Finally, Mr Keynes would expand the volume of deposits to supply any demand from the public for liquid balances. We have given our reasons for believing that this demand, on Mr Keynes' definitions, might be very large. What if there is then a change in the public's proportionate demand for active and idle balances (which is very likely to happen at the height of a boom)? Mr Keynes says that "the extra idle balances" should be "subsequently withdrawn." But how? By calling in advances? Or by selling investments? And what is to happen to the boom, or the rate of interest, then?

We agree with Mr Keynes that, even with a Defence Loan, the rate of interest *could* be prevented from rising—but only, we fear, at the cost of generating a runaway inflation.—*Ed., Econ.*]

TO THE EDITOR OF THE ECONOMIST

SIR,—Reading *The Economist* is pretty much like listening to Demosthenes' orations to me—it is Greek. Where and what is this boom of which you pundits are writing and speaking?

It seems to me that bankers' investments, overdrafts and credits are as speculative as that of private persons who (if they can) borrow to speculate on the Stock Exchange. As a small shopkeeper, I have never found banks to be the slightest use to me, except as a kind of "safe deposit," in which "current account" must exceed the value of the cheques that I draw. Any "savings" that I make go into "Old Consols," and the *cheaper* they are the better for me. I have bought them as low as 48; now they cost 81½. Banking business is too much entangled with a so-called money market. Consequently, the speeches of bank chairmen have no significance for the small trader.

Further, what you call a "slump" is a harvest time for both Woolworth's and myself.

Then, too, note the inequity of banking practice: my *surplus* current account is loaned to "Trusts," owning large numbers of retail shops, the shares in whose subsidiary concerns are accepted by banks at the Stock Exchange current price as collateral, whilst the goodwill of my business is, for that purpose, nugatory.

This system by which my competitors are financed at my expense will eventually throttle us; and yet Mr J. M. Keynes designates it "sound finance."

This rigmarole of "Day to day" money "Overnight" money, "Fixtures" (weekly money), "Floaters" (lodged by bill brokers), Treasury Bill tenders, and what not, all wants sweeping away. They were unknown to Dick Whittington, are unnecessary to traders, and an impediment to progress. Banks and finance should be *nationally* controlled.

Yours faithfully,

A DISGUSTED TRADER.

The Soviet Trials

TO THE EDITOR OF THE ECONOMIST

SIR,—With reference to your article on the Soviet trials, it is, I agree, easy to be mystified if one has only read the accounts which have appeared in the British press, most of which give a distorted impression of what took place.

I was able to be present at the whole of the proceedings, and I have a knowledge of the Russian language. It seems to me that your article is based in some respects on incorrect information.

Yours, etc.,

DUDLEY COLLARD.

First, it is not true that the seventeen defendants were all "Old Guard Bolsheviks." Some of them took no part in politics; some were common criminals, and of the leaders who did play an active role in 1917, most, if not all, were, I was told, frequently in opposition to Lenin. On the other hand, such companions of Lenin as Voroshilov, Ordjonikidze, Molotov and Kalinin occupy prominent positions in the present Soviet Government. It cannot therefore be said that Stalin is "the only Primitive Leninist left."

Secondly, I do not agree that the prisoners displayed "blitheness, jauntiness, almost gaiety." I observed them closely, and their attitudes varied. All seemed to appreciate the gravity of the charges; some made an attempt to defend their political opinions. Stroilov appeared genuinely penitent; Radek posed and grinned at the foreign press correspondents he knew; Sokolnikov was quiet and grave; Boguslavsky indignant at hearing for the first time what his leaders had concealed from him; Shestov proud of his exploits, and so on. There was no air of gaiety about any of the proceedings.

As to the confessions, I believe, after listening to the detailed examination of the accused for five long days, and observing their demeanour as carefully as I could, that they pleaded guilty quite voluntarily to crimes they really had committed. That they were acting parts is out of the question. Why they confessed is another question. It may be, as some of them declared, that the success of industrialisation and collectivisation led them, on reflection in prison, to realise that their policy had been wrong. In any case, no one who was present at the trial could possibly believe that their confessions had been extorted.

Thirdly, Sokolnikov was Assistant Commissar for Foreign Affairs, not Commissar of Heavy Industry, a post occupied by Ordjonikidze. You must be referring to Piatakov, who was Ordjonikidze's assistant. I do not understand why you think it odd that the accused accomplished so little. One would imagine that it is not easy to organise large-scale acts of sabotage undetected. Most English papers make an opposite criticism, namely, that too much was admitted, and that hundreds of train wrecks, for example, could not have escaped detection.

I do not desire to comment on the political aspects of the trial save to say that I think it is important for British opinion to be correctly informed on the real nature of these Soviet trials, if only to realise what methods are being adopted by Germany and Japan in their preparation for war against the Soviet Union.

6 Pump Court,
Temple, E.C.4.

Yours, etc.,
DUDLEY COLLARD.

Books and Publications

Women who Work

HERE are two books crammed with facts about working women, the one* dealing, in the main, with the working woman of Russia and the other† with the working woman of England. They are both very full of figures, the Russian one, indeed, almost so much as to be unreadable; for there is a limit to the amount of arithmetic which the ordinary human mind can swallow at a gulp, and Serebrennikov tends to exceed it. Some of the percentages of women working at various dates, and in various parts of the Union, to cite an example, ought to be taken out of the text and put in tabular appendices at the end.

Nevertheless, paradoxical as it may seem, what one feels, having read both books, is that one would like not fewer facts but more. For the contrast between the two pictures given is so strong that one would like them both to be expanded into really comprehensive social studies which would give a complete picture.

This is particularly true of Miss Joan Beauchamp's vigorous and telling little book. It is very well written, and it badly needed writing; but it is only 100 pages long, and that length, in a field of social research which

both in factory and in clerical work has increased in the past ten to fifteen years; though a journey along the Great West Road or Western Avenue at the hour of factory closing would go far to show them. This labour is, for the most part, young, dexterous, very low paid, and violently speeded-up wherever speeding-up is possible. It is dismissed, or dismisses itself, on marriage, and has in any event little chance of getting back afterwards into the factories, because its dexterity is gone; and, except in co-operative employment, in teaching, and to a lesser degree in the Civil Service, it is scarcely organised at all. Moreover, though the girls and women so employed are not "engaged in domestic work," a number of them do in fact perform a good many domestic duties after a day's work so long as to be severely commented upon in the latest report of the Chief Inspector of Factories and Workshops. Even leaving on one side the problem of the housekeeping women, to which Miss Beauchamp devotes a short but interesting chapter, this little book raises questions which demand a good deal of very careful thought.

Serebrennikov's book also shows an increase in women industrial workers; and it is extremely interesting to observe that, whereas the entry of women into Soviet industry upon equal terms dates from the Revolution and was, of course, a cardinal principle of Lenin and the pioneers, their actual influx is more the result of the Five-Year Plan. In table after table we see the great increase after 1928 or after 1931, and are led to the conclusion that the industrial employment of women is not a whim of the Revolution, but a phenomenon that has come to stay.

Its social aspect is naturally very different from that of the employment of women in Great Britain. There are two major differences: first, equality of pay; and, secondly, the State, aiming to use its women both for industrial and agricultural production and the production of citizens, is logically bound to make it easier to combine child-bearing and child-rearing with productive employment. Serebrennikov, like all Soviet writers, is an incurable advertiser, and almost stuns his readers with tables and anecdotes all aimed to show how immense is the provision of crèches, kindergartens, etc., in the Soviet Union, how great the productivity and emancipation of its women, and how enormous their appetite for training and education. Nevertheless, when all allowances are made for exaggeration, it remains a remarkable field for the student of sociology.

Shorter Notices

"World Trade and its Future." By Sir Arthur Salter. Humphrey Milford (London). 101 Pages. 7s. 6d.

The five very interesting lectures, here reprinted, were delivered at Swarthmore College in the spring of 1936. After discussing the pre-war position and the economic changes affecting world trade that took place after the war and particularly during the recent depression, Sir Arthur Salter examines the principal factors in the present situation and outlines a policy for the future. He thinks that the coming changes in world population are going to inflict all sorts of extremely difficult transfer problems on national and international economic systems. He also believes that the monetary problem will be increasingly important; and he assumes that "the restoration of an effective gold standard over the greater part of the world will depend on the central banks and governments being able in co-operation so to manage it as to secure a reasonable stability in the general level of prices and being able to eliminate the dislocations caused by immense mass movements of liquid capital, or changes of investment." In the transitional period Sir Arthur does not look for the re-imposition of rigid gold parities. Instead, he hopes for a provisional stabilisation in which each

country will "contribute to a joint equalisation fund, or, alternatively, undertake to use national funds in consultation to support this policy."

Sir Arthur Salter does not think that an actual frontal attack on trade barriers is likely to succeed. He consequently suggests that each country should first try to take a national rather than a sectional view of its own foreign trade problems; that bilateral efforts towards freer trade should then be undertaken; and that, finally, negotiations should be directed towards the objective of a low tariff bloc. This kind of strategy, Sir Arthur recognises, would involve the modification of the most-favoured-nation clause. As a whole these lectures present perhaps the most realistic programme yet devised for the freeing of trade in the circumstances of to-day.

"Hitler and the Empire." By James Turner, with a foreword by Air Commodore L. E. O. Charlton. Lawrence & Wishart. 40 pages. 6d.

This is an excellent and timely little book. The economic "proofs" of the German claim for special treatment in the distribution of colonies and raw materials are shown to be unsound. This conclusion is reached by a simple statement of the facts, as set out in the German official statistics. These figures show that there is no shortage of raw materials in the Third Reich; that German supplies of raw materials from all sources were higher in 1935-36 than in 1929; and that the civil population of Germany consumes a smaller amount of raw materials than in 1929, only because of the enormous increase in the amount of raw materials used for military purposes. Rearmament, and not shortage, is the real ground of the German plea.

Mr Turner shows how the restrictions imposed by the German Government upon foreign exchange are used to compel creditors to buy German goods; how the conquest of foreign markets has been given a political significance in the advancement of Germany's "Drang nach Osten"; and how British trade and shipbuilding have been adversely affected by this exploitation of a debtor position.

This book should enable students of politics to temper mercy and sympathy with some facts.

MONEY AND BANKING

The French Credit

THE agreement for a loan by British banks to the French Government, to which we referred in *The Economist* last week, has now been concluded. The loan is for £40 millions at 3½ per cent., and it will run for a limit of ten months. The banks will thus have been repaid in time for any window-dressing operations in which they may wish to indulge at the end of this year. The first instalment of £8 millions was paid over on February 2nd, and similar sums will follow on February 5th, 12th, 19th and 26th. The proceeds are being taken officially by the French Railways, but the latter will pay over the money to the Treasury, which will use it for whatever purposes it sees fit. The security is of much the same character as that for last year's loan, with one important difference which strengthens the lenders' position. So long as the loan is running, the Bank of France has agreed to maintain an equal amount either of gold or of sterling balances. There is an additional clause, however, which stipulates that, should the French Treasury be unable to pay back the whole of the credit in sterling when it falls due, it shall buy with francs the necessary amount of this ear-marked gold or sterling balance to make up the total. This makes the security virtually water-tight.

In view of these very favourable terms, the fixing of the rate of interest at 3½ per cent. against 3 per cent. last year, and the improved security behind the loan, the fact that only £40 millions and not £50 millions have been placed has caused considerable comment. We are able to state, however, that at no time was £50 millions, as distinct from £40 millions, regarded necessarily as a fixed objective (last year's total was actually £40 millions); and that, had the French Government been willing slightly to postpone the announcement of the loan, there would have been little or no difficulty in obtaining another £10 millions. It is clear that, on commercial grounds at least, the terms of the loan are irreproachable. A number of the British subscribers, indeed, have been able to earn an extra profit through the sub-participation of a number of French banks which were precluded from direct participation by the terms of the agreement.

On broader grounds, however, many observers will regret that France should find herself under the necessity of borrowing abroad once again. Were it not for the policy of taking the profit out of repatriation of capital, and for the general lack of confidence in the immediate financial future, a dozen such loans could easily have been raised in Paris. Granted, however, that existing conditions make recourse to financial aid from abroad inevitable, the fact remains that no outside loan can have any permanent effect on the fundamental weakness of the French financial structure. The £40 millions is merely a stop-gap. It may allow the Government time to consolidate the advances they have made in other spheres, which should ultimately have a favourable effect on the financial situation. Everywhere but in the realm of finance there is, in fact, an atmosphere of increased optimism in France to-day. Industry, though by no means booming, is recovering rapidly, in spite of the heavy increases in manufacturing costs consequent on higher wages, paid holidays, and the 40-hour week. These, by increasing purchasing power, will in the long run help towards recovery. Foreign trade is also reviving, and now that the wave of strikes has subsided and the international tension has eased, the prestige of M. Blum's Government stands higher than ever. A proportionate improvement in the

financial situation would have far more effect than any number of foreign loans.

The disappointing financial results of the devaluation are, at least in part, due to the confiscation of profits realised by the repatriation of capital. These measures embody a political principle of which many may approve on moral grounds, but its practical effect has been unfortunate. Moreover, as Dr Colijn remarked when refusing to apply it to his own case, its justice is equivocal; for when it is impossible to penalise all profiteers, the penalising of a few becomes an injustice. The example given by the return of funds after devaluation to Holland and Switzerland should be an encouragement to M. Vincent Auriol to retreat as quickly as possible from an untenable position. His recent offer of special terms for gold subscriptions to an internal bond issue was a step in the right direction, but it did not go far enough, for it failed to offer any decisive inducement to repatriate funds. The time is more than ripe for another step.

A more immediate reason for the recent rapid outflow of capital from France has been the rumours that a new depreciation of the franc to its lower limit of about Frs. 112 is imminent. The report has been strenuously denied by the French Government, but it is likely to persist so long as the margin remains in hand. It has even been suggested that such a depreciation was one of the conditions of the British credit, but there is no reason for believing that this report is true. There are, however, technical reasons for departing from the rigid rate of Frs. 105.15 at which the franc has been pegged. A "peg," if there is complete confidence in its permanence, kills speculation. But if not it enables speculators to bear the currency with an easy mind, certain of the rate at which they could cover their commitments in case of need.

Fortunately there are now signs that this policy is being abandoned. Last Monday, the first full day after the granting of the credit, the peg was removed from time to time. Official intervention was needed on a substantial scale on Tuesday, to prevent the rate from running away, but the change in policy has certainly shaken the bear speculators, who will in future act with more caution. M. Cariguel, who is in charge of the French Control, will now be able to exercise his skill in manipulating bear squeezes, if he wishes, by letting the rate run down a little and bringing it back overnight. There is, indeed, no reason why the rate should not be allowed to fluctuate, say, by as much as two francs each way; for freedom of movement was one of the objectives of devaluation. The pegged franc was in fact more rigid than the old franc, since under the gold standard movements of a few centimes at least were possible, within the gold import and export points. It is clear that unpegging cannot in itself be expected to restore confidence. But it is a policy long advised in London, which will certainly alleviate immediate pressure on the franc.

As for a further depreciation of the franc, we remain unconvinced of its long-term necessity. French prices, it is true, have risen rapidly during the last four months, and the franc is probably overvalued. But prices in other countries, particularly in Great Britain and the United States, are also rising. The disequilibrium may therefore be reduced in the near future—provided, of course, that the French Government can prevent their own prices from rising still further. The majority of the increases are due to the incidence of the recent social legislation. In many cases, however, prices were arbitrarily marked up soon after the legislation came into

CONTEMPORARY RUSSIA

"Of value to all serious students of Soviet affairs."

The Times

No. 2 just out: "The Soviet Budget," "Russian Industrial Production," and other articles.

force, and before the full effect of higher costs had been experienced. If the Government can use its influence to persuade manufacturers to discontinue this practice, and even modify some of the prices they have already fixed, a further rise may be averted. Prices may also be kept down by a relaxation of tariffs and import quotas, if the protests of the vested interests can be ignored. For example, the price of wheat in France has been maintained at an unnaturally high level to win the support of the farmer. M. Blum may not feel himself politically strong enough to make a break in this policy.

It is clear, in short, that there is no inherent weakness in the French economy except in the sphere of finance; and here it is the Government's plain and urgent duty to restore confidence. If the breathing space allowed them by the £40 millions British credit is turned to good advantage, it will have justified itself. More than that, at present, cannot be said for it.

Financial Notes

Bank Advances.—One of the minor recommendations of the Macmillan Committee, which reported five-and-a-half years ago, was that the London clearing banks should publish a regular analysis of their advances in accordance with a classification which the Committee itself had drawn up. Lord Wardington announced last week, in his speech at the annual general meeting of Lloyds Bank, that the clearing banks had decided to accept this recommendation. He proceeded to give the figures for "the nearest available date to October 31st last." The decision is none the less welcome for the long delay in arriving at it. The first year's figures, which are given in the following table, can be compared only with the Macmillan Committee's figures, which refer to "dates between October, 1929, and March, 1930." The interval of time is so long that comparison is of limited value, but it is of interest to set out the different items in order of their relative declines:—

CLEARING BANK ADVANCES, 1929-36

	1929-30	1936	Change
	£	£	%
Amusements, clubs, churches, charities, etc.	26,502,720	40,459,790	+ 53
Building trades	47,824,549	61,547,687	+ 29
Other advances	218,402,248	258,542,153	+ 18
Local Government authorities and public utility cos. (ex. railways)	52,384,672	50,397,983	- 4
Shipping and transport (inc. railways)	25,176,565	23,167,305	- 8
Total advances	987,711,344	869,453,122	- 12
Miscellaneous trades	146,496,288	67,367,142	- 53
Retail trades		60,060,190	- 16
Agriculture and Fishing	68,630,471	57,657,404	- 16
Financial (inc. banks and building societies)	142,547,506	109,554,025	- 23
Heavy industries (iron, steel, engineering and shipbuilding)	62,962,675	40,681,469	- 35
Mining and quarry (inc. coal)	30,003,440	18,091,024	- 40
Leather, rubber and chemicals... ..	21,969,950	12,593,550	- 43
Textiles (cotton, wool, silk, linen, jute)	81,632,371	39,929,997	- 51
Food, drink and tobacco	63,177,889	29,403,403	- 53

It will be noticed that the clearing banks have subdivided the cumbrous item of "Miscellaneous and retail trades."

The experience shown by these figures is curiously mixed, and makes it very difficult to generalise about the course of bank advances. The items which show the largest declines are, in the main, the very depressed industries which have been able in the last year or two to pay off some of their heavy accumulations of debt. But the biggest decline of all is shown by the highly prosperous food, drink and tobacco industry, and is obviously due to the much greater possibility now open

to these trades of financing themselves out of their own liquid resources accumulated out of profits. On the other hand, the rise in the standard of living is clearly reflected in some of the items which show large increases. Chief of these is, of course, the omnibus item "Amusements, clubs, churches, charities, etc." But the organisation of the building trades is also apparently such that greater activity requires larger borrowings from the banks.

Big Five's Experience.—It may be of interest to compare the figures of advances given in the preceding note with the proportionate changes in approximately the same period (December, 1929, to December, 1936) of the advances of each of the Big Five banks:—

	December 31, 1929	December 31, 1936	Change
	£	£	%
Barclays	172,926,488	178,859,150	+ 3
Lloyds	191,010,596	149,054,263*	-22
Midland	210,374,230	189,265,053†	-10
National Provincial ...	156,678,357	122,077,391	-22
Westminster	146,756,553	125,249,310	-15
Total Big Five ...	877,746,224	764,505,167	-13

* After deducting provision for bad and doubtful accounts.
† After provision for doubtful debts and contingencies.

Those who are familiar with the geographical distribution of the business of individual banks may be able to trace correlations, in some cases, between the figures in the two tables.

A Banker on Cotton Exports.—In a leading article last week we drew attention to the warning included in several of the bankers' speeches that industrialists should not rely entirely on the home market. Mr Dewhurst, in his address to the meeting of Williams Deacon's Bank, made it clear that the revival in the cotton industry is due very largely to internal demand, as the export trade, though improved as regards the Dominions and Colonies owing to reduced import duties, has suffered as regards India, which is the largest customer. Now that India has denounced the Ottawa Agreement, it is obviously of extreme importance that a mutually beneficial trade agreement should be rapidly concluded. As the United Kingdom takes more than twice as much of India's exports as Japan, which is the chief competitor in cotton, this should not be impossible. It is imperative that the cotton trade, which is the largest consumer of raw materials in the country, should be assured of its export demand in the event of a recession at home.

U.S. Excess Reserves.—The American Federal Reserve Board has ordered a further increase in the minimum reserves to be kept by Member Banks of the Federal Reserve system. The increase is to be of one-third of the present minimum percentages, bringing the required reserves up to 26 per cent. of demand deposits for banks in New York City and Chicago, 20 per cent. for banks in other so-called reserve cities and 14 per cent. elsewhere; reserves of 6 per cent. must be kept against time deposits by all banks. This action has been expected for many months. It will be remembered that a first increase of one-half of the original reserve percentages was made on August 15th last. Immediately before that change took place, required reserves were \$2,946 millions and reserves in excess of requirements reduced excess reserves to \$1,810 millions. But by January 28, 1937, they had again increased to \$2,150 millions. Since it is the avowed and determined intention of the present Administration to do everything in its power to prevent boom conditions from developing, the further increase has clearly been impending. If it were

applied to the figures of January 28th, it would absorb about \$1,540 millions of the excess reserves, leaving \$610 millions remaining. This second increase exhausts the powers of the Federal Reserve Board, and if it is desired to raise reserve requirements still further new legislation will be required. It is doubtful, however, whether any further action will be needed. The increase in excess reserves during the past three years has been due to the enormous imports of gold, and the recent announcement of measures to "sterilise" future gold imports should prevent any further swelling of reserves for this reason. The excess reserves now remaining amount to only about 10 per cent. of the total of Member Bank reserves, and provided that further accretions can be avoided they do not provide the basis for more than a moderate further expansion of credit.

The Brokerage Controversy.—In the light of the recent controversy concerning foreign exchange brokers and their charges, the following figures are of interest as showing exactly why some foreign exchange business is now being done in Paris instead of in London. It must be borne in mind that the Paris "brokers" in fact act as principals and derive their income from the spread between their buying and selling quotations. For some time past the Paris brokers have been willing to buy at 105.15½ and sell at 105.15 (this latter being the Bank of France's buying rate), working on a margin of only ½ centime. This is equivalent to 10 shillings per 1,000,000 francs, and certainly compares very favourably with the 30 shillings, divided between buyer and seller, which the London brokers make on a purchase and re-sale of francs. But if only brokerage were in question it would probably pay very few buyers or sellers to put through a telephone call to Paris. Unfortunately, the buying and selling margin of the banks also has to be taken into consideration. At present the banks are buyers at 105½ and sellers at 105¾. Converting these rates into decimals and allowing for brokerage, this means that a buyer in London receives only 105.11½ to the £ (against 105.15 in Paris), while a seller must hand over 105.16½ (as compared with 105.15½ in Paris). Thus the Paris quotations favour buyers to the extent of 3½ points and sellers to the extent of ½ point, equivalent to £3 5s. and 17s. 6d. respectively on a million francs. Since a single-period telephone call to Paris costs only 6s., it would be a long-winded dealer, indeed, who could not save money by putting through a transaction of any magnitude in the Paris market instead of in our own.

Swiss Bank Corporation.—The figures of the Swiss Bank Corporation for December 31, 1936, show that last September's devaluation of about 30 per cent. has, financially, been a complete success. The feeling of confidence that followed devaluation resulted in a reflux of funds both from abroad and from private hoards, and money has been plentiful in the Swiss capital market. The total figures of the balance sheet of the Swiss Bank Corporation have made a remarkable advance over 1935, from Frs. 1,044,045,192 to Frs. 1,389,041,967. By far the biggest expansion on the liabilities side has been in deposit and current accounts, and more particularly in the latter, which have risen from Frs. 343,258,000 to Frs. 653,983,000, an increase of Frs. 310,725,000. It is natural that so rapid a reflux should find the bank unable to employ more than a small proportion of it profitably, and, in fact, it has gone very largely to swell cash assets. Cash has increased by Frs. 202,919,000 and funds with bankers at sight by Frs. 59,426,000. Debtors and other advances have actually decreased during the year, and of the working items only bills receivable have increased. However, this has not affected profits, which are Frs. 8,242,828, against Frs. 7,116,142 in 1935. This has enabled the dividend to be raised from 4½ to 5 per cent., and the amount carried forward is increased from Frs. 1,056,085 to Frs. 1,298,913. Now that the effects of devaluation

have been absorbed, and with a successful winter sporting season as yet unfinished, a feeling of optimism would appear to be justified.

The Money Market.—Conditions have been very quiet in the money market in spite of several large operations that have taken place during the week. The payment on Tuesday of the first instalment of £8 millions of the French Credit seemed to have little effect, except that money subsequently became a little more usable. One or two of the banks have even been calling. Rates, however, remain unchanged.

	Jan. 14, 1937	Jan. 21, 1937	Jan. 28, 1937	Feb. 4, 1937
	%	%	%	%
Bank rate	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short loan rate:—				
Clearing banks	½-1*	½-1*	½-1*	½-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	½-1	½-1	½-1	½-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The clearing banks have been buying maturities up to the end of April at their minimum rate of ½, but the demand has not been great. The market was a little more successful at last week's tender, securing 30 per cent. against 24 per cent. the week before.

The Foreign Exchanges.—Apart from the franc, the position of which we discuss in full above, there have not been any movements of interest in the foreign exchange market. Swiss francs were bid up to Frs. 21.38 at one time, but the rate slipped back again to Frs. 21.41. The premium of 2½ centimes for three months is only a measure of confidence in the exchange, as there is little or no forward business passing. Guilders remain firmly pegged to the dollar and vary accordingly, which is to say very little. The three months' forward premium of 1 cent is in effect equivalent to parity. The belga has shown a slight weakness, the rate going out to 29.06½ on one occasion before coming back to 29.03, but the three months' premium has remained at a minimum of 4 cents. There is, in fact a striking contrast between the weakness of the franc and the strength of the other currencies which were devalued last autumn, as shown in the premiums on the forward rates.

The Bank Return.—The most interesting feature of this week's bank return is the expansion of £5 millions in the note circulation, compared with £2.7 millions at the same time last year. This might suggest a recrudescence of French hoarding, but in fact there have been no signs of it. This expansion, then, may be taken as a measure of returning prosperity and the increased domestic demand for currency.

Other changes are a slight drop of £2.3 millions in bankers' deposits and an increase of £3.8 millions in Government securities.

THE STOCK EXCHANGE

American Company Leverage

THE English language owes many enrichments to American usage. In the realm of company finance, however, there is less philological free trade, and the investor must needs be bi-lingual. So, when we pursue our study of company capitalisation (inaugurated in *The Economist* last week) across the Atlantic, "gearing" undergoes a sea-change and becomes "leverage." Both terms describe the relationship between fixed-interest and variable dividend capital; and both confront the investor with the same problem. How far can changes in industrial earning power be distorted by changing the relative proportions of these two forms of capital?

In our first article, the effects of gearing were examined from two aspects: first, the proportion of fixed to variable dividend capital; and, secondly, proportionate changes between total profits and ordinary share earnings during recovery. For American concerns, only the second method is available, owing to the ubiquity of the no-par share. The disadvantage, however, is not serious, for the earnings aspect of leverage, after all, is crucial, and the existence of the no-par share throws it into high relief.

It would be informative to compare the experience of the eight British companies whose results were analysed last week with their exact American counterparts, but unfortunately this is hardly practicable. Lever Brothers may, it is true, be ranked with Procter and Gamble, and Imperial Chemical Industries with Du Pont. But there is no precise American parallel for Allied Newspapers or even J. and P. Coats. In many cases, again, the recovery of corporation earnings is too recent to be serviceable for comparative purposes. The steel industry is a case in point. We have been compelled, therefore, to draw our American examples from a similar range of consumption and constructional trades, rather than to seek exact parallelism.

In measuring the change in the profits and common earnings of the average American corporation, from the

trough of depression to the latest year of recovery, the analyst is confronted by a mathematical dilemma. The 1932 profits depression brought deficits for the common capital of the majority of concerns, and, indeed, many were "in the red" before meeting their prior charges. Outside the higher mathematics there is no way of measuring the subsequent percentage change in these cases. Accordingly, the information given in last week's table has been extended to include not merely the worst and the latest years, but also a "first recovery" year, in which positive earnings were again available for both prior charges and common stocks. Consequently, the measure of improvement, shown in the accompanying table, is in several cases based on the second rather than the first phase of recovery.

The prevalence of deficits in depression shows that leverage is an important factor in the choice of recovery stocks, and an essential criterion for selling policy. When earnings are falling, the investor must know what reduction in equity earnings would follow from a given percentage fall in total profits. The different speeds at which deficits appear or are replaced by positive earnings are a function of leverage. But our figures also suggest that American undertakings as a whole are subject to a wider degree of fluctuation in total profits than British industry. For a "young" community which includes vast agricultural areas, this phenomenon is to be expected.

In the present series of articles we are concerned not with the amplitude of fluctuations in total profits between bad and good times, but with the effect on equity earnings of a given change in total earnings. It may be that the total profits of American companies are liable to move much more widely, over periods of years, than those of British companies. But to justify the suggestion that the American companies have the more highly geared capitalisation it is necessary to show that a given percentage rise in their total profits has produced a greater percentage rise in their equity earnings than the

same percentage rise would have produced in the equity earnings of their British counterparts. Now, reference to our table will show that six out of the eight American concerns have recorded an advance of more than 75 per cent. in total profits during the recovery period. In several instances, indeed (for reasons already discussed), this measurement covers only part of the actual progress. But two of these companies have not yet doubled their common stock earnings and a third shows slightly more than a 100 per cent. increase. In other words, their equity earnings have increased only a little faster than their total earnings. It is the relationship between the percentage rises in the two categories of earnings, shown in the last two lines of our table, which is relevant to the question of gearing.

Even this method of comparison, however, is open to mathematical objection, for the "percentage rise" figures are avowedly based on the results of a period when earnings were low; and a moderate absolute increase in subsequent earnings may be given a wholly exaggerated significance when it is expressed as a percentage of a small initial figure. Thus, the gearing of Johns-Manville appears decidedly high at first sight, because a rise of 189 per cent. in total earnings during the recovery period has produced a rise of no less than 630 per cent. in equity earnings. But the company's equity earnings in 1934, the base year, were microscopic, and the comparison gives no idea of the actual gearing to-day.

If we put ourselves in the shoes of an investor who is concerned with the question of buying or selling a particular share to-day, we may ask what percentage change in *present* equity earnings would be caused by a 1 per cent. rise or fall in *present* total earnings. Measured in this way, the gearing of the majority of the American companies in our list does not look particularly high. A one per cent. rise in the total earnings of General Motors will produce an increase of only 1.06 per cent. in equity earnings. An increase of similar proportion will secure an equity rise of 1.07 per cent. for Procter and Gamble, 1.12 per cent. for Du Pont, 1.18 per cent. for Liggett and Myers, 1.32 per cent. for Johns-Manville and 1.72 per cent. for American Smelting. If the same test is applied to the eight British companies shown in last week's table it will be found that the equity increases or decreases for every 1 per cent. rise or fall in total earnings exceed 1.3 per cent. in six out of eight instances, exceed 1.5 per cent. in four instances, and exceed 2 per cent. in three instances. The conclusion would seem to be that, at the present time and the present level of profits, the capitalisation of our selection of representative British companies is more highly geared than that of the American companies in our list.

But this statement is subject to an important qualification. A parent company may have no prior charges in issue, but its income may be derived from a chain of subsidiaries and sub-subsidiaries, each of which has prior charges to meet before passing the residual profits to the next in line of succession. In these circumstances, formidable leverage is inevitable. Suppose, for example, that an operating company, earning 7 per cent. over-all, has 25 per cent. of its capital in equity form. If four successive holding companies, each having half their capital in prior charges and half in equity stock, divide these operating earnings in turn, the ultimate rate of return on the common stock of a "top-tier" holding company with small equity capital will be fantastically distorted. If the assumed earnings of the operating company are reduced from 7 per cent. to 5 per cent. the earnings stability of the whole group will be completely shattered.

Leverage, therefore, is not a matter which can be judged on the balance sheet of one single company alone. It determines not merely the method of distributing earnings, but also, for holding companies, their actual amount. But whether leverage is accomplished within the agency of one company, or pushed to extreme limits through group finance, its nature and its consequences remain the same. We propose to explore, in a final article, its practical effects upon investment policy.

FOR
SECURITY:
STABILITY:
STRENGTH:

This popular unit trust spreads your investment over 23 first-class British companies, all sound dividend payers and notable for their very strong financial and trading positions. The yield, from cash dividends only, was about 5% gross in the past year. Lloyds Bank Limited are Custodian Trustees of the underlying securities.

OVER 45,000 INVESTORS HAVE INVESTED MORE THAN £11,000,000 IN BRITISH INDUSTRY THROUGH THE MEDIUM OF THE "15 MOORGATE" GROUP OF UNIT TRUSTS.

Investment Notes

Course of Share Values.—January was a month on which few British investors will look back with pleasure. Although Wall Street (as the annexed chart shows) continued its upward movement, the trend of prices in

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS

(1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

London was reactionary. In the market for industrial and commodity shares, the recession was carried only to moderate lengths, and left values comparatively near the highest points reached in the present cycle. The

effects of a change in sentiment from ebullient confidence to half-incredulous doubt were more clearly visible in the market for gilt-edged securities and fixed interest stocks generally, though initial selling was somewhat overdone, and a limited recovery occurred this week. The market, in fact, has been concerned over the possible presence of a spectre at the Feast of Prosperity. The word boom has been inseparably associated with its ugly sister, slump. Though the market would like one without the other, it is convinced that, rather than have both, it would prefer neither. But can a boom be avoided now? Mr Keynes, in a further letter to *The Economist*, printed on page 302 of this issue, admits that the protestations of bank chairmen and other speakers and writers, that there must be no boom and no rise in interest rates, have had the opposite effect from that intended. The bankers, in fact, have made the market remember all that it wished to forget. Nor can it be said that confidence has, as yet, been restored. If the Government agrees that action designed to maintain the level of security values is most necessary, it must be prepared to stretch out a strong right arm, and that speedily. Now, in the market's view, is the time for the Party to come to the aid of all good men.

"Up and Up" on Wall Street.—Prices have been rising steadily on Wall Street since the middle of last week, for a number of substantial reasons. Steel shares have forged ahead on the good fourth quarter earnings now being reported, and because neither floods nor strikes seem to be able to affect output. *Iron Age* estimates steel mill activity this week at 79 per cent. of capacity, compared with 75 per cent. last week; and there are suggestions of a further increase in finished steel prices at the end of the current quarter. The decision to raise reserve requirements to the full extent permitted by law to the Federal Reserve Board acted as further encouragement to the market; for the market doubted of there being any significant rise in interest and money rates. This week there were renewed hopes of a settlement of the General Motors strike when Mr Knudsen agreed, on pressure from the President, to take up the negotiations broken off with Miss Perkins. Rail securities are overshadowed at the moment by the application of the unions for a 20 per cent. wage increase, and by the controversy between the Treasury and the Interstate Commerce Commission regarding the imposition of the undistributed profits tax upon the railroads, which the Commission strongly opposes. Utility issues were not adversely affected by the decision of the Federal Court upholding the constitutionality of the registration part of the Public Utility Act. In general, the most encouraging feature of recent Wall Street's strength is that it has developed despite the many factors which might in the short run have been made an excuse for weakness. Wall Street is not in that sort of mind.

Provident Societies and the Investor.—"Prospectus of *Stag Pool Loan*. Loan capital now offered for subscription, £50,000. Loan capital guaranteed against loss. Special Trust Fund created. Monies invested may be withdrawn at ten days' notice. Objects of the *Stag Pool Loan*: to make application for shares in high quality new issues—and turn same to profitable account in due course. How large profits are made: the profit arising from one operation of this type is not large, but it is made very quickly, and it will be multiplied within a short period by the regular repetition of the same operation. Estimated profits, 25 per cent. minimum." The society issuing the "prospectus" from which the above extracts have been culled is registered under the Industrial and Provident Societies Acts, 1893 to 1928. It is bound by none of the rules which apply to prospectuses issued under the Companies Act of 1929, or to statements for public information advertised under the rules of the London Stock Exchange. There is no public market in its capital. . . . An Expert Committee was set up last year by the Advertising Associa-

tion under the chairmanship of Sir Josiah Stamp. This committee has recommended, in a report published this week, that when societies registered in this way undertake public advertising, and seek to obtain money from the public generally, they should be subject to restrictions, at least as satisfactory as those imposed upon concerns utilising the Companies Act. As the report also finds that societies registered under the Industrial and Provident Societies Acts were intended for the small investor, there will be the widest possible agreement with the Committee's view. It may be hoped that early action will be forthcoming in the proper quarter.

Chinese Customs in 1936.—The full returns of Chinese Customs revenue in 1936, which are now available, show an increase of revenue to \$324,583,291, against the 1935 total of \$315,519,712. These totals include import and export duties, inter-port duty and surtax, tonnage dues, flood relief surtax and revenue surtax. The improvement during the past year is a reflection rather of the depreciation of the Chinese dollar than of expanding trade, for it is estimated that imports expressed in gold Customs units would show a decrease of perhaps 20 per cent. during 1936, against a slight increase in exports. The import duty yields more than ten times the export duty, so that an improvement in the balance of trade at the cost of falling imports, in Customs values, is not an unmixed blessing for the Chinese National Government. Smuggling continues unabated in the North; receipts from Tientsin, in Chinese dollars, fell by 13 per cent. during 1936, and there is no sign of an easing in the situation, particularly after recent developments in Japan. But while the Chinese Government may face a more difficult position in the future, the foreign holder of Customs loans need have no immediate concern. The service of foreign loans and Boxer Indemnities, expressed in Chinese dollars, was higher in 1936 owing to the depreciation of the dollar, but at last year's figure of \$76.7 millions it was covered four times. After providing \$6.5 millions for American Loans, and \$129.1 millions for the internal debt, a surplus of \$112 millions was available for the National Government revenues. The internal loan charges were greatly reduced in 1936 through the debt consolidation. In a negative sense, these results are satisfactory.

Foreign Bond Movements.—A further rise in "commodity bonds" is recorded by the "Municipal and General" index of foreign bond movements. South American provincial issues rose by no less than 20 per cent. during the past month, and are now over 50 per cent. higher than a year ago. The market's main emphasis is still upon defaulted bonds, and as a result of their further rise all the component series now stand above the base level of January-June, 1934:—

The relatively small advance in Far Eastern issues masks a vigorous rise in Chinese loans, coupled with a setback in Japanese issues owing to political uncertainty.

Short Particulars.

BOOTH'S DISTILLERIES LIMITED

Authorised and issued. SHARE CAPITAL:		Paid up.

LOAN CAPITAL:		Outstanding.
£600,000 in 5 per Cent. First Debenture Stock . .	£588,300	£588,300

Notice has been given to redeem this Stock and a conversion offer has been made to the holders.

The List of Cash Subscriptions will open and close on Wednesday, the 10th day of February, 1937, for an

ISSUE OF £1,000,000 FOUR AND ONE QUARTER PER CENT. FIRST DEBENTURE STOCK AT £105 PER CENT.

This Stock will be secured by a first specific charge upon the Freehold Distilleries and other real properties of the Company with a floating charge upon the remaining assets of the Company, including uncalled capital. Such charges will rank subject only to the charges securing the old Debenture Stock until paid off.

This Stock will be redeemable by the operation of a Cumulative Sinking Fund of 1% commencing in 1940, either by purchase on the market at or below 106%, or by drawings at 106%.

Subject to the requirements for conversion purposes of the holders of the existing 5% First Debenture Stock, all stockholders and customers of the Company applying on the special Buff forms provided will receive preferential consideration in allotment in the public issue.

The Prospectus will show that:—

- The Company, incorporated in 1897, whose business was originally founded in 1740, is the distiller of the world-famous **BOOTH'S MATURED DRY GIN** and carries on an important general wholesale wine and spirit trade, and owns (amongst others) the following brands and businesses:—
Wm. Sanderson & Son Limited, owners of "VAT 69" Whisky.
The Millburn Distillery, Inverness, owners of "MILLBURN HIGHLAND MALT WHISKY."
- The objects of the present issue are to replace the outstanding Debenture Stock by a Debenture Stock carrying a lower rate of interest and to provide additional working capital.
- Total assets (including net surplus proceeds of the present issue) amount to **£2,596,262** more than two and a-half times the nominal amount of the present issue.
- The net profits of the Company as shown by its published accounts for the three years ended 31st March, 1936, before charging income tax, Debenture interest and any sums set aside for redemption of Debenture Stock, but after deducting all working charges including Depreciation and Bank interest, have been as follows:—
For the year ended 31st March, 1934 **£100,655 12 9**
" " " " 1935 **108,782 4 6**
" " " " 1936 **156,375 5 11**

On the basis of the average net profits for the last three years the amount required to meet the annual interest on the new Debenture Stock now being issued, namely £42,500, is covered over two and a-half times, and over three and a-half times by the net profits for the last financial year.

It is estimated that the net profits for the year ending 31st March, 1937, on the above basis will not be less than £175,000.

Prospectuses and Application Forms are now available from:—

Company Notes

Some Manchester Investments.—We discuss the economic achievements and prospects of the Northern Metropolis in a special article on page 289 of this issue. It is no easier to define a "Manchester" share than to identify each ingredient of a Lancashire hot-pot. There are Manchester concerns known to investors in every county; there are others situated between Manchester and

Company and Share Denomination	Earned for Ordinary		Ordinary Dividend		Ord. Share Price		Yield (%)
	Previous Year	Latest Year	Previous Year	Latest Year			
Blackpool Tower (£1) ...	30.4	32.8	20	22½	125 0	£ 3 12 0	
District Bank ("A" shs. £5, £1 paid) ...	19.5	19.5	16½	16½	90 0	3 14 0	
Lancashire Dynamo and Crypto (£1) ...	6.8	15.5	5	10	67 6	2 19 3	
Lancashire Electric (£1) ...	7.5	8.1	7½	7½	38 0	3 19 6	
Manchester Ship Canal (£1) ...	1.9	1.8	1½	1½	8 6	4 2 0	
Ribble Motor Services (£1) ...	18.4	18.1	10	10	75 0	2 13 4	
Trafford Park Estates (£1) ...	5.8	6.6	6	7	32 6x	4 6 2	

Oldham whose shares are almost exclusively a matter of local interest. Among the latter must be included the shares of smaller spinning mills, which enjoy a specialist following in the two centres. Even these, however, are now attracting the outside investor. But there are other concerns which, having taught Manchester their merit, have sought further following in the South. We can include the *District Bank* and *Lancashire Electric* under this heading without flattering Manchester or offending

London. The more independent excursions into local finance which London has periodically made have sometimes been less fortunate. Investors in the South, for example, have paid rather dearly for the opportunity to assist in the large (too large) scale capitalisation of *Lancashire Cotton Corporation*. Manchester's traditional dependence upon free trade provides a group of warehousing and transport companies. *Manchester Bonding Warehousing* and *Lloyds Packing Warehouses* both have a consistent dividend record through good years and bad. Local transport services include *Manchester Ship Canal*, whose traffics have steadily increased during the past year, and *Ribble Motor Services*, a Tilling and B.A.T. undertaking. New industries find their home in *Trafford Park Estates*, where a number of industrial concerns, including *Lancashire Dynamo and Crypto* and *Rubber Regenerating* have built their works. Finally, "laiking" Yorkshiremen and "wakeing" Lancastrians cease fighting the Wars of the Roses among the entertainments of Blackpool, and so provide increasing dividends for shareholders in *Blackpool Tower*. The Palatinate may not match its pre-war economic strength, but, as the accompanying table shows, its representative enterprises are stretching out towards increasing prosperity. And if the current revival of the cotton industry proceeds, the case for including a selection of Manchester shares in a diversified investment portfolio must be strengthened.

* * *

Thomas Tilling Finance.—The disclosed profits of Thomas Tilling for 1936 were £428,752, against £388,005 for 1935. After fees, interest and preference dividend, there remains £388,110 (equivalent to 12.3 per cent.) to cover the 10 per cent. dividend, of which the gross cost is £329,600. For 1935, £346,952 was available for the ordinary dividend, which was also at the rate of 10 per cent., but on a smaller capital. It is difficult to assess the significance of these figures. The company is now almost entirely a holding company; and its largest individual holding is of 1,610,880 ordinary shares in Tilling and British Automobile Traction, another holding company. No consolidated accounts are issued. Yet, over a period, there is evidence that relative stability of profits may be approaching. The following table compares the ordinary earnings with the amounts distributed by both Tilling companies:—

	Thomas Tilling		Tilling and B.A.T.	
	Earned for Ord.	Ord. div. cost (gross)	Earned for Ord.	Ord. div. cost
1931	308,365	158,205	210,105	160,000
1932	312,325	197,756	214,801	160,000
1933	324,125	197,756	215,264	180,000
1934	280,916	197,756	256,877	225,000
1935	346,952	263,675	308,718	250,000
1936	388,110	329,600	347,423	333,333

Though earnings have risen vigorously over the six years, dividends have risen more steeply still, and now absorb much the greater part of earnings. Under the Road Transport Act of 1930, the road passenger transport industry has been stabilised and controlled. With the risk of competition virtually eliminated, the larger undertakings have concentrated on savings by way of improved equipment and organisation. Those savings no doubt account for most of the improvement in profits shown above. But, with rising petrol, tyre and vehicle costs and the possibility of higher wages, the scope for further savings begins to appear more limited. In the absence of a substantial further expansion in traffics, stability is the logical prospect. Behind such uninformative accounts, however, there lies the possibility of "hidden" reserves. Over-generous depreciation charges might be reduced; or the operating companies' earnings might be more lavishly distributed. In valuing the ordinary shares of Thomas Tilling at 73s. (cum dividend) to yield £2 15s. 6d. per cent., however, the market seems to assess these chances—and further share bonus possibilities—distinctly highly.

Retrospect for Gas Stockholders.—For undertakings which are subject to steady changes of trend, there is point in the much-despised process of "jobbing backwards." This suggestion applies even to an undertaking like the Gas Light and Coke Company, which has maintained its 5½ per cent. ordinary dividend since 1929. It is at least equally relevant to such a concern as South Metropolitan Gas, whose dividend has been reduced from 6½ per cent. in 1930 to 5½ per cent. for 1936. In the following table we show the changes in the main operating and financial figures for Gas Light and Coke between 1929 and 1931. The base date is open to the objection that it precedes the acquisition of the Southend undertaking in 1932, but the principal lesson of the table is to be drawn from the widely differing rates of change between the items:—

	1929	1936	Per cent. Change
Revenue:—			
Sales of gas	8,463,739	8,725,012	+ 3
Rentals	1,405,510	1,829,835	+30
Residuals	1,945,300	2,410,630	+24
Costs:—			
Manufacture	5,890,176	5,418,432	— 8
Distribution	2,539,421	3,668,924	+45
Operating:—			
Gas sold (000's of therms)	257,044†	266,210	+ 3
Coke sold (000's of tons)	1,495	1,703	+14

† Figure for 1931; 1929 figure not available.

During the period, sales of gas have increased by 3 per cent., much of the advance being attributable to last year. Rentals, up by 30 per cent. and costs of distribution, up by 45 per cent. reflect the progress of an extensive campaign for popularising new appliances and for supplying new housing areas. Important economies have been achieved in manufacture, and the percentage fall would have been more impressive but for increased coal costs in 1936. Finally, the treatment and sale of residual products has been greatly improved; at present this source of income is equivalent to no less than 27½ per cent. of the revenue from gas sales. The figures, indeed, suggest that more consumers are using less gas per head, owing to more efficient apparatus and to changes in the public's dietary. At this stage cost factors appear more expansionary than revenue. Holders of Gas Light and Coke ordinary stock should be able to count upon the maintenance of the present dividend at present gas prices. But the prospect of a further rise in interest rates confronts the purchaser with a choice between some capital depreciation with a more or less stable cash return. The stock stands at 26s. 1½d. and yields £4 6s. per cent.

* * *

Progressive Footwear Profits.—The reports of boot and shoe companies for 1936 make, on the whole, a more satisfactory showing. Rising costs have, for the most part, been passed on to the consumer, and steady improvement in profits is generally reported. Among firms which retail their own manufactures, *William Timpson* stand out with a 20 per cent. rise in profits to £152,162. In addition to a 2½ per cent.

increase in the dividend of 25 per cent. on the old capital, a 6½ per cent. capital bonus has been distributed. In the same category, *Stead and Simpson* show the more moderate increase of about 4 per cent. in profits, and maintain the 10 per cent. dividend. This company, in fact, distributes only half of its equity earnings, but its total profits of £47,151 are still well below the pre-depression level. That condition, however, is common to most companies in the group. It applies, for example, to *H. E. Randall*, whose earnings of £28,929 are, indeed, slightly below those for the previous year. On the manufacturing side, increases in profits, as exemplified by *Lotus, Limited*, and *L. J. Weber and Phillips*, are more substantial. Earnings for Lotus ordinary shares are equivalent to 11.1 per cent. against 8.6 per cent., and total income has reached a new record at £110,886. The dividend, however, is modestly raised by only 1 per cent. to 7 per cent. *L. J. Weber and Phillips*, with profits of £18,237, have made comparable progress, and a rising output, apparently, more than offset the rising prices of materials. Among distributing companies, *John Loveys and Company* report a remarkable increase in income from £5,715 to £10,232, in keeping with its somewhat erratic record. *J. Darnell and Public Benefit Boot* have earned about 6 per cent. more in profits, and the latter company has resumed deferred ordinary dividends with a 5 per cent. payment. Boot company shares are experiencing a late and modest form of recovery. And in the struggle between increasing turnover and higher costs, it is difficult for the general investor to find a verdict.

Qualcast Finance.—Modern methods of industrial finance divert business not merely from the banks but also from the new issue market. The observer may detect signs that many leading industrial concerns are stoking up their cash resources, with the intention of securing a comfortable margin of net current assets to finance further extensions of business. The Turner and Newall and Triplex issues to shareholders may be cited. So might the proposed Qualcast issue, but for one sentence in the directors' announcement. It is stated that the offer of 100,000 5s. shares at 20s. will enable the company to finance its activities entirely out of its own resources. "At certain periods of the year," the circular proceeds, "the company has to finance considerable stocks in its lawn-mower department, which have, in the past, necessitated obtaining advances outside the business." Shareholders will doubtless be gratified to have the opportunity to subscribe for new shares on attractive bonus terms, in view of the directors' anticipation that they will be able to maintain at least the usual distribution. During the last three years, 20 per cent. has been paid out of remarkably stable earnings approximating to 30 per cent. The last three balance sheets, at June 30th, show no lack of net current assets, although large sums are locked up at that time of the year in debtors and stocks. But is it necessary to make a permanent increase in capital merely to avoid legitimate recourse to temporary accommodation for seasonal fluctuations in the business? Qualcast is not a holding company. With a number of subsidiaries, capable of smoothing out their seasonal requirements. If temporary requirements are permanently financed in this way, can satisfactory employment be found for the free cash during other periods of the year? It would be interesting, indeed, to see a Qualcast balance sheet drawn up to September 30th.

Rubber Prices and Prospects.—During the past two months the rubber share market has not lacked incident. The commodity price, after reaching 11d., is

now slightly below 10½d., yet it is only three months ago since 8d. was used as a reasonable basis for calculations. The 70 per cent. for the first half of 1937 has been superseded by quotas of 75 per cent. and 80 per cent. for the first and second quarters, and for the third the committee has ordained a further increase to 85 per cent. For companies whose financial year ended round about October, 1936, it is a far cry from the 65 per cent. quota then in force to the average of 80 per cent. for the first nine months of the current year. Whatever may be the real advantages of a system of freely adjusted quotas over unregulated output, freer supplies became necessary when rubber prices began their rapid climb. Moreover, for technical reasons, the longest possible notice of quota revisions is necessary for the plantations. The direction of future prices may be clearer when the General Motors dispute is settled, but until increased supplies become available, fluctuating prices of rubber appear likely. But a considerable rise in demand will be necessary to support a 10d. price when production under the higher quotas is forthcoming. We have, therefore, taken the commodity price both at 9d. and at 10d. in the following estimates of earnings:—

Company (and last accounts, 1936)	Latest Costs†	Latest		Est. Ord. Earnings, Rubber at		Share Price	Potential Earnings Yield on 9d. Rubber
		Ord. Earnings	Ord. Div.	9d. per lb.	10d. per lb.		
	d. per lb.	%	%	%	%	s. d.	%
Bah Lias (Oct.)	4.9	9.9	9	16.1	20.0	38 9	8.3
Sednak (Oct.)	4.4	8.1	6	14.0	17.0	35 0	8.0
Sedayan (Sept.)	4.4	8.3	7½	14.2	17.3	31 3	9.1
Toerang (Oct.)	5.0	9.3	9	19.1	24.0	43 1½	8.9
Bila (Sumatra) (Aug.)	4.9	4.4	4.0	15.5	19.3	2 1½	8.6

† Estimated all-in London cost plus prior charges if any, from latest accounts.

In each case, average production of 75 per cent. has been assumed for the current financial year. Taking 9d. and 10d. as a possible range of prices, there may be a possible variation in equity earnings of between 3 per cent. and 4 per cent. On the lower price basis, the market does not appear to have lost touch with the realities of the situation.

"Writs."—As anticipated, the West Rand Investment Trust made its official debut on the Stock Exchange after the Committee had given permission to deal at mid-day on Wednesday. The actual "opening" price was 1½-1½ for the 10s. shares (subscribed by finance companies in the Anglo-American Corporation group at 15s. per share). Between the subscription and the official opening many unofficial dealings were done, precisely of the kind which is understood to be authoritatively frowned upon and is certainly not calculated to attract commendation. Some "placing" appears to have been done in the region of 25s. 6d., but the placing price to brokers through the market was fixed at 27s. 10½d.—at which level only about one-twentieth of the demand was satisfied—and *sub rosa* transactions before the granting of permission to deal ranged up to around 32s. The bulk of the company's assets is represented by the holdings in West Witwatersrand and Western Reefs, both of which could have been bought a few weeks ago well below the present level as represented by the price of the West Rand Investment shares. "Writs," as the company has established itself in the market, is not, however, merely a holding company, and it is to be presumed that the present market capitalisation includes something for the goodwill which attaches to a strategic position in the prospective development of the great potentialities of the Far West Rand. Point was given to this aspect of the company's prospects by the announcement, before the commencement of official dealings, of the acquisition of options covering approximately 165 square miles in the Orange Free State, situated 60 to 70 miles south of the Western Reefs property near Klerksdorp. Meanwhile, permission to deal in the shares of the company on Johannesburg Stock Exchange has been temporarily postponed—it is understood for purely technical reasons.

The Rand's Market Capitalisation.—Last week we published a comparative table showing the ore reserve re-estimates of the majority of the Rand's gold mines as at December 31, 1936. The figures revealed an almost general expansion in tonnage. Since South Africa left the gold standard in December, 1932, changes in the status of her leading industry have been momentous. In 1932, the thirty-two principal producing mines of the Rand crushed some 35,000,000 tons of ore. The average recovery was 6.5 dwts. per ton—equal to 28s. per ton, with gold at 85s. per ounce; and the working profit was £14,500,000. Last year, thirty-five important mines crushed 44,000,000 tons. Their recovery of only 4.5 dwts. per ton was equal, at the higher gold price of 140s. per ounce, to 31s. 6d. per ton; and their working profit was £32,000,000. The expansion has been even more pronounced in so far as it affects the investor. Five years ago there were quoted on the London Stock Exchange the shares of thirty-two producing mines and one mine in the active development stage. These mines had an aggregate market capitalisation of £70,000,000. To-day, the shares of over sixty important mining companies are quoted, thirty-four of which are producers and dividend-payers, while the remainder are in varying stages of development. The aggregate market capitalisation of these sixty companies exceeds £400,000,000.

Of the thirty-two producers of 1932, some twenty-six were on the dividend list. These companies distributed an aggregate of £8,500,000, representing 12 per cent. on their 1932 market capitalisation. Last year's total distribution by thirty-four companies was approximately £17,000,000, giving a yield of 6½ per cent. on a market capital value of £255,000,000. These figures afford striking testimony to the efficacy of three tendencies: expansion in the gold-mining industry, reduced interest rates, and the increased investment prestige of the Rand. South Africa's departure from the gold standard has more than doubled the potential life of the Rand within its former limits. But it has done more; for it has brought within the orbit of profitable exploitation extensive tracts of country on lateral extensions of the field, both East and West.

Union Corporation Ore Reserves.—The feature of the December ore reserve estimates of the Union Corporation group is the expansion at East Geduld. The reserves at the end of 1936 are computed to be 9,000,000 tons, averaging 6.3 dwts. over an estimated stoping width of 60 inches. This compares with 7,950,000 tons, averaging 6.5 dwts. over 59 inches a year earlier. The latest calculation, however, includes 600,000 tons in shafts and safety pillars not at present available for mining, with a value of 7.7 dwts over 59 inches. The ore reserves of Geduld Proprietary are slightly higher at 9,100,000 tons, with a value of 5 dwts., compared with 5.2 dwts. previously—both over 57 inches. Although Modder Deep (now in liquidation) has in the meantime treated about 600,000 tons of ore, the reserves stand at 600,000 tons, and show a reduction of only 200,000 tons. The average value, however, is 0.4 dwts. lower at 2.9 dwts. The latest estimate includes a substantially increased tonnage of Kimberley reef material.

Company Results of the Week.—*British Investment Trust and Olympia, Limited*, are among the 28 other companies whose profit and loss accounts are tabulated on page 336. A discussion of the results appears on page 335 under the heading "Shorter Company Comments."

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Lloyds Bank, Williams Deacon's Bank, General Consolidated Investment Trust, Central and District Properties, Governments Stock and Other Securities Investment, Ashanti Goldfields Corporation, Bibiani (1927), and Gold Coast Associated Companies. At the Lloyds Bank meeting Lord Warrington gave the first analysis of total advances classified by industries which the clearing banks propose to publish annually. A comparison was given between advances outstanding at about October 31, 1936, and those reported to the Macmillan Committee for 1929-30. Mr Gerard Dewhurst, addressing Williams Deacon's Bank shareholders, considered that the Cotton Spinning Industry Act for dealing with redundant machinery was having a definite psychological effect on the trade. At the Central and District Properties meeting, Mr Horace Boot reported the purchase of two new properties, and discussed the position of flat accommodation generally. The chairman of General Consolidated Investment Trust explained to the proprietors the duty of trust directors to forestall the inevitable fluctuations in economic and market conditions. At the Governments Stock and Other Securities Investment meeting, Viscount St. Davids drew attention to the disappearance of the depreciation on investments, which four years ago was 36 per cent. Mr J. H. Batty, speaking to Ashanti Goldfields Corporation shareholders of reduced working costs, estimated that the dry-crushing and roasting process costs might eventually come within 8s. 3d. per ton. At the Bibiani (1927) meeting, he spoke of the urgency of increasing haulage capacity and installing a new treatment plant. Sir Cecil Rodwell, at the Gold Coast Associated Companies meeting, after estimating the saving from changes in the company's administration, pointed out that the downward trend in the value of mining investments had been checked.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS

TICKET: FEBRUARY 16 ACCOUNT: FEBRUARY 18

THE market has entered February with much more heart than it showed during the last account. The "House" generally presents a more settled appearance, and while spectacular price advances are still rare, there is a sufficient strengthening in prices to make a perceptible impression on the index numbers. Gilt-edged have produced their expected rally, and the smaller type of seller has fled at the appearance of the Government broker. Herr Hitler's week-end speech produced no specific reaction in the market—except in Dawes and Young loans. And with sufficient features to keep the pot simmering, greater public and professional interest has been attracted to the industrial sections.

Gilt-edged opened too erratically to stage large gains, but a general growth of confidence was evident on Tuesday and Wednesday. Support was not on a large scale but it was sufficient—thanks to the eager covering of small bears—to produce a half-point rise in Old Consols on Wednesday and Thursday's close was strong. Indian stocks staged a recovery in sympathy, and Australian loans were better on the trade figures.

Sino-Japanese issues opened firm in the foreign market, and continued to advance on later days with good support. German bonds made a delayed reaction to Herr Hitler's speech, after some initial support. Peru Corporation and Brazilian issues improved.

The home rail market, buoyed up with dividend optimism, did not stay the pace. Some demand was reported for junior issues, but professional operators turned sellers of Southern deferred in anticipation of the traffics. Apart from a further rise in Great Western, Tuesday was a spasmodic day, and general slackness prevailed in midweek. Argentine rails made an impressive bow, but some excellent traffics found the market unresponsive later. Some speculative purchases of Canadian Pacific ordinary lifted the price more than a point on Tuesday.

The new account has seen business on a modest scale in industrial markets, but the tone has been firm, and has improved as the week progressed. Cable and Wireless stocks

have been consistently favoured in expectation of good accounts and better traffics, and trans-Atlantic issues have moved in sympathy with the upward trend on Wall Street. Iron and steel issues registered an all-round improvement, with Colville prominent on dividend hopes, John Brown higher for similar reasons, and United Steel in demand on the expansion scheme. Stewarts and Lloyds shares and Tube Investments weakened against the trend. In the coal group, William Cory improved on dividend and bonus hopes, and Powell Duffryn on trading reports. Prices improved slightly in the aircraft section, and in the motor group Standard were the outstanding feature. Electrical equipment issues were irregular at the opening of the week, but strengthened later, particularly General Electric.

The textile group contained several bright features and prices improved generally with Lancashire Cotton Corporation debentures at par on Thursday. British Celanese were in the lead in the rayon group. Brewery issues were irregular despite the good beer production figures. In the miscellaneous industrials section British Oxygen were subject to profit-taking. International Combustion improved slightly, and a recovery was registered in cement and building material issues, with Tunnel Portland Cement prominent.

Oil shares enjoyed an active week. Apex and Trinidad Leaseholds attracted most attention in a market encouraged by the increased posted prices of American crude oil. This evidence of a strengthened price structure brought good support for the leading issues, and no share, whether of petrol or crude oil producers, lacked buyers. We examine the prospect for oil shares on page 313. Scant interest was shown in the rubber market, and apart from an intermission of French buying, on Tuesday, the market was largely featureless. Tea shares lost ground on the poorer tone on Mincing Lane, and the mid-week prospect seemed somewhat bleak.

The tone in the mining market has remained good. Early in the week more attention was paid to established concerns, but interest centred mostly round the new West Rand Investment Trust. Before dealings in "Writts" started on Wednesday, there was considerable activity in developing mines. The start of business in the new company's shares was awaited eagerly, the opening quotation being 31s. 3d. to 32s. 6d. Rhodesian copper issues improved on the better outlook, while in West Africans, and also in base metals generally, prices were firm, though there was little business. The Burma Corporation dividend was well received, being rather more than was expected.

OVERSEAS STOCK EXCHANGES

NEW YORK

VERY firm conditions have prevailed in Wall Street during the week. At the opening of markets on Monday prices rose generally on the increase in reserve requirements announced by the Federal Reserve Board. Steel issues were higher on the rising steel mill activity, which has not been affected

greatly either by strikes or floods. Utilities were firm despite the Federal Court decision that the registration section, at least, of the Public Utility Act is constitutional. Oil issues improved on higher petrol prices. Rail and rail equipment shares, and motor issues with the exception of General Motors, led the market later in the week, Chrysler in particular benefiting from the effect of the shut-down of its competitors. Rail equipment shares are being helped by larger orders placed by the companies for new equipment. Steel shares continued to be strong in mid-week on the *Iron Age* estimate of activity at 79 per cent. of capacity against 75 per cent. for last week. Conditions in the bond market improved after the announcement of the increased reserve requirements, but Treasuries turned slightly weaker later, although substantial gains were made by second-grade industrials.

CANADA

THE stock markets during January were continuously active, with a progressively upward trend for most reputable stocks. On the immediate outlook, the advance is expected to continue. Utility, construction and equipment stocks have been high in popular favour, but newspaper issues have risen freely and even the common stocks of companies in liquidation are in demand owing to the certainty of high newsprint prices in 1937. C.P.R. has also strengthened, less on account of higher net earnings than of the prospects for increased profits from its holdings in Consolidated Smelters. The bond market has been firm, and high-grade bonds have advanced; but certain Western Provincial issues have again been weak. The mining market has been booming as the result of better earnings and higher prices for copper and other base metals, but speculation is being carried to extremes.

PARIS

AFTER an uneasy beginning, with further anxiety about Spain, and labour troubles at home and in the U.S.A., the tone became good for the rest of January, despite a few irregular sessions. The settlement of the Lille metal workers' strike and the improvement in conversations helped the market, and the improvement in Young Loan was marked. French industrials were steady, Renten and bank shares alone being sensitive to changes in feeling. Some temporary weakness in Renten followed M. Blum's speech at Lyons towards the end of the month, as the market's expectations were somewhat disappointed. As the fall in the franc became accentuated, a waiting attitude was adopted; there were no serious falls, but business became restricted. Finally, the Bourse was relatively unmoved by the bank rate increase, as it still preferred to await the results of negotiations for a sterling loan. It seems that any tendency to weakness was offset by relief that earlier rumours of further devaluation and political difficulties had been disposed of.

BERLIN

DURING the greater part of January the market was dull, with slightly weakening prices for industrials. In general, firm quotations were made in shipping shares and the leading

ADVICE ON AMERICAN STOCKS

Recognizing the demand of both private investors and financial institutions in Europe for first-hand advice regarding American securities and the cyclical trend of the American Stock Market, Major L. L. B. Angus of 301

commercial bank issues. The new year regulations restricting the purchase of stocks with blocked marks, and uncertainty as to the incidence on company finance of the new tax on currency-depreciation profits restrained the market. In mid-January the favourable blocked marked rate induced some selling by foreigners. Activity developed in the minor industrial issues quoted in the "cash list," many of which had been neglected. At the end of the month, after a dull opening, the market became more cheerful, and a pronounced advance occurred, in which potash issues, public utilities, and automobile shares made greater progress. Colonials were irregular, Otavi Copper being heavily sold towards the close. Throughout the month reichsmark bonds were very firm. Young Loan rose from 102½ to 103½. Among foreign currency bonds, Mexicans were a speculative feature. Certificated dollar bonds were active, but nominal quotations weakened, industrial issues losing around 3 points. The official shares index number (1924-26 = 100) for December, 1936, was 105.40, against 106.58 for November, but the bond index number was fractionally higher at 96.38, against 96.32.

AMSTERDAM

No new tendency emerged during January, for the Bourse was inclined to mark time, and day-to-day movements were irregular. Rubber shares continued to dominate interest, quotations closely following changes in the commodity price. The General Motors dispute caused some weakness, but this was partly offset later on by satisfaction with the quota decision for 1937. On several occasions, sugar issues were in good demand on the large Java sales, and interest was again shown in shipping shares. Early in the month the Royal Dutch dividend caused some disappointment, and the shares fell, but they improved later when the dollar loan judgment was announced. As in Paris, Young Loan was a good feature in the second fortnight.

