The Corporation has consistently charged, to capital account, varying amounts of expenses and interest charges, on the ground that they have been incurred in respect of new capital expenditure. This is, of course, perfectly legitimate accounting procedure. It exposes the Corporation to the risk, however, that, as the amount of new capital expenditure diminishes, it will be unable to decrease its expenses correspondingly. Consequently, the proportion of expenses charged to revenue may require to be increased, with a consequent reduction in earnings. Whether this is likely, in fact, to prove an important factor in the near future, it is impossible to say. The second reservation flows from the character of the Corporation's main subsidiary, the North Wales Power Company. A hydro-electric undertaking is, as recent experience has shown, susceptible to drought; and earnings are consequently more liable to fluctuation than in the case of the normal undertaking based on steam generation. The company, indeed, has recognised this danger by the establishment of a special drought reserve fund, which now amounts to £50,000.

On balance, the Corporation's ordinary stock would appear not unfairly priced at its present level. It still remains one of the more interesting equities in the electric supply group. In conclusion, we take the opportunity to compliment the Corporation on the excellent manner in which its published accounts are presented. A consolidated earnings statement, with a consolidated balance sheet and a clear statement of depreciation, is *rara avis* in the electric supply industry.

INVESTMENT NOTES

Course of Share Values.—New York and Wall Street which have so long been moving in unison, adopted "counterpoint" last month. London, having had its shake-out in February and March, made a better showing in April. Although prices, as the annexed chart shows, made only a small net gain, the tone of the market, on the whole, was firmer until the end of the month, when sentiment became less assured. Even the announcement of increased taxation in Mr Chamberlain's Budget speech failed to exercise any considerable initial effect on quotations. In New York, on the other hand, the market suffered the most noteworthy reaction since the upward movement began, almost exactly a year ago. Professionally, the reaction was attributed mainly to external causes, such as the possibility of a withdrawal of European money in the event of the devaluation of the franc. London, however, which is probably providing at least as much cloak-room accommodation for nervous overseas capitalists as New York, has been affected only to a minor degree. It may be presumed, therefore, that the downward movement in America is mainly of domestic and "technical" origin. The chart, drawn up early this week, gives an inadequate indication of the extent of the reaction, which in some instances has reduced quotations below this year's opening levels. So long, however, as the twin pillars of recovery—cheap

money and industrial activity—stand firm in America and Britain, it is unlikely that any recessionary movement will persist, in the near future, in either market. Meanwhile, the Actuaries' Index shows that, in Great Britain, last month's net changes were, in most cases, scarcely large enough to be measurable. The yield on 2½ per cent.

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

Consols was 2.94 per cent. at the end, against 2.95 per cent. at the beginning, of the month. The price of the Actuaries' mixed bag of 178 industrials (December 31, 1928 = 100) rose slightly from 82.8 to 83.9, to yield 3.64 per cent. against 3.66 per cent. Changes in component groups, with a few exceptions, were very small:—

Group (No. of Securities)	Prices (Dec. 31, 1928=100)			Yields (%)		
	Beginning of 1936 (Jan. 7*)	Month Ago (Mar. 31)	This Week (Apr. 28)	Beginning of 1936 (Jan. 7*)	Month Ago (Mar. 31)	This Week (Apr. 28)

Miscellaneous (56)	76.1	75.5	75.8	3.86	3.99	4.00

* December 31, 1935, for fixed-interest groups.

The most noteworthy rise occurred, it will be seen, in the "electric supplies" (i.e. electrical equipment manufacturing) group, where share values showed an average appreciation of nearly 5 per cent.

Wall Street Reacts.—The sharp reaction in Wall Street during the past few weeks is paradoxical. Almost without exception, business reports and anticipations seem to justify a continuation of the upward movement which started in March last year. The extent of the setback can be seen from the Standard Statistics Company's indices on page 266 of this issue. The complete index for 421 stocks (1926 = 100) rose from 63.1 on March 20, 1935, to 110.6 on April 8th of this year. This week, on April 29th, it had fallen to 97.7. It is the more remarkable that this movement should continue after the steps taken, on Friday of last week, by the Stock Exchange authorities to liberalise minimum margin requirements. Recently, the Federal Reserve Board increased the minimum margin requirements for extensions of new credit by bankers or brokers to 33 per cent. But brokers have been able to maintain credits with a margin of 23 per cent. for debit over \$5,000 and 33 per cent. under \$5,000. The introduction last Friday permits a minimum margin

of 23 per cent. for all accounts, although brokers themselves cannot borrow more than 40 per cent. of the value of securities pledged with the banks. The effect of this change should be to improve the technical position of the market in times of falling prices, since speculators are not forced to put up new margins or sell their securities until the downward movement has progressed further than before. But, in spite of the change, prices continue to fall. For this, several reasons are advanced, none of which seems completely adequate. Foreign news is generally depressing; political uncertainties in Europe, combined with fear of imminent devaluation of the franc, naturally have some effect on Wall Street—but not enough, it may be surmised, to explain the whole of the present setback. Domestic factors contributing to uncertainty are the new taxation bill, which has now passed through the House of Representatives substantially in the form proposed by the President, and the return of the President to active political campaigning against the captains of industry and finance. Political ill-feeling is running high and the success of the President in some of the early primaries may even have induced many of his opponents (among whom Wall Street interests are not least) to hope that a setback in the markets might provoke a certain amount of distrust of Rooseveltian policies. But a deliberately engineered panic is a double-edged weapon. The condition of the market at present may, indeed, be the effect of the combined operation of all these general factors. In that case it is difficult to gauge the extent to which the reaction may be expected to continue. The encouraging feature is that in the background is an almost unbroken series of good business reports, and money is still cheap and plentiful. A reversal of the downward movement may, therefore, be probable, once general fears have been exorcised.

Price of Corporation Borrowing.—It was learned with some surprise, last week, that a month's "holiday" in the new Home Corporation issue market was to be followed by an offer by the City of Birmingham of £5 millions of new 3 per cent. stock at a full point under par. It is only three months since a borrower like Smethwick, whose status and popularity with the investor would not normally be compared with those of Birmingham, offered a similar stock at 101. Possibly, the fact that the Birmingham total was relatively large may have induced the authorities which "regulate" the market to err on the safe side. The table below throws a significant light on conditions in the market since new borrowing was resumed, on the completion of the 5 per cent. War Loan conversion:—

Borrower	Date of Issue	Amount	No. of Years' "Life"	Rate of Interest	Issue Price	Price, April 23, 1936
Essex County	Jan., 1933	1,000,000	19-39	3½	98½	108
Sheffield	Sept., 1933	2,000,000	20	3½	101	106

Blackpool	Feb., 1936	1,500,000	21	3	Par	101
Surrey County	Mar., 1936	1,500,000	25-30	3	Par	101
Southgate	Mar., 1936	550,000	25-30	3	Par	99½
Birmingham	Apr., 1936	4,882,700	20-22	3	99	½ pm

The list is representative and not exhaustive, but its figures are revealing. The average period for which Home Corporations have borrowed has been 20 to 25 years. The new epoch opened with an Essex County 3½ per cent. loan at 98½ in January, 1933, but, before the end of that year, Manchester was floating a 3 per cent. 25-year stock at 95. In succeeding months, the issue price of new 3 per cent. loans, by borrowers of the first rank, crept up steadily towards par. In January, 1935, however, the screw was tightened much too quickly. The London County Council endeavoured to obtain par terms for an issue of as much as

NEW ZEALAND GOVERNMENT £3% INSCRIBED STOCK, 1952-1955.

Interest payable Half-yearly at the Bank of England on the 1st January and the 1st July

ISSUE OF £4,000,000

Authorised to be raised under the New Zealand Loans Act, 1932.

A first payment of Interest, at the rate of £1:5s. per £100 Stock, will be made on the 1st January, 1937.

PRICE OF ISSUE £98:10s. PER CENT.

PAYABLE AS FOLLOWS:

On Application	£5:—	per Cent.
On Friday, 31st July, 1936	£93:10s.	”
	£98:10s.	per Cent.

The Government of New Zealand have observed the conditions prescribed under the Colonial Stock Act, 1900, as notified in the "London Gazette" of the 14th December, 1900, and Trustees may invest in this Stock under the powers of the Trustee Act, 1925, unless expressly forbidden in the instrument creating the Trust.

THE GOVERNOR AND COMPANY OF THE BANK OF ENGLAND give notice that, on behalf of the Agents appointed for raising and managing Loans under the above Act, they are authorised to receive applications for £4,000,000 NEW ZEALAND GOVERNMENT £3 per Cent. INSCRIBED STOCK, 1952-1955.

If not previously redeemed, the Stock will be repaid at par at the Bank of England on the 1st July, 1955; but the New Zealand Government reserve to themselves the right to redeem the Stock, in whole or in part, by drawings or otherwise, at par on, or at any time after, the 1st July, 1952, on three calendar months' notice having been given in *The Times* of such intended redemption. In the latter event the Stock will cease to bear interest on the date fixed for such redemption.

New Zealand Government Stock issued and payable in London and the interest thereon so payable, the property of persons not domiciled in New Zealand, are not, and will not be, subject to any taxes, duties, or levies by the Dominion.

By Act 40 and 41 Vict. Ch. 59, the revenues of the Dominion of New Zealand alone are liable in respect of this Stock and the dividends thereon and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the dividends thereon, or for any matter relating thereto.

The proceeds of the Issue will be applied to the repayment on the 1st August, 1936, of New Zealand Government £6 per Cent. Inscribed Stock, 1936-1951, of which due notice is being given in the *London Gazette* and *The Times*. The total amount of this Stock now outstanding is £5,869,988 9s. 9d. and the balance of the moneys required for repayment is being provided by the New Zealand Government so that the present operation involves an actual reduction in the Public Debt.

The transactions of the New Zealand Ordinary Revenue Account for the year ended 31st March, 1936, including £1,440,000 provided from revenue for the redemption of debt and without recourse to reserves, resulted in a surplus of £270,000.

The Exports from New Zealand during the financial year ended the 31st March, 1936, amounted to £49,676,000 and the Imports to £37,439,000, resulting in a favourable visible balance of trade of £12,237,000. Returns at present to hand in respect of the current financial year indicate that a favourable balance is being maintained.

The gross Public Debt of the Dominion on the 31st March, 1936, was £282,561,000, involving a gross increase for the year of £3,837,000 long-term Debt of which £2,400,000 was raised for Public Works (Railways, Electric Power, Telephone and Telegraph Extensions and other productive works), the balance representing increases due to conversions, etc. This gross increase was offset by redemptions totalling £1,857,000, leaving a net increase in the long-term Debt of £1,980,000. The redemptions include a portion of the War Debt, which has been reduced from £81,840,000 in 1921 to £65,035,000 on 31st March, 1936. This shows a total reduction in the War Debt of £16,805,000 since 1921.

Against the Public Debt of New Zealand must be set assets valued at approximately £309,000,000. Of these assets £268,000,000 are directly interest bearing and productive, e.g., Railways, Telephones and Telegraphs, Hydro-electric Development, Advances to Settlers and Workers, Crown Lands, Sinking Funds, etc., and the remaining £41,000,000 are indirectly productive, such as Roads, Public Buildings, etc.

The Repayment of the Public Debt Act passed by the New Zealand Parliament in 1925 substituted for the long-term Sinking Fund system a method whereby the Dominion's Debt reduction resources are now made available to purchase New Zealand Government securities on the open market for cancellation or to pay them off at maturity, thereby ensuring an actual reduction in the Public Debt annually. For this purpose, there is issued annually out of the Consolidated Fund of the Dominion a sum equal to ½ per Cent. of the Debt affected, and to this is added a sum equal to interest at 3½ per Cent. per annum on the Debt paid off under this scheme. By this means a portion of the savings in interest on the Debt paid off is applied to further repayments of Debt, so that the Debt reduction resources are increasing year by year. It is estimated that the Debt outstanding at the inception of the scheme will be liquidated over a period of approximately 60 years, while all subsequent Loans will be liquidated within a similar period from the

£10 millions, carrying only 2½ per cent. interest and having a maximum life of as much as 35 years. Other borrowers, like Bristol and Hull, were a little less exigent with their 2½ per cent. stocks, but the market's digestion had been badly impaired, and for nearly half a year there was a complete cessation of corporation borrowing. January, 1935, in fact, registered high-water mark. All subsequent issues have held to the "safe" interest figure of 3 per cent. The authorities have fed the market gingerly, with frequent intervals for digestion. Nevertheless, Birmingham now finds itself in no better position than Manchester was in June last year, when new borrowing was resumed. The last column of our table suggests that, in the meantime, the process of absorption has gone on steadily. Better terms, indeed, might have been obtained for Birmingham had the authorities been prepared to allow time for mastication and assimilation. Their insistence on the technique of the snackbar, however, argues a stronger determination to keep the

dates of issue; the total Debt so far redeemed under this system is £13,272,000. The Sinking Funds which accrued under previous legislation have been capitalised and will be held intact.