CAPITAL ISSUES

A QUIETER week has been experienced in the new issue market—a not uncommon consequence of unsettled market conditions during the previous account. Two industrial offers for sale have appeared, together with a mixed issue of debenture and preference stocks by *South Suburban Gas*. The latter are well secured issues, as their issue price suggests; the debenture, indeed, is offered on a 3½ per cent. basis over a twenty-year life. The fixed-interest investor is also catered for by the offer of 1,750,000 5½ per cent. £1 preference shares at 21s. by *Jays and Campbells (Holdings)*. This is a chain furniture retailing concern. The vendors receive the whole ordinary share capital of the company as part of the purchase price. On the average profits of the past three years the preference shares are covered rather more than three times. These profits, however, are derived largely from hire-purchase business, and although the stock figure in the combined assets is suitably valued, this type of business is not free from risk. Since this concern has been formed as a holding and not a merger company, an indication that consolidated accounts will be presented would have been welcomed. *Barracks Fabrics Printing* 6 per cent. preference shares are issued at 5 per cent. premium and the 4s. ordinary shares at 137½ per cent. premium. The company has made rapid progress during the past three years, but an earnings yield basis of 16 per cent. on the issue price of the shares appears more generous than some recent

offers have been disposed to give. But the terms of the offer, nevertheless, are based on the results of a single year. Statements for information only have been published by *Linway Trust*, *West Rand Investment Trust* (discussed on page 314), *Chinese National Government* (details of the 6 per cent. Shanghai-Hangchow-Ningpo railway bonds, which, like a previous issue, have run the gauntlet of the Foreign Transactions Advisory Committee without apparent difficulty), *Albert E. Mallandain, Rheostatic Company, M. Cook and Son, Ley's Foundries and Engineering*, (which, very commendably, indicates the Company's intention to provide Consolidated Accounts).

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at the option of the holder the yield is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

COMPANY MEETINGS

LLOYDS BANK LIMITED

INCREASED DEPOSITS AND CORRESPONDING INCREASE IN ADVANCES

MARKED PROGRESS IN BRITISH TRADE

ACTIVITY OF INTERNAL TRADE AND THE FUTURE

IMPORTANCE OF RETAINING EXPORT CONNECTIONS

LORD WARDINGTON'S ADDRESS

The seventy-ninth ordinary general meeting of the shareholders was held, on the 29th ultimo, at Southern House, Cannon Street, London.

Lord Wardington (chairman of the bank) presided.

The notice convening the meeting having been read by the Secretary, and the auditors' report by Mr F. S. Tull (Price, Waterhouse and Company),

The Chairman, in moving the adoption of the directors' report, said:—My lords, ladies and gentlemen,—Since we met at our annual general meeting this time last year we have elected to the board Mr Henry E. S. Upcher and Mr W. G. Verdon Smith. Both these gentlemen have an intimate and expert knowledge of Norfolk in the one case and the neighbourhood of Bristol in the other, and we are confident that we shall be kept in much closer contact with the activities of these places, and shall benefit very considerably by the advice and knowledge which our new colleagues will bring to our deliberations.

BALANCE SHEET

Let us now turn to the report and balance sheet which are in your hands. I presume you will, as usual, take them as read, but there are one or two points to which I think it is worth while drawing your attention.

You will notice that we have re-transferred from our internal funds £500,000 to our published reserve. I have no doubt you recollect that in 1931 we took from our published reserve £2,500,000 in conformity with the action of most of the other banks, in order to supplement our internal investment reserve fund, which had been heavily depleted in consequence of the severe drop in the value of our gilt-edged investments. That sum has always remained intact, but as our investment reserve fund continued to grow as the result of realisations on a rising market, we have from time to time restored to our published reserve part of the £2,500,000 we took from it.

After this last re-transfer there is only £1,000,000 of the original sum still remaining in our internal fund, which no doubt will be restored in due course, as at present it seems unlikely to be required either for its original purpose or for the augmentation of any of our other internal funds. This transfer does not, of course, affect the strength of the bank in any way. That remains the same whether a reserve is advertised in our published figures, or whether it is hidden from view in the internal funds. But the proportion of our external reserves to our capital is less than is the case with other banks, and it is perhaps worth while rectifying this. The real security to the depositor is not the reserve alone, or the capital figure alone, but the two together, and in this latter respect we compare favourably with our neighbours.

INCREASED DEPOSITS

The next item on which I wish to comment is the total of our deposits, which at £406 millions show an increase of £6,000,000 in round figures as compared with last year. When we come to the other side of our balance sheet you will see that our overdrafts have increased to a slightly greater extent. In other words, these figures show that we have been able to lend to trade and the public the whole of our increased deposits. From a profit-earning point of view this is distinctly satisfactory. To have bid higher rates in order to attract further deposits would have profited us nothing. We would have been unable to use them in making advances, and perforce would have been obliged to employ them by increasing our less remunerative assets.

INVESTMENTS

On the other side of our balance sheet the changes are comparatively slight and self-explanatory until we come to our in-

vestments. Here there is some alteration. In consequence of the absorption by the Bank of London and South America Limited of the Anglo-South American Bank Limited we no longer are the majority holders of the shares of the former bank, and it ceases therefore to be technically a "Subsidiary Company," which, under the Companies Act, 1929, we are obliged to show as a separate item.

As we have comparatively small holdings in about half a dozen other banks

conjunction with the total of our deposits shows a comparatively low percentage.

I hope you will consider that these figures for the year are satisfactory. Our profit might have appeared even more satisfactory if we had not debited our profit and loss account with various allocations, such as that to staff pensions fund, before we arrived at our profit figure. These allocations we regard as provisions for a definite liability, whereas the allocations we make out of our published profit figure we like to regard as provision for contingencies which may or may not occur, but which for the moment at any rate is not definitely required.

CLEARING BANKS' CLASSIFIED ADVANCES

	1929-30	Oct. 31, 1936
1. Textiles (cotton, wool, silk, linen, jute)	£ 81,632,371	39,929,997
2. Heavy industries (iron, steel, engineering and shipbuilding)	62,962,675	40,681,469
3. Agriculture and fishing	68,630,471	57,657,404
4. Mining and quarrying (including coal)	30,003,440	18,091,024
5. Food, drink, and tobacco	63,177,889	29,403,403
6. Leather, rubber, and chemicals ..	21,969,950	12,593,550
7. Shipping and transport (including railways)	25,176,565	23,167,305
8. Building trades	47,824,549	61,547,687
9A. Miscellaneous trades	146,496,288	{ 67,367,142 60,060,190
9B. Retail trades		
10. Local government authorities and public utility companies (excluding railways)	52,384,672	50,397,983
11. Amusements, clubs, churches, charities, etc.	26,502,720	40,459,790
12. Financial (including banks and building societies)	142,547,506	109,554,025
13. Other advances	218,402,248	258,542,153
	£987,711,344	£869,453,122

The above totals for 1936 exclude money lent by the banks at call and short notice.

SIGNS OF INCREASED PROSPERITY

The year has indeed been an encouraging one, in spite of disappointments, tragedies and occasional nervous apprehension. We have seen improvements in many directions, and the buoyancy of trade and Stock Exchange securities has withstood the reaction to political and other shocks in a way which must be considered truly remarkable.

It is not necessary for me to particularise the signs of our increased prosperity. Wherever you look, even in the depressed areas, they are visible, and all the signs, such as the figures of employment, the reduced amount of unemployment, the increased values of commodities, of industrial shares, full order books, clearing house, railway, and retail sales returns, and the reduced figures of bankruptcy and bad debts, all point in the same direction. There is this satisfactory feature, too, that the fundamental basis of good international trade is present. The higher prices of primary commodities are fulfilling their function of restoring prosperity to the countries of primary production, and are putting them once more into the position of being able to place orders in industrial countries for the secondary products which they need. Thus we see the impulse of those movements which should result in the general interchange of goods between the nations of the world for the advantage and profit of all.

NEED FOR CAUTION

I wish I could leave the picture there and believe that these bright colours would necessarily develop in intensity. But it is just at such a time when it seems to me it is wise to stand back for a moment and survey the scene with some cautious criticism, in spite of one's natural inward feelings of optimistic expectancy.

It does not require a very long memory to go back to the end of 1919 or the beginning of 1920. At that time we were still enjoying a post-war boom; industry was active and prices were high. You will remember there was an outcry in the latter year against the high bank rate which had been imposed, and the movement to restrict credits which had been encouraged. Those wicked people, the bankers, it was said, were strangling trade and were deliberately destroying the good times.

When I was in Australia two years ago exactly the opposite criticism was being levied against the banks in that country, without, as far as I could gather, any foundation. They were said to have helped to swell the boom to an unwieldy size by forcing credits on unwilling takers, with the result that the subsequent crash had been much greater than it otherwise would have been.

In the case of our own country our fault after the war was not that credit was restricted, but that it was not restricted soon enough. I recall various cases where customers of banks, after the inevitable fall from boom prices, were the prey to bitter regrets because they had not listened to the advice given to them, and complained "How we wished that we had not succeeded in over-persuading you to assist us in buying our farms, extending our factories, or purchasing shares."

LARGE INCREASE OF LENDING POWER

I am not suggesting that conditions to-day are the same as they were at the time of which I speak. One factor alone is decidedly different. I have been looking back to the amount of deposits and overdrafts of the five big banks and I find that in 1920 the overdrafts were £767,585,000 and the deposits £1,628,375,000—i.e. 47.1 per cent. In 1929 they were £880,612,000, with deposits £1,625,579,000, or 54.2 per cent., whereas at the end of last year the percentage was only 38.1 per cent., the overdrafts being £765,612,000 and the deposits £2,011,582,000. We are lending now practically the same amount as we did in 1920, but the lowness of the percentage, due to the greater amount of the deposits, reveals a very large potential increase of lending capacity.

PRESENT POSITION

It seems to me, therefore, to be wise to pause for a moment and take stock of the position. No one wishes violent ups and downs in trade, neither is an entirely dead level an inspiring ambition, but to flatten out a too abrupt curve is surely a desirable objective! There are many features of the present time, which on paper at any rate may be said to be approaching boom conditions; a shortage of labour, especially skilled labour, a continued rise in the price of commodities and of wages, with consequent increased cost of production, an extension of productive capacity, based in some instances on expectations rather than actual orders, and fresh capital issued to the public on the same slender foundations. In Stock Exchange quotations also we see prices rising to figures which render the yield to the purchaser insignificant, although, as I have already pointed out, the percentage of our loans to the Stock Exchange is still of moderate dimension.

IMPORTANCE OF EXPORT TRADE

There is much which is quite healthy in the situation and of good augury for the future, and the increased purchasing power of the primary producing countries is only just beginning to show its effects. It is much to be hoped that everything which can be done will be done to help on international trade, and in particular our own export trade, which ought to benefit so materially from the extension of this movement.

The tripartite exchange agreement effected in September between ourselves, the United States and France raised our hopes that it would prove a first and most important step in the direction of a greater freedom of movement of goods between all nations. Not only was it the first real practical attempt between three of the leading nations of the world to obtain that co-operation in the economic sphere which we are so earnestly anxious to achieve in the political, but it was legitimate to hope that it would have a highly beneficial effect on the general international psychology.

A less restricted export trade is of the highest importance to this country especially. It is true that we have recovered a greater share in this respect than other countries, and the value of our export trade in 1936 shows an improvement of £75 millions as compared with 1932, although it is still £288 millions less than it was in 1929, but it is very necessary that the present activity of our internal trade should not make us liable to forget the essential importance of retaining our export connections. There is a definite danger that this may happen. We are so busy internally that many of our trades under the additional stimulus of our armament programme are working at a 100 per cent. capacity, and in such goods as machine tools, to mention only one, we are unable to meet our own requirements and are actually importing large quantities, while a shortage of labour has induced many manufacturers to scour the country to find fresh workmen and women in the depressed areas who can be persuaded to leave their homes and take up the work which is awaiting them in more

fortunate parts of the country. A curious illustration in terms of labour of the phrase "Poverty in the midst of plenty," which we have so frequently used in recent years in reference to goods.

FUTURE RESPONSIBILITIES

All these factors seem to me to point to two main considerations. In the first place, every care must be taken to ensure us against the present activity of our internal trade degenerating into anything which properly can be called a boom. And, in the second place, we ought to look ahead to that time when two of the chief causes of our present internal activity have come to an end, our building operations and our re-armament programme, and take all possible measures to fill the gap with increased foreign trade.

The old weapon, when the pace was becoming too hot, has been so long kept in its sheath that its existence has been almost forgotten, and, indeed, higher bank rate and dearer money are handicaps to legitimate trade, however efficacious they may be in other directions, and are inevitably an added burden on the Budget. But without this control we are dependent on open market, or other operations on the part of the authorities diminishing or increasing bankers' cash balances, or on individual action by the banks in restricting or increasing advances to customers. We have moved a long way from the days when control in these matters was semi-automatic, and many practical men of affairs are becoming more and more aware of a new responsibility attaching to their actions, not merely a responsibility which they always have had to the particular concern which they are interested in running, but a responsibility to the whole body politic.

GRANTING OF CREDIT

I do not think that this awareness has proceeded very far as yet. A manufacturer extends his plant or accepts orders mainly on the result of his calculation that he can keep the one employed and carry out the others with a reasonable profit and without undue risk. Likewise a banker will decide whether he will grant or withhold a credit primarily on the grounds of its safety and liquidity having due regard to the symmetry of his own figures. It is only in a secondary way that he is influenced by conjectures as to the effects of his actions on the economic life of the nation, or by doubts as to whether any alternative action would result in greater social gain. It is inevitable that this should be so. A practical man of affairs is much more afraid of laying down the law on any particular question than one who studies and deals in theories, and if he makes a mistake the penalties come home to him with greater force than they do to one who is engaged in theory rather than practice. He also feels, even if he has strong views on any particular theory, that his action in any case will be individual and isolated, and that he has no means of making his competitors co-operate with him.

At first sight this may seem to indicate the desirability of some central dictatorship to say what trades should carry on their operations and to what extent, which should be shut down and which extended. Presumably, if an entirely omniscient dictator could be found this might prove the remedy for every evil. But where is he to be found? If among politicians, who is there who would be accepted by all other politicians? If among economists, whose theories are free from the criticism of other economists, and who would dare to speak without fear of contradiction on behalf of all bankers or all industrialists?

On the whole, I think it is as well that we should continue to guide our course as well as we each may, and the sum of the wisdom and experience of us all will be greater than that of any one central authority, however omniscient. (Applause.) In these matters, as in politics, we in this country do not like dictators—(hear, hear)—whether they come from the Left or the Right, but it is all to the good that everyone engaged in practical affairs should busy themselves more and more in the wider scope and result of their actions, and study more closely their general economic effects.

PRACTICAL STEPS

As a people we do not concern ourselves over much with theory, but we have a faculty for dealing with problems or abuses as they arise. Means have been found to lessen the activities of what are known as "bucket shops," with every help from the Press, and a committee has been appointed to inquire further into the matter. Possible weaknesses in the Fixed Trust Movement have been the subject of inquiry, and a committee appointed to investigate the position has already made recommendations to safeguard against possible abuses. Bankers have shown their willingness to assist in ameliorating our unemployed problem by co-operating in the

formation of the Special Areas Reconstruction Association, perhaps not with any great optimism.

BANKS AND PROSPECTUSES

Further, they show a stronger sense of responsibility to the public by the way in which they criticise the contents of a prospectus appealing for public subscriptions on which they are asked to allow their name to appear. I know that this bank goes out of its way, so to speak, to be particularly careful in this respect. It is always possible for an ignorant member of the public to conclude, if he sees the names of a respectable bank and brokers on a prospectus, that they are virtual guarantees of the success of the enterprise. No one, of course, who is familiar with business would ever draw this conclusion, and he knows that a bank's name on a prospectus merely indicates that the banker has made every inquiry into its general *bona fides* and that he is only acting on behalf of the issuing house to receive subscriptions. In order to prevent any ignorant exaggeration on the part of the public of the functions of a bank in this connection, it might perhaps be better if the name of the bank appeared in a less prominent position on a prospectus.

A further example of a greater orderliness in our affairs in the City can be found, I think, in the reorganisation under the auspices of the Clearing Bankers of the Foreign Exchange Committee, which I believe is working very satisfactorily under conditions which no one can call easy.

THE FUTURE

In conclusion, I would suggest that we are justified in hoping that our present good trade will continue, but that the circumstances are such as to render it necessary that we should be on our guard against any tendency for exaggeration into unhealthy boom-like conditions, while at the same time we should lose no opportunity of maintaining our connections abroad, which will be more than ever useful when our internal activity lessens.

I now beg to move: "That the report just taken as read be received and adopted, and that, in accordance with the recommendation of the directors therein, a dividend be declared for the half-year ended December 31st last on the paid-up capital of the company at the rate of 12 per cent. per annum on the 'A' shares, and at the rate of 5 per cent. per annum on the 'B' shares, payable, less income tax, on and after January 30, 1937." (Applause.)

The resolution was seconded by Sir Austin E. Harris, K.B.E., the deputy chairman, and carried.

The retiring directors were re-elected, and Messrs. Price, Waterhouse and Company were reappointed auditors for the year 1937.

Votes of thanks to the directors for their services during the past year, to the staff for their excellent work, and to the chairman for presiding, were carried, and the proceedings then terminated.

GOLD COAST ASSOCIATED COMPANIES, LIMITED

PROSPECTS UNDER NEW MANAGEMENT

The second ordinary general meeting of the Gold Coast Associated Companies, Limited, was held, on the 4th instant, at River Plate House, E.C.

Sir Cecil Rodwell, G.C.M.G. (the chairman), after stating that the change in the company's office effected in June last would result in an estimated net saving in the neighbourhood of £1,000 per annum for the next five years and thereafter at the rate of £1,500 per annum, said:—The depreciation in value of mining investments amounts to £34,000, an even less satisfactory result than that shown for the previous year, when the corresponding figure was £23,000. I wish that I had been able to tell you that a comparison between the book cost and the market value of investments at this date would make a better showing than at September 30th last. I am, however, at any rate able to say that, thanks to the new investments to which reference is made in the report, the downward trend has been checked and that, while there is still a considerable leeway to be made up, the prospects of an improvement in the value of our investments as a whole are better than they were before the list of holdings was extended.

In conclusion, gentlemen, I can assure you that by the end of the current year, begun as it was under fresh auspices and in a new environment, it will be the earnest aim of the directors to show, as indeed the shareholders may reasonably expect them to show, more satisfactory results than it has been possible to place before you in respect of the period under review to-day.

The report was adopted.

WILLIAMS DEACON'S BANK, LIMITED

SATISFACTORY RESULTS—INCREASED NET PROFIT

IMPROVEMENT IN THE COTTON INDUSTRY

THE INDIAN IMPORT DUTIES

MR GERARD DEWHURST'S SPEECH

The annual meeting of the shareholders of Williams Deacon's Bank Limited was held, on the 28th ultimo, in the Board Room, Mosley Street, Manchester.

Mr Gerard Powys Dewhurst (the chairman) presided.

The Secretary read the notice convening the meeting and the auditors' report.

The Chairman, in moving the adoption of the directors' report and statement of accounts, said:—Gentlemen,—I have received apologies for unavoidable absences from our meeting to-day from certain members of the board.

BIRCHIN LANE BUILDING

You will notice from the report that the rebuilding of our old Bank in Birchin Lane was completed in October last and that since then we have been in occupation of our new premises. The Georgian type of architecture adopted appears to blend admirably with the surroundings, while the lay-out of the interior is all we could desire; in fact, the comfort and convenience of both customers and staff have been carefully studied. Soon after moving in we invited our friends and customers in the City of London to view the premises, and, judging by the kindness of their remarks, I think the architect is to be congratulated, and I should like on your behalf to assure him of our appreciation of the happy result of his labours. Our only regret is that our late general manager, Richard Dobson, did not live to see the completion of a project he had made particularly his own.

You will see from the report that we have invited Mr Ernest E. Bird, who is well known in the City, to a seat on our board, and this meeting will be asked to confirm his appointment. I should like in your name to offer Mr Bird a very hearty welcome, in the assurance that his wide experience and knowledge of men and affairs will be of the utmost value to the bank.

BALANCE SHEET ITEMS

Taking the remainder of the report with your permission as read, and turning to the figures of the balance sheet, on the liability side our capital and reserve fund show no change, but our deposits give us a substantial increase of over £2,000,000, which appears to be a common feature in all bank balance sheets this year. Acceptances on behalf of customers show a contraction from last year, while a smaller volume of foreign exchange contracts accounts largely for a reduction of over £600,000 in the next item of endowments.

Turning to the assets side of the sheet, our holding of cash shows little change, though the ratio of cash to deposits is reduced from 11.5 per cent. to 10.9 per cent. Balances with other banks are higher by £270,000 and we have over a million and a half less short money on the market than we had a year ago. Purchases of Treasury Bills account for a small increase in the next item of bills discounted.

The increase in our investments amounting to over three million, coupled with a relatively small addition to our advances, would indicate that our customers, especially in the cotton trade, while undoubtedly improving their position, have not yet reached the point of requiring fresh facilities to any large extent: in other words, our advances have so far improved in quality rather than in quantity.

Bank premises account, after an appropriation from this year's profits, shows a net increase of £55,000, not, we consider, an undue addition, considering the calls of the last three years upon this fund.

PROFIT AND DIVIDEND

Turning now to the figures of profit and loss, our net profit after making the usual provisions appears at a total of £293,636 as compared with £278,536, or an increase of £15,100. This profit, with a balance of £72,784 brought forward from last year, gives us a total of £366,420 now to be dealt with.

After transferring £30,000 to premises account, we are in a position to pay a dividend at the rate of 12½ per cent. on both our "A" and "B" shares, and to carry forward to next year's account £102,045 as against £72,784 brought in.

With the figures I have quoted, it is unnecessary for me to stress the liquid nature of the bank's position, and I am glad to report that the general business of the bank has been more than maintained, and we have every reason to be gratified with the progress recorded during the past year.

The year under review has seen a further revival in the internal trade of the country, and in spite of rising costs most of the heavy industries, under the stimulus of the Government's expenditure, and aided by cheap money, have attained a high level of output; in fact, we can record an increase of some 10 per cent. over last year in the volume of industrial production.

A STEP FORWARD IN INTERNATIONAL TRADE

The improvement in our export trade, so vital to us, still remains, however, a problem to be solved; but in this connection a definite step forward has been taken during the past year towards freeing international trade from its many restrictions, which may mark a new era in international economic relations, an agreement having been come to between the United States of America, France, and Great Britain to maintain reasonable stability of the principal exchanges through their respective equalisation funds. 1936 has also witnessed a substantial rise in the price level of primary commodities, including a higher value for agricultural produce, which, in so far as it affects the purchasing power of the producing countries, may also in its way be of material assistance to this country in regaining its exporting position to those markets, so long as the present remunerative nature of our domestic trade does not lead us to neglect the requirements of our customers abroad.

IMPROVEMENT IN COTTON TRADE

Turning to the area more directly served by this bank, it is gratifying after so many years of depression to be able to record a definite, if not yet very pronounced, improvement in the cotton trade. Various causes have been responsible for this happier state of affairs. Doubtless the Cotton Spinning Industry Act for dealing with redundant machinery, though only coming into operation during the latter part of the year, has had a definite psychological effect in restoring the confidence of the trade. Again, those responsible for various schemes for the prevention of undercutting of prices at last appear to be reaping the reward of their unremitting labours of the last three years, and a great proportion of yarn produced is now sold under an arrangement for minimum prices.

Lastly, as was to be expected, the trade has benefited by the increased purchasing power of the country. As a result, spinners and manufacturers have their order books filled for some time ahead at prices which, for the first time for many years, bear some relation to costs, and while these, largely through higher wages to be paid in the coming year, must inevitably rise, the outlook for the basic end of the industry can be described as distinctly promising.

TRADE WITH INDIA

On the other hand, our shipments of piece-goods abroad, I am afraid, show a somewhat mixed picture. Following upon the various reductions in the import duties on Lancashire textiles, welcome improvements are to be noted in the volume exported to the Dominions and Colonies, but this is more than offset by a further reduction of our trade with India, which, considering that the shipment of cotton piece-goods and yarns is still this country's largest export trade, and India the most important market, gives rise to serious misgivings.

In the meantime, by a vote of the Legislative Assembly of India, the Ottawa Agreement with the United Kingdom has been

ASHANTI GOLDFIELDS CORPORATION, LIMITED

ANOTHER SATISFACTORY YEAR

INCREASED DIVIDEND AND FAVOURABLE OUTLOOK

Mr J. H. Battey, the chairman, presiding at the fortieth ordinary general meeting of the Ashanti Goldfields Corporation, on the 29th ultimo, said the ore milled and treated was 213,713 tons, as against a previous high record of 192,110 tons. Working costs showed a further reduction at 26s. 0½d. per ton, as against 26s. 11¼d. last year.

The development footage reached the high figure of 21,037 ft., which was easily a record, and their ore reserves gave a total of 1,458,031 tons of an average value of 20 dwt., as against 1,059,224 tons, of an average value of 19.8 dwt. last year, being a net increase of 398,807 tons.

The outstanding feature was the development of the Cote d'Or reef from the south shaft, where, after using 118,440 tons for milling purposes, the stoping ore on this reef alone now stood at 1,163,745 tons of 23 dwt. out of a grand total of 1,458,031 tons. These figures were eminently satisfactory, and the position now was that they had ore for stoping purposes to cover them for at least six years, on the basis of the present output.

REDUCED WORKING COSTS

The dry crushing, roasting and cyanidation process showed a further reduction of 1s. 5.8d., and now brought the cost down to 9s. 5.92d. per ton. A recent experiment in firing with wood gas had proved satisfactory in reducing the cost of firing by about 1s. 4d. per ton, and they proposed similarly to equip the other furnaces. This should ultimately mean that the dry crushing and roasting process costs might eventually come within 8s. 3d. per ton.

In the meantime, they were increasing the capacity of the dry crushing treatment plant to 20,000 tons per month by erecting another roasting furnace. This would bring the total number of furnaces in commission to thirteen.

Referring to the prospecting and development of outside mines, the best results had been at Ayeinm. Developments had, on the whole, been satisfactory. A net increase of 61,386 tons of stoping ore brought the total reserves in this mine to 294,286 tons of 7.8 dwt.

APPROPRIATION OF PROFITS

The Chairman, having dealt with the various items in the balance sheet, continuing, said that shareholders would observe that a balance of £964,915 had been transferred to the appropriation account. In addition to this, a sum of £88,762 had been brought forward from last year, which was the balance outstanding after providing for the allocations agreed to at the last annual general meeting, and the payment of the second interim and final dividends for the year 1934-35.

In addition, the directors had considered it desirable to re-credit profit and loss account with £30,718, which was written off this account to meet the fall in the market value of Government securities in 1931. These securities more than recovered their original value, and they thought it a proper course to bring this amount back into profits.

The total sum thus to be appropriated was £1,084,396. They had again transferred £1,000 to the benevolent fund and had reserved £10,000 for income tax. The first interim dividend for the year under review absorbed £225,000, leaving a balance to be carried forward to the balance sheet of £848,396. Out of this they had paid a second interim dividend amounting to £225,000, and recommended a final dividend of 50 per cent., totalling £500,000, making a distribution of £950,000 for the year, and leaving a balance of £123,396. From this amount they were recommending a transfer of £10,000 to the pensions fund, £10,000 to the exploring account, and writing off £9,221, cost of development on Justice's Mine, leaving a carry-forward of £94,175.

FUTURE PROSPECTS

The programme proposed for this year, which the directors believe can be carried out quite comfortably provided there are no unforeseen circumstances beyond their control, should provide profits of over a million pounds, taking gold at the present value of, say, £7 per ounce.

Their investments this year comprised Government securities £252,536, and shares in other companies £575,070. The market value of these shares at September 30, 1936, was £2,085,000, and since then there had been a further appreciation.

The report and accounts were unanimously adopted.

denounced, and the whole question of the commercial relations between the two countries is shortly due to come up for revision, and now that the political considerations are removed from discussion we may surely hope that any differences of opinion may be settled from a purely commercial point of view, and a policy of mutual concession be adopted. After all, the United Kingdom provides a practically free market for over 30 per cent. of India's exports, or more than twice as much as her next best customer, Japan, so that a case would appear to lie for a further modification of the existing import duties into that country, which have had such devastating results in the past. If we realise that the population of Lancashire is 11 per cent. of the country's total and that its textile trade is the largest consumer of raw materials in the country, then I submit any move in this direction would do more than anything else to consolidate and broaden the revival in Lancashire trade which we welcome to-day.

RECORD STEEL PRODUCTIONS

Trade reports from Sheffield, where our bank has important interests, show that the improvement noted last year has been more than maintained. New records of production of steel and steel goods have been established during the year. Much new plant has been installed, and considerable expenditure on extensions and improvements is under consideration, though the problem of a sufficient supply of skilled labour in that industry, as elsewhere, is still acute.

COAL INDUSTRY

With regard to the coal industry, both in South Yorkshire and Lancashire the trade has definitely improved its position during the year. To a considerable extent this is due to the Coal Mines District Scheme set up in every coalfield in the country, whereby the output of coal is regulated and the actual business of selling is controlled. That these schemes have given a much-needed stability to the trade generally is clear, while safeguards, to some extent, of the interests of the consumer have not been overlooked.

From our other main branches in Lancashire we have similar reports of all-round improvement in business, with the exception perhaps of Wigan, where the percentage of unemployed persons still remains, unfortunately, high, though hopes are entertained that the big Government scheme initiated in the neighbourhood will alleviate this position when under way.

FAVOURABLE ENGINEERING OUTLOOK

All branches of engineering situated in and round Manchester have experienced an exceptionally busy year, and with the order books well filled the outlook of the trade here is distinctly favourable.

It is somewhat remarkable in a year when the international position has been so precarious and dangerous incidents of an inflammable nature have arisen so frequently, that this country from a commercial point of view should have proceeded so calmly with its affairs. Under the circumstances Stock Exchange prices for gilt-edged securities have remained remarkably steady, and business men, having accepted the Government's defence programme with all its implications of extra taxation, have trusted their Ministers to steer this country clear of any entanglements abroad, and it is only with the fervent hope that this confidence may be justified that we can look forward without apprehension to the coming year.

TRIBUTE TO STAFF

Before I conclude I should like, on your behalf, to convey to our general manager, Mr Bradburn, the assistant general managers, and the officers and staff of the bank, our best thanks for their efficient services, and to assure them of our keen appreciation of the way in which the work of the bank has been conducted during the year.

The Chairman then moved the adoption of the report and accounts, which was seconded and carried.

The retiring directors, Mr Herbert William Haldane and Mr Alexander Maitland, K.C., were re-elected, the appointment of Mr Ernest Edward Bird to the board was confirmed, and the auditors, Messrs Ashworth Mosley and Company, were re-appointed.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

GENERAL CONSOLIDATED INVESTMENT TRUST LIMITED

INCREASED REVENUE AND DIVIDEND

The forty-first ordinary general meeting of the General Consolidated Investment Trust, Limited, was held, on the 29th ultimo, at 4 Moorgate, London, E.C.

Mr R. B. H. Ottley (the chairman), in the course of his speech, said: Our net income, after payment of debenture interest and all expenses, amounts to £39,254, against £31,890 last year and £24,222 in 1934. Our progress, therefore, over the last three years has been steady, and we must be forgiven a modest feeling of satisfaction, modest because, after all, we cannot but admit that the times have been propitious to companies such as ours which, like sailing ships, are to a large extent subject to the caprice of elements over which their masters have no control. We have successfully weathered one of the stormiest periods in the memory of living man, and we have for some time past been running before a steady trade wind which, indeed, during the last year, has been increasing in strength and we have had, at times, to shorten sail; for, in the uncharted seas of investment, you must always have your ship under control.

You must have, in the Trust's holdings of debentures and fixed interest-bearing stocks, the soundest possible rigging against the day of the low barometer presaging the approach of a tornado and plenty of spare tackle in the sail locker in the shape of reserves to provide for any contingency. There was a famous master of an Australian wool clipper, Captain Forbes of the "Schomberg," who formed the dangerous habit of padlocking the sheets; his ship was lost at sea with all hands. Is there a parallel, I wonder, in the investment world of to-day?

The valuation of our securities at December 31st gives us a total very substantially in excess of the figure standing in the balance sheet, and without, of course, taking into consideration the sum of £102,881, representing the total of our reserve funds and our carry-forward. Moreover, from the point of view of the revenue account, we still have some frozen investments which we feel justified in retaining, but from which we are at present obtaining little or no revenue.

CONFIDENCE IN THE FUTURE

We may, therefore, look with confidence to the future prosperity of our company in so far as our conduct of its business may influence it, but this all connotes a period of comparative immunity from social and economic upheavals of which, I confess, there are no very clear signs. There is evidence of a general rise in commodity prices, and money should become scarcer and dearer. On the other hand, other influences will be at work, and we may perhaps be justified in prognosticating a continuance of cheap money, though possibly not on so generous a scale as in the last few years.

There seems no reason, however, why the good days should not continue awhile, but that the curve of trade activity will, one day, become a declining one is only too certain, and it is the duty of investment trust directors to foresee these inevitable periods, and, in so far as they can, provide against them. It is for that reason, although we have earned 9 per cent. on our ordinary stock for the past year, that we have thought fit to recommend for your acceptance to-day a dividend of 6 per cent., a modest increase over the 5 per cent. paid last year and which we hope will meet with your satisfaction. Shareholders have never suffered by conservative distributions, and it will be the policy of the board to distribute on as generous a scale as possible commensurate with the building up of adequate reserves.

The report was unanimously adopted.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "Economist Newspaper Ltd.,"
8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

CENTRAL AND DISTRICT PROPERTIES, LIMITED

DIFFICULT CONDITIONS—BETTER PROSPECTS

The third ordinary general meeting of Central and District Properties, Limited, was held, on the 29th ultimo, in London.

Mr Horace Boot, M.I.C.E., M.I.Mech.E., M.I.E.E. (the chairman), in the course of his speech, said: The year under review has been a difficult one for property-owning companies, large blocks of flats have been built in and around London so that the supply at present of residential flat accommodation exceeds the demand. This position is considered to be only of a temporary nature as the rate of building new blocks appears to be slowing up.

The resultant profit for the year was £14,848, as compared with £20,102 in 1935, which, however, included £7,881 profit from the sale of a property. I should like to draw your attention to the fact that in accordance with the terms of the company's prospectus it is necessary for a sum to be set aside out of the profits to repay the company's indebtedness to its debenture holders. Last year the amount provided was £2,400, and in the year now under consideration it amounted to £2,508, a total for the two years of £4,908. It will be necessary to provide £1,850 from next year's profits in respect of the redemption of preference shares, and it is in anticipation of this further charge that your directors have adopted a conservative policy in recommending only 4 per cent. dividend on the ordinary shares. While these provisions restrict the dividend that can be paid on the ordinary shares, they enhance every year their value by reducing the prior charges.

From the balance sheet it will be seen that the company's freehold and leasehold properties have cost £962,118, an increase of £35,620 as compared with last year; it will be remembered that last year we had a substantial sum awaiting investment. Towards the latter part of the last financial year we purchased two new properties. One of these properties is a block of shops with residential accommodation at South Harrow. The other is a block of small houses in Welling, Kent.

Your directors believe in the future prospects of the company as an investment for those desiring a good security with a reasonable yield.

The report was unanimously adopted.

BIBIANI (1927) LIMITED

SATISFACTORY DEVELOPMENT

Speaking at the tenth ordinary general meeting, on the 29th ultimo, the chairman, Mr J. H. Batty, said the mine development during the year had been highly satisfactory. Values had been maintained on levels 2, 5 and 6, and good values continued on levels 7, 8 and 9. On No. 9 the present lowest level, the first cross cut No. 14 from the winze, exposed 25 ft. of ore averaging 19 dwt.

It was most encouraging to find the ore body in depth maintaining its strength and values, and they felt justified in taking an optimistic view of the future.

The developments of the mine were so excellent that they must be ready, ultimately, to extend the plant beyond the 30,000 tons. They were increasing the haulage capacity to meet the 30,000 tons, which meant installing new machinery at No. 4 shaft. Everything pointed to the urgency of increasing the haulage capacity and installing the new treatment plant, as there was no doubt that the mine itself was ready to provide the ore required.

He was glad to be able to assure them that all this work was well in hand. For the present the tonnage should be at least 10,000, and they expected that early in the year 11,000 tons should be reached.

During the year, 93,230 tons were treated, which returned 32,120 ounces of fine gold, valued at £225,295. The cost worked out at 25s. 3d. per ton, including 5s. per ton for development. This compared favourably with the cost of the previous year of 30s. 6d. per ton.

The ore reserves had now reached 2,049,300 tons, of an average value of 7.8 dwt., an additional 343,100 tons placing them in a very strong position.

Profit and loss account showed a balance brought forward, at September 30, 1935, of £83,655, and they had to add to this the profit for the year, £81,537, making a total of £165,192. To be deducted from this was the 12½ per cent. dividend paid in February, 1936—£50,000, making a balance of £115,192, out of which the directors now recommended the payment of 15 per cent. for the year ended September 30, 1936. This would absorb £67,500, and leave a balance of £47,692 to be carried forward.

The report was unanimously adopted.

GOVERNMENTS STOCK AND OTHER SECURITIES INVESTMENT COMPANY, LIMITED

The ordinary general meeting of this company was held, on the 29th ultimo, in London.

Viscount St. Davids (the chairman) said:—I want to say something about depreciation as it affects investment trust companies. In this company four years ago we had a depreciation of 36 per cent. To-day there is no depreciation at all, and both the capital and the reserve are intact and there is a substantial balance on the right side.

As to revenue, the results of the past year were arrived at after having forty decreases in revenue and over sixty increases. On balance we have a gain of £3,300. No bonuses or scrip have been taken to revenue.

Foreign bonds and foreign railways did better in the past year. South America also did better. Although very far from doing well, there was an improvement the right way. Then an African company gave us a little jump in our income. We had some pleasant increases from tramway companies and from foreign land companies. We did rather better in rubber and in some miscellaneous companies.

We propose to pay an extra ½ per cent. on our deferred and to add £2,000 to our revenue reserve fund, making that fund £56,000. As it has borne tax, it represents over 12 per cent. on the deferred stock.

I venture to think that this year ought to be a pretty good year for our income. We ought to do much better in our holdings in investment trusts and very much better in rubber. Unless I am very widely mistaken, our income during the present year is going to be better than our income in the past year.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended January 30, 1937, amounted to £24,563,000, against ordinary expenditure of £11,187,000. After allowing for an increase in Exchequer Balances of £299,259, the operations for the week, as shown below, decreased the gross National Debt by £12,853, to approximately £7,986 millions.†

GOLD MARKET

Messrs Samuel Montagu and Company write on February 3, 1937:—
 The Bank of England gold reserve against notes amounted to £313,680,660 on January 27, 1937, as compared with £313,680,659 on January 20th. Most of the gold offered in the open market was secured for New York. About £1,900,000 was sold during the week at prices ruling slightly over dollar parity based on the exchange at the time of fixing. The s.s. "Narkunda," which sailed from Bombay on January 30, 1937, carries gold to the value of about £212,000. The Southern Rhodesian gold output for December, 1936, amounted to 64,106 fine ounces, as compared with 64,377 fine ounces for November, 1936, and 64,762 fine ounces for December, 1935.

SILVER MARKET

During the past week supplies were more freely forthcoming, and as demand was limited, prices showed a downward tendency, quotations on February 3, 1937, being 20½d. for cash and 19½d. for two months' delivery, as compared with 20½d. and 20½d. for the respective deliveries on January 27th. There were considerable resales, which could only be absorbed at lower prices, where support was given by America and speculators, chiefly for covering purposes. Indian demand for prompt shipment was renewed, and this is thought to be due to fears of an increase in the import duty; but there has been little fresh buying for this quarter, purchases being mostly effected against sales to cover forward commitments. No marked recovery is indicated at the moment, and the market may continue to be unsettled until the provisions of the Indian Budget are made known at the end of the month.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce .999 fine
			Cash	Two Months

UNIT TRUST DISTRIBUTIONS

ELECTRICAL INDUSTRIES TRUST.—Income distribution for the second half-year, 3-0d. per unit, making a total of 6-2d. with the distribution of July 31st last. Period covered by the two distributions is forty weeks. Report gives particulars of the trust fund at the end of 1936.

SCOTTISH AND NORTH COUNTRY INVESTMENT FUND.—Half-yearly distribution, 3-20d. per unit, free of tax, payable March 1, 1937 (£3 10s. gross per cent. per annum on initial price of £1).

MISCELLANEOUS

BARROW, HEPBURN AND GALE.—Trading profits for 1936 show a substantial improvement, but no dividend is to be paid on ordinary shares. Last dividend, 3 per cent. for 1933. The preference dividend for half-years to December 31, 1936, will be paid February 23rd.

BORAX CONSOLIDATED.—A dividend of 7½ per cent. is to be paid on deferred ordinary shares, compared with 5 per cent.

BRITISH OXYGEN COMPANY.—The company has acquired the whole of the shares in the Ferro-Arc Welding Company, Ltd., by exchange of shares.

BRITISH SOUTH AFRICA COMPANY ("Chartered").—Dividend 1s. per 15s. share, fully paid, also bonus of 6d. per share for year to September 30, 1936, equal to 10 per cent. for year compared with 6½ per cent.

BURMA CORPORATION.—Interim dividend, 7½ annas, compared with 6 annas payable March 24th, free of Indian and British income taxes. Shareholders on London Register to be paid at rate of 1s. 6d. per rupee (equal to 8½d. per share).

CONSOLIDATED MINES SELECTION.—Dividend 30 per cent., against 27½ per cent.

RIFE COAL.—Final dividend, 7 per cent., making 10 per cent., tax free, compared with 7½ per cent.

FLEMING REID AND COMPANY.—Ordinary dividend 5 per cent., also cash bonus of 10 per cent. payable March 1st, making 20 per cent. for year as before. It is also proposed to distribute one bonus ordinary share for every four held.

GAS LIGHT AND COKE.—Final dividend on ordinary stock at rate of £5 12s. per cent. per annum as before, making £5 12s. per cent. for year—unchanged. Carry forward, £213,177, increased by £10,554.

GREENLEES AND SONS ("EASIEPHIT" FOOTWEAR).—Dividend on ordinary shares 7½ per cent. less tax, against 5 per cent. less tax.

INTERNATIONAL NICKEL.—Dividend 50 cents on common stock, payable March 31, 1937. This is double the payment for first quarter of 1936 and 10 cents more than that for the December quarter.

LAMSON PARAGON SUPPLY.—Cash bonus of 10s. per £1 share.

LONDON ELECTRIC SUPPLY.—Final dividend 4 per cent., payable March 5th, on ordinary shares, making 7 per cent., less tax. It is also proposed to pay a bonus of 1 per cent. as before.

MERCANTILE INVESTMENT AND GENERAL TRUST.—Final dividend 8 per cent., making 11½ per cent., against 10½ per cent.

MEUX'S BREWERY.—Profits £150,790, against £150,388; dividend unchanged at 11 per cent. for year.

O.K. BAZAARS, LTD.—Interim dividend 25 per cent. (South African currency) on "A" ordinary and "B" ordinary shares, compared with an interim dividend of 20 per cent. The 240,000 new "B" ordinary issued in December rank for the final dividend only for year to June 30, 1937.

PUBLIC BENEFIT BOOT.—A dividend of 5 per cent. on deferred capital, the first since the 10 per cent. in respect of 1930.

RONEO, LTD.—Two years' dividend on 6 per cent. cumulative preference shares for 1935 and 1936.

THOMAS TILLING, LTD.—Final dividend 5 per cent., making 10 per cent. for year as before but paid on a capital increased by a capital bonus of 25 per cent. To reserve £50,000, against £101,393. Also to reserve £138,890 being net surplus on sale of certain investments.

WATNEY, COMBE, REID.—Interim dividend 6 per cent. on deferred shares, as before, payable February 19th.

WEMBLEY STADIUM.—Dividend on deferred resumed at 20 per cent.

WEYBURN ENGINEERING.—Final dividend, 15 per cent., making 20 per cent. for first year.

WM. FRANCE FENWICK.—Dividend 5 per cent., against 3 per cent.

SHORTER COMPANY COMMENTS

OTHER COMPANY RESULTS.—Rubber companies continue to show substantial improvement, TAIPING having raised their dividend to 4½ per cent. from 3 per cent., while profits are over £2,000 higher at £11,349. A profit of £64,240 has been achieved by ARISTOC, LTD., whose combined prospectus earnings for 1935 were £62,000. ENGLISH VELVET AND CORD DYERS have made an appreciable recovery with earnings of £23,441 against £4,553, but owing to the maintenance of depreciation at about £20,000 no dividend is paid. Six recent investment trust results include those of BRITISH INVESTMENT TRUST, with net earnings some 6 per cent. higher at £163,624, while comparable improvement, with earnings of £167,481, is shown by SCOTTISH AMERICAN INVESTMENT. STERLING TRUST has increased its net revenue by more than £10,000 to £98,538. Earnings of BRADBURY GREATORIX are practically unchanged at £45,764, although gross profits are slightly lower. There has likewise been little change in the profits of ENGLISH CLAYS LOVERING POCHIN. A small decline in the revenue of OLYMPIA is again shown, but improvements estimated to cost £230,000 are being undertaken to meet increased competition. The week's dividends include the payment of 7½ per cent. against 5 per cent. by BORAX CONSOLIDATED on the increased deferred ordinary capital, and the maintenance of an 11 per cent. dividend by MEUX'S BREWERY, whose preliminary statement shows practically unchanged profits of £150,790.

INSURANCE RESULTS

THE NATIONAL MUTUAL LIFE ASSURANCE SOCIETY.—Bonus distributions for the years 1935 and 1936 on the same scale as at the previous distribution, viz.: Fully-participating policies—Whole-life assurances, 52s. 6d. per cent. per annum compound; endowment assurances 45s. per cent. per annum compound. These rates include a special distribution of 10s. per cent. per annum and 7s. 6d. per cent. per annum, respectively. Low-premium participating policies—17s. 6d. per cent. per annum compound (including special distribution of 2s. 6d. per cent. per annum).

NATIONAL PROVIDENT INSTITUTION (New Bonus Rates).—Bonus rates on full profit policies at triennial valuation, December 31, 1936. Whole life assurances: £3 per cent., gradually increasing to as much as £5 per cent. and upwards. Endowment assurances: Duration up to 18 years, £2 3s. per cent., increasing to £2 13s. per cent.; duration 21 years and over, £2 13s. per cent., increasing to £3 3s. per cent. Additional bonus payable only on maturity by survival, 5s. per cent. Balance carried forward £389,378, after providing for these bonuses.

CANADA LIFE ASSURANCE COMPANY.—Net new business of Canada Life Assurance Company in 1936, £9,648,974, an increase of £839,178 over the 1935 figures.

PROVIDENT MUTUAL LIFE ASSURANCE ASSOCIATION.—The balance of income for 1936, £677,626. Life assurance fund, end 1936, £10,504,163. Life assurance premiums, £1,081,484, an increase of £74,098. Claims by death, £193,252, against £153,354. Claims by survival, £480,800, against £463,750. Net new sums assured, £2,661,632, against £2,272,415 for 1935.

BUILDING SOCIETIES

LEEDS AND HOLBECK BUILDING SOCIETY.—Report for 1936 shows total assets increased by record figure of £603,728 to £3,634,605. Over one million pounds advanced on mortgage, actual amount being £1,086,327, an increase of £269,205. Mortgage assets, £3,430,383.

WESTBOURNE PARK PERMANENT BUILDING SOCIETY.—Report for 1936. Shares total £10,112,262. Deposits, £1,707,514. Dividend for 1936 on investment shares, £3 10s. per cent., free of tax. Total assets on 21,815 mortgages, £12,210,144. To Reserve Fund No. 1, £95,000, making it £750,000. To Reserve Fund No. 2, £14,472.

BANKS

SWISS BANK CORPORATION.—Net profit for 1936, 8,242,828 Swiss francs, which compares with 7,116,142 Swiss francs for 1935. Dividend increased from 4½ per cent. to 5 per cent., and 1,298,913 Swiss francs carried forward, against 1,056,085 Swiss francs brought in. Cash

stands at 310,665,161 Swiss francs, against 107,746,054 Swiss francs at end of 1935. Debtors, 491,539,165 Swiss francs, against 540,753,187 Swiss francs. Current accounts, 653,982,923 Swiss francs, against 343,258,207 Swiss francs.

APPOINTMENTS AND PERSONAL

The Bank of New South Wales announces that the Royal Victorian Institute of Architects has awarded the Victoria Street Architecture medal for 1936 to the bank's Melbourne premises.

Major H. R. Kerr, M.C., M.Inst.M.M., has been elected a director of Kassala (Sudan) Gold Mines.

Mr H. C. H. Graves has been appointed chairman of Vitamins, Ltd., in succession to the late Viscount Fielding.

Mr Andrew Williamson has retired from the chairmanship of Australian Estates Company, Ltd. Sir Frederick W. Young has been appointed chairman. Mr Williamson retains his seat on the board.

Mr Francis Alexander Johnston is relinquishing his position as a deputy chairman of National Provincial Bank, Ltd. He will retain his seat on the board. Captain Evan Cadogan Eric Smith, M.C. has been elected in the place of Mr F. A. Johnston.

The British Bankers' Association have appointed Mr Edwin Fisher as a member of the Council of Foreign Bondholders, London, in place of Mr Favill Tuke, resigned, and Mr Colin F. Campbell in place of the late Mr R. Hugh Tennant.

Mr A. G. Robertson has been appointed a director of Alpha Cement, Ltd.

Mr Charles George Dobson has been appointed director of Hall and Company, Ltd., from April 1, 1937.

Sir James Williamson has been appointed secretary of the Rohilkund and Kumaon Railway Company, Ltd., also managing director of the Bengal and North-Western Railway Company, Ltd., in place of Lt.-Col. W. R. Izat, D.S.O., R.E., who retains his seat on the board.

The Dominion Bank announces Maj.-Gen. D. M. Hogarth, C.M.G., D.S.O., has been elected a member of the board.

Mr P. M. Rosedale has resigned his position as chairman of the Yorkshire Traction Company, Ltd., but retains his seat on the board. Mr J. S. Wills has been elected chairman.

Mr P. M. Rosedale has resigned his position as chairman of the Yorkshire Woollen District Transport Company, Ltd., but retains his seat on the board. Mr W. S. Wreathall has been elected chairman, and Mr J. S. Wills deputy-chairman.

Mr J. S. Wills has been elected chairman of Hebble Motor Services, Ltd., in succession to Mr P. M. Rosedale, who has

ARGENTINE TRANSANDINE RAILWAY COMPANY, LTD.—The Argentine Government is to reconstruct part of the Argentine Transandine Railway destroyed in the flood of January, 1934. This involves the taking control of the line and the arrangement of terms for its acquisition. The Government will seek the advice of the National Railway Board, and holders will be advised by circular of further definite details.

WEST RAND INVESTMENT TRUST, LTD.—The Trust is to take over from Dr Hans Merensky an option granted by Wit Extensions, Ltd., and the Northern Free State Exploration Company, Ltd., on mineral options over approximately 165 square miles in the vicinity of Odendaalsrust, Orange Free State.

† Free of income tax. (s) Includes special bonus of 1 per cent., paid free of income tax. (t) Paid on 100 Founders' shares of £10 each.
(a) No comparable figure.

The position in the pig iron market has changed but little since the opening of the year; and business is limited by the small quantities which makers have for sale after meeting their contract commitments. Most works have orders in hand for delivery over several months, and there is little iron available to meet the supplementary orders which continue to reach the market.

The immediate outlook for large quantities of lead is not bright. Sales of lead on the London Metal Exchange: 1,050 tons on Monday, against 1,750 last week; 1,450 tons on Tuesday, against 1,300 tons last week; 2,700 tons on Wednesday, against 1,200 tons last week. The New York quotation on Wednesday was 6-00 cents per lb., against 6-00 cents a week ago and 6-00 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £27 7s. 6d. per ton, compared with £27 5s. a week ago.

Sales of spelter on the London Metal Exchange: 1,275 tons on Monday, against 1,100 tons last week; 650 tons on Tuesday, against 1,300 tons last week; 2,650 tons on Wednesday, against 1,700 tons last week. Wednesday's quotation in East St. Louis was 6.00 cents per lb., against 6.00 cents the week before and 5.45 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £21 16s. 3d. per ton, against £21 16s. 3d. last week.

TIN.—In consequence of better news from America, the cash quotation rose £1 15s. and the forward quotation £2 on the week. There has been some American buying in London, but only on a small scale. European consumers are also buying on a moderate scale only. On the other hand, supplies are more firmly held. According to A. Strauss and Company, Ltd., the world's visible supply of tin increased during January by 1,562 tons to 23,396 tons, but this was almost entirely due to the rise of 1,446 tons (to 3,568 tons) in the Straits carry-over. New supplies were 342 tons lower at 11,548 tons, while deliveries advanced by 1,060 tons to 11,432 tons. No less than 720 tons of the latter increase fell to the share of the United States, where deliveries reached the high total of 7,650 tons during January. Part of the increase in United States deliveries was, of course, due to the ending of the U.S. shipping strike. It is to be expected that deliveries will decline somewhat during February; while the recent trend of production points to a slight increase in new supplies. Stocks will thus almost certainly show another increase this month, a fact which might induce the International Committee to reduce the quota for the second quarter at its meeting to be held on March 5th.

Sales of tin on the London Metal Exchange: 350 tons on Monday, against 260 tons last week; 300 tons on Tuesday, against 200 tons last week; 370 tons on Wednesday, against 315 tons last week. The New York quotation on Wednesday was 51 cents per lb., against 50.10 cents a week ago and 51.00 cents a month ago. Wednesday's official closing quotation in London for standard cash was £228 15s. to £229 per ton, compared with £227 to £227 5s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 1,702 tons, an increase of 311 tons on the week.

PLATINUM.—As was to be expected, the price of platinum has been raised further this week. On February 2nd, an increase of £2 5s. to £14 per ounce took place, which followed the New York increase from \$58 to \$68 on Monday. The basic position of the market has not changed since last week, and the forecast of price movements still holds good. Meanwhile, the Dominion Bureau of Statistics at Ottawa has published its preliminary figure for Canadian platinum production in 1936. It is 233,652 ounces, as compared with 190,166 ounces in the preceding year. The 1936 output represents the highest in the history of the Canadian platinum industry.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £14 6s. per flask of 76 lbs., against £14 6s. a week ago. Chinese antimony was quoted at £67 per ton ex warehouse, as against £65 per ton last week. Chinese wolfram for "February-March" shipment was quoted at 34s. 3d. to 34s. 9d. per unit, c.i.f., compared with 34s. to 35s. for January-February last week. Refined platinum was firmly held at £14 per ounce, against £11 15s. last week.

TEXTILES

COTTON.—Manchester.—The market has been firm during the past week. Prices have again gone against buyers, chiefly owing to the further advance in American yarns. In some quarters the higher rates have checked business, and delivery difficulties are increasing.

Prices for American cotton, after being raised to a new high level for this season, have eased slightly. The heavy fixing by spinners in Liverpool to cover yarn sales has revealed a shortage of contracts. There has been further evidence of an increasing consumption in the United States and trade activity in Lancashire has attracted more attention. The opinion is held that only a limited amount of loan cotton will be released by the Washington Government.

At the beginning of this week American yarn prices were raised by the Committees controlling the price agreements. This decision was announced at the end of last week, and resulted in heavy buying. The scarcity of ring qualities has become more pronounced than ever. The improved offtake in Egyptian numbers has been maintained.

Cloth inquiry has continued on a large scale. Rather varied reports have been circulated as to the sales for India, but free operations have occurred in several directions, and makers have been able to extend their order lists. Contracts have been put through in dhooties, which will not be completed until the beginning of next year. Healthy buying has taken place for Java, the Straits Settlements, Egypt, South America, the Continent, the Dominions and the Crown Colonies. Many buyers have operated owing to the probability of still higher prices. Home trade purchases have been encouraging in both standard makes and fancies.

The trade as a whole is in a healthier position than at any time since the post-war boom of 1919-20. The strongest sections are coarse American yarns and wide cloths.

COTTON OPERATIVES' WAGES.—A few weeks ago operative weavers and operative spinners in the Lancashire cotton industry secured an increase in wages, and the employers in the manufacturing section are now considering an application from the workpeople in sections which are not covered by the organisations already dealt with. It is estimated that between 40,000 and 50,000 operatives, comprising beamers, twisters, drawers, warp dressers, chain beamers, overlookers and tape sizers have

claimed a general advance of 15 per cent. on current earnings, with a minimum wage of 7 d. an hour for certain classes of weavers. A joint meeting with the employers was held in Manchester on Tuesday last, and it was announced at the close that the Manufacturers' Association is taking a census of the actual earnings of the operatives affected and the forms are not returnable until February 5th. After the returns are analysed, they will be considered by the Wages Sub-Committee of the employers. It is understood, therefore, that it will be two or three weeks before the Association can give a definite reply to the trade unions. It is taken for granted that an advance in wages will be given, but the rates may vary in the different sections.

WOOL.—Bradford.—The results of the recent London Sales may be considered satisfactory, although merinos reverted more or less to the quotations ruling last December. The closing days found Russia still in the market as a liberal buyer, many qualities showing a considerable advance. Altogether 94,500 bales were sold, the home trade being credited with taking 47,000 bales, the Continent 45,500 bales, and America 2,000 bales; 11,500 bales were carried forward to the next series, which begin on March 2nd.

Attention is now focused on overseas markets. High prices were paid at the two Tasmanian sales last week, and for fine wool at Geelong, Melbourne and Sydney. A little irregularity developed at most of the Australian selling centres towards the end of last month because of the reduction of Japanese competition. However, cables from Sydney this week clearly indicate a return of Japanese competition, with very firm and slightly higher prices for good combing merinos. It now seems as if the balance of the Australian clip will be sold freely at current prices. Sales in New Zealand are also satisfactory, and firm prices are still ruling for all descriptions of crossbreds. The home trade is seizing the opportunity to lay in stocks of these, the free purchases of Bradford topmakers in particular being a feature.

Markets in Yorkshire are not as active as during recent months, and it is rather difficult to sell merino tops 2d. below the prices ruling a month ago. Mills are not experiencing as much pressure for delivery of tops, yarns or pieces as two months ago, but most factories continue to run full time. Firm wool prices, however, will tend to stimulate sales.

GRAIN MARKETS

WHEAT.—Despite a recovery on markets in North America, prices in this country have been barely steady. Increasing selling pressure and absence of buying interest were responsible for easier markets in the early part of the period under review, but a better tone was evident later.

On Wednesday last, "May" futures were quoted in Chicago at 131½ cents per bushel, against 126½ cents the week before and 131½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 49s. 9d. per 496 lbs., against 49s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 48s. 6d., against 48s. 9d. a week ago. According to *The Corn Trade News*, total shipments of wheat and flour last week totalled 1,853,000 quarters, against 2,209,000 quarters in the previous week and 1,007,000 quarters in the corresponding week a year ago.

FLOUR.—After another quiet week, prices are again lower. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 38s. 6d. per 280 lbs., against 39s. 6d. a week ago; delivered inner London, 38s., as compared with 39s. a week ago. Manitoba patents, ex store, 37s. 6d. to 39s., against 37s. to 38s. 6d. a week ago. Australian, ex store, 32s., against 33s. last week.

BARLEY.—The market in imported feeding barley remains quiet, while prices of English descriptions are rather lower. "May" futures were quoted at 81½ cents per bushel in Winnipeg on Wednesday, against 80½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed," at farm, 34s. to 36s., as against 36s. a week ago; "English malting," at farm, 36s. to 45s., against 38s. to 50s. last week; Californian (new), ex ship, 51s. to 60s., against 51s. to 60s. last week; Chilean, brewing (new), ex ship, 44s. 9d. to 50s., against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "May" futures were quoted at 50½ cents a bushel in Chicago, against 49½ cents a week ago and 52½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 24s. to 26s. per 336 lbs., against 25s. to 27s. a week ago; "English White," at farm, 24s. to 26s., against 25s. to 27s. a week ago; mixed Canadian feed (Vancouver), landed, 23s. per 320 lbs., compared with 23s. 9d. last week.

MAIZE.—Prices are a shade easier. "May" futures were quoted on Wednesday at 105½ cents per bushel in Chicago, against 106½ cents a week ago and 105 cents last month. Quotations in London, Wednesday: "Plate," landed, 24s. per 480 lbs., compared with 24s. 6d. a week ago; "Plate," ex ship, 23s., as against 23s. 6d. a week ago; "Plate," "February," 23s. 9d., as against 23s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at £6 7s. 6d. to £6 10s. per ton, as against £6 10s. to £6 12s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Feb. 5, 1936	Dec. 30, 1936	Jan. 27, 1937	Feb. 3, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82½	84½	86½	129	119½	124½
Chicago (No. 2, Winter) —Cents per 60 lb.	98½	101½	99½	135½	126½	131½

The visible supply of wheat in Canada amounts to 54,212,000 bushels, against 56,288,000 bushels last week, and 128,723,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933-34 to 1936-37:—

	1933-1934	1934-1935	1935-1936	1936-1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to January 30.....	316,749	372,132	395,287	274,403
22 weeks to January 30.....	6,825,632	8,508,107	8,576,754	6,509,480
Average price of English wheat per cwt.	s. d. 4 5	s. d. 4 9	s. d. 6 5	s. d. 9 8

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
January 28, 1933.....	Cwts. 263,230	Cwts. 190,480	Cwts. 43,880	s. d. 5 4	s. d. 7 1	s. d. 5 11
January 27, 1934.....	316,749	219,016	40,429	4 5	9 6	6 1
February 2, 1935.....	372,132	239,090	62,979	4 9	8 2	7 0
February 1, 1936.....	395,287	225,874	69,043	6 5	8 0	6 1
January 23, 1937.....	343,038	382,587	69,672	9 11	10 3	8 5
January 30, 1937.....	274,403	273,392	86,271	9 8	10 2	8 5

OTHER FOODS

BACON.—After last week's reduction in the official prices, demand has improved this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English: 86s. to 90s.; Canadian, 77s.; Danish, 86s., against 90s. to 94s., 80s. and 90s. last week. Arrivals in London last week included Danish, 14,771 bales; Canadian, 7,530; Dutch, 2,197; Lithuanian, 1,268; and Polish, 2,840, as against 12,118, 7,385, 2,302, 748 and 2,049 bales, respectively, in the previous week.

BUTTER.—Prices of Colonial butter are again lower. Heavy supplies and a substantial increase in cold storage holdings have had a depressing effect on the market. Danish, however, is again dearer. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 86s.; Australian, choicest salted, 86s.; Danish, 120s.; compared with 89s., 88s. to 89s. and 116s., respectively, a week ago.

CHEESE.—The market has been fairly steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 86s. to 88s.; Canadian, finest coloured, 71s. to 72s.; and New Zealand, finest coloured, 50s. 6d.; against 86s. to 88s., 71s. to 72s. and 51s. respectively, a week ago.

COCOA.—After a week of heavy transactions and wide price fluctuations, cocoa closed on Wednesday substantially lower on the week. The spot quotation in New York on Wednesday was 10½ cents per lb., as against 11½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, February-April, was quoted at 48s. to 48s. 6d. per 50 kilos, c.i.f. Continent, against 52s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 11,895 bags; delivered, for home consumption, 4,349 bags; exported, 25 bags; stocks, 132,321 bags, against 126,602 bags a year ago.

COFFEE.—The London spot market has been quietly steady. The market in New York has been steady, with prices unchanged. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week and 8½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 325 cwt.; delivered, for home consumption, 64 cwt.; exports, nil; stocks, 8,453 cwt., against 12,366 a year ago; Central and other South American, landed, 3,324 cwt.; delivered, for home consumption, 1,938 cwt.; exported, 1,280 cwt.; stocks, 58,437 cwt., against 60,428 last year. Other kinds: landed, 11,585 cwt.; delivered, for home consumption, 5,244 cwt.; exported, 1,724 cwt.; stocks, 108,018 cwt., against 136,771 last year.

EGGS.—Prices have shown further improvement under the influence of a better demand. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 12s. 9d. to 13s. 6d. per 120, as against 12s. 6d. to 13s. last week; while Danish (15½ lb.) made 9s. 6d. to 10s., as against 9s. 3d. to 9s. 9d. last week.

FRUIT.—Business at Covent Garden, says *The Fruitgrower*, is moderately good, most lines moving steadily. A spell of bright weather would improve the tone. Ample supplies of apples are available, and prices remain moderate. Oranges are plentiful and easier, but lemons remain firm, and are improving in quality. Grapefruit are in shorter supply, but remain about unchanged in price. A few English Conference pears are still on the market. Hothouse grapes are at present a limited item, and rather dearer, but consignments from the Cape are now due. South African fruit generally has been coming in for more attention this week.

MEAT.—There was a steady demand for fresh meat at Smithfield this week. Demand, however, was not so good for chilled beef, while mutton and lamb were slow items. On Wednesday last, Argentine chilled hind-quarters were quoted at 4s. to 4s. 4d. per 8 lbs., as compared with 4s. 2d. to 4s. 6d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 10,042 tons, an increase of 1,396 tons on the corresponding week last year. Beef and veal accounted for 8,145 tons, mutton and lamb 2,775 tons, and pork and bacon 1,195 tons, as compared with 4,632, 2,336 and 1,028 tons, respectively, in the same week of 1935.

PEPPER.—On Wednesday, Singapore white Muntok, spot, was quoted at 6d. per lb. in bond, against 6d. per lb. a week earlier. Black Lampung, spot, in bond, was quoted at 3½d. per lb., sellers, compared with 3½d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 5 tons; delivered, 15 tons; stocks, 1,792 against 1,594 last year. White, landed, 62 tons; delivered, 63; stocks, 11,753 compared with 13,251 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 10s. 3d. per cwt. a week ago. February-March in singles to Continent and U.K., was quoted at 9s. 6d. per cwt., against 9s. 6d. last week. Movements in London last week were as follows: Landed, 43 tons; delivered, 151; stocks, 1,183 tons, against 3,801 a year ago.