On the 31st March, 1936, approximately 44 per Cent. of the total New Zealand Public Debt was domiciled in the Dominion, as against only 17 per Cent. in 1914. A reduction of £2,257,000 in the London domiciled Debt took place during the year ended the 31st March, 1936.

The Books of the Stock are kept at the Bank of England, where all assignments and transfers are made. Transfers are free of Stamp Duty.

Interest is payable half-yearly at the Bank of England on the 1st January and the 1st July. Interest Warrants are transmitted by post.

Applications, which must be accompanied by a deposit of £5 per Cent., will be received at the Bank of England Loans Office, 3, Bank Buildings, Princes Street, London, E.C.2. In case of partial allotment the balance of the amount paid as deposit will be refunded by cheque. Default in payment by the 31st July, 1936, of the balance due that day will render the deposit liable to forfeiture and the allotment to cancellation.

Applications may be for the whole or any part of the Issue in multiples of £100. No allotment will be made of a less amount than £100 of Stock.

Scrip Certificates to Bearer will be issued on, or after, the 21st May, 1936, in exchange for the Allotment Letters. These Certificates, when fully paid, may be lodged for inscription forthwith.

NEW ZEALAND GOVERNMENT £6 per Cent. INSCRIBED STOCK, 1936-1951.

Holders of the above Stock, which will be repaid on the 1st August, 1936, may surrender their holdings in whole or in part and receive therefor New Zealand Government £3 per Cent. Inscribed Stock, 1952-1955, at the rate of £100 £3 per Cent. Stock for each £100 nominal £6 per Cent. Stock surrendered, together with a Cash Payment at the rate of £1:10s. per Cent. on the nominal amount of Stock converted. Holders who accept this offer will receive six months' interest payable on the 1st August, 1936, in respect of the £6 per Cent. Stock surrendered. A first interest payment of £1:5s. per Cent. on the new Stock will be made on the 1st January, 1937.

Applications for conversion must be made on the special printed forms. Application Forms have already been sent by post to all holders (in the case of a joint account to the first-named holder).

Applications for the conversion of Stock Certificates to Bearer must be accompanied by the relative Stock Certificates with all unattached Coupons attached.

Preferential allotment will be given to holdings which are tendered for conversion as above. The List of Conversion Applications will be closed as soon as the required amount of Stock has been surrendered and in any case not later than the 11th May, 1936.

Until the 2nd December, 1936, New Zealand Government £3 per Cent. Inscribed Stock, 1952-1955, issued in accordance with the terms of this Prospectus will be designated "A" Stock; but on that date it will be amalgamated with the £3 per Cent. Stock, 1952-1955, already existing.

A commission of 5s. per £100 Stock will be paid to Bankers or Stockbrokers on Allotments made in respect of cash or conversion applications bearing their stamp.

Prospectuses and Application Forms may be obtained at the Bank of England Loans Office, 3, Bank Buildings, Princes Street, London, E.C.2, or at any of the Branches of the Bank of England; of Messrs. Mullens & Co., 13, George Street, London, E.C.4; at the Bank of New Zealand (the Bankers to the Government of New Zealand in London), 1, Queen Victoria Street, E.C.4; of Messrs J. & A. Scrimgeour, 3, Lothbury, London, E.C.2; at any Stock Exchange in the United Kingdom; or at the Office of the High Commissioner for New Zealand, 415, Strand, London, W.C.2.

The List of Cash Applications will be opened and closed on Monday, the 4th May, 1936. The List of Conversion Applications will be opened forthwith and will be closed on or before Monday, the 11th May, 1936.

BANK OF ENGLAND, LONDON,
30th April, 1936.

queue of new borrowers moving than to maintain any arbitrary level of interest rates. This impression is confirmed by the fact that Birmingham's successful offer has been followed by conversion issues, on similar terms, on behalf of Croydon, Bradford and Cardiff.

COMPANY NOTES

Private Car Manufacturers.—The outstanding feature of the motor industry in the last four years has been the bounding expansion of its market. From a pre-depression peak of 182,347 vehicles in 1928-29, production of private cars fell to 158,997 vehicles in 1930-31. Between 1931 and 1935 output nearly doubled (being 311,544 vehicles for 1934-35); and it is not impossible that 1935-36 should come

near to doubling the pre-depression best. Improvements in production methods have allowed this expansion in output to be achieved with an increase of only about 14 per cent. in the labour force between 1931 and 1935. The accompanying table of profits shows that this transformation of the industrial and marketing factors in the industry has, on the whole, allowed of a rising trend in recent profits, and has improved the general profitability of the industry since 1929 by making net losses a much rarer feature than they were before the depression. Yet the profits record gives little positive suggestion of booming sales and reduced costs, for the expansion of markets has largely been stimulated by reductions in selling price, combined with an improved equipment which has resulted in reduced running expenses. In brief, competition has been vigorous, and no manufacturer has been able to risk falling behind his rivals in "value for money," since turnover is the prime requisite of low production cost and

§ Broken period equated to 12 months.

reasonable profit. It is this factor which gives the industry its well-known characteristic of widely fluctuating profits. For a relatively "high-gear" manufacturer, such as the Austin Company, net profits on the ordinary capital may amount to no more than an average of £3 to £4 per car sold—a narrow margin to cover fluctuations in raw materials and the risk of a competitor "stealing a march" in prices or in sales appeal. The relative movements in the Morris and Austin profits for last year demonstrate that the largest concerns cannot shake off the liability to fluctuation. They can, however, avoid the extremes. Their dealer organisation, advertising and goodwill allow them to view one year's success by a smaller competitor with equanimity. The successful feature can be incorporated in their own next model before any serious inroad on sales has occurred. Nevertheless, the shares of even the largest or most progressive concern should be valued on a much higher earnings yield (and somewhat higher dividend yield) than the ordinary industrial. The present generally favourable conditions cannot continue indefinitely and there is ample evidence that competition will become fierce once demand ceases to expand.

Union-Castle Developments.—For ordinary shareholders of the R.M. Realisation Company there is welcome significance in the announcement that the parties to the litigation on the voting rights of preference shareholders in the Union-Castle Mail Steamship Company have reached provisional terms of settlement, as a result of which it is hoped that it will be unnecessary to proceed with the case. On April 23, Mr Justice Luxmoore, in the Chancery Division, assented to an application that the action, brought by Viscount St. Davids against the steamship company and others, should be adjourned indefinitely. The control of the company came into the hands of interests representing preference shareholders, under the Articles of Association, when the preference dividends fell into arrear. On November 27, 1934, special resolutions were passed conferring, *inter alia*, the right to attend and vote at all general meetings on preference shareholders in perpetuity—in other words, confirming their control even after the repayment of their preference arrears. The validity of this provision was challenged by the ordinary stockholders, and its operation was suspended *pendente lite*. Some £1,370,000 out of a total of £2,740,000 Union-Castle ordinary stock is held by the R.M. Realisation Company, whose £1 ordinary shares are now quoted at 45s. As we showed in a recent analysis (February 8, 1936, page 309), the price to be put on this Union-Castle stock is a material factor. We then estimated that each £1 ordinary share of the Realisation Company represented 27s. 5d. (nominal) of Union-Castle ordinary plus 20s. 10d. in Royal Mail Lines ordinary, minus 25s. 10d. of cash, and each E.D. Realisation share represented 10s. 2d. cash plus 27s. 4d. Union-Castle stock. It is obvious that Union-Castle ordinary would be worth far more in terms of cash from a potential buyer if the latter were thereby obtaining control, on reasonable terms, of one of the soundest of present-day shipping lines, than if he merely acquired a deferred stake in whatever future distributions the preference shareholders, holding control in perpetuity, were prepared to allow. It may be presumed that the preference shareholders will be given some satisfactory form of guarantee against the danger of any possible recurrence of "group finance" on the lines which threatened danger to their own position during the "Kylsant" regime. It is understood that, even under existing conditions, a well-known shipping line was recently prepared to offer something like 27s. 6d. per £1 unit of Union-Castle ordinary. Even in 1934, disclosed ordinary earnings, on the basis of normal preference dividends, ran at over 10½ per cent. The preference dividend was brought up to June 30, 1934, a few months ago, and the forthcoming report for 1935 should reveal further improvement. The company, which trades with South Africa, one of the most prosperous parts of the British Empire, is believed to have had a very satisfactory year. It has recently secured a ten-year renewal of its mail contract, without any subsidy reduction. A year ago, the chairman announced a considerable ship-building programme, involving "inevitably onerous" obligations, but added that there was no reason to doubt the company's ability to meet them. The new steamers should produce increased efficiency and improved operating profits, particularly when, a couple of years hence, the company's mail service is expedited by three days. If the litigation question were finally disposed of, the Union-Castle ordinary stock might well be marketed under considerably more favourable conditions than could have been foreseen some time ago.

Dunlop Accounts.—There is only one way to begin any article on the Dunlop Rubber Company—by complimenting the company on the format of its accounts, which are unrivalled for clarity, lucidity and comprehensive detail. A directors' report, which groups, classifies and comments upon the relevant figures in the accounts, item by item, is followed by a statement which shows exactly how the parent company's profit figure has been arrived at. Next comes a holding company balance sheet and profit-and-loss account, and a consolidated statement of the assets and liabilities of the parent company and its subsidiaries. The content, rather than the form, of the 1935 report has disappointed

the market, for net earnings show a setback for the first time for some years. Actually, recent profits (on the base 1932 = 100) have been: 1933, 176; 1934, 196; 1935, 150. The board, however, warned the stockholders, a few months ago, that increased raw material prices, the lag in the adjustment of selling prices, and unstable conditions abroad had adversely affected profits. The 8 per cent. dividend, however, paid for the third year in succession, is still covered by earnings of 9½ per cent. :—

The financial position remains strong and liquid. Current assets, at £6,230,399, show an increase of £644,113, reflecting the proceeds of the balance of debenture stock issued during the year. Substantial profits have been made in Germany, but owing to the continuance of exchange restrictions they cannot be brought into the parent company's accounts. The £1 ordinary stock units, which touched 42s. 9d. this year, and were quoted at 39s. before the divi-

dend, now stand at 36s. 6d. They fall into the category of long-term holdings, with an active market interest coupled with the liability, as the experience of many years has shown, to considerable annual fluctuations in earnings. At their present price they do not appear unduly attractive to the short-term investor.

* * *

I.C.I. Meeting.—It is given to the ordinary stockholders in Imperial Chemical Industries to take a more disinterested view of their company's rôle in industry than the proprietors of almost any other company. They have it on the highest authority that the directors intend to share the fruits of expanding trade and increasing efficiency with consumers, and to increase dividends, if at all, slowly. Thus, the largest concern registered under the Companies Act comes nearest to the conception of an "industrial utility." Its ordinary stock is a gilt-edged industrial in the narrowest sense of the word, and its dividends are designed to typify the inevitability of gradualness. At last Monday's meeting Sir Harry McGowan, the chairman and managing director, defined this position in detail. The company, he declared, endeavoured to keep its prices as low as possible, consistently with the preservation of shareholders' capital, the provision of the finest products, and the recruitment of the most skilled labour under the best working conditions. It is no derogation of Sir Harry's speech to say that it reads a little like Samuel Smiles in a twentieth-century setting. The chairman, on Monday, repeated his refutation, made before the Royal Commission on Arms, of the allegation that a significant percentage of the company's profits was derived from munitions production. This, however, as he was able to point out to shareholders, does not mean that such branches as the Billingham nitrogen fixation plant, petrol production by coal hydrogenation, sulphuric acid production and the development of chlorine derivatives, will not be of supreme importance in time of war—or that, under such a condition,

AN EXCELLENT MEDIUM FOR CAPITAL APPRECIATION

The Trust has been formed to meet the demand of those investors who wish to place a portion of their funds in the securities of companies which, before the depression, paid good dividends and now offer excellent prospects of capital appreciation.

The average price of the units, containing equal quantities of all the securities listed in the portfolio, would have stood at 25s. 3d. in 1928, at 3s. 4d. in 1932, and would have recovered to approximately 8s. 6d. in April, 1936.