SUGAR.—The markets have been quiet and easier generally. The spot price in New York on Wednesday was 3.65 cents per lb., as compared with 3.75 cents per lb. last week and 3.95 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "March" delivery at 6s. 0½d. to 6s. 0½d., against 6s. 0½d. to 6s. 1½d. a week ago. Statistics of raw sugar in public warehouses in London and Liverpool for the week ended January 23rd were as follows:—Imports, 9,585 tons, against 44,171 in the previous week and 14,816 in the same week of 1936; deliveries, 15,373 tons, against 15,574 and 15,836 tons respectively; stocks, 263,556 tons, against 269,344 and 268,147 tons, respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Jan. 30, 1936	d. 12-94	d. 12-51	d. 13-62	d. 10-53	d. 10-29	d. 11-77	d. 12-84
Dec. 10, "	12-55	12-54	14-51	11-47	10-30	11-58	12-92
Dec. 17, "	12-54	12-58	14-67	11-21	10-35	12-14	12-97
Jan. 7, 1937	12-82	12-66	15-14	11-87	10-64	12-12	13-31
Jan. 14, "	13-12	12-95	15-42	11-75	10-71	12-21	13-53
Jan. 21, "	13-47	13-26	15-58	12-41	11-08	12-31	13-83
Jan. 28, "	13-77	12-49	15-92	12-60	11-42	12-69	14-18

The quantities catalogued for this week's public auctions comprised 51,745 packages of Indian and 19,488 packages of Ceylon tea. After a quiet spell on Monday, during which medium and common sorts lost some ground, prices for Indian sorts firmed up on Wednesday. The tone of Tuesday's market in Ceylon descriptions was generally quieter than of late.

VEGETABLES.—At Covent Garden this week, according to *The Fruitgrower*, asparagus has eased in price on heavier arrivals. Sprouts and carrots are firmer, but cauliflowers have declined in price. House grown beans are steady, but mushrooms do not clear so well. Canary tomatoes are dearer on shorter supplies. The recent fall in the temperature improved the demand for potatoes, but this has been a purely temporary phenomenon. Meanwhile, supplies remain ample, and prices show little alteration at London markets. At the Borough on Tuesday, best siltland King Edward again made from 9s. to 9s. 6d. per cwt. ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—The market remains quiet but steadier. Buyers are very reserved and, with ample supplies assured, do not appear to be inclined to enter the market at present. The new Argentine linseed is now arriving in this country in considerable volume, thus removing the scarcity in the mills and enabling production of oil and cakes to return to normal. The premium over shipment has thus all disappeared. Large quantities of the new seed have been arriving at River Plate ports for shipment, and in the first four weeks of this year 217,000 tons was exported against 150,000 tons a year ago. The greater proportion is destined for Europe, though larger quantities are being shipped to the United States. The quantity afloat for Europe is now 191,500 tons or 4,000 tons less than in the previous week, while that on passage to America and Canada is 103,500 tons, against 38,300 tons a year ago. The harvest in Argentina is practically completed, and the yield is stated to come up to expectations. Very little linseed is being shipped from India, whose exportable surplus of old crop is put at 20,000 tons. Egyptian cottonseed is weak and lower in the absence of demand.

Most vegetable oils have declined in the past few days. Linseed oil, however, is steady at the lower level, and for February-April delivery ex Hull is quoted at £26 5s. Crude cotton oil is easier, and is offered at £29 per ton ex Hull. Palm kernel oil has further receded, and is now £6 per ton below the highest asked six weeks ago. Demand for oilcakes continues satisfactory.

FURS.—The winter series of fur auctions opened in London on Monday with the Hudson's Bay sale. Supplies were considerably above recent levels, but, on the other hand, demand was good. Besides home buyers, there is a large attendance from the United States, while European support is excellent. Italy is represented for the first time since the imposition of "sanctions," while Leipzig merchants are more numerous and their exchange permits larger than of late. Spain is the only foreign European country not participating. Competition has been active. Compared with the October sales, beaver were dearer by almost 40 per cent., while otter, which have recently been neglected, rose by 10 per cent. Following a spectacular rise at the previous sales, musquash advanced by a further 5 per cent., and fisher were some 20 per cent. higher than in October.

RUBBER.—After a quiet week, with narrow price fluctuations, the market closed on Wednesday with the forward quotation rather lower, and the spot price unchanged on the week. Meanwhile, the strike situation in the United States shows little change; United Kingdom rubber stocks continue their downward trend. The spot price in New York on Wednesday was 20½ cents per lb., compared with 20½ cents per lb. a week ago and 21½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 10½d. per lb., as against 10½d. on the corresponding day last week. In forward positions, business 10½d. a week ago, to 10½d. for March shipment, as against 10½d. to 10½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 71,031 tons, against 73,059 tons a week earlier. A year ago stocks amounted to 182,032 tons.

BARCLAYS BANK LIMITED

HEAD OFFICE: 54, Lombard St., London, E.C.3
and over 2,000 Branches in England and Wales

TRUSTEE DEPARTMENT

CHIEF OFFICE: 37, King William St., London, E.C.4

The Bank has power to act as EXECUTOR and TRUSTEE under Wills and Settlements, and as Trustee for Debenture Holders. A Pamphlet stating terms and conditions for transacting business may be obtained from the Manager of the Trustee Department, or from the Manager of any Branch of the Bank.

AGENTS IN CANADA:
BARCLAYS TRUST COMPANY OF CANADA

NOTES OF THE WEEK

The arguments for doing this, which are, of course, the same as those which we urged last month against any defence loan at all—fall into two categories. First, economic authority in this country is opposed to borrowing because our economy is fast approaching, if it has not already reached, the boom stage, at which capital expenditure out of borrowed money is positively dangerous. The economists would agree that, in the next two years, the need is for higher taxation and lower loans, in order to brake the otherwise dangerous velocity which our business activity threatens to attain. The second reason is psychological. A defence loan, or series of such loans, makes the public think they are really getting armaments for nothing, or for no current effort. They consume the borrowed capital in the borrowing period—which heightens the *tempo* of business—and leave it to posterity to pay. Moreover, the effect of this bad example is a fact of political importance in an already frantic world. True, some other countries have adopted those expedients already. But we possess to-day the current taxable capacity which they have jettisoned; and for many a long year Great Britain has set a standard in such matters which has helped to make more difficult the rake's progress in finance. If rearmament is to be regarded as legitimate capital expenditure in the home of financial orthodoxy, it is

only to be expected that throughout the world the nations will succumb more light-heartedly to the temptation to borrow for the strengthening of their defences. And this in its turn means that the armaments race will undoubtedly be accelerated.

But perhaps the first effect of MR CHAMBERLAIN'S announcement will be to bring the country face to face with the stupendous scale of the preparations on which we are now embarked. In spite of the CHANCELLOR'S insistence that his figure is a maximum, he presumably would not have named it unless he had reason to think that the sum he may require is of this order of magnitude. But we have already increased our expenditure on armaments out of current revenue by something like £80 millions compared with the peaceful times of four years ago, and there is no reason to doubt that this expenditure out of the Budget will still further increase. This means that by the end of a further five years the exceptional expenditure on armaments (i.e. the excess over our normal £110 millions a year) will amount to some £500 millions out of revenue and £400 millions out of loans. We shall then have added to our normal expenditure more than four times the cost of the Boer War—and that before ever a shot is fired. Well may the world now pause and ask once more what will be the end of this universal madness.

The Cabinet and Germany

DAME RUMOUR was last week enlisted in the cause of German propaganda. Following HERR HITLER'S speech a German newspaper gave currency to the rumour—which was echoed in the whispering galleries of Westminster—that the British Cabinet was sharply divided in its attitude towards Germany. MR EDEN'S response towards Nazi advances was not sufficiently friendly for the taste of the majority; his trip to the Riviera was in reality a political, not a health, vacation: and the gentle LORD HALIFAX would first receive the redoubtable HERR VON RIBBENTROP.

Later gossip gave a more elaborate version. In June MR BALDWIN is to retire; MR EDEN (who is eminently MR BALDWIN'S young man) is to disappear with his leader; MR NEVILLE CHAMBERLAIN is to step into MR BALDWIN'S shoes; and MR EDEN'S place is to be filled by somebody who will be willing to carry out a more pro-German foreign policy. This at present unknown soldier will not only have to be amenable to the will of the new British Prime Minister; he must also be *persona grata* to the present Nazi rulers of Germany.

Now whatever credence may be given to these obviously prejudiced suggestions, one point of substance lies behind them all: namely, that the Cabinet is at this moment faced with the necessity of determining its attitude towards Germany. What are the aims an Anglo-German understanding would have to reconcile?

The first of them is to force France to renounce her present treaties with Czechoslovakia and Russia; and although any German pressure in this direction merely has the effect of tightening the bonds which Germany wants to prise asunder, it is hoped in Berlin that British pressure on France might prove most effective for the purpose. The new Foreign Secretary, so the theory runs, would tell M. BLUM that France cannot keep her alliance with Russia without forfeiting Great Britain's support, and that the time has now come for France to make her choice.

The fulfilment of this first German desire would open the way for the presentation of another. This would be that France and Great Britain should in effect repudiate their obligations under the Covenant of the League

towards all their fellow States-Members that have committed the offence of being situated on the far side of Germany's and Italy's eastern frontiers. This next step would follow of itself; for the Franco-Czech and Franco-Russian pacts are like the girders, wires and rods in reinforced concrete. When they have been wrenched out, the concrete can easily be pounded into the dust and ashes from which it was originally made.

What will Germany demand beyond that? She will hardly be willing to forgo her claims to the restitution of the colonies that were taken from her in the last war. This, as HERR HITLER has now declared more than once, is a point of principle and of honour for the Third Reich. Perhaps, however, in the above circumstances HERR HITLER will be willing to accept a token payment on account—the restoration, say, of Togoland pending the eventual creation of Germany's *Mittelafrika*.

If these are the German terms, the British public, rubbing its eyes, may well ask what this country is going to get out of it. The answer is that, in return for Britain's concession of Germany's demands, Germany would grant Britain the privilege which the Cyclops bestowed upon Odysseus when the hero, and others who had been in the same boat, found themselves prisoners in the cannibal giant's cave. "I will eat you," said the Cyclops to Odysseus, "the last of the batch." As we know from Homer, this did not satisfy Odysseus; and he quietly took measures to save his companions' lives and his own. This country, peace-loving though it be, does not find such an offer more attractive. "I will eat you last" is a boon scarcely worth all the concessions which this programme requires us to make to the Nazis in exchange for a year or two of grace.

How does this prospective Anglo-German deal look from a German angle of vision? If HERR VON RIBBENTROP could persuade the British Government to walk into the German giant's cave, the FÜHRER would, indeed, have good reason to be satisfied with his emissary. For the Germans know that, if once they can induce the British to make a bargain on these terms, then Germany has virtually won the world-power game.

The gist of the plan is clear. If Britain succeeds

in forcing France to leave Germany a free hand in the East, then Germany will build the whole of Central and Eastern Europe—at least as far East as Finland and Roumania, and perhaps even as far as "the Ukraine and the Urals"—into an immense, compact, highly organised German dominion. The resources of this Greater Germany will be of the same order as those of the United States; and when they have been converted, at Germany's leisure, into air-power on Germany's Western frontier, this German power will completely overshadow the power of France, Britain and the Low Countries put together. These four little countries in Western Europe will, however, still be holding, between them, the lion's share of Europe's colonial dominions. Germany will then be able to take some. A large packet of colonies will find its way into the German lion's mouth; the Cameroons and Tanganyika will have been reconquered in the Sudetenland and in the Donetz Basin—and not only they, but also perhaps Morocco, the Congo, Nigeria and Netherlands India.

If DAME RUMOUR last week-end sought to persuade us that any British Government would fall in with such grandiose ideas as these, she was indeed a lying jade. These may be the dreams of Nazi enthusiasts, but Germany's spokesmen know that there are limits beyond which British complacency cannot be pushed. In the event, it appears that HERR VON RIBBENTROP, in his interview with LORD HALIFAX on Thursday, did not raise the colonial claims of Germany at all, and only urged that the Franco-Soviet Pact or its Protocol should be so amended as to make it clear that they are not aimed at Germany. True, these documents can be read as providing for the encirclement of Germany; but only if Germany commits aggression. Indeed, they

actually state that the Pact is open to other Powers to join; and the Protocol expressly records the desire of France, Russia, Czechoslovakia, and other Eastern States, to conclude a general security pact including Germany. Germany will not agree to join a pact which includes Russia; but it may well be that HERR VON RIBBENTROP'S instructions are now to revert to the position before the ratification of the Franco-Soviet and Czecho-Soviet Pacts, and to renew attempts to rob them of the sting which they naturally caused to Germany. The parties to them would certainly guarantee that they are not aimed at Germany of malice aforethought; but no guarantee can be given that they will never be implemented against a Germany on the warpath.

If Germany is looking for peace along these lines the prospect is not unpromising; but if either in form or in substance she is seeking freedom to pursue her greater ambitions towards the East she will be making a demand that has been steadily rejected by British statesmen. During the past two and a half centuries even the extremest isolationists in Downing Street have never dreamt of disinteresting themselves in the European balance of power. Again and again, down to 1914 inclusive, they have actually gone to war in order to prevent some Continental Power from doing precisely what the Third Reich would like to do with British acquiescence. But it has happened far more often that British statesmanship has saved both Britain and Europe from a danger of war and tyranny by taking the lead in maintaining the concert of Europe. Thereby it has often induced ambitious Powers to renounce a resort to the *ultima ratio regum*. To play this rôle and take these risks in Europe remains the condition of England's greatness—and of her security.

The British Film Industry—II

British Film Finance

IN an initial article on the economics of the film industry, we showed that fixed prices for any class of film, at any given theatre, were non-existent; that in every case the skill of the renter (i.e. the distributor) was exerted to raise, and the skill of the exhibitor to reduce, the price demanded. There are, however, important conditions which modify this state of affairs, and these we now propose to examine. The dominant purpose of every film renter—as of every other trader—is to obtain the maximum return on the total product he has to sell. But in the film trade what is being sold is not a tangible commodity, but an abstract right—the right to show a particular film in a specified cinema for a definite number of days. The only variable in the transaction is the cash price, and here the renter has many more considerations to take into account than the exhibitor, whose outlook is confined to his own cinema, his patrons and his probable revenues. The renter must think imperially, or at least nationally. He knows that his maximum return for the whole of Great Britain is the sum of the separate returns from each of the areas into which the country is divided. He may secure this maximum return by selling to a single cinema, to a combination of two or three cinemas, or to a larger grouping. In some instances, one cinema in a town may draw as much as £2,000 a week, while the next half-dozen average only £400 each. It will obviously be more remunerative to sell a picture to the first house for 50 per cent. of net box-office receipts rather than to three or four of the others at 40 per cent. But if the smaller theatres can be induced to select and exhibit three times as many pictures as the larger theatre for a period, say, of three to six months, the contract will be placed

with the smaller theatres; for their territory will yield over £1,400 against £1,000. This example explains why, for example, in some areas important films may be consistently exhibited at secondary cinemas and inferior films at the larger houses.

Another consideration which weighs heavily with the renter is that of cinema circuits. More than 20 per cent. of the cinemas in Great Britain are owned by six or seven companies. The leading group owns over 330 cinemas and the second nearly 250. These circuits cannot all show the same films, either at the same time or even at different times. But their purchasing power is so great that they can generally negotiate for any important picture before any lesser group or any individual theatre. Their power is such, moreover, that they are able to secure films at a lower price than the aggregate of all their competitors.

The renter is able to bring further pressure to bear on the exhibitor through his trade organisation—the Kinematograph Renters' Society. The members of this Society control more than 98 per cent. of the entire available film supply. Exhibitors who fall into arrears with their payments may find themselves deprived of their supplies of film. This threat is so drastic that the exhibitor is compelled to be an exceptionally honest debtor, and the renters' bad debts are, therefore, phenomenally low. During several years they have totalled less than one-half of one per cent. of the amounts involved. The Society has also prevented the development of combinations among exhibitors—other than those arising from unity of proprietorship—in order to depress the level of prices paid to renters. It has consistently refused to co-operate with the exhibitors in

preventing the development of competition by withholding supplies from new cinemas; for the renters as a whole believe it to be in their interest that no restriction should be placed on the growth in the number of cinemas.

With the finance of individual film companies we propose to deal in some detail in our Stock Exchange section in the near future. In the meantime, we may briefly discuss some general financial features, which have been the subject, during recent weeks, of a good deal of Press attention. Capital losses have undoubtedly occurred in certain branches of the trade; but we would warn our readers against too ready acceptance of the statement that many millions have been lost during the last two or three years in film production. A writer in a trade publication recently reached that conclusion after consideration of a list of charges registered at Somerset House for moneys purporting to be advances for film production. But such figures may be very misleading. It does not follow, when a charge of, say, £1,000,000 has been registered, that the whole of this sum has been, or ever will be, actually borrowed. It merely records an arrangement by which a series of advances will be made, in rotation, for a succession of pictures, provided that certain conditions—for each picture in turn—are satisfied. In some recent instances not more than one, or at most two, of these instalments have been advanced; and further sums are not now available. Equally misleading are bald statements that forty or fifty new production companies have been registered in recent months. Many of these companies are, in fact, designed to produce only a single picture. Others register merely the aspirations of promoters, which will never be realised. Others, again, are merely separate subsidiaries of already existing units. That the finance of film production has unsound features is undeniable, but their elucidation needs detailed expert research rather than hasty generalisations or partial data.

At the exhibiting end of the industry, however, the present position is fairly clear. We know that the public pays over £40 millions a year for admission to the cinema. How is this huge sum divided among different interests? The tax collector has, as always, the first claim upon it. Entertainment tax is now payable on all admissions over 6d., and brings in over £5 millions annually for the Treasury. Of the remaining £35 millions, it is estimated that nearly £22 millions is retained by the

exhibitors and £13 millions paid to the renters. A careful computation suggests that the exhibitors' payments for running costs—i.e. for outgoings other than films—are in the neighbourhood of £10 millions. Depreciation accounts for approximately another £2 millions, and leaves about £10 millions for fixed charges and profits. The aggregate capital value of all British cinemas may be estimated at nearly £80 millions. On this basis, allowing for charges, the return comes out at nearly 10 per cent.

How is the renters' £13 millions disposed of? Probably some £2½ millions are required annually to defray the running costs of their highly elaborate organisation—including salaries, rents, advertising, and so on. Approximately £6½ millions are remitted to America for films. Of the balance of £4 millions, probably over £1½ millions is required to pay for the cost of the positive prints used in the cinemas and another £1 million is spent on the news reels. About £1½ millions to £2 millions remains for payments to producers of British films, to which we may add net receipts from sales of British films abroad, which are probably in the region of £1 million. This brings the total earnings of British films to nearly £3 millions.

We have made no mention of renters' profits, because of the inherent difficulty of giving a precise meaning to that term. The American renters remit all their surplus receipts to their head-offices, where these funds are merged with all other receipts in determining profits. The American renters are merely agents, and their profits cannot be calculated on the assumption that they are willing buyers in a free market. The figure of £2½ millions, mentioned above as the renters' costs, does, however, include the profits of the British renters; but in the case of theatre companies owning their own renting organisations, the profits shown in the renters' books do not indicate the actual earnings of the renting branches.

In the light of the facts which have been elicited in the course of this series of articles, it is clear that the film industry ranks among the major British trades. Certainly there are few industries whose products reach a larger proportion of the total population. And the present series of articles suggests that its organisation is paralleled by that of no other industry. Understanding of its ramifications is clearly essential to any study either of its present problems or of its future possibilities.

Shipbuilding Revival

BRITISH shipbuilders may rejoice that their industry has emerged from the greatest slump of modern times. But many of its leaders are seriously asking whether improvement is merely a flash in the pan or whether they can look forward to a period of more stable activity like that of pre-war days. We propose to examine the industry's present position and prospects in the light of the changes of the past decade.

Prosperity in shipbuilding is linked with the fortunes of shipping and the course of international trade. Before the war the volume of world trade increased steadily and almost uninterruptedly. Between 1913 and 1923 it made, on balance, little headway; but during the next five years it resumed its interrupted advance. Another serious check, however, came after 1929, and, as we showed in *The Economist* of January 30th (page 226), the volume of world trade in 1932 was less than 75 per cent. of its pre-depression level. Even after the partial recovery of the last four years, the world trade index was still nearly 15 per cent. lower last year than in 1929.

Shipbuilding is particularly vulnerable to fluctuations in world trade. As shipping capacity cannot be rapidly

adjusted to changes in demand, every fall in world trade is immediately reflected in declining freight rates and increasing unemployment of vessels. Moreover, the volume of new mercantile tonnage constructed each year represents only a small fraction of existing tonnage. Orders for new vessels tend, consequently, to decline during depression far more than in proportion to the fall in world trade. Between 1929 and 1932, indeed, the volume of new orders became, for a time, almost negligible. In any case, there is an appreciable time lag before the industry can adjust its output to a change of demand, either upward or downward, since a year or more is required for the construction of a modern vessel. New launchings normally increase for a time, even after the world's shipping position has visibly deteriorated, and are correspondingly slow to rise during the first phase of recovery.

Before the war these factors were largely obscured by the strong upward trend of international trade. Actually the lowest annual world output of mercantile tonnage between 1903 and 1913 was 1,602,000 in 1909, and the highest 3,332,900 tons in 1913. In more recent years,

however, the inherent instability of the industry has been accentuated by trade fluctuations and by the growth of subsidised construction in many countries—its reflection of increased economic nationalism. These tendencies are well brought out by the first of the two diagrams annexed. The volume of world trade, it will be seen, has been on the upgrade since 1932. The output of ships only began to turn upward a year later, but since 1935 it has made rapid progress.

As we have recently pointed out (see *The Economist*, January 9th, page 53), the omens are now favourable to an expansion of international trade. The volume of tonnage has been reduced to almost negligible proportions. The demand for new vessels is therefore likely

VOLUME OF WORLD TRADE, MERCANTILE SHIPPING CAPACITY, AND "THE ECONOMIST" INDEX OF FREIGHT RATES

to continue its upward trend. But the volume of orders placed in the near future may well be substantially in excess of the tonnage suggested by a mere calculation of necessary additional capacity. Technical progress has recently been so rapid that the expense of running many existing vessels is greater than the running costs plus capital charges of modern ships. A modern cargo vessel, for example, is capable of carrying twice as much freight, per ton of coal consumed, as a similar ship built either before or during the war.

British shipbuilding, however, has problems peculiar to itself, which arise from the fact that its share of world

MERCANTILE TONNAGE LAUNCHED IN THE UNITED KINGDOM AND ABROAD

tonnage construction has tended to decline since the war, mainly as a result of subsidised construction abroad.

Between 1900 and 1913 the British output of mercantile tonnage was greater than that of all other countries in the world together. Between 1920 and 1929 it sometimes exceeded, and sometimes fell below, the total constructed abroad. But, as our second chart shows, foreign launchings have exceeded British output in every single year since 1929. An important factor in this result has undoubtedly been the decline in the tonnage of foreign orders placed in this country. As recently as 1930, for example, the tonnage of new British-made vessels, exported to countries other than the Dominions, approached 500,000 tons, valued at £20 millions; while at the end of last year the tonnage under construction, for registration abroad or for sale, was only 70,000 tons. And there are few indications of any marked expansion of foreign orders in the near future.

It is most important that British shipbuilders, like their colleagues in some other constructional industries, should not neglect their permanent interests in the export markets, even though the outlook for domestic orders may be brighter than for many years past. Of the latter fact, certainly, there appears little doubt. It is true that the volume of mercantile shipping under construction at the end of last year was still below the million-ton mark, compared with 1,560,000 tons on hand at the end of 1929. But work on naval vessels this year will be equivalent to about 500,000 tons of merchant vessels, and total activity should therefore regain the level of 1929, when only a small amount of tonnage was under construction in private yards for the Admiralty. Some time, indeed, may well elapse before the industry can deal with a further substantial expansion of orders. The recent revival has already revealed a number of bottle-necks in its organisation, one of the most serious being a shortage of skilled labour after a prolonged period of inactivity. There is a danger, moreover, of serious delay in obtaining deliveries of essential raw materials, such as iron and steel. Such a shortage of materials, if it were accompanied by rising prices, might lead, among other undesirable effects, to a further diversion of orders to foreign shipyards. Altogether, though immediate prospects are most encouraging, there is no evidence that, in the long run, the industry will be any the less vulnerable to fluctuations in activity in the future than in the past.

Are Interest Rates Rising?

THE rate of interest looms large in contemporary discussions of Britain's commercial prosperity. Bankers, economists and politicians have expressed varying views on the practicability of maintaining rates at their present low levels, but practically all are agreed that a serious rise would have unwelcome repercussions. The moment is particularly opportune, therefore, for publication of the results of an inquiry made by *The Economist* into the actual rates at which long-term borrowers have obtained capital in the London market in recent years.

Before we discuss these results, a few words of explanation and definition are necessary. We have excluded from our computation all borrowings for periods of less than twelve months. Regular returns of the interest rates paid by short-term borrowers from the British Government downwards, for periods from one day upwards, will be found in the statistical returns relating to the Money Market, published in *The Economist* each week. Our long-term figures are averages of the yields offered, on issues of capital by public prospectus, by the British Government and by all companies which have issued fixed interest securities (i.e. debentures or preference shares) in every year from 1920 to 1936. The interest yield on each issue has been weighted by the amount of new capital involved, computed in terms of new money. Issues for conversion of pre-existing obligations, in other words, have been disregarded. The results shown in detail on page 346 have been plotted in the chart overleaf.

There is no doubt whatever that since the end of the Great War the general trend of long-term interest rates—apart from purely ephemeral fluctuations—has been steeply downwards. The British Government paid nearly 7 per cent. on its new borrowing in 1920, and less than 3 per cent. in 1936. The rate on new company debentures was only half as high in 1936 as in 1920. The decline has been accomplished in three stages. From 1920 to 1923-24 interest rates were falling rapidly; from 1923-24 to 1930-31 they showed considerable variation, but their general trend was stationary; from 1930-31 to 1935 their course was again downward. On the whole, the curve of debenture rates has followed that of Government loans. The two series have run more or less in parallel, with about one per cent. between them. The curve for preference shares has been much more erratic, since it has been influenced by factors of industrial risk, as well as by pure interest considerations.

Has the period of declining long-term interest rates come to an end? Clearly, the downward movement last year suffered its first serious check since 1930-31. Although the preference rate was practically stationary, the apparent yield on new Government loans rose from 2.19 per cent. to 2.85 per cent., and the rate on industrial debentures from 3.83 per cent. to 4.17 per cent. Earlier experience suggests, however, that it may be dangerous to read too much into a single year's fluctuations. The figures from which our averages have been compiled, further, suffer from an unavoidable limitation. The rates of interest actually paid are determined by considerations like the status of the borrowers and the duration of their loans, as well as by those affecting the general supply of and demand for new capital. Out of £291 millions offered by the British Government in 1935, as much as £98 millions had a maximum life of only five years, the remainder having a maximum life of 26 years. In 1936 the whole of the £61½ millions borrowed had a maximum life of 21 years.

PRICE OF NEW CAPITAL, 1920-36
(Issued by Prospectus)

Other evidence suggests, however, that although the upturn in interest rates last year may have been slight, it was real and perceptible. In the table in the next column, we set out the total amounts raised at fixed interest by various borrowers, in recent years, together with the weighted average rates of interest at which they were borrowed. We have added figures for 1913, to afford a basis of comparison with pre-war conditions. The significance of these figures may be briefly discussed. It will be observed that in July, 1935, a Treasury-guaranteed London Electric debenture issue for £32 millions, with a maximum life of 20 years, was successfully floated to yield 2.70 per cent. to redemption. Last month a further £9½ millions of the same stock was offered on a redemption yield basis of 3.05 per cent. Loans issued by British municipalities in the last year or

two have been cast, more or less, in a common mould, with maximum "lives" of 20 to 25 years. But the £20 millions raised by home corporations in 1935 cost the borrowers, on the average, 3.02 per cent., while the £42 millions raised in 1936 cost them 3.21 per cent.

A somewhat more favourable impression is suggested by a special computation we have made for the past two years of the new capital raised by the increasingly popular technique of Stock Exchange placing, as distinct from issue by prospectus. From the detailed tables on page 386 readers will discover that, taking prospectuses

GOVERNMENT ISSUES

	British Government		Dominion and Colonial Governments		Total—Home and Empire Governments	
	Amount (£'000)	Per cent.	Amount (£'000)	Per cent.	Amount (£'000)	Per cent.
1913	None	—	26,290	4.15	26,290	4.15
1929	67,000	5.00	26,366	4.97	93,366	4.99
1932	107,589	3.50	23,761	4.60	131,350	3.72
1935	291,000	2.19	2,907	3.02	293,907	2.21
1936	61,304	2.85	375	3.50	61,679	2.86
New Basis†						
1935	291,000	2.19	2,959	3.02	293,959	2.21
1936	61,304	2.85	885	3.33	62,189	2.86

OTHER BORROWINGS AT FIXED INTEREST

	Home Corporation Loans*		Industrial Bonds Debentures and Notes†	
	Amount (£'000)	Per cent.	Amount (£'000)	Per cent.
1913	920	4.41	25,086	5.50
1929	8,316	4.96	25,849	5.48
1932	28,832	4.75	6,111	5.44
1935	20,000	3.02	24,941	3.83
1936	41,751	3.21	18,913	4.17
New Basis‡				
1935	20,750	3.01	46,484	3.95
1936	46,942	3.60	36,877	3.95

* The above figures exclude the London Electric Transport Finance issue (guaranteed by the British Government) in July, 1935, of £32,000,000 in 2½ per cent. debenture stock at 97, to yield 2½ per cent.; also the Railway Finance Corporation Loan in February, 1936, of £27,000,000 in 2½ per cent. Stock at 97 to yield 2½ per cent.; and the £9,300,000 Railway Clearing House 2½ per cent. Loan in December, 1936, at 94½ per cent. to yield 2½ per cent. Excluding Issues under Trade Facilities Act.
† Including, in addition to prospectus borrowing, all capital made available by Stock Exchange placing and permission to deal.

and placings together, some £46.5 millions of industrial debentures were raised in 1935, at an average rate of 3.95 per cent. In 1936, the total was somewhat lower, at £37 millions, but the average rate was unchanged at 3.95 per cent. On the other hand, while borrowers are still finding it possible to convert their maturing obligations into new stock carrying lower interest rates, the rates "after conversion" are rising. In 1935 British municipalities converted £15 millions of stock on an average yield basis of 2.80 per cent.; in 1936, some £20 millions of stock was converted at an average level of 3.11 per cent. The amount of industrial debentures converted was between £28 and £29 millions in each year, but the new stocks were issued at an average rate of 4.00 per cent. in 1936, against 3.85 per cent. in 1935.

We may conclude, therefore, that, so far as capital market records go, the downward movement in interest rates appears to have been arrested last year. The next few months will show whether this was merely a temporary development or the reversal of a well-established trend. Up to the end of last year, certainly, the upward reaction in rates had not gone very far, and in almost every case our computations of average interest rates were well below the levels of 1934. Since the new year opened, however, the market for existing fixed interest securities has been depressed, and market values have fallen appreciably. This week's announcement of the Government's decision to seek power to borrow up to £400 millions for re-armament is obviously not calculated to help the gilt-edged market. It is reasonable to assume, therefore, that a resumption of large fixed interest borrowings in 1937 may well be associated with a further increase in the percentage yields offered to subscribers.

Japan's Year of Crisis

It was freely prophesied in Japan that 1936 would be a year of crisis. And now crisis has come, though not, perhaps, in the way expected. The present struggle is not between the Government and the peasant population, nor has it arisen directly over the burden of war and warlike preparations. The issue lies between an army, whose dreams are realisable only through the restoration of a new Shogunate with dictatorial authority, and a financial hierarchy fighting to maintain its influence through the political parties which are its governing instruments.

Outside observers have frequently argued that the strain resulting from Japan's imperialistic policies would produce unbearable distress among the peasantry. In 1936, however, economic conditions were more favourable for the Japanese farmer than in any of the preceding five years. His income from rice, cocoons, wheat, barley and rye has increased. *The Oriental Economist*, indeed, has put the cash value of saleable crops at a level exceeded during recent years only in 1929. Although Government action has been necessary to maintain the price of rice, prices of silk and cocoons are likely to rise further, for recovery is rapidly progressing in the United States, and the American demand for raw silk is increasing.

A mild attempt was made last year further to alleviate the hard lot of the agricultural regions by reducing their tax burden and by subsidising the prefectures out of national government revenues, which had been increased by higher urban taxation. A significant part of the benefits both of higher farm income and lower taxation will doubtless be absorbed by middlemen, merchants and landlords, but the farmer will at least not be worse off than before. To the extent that the standard of rural living recedes from a starvation level, industrial workers may also benefit, for industrial wages cannot rise much above those of agriculture so long as the ranks of industrial workers, particularly of female textile workers, can be replenished from a depressed peasantry. During 1936, indices of industrial wage rates and actual earnings, calculated by the Bank of Japan, were actually lower than in 1935, despite an increase in the number of hours worked. The reduction in real wages was even of more considerable, for retail prices, particularly those of commodities of domestic consumption, rose more rapidly in 1936 than in preceding years.

Recent tendencies have not been wholly favourable to the large capitalists of Japan. Last year's increases in the indirect taxation may well affect the interests of the semi-monopolist financial trusts and industrial organisations as much as the rise in income tax, if they necessitate the higher wages to counteract a higher cost of living. The large concerns are directly interested, not only in large concerns among their own workers, but in those of conditions among the many small workshop and household industries, which are frequently controlled by the large groups for whom their work is done.

The most important economic factors, however, behind the political events of the past twelve months and in Japan, have been developments in foreign trade and in the financial policies of the Government, which have been increasingly subjugated to military ends. Industrial production is still rising rapidly, particularly in the heavy industries, which benefit from armament expenditure. But Japan's foreign trade balance, which was exceptionally active in 1935, reverted to its normal passivity in 1936. Exports of cotton textiles, for example, decreased slightly last year. Japanese goods are continuing to meet increased trade restrictions in many of their principal markets. Last year there were trade wars with Canada and Australia; and negotiations

are pending for a new agreement with India, which may be less favourable than the old. The progress of recovery in other countries, and the rising costs of raw materials are adversely affecting the competitive power of Japan's export industries which, with the major exception of silk, rely on imported raw materials.

It became apparent last year that Japan could not continue to export large amounts of capital to Manchukuo. But the army, directing the Government, refused to abate its Manchurian policy or to allow the gold reserves to be used for foreign payments. To prevent a flight of capital, of which signs were becoming evident, drastic control of foreign exchanges was adopted. It is claimed that this control will not be continued after the middle of the present year, when the usual seasonal excess of imports will have come to an end. But it would be more in accordance with precedent if control were, in fact, maintained for exactly as long as the present economic and military policies.

The Government has recently reduced the interest burden of its rapidly growing debt by a large conversion operation. The banks, who are the main holders of Government bonds, benefited by premium payments on conversion, but their income will suffer in the future; and, in any case, the bond conversion was designed to pave the way for a still further increase in the national debt. The draft Budget for 1937-38, presented by the Finance Minister in the last Cabinet, showed an excess of expenditure over ordinary income of 806 million yen. The deficit, together with a further 155 million yen for special accounts, was to be raised by bond issues. This Budget produced a political storm. It has been withdrawn by the new Terauchi Government, and certain adjustments are promised in its successor. It is most unlikely, however, that the army will relax any of its demands.

So far the army has been able to carry the large financial trusts with it, in passive if not active support of its foreign policies. Last year, however, the financiers showed signs of growing uneasiness. The army *coup d'état* of last February resulted, if not in open victory for the army, at least in the formation of a Government more amenable to its persuasions. During the latter part of the year there were constant reports that the army wished to dispense with the political parties altogether; to destroy even such small control over the Government as remains to the Diet; to introduce various economic monopolies of a Fascist character, and restrict the electoral franchise, which is now exercised by some 12 millions of the Japanese people, to the heads of families and to ex-army men. Such policies as these are anything but popular with the financial interests, who are at one with the Liberals in disliking the company into which the army's foreign policy has brought their country, and the consequent abandonment by Russia of negotiations for a long-term fishing agreement. They would not welcome open armed intervention in China; and they are refusing to supply capital to the South Manchurian Railroad, which is the army's instrument of economic aggression in North China.

Friction between the rival powers came to a head in the recent parliamentary crisis, which ended with the resignation of the Hirota Cabinet and the assumption of power by General Terauchi. The latter has declared that "the army is opposed to the operation of the Parliamentary institution along democratic ideas of the Western type." If the army continues to destroy the feeble remnants of Parliamentarism it will, in fact, destroy an instrument of the financial magnates rather than an organ of opinion of the Japanese people. The financial powers, unfortunately for themselves, are unable to call upon the common people as allies in opposition to the army dictatorship, for there is more sympathy among peasants for the army than for the financiers. But even the peasants may tire of army politics. If armies are to rule, they must produce victories. And at present the Japanese army is producing, not victories, but an increasingly difficult international position, economically and politically. Hope deferred may make even a Japanese heart-sick.

Notes of the Week

Freer Trade or Deadlock?—The stirrings of anti-tariff hopes have so far had no consequences calculated to inspire optimism. Our Swedish correspondent warns us (on page 358) that little can be immediately expected from the meeting of the signatories of the Oslo Convention, which has been called at The Hague. He points out that the reciprocal concessions which can now be made between Holland, the Scandinavian countries, Finland and Belgium are very slight; and that real progress can only be made through a wider agreement embracing other States. The onus of responsibility, in fact, now rests—as it has rested for so long—upon the British Government. The Oslo Convention might have become an effective instrument at Ouchy as long ago as 1932 had it not been for the agreements of Ottawa.

The challenge has been repeated; and Mr Runciman has been to Washington. Questioned in the House this week about his American visit, the President of the Board of Trade showed reluctance to make any definite statement. He was asked if the time had come for the drafting of a trade agreement with the United States, and if there was any immediate prospect of the reduction of trade barriers between the two countries. He denied that he had conducted any negotiations in Washington, but confessed to useful conversations. His conclusion was that "further exploration will be necessary before it can be determined whether there is a firm basis upon which negotiations can take place." What is the obstacle? Is it war debts? Is it Ottawa? Is it the most-favoured-nation clause? Meanwhile the world waits for a British decision whose consequences, whatever it may be, will be far-reaching for the future of world trade and world peace.

World Trade and Peace.—The American Government's Trade Agreements Act, after its extension for three years from next June was approved by the House of Representatives, came before the Senate Finance Committee on Wednesday. Mr Secretary Hull prefaced it with a letter in which he urged its extension. To abandon it, he said, would give a fillip to the economic warfare which has already played such havoc in the world; and its extension might ease the economic tension which was driving many nations towards military conflict. "In the years that lie ahead," he went on, "an adequate revival of international trade will be the most powerful single force for easing political tension and averting the danger of war." On the same day General Smuts launched a cogent plea for relaxation of tariffs and trade restrictions in the cause of world peace. In this he urged the British peoples, together with the Americans, to return to their original way of using trade as a civilising medium. The new French Minister to Washington, M. Georges Bonnet, also pointed out when leaving Paris on Wednesday for the United States that if the democracies closed their economic ranks they could achieve stability by freer trade. These powerful reminders must not be ignored by the British Government, or treated with that easy optimism which General Smuts deplored. All is not for the best in this economically disordered world.

Safety in Mines.—The pit at Gresford where 265 men lost their lives in September, 1934, is still sealed. But that tragic disaster was thrown into stark relief last week by the alarming report of the Chief Inspector of Mines and his two colleagues. There was some disagreement between the assessors, but the major findings were undisputed. The ventilation of the mine was inadequate and precarious; air measurements were improperly recorded; to permit of the speeding-up of work, shot-

firing was too quickly executed; the provisions of the Eight Hours Act were ignored; the apprehensions of the manager were overridden for purely commercial considerations. Moreover, the management made some attempt to conceal the grave facts, and the colliery owners showed no eagerness to assist in the investigation. Nor were the workmen themselves blameless; they connived at illegal shot-firing, and in violation of the law worked double shifts in order to gain free time on Saturdays. The implications of the report are even wider. The system of inspection and supervision is inadequate; inspection might be more frequent and more effective, if the inspection districts were more efficiently organised, and if there were more inspectors to do the work. The price of disregarded regulations is loss of life, and the sealed pit at Gresford is a mute witness of the cost. The Royal Commission on Safety in Mines, at present sitting, cannot fail to take up the challenge of this report. Members of Parliament will voice their anxiety in the debate announced for next week. But the lessons of the report extend still further. Owners, managers, trade unionists and civil servants have been warned; so too have those to whom a new Factories Bill was recently entrusted. National campaigns for physical fitness, and for safety at sea, at work and on the roads, lose much of their force as long as tragedies like the Gresford disaster are possible.

A Fitter Nation.—The last war exploded the myth that the British are physically a decadent people; we do not compare unfavourably with any of our neighbours. But a comparison of the average physique of boys and girls in our elementary schools with that of the sons and daughters of the well-to-do shows a startling discrepancy. Far more than universal education and minimum standards of house-room is needed if our people are to reach the highest attainable standards of health, intelligence and mental and moral equipment. Not least among these needs is the provision of adequate physical training for all our people.

On Monday, the Government announced its decision to set up machinery and allocate money for the encouragement of schemes of physical training, run by local bodies and by voluntary associations. The Government is to appoint about thirty persons, as a National Advisory Council, under Lord Aberdare, to co-ordinate the work of voluntary organisations and to advise representative bodies for wide areas of England and Wales. A similar Council is to be set up for Scotland, under the Secretary of State. The local committees will examine the needs of their areas for physical training facilities, instructors, recreational centres, playing fields, equipment, etc., and the various local government bodies included in each committee's area will be able to ask for grants-in-aid from special grants committees. The grants committees can defray the costs of the local committee's administration, and can make grants for capital expenditure up to a total of about £2,000,000 over a period of about three years. A national college for training instructors—men, at first—is to be established at Government cost. It was made clear by the Minister that local government bodies and voluntary organisations would be expected to pay some contribution for the training of their necessary instructors; and that grants would only be given to local authorities in exceptional cases, if they could not provide the required facilities out of rates or existing grants.

While all this is certainly welcome, it seems a nebulous beginning for a really national plan. It further complicates a mass of voluntary organisations, and the new

Council has only advisory powers. The Government selects its own National Council and its own grants committees—to be the repositories of such administrative and financial power as the scheme provides. It would not be unnatural if the grants committees, thus composed, proved less amenable to propositions from local councils with Labour majorities. The annual amount of Government grants may be £667,000, or even less than £500,000. There is, moreover, some substance in the criticism that, laudable as is the aim to improve the physique of everybody, the poorest physiques stand in the most urgent need of improvement; and to expect the demonstrably undernourished 10 per cent. of our people voluntarily to engage in, and to profit from, physical training is unwarranted. The nutritional problem also needs urgently to be tackled; but not in broad general terms. It should be tackled *ad hoc*, locally, where the submerged tenth of our people are to be found; for this tithe of the nation suffers at the same time the most inadequate housing, clothing and nourishment. What is in a general way the best for the whole population should not be made the enemy of what is the good for the unfit 10 per cent.

Party and No Party.—A confused situation has followed the repudiation by the major parties of the Left of proposals for United and Popular Fronts. Labour candidates receive Communist support against their will. Apprehensions of Marxism moved Mr Attlee to refuse his support to a meeting on Spanish relief; yet he was inspired to telegraph his good wishes to the Left Book Club rally at the Albert Hall, where Mr Strachey and Mr Pollitt sat cheek by jowl with the Liberal Mr Acland on the platform. A considerable body of opinion doubtless believes that a more effective Opposition, bent on immediate reforms, is constitutionally desirable and politically wise. But the somewhat unexpected retention of St. Pancras by the Conservatives, small though the majority was, reflected the divisions in the Opposition. At a time when the unrepresentative disparity of party strength in the Commons should if possible be minimised, the gathering at the Albert Hall on Sunday last revealed that there is a substantial body of opinion which is neither effectively led nor adequately represented. The Oxford University by-election reveals a similar picture. The programme presented by Sir Arthur Salter to the electors reflects dissatisfaction with the direction in which the two major parties in Parliament are travelling. Sir Arthur asks for a policy which shall be progressive, informed and independent of any caucus or interest; and on the content of his pronouncement there would be a great body of agreement. But the party reins are held too tightly to permit of its free expression. Here is an unsolved problem for our constitutionalists.

President and Supreme Court.—President Roosevelt has set the cat among the pigeons again, and on a calm day the screams of anguish can be heard across the Atlantic. Last Friday, without previous warning, he sent to Congress radical proposals for the reform of the personnel and procedure of the Federal judiciary. The central proposal is that when any Federal judge has reached the age of 70½ without retiring the President shall have power to appoint one more judge to sit with the obstinate septuagenarian. The proposal is to apply to the whole of the Federal Courts, but its main significance lies in the fact that six out of the nine members of the Supreme Court, including all the four consistent conservatives who have voted against all President Roosevelt's measures, are over the age mentioned. If Mr Roosevelt gets his way he will be able to appoint six new judges, all presumably of liberal sympathies, and thus convert the present majority of the Court into one more sympathetic to his own interpretation of the Constitution. This is a most ingenious circumvention of the Constitution. That document specifies that there shall be judges, and that they shall hold office "during good behaviour." But it does not specify the size of the Court, and there is excellent precedent, from the heyday

of the Republican Party under President Grant, for the membership of the Supreme Court being enlarged by Act of Congress to make it more amenable to the wishes of the President.

Mr Roosevelt's message also included a number of excellent suggestions for changes in procedure in constitutional cases, which would have the effect of speeding up the process of judicial decision on these matters and avoiding the unfortunate delays which now result in Acts being found unconstitutional after they have been in full force for two or more years. These recommendations on procedure are generally accepted as reasonable and welcome, but they have been largely disregarded in the acute controversy which has arisen over the proposed new appointments to the Supreme Court. To understand the intense indignation which this proposal has aroused, it is necessary to appreciate the very deep reverence in which the Supreme Court is held not only by Americans but by the great majority of foreign jurists who have studied its record. Mr Roosevelt has been denounced as a would-be dictator; opposition to him has been declared even by some of his usual supporters, such as Senators Johnson and Norris; the legislatures even of Democratic States such as Texas have passed resolutions against the proposal; and the full bitterness of Big Business's hatred of Mr Roosevelt is once more vocal. It remains to be seen whether Congress will give him what he wants. The present indications are that it will; but Congress is an unpredictable body.

The foreigner will have more difficulty than Americans (for whom it is a question of religion) in making up his mind on the ethics of the controversy. On the one hand, the President's proposal is a clear violation of the intention of the Constitution, which set up a judiciary independent both of the Legislature and of the President. On the other hand, the Supreme Court has been "packed" before, and by the party which is now most incensed. Moreover, wider considerations suggest the reflection that it is better to find some way out of the present deadlock than to allow the particular interpretation, which five elderly lawyers choose to put upon a 150-year-old document, completely to thwart the very clearly expressed wishes of 27 million voters. Americans are wont to boast that their Constitution establishes a "Government of laws, not of men," but it would be closer to the truth to say that it is a Government of lawyers, not of men. Constitutions are made for humanity, not humanity for Constitutions. If the choice lies between a change in the opinions held by the Supreme Court, however brought about, and a breakdown of the whole constitutional system, even American conservatives might, on reflection, prefer the former.

**SKANDINAVISKA
KREDITAKTIEBOLAGET**

The Automobile Strike Settled.—A settlement in the automobile strike in the General Motors plants at Flint, Michigan, was reached on Thursday morning. Towards the end the real issue emerged very clearly. The Union's irreducible demand was that it should be recognised as the sole collective bargaining agent for all the workers. The Corporation refused, unless a secret ballot established support of the Union by a majority of the workers. But the Union declined the offer of a ballot, saying that the closing of the plants was sufficient evidence of its strength. The compromise eventually reached was that General Motors will recognise the Union as agent for its members only; but on the other hand it will not negotiate with any other body for a period of six months. It is difficult to pronounce a judgment on the rights and wrongs without bearing in mind the background of allegations and counter-allegations. The Union asserts that there is no other genuinely independent bargaining agency in existence, and that the Corporation's system of espionage and victimisation (about which unsavoury evidence is being taken by a Congressional Committee in Washington) would render even a secret ballot unrepresentative. The Corporation counters with the charge that the strike has succeeded in closing the plants only because of the picketing methods adopted by the Union, and not because of its support by a majority of the workers. It is probable that all these allegations are true. The real welfare of the workers seems to be far removed from the thoughts of either side, and the collective bargaining rights of the workers who are not members of this particular Union have been cheerfully jettisoned in return for some recognition for itself. One disputant was thus aiming at the creation of a powerful organisation, which would bring authority and prestige to its officials. The other was trying to perpetuate its feudal dominance over its workpeople. This was not a labour dispute as the term is understood in Great Britain, and the public seems, with some reason, to have taken the attitude: "A plague on both your houses!"

Activity in Spain.—The struggle in Spain broke out with renewed intensity last week-end. The rebel force from Algeciras captured Malaga on Tuesday, aided, apparently, by German and Italian warships which patrolled the coast and prevented the Government's naval forces from harrying the land operations of the rebels. The Malaga defence junta obviously collapsed; they were never strong; and their forces have retreated northwards towards Valencia. This is an important victory for the rebels, for Malaga can now be made a base for the rebel cruisers and the German and Italian warships aiding them, from which Barcelona and Valencia can be bombarded—perhaps invaded. Again, land operations can now begin from Malaga, reinforced by landings of rebel or foreign auxiliaries there. On Monday the forces of General Franco, under cover of German and Italian aircraft and tanks, launched a heavy attack south of Madrid, and occupied land along the Madrid-Valencia road—the only way still open for the retreat from Madrid. It is still not sure what effective position has been gained by the rebels; but they have, with the aid of their allies, scored two big successes this week.

The Non-intervention Farce.—The farce of non-intervention is still sedulously being played by the international repertory company which meets under Lord Plymouth's gentle presidency. Last week-end a Gibraltar message announced that 15,000 fresh Italian troops had landed at Cadiz from many ships, three of them liners and all with their names blacked out. So the farce proceeds, while the London Committee tries to establish the international control of Spain's frontiers to prevent intervention. It begins to appear obvious that Herr Hitler only agreed to withdraw from Spain and to aid efforts at non-intervention because in the meantime

General Goering at Rome had told Signor Mussolini to take on the job of intervention for a little while. And so are the British and French Governments outwitted at every trick and turn; when the British signed the Anglo-Italian agreement at the new year, Herr Hitler kept up the intervention; when he was asked to give it up, Signor Mussolini kept it going. This week all three Fascist Powers, Germany, Italy, and Portugal, have declined to allow Portugal's land and sea frontiers to be supervised. The British and French Governments seem intent on facilitating the victory of Fascism in Spain. The farce of non-intervention will then come off, in favour of the Spanish tragedy.

Dominion Status in Peace and War.—General Hertzog's constitutional high-wire act becomes more breath-taking at every performance. His only rival is that daring young man on the Irish trapeze, Mr de Valera. Lately we have had from South Africa two new displays of legal virtuosity. First, there was the strange but politically serviceable theory that a demise of the Crown was created, not by any act of any Parliament, but by the King's signing of a paper saying that he intended to abdicate—a theory riddled with brilliant ease in parliamentary debate by one of the General's own supporters, Mr Egeland. Secondly, the Union Government introduced last week a Bill declaring that the King shall take an Oath, either on assuming the government of the Union or at his Coronation, "the purport of which shall be that he will govern the people of the Union" according to its laws and customs. Beyond "purport" the Bill does not go, except to provide that the Oath may be a joint one for all the nations of the Commonwealth. The birth of this premature measure seems to have been precipitated by the Prime Minister's anxiety to clear such matters out of the way before he himself sails for London; but the result is, to say the least, a legislative curiosity. It is doubtful whether General Hertzog and his advisers have the Athanasian genius needful in expressing the Commonwealth constitution.

A more solid and practical advance in Dominion status is evident in the Australian Government's decision to appoint their present Liaison Officer with the Foreign Office to a similar post at the Washington Embassy. Australia has at present no direct diplomatic representation abroad, but she is steadily building up—doubtless under Mr R. G. Casey's inspiration—a trained service that will not flounder if and when it is eventually thrown into the deep water of independent diplomacy. There was a noteworthy realism, too, in the Ottawa debate last week on Mr Woodsworth's motion declaring in advance that Canada would be neutral in a European war. Mr Lapointe, who, in effect, was defending the Government's programme of increased armaments, justly described the resolution as destructive, and it was rejected without a division. Internal as well as external triangles of political force make it necessary for Canada to keep a free hand with regard to participation in any war. To strain the Commonwealth bond by advance declarations of neutrality would be rather like digging a pit under a great building in which people were comfortably living, on the ground that there might one day be an earthquake.

Canadian National Railways.—The rearrangement of the finances of the Canadian National Railways may pass, at first sight, as a mere book-keeping manoeuvre, such as might be made between a strong parent company and a subsidiary in difficulties. The most important elements in it are the abandonment of the Government's claims against the railway for the principal and interest on advances to meet deficits to a total of \$856 millions, and the transmutation of the Government-held debt of

\$284 millions, lent for capital purposes, into an equity without fixed interest. But the adjustment takes on a larger significance when viewed against the background of the unceasing controversy over national control of the railways in Canada. The disappointment of the Co-operative Commonwealth Federation at the last general election, and the resounding victory of the Liberals (who theoretically frown upon Socialist doctrine), show that, so far as State Socialism is a general political issue in Canada, it is an unpopular one. But the body of feeling behind continued national ownership of the C.N.R., reinforced by the widespread distrust of big business—of which the Canadian Pacific Railway is held to be an example—is so great that no Government would dare to turn the railway back to private control. The financial readjustment is obviously regarded in Canada as a gesture in the direction of perpetuation of State ownership.

Finland to the Fore.—The Presidential elections, which take place in Finland next Monday, have acquired a certain degree of speculative interest because of the emergence of so many candidates. Through his refusal to admit the Socialists to power—they represent the largest single party in the Parliament, but have no absolute majority—the President, Hr. Svinhufvud, has incurred considerable antagonism in the country. Apart from this, his chances of re-election would be unquestionable. This veteran but remarkably vigorous statesman was seventy-five last December; but he has always been Germanophil, while many Finns now dislike, and even distrust, the Nazi regime; and he is now faced with several powerful rivals. There is the Liberal ex-President, Professor Stahlberg, and the Socialist leader, Vainio Tanner; while if the popular Governor of the Bank of Finland, Hr. Risto Ryti, who has so far declined all invitations, agrees to stand, his candidature would perhaps attract a majority of votes.

Owing to the remarkable degree of prosperity and internal stability reached by Finland in recent years, a change at the Presidential palace has lost some of its former significance. The four years' boom shows no signs of decline; so there is little room for extremism and discontent. Whatever Fascist or Communist tendencies there may have been in the past, and whatever President Svinhufvud's personal sympathies for Germany may be, Finland can still be considered a progressive, democratic country—anxious for internal and external peace. The Finns want no adventures, and the mere suggestion that they should participate in, or passively facilitate, any attempted German aggression against Soviet Russia is abhorrent to the vast majority. Against this background, the visit of the Finnish Foreign Minister, Hr. Holsti, to Moscow this week is symptomatic. Its purpose was to emphasise that the Finns will not allow themselves to be manoeuvred into an anti-Russian position. Indeed, they are anxious for better relations with Russia. The growth of the German fleet in the Baltic, after the 1935 Anglo-German Naval Agreement, has made Finland, like Poland, very nervous; and despite the rankling of the Aland Islands dispute with Sweden after the War, Finland is consolidating her position with the Scandian bloc. The real poles of attraction for Finland are, politically, Scandinavia, and, economically, England. The Finns have been able to achieve their remarkable expansion of exports and imports, followed by a spectacular rise in their standard of living, largely by virtue of their profitable trade with this country.

Employment in January.—The seasonal decline in employment between December and January was less pronounced than usual last month. On January 25th the number of insured persons in employment was 11,106,000—a total 26,000 less than in December, but 715,000 more than in January a year ago. As unfavour-

able weather conditions affected outdoor employment on the day of the count both in December and in January last year, comparability is somewhat impaired; but the figures, nevertheless, are most satisfactory. The number of unemployed on the registers rose by 60,504 to 1,689,223, the increase being partly attributable to the registration of more than 25,000 juveniles who left school at the end of the December term. Compared with January last year, unemployment declined by 470,499. The unemployment position in various industries is shown below:—

Industrial Group	Jan. 20, 1936	Dec. 14, 1936	Jan. 25, 1937
Coal mining.....	183,148	146,729	138,408
Iron and steel manufacturing	34,338	22,699	21,979
Engineering.....	77,578	47,606	47,736
Metal goods manufacture	49,405	29,829	33,095
Shipbuilding and repairing	55,694	38,954	38,846
Motor vehicles, cycles and aircraft	20,730	13,218	16,319
Public works contracting	138,387	123,259	120,460
Building	267,385	171,725	173,578
Electric cables, apparatus, etc.	14,091	7,612	9,520
Furniture making, etc.	18,062	11,245	15,454
Cotton	78,003	52,270	47,942
Woolen and worsted.....	20,526	14,294	15,822
Hosiery	12,685	8,428	10,976
Boots and shoes	19,607	18,628	17,146
Distributive trades	17,597	20,996	20,996
Printing and bookbinding	25,881	25,155	31,706
Agriculture	78,286	71,400	73,442
Hotel, boarding-house, etc., service	230,782	175,402	200,582
Shipping service	43,779	33,990	32,981
Dock, harbour, etc., service	48,881	42,895	44,412
All persons registered	2,159,722	1,628,719	1,689,223

The aftermath of the Christmas trade spurt is reflected in an increase in unemployment in the distributive trades, furniture making, printing and bookbinding, and in hotel and boarding-house service. In agriculture, there was a further seasonal decline in employment. The level of employment was well maintained in coal mining, iron and steel manufacture and engineering; improvement was shown in the cotton industry, in boot and shoe manufacture, and in public works contracting. London, the South-Eastern and the South-Western administrative areas, the Midlands and Scotland, suffered most from the increase in unemployment.

The Army Reserve.—In view of European alarms and excursions and of the exigencies of order within the Empire, the inability of the Army to secure all the recruits it needs remains a serious problem. There was a general feeling in the House of Commons on Tuesday that the Reserve Forces Bill, introduced by the Minister for War, was a very small measure for dealing with a very big subject. The object of the Bill is to increase to the statutory limit of 6,000 the number of men who, having served seven years with the Colours and five with the Reserve, are still liable to be called up in times of emergency. By increasing the period during which these men may serve with the "A" Reserve from two to five years it is hoped to double the present strength of 3,000.

CHRISTIANIA BANK OG KREDITKASSE OSLO

Established 1848

Paid-up Capital and Reserve Funds,
Kr.40.000.000.—.

Oldest Norwegian Private Joint Stock Bank.
Direct correspondents throughout the country.
Offering complete services to banks and firms
doing business on Norway.

Correspondence invited

Critics on both sides of the House asked for a clearer and more general statement of the Government's recruiting policy. Was the Army required for police purposes or for a major war? Did not the real shortage of men lie with the Colours rather than with the Reserve? The Government's approach to these problems was denounced as piecemeal; and strong exception was taken to the assessment under the Means Test of the 6d. per day received by the second-line Reservists. While it is comforting to know that the men who were called to serve in Palestine are now no worse off, at least, than they were when they left their employment, it is to be doubted if such a measure as this Bill, and such an inducement as the daily sixpence, go far to solve the real problems of military strength.

A Population Inquiry.—Sir William Beveridge voiced on Wednesday the disturbing conclusion of our demographers: our population is soon going rapidly to fall. He pointed out that the people who really mattered were the women under 50; that for every 100 mothers in this country to-day there would be, unless things altered, only 75 in the next generation; and that one-quarter of our population was therefore likely to disappear in each generation. He forecast a population of 20 millions in 2037, and of only 5 millions in 2137. Similar figures were freely used that evening when Mr Cartland's motion, which successfully urged the Government to set up a Departmental Inquiry, was debated in the House. It was suggested that the future well-being of the nation was in danger; that the next generations of our people would not be able to maintain the houses, schools and industrial equipment which we were erecting; and that they would not be able to pay our debts.

* * *

It was agreed, however, that surmises might be falsified by events. Better maternity services might remove the fear of childbirth; proper nutrition, better jobs for young people, and less fear of war might increase the readiness of parents to have children. Sir William Beveridge himself suggested at Sheffield that the vicious circle might be broken by family allowances and bigger, better and cheaper homes. If by these or other means the absolute number of female children per family could be increased, the dangers of underpopulation would be at least postponed, even if the present rate of reproduction were later resumed. The problem is very serious. Statisticians have often been wrong; but they have also often been right. And it is fitting that the Government should have agreed to pursue this urgent inquiry.

* * *

It is, however, not enough that the existing Departmental inquiry should just quietly proceed, as Mr Hudson said would be the case. There is already in existence a Population Investigation Committee under the chairmanship of Professor Carr-Saunders, and composed of the leading demographers and experts in this country. We trust the Government will economise in effort, and utilise the available material and ability which the Investigation Committee has brought together. Indeed, we see every reason why the inquiry should be public. It is a matter of extreme public importance.

* * *

New Standards for Roads.—Mr Hore-Belisha has just issued to the local highway authorities a lengthy memorandum advising new standards for roads which are much in advance of existing practice. The objects of the memorandum are increased public safety, greater convenience of traffic and more effective preservation of the countryside. The Minister especially advocates safety measures; planning to meet probable changes in the amount of traffic; keeping careful map records of accidents; the limitation of points of access to main roads, and the careful regulation, under the Ribbon Develop-

ment Act, of new building along them. For new roads a minimum curvature and details of banking are suggested, and the minimum visibility for hills and bends is put at 500 feet, with a recommendation that unless this condition is fulfilled the system of three lanes should not be adopted. The ideal form of crossing is recognised to be one at which the roads are at different levels, and it is suggested that when new roads are built, land should be kept for the future building of bridges. Consideration is recommended for the erection of subways or pedestrian bridges at roundabouts. The conditions for cycle tracks, guard rails and signals are defined in detail.

* * *

As to amenities, the Minister advises that redundant and obsolete signs should be ruthlessly removed; that the position of old buildings should be taken into account in planning any improvements; that wherever possible trees should not be felled, but left on the verges, or the whole road should be deviated; and that planting is to be encouraged. For rural areas there is the interesting suggestion that, "because of the tendency of pedestrians to step in front of fast-moving vehicles," shrubs should be planted judiciously between the footpath and the carriage way. Even from this brief summary it may be seen that the Ministry of Transport has drawn up what is, in effect, a code for road builders. And since it has been prepared in consultation with local officials, there is every prospect that the Ministry's advice will be taken. The country is one step nearer to possessing a coherent and consistently planned system of roads.

* * *

Special Areas Reconstruction.—The Special Areas Reconstruction Association was set up last June to furnish financial assistance to small businesses in the Special Areas. Since then, it has approved some forty-two loans to the value of £243,450. And on Monday and Tuesday of this week its operations were exposed to the comments and criticisms of M.P.s, when a supplementary vote of £10,937 was sought to cover the administrative expenses of the scheme. There was a marked lack of enthusiasm for the work done so far. It was argued that there had been overlong delay in the granting of applications for loans, and that the conditions with which applicants had to comply were unduly severe. Since the object of S.A.R.A. was originally to give help to businesses not in a position to obtain assistance from banks in the ordinary way, it would be disquietening if its conditions of assistance were more stringent than those of the banks. Certainly the Nuffield Trust appears likely to do a great deal that S.A.R.A. was instituted to do.

* * *

The Standstill Agreements.—Negotiations were opened on Tuesday for a further prolongation of the Standstill Agreements between Germany and her creditors, which date from 1931 and have been more or less automatically renewed every year since. The agreements originally covered debts totalling Rs. 6,300 millions, but as devaluations have occurred in the interim, and many creditors have cut their losses and accepted payment in registered marks at as much as 50 per cent. discount, the total is now only about Rm. 950 millions, the service on which is only Rm. 27 millions. British funds involved originally amounted to only 25 per cent., but are now 60 per cent. of the total, with the United States next with 30 per cent. In view of this fact, some special treatment for British creditors should be urged. Germany has a large favourable balance with this country and an adverse one with the United States. This is not to suggest that there should be a special agreement with Great Britain, but it is clear that the position has so altered that all countries cannot be treated alike. Germany had an appreciable export surplus last year; and both this, and the free surplus under the Anglo-German Payments Agreement is being used for her imports of war materials. It is rumoured that there is a strong body of opinion demanding that the agreement shall not be prolonged for

more than six months. This would be only a minor precautionary measure; and some more far-reaching change in the settlement is by now overdue.

* * *

France and the Gold Clause.—In view of the recent gold clause case, concerning payments between this country and the United States, on which we commented last week, the decision of the French Government to continue to uphold the gold clause is a matter of interest. Article 6 of the original Devaluation Bill stipulated that all foreign loans contracted before devaluation should be paid in Poincaré, pre-devaluation, francs. On Tuesday the Chamber of Deputies passed an amendment stating that only those loans which stipulate that payment shall be made in Poincaré francs shall be so treated, and that the rest shall be paid in francs of the current legal value. Thus the gold clause is upheld, but it is not extended to loans which did not originally contain it. As outgoing loan payments of this kind are at the moment heavier than those in the reverse direction, the saving to the French Treasury should be substantial. M. Vincent Auriol actually estimates it at about Frs. 600 millions. The decision will necessarily be unwelcome to the creditors affected, which include Belgium, Austria, Czechoslovakia and Turkey; but the original article was of a generosity which they could hardly have expected. The new legislation may be another indication of the financial difficulties with which France is struggling, but it is certainly legitimate.

* * *

Television Developments.—The Postmaster General's announcement, to the effect that only the Marconi-E.M.I. system will operate from the B.B.C. Television Station at Alexandra Palace from now till the end of next year, should provide a much-needed fillip to the television industry generally. The dual experimental service, in which the Marconi-E.M.I. and Baird systems were used in alternation, was a necessary evil, which owed its inception to the fact that eighteen months ago the Television Advisory Committee were unable to choose between them. The result has been that manufacturers have had to design receivers for home viewing, capable of receiving both standards. The Committee's decision has possibly been due to the noticeable absence of flicker in the received picture, under the Marconi-E.M.I. system, and its superiority in the delineation of outdoor scenes. The response of the purchasing public to the B.B.C.'s service which has operated since last November has been lukewarm, and it is only from the sale of sets to the home viewer that substantial profits may be expected to accrue from television. The apparatus can now be made somewhat less complicated, and a reduction in prices has already occurred. We discuss, on page 369, the effect of these developments on the earnings prospects of those television companies in which the investor is interested.

* * *

It is generally agreed that models costing £50 to £60 are still beyond the reach of the general public. Profits are comparable with those made by the ordinary radio industry, accordingly, are unlikely to be earned for a considerable time. The preference shown by the Television Advisory Committee for the Marconi-E.M.I. system is, of course, a tribute to the company and will doubtless have a goodwill influence on their sales of sets. But every radio manufacturer can compete in the television market, and competition from Baird, G.E.C. and Scophony is likely to be keener than ever. The position of the transmission of television, in short, has been considerably simplified; but no one would dare, as yet, to predict the corresponding organisation in the field of reception.

* * *

Science and Industry.—The traditional reproach that British industry proceeds by rule of thumb is fast losing force. The annual report of the Department of

Scientific and Industrial Research, published last Saturday, shows how much careful and exact thought is being taken for the morrow. With Government advice and assistance many large undertakings have set on foot programmes of co-operative research, conducted by teams of experts. After five years' hard work, results, both varied and valuable, can be recorded. The community has more efficient electric lamps. Great strides have been made in television and in the hydrogenation of coal to produce oil. Milk is cleaner, and less of it is wasted. The loaf of bread has a longer life, and shoes fit better. The amount spent by industry on this kind of research rose from £167,370 in 1934 to £232,468 in 1936; and the benefit to the milk industry alone represented an annual saving of £50,000. Much still remains to be done. The total sum spent is still small in relation to the vast field which awaits the attention of the research worker, whose efforts are invaluable, not only to particular industries, but to the nation at large. The development of wireless aids to aerial navigation, the progress towards lighter aircraft, and the correlation of hull shapes, high speeds and rough water conditions—all these have their bearing on the safety and amenity of our daily lives.

* * *

Air Mail to Australia.—The agreement which has at last been reached between the United Kingdom and Australian Governments, for the inauguration of a twice-weekly air mail service in 1938, follows expected lines. Australia will impose a surcharge of 5d. per half-ounce on outgoing letters, while mails from this country will be carried for 1½d. She contemplates the abolition of the surcharge, however, as soon as the traffics are sufficient to justify the financial sacrifice; and it must surely go as soon as New Zealand comes into the scheme—as she intends to do—on the basis of a 1½d. charge. The Commonwealth Government is to retain operating control of the section of the route from Sydney to Singapore, though the scheme as a whole is entrusted to Imperial Airways. When Australia first declared her objections to the original scheme for a twice-weekly flying-boat service, with no surcharge, for Empire air mails, there was a tendency to accuse her of petty parochialism in the face of a splendid, imaginative advance. There may, however, have been more good sense than bad publicity behind her reluctance to adopt flying boats (for her own problem of civil airways is mainly one of inland routes); her desire to maintain control of a section which is strategically as well as commercially most important for her; and her canniness towards a grandiose plan after many disappointments over speed and punctuality under the more modest conditions of the past. The revised scheme is probably the better for Australia's original hesitation.

* * *

Volume of Oversea Trade.—Britain's oversea trade last year was characterised by a marked rise in imports and by stagnation in exports. This tendency is reflected in the indices of the volume of goods exchanged

Newfoundland and the United States.

between the United Kingdom and other countries, published in last week's *Board of Trade Journal*. The volume of retained imports last year was considerably higher than in 1929 and 1930. The quantity of goods exported during 1936, on the other hand, was still 6.9 per cent. smaller than in 1930, and about 24 per cent. below the pre-depression level. While the average prices of exports in 1936 showed only a slight rise, those of retained imports rose by 4.7 per cent.

VOLUME AND VALUE OF IMPORTS AND EXPORTS

Period	Retained Imports				Exports of Domestic Produce			
	Declared Values	Index of Average Values	Values in terms of 1930	Index of Volume	Declared Values	Index of Average Values	Values in terms of 1930	Index of Volume

Owing to the continued expansion of production for the home market, the demand for raw materials showed a marked increase in the past year, when imports of these products were 13.3 per cent. higher than in 1935. The volume of retained imports of commodities classified as articles wholly or mainly manufactured rose by 9.9 per cent., but the quantity of food, drink and tobacco purchased abroad last year was only 3.3 per cent. bigger than in 1935. Smaller shipments of coal, non-ferrous metals, iron and steel, and oils, fats and resins were mainly responsible for the relatively poor showing of exports in 1936. While exports resumed their upward trend in the second half of last year, imports rose in volume throughout 1936. Moreover, the indications are that imports will continue to increase faster than exports during the current year.

World Production of Iron and Steel.—During the past year world production of crude steel rose above the pre-depression level. In continuation of recent trends, however, the output of pig iron increased more slowly, and, in 1936, was still about 10 per cent. below production in 1929. Production of crude steel in the principal countries, as estimated by the British Iron and Steel Federation, is shown below:—

OUTPUT OF CRUDE STEEL

(In millions of tons)

	U.K.	Germany (incl. Saar)	France	Belgium	U.S.A.	World (incl. other countries)
1913 ...	7.7	15.1	6.7	2.4	31.3	75.1
1929 ...	9.6	18.2	9.5	4.0	56.4	118.4
1934 ...	8.8	13.6	6.1	2.9	26.1	80.6
1935 ...	9.7	16.2	6.2	2.9	34.1	96.3
1936 ...	11.7	19.0	6.6	3.1	46.9	120.3

Output in Belgium, France and in the United States last year was still smaller than in 1929, but both the United Kingdom and Germany produced more steel last year than in the pre-depression year. The indications are that the demand for steel will continue to expand in most countries during this year. And, since supplies of iron ore and iron and steel scrap are none too plentiful

even now, there is some anxiety lest there may be a scramble for these materials, accompanied by a hectic advance in prices which might endanger the orderly progress of the industry.

Wholesale Price Movements.—Wholesale prices are a little steadier now after last autumn's rapid rise. A fortnight ago there was a definite check, but the advance has now been resumed, although at a slower rate. For England, the complete *Economist* index number has risen by 0.6 per cent. and that for primary products by 1.3 per cent. In the United States, the primary products index number has fallen by 0.1 per cent., while the complete Irving Fisher index number remains stationary. The French wholesale index number is a little lower and the German one a little higher.

Details of the British price index show that movements are still irregular. The cereals and meat group is stationary, while advances in "other foods" and minerals are offset by a fall in textiles:—

The Economist INDEX (1927 = 100)

	Sept. 18, 1931	Jan. 13, 1937	Jan. 27, 1937	Feb. 10, 1937
Cereals and meat...	64.5	88.2	88.3	88.3
Other foods	62.2	65.2	67.8	68.7
Textiles	43.7	69.4	69.2	68.8
Minerals	67.4	98.0	97.2	99.3
Miscellaneous	65.8	82.3	82.2	82.8
Complete index	60.4	80.7	81.0	81.5
1913 = 100	83.1	111.0	111.4	112.2
1924 = 100	52.2	69.7	70.0	70.5

Numerous primary product prices continue to fall, including foreign wheat, maize, jute, and the non-ferrous metals. Barley, oats, potatoes, beef, tea, coffee, cocoa, sugar, butter, cotton are among those that have risen.

Shipping Freights: A Correction.—We regret that, in a Note in our last week's issue, our index of shipping freights for January, 1937, was given as 118.9 (1898-1913 = 100) and 102.2 (1913 = 100), instead of 135.6 and 116.5, respectively. As the original figures and the comment based upon them were alike misleading, owing to an error in compilation, we ask our readers kindly to note this correction. It will be observed that the average level of freight rates did not decline, but continued to rise during January.

The Legacy of the Crown

NEW YORK, February 2.—The judgment delivered recently in London by the Judicial Committee of the Privy Council, nullifying certain Acts of the Canadian Parliament, illustrates the genealogy of our own constitutional practices. Prior to American independence, the several American colonies not only shared in the British Constitution, but were specifically organised under Royal Charters, which were the supreme law of the land. Appeal was often made through the Courts to the Royal Charter in the event of conflict with acts of the Colonial Administration, and the capacity of the Courts to resolve such disputes was probably never contested. Our written Constitution is the historical descendant of the Royal Charter; but (a) no Royal Charter had ever been granted to the thirteen colonies as a unit, and (b) the Constitution was conferred on the Central Government by authority of the People and not of the Crown. But the capacity of the Courts to interpret the Constitution, and to invalidate laws in conflict with it, was not created by the Constitution; rather it was perpetuated by the Constitution in a political society accustomed to living within the framework of a formal instrument, whether Royal Charter or written constitution. The genealogy of the Canadian case is almost identical.

Is There a Boom?

Our economy is "like Cerberus, three gentlemen at once." We are in a boom in consumer goods industries, as a consequence of the generous extension of consumer credit; we are, or were, on the verge of a boom in the motor industry, when, before the strike, there was a reasonable prospect of a production of well over five million cars in the year, and in steel and some of the factory equipment industries; but, at least by comparison with the past, we are very far from a boom in building, either residential or non-residential.

FEDERAL RESERVE BUSINESS INDICES, 1923-5 = 100
ADJUSTED FOR SEASONAL

	Dec., 1935	Nov., 1936	Dec., 1936*
Industrial production (total)	101	114	121
Manufactures	101	115	122
Minerals	102	111	115
Building contracts (total)	68	58	61
Residential	26	40	40
All other	103	72	77
Factory employment	88.6	96.0	98.2
Factory payrolls	77.4	90.5	94.5
Freight car loadings	71	80	86
Department store sales ..	83	93	92

* Preliminary

The following table shows the unadjusted December indices of the highly active industries:—

Iron and steel	125
Textiles	132
Automobiles	147
Tobacco*	153
Petroleum	155
Leather and shoes	112

* November. December figures not yet available.

These figures are in sharp contrast to the unadjusted index of 34 for residential building. In the recent symposium of economic opinion on the state of England, there appeared to be unanimity of opinion that there is no boom in that country. It is questionable if such categorical agreement would be expressed about conditions here. Taken as a whole, our

economy could not be described as booming; in detail, we certainly have no stock market boom directly financed by credit, and no building boom financed by credit; but we have something which some persons would describe as a boom in consumer goods, financed by consumer credit.

The December index of production was 121, only 5 points below the May peak of 1929, and 2 points below September, 1929, the month when the boom collapsed. The average for the last six months of 1936 was the same as that for 1928. Since 1928, our population has risen by 7 per cent. On the other hand, 1928 was definitely a boom year. Such comparisons provide no real answer to the question whether there is, or likely to be, a boom in 1937.

The Changing Balance of Trade

The foreign trade figures for December 1935 and 1936, emphasised the change in our trade balance, particularly in the past two years:—

FOREIGN TRADE OF U.S. (\$000,000)					Gold Imports
	Merchandise Exports Imports		Silver Exports Imports		
Dec., 1935	\$ 223	\$ 186	0.769	48	190
Dec., 1936	229	244	0.236	2	57
	<u>+ 6</u>	<u>+ 58</u>		<u>- 46</u>	<u>- 133</u>

The new policy of the Stabilisation Fund was inaugurated late in December, and it is possible that it affected the gold import figures. Presumably gold bought by the Stabilisation Fund and imported would be reported as an import; but gold (if any) held abroad would, of course, not figure in these statistics. The total gold reported by the Treasury in its "inactive account" is close to \$120 millions, only a little of which was acquired in December. The Fund has made no statement as to whether or not it transfers all gold purchased.

The December imports of goods were unusually large, and supply a clue to the vigorous price movement in primary commodities which marked the last two months of the year. It did not alter the general trend of our trade balance; rather, it emphasised it:—

MERCHANDISE TRADE OF U.S. (\$000,000)

	Exports	Imports	
1934	2,133	1,685	+448
1935	2,283	2,047	+235
1936	2,453	2,419	+34

A variety of explanations is offered for this abrupt change, including the drought, Secretary Hull's treaties, the price movement, the vigour of the American recovery, etc.

Reducing Excess Reserves

On January 30th the Federal Reserve Board announced an increase of reserve requirements of 50 per cent. of the base rate, or 33½ per cent. of present require-

The COMMERCIAL NATIONAL BANK and TRUST COMPANY of NEW YORK

An International Bank working with the principal banks of the world as correspondents. No foreign branches

FIFTY-SIX WALL STREET, NEW YORK

Cable Address: COMTRUST

Member: Federal Deposit Insurance Corporation

ments. It is to be applied in two equal steps—on March 1st and May 1st:—

RESERVE REQUIREMENTS—%.		DEMAND DEPOSITS		
Class of Banks	Present	Mar. 1-Apr. 3	May 1	
Central Reserve City	19½	22½	26	
Reserve City	15	17½	20	
Country	10½	12½	14	

For time deposits, in all classes of banks, the base rate is 3 per cent., and the present requirements of 4½ per cent. will be raised to 5½ per cent. on March 1st and to 6 per cent. on May 1st. It is officially estimated that the action will absorb \$1,500 millions of excess reserves. The system will thus be rendered more responsive to open market operations. This step, with the recently-adopted policy of the Stabilisation Fund, disposes of the problem of excess reserves. The Board of Governors is placed within reach of control over the credit system, or, more precisely, over the volume of credit supplied by the Federal Reserve system.

The flood has approximately reached its peak along the lower Ohio, and while there are apprehensions about the Mississippi they appear less grave than a week ago. Estimates of the numbers of persons driven from their homes have run as high as 900,000, and estimates of the property damage as high as \$400 millions. In the magnitude of destruction and in the numbers of persons affected this may be rated as the largest flood in our history, and very likely one of the greatest national disasters.

France

Opposition Demand for Economy

PARIS, February 11.—The English credit, a loss of Frs. 3,000 millions in the gold stock of the Bank of France, and the unexpected raising of the rediscount rate of the Bank provoked a financial debate in the Chamber. Members accused the Government of resorting to inflation, and of mortgaging the gold of the Bank, after putting the embargo on it to impede its outflow. M. Vincent Auriol replied that he was not borrowing more than his predecessors had done. His statement of the needs of the Treasury for 1937 was as follows:—

	Frs. millions
Estimated deficit	4,600
Military and public works	13,685
Pensions fund	2,200
Public undertakings	12,272
Treasury charges	3,370
	36,127

Some Frs. 8,000 millions of this total have been already met, and the Treasury needs only Frs. 28,000 millions against Frs. 30 millions last year.

This statement did not, however, take into account the reimbursement of the English loan of Frs. 4 milliards; thus the Government will need to borrow Frs. 32,000 millions at least. The exact figures are uncertain, and the adversaries of the Cabinet are making even higher estimates (Frs. 32,000 to 42,000 millions). They maintain that this extravagant expenditure is sapping public confidence. Economy is the watchword of the Opposition. In the Senate, M. Caillaux added that the Finance Committee would in future refuse to vote new expenditure which was not accompanied by actual economies. M. Auriol replied, however, that confidence would soon be restored by the success of the Government's economic policy; this was already shown, he said, by the increase in fiscal receipts. M. Auriol maintains that the Budget will be balanced in the second half of the year.

Rising Prices and the Popular Front

The difficulties of the Treasury are actually of secondary political importance, compared with the rise in prices; public opinion is very alarmed. "What is the increase in wages worth, if it is absorbed at once by the

rise in prices" is the slogan invariably heard in the streets, when a further increase in the price of bread, or wine, or butter occurs. The Popular Front is anxious, and the organs of the Left demand that the rise in prices should be checked at once. The leaders of the Trade Unions are urging their followers to be patient, to "digest" the labour reforms, and to safeguard the victory of the Popular Front. But their patience will not last very long.

The Government's Difficulties

The stipulations of the 40-hour week have been further relaxed in order to increase production and to diminish imports. These imports increase the import surplus, and render the task of the Equalisation Fund more difficult. It is rumoured, moreover, that the Government intends to take steps against those wholesalers who are shifting the entire cost of the new social laws and the rise in prices to the shoulders of retail consumers. And it is suggested that the Government will also lower tariffs and suppress new quotas, in order to increase the competition of foreign products in French markets.

These efforts, and the declaration of M. Auriol that he was opposed to a further devaluation and would remain true to the tripartite agreement, restored confidence somewhat. French difficulties are not only the consequence of the new social policy, but also of other causes; such as the rise in world prices and a certain dislike of a Socialist Government. Yet the Government has made important concessions to liberal and capitalist doctrines (with the exception of the incomprehensible taxation of gold). It is now hoped that the Paris Exhibition in May will further revive business and restore confidence. But it appears to many observers that the present uncertainty cannot last much longer. Five months after devaluation, France must make headway, or decline.

Germany

Propaganda for the Plan

BERLIN, February 10.—Although no programme of output under the Four-Year Plan has been published, and it seems, indeed, that none has been compiled, the recently created Office for Raw Materials is now supervising all new enterprises. A certain measure of co-ordination is therefore assured. Independently of the special powers given to General Goering as Director of the whole plan, the Ministry of Economy can regulate production under its old powers. It can authorise or forbid the raising of industrial capital in the market, and prohibit the expansion of existing concerns. The Nazi Press strongly advocates the compulsory investment of industrial profits in plan undertakings. Industrial concerns are willing enough to invest if, where market conditions themselves do not ensure profits, the Reich will give its already promised guarantees. In general, industry holds that it is burdened sufficiently. The Corporation Income Tax, which yielded only Rm. 106 millions in 1932-33 and was last year increased, is estimated to yield Rm. 1,100 millions in the present financial year; and the new tax on exchange-depreciation profits will hit hard those great companies which still have substantial foreign debts. Although production in general has regained the best pre-depression volume, industrial net profits have not fully recovered. The Party Press stresses the substantial company profits which were not paid out in dividends, and which, indeed, were mostly not disclosed at all. The plan is being given an ever more anti-international and anti-Jewish character. The Director of the Labour Front, Dr. Ley, promises that it will ultimately cheapen building materials, housing, clothing, and fuel; but other authoritative utterances admit that the particular products to be turned out under the plan will be very dear, at least at the beginning.

Uncertain Debt Position

The Reichsbank announces a prolongation until June 30, 1937, of the Conversion Fund regulation for the service of foreign debts. The provisions of Clearing or Payment agreements will not be affected. A conference is to be held this week in Berlin to discuss the Standstill Agreement. At the Conference of February, 1936, interest rates were left unchanged, and the only important change was the establishment of a "travel mark" within the registered mark system. The Standstill Debt, which was Rm. 6,300 millions in 1931, was fixed at Rm. 1,603.7 millions at the end of 1935. The reduction of debt in the year 1935-36 was estimated at Rm. 400 millions; the known reduction in March-December, 1935, was Rm. 357 millions. This week's conference will probably report the debt at about Rm. 1,000 millions. No explanation has yet been given of what became of the estimated Rm. 1,000 millions surplus on trade and shipping services in 1936. Fragmentary figures which have been published of the debt service transfers, travel allowances, the repayment of trade debts, and losses of various kinds, do not account for more than about two-thirds of the surplus.

In 1936, exports of most manufactured articles, and also of coal, heavy metals and chemicals, increased very considerably, with a few exceptions. A curious feature, in view of the shortage of materials and of the decline in imports was the sharp rise in the export of yarns and cloth:—

	Exports in millions of Rm	
	1935	1936
Iron and iron goods.....	729	852
Machinery (not electrical)	362	484
Electrical machinery	206	235
Coal and coke	367	389
Chemicals and dyes.....	541	565
Vehicles	72	102
Yarn and cloth.....	295	394
Paper and paper goods	147	168
Glass	120	137
Pottery	51	54
Musical instruments, clocks, etc.	102	117
Leather and leather goods	97	86

The quantity of exports increased rather more than the value, although for some articles export prices in 1936 were higher than in 1935.

Better Conditions for Farmers

According to the Bureau of Statistics, agricultural prices (to first producers) in the farming year 1935-36 had recovered to 77.1 per cent. of the 1928-29 level, after being as low as 58.8 per cent. in 1932-33. Prices of materials used in farming were in 1935-36 78.6 per cent. of the level of 1927-28, having risen from 74.4 per cent. in 1932-33. It follows that the "price-scissors" which was so widely open to the disadvantage of farmers in 1932-33, has almost entirely closed. Sales of agricultural machinery last year reached Rm. 330 millions, or 38 per cent. more than in 1935. Exports increased 42 per cent. The value of agricultural production in 1935-36 is returned at Rm. 11,600 millions; of this, Rm. 2,285 millions was consumed by the producers.

The steel industry continues active. The syndicates report that prices exceeding those of the International Cartel are being offered for the speedy delivery of exports. The industrial use of gas over long distances is increasing rapidly. The Ruhrgas A.G., of Essen, reports delivery for all purposes in 1936 of 2,027 million cubic metres, which is an increase of 21 per cent. over the 1935 figure. Of this quantity approximately 40 per cent. went to iron producers, 40 per cent. to iron consumers, and 13 per cent. to municipalities. The Siemens und Halske and Siemens Schuckert companies have each increased their dividends (for 1935-36) by 1 per cent. The turn-overs of both companies show large increases.

The New Company Law is intended to facilitate capital increases by existing concerns. A company may decide to increase its capital in favour of the holders of bonds convertible into shares, or in order to prepare for a merger. The increase will only come into effect when the option to convert is exercised.

Sweden

A Move Towards Freer Trade

STOCKHOLM, February 10.—The question of closer economic co-operation between signatories of the almost forgotten Oslo convention of 1930 has so far not advanced beyond the stage of preliminary discussions and somewhat platonic official declarations. After a visit which a Dutch delegation, headed by the Minister of Commerce, Mr. Gelissen, paid to Sweden, Mr. Sandler, Swedish Foreign Secretary, went with the King to Brussels. He then went on to The Hague to see Dr. Colijn, the most active personality in the move for the revival of the Oslo instrument. The Dutch Government has now made known its intention to call at the end of February, at The Hague, an informal meeting of representatives of the signatory States, i.e. the three Scandinavian countries, Holland, Belgium and Luxembourg.

A certain scepticism is shown in business quarters about the possibility of reaching positive results by vitalising the Oslo Convention. While there hardly exist any trade barriers in Sweden and Norway, Denmark is certainly not in a position to abolish her import and transfer restrictions, and Holland will hardly take any such step without compensation. And neither Norway nor Sweden has any further tariff concessions to grant. The move must therefore be regarded as the beginning of negotiations for removing trade restrictions, on a wider scale than within the frame of the Oslo agreement.

Rapid Rise in Prices

The boom follows its normal course; business continues to expand. The only disturbing factor is the almost hectic rise in wholesale prices which has recently taken place. The general wholesale price index of Professor Silverstolpe, regularly published by the Board of Trade (100=average 1913/14) showed for January a jump of not less than 6 points, i.e. from 125 to 131; it had remained unchanged at 113 during the first part of 1936. A striking increase was recorded by metals, which rose from 121 to 144 after having been at 100 in July, 1936. This rapid rise in prices has inspired rumours of an early reduction of the sterling rate in Stockholm. But the Minister of Finance, in an interview, stated that the Swedish Government has at its disposal sufficient means to check the price advance. He admitted that the most effective of these was a lowering of the sterling rate. But such a step, the Minister stated, would certainly not be undertaken without very mature consideration; and only if the price advance in Great Britain were to continue at a disquieting pace.

Boom in Pulp and Paper

Industrial production continues to expand. Market reports for the main Swedish staple articles have been satisfactory. Sales of wooden goods have been brisk, particularly on account of better demand from Great Britain, and rising prices. Pulp sales have been favourable. Great liveliness is reported from the paper mills; and the Scandinavian Kraft paper cartel, Scancraft, recently increased its prices by 17 shillings per ton for Great Britain, and by 20 shillings for other markets. The metal industry is working at full capacity, though the works are increasingly suffering from lack of raw material, of semi-finished goods, and particularly of pig iron. The shortage of pig iron, which has caused an abnormal rise in pig iron prices, is due largely to the inadequate supply of charcoal.

Unemployment showed in December a seasonal rise; the number of unemployed rose from 28,700 to 31,000 against 58,000 for December, 1935. There was a shortage of skilled labour in the metal and machine trades. Unemployment in building rose slightly. During December, money was plentiful, and deposits at the joint stock banks rose from Kr. 3,790 millions, to Kr. 3,833 millions; total advances increased from Kr. 3,971 millions to Kr. 3,991 millions.

Italy

Falling Birth Rate

TURIN, January 30.—The number of Italians living in Italy, which increased from 37,947,000 in December, 1921, to 41,176,671 on April 21, 1931, reached 42,528,000 on April 21, 1936 (the census date). It was estimated at 42,764,000 at the end of 1936. Disregarding territorial changes, marriages, births, deaths and the excess of births over deaths (per 1,000 inhabitants) changed as follows:—

	Marriages	Births	Deaths	Excess of Births over Deaths
1872-75	7.9	36.8	30.5	6.3
1891-95	7.4	36	25.5	10.6
1911-14	7.4	31.7	19.1	12.6
1922-25	8.4	29.5	17.3	12.2
1926-30	7.3	26.8	16.0	10.9
1931-36	6.8	23.8	14.1	9.8
1936	7.2	22.2	13.5	8.7

The encouragements which have been given to new and large families have not been able to arrest the decline in births; the increase of population is due to improved sanitary conditions and consequent lower mortality. The natural increase in population was lowest in the north; in Piedmont there was an excess of births over deaths of only 0.7 per 1,000 inhabitants. The increase was largest in the south (Calabria 16.8, Lucania 15.2, Sardinia 14.5 per 1,000).

The Growth of Rome

Internal emigration was highest from agricultural areas. In the Venetian provinces there was an excess of 43,932 emigrants over immigrants, in Marche of 5,497, in Abruzzi of 6,142, in Puglia of 6,479, in Calabria of 9,300, in Sicily of 27,883, and in Sardinia of 12,774. The greater part of the rural migrants moved into the industrial and trading regions: Piedmont had a surplus of 2,073 immigrants over emigrants, Liguria of 10,264 and Lombardy of 12,937. The largest quota went to Latium. The capital city took over 30,142. This is a highly significant index of the movement towards centralisation which is taking place in Italy. Rome has fast become the largest city in Italy. In 1935 and 1936 the excess of immigrants over emigrants in Rome was 34,915 and 34,331 respectively; 28,535 and 33,604 in Milan; 20,380 and 15,104 in Turin; 6,040 and 8,534 in Naples; 8,185 and 6,920 in Genoa; and 9,625 and 9,829 in Bologna. At the end of 1936 Rome reached a peak of 1,198,023 inhabitants; the population of Milan was 1,130,142, of Naples 886,952, of Turin 642,179, and of Genoa 631,202. The growth of the Corporative State has tended to make Rome, not only the political capital, but also the real centre of all the banking, industrial and trading interests of the country. Economic life depends more and more on decisions taken in the capital, and the capital is therefore bound to grow relatively bigger and bigger.

U.S.S.R.

World Revolution and the United Front

MOSCOW, January 31.—The Soviet Government finally has succeeded in persuading sceptical observers that it has had to reckon with a serious opposition, led by members of rival factions, into which the ruling Communist Party split after Lenin's death in 1924. Stalin and his associates struggled openly with these factions for five years, and then suppressed them by force. They were faced with the alternative of accepting Stalin's programme and leadership, or fighting against them in secret.

According to the testimony in the second of a series of conspiracy trials which began last August, the leaders of all rival Communist factions had united on a common platform in which the principal plank was Stalin's overthrow. Even sceptical observers, while unable to accept the testimony at face value, were convinced that an opposition movement had crystallised within the Communist Party, and that Stalin had been compelled to act swiftly to break up the opposition before it had fairly started.

These trials, which will continue for some time, have international implications. Trotskyism, as opposed to Stalinism, has become a considerable factor in the international revolutionary movement. The Trotskyists have interfered with Stalin's efforts to combine foreign Communist parties in a United Front with other anti-Fascist groups. Claiming to be the only "pure" revolutionaries, the Trotskyists argued that the United Front is side-tracking world revolution. Stalinists contend that the immediate task is to preserve the Soviet Union, while the Red Army is being expanded to the point where it can not only defend Russia, but also help revolutionary uprisings in other countries. Both groups aim toward world revolution, but disagree on the means to attain it.

So far as Russia is concerned, the "myth of world revolution" has retarded the country's development. The inter-Party struggles, whether conducted openly or in secret, preoccupied the attention of Communist leaders who held key positions in Soviet industry, agriculture, etc., and the inefficiency of many industries may be largely attributed to the political and theoretical distractions of those who should have been devoting all their time to executive work.

A Middle-Class State

But the present "purge" may be salutary. Stalin has discovered that veteran revolutionaries are less trustworthy than members of the dispossessed classes. For more than two years the political police have been busy clearing out political malcontents from the vast State machine, and almost all of those implicated were Communists. The prestige of veteran revolutionaries has declined at the same time that that of former "class enemies" has risen.

As a result of the present "cleaning," it appears to some observers that a new kind of middle-class state is emerging in Russia. At the top stand Stalin and his closest associates, men who picked him as a winner in the Party struggles. Just below this group stand the executives of the "one vast syndicate" which Soviet Russia has become. At one time these executives were drawn largely from the Communist Party and from men of proletarian origin. They are now selected by a loose merit system, without regard to social origins, and form a new kind of upper middle-class. Below them stand the superior workers and peasants, who have an honoured position in the State bureaucracy. The whole structure rests on the broad mass of workers and peasants, closely organised and controlled by the bureaucracy, who are persuaded by every device of modern propaganda that they are important cogs in the State machine.

This political, economic and social system differs from all others in that it tolerates no individual "capitalists"; the State has a monopoly of the means of production, and well-paid executives may invest their surplus earnings only in personal property and Government bonds. But material and social rewards are now sufficient to impel ambitious men and women to struggle for advancement. This system promises to become more efficient and practicable than the earlier system, in which most of the key positions were given to veteran revolutionaries or to untrained "proletarians." But the system requires absolute loyalty to the Party dictatorship; the political police must detect and root out malcontents. That is the purpose of the present series of trials.

Letters to the Editor

Bankers, Boom and Budget

TO THE EDITOR OF THE ECONOMIST

SIR,—The answer to your question is easy and should be obvious. If, subsequently, the desire of the public to hold idle balances is diminished, the excess can, in such circumstances, be withdrawn without detriment to the rate of interest.

It is not easy to become accustomed to the idea of trying to avoid booms and slumps. But it is a necessary first step in this direction to get accustomed to the notion that the supply of idle balances should not be kept constant irrespective of the fluctuating impulses of the public to hold them.

Yours, etc.,

J. M. KEYNES.

King's College, Cambridge.

TO THE EDITOR OF THE ECONOMIST

SIR,—Is not Mr Keynes in some danger of misinterpreting his own analysis, and of treating two exactly opposite situations as though they were mere variants of the same situation?

The price of gilt-edged securities may sag because on the balance their holders, including banks, are desirous of becoming more liquid, i.e. of increasing their holdings of what seems to them (according to their several standards) to be "cash." Or the price of gilt-edged securities may sag because on the balance their holders, including banks, are desirous of becoming less liquid, i.e. of increasing, directly or indirectly, their investment in commodities or equipment. The latter is surely the predominant reason for the tendency of gilt-edged prices to sag during the later phases of a trade recovery.

In the former case it may well be proper for the Central Authority to counter the public's shift towards liquidity by increasing its own willingness to hold gilt-edged securities. But it by no means follows that it is proper for it in the second case to reinforce the public's shift away from liquidity by taking the same course. For to take this course is to neutralise the check which the tendency of gilt-edged prices to sag, i.e. of the rate of interest to rise, imposes upon the growth of the public's appetite for investment in commodities and equipment.

The danger of attempting to kill two such dissimilar pigeons with one verbal shot is well illustrated by the crucial sentence of Mr Keynes' second letter, which I reproduce with my own italics:—

If the public is deprived of its normal supply of idle balances by the demand for active balances, or if it gets nervous about the prospects of the gilt-edged market, then I feel strongly that, unless we deliberately desire to raise the rate of interest, this demand for idle balances should be satisfied for the time being, the extra idle balances being subsequently withdrawn as a change in the atmosphere or in the circumstances permits.

The phrases which I have italicised seem to suggest that if later on a recession of trade develops, so that less money is required for the conduct of business and more becomes available to satisfy the desire for idle balances, the Central Authority should contract the basis of credit. Is this really the policy which Mr Keynes will advocate in the next slump?

We may see no reason for apprehension in the trade activity and the accompanying price movements: if so, well and good. Or we may be confident that we are strong and clever enough to control them by direct action, in spite of our own endeavours to prevent the rate of interest from responding in the usual manner to an enhanced demand for loanable funds: if so, again well and good. But let us at least be clear that for the Authority to support the gilt-edged market *à outrance* during a boom is not an action of the same kind as to support it *à outrance* during a slump, but an action of the opposite kind. For the second is to move in opposition to the movement of the public along the scale or spectrum of liquidity, the first is to move in conjunction with it. The second therefore is compensatory, the first inflammatory.

Yours, etc.,

D. H. ROBERTSON.

Trinity College, Cambridge.

Mr Runciman in Washington

TO THE EDITOR OF THE ECONOMIST

SIR,—In your note of the week (January 30th) on Mr Runciman's visit to Washington you raise a very interesting and important question. Discussing the possibility of a trade treaty with America you say "it is well, however, to realise the limited scope of such a treaty. According to American law it must be reciprocal; that is, the concessions offered by either party must be approximately equal."

I suggest that the *quid pro quo* to be offered by this country for a very material reduction of the barriers to British trade should be the continuance by this country of Most Favoured Nation treatment to America.

Apart from the question of the rates of the American tariff which are in many cases prohibitive, the Commercial Counsellor of the British Embassy at Washington reported about two years ago that the administrative and sanitary restrictions regarding imports into the U.S.A. were such that "rather than face these impediments foreign exporters and American importers often give up the attempt to trade."

The policy of the British Government has been stated as follows: this country "will certainly not be prepared to continue indefinitely to accord full Most Favoured Nation treatment to countries which show themselves unwilling to meet the reasonable requirements of this country in regard to the treatment of United Kingdom goods."

I believe that if this stated policy of the Government were followed to its logical conclusion, it would permit a considerable reduction in the British tariff either through an agreement with America, or if negotiations were unsuccessful because it would be no longer necessary to extend such reduction to imports from America.

Yours faithfully,

J. LOGAN STRANG.

A Road and Rail Controversy

TO THE EDITOR OF THE ECONOMIST

SIR,—Having read with interest the first article in *The Economist* on "A Road and Rail Controversy," I had looked forward to the reply from the railway point of view. But I must confess to disappointment and to a complete inability to see what is indeed the railway case.

On what *are* railway rates based? It seems to me the writer of the second article has failed to answer this question. Railway rates are dismissed as being "finally determined by statutory restraints." Even if Parliament is made responsible for the railway rate structure, there must be some basis on which it is built. Furthermore, whatever the original basis may have been, it can hardly have achieved "finality" if 69 per cent. of railway freight revenue is derived from exceptional rates and "agreed charges." And if this figure is accurate, it must tend to make railway rates, as a whole, approximate more and more closely to "cost of service."

The railway reply would have been more convincing if some attempt had been made to show that this and other figures adduced in the "Road Transport Case" were inaccurate. Instead, it confines itself to blunt contradictions, which, without proof, fail to answer the road arguments. Epithets are not evidence. If the figures produced in the first article are wrong, and it must be emphasised that no evidence is given to prove them to be so, it is a pity the railway reply did not include a statistical statement showing the true position. If they are not wrong, the alleged reply merely evades the issue.

Again, why does the exclusion of overhead costs invalidate the road argument—rightly, as it seems to me, based on haulage costs alone? Certainly stations and permanent way must be maintained, but their cost must be spread over all traffic; its allocation is mainly a matter of book-keeping.

Is it possible that the writer of "The Railway Reply" cannot answer the "Case for Road Transport" except by the time-honoured method of abusing the plaintiff's attorney?

Yours faithfully,

H. E. CRAWFORD.

Hawker Aircraft

TO THE EDITOR OF THE ECONOMIST

SIR,—On November 28, 1936, the chairman of Hawker Aircraft, Ltd. (the "Aircraft Company") intimated to the ordinary and "A" ordinary shareholders of the company that the Hawker Siddeley Aircraft Company, Ltd. (the "Siddeley Company") offered to exchange four ordinary shares of 5s. each of the Siddeley Company for every five ordinary or "A" ordinary shares of the Aircraft Company.

The prices at the close of business on November 27th were: Aircraft Company ordinary, 31s. 9d. (2s. down on the day), Siddeley Company, 36s. 6d. (6d. down on the day), the latter being just ex a one in ten free bonus. Taking the four to five ratio on the Siddeley Company price of 36s. 6d., the offer was equivalent to a price of 29s. 2d. per share to the Aircraft Company ordinary shareholders. On November 30, 1936 (i.e. after the announcement), the price of Aircraft Company ordinary shares fell 2s. to 29s. 9d., while Siddeley Company ordinary shares were 6d. better at 37s.

It is not as if the price of the Aircraft Company's shares had been forced up in the market, in anticipation of the offer, faster than the rise in the Siddeley Company's shares. What are the facts? Siddeley Company ordinary were issued in July, 1935, at 15s. Aircraft Company ordinary were then about 28s. When the merger was foreshadowed by the chairman of the Siddeley Company (and incidentally of the Aircraft Company, too) on June 4, 1936, the relative prices were: Siddeley Company ordinary, 26s. 3d.; Aircraft Company ordinary, 27s. Between the latter date and November 27, 1936 (the eve of the actual announcement of the offer), Siddeley Company ordinary had risen 13s. 9d. per share (cum the one in ten bonus declared on November 11, 1936), while the Aircraft Company ordinary had only risen 4s. 9d. per share.

In my experience it is almost unprecedented for an offer of either cash or securities to be made for the shares of a company on such terms as would give a holder a poorer value than the current market price. In this particular case the Siddeley Company already held 50 per cent. of the ordinary shares of the Aircraft Company, and some 80 per cent. to 85 per cent. of the outside shareholders accepted the offer. All shareholders must be presumed to have been aware that the marketability of their holdings would be jeopardised if they did not accept. And those shareholders who, in fact, did not, now find themselves practically without a market.

In the circular to shareholders, the chairman pointed out that the profits of the Aircraft Company were likely to be less than those of the two previous years, and stressed this factor as a strong argument for acceptance of the Siddeley Company's offer. Further, a second circular was issued on December 16th, reiterating this point and extending the date of the offer. It also stated that the offer was entirely voluntary, and that shareholders could refuse or accept accordingly. There was, however, no warning added as to the result of refusal on the question of marketability. Now when a holder of some shares feels or knows that the company is facing lower profits, he generally tries to sell his shares. So, if the board of the Siddeley Company felt so sure that the Aircraft Company's profits would be lower, would it not have been better business for them to offer their own Aircraft Company holding to the public by an offer for sale, rather than to acquire the publicly-held remainder of the capital?

The main point which, however, emerges from this experience is the very weak position in which a minority shareholder can be placed.

Yours faithfully,

"EQUITY."

Books and Publications

Preparing for the Next War

THIS book* differs from most of the many other books recently published in Germany on industrial mobilisation for war; it ignores policy and organisation and concentrates on statistics. The statistics, analysed adequately in the text, are grouped under three headings: the need for industrial mobilisation; the basic problems of industrial mobilisation; and industrial mobilisation and the economic structure. Readers will find a great quantity of useful data about past wars; about the cost of armaments in the various European States, in Japan, and in the United States; and about their capacity to produce armaments. But they will find nothing regarding Germany, except certain known facts about her industries. If power in war is relative, it is of little use to know how much munitions Great Britain

produced in 1935, and Russia even in 1936, if one knows nothing at all about Germany.

Nevertheless the book is useful. It brings out clearly, as a reason for preparing for industrial mobilisation, the vital importance of the time factor. In this respect, indeed, the term "industrial mobilisation" is a mistake. It seems that a vast supply of war material ought to be available at the outbreak of hostilities, to be mobilised only in the sense that soldiers already available are mobilised. This is the logic of the statement by the Director of the Defence Economic Staff of the Reich War Ministry that attack on the enemy's country will begin before war is declared. In the last war, time often moved very lazily. Eighteen months, it is stated, were needed by Great Britain for the manufacture of a particular gas; and of all the guns produced in the United States after she declared war, only four reached the front.

It is plain that no accumulation of arms and munitions in advance would suffice for even a short war; as in 1914-18, existing armaments factories would not

be able to meet the current demand. Of the three possible ways of creating in advance a reserve production capacity only one, it appears, really counts. The development of armament industries for export is limited, and the establishment of reserve munitions factories, which would lie idle in peace time, would be too costly. In effect, therefore, industrial mobilisation means the transformation of peace factories into war factories. This will be enforced by the State. The last war proved that high prices alone were not a sufficient incentive to manufacturers to adapt their plant.

The book gives due prominence to the labour problem. The "domination of material" in modern war has not, in fact, replaced men by machines. On the contrary, it has massed skilled workers behind the machines. Some illuminating figures are given of the number of men behind the lines necessary to keep going a tank or an aeroplane at the front. The reserve of labour is, however, already very considerable, for an ever smaller proportion of the German population is occupied in producing really indispensable peace-time goods. Germany, in the last war, saved enormous quantities of materials and labour by suspending domestic construction. In 1913 she added 200,000 to her total number of dwellings; in 1918 only 2,800. It is implied that at the outbreak of war some unemployment might be an advantage; Germany with 76 per cent. of her industry employed (1935) is presented as being better off than Russia, which has a greater industrial capacity, which is, however, practically fully employed.

The compilers calculate that Russia and Japan are each producing 18 per cent. of the world's total output of war materials, which is double the share of Great Britain. They admit, however, that, finding Russia's own return of her expenditure on war materials unconvincing, they summarily increased it by 65 per cent.

This book rejects the Nazi view that countrymen make the best soldiers. It emphasises the superior skill of the townsman in the handling of machinery.

Shorter Notices

"A Simple Theory of Capital, Wages and Profit or Loss." By E. C. van Dorp, LL.D. P. S. King. xix+290 pages. 12s. 6d.

In the introduction to this book, the author makes the welcome remark that "the dragon of scholasticism must be killed." It is a pity, therefore, that only thirty pages are devoted to her own positive theory, while the bulk of the book consists mainly of rambling and often polemical criticisms of the theories of others. The author's chief quarrel is with the marginal productivity analysis. This seems to be due largely to an apparent failure to grasp its mathematical basis, and to a confusion between static and dynamic conditions.

Dr van Dorp's own theory of wages is a naïve form of the wages fund theory. Wages depend, not on what is being produced, but on the amount of consumption goods left over from the previous period of production, which *entrepreneurs* decide not to consume themselves. "How much the capitalist will consume is a datum for economic theory" (page 77). This fixes the wages fund. The problems of working-class savings, and of the accumulation and decumulation of stocks of consumption goods, are nowhere referred to. It is indeed astounding that the author, who has evidently an extensive knowledge of economic writings, should have thought that this simple thirty-page exposition was adequate as a new theory.

English readers of this book will feel that the critical section suffers badly from too little attention to Marshall, who is dealt with in seven pages. This accounts for many of the misunderstandings in the much longer analysis of Keynes's new theory. The long discussion of Böhm-Bawerk is a typical example of the scholasticism which the author deplores, but it may be of interest to a few specialists. Taken as a whole, the only merit of this book is that it draws attention to the perplexities of the problem of profit and interest, and to the necessity of examining wages and profits together; but it cannot be said that any original contribution is made. About practical issues the author's suggestions are also very simple—since all our ills are due to the interference of governments and trade unions, all our exertions must be directed to restoring free economy.

"Forward From Liberalism." By Stephen Spender. Gollancz. 295 pages. 7s. 6d.

This is an interesting and curious book by a young intellectual and poet who wants to call himself a communist. It is a curious book because it makes quite clear that Mr Spender is in fact a liberal. The things he believes in—with an immediately recognisable sincerity—are freedom, justice and equality. But he is determined to be known as a communist, and the whole book trying to resolve the problem. Finally, the truth is out: "I am a communist because I am a liberal."

Mr. Spender's convictions shine so brightly through his book that one is unwilling to quibble over labels. One is only left wondering what trick of taste or fashion it is that has made him so anxious over labels himself.

"Spain." Report of an All-Party Group of M.P.s. Lawrence and Wishart. 15 pages. 3d.

Three Unionist, two Labour and one Liberal M.P.s visited Spain and entered into relations with the Spanish Government in Madrid in November-December. Their Report emphasises the terrible sufferings of the Madrid civilian population; denounces aerial bombing of this population; urges its evacuation with the aid of foreign motor transport; and exhorts both sides to more humanitarian treatment of prisoners. The Report says Franco's forces are much less than those of the Government, and describes one Italian prisoner captured from the rebel forces as having informed the M.P.s that he and his fellows had been serving soldiers in a Rome artillery regiment, and had been sent to Spain. It also urges the need of gas-masks in Madrid. The M.P.s had an interview with M. Blum on their way back, when the French Prime Minister agreed to help in the international task of evacuating the Madrid population. The Report itself is an interesting document, free from any taint of party bias, constructive, and (for its small size) most informative.

MONEY AND BANKING

Brazilian Exchange

It is nearly three years since Brazil presented her long-term overseas creditors with a cut-and-dried debt scheme which arbitrarily graded their securities in tiers for interest-paying purposes, and greatly reduced the total volume of payments. Before the end of September the whole position is to be reviewed, in order that a fresh scheme may run from April 1, 1938, so that Brazil's present exchange position is of interest.

Although exchange control was introduced into Brazil in May, 1931, the present exchange arrangements date from February 11, 1935. All exports, with a few minor exceptions, must be sold in the "free" exchange market to authorised banks. The latter then deliver 35 per cent. of the resultant exchange to the Bank of Brazil at a stipulated official rate (57 milreis to the £) and the balance of 65 per cent. is left for the "free" market. By a ruling of June, 1935, these quotas were maintained, but the authority of the Exchange Control was required for all remittances abroad, even though they were made through the "free" exchange market.

In March, 1935, an Anglo-Brazilian Payments Agreement was arrived at, in order to make provision for the liquidation of blocked commercial debts, due to the United Kingdom for goods imported into Brazil before February, 1935. The Agreement was implemented a year later. Only small cash payments were forthcoming, the majority of the debts being funded by the issue of Brazilian 4 per cent. Sterling Stock, redeemable within about five years. Similar arrangements were made for the liquidation of blocked American funds. This was the second occasion within a few years when Brazil resorted to funding arrangements for the settlement of foreign commercial credits.

Brazil's visible trade balance deteriorated rapidly between 1931 and 1935, as the following table shows:—

	Imports (£ gold)	Exports (£ gold)	Export Surplus (£ gold)
1931	28,755,694	49,543,866	20,788,172
1932	21,744,297	36,629,594	14,885,297
1933	28,131,911	35,790,080	7,658,169
1934	25,467,306	35,239,611	9,772,305
1935	27,431,141	33,011,848	5,580,707

As a result, largely, of the reduced export surplus, and the consequent shortage of foreign cover, the "free" exchange rate depreciated steadily to a level of 93½ milreis per £ at the end of July, 1935. During 1936, however, the trading position improved, and the latest available statistics show that between January and November, 1936, exports were valued at £35,234,240 (gold), against £30,057,887 (gold) in the same period of 1935, and imports at £27,126,300 (gold), against £24,967,830 (gold). Thus, the recorded export surplus for the first eleven months of 1936 was £8,107,940 (gold), against only £5,090,057 (gold) for the same period of 1935.

The appreciation in the "free" market value of the milreis, in terms of sterling, has been further assisted by the adoption of the United States dollar as the basis of milreis quotations, last October, after the devaluation of the franc. At the end of December, 1935, the sight rate on London was Rs. 89\$900 per £, but it had improved by the end of 1936 to Rs. 82\$500. It has subsequently appreciated steadily to a present level of about Rs. 80\$000. The improvement partly reflects temporary factors, such as the transfer of funds from France before the devaluation of the franc, and the influx of capital from abroad (particularly from North America) to finance new cotton production. The main factor, however, is undoubtedly the improved trading balance.

The most encouraging feature of recent returns is the greater diversification of the products which have been exported from Brazil. This factor has compensated for the steady decline in Brazil's proportion of the world's shipments of coffee, which was only 59.51 per cent. between January and November, 1936, against 64.56 per cent. for the same period of 1935. Although the volume of Brazilian coffee shipments was lower in 1936 than in 1935, their aggregate value was slightly higher, largely as a result of official intervention after the conclusion of the Bogotá Agreement with other American coffee-producers. Nevertheless, as Brazil's economy must continue for many years to depend mainly on the fortunes of coffee, there is widespread criticism in Brazil of the present valorisation policy. Artificial support of prices may certainly give a specious appearance of immediate prosperity, but the production of coffee for eventual destruction obviously cannot possibly be made the basis of a permanent policy. If the industry is to be restored to a sound basis, either a reduction in production or a substantial increase in consumption is essential.

Meanwhile, Brazil's cotton-growing industry is rapidly increasing in economic importance. The value of cotton exports is now about 45 per cent. of that of coffee shipments, and Brazil's export surplus is now largely bound up with the fortunes of the raw cotton industry. This industry, which is mainly carried on in the State of Sao Paulo, was practically non-existent before 1934. Last year's Sao Paulo cotton crop approached 200,000 tons—a record figure. But former hopes of a 250,000-ton crop are being nullified by bad weather and pest. A crop of about 250,000 tons would, at present prices, produce a return of more than £12 millions sterling. Further expansion, however, may be limited by shortage of labour, unless the limitations imposed on immigration by the Constitution are modified.

A favourable visible trade balance of £8,108,000 (gold) for January to November, 1936, is equivalent for the complete year to, say, £8,845,100 (gold), or £15 millions sterling. Allowing for the fact that certain classes of exports are very frequently undervalued, the total is not far short of the £18 millions sterling at which Brazil's overseas requirements are generally computed, under present conditions. The actual balance is, however, affected by the existence of a "compensation" agreement with Germany, under which the Government's percentage of 35 per cent. of exchange arising out of exports to Germany is deliverable in blocked currency. Further, it is impossible to say to what extent the position is, or may be, modified by the movement of capital from abroad. At present, however, the exchange market at Rio de Janeiro is easier than it has been for some time past. There is a plentiful supply of export bills, and none of the delay in remitting funds, which was in evidence up to quite recently, is now being experienced. Altogether, there appears to be little likelihood of any further accumulation of blocked commercial credits.

What light do the figures throw on the bondholders' problem? On the basis of eleven months' figures, the total value of Brazil's exports for the complete year 1936 should approach £65 millions sterling. The 35 per cent. of the resulting exchange which has been delivered to the Government should thus represent £22,500,000 sterling. It is generally considered that from £13 millions to £15 millions sterling is required by the Government for all expenses abroad, including £9,000,000 for the present debts scheme. The authorities would appear, therefore, to have a comfortable margin, on the right side, in 1936.

Financial Notes

Germany and the B.I.S.—There has recently been a strong belief in some quarters that Herr Hitler's announcements, in his speech on January 30th, of the final removal of all international restrictions on the legal status of the Reichsbank would entail the withdrawal of the German members from the Board of the Bank for International Settlements. The fact that the meeting of Central Bank governors in Basle last week-end was somewhat prolonged lent support to the rumour that Dr Schacht was about to announce the withdrawal of the Reichsbank. This interpretation, however, was strongly disclaimed in banking circles, and on February 8th the B.I.S. issued an official statement which put an end to all rumours. The statement affirms that no changes are contemplated in the relations between the B.I.S. and the Reichsbank. This, of course, is not incompatible with Germany's equality of status, which, indeed, is all that Herr Hitler claims. Germany could obtain no possible advantage, either of finance or of "face," from the abandonment of yet another means of international co-operation.

* * *

Bank of Nova Scotia Meeting.—A comprehensive survey of recovery in Canada was made by Mr J. A. McLeod, President of the Bank of Nova Scotia, in his presidential address. Unlike most other countries, Canada's recovery began with, and still depends on, the export trade. Rising prices for primary products have been the most powerful agent, but the trade agreement with the United States has also been helpful. Canada still suffers, however, from unemployment, unbalanced budgets, and an inadequate agricultural income. The first of these evils, which can only be slowly eradicated, is a heavy drain on the Dominion's resources, for about 9 per cent. of Canada's population is still in receipt of Government relief. The second results largely from the method of dividing taxing power between the federal, provincial and municipal governments. The position of the farmers is improving, but their net income is still 40 per cent. below the 1925-29 average. In a discussion of monetary conditions, the General Manager, Mr Patterson, showed that the cheap money policy has not yet resulted in a recovery in the building trade; and it cannot, unfortunately, affect the fundamental problems of agriculture. It is clear that recovery in Canada, as elsewhere, is far from uniform. But recovery stimulated by foreign trade may be healthier than recovery dependent entirely on the home market. On these grounds it is certainly possible that Canada may outstrip some other countries in the near future, in spite of the unsatisfactory position of agriculture.

* * *

The Foreign Exchanges.—There have been more movements of rate than usual during the past week. The franc has fluctuated somewhat, but has definitely strengthened, and on Thursday there was no adverse pressure at all. This is due very largely to the talk of stabilisation of the franc at a definite gold content, which, whatever the measure of devaluation decided upon, would be bound to hold the rate steady. It is certain that the franc crisis has for the moment passed. The guilder has been heavily offered and has gone to Fl. 9.00, owing, it is understood, to purchases of dollars to cover repatriation of funds. Rumours of a French loan in Amsterdam may also have had an anticipatory effect. The dollar has also weakened, and Swiss francs have been offered up to Frs. 21.48. The past week's movement of exchange rates is indicative of a series of capital movements which are on the whole in the direction of the countries whose currencies were recently devalued. And for the first time for weeks France is not excepted.

The Money Market.—It has been a quiet week in the money market. The payment of the second instalment of the French credit on Friday 5th made money fairly usable throughout the week. Conditions have remained fairly comfortable, however, as nearly all Treasury bills were being paid for on Friday 12th, since these mature on May 12th, the date of the Coronation, and will thus run an extra day. As the third instalment of the French credit also falls due on Friday, a temporary stringency may develop. Rates remain unchanged.

	Jan. 21, 1937	Jan. 28, 1937	Feb. 4, 1937	Feb. 11, 1937
Bank rate	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short loan rate:—				
Clearing banks	½-1*	½-1*	½-1*	½-1*
Others	½	½	½	½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	½-¾	½-¾	½-¾	½-¾

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The announcement of the Defence Loan on Thursday afternoon was taken very calmly by the market. Whatever may be the ultimate effect on interest rates, it is felt that there will be no immediate changes in monetary conditions.

* * *

The Bank Return.—The note circulation has fallen this week by £2.3 millions, which is normal considering the recent expansion. It is offset by an equal increase in the reserve. Bankers' deposits have risen by £3.1 millions, and public deposits have fallen by £0.5 million.

	BANK OF ENGLAND				
	Feb. 12, 1936	Jan. 20, 1937	Jan. 27, 1937	Feb. 3, 1937	Feb. 10, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	200.5	313.7	313.7	313.7	313.7
Note circulation	399.3	450.5	452.3	457.3	455.0
Banking Department:—					
Reserve	61.9	63.6	61.8	56.8	59.1
Public deposits	11.0	13.6	12.1	12.2	11.7
Bankers' deposits	103.6	100.3	98.4	96.1	99.2
Other deposits	36.3	37.6	38.4	38.3	37.3
Government securities	79.2	74.9	78.6	80.4	81.2
Discounts and advances	13.4	8.9	8.0	8.5	6.5
Other securities	14.6	22.1	18.7	18.9	19.5
Proportion	41.0%	42.0%	41.4%	38.7%	39.8%

The only other changes of interest are a fall of £2.0 millions in discount and advances, and a rise of £0.8 million in Government securities and of £0.6 million in other securities.

* * *

January Clearing Bank Averages.—The January returns of the eleven English clearing banks show some substantial changes compared with December. Cash is still high, although it has fallen £6.2 millions from the December figure. Owing to a combination of seasonal influences, deposits have dropped for the first time since last March, being £7.4 millions below December's record high figure. Advances have decreased by £4.4 millions, but the February returns should show an increase following the transfer of the £40 millions French credit. The heavy increase of £22.9 millions in discounts shows that after the New Year had passed and the need for cash reduced, the banks have been taking up bills freely. This is offset by a fall in call and short loans, as the market has necessarily secured less bills. Investments have again increased. Our usual comparative table will be found on page 386.

THE STOCK EXCHANGE

Gearing: Some Practical Conclusions

SUCCESSFUL investment is essentially a matter of measuring risks. Since the war, fluctuations in national income, industrial activity, prices, profits and share values have been far wider than before, and, simultaneously, the outlook of investors has undergone a perceptible change. It is now generally recognised that neither preference shares nor even debentures confer immunity from economic vicissitudes, since any security whose income depends on industrial earnings must needs carry an industrial risk.

The series of articles which we have recently published, on the "gearing" of ordinary shares, gains significance from the modern tendency, even among conservative investors, to argue that, if an industrial risk is to be taken at all, it is better to secure the positive long-term equity inherent in an ordinary share than to put one's faith implicitly in a debenture or preference share, whose income is sharply defined in good times but has no limit, short of zero, in bad times. It is less widely realised that the existence of these latter types of security tends significantly to heighten the risks of the ordinary share. If all industrial company capitalisations were in "straight" ordinary shares, holders could face even depressions like that of 1932 with comparative equanimity. Between 1929 and 1932 the total business activity of Great Britain, as shown by *The Economist's* index (annual averages), declined, after all, by no more than 15 per cent. But, as every investor knows, the decline in ordinary share values was much more abrupt. The investor in ordinary shares who desires to secure more than an average gain in income and capital when profits are rising, and to suffer less than an average loss when profits are falling, may be strongly advised to bear three factors constantly in mind. First, some industries are notoriously subject to extreme fluctuations, even in a normal trade cycle. Secondly, some industries have heavier overhead costs than others. Thirdly, the equity earnings of any given company may fluctuate owing to the quite arbitrary factor of fixed interest capitalisation. As we have shown in the two preceding articles, the interposition of a fixed *corpus* of prior payments for debentures and preference shares, magnifies the risks attaching to equity shares. We may proceed to examine each of these factors in turn.

The importance of the first point may be appreciated from the following table, which shows the percentage increase in productive activity in a number of industries between the third quarter of 1932 and of 1936, according to the Board of Trade's index.

VOLUME OF INDUSTRIAL PRODUCTION
(September Quarter Figures)

Industry	Change 1936 compared 1932 (%)	Industry	Change 1936 compared 1932 (%)
Iron and steel	+142½	Mines and quarries	+30½
Textiles	+63½	Leather, boot and shoe	+25
Non-ferrous metals	+53½	Chemical and allied trades	+21½
Engineering and shipbuilding	+47	Food, drink and tobacco	+16

The immemorial advice to buy low and sell high obviously has special relevance to shares of companies operating in industries like iron and steel, which are peculiarly susceptible to cyclical trade influences. The profits of such concerns, further, are liable to fluctuate even more widely than their productive activity. Companies in most industries which produce capital goods normally have considerable fixed plant and, consequently, large overhead expenses, which cannot be greatly reduced if production and profits fall. The "net

profit" item disclosed in company reports is invariably a residual figure which is arrived at after the deduction of many such items of expenditure. In other words, every published profit is subject to an invisible gearing factor whose incidence can be only a matter of very broad estimate, so long as British company law does not insist on the disclosure of comprehensive figures of gross, as well as net, receipts.

All conclusions, however, are liable to be completely upset by the fact that even if two companies, operating in the same industry, and paying the same fixed charges, were to show an identical percentage rise or fall in total net profits, the percentage charges on their ordinary share earnings would be altogether disparate if one happened to have higher fixed charges than the other. Now, the incidence of this gearing-factor is a matter of pure mathematics. The investor who is considering, at any given moment, whether he ought to buy or sell a particular equity share knows: first, how much the company in question earned in its last year of operation; and, secondly, how much the company requires to pay its fixed charges. Subject to any changes in capitalisation, etc., subsequent to the date of the accounts, it is possible to state what percentage rise or fall in ordinary share earnings will follow every 1 per cent. rise or fall in total net earnings. On page 244 of *The Economist* of January 30th last we published a table of relevant figures for eight well-known British companies, whose capitalisations illustrated every stage between high gearing and no gearing. A simple arithmetical operation based on those figures shows that a rise or fall of 1 per cent. in present total earnings would produce the following percentage increases or decreases in the equity share earnings of each company:—

Company	%	Company	%
Staveley	1.00	Austin Motor	1.71
J. and P. Coats	1.20	Vickers	2.16
Imperial Chemical Industries	1.31	Allied Newspapers	2.65
Bass Ratcliff	1.45	Lever Bros.	3.26

* Subject to any adjustments for taxation.

Sooner or later there will be a check to the upward trend in industrial profits which has now lasted for four years. Whenever it occurs, its first onset will be the signal for a switch—broadly—from high-g geared equities in producers' goods industries with heavy overhead charges to low-g geared equities in consumers' goods trades with small overheads. Liability to extensive changes in earning power is a virtue in a boom but a vice in depression. Even over a short period, the high-g geared share will tend to fluctuate in value much more violently than the low-g geared share. For that reason (and for many others) high gearing is wholly inappropriate for new companies whose shares have still to prove their investment worth. The notorious shilling deferred share of the 1928-29 boom was an instance of the deliberate exploitation of high gearing, to produce exaggerated market activity. No one can well maintain that new company finance, even during the past few months, has been wholly free from this objectionable feature.

It is precisely because gearing is an arbitrary and non-economic factor that its effects deserve the investor's unremitting attention. It is the more to be regretted, therefore, that, with the growth in the number of holding companies in every branch of industry, the ability of the investor to calculate the true gearing ratio of the securities he holds has been seriously diminished. There can be no question that the development of the holding company has increased the instability of British equities. The extent to which fluctuations in industrial earning

power may be magnified, when they are expressed in terms of the ordinary shares of a holding company, is not widely realised. It may be appreciated, however, from the following example. The figures relate to a hypothetical holding concern which, through an intermediate company, holds a majority interest in three operating companies:—

	Operating Companies			Intermediate Holding Company (Holds 60% of Ord. Cap. of A, B and C)	Final Holding Company (Holds all Ord. Cap. of Intermediate Company)
	A	B	C		
Presumed Amount of Annual Fixed Charges...	£500,000	£500,000	£500,000	£300,000	£100,000
Latest Results:

Change in Ord. Earnings	+20%	+27%	+60%	+60%	+103%

* From present level, in each case.

The formation depicted in the above table is simple, as holding company relationships go. Compared with some of the groupings in the American utility industries, for example, it is simplicity itself. Yet, on the basis of the figures shown, a 10 per cent. increase in the earnings of the operating companies would be sufficient to double the earnings available for the ordinary shares of the parent holding company; while a drop of 10 per cent. would reduce the parent company's equity earnings to less than nothing. Normally, the investor in a holding company sees none of the intermediate figures set out in our table. The law requires the parent company merely to disclose its own profits. Even the meagre

requirements of the Companies Act of 1929—relating to qualifications in auditors' reports on subsidiaries and the method of bringing subsidiary profits and losses into parent companies' accounts—do not apply to the operating companies, A, B and C, in our table. These companies are not subsidiaries but sub-subsidiaries of the parent concern, and the Act makes no provision whatever for disclosure in the case of sub-subsidiaries.

The present series of articles, therefore, reinforces the plea for wider disclosure in holding company accounts, which has been made, time and again, in these columns. Until ordinary shareholders have, as a matter of right, a complete consolidated income statement for every holding company group in which they are interested, they will lack information which is indispensable to a correct understanding of the investment risks they shoulder by the purchase of holding company shares.

Investment Notes

Re-armament Finance Repercussions.—The immediate Stock Exchange reaction to Mr Chamberlain's announcement of a £400 millions re-armament finance programme was to quote lower and wider prices for gilt-edged, home rails and leading industrials—the traditional response to a matter whose serious import is not to be assessed in a moment. It is now clear that neither Mr Keynes nor the bank chairmen were wholly responsible for the sagging in gilt-edged stocks, which, in fact, started on the day after circumstantial forecasts of the Government's policy first appeared in the week-end Press, four weeks ago. We discuss the general issues at stake in our opening leading article. The investor, however, is necessarily interested in the size, time and form of the prospective borrowing. Under the first heading, it may be reasonable to suppose that the

PRELIMINARY ANNOUNCEMENT.

PREMIER METAL COMPANY OF SOUTH AFRICA LIMITED

Authorised SHARE CAPITAL Issued or agreed to be Issued
£115,000 in 1,150,000 Shares of 2s. each £115,000

The List of Applications will OPEN and CLOSE on TUESDAY, FEBRUARY 16th, 1937 for an
OFFER FOR SALE
of 750,000 of the above Shares of 2s. each at 3s. per Share.
(United Kingdom Currency)

DIRECTORS

JOHN FLEMING ORR, C.A., 2 Dundalk Avenue, Parkview, Johannesburg (Manager, St. Andrew's Building Society), Chairman.
WILLIAM PATRICK JONES, 92 Jan Smuts Avenue, Saxonwold, Johannesburg (Deputy-Chairman, Rand Leases (Vogelstruisfontein) Gold Mining Company, Limited, Deputy-Chairman, South African Torbanite Mining and Refining Company, Limited).
ALBERT ERNEST LINTOTT, M.I.E.S.A., 1 Simmonds Street, Johannesburg, Engineer (Joint Managing Director, Central Engineering Works, Limited).
MANUEL RITCHKEN, 20 Wellington Road, Parktown, Johannesburg, Engineer, Managing Director.

LONDON COMMITTEE

Brigadier-General THE HON. ALEXANDER VICTOR FREDERICK VILLIERS RUSSELL, C.M.G., M.V.O., Ketches, Newick, Sussex (Director, Sun Insurance Office, Limited, and Sun Life Assurance Society).
WILLIAM E. OGDEN, F.C.A., Audrey House, Ely Place, London, E.C.1. (Partner in the firm of Ogden, Hibberd, Bull and Langton, Chartered Accountants.)

The Offer for Sale, will show, *inter alia*, that:

- The Company has been formed to acquire as from July 1st, 1937 the business of the PREMIER METAL CO., LTD., of Johannesburg, Contracting and Constructional Engineers and Dealers in Mining and Industrial Machinery, which was established in 1912.
- The business extends throughout the whole of the Union of South Africa and Rhodesia in connection with boilers, steam and electric hoists, suction gas engines, crude oil engines, etc., and has been built up almost entirely out of profits. Further working capital is now required to meet the increasing volume of orders obtained and anticipated as a result of the great developments in the Gold Mining Industry.
- Total Net Assets, exclusive of Goodwill, and excluding profits since July 1st, 1936, amount to £130,138 4s. 0d., which is in excess of the Share Capital of the Company.
- Net Profits for the three years ended June 30th, 1936, after Depreciation and amortisation, but before Directors' remuneration and Income Tax, were:—
Year ended June 30th, 1934 £8,850
" " " 1935 14,760
" " " 1936 21,280
Profits for the year ended June 30th, 1936, after charges of £2,150, were equivalent to nearly 16½ per cent. on the Ordinary Share Capital, or 11 per cent. on the price at which the Shares are offered for sale.
- Profits for the year ended June 30th, 1936, after charges of £2,150, were equivalent to nearly 16½ per cent. on the Ordinary Share Capital, or 11 per cent. on the price at which the Shares are offered for sale.
- The Managing Director estimates the profit for the four months to October 31st, 1936, at £8,000, and the net profits for the current year at not less than £23,000, equivalent to 20 per cent. on the Ordinary Share Capital, or 13½ per cent. on the offering price.