Of special interest is the inclusion of carefully selected North and South American Stocks, to which many investment experts look for very considerable improvement during the next few years.

In view of definite signs of an improvement in world trade the portfolio constitutes a unique medium for participation in the general recovery.

they will not be profitable. They will remain essential assets, however, in time of peace. For the rest, Sir Harry regards 1936, like 1935, as likely to be a reasonably successful year for the I.C.I., without providing either an abnormal setback or any outstanding extension of the company's activities. How far re-armament will give a stimulus may depend, in Sir Harry's opinion, on the extent to which the monetary resources to be used for the purpose would otherwise have remained unemployed, or might have found alternative uses in the way of peace. The chairman of the I.C.I. is thus among those who view the "blessings" of re-armament guardedly. His attitude towards overseas possibilities is even more cautious, pending clear evidence that the world's statesmen have adjusted their vision "to the broad issues of the future, rather than to painful events of the past." Altogether, the speech gives the impression that while an ordinary dividend of, say, 10 per cent. may not be beyond the bounds of intention, or possibility, in the course of the next few years, the main factor governing the price of the ordinary stock—which at 40s. yields 4 per cent. on an 8 per cent. dividend—may be the course of general interest rates.

Spillers' Results.—Though the market was satisfied with the results of Spillers, Ltd., the big milling combine, the shares still find little speculative demand. The ordinary and deferred dividends have been maintained at 15 per cent., but trading profit—struck after the deduction of depreciation, income tax and staff bonus—has fallen from £458,070 to £437,629. The dividends have consequently been earned, but only £100,000 has been allowed for extra obsolescence and investment reserve, compared with £150,000 in 1934. The market was not expecting an increase in profits. Price movements in 1935 probably worked to the company's disadvantage, although the heavy reduction in the imports of flour must have removed one of the company's greatest difficulties. The balance sheet shows an expansion of turnover and a strong liquid position. New plant is being constructed at Newcastle, and the mill and silos at Birkenhead have also been expanded. At the same time, the company is still absorbing independent millers all over the country. During the year a leading Cornish milling firm was acquired, and, since the accounts were published, the company has absorbed E. C. Robson and Sons, of Sunderland. Despite the decline in profits in 1935, therefore, the company is evidently anticipating a further increase of business. The following table shows profits and their appropriation during the last three years:

	Years to January 31		
	1934	1935	1936
Trading profit.....	405,409	458,070	437,629

Additional obsolescence	...	150,000	50,000
Carried forward*	173,657	168,401	175,935

* After bringing in £7,225 profit on the sale of investments (less depreciation of investments written off) in 1934, £79,275 in 1935, and £53,481 in 1936.

deferred shares are quoted at 48s., to yield 10 per cent. The market, apparently, is discounting a trend of profits. The company may not, indeed, be in the long run, on a broad consumption for an increase in earnings—partly because of the falling trend in prices, and partly because the increasing standard of living tends to divert consumption from bread to meat, and from vegetables. The main prospect, indeed, may be

found in the company's manufacture of animal and poultry foods. If agricultural protection remains the Government's policy, increased business on that side may be envisaged.

Rubber Plantations Investment Trust.—This company, which is one of the Great Powers of the rubber industry, has shared in the moderate revival of prosperity which has come the industry's way in the last two years. Of its total assets, approximately three-fifths are invested in rubber and one-fourth in tea. Receipts from its £2,306,992 of investments (other than directly owned properties) showed a further increase last year, and were nearly four times as large as in 1933. Gross receipts, however, from the company's estates—which are devoted mainly to tea cultivation on the east coast of Sumatra—showed a falling-off, and were little above the 1933 figure. As the provision for difference in exchange has appreciably increased since that year, the net receipt from these estates provided only about one-fifth of the company's net earnings for 1935:—

	Years to December 31

Depreciation or appreciation in value of investments, compared with balance sheet figure†

* On estates produce account. † Investments other than properties. (a) After transferring £10,000 from dividend equalisation reserve, and crediting £3,000 insurance reserve not required. (b) After transferring £10,000 from dividend equalisation reserve, and transferring £2,000 to staff special reserve.

The payment of an unchanged 5 per cent. dividend has again entailed a draft on dividend equalisation account. Despite the moderate recession in rubber and tea share values last year the company's security holdings still show an appreciation over book cost. The immediate outlook for the plantation industries is reasonably satisfactory. The company's accounts, however, reflect changes in underlying conditions with a certain time-lag, and the accounts for 1936 will include the reduced dividends of many producing companies for the past year. In view, moreover, of the evident determination of the International Committee to prevent any considerable rise in rubber prices under the restriction scheme (see a Note of the Week on page 242 of this issue) the trust's £1 stock units would appear fully valued at 33s., to yield £3 2s. 6d. per cent. on a 5 per cent. dividend.

Copper Share Outlook.—The recent activity in the leading copper shares (based on the market factors discussed in the *Economist* of April 18th, page 125) has given place to a quieter phase. From the long term aspect, however, two recent developments are of obvious importance. The recent announcement that the Kennecott group had at length raised its selling price to the level quoted by the Anaconda and Phelps Dodge companies has removed all doubts concerning the outlook for United States copper consumption. Though the influence of the American market on London is

chiefly indirect (apart from export factors, which are not important at present), the extraordinary burst of consumers' buying in the United States which followed the price announcement encouraged a rise in the standard quotation in London to a peak of £37 13s. 9d. a ton, the highest level reached since 1933. The following table illustrates the advance in share prices which has occurred. The spectacular fall in Rio Tinto is attributed solely to political uncertainties in Spain:—

Company and Share Denomination	Market Quotation of Shares, 1936			
	January 1	March 16	March 30	April 29
Rhodesian Anglo-American (10/-)	11/3	13/9	14/7½	14/3
Rhodesian Selection Trust (5/-) ...	10/1½	10/10½	11/3	12/9
Rhokana (4/-)	5/1	5/8	5/4	5/4
Rio Tinto (£5/-)	19½	18½	19½	14½
Rio Antelope (5/-)	32/-	35/7½	38/-	37/6

The favourable prospect in the copper market has been assisted by the decision to prolong the existing restriction scheme for two more years until July, 1938. In view of the technical success of the scheme in restoring a statistical equilibrium, no other decision was to be expected. By the end of February, world refined stocks had been reduced by about 100,000 tons in one year to a total of 483,000 tons, of which 232,000 tons were in the United States, and for practical purposes could be regarded as segregated from the world market. Outside America, stocks are now equivalent to little more than ten weeks' absorption at the current rate. For the moment it appears that production is somewhat on the right side of consumption, and a steady improvement in the statistical situation, leading to a renewed strengthening of prices, perhaps at a more moderate pace, may not be unlikely in the future. Prices are already approaching the level—£38-£40 a ton—at which, according to market report, the sponsors of the restriction scheme are said to aim. The date, therefore, when an expansion in output quotas is deemed advisable may thus be sensibly approaching. Importance will therefore attach to the operating position of the leading concerns. The accompanying table gives the main factors affecting the copper revenues of the three restricting Rhodesian producers:—

Company	Present Prod'n. Cu.	Present capacity	Latest "All-in" cost per ton	Profit for present price = Cu.†	Est. profit on 5% inc. in quotas	5% inc. on Ord. cap.	£1 rise in cu. price on present prodn. = % on Ord. Cap.
Mufulira	28,000	70,000	29	8	28,000	3.3	3.2
Roan Antelope	50,400	100,000	23	14	70,000	4.5	3.2
Rhokana	50,400	70,000*	26½	15	52,500	2.2	2.0

* Rising to 120,000 tons in 1937. † Average cost for blister and electro copper. ‡ Taken at £37 for standard and £41 for electrolytic.

The comparative importance to these companies of an expansion in production quotas over a further rise in the price of copper is evident. Even the fruits of a relatively small increase in production of 5 per cent. on existing capacity exceeds in each case the effect of a £1 rise in copper prices maintained over a whole year. The table takes no account of other revenues, of which cobalt is important for Rhokana.

Selection Trust.—This company, of the Chester Beatty group, which has large holdings in base metal, diamond, silver and other undertakings, has now entered the dividend list. Revenue for 1935 totalled £229,700, against £156,500, the increase being chiefly attributable to the larger dividends distributed by Consolidated African Selection Trust and Trepan Mines, which paid, respectively, 65 against 60 per cent., and 20 per cent. tax-free against 12 per cent. before tax. A largely increased sum of £65,950 was written off "investigations and ventures." Income-tax, naturally, required an increased sum, and an allocation of £9,800 was made towards redemption reserve, under the terms of the debenture issue of December, 1933. The net profit, consequently, was only £14,600 higher, at £77,000; and the payment of the initial dividend at the modest rate of 5 per

cent. involves a slight draft upon the carry-forward. No dividend was received last year on the company's holding of common shares in American Metal, which has substantial interests in Rhodesian copper concerns. The American Company's results, nevertheless, showed a marked improvement, a net surplus of \$801,530 replacing a deficiency of \$232,500. The Selection Trust's holdings stand in the balance sheet at £2,867,660 and are stated to show a substantial surplus over that figure. Twelve months earlier there was a depreciation of £293,900. Cash and Government securities on December 31st totalled £347,300 against £292,600 at the end of 1934. Last February an offer of half a million shares was made to the members of Kopanik Mines, one of the Trust's subsidiaries operating in the neighbourhood of Trepca. The particulars given in the prospectus were impressive enough. Owing to the conditions prevailing at the time, however, the opening of dealings was not marked by great enthusiasm, and the price declined. Full particulars of the Selection Trust's interests will, doubtless, be given at the annual meeting on May 18th.

"The North American Company."—It is regretted that, by an accident of typography and syntax, the opening sentence of a Note on page 721 of the *Economist* of March 28, 1936, may have conveyed the impression that "frenzied finance" had been associated with some of the North American Company's subsidiaries. The criticism referred, in fact, to certain other utility companies, and our comment was designed as a commendation of the North American Company for eschewing unbalanced methods. In order to prevent misunderstanding, we ask our readers kindly to note this explanation.

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

Consolidated Diamond.—Since production was resumed on a small scale at the beginning of 1935, the receipts of Consolidated Diamond Mines of South-West Africa naturally show an expansion upon those of 1934, when sales were effected from stocks; and net profits have improved from £142,100 to £263,260. Depreciation last year required the increased amount of £63,230; but owing to further redemption of debentures, interest charges were slightly lower, and only £68,600 debentures now remain to be redeemed. The resultant profit balance of £188,100 is added to the profit and loss credit, increasing that account to £480,100. The past improvement and current hopeful outlook in the diamond trade, together with the prospects for payment of the preference dividend arrears have produced a marked recovery in share prices. Investments in associated companies, at cost or under, are unchanged at £1,804,500, but the actual cash resources at the end of the year amounted to no more than £99,930, compared with an amount due to creditors for £159,650. It seems clear, therefore, that liquidation of the Preference arrears—which have accumulated over five years on the £2,240,000 7½ per cent. preference capital—may involve far-reaching financial reorganisation.

* * *

Vogelstruisbult and Vlaktefontein.—The reports of these developing Far East Rand concerns become more interesting as they approach the production stage. The former enjoyed the earlier start. At the end of last year nearly 23,000 feet of development work had been carried out at Vogelstruisbult, the payable percentage being 60.5, and the average value 12.7 dwts. over a reef channel width of 17.9 inches. The results in the Daggafontein section were better than elsewhere; and following the completion of permanent hoisting arrangements at the No. 1 shaft, all operations were taken over from Daggafontein, which has hitherto carried out the work on this area. The consulting engineer reports that "excellent progress" is being made with the erection of treatment plant, and it is expected that crushing will commence towards the end of the current year. As a result of the issue of one million new shares of 10s. each at par just before the end of the year—which exhausted the highly profitable rights of the original subscribers—cash in hand on December 31st amounted to over half a million. The Vogelstruisbult property is situated between Sub Nigel and the Daggafonteins, and the Vlaktefontein area is situated to the south-west of the Vogelstruisbult. Its value was explored by diamond drilling, and at the end of last year the No. 1 vertical shaft had reached a depth of 1,610 feet. It is expected that the reef will be intersected at about 6,200 feet instead of 7,000 feet as originally anticipated. The consulting engineer states that development at depth in Sub Nigel, which is now within approximately 8,500 feet of the Vlaktefontein boundary, indicates the trend of the Sub Nigel shoot system in that direction. As from April last operations were conducted by the company on its own account, the arrangement with Sub Nigel being discontinued. At the end of last year the resources on hand or available amounted to £1,152,090 and should suffice to bring the company to the production stage.