Copies of the Offer for Sale, upon the terms of which alone applications will be accepted, and Forms of Application, are now available from:

THE BANKERS

MARTINS BANK, LIMITED, 68 Lombard Street, London, E.C.3. (Bankers for the Offer) and Branches.
BARCLAYS BANK (DOMINION, COLONIAL & OVERSEAS), 54 Lombard Street, E.C.3. (Bankers to the Company) and Branches.

THE BROKERS

A. SHERRIFF & CO., 9 & 10 Tokenhouse Yard, and Stock Exchange, London, E.C.2
and from

THE HARROW INVESTMENT TRUST LTD.
27 Clements Lane, London, E.C.3

All monetary figures referred to are expressed in terms of South African currency, unless otherwise stated.

"Budget surpluses" which are to be employed as an alternative, so far as they go, to borrowing new capital, will be interpreted in the widest sense, and will, presumably, include such ultimate windfalls as the profit from the Exchange Equalisation Account, and the eventual profit if and when the gold reserve is revalued. The balance of these factors suggests that the demand upon the gilt-edged market may be less than the total borrowing powers taken. On the question of dates of issue the Chancellor was silent, but the White Paper issued on Thursday evening shows that borrowing powers will extend over five years from April 1st next. Issues will presumably be made as necessity—and opportunity—serve, but the consensus of City opinion on Thursday was that any major operation before next autumn was unlikely. As regards the form of the new borrowing, investors can only seek for inferences from the method of provision in the Defence Votes. These will be charged with interest at 3 per cent. per annum on the capital sums voted up to 1942, and thereafter annuities will be set up on the Votes to repay the sums issued with interest at 3 per cent. per annum in a period of thirty years. These provisions, being of an internal nature, within the Budget, do not determine the form of borrowing. The sums so provided, however, will be respectively available for meeting an equivalent amount of interest on the National Debt and for debt redemption as the Treasury may determine. If the new loans are devised to fit these requirements, questions of accounting principle will surely be involved, for it cannot be pretended that the "assets" to be financed will enjoy a 30-year life. A 15-year loan with a heavy sinking fund would be far preferable—and would prove much more acceptable to the investor.

Tithe Redemption Stock.—The publication in certain sections of the Press of a report that a very considerable amount of Tithe Redemption stock would

shortly come on the market caused early selling of gilt-edged this week. It is worth while making the facts clear. Under the Tithe Act of 1936 it was arranged that about £70,000,000 of stock, at 3 per cent., with a Government guarantee, should be issued to tithe-owners in place of the tithe-rent charge. Tithe-payers were to pay, first to the Tithe Redemption Commission (a temporary body) and later to the Inland Revenue, a half-yearly instalment of redemption. The first instalment is due on April 1st next. But there is nothing to warrant the belief that the stock will be issued in part or whole at that date. Nor, of course, will it be issued to the market: it will be issued to the tithe-owners, with accrued interest, when their claims have been dealt with by the Commission. The Commission has obviously an immense mass of claims to adjudicate before it can hand over any convenient portion of the stock. It has, in fact, been officially stated that little will be ready until about May, when it will be announced in the ordinary way in *The London Gazette*. The whole operation will probably not be finished within two or more years. Moreover, by far the greater part of the stock—about £60,500,000—goes to the Church, and neither that, nor indeed any of the remaining £10,000,000 which goes to lay owners and Cambridge and Oxford Colleges, is likely to be exchanged for speculative securities or for cash in significant quantities. Tithe Redemption stock, in short, can have at most the very slightest effect upon the gilt-edged market.

Wall Street and the Law.—The President's proposals for rejuvenation of the Supreme Court have precipitated great political controversy, but Wall Street, once the first shock was over, seems to have taken a philosophical view of the matter. The investor should have nothing to fear from the inclusion of a number of judges whose attitude towards modern social problems is not confined to the legal concepts of a hundred years ago. Nor need the investor fear evil consequences from the President's proposals to speed up procedure in the Federal Courts throughout the country, and to prevent the use of spoiling injunctions intended to handicap and destroy Federal legislation. In themselves, the measures are intended to provide a more efficient and elastic legal system. Criticism of the proposals is really meant for the remaining New Deal policies, which may receive more friendly hearing if the legal changes are adopted. Many of these are hardly inimical to the investor, but specific fears concern a revival of N.R.A. and a no-quarter fight with the utilities. The N.R.A. clauses dear to the President deal with labour, but there is no suggestion that the "codes" should be reconstituted, and even these benefited big business rather than the small man. Utilities are more obviously a matter for concern, but utility shares are not likely to suffer more than at present. The general attitude of the investor to American recovery need not be changed. By mid-week, indeed, Wall Street had recovered all of its lost ground, and after the General Motors settlement, prices were higher than on the eve of the announcement of the Supreme Court proposals.

A Code for Property Societies.—Those whose duty it is to criticise national financial developments may be permitted a measure of self-congratulation when their words strike root. Some months ago the fixed trust movement (as it then was) formed an association to check certain practices which had become widely recognised as undesirable. It is now the turn of the property societies, recently formed under cover of the Industrial and Provident Societies Acts (and not, therefore, subject to the rigours of the Companies Act), to get together for the protection of the public. To act as one's own arbiter of good behaviour, and at the same time as agent for the investor and as an interested principal, implies an objectivity of outlook which is not, alas, too common in the hard world of affairs. But until such time as the President of the Board of Trade can introduce his Bill for controlling unit trusts (which will presumably

incorporate some provisions for dealing with certain companies registered under the Industrial and Provident Societies Acts) a self-imposed code has its own merits. The activities of the Association of Property Societies, Ltd., which has been created to regulate property society business, will, therefore, be watched with considerable interest. The Association reports that some fifty societies have made inquiries regarding membership, which are being scrutinised by an "applications committee." The Council lays down the principle (surely a rather self-evident starting point) that "the greatest measure of protection" for the investing public will be secured by prohibition of the public offer of loan capital which, *after providing for prior charges*, is in excess of the society's available assets. The Council goes on to claim that its own standard of information, which will be available for public examination, far exceeds the requirements of the Acts. At present only eight societies are members of the Association. It remains to be seen, therefore, how widely its writ may run.

Capital Issues in January.—The new issue market has quickly regained its stride after the end-year lull. If the £61 millions of new money for the 2½ per cent. Funding Loan in the December total is excluded, the January business is comparable with that month. The amount of subscriptions for recent months is shown below:—

(000's omitted) Excluding Conversions

The principal offers of the month were of £9,000,000 London Electric Transport debentures for tube extensions in N.E. London, followed by £5,700,000 (net) of Richard Thomas convertible debentures.

Company Notes

Home Rails: Southern Dividend.—This week's home rail dividends have run extraordinarily close to the form book. The Southern Railway has resumed dividends on its deferred stock (after a lapse of five years) at the generally anticipated rate of ½ per cent. The London, Midland and Scottish ordinary stock receives 1½ per cent.—the first payment since 1931—and the Great Western, from whom 3 per cent. was confidently expected, has covered this rate with a margin. These rates, which fit very closely to the earnings estimates given in *The Economist* of January 2nd, could only disappoint the inveterate optimists, and even they were warmly surprised by the excellence of the Great Western statement. The Southern announcement on Monday showed an increase of £751,042 (3.2 per cent.) in gross receipts for 1936, and of £153,863 (2.5 per

cent.) in net revenue. The ½ per cent. distribution, therefore, was fractionally short-earned. In computing the net revenue figure, the company has charged rates and contributions to the Freight Rebates Fund on the revised basis. Since the further rating saving in 1936 compared with 1935 was of the order of £75,000, the margin between gross and net increases has been largely absorbed by increased operating costs. The half-yearly statement last July showed that practically the whole of the increase in railway receipts had been absorbed by working expenditure. In the second half, receipts, including ancillaries, increased by £585,000, and net revenue by £171,000, with the increased wages costs (from August 16th) roughly cancelling out the reduced rating provision (which was confined to the second half of the year). This saving of gross to net is somewhat lower than the deferred stockholder might have hoped for, particularly in relation to the certainty of higher costs for wages, coal and stores in the current year. These reflections appeared to check the market, for the deferred stock, even at 23½ offers a small yield and, so far as the preliminary figures can be relied upon, less expansive prospects than, say, L.M.S. ordinary at 30½.

L.M.S. Statement.—The L.M.S. results coincided with a good traffic, but failed to stimulate the market, despite their satisfactory nature. Railway receipts were £2,805,000 (4.6 per cent.) higher and railway working expenses £1,690,000 (3.4 per cent.) higher in 1936. Ancillaries and miscellaneous receipts showed a net fall of £94,000 so that net revenue was £1,021,000 (7.8 per cent.) higher. Each year since 1932 has thus brought an increase of more than £1,000,000 in net revenue. The 1½ per cent. ordinary payment is covered, in fact, to the extent of 1.2 per cent. Calculation of the second half-year's working (which eliminates the effect of Leap Year) shows that increased expenditure absorbed 62 per cent. of the increase in receipts against 58 per cent. for

the first half of 1936—a result which appears reasonably satisfactory, since the extra saving in rates compared with 1935 (when the greater part of the saving was brought into the accounts) is roughly balanced by the 1½ per cent. wage cut restoration. But the further sums receivable for rates over-paid during 1931-34, amounting to £3,180,000, will be allocated to reserves for maintenance and new works—a decision which was foreshadowed by Sir Josiah Stamp's speech last February, and is obviously to be commended.

A Surprise from Paddington.—The Great Western provides the most spectacular of this week's railway statements. A 3 per cent. dividend was anticipated as a matter of course, but few expected it to be fully covered by earnings. Gross receipts, including ancillaries, increased by £974,411 (3.3 per cent.), but gross expenditure was a mere £22,217 (0.1 per cent.) higher. In consequence, net revenue is increased by £864,271 (15.8 per cent.). This truly impressive result is in part due to special features in the Great Western accounts. For 1935, no rating relief was allowed for, but in 1936 between £360,000 and £370,000 was contributed towards the reduction in expenditure. But the second half-year's working appears none the less satisfactory, irrespective of the rating saving. Despite the increased wage charges, some £535,000 out of the £565,000 gross increase appears to have been saved net. It is particularly fitting that the G.W.R. should place the whole of the £1,737,800 recoverable for excess rates during the 1931-35 quinquennium to reserve, for during the lean years the 3 per cent. ordinary dividend has been maintained at the cost of £4,210,000 from contingencies and general reserves. Investors may, perhaps, presume that further surpluses earned over the 3 per cent. dividend will find their way to a similar home, and at 62½ the stock may best be regarded as a fixed-interest security, subject to the general context of rising costs in which the railways are placed.

Progressive Store Results.—If this week's store results and dividends can be regarded as representative of the industry, the rate of recovery in retail trading is now expanding vigorously. The net profit of *Harrods, Ltd.*, for instance, at £800,320, shows an increase of £70,889, or 10 per cent., which is higher than for any post-depression year. The 16 per cent. dividend paid for the two previous years is supplemented by a 2½ per cent. bonus, comfortably covered by equity earnings of 23.8 per cent. against 20.4 per cent. One contribution to this improvement lies in the higher dividend of *Dickins and Jones*, who pay 12½ per cent. against 10 per cent., after earning £120,504 against £114,143. *Selfridge and Company* also report substantial progress. Total profits of £485,086 compare with £414,190, and are the highest for ten years. The dividend is again raised, from 10 per cent. to 15 per cent., and the preliminary statement gives the profits for the whole group at £830,000 against

£723,000. *Lewis's, Ltd.*, are maintaining their deferred ordinary dividend at the same rate of 275 per cent., though profits, after debenture interest, show a substantial advance to £806,846, against £766,709.

Yorkshire Electric Report.—Although most electric supply companies have shown relatively small increases in earnings available for ordinary capital during the last five years, Yorkshire Power has achieved a very substantial increase in its profits in the period. Five or six years ago the ordinary earnings, if allowance had been made for depreciation on our customary standard rates, would have been inadequate to cover the dividend paid. The figures for 1936, on the same basis, show that the ordinary dividend, which has been maintained throughout at the rate of 8 per cent., is now covered by a handsome margin. The following table shows the progress over the last three years:—

	1934	1935	1936
Units sold (millions)—			
To company's consumers.....	269	306	366
Increase over previous year.....	13.9%	13.7%	19.5%
To Central Electricity Board....	149	134	90
Total.....	418	440	456
Power receipts.....	922,917	1,015,418	1,137,452
Plant renewals, contingency fund and depreciation and reserve fund.....	230,000	270,000	305,000
Ordinary shares—			
Earned.....	160,472	157,821	166,376
Paid.....	155,000	155,000	152,500
Depreciation on standard scale....	178,000	195,000	215,000
Earned for ordinary on adjusted basis.....	212,472	232,821	256,376
Earned (%).....	11.0	12.0	13.4

The progressive decrease in the sales to the Central Electricity Board is probably due to the fact that the company expanded its generating plant in advance of its own requirements, and was able to find a satisfactory market for the surplus in sales to the C.E.B. The demands of the company's consumers have taken up a good part of the slack, but the report indicates that further substantial extensions are in hand. These will no doubt provide the C.E.B. with a new surplus from the company's efficient generating stations. The £1 ordinary stock units are quoted at 44s. 6d. xd to yield £3 11s. 9d. per cent.

Lancashire Electric Results.—Despite the moderate improvement in the cotton industry last year, the progress of the Lancashire Power Company is, as yet, less impressive than that of the Yorkshire Power Company. Sales to general consumers increased by 12.1 per cent., against increases of 9 per cent. and 8 per cent. for the previous two years; but the 1936 earnings do not appear to cover the ordinary dividend, after providing for depreciation at our computed "standard rate." Electrification of cotton mills has notoriously lagged behind other industries. Under present conditions more rapid progress in the installation of modern power transmission may be expected. The following table summarises the principal features of the report:—

	1934	1935	1936
Units sold to general consumers (millions).....	303	330	370
Depreciation provided.....	90,500	100,500	113,000
Ordinary shares—			
Earned after pref. participation....	92,513	105,677	136,848
Paid.....	93,000	96,881	114,375
Rate (per cent.).....	7½	7½	7½
Depreciation on Standard Scale....	148,000	160,000	175,000
Earned for ordinary on adjusted basis.....	35,013	46,177	74,848

The accounts show that the total provision for income tax last year (all interest and dividend payments being on a net basis) was under £30,000, out of total earnings of nearly £430,000 before depreciation and interest. This may suggest that the revenue authorities accept a more conservative view of the necessary replacement provision than the published accounts suggest.

Television Finance.—Television as an entertainment opens up intriguing possibilities for "viewers" under the new regime (as we show on page 353); but it is early to explore the investment prospects of the industry. The record of the radio industry provides sufficient warning that, during a period of rapid technical change, the investor cannot hope for adequate earnings stability, despite the fact that some eight million set users have been supplied in a decade. Television is, technically, in an early stage of development. No lay investor can judge whether new discoveries will challenge the present methods. The intricacies of the patents position must be a closed book to him. And profits will depend largely upon the volume of sales of television receivers, although heavy technical costs are incurred in transmission, where, incidentally, the further development of programmes may involve a large outlay for specially designed cables. Meanwhile, the struggle in the receiver market is in full swing. Both Electric and Musical Industries and General Electric have introduced price cuts of 31½ per cent. for receivers, which are now to cost 60 guineas. By this means, a considerably larger potential market will be tapped, but, with the experience of the radio industry in mind, some potential "viewers" may decide to postpone their purchases for the time being.

Electric and Musical Industries, through its association with the selected transmission system, will presumably be most favourably situated in the receiver market. And this concern already has a considerable element of industrial diversification through its radio, house equipment and Rudge-Whitworth interests. It has regularly written off television development expenditure and is well furnished with cash resources. General Electric, which is interested in television receivers only, has too many other interests to rank as a television share proper. Baird Television has not been denied a share in the future development of the industry. The selected system applies only to the London station; there may be further provincial stations, and the Baird system may be adapted to the London standard. Meanwhile, the company will produce receivers suitable for both systems. For the moment, however, Baird shares must rank as a speculative holding, for they carry a high degree of technical risk.

Investment Trust Progress Continued.—Further investment trust results show a mottled combination of occasional outstanding improvements coupled with a comparatively moderate buoyancy of profits for the group as a whole. The full effect of recovering industrial earnings is not shown in trust dividends until one and a half to two years later, and there are signs that the time lag is still operating. An analysis of the latest reports of nine large trusts shows that only two companies, *General Investors* and *Scottish American*, achieved a 10 per cent. increase in revenues, and for the rest the recovery was in no case higher than 6 per cent. But there is common improvement in capital values. The accompanying table shows that eight companies are paying increased dividends (and usually preserving their margin of undistributed earnings). *Debenture Corporation*, whose holding of ordinary shares is only 17 per cent.

Company	App'n or Dep'n of Investments		Ordinary or Defd. Stock				Price	Yield (%)
			Earned		Dividend			
			Prev. year	Latest year	Prev. year	Latest year		
British Inv.	%	%	%	%	%	%	320	3.8

† Per £1 Stock.

of the total, however, resumes reserve allocations with a provision of £15,000, although the carry forward had previously been increased by £10,000. The position of the portfolios shows a further improvement. At the beginning of last year depreciation had usually been reduced to modest dimensions, but in each case an appreciation—usually of undisclosed amount—is now reported. Only a handful of these companies provide an analysis of their holdings, and firm conclusions regarding portfolio changes are difficult to reach. *General Investors* shows a slightly lower proportion of equity securities. Although continued revenue recovery may be looked for, most trusts are some way from repeating their pre-depression dividends. Present share prices discount reasonable recovery prospects for the current year.

Oldham Cotton Shares.—The improvement in the Lancashire cotton industry has brought an active demand for cotton mill shares on the Oldham Stock Exchange. During the last two months, many shares have risen substantially, as the following table shows:—

Share and Denomination	Quotations Dec. 11, 1936		Share and Denomination	Quotations Dec. 11, 1936	
	s. d.	s. d.		s. d.	s. d.
Albany (£1)	7	0	Lilac (£5).....	10	0
Bolton Textile (£5)	18	6	Lion... (£10s)	43	6
Borough (£3)	44	0	Maple (£5).....	69	0
Crozier (£1, 12s. pd.)	6	9	Newhey Kings (£1).....	33	6
Devon (£5)	45	6	Park & Sandy Lane (£1).....	25	3
Durban (£5, £2 15s. pd.)	17	6	Talbot (£1)	5	6
Fernhurst (10s.)	8	0	Union Ring (£1)	3	3
Granville (£20)	89	0	Victoria (Rochdale) (5s.)	7	3
Grape (£1)	28	0	Werneth (£2)	62	6
Irish (£4, £2 10s. pd.)	53	0			

Much of the buying has been speculative, and some operators have already taken their considerable profits. Patient shareholders have obtained good bids for many shares which, but a short time ago, were almost unsaleable. Further encouragement has followed the resumption of dividends by some companies after many years' absence from the dividend list. It is anticipated that the

A 6% ANNUITY with CAPITAL RETURN at death

"WHAT investment do you advise?" is a question often asked. To the ageing, the best return combined with security is the Annuity, but everyone is not prepared to surrender their entire capital and so deprive their heirs of legacies.

The new 6% Annuity Scheme solves this difficulty in a very satisfactory way. On capital invested there is allowed 6% interest for the life of the Annuitant. At death a generous return is made. Have particulars of this new and attractive Scheme by you. A supply of prospectuses will be sent to you upon request.

stocktaking results at the end of June will be the best since the post-war boom of 1919-20. Many concerns, of course, have large adverse balances which must be extinguished before dividends can be resumed. Some fantastic reports of quick fortunes have been put about, but the recovery is so recent that they must obviously be unreliable. Market opinion, however, holds that the upward movement in share values has not yet reached the top.

* * *

Gas Light and Coke Meeting.—In the terminology of the hustings, Sir David Milne-Watson gave the stockholders of Gas Light and Coke a fighting speech at the end of last week. The company has entered the 125th year of its existence (for which, unfortunately, the English language provides no celebratory title) with all the confidence of second youth. Progress is best measured by the striking particulars of new installations which Sir David disclosed—an increase of £900,000 in the value of appliances sold last year, when nearly 750,000 appliances were issued; and an increase of £1,000,000 in appliance revenue from all sources. Having decided that the day of the black stove is past, the company has made modern appliances available on hire-purchase or rental, and last year issued nearly £3,700,000 of new capital mainly to finance them. As we pointed out last week, sales of gas have increased by no more than 3 per cent. since 1929, but rentals from appliances are no less than 30 per cent. higher. The increase in gas sales—last year it amounted to 3.69 per cent.—is less modest than it appears, in relation to the company's total output, but under modern conditions the locking-up of substantial capital in appliances and hire-purchase contracts is essential if gas consumption is to be maintained and increased. Even for the largest companies, however, rising costs, particularly for coal, are becoming increasingly pressing. Meanwhile, the scope for adjusting gas charges is limited by the basic price system, under which dividends are controlled by selling prices. Pending the decisions of the Joint Select Committee on gas tariffs, it is at least justifiable to regard the best gas stocks as fixed-interest securities. For those less fortunately placed, slight reductions in dividends have already occurred and may well become more frequent.

* * *

Rhodesia Railways Merger.—The scheme for the Rhodesia Railways merger and debenture conversion, which was approved on Thursday, will greatly clarify the capital structure of the two systems (the separate existence of which is by now an anachronism), although it will still leave the new company with record capital gearing. Rhodesia Railways has four and Mashonaland Railway three issues of debentures, all of which are to be converted into 4½ per cent. stock. Some £23,925,000 of the stock is to be created, of which £21,750,000 will be required for the conversion. The balance of £2,175,000 will remain in reserve, and British South Africa Company has undertaken to find subscribers for the stock on demand from the railway company. At present,

Rhodesia Railways has a share capital of no more than £8,000, and this is to be augmented to £350,000 by the capitalisation of £342,000 from reserves. The Mashonaland undertaking will then be acquired for 150,000 £1 shares of the Rhodesia Company. These share transactions, however, are not of direct public consequence, for the two operating companies are controlled by Rhodesia Railways Trust, whose ordinary capital, in turn, is largely held by British South Africa Company. Between November, 1932, and May, 1935, debenture moratorium schemes were in force, but the Rhodesia company showed a substantial surplus of profits over debenture service for the year to September, 1935, while the Mashonaland company covered its requirements with a small surplus. The depression earnings record reveals the dependence of the two systems upon the Rhodesian mining industry. Their delayed earnings recovery, in fact, has placed the companies rather late in the conversion queue, and it is unfortunate for the new company that the market's present form is hardly auspicious for an issue of this size without some concession in the issue terms.

* * *

Abbey Road Building Society.—The latest Abbey Road report shows that the customary progress has been maintained. Total mortgages, standing at £42,715,954, are 6 per cent. above the previous year, when a similar rate of increase was revealed, and properties mortgaged now number 82,997, against 77,127 and 70,138 at the end of 1935 and 1934 respectively. New advances are still more progressive, for the £7,506,680 lent was 3 per cent. above the level of the previous year. During the year there has been no change in rates or rebates to borrowing members, or in the rate of dividends and interest paid. The numbers of shareholders and depositors are still rising, but a marked rise in new share subscriptions (from £2,372,652 to £3,692,942) compares with a small fall in new deposits. The Abbey Road results may still be regarded as a model for the movement.

Company Results of the Week.—The profit and loss accounts of 42 other companies, including further gas company results, some interesting investment trust reports and several good industrial recoveries, appear on page 387, and are discussed under the heading "Shorter Company Comments" on the same page.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Gas Light and Coke Company, Sterling Trust, Standard Trust, and Olympia. Sir David Milne-Watson's address to Gas Light and Coke Company stockholders is discussed in a Note on this page. At the Sterling Trust meeting, Baron Emile d'Erlanger expressed agreement with Mr J. M. Keynes regarding the wisdom of putting a brake on municipal development schemes during years of activity, so as to have them in hand in the next depression. Mr Alfred Shepherd explained to Standard Trust proprietors that the lower holdings of bonds and preference shares were due largely to the ability of companies to borrow more cheaply and therefore to compel trusts to accept lower rates or to take repayment. At the Olympia Limited meeting Mr Louis Nicholas outlined the various improvements the company is undertaking. Special expenditure of £20,602 has already been incurred.

ADVICE ON AMERICAN STOCKS

Recognising the demand of both private investors and financial institutions in Europe for first-hand advice regarding American securities and the cyclical trend of the American Stock Market, Major L. L. B. Angus of 301 Park Avenue, New York City, who is now established as Investment Counsel in America, is prepared to accept enquiries regarding this service.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS

TICKET: FEBRUARY 16 ACCOUNT: FEBRUARY 18

THE market's testing time has come this week. Each day, save for a small mid-week recovery, has found gilt-edged values forcibly dragged down to lower levels, until the culminating blow on Thursday. The Chancellor's statement, in which he outlined his proposal to take powers to borrow up to £400 millions for re-armament, produced the invariable response to serious and far-reaching news—wider and lower prices. The statement is discussed in a leading article on page 341, and some market implications are reviewed in an investment note on page 365.

Dealings in the last half-hour on Thursday were extremely difficult in gilt-edged and, to give only one example, jobbers called War Loan 103½, compared with the usual ½ turn. Throughout the week, except for some moderate support on Wednesday, dealers have been averse to taking comparatively small sales of gilt-edged on their books. War Loan fell ¼ on Monday, ½ on Tuesday, but recovered ¾ on Wednesday. Comparable falls were registered by the irredeemables, and the blight affected the whole gamut of redeemable stocks, Indian loans, and Dominion issues.

Among foreign bonds, Chinese bonds opened well, and some demand was evident (and was maintained on Thursday) for Brazilian Fundings. German issues were sold at the opening of the Standstill negotiation. Some mid-week buying of Greek issues was reported, and Japanese issues appreciated on quiet supporting orders.

Home rails, after showing weakness following the deadlock in the locomotive engineers' dispute, found plenty of distraction in the dividend announcements. Southern Deferred reacted on the ½ per cent. payment, though one per cent. was unlikely while the Preferred weakened in sympathy. The market generally sagged on Thursday in response to the decline in gilt-edged. The G.W.R. 3 per cent. and the L.M.S. 1½ per cent. dividends, though of the expected amount in both cases, met with different responses: G.W., Ordinary rose sharply, as the payment, though no higher, had been fully earned. L.M.S. Ordinary rallied a little on the announcement, but fell back

afterwards. Argentine rails enjoyed a good week on the whole, and though they shared in Tuesday's dullness, improved considerably on the traffics. Canadian Pacific Preference was a poor market on the disappointing dividend, and the common stock reacted slightly from its somewhat optimistic level.

The uneasy conditions in the gilt-edged market have not spared the industrial markets this week, and prices generally moved against holders, although the volume of business was small. In the iron and steel section, apart from general dullness, T. W. Ward were lower on disappointment with the interim dividend, and Chinese Engineering were about the only issue to improve steadily. Coal shares have been fairly well supported on various good dividend announcements. There were signs of a slight improvement in the motor section in mid-week, but Tilling were subjected to profit-taking, and Standard were also a little lower; conditions in the aircraft section were equally uninteresting. At the beginning of the week there was a good demand for leading electrical equipment shares, with Associated and Crompton Parkinson prominent, but interest was not maintained later. County of London showed a modest improvement among electrical supply shares.

Textile issues have been firm most of the time, on good trading reports, and in the stores section Harrods were supported on the increased dividend and bonus, although profit-taking became evident later. Breweries showed signs of life in mid-week, although Guinness were unchanged on the maintained interim dividend. One of the outstanding points of the week was the fall in Bowater ordinary; various rumours were in circulation, and the market was obviously troubled. The miscellaneous industrials section was dull, with prices moving against holders in most cases. Outstanding for their resistance were Consolidated Signals on the increased dividend, and British Aluminium on a good trading report.

After a firm opening session, the oil market shared some of the weakness in gilt-edged stocks which on Tuesday spread to other sections. Thursday's street market was active on ½d. increase in petrol prices. The demand for leading issues continued good throughout, the main features being Anglo-Iranian and Trinidad issues generally. Eagles were neglected.

Until mid-week, rubber share prices were quiet though firm, numerous but small improvements in quotations having given way to uninteresting conditions. Belief that some countries

REDEMPTION OR CONVERSION OF ALL EXISTING DEBENTURES

OF

THE RHODESIA RAILWAYS, LIMITED

(formerly the Bechuanaland Railway Company, Limited)

AND

THE MASHONALAND RAILWAY COMPANY, LIMITED

THE RHODESIA RAILWAYS, LIMITED

(Incorporated under the Companies Acts, 1862 to 1890.)

REDEMPTION OF 5 PER CENT. FIRST MORTGAGE DEBENTURES.

NOTICE IS HEREBY GIVEN that pursuant to the provisions of a Trust Deed dated 18th September, 1896, and the Trust Deeds supplemental thereto, the £1,831,800 5 per cent. First Mortgage Debentures of the above-named Company now remaining outstanding will be REDEEMED by the Company at £105 per cent. plus accrued interest (less Income Tax) on the 13th August, 1937, after which date interest will cease to accrue. Holders of the said Debentures are offered the right to convert their holdings into new 4½ per cent. Debenture Stock of the Company. The principal moneys, premium and accrued interest in respect of Debentures not converted will be paid on or after the 13th August, 1937, on presentation of such Debentures (which must be left three clear days for examination prior to payment and must have attached coupon No. 78 and all subsequent coupons) at Erlangers Limited, 4, Moorgate, London, E.C.2.

By Order of the Board: R. E. FITZGERALD,
12th February, 1937.

London Manager and Secretary of The Rhodesia Railways, Limited.

THE RHODESIA RAILWAYS, LIMITED

(Incorporated under the Companies Acts, 1862 to 1890.)

REDEMPTION OF 3 PER CENT. GUARANTEED MORTGAGE DEBENTURES AND 4 PER CENT. GUARANTEED MORTGAGE DEBENTURES.

NOTICE IS HEREBY GIVEN that pursuant to the provisions of a Trust Deed dated 1st June, 1900, and the Trust Deeds supplemental thereto, the £252,870 3 per cent. Guaranteed Mortgage Debentures and the £3,996,333 4 per cent. Guaranteed Mortgage Debentures of the above-named Company now remaining outstanding will be REDEEMED by the Company at £107 per cent. plus accrued interest (less Income Tax) on the 14th August, 1937, after which date interest will cease to accrue.

Holders of the said Debentures are offered the right to convert their holdings into new 4½ per cent. Debenture Stock of the Company. The principal moneys, premium and accrued interest in respect of Debentures not converted will be paid on or after the 14th August, 1937, on presentation of such Debentures (which must be left three clear days for examination prior to payment and must have attached coupon No. 70 and all subsequent coupons) at Erlangers Limited, 4, Moorgate, London, E.C.2.

By Order of the Board: R. E. FITZGERALD,
12th February, 1937.

London Manager and Secretary of The Rhodesia Railways, Limited.

THE MASHONALAND RAILWAY COMPANY LIMITED

(Incorporated under the Companies Acts, 1862 to 1890.)

REDEMPTION OF 5 PER CENT. FIRST MORTGAGE DEBENTURES.

NOTICE IS HEREBY GIVEN that in the event of a special resolution for the voluntary winding-up of the above-named Company for the purpose of amalgamation with The Rhodesia Railways, Limited (which will be submitted to an Extraordinary General Meeting of the Company to be held on the 31st March, 1937), being duly passed, the £1,795,100 5 per cent. First Mortgage Debentures secured by a Trust Deed dated 1st March, 1896, and the Trust Deeds supplemental thereto, and now remaining outstanding, will become redeemable on the 31st March, 1937, and will be REDEEMED at £105 per cent., plus accrued interest (less Income Tax) on the 31st March, 1937, after which date interest will cease to accrue.

Holders of the said Debentures are offered the right to convert their holdings into new 4½ per cent. Debenture Stock of The Rhodesia Railways, Limited.

Subject to the above-mentioned special resolution being duly passed, the principal moneys, premium and accrued interest in respect of Debentures not converted will be paid on or after the 31st March, 1937, on presentation of such Debentures (which must be left three clear days for examination prior to payment, and must have attached coupons Nos. 79 and 80) at Erlangers Limited, 4, Moorgate, London, E.C.2.

By Order of the Board: R. E. FITZGERALD,
12th February, 1937.

Secretary of The Mashonaland Railway Company, Limited.

THE MASHONALAND RAILWAY COMPANY, LIMITED

(Incorporated under the Companies Acts, 1862 to 1890.)

REDEMPTION OF 5 PER CENT. GUARANTEED MORTGAGE DEBENTURES (1905).

NOTICE IS HEREBY GIVEN that in the event of a special resolution for the voluntary winding-up of the above-named Company for the purpose of amalgamation with The Rhodesia Railways, Limited (which will be submitted to an Extraordinary General Meeting of the Company to be held on the 31st March, 1937), being duly passed, the £2,560,000 5 per cent. Guaranteed Mortgage Debentures (1905) secured by a Trust Deed dated the 14th June, 1905, and the Trust Deeds supplemental thereto, and now remaining outstanding, will become redeemable on the 31st March, 1937, and will be REDEEMED at £105 per cent., plus accrued interest (less Income Tax) on the 31st March, 1937, after which date interest will cease to accrue.

Holders of the said Debentures are offered the right to convert their holdings into new 4½ per cent. Debenture Stock of The Rhodesia Railways, Limited.

Subject to the above-mentioned special resolution being duly passed, the principal moneys, premium and accrued interest in respect of Debentures not converted will be paid on or after the 31st March, 1937, on presentation of such Debentures (which must be left three clear days for examination prior to payment and must have attached coupon No. 64 and all subsequent coupons) at Erlangers Limited, 4, Moorgate, London, E.C.2.

By Order of the Board: R. E. FITZGERALD,
12th February, 1937.

Secretary of The Mashonaland Railway Company, Limited.

THE RHODESIA RAILWAYS, LIMITED and THE MASHONALAND RAILWAY COMPANY, LIMITED

(Incorporated under the Companies Acts, 1862 to 1890.)

REDEMPTION OF RHODESIA AND MASHONALAND RAILWAYS 6 PER CENT. CONSOLIDATED DEBENTURES.

NOTICE IS HEREBY GIVEN that in the event of a special resolution for the voluntary winding-up of The Mashonaland Railway Company, Limited, for the purpose of amalgamation of that Company with The Rhodesia Railways, Limited (which will be submitted to an Extraordinary General Meeting of that Company to be held on the 31st March, 1937), being duly passed, the £10,000,000 6 per cent. Consolidated Debentures of the two Companies which are secured by a Trust Deed dated 12th May, 1927, and the Trust Deeds supplemental thereto, and now remaining outstanding, will become redeemable on the 31st March, 1937, and will be REDEEMED at £101 per cent., plus accrued interest (less Income Tax) on the 31st March, 1937, after which date interest will cease to accrue.

Holders of the said Debentures are offered the right to convert their holdings into new 4½ per cent. Debenture Stock of The Rhodesia Railways, Limited.

Subject to the above-mentioned special resolution being duly passed, the principal moneys, premium and accrued interest in respect of Debentures not converted will be paid on or after the 31st March, 1937, on presentation of such Debentures (which must be left three clear days for examination prior to payment and must have attached coupon No. 20 and all subsequent coupons) at Erlangers Limited, 4, Moorgate, London, E.C.2.

By Order of the respective Boards of the above-named Companies:

12th February, 1937.

R. E. FITZGERALD, London Manager and Secretary of The Rhodesia Railways, Limited,
and Secretary of The Mashonaland Railway Company, Limited.

TERMS OF CONVERSION

The Rhodesia Railways, Limited, is issuing £21,750,000 4½ per cent. Debenture Stock at £98 per cent. for the purpose of providing for the conversion and/or redemption of the outstanding Debenture Capital of the Company and of The Mashonaland Railway Company, Limited, except the 3 per cent. Guaranteed Mortgage Debentures of The Rhodesia Railways, Limited, which in so far as they are not converted, will be repaid out of an unsecured advance to be made by The British South Africa Company.

Holders of the existing Debentures of The Rhodesia Railways, Limited, and The Mashonaland Railway Company, Limited, are given the right until 3.30 p.m. on Wednesday, the 24th February, 1937, to convert any of their Debentures into the said 4½ per cent. Debenture Stock of the Rhodesia Railways, Limited.

Every holder of existing Debentures who exercises the right of conversion will receive fully paid Letter(s) of Allotment for the nominal amount(s) of 4½ per cent. Debenture Stock, carrying interest from 1st April, 1937, equivalent to the nominal amount(s) of existing Debentures surrendered by him for conversion and an immediate cash capital payment representing (a) the premium payable on redemption of the Debentures so surrendered, (b) the discount of 2 per cent. being the difference between par value and the issue price of the 4½ per cent. Debenture Stock, and (c) an amount equivalent to the appropriate adjustment of interest. The cash capital payments appropriate to the several classes of existing Debentures are given below.

Prospectus giving full particulars of the £21,750,000 4½ per cent. Debenture Stock of The Rhodesia Railways, Limited, and comprising a Conversion Offer, together with Forms of Conversion Acceptances, may be obtained on and after Saturday, the 13th February, 1937, on application to:—

ERLANGERS LIMITED ... 4, Moorgate, London, E.C.2.
WESTMINSTER BANK LIMITED ... New Issue Department, 9, Old Broad Street, London, E.C.2, or Branches.
BANK OF SCOTLAND ... The Mound, Edinburgh, and principal Branches in Scotland.
ULSTER BANK LIMITED ... Waring Street, Belfast, and College Green, Dublin.
CAZENOVE, AKROYDS & GREENWOOD & CO. ... 10, Old Broad Street, London, E.C.2.
PANMURE GORDON & CO. ... 1, St. Michael's Alley, London, E.C.3.

or to the Registered Offices of The Rhodesia Railways, Limited, and The Mashonaland Railway Company, Limited, 2, London Wall Buildings, London, E.C.2.

Holders of Debentures who wish to accept the Offer of Conversion must lodge their Forms of Acceptance, duly completed, accompanied by the relative Debentures for cancellation, with ERLANGERS LIMITED, 4, MOORGATE, LONDON, E.C.2, or WESTMINSTER BANK LIMITED, NEW ISSUE DEPARTMENT, 9, OLD BROAD STREET, LONDON, E.C.2, or Branches, not later than 3.30 p.m. on Wednesday, the 24th February, 1937.

Brokerage at the rate of 5s. per £100 nominal of stock will be paid to recognised Stockbrokers, Bankers, and other approved Agents on allotments made in respect of conversion acceptances bearing their stamps.

Dated 12th February, 1937.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of redemption is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

(c) Also scrip bonus of one share for each five held.

* Free of income tax.

Rate % per Annum, except where marked % or Stated in Cash.

(d) Special Jubilee bonus.

ARGENTINE GREAT WESTERN RAILWAY.—A half-year's payment is announced on Argentine Great Western 5 per cent. Debentures.

BAIRNS-WEAR.—Dividend on ordinary shares of 15 per cent. actual, less tax, on account of the year ended December 14, 1936. Also a bonus of one ordinary share for every twenty held.

BUENOS AYRES AND PACIFIC RAILWAY.—Buenos Ayres and Pacific Railway is paying a half-year's arrears of interest to January 1, 1933, on the 4 per cent. consolidated debenture stock.

BOLSOVER COLLIERY.—Final dividend, 6 per cent. and bonus of 2 per cent., making 11 per cent. For 1935, dividend was 9 per cent.

BRITISH INDUSTRIES FIXED TRUSTS—FOURTH PORTFOLIO.—Distribution 4d. per sub-unit the half-year January 10, 1937. Credit balance carried forward 0-00858d. per sub-unit.

COMPANY MEETINGS

GAS LIGHT AND COKE COMPANY

SATISFACTORY INCREASE IN SALES

SIR DAVID MILNE-WATSON'S ADDRESS

The two hundred and thirtieth ordinary general meeting of the Gas Light and Coke Company was held, on the 5th instant, at the Chief Office, Horseferry Road, Westminster, London.

Sir David Milne-Watson, LL.D., D.L. (the governor), in the course of his speech, said: During the year we have raised a considerable amount of capital on very advantageous terms. In April we issued £700,000 3½ per cent. redeemable debenture stock at par. In November we issued £2,000,000 3½ per cent. redeemable preference stock, 1970, at par, and just before the end of the year we issued £993,000 of the same stock at 100½ per cent. net.

The policy of sale by hire-purchase has met with the greatest success, and during 1936 we have sent out various gas appliances on hire-purchase to the number of over 270,000. This includes 93,000 cookers, 101,000 fires, 13,000 refrigerators and 61,000 water heaters.

Last year I told you of the very remarkable totals reached by the appliances issued and installed on the company's area during the year. The figure was over 600,000, but 1936 has seen it increased by nearly 25 per cent., to 749,936. This total included 397,450 cookers, against 364,289 last year; 184,114 fires, not including coke fires, against 151,137 last year; and 99,447 water heaters, compared with 66,078 last year.

Our total sales for cash and upon hire-purchase reached the figure of approximately £2,800,000—an increase of £900,000 over the 1935 figure of £1,900,000, which was itself an increase of three-quarters of a million over the previous year. Our appliance revenue from all sources—sale, hire-purchase and hire—rose from £2,600,000 in 1935 to £3,600,000 in 1936.

Sales of gas have gone up by 3.69 per cent. Both the ordinary and the automatic consumption shows an increase. Making all allowances for adventitious factors, it may interest the shareholders to know that there was a genuine increase in the extent to which the public was using our gas.

The increase in the quantity of coke sold by the company to the public reached the large figure of 211,000 tons.

YEAR'S RESULTS

The result of the working of the year is as follows:—The balance transferred from the revenue account to the profit and loss account is £2,093,000, as against £2,071,000 for the previous year. This balance, after adding the sum of £3,700 received from H.M. Treasury under the Development Act, 1929, and after allowing for interest on borrowed money for the year and dividends distributed in respect of the June half-year, leaves a sum of £907,000 out of which to pay dividends for the December half-year. This sum enables the directors to recommend the usual dividends on the 4 per cent. consolidated preference stock, the 3½ per cent. maximum stock, and a dividend (unchanged) at the rate of £5 12s. per cent. per annum on the ordinary stock.

We had two Bills before Parliament. No. 1—a money Bill to enable us to raise preference or ordinary stock to the extent of £3,000,000—met with practically no opposition. A very different fate awaited No. 2 Bill. This was opposed by no less than 28 local authorities. The Bill was subjected to 16 days' hearing and cost the company some £7,000—all in order that we might obtain what would seem to be the most reasonable right, namely, to put gas pipes at our own expense in council houses.

The growth of the company's work in public lighting continues, and the total of street lamps which we have installed and maintained has grown to over 52,000. The new long-term contracts obtained during the year include those from the boroughs of Chelsea and Hendon, each for 15 years, the latter covering 10 miles of main and arterial roads, and 10-year contracts from five other local authorities.

Whatever can be achieved by any other method can be achieved by gas lighting, which is sufficiently adaptable to yield any type and degree of illumination that is planned for it—without the need of introducing any graveyard effects or blue limelight.

GROWTH OF INDUSTRIAL BUSINESS

The very substantial increase in this part of our business which took place in 1936 is attributed not merely to the virtue of gas for these purposes, but to the effectiveness of the block rates and special tariffs which have been worked out to enable us to secure this large-scale business in the strenuous conditions of a hotly contested market.

The increased use of gas in industry represents a very substantial contribution by the gas industry to the national well-being.

The replacement of older methods of industrial heat provision by gas accelerates and improves output, reduces the amount of waste and spoiling through exact control of temperature, and provides improved working conditions. Moreover, it serves very effectively the nationally desirable cause of smoke abatement. This industrial business is of the greatest benefit to the company's general position by stabilising and spreading demand, by helping materially to bear the general burden of overheads, and thus benefiting every other aspect of our business and every grade of consumer.

THE COAL POSITION

The coal position in the country is causing us considerable concern. Ever since the Coal Mines Act of 1930 came into operation all coal consumers, and particularly large consumers like gas undertakings, have had reason to fear that it might be used in a manner detrimental to their interests, and those fears are, unfortunately, now being realised. A revised set of selling schemes has now been put in operation. Each of these schemes enacts that the control of coal buying and selling in the district shall be vested in the District Coal Board, and all the boards are composed exclusively of coalowners.

A complete monopoly has thus been created, and the competition upon which we and others formerly relied to enable us to get the coal we required at a reasonable price has ceased to exist.

The price of coal is being raised considerably, and the absence of any proper control is naturally causing dissatisfaction and anxiety in the minds of the coal-consuming public. Coalowners throughout the country would be well advised to realise that, long-suffering as we are as a nation, abuse of a monopoly in a commodity of vital national importance will not be endured for any length of time, and that, unless they exercise in a reasonable manner the powers which have been conferred on them, there is bound to be trouble.

COMPANY'S 125TH BIRTHDAY

This year the company celebrates its 125th birthday. It is difficult to find a proper title for such an occasion—a centenary plus a silver jubilee—as all the precious metals and jewels have been appropriated for other long-term anniversaries, and there is nothing left to stand for five silver jubilees rolled into one. And when one thinks of the small beginnings 125 years ago the story I have told to-day is a most striking instance of growth.

Speaking of progress, may I add one final point? I am not sure whether the review which I have given you of our year's working, and the increases in sales, will convey to you the true extent of the progress which the company has made. An increase in gas sales of 3.69 per cent. may not, on the face of it, seem a very spectacular figure. From time to time we have to congratulate our electrical friends on increases of the order of 10 per cent. or 15 per cent., and possibly some people think that the older industry, while it manages to hold its own, and perhaps a little more, is not really keeping pace with its new friend and competitor.

But let us look a little closer. We have taken note of the total output and increased sales of electricity on our area, and have been able to make an extremely close estimate based on official sources of what the figures amount to. We find that your company's sales of gas in 1936, expressed in terms of heat values, were about eight times the sales of electricity for heating, lighting and cooking. This excludes the electrical sales for power purposes, which, incidentally, our total sales were over three times the electrical sales for all purposes, including power. From this you will see that our additional gas sale of 3.69 per cent. means a good deal more than might appear. Actually it represents an increase over three times as great as the increased electrical sales for lighting, heating and cooking in the last year for which figures are available.

If we include the coke sold on our area for purposes other than power production, we find that the increase in gas and coke sold, in terms of heat value, was over eight times the electrical increase for all purposes, and some 20 times the increase in electricity sold for lighting, heating and cooking.

CONFIDENCE IN THE FUTURE

On several occasions in recent years the gas industry has had the entertainment of reading its own obituary notice in the columns of

STERLING TRUST, LIMITED

SATISFACTORY INCREASE IN INCOME

The twentieth ordinary general meeting of the Sterling Trust, Limited, was held, on the 9th instant, in London.

Baron Emile B. d'Erlanger (the chairman) said that the reserve account, standing at £560,000, showed an increase of £20,000, and the balance of revenue account, at £180,205, showed an increase of approximately £4,000. The income for the year was £203,882, as against £194,042, an increase of £9,840. In the face of the reduction of interest which they had suffered by the process of conversions, that increase of £9,840 was gratifying and reflected an improvement in the general economic conditions of the world. The directors proposed to pay an additional 4½ per cent. on the ordinary stock, making, with the interim payment on that stock, 6½ per cent. for the year. The final dividends proposed would require £46,703, and leave £83,479 to be carried forward, which was a slightly higher amount than that brought into the accounts.

As to general topics, it appeared to him that the most notable world feature was the gradual improvement of internal economic conditions in a great many countries. It had made itself felt in England and the Dominions earlier than elsewhere, but, whether they looked across the Atlantic to the United States, to the Republics of South America or to the Far East, Japan and China, or restricted their horizon to Europe, there were unmistakable signs that the economic storm had abated. It was regrettable that that improvement should be partly due to the enormous expenditure upon armaments, which was to a great extent responsible for the very substantial rise in most raw materials, for the reduction in unemployment and consequently for the increase in the purchasing power of the masses.

FINANCE AND INTERNATIONAL TRADE

Within a few years, assuming that a conflagration was avoided—and he verily believed that it was the desire of all civilised people to avoid it—every nation would be armed to the teeth, and the yearly amount spent would be greatly reduced. It was high time that statesmen should be prepared to face the situation which would then arise. He agreed with Professor Keynes that it would be wise to put a brake during years of activity upon schemes of municipal development, damming them up so as to be able to use them when the next industrial drought occurred. He was not the only one to believe that if they were to avoid a setback they must turn all their energies towards reviving international trade, which could only be done by lowering the barriers that at present restrained its flow—prohibitive Customs duties, compensation agreements, and antediluvian barter transactions.

Poor and undeveloped countries would have to be given financial assistance, but, with all due safeguards that the moneys should not be misused, and that the lending country should reap all the direct and indirect benefits to which it was legitimately entitled. Notwithstanding the existing restrictions on foreign loans, vast sums of money were being invested abroad; that capital went to countries which were considered the safest for the investor, but which did not require it, and were not benefited by its influx; nor was the trade and industry of the country from which that capital originated benefited by the outflow beyond the direct revenue derived therefrom.

That flow of capital could only be diverted to needy countries with the intervention of the lending powers strong and wise enough to see that, in the consolidation of the economic fabric of the world lay the soundest foundations of peace, the possibilities of permanent improvement in their own economic position, and, consequently, the surest prospects of raising the standard of life of the people within their own boundaries.

The report was adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

OLYMPIA LIMITED

EXTENSIVE IMPROVEMENTS

The eighth ordinary general meeting of Olympia, Limited, was held, on the 11th instant, at Olympia, London, W.

Mr Louis Nicholas, who presided, said that the net revenue for the year under review was £159,241, as compared with £167,572 for the previous year. The trading profits were approximately the same, the reduction of £8,300 in revenue being partly due to a reduction in the dividends received from investments, owing to their sale, and partly to a smaller profit having been made on such investments as had been sold. They had incurred certain special expenditure on decorations and repairs of the building amounting to £20,602. That expenditure was exceptional, the cost of the normal maintenance having already been deducted when arriving at the net revenue figure. During the year under review they had carried out an extensive scheme of improvements, including the provision of a new entrance hall, new booking halls with a covered way from Hammersmith Road to the main entrance hall, an entirely new block of offices for the tenants, further refreshment rooms with exhibitors' club rooms, together with a new suite of private offices, baths, dressing rooms and hairdresser's saloon, and a modern garage at the back of Olympia capable of holding 1,000 cars, connected with the main entrance by a covered way. Extensive alterations had been carried out in the Empire Hall by opening up the centre and installing a series of escalators from the ground floor to the top of the building.

The directors considered that they had done everything possible to preserve for the company's buildings that predominant position they had held for so many years in the exhibition world. The *Daily Mail* Ideal Home Exhibition was being held this year in Olympia. In addition, they were, as usual housing such old favourites as the British Industries Fair, the Military Tournament, the Horse Show, the Radio Exhibition and Mr Bertram Mills' World-Famed Circus, as well as many other smaller exhibitions. Negotiations were also on hand which they hoped would lead to further substantial business.

The report was unanimously adopted, and the proceedings terminated with a hearty vote of thanks to the chairman and directors.

STANDARD TRUST, LIMITED

SUBSTANTIALLY IMPROVED POSITION

The thirty-fourth annual general meeting of the Standard Trust, Limited, was held, on the 5th instant, at the offices of the company, 25-31 Moorgate, London.

Mr Alfred Shepherd, W.S. (the chairman of the company), who presided, said that the net revenue, after paying interest on debenture stock, income tax and expenses, was £43,276, against £39,488. It was proposed, after deduction of the dividend on the preference stock, to pay an ordinary dividend of 4 per cent., as against 3 per cent. last year, leaving, with the amount brought forward and arrears of revenue, a balance of £34,762, against £30,288. From that balance the directors had transferred £5,000 to the general reserve, against £3,000 last year, and £646 to the staff superannuation fund, and there would remain to be carried forward £29,116. It must be gratifying to the stockholders to see that, whereas the value of the investments at the end of December, 1935, showed a depreciation of £275,000, that year the valuation showed that the capital of the trust and the general reserve were more than intact.

In the report the percentages of bonds, preference and ordinary shares were, as usual, given, as also the geographical distribution. The only point to which he need refer was that the bonds and preference shares were about 2 per cent. and 1 per cent. lower respectively than last year, while the ordinary and deferred stocks were higher by about 3 per cent. That was due to a large extent to many of the companies whose debentures they held taking advantage of being able to borrow on terms more advantageous to themselves, thereby forcing the trust to accept lower rates of interest, or to take repayment and find other investments.

To sum up, the figures in the year's accounts showed (a) a very satisfactory increase in the revenue, enabling the board to put a larger sum to general reserve and to increase the dividend by 1 per cent., and (b) an increase in the valuation of the investments sufficient to wipe out the depreciation shown last year, and enable the board to state that the value of the present investments was in excess of the figure at which they stood in the balance sheet. Those were two most important and satisfactory points, and he trusted the stockholders would be satisfied with the progress made. The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended February 6, 1937, amounted to £41,021,000, against ordinary expenditure of £22,825,000. After allowing for a decrease in Exchequer Balances of £99,147, the operations for the week, as shown below, decreased the gross National Debt by £18,295,000, to approximately £7,968 millions.†

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

AFTER the hesitancy of the previous three weeks, commodity prices in general showed a firmer tendency in the period under review. The improvement took place before the settlement of the strikes in the American automobile industry and was strengthened by Thursday's news.

Copper was again in the limelight on the London Metal Exchange. In consequence of falling stocks, improved buying and the anticipation of a further rise in the United States quotation, the price of the metal advanced to almost £56 a ton in the week ended Wednesday. The copper position is now becoming highly artificial and a serious set-back in prices appears likely when increasing supplies reach the market. Spelter also rose sharply in an active market and on Wednesday reached the highest level since 1929. The improvement in the statistical position, greater activity in the consuming industries and the operations of speculators were responsible for this week's advance. Lead, on the other hand, was easier in consequence of increased supplies, while tin lost ground in a dull market. Meanwhile, quotations for iron and steel remain very firm, and coal prices show a hardening tendency.

Demand has been active at the London fur auctions and prices are higher. Rubber scored a further advance, despite the absence of any improvement in the American strike situation, mainly in consequence of the supply position. Cotton prices, however, showed a sagging tendency and raw wool and tops were barely steady. The news that the Indian Jute Mills will remove all restrictions on production after March 1st, caused a general decline in jute prices; other textile fibres showed little change. The market in oilseeds and their products was rather quiet generally, but linseed and coconut oil registered an advance.

(Continued from page 387)

RAILWAYS

SOUTHERN RAILWAY.—Increases of £751,042 in gross receipts for 1936 and £153,863 in net revenue. Final dividend, 4 per cent. on preferred ordinary stock, making 5 per cent. as before. On deferred ordinary stock a $\frac{1}{2}$ per cent. dividend is to be paid (first since 1 per cent. for 1930). Carry-forward increased from £220,809 to £225,875. Dividends to be paid March 2nd.

GREAT WESTERN RAILWAY.—Final dividend, 2½ per cent. on ordinary stock, making 3 per cent. for 1936, same as for 1935. Net revenue for 1936, £864,271 higher. Carry forward, £76,794. The amount recoverable for rates of £1,737,800 is placed to contingency fund.

LONDON MIDLAND AND SCOTTISH RAILWAY.—Dividends resumed on ordinary stock at rate of 1½ per cent. for 1936. Previous payment $\frac{1}{2}$ per cent. for 1931. Receipts from all sources have risen by £3,136,000 and net revenue is higher by £1,021,000. Carry forward, £79,000, against £134,491. A sum of £3,180,000 recoverable for rates and rate relief is to be placed to reserves for maintenance and new works.

BUILDING SOCIETIES

NORTHAMPTON TOWN AND COUNTY BENEFIT BUILDING SOCIETY.—Report for 1936 shows due to shareholders, £4,466,961. To depositors, £1,432,308. Mortgage advances, £1,278,262. Total assets, £6,312,750. Net working profit, £27,639, and £10,818 on sale of investments. To general reserve, £25,000. To mortgage contingent reserve fund, £5,000. Written off office premises, £7,225. Carry forward, £8,064.

BANKS

DANSKE LANDMANDSBANK.—After paying expenses there is a balance of kr. 8,417,854 for 1936 (including undivided profits from 1935, kr. 1,109,702). Kr. 251,666 written off for bad debts; kr. 500,000 for buildings depreciation; kr. 950,000 for taxes; kr. 250,000 transferred to securities depreciation reserve, and kr. 1,428,242 to the reserve fund; kr. 500,000 for staff bonus. Dividend of 6½ per cent. absorbs kr. 3,250,000, leaving kr. 1,287,945 forward.

INSURANCE

REFUGE ASSURANCE COMPANY.—The directors have declared a reversionary bonus of £1 16s. per cent. on with-profit policies in the ordinary branch as at December 31, 1936.

APPOINTMENTS AND PERSONAL

Sir William Firth has been appointed a director of the Alliance Assurance Company.

Mr D. C. Coleman and Mr J. W. McConnell, of Montreal, have been elected to the Canadian Committee of the Hudson's Bay Company.

The Frederick Hotels, Ltd., have elected the Rt. Hon. Lord Bethell chairman of the company in succession to the late Mr Ronald Peake.

Mr W. C. E. Gibson has been elected chairman of Duff Development Company, Ltd., in place of the late Mr R. W. Duff.

The following have been appointed directors of Anglo-Continental Guano Works, Ltd.: Mr E. Hessenberg, Captain Alexander Barclay, Mr J. R. Ray, and Mr K. A. J. S. Mitchell.

Mr E. Hessenberg, Captain Alexander Barclay and Mr A. G. Barthel have been appointed directors of Genatosan, Ltd.

Mr J. Ernest P. Drew has been appointed a director of McCrae and Drew, Ltd.

Following the recent set-back, wheat prices scored a sharp recovery under the influence of substantial demands from Germany and Spain while maize was also marked up for a similar reason. At this week's tea auctions a firmer tone was evident, but cocoa again registered a decline. Eggs were seasonably cheaper, while prices of meat and provisions were generally unaltered.

In the United States, prices appear to be "marking time." Thus, Moody's daily index of staple commodity prices (December 31, 1931 = 100), stood at 205.8 on Wednesday, against 206.1 a week earlier, 208.7 a month ago and 169.7 on the corresponding day last year.

COAL

SHEFFIELD.—On the increased quota for February collieries are making better time, and larger outputs appear assured. On home account there is no slackening of demand, and all grades of industrial fuel are in good request. Furnace and foundry coke are in strong demand, and contracts are taking all available supplies. Gas coke is a good feature. There is some improvement on the export market, more coal being available, with a fair call for prompt shipment. There are also more inquiries for forward. Shippers, however, state that they cannot be certain of supplies of specific sorts, and the fixing up of contracts is consequently being retarded to some extent.

NEWCASTLE-ON-TYNE.—Quotations in the North-East coalfield are unaltered; but there still exists a very firm undertone, with indications that higher prices would be paid for prompt delivery if supplies were available. Screened steam coals are very firm, under a good inquiry from Scandinavia and steady shipments to the home market. Durham coking and gas coals are scarce, due to good home trade, the relaxation of import quotas by Belgium and France and renewal of trade to Italy. A further 300,000 tons of coking and gas coals have been sold to Italy over April-May-June at full current prices. Patent oven coke is more difficult to obtain, there being every indication that another increase in prices will take place due to increased costs and demand from Sweden.

MISCELLANEOUS

UNITED KINGDOM GAS CORPORATION, LTD.—The corporation has acquired four further gas undertakings: 87.8 per cent. ordinary stock of Normanton Gas; 91.32 per cent. ordinary capital of Kippax and District Gas; 100 per cent. of ordinary capital of Sherburn and South Milford Gas; 88.83 per cent. of ordinary capital of Farnworth and Kearsley Gas.

LINEN THREAD COMPANY, LTD.—Profit for year to September 30, 1936, £325,438, compared with £261,653. Ordinary dividend 6 per cent. and bonus 2½ per cent., against 6 per cent. for previous year. Dividend reserve account, £50,000, against nil. Carry forward £206,430, against £192,242.

WM. FRANCE FENWICK AND COMPANY.—Net earnings for 1936 are £62,787, compared with £30,178. Ordinary dividend 5 per cent., compared with 3 per cent. Carry forward £7,213, against £7,849.

ASHTON BROTHERS AND COMPANY.—Trading profit year to January 2, 1937, £50,967, compared with £7,464. To depreciation, £13,867. Net trading profit, £33,793, compared with loss of £9,757. Debit balance of £27,422 replaced by credit balance of £6,371.

SUMATRA TEA ESTATES, LTD.—The offer of Rubber Plantations Investment to acquire shares of this company has been largely accepted and the amalgamation has now become effective.

WOLVERHAMPTON CORPORATION. 3 per cent. stock 1924-54.—Williams Deacon's Bank, Ltd., state that the books will be closed from February 15th to February 28th, to prepare interest warrants due March 1, 1937.

E. I. DU PONT DE NEMOURS AND COMPANY.—Net profit for 1936, \$89,884,000 (\$7.56 per share), compared with \$62,085,000 (\$5.04 per share) for 1935.

SOUTH SUBURBAN GAS.—Net revenue for 1936, £202,971. Ordinary dividend maintained at 6 per cent. Carry forward increased from £14,960 to £18,443. Sales increased 5½ per cent., and additional consumers number 8,326.

WANDSWORTH AND DISTRICT GAS.—Net revenue for 1936, £103,772, compared with £84,626, including £12,500 against £15,000 transferred from tax account. Final dividend of 3½ per cent. on consolidated stock, making 7 per cent. (as before) and £26,963, against £26,810, to employees co-partners.

BRITISH CELLULYND, LTD.—The Board state that while it is not concerned with fluctuations in the company's shares, these may be attributable to difficulties which have arisen in the completion of negotiations for the sale of foreign rights.

D. SMITH & SONS, LTD.—The Board state that it is not concerned with fluctuations in the company's shares. The business, it is stated, continues to make good progress and since the commencement of the financial year sales exceed those for the corresponding period of last year.

THE SHAREHOLDERS PROTECTION ASSOCIATION.—The annual meeting will be held at 11.30 a.m. on February 18th, at the Holborn Restaurant, London. The chairman will be Mr Charles Latham. The balance sheet shows that there was a debit balance for the year 1936 of £171 which, deducted from the surplus of £222 at end of 1935, leaves a credit of £51 to carry forward.

BOLSOVER COLLIERY COMPANY, LTD.—Net profit for 1936, £454,554, compared with £386,244 for 1935. Transfers to reserves, £149,246, compared with £128,503. Ordinary dividend, 9 per cent. plus bonus of 2 per cent., making 11 per cent., compared with 9 per cent. for 1935. Carry-forward increased from £65,420 to £84,332. Total assets, £6,900,206, compared with £6,548,596 at end of 1935.

GLASGOW.—If anything, the recent shortage of supplies to meet new business is more pronounced, and prices all round remain firm. During the stormy weather home market needs have been partially satisfied through the diversion of fuel not taken up at the ports; but with vessels arriving more regularly this is no longer possible. In general, the collieries are fully booked for some time ahead and, in view of difficulty in covering contracts and previous sales, are not at present inclined to commit themselves further. The problem is a difficult one, involving, as it does, maintenance of export connections at the present time—when foreign importers are quite ready to buy—and also an adjustment of capacity to future demand. If this is considered likely to be maintained, the only solution appears to be new development, especially the dewatering of old pits in Lanarkshire, which block the way to the deeper seams.

CARDIFF.—A scarcity of supply for prompt positions persists on the Cardiff coal market. There is still a large percentage of absenteeism at the collieries owing to illness, and in spite of the large number of insured unemployed there is a lack of both boy and skilled adult labour. The pits are producing practically as much coal as in the corresponding period last year, but outputs are readily absorbed under enhanced levels. Among and prices continue very firm at their recently enhanced levels. The contracts arranged during the past few days is one for the supply of 38,000 tons of sized coals for the Rosario electricity works for shipment over 1938, while there are inquiries in the market from the Algerian electricity works, the Jamaica railways, and for the supply of 50,000 tons of coking coal for Belgium. Coke and patent fuel are firm markets and there is a comparative scarcity of pitwood. Last week shipments in the foreign and coastwise trades totalled 413,100 tons compared with 363,500 tons the previous week, and 259,233 tons in the corresponding period last year. At 2,297,300 tons, loadings for the first six weeks of the year are about 215,000 tons greater than in the same period of 1936.

IRON AND STEEL

LONDON.—The iron and steel industry is concerned more with fulfilling contracts already on the books than with obtaining new business, says the official report of the London Iron and Steel Exchange. Notwithstanding all efforts, however, delays in deliveries are general and whilst the present insistent demand continues the producing works have little opportunity of overtaking their arrears. In the pig iron market the shortage of material is unrelieved and makers in practically all districts are rationing their customers. Most of the producing works have sold their production for the first half of this year, and it is difficult to place new business, but expiring contracts are usually renewed. Business in the semi-finished steel department has been on a small scale; most of the British works are reluctant to accept fresh commitments, as their output is earmarked for two or three months. Owing to the situation in other producing countries it is difficult to relieve the position by increasing imports, and consumers are alarmed at the prospect of the scarcity becoming accentuated. There has been no relaxation in home demand for finished steel materials, whilst the requirements of overseas customers appear to be expanding. It is not easy, however, to place orders for export for reasonable delivery owing to the necessity of providing for home needs. The position has been made more difficult by the delay in delivery of Continental steel.

SHEFFIELD.—The volume of business is on a comparatively small scale, not by reason of any lack of demand, but of inability of suppliers to accept more than a proportion of the orders on offer. So far as pig iron is concerned there is a definite shortage of foundry and basic, makers being fully committed under contract over at least the next three months, and having virtually nothing in the way of odd lots for disposal in the open market. The position with regard to forge is not so difficult, but at the same time producers are not seeking business. Deliveries of pig under contract are fairly regular, but consumption is at a level which precludes any accumulation of reserves either at furnaces or works. Hematite requirements are fully maintained, but supplies of both East and West Coast mixed numbers are short, and makers are very hesitant about adding to their commitments at present. There is but little variation in finished iron. Good business is being done in common and best bars, and a steady improvement in Crown iron is reported. New high records in output and demand for basic steel billets are being set up, but even so it is impossible to keep pace with users' requirements. Acid billets are also in active request. Wire rods, steel bars and strip are important features, and the call for structural steel is at a very satisfactory level. There is a further speeding up of production of stainless steel in sheet and other forms, but demand still outpaces supply. Iron and steel scrap demand shows further expansion, and in some sections supplies are on the short side. Prices throughout the market are firm, but without change.

MIDDLESBROUGH.—Demand for all classes shows no sign of abating and requirements are much larger than actual output. Cleveland foundry iron continues to be rationed to home consumers, although small quantities are occasionally shipped abroad. The position of East Coast Hematite pig iron is equally stringent, although, here again, small parcels are from time to time released for shipment. It is not possible to do new business for early delivery as producers are fully contracted; buyers would

be prepared to increase their purchases for delivery further ahead. More enquiries are coming to hand from abroad, but here again business is similarly limited.