* * *

Other Company Results.—On page 285 will be found our usual table summarising the results of 36 other companies. In the Financial and Land companies group the most marked improvement is shown by *Forestal Land, Timber and Railways Company*, doing business in the Argentine. The principal item in the profit and loss account of the parent company is a sum of £270,000 transferred from depreciation account in respect of investments in *La Forestal Argentina, S.A.*, corresponding to the amount appropriated out of profits by that company for amortisation of goodwill. This improvement in the position of the Argentine company is attributed to better prices for the tin, many's products, and the parent company pays a dividend this year of 6 per cent., after passing the dividend for four years. *Rolls-Royce* profits at £349,802 permit of a distribution of 22½ per cent. compared with 20 per cent. in the previous year. The results of eight more rubber

companies confirm the trend set by previously published results; the *Central Travancore* company passes its dividend as last year, and the other seven companies reduce their dividends. The combined profits of the eight companies are £53,662, compared with £76,443 for the previous year. *The Clan Line Steamers, Ltd.*, show a remarkable recovery in profits to £644,511, and increase the dividend from 6 to 20 per cent. Of the three tea companies whose results are summarised, two report lower profits and dividends, and one, *Ragalla*, higher. *London Shoe Company* shows a profit of £4,391, slightly higher than for 1931, since when no dividend has been paid on the ordinary shares. *Barry and Staines Linoleum Company* have benefited from good trading conditions, and increase their dividend to 12½ per cent. Among the miscellaneous companies, *London Electric Wire and Smilhs* reflect good business in an increase of dividend to 6½ per cent. from 5 per cent. for the previous year, and *John M. Newton and Sons*, plate glass merchants, etc., pay 15 per cent. ordinary dividend. This is the first year an ordinary dividend has been paid since 1929. Both *Odham's Press* and *Provincial Newspapers* show profits substantially unchanged from last year. *The English Sewing Cotton Company* maintains the same dividend as in the previous year, but the profit, at £240,728, is nearly £45,000 down on the year.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following companies:—Bank of Athens, Banque de Credit Roumain, General Accident, Fire and Life Assurance Corporation, London Assurance, Royal London Mutual Insurance Society, Scottish Equitable Life Assurance, World Auxiliary Insurance Corporation, Imperial Chemical Industries, India Tyre and Rubber, Labu (F.M.S.) Rubber, Gold Fields Australian Development, Ex-Lands Nigeria, and Rio Tinto. At the meeting of the Bank of Athens reference was made to the continued increase of economic activity in Greece and to the improvement in Egypt and the United States, where the Bank has considerable interests. Its profits have consequently increased and its dividend risen from 8 to 10 per cent. The report of the Banque de Credit Roumain for 1935 draws attention to the ill-effects on economic activity and particularly on agriculture of the restriction of credit necessitated by the crisis. The General Accident, Fire and Life Assurance Corporation showed an increase of activity in all branches with record profits. The Governor of the London Assurance also recorded progress in all departments. The company acquired a controlling share during the year in the Clive Insurance Company of India. Mr Alfred Skeggs, of the Royal London Mutual Insurance Society, noted the remarkable growth in recent years of industrial insurance, which forms an important part of the Society's business. The results of the Scottish Equitable Life Assurance Society were reported as very satisfactory. Claims by death had fallen and returns on investments had risen owing to the maintenance of the rate of interest. The chairman of the World Auxiliary Insurance Corporation said that although marine business was worse than ever and there had been difficulties over foreign fire insurance, the company had more than held its own during the year. The speech of the I.C.I. chairman is discussed in a Note on page 261. Mr H. A. Holmes explained that in order to meet modern requirements and not to clash with the many colour designs of private cars, the India Tyre and Rubber Company had discontinued the distinctive red ring on its tyres. The chairman of the Labu (F.M.S.) Rubber meeting stated that the labour position in Malaya had become easier; and at the Cheviot Rubber meeting, held subsequently, Mr J. G. Hay reported on his recent visit. The Gold Fields Australian Development Company has undertaken considerable developments during the past year with satisfactory results and has acquired an interest in the Leopold Ranges which promises good gold yields. Output and profits of Ex-Lands Nigeria were higher than in 1934 and Mr Latilla announced that additions to their quotas had been obtained from other producers for the current year. The chairman of Rio Tinto, Sir Auckland Geddes, said that prospects for all the company's interests, except those in Spanish pyrites, were bright.

THE WEEK IN THE MARKETS THE LONDON STOCK EXCHANGE

SETTLING DAYS
TICKET MAY 5 | ACCOUNT MAY 7

THE confidence with which the markets last week accepted Mr Chamberlain's Budget was not in evidence this week, when the prospect was clouded not with increases in taxation but with rumours of political disturbance in Europe. Hot upon the heels of the first ballot in the French elections, with its signs of an increased majority for the Left, came whispers of marching armies in Germany, Austria, Czechoslovakia. A spontaneous or induced setback on the Paris Bourse was accompanied by weakness in the French franc, and more particularly the Swiss franc, which cannot stand alone if the French franc is devalued. And, to reinforce the natural impulse of the British operator to hold his hand until some light could be seen, came the break of prices on Wall Street, in the face of the most satisfactory indices of business progress. Throughout the week conditions in the London markets have been quiet and dull.

Gilt-edged securities were firm at the beginning of this week, but sagged later. Old Consols were the subject of some refugee French buying, and War Loan improved up to the deduction on Tuesday of the half-year's interest. The sagging tendency later in the week was attributed mainly to the military movements in Germany and Austria, and there was no improvement in mid-week. Home corporation securities were fairly steady in face of the prospect of a series of new issues. Dealings in the Birmingham 3 per cent. conversion loan opened at a premium; cash lists for the Croydon 3 per cent. issue closed rapidly, but lists for the Bradford and Cardiff loans remained open the full time on Tuesday of this week. India stocks and colonial issues were neglected, although colonials improved slightly at the end of last week.

The full weight of the European political difficulties was felt in the foreign bond market. On Monday there was a little support for Greek issues, in the hope of better treatment for bondholders, but generally prices fell. The new Polish currency restrictions led to a fall of 2½ points in Poland Sevens on Tuesday, and practically the only issues to stand out against the general decline were Italian "B" 20-year bonds. Chinese bonds have attracted less interest this week, but have held their ground, while the agreement between Japan and Russia over a border commission encouraged support for Japanese bonds. In the South American bond market, Argentine issues have been firm and Brazilians dull.

Home rails ended last week firmly, but were dull this week, and were not influenced by the traffic results, which showed up fairly well against last year, but will suffer in the next few weeks by comparison with last year's Jubilee figures. Foreign rails have been practically featureless, with a slight improvement in mid-week in American issues.

In the industrial market the decline of prices on Wall Street has had considerable effect, and although the volume of business has not been large, prices have generally moved downwards. Iron and steel shares have suffered from less encouraging trade reports, and have been dull with few exceptions. R. A. Lister have attracted a steady demand, but Park Gate Iron and Steel Company lost ground when it announced merely a maintained dividend. Aviation issues were similarly dull, particularly Rolls-Royce on publication of the full report for the past year. Standard motors were prominent at the beginning of the week, but were unable to resist the general recession which set in later. Electrical equipment issues provided one of the firmer sections of the market, and British Insulated were especially favoured on good trading reports. Electric supply shares suffered from lack of support which resulted in lower prices generally.

In the textile group, prices were rather uncertain at the end of last week, but were inclined to improve slightly later. In mid-week there was a demand for Salts (Saltaire) on the increased dividend, and conversely English Sewing Cotton shares suffered from the decreased profits. British Celanese and Courtaulds were both weak in spite of favour-

SITES FOR WORKS Apply to above address for particulars "T"

able production figures, and announcement of a dividend payment on Celanese first preference. Store shares were quiet, and breweries, which were doing fairly well at the end of last week, lost ground for lack of support. There was similar weakness in the tobacco shares group.

In the miscellaneous industrials section the majority of the leading shares were lower in mid-week, including Murex, British Oxygen, Alpha and Portland Cement issues. Valors were in demand and Dunlop issues hardened on publication of the full reports.

The general weakness spread to the oil shares market, which latterly has been the centre of great activity. Payments of arrears of dividend on the first preference shares of Mexican and Canadian Eagle Companies had been discounted in advance, but the announcement induced temporary support which faded away later. In mid-week both Eagle issues recovered some of the previous day's losses. Royal Dutch and Shell shares were sold by the Continent, following a warning from Amsterdam against too great expectations for dividends. Reports that a new well had been brought in led to support for British Controlled common and preference shares. The rubber share market reacted to the decision on Tuesday by the International Rubber Committee to increase export quotas for the last half of the year by 5 per cent., and shares moved downward along with the commodity, but most offers were soon taken up by professional operators. Dealings in the tea shares market were light, and prices fell.

Business in the Kaffir market has been relatively brisk, thanks to good quarterly reports from leading producers, and West Witwatersrand were a particularly strong feature. The political news from Austria was not without its effect in the market, but losses were not important, and were recovered later. The West African group attracted most attention in the mining market, and Gold Coast Selection were prominent in a general improvement, which gave way in mid-week to profit-taking. Rhodesians were irregular under the influence of the fall in the commodity price, the recession on Wall Street, and the general political situation, and diamond issues were dull. De Beers declined pending clarification of the position on arrears of preference dividends. Tin shares were irregular, despite an improvement in the commodity price.

FOREIGN STOCK EXCHANGES

NEW YORK

APART from a temporary recovery toward the end of last week, prices on Wall Street have continued to move downward, under the cumulative effect of a variety of rather general factors. There has been no change in the business and industrial outlook which would justify so marked a recession, and the movement must therefore be ascribed to technical and psychological conditions, which we discuss in a Note on page 258. On Monday of this week the market broke sharply, and losses of up to 6 points were registered in fairly active trading. Tuesday's market was more undecided, but on Wednesday renewed selling in a less active market caused a further general reaction. On the bond market, Government issues were firm at the beginning of the week, but speculative bonds fell rapidly, and later the whole market became rather soft. A tightening up of control of the markets was feared as a result of action by the Securities and Exchange Commission against White, Weld and Company for alleged attempts to make a market. The *Iron Age* estimates steel mill activity at 69 per cent. of capacity, i.e. 1 per cent. higher than a week ago, but this was not sufficient increase to offset market disappointment with the United States steel quarterly statement. Electricity output for the week ending April 25th was 15.5 per cent. higher than a year ago and 1 per cent. up on the preceding week; automobile output was the highest for any week since 1930; freight car-loadings for the week ending April 18th were nearly 5 per cent. higher than for the corresponding week of last year. Thus there is little sign of any recession in business indices corresponding to the market relapse.

* Two-hour session.

PARIS

The days on the eve of Sunday's first ballot in the French general elections found the Bourse optimistic, and although the volume of business was small, prices moved upward. Rentes closed on Saturday with gains of up to 60 centimes, and Banque de France shares gained 180 francs; internationals were firmer in sympathy with the end-of-the-week improvement on Wall Street. But the result of Saturday's voting, encouraging for the parties of the Left, was disliked on the Bourse; and in any case a temporary panic in the markets is a well tried weapon in the French political battle, with limits in the present case imposed only by fear of provoking a flight from the franc. On Monday rentes lost from one to two points, and Banque de France shares dropped 465 francs; industrials were weak, and profit-taking on the Coudisse provoked a sharp decline in diamond shares. On Tuesday conditions improved slightly, but later renewed selling caused a sharp break in prices, and Banque de France shares, which had lost 85 francs on Tuesday, fell a further 675 francs to 6,605. In mid-week rentes had lost 2½ francs since Saturday's close. The general collapse was due mainly to political prospects and manœuvres in France, but contributory causes were found in the recession in Wall Street, the rumours of impending developments in Austria, and the sudden weakness in the Swiss franc.

BERLIN

The share market was firm throughout nearly all of last week. Most standard industrials gained one or two points, and there was a special bull market in shares of the paper-cellulose group, and in motor-car shares, some of which are not officially quoted. The improvement in steel shares was led by Mannesmann, Kloeckner and Hoesch; and the announcement that Reich representatives had been appointed to the management boards led to a sharp rise in shipping securities. Considerable gains were registered by some lignite issues, and Westdeutsche Kaufhaus (formerly Tietz) rose several points. There were further gains this week, but Laurahütte and other Polish securities were depressed by the new Warsaw foreign exchange regulations. Profit-taking led to a reaction on Tuesday afternoon, and on Wednesday there was further irregularity, although there were some marked improvements, particularly in Farbenindustrie shares. Home bonds were steady, and Reich Valorised Loan improved; dollar bonds were firm, and Dawes Loan (certificated) rose four points.