In the steel trade the difficulty of securing foreign semi-manufactured material is accentuating the shortage of this class of material from home producers. Re-rollers could deal with much larger deliveries. In the finished steel departments deliveries in some cases are in arrears, and, although output is being fully maintained, the supply is insufficient to satisfy demand. Good Durham blast furnace coke is firm at 25s. 6d. per ton, delivered at furnaces. Foreign ore which was due to arrive in the Tees during January, and has been delayed owing to the weather, is now coming to hand. The scrap situation is not easing and demand continues unabated. The price of heavy melting steel scrap is 65s. per ton, but supplies are scarce and merchants are anticipating higher figures.

GLASGOW.—It is becoming increasingly difficult to conduct business in the iron and steel trades here. While makers are working to capacity and, even so, unable to meet the demands of the various users, difficulties are increased by inability to obtain supplies of raw material. Every branch of the industry is now being handicapped by delays in deliveries of material already contracted for and also by the impossibility of placing orders for supplies sufficient to meet future requirements. There is no falling off in demand either from home or overseas buyers. Much new work has been placed in Glasgow and other districts in the West of Scotland within the past week and all branches of the engineering industry are exceedingly busy.

CARDIFF.—The recent improvement in the volume of the tinplate export trade has been maintained and shipments at Swansea last week totalled 8,224 tons, as against 7,938 tons the previous week, and 4,889 tons in the corresponding week last year. There is a good inland demand as well, and stocks have fallen to the exceptionally low quantity of 1,646 tons as against 4,023 tons a year ago. There is an active demand also for blacksheets for the home market. Prices of steel bars, galvanised sheets and tinplates are firm but unaltered.

OTHER METALS

COPPER.—After a steady rise, the cash price reached the new high level of £55 16s. 3d. on Wednesday, an increase of £1 11s. 3d. on the week. Several factors were responsible for the renewed improvement. The considerable reduction of 1,707 tons to 41,139 tons in home warehouse stocks impressed the market earlier this week; improved political sentiment on the Continent stimulated consumers' buying; and the belief that the United States domestic price will be raised above its present level of 13 cents per lb. within the next few days resulted in increased speculative activity. The price of standard cash is now being "talked" to £60 or even higher, and in view of the bullish mood of the market it is quite possible that this limit will actually be reached. With the new rises in price, however, the position is becoming highly artificial, and there is little reason to doubt that the present boom will have very unfavourable effects from the long-term point of view. Reports from all producing centres speak of increasing outputs and the re-opening of mines which have been idle for a number of years. Sooner or later this advance in production will check speculation, and will at the same time lead to new disturbances on the market.

Sales on the London Metal Exchange: 3,600 tons on Monday, against 1,500 tons last week; 3,300 tons on Tuesday, against 2,200 tons last week; 5,000 tons on Wednesday, against 6,300 tons last week. Domestic spot was quoted at 13.17½ cents per lb. in New York on Wednesday, against 12.72½ cents a week ago and 12.80 cents a month ago. Wednesday's official closing price for standard cash in London was £55 16s. 3d. to £55 17s. 6d., compared with £54 5s. to £54 6s. 3d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 40,332 tons, showed a decrease of 1,507 tons, while stocks of rough copper, at 807 tons, were 200 tons smaller.

LEAD AND SPELTER.—Lead closed on Wednesday 7s. 6d. lower on the week at £27, while spelter closed £1 8s. 9d. up at £23 5s. The latter level represents the highest price since 1929. Although speculative buying helped to lift the price, consumers' demand showed signs of expansion. Brass-makers on the one hand and galvanisers on the other have larger orders in hand than for many months, and are, therefore, more anxious to buy. At the same time, the London market is greatly impressed by the sharp improvement in the United States spelter position. During January U.S.A. stocks declined from 44,756 short tons to 34,143 short tons. A year ago the figure stood at 79,207 tons. American stocks are now down below the safety level and replenishment is necessary. Lead, on the other hand, suffers from the fact that high prices of recent weeks and months have stimulated production in high-cost countries, and have at the same time increased supplies of old lead. The basic position of this market, however, remains sound, and it seems quite likely that lead prices will recover in the immediate future.

Sales of lead on the London Metal Exchange: 1,450 tons on Monday, against 1,050 last week; 2,700 tons on Tuesday, against 1,450 tons

The Bank grants long term loans to small and medium-sized rural holdings and short term advances through the intermediary of local credit institutions. The Bank's Mortgage Bonds and Land Improvement Debentures are guaranteed by the Polish Treasury.

last week; 1,500 tons on Wednesday, against 2,700 tons last week. The New York quotation on Wednesday was 6.00 cents per lb., against 6.00 cents a week ago and 6.00 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £27 per ton, compared with £27 7s. 6d. a week ago.

Sales of spelter on the London Metal Exchange: 5,250 tons on Monday, against 1,275 tons last week; 4,500 tons on Tuesday, against 650 tons last week; 6,500 tons on Wednesday, against 2,650 tons last week. Wednesday's quotation in East St. Louis was 6.40 cents per lb., against 6.00 cents the week before and 6.00 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £23 5s. per ton, against £21 16s. 3d. last week.

TIN.—Tin prices, which were firm at the beginning of the period under review, turned easier again and closed on Wednesday at £226 5s. for cash and £227 5s. for forward, a loss of £2 10s. and £2 5s., respectively, on the week. American buying was again on a small scale, and European consumers were by no means keen buyers. As offerings were fairly large, the decline in prices cannot be regarded as surprising. The future of tin price movements depends mainly on the revival of United States buying—especially in view of the fact that increasing supplies will intensify selling pressure unless there is a larger demand.

Sales of tin on the London Metal Exchange: 325 tons on Monday, against 350 tons last week; 225 tons on Tuesday, against 300 tons last week; 175 tons on Wednesday, against 370 tons last week. The New York quotation on Wednesday was 50.65 cents per lb., against 51.00 cents a week ago and 50.95 cents a month ago. Wednesday's official closing quotation in London for standard cash was £226 5s. to £226 10s. per ton, compared with £228 15s. to £229 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 1,987 tons, an increase of 285 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £14 6s. per flask of 76 lbs., against £14 6s. a week ago. Chinese antimony was quoted at £67 per ton ex warehouse, the same as last week. Chinese wolfram for "February-March" shipment was quoted at 35s. 6d. to 36s. per unit, c.i.f., compared with 34s. 3d. to 34s. 9d. last week. Refined platinum was firmly held at £14 per ounce.

TEXTILES

COTTON.—**Manchester.**—The improved position has been well maintained, although some sellers have not booked so many orders as a week or two ago. More contracts could be arranged, but for the difficulty of obtaining early delivery. There has not been much change in raw cotton prices. For the most part sentiment remains bullish, but there is rather more uncertainty as to future supplies. Good staple American cotton is now scarce. Deliveries of all kinds of cotton to spinners in Lancashire continue heavy and consumption in the United States remains on a large scale. Business in actual material has centred on outside growths, such as South American and East Indian descriptions. In the yarn market an event of importance has been the success of the price maintenance scheme in the Egyptian section; it was announced at the end of last week that the owners of more than 80 per cent. of the spindles concerned had signed the legal document. This report has stimulated demand for fine counts. In American yarns, the last advance in prices has checked the turnover somewhat, but spinners continue to sell their production.

A considerable cloth industry has again been experienced and an encouraging business has been done, but buying has not been so spectacular as during the early weeks of the year. Numerous offers have been met with for India and, although many of them have been too low, a useful business has been put through in light bleaching descriptions, white shirtings and printed and dyed goods. The most active outlet has been Karachi. Further buying has been reported in bleached shirtings and dyed fabrics for Java and specialities for Singapore. Egypt has bought light bleachers, South America printing and finishing styles and the Dominions heavy materials. A persistent demand has been met with in home trade goods. Makers with wide looms are very well engaged.

JUTE.—**Dundee.**—The Indian Jute Mills Association members have agreed to their Committee's recommendation to remove all restrictions regarding working hours and extensions of looms as from March 1st. This will no doubt lead to a decline in prices for goods and the market in Calcutta might already have been adversely affected had it not been for the fact that the Fort Gloster, Ganges and Howrah mills are idle owing to strikes. There are 15,000 employees in these mills striking for the restoration of the 1932 cuts on their wages, for a provident fund and for old-age pensions. Though these three mills have been idle for over a week, the trouble has not yet spread to other establishments. Production in India is, however, being curtailed and the demand for jute goods is sufficient to keep prices steady at around recent levels. Whether any of the Associated mills in India will take advantage of the fact that they can work any number of hours and extend their number of looms remains to be seen but it is quite on the cards that there will be a considerable increase in production after March 1st, at least on account of longer hours; but it may take some months before additional new machinery can be installed. The "outside" mills may eventually be forced to join up with the Association and work harmoniously for the regulation of supply of goods with demand. The consumption of jute goods has increased enormously during the past eight or nine months and the total production of the Indian Mills has been well absorbed.

Raw jute prices have weakened a trifle and Daisee 2/3 full group is offered at £18 12s. 6d., with PR at £19 5s. and fours at £17 5s., while Tossa 2/3 is down to £19 10s. for full group and fours to £18 10s., February-March. Spinners here have shown no interest at these limits. Good First Marks are offered at £22 5s., Lightnings at £20 5s. and Hearts at £19 5s., February-March. Jute yarns are very quiet and purchases of common 8 lb. cops have been made at the lower rate of 2s. 1 1/2d. and of 8 lb. spools at 2s. 2 1/2d. Other yarns are quite steady, however, at 3 1/2d. to 4d. for 3 ply 8 lb. twist, 2 1/2d. for 24 lb. sacking web and 3 1/2d. to 3 1/2d. for 8 lb. chains. Rove is being sold steadily at £21 for 48 lb. and £16 15s. for 200 lb., while the Rio yarns have come in for attention at 2s. 4 1/2d. for fourth grade 8 lb. warp, and 2s. 6 1/2d. for third. Business in jute cloth is dull and buyers are unwilling to operate in view of the unsatisfactory position in Calcutta and the probability of increased output. Prices are rather easier at from 2 1/2d. for 10 oz. 40 in. and 2 1/2d. can be done for 8 oz. Linoleum hessians are quiet and heavy goods in moderate demand at steady rates.

GRAIN MARKETS

WHEAT.—Substantial purchases by Germany and Spain have imparted a much better tone to the market during the past week. Heavy shipments have been insufficient to hold the rise of prices in check.

On Wednesday last, "May" futures were quoted in Chicago at 135 1/4 cents per bushel, against 131 1/4 cents the week before and 135 cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 52s. 3d. per 496 lbs., against 49s. 9d. a week ago; No. 2 Northern Manitoba, ex ship, 51s., against 48s. 6d. a week ago. According to *The Corn Trade News*, total shipments of wheat and flour last week totalled 1,866,000 quarters, against 1,853,000 quarters in the previous week and 1,503,000 quarters in the corresponding week a year ago.

FLOUR.—After the recent quiet spell, demand improved this week and prices were advanced. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 40s. per 280 lbs., against 38s. 6d. a week ago; delivered inner London, 39s. 6d., as compared with 38s. a week ago. Manitoba patents, ex store, 39s. to 40s. 6d., against 37s. 6d. to 39s. a week ago. Australian, ex store, 32s. 6d. to 33s., against 32s. last week.

BARLEY.—Imported feeding descriptions have been a firm market, but business has been limited. Home grown malting barley is sparingly offered. "May" futures were quoted at 81 1/2 cents per bushel in Winnipeg on Wednesday, against 81 1/2 cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed," at farm, 34s. to 36s., as against 34s. to 36s. a week ago; "English malting," at farm, 36s. to 45s., against 36s. to 45s. last week. Californian (new), ex ship, 54s. 6d., against 51s. to 60s. last week; Chilean, brewing (new), ex ship, 44s. 9d. to 50s., against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "May" futures were quoted at 51 1/2 cents a bushel in Chicago, against 50 1/2 cents a week ago and 54 1/2 cents last month. Quotations in London, Wednesday: "English Black," at farm 24s. to 25s. per 336 lbs., against 24s. to 26s. a week ago; "English White," at farm, 24s. to 25s., against 24s. to 26s. a week earlier; mixed Canadian feed (Vancouver), landed, 23s. 3d. per 320 lbs., compared with 23s. last week.

MAIZE.—A much firmer tone developed during the past week and prices have risen sharply. Demand from Germany has been an important factor in the recovery. "May" futures were quoted on Wednesday at 107 1/2 cents per bushel in Chicago, against 105 1/2 cents a week ago and 108 1/2 cents last month. Quotations in London, Wednesday: "Plate," landed, 25s. 6d., per 480 lbs., compared with 24s. a week ago; "Plate," ex ship, 24s. 6d., as against 23s. a week ago; "Plate," "February," 25s., as against 23s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at £6 12s. 6d. to £6 17s. 6d. per ton, as against £6 7s. 6d. to £6 12s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Feb. 11, 1936	Dec. 30, 1936	Feb. 3, 1937	Feb. 10, 1937
Winnipeg (No. 1, Manitoba)	82 1/2	84 1/2	83 1/2	129	124 1/2	128 1/2
—Cents per 60 lb.						
Chicago (No. 2, Winter)	98 1/2	101 1/2	97 1/2	135 1/2	131 1/2	135 1/2
—Cents per 60 lb.						

The visible supply of wheat in Canada amounts to 97,520,000 bushels, against 54,212,000 bushels last week, and 126,242,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933-34 to 1936-37:—

	1933-1934	1934-1935	1935-1936	1936-1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to February 6	324,273	334,025	328,424	6,678,290
23 weeks to February 6	7,149,905	8,842,132	8,903,178	
Average price of English wheat per cwt.	s. d. 4 5	s. d. 4 9	s. d. 6 5	s. d. 9 3

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
February 4, 1933	Cwts. 248,512	Cwts. 211,189	Cwts. 50,561	s. d. 5 5	s. d. 6 11	s. d. 6 0
February 3, 1934	324,273	178,214	81,703	4 5	9 4	6 4
February 9, 1935	334,025	205,179	51,785	4 9	8 2	7 0
February 8, 1936	326,424	215,793	54,003	6 5	8 1	6 1
January 30, 1937	274,403	273,392	66,271	9 8	10 2	8 5
February 6, 1937	168,810	216,708	56,494	9 3	10 3	8 4

OTHER FOODS

BACON.—Prices were unchanged last week-end and the tone of the market has been steady this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 90s.; Canadian, 77s.; Danish, 86s.; against 86s. to 90s., 77s. and 86s. last week. Arrivals in London last week included: Danish, 13,272 bales; Canadian, 7,484; Dutch, 2,296; Lithuanian, 1,334; and Polish, 2,388; as against 14,771, 7,530, 2,197, 1,268 and 2,840 bales, respectively, in the previous week.

BUTTER.—The position shows little change. The market in Colonial grades has been rather slow, with Danish showing a firm tendency. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 86s.; Australian, choicest salted, 86s.; Danish, 122s.; compared with 86s., 86s., and 120s., respectively, a week ago.

CHEESE.—The market has ruled steady, with prices a little above last week's level. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 86s. to 88s.; Canadian, finest coloured, 72s.; and New Zealand, finest coloured, 51s. to 51s. 6d.; against 86s. to 88s., 71s. to 72s., and 50s. 6d., respectively, a week ago.

COCOA.—The markets were again a little easier this week. The spot quotation in New York on Wednesday was 10 1/2 cents per lb., as against 10 1/2 cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, February-April, was quoted at 47s. 6d. per 50 kilos, c.i.f. Continent, against 48s. to 48s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 14,969 bags; delivered, for home consumption, 7,247 bags; exported, 113 bags; stocks, 139,930 bags, against 132,031 bags a year ago.

COFFEE.—The spot markets in London and New York have been steady. On Wednesday, Rio No. 7 (cash) was quoted at 9 1/2 cents per lb. in New York, as compared with 9 1/2 cents per lb. last week and 8 1/2 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 127 cwt.; delivered, for home consumption, 218 cwt.; exports, 523 cwt.; stocks, 7,839 cwt., against 12,124 a year ago. Central and other South American: landed, 8,791 cwt.; delivered, for home consumption, 7,225 cwt.; exported, 1,744 cwt.; stocks, 62,659 cwt., against 66,708 last year. Other kinds: landed, 10,060 cwt.; delivered, for home consumption, 4,665 cwt.; exported, 1,620 cwt.; stocks, 111,793 cwt., against 138,188 last year.

EGGS.—In response to a rather slow demand, prices are generally a little easier this week. At Smithfield, on Wednesday, English (ordinary packing, Grade 1, about 15-15 1/2 lb.) realised 13s. to 13s. 6d. per 120, as against 12s. 9d. to 13s. 6d. last week; while Danish (15 1/2 lb.) made 9s. 3d. to 9s. 6d., as against 9s. 6d. to 10s. last week.

FRUIT.—With some improvement in weather conditions, business at Covent Garden has been rather more brisk this week. According to *The Fruitgrower* there is a moderate but steady demand for apples. Pears encounter a good market, supplies being rather limited. Hothouse grapes are short, English making good prices; some excellent South African grapes are to hand and meet a ready sale. South African peaches and nectarines are in moderate demand, while plums from the same source are going out well. Oranges are generally easier, the bulk of the arrivals being in good condition. Lemons show a firm tendency on shorter supplies, but grapefruit are a slow item, supplies being abundant this week.

MEAT.—Business at Smithfield was moderate this week, prices showing little alteration. On Wednesday last, Argentine chilled hind-quarters were quoted at 4s. to 4s. 4d. per 8 lbs., as compared with 4s. to 4s. 4d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,466 tons, an increase of 2,784 tons on the corresponding week last year. Beef and veal accounted for 5,035 tons, mutton and lamb 2,674 tons, and pork and bacon 1,052 tons, as compared with 4,217, 1,839 and 313 tons, respectively, in the same week of 1935.

PEPPER.—On Wednesday, Singapore white Muntok, spot, was quoted at 6d. per lb. in bond, against 6d. per lb. a week earlier. Black Lampung, spot, in bond, was quoted at 3 1/2d. per lb., sellers, compared with 3 1/2d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 2 tons; delivered, 26 tons; stocks, 1,768 against 1,585 last year. White, landed, 126 tons; delivered, 77; stocks, 11,802 compared with 13,129 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 10s. 3d. per cwt. a week ago. February-March in singles to Continent and U.K., was quoted at 9s. 4 1/2d. per cwt., against 9s. 6d. last week. Movements in London last week were as follows: Landed, 157 tons; delivered, 100; stocks, 1,240 tons, against 3,801 a year ago.

SUGAR.—The London market has been steady, but New York has displayed an easier tone. The spot price in New York on Wednesday was 3.55

cents per lb., as compared with 3.65 cents per lb. last week and 3.95 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "March" delivery at 6s. 0 1/2d. to 6s. 0 1/2d., against 6s. 0 1/2d. to 6s. 0 1/2d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 3,526 tons, against 3,481 in the previous week and 16,396 in the same week of 1936; deliveries, 14,618 tons, against 16,326 and 16,228 tons respectively; stocks, 239,619 tons, against 250,711 and 267,738 tons, respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Feb. 6, 1936	d. 13-09	d. 12-71	d. 13-71	d. 10-55	d. 10-86	d. 12-04	d. 12-86
Dec. 17, "	12-54	12-58	14-67	11-21	10-35	12-14	12-97
Jan. 7, 1937	12-82	12-66	15-14	11-87	10-64	12-12	13-31
Jan. 14, "	13-12	12-95	15-42	11-75	10-71	12-21	13-53
Jan. 21, "	13-47	13-26	15-38	12-41	11-08	12-31	13-83
Jan. 28, "	13-77	12-49	15-92	12-60	11-42	12-69	14-18
Feb. 4, "	13-63	13-38	15-78	13-22	11-23	12-68	14-06

The quantities catalogued for this week's public auctions comprised 51,076 packages of Indian and 18,365 packages of Ceylon tea. Demand was strong at the Indian auctions, common and medium sorts being dearer. At the Ceylon sales on Tuesday, a similar tendency was exhibited.

VEGETABLES.—Canary Island tomatoes are doing better, states *The Fruitgrower's* Covent Garden report, and prices are firmer. House-grown beans are dearer, the best ranging up to 5s. a lb. Madeira beans are also firmer, while mushrooms are steady. Celery enjoys a consistent sale, good samples being in short supply. Cucumbers are a little more prominent and lettuce sells at a moderate price. Both English and French asparagus are a point easier, while forced rhubarb has also declined on increasing supplies. Kitchen vegetables remain at a low figure, greenstuff being plentiful and cheap. Meanwhile, plentiful supplies of potatoes encounter only a moderate demand at London markets, with prices occasionally easier. At the Borough on Tuesday, however, best si. land King Edward again made from 9s. to 9s. 6d. a cwt., ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Generally, oilseeds and their products have a quiet tone. After a fair business done in Plate linseed on U.K. and Continental account, demand has fallen off except for seed in near positions. Forward shipment is neglected and prices have an easier tendency. The new Argentine crop is arriving at the River Plate ports in considerable volume and shipments continue on a high level, a feature being the large proportion destined for the United States. Thus far this year 272,000 tons have been exported, as against 199,500 tons at the same date last year. Notwithstanding large arrivals recently, the quantity afloat for Europe remains substantial, viz., 179,300 tons—or 13,000 tons less than a week ago. Very little is now being shipped from India, whose old crop available for export is now put at 18,000 tons. The new crop in India appears to be progressing satisfactorily, but will not be ready for shipment before the end of April. The shortage of domestic has induced growers in the United States to place a greater area under linseed for next season. Trade in linseed oil is only moderate and a recent gain in value has not been sustained. Egyptian cottonseed is very slow and is attracting little or no interest from consumers. Refined cotton oil is in some demand and quoted £32 per ton ex Hull, prompt. The demand for oilcakes continues good and prices are steady.

RUBBER.—Despite the continuance of the strikes in the American automobile industry, prices were higher, both in London and New York. This week's advance may be attributed to the supply position. Shipments from Malaya and from Ceylon during January were below the permissible quota and doubts are entertained concerning Malaya's ability to produce her full quota during the first half of 1937. Labour supply is a serious problem in this and other growing areas. The spot price in New York on Wednesday was 21 1/2 cents per lb., compared with 20 1/2 cents per lb. a week ago and 21 1/2 cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 10 1/2d. per lb., as against 10 1/2d. on the corresponding day last week. In forward positions, business has been done at 10 1/2d. for March shipment, as against 10 1/2d. to 10 3/4d. a week ago. Stocks in London and Liverpool at the end of last week totalled 68,555 tons, against 71,931 tons a week earlier. A year ago stocks amounted to 161,116 tons.

FURS.—As had been anticipated, a firm tone was again displayed at this week's winter auctions in London. Demand was keen and prices advanced sharply, despite the fact that some London merchants regarded the present boom as dangerous and are predicting a setback. The proportion of sales to offerings was larger than for some years, and withdrawals were small. Although the bulk of the supplies was taken by London and Parisian merchants, practically all countries participated. The main price increases compared with the October sales were as follows: red foxes, 7 1/2 to 12 1/2 per cent.; blue foxes, 25 per cent.; white foxes, 35 per cent.; ermine, 20 per cent.; marten, 20 per cent.; mink, 15 to 30 per cent., and Persian lambs, 33 per cent. No reductions below October levels were recorded, but prices for lynx were about unchanged.

CANADIAN PACIFIC RAILWAY COMPANY

(INCORPORATED IN CANADA WITH LIMITED LIABILITY)

DIVIDEND NOTICE. PREFERENCE STOCK

Upon consideration of the results of the Company's operations in 1936 and having in view its obligations as guarantor of the interest on certain securities of the Minneapolis, St. Paul and Sault Ste. Marie Railway Company the Directors have declared a dividend from the earnings of 1936 of One per cent. on the Preference Stock, payable April 1st, 1937, to shareholders of record on March 1st, 1937.

The year's earnings and therefore the rate of dividend on the Preference Stock have been affected by the very unfavourable drought conditions in the territory served by the Company and also by the "Soo" line which resulted in substantial curtailment of the earnings for the last quarter of the year.

By order of the Board, F. BRAMLEY, Secretary.

Montreal, February 8th, 1937.

CIVIL SERVICE COMMISSION

The National Savings Committee invite applications for a vacancy for an Assistant Commissioner. Candidates must have attained the age of 21 and must not have attained the age of 35 on the 1st April 1937.

University training and knowledge of economic subjects are desirable.

Service in any part of England or Wales may be required.

Salary £277 16s., rising by annual increments of £18 to maxima of £634 19s. (men) and £515 18s. (women). Salaries are liable to review.

Copies of the regulations may be obtained from the Establishment Officer, The National Savings Committee, Sanctuary Buildings, Westminster, S.W.1, together with forms of application, to be returned not later than the 15th March, 1937.

Our New Information Service

The Intelligence Branch of the *Economist* has now been enlarged to meet the growing demand for economic and statistical information. The Department has been able to secure the services of a number of experts, and is prepared to supply information and reports on any branch of industry and finance as well as on international relations at a fee proportionate to the work involved.

Enquiries should be addressed to the Intelligence Branch THE ECONOMIST 8 B

Recovery Becomes World Wide

SINCE 1933 the chief trading countries have become used to thinking of their economic progress as merely a painful recovery from a long depression. The economic tale of 1936, told by our seventy-fourth annual Commercial History, is very different from that. Last year the world as a whole, and not a favoured few countries, can be said to have passed out of the depression epoch and entered a period of rapid economic development. But the world has emerged from the depression of 1930-35 by different means than on earlier occasions. Two outstanding features distinguish the world in 1937. First, its relative prosperity is more than ever before a sum of so many separate national prosperities, while world trade remains 20 per cent. less in volume than in 1929. Secondly, Budgets and national finances are being jeopardised, or severely strained, in one great nation after another by a disturbing factor—the great and growing proportions of the various countries' national incomes now being devoted to the unproductive fashioning of armaments.

Recovery began in Great Britain, the Dominions, Scandinavia and the countries of the sterling area after they had devalued their currencies. It proceeded after 1933 to Japan and the United States and to some of the primary producing countries which had first been hit by the fall in world prices. Throughout 1934 and 1935 the stocks were worked off, droughts occurred, and restriction schemes were applied to current production. The outcome, in 1936, has been a universal and rapid jump in world commodity prices. The purchasing power of primary producers revived, and was accompanied by an extensive rise in freight rates, recovery in shipping, and a revival of shipbuilding in many countries.

To these commercial influences was added the tonic effect of the abandonment, last September, by the erstwhile gold bloc countries of their attachment to the gold

parities of the pre-depression era. This re-alignment of the world's leading currencies made possible the conclusion of a tripartite currency agreement between London, Paris and Washington.

Thus the year saw the conjuncture of many factors, all favourable to economic recovery. But their influence served only to reinforce the purely domestic stimuli which Governments continued to apply, by devious protective stratagems, to their home markets. The results can be read in one after another of our Correspondents' reports: rapid rises in prices, shortages of skilled labour, falls in unemployment to an obstinate minimum well above pre-depression levels, restoration of profitability in agriculture, expansion of constructional activity, operation of iron and steel plant to full capacity, hectic armaments manufacture, large increases in Budget totals, rising taxation, lagging foreign trade, and the maintenance of currency and exchange controls. All these suggest the danger that separate national levels of business activity will be pushed ahead at widely differing rates by State action, and that new disequilibria may later emerge.

The reader of the pages that follow can scarcely fail to be impressed by the accumulated evidence of a real world-wide recovery from depression. In our own country, the signs are striking. One commodity market after another, one industry after another, has achieved new records in 1936. Money is still cheap; and bank advances show signs of expansion. In the former gold bloc countries the outlook was brighter at the end of 1936 than for years past. The task before the world's chief trading countries in 1937 is to broaden the bases of domestic recovery by freeing world commerce from the shackles which depression, economic nationalism, and political fears have fastened upon it.

INDUSTRY AND TRADE

DURING the past year business activity in the United Kingdom continued to expand vigorously, surpassing all previous records of aggregate production and employment. *The Economist* Index of Business Activity rose almost without interruption, from 102 (1935 = 100) in January to 109 in December. Moreover, the index for 1936 shows an increase of 6 per cent. over 1935 and of 7½ per cent. over 1929. Industrial relations were satisfactory, strikes in the coal and cotton industries having been averted by increases in wages. Despite the more marked rise in the cost of production, due to higher wages and rising raw material prices, industrial profits, the springboard of enterprise, continued to advance. The past year drew to its close without any loss of momentum in the expansion of industrial activity. The trend of business activity since 1929 is summarised in the following table:—

PRODUCTION AND BUSINESS				
Indices of production—	1929	1932	1935	1936
London and Cambridge Economic Service (1924 = 100)	110.6	84.9	108.3	118.0
Board of Trade (1930 = 100)	108.5	90.5	113.5	†

Complete Index	98.5	84	100	106*

* Provisional. † For the first nine months of 1936 the figure was 122.5, as compared with 111.8 in the corresponding period of 1935. ‡ Third quarter of 1936.

There were a number of significant changes in the incidence of industrial progress during the past year. First, the increase in the requirements of the domestic market was responsible for a further decline in the share of total production sold abroad. But while exports made little headway, imports, mainly of raw materials and semi-manufactured goods, showed an appreciable increase. Secondly, as far as activity for the domestic market is concerned, progress in the capital equipment industries was again more marked than the increase in the output of consumers' goods. Throughout the past year the United Kingdom has been passing through a process of large-scale re-equipment and extension of productive capacity. Thus, while the expansion of dwelling-house construction tended to slow down, the volume of industrial and commercial construction was pushed forward with increasing speed. Moreover, the curve of activity in the capital equipment industries was given an upward twist by the re-armament programme, which was responsible for part of the increased demand for plant and machinery. Demand for iron and steel and machinery rose to such an extent that British manufacturers were unable to meet all requirements. Hence, home production had to be supplemented by increased imports. Shipbuilding is another industry which made rapid progress during the past year as a result of the improvement in international trade. Output of coal showed an increase despite a further decline in exports and shipments for the use of steamers.

As was to be expected, the increase in employment, wages and profits during the past year was accompanied by an expansion of the demand for consumers' goods. The textile, clothing, food, drink and tobacco industries benefited from the increase in the purchasing power of the public—reflected in an expansion of retail turnover. A feature was the sharp recovery of the cotton trade towards the end of the year. The automobile industry, too, experienced a further increase in the demand for private cars. A description of developments in various branches of British industry during 1936 will be found in Section III, Commerce and Trade.

AGRICULTURE

In some directions, British agriculture failed to hold its own last year. The total arable area, after increasing in 1935 for the first time since the war, last year resumed its long-term decline. The area under cereals fell by about the same amount as in 1935; but, whereas in that year a sharp drop in the area under barley was partly offset by increases in wheat and oats, 1936 witnessed a 4 per cent. contraction in the wheat acreage and a partial recovery in barley, with oats showing little change.

The weather did not deal kindly with the arable farmer, and yields were generally lower than in the previous season. Among cereals barley made the best showing, the total crop being officially estimated at 663,000 tons, against 656,000 in the previous year. The total outturns of wheat and oats were, however, smaller on the year, falling from 1,623,000 and 1,138,000 tons, respectively, in 1935, to 1,378,000 and 1,080,000 tons, respectively, last year. Wet weather wrought havoc with the hay crop in many localities; and production of root crops, except mangolds, was lower last year. Orchard fruit generally yielded well, but production under glass suffered from lack of sunshine and disease was common.

There was no lack of grass during the summer, and milk yields were accordingly good. The dairy herd was again larger last year, but other cattle declined in number. An increase in the flock of lambs and breeding ewes was insufficient to offset a fall in the number of other sheep. The pig population was larger than in 1935, but a drop in the number of breeding sows appears to reflect dissatisfaction with the future of the pigs marketing scheme.

Indeed, there is evidence that marketing schemes in general became less popular among the farming community last year. Thus, the contract system, which has formed an integral part of the machinery of the Pigs and Bacon Marketing schemes since their inception, broke down in December. The farmers failed to offer sufficient pigs on contract to meet the curers' minimum requirements and the latter have consequently received permission to buy their pigs on the open market. A draft marketing scheme for Scottish raspberries was again rejected by the growers, and it was decided not to proceed with the proposed scheme for tomatoes.

The report of the committee of investigation into milk prices is referred to in the article on Dairy Produce in the Commerce and Trade Section. The Milk Reorganisation Commission for Great Britain reported in the year under review (see *The Economist*, December 5, 1936) and proposed that a permanent Milk Commission should take over from the Milk Board the fixing of prices. Meanwhile, the Milk Act of 1934, which grants a subsidy to maintain manufactured milk prices, has been extended until September, 1937. The Government's policy for the beef industry was formulated last year, and is discussed in the article on Livestock and Meat. The existing fat cattle subsidy will continue to be paid until July 31, 1937.

OVERSEAS TRADE

THE expansion in overseas trade which began in 1933 gathered momentum last year. Imports increased faster than exports, and the passive balance on merchandise account reached the highest level since 1931.

FOREIGN TRADE VALUES

(£000,000)					
	1929	1933	1934	1935	1936
Imports	1,220.8	675.0	731.4	756.0	848.9
British Exports	729.3	367.9	396.0	425.8	440.7
Re-exports	109.7	49.1	51.2	55.3	60.4
Total Exports	839.0	417.0	447.2	481.1	501.1
Excess of Imports over Exports	381.8	258.0	284.2	275.9	347.8

Imports were higher in value each month last year compared with a year ago; British exports made a poor showing in the first six months, but subsequently improved. Totals in the different categories are shown below:—

(£000,000)								
	1929		1934		1935		1936	
	Retained Imports	British Ex. ports	Retained Imports	British Ex-ports	Retained Imports	British Ex-ports	Retained imports	British Ex-ports
Food, drink and tobacco	509.5	55.7	334.0	30.4	343.4	31.6	371.0	35.6
Raw materials and articles mainly unmanufactured	285.3	78.9	181.8	48.2	182.9	52.8	215.2	51.3
Articles wholly or mainly manufactured	305.5	573.8	160.7	304.8	171.6	328.8	197.5	340.9

As compared with 1935, the largest increase in imports was in raw materials. Undressed hides and skins rose by 33 per cent., wool by 24 per cent., and cotton and wood and timber by 23 per cent. In the manufactures group, machinery imports increased by 36 per cent. and non-ferrous metals by 18 per cent. The most noticeable increases in the food group were grain and flour (23 per cent.), dairy produce (15 per cent.).

In considering value figures, however, price movements must not be overlooked. According to the Board of Trade index, the volume of retained imports rose from 97.9 (1930 = 100) in 1935 to 105.3, and average values from 74.8 to 78.3. Only in the food and drink category did the rise in average values counteract the increased value of imports. As regards British exports, the volume index was 93.1 against 91.3 in 1935, and average values, 82.9 and 81.7 respectively. There was an absolute increase in trade in all categories.

The volume of exports of certain important commodities is shown in the following table:—

BRITISH EXPORTS

(000's omitted)

	1929	1934	1935	1936
Coal, Iron and Steel Products				
Coal	60,267	39,680	38,714	34,533
Railway materials	610	190	161	
Total iron and steel manufactures	4,380	2,251	2,312	2,205
Machinery	562	335	384	380
Locomotives (complete and parts)	40*	11	16	18
Motor vehicles and chassis..number	42	61	72	89
Textile Goods				
Cotton yarns	166,638	130,428	141,675	150,935
Cotton piece goods	3,672	1,993	1,949	1,917
Wool tops	32,737	41,746	55,930	52,133
Woolen and worsted yarns	46,696	42,904	40,816	37,155
Woolen and worsted tissues sq. yds.	155,467	102,202	109,685	117,920
Linen piece goods	71,540	77,597	77,163	88,756

* Complete only.

Three-quarters of the decline in coal exports was due to the almost complete cessation of shipments to Italy following the imposition of "sanctions." Owing to intensified home demand, exports of chemicals, non-ferrous metals and manufactures declined, while those of iron and steel, implements and tools, electrical equipment and machinery, showed only a small increase. There was an increased demand from abroad for automobiles, cotton, wool and other textile manufactures. In 1936, our trade with the Empire attained record dimensions.

INDUSTRIAL PROFITS

In 1936, the third complete year of Britain's economic recovery, the 2,186 industrial companies whose reports during the year were included in our quarterly analyses of profits showed a rise in total profits (after debenture interest, etc.) of £27.0 millions, or 12.7 per cent., over the

1935 figure for the same concerns. The total was £239 millions, compared with £212 millions in 1935. A year ago, 2,116 concerns showed a rise in profits in 1935 from the 1934 figure of £28.0 millions, or 15.9 per cent., to £203 millions.

NET PROFITS (AFTER PAYMENT OF DEBENTURE INTEREST, ETC.)

Quarter	No. of Companies	Reports published in		Increase (+)	
		1935	1936		
I	569	£66,839,644	£75,731,976	+ 8,892,332	+ 13.6
II	739	83,404,187	92,280,660	+ 8,876,473	+ 10.6
III	382	25,359,334	28,974,570	+ 3,615,236	+ 14.3
IV	496	36,565,347	42,134,767	+ 5,569,420	+ 15.2
Total, 1936	2,186	212,168,512	239,121,973	+ 26,953,461	+ 12.7

As in 1935, the total quarterly percentage increases in 1936 in each batch of companies' profits were smaller than the year before. Thus, the rate of increase was slowing down; though, except in the second and most important quarter, the absolute amounts of the increases in profits were larger than in 1935 or 1934. The article on page 106 of *The Economist* of January 16th, analysing the 1936 figures, shows that companies concerned with tea, oil, steel and coal, motors and aircraft, electrical equipment and power, newspapers and printing, finance and estate, and warehousing and trading recorded increases in profits in 1936 over 1935 above the average of 14.8 per cent. Those concerned with building, textiles, rubber, retail trade, hotels, brewing, trusts, tobacco, water supply and food showed less than average increases; and those engaged in shipping and gas supply showed falling profits. Reference should be made to this article and the detailed tables on pages 146-47 of that issue.

The next table shows the ratios of net profits to the sum of preference and ordinary capital, and the average dividends paid on preference and ordinary shares since 1909, excluding the war years:

PROFITS AND DIVIDENDS

	Ratio of Profits to Pref. and Ord. Capital	Average Dividend on Preference Capital	Average Dividend on Ordinary Capital
	%	%	%
1909	7.4	4.3	6.3
1910	8.2	4.5	7.0
1911	9.9	4.9	8.5
1912	10.2	5.2	8.5
1913	11.7	5.1	10.2
1914	15.2	5.0	12.6
1915	10.3	5.2	10.2
1916	7.0	5.2	8.4
1917	9.8	5.3	9.3
1918	10.3	5.4	9.8
1919	10.9	5.5	10.3
1920	11.3	5.4	11.1
1921	10.5	5.3	10.8
1922	11.1	5.4	10.6
1923	10.5	5.5	10.5
1924	9.8	5.7	9.5
1925	7.2	5.2	7.2
1926	5.8	4.2	5.9
1927	6.1	4.6	5.8
1928	7.2	4.8	6.5
1929	8.5	5.2	7.4
1930	9.7	5.2	8.2

The total put to reserves in 1936 was over £62.0 millions, nearly four times that of 1933. It was 26.0 per cent. of total profits, against 22.4 per cent. in 1935, and 2.5 per cent. of total preference and ordinary capital, against 1.9 per cent. in 1935.

Appended overleaf is the table showing the movements of our new chain-index of the profits reported each year from 1924 (basis 1929 = 100). The compilation of this new Index was described in the article of January 18, 1936 (page 118).

Reports Published in Calendar Year	No. of Companies	Total Profits*		"Chain" Index (1928 = 100)
		Current Year's Reports	Same Com- panies, Pre- ceding Year	
		£ Mn.	£ Mn.	
1924	1,490	155.0	142.6	83.1
1925	1,572	174.9	164.5	90.1
1926	1,669	169.4	174.7	96.1
1927	1,709	179.6	167.6	93.3
1928	1,770	194.7	194.6	100.0
1929	1,932	197.5	198.8	99.4
1930	2,009	160.1	206.6	77.1
1931	1,998	143.3	175.0	63.1
1932	1,945	141.4	140.8	63.4
1933	1,975	168.8	144.8	73.9
1934	2,116	203.2	175.3	85.7
1935	2,186	239.1	212.2	96.5

* After debenture interest.

It will be remarked how fast and how far the earning capacity of British industrial companies has progressed in the last three years.

COMMODITY PRICES

COMMODITY prices in 1936 made a striking advance, and were higher in December than at any time since 1930. This advance was due to the general recovery of world trade, stimulated by the devaluation in September of the currencies of the gold bloc. The rise took place entirely in the second half of the year; until the end of June prices tended to sag; between July and September there was a slight advance; after September the rise was spectacular. Until last year the revival of demand operated largely upon accumulated stocks and unused capacity; but by last autumn stocks were practically eliminated, and capacity was almost fully employed. Between 1932 and 1935 stocks fell by 17 per cent.; in only nine months of 1936 they fell by a further 12 per cent. Prices bounded upwards.

The movement of our indices has been as follows:—

1927 = 100						
Date	Cereals and Meat	Other Foods	Tex- tiles	Min- erals	Miscel- laneous	Com- plete Index
Average, 1928	103.6	93.8	105.1	92.1	95.8	98.1
" 1929	96.9	85.8	92.2	95.6	90.5	92.4
" 1930	81.0	77.2	64.4	83.6	81.6	77.6
" 1931	68.7	65.3	50.0	73.1	68.4	64.9
" 1932	68.2	62.5	49.2	72.9	61.9	62.6

" 1934	69.1	59.0	54.1	77.0	68.9	65.6
" 1935	69.9	60.6	57.0	79.8	74.8	68.6
" 1936	76.9	61.1	61.8	84.6	78.2	72.8
End Dec. 1930	70.0	71.0	51.4	78.0	75.2	68.7
" Dec. 1931	69.0	65.7	52.8	76.7	66.2	65.8
" Dec. 1932	63.1	60.0	48.6	73.9	61.9	61.1
" Dec. 1933	64.5	56.7	53.3	77.4	68.1	63.9
" Dec. 1934	69.9	60.2	54.5	75.8	69.4	66.1
" Dec. 1935	71.9	61.7	61.7	82.3	78.2	71.4
" Jan. 1936	72.7	59.5	61.4	82.9	78.7	71.3
" Feb. "	71.6	59.8	60.2	83.5	78.5	70.9
" Mar. "	72.3	59.8	60.4	83.3	78.4	71.1
" Apr. "	73.3	59.0	59.6	83.1	78.1	70.9
" May "	72.0	58.7	58.4	81.7	76.9	69.8
" June "	70.2	58.9	59.4	80.7	77.9	69.7
" July "	76.9	61.2	61.7	82.4	77.7	72.3
" Aug. "	79.7	61.5	61.1	82.6	77.5	72.8
" Sept. "	82.0	61.6	61.7	84.2	77.0	73.6
" Oct. "	82.0	62.5	63.6	86.0	77.8	74.6
" Nov. "	83.2	65.0	66.6	89.7	78.8	76.9
" Dec. "	86.4	65.6	67.5	95.4	81.2	79.3

The complete index, it will be seen, rose nearly eight points during the year, compared with a rise of five points in 1935. Among the component indices there was a general rise; but the advances of four points in "other foods," six points in textiles and three points in "miscellaneous" were slight compared with the sharp rise of fourteen points in cereals and meat and thirteen in minerals. There were wide divergencies in the movements of individual prices; some, like wheat, cocoa, lead, spelter, rubber and wool, bounded upward; others, like sugar, flax and jute, finished the year with a slight

net loss. There were divergences in the supply position; although most stocks have been reduced to reasonable proportions, stocks of coffee are still large; and, on the other hand, supplies of tin are dangerously low.

The following table shows the movement of our index number converted into a percentage of the average level during the last pre-war year:—

1913 = 100						
Date	Cereals and Meat	Other Foods	Tex- tiles	Min- erals	Miscel- laneous	Com- plete Index
Average, 1928	115.0	119.1	161.7	111.9	119.3	135.1
" 1929	135.6	136.8	111.9	116.2	112.7	127.2
" 1930	113.1	122.9	99.1	101.6	101.5	106.8
" 1931	96.1	104.1	77.0	88.9	85.3	89.3
" 1932	95.1	99.6	75.7	88.6	77.1	86.1
" 1933	90.1	93.5	77.6	93.9	81.7	86.8
" 1934	96.7	94.0	83.2	93.6	85.7	90.3
" 1935	97.8	96.5	87.8	97.1	93.1	94.3
" 1936	107.5	97.3	95.2	102.9	97.4	100.1
End June, 1932	96.4	91.8	67.3	82.0	72.7	80.9
" Dec. "	88.3	95.6	74.8	89.9	77.1	84.1
" June 1933	90.5	92.4	83.1	98.5	84.9	89.5
" Dec. "	90.2	90.2	82.1	94.1	84.8	87.9
" June 1934	95.7	93.4	81.5	93.6	86.1	89.7
" Dec. "	97.9	95.8	84.0	92.2	86.4	90.9
" June 1935	95.8	94.2	85.4	95.7	93.4	92.9
" Dec. "	100.6	98.3	95.0	100.1	97.3	98.2
" June 1936	98.2	93.8	91.4	98.2	96.9	95.9
" Dec. "	120.9	104.5	103.9	116.0	101.1	109.1

In all cases the indices have definitely exceeded the 1913 levels; cereals, meat and minerals have strikingly surpassed that figure; and the complete index at the end of December was over nine points higher.

The next table shows the annual movement occurring in each group of the index since 1929:—

YEARLY AVERAGE (1924 = 100)										
	1929	1930	1931	1932	1933	1934	1935	1936		
Cereals and meat...	84.8	70.9	60.1	59.7	56.3	60.4	61.2	67.3		
Other foods.....	80.5	72.3	61.2	58.6	55.0	55.3	56.8	57.3		
Textiles	67.4	47.1	36.6	35.9	37.2	39.5	41.7	45.2		
Minerals	80.0	70.0	61.2	61.0	64.7	64.3	66.8	70.9		
Miscellaneous	85.7	77.3	64.8	58.6	62.1	65.2	70.8	74.0		
Complete index	79.9	67.0	56.1	54.0	54.5	56.7	59.2	62.9		

As in 1935, textiles are still the furthest from recovering the price level of 1929. Minerals and "miscellaneous" have come nearest to that figure.

The next table shows the quarterly movements of our index of the sterling wholesale prices of certain primary products, together with the quarterly movements of our index of dollar wholesale prices of the same products (i.e. gold prices up to March, 1933, and thereafter "dollar"):

(September 18, 1931 = 100)			
	1931	Sterling Prices (Primary Products)	Dollar Prices
December 30	1932	117.1	94.4
December 28	1933	109.3	76.9
December 27	1934	113.9	119.8
March 28	1935	121.4	127.5
June 20	1936	123.4	133.9
September 26	1937	125.7	149.0
January 2	1938	123.7	154.5
March 27	1939	123.3	147.6
June 19	1940	125.6	144.2
September 25	1941	131.3	148.6
January 1	1942	131.2	143.3
March 25	1943	133.9	144.3
June 24	1944	133.2	147.0
September 30	1945	144.5	159.6
December 30	1946	163.9	187.3

Dollar prices forged ahead of sterling prices in 1934, and in 1935 sterling prices recovered ground. Last year sterling prices fell further behind, particularly in the last quarter of the year; the lead of dollar prices remains very substantial.

MONEY AND BANKING

THE MONEY MARKET

CONDITIONS were easy in the money market for the greater part of 1936. The Government continued its policy of cheap money, but this proved to be no longer a simple process, and on several occasions it was necessary to intervene actively to prevent interest rates from hardening appreciably. This resulted not only from the general increase of activity at home, but even more from the influx of foreign money from abroad following the various currency crises of the year. The greater part of this flight capital came from France, and was either lodged in deposits at the joint stock banks or was used to buy British currency for hoarding purposes. The movement began to attain large proportions at the end of April and the beginning of May, stimulated by the French currency crisis that reached its culmination at that time. Simultaneously, the Bank of England began its offsetting purchases of gold, which were to continue throughout the summer. The following table shows the extent of the purchases, which by the time they ceased at the beginning of October, totalled £46 millions.

	April 29	June 10	Aug. 5	Oct. 7
Bank of England:—	£ mill.	£ mill.	£ mill.	£ mill.
Gold	202.7	208.5	243.0	248.7
Note circulation	416.9	433.0	254.4	450.8
Reserve	46.6	36.4	49.6	58.9
Bankers' deposits ...	104.7	86.5	92.7	84.2

An unfortunate result of the French hoarding of notes was that the Exchange Equalisation Account, by its normal procedure of turning out Treasury bills on to the market to make room for its gold acquisitions, thereby increased the market's borrowing at the clearing banks, with the ultimate result that the "proportion" of the Bank of England and the cash ratios of the joint-stock banks contracted; this is precisely the opposite effect to that of purchases of gold under the old gold standard. To prevent this anomaly the Bank of England adopted the principle that for every £1 of currency hoarded the Bank, and not the Exchange Account, should buy £1 of gold. When the foreign money went into the deposits of the joint-stock banks, the Bank should buy £1 of gold for every £10 so deposited, leaving the remaining £9 to the Exchange Account. By this process, which continued until the autumn, the Bank prevented any stringency from developing in the money market. The only difficulty that might result from this policy would be that if the French flight funds returned wholesale to France the Bank would have to sell back the gold to the Exchange Account in order to give the necessary support to sterling. This has not yet happened and is unlikely to, and in any case French funds will most probably return slowly and over a long period.

From the late autumn onwards, conditions were more normal, though on several occasions stringency threatened to develop, usually owing to vagaries of the calendar by which payments for Treasury bills had to be made early in the week, whereas maturities did not fall due until the latter half. Furthermore, there was a tendency for funds to be segregated in public deposits, largely owing to heavy sales of Funding Loan by the Departments, which were generally thought to indicate that the decks were being cleared for a new loan. On November 17th, in fact, the Bank of England announced a new Funding Loan of £100 millions at 2½ per cent., redeemable 1952-1957, which was not of immediate interest to the market, except in so far as it might affect the tender issue, for subsequent sales of such issues through the "tap" are more important than their actual issue. Money conditions still continued to be tight, but the repayment of the French loan, the last instalment of which fell due on November 20th, helped to ease the strain. The constitutional crisis passed without having any great effect, and in fact all that was noticeable was a slight strengthening of their resources

by the clearing banks in preparation for the emergency that never came.

The year ended, however, with an important step by the Bank of England. On December 16th, the Bank announced a gold purchase of £65 millions, valued at 84s. an ounce, and at the same time Mr Chamberlain announced that this gold would be used to reduce the fiduciary issue by £60 millions, the extra £5 millions going to ease conditions in the money market. It had long been rumoured that the Exchange Equalisation Account was getting over-full of gold, and this method of using the fiduciary issue as an adjunct was highly practical. It is a new development in the Governmental technique of insulating the monetary system from external shocks so as to be the better able to pursue its policy of cheap money unhampered by separate international movements.

BANK CLEARINGS

THE 1936 returns of the London and provincial bankers' clearing houses illustrate the progress of trade revival and the more rapid circulation of money:—

	1934	1935 (£ million)	1936
Town clearings	30,740	32,444	35,039
Metropolitan clearings ...	1,760	1,887	2,040
Country clearings	2,984	3,229	3,538
Total, London clearings...	35,484	37,560	40,617

Provincial bank clearings for 1936 totalled £1,394 millions, against £1,283 millions in 1935 and £1,295 millions in 1934. Part of the increase in town and metropolitan clearings is due to the admission of the District Bank to the London Clearing House a year ago. This does not affect the country and provincial clearings. Comparing 1936 with 1935, quarter by quarter, the largest increase is in the fourth quarter, especially in Birmingham, Leeds, Liverpool, Manchester, Newcastle-on-Tyne, and Sheffield. The rearmament programme, coupled with the revival in shipbuilding and the cotton trade, is the probable explanation of this, and in the case of Liverpool the upward trend of prices for wheat and other primary products may have contributed.

THE FOREIGN EXCHANGES

THE year which has just closed was as momentous in the history of the foreign exchanges as 1931, to which it was in fact the sequel. During the five years following the abandonment of the gold standard, those currencies which had not followed suit were subjected to the growing pressure of over-valuation. This led to the defection from the gold bloc of the dollar in 1933, the Czech crown in 1934 and of the belga in 1935. The devaluation of the remaining currencies was only a matter of time, for even the most drastic deflationary measures failed to bring prices down to world levels. Interest thus inevitably centred on the franc throughout the year. The various adversities to which it was subject were the same as in the other gold bloc countries, only more intense. Up to devaluation the history of the franc was the history of the gold bloc. Subsequently the franc pursued a downward course of its own, the end of which was not yet in sight at the end of the year.

During January the position of the franc seemed strong, and in the first fortnight the Bank rate was reduced from 6 to 5 and from 5 to 4 per cent. By February, however, it was clear that the position in reality was inherently weak and rumours of devaluation increased, when the French Treasury applied for and obtained a loan of £40 millions from a number of London banks, at a rate of 3 per cent. A further crisis was precipitated when Hitler re-occupied the Rhineland in March. Soon after the borrowing powers of the Government were raised by Frs. 6,265 millions, but this

only served to accelerate the flight of capital, and it was increasingly clear that the franc was so heavily over-valued that an indefinite maintenance of the rate at its existing level of Frs. 75 to the pound was impossible. The Bank of France took the traditional step of raising the Bank rate from 3½ to 5 per cent. During April the situation continued to grow worse, but it was felt that nothing could happen until after the election. The results of which were due at the beginning of May. The success of the Front Populaire with its extensive programme of social legislation caused another flight of capital, and during the interim period, when M. Sarraut continued in power until M. Blum took over on June 1st, the rate was only held by reason of M. Blum's assertions that he was opposed to devaluation. The outbreak of strikes in June was an incentive for another rush of funds abroad, but it was clear that M. Blum was unable to set his hand to devaluation without playing into the hands of his political opponents and sacrificing the support of the Left Wing of the Front Populaire. Accordingly, the crisis passed, and during June and July the improvement was such as to allow the reduction of the Bank rate to 3 per cent., and the Finance Minister, M. Auriol, was able to issue his "baby" bonds of small denomination. By the beginning of September, however, the franc had become even more over-valued, largely as a result of the Matignon wage agreements, and a new crisis developed which was to be the last. In the third week of September events began to move fast. At the beginning of the week the report of the League of Nations Economic Committee was issued containing a strong hint that "alignment" of the franc was essential. On Wednesday the subscription lists for the "baby" bonds were closed after only Frs. 4,000 millions had been subscribed, and on Thursday the Bank rate was raised from 3 to 5 per cent. On Saturday, September 26th, the decision to devalue was taken, and by the evening the Swiss franc had followed suit and the Dutch guilder was riding free from gold. The lira and the Czech crown were devalued the following week, and those currencies which were previously pegged to the franc attached themselves to sterling.

	Parity	Dec. 31, 1935	March 31, 1936	June 30, 1936	Sept. 30, 1936	Dec. 31, 1936

* \$8.23½ since devaluation of dollar on February 1, 1934. † Kr. 164½ prior to devaluation on February 17, 1934.

Devaluation of the franc was fixed between limits of 26 and 35.2 per cent., of the Swiss franc between 26 and 34.5 per cent., of the lira between 50 and 60 per cent.; in practice, 59.06 per cent., as the lira has gone back to its old parity with the dollar, and that is the extent of the American devaluation. The guilder is riding free, but the depreciation amounts only to about 12 per cent. The belga, which was devalued by 28 per cent. in 1935, maintained its *status quo*, and the mark remains entrenched behind Dr Schacht's fantastic structure of exchange restrictions.

The subsequent history of the devalued currencies has varied. Switzerland and Holland have benefited from a reflux of funds, but M. Blum's policy of penalising devaluation profits has resulted in a continued outflow of capital, and the year closed with the franc in a position little better than that preceding devaluation.

The other movement during the year has been the growing strength of the currencies of the primary producing countries, consequent on higher prices. In

Argentina this resulted in the lowering on December 10th of the official selling rate from 17 to 16 pesos. This halves the official profit, as the buying rate remained at 15 pesos. Apart from a few countries which are pursuing self-sufficiency, there has been a tendency during the latter part of the year towards a freeing of trade and exchange restrictions. The "gentlemen's agreement" between Great Britain, the United States and France that preceded the devaluation of the franc is an example of the spirit of co-operation which may help to improve world trade during 1937.

GOLD OUTPUT AND MOVEMENTS

SOUTH AFRICAN gold production in 1936 amounted to 11,339,000 fine ounces, which at the average market price for the year is equivalent to approximately £79.5 millions, compared with £75.0 millions in 1935. The output of Russia rose considerably, from 5,831,000 fine ounces in 1935 to 7,350,000 fine ounces last year.

The greater part of the gold output continues to find its way into the monetary gold stocks of central banks, but it is certain that during 1936 a very considerable quantity went into private hoards.

Movements of gold in and out of the country were very active, and on balance we gained considerably more gold than in 1935. The following table shows the actual movements:—

BRITISH GOLD IMPORTS AND EXPORTS

	Bullion		Specie		British Coin	
	1935	1936	1935	1936	1935	1936
	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ Mn.	£ Mn.
Imports	227.4	304.6	10.5	6.2	6.2	3.6
Exports	158.3	80.1	9.2	3.8	5.5	2.7
Import surplus	69.1	224.5	1.3	2.4	0.7	0.9

The next table gives imports and exports of bullion in greater detail for the past two years:—

	1935			1936		
	Imports from	Exports to	Net Exports (+) or Net Imports (—)	Imports from	Exports to	Net Exports (+) or Net Imports (—)
	£ millions			£ millions		
India	34.6	Nil	— 34.6	24.6	0.1	— 24.5
South Africa	70.8	Nil	— 70.8	84.7	Nil	— 84.7
Australia	7.5	Nil	— 7.5	5.3	Nil	— 5.3
Canada	0.7	Nil	— 0.7	0.5	Nil	— 0.5
Germany	0.4	1.4	+ 1.0	5.2	0.7	— 4.5
Holland	7.4	12.2	+ 4.8	2.6	6.7	+ 4.1
France	78.2	42.6	— 35.6	156.3	4.1	— 152.2
Belgium	0.3	2.8	+ 2.5	2.4	4.6	+ 2.2
Switzerland	10.9	2.7	— 8.2	2.9	3.8	+ 0.9
United States	0.2	83.0	+ 82.8	1.3	76.2	+ 74.9

Germany has re-appeared as a shipper of gold, but not to any great extent. The largest quantities of gold, as in previous years, come from South African mines, Indian hoards, and France. Again the heaviest efflux was to the United States.

The following table summarises the gold holdings of the central banks:—

GOLD HOLDINGS OF CENTRAL BANKS (In millions of dollars)

1936 (end of month)	Jan.	March	June	Sept.	Nov.
Bank of England	1,652	1,633	1,782	2,049	2,049
U.S. Reserve Banks and Treasury	10,182	10,184	10,608	10,845	11,184
Banque de France	4,324	4,348	3,580	3,322	3,184
Reichsbank	31	29	29	25	27
Netherlands Bank	455	486	404	456	388
National Bank of Belgium	600	586	638	631	630
Swiss National Bank	454	483	460	508	624
Bank of Italy	270*	...	...	...	...
Bank of Sweden	194	206	231	238	239
Bank of Norway	84	84	89	98	98

* Figure for December, 1935, the last issued.

The continued losses of the Banque de France, even after devaluation, contrast with the Swiss National Bank's recovery of its lost gold. The Bank of England's autumn purchases and the heavy gains of the United States are clearly shown.

NEW CAPITAL ISSUES

LAST year the London new capital market was active, but not consistently active. The total new money offered publicly to investors, which rose, according to *The Economist's* computation, from £169.1 millions in 1934 to £236.1 millions in 1935, made a further modest gain to £255.7 millions. That figure is two and a half times as large as the total for 1931, the worst year of depression, but it is little more than two-thirds that of 1928, the best pre-depression year. Detailed figures are given below:—

TOTAL BORROWING BY DIRECT PUBLIC OFFER

Calendar Years	Government	British			Empire	Foreign	Total Issues	Index 1928 = 100
		Home Corporations*	Others	Total Home				
1928	83.9	14.9	164.8	263.6	63.2	42.3	369.1	100
1929	65.4	8.3	124.3	198.0	61.0	26.2	285.2	77
1930	65.6	41.7	63.3	170.6	61.4	35.8	267.8	73
1931	10.7	8.0	35.8	54.5	38.5	9.1	102.1	28
1932	102.7	24.5	163.1	255.7	25.5	0.3	188.9	51
1933	150.8	28.8	31.6	210.2	29.2	5.4	244.8	66
1934	44.1	36.1	57.5	137.7	29.9	1.5	189.1	51
1935	88.0	51.1	81.6	220.7	15.2	0.2	236.1	64
1936	60.2	79.5	90.6	230.3	24.7	0.7	255.7	69

* Including county and public board loans.

Foreign issues by prospectus (controlled by the Treasury through an Advisory Committee) remained almost non-existent; Empire issues were the lowest for any year, save 1935, shown in the table; and British Government borrowings (involving the subscription of new money or the funding of the floating debt, as distinct from pure conversion operations) were on a moderate scale. That total home borrowings (representing 90 per cent. of all public issues) were higher than in any year since 1928, was due partly to a further rise in the total raised by home companies and partly to further revival in the market for new issues by municipalities and public boards. For the year 1935 and 1936 we have calculated, for the first time, the value of issues made by Stock Exchange placing, as well as by public prospectuses. Taking the two together the results are shown:—

TOTAL BORROWING, INCLUDING STOCK EXCHANGE "PERMISSION TO DEAL" (Million £)

Calendar Years	Government	British			Empire	Foreign	Total Issues
		Home Corporations*	Others	Total Home			
1935	88.0	54.9	183.9	326.8	29.3	1.2	357.3
1936	60.2	82.1	306.1	448.4	33.8	11.7	493.9

* Including county and public board loans.

The process of converting existing capital obligations to lower rates of interest continued, but at a decreasing rate:—

CONVERSION ISSUES

	1932	1933	1934	1935	1936
British Government	2,478.9	50.7	105.0	204.0	37.2
Other Conversions	31.8	172.4	136.9	108.2	109.7
Total	2,510.7	223.1	241.9	312.2	146.9

THE STOCK EXCHANGE

THE past year was the most active and prosperous for the Stock Exchange since recovery began. The volume of business at times extended the physical capacity of members of the "House." Industrial shares showed a rise of 16.5 per cent. according to *The Financial News* index, and prices advanced almost without interruption from May to November. The highest prices for gilt-edged stocks were recorded, however, very early in the year, and a sustained period of market heaviness resulted in a fall of between 2 and 3 per cent. in gilt-edged levels.

The re-armament loan which was widely canvassed in the spring failed to arrive, but in November a 2½ per cent. Funding issue was carried out, partly to repay 2½ per cent. Treasury bonds. But the prospect of enormous re-armament expenditure was responsible for the high level of activity in industrial shares during the first part of the year. General engineering shares, augmented by a large number of new issues with a re-armament equity, were carried to new "highs," although constructional steel shares showed a more subdued advance.

The second phase of the year's movement was caused by the rapid rise in commodity prices. This brought advances over a wider front. Argentine rail issues, for example, enjoyed a boom in the last quarter of the year. Defaulted bonds of primary producing states—particularly South Americans—were eagerly bought. Among base metal shares, confident buying accompanied some sensational rises in the metal markets, with Rhodesian coppers and silver-lead-zinc issues prominent.

The following table, based on the Actuaries' Investment Index (December 31, 1928 = 100), shows the movements of fixed-interest and equity securities since 1932:—

End of	Fixed Interest Securities			Ordinary Shares		
	2½% Consols.	Miscell. Indus. Debts.	Miscell. Indus. Pref.	Home Rails	Iron and Steel	Miscell.
December, 1932	131.6	113.1	97.8	68.2	43.2	47.9
" 1933	131.6	181.7	111.6	82.9	48.0	60.3
" 1934	165.3	125.6	120.7	75.0	52.1	65.1
" 1935	154.5	124.8	120.6	64.9	67.8	75.2
January, 1936	152.2	125.4	121.3	64.4	73.1	78.1
February	151.4	125.5	121.3	70.4	71.4	75.5
March	151.0	125.5	120.4	72.9	70.7	75.8
April	151.7	125.7	121.1	68.8	67.7	74.4
May	152.7	125.7	121.6	66.4	71.7	75.5
June	150.8	125.5	122.4	69.5	79.4	77.3
July	150.6	125.3	122.9	77.1	79.7	79.0
August	150.9	125.6	122.8	81.5	80.1	79.6
September	151.0	125.6	122.8	86.3	84.1	81.3
October	150.1	126.1	123.0	87.1	83.3	81.6
November	150.9	125.6	122.5	86.6	83.0	81.3
December	150.9	125.6	122.5	86.6	83.0	81.3

The majority of stable industrial shares, of the quasi-fixed interest class, made no sensational fresh advances. In the industrial markets, indeed, business was often more selective than in previous recovery years, on the argument that rising costs of raw materials and wages might become increasingly prominent. The increase in coal prices, to give one instance, affected a wide range of industry, and particularly concerned the railway stockholder. The rather modest appreciation of home rails was led by the junior prior charges. Towards the end of the year it became apparent that home rails were distinctly vulnerable to rising material and wage costs, and despite the settlement of excess rates payments for the past quinquennium, the market was unable to stage a fresh advance.

An opening speculative boom in aircraft shares was

broken by the Government's declared policy of insisting on reasonable profits and by the failure of many concerns to show a satisfactory working record for their first year of operation. Most electrical equipment shares made further progress, accompanied by a number of successful new issues. The motor share investor will remember 1936 for the Morris "placing" and the excellent Standard results.

High record levels were recorded by such leading shares as Imperial Tobacco, Turner and Newall, and Woolworth. But accompanying these movements among the market leaders, a demand for "late recovery shares" developed, in which cotton textile shares and shipping issues were in chief demand. Cement shares again progressed, though less rapidly towards the end of the year, when a perceptible decline in residential house building activity became apparent. Brick shares remained dull for this season.

Improving conditions in the oil industry brought a substantial improvement in the leading shares, while Mexican Eagle, thanks to the settlement of differences with the Government, appreciated in spectacular style. Kaffir shares were a much steadier market, owing to the stable price of gold. But the developing companies on the Far West Rand, such as West Witwatersrand and Western Reefs, were the focus of active professional and public demand.