AMSTERDAM

Last week closed with a very slight recovery movement after some weak sessions in which sugar securities had been particularly depressed. But business this week has not continued to recover, and the American section has been very much affected by the course of prices on Wall Street. The raising of the export quota caused rubber issues to lose ground, and Royal Dutch were the focus of warnings against expecting too great dividends. Dutch bonds were fairly steady. In mid-week the crop of political rumours had considerable effect, and heavy selling

developed, in the course of which Royal Dutch lost four points, Unilever N.V. two, and Philips Lamps one.

CAPITAL ISSUES

In all the "unregulated areas" of the new issue market, activity proceeds merrily. Even in Threadneedle Street, the queue of corporation borrowers is on the move again. The success of the Birmingham issue (whose significance as a portent is discussed on page 258) has been followed by further offers on behalf of *Bradford and Cardiff*, respectively. Both are conversions of 6 per cent. into 3 per cent. stock, with a 20-22 year life, at a point under par. The *New Zealand Government* is replacing £5,869,988 of 6 per cent. stock by £4,000,000 of 3 per cent. stock at 98½. The week's industrial issues range from milling to gold-mining. *Fulford, Trumps* offers high-yielding preference shares in a company which has acquired various West-country, milling, wool-stapling, and agricultural and builders' merchandising businesses. The issue appears fairly priced. The debenture stock of *Guildhall Development Company* (whose properties are situated not in the City but in Chiswick and Sussex) are stated to be covered more than five times by the estimated profits of the company and the guarantor concern, *Guildhall Property Company*. The bulk of the company's assets are properties for development, and prospects are largely dependent on the maintenance of residential building activity. *F. Hills and Sons* are plywood and aircraft manufacturers who have the sole British Empire concessions for the "Hillson Praga" light aeroplane. The joinery side is old established, but the aircraft manufacturing arrangements were made only recently. Under present conditions, prospects are favourable, but the aeroplane side of the business is still sufficiently new to give the ordinary shares a speculative flavour. Another aircraft concern is the *Aeronautical Corporation of Great Britain*, whose ordinary shares offer a reasonable speculation on the popularity of a machine which has been tested out in America. *Whiteley, Stevens (Holdings)* acquires three rayon silk companies whose combined profits showed a steep jump last year. The preference shares appear reasonably covered, but the premium of 50 per cent. on the ordinary shares should be read in conjunction with the fact that the indicated average earnings of 26 per cent. are based on a figure appreciably above the actual earnings for two of the last three years. *Follisain Metals* acquires, on a royalty basis, processes for the treatment of iron and steel products. The prospectus gives no figures of financial results, but merely test reports, testimonials and the names of firms who have given repeat orders. Until the commercial possibilities have been similarly "tested," the shares must be regarded as speculative. *Smethwick Drop Forgings* takes over a business which has been carried on by a company which until recently was a subsidiary of Hadfields. Present profits are running high, and the company has an impressive list of customers. In view, however, of the recency of the rapid increase in earnings, a premium of 300 per cent. for the ordinary shares appears generous. The *Economic Gas Boiler Company* offers high yielding £1 preference shares, and 2s. ordinary shares at a premium of 50 per cent.—a high-gear form of capitalisation which has frequently been criticised in these columns. The business is small but profits have been steady. The latter consideration is important, since a relatively small fall in profits would greatly reduce the average balance on the ordinary share capital. *Witwatersrand Nigel*, a South African mining company formed in 1933, is increasing its capital. The enterprise will not reach the producing stage for some time, but is under satisfactory auspices. *British Guiana Consolidated Goldfields* acquires reasonably promising properties and claims. The offer appeals to a specialised clientèle, but the company should enjoy good management. The week's placings, accompanied by public statements, include the shares of *Woodhead's Canonbury Brewery*,

OTARD'S

ESTABD 1795

THE BRANDY WITH A PEDIGREE

which has acquired an old-established business with a sound profit-earning record; *Switchgear and Cowans*, an electrical engineering concern whose products are of high reputation, but whose profits show a large annual fluctuation; and *Brown, Muff and Company*, a departmental store in Bradford doing an old-established and steady business.

LONDON ACTIVE SECURITY PRICES AND YIELDS

NOTE—Shares with a New York Quotation or with definite American interest are distinguished by italics

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

£130,150 after allowing for all operating costs and expenses in the colony. Purchase price, £196,750, of which £46,750 in cash.

Witwatersrand Nigel, Ltd. (Incorporated in the Union of South Africa).—Issue of 800,000 5s. shares at 10s. per share. Total mining area, 9,840,320.3 claims. The total purchase price of the mining properties, £555,850, will be supplied by the subscription of shares by the vendors, i.e. 1,111,700 shares of 5s. at 10s. per share. Proceeds of present issue, after allowing £20,000 for expenses, will leave £380,000 for working capital. Additional property acquired shows an aggregate area of mineral rights and claims of 5,566,376.8 claims. Whole of present issue underwritten by East Rand Consolidated, who receive option to subscribe for 200,000 shares at 12s. 6d. up to December 31, 1936, and a further 200,000, at same price, to December 31, 1937. List closed April 29th.

Guildhall Development Company, Ltd.—Issue of £250,000 5 per cent. guaranteed 1st mortgage debenture stock at 99 per cent. Unconditionally guaranteed as to principal, premium and interest by the Guildhall Property Company. To be repaid at 103 per cent. on December 31, 1960, or after December 31, 1941, at 103 per cent. on three months' notice. Formed October, 1934. Owns freehold properties in Chiswick and at Bishopstone, Seaford, Sussex. First accounts will be made up to March 31, 1936. Profit up to end of 1935 about £11,000. Present issue for purpose of repaying bank charges on properties of the company and for development of the business. Total assets, £631,156. Total assets of Guildhall Property Company, £806,717. Actual and estimated income of the two companies, £67,000 per annum. List closed 9.30 a.m., April 29th.

Fulford, Trumps and Company, Ltd.—Issue of 71,865 5½ per cent. cumulative £1 preference shares at par. Acquires whole issued share capital of six old-established companies carrying on business, in the West of England, of millers, wool staplers and general agricultural merchants. Purchase price, £135,358. Net assets acquired (excluding goodwill), £103,697. Combined profits, after allowing for depreciation but before charging income tax—years: 1934, £11,108; 1935, £15,339. List closed 9.5 a.m., April 28th. Oversubscribed.

Follsain Metals, Ltd.—Issue of 250,000 6 per cent. cumulative participating 10s. preference shares at par, in addition to 25 per cent. of further distributable profits. Object of present issue: to enable company to pay consideration to Follsain Syndicate for acquisition of certain rights in Follsain Tubular Products, Ltd., and to enlarge production facilities at works at Lutterworth. The company was incorporated on March 15, 1934, and has carried on business since, operating in Great Britain and Ireland, on a royalty basis, the Follsain Processes for treatment of iron and steel products. Estimated annual profits when additional plant, etc., is installed, £54,000 to £56,000. It is estimated that with the working capital provided by this issue the preference dividend will be earned with the existing plant. Purchase consideration, £40,000. List closed, 9.5 a.m., April 28th. Underwriters have had to take up part of the issue.

Aeronautical Corporation of Great Britain, Ltd.—Issue of 560,000 5s. shares at par. Acquires Light Aircraft, Ltd., Lang Propellers, Ltd., and Aircraft Accessories, Ltd., for £100,000, of which £40,000 will be paid in cash and remaining £60,000 by allotment of ordinary shares. The company is acquiring for £55,000 a freehold factory at Peterborough, well equipped with extensive fixed plant and machinery. It is expected that the factory will be in full production within six months. Annual profits, subject to income tax but allowing for depreciation, estimated at not less than £40,000. List closed 9.5 a.m., April 28th.

Waterworth Brothers.—This company will make an issue early next week of 50,000 6 per cent. cumulative £1 preference shares at 21s. 3d.; also 160,000 5s. ordinary shares at 6s. 9d. each.

Whiteley, Stevens (Holdings), Ltd.—Issue of 100,000 6 per cent. cumulative £1 preference shares at par and 200,000 5s. ordinary shares at 7s. 6d. each. Acquires Whiteley, Stevens and Co., of Stapleford, Nottingham; George Newton (Nottingham), and Kirkland and Clemerson, of Long Eaton, manufacturers of rayon and pure silk fabrics. The company has an option until April 23rd, 1939, to acquire for £10,000 the issued share capital of The Denda Knitting Company, of Haworth, near Keighley, Yorkshire. Valuation of net assets acquired £3,153, excluding goodwill. Purchase price £160,000, of which £90,000 will be paid in cash and the balance by allotment of 10,000 preference shares and 240,000 ordinary shares in company. Preliminary expenses estimated at £22,800 to be by the company. Profits after charging depreciation, before providing for income tax, years 1932-3, £12,685; 1933-4, £15,342; 1934-5, £35,703.

BY OFFERS FOR SALE

Carries on business of department store at Bradford, founded in 1814. Particulars of £200,000 4½ per cent. first debenture stock which Messrs Cazenove, Akroyds and Greenwood and Company have purchased at 98 per cent. for a commission of 1½ per cent. Issue for purpose of eliminating bank and other loans. Total assets February 5th, 1936, £463,543. Profits after charging depreciation, but before providing for income tax, years ended February 5th, 1934, £24,498; 1935, £25,710; 1936, £24,851. Ordinary share dividends: 1933-4, 6 per cent.; 1934-5, 6 per cent.; 1935-6, 7½ per cent.

BY TENDER

Bedford District Gas Company.—Messrs A. and W. Richards offer for sale by tender £20,000 4 per cent. perpetual debenture stock at minimum price of £103 per £100, yielding at that price £3 17s. 8d. per cent. Capital to be utilised for extensions

of mains, etc. Company established 1833. Area of supply covers 35 square miles. Total population approximately 55,000. Number of consumers, December 31, 1935, 12,795. Sales of gas, 1935, 1,914,186 therms. Net revenue year 1935, £13,858. Accumulated funds at end of 1935 amounted to £31,870. Tenders should be sent to Messrs A. and W. Richards, 37 Walbrook, London, E.C.4, not later than 11 a.m. on May 5th.

BONUS ISSUES

Berisford (S. and W.).—It is proposed to capitalise £75,000 of the reserve fund and to issue to each ordinary shareholder appearing on the register on May 2, 1936, one 4 per cent. cumulative preference share for every three ordinary shares held, any fraction to be paid in cash. These preference shares will rank as regards capital and dividend after the existing 6 per cent. cumulative preference shares and in priority to the ordinary shares and to dividend as from April 1, 1936.

J. C. and J. Field, Ltd.—This company is to distribute £62,500 of its reserves in payment of cash bonus of 5s. per share on ordinary capital.

ISSUES TO SHAREHOLDERS ONLY

General Funds Investment Trust.—The directors invite applications for an issue at par of 24,644 5 per cent. cumulative preference shares of £1 and 24,644 ordinary shares of £1, payable in full on application. Such preference shares will rank for dividend from May 1, 1936, and in a winding-up *pari passu* with the £125,356 existing preference stock and such ordinary shares will as from May 1, 1936, rank for any dividend declared on the ordinary stock for the year ending January 15, 1937, rateably with the £125,356 existing ordinary stock.

Colombian Mining and Exploration Company.—The directors of the Colombian Mining and Exploration Company offer to shareholders 600,000 shares of 2s. each at par. The new shares will rank *pari passu* with the present capital. The board has decided to issue an option of one share at par for every two new shares allotted under this issue. The option period will be from date of allotment of the present issue until six calendar months after the dredge has commenced operations or until June 30, 1937, whichever is the later date.

CONVERSIONS AND REPAYMENTS

New Zealand Government 3 per cent. Inscribed Stock 1952-1955.—Issue of £4,000,000 3 per cent. Inscribed Stock at 98½ per cent. to be repaid at par 1st July, 1955, or after 1st July, 1952, on three months notice. Proceeds to be utilised to repay New Zealand 6 per cent. Inscribed Stock 1936-1951, of which £5,869,988 is outstanding, the balance being provided by the New Zealand Government. New Zealand Revenue account for year to 31st March, 1936, showed a surplus of £270,000. Exports year to 31st March, 1936, £49,676,000. Imports £37,439,000. Gross Public Debt 31st March, 1936, £282,561,000. Assets of the Dominion are valued at approximately £309,000,000 of which £268,000,000 is interest bearing.

Goodyear Tyre and Rubber (Great Britain).—Notice is given that, in addition to the repayment (on August 1, 1936) of the 6½ per cent. debenture stock drawn for redemption at 102 per cent., the company will repay the remaining £275,850 6½ per cent. debenture stock at 105 per cent. on August 1, 1936.

British Columbia 4 per cent. Debentures.—The British Columbia 4 per cent. debentures for \$3,500,000 maturing May 15, 1936, payable Canada and New York, will be paid off in cash at maturity.

Bradford Corporation 3 per Cent. Redeemable Stock, 1956-1958.—Offer of conversion to holders of £2,000,000 Bradford Corporation 6 per cent. redeemable stock, 1936-1946, into Bradford Corporation 3 per cent. redeemable stock, 1956-1958, at 99 per cent., to the extent of £1,744,440. The new stock will be redeemable at par on July 1, 1958, or after July 1, 1956, on three months' notice. Area, 24,342 acres; estimated population, 292,200; rateable value, £2,171,431; rateable value per head, £7 8s. 8d.; produce of 1d. rate (net), £7,850; amount of rate in £1=16s. 2d. Net outstanding debt, £19,769,538, of which £13,704,368 is productive. Property and permanent works, £32,517,991. Combined profits of trading undertakings for year 1934-35, after providing sinking fund, were £491,433. List for cash applications closed at end of business hours April 28th. List for conversion applications will close on May 4th.

Cardiff Corporation 3 per Cent. Redeemable Stock, 1956-1958.—Offer of conversion to holders of £1,439,500 Cardiff Corporation 6 per cent. redeemable stock, 1936-1946, into Cardiff Corporation 3 per cent. redeemable stock, 1956-1958, at the rate of 99 per cent. The new stock will be redeemed at par on July 1, 1958, or after July 1, 1956, on three months' notice.

Statistics of City of Cardiff as at March 31, 1936, show: Area, 13,628 acres; population, 221,050; rateable value, £1,851,963; rateable value per head, £8 7s. 7d.; product of 1d. rate, £7,080; amount of rates in £, 1935, 12s. 2d.; total capital expenditure, 1935, £17,637,316. Net debt outstanding: Reproductive (including housing), £7,041,040; non-productive, £2,207,001. Net debt per head: Reproductive, £31 17s. 1d.; non-productive, £9 19s. 8d. Net debt per £ of rateable value, £4 19s. 10d. General Exchequer grant, £201,330. List for cash applications closed at end of business hours April 28th.

FIXED TRUSTS

Capital Securities Trust.—This trust has been formed to give the investor the benefit of expert selection and management. The chief points in a booklet issued are: (1) Capital appreciation rather than yield; (2) there is a very strong board; (3) associated with the British General Fixed Trust; (4) inclusion of North and South American stocks; (5) high flexibility of the trust; (6) managers have the power to select and to vary as economic prospects and expert advice may dictate. The managers are Improving Securities Trust, Ltd., King's House, 36-37 King Street, London, E.C.2.

FORTHCOMING ISSUES

Hield Brothers, Ltd.—The directors recommend that the capital of the company be increased to £440,000 by the creation of £110,000 in ordinary shares. An extraordinary general meeting is being convened to consider such a proposition. It is proposed that £66,000 in 1,320,000 ordinary shares of 1s. each shall be issued and offered for subscription by the ordinary shareholders at 2s. per share, in the proportion of three new shares for each complete five of existing holdings.

British Celanese.—The directors of British Celanese have decided to pay on May 30th, 1936, to holders registered as at the close of business on May 14th, 1936, the dividend on the 7 per cent. first cumulative preference shares for the half-year ending April 30th, 1936, thus bringing the dividend on this class up to date. In order to meet the company's requirements of further working capital, arrangements have been made for the issue and subscription of 500,000 7 per cent. first cumulative preference shares to rank for dividend as from May 1st, 1936.

County of London Electric Supply.—An issue of £2,500,000 3½ per cent. debenture stock 1952-72 at par is to be made to provide funds for repaying loans and for capital expenditure.

Miris Steel Company.—An issue is to be made of 150,000 6 per cent. cumulative redeemable preference shares 10s., and 300,000 2s. ordinary shares.

Evans Bellhouse.—It is understood that an issue of shares is to be made by this concern.

General Consolidated Investment Trust.—An issue of preference shares and debenture stock is to be made by this company.

OTHER RESULTS OF ISSUES

Anglo-Palestine Bank.—Application lists for the offer for sale by Robert Benson and Company of 300,000 "A" ordinary shares of £1 each at 37s. 6d. per share of the Anglo-Palestine Bank were closed at 9.2 a.m. on April 24th, owing to very heavy over-subscription.

Birmingham 3 per cent. Loan.—Conversion lists in connection with the issue at 99 of £4,882,700 Birmingham Corporation 3 per cent. stock were closed April 24th. Cash applicants were allotted about 10 per cent. of their requirements.

Croydon Stock.—Lists for cash applications in respect of £1,500,000 Croydon Corporation 3 per cent. redeemable stock, 1956-58, were closed at 9.5 a.m. April 24th. The conversion lists were closed on May 1st.

Tizer, Ltd.—Lists for the offer for sale of 575,000 ordinary shares of 5s. of Tizer at 20s. each were closed at 9.20 a.m. April 24th. Underwriters had to take up 71 per cent. of the issue.

Hetty (Wholesale Gowns).—Lists for the issue of 200,000 6 per cent. cumulative participating preference shares of 4s. at par and 100,000 ordinary shares of 1s. at 2s. each of Hetty (Wholesale Gowns) were closed at 1.40 p.m. April 24th. Underwriters had to take up just over 50 per cent. of the preference shares.

Bristol Waterworks Company.—The issue by tender of about £120,000 5 per cent. consolidated preference stock was largely oversubscribed. The stock was allotted at the average price of £146 0s. 11d. per cent. The minimum price at which tenders would be considered was £143.

CALLS DUE MAY 4 TO MAY 9, 1936

The grand total of calls in May, 1936, is £11,271,054, which compares with £5,893,415 in May, 1935.

COMPANY MEETINGS, &c.

IMPERIAL CHEMICAL INDUSTRIES, LIMITED

FURTHER STEADY PROGRESS AT HOME

SATISFACTORY GROWTH OF EXPORT TRADE

EXPORT MARKETS

The ninth annual general meeting of Imperial Chemical Industries, Limited, was held, on the 27th ultimo, at Queen's Hall, London.

Sir Harry McGowan, K.B.E., D.C.L., LL.D. (chairman of the company), commenced his speech by expressing regret at the great loss suffered through the death of the Marquess of Reading, who had been a director since the formation of the company in 1926 and president since 1930. They had elected, he said, Mr. H. J. Mitchell to be president and Mr. H. O. Smith to be a director.

Dealing with the report of the directors, he said:—There are only two home matters on which I wish to say a few words. The new coal hydrogenation petrol plant at Billingham is working satisfactorily, having regard to the magnitude of the enterprise and the unique nature of the process. Every new factory requires a certain time to shake down and get into full running order, even where the method of production is familiar. In the case of a novel process troubles are likely to be more persistent because careful observation must precede each modification. While that is our experience at Billingham, we have encountered no fundamental difficulty and we shall, I think, shortly reach the full measure of our original expectation.

The other matter is our acquisition from Messrs du Pont of their interest in Nobel Chemical Finishes, Limited. This company carries on a very large paint, varnish and cellulose finish business, one which is expanding rapidly and is, moreover, of a satisfactorily remunerative nature. Although Messrs du Pont have relinquished their financial interest in this business, we shall still retain the great benefits to be derived from technical co-operation with them in this field.

AUSTRALIA

In Australia there has been a marked improvement during 1935 and the prospects for 1936 are encouraging. The Australian company's sales of explosives again show a substantial expansion. In view of the attractive conditions in the gold-mining industry, this increase is expected to continue. Dyestuffs sales again increased satisfactorily and some progress has been made in the sale of pesticides. Fertilisers also improved a little, but a larger local steel production carries with it a further growth in the manufacture of sulphate of ammonia, which affects the sales of our material. Negotiations for the site for the alkali plant and the accompanying saltfields, referred to in my speech last year, have been completed, and work on the saltfields has been commenced. A period of two years will probably be required for the completion of the whole undertaking.

The sales of other products show no important changes. The results of the company's operations last year were satisfactory, and its prospects for the current year are good. In New Zealand the rate of improvement has been rather less marked, but the Dominion has also benefited from enhanced prices of primary products, and sales of our goods have been well maintained.

CANADA AND SOUTH AFRICA

REORGANISATION OF CAPITAL

As regards Canada, economic conditions improved steadily throughout the year, and, although all industries have not participated equally in this recovery, there are indications that it is becoming more evenly distributed. Canadian Industries, Limited, had a satisfactory year, and, although the margin of profit of a great many products lessened, due to lower selling prices and higher costs of raw materials, resulting in slightly lower profits than those achieved in 1934, sales increased substantially, and the company looks forward to further progress during 1936.

In South Africa, African Explosives and Industries, Limited, has had another good year. The gold-mining industry continues to expand, new areas are being opened up and, owing to the present price of gold, lower-grade ore can be profitably worked, thus lengthening the life of some of the mines. The outlook is steady and promising.

Production of explosives for the year established a new record, and considerable capital expenditure is being incurred to increase the capacity of the Modderfontein factory in the Transvaal, in order to keep pace with the growing demands of the mines.

Compared with the previous year, the volume of British export trade to overseas markets has shown a

PROFITS AND DIVIDEND

The company's net profits show a further moderate increase of £357,000. This net income is arrived at after providing £1,000,000 for the Central Obsolescence and Depreciation Fund and the necessary amount for the company's income tax. The board have again appropriated £1,000,000 to the general reserve and have also this year put aside £150,000 for a Workers' Pension Fund.

In considering the dividend policy, the board found themselves in a difficult position, because the decisions in the Supreme Court in regard to the company's scheme for the reorganisation of capital could not yet be taken as final. After consultation with counsel, and on their advice, the board have followed the course already announced, namely they recommend a final dividend of 5½ per cent. on the ordinary stock, which represents the former ordinary shares, payable on June 1, 1936. With the 2½ per cent. interim dividend on this stock already paid on November 1, 1935, the dividend for the year thereon will be 8 per cent. The board also recommend a dividend of 4 per cent. on that ordinary stock which represents the former deferred shares.

THE COMPANY'S POLICY

From a perusal of our annual report, with its record of growth in the volume of business, of capital extensions, etc., a larger increase in the company's profits might perhaps have been expected by shareholders. I must remind you, however, of the company's policy, which I have dealt with in these annual speeches from time to time. We endeavour to combine every possible extension of our activities with a consistent care of the prices we charge for our products. As a quasi national organisation serving practically all the major industries of the country, we endeavour to preserve the shareholders' capital and to make it reasonably remunerative; to provide our customers with the finest products and give them also the most attentive service; to keep in the forefront of technical progress by active and original research; to recruit the finest material possible for employees of all grades, and to enlist their loyalty and interest by giving our workers and staff the best working conditions, as well as by caring for their physical and mental needs—the co-operation of loyal workers is one of the most valuable assets the company possesses—and to keep our prices as low as possible, consistent with the foregoing principles. Low prices in the long run stimulate a greater volume of trade, as our products are the raw material for the great industries of this country. The less we charge the more competitive should our customers become, and every increase in their trade means a greater volume in our own.

Such a policy spells long-continued success, and is, I submit to you, more likely than any other so to build up the strength of the organisation that it shall endure through long years to come, able to meet any competition that is offered to it, and still provide the shareholders with a gilt-edged industrial investment.

ROYAL COMMISSION ON ARMS

You may expect me to say something about the position of our company and what its contribution may be in times of crisis. The company has presented its evidence to the Royal Commission on the Private Manufacture of and Trading in Arms. We did not confine ourselves merely to refuting the allegations that the company was in the main a munitions producer, but endeavoured to demonstrate how our developments of recent years purely on a peace-time basis had provided a national asset which would be invaluable in time of crisis.

As far as profits to be made out of wartime needs are concerned, I told the Royal Commission that I was responsible to you, ladies and gentlemen, for providing a fair return on the money invested, and that I desired no more and no less. I also added that the company's staff would discuss with representatives of the Government at any time our costs of production, and agree with them what was a fair return on the capital involved. This made the I.C.I. policy perfectly clear, a policy which will, I believe, be fully supported by the shareholders.