LABOUR CONDITIONS

THE upswing of the trade cycle carried employment to a record level in 1936. At the same time there was a further decline in unemployment, the percentage for Great Britain being 13.0, against 15.3 in 1935; for the United Kingdom as a whole the unemployment percentage was 13.2, against 15.5 in the preceding twelve months. The following table shows monthly figures of employment and unemployment in Great Britain:—

EMPLOYMENT IN 1935 AND 1936

	Insured Employed (a)		Insured Unemployed (b)		Insured Unemployed (c)	
	1935	1936	1935	1936	1935	1936
January.....	10,087	10,391	2,224	2,063	17.5	16.1
February.....	10,097	10,525	2,200	1,949	17.3	15.3
March.....	10,219	10,689	2,072	1,814	16.3	14.2
April.....	10,341	10,785	1,962	1,745	15.5	13.7
May.....	10,539	10,918	1,956	1,635	15.4	12.8
June.....	10,391	10,933	1,936	1,645	15.2	12.6
July.....	10,414	11,006	1,919	1,595	15.0	12.2
August.....	10,461	11,072	1,874	1,548	14.7	11.9

December.....	10,629	11,132	1,796	1,552	13.9	11.9
Average.....	10,377	10,896	1,958	1,684	15.3	13.0

(a) Estimate of number of insured persons aged 16-64 in employment in Great Britain, with allowance of 3½ per cent. absence for sickness, etc.

(b) Insured persons aged 16-64 unemployed in Great Britain.

(c) Percentage unemployed among insured workers aged 16-64 in Great Britain.

The decline in unemployment, though general, was not uniform throughout the country; the largest decrease occurred in the North-Eastern division, followed by Scotland, the North-Western and the South-Western divisions. Nevertheless, there is still a marked disparity between the level of unemployment in the Southern and Midland areas, on the one hand, and in the remainder of the country on the other. Employment in the metal

trades scored further improvement in 1936, particularly in the iron and steel and engineering industries; in the tinplate and steel sheet industries, too, unemployment was less pronounced. Shipbuilding and ship repairing were also more active, except in Northern Ireland. There was a welcome improvement in the cotton industry, whilst in wool textiles the increased activity of the previous year was fully maintained. In building, public works contracting, the distributive trades and other highly seasonal industries employment improved between January and May, but remained fairly stationary for the rest of the year. Conditions in the coal mining industry continued unsatisfactory; despite a fall in unemployment, the average number of wage-earners on the colliery books showed a further decline.

The improvement in employment is also reflected in a renewed decline in the numbers in receipt of poor relief.

A sharp rise occurred in the average level of wage rates, the increase for all industries, including agriculture, being approximately 3 per cent., against 1½ per cent. in the previous year. In industries for which detailed information is available, some 4,012,300 workers—the highest total since 1920—benefited from an increase in pay, whilst only 425 suffered a reduction. Wage increases were fairly generally distributed, the largest being in coal mining, transport, building, public works contracting, textiles and engineering. The table below gives details of wages, cost of living and trade disputes:—

WAGES, PRICES AND TRADE DISPUTES, 1935 AND 1936

	Wages (a)		Cost of Living (b)		Trade Disputes (c)	
	1935	1936	1935	1936	1935	1936
January.....	94½	96	143	147	000's	000's
February.....	94½	97	142	147	102	114
March.....	94½	97	141	146	75	212
April.....	94½	97	139	144	177	195
May.....	94½	97	139	144	204	141
June.....	94½	97½	140	144	98	168
July.....	95½	98	143	146	78	191
August.....	95½	98	143	146	114	83
September.....	95½	98	143	147	137	76
October.....	95½	98	145	148	129	166
November.....	95½	98	147	151	470	148
December.....	95½	98	147	151	210	156
Average.....	95	97½	143	147	141	195

(a) Index (1924 = 100) compiled by Prof. Bowley, eliminating seasonal fluctuation.
(b) Ministry of Labour Index for 1st of month (July 1, 1914 = 100).
(c) Number of working days lost.

The cost of living rose during 1936, but the increase was confined almost exclusively to food and clothing. The number of disputes involving stoppages of work rose from 553 in 1935 to 808 last year, the latter being the highest total recorded for any year since 1920. Nevertheless, since the majority of disputes were speedily settled, the actual loss of time was smaller than in 1935.

Two important legislative changes affecting labour conditions were made last year. Following the Report of the Unemployment Insurance Statutory Committee, the unemployment insurance contributions for men and women over 18 years of age were reduced by 1d. per week for employer, employee and the State, as from July 6th. Under the Unemployment Insurance (Agriculture) Act, 1936, agricultural workers became insurable for the first time. Contributions were payable from May 4th, but agricultural workers were not eligible for benefit until November 5th. During November and December the numbers on the registers of the unemployment exchanges were swollen by this legislation.

II. THE WORLD IN 1936

WESTERN EUROPE

FRANCE

THE abandonment of the deflation policy in 1935 was followed in 1936 by the abandonment of the gold franc, when, after five years of hard struggle, everyone was convinced that the Budget would not be balanced by a recovery of business. Last year can be divided into three periods: (1) the period of "wait and see" before the Election, which ended with the victory of the Popular Front in May; (2) the attempt to revive business by increasing the purchasing power of the masses, which ended in September; (3) a period when the rise of internal prices brought them out of line with world prices, and provoked at the end of September the devaluation of the franc, at the end of September the Monetary Agreement. This combined with the Tripartite Monetary Agreement. This started a dishoarding of capital and a revival of business.

Monetary Policy.—The new value of the franc has been fixed between the limits of 49 and 43 milligrams of gold 0.900 fine (compared with the previous rate of 65.5 milligrams). A 10,000 million francs Exchange Stabilisation Fund has been set up, which has maintained the franc at a position midway between its two extreme gold points; that is, at about 105.05 to the pound and 21.15 to the dollar. The gold stock of the Bank of France was revalued at 57,000 millions; but 7,000 millions were bought from the Equalisation Fund, and 4,000 millions were used to repay the English loan; thus, the stock was 60,000 millions at the end of 1936, a decline of 16,000 million Poincaré francs, compared with the end of 1935.

Finance.—The 1936 Budget was balanced at 40,000 millions of income and expenditure. But there was an extraordinary military Budget of 6,500 millions. Final figures showed a deficit of about 10,000 millions, including expenditure on social relief and pensions. The total sums to be borrowed by the Treasury in 1937 will reach 25,000 millions at least, to which must be added 7,000 millions for Treasury maturities. This makes a total of more than 30,000 millions, and this does not take into account the deficit on the railways (7,000 millions) and on the P.T.T. and other public communities. Total Treasury issues in 1936 reached nearly 30,000 millions, excluding railway loans, which totalled about 5,000 millions. As a result of these borrowings, the Public Debt reached at the end of August, 1936, the new record of 355,000 millions, against 263,000 millions in 1930:

	(In million francs)	
	December 12, 1935	September 30, 1936
"Perpetual" debt.....	50,834	50,485
Redeemable debt.....	184,432	191,413
Short term debt.....	30,560	32,543
Floating debt.....	56,857	69,580
Agricultural credit debt ...	2,451	2,265
P.T.T. debt.....	10,008	10,556
Total.....	335,142	356,842

At the end of 1936, the total debt was about 370,000 millions, the municipal debt 40,000 millions and the railway debt 110,000 millions.

Banking and the Money Market.—Political and Treasury difficulties combined with the psychological effects of recovery abroad and the fear of war to bring about a considerable flight of capital. Consequently, the rediscount rate of the Bank was changed six times. Devaluation was followed by a dishoarding of capital, which is shown in the increase of the deposits of the big banks.

	(000,000,000 omitted)		
	Nov. 30, 1935	Aug. 31, 1936	Nov. 30, 1936
Crédit Lyonnais.....	10.6	9.4	10.6
Société Générale.....	9.1	8.0	8.8
Comptoir Nat. d'Escompte	6.9	6.1	7.0
Crédit Ind. et Commere.	1.3	1.2	1.5
	27.9	24.7	27.9

As a result of this dishoarding, the discount rate for trade bills fell from 5 per cent. (September), to 2½ per cent. (December); and the rediscount rate of the Bank was successively reduced from 5 per cent. in September to 3, 2½ and 2 per cent. (October 15, 1936). But the stagnation of

the Renties, which was due to social disturbances and the prospect of large Treasury issues, prevented a similar decline in long term money rates. The average yield of debentures declined from 5.99 (September) to 5.61; and the yield of the 3 per cent. Renties from 3.93 to 3.60 per cent. Private issues were, nevertheless, more active at the end of the year.

Transport.—The number of loaded cars on the railway system was 14,861,064 during the year 1936, against 14,648,009 in 1935; receipts increased to 9,946 millions from 9,839 millions in 1935 and 10,850 millions in 1934. The deficit on the railways is estimated at 4,888 millions in 1936.

Agriculture.—The wheat market has greatly improved; this is partly due to a smaller crop of 66.5 million quintals in 1936, against 77 millions in 1935, and an average of 83 millions in the period 1930-35. The price of wheat was fixed by the Wheat Office at 140 francs, compared with a free price of about 85 francs in 1935. Prices have also risen as a consequence of protective measures, and the deficiency of the last wine crop. Prices of live stock and secondary cereals also rose.

Production and Prices.—All prices have risen considerably as a consequence of the devaluation, the social laws and the rise of external prices:—

	End of 1935	End of 1936
	(1914 = 100)	(1914 = 100)
Wholesale prices.....	357	496
National products.....	387	522
Imported products.....	303	448
Foodstuffs.....	357	511
Retail prices.....	435	534
Cost of living (4th quarter).....	478	540
	Nov. 1935	Nov. 1936
	(1913 = 100)	(1913 = 100)
Industrial production.....	95	98
Building.....	66	56
Textile.....	70	74

Unemployment..... 439,782 410,785

The output of the coal mines declined to 46,146,600 tons, from 47,106,800 in 1935. The production of pig iron during the first eleven months of the year was 5,679,000 tons, against 5,295,000 in the same period of 1935; that of steel was 6,112,000 tons, against 5,704,000 in 1935.

Foreign Trade.—Imports rose to 47,949 millions from 44,621 in 1935, and exports were only 28,951 millions, against 29,317; thus, the import surplus rose from 5,478 millions to 9,944 millions. The volume of imports increased considerably from 44,621,000 tons to 47,949,000 tons, while the volume of exports fell slightly from 29,317,000 to 28,951,000 tons. Imports of foodstuffs increased appreciably, while the exports of manufactured goods again declined.

The Stock Exchange.—The Stock Exchange has reflected the effects of the devaluation and the general rise of prices. The index of French ordinary shares has risen from 180 to 221; and that of Renties and debentures rose from 79.1 at the end of 1935 to 98 at the end of 1936. The 4½ per cent. "A" stood at 79.10 at the end of 1936, against 83 at the end of 1935, after having touched a high level of 87.70 and a low level of 67.35.

GERMANY

THE year 1936 witnessed increasing activity in industry and internal trade. The campaign against unemployment fell into the background, and interest was concentrated on production. The Government continued to intervene by means of price regulation, restriction of output in particular trades, and control of the capital and labour markets. The chief event in business was the announcement of a Four Year Plan to increase the home production of such raw materials as are at present imported.

Credit and Investment.—The Reichsbank's rates remained unchanged at 4 and 5 per cent. for rediscounts and advances, respectively. Reichsbank credits and investments rose from Rm. 5,299 millions to 6,108 millions; rediscounts (Treasury bills omitted) from Rm. 4,498 millions to Rm. 5,447 millions; and the note circulation from Rm. 4,285 millions to Rm. 4,980 millions. Money was

abundant, except after the flotation of a Reich loan in the middle of the year. The embargo on the issue of private debentures and shares remained in force, but late in the year was somewhat relaxed. Numerous companies converted their debentures to lower interest rates. In general, borrowing in the market remained a preserve of the Reich. Investments of all kinds totalled Rm. 13,500 millions, of which Rm. 7,500 millions were direct public investments. Savings bank deposits rose from Rm. 13,384 millions in December, 1935, to 14,222 millions in November, 1936.

The Reichsbank's gold and exchange reserve decreased from Rm. 87 millions to Rm. 72 millions. Despite a substantial active foreign trade balance and the decline of debt transfers to some Rm. 220 millions, the foreign exchange shortage continued; and restrictions on private transfers and on the removal of funds by travellers and emigrants became more stringent. Late in the year foreign shares and bonds quoted in Germany were compulsorily impounded in the officially controlled "foreign exchange banks." The short-term Standstill Agreement was renewed until February, 1937. The foreign debt was reported in January, 1936, to have declined to Rm. 13,000 millions, of which Rm. 6,500 millions were short-term. In the course of the year there was a further decline, to which the gold *blot* devaluations of September contributed.

Public Finance.—The Reich Budget for 1936-37 was not divulged, and no monthly returns of expenditure or of total revenue were published. Reich revenue from taxation in the financial year ended March, 1936, was Rm. 9,555 millions, against Rm. 8,212 millions in the preceding year. In the new financial year 1936-37, revenue from direct taxes increased rapidly. In the nine months from April to December, Rm. 8,584 millions was collected, against Rm. 7,190 millions in the same months of 1935-36; all but Rm. 131 millions of the increase was derived from direct taxes and taxes on business. The Reich continued to borrow on middle-term Treasury certificates, and brought the total of new loans since the beginning of 1935 up to Rm. 4,170 millions. The Reich debt was returned at Rm. 15,245 millions on November 30th, against Rm. 14,009 millions on November 30, 1935. The funded debt increased, and unfunded declined. There were in addition Rm. 707 millions of tax-credit certificates and unconverted loan-valorisation liabilities. No return was issued of the debts contracted for "work-creation" and re-armament. It is officially explained that these are not yet a formal Reich liability. The main fiscal changes in 1936 were an increase in the Corporation Tax; a new tax of 75 per cent. on future profits from the devaluation of foreign loans, and a reform of State and municipal tax law, according to which the States will depend entirely on subventions from the Reich. The Reich railways had an operating surplus of Rm. 460 millions, against Rm. 152 millions in 1935. The Reichpost's revenue in the business year 1935-36 was Rm. 1,747 millions against Rm. 1,710 millions in 1934-35.

Prices and Wages.—Collective agreement wages remained entirely unchanged, but, in consequence of the lengthening of hours, there was a slight increase in the average weekly wage earned. The shortage of foodstuffs was more acute than in 1935, and, after some unofficial rationing measures, food cards for butter and fats were issued at the end of the year. An official decree forbade any increase in prices above the level of mid-October; but some exceptions were made, particularly for imported goods.

Agriculture.—Cereal crops were moderately good, and fodder crops good. The bounty and price-guarantee system in force for flax and hemp led to large increases in area and output. Cereals production (in metric tons) was:—

	1935	1936
Wheat and spelt.....	4,790,000	4,710,000
Rye	7,478,000	7,660,000
Oats	5,386,000	5,700,000
Barley	3,388,000	3,470,000

The potato crop was 46 million tons, against 41 million tons in 1935; and sugar beet 12 million tons against 10½ million tons. Sales of produce by farmers in the crops year 1935-36 realised Rm. 8,786 millions, against Rm. 8,256 millions in 1934-35. Owing to the increased consumption of bread and fodder, stocks of wheat and rye fell heavily. Imports will probably have to be resumed in 1937. The number of livestock of all kinds increased.

Employment and Industry.—The decline in unemployment was greater than in 1935, the number unemployed at the end of the year being 1,478,000, against 2,508,000 and 2,604,000 in 1935 and 1934, respectively. The busiest trades were iron, steel and metals, and in these trades there was the greatest decline in unemployment. Average daily working hours in industry rose from 7.49 to 7.68. The shortage of skilled labour, particularly in building, led to

regulation and rationing. The output of capital goods rose from 99.4 per cent. of the output of 1928 to (third quarter 1936) 118.6 per cent.; and of consumption goods from 91 to 97.2 per cent. Production figures (in metric tons) were:—

	1935	1936
Coal	143,030,000	158,380,000
Pig iron	12,841,900	15,300,000
Ingot steel	16,095,000	19,157,500

Steelworks were employed to full capacity. Output late in the year, therefore, ceased to increase, and delivery terms were lengthened. Some of the firms manufacturing machinery were also fully employed. Home and export sales of machinery were valued at Rm. 3,100 millions, against Rm. 1,483 millions in 1933. Shipbuilding yards had orders at the end of the year for 980,000 tons; 550,000 tons were for foreign buyers. The foreign orders were largely for tankers and motor vessels. The output of textiles, footwear and other consumption goods increased relatively little, and in most trades remained below the level of 1928. Railway receipts from goods traffic were 12.7 per cent. above those of 1935, to which, however, an increase in rates, estimated to yield Rm. 100 millions a year, contributed.

Foreign Trade.—Foreign trade continued to be regulated on the New Plan principles as far as these were consistent with international commitments. In general, reciprocal treaties were in force, mostly associated with clearing agreements. With some countries, cash settlements were still theoretically the rule, but these were associated with compensation, or with "Ask" private clearings. Export subsidies continued to be paid:—

	Imports	Exports
	Millions of Marks	Millions of Marks
1935	4,159	4,270
1936	4,218	4,768

Detailed figures for 1936 were:—

	Imports	Exports
	Millions of Marks	Millions of Marks
Foodstuffs	1,499	88
Animal	444	10
Industrial goods	2,718	4,680
Raw materials	1,571	419
Semi-manufactured	750	459
Manufactured	397	3,802

The active balance was Rm. 550 millions, against Rm. 111 millions in 1935.

Stock Exchanges.—The share market was firm early in the year, and after a reaction in the summer, again advanced. The official shares index number (1924-26 = 100) rose from 89.32 to 105.40; and the index number for bonds from 94.91 to 96.38.

ITALY

THE only available figures of foreign trade are those communicated by the Finance Minister to the Senate on December 22nd: there was an export surplus of 22 and 55 million lire in October and December, respectively. Clearing offices are at present the most important instrument for settling international indebtedness. There are a number of sums due to be paid in Italy which are held up because the National Institute for Foreign Exports has not received the money to pay Italian exporters.

	Sums due to Italian exporters	December 3, 1936	January 15, 1937
Germany	152.8	180.3	
Great Britain	30.9	102.4	
France	31.3	27.1	
Czechoslovakia	25.1	26.0	
Jugoslavia	20.4	22.3	
Belgium	14.8	19.1	
Spain	12.4	12.2	
Poland	5.4	11.7	
Totals	309.2	412.8	

Production.—Wheat production was smaller than in 1935, and consequently imports will rise to 1.5 or 2 million tons in the agricultural year 1936-37. The corn harvest was larger than the 2.5 million tons of 1935. The yield of cocoons increased by about 70 per cent. over 1935, when it was 17,400 tons. The yield of rice in 1936 was 681,795 tons, against an average of 666,000 tons for 1933-35. Olive oil production was lower than the average for 1933-35; prices are rising, and it is difficult to buy at the official price of 6,510 lire per ton for the best quality. Production of wine

was below the average for the three years 1933-1935, but, because stocks are heavy, prices are still very low. Legislation is announced to restrict the increase of vineyards. The production of sugar for 1936-37 is estimated at 300,000 tons against an average production of 295,533 tons for the years 1933-35. Building is slackening owing to the cessation of the tax exemption for new buildings. Engineering, iron and steel, and textiles, are active. Rayon production was 40,242 tons in 1933, 51,053 in 1934, 72,356 in 1935, and is estimated at 90,000 tons in 1936.

New industrial projects are not increasing in number; it seems more easy for old firms to obtain permission to enlarge their plants, than it is for new undertakings.

Prices.—Prices have risen continuously since 1934. The rise since September has been slow, although the lira was devalued at the beginning of October.

Wholesale Prices (1928 = 100)

Years and months	Raw Materials	Semi-finished Products	Finished Products	General Index
1929	95.3	97.5	94.4	95.4
1934	57.3	66.6	62.5	62.0
1935	65.6	74.9	68.3	68.2
„ August	67.2	74.6	69.3	69.1
1936 January	72.2	90.8	71.2	74.8
„ September	77.8	86.0	73.7	76.9
„ December	79.6	87.8	74.7	78.3

Industrial Prices (August, 1935, and November, 1936)

	Raw Materials	Semi-finished	Finished	General Index
Textiles and leather	1935 36.9 1936 56.8	56.0 70.4	58.0 69.7	50.5 65.6
Iron and steel, metals and engineering	1935 74.4 1936 84.3	87.1 94.1	64.3 73.0	76.0 88.6
Coal, mineral oils and other fuels	1935 86.4 1936 93.7	97.6 105.4	...	93.1 100.7
Chemicals and fertilisers	1935 86.6 1936 88.1	77.0 85.2	61.9 83.8	74.1 85.0
Paper	1935 ... 1936 ...	...	...	61.2 75.1
Wood	1935 ... 1936 ...	...	...	87.1 109.9
Non-metallic minerals, glass, clay goods	1935 66.8 1936 81.1	75.2 78.6	64.1 77.3	72.2 78.5
Food products	1935 ... 1936 ...	Vegetables 74.6 80.2	Animals 77.4 77.4	70.0 79.3

The spread between the prices of raw materials, semi-finished and finished goods is generally diminishing. Industrialists had accumulated large stocks of raw materials, and the effect of the devaluation or alignment of the lira was therefore not acutely felt. But the stocks now need replenishing, and the rise in import prices will probably lead to a further rise in domestic prices.

The Cost of Living.—The rise in retail prices was less marked than in wholesale.

(1928 = 100)

	Wholesale Prices	Cost of Living	Foodstuffs
August, 1935	69.1	77.23	72.75
January, 1936	74.8	82.05	77.09
September, 1936	76.9	83.54	77.82
December, 1936	78.3	85.98	80.50
Increase between August, 1935 and December, 1936	13.3%	11.3%	10.6%

Between August, 1935, and December, 1936, increases in wages of from 8 to 10 per cent. were decided upon by agreement between employers and employees. There are no unemployment statistics, but since employment increased because of the movement of men to East Africa and the great activity of armament firms, it is very probable that earnings per family increased more than wages.

Public Finance, Money Market.—The State Budget was the controlling factor in the Money Market. There were deficits of 6,377 million lire in 1933-34, 2,030 millions in 1934-35, and 1,550 millions in 1935-36; as this last figure does not include the cost of the East African campaign, we can only guess at the call of the Treasury on the Money Market. Part of the total deficit (ordinary deficit *plus* East African expenditure) was met with means which did not press on the existing internal liquid funds: (1) the proceeds of the sale in foreign places of foreign securities and of Italian securities issued in foreign countries; (2) the decrease of the gold reserve of the Bank of Italy. Estimates of securities compulsorily sold to the Treasury vary between 4,000 and 6,000 million lire. How much of this amount could be and was sold in foreign places is not known; but the sum thus made available for foreign payments must have been substantial. According to the official report, the gold held in cash by the Bank fell from 4,704 million lire on August 31, 1935, to 3,027.3 on December 31, 1935.

How much it has declined during 1936 is not known; but the amount held at the end of the year must have been substantial because the 41 per cent. devaluation of the lira gave (by the revaluation of the gold reserve) a not inconsiderable bonus to the Bank and the Treasury. The note circulation was increased. It is possible that these means went far to meet the major part of the extraordinary needs of the Treasury; the remaining part was easily met by the conversion of the 3.50 per cent. redeemable into 5 per cent.

The Money Market responded easily to these calls; the Bank of Italy was able to reduce the official rate of discount on May 18th from 5 to 4½ per cent.; and the private rate was frequently even lower than the official one. The redeemable 3.50 per cent. began the year at 65.9 and closed at 74.5; the 3.50 per cent. Rentes rose from 68.6 to 75.5. Industrial securities progressed even more: La Centrale (electric) from 671 to 818; Meridionali (holding company, mainly electric), from 615 to 798.50; Fiat (motor car and other engineering), from 345 to 475.75; Savigliano (engineering), from 720 to 1,130; Snia Viscosa (rayon), from 348 to 463; Linificio e Canapificio Nazionale (linen and hemp), from 350 to 464; Olcese (cotton), from 228 to 369; Edison (electric), from 240 to 316; Gas, Turin, from 12.87 to 14.57; Eridania (sugar), from 411 to 495; Pirelli Italiana (rubber), from 1,086 to 1,323; Risanamento Napoli (real estate), from 905 to 952. The rise was in part due to the devaluation of the lira on October 5th by about 41 per cent.; the dollar exchange fell from 11.22 to 19 lire. But there is also a real basis of abundant money. Whether the abundance is due to effective savings, or to the fact that industrialists have in 1936 converted their stocks of raw material into liquid money, awaiting the best moment or the licence to re-convert into stocks, is a thorny point about which opinions differ.

BELGIUM

ALTHOUGH the political situation was often uncertain 1936 ended calmly. The re-militarisation of the Rhineland caused a deep feeling of uneasiness; the recollection of the invasion of 1914 caused some panic in Eastern districts. In Business slackened, and was in places entirely paralysed. In May there was a General Election, which caused serious losses to the old parties. The Rexists, a party inclined to Fascism, obtained 10 per cent. of the seats. The Reform of party has, however, lost ground ever since. Reform of the Van Zeeland Government was rendered difficult by the strikes which broke out all over the country. Finally, M. van Zeeland regained control. The strikes were responsible for a moderate increase of wages, and the Government is now morally bound to introduce the forty-hour week.

Budget.—The Belgian Budget shows a position unknown since before the war. There was a deficit of less than 1 per cent. of the expenditure in 1935; and 1936 will probably show a small surplus. Expenditure in 1937 will amount to 10,565 million francs, and revenue to 10,750 millions. Taxes have been reduced by 400 million francs, and it is hoped that further reductions will be possible. Receipts from taxation, moreover, which amounted to 8,200 millions in 1934, and 8,330 millions in 1935, reached 9,070 millions in 1936.

Government securities showed a marked improvement. The 4 per cent. converted loan stands above par, although the Government issued more than 800 millions of this stock in the summer and in the autumn. If the improvement continues, it will be possible to effect another conversion of Government securities into 3½ per cents.

Finance.—Belgian banks strengthened their position in 1936. Under the influence of the Banking Commission, they increased their liquidity. The Brussels Stock Exchange, after having been depressed, enjoyed an advance during the last few months. Colonial mines and metals were responsible for this improvement. The share index of the National Bank of Belgium rose by 23 per cent.

Economic Activity and Employment.—The main topic of 1936 was a notable development of the heavy industries. There was an abundant demand for coal, and stocks fell to an unusually low level. Unsold coal amounted to 3,600 million tons during the crisis, and to 2.5 million tons at the end of 1935; it has now fallen to about 1 million tons. Although exporters selling coal in France do not enjoy any longer the premium on the French franc, Belgian coal companies are making profits. Production of metals increased only slightly because of the restrictions imposed by the Steel Cartel. Output was only 3,100,000 tons against 4,100,000 tons in 1929. Nevertheless, this industry enjoys at present appreciable profits. The industries which produce for the home market did not make so much headway.

Unemployment again declined in 1936. From 1935 to 1936 the number of unemployed (seasonal unemployed excluded) fell from 130,000 to 100,000. The maximum was (seasonal excluded) about 200,000.

In fact, there is in many trades a shortage of hands. The Government is compelled to authorise the immigration of Polish miners, because there is a shortage of labour in the Belgian pits.

The agricultural situation improved and crops were good. But the rearing of cattle and dairy farming did not show any marked improvement. In all, agriculture advanced less than industry on the way to prosperity.

Foreign Trade.—Foreign trade was in 1936 more favourable than could have been anticipated. The consequences of devaluation appeared only slowly, but they have lasted. The textile industry, for instance, succeeded in increasing its exports, and most Belgian export industries recorded important advances:—

	Imports (in millions of francs)	Exports
1934	14,000	13,700
1935	17,325	16,146
1936 (provisional)	21,200	19,800

The import surplus was slightly larger than during the crisis; but Belgium has some important invisible exports. The above figures are exclusive of the Congo Colony.

Exchange and Banking.—The belga was very firm throughout the year. The gold reserve of the National Bank increased by about 1,500 million francs. Taking into account the State's gold reserve accumulated from devaluation, Belgium has now more gold than ever before. The note circulation was increased by about 2,000 millions. This is not a symptom of inflation; policy has rather been in the direction of deflation, for the State converted into gold certain assets in paper francs. The discount rate remained at a low level, and the demand for credit at the Central Bank was very slight. Money is now so abundant that the private banks are seeking every available employment, particularly in commercial bills.

It seemed in the course of 1936 that the devaluation of March, 1935, had been successful from both the economic and monetary standpoints. The rise in prices did not even reach the level which had been anticipated by the experts. In 1936 some rise in wholesale and retail prices took place, but was due not to devaluation but to the movement of world prices. Prices in Belgium remain among the lowest of all industrial countries.

The Congo Colony.—Belgian Congo has made greater progress than the mother-country on the road leading to prosperity. Activity had increased by the end of 1936 because of an increase in the production of copper.

SPAIN

The past year will be remembered as one of the most fateful and unfortunate in Spanish history. Foreign interests in close touch with the under-currents of Spanish politics were not surprised by the outbreak of civil war in July, nor by the bitterness which has marked the hostilities. The division of Spanish territory between the Valencia Government and the Burgos Insurgents, who very early assumed the full style of the Government of Spain and were recognised by Germany and Italy, has led to conflicting decrees, which have added to the many business and financial difficulties. Nevertheless, communications with the various parts of Spain have been surprisingly prompt and normal in the circumstances.

Foreign Trade.—The clearing arrangements between Spain and Great Britain instituted under the Anglo-Spanish Payments Agreement of January 6, 1936, ceased to work satisfactorily, and were suspended in December. It was understood in January, however, that negotiations between the Spanish and British Governments for a new trading agreement had been practically concluded. British exporters to Spain were warned to exercise due caution, and especially to satisfy themselves that the intending importer had obtained the necessary permit. It was recommended that payments should be arranged in foreign currency or by credits opened in London.

A Decree was issued in Madrid on December 3rd that exports from Spain must be authorised by the Ministry of Commerce. The publication of foreign trade statistics has been suspended since the civil war commenced, and the latest available are those relating to the first half of 1936. These show that, during that period, imports were valued at 382 million pesetas compared with 424 millions in the first six months of 1935. Exports during the first half of 1936, including bullion, were worth 332 million pesetas, compared with 295 millions in 1935.

Finance.—The Budgetary position is naturally obscure, as is also that of the foreign exchange markets and the public debt. The situation has been marked by various moratoria decrees by both the Government and the insurgents, and by the control of banking commerce and industry. A moratorium on banking business and bills of exchange was decreed by the Government in July, and has been extended "while the present circumstances continue." Drawings upon current accounts in banks have been still further limited by a Decree of the Madrid Council that only 750 pesetas per month can be withdrawn by one person. Wages may be paid, and industrial concerns may pay public utility charges. The Madrid Government has decreed that notes of the Bank of Spain which bear the stamp of the Burgos authorities, shall not circulate as legal tender, and will not be guaranteed by the gold reserves of the Bank of Spain. All activities, any proposed modification of capital, the issue of loans, the suspension of payments, and the closing-down or abandoning of business, are subject to the approval of the Treasury. The export of gold and silver was prohibited by the Government at an early stage of the Civil War. It was also decreed in Madrid that private holdings of gold, as well as of foreign currencies, should be surrendered to the Bank of Spain.

Agriculture and Industry.—It is difficult to estimate the state of agriculture and industry. The Valencia Minister of Agriculture stated that, in that part of the country which is still under Government control, the production of olive oil in 1936-37 was expected to reach 2,138,670 metric quintals, or some 25 per cent. higher than the average. It is also estimated that the 1936-37 orange production will amount to nearly 9,000,000 metric quintals, which is some 300,000 quintals more than in 1935-36.

The situation is further complicated by the political aspirations of the provinces. Catalonia, for example, is seeking complete independence, and commercial and political ties with Russia have been strengthened considerably. Whatever the eventual outcome, hostilities between rival parties are likely to be prolonged; the economic state of the country will suffer accordingly.

HOLLAND

The year was divided into two periods. The period of the gold standard, ended on September 26, 1936, was characterised by a further retrograde movement. In some branches of industry, however, some improvement could be recorded, but on the whole the situation was one of continued depression. There was a complete change during the second period of the year, after the depreciation of the guilder. This was not due solely to the abandonment of the gold standard, but was stimulated also by the all-round advance in world prices. Dutch shipping and Dutch plantations found remunerative business, and have been able to resume the distribution of dividends. This led to a rapid advance in security rates on the Amsterdam Bourse, in the fourth quarter of 1936.

SECURITIES INDEX FIGURES
(1921-1925 = 100)

	1932	1933	1934	1935	1936			
					1st Qtr.	2nd Qtr.	3rd Qtr.	4th Qtr.
General index	31.9	34.3	31.4	30.4	31.1	28.5	29.6	44.8
Netherlands Indies	35.9	37.9	36.7	38.1	48.5	47.5	50.2	72.9
Netherlands Industrials	33.0	35.2	34.2	32.8	38.4	37.1	37.6	56.6

Foreign Trade.—The revival of industry after the devaluation of the guilder led to a reduction of the import surplus in the fourth quarter of 1936. Both imports and exports rose sharply compared with the corresponding months of the preceding year.

FOREIGN TRADE

	Imports (in million guilders)			Exports		
	1934	1935	1936	1934	1935	1936
January	100	76	79	56	55	50
February	81	70	74	51	51	50
March	94	80	79	61	54	55
April	85	78	81	54	50	57
May	87	78	76	57	58	53
June	89	73	77	59	51	53
July	86	76	80	58	54	60
August	87	76	82	69	61	63
September	78	76	82	69	59	72
October	87	95	92	62	70	75
November	88	86	101	60	60	77
December	75	73	114	56	62	79

For the whole year, 1936, the import surplus was 272 million guilders against 261 millions in 1935.

Industry and Shipping.—Symptoms of industrial revival were evident even before the devaluation. Ship building and its subsidiary industries, for instance, were better provided with work, partly in consequence of Government orders. Unemployment rose steadily in 1936, and only began to fall after the depreciation of the guilder.

UNEMPLOYMENT IN THE NETHERLANDS
(in thousands)

	1935	1936	Rise in 1936
January	432.4	475.9	43.5
February	417.6	465.5	47.9

November	415.2	419.5	4.2
December	471.9	...	...

Shipping showed a pronounced improvement. The improvement in the traffic of Rotterdam and Amsterdam was, in part, attributable to the port strike in Antwerp. The lower port rates in Antwerp were a handicap until an agreement was made between the Dutch Government and the municipalities of Rotterdam and Amsterdam. This enabled the wharfrage and quay dues in Amsterdam and Rotterdam to be reduced by 15 and 28 per cent.

Agriculture.—For agricultural produce, export prices were not yet remunerative, and, even after the devaluation, Government support could not be dispensed with. There is, therefore, no prospect that the comprehensive machinery for the regulation of agriculture will be abolished. Emergency levies and the restriction of production are to remain in force.

Finance.—After the devaluation the Netherlands Bank was able to reduce the official bank rate to 2 per cent., against 4½ per cent. in June. Private discount rates also fell sharply. The great liquidity of the Money Market is principally due to the fact that, soon after the devaluation of the guilder, the 300 million guilder Equalisation Fund had to buy foreign currencies, to maintain the depreciation of the guilder at about 20 per cent. The extensive repatriation of Dutch capital constituted a strong support for the guilder rate, and the Equalisation Fund was regularly called upon to take action. This automatically produced great liquidity in the Money Market, and interest rates fell. There was a chance for large-scale conversion operations by the State, Provinces and municipalities. The new issues market showed a vigorous revival; and the rate for loan issues came down to 3 and 3½ per cent.

Prices.—The devaluation of the guilder caused a rise in wholesale prices, but the cost of living remained practically unchanged.

An advance of prices in the retail trade in the Netherlands was neutralised by the reduction of various emergency levies on a number of commodities.

The rise in prices in recent months is partly due to the all-round advance of world prices.

SWITZERLAND

The slump reached its lowest point in the middle of March. Exports then rose slowly, business was more active, and, during the third quarter, improvement was noticeable in nearly all branches of trade and industry. Economic conditions were deeply affected by devaluation. On September 29th, Parliament approved the reduction of 30 per cent. in the value of the Swiss franc. This step was mainly the result of the devaluation of the French franc which had been the backbone of the gold bloc, to which Switzerland had hitherto remained faithful. A few weeks later, Switzerland adhered to the monetary agreement concluded between Great Britain, France and the U.S.A. Devaluation led to a slight rise in the cost of living: foreign goods, and especially raw materials, are dearer; but the Government has attempted to prevent illegal rises in prices by reducing certain Customs duties and by relaxing import quotas on several categories of goods. Devaluation, on the other hand, stopped the hoarding of gold and bank notes. Money is now so abundant that the National Bank reduced the discount rate from 2 to 1½ per cent. from November 26th, and the interest on advances from 3 to 2½ per cent. The greater part of the hoarded

funds was used to buy securities of all sorts, mainly Swiss, British and American, and the Bourses showed great activity.

Finance.—The estimated deficit of 41 million francs for 1935 was finally reduced to 18 millions. In 1936, because of the yield of the "Crisis Tax," revenue was slightly higher than in 1935, and the estimated deficit of 77 millions may be reduced by 6 or 7 millions. For 1937, expenditure is estimated at 525 millions and receipts at 483 millions. The financial situation of the Federal post, telegraph and telephone services was satisfactory; their aggregate surplus reached (for the first 11 months of 1936) 67 million francs, against 63 millions in 1935. Despite an increase in the passengers and goods traffic during the two last months of the year, the Federal Railways recorded a surplus of only 77 millions, compared with 85 millions in 1935, on operation.

The influx of foreign funds (mostly French) was noteworthy, particularly during the second half of the year. Interest on long-term deposits ranged from 2½ to 3 per cent., and on short-term deposits it moved between 1 and 1½ per cent. The sterling exchange rate was 15.14 francs at the beginning of the year; since September 29th it has moved between 21.25 and 21.38 francs. Banking showed renewed activity during the second half-year. Foreign borrowings on the Swiss market were reduced to nothing, but Swiss issues, mostly for conversion purposes, totalled 675 millions, against 501 millions in 1935; the biggest loan was the National Defence Loan of 235 millions, for which the public subscribed 330 million francs. The gold reserve of the National Bank, which was 1,388,000,000 francs in January, rose to 1,553,700,000 francs in September, and to 2,709,000,000 francs in December.

Unemployment.—The level of unemployment remained high throughout the year. The number of registered unemployed moved between 124,000 in January and 75,000 in June, and reached 104,000 in December, against 118,000 in December, 1935. Devaluation checked the usual seasonal rise, and the increase, between September and December, was 22,000, compared with 49,000 in the previous year.

The yield of agriculture was about 1,150 million francs, against 1,203 millions in 1935. Wheat growers, vine growers, and the milk and cheese industry were helped by State subsidies.

Foreign Trade.—Imports, reduced by quotas, aggregated 1,266 million francs (1,283 millions in 1935), and exports 881 millions (821 millions in 1935). Trade with Great Britain showed an improvement over 1935, imports totalling 78 million francs (76 millions in 1935), and exports 97 millions (77 millions in 1935). The outstanding features in Swiss foreign trade were the recovery in exchange with the U.S.A., and the revival of the watchmaking and machine industry.

The cost of living, which rose in 1935 to 130 (100 = 1914) remained unchanged until October, when it reached 132. The index of wholesale prices rose progressively, from 91 in January to 102 in December.

EASTERN EUROPE

AUSTRIA

The general economic situation in 1936 scarcely altered from that of 1935, production and activity being maintained. The Stock Exchange showed a rise in 1936 in both shares and bonds; and the decline in activity in certain branches of export industries after the end of the Abyssinian War was made up towards the end of the year.

Finance.—During 1936, compared with the year before, the National Bank's total foreign exchange cover rose by 16 million schillings, or from 27.7 to 29.0 per cent. The gross circulation of notes and bills reached an average figure in 1936 of 1,173 million schillings, against 1,167 millions in 1935. The Stock Exchange was very active, the turnover for securities totalling 576 million schillings against 366 millions the year before. The index of 34 industrial shares prices (1923-32=100) stood at 80.9 for 1936, against 63.6 for 1935. The bond index rose from 107.4 to 109.

The gradual recovery in trade since 1934, tax revenue has steadily increased; last year the total rose to 1,185 million schillings from 1,074 millions in 1935. The most sensitive taxes—the turnover tax, and the private and corporate income taxes—are mainly responsible.

Expenditure was listed under the headings of "national economy" and "social and cultural measures." The largest item under the latter, curiously enough, was 14,900 million roubles for the Army and Navy. It is estimated that at least two-thirds of the expenditure on national economy—37,588 million roubles—was devoted to capital investment.

Industry.—The figures of production for the whole of 1936 are not yet available; except for pig-iron, of which 14.4 million tons were produced, compared with 12.48 million tons in 1935, and steel ingots, the production of which was 16.2 million tons, compared with 12.6 million tons in 1935. Car-loadings in 1936 averaged 86,500 daily, compared with 73,000 in 1935. The following table shows industrial production in 1935, and for the first nine months of 1936:—

	1935 Million kw. hrs. Million tons	1936 (first nine months) Million kw. hrs. Million tons
Electricity	594,500	606,300
Coal	109	91.4
Coke	16.7	14.8
Coal and gas	26.8	21.7
Petrol	2.4	3.09
Peat	19.9	19.4
Iron ore	26.8	20.7
Manganese	2.38	2.27
Cement	4.46	4.34
Paper	640,000	518,000
Locomotives	No. 1,518	No. 1,861
Grain combines	21,159	37,477
Threshing machines	12,800	9,200
Motor lorries	77,666	86,607
Light motor-cars	1,895	2,480
Tractors	113,566	89,114

Production figures take no account of quality, for which the Soviets have not yet been able to fix standards. Much of the output both of capital and consumers' goods would be scrapped in other countries.

Agriculture.—Drought affected cereal grain harvests in Soviet Russia in 1936, as in many other countries. The estimated yield was 82 million metric tons, compared with 88.6 million tons in 1935. Exports were negligible. The flax crop, which is very important in Russia, also fell below that of 1935. But the cotton crop, 2,230,000 tons, was the largest on record. No figures are available for the potato crop, which apparently fell below that of 1935.

Prices and Wages.—The Soviet Government has published no price indices since 1932. Food prices remained at about the same level as in 1935, while the prices of manufactured goods increased. Average money wages in industry, according to official figures, rose by about 20 per cent., and peasant incomes increased 30-50 per cent. Piece-work payments were raised, and wage increases were diverted to the more skilled workers. The authorities endeavoured, in this way, to encourage increased production and greater skill. Unskilled groups are near the subsistence level. There was reported to be no unemployment; Soviet authorities deny the possibility of unemployment under their system. Those who cannot find work in one place are helped to move to unsettled regions now being developed.

Foreign Trade.—The Soviets reported an export surplus for the third year in succession. Imports, which declined from a peak of 1,105 million gold roubles in 1931 to 241 millions in 1935, were kept at about the 1935 level in 1936. Short and middle-term credits were paid off, and long-term credits were accepted from Germany, Great Britain and Czechoslovakia, on more favourable terms than any previously granted. Figures were cited to show the degree of self-sufficiency which has been attained; in 1931 imports of machinery and metals amounted to \$541 millions, and domestic production was valued at 7,400 millions of roubles; in 1936, imports were \$120 millions, and production 22,000 millions of roubles; in 1931 imports of rolled steel were 1.2 million tons, and production 4.1 million tons; in 1936, imports were 120,000 tons, and production 12.5 millions; in 1931, 20,000 tons of aluminium were imported, and none produced; in 1936, 37,000 tons were produced, and none imported; in 1927-8, 145,000 tons of ginned cotton were imported, and 238,000 tons were produced; in 1936 17,000 tons were imported, and 660,000 tons were produced.

Public Finance.—The internal debt on January 1, 1937, stood at 20,400 millions of roubles, having increased during 1936 by 5,400 millions. The State also had the use of savings bank deposits, which increased in 1936 from 2,400 millions to 3,500 millions. Public borrowing has played a considerable part in financing capital investment since 1934, when the public debt was 13,000 millions of roubles. But the turnover tax still plays the principal part. All internal bonds were refunded during 1936; those bearing interest of 12, 10 and 8 per cent. were converted into non-negotiable bonds bearing 4 per cent. interest. A new law was passed permitting State savings

banks to issue loans against bonds up to one-third of their face value. The only acknowledged foreign indebtedness is \$75 millions in trade credits, which will be paid off during 1937. Comparisons between Soviet (State ownership) economy and the economy of other countries may well prove misleading. The Soviet public debt, for example, is partly invested in productive enterprise. The Soviet Budget represents the budgets of a large part of industry and agriculture.

General Economic Position.—It is difficult to determine whether any branch of Soviet industry is profitable or not; all industry is a State monopoly, lacking the standards set by competition. For example, no figures are given to show the cost of producing synthetic rubber, which is very high. Yet the State is determined to replace all imports of rubber with domestic production of synthetic rubber, in the interests of self-sufficiency. Similarly, the enormous investments in the motor industry resulted in the first nine months of 1936 in the production of only 2,480 light cars and 86,000 lorries and buses. The cost per car was very great. The Soviet authorities are determined to attain self-sufficiency, whatever the cost.

The inflated rouble, whose internal purchasing power appears to be about one-fourth that of the official exchange rate, would have to be drastically de-valued to be stabilised. There is no evidence of any intention to stabilise the rouble in the near future. As long as Soviet peoples can be persuaded to live on what their own country produces, despite the inevitable hardships that process involves, the present system apparently can be continued indefinitely, with mounting production, increased capital investment, and a growing trade turnover in domestic products. There is no evidence of any change in the policy of compelling Soviet people to get along on what they themselves produce, while domestic industry is learning to produce in greater variety and quality.

Soviet leaders have applied a "war economy" since 1930, restricting consumption, in order to force the pace of industrialisation and of mechanising agriculture. The severity of the process was somewhat relaxed in 1936, but the increase of 7,000 millions of roubles in the military estimates for 1937 suggests further involuntary savings. Almost one-quarter of the State Budget for 1937 has been assigned to military expenditure.

ROUMANIA

THROUGHOUT the year 1936, the Government of Roumania was in the hands of the Liberal party, with Mr Tataresco as Prime Minister. There has been no change in foreign policy; the maintenance of the Little Entente and of the Balkan Pact remains the guiding principle. The ties between Roumania and Czechoslovakia were strengthened by discussions of economic and military questions. Diplomatic relations with Russia were resumed, and this was followed by a trade agreement. Mr Antonesco's visit to Warsaw gave proof of the good relations existing between Poland and Roumania. The uncertain political situation in Europe caused the Government to increase armaments. Economically, 1936 was a year of consolidation and progress.

Finance.—The financial year, ended March 31, 1936, showed a small surplus in the public finances. The ordinary Budget for the year 1936-37 was balanced at Lei 22,972,419,500; and the Budget for National Defence amounted to 2,600 million lei. Both figures were substantially higher than those of the previous year. Treasury receipts to date suggest that the expenditure provided for in the Budget will be met. Owing to increased exports, it was possible to resume the payment of the coupons on the foreign debt towards the end of the year.

The profit from the revaluation of the gold revenue was appropriated by the Government to provide for additional armament expenditure. Banking deposits increased, and capital was scarce owing to intense activity in foreign trade and in industry. Stringent control over foreign exchange transactions and foreign trade by the National Bank was maintained. Clearing arrangements and payment agreements were concluded with most countries; the most important was the Anglo-Roumanian Agreement, which was so successful that, at the end of the year, the National Bank had accumulated sufficient sterling in the clearing account to arrange for the full payment of the commercial arrears due to the United Kingdom.

Agriculture.—Owing to higher world prices for cereals and a satisfactory harvest in Roumania, the agricultural situation improved. The production of wheat amounted to 350,314 waggons in 1936, against 262,470 in 1935 and

281,540 in 1934. The total harvest of maize was estimated at about 500,000 wagons, a slight decrease compared with the previous year, but higher than the average production of the last ten years. The production of barley, rye and oats also increased. Produce was sold at profitable prices. The exportable surplus was estimated at 120,000 wagons of wheat, 190,000 wagons of barley, 15,000 wagons of rye and 28,000 wagons of oats.

Industry.—The metallurgical and textile industries flourished, and the timber trade improved in the second half of the year. The total production of crude oil for the year amounted to 8,760,000 tons, against about 8,500,000 tons in the previous year. Prices ranged from 6,500 to 9,000 lei per wagon according to quality, against 5,800 to 8,200 at the beginning of the year. The internal consumption of petroleum products rose from 1,181,373 tons in 1931 to over 1,500,000 in 1936.

Foreign Trade.—The foreign trade regulations had established by the end of 1935 a premium of 38 per cent. on foreign exchange bought or sold by the National Bank, a tax of 12 per cent. on the export of petroleum products, and a similar tax on imports. This position was maintained during 1936. A certain amount of foreign exchange was bought freely to pay for approved imports. Foreign trade showed a considerable increase over previous years, which was, however, largely due to the very favourable situation in world markets. The following figures compare imports and exports during the first ten months of the last five years:—

	Imports Lei	Exports Lei	Balance Lei
	(000 omitted)	(000 omitted)	(000 omitted)
1932	9,285,094	13,360,725	+ 4,075,631
1933	9,569,000	11,674,095	+ 2,115,095
1934	10,557,343	10,850,029	+ 292,686
1935	8,679,506	12,931,132	+ 4,251,626
1936	9,824,821	15,903,128	+ 6,078,307

About one-sixth of the total exports were effected in compensation against imports. The largest markets for Roumanian exports (in the order of their importance) were Germany, England, Austria, France and Czechoslovakia; Germany was easily first. Imports showed a fall in textiles and manufactured goods; semi-manufactured goods and raw materials increased considerably.

JUGOSLAVIA

DURING 1936 the recovery of Yugoslavia proceeded at a slow but steady pace, until the early autumn, when it gained impetus from a bumper harvest and increased demand from abroad.

Foreign Trade.—No fewer than 11 trade agreements were concluded in the course of the year: with Germany (two), Spain, Greece, Holland, Italy, Turkey, the United Kingdom, France, Hungary and Czechoslovakia. Import control was introduced in the spring, to realise the large German debt on the clearing account. The limited success of this arrangement, and the renewed interest shown by other countries in Yugoslav agricultural produce, prevented Yugoslav interests from being bound entirely to Germany. The first place among buyers from Yugoslavia in October was attained by Great Britain. The total amount of exports during the first 11 months of 1936 was 2,487,000 tons, valued at 3,760,700,000 dinars, against 3,119,000 tons, worth 3,678,600,000 dinars, in 1935. Hence 2.23 per cent. more was obtained in value for 20.25 per cent. less goods. Imports for the same period were 872,000 tons, worth 3,645,500,000 dinars, against 888,000 tons, valued at 3,363,000,000 dinars, in 1935. With an increase in the price of imported articles of only 8.43 per cent., against a drop of 1.85 per cent. in quantity, the threatened discrepancy between the price of exports and imports has changed slightly in favour of the agricultural producer.

Agriculture and Industry.—The harvest of 1936 was the best since the war. Wheat yielded 29,200,000 quintals, against 19,900,000 in 1935, an average of 13.2 quintals per hectare. Maize produced 51,000,000 quintals, against 38,300,000 in 1935, the yield per hectare being 19.6. The cereals harvest was 15 per cent. above the average. The peasant was assisted by the settlement of agrarian debts, the total of which is estimated at 6,880,000,000 dinars; the principal was reduced by 25-50 per cent., the interest was brought down to 4.5 per cent., and the time for repayment was lengthened to 12 years.

There has been an appreciable advance in all industries, especially in timber, milling, beer, meat, textiles, footwear, chemicals and metals. Mining results were excellent, with an increase of 25 per cent. in production and 30 per cent. in value; the index stands at 132 (100 = 1926-30). The greatest increases were in pyrites, iron and copper. Two new gold mines were opened; and foundries increased their output by 64 per cent. A series of successful strikes, involving a considerable number of workers, led to a rise in wage rates, which had previously been extremely low. The number of workers increased during the first nine months of 1936 from 594,000 to 651,000, a new high level for the last six years.

Finance.—The Budget returns for the first eight months of the year 1936-37 show a big advance on last year's figures; receipts totalled 6,786,100,000 dinars (98.6 per cent. of the estimate), against 6,529,000,000 in 1935. Expenditure was 5,892,900,000 dinars, and unpaid accounts were 154,100,000 dinars, and there is a surplus of 739 million which is the first real surplus since the crisis of 1931.

The dinar was steady throughout the year at 7 Swiss francs (old value), or at 10 Swiss francs (devalued). The discount rate remained unchanged at 5 per cent. There was little change, however, in banking, which is still suffering from the 1931 crisis. Of a total of 631 banks, 272 postponed payments, 12 are being reorganised, and 37 are in liquidation. The public continues to favour public as against private institutions. The total deposits, from October, 1935, to October, 1936, increased from 10,238 million dinars to 10,622 millions, but although the two chief State banks, the State Mortgage Bank and the Postal Savings Bank, showed an increase from 1,946 to 2,113 millions, 20 of the leading banks recorded a decrease from 3,145 to 3,013 million dinars. The National Bank cover increased from 1,464,300,000 to 1,626,000,000 dinars, and the circulation showed a proportionally smaller increase from 4,889,000,000 to 5,408,500,000 dinars.

BULGARIA

For the first time since the recent depression, the economy of Bulgaria showed in the course of 1936, a marked improvement. One important reason for this was the comparatively calm political situation and the relative stability of the last Government. The dangerous experiments with the economic life of the country, which were so marked in 1934 and 1935, were almost abandoned, and State intervention was confined to the maintenance of higher prices for agricultural products, and the introduction of a new and less prohibitive tariff.

The foreign exchange monopoly of the National Bank was maintained throughout 1936. But the system of import quotas was further simplified, and the *de facto* depreciation of the national currency in foreign markets found its expression on the local market in the maintenance of a premium on devisen up to 35 per cent.

Agriculture and Industry.—Abundant crops of cereals, tobacco, vegetables and fruit, and a general rise of about 6 per cent. in the wholesale price-level of almost all products were responsible for a notable improvement in the welfare of the rural population. Domestic industry was also successful during 1936. The volume of production increased in all trades. For the first time since the crisis, bank deposits and other investments increased. Several banks are expected to distribute dividends. The volume of money in circulation was generally greater than in 1935, the average being 6 per cent. above the level of that year.

Foreign Trade.—The foreign trade figures for 1936 were particularly satisfactory. Exports increased from 3,253 to 3,910 million leva, i.e., by 20 per cent., while imports rose from 3,009 to 3,181 million leva—6 per cent. The surplus of exports strengthened the foreign exchange position of the National Bank. It should, however, be remarked that the greater part of these devisen are only for clearing purposes. The improved balance of payments enabled the Bulgarian Government to pay an agreed percentage of the interest on the foreign debt. The increased exports to Great Britain have brought the latter country to the second place (with 11 per cent.) on the list of Bulgaria's customers.

Public Finance.—A considerable improvement in the State finances, the revenue being 12 per cent. above the 1935 figure, has reduced the Budget deficit, for the first eleven months of 1936, to 156 million leva, against 563 millions for the corresponding period of 1935. The new agreement, concluded at the end of December, 1936, with the Committee of Foreign Bondholders, fixed the transferable portion on the interest of the loans for the next two years.

GREECE

THE outstanding political event of the past year in Greece was the establishment, in the first days of August, of an authoritarian government under General Metaxas, which dissolved Parliament *sine die*. Economically, Greece made in 1936 some further progress towards recovery, though more slowly than in the three previous years.

Foreign Trade.—Provisional returns for the first eleven months show, compared with the corresponding period of 1935, an increase in both the volume and the value of total trade with foreign countries. The increase in value is, however, due entirely to larger imports and the rise in international prices. The value of exports was lower than in the previous year, owing to a falling-off in the exports of tobacco. Consequently, the import surplus has increased, as the following table shows:—

(In millions of drachmas)

	January–November 1935	1936
Imports	9,727	10,629
Exports	6,305	5,847
Import surplus ...	3,422	4,782

Agriculture, Industry and Commerce.—Agricultural production was, on the whole, smaller than in 1935. On the other hand, industrial activity and home trade were maintained at a fairly satisfactory level, despite restrictions, higher costs and rising wholesale and retail prices.

Currency.—The external value of the drachma remained stable throughout the year. After the devaluation of the Swiss franc, near the end of last September, the drachma was linked to the pound sterling. Until September, political instability and large payments for imports combined to deplete the foreign exchange reserves of the Bank of Greece. Since September, however, severe measures to prevent speculation and the evasion of devisen have been adopted; many people have surrendered their hoarded gold; and the exchange position has improved appreciably, although transfers have been made abroad, for the payment of foreign debt coupons.

Public Finance.—The principal financial feature of the year was the resumption, following a provisional agreement with the Committee of Foreign Bondholders, of the service on the foreign debt, which was suspended early in 1935. Negotiations are understood to be in progress, for a final settlement of this question. Drastic economies in State expenditure have been promised by the Finance Minister. He has forecast a balanced Budget for the financial year 1937–38; in spite of large outlays for rearmament and relief purposes, without any increase in taxation.

(In millions of drachmas)

	Financial Year 1935–36 (First seven months) April–Oct., 1935	1936–37 (First seven months) April–Oct., 1936
I. <i>Revenue</i> :—		
(a) Estimated (for the whole year) ...	11,216	12,833
(b) Assessed	8,722	7,891
(c) Collected	6,462	7,006
II. <i>Expenditure</i> :—		
(a) Estimated (for the whole year)...	12,223	13,908
(b) Liabilities incurred	11,483	12,308
(c) Payments effected	5,824	6,489

However, in the first days of January, the Government had to increase certain taxes, in order to find 500 million drachmas for social relief.

NORTHERN EUROPE

DENMARK

DENMARK in 1936 made trade agreements with Belgium, France, Germany, Italy, Norway, Switzerland and Poland. The trade treaty of April 24, 1933, with Great Britain was indefinitely prolonged on June 19, 1936.

The Stauning Cabinet, which has remained in power since April 29, 1929, retained popular support. The Landsting elections of September 22nd gave the Government parties a majority in both Houses.

Employment.—From February 22nd to March 30th, there was a widespread lockout, which caused a heavy decline

of industrial production and a shrinkage of imports. Unemployment has slightly declined during 1936:—

	Percentage Unemployment	Number of Organised Workers	Number of Employed
1934	22.1	369,915	287,794
1935	19.7	386,080	310,022
1936 (approx.) ...	18.7	414,000	337,000

The Budget.—The National Accounts for 1935–36, the Budget for 1936–37, and the proposed Budget for 1937–38, are as follows:—

	Accounts 1935–36	Budget, 1936–37	Proposed Budget, 1937–38
(In million kroner)			
Total revenue (less deficits on state enterprises and crown land)...	418.9	417.9	421.2
(Taxes and duties)	429.6	426.2	432.3
Total expenditure	405.4	416.7	416.0
Hereof, social purposes (old age pensions, etc.)	137.5	141.0	144.3
Furtherance of trade and industry	24.2	31.2	25.8
Defence	47.4	46.6	48.0

It therefore appears that the finances of the State are sound.

Money and Capital Market.—The krone remained pegged to sterling at 22.40. On November 19th the discount rate was raised by $\frac{1}{2}$ per cent. to 4 per cent. The policy of moderate credit contraction, which the Nationalbank commenced in April, 1935, was continued through the whole of 1936. On the other hand, because of the rising prices of imports, the private banks found it necessary to expand their advances to customers. Two new long-term loans, aggregating 40 million kroner, were taken up in Sweden; and one long-term loan of £1½ million was issued in London. In addition, several big loan transactions were carried through smoothly in the inland market.

Agriculture.—While the corn harvest was about 20 per cent. lower than in 1935, the fodder beet crop was higher; the total crop is estimated to be only slightly below that of 1935. The average prices obtained for agricultural produce have been as follows:—

	1935 Kr.	1936 Kr.
Horses, per head	1,066	1,040
Cattle, per head	221	268
Fresh meat, per 100 kg.	71	78
Bacon, per 100 kg.	191	198
Fresh eggs, per 100 score	153	162
Butter in casks, per 100 kg.	202	218

The yield on capital invested in farms is estimated to have improved from 4 per cent. in 1934–35 to 4.6 per cent. in 1935–36.

Foreign Trade.—The estimated total of foreign trade, compared with previous years, is as follows:—

	Total Imports (Million kr.)	Total Exports (Million kr.)	Import Surplus (Million kr.)
1934	1,354	1,235	119
1935	1,330	1,267	63
1936 (estimated figures)	1,484	1,380	104

The value of agricultural exports for the last three years has been as follows:—

	1934 (Million kr.)	1935 (Million kr.)	1936 (Million kr.)
Bacon, meat and other products of slaughteries	448	417	379
Butter, cheese, raw milk	262	288	333
Eggs	83	89	112
Total agricultural exports	874	885	969

The value of agricultural exports was about 10 per cent. higher than in 1935, and only bacon exports ran counter to the general trend. The volume of trade with Great Britain and Germany was as follows:—

	Imports from: (Million kr.)	Exports to: (Million kr.)
1934 :—		
Great Britain	407	740
Germany	288	189
1935 :—		
Great Britain	479	731
Germany	292	206
1936 :—		
Great Britain	542	744
Germany	376	280

The economic situation of Denmark was further improved during the year, but the position of agriculture is not yet satisfactory.

SWEDEN

THE pace of economic expansion in Sweden was accelerated in 1936, and there is now a real boom. Progress became particularly marked during the second part of the year, when industrial production reached the country's full capacity. On the whole, political events on the Continent affected Sweden's economic life very little.

Production and Employment.—Exports rose and domestic consumption increased; as a result, production recorded a further increase in 1936; the general industrial production index (100 = 1935) rose during the year from 103 to 112. The rise was particularly pronounced for the engineering industry, the index for which rose to 118; and it was least marked for the foodstuffs industry, which at the end of 1936 reached an index figure of 109. The iron and steel industry worked at full capacity, and raw materials were scarce during the latter part of the year. For the period January to November, domestic consumption of iron totalled 860,000 tons. The building industry also showed progress, and the total number of dwellings finished during the first nine months of the year was 12,250, compared with 11,730 a year ago. On October 1, 1936, the number of dwellings under construction totalled 6,904, compared with 5,200 at the same date in 1935. The number of unemployed gradually declined from a total of 61,400 in January to 31,000 at the close of the year; the number of unemployed workers, registered by the trade unions, fell from 19 per cent. to 10 per cent. of total organised labour.

Shipping.—Sweden's merchant fleet amounted at the end of 1936 to 1,230 vessels, totalling 1.5 million gross tons. Some five vessels were laid up, aggregating 12,500 tons. Freights rose by December to the level of 1929.

Prices.—During 1936 the general price index of the Board of Trade rose from 118 to 126 (100 = average 1913). The sharpest rise was in the price of raw materials. Nevertheless, the cost of living index remained practically unchanged throughout the year; this cannot, however, last indefinitely, and Government interference will be required to check the rise in prices.

Foreign Trade.—The import surplus was reduced in 1936 to Kr. 114 millions. Total imports during 1936 were valued at Kr. 1,619.4 millions, against Kr. 1,505.4 millions exports; the corresponding values in 1935 were: imports, Kr. 1,476.3 millions, and exports, Kr. 1,297.4 millions. Of the increase of Kr. 208 millions in exports, pulp and paper account for Kr. 34.7 millions, metal for Kr. 31.5 millions, and wooden goods for Kr. 28.5 millions. Though the increase in value of exports was partly due to higher prices, the chief factor was the increase in volume. An export item of special interest was iron ore, of which Sweden exported 11,224,000 tons, against 7,719,000 tons in 1935.

Public Finance and Banking.—Sweden's monetary policy in 1936 did not vary much from that of 1935. The sterling exchange rate remained unchanged at 19.40, and the discount rate of the Bank of Sweden at $2\frac{1}{2}$ per cent. The State debt totalled at the end of 1936 Kr. 2,364 millions, against Kr. 2,380 millions a year ago. State bonds of a nominal value of Kr. 252 millions were called in for redemption, for the purpose of conversion. State revenue showed a substantial increase; estimated current revenue rose to Kr. 977 millions for the financial year 1937–38, compared with Kr. 885 millions for the preceding year. This enabled the Government to propose a Budget balanced at Kr. 1,291.5 millions. The Money Market showed growing easiness throughout the year, and the holdings of the joint stock banks in cash and at the Bank of Sweden rose during the year from Kr. 351 millions to Kr. 464.5 millions; and there was practically no rediscounting at the Bank of Sweden. A net capital export of Kr. 49 millions took place during the year. The marked easiness of money was accentuated during December, when the Skandinaviska Kredit Aktiebolaget redeemed a balance of Kr. 50 millions of registered certificates, and the Swedish Ball Bearing Company returned to its shareholders an amount of Kr. 65 millions. The total deposits of joint stock banks at the end of the year amounted to Kr. 3,833 millions, an increase during the year of Kr. 201 millions. Total advances rose by Kr. 163 millions to a total of Kr. 3,992 millions. This increase is rather insignificant in view of the considerable business expansion which took place during the year, an expansion which to a large extent has been financed out of the companies' own resources. The total foreign assets held by the joint stock banks and the Bank of Sweden (net balance of current accounts, foreign bills and foreign stocks)

further increased, and stood at the end of 1936 at Kr. 878 millions. The total gold reserve of the Bank of Sweden, valued at the old statutory parity, amounted on December 31st to Kr. 529 millions; it increased by Kr. 121 millions during the year.

Stock Exchange.—The Stock Exchange showed during the year an upward trend. During the year the index of listed shares rose from 132.7 to 174.5 (100 = par value), with a corresponding increase in the aggregate stock value from Kr. 2,178.6 millions to Kr. 2,946.2 millions. In spite of prevailing import restrictions on foreign markets, the business of the leading export trades recorded a marked increase. The bond market displayed a rising tendency; the average yield of seven representative Swedish State bonds declined from 3.25 per cent. to 3.03 per cent.

NORWAY

AMONG political events during 1936 the Storting elections were most important. The Labour Party, which had gained in 1933, was checked; the Conservatives gained 6 seats. But, with some rearrangement, the Labour Government remained in power throughout the year.

Finance.—The Budget estimates for 1936–37 showed expenditure and revenue balanced at 481.4 million kroner. The Government introduced a tax of 25 per cent. on all interest derived from bank deposits. Old age pensions were considerably increased.

The Money Market was easy, but showed a firmer tone during the later part of the year, and the bank rate was increased on December 7th from $3\frac{1}{2}$ to 4 per cent. The limit of the right of issue of the Norges Bank was raised by 75 million kroner, the note circulation having risen from 348 million kroner in January to 428.6 million kroner on December 31st. Balances abroad rose from 102.5 to 192 million kroner. Bank deposits fell during the year by nearly 70 million kroner. The Government, municipalities and private concerns negotiated loan conversions during the first half of the year on easy terms. The Krone was pegged to sterling at 19.90 throughout the year.

Foreign Trade.—The official statistics show a considerable expansion of foreign trade.