WORKERS' PENSION FUND

I have already mentioned that the board have set aside a sum of £150,000 from this year's profits to provide the nucleus of a workers' pension fund. Final details of the scheme have not yet been worked out. Thereafter, consultation will take place with the workers through the medium of the Works Councils, in order that the scheme formulated may commend itself to our employees. In the meantime, we have set aside this £150,000, and the assumption that next year we are able to augment that there will be the necessary financial nucleus for a scheme to be put into full effect as from January 1, 1937. We believe that this pension fund will be very welcome to our workpeople, that

it will give a great sense of security to them, for it will remove their great anxiety for the future, and that it will be of advantage to the company. Happiness and contentment in work, together with the knowledge of a secure old age, are the finest ingredients of human efficiency. Your board is pleased to record the continuance of the harmonious staff and labour relations on which I have commented in previous years.

FUTURE PROSPECTS

My views of the future are clouded in one respect. I refer to coal, which in this country is the basis of power for all the major industries, and in addition for us is a vital raw material. The problems of its supply and price are therefore of prime national importance.

Many of the troubles of the coal-mining industry are expected to be eliminated by the formation of a selling committee for each of the districts established by the Coal Mines Act. The purposes in mind are to establish these schemes with a measure of permanence and effectually to prevent inter-district and inter-colliery competition on a basis which allows no evasions. By this means it is hoped to reach such a level of prices as will permit reasonable wages to be paid to the miners below and above ground.

Beyond this, industry is not aware of the future price policy of these committees, and the interests of general industry are safeguarded only by the powers of the Committees of Investigation established under the Act. But administrative machinery of this kind is apt to work very slowly, and such delay may be extremely prejudicial to industry.

Any substantial increase in the price of coal must affect industrial consumers both directly and indirectly—first, on their own purchases, and, secondly, through the increased prices of all their other goods arising from the additional coal costs of other suppliers. Further, if it is intended to expand exports of coal, by lower prices to foreign buyers, and to recoup the loss by still higher prices to industrialists at home, our competitive power will be doubly hit, for we shall be paying part of our own competitors' costs as well as our own. I feel sure that a statesmanlike price policy will prevail and that the new powers to be conferred will not blind the mining industry to the necessity of sparing no effort to bring its organisation to a point at which increased labour costs will be largely, if not entirely, absorbed by contra economies.

STEADY PROGRESS AT HOME

My estimate last year that 1935 might be looked forward to as a reasonably successful year, with neither any abnormal setback nor any outstanding extension of our manifold activities, has proved correct. I can only hope that 1936 will yield us similar conditions and similar results. At home, our business so far this year is better than last year, and recent employment figures give every hope of continuing steady progress. Activity in the building industry as a whole is still strong, and while housing construction may fall somewhat in the future, as against this it is not unlikely that industrial construction will show an increase.

The unfortunate necessity of making good the gap in our defences, brought about by the inability of other nations to realise the blessings of peace accompanied by the economies of disarmament, must inevitably give some stimulus to industrial activity. The question of how much depends partly upon whether or not the monetary resources used for that purpose would otherwise have remained unemployed, or whether they might have found alternative uses in the ways of peace instead of in the ways of war. The company will benefit, not only from direct orders, but also from its general interest in the great industries of the country, through a derived demand from orders given direct to them.

Abroad, the same political conditions appertain as last year, though many of us may reasonably regard them as worse. Mutual fears, mutual suspicions, unwillingness to believe in the *bona fides* of anyone else, are still the distinguishing characteristics of the foreign situation. Perhaps some wider hopes of improvement may this year be encouraged by the outlines of policy recently disclosed on the Continent, but for this we must depend upon the ability of statesmen in many lands to adjust their points of view to the broad issues of the future, rather than the painful events of the past, to set aside natural jealousies in favour of a new goodwill and to turn to account the deep longings of the peoples themselves to live at peace with one another and in that peace to carry on their trade and industry. (Applause.)

Both at home and abroad, daily anxieties beset your board, but you can rest assured that they spare no effort with the aid of their able staff, to guard your business against any permanent harm, while at the same time taking advantage of any opportunities which can be found to develop either new manufactures or trade, within the sphere of the company's legitimate activities.

The report and accounts were adopted.

THE LONDON ASSURANCE

PROGRESS IN ALL DEPARTMENTS

The annual general court was held, on the 29th ultimo, in London, Mr R. Olaf Hambro (the governor) presiding.

The Governor, in the course of his speech, said that during the year they had acquired a controlling interest in the Clive Insurance Company, of India, which company was created in 1917 by their managing agents for India, Messrs Gillanders, Arbuthnot and Company. The acquisition meant that they had immediately obtained a reasonable volume of proved profit-paying accident business in India, and on a basis on which they might look not only for continuity, but also for progress.

In the life department another record was set up in the production of business during the year, and in both gross and net sums assured the figures had not previously been attained during the history of the corporation. They were respectively £3,961,848 gross and £2,763,674 net. The number of new policyholders had increased very substantially, and the increase of £661,675 in the fund was also the largest increase recorded. The mortality experienced in 1935 was very light, and for the five years just concluded represented less than 90 per cent. of that expected according to the most recent mortality tables.

Dealing with the valuation as at December 31st last, the latest mortality tables A.1924-1929 had been adopted, and the rate of interest used had been reduced from 2½ per cent. to 2¼ per cent.

The effect of those changes was to strengthen the valuation so that the prospects of the maintenance of a good bonus were very favourable.

SUBSTANTIAL RATES OF BONUS

The results of the valuations put quite briefly, were that the value of the fund on December 31st last was £8,901,029, covering an estimated liability of £7,896,535, and showed an available balance of £1,004,494, to which had to be added the amount of intermediate bonus paid during 1931-35—namely, £43,360—giving a grand total of £1,047,854.

The bonus declaration fell into three categories; the first, applying to policyholders in the old series, was at the rate of 55 per cent. of the ordinary premiums paid during the quinquennium, and was on a cash basis. Policyholders in the 1911 series received a compound reversionary bonus, calculated on the sum assured and existing bonuses, at the rate of £2 5s. per cent. per annum in respect of whole-of-life assurances and £2 per cent. per annum in respect of endowment assurances. Intermediate bonus would be allowed at the full rates now declared in respect of all with-profit policies which became claims during the current quinquennium. The life fund had increased by £2,500,000 during the quinquennium.

FIRE, MARINE AND ACCIDENT

In the fire department also they had again to record substantial improvement. The total income of £2,094,337 showed an increase of £19,651, and £248,693 had been transferred to profit and loss account. The loss ratio over the past three years showed a progressive decline. The total reserve in the account was £1,789,742, being 85.4 per cent. of the annual premium income, as against 84.1 per cent. previously.

The marine account had, in all the circumstances, acquitted itself remarkably well. The premium income at £646,294 showed a decline of £43,288, and the figure of losses at £475,905 was lower, both in the aggregate and percentage, than in the previous year. The transfer to profit and loss had been maintained at £100,000. The marine fund now stood at £787,311, an increase of 5.8 per cent. over that of the previous year.

The total premiums in the accident department were £1,252,586, an increase of £89,481, and they felt particularly gratified in the drop in the claims percentage, the decrease being 4 per cent. There was also an improvement in the expenses of management, and the transfer to profit and loss account at £145,570 showed an increase of £65,571. The fund showed an increase of £120,197, and stood at 59.5 per cent. of the annual premium income, as against 53.7 per cent. in the previous year.

With regard to the profit and loss account, the balance carried forward was £657,944, or £251,464 in excess of the amount brought in. The total of the general reserve fund, together with the contingency account, now stood at £1,880,000. The market value of the Stock Exchange securities in the general fund was in excess of the figures shown in the balance sheet, the appreciation over book value amounting to £241,447, and this was in addition to the appreciation of over £750,000 shown in the life department investments. The total assets of the corporation showed an increase over the previous year of all but £2,000,000.

The report was unanimously adopted.

GENERAL ACCIDENT, FIRE AND LIFE ASSURANCE CORPORATION, LIMITED

RECORD PROFITS

The fiftieth annual general meeting of this corporation was held, on the 29th instant, at the Head Office, General Buildings, Perth.

Sir Francis Norie-Miller, Bt., the chairman, in moving the adoption of the report, said that the past year had shown a great industrial and economic improvement, which he hoped and expected would continue. The year 1935 had seen the continued progress of their company, and their profits were the highest in their history, namely £454,630.

The dividend was again increased by one shilling, and he looked for a further increase in the current and future years. In recent years the dividend had been well within the total of the company's free interest earnings; notwithstanding the fact that this year a large portion of the new capital only earned about nine months of interest and they paid the full year's dividend on the new shares, they were still within the total interest earnings. All departments showed progress. In the life department they showed a very substantial amount of new life business—nearly £3,000,000. The fire premiums showed an appreciable increase of about £50,000, and continued to show a very satisfactory profit. They had added £10,000 to the additional reserve in that account, as they were now concentrating on the fire business, and hoped to see a more rapid increase in the income.

In the accident and general account there was an increase in the premium income of about £650,000. The reserves carried forward in that account for unexpired risks had always been more than sufficient for the purpose. The board had, however, increased those this year by over £370,000, £200,000 being an additional reserve, and they had now reserved over 40 per cent. of the total income, including the monthly and other short-term income, under which there was no unexpired risk. From that account they had been able to transfer a profit of £264,511, and he looked forward to that department in the future showing a considerable increase on that amount. Their marine department did a small business, and they carried forward 90 per cent. of the premiums. They hoped that they would get a profit on that department in future years.

Shareholders were probably aware that the corporation, through the trustee department, was acting as trustee of several "fixed" trusts, and that a Government inquiry was being held to review the whole movement. He need hardly say that the corporation welcomed the inquiry. His reason for mentioning the matter that day was, however, because it was essential to make it definitely clear to the public that the fact that the corporation were acting as trustee of a fixed trust did not imply any guarantee by them as to the particular investments forming the trust fund in the selection of which they had no voice or responsibility. The corporation were not and would not be interested in or concerned in any way with the management of any fixed trust of which they acted as trustee.

The general reserve fund had been increased to £1,700,000, in addition to which there was a carry-forward of £538,848, together over £2,200,000, and if they added the surplus reserves of £210,000 in the fire account and £200,000 in the accident account, they had over £2,600,000 of surplus reserves. They had carried the whole of the premium on the issue of shares in the early part of last year to that fund plus £125,000 from profit and loss. The value of the corporation's investments at market prices was considerably in excess of book values.

Business for the first three months of this year had been very satisfactory, showing a larger profit than for the same period last year. They had placed the company in the front rank of British insurance companies and they all looked with pride upon the achievement and congratulated themselves as shareholders and officials.

This was their fiftieth annual general meeting, and it was a very happy retrospect for himself personally to think that he had been spared in health and strength to attend every one of those meetings. He was proud of their organisation, and still more proud of the officials in every part of the world, who were responsible for it. One and all had done splendid work.

The Chairman concluded by moving the adoption of the accounts for the year 1935, and recommending the payment of a final dividend of 2½ per cent. on the preference shares, making 5 per cent. for the year, and a final dividend of 9s. per share on the ordinary shares, making 16s. per share for the year, subject to income tax, and payable on and after May 1, 1936.

Mr William C. Hunter seconded the motion, and it was carried unanimously.

BANQUE DE CREDIT ROUMAIN, S.A., BUCAREST

INCREASED DEPOSITS

DIVIDEND OF 5 PER CENT.

The annual general meeting of the Banque de Credit Roumain, S.A., was held on Saturday, April 4, 1936, M. Const. Argetoianu (a former Minister of Finance) being in the chair.

As in previous years, the meeting was attended by Government officials and well-known members of the financial, industrial and commercial world in Roumania.

The report for the year 1935 deals, *inter alia*, with the problem of credit and states that the restrictive measures necessitated by the crisis, which were introduced with a view to adjusting the relationship between creditors and debtors, have contributed little towards a revival of economic activity. Agriculture, on which any revival in business depends, remains, through lack of credit, in a state of stagnation. Fundamental measures which would put credit on a broader basis are essential.

BALANCE SHEET ITEMS

The report goes on to deal with certain items in the balance sheet. Liquid assets amount to Lei 842,000,000 and deposits to Lei 1,450,000,000 (against Lei 1,130,000,000 as at December 31, 1934). Rediscunts with the National Bank of Roumania amount to Lei 221,000,000, compared with Lei 481,000,000 the previous year. The net profit is Lei 35,000,000, of which Lei 8,800,000 was brought forward from 1934.

M. Gr. Tranco-lasi, a former Minister, as well as General Vasilescu, speaking on behalf of those present, dwelt on the clarity of the balance sheet, and paid tribute to the energy and ability of those charged with the management of the bank.

The resolutions on the agenda were passed unanimously.

The dividend was fixed at 5 per cent.

WORLD AUXILIARY INSURANCE CORPORATION, LIMITED

TAX-FREE DIVIDEND OF 7½ PER CENT.

The seventeenth ordinary general meeting of the World Auxiliary Insurance Corporation, Limited, was held, on the 28th ultimo, at Winchester House, Old Broad Street, London, E.C.

Capt. the Rt. Hon. C. C. Craig, D.L. (the chairman), said that with regard to the fire account, after paying all claims, commissions and expenses, and after making full allowance for outstanding claims and transferring £7,500 to profit and loss account, the fund at the end of the year amounted to £45,027.

Conditions regarding foreign taxation and foreign Government restrictions were, if anything, more difficult than ever, so that it was as much as they could expect to find that the premium income had been maintained on the same level as that for the previous year.

In the general accident and miscellaneous account, after transferring £10,000 to profit and loss account, the fund was carried forward at £128,384. That account had for some years been on a three-year basis and that transfer to profit and loss resulted from the closing of the account for 1933; the settlements on account of 1934 were so far satisfactory.

MARINE ACCOUNT

As to the marine account, £20,000 had been transferred to profit and loss, leaving £158,015, which was carried forward. Premiums were again lower; rates were still being reduced to such an extent that many sections of marine business had become definitely unprofitable and had had to be declined. It would seem that the time had come when underwriters should get together in friendly conference to endeavour to improve the situation as to rates and marine insurance generally. There was a danger of unprofitable results if the present conditions were to continue.

With reference to the profit and loss account, the balance brought forward was £112,257 and various additions brought the total to £173,176. After paying sundry charges, reserving £10,000 Government taxation and transferring £10,000 to reserve fund, the balance amounted to £147,695, from which they recommended a dividend of 7½ per cent., free of income tax, to be paid to the shareholders. The resolution was unanimously adopted.

BANK OF ATHENS

INCREASED PROFITS AND DIVIDEND

The directors' report for 1935 was presented at the annual shareholders' meeting in Athens, which approved a dividend of 10 per cent. (as against 8 per cent. for 1934).

Reference was made to the continued increase in economic activity in Greece, in spite of the political disturbances that took place in the spring of 1935, but for which the results obtained by the bank would have been even better, and would have reflected more accurately the development in its turnover of business, even in face of the competition of institutions that enjoy a privileged status and which are able to attract the savings of the public by offering rates of interest higher than those paid by the members of the Hellenic Bankers' Association.

Trade had benefited by the increased purchasing power of the agricultural community, and there had been a notable activity in the merchant marine—especially towards the end of the year—but no complete revival was possible until the return to freedom of trade.

It was explained that any losses arising from advances still outstanding on old stocks of tobacco, as well as any final difference resulting from the "drachmification" of loans and deposits in foreign monies, a question not yet settled with the Government, were amply covered by the surplus of market value over book value of the bank's investments (particularly in the unquoted securities).

Attention was also called to the improvement of conditions in Egypt, where the bank has considerable interests, especially in real estate, and to the very important betterment of conditions in the U.S.A., where the bank possesses an affiliated institution, and where, although the conditions have not yet returned to those existing prior to the crisis of 1931, there has been very important progress, with corresponding benefit to the bank. Circumstances, however, still prevented the consummation of the projected foundation, by the National Bank of Greece and the Bank of Athens, of the new Banque Helleno-Egyptienne.

Affiliated Institutions
throughout Latin America
and Spain, and affords
complete facilities for the
transaction of every description of modern banking business.**

HEAD OFFICE
ATHENS

GOLD FIELDS AUSTRALIAN DEVELOPMENT COMPANY, LIMITED

REVIEW OF PAST YEAR'S WORK

The third annual meeting of this company was held, on the 28th ultimo, in London.

Mr John A. Agnew (the chairman) said, in the course of his speech: Development work has been concentrated on the four ore bodies. The No. 1 east lode was intersected on the 270-ft. level in the main north-west crosscut from the Moonlight shaft. Driving and crosscutting along the strike on this level and on the first sub-level at about 22 ft. higher elevation has exposed a practically continuous stretch of 340 ft. of approximately 30s. ore over some 60 in. in width. A winze, sunk at about 280 ft. north-east of the main crosscut, from the 270-ft. level to the 450-ft. horizon, averaged 27.1s. for 206 ft. over an exposed width of 4 ft.

The downward extension of this lode was cut by a horizontal diamond drill hole from the 450-ft. level which exposed a width of 9 ft. of ore averaging 38s. per ton. A crosscut was driven from the Adelaide shaft to meet the No. 1 east winze, which intersected the No. 1 east lode, sampling showing an average value of 33s. over the full width of 8 ft. This is most satisfactory, confirming as it does the results of the diamond drill hole further north. Our latest information is that the north-east drive has been advanced 108 ft. in ore averaging 31s. over an exposed width of 96 in., whilst the south-west drive is in 44 ft., sampling returning 32.4s. over an exposed width of 90 in. for the full distance advanced.

ADELAIDE LODE

As regards the Adelaide lode, prospecting of this at the 450-ft. horizon was carried out off winzes from the 270-ft. level. The No. 1 winze averaged 29s. for 200 ft. depth over the full width of the winze. A north-east drive from this winze was started; the first 130 ft. was driven in the footwall of the Adelaide shear and showed low values only, but on the drive being swung into the shear itself the next 59 ft. averaged 21.4s. over 8 ft. With regard to the low values encountered in the first 130 ft. just mentioned, it is very satisfactory to know that two horizontal diamond drill holes some 55 ft. apart have since been put out into the hanging wall, the first showing a width of 16 ft. averaging 36.4s. and the second 12 ft. of 20.2s. ore followed a few feet further in by another body of 6½ ft. wide averaging 24.1s. per ton.

A winze is now being sunk from the 450-ft. level, and our latest information is that from 8 ft., when the lode was entered, the next 94 ft. have averaged 30s. over an exposed width of 51 in. It is very pleasing indeed that the further downward continuation of this lode has been confirmed by the diamond drill hole No. 42, which, at an estimated vertical depth of 700 ft., showed the lode to average 40s. 4d. over a true width of 21 ft.

With regard to the ore reserve position at the mine. Your general manager has made an estimate, calculated on the average widths exposed and sampled below the oxidised zone, of 130,000 tons averaging 27s. over varying widths, with a further indefinite tonnage from the oxidised zone.

NEW INTERESTS

An interest in a syndicate has been secured for a reservation in the Leopold Ranges in the north-west portion of the State. Indications met with from surface prospecting reveal the existence of very considerable widths of lode formation carrying highly profitable gold values, and as this condition appears to prevail over a very great length of ground so far tested, the area is regarded as one of much promise.

A more recent acquisition which has given very encouraging results is the Kintore property in the Kunanalling district. Here an old shaft, sunk on the lode, was deepened to 58 ft. when values were found to average 131s. 6d. over a width of 30 in. During the last three months, and since the receipt of the general manager's report, developments have been particularly satisfactory. The results were so encouraging that the management recommended the payment of an additional instalment of the purchase price, which was agreed to.

The developments at the Moonlight have continued satisfactory and production at the rate of 90,000 tons a year will begin in July. Production for Yellowdine is expected to commence next month. It may fairly be anticipated that from these two sources a satisfactory revenue will accrue to the company. The search for, and preliminary development of, properties, which is an essential part of our business, always presents a large element of chance. We have no reason to be dissatisfied with the results so far obtained.

The report and accounts were adopted.

INDIA TYRE AND RUBBER COMPANY, LIMITED

INCREASED PROFITS AND DIVIDEND

The eighth annual general meeting of the India Tyre and Rubber Company, Limited, was held, on the 27th ultimo, in Glasgow, Mr H. A. Holmes (the chairman) presiding.

The Chairman, in the course of his speech, said:—During certain periods of the year selling prices fell a little or of profit, and it was only after the lapse of several months that an agreement was reached by manufacturers of several prices to more reasonable economic levels. Large part of the result of the second half-year's operations, the trade, after providing for all bad and doubtful debts as shown in the profit and loss account is £116,149, which, together with rents and transfer fees, gives a total income for the year of £117,602. This figure compares with £111,647 for the previous year.

PROFITS AND DIVIDENDS

The provision for depreciation on the fixed assets is again fully adequate and about the same figure at £55,340. Directors' fees are unchanged, and the result shows a net profit of £60,262 for the year, being an increase of £6,473 on the year before.

In view of the conditions of the tyre industry, and the inevitable lag in adjusting selling prices to take care to some extent of the higher cost levels of raw materials, your board consider the figures satisfactory.

Against the net profit of £60,262 earned for the year, £10,000 has been transferred to taxation account. The preference dividend for the year, less income tax, absorbed £18,988. £10,000 has been appropriated to write off the cost of acquisition of additional foreign marketing rights and the transfer of £5,908 to the preference dividend reserve has now brought that reserve up to the required £50,000. £2,000 has been provided for the purpose of the foundation of an employees' welfare scheme. Your directors are glad that after making these appropriations they feel justified in recommending a dividend on the ordinary shares of 8 per cent., less income tax—as against 5 per cent., less tax, leaving to be carried forward to next year £17,057, as against a sum of £16,091 brought in.

The balance sheet calls for little comment.

On the liabilities side the creditors show an increase of roughly £20,000 at £154,419 and which almost corresponds with the increase in sundry debtors and bills receivable as shown on the other side of the sheet at £207,993. Stocks are some £20,000 higher at £332,048, and these variations all reflect the higher levels of raw materials.

The reduction of £10,868 under buildings and land was occasioned by the sale of a small property for £3,500, the balance being the normal rate of depreciation we employ. Cash in hand is £72,829, an increase of £22,645.

In concluding my remarks on the accounts, I feel sure you will share the directors' opinion that the balance sheet reveals an exceedingly sound position. The current assets at £613,912 are all conservatively valued and exceed the current liabilities by £447,093. We have no book item for goodwill and our surplus and reserves amount to £193,474.

DROPPING THE RED RING ON CAR TYRES

During the period under review the factory had a difficult time in changing over to the newly designed and thoroughly proved super tyre, which was followed by a similar operation to our standard type. Notwithstanding the dislocations involved, production and sales have been kept up. To meet present-day requirements and in order not to clash with the many colour designs of private cars, it has been desirable to discontinue the well-known red ring which identified our products for several years, and although we retain this distinctive feature on our truck tyres, we feel, in the case of private cars, that distinction has only given way to dignity, and so far as durability and appearance go, our latest productions should further enhance the reputation of our goods.

As to the current year's prospects, I would be unwise to venture any forecast, because of the big fluctuations in price to which raw rubber is subject. I can tell you that the factory is fully occupied, but it is to be regretted that one important section of the trade is at present operating uneconomically, owing to very keen competition. We have had a considerable rise in the price of raw rubber, which is now fully 25 per cent. above the average price over 1935, and as stocks acquired lower down and worked off by manufacturers will be obliged to raise prices if reasonable profits are to be maintained.

The report and accounts were unanimously adopted, and payment of an ordinary dividend of 8 per cent. was sanctioned.

LABU (F.M.S.) RUBBER COMPANY, LIMITED

CONDITIONS ON LABU AND CHEVIOT

MR J. G. HAY'S VIEWS

The twenty-ninth annual general meeting of the Labu (F.M.S.) Rubber Company, Limited, was held, on the 30th ultimo, at the Rubber Growers' Association, 19 Fenchurch Street, London. Brigadier-General the Hon. Charles Lambton, D.S.O. (the chairman), said that the year covered by the accounts had been marked by intensification of rubber restriction, which had resulted in the exportable crop for 1935 falling by about 223,000 lbs. as compared with that for 1934. Coincidentally, the price of rubber had been weaker, and but for successful selling on the part of their agents, which had resulted in a large part of the crop being sold while the price was comparatively high, there would have been a sharp fall in profits. As it was, in spite of the reduced crop, profit for 1935 at £21,570 was only £2,189 below that for 1934. That result enabled them to recommend the repetition of the dividend of 10 per cent., the amount required being more than covered by the year's earnings.

One result of lower crops in Malaya generally was that the supply of labour, which had presented an acute problem for several years previously, had become easier, and, coupled with the steps taken by the Government to facilitate recruitment of Tamils from India, there was now sufficient for all purposes at fair rates of pay.