Kroner (000's omitted)

	1935	1936
Imports	825.4	922.9
Exports	605.1	685.3

Higher prices influenced the figures to a certain extent, but it is noteworthy that this expansion has been possible in spite of trade restrictions. The heavy rise in imports is chiefly due to increased purchases of raw materials, semi-manufactured goods and ships. Employment increased appreciably, and the index of industrial production for November was 131 against 122 in November, 1935.

Shipping.—The chief feature of the year was the appreciation of freights, and the sharp reduction in the amount of laid-up tonnage; the figure fell from 281,600 tons on April 1st to about 25,000 tons on December 1st. Net freights covered the imports surplus of 1936, and left a balance of some 10 million kroner. During the year, the merchant fleet increased by about 268,000 tons and reached a total of 4,201,000 tons. The whaling catch in the Antarctic realised a total of about 1,100,000 barrels, which was practically the same as in 1935. Oil prices rose steadily, especially during the latter half of the year. A dispute between British and Norwegian fishing interests about limiting production for the season 1936–37, was settled by the respective Governments after protracted negotiations. The output of the fisheries was valued at some 70 million kroner against 66.5 millions in 1935; the total quantity landed was 938,000 tons against 818,000 tons in 1935.

Agriculture.—Crops were above the average, and prices continued to rise. Official measures of various kinds helped to improve economic conditions among the peasants. The wholesale price index rose from 134 to 146.5, i.e. by about 10 per cent., and the rise in the cost of living index was less marked.

Operations on the Bourse, especially during the latter half of the year, increased steadily in volume, and prices climbed to new peaks. Whaling and shipping were favourites, but industrial and miscellaneous shares also aroused interest. Bonds failed to attract attention, and prices fell during the first six months, but the tone was brighter during the second half of the year.

FINLAND

THE improvement in international economic conditions was reflected in Finland. After the recession of 1935, there was marked progress in 1936 towards recovery.

Public Finance.—The financial position of the State was sound. More revenue was collected than in 1935, and the estimated yield of taxation was exceeded. In the eleven months, January to November, 1936, the current receipts of the Treasury amounted to about 3,070 million marks, compared with 2,865 millions for the corresponding months in the previous year. The booked value of the Public Debt was slightly reduced by 47 million marks to 3,119 millions, and the service of the Debt decreased in consequence of loans being converted at lower rates of interest.

Prices.—The rise in world prices was chiefly reflected in Finland by a rise in the price of exports and imports. The price index for exports rose from 77 in December, 1935, to 100 in December, 1936, and the price index for imports rose in the same period from 88 to 98 points. The price level for goods in the wholesale trade only began to rise in the autumn and the advance was slight, from 91 in December, 1935, to 95 points in the same month in 1936. The rise in prices did not extend to retail trade.

Industrial Production.—In the principal branches of industry output increased very appreciably, the total production reaching a greater volume than in any previous year. The index for January to September rose 13 points above that of 1935 to 159 (1926 = 100), and was about 30 per cent. higher than during the last period of prosperity. The value of production increased rather more last year because of higher prices, and exceeded the previous record of 1928 by 11 per cent. The increase in output was largest in the timber trade; the value of timber production rose by 53 per cent., and the rise in the value of the output of the paper and pulp industries amounted to 31 per cent. The state of the labour market was satisfactory. No important disputes occurred, and unemployment was practically cured. There was some shortage of labour and wages tended to rise. The price of all kinds of grain rose, and the harvest was valued at a record of 5,800 million marks, compared with 5,100 millions during 1935. Prices for dairy produce were, however, unfavourable.

Foreign Trade.—The volume of foreign trade was a record, but the value fell slightly short of the 1928 figures. The volume of imports rose by 13 per cent., and the value increased by 999 million marks to 6,343 millions. The volume of exports rose by 11 per cent., and their value by 995 millions to 7,215 millions. There was a surplus of exports amounting to 872 million marks, against 896 millions in 1935.

The Money Market.—The Money Market was easy throughout the year; there was an abundant accumulation of capital and a very moderate demand for credit. Rates of interest showed a downward tendency, and the demand for bonds and shares increased.

The credits granted by the joint stock banks fell off by 35 million marks, but their holdings of bonds increased by 415 millions. The credits granted by the Bank of Finland rose by 168 million marks. The cash of the joint stock banks reached a record figure of 850 million marks, against 633 millions a year ago. The net foreign balances of the joint stock banks increased from 182 to 312 million marks. The position of the Bank of Finland improved; its foreign balances grew from 1,267 to 1,492 million marks, and the gold reserve increased from 472 to 603 millions.

LATVIA

RECOVERY continued last year even before devaluation. Foreign trade expanded, and there was a substantial excess of exports, in contrast to the large import surpluses of 1934 and 1933. The State accounts closed in March with a small surplus, the first for some years. The Bank of Latvia's reserves of foreign currency increased appreciably.

The gold standard was maintained until October, when the over-valuation of the currency led the State to intervene in almost every branch of economic activity. Export markets were maintained by increasingly heavy subsidies, often amounting to 100 per cent., or more, of the export price. Even before 1936, the State had acquired a dominating position in industry, agriculture and foreign trade, and it now controls directly or indirectly most of the important sources of production. In banking, through the newly-formed Credit Bank, an institution owned and controlled by the State, the Government has acquired control. A series of decrees gave the Government so much power to

interfere with the remaining private banks, that it is hard to avoid the conclusion that a nationalisation of the banking system is envisaged.

Imports were 122,000,000 lats., against 101,000,000 lats. in 1935, and exports rose to 138,000,000 lats. from 99,000,000 lats. Exports of timber, flax, butter and bacon showed marked increases. Grain crops were below the average, but those of flax and linseed were satisfactory, and that of potatoes excellent.

The note issue (State and Bank of Latvia) rose during the year to 86,000,000 lats. from 81,000,000 lats. Gold holdings were written up from 46,000,000 lats. to 77,000,000 lats. at the time of devaluation; and the foreign currency holdings rose during the year to 24,000,000 lats. from 6,000,000 lats. The Bank rate was reduced by $\frac{1}{2}$ per cent. to 5 per cent. from November 1st. Deposits in State and private banks and credit institutions at the end of September totalled 295,000,000 lats., against 248,000,000 lats. in December, 1935. Wholesale prices were steady until September, but rose by 10 per cent. in October.

It is too soon to say how far the recovery is being stimulated by devaluation. Much depends on whether the Government's policy of intervention is moderated. Of this there are as yet no signs, apart from some reduction of import quotas and restrictions on payments.

LITHUANIA

LITHUANIA succeeded in maintaining the pre-depression parity of its currency without recourse to extreme forms of restriction. A low standard of living has made possible an adjustment to the new conditions, and the improvement in the economic situation continued, and was somewhat accelerated, in 1936. Exports rose appreciably; agricultural interest charges were lowered; and the prices of several important products rose in the world markets. State revenues increased equally with expenditure, the banking position became more liquid, and gold and foreign currency reserves increased substantially.

Imports were 156,000,000 lats. in 1936, against 129,000,000 lats. in 1935, and exports rose to 190,000,000 lats. from 152,000,000 lats., under the stimulus of subsidies and the efficient co-operative marketing organisations. Butter, bacon and flax exports were much higher. The export surplus was 34,000,000 lats., against 23,000,000 lats. in 1935. Invisible exports, especially emigrants' remittances from the U.S.A. (\$1,558,000 in 1935), probably improved substantially. Grain crops were about 20 per cent. lower than in 1935 (a good year), but the flax crop was about the average. The supply of fruit, vegetables and potatoes was satisfactory. Dairy-farming, which is almost as important as agriculture, continued to advance.

The Budget for 1936 was balanced at 284,000,000 lats., a slight increase on 1935. Receipts from January to October totalled 210,000,000 lats., against 193,000,000 lats. in the same period of 1935. An internal loan of 15,000,000 lats. was raised in November to finance additional expenditure in 1937 on armaments.

Gold and devisa at the Bank of Lithuania totalled 79,000,000 lats. at the end of December, against 54,000,000 lats. in 1935, and the note circulation increased to 110,000,000 lats. from 104,000,000 lats. The bank rate was reduced from 6 to $5\frac{1}{2}$ per cent. on July 1st. Total deposits in all banks, including the Bank of Lithuania, were 229,000,000 lats. at the end of October, against 178,000,000 lats. in 1935.

Wholesale prices rose by 12 per cent., and the rise was steepest at the end of the year. There has been a marked advance in exports, and the foreign exchange position has been strengthened. Any further lowering of the standard of living seems to be unnecessary, and the chances of devaluation have been appreciably lessened. An agreement signed in August provides for a recovery of the trade with Germany, which was lost as a result of the Memel dispute.

ESTONIA

THE economic recovery, which began with the abandonment of the gold standard in 1933, spread in 1936 from foreign to domestic trade; and industrial production rose by about 13 per cent. to a record level. Imports, especially of machinery and metals, substantially increased, but exports rose only slightly, because of unfavourable harvests and increased home consumption. There was a small import surplus, in contrast to the export surpluses of previous years. Invisible exports probably increased. Unemployment was negligible, and there was a shortage of

skilled workers. Labour tended to drift from agriculture to industry. Wholesale prices rose by 6 per cent., and the cost of living by 5 per cent. Wages rose sharply. State finance remained sound, and revenue was larger than in 1935.

Imports totalled 87,000,000 kr., against 69,000,000 kr. in 1935; and exports were 83,000,000 kr., against 80,000,000 kr. It is stated that the larger imports were from countries with which Estonia had credit balances under clearing agreements. The yield of rye, barley, oats and mixed corn was considerably below the average, but the wheat harvest was above normal; and there was an excellent harvest of potatoes and hay. Root crops for fodder, and flax, were above the average.

The Budget for 1936-37 was originally balanced at 78,000,000 kr., but an additional 10,000,000 kr. was subsequently allocated to assist agriculture and industry. Revenue from April to October totalled 54,000,000 kr., against 46,000,000 kr. in the same period of 1935. The Government has no short-term debt, and the service of the League Loan was maintained. Note circulation on December 31st was 44,000,000 kr., against 40,000,000 kr. in 1935; and gold and foreign currency reserves were 43,000,000 kr., against 36,000,000 kr. Deposits in the principal private and co-operative banks totalled 89,000,000 kr. at the end of November, against 73,000,000 kr. in 1935, and loans were 93,000,000 kr., against 82,000,000 kr.

In general, there has been an extraordinarily sharp improvement since 1933, but the excess of imports, the shortage of labour and the rise in prices and wages suggest that the encouragement of industry has proceeded far enough and that further expansion of credit should be avoided.

AMERICA

UNITED STATES

THE year 1936 opened with business active and money rates extremely low, but with some apprehension of the continued increase of excess reserves produced by the influx of gold. By the middle of the year, business was even more active, and, with the fourth successive drought, agricultural prices rose sharply. The political campaign had no obvious effect on business, probably because its outcome was never in question. When the year ended, industries producing consumer and household goods were booming, heavy industries were active, and primary commodity prices were advancing excitedly with heavy forward contracting. Labour troubles, conspicuously absent in 1935 and early 1936, became serious in the fourth quarter of the year; a great maritime strike, innumerable "bottle-neck" and "stay-in" strikes, and the prospect of a major strike in the automobile industry.

Legislation.—The legislation of the Second Session of the Seventy-fourth Congress included the Social Security Act, which provided a Federal plan for pensions and State plans for unemployment insurance; the Soil Conservation Act, to replace the sections of the Agricultural Adjustment Act which were invalidated by the Supreme Court; the Undistributed Profits tax, compelling corporations to distribute their earnings; and the Veterans' Bonus. Administrative decisions included the increase of 50 per cent. in the reserve requirements of member banks (August 15th); the Tripartite Monetary Agreement (September 25th); and the announcement that the Stabilisation Fund would buy and retain gold, rather than permit its automatic monetization by the Reserve Banks (December 22nd).

Treasury Finance.—At the end of 1936, the public debt amounted to about \$34,400 million, an increase of \$3,800 millions in the calendar year, compared with an increase of \$2,100 millions in 1935. This total does not include about \$4,700 millions of fully guaranteed securities, or about \$2,600 millions of contingent liabilities; these items have increased only slightly in the past year; of the increase in the Federal debt, about \$2,000 millions is attributable to the Bonus. The Treasury offered four long-term bonds during the year; the issue of March was of 12-15-year bonds at $2\frac{1}{2}$ per cent., that of December of 13-17-year bonds at $2\frac{1}{2}$ per cent. The five-year notes also fell from $1\frac{1}{2}$ per cent. to $1\frac{1}{4}$ per cent. Including Bills, the Treasury brought out 73 issues in all in the course of the year.

Banking.—During the year no open market operations were carried out by the Federal Reserve Banks, but the reserve requirements of the member banks were raised by 50 per cent. During the calendar year, the monetary

gold stock increased by \$1,126 millions to \$11,251 millions, and gold certificates in the Reserve Banks increased by \$1,300 millions to \$8,852 millions. Currency in circulation increased by \$668 millions; and member bank reserve balances by \$985 millions, which was rather less than the increase in gold stock. The retirement of National Bank notes continued; they fell from \$493 millions in November, 1935, to \$320 millions in November, 1936. Silver certificates, however, rose from \$947 millions to \$1,211 millions in the same period. The net increase in currency mostly took the form of Federal Reserve notes.

The reporting member banks, on December 30, 1936, showed a total of loans and investments of \$22,931, an increase of \$2,036 millions (10 per cent.) in the calendar year. Of this increase, \$900 millions was in commercial loans, a similar amount in Government and guaranteed securities, and \$200 millions in "other securities." Reserves with the Reserve Banks increased by \$566 millions, and demand deposits by \$1,684, about 10 per cent. in each case. This year was the first since 1929 to witness an increase in commercial loans.

The Money Market.—Except for Government paper, one could scarcely speak of a Money Market. The discount rate of the New York Reserve Bank has been less than $1\frac{1}{2}$ per cent., and call money was pegged at 1 per cent. in June. Business in commercial paper was nominal; customers' loans in New York City ran at about $2\frac{1}{2}$ per cent., with an increasing demand after the middle of the year.

One of the outstanding facts of the Money Market is the replacement of brokers' loans by short Government paper. The market for call money or brokers' loans shrank to about \$1,000 millions during the depression, and has only slightly increased during the recovery. On the other hand, the Budget deficit has been chiefly financed with short paper, and this has reached a figure roughly equivalent to that of the brokers' loans in the late '20's.

The Capital Market.—The issue market of 1936 could fairly be described as "boiling." In addition to Federal

THE CHASE
NATIONAL BANK

OF THE CITY OF NEW YORK

(Incorporated with Limited Liability under the Laws of the U.S.A.)

HEAD OFFICE:
PINE STREET CORNER OF NASSAU, NEW YORK.

The Bank offers complete facilities for the provision of all banking services and the handling of Anglo-American and foreign business. Current and deposit accounts are invited and consultation with the management is welcomed.

The Chase Banking Organisation has Offices in:
PARIS, HAVANA, SAN JUAN-PORTO RICO, PANAMA,
CRISTOBAL, COLON, HONGKONG, SHANGHAI and TIENTSIN

and Special Representatives in:
BERLIN, ROME and MEXICO CITY

CORRESPONDENTS THROUGHOUT THE WORLD

financing, capital issues (as tabulated by the *Commercial and Financial Chronicle*) amounted to \$6,255 millions, of which \$1,986 millions were described as new capital, and \$4,269 millions as refunding. Of the new capital issues, \$746 millions were for local government. Approximately, \$1,200 millions were new capital for private enterprise (mostly bonds), compared with \$400 millions in 1935; and \$178 millions in 1934. Thus, the market was predominantly, though not exclusively, one of refinancing.

The market in listed obligations was strong throughout the year, except for a minor relapse in April; and the year ended with high prices in the Stock Market. The *Standard Statistics* average of 90 shares rose by about 30 per cent., but the advance was distinctly "selective"; rails and utility equities made little net progress after February, despite an increase in car-loadings, and a rather spectacular increase in electric power consumption.

Commodity Prices.—In the last half of the year, there was a sharp increase in primary commodity prices; Moody's index rose by about 25 per cent. in six months. This movement found little reflection in the wholesale price index of the Bureau of Labour, which rose only from 80.6 (December 28, 1935) to 84.1 (December 26, 1936). The official index of retail food prices showed similar inertia: 82.5 (November 17, 1936) compared with 81.5 (November 19, 1935). Similarly, the official cost-of-living index (quarterly) rose only by 2.1 per cent. from October 15, 1935, to September 15, 1936, when it was 82.4; the lowest figure during the depression was 74.5 (June, 1933).

Industry.—Industrial production stood at 96 in November, 1935, and 114 in November, 1936; the unadjusted (for seasonal) average of the last quarter of 1935 was 97, of the first quarter of 1936, 95; of the second quarter, 104; of the third quarter, 106; and of the final quarter, about 112. In this increase, steel production was conspicuous: the index of steel output for November, 1936, was 138, compared with 96 for November, 1935. Textiles were also remarkably active throughout the year. In addition, there was a great increase in building: the index of residential building was 12 in 1934 and 21 in 1935, while the average for the last half of 1936 was well above 40. Retail trade, measured by the sales of department stores, was between 10 and 15 per cent. above that of 1935.

Agriculture.—Agricultural income (\$7,800 millions, including about \$300 millions of benefit payments) was about 10 per cent. above 1935; it was almost double the income of 1932. It was, however, still below that of 1930, and far below the figure of the '20's. In 1936, the long-sought parity was reached; that is, the index of agricultural prices stood in the same relation to the index of non-agricultural prices as in 1909-14. This was achieved by a considerable reduction of supply, partly because of planned curtailments, more because of the severe drought in early summer. Cotton stocks, which on July 31, 1932, were 13 million bales, were but half that amount on July 31, 1936. The year saw the nullification of the A.A.A., and the passage of the Soil Conservation Act in its place. One important fact should be borne in mind: for four successive years the weather in the West has been unusually dry; and in two of these years (1934 and 1936) this drought was a meteorological phenomenon of great severity. Such a sequence is unusual, if not unprecedented.

Foreign Trade.—For the 11 months ended November, exports rose by almost 10 per cent., from \$2,059 millions in 1935 to \$2,223 millions in 1936; but imports increased still more, from \$1,861 millions to \$2,174 millions. This gives an export surplus of goods of only \$50 millions for the 11 months, one-quarter of the surplus in the same period of 1935, and little more than one-tenth of that in 1934. Net silver imports for the period were \$178 million, compared with \$289 millions in the first 11 months of 1935; this reflected the lower price, and there was perhaps some reduction in volume. Net gold imports were \$1,060 millions, compared with \$1,549. There was therefore an import surplus, including bullion, of about \$1,200 millions in the first 11 months of 1936, compared with about \$1,650 in 1935.

ARGENTINA

The first half of 1936 was marked by trade depression, and exports fell after the drought of the previous year. In July, however, there was a sharp recovery, due to the rise in the price of Argentine products, caused by the drought in the United States. The improvement became steadily more pronounced and continued up to the end of the year.

Foreign Trade.—In market value exports were slightly higher, and imports were appreciably lower than in 1935:—

	1935 (Eleven months)	1936 (Eleven months)
	Pesos	Pesos
Exports	1,443,278,542	1,447,718,126
Imports	1,078,979,523	1,012,384,555
Export surplus ...	364,299,019	435,333,571

Trade between Argentina and her chief customers and suppliers in 1936 was as follows:—

	Argentina Exports to (First eleven months)	Argentina Imports from (First eleven months)
	Market Value Pesos	Tariff Value Pesos
United Kingdom.....	451,927,699	219,041,573
United States	152,764,170	154,150,063
Brazil	95,702,982	49,787,088
Netherlands	89,415,148	29,108,586
Germany	88,392,264	98,742,149
Belgium	86,996,589	67,435,075
France	73,573,143	46,150,982
Italy	30,140,039	55,578,759
Canada	22,708,898	15,573,429
Japan.....	19,599,070	39,068,074

The total figures include 172,017,832 pesos worth of goods shipped for orders, the ultimate destination being yet unknown. Among the chief changes in the distribution of foreign trade are the increase in Japanese purchases and the decrease in Japanese sales. Brazil, which in 1935 held sixth place as a buyer of Argentine goods has now jumped to third place. Italy bought only half as much from Argentina as in 1935, but sold considerably more.

Grain Prices.—In March the Government raised the basic price of maize from 4.40 pesos to 5 pesos per 100 kilos. In December the minimum price of wheat was abolished while that of maize was retained. The Government's decision was due to the great improvement in world prices which had occurred in the preceding months, and to the disappearance of any important wheat and linseed surplus which might weigh upon the market. The basic price of maize was maintained because, as a result of last season's bumper crop, there was an enormous quantity of maize available for shipment; with prospects of another record crop a fall in price remained a possibility. Owing to a strong world demand, however, maize at present is well above the basic price.

Agriculture.—Although some damage was done by a late frost in November and by torrential rains towards the end of the year, the weather in 1936 was very favourable, and prospects for all crops are very good. Owing to a partial crop failure in the United States and Canada, and a strong demand from the consuming countries, cereal and linseed prices are very much higher than a year ago. There has also been a very great improvement in the price of wool. Cattle prices, however, were decidedly weak towards the end of the year.

Exchange.—The official import rate and the free market for the peso remained very steady during the first five months of the year, at about 17 and 18 pesos respectively to the £. In June, however, the free market rate of exchange began to decline rapidly owing to the fall in exports. The fall in the official rate was much less marked. On July 3rd the value of the £ in the free market reached a high-water mark of 18.85 and the official rate touched 17.08 pesos. Thereafter, there was a rapid recovery, due to the rise in cereal prices on the news of the drought and dust storms in the Northern Hemisphere. The improvement in the value of the peso became more pronounced towards the end of the year, and the free market rate became nearly the same as the official rate. On December 9th, the Government reduced the official rate from the then existing level of 17 to 16 pesos to the £. The official buying or export rate of exchange remained at 15 pesos to the £ throughout the year.

Money Market.—Both the borrowing and the lending rates of banks fell appreciably during the year. This is attributed indirectly to the plethora of funds made available by the revaluation of the gold stock in 1935, and the repayment by the Federal Government of its debt to the Banco de la Nación Argentina. Owing, however, to the absence in Argentina of a highly organised money market, banks adjust their rates to suit their own requirements, and there is a wide discrepancy between maximum and minimum rates. In consequence, the money market—if such can be said to exist—is of very much less importance relatively than in the world's leading financial centres. In February the Central Bank fixed the minimum re-discount rate at 3½ per cent., and thereby through the operation of the Banking Law, the maximum rate of interest on Savings Bank deposits was

CHILE

COMMERCIAL conditions in Chile during 1936 continued to be favourable, but present indications are that business activity in general has reached its limit. The level of industrial production in 1936, according to the official index was 4.5 per cent. higher than in 1935. The production of mines (nitrate, copper, iodine, coal, gold, etc.), was maintained at about the same level as in the previous year. The grain harvest was good; but the potato crop was poor. Building activity, both public and private, was carried on with great intensity. Total construction was, however, lower than in 1935.

Foreign Trade.—Exports in 1936 amounted to 562.7 million pesos, against 464.4 millions in 1935, an increase of 21 per cent. Imports increased by 17 per cent. A noteworthy feature was the large increase in imports from Germany. In 1936, imports from Germany amounted to 99.6 million gold pesos, against 60.8 millions in 1935. The United States of America came second with 88 million pesos in 1936 and 82.1 millions in 1935, and Great Britain third with 45.4 million pesos in 1936, against 57.4 millions in 1935. The large increase in Chile's foreign trade with Germany is largely due to the Compensation Treaty with that country, which was recently extended to June 1938. A considerable rise of prices took place in 1936, due to the reaction in the prices of agricultural products and raw materials abroad, and, more especially, to the domestic boom. The index of wholesale prices up to November, 1936, rose by 15 per cent., and the cost of living index increased by 11 per cent.

Exchange Rates.—Since the devaluation of the French franc, the Bank again bases its rates on the U.S. dollar. The export exchange rates, which are controlled by the Exchange Committee, rose somewhat in 1936. The average quotation of the pound sterling was 130 pesos (against 119 in 1935); the dollar 26 pesos (compared with 24.25); the French franc 1.55 pesos (against 1.68) and the reichsmark 7.89 pesos (against 8.10). The depreciation of the peso in the unofficial market was more pronounced; the pound sterling was quoted at one time at approximately 150 pesos. The average rate for sterling in the free market was 138.40 pesos (against 123.15) and for the dollar 27.85 pesos (against 25.10).

Finance.—The Budget for 1937 has recently been approved by Congress, with revenue and expenditure at 1,445.7 million pesos. The surplus of revenue over expenditure for 1936 will probably be sufficient to cover the deficit. This institution has published recently a statement regarding the service on the foreign debt. It received \$1,919,573.90 U.S. in 1936, on account of profits of the Nitrate Sales Corporation and taxes from the copper producing companies. One-half of this amount will be allocated to the payment of interest at the rate of 6.05 per mille on nominal capital. The other half will be allotted to the redemption of bonds to a nominal value of \$15,839,000 U.S., £71,660 and Sw. Fcs. 839,300. After effecting these redemptions, including some extra amortisations, the foreign debt will be reduced to £29,524,582, \$233,607,500 U.S. and Sw. Fcs. 118,637,700.

URUGUAY

URUGUAY is enjoying a period of moderate prosperity. The demand for cattle is steady at prices appreciably above the average of recent years. The Government has carried through a comprehensive plan of financial reform. The fiscal accounts show a surplus, and the arrangements regarding service of the National Debt have been regularly implemented. The new wool clip is meeting with a steady demand at high prices, and by the beginning of January, 1937, over 80 per cent. had already been sold. Business is active, and prices high in the important hides and skins markets.

Through the medium of the State Bank, the Government is utilising the Exchange Fund to maintain stable foreign exchange rates, and meanwhile, owing to the ready disposal of the wool clip, the tendency is for the value of the peso to appreciate. Great Britain heads Uruguayan trade returns on both import and export account. The Exchange Commission is dealing promptly with applications for exchange required for payment of imports received from countries to which quotas have been allotted. Various commercial agreements have been concluded, and the Republic has an export surplus.

reduced to 2½ per cent., and that on sight deposits to ½ per cent. As a result of economic and financial improvement taxation was substantially reduced during the year. The most important change was the raising of the tax-free minimum income from 200 to 400 pesos per mensem, as from the beginning of 1936.

BRAZIL

The past year has been the quietest since 1930, and the new confidence in the Government is clearly shown by the expansion of trade, the decrease in labour trouble and the more general prosperity. The partial loan service, the so-called "Oswaldo Aranha" scheme, and the liquidation of the "frozen credits" have continued normally and punctually. The first part of the electrification scheme, which was contracted with The Metropolitan-Vickers Export Co., is practically finished; trial runs have been made and operation will soon be started. Only one new gold mine of importance has been placed in production; but other concerns have extended operations and opened new mines. The export of iron and manganese ore in the last eleven months of 1936 increased from 99,000 tons to 259,000, compared with the same period of 1935.

Industry.—Industrialisation continues rapidly, and in addition to genuine national industries, a number of American and European (except British) firms are installing branch factories, or assembling plants. British industry is gradually losing what little is left of its market. The largest industrial centre is São Paulo, and the following figures speak eloquently of the pace of development in this State:

	Value of industrial production	Contos
1915	274,000	
1925	1,213,000	
1935	2,919,000	

In 1935 there was 3,188,000 contos invested in 7,840 factories, with 275,000 h.p. installed and employing 213,000 hands.

The principal items of production in 1935 were:

	Contos
Textiles	915,000
Metal and machines	394,000
Clothing	376,000
Chemicals	254,000
Food supplies	220,000
Building material	86,000
Pottery	70,000

Drilling for oil has continued, but so far without any definite result. The State of Bahia is planning to subsidize exploitation of the Marahu oilshale (18 per cent.) deposits, and will probably use German equipment.

Power.—A number of supply companies are increasing their generating capacity to carry the fast increasing load. But, because of the 1934 Water Code, several concerns, which in the past have generated hydro-electric power, and still have great reserves for development, are now going over to oil-burning steam plants. These involve less capital cost for new installation, but the cost of power is higher. Moreover, it is necessary to use the country's surplus exchange to buy foreign fuel.

Foreign Trade.—Both exports and imports show increases in tonnage and value, as the following figures for the first eleven months of the year indicate:

	1935	1936
	1,000 Tons	1,000 Tons
Imports	3,886	3,492
Exports	2,492	3,720
Surplus.....	228	5,089

The export of coffee, which last year accounted for nearly 50 per cent. of total exports, in 1936 was only 40 per cent.; about 1,000,000 bags fewer than last year were exported; but the price obtained was about the same as last year. The value per ton of imports and exports also increased.

Average value per ton				
1935		1936		
	Milreis	£ gold	Milreis	£ gold
Imports	\$876	£6.3	\$925	£6.5
Exports	\$1,492	£12.1	\$1,563	£12.5

The German-Brazilian compensation agreement is still in force. This has an adverse effect on the export trade of Britain and U.S.A. to Brazil.

COLOMBIA

ALTHOUGH there was no outstanding improvement in general conditions during 1936, progress has been made towards economic stability. The country's chief exports are petroleum, coffee, bananas and hides, and these continue to find a ready market at prices reasonably profitable to producers. The country is very rich in natural resources, and is diversifying its products for export. Steady progress is being made in the production of gold, and a new petroleum law has recently been passed designed to attract foreign capital.

The Budget for 1936 was balanced chiefly through increased direct taxation. There was a definite increase in the total value of exports in 1936 over 1935, and this tendency should continue because higher prices are now being obtained for the new coffee crop. The agreement recently reached in Bogota with other American coffee-producing countries is expected to benefit the industry. Because of good coffee sales, there is an ample supply of exchange in the commercial exchange market, which represents about 88 per cent. of export exchange; the remaining 12 per cent. is sold to the Government for official purposes. Reforms to the Constitution last autumn empowered the Government to intervene to a greater extent in industry and commerce; but there appears to be little prospect of actual intervention in private enterprises.

ECUADOR

THE gold reserves of Ecuador declined considerably in the middle of 1936, and in July the Government reimposed control over exchange and imports. The Central Bank became the sole buyer and seller of exchange, and also controls imports by means of permits. Business was very restricted until the machinery of control was prepared, and the issue of foreign exchange for imports has been made slowly. Towards the end of 1936, steps were taken to meet the difficult position in the foreign exchange market. Certain reforms have been introduced to speed up the control organisation; and the Banco Central del Ecuador has contracted in New York a loan of U.S.\$300,000 for a period of three months. This loan, it is stated, will be used to relieve the congestion of goods in the Customs. The authorities now believe that they will be able to provide exchange cover for all import permits issued.

Ecuador stands to benefit by the improvement in the cocoa and coffee markets. Locally, cocoa is in strong demand, and prices have risen. Reports about the Christmas crop of cocoa are satisfactory. The coffee market is active, with prices firm. Negotiations are going on to extend the trade agreement between Germany and Ecuador; and a German loan to Ecuador is expected. The Government is also understood to be negotiating with North American contractors, for the construction of roads in the Republic.

PERU

THE political situation has been somewhat uncertain; and in mid-November, 1936, the term of office of President Benavides was extended for a further period of three years. Certain additional powers were conferred upon the President, and in view of the more prosperous economic conditions, the Government is likely to remain in a strong position. Peru has continued to avoid control of foreign exchange operations. The exchange value of the currency has steadily improved. Mining for copper and other minerals has recently made considerable progress, and the petroleum industry continues to expand.

Peru is a cheap producer of cotton and sugar, and stands to benefit by the recent advance in commodity prices. Reports on the coming cotton crop are generally favourable, and dealings in cotton futures, and in sugar, are active at advancing prices. A trade agreement between Peru and Great Britain was signed in October, 1936, on a "most-favoured-nation" basis. Peru's overseas trade is steadily expanding, although it is believed that the markets are rather overstocked, particularly with cheap German and Japanese goods; this may temporarily affect the import markets and retail prices.

BOLIVIA

AFTER the end of the war with Paraguay, Bolivian military forces were demobilised by easy stages, and the consequent shortage of labour adversely affected the production of tin. The new President refuses to be influenced by those of his supporters who desire an extreme programme of social reform. There is an acute shortage of exchange cover, and levies are being made on individuals and firms, to obtain

foreign currencies. New exchange regulations were issued in mid-November, 1936; imports are subject to very strict control, and the banks have agreed upon a commercial rate of about Bs. 160 per £ sterling. Tin exporters have to hand over 35 per cent. of their export drafts to the Exchange Control, and are paid at the official rate of 50 bolivianos per £.

The cost of living is rising rapidly and some uneasiness is being caused by lack of rain this season. This may seriously affect the crops at lower altitudes, and thus aggravate the already difficult situation caused by the shortage of foodstuffs. Bolivia should eventually benefit, however, by the rise in metal prices. About 25 per cent. of the world production of tin comes from Bolivia; and a new international tin regulating scheme has just been concluded, to last five years.

PARAGUAY

PARAGUAY withstood the financial strain of the Chaco War in a remarkable manner, and the past year was a period of readjustment. The present Government has made every endeavour to restore normal conditions. The revised Moratorium Law of October 1st provided for the further liquidation of outstanding obligations, including blocked commercial debts. The position of the cattle-raising industry is relatively satisfactory, and prospects are encouraging. There has been an influx of fresh capital from abroad, mainly for the cotton-growing industry. The past year saw a welcome recovery in the timber industry, and exports greatly exceeded those of the preceding five years. Foreign markets remained firm, with attractive offers. Business has been checked by the low level of the River Paraguay, but the river is now rising. Cattle and sheep are in good condition, and prospects for the 1937 cotton crop are satisfactory. The market for mild tobacco continues inactive, but shipments of strong tobacco to Argentina have recently expanded considerably. Business is expected to improve in 1937. The progress which has already been made is reflected in the steady appreciation of the Paraguayan peso since November.

VENEZUELA

THE election in December of General Lopez Contreras, as President of Venezuela, was welcomed. Conditions are settling down under the new regime, and there has been some improvement in the commercial situation. Venezuela is fortunate in having no external debt. Exchange control has been so far avoided; but a Decree published at the beginning of December, 1936, which established export premiums on coffee, cattle and other national products, empowered the Government to adopt measures in future to regulate all exchange operations. This may be due to the shortage of exchange in the market; sporadic strikes in the oilfields have interrupted the supply of exchange. The Government, however, possesses considerable gold reserves and has stated its determination not to devalue the currency. The 1935 coffee crop was poor, and the movement of exports slow. This, combined with the foreign currency requirements of political emigrés, was partly responsible for the exchange shortage. The new coffee crop is satisfactory, however, and there is a good demand at higher prices. The new cocoa crop should begin to arrive in January, 1937, and the exchange stringency should then tend to be alleviated.

MEXICO

THERE was serious labour trouble in Mexico in the summer of 1936, but commerce and industry seem to have returned to normal conditions. The paper peso was pegged to the United States dollar, but by a Decree of August, 1936, the silver peso was again made the unit of currency, at 3.60 pesos to the U.S. dollar. Paper peso notes are to be withdrawn from circulation, within six months from August last. The Bank of Mexico has been given greater powers to control the note issue and the foreign exchange. The return to silver should encourage silver mining, which has already been stimulated by the rise in world prices and by the purchases of the United States. The estimated production of petroleum in the first seven months of 1936 was approximately the same as in the same period of 1935. New roads facilitated the movement of goods, particularly of agricultural products. Prospects, however, do not appear favourable for any considerable growth in trade with the United Kingdom. Recent New York reports indicate that negotiations are proceeding for the refunding of the Mexican external debt.

ASIA

JAPAN

IN spite of the military insurrection in February last and its repercussions, the year 1936 in Japan witnessed further economic recovery. Industrial activity was generally well maintained, and production in many lines of the major industries reached highest figures on record. The course of foreign trade was satisfactory, although exports did not quite maintain the preceding year's rate of expansion. The rice crop was exceedingly good after two consecutive lean years, and the agricultural situation improved considerably. Commodity prices rose to the highest level since 1929. The Government continued to finance the Budget deficit by inflationary borrowing, but no marked currency expansion occurred; the money market was quiet; and the exchange value of the yen remained stable. Relations with foreign countries, however, were hardly encouraging. Although the trade war against Australia has just come to a close, negotiations with Egypt and the Dutch East Indies for a new trade agreement have not been reopened since the breakdown in 1934. Possibly offended by the anti-Red pact with Germany, the Soviet Government refused to ratify the new fishery treaty.

Public Finance.—The Budget for 1936-37 estimated expenditure at 2,305.5 million yen against estimated revenue of 1,584.2 million yen, revealing again an appalling large deficit of 721.3 million yen, which is to be met almost entirely by fresh borrowing. Compared with the preceding year, expenditure in 1936 increased by 90.1 million yen, while revenue rose by 177.8 million yen. Relief works and national defence are responsible for the increase in expenditure. The growth in revenue, on the other hand, is mainly accounted for by increased tax revenue and larger receipts from Government undertakings.

The national accounts for the first six months of the current fiscal year ended September 30th disclose revenue amounting to 441,414,000 yen and expenditure of 700,562,000 yen, against 683,862,000 yen and 672,167,000 yen, respectively, for the corresponding period of 1935. The Budget estimates for the next fiscal year show expenditure at 3,038.5 million yen against a revenue of 1,918.2 million yen, with a huge deficit of 1,120.3 million yen, one-third of which is to be covered by fresh taxation and the rest by a new loan. The National Debt rose by 655 million yen to 10,135.7 million yen during the first eleven months of 1936. The following table gives Budget estimates for three fiscal years:—

	(In million yen)	1935-36	1936-37	1937-38
Expenditure		2,215.4	2,305.5	3,038.5
Revenue		1,406.3	1,584.2	1,918.2
Deficit		809.0	721.3	1,120.3

Money and Investment.—Conditions in the money market were on the whole easier in 1936 than in the preceding year. The Bank rate was reduced from 3.65 per cent. to 3.29 per cent. in April. Despite vast Government borrowing the note circulation pursued its normal course, but at a level of some 70 million yen above that of 1935. The yen exchange maintained stability, moving in close sympathy with the sterling exchange. Official quotations for sterling remained unchanged at 14d. throughout the year, and those for the American dollar ranged between 29½c. and 28½c.

The market for new capital was distinctively more active than in 1935, and borrowing was effected at lower rates. The new capital raised in the first eleven months was 6,308,066,000 yen, against 3,270,319,000 yen and 4,520,403,000 yen, respectively, in the corresponding periods of 1935 and 1934.

Production, Profits and Prices.—Production in many lines in both the light and heavy industries was at a higher level in 1936 than in previous years:—

	Jan.-Nov., 1934	Jan.-Nov., 1935	Jan.-Nov., 1936
	Bales	Bales	Bales
Cotton yarn	3,152,076	3,265,660	3,280,800
	(In thousands of square yards)		
Cotton cloth	1,634,167	1,690,515	1,644,662
	Lbs.	Lbs.	Lbs.
Rayon yarn	125,029,000	182,372,000	236,320,000
	Tons	Tons	Tons
Pig iron*	1,685,852	1,823,782	1,869,173
Steel ingots*	1,817,505	2,155,467	2,426,832
Coal	21,490,963	23,223,987	25,109,227

*Output of the Japan Steel Corporation.

Industrial profits have been still on the upgrade. According to Mitsui Gomei Kaisha's half-yearly analysis of joint-stock industrial undertakings, the net earnings of 1,000 companies for the first half-year of 1936 amounted to 422,373,000 yen, compared with 388,631,000 yen and 415,362,000 yen, respectively, in the two halves of 1935.

Commodity prices recovered substantially, the net rise during the twelve months ended November last being a little over 5 per cent. The Bank of Japan's index number for wholesale prices (July, 1914 = 100) was 161.8 for November last, against 154.0 a year ago and 144.0 two years ago.

Agriculture.—The wheat, rye and barley crops suffered from adverse weather conditions, and their yields were far below normal. The cocoon crop also was rather poor. The rice crop, on the other hand, did exceptionally well, the weather having turned favourable towards the end of the summer. The year's crops in comparison with the preceding two years are as follows:—

	1934 Koku	1935 Koku	1936 Koku
Rice	51,840,182	57,456,976	66,386,980
Wheat and allied grains	22,408,110	23,571,153	21,155,826
	Kamme	Kamme	Kamme
Cocoon	87,139,796	82,066,053	79,679,614

Farmers' gross income from the above three staple products in 1936 is estimated at 1,589 million yen, against 1,383 million yen in 1935 and 1,099 million yen in 1934.

Foreign Trade.—For the first eleven months of the year the total value of imports was 2,479,165,000 yen and of exports 2,396,258,000 yen. Compared with the corresponding period of 1935, imports and exports increased in value by 253,467,000 yen, or 11½ per cent., and 119,981,000 yen, or 5½ per cent. The import surplus was 82,907,000 yen, against an export surplus of 50,579,000 yen in 1935. The following table gives figures for the first eleven months of each of the past three years:—

	(000's omitted)	Imports Yen	Exports Yen	Import (—) or Export (+) surplus Yen
1934		2,030,029	1,962,806	— 67,223
1935		2,225,698	2,276,277	+ 50,579
1936		2,479,165	2,396,258	— 82,907

The increase in imports is mainly accounted for by raw materials, while the expansion in exports covers the whole list, with the possible exception of textile goods. The movements of a representative list of staple commodities are given below:—

	(000's omitted)	First eleven months of 1934 Yen	1935 Yen	1936 Yen
Imports:—				
Raw cotton		639,843	637,027	744,611
Raw wool		169,304	161,831	189,232
Iron and steel		148,702	195,023	171,310
Non-ferrous metals		70,020	90,074	94,314
Crude petroleum		73,547	98,240	116,784
Crude rubber		53,291	45,877	69,697
Machinery and parts		89,623	98,138	84,336
Exports:—				
Raw silk		260,958	344,080	336,928
Cotton piece goods		445,205	459,069	432,823
Rayon piece goods		101,122	117,339	133,029
Silk piece goods		70,217	71,793	61,568
Machinery and parts		51,757	57,772	72,640
Iron and steel		48,808	58,819	68,562
Tinned and bottled provisions		42,774	46,055	66,528

There was a considerable change in the distribution of trade. Japanese sales to British India, Dutch East Indies and Egypt decreased markedly, while purchases from the "new market" countries increased heavily, owing in many cases to bilateral trade agreements.

TURKEY

THE year 1936 witnessed a further improvement of Turkey's economic situation, due partly to exceptional factors.

Foreign Trade.—The persistence of an export surplus remained the dominant feature of Turkish trade. The German demand for raw materials largely contributed to making this possible. In the case of a number of staple exports, however, Turkish prices are still ten to thirty per cent. higher than international quotations. Exact figures for 1936 are not yet available, but the share taken by Germany is roughly estimated at over one-half of Turkey's total foreign trade. Given the system of clearing accounts, it was natural that because they were unable to purchase from Turkey, countries like France, Holland, and Belgium

could not sell to her. There has been much resort to "compensation agreements"; the Turkish importer pays the Turkish exporter a premium representing the difference between the national and the international price.

Industry.—An attempt was made to cut down the cost of living. The prices of manufactures, and of services rendered by the State, were substantially reduced; this experiment has proved satisfactory. The State also made use of foreign competition to reduce the selling price of nationally produced articles. At the same time, the Government continued to develop industries and mines, but withdrew its support from small private undertakings, and announced its determination to reorganise agriculture. It is intended that the peasant should pay less for the goods he consumes, produce at less cost, and therefore be able to offer his goods at a lower price.

Agriculture.—The harvest was disappointing. For a time it was even feared that the heavy foreign demand for Turkish cereals might cause a shortage of supplies for home consumption. But the fruit crop and the cotton crop were very good. The most striking features in last year's agricultural policy were the large irrigation scheme and the decision to create one thousand agricultural "combines." Each of these "combines" will comprise a few villages, with collectively owned irrigation works and up-to-date heavy agricultural equipment, which the individual peasant could not afford to buy. The initial capital will be advanced by the State. Moreover, there is likely to be a redistribution of land, which will give the Turkish peasant and his family enough land to live on.

Finance.—The yield of taxation for the fiscal year ended May, 1936, was TL. 235,266,000, against TL. 209,921,000 in 1934-5, and TL. 173,514,000 in 1933-4. Reports about the subsequent months are even more encouraging. This improvement is attributed to better economic conditions and to the reorganisation of the system of tax collection.

Currency.—Although the Turkish lira had for several years been linked to the French franc, the Turkish Government refused to "align" her currency: the rate has been kept at its established value, viz., 12.03 pre "alignement" francs, about 618 piastres for one pound sterling. The devaluation of a number of foreign currencies gave Turkey an unexpected profit on the very important sums in such currencies awaiting transfer in various clearing accounts. That part of the Turkish note circulation which is not backed by gold, and which the Kemalist regime inherited from the Ottoman Empire, continues to be gradually redeemed, as set down in the Turkish currency Bill. The surplus of notes in circulation is entirely backed by gold or by foreign exchange, which gives the total circulation a gold backing, which, until recently, was steadily increasing.

CHINA

APART from temporary set-backs caused by the Kwangsi revolt and the recent Sianfu incident, China has made steady progress during 1936, both politically and economically. At the end of the year, the Central Government seemed stronger than any previous regime since the foundation of the Republic, and Generalissimo Chiang Kai-shek has gained the support of all the best elements in the country. Japan continues, however, to be a constant menace to the territorial integrity of China.

Trade.—Reports show a general improvement in trade; due to bumper crops and mineral developments and to the stability of the exchange.

The following table shows comparative figures for the first ten months:—

	JANUARY-OCTOBER 1935	1936
Net imports	\$781,550,000	\$766,579,000
Net exports	445,000,000	566,698,000
Excess of imports ...	\$336,550,000	\$199,881,000

There were considerable decreases in the imports of cotton piece goods, cereals and flour, sugar and timber. Imports of metals and ores, woollen manufactures, vehicles and sundries were all higher than in 1935. In exports the principal increases over 1935 were in animals and animal products, hides, leather and skins, oil, tallow and wax, and textile fibres. The reduction in the import surplus is encouraging. On the other hand, the disposition of provincial administrations to interfere with trade is unfortunate. Wood oil and tea are two products which have hitherto been important items of trade between native cultivators and world markets, carried by foreign exporters; they are now controlled by monopolies, ostensibly official, but actually in the hands of privileged parties. Wolfram and other minerals are also subject to monopolistic restrictions,

while the Kwangtung Government is heavily committed to various industrial enterprises, which are protected from private competition.

Customs Revenue.—The total revenue collected was \$324,583,000, compared with \$315,519,000 in 1935. The North Eastern ports, notably Tientsin, showed substantial decreases. On the other hand, Canton, with \$11 millions, and Kowloon with \$9 millions, showed increases of \$1½ and \$1¼ millions respectively. Foreign loans secured on Customs revenue were met in full, at a cost of \$76½ millions, compared with \$66,400,000 in 1935.

Budget.—Estimated revenue totals \$990 millions, an increase of \$32 millions over 1935-6. On the expenditure side, the items "Military, \$322 millions" and "Education, \$44 millions" show a regrettable disparity. The introduction of the income tax has yet to be put into effect.

Communications.—The principal event in railway development during 1936 has been the completion of the line between Canton and Hankow. No regular service has yet been instituted, owing to the line being largely under military control. Arrangements are now being made to build a short line, connecting the terminus of the Canton-Hankow Railway with that of the Canton-Kowloon Railway, thus providing the one missing link of railway line between Kowloon and Calais. A branch of the Canton-Hankow Railway is contemplated to give through connection between Canton and Shanghai.

Aviation continues to make strides, and there are now four regular services between Shanghai and other important centres of the country. During the past year, Hongkong was included as a port of call for the air service between Shanghai and Canton.

Political.—Considerable progress was made during 1936 towards the unification of China. The chief obstacle to the work of Chiang Kai-shek has been the intransigence of the two Kwang provinces. His policy of winning over one province after another led to the revolt in Kwangsi during the summer. The Generalissimo managed to bring Kwangsi into line with the rest of the country, although the terms he laid down have not been strictly adhered to.

The treachery of the Young Marshal in December was a severe shock to the Central Government, but it revealed widespread support for Chiang Kai-shek, who is now clearly a national hero. Although Marshal Chang Hseub Liang has been pardoned for his outrageous conduct, there is considerable speculation as to what will emerge from the situation in Shensi and Kansu. It may well be that the Sianfu incident is the forerunner to a struggle between Communist and Fascist World Powers for China as an ally.

Currency.—When China finally abandoned the silver standard in November, 1935, there was much doubt as to whether the Nanking Government was capable of keeping a managed currency under control. Confidence in the currency is, however, growing. Certain provinces, notably Kwangtung and Kwangsi, have not yet adopted the national currency; but the Central Government is determined to make its standard effective throughout the country.

BRITISH EMPIRE CANADA

RECOVERY continued in 1936. The trend of the economic index was steadily upward and, beginning the year at 100.1 (base 1926=100), it reached 116.6 in December. This marked advance was recorded in spite of another disappointing wheat crop, which was estimated at only 229½ million bushels. There was, however, a sharp rise in grain prices during the second half of the year. As the prices of other farm products also rose, the provisional estimate of the gross value of the principal field crops is \$594,139,000, which is an increase of 85 million dollars over the figure for 1935 and the highest figure since 1930.

Industry.—The fishing industry is still handicapped by low prices. The mining industry enjoyed a real boom; the value of the aggregate production for 1936 was \$360,500,000, a gain of 15 per cent. over 1935. The lumber industry also fared well; and for the depressed newsprint industry a "buyers' market" was gradually transformed into a "sellers' market"; at present there is actually a shortage of newsprint. The expansion of rural and urban purchasing power benefited the manufacturing industries, which were able to operate at a satisfactory and profitable level. Costs of production are, however, rising, and prices advanced steadily in the last quarter of 1936. The Bureau's index of wholesale prices, which stood at 72.7 in December, 1935, rose to 79.7 in December, 1936. There was no parallel rise in the cost-of-living index.

Employment.—There was an improvement in employment during the year; the Bureau's employment index, which stood at 99.1 in January, 1936 (base 1926=100), rose by December 1st to 110.1, a gain of more than 11 per cent. Unfortunately, the absorption of the unemployed in the labour market did not keep pace with the increase in production. A recent report of the Canadian Welfare Council asserted that at the end of 1936 there were just as many people on public relief as twelve months before. The building industry lagged behind, and special efforts are being made to stimulate it by housing schemes.

Foreign Trade.—There was an encouraging expansion of Canada's foreign trade. The aggregate value was \$1,663,000,000, compared with \$1,389,000,000 in 1935. Exports were valued at \$1,028,000,000, and there was an export surplus of 393 million dollars. The new trade agreement with the United States was in operation throughout the whole year, and produced valuable benefits for lumbermen, dairymen and other Canadian producers. Canada's exports to the United Kingdom rose more than her imports from the United Kingdom. The King Ministry continues to try to enlarge Canada's foreign markets, and was able last autumn to conclude a new agreement with Germany, virtually on a barter basis.

Finance.—The Federal revenues expanded and, as expenditure fell slightly, there was an improvement of nearly 60 million dollars in the Budget position on December 31st. The problem of the debt burdens of the three prairie Provinces is still causing anxiety, and there was great resentment in financial circles about the drastic debt-cutting legislation, passed by the Provincial Ministry of Alberta. There has been some improvement in the earnings of both the railway systems during the past year, but no progress can be recorded towards a settlement of the problem created by their competitive overlapping of services. The banks had a good year and money remained cheap; the Federal Government was able to borrow short-term money on Treasury notes at rates below .75 per cent. Throughout the latter part of the year the stock markets were very active.

AUSTRALIA

DURING the financial year ended June 30, 1936, the general economic situation in Australia showed very marked improvement. The prices received for exports of most primary products rose considerably above the level of the previous year, the rise being especially marked in the case of wool. Weather conditions were on the whole favourable, and agricultural production was well maintained; and exports rose considerably in value.

Industry and Agriculture.—Increased activity in secondary industries resulted in much re-employment of factory workers, and contributed to the general improvement in purchasing power. The percentage of trade union members unemployed fell from 17.8 in June, 1935, to 12.8 in June, 1936. The wool clip totalled 1,000,000,000 lbs. in the 1935-36 season, compared with 1,015,000,000 lbs. in 1934-35. The value of wool per lb. averaged in 1935-36 1s. 2.8d. for greasy and 1s. 7.6d. for scoured, compared with 0s. 10.5d. and 1s. 4.6d., respectively for the previous year. The current season's clip is expected to be 1,000 million lbs. The area under wheat for the 1935-36 season was 11,924,000 acres, compared with 12,544,000 acres last year, and the yield was estimated at 142,597,000 bushels in 1935-36, compared with 133,393,000 in the previous year. The acreage under wheat in the current season is estimated at 12,400,000. The average export price of wheat rose from 3s. 0.7d. per bushel in 1934-35 to 3s. 7.7d. in 1935-36.

Gold production has become very much more important in recent years; the value of gold produced rose from £1,872,000 in 1929-30 to £7,363,000 in 1934-35 and £9,149,000 in 1935-36 (Australian currency). Three quarters of the total comes from the mines of the State of Western Australia.

Overseas Trade.—Imports of merchandise for the year 1935-36 amounted in sterling to £83,581,000, for which the recorded values in Australian currency were £A.104,686,000, an increase of £A.13,979,000 over last year. The principal groups of imports for which increases were recorded were: Machines and machinery, £3 million sterling, and motor-car chassis and parts, £1,600,000 sterling. Exports of merchandise were £97,408,000 sterling (£A.122,003,000) in 1935-36, an increase of £A.19,474,000 over the previous year; exports of bullion and specie amounted to £10,425,000 sterling, an increase during the year of £2,060,000 sterling.

There was an import surplus of £13,826,000 sterling, compared with £9,438,000 last year; and the excess of exports of bullion and specie was £8,694,000 sterling, compared with £8,666,000 in 1934-35.

Exports	1934-35		1935-36		Per cent. exported to Great Britain 1935-36
	Quantities	Values (a)	Quantities	Values (a)	
	Lbs. Mn.	£'000	Lbs. Mn.	£'000	%
Wool, greasy	786	34,208	751	46,168	32.5
Wool, scoured	72	5,047	74	6,135	44.7
Wheat	4,557	11,612	4,619	14,108	45.2
Flour	1,398	4,607	1,241	4,545	21.1
Butter	232	9,586	213	9,027	92.6
Frozen beef	212	2,547	197	2,481	87.0
Frozen mutton and lamb ..	196	4,475	178	4,465	98.0

(a) Recorded values, Australian currency.

Finance.—The accounts for the Commonwealth and States for the year ended June 30, 1936, were as follows:—

State	Revenue	Ordinary Expenditure	Net Loan Expenditure	Gross Public Debt.
		(Value in £'000)		
New South Wales	46,518	48,213	7,657	346,576
Victoria	26,043	26,158	3,880	175,058
Queensland	15,488	16,230	4,219	122,636
South Australia	11,409	11,260	1,661	105,688
Western Australia	10,033	9,945	2,464	90,344
Tasmania	3,117	3,247	100	24,418
Six States	112,612	115,055	19,981	864,731
Commonwealth	82,203	78,635	683	391,039
Total	194,815	193,690	20,624	1,255,770

The Consolidated Revenue Accounts of the Commonwealth showed a surplus of £3,568,000 for the year 1935-36. The estimates for 1936-37 show a balance of receipts over ordinary expenditure of £45,000, after providing for reductions in taxation amounting to £5,275,000 in a full year. The principal reductions in taxation are as follows: Sales tax, £300,000, the rate being reduced from 5 per cent. to 4 per cent.; primage duty, £170,000, and income tax, £2,105,000; the special profits tax is abolished, and the normal rates of income tax on individuals are lowered by 10 per cent.

The loans issued by the Loan Council, on behalf of the Commonwealth and States, during the financial year 1935-36 were as follows:—

(1) London (Conversions):—		£'000
July, 1935	3%	13,469
January, 1936	3%	21,657
(2) Australia:—		
November, 1935	3½%	7,963
January, 1936 (conversion)	3½%	2,393
June, 1936	3½%	9,018
State (over the counter)	...	3,382

The total Public Debt (Commonwealth and States) per head of the population was £185 2s. 10d. on June 30, 1936, compared with £184 14s. 5d. in 1935.

NEW ZEALAND

The progress of recovery, which began about 1933, has been accelerated during 1936, and the year closes with business approaching again the levels of 1928 and 1929. The chief stimulant has been the marked increase in export receipts, particularly for wool, during the 1935-36 season. Increased expenditure on public works and the restoration of wage-cuts made during the depression have helped to increase demand, and the higher level of internal business activity has increased the flow of imports.

External Trade.—External trade returns, for years ending with September in 1929 and in the last four years, are as follows:—

Year ending September 30th	£ millions		In Sterling	
	In N.Z. Currency	Exports	Imports	Exports
1929	56.20	44.10	56.20	44.10
1933	39.77	25.34	32.71	20.97
1934	49.34	28.97	39.51	23.20
1935	43.36	35.39	34.80	28.39
1936	56.69	41.67	45.53	33.47

Expressed in domestic currency, exports are now greater than in 1929, and only slightly less than the highest figure ever reached, £57.1m. in 1924-25. Imports have increased steadily by about £N.Z.500,000 a month during the past year. As the 1936-37 season's wool sales have opened with prices 50 to 70 per cent. higher than a year ago, it appears

that both exports and imports are likely to expand considerably during the next few months.

Comparing the export seasons ending with June, butter exported in 1935-36 increased by 211,000 cwt. over 1934-35, while cheese exported declined by 239,000 cwt. Beef exports remained unchanged; lamb decreased by 400,000 cwt., and mutton by 155,000 cwt.; pork increased slightly; and wool increased from 583,000 to 918,000 bales, including a considerable carry-over from previous seasons. Great Britain retains her high proportion of the external trade. For the ten months to October, 80 per cent. of the exports were shipped to Britain, some of which were re-exported; and 49½ per cent. of the imports came from Britain. Increased imports of foreign motor vehicles and motor spirit account for a slight fall in the proportion of imports from Britain.

Internal Conditions.—The expansion in internal trade is indicated by increases of 25 per cent. in the yield of sales tax, and of 18 per cent. in total bank debits between the September quarters of 1935 and 1936. Retail trade has been stimulated by increased wage payments, following upon the restoration of pre-depression wage rates, and by heavy expenditure on public works, as well as by the increased expenditure from export income. A useful indication of the expansion is given by the total note circulation, which fell below £N.Z.6m. during the depression and averaged nearly £N.Z.8m. for November, 1936. The total number of registered unemployed has fallen slightly, from 39,681 to 39,056, during the past year, but the total assisted from the unemployment fund has declined from 54,481 to 46,140. An additional 6,000, however, are employed in public works.

Banking and Finance.—Trading bank deposits for September were £N.Z.60.64m. in 1935 and £N.Z.62.74m. in 1936, but Government deposits at the Reserve Bank fell from £N.Z.9.2m. to £N.Z.6.73m. over the same year. Trading bank advances also fell slightly, but increased towards the end of the year, reaching nearly £N.Z.48m. in November. The Reserve Bank, which now makes advances against dairy produce exported under the Government marketing scheme, had advanced £N.Z.5.10m. to the Government on November 23rd, all but £N.Z.700,000 against dairy produce. Although exports for the year exceeded imports by £N.Z.15m., about £N.Z.5m. more than is normally required to meet payments for interest, etc., due abroad, net bank funds held overseas declined from £N.Z.34.97m. at the end of October, 1935, to £N.Z.31.45m. at the same date in 1936.

The Budget for 1936 showed a surplus of £N.Z.280,000; revenue was £N.Z.26.17m. and expenditure was £N.Z.25.89m. For 1936-37, revenue, including £N.Z.4.47 increased taxation, is estimated to reach £N.Z.31.07m. and expenditure £N.Z.31.05m. The first half-year's returns show increases in both revenue and expenditure, and the Government is confident that expansion in business and in the sources of taxation will expand revenue, and enable the budget to be balanced comfortably.

SOUTH AFRICA

At the time of writing, final official figures for 1936 are not available; but there is abundant evidence that in every phase of public and private progress, 1936 will easily eclipse every previous period in South Africa's development. Fundamentally, the gold mining industry is responsible; it has continued the uninterrupted series of new records, in almost every aspect of its achievements, which began with the country's departure from the gold standard. With the intense activity marking its expansion far beyond its former eastern and western boundaries, this prosperity, both for the Rand and the country, will continue for many years.

Gold-Mining.—The position of the gold mining industry may be seen from the following figures for the last two years, corresponding figures for 1932 (with gold at standard value), being added for comparison under old and new conditions:—

Witwatersrand gold mines results			
	1932	1935	1936
Tons milled	34,906,450	44,234,650	48,221,120
Gold won (fine oz.) ..	11,378,064	10,564,904	11,117,327
Do. (dwts. per ton) ..	6,481	4,729	4,569
Working revenue	£48,985,740	£75,048,000	£77,227,893
Do. (per ton)	27/1	33/7	32/-
Working costs	£32,755,157	£41,773,656	£45,317,911
Do. (per ton)	19/-	18/11	18/9
Working profit	£13,770,296	£32,426,015	£31,909,982
State's share	£4,312,500	£14,378,000 (unavailable)	
Dividends	£8,378,995	£16,391,166	£17,237,216

Since South Africa's departure from the gold standard, the Union Government has received directly from the gold

mining companies operating on the Witwatersrand no less than £42,830,000 (excluding contributions in respect of the year 1936, which are not yet computable, but will certainly maintain the average of the preceding three years. The State's revenue from the mining industry in the year 1932 amounted to only £4,312,500; so that it will be apparent that the departure from the gold standard has resulted in an increase in the State's revenue therefrom of not less than £10 millions per annum.

The Budget.—This contribution has eased the task of the Minister of Finance: it immediately wiped out deficits and has since been reflected in an all-round amelioration of economic and social conditions. As an outstanding example, there is the prospect of a Budget surplus in March of more than £4,000,000, while the Railways Administration has an assured surplus of £2,000,000, although against this the recent reduction in rail rates on petrol has already absorbed rather more than half the expected surplus. But there will still remain approximately £750,000 for other forms of relief.

Banking Business.—Bank returns for the year are not yet available, but the clearances for November alone are significant. In that month the Johannesburg clearances were just under £53 millions, reflecting an increase on those of November, 1935, of nearly £12,500,000. Figures for other centres show a similar improvement. All building records for Johannesburg will again be broken for the year. The value of plans passed up to the end of November was just short of £9,000,000 and the December figures will bring the year's total to approximately £10 millions, an increase of over £3,000,000 compared with the 1935 figure which established a new record. The value of new buildings erected in the first year of the "boom" was well below £2,000,000. The city's population, according to the census completed during the year, now exceeds 500,000, having doubled within the last five years. This growth has, of course, called for a corresponding development of municipal amenities.

Foreign Trade.—According to official statistics just issued, South Africa eclipsed all records of exports and imports for last year; the figures for the last two years are:

	1935	1936
Exports	£102,252,699	£114,012,320
Imports	£75,141,633	£86,050,000

The imports figure is the highest in the history of the Union and exceeds the previous record of 1929 by £2,594,831. The country's combined exports and imports aggregated over £200 million for the first time. Gold bullion exports reached a total of £81,801,421 last year, an increase of nearly £10 million over 1935. Diamonds reached a total export value of £3,200,726, an increase of £395,556. Wool exports were extremely buoyant, attaining a value of £9,826,966, compared with £9,509,060 in 1935. On the other hand, it was a bad year for maize, the exports of which were only £55,668, compared with the previous year's £1,557,732. Import duties last year reached the record figure of £12,035,959, compared with £10,859,726 in 1935, an advance of over £1,000,000, in spite of substantial Customs concessions made by the Minister of Finance.

New Companies.—All records of company registration in the Union have been eclipsed. The year has been one of unprecedented activity. The monthly registrations reached a peak in December, with a total of 170 new companies for the month, and about 1,520 for the year; the previous record, for 1935, being 1,200 registrations. The total nominal capital of the companies registered during the year will be something in the neighbourhood of £25 millions.

Although only applicable to part of the year 1936, the report of the Commissioner for Inland Revenue for the financial year 1935-36 furnishes some interesting figures of individual prosperity. There were in that year 3,275 persons and 233 companies liable for supertax. In this category there were 987 persons with incomes between £2,501 and £3,000; 238 with incomes £5,000 and £6,000, 37 between £9,000 and £10,000 and 36 returned incomes over £20,000. The amount of "super-taxable" individual incomes totalled £15,912,263, and of companies £2,475,937.

INDIA

INDIA continued to make steady economic progress in 1936. Two of the outstanding events of the year were the inauguration of the two new Provinces of Orissa and Sind in April, and in the same month the installation as Viceroy of Lord Linlithgow. In May the Secretary of State accepted Sir Otto Niemeyer's report on the financial prospects of the new Constitution, and proposed the inauguration of provincial autonomy on April 1, 1937. In July Indo-Japanese trade negotiations began. In September a panel

of advisers was appointed to examine plans for a fresh trade agreement with Britain to replace the Ottawa Agreement, which the Assembly requested the Government to denounce.

The 1936-37 Budget.—Introducing the Budget Sir James Grigg said that it was expected that the current year about to expire would close with a surplus of Rs. 242 lakhs. For 1936-37 the total figure for revenue was Rs. 8,735 lakhs. The total figure for expenditure was Rs. 8,530 lakhs, an increase of Rs. 120 lakhs. A surplus of revenue over expenditure of Rs. 205 lakhs was envisaged. With effect from April 1, 1936, the remaining tax on incomes below Rs. 2,000 has been abolished, and the surcharges on income tax and super-tax on higher incomes have been reduced from one-sixth to one-twelfth. The net cost of these measures is estimated at Rs. 185 lakhs. The additional import duty on foreign salt was also continued for another two years, subject to a reduction of the rate from 2½ to 1½ annas per maund.

PRINCIPAL HEADS OF REVENUE (In crores, lakhs, and thousands of rupees)				
	Accounts, 1934-35	Revised Estimate, 1935-36	Budget Estimate, 1936-37

Money Market.—In May a 2½ per cent. loan of twelve crores was issued. The bank rate remained at three per cent. throughout the year. During the latter half of the year, and particularly during the last quarter, there was a big spate of new issues. This was partly due to the plethora of money available, but also to the desire of some promoters to escape the greater restrictions imposed by the new Companies Act, which is due to come into force early in 1937.

Foreign Trade.—The total value of imports into India advanced from Rs. 1,32 crores in 1934-35 to Rs. 1,34 crores, while exports, including re-exports, advanced by Rs. 9 crores from Rs. 1,55 crores to Rs. 1,64 crores. The import surplus of merchandise and treasure in 1935-36 was Rs. 67 crores, compared with Rs. 76 crores in 1934-35. The transactions in treasure on private account resulted in a net export of treasure amounting to Rs. 36½ crores, against Rs. 52½ crores in the preceding year. Net exports of gold amounted to Rs. 37½ crores, while silver showed a net import of Rs. 1½ crores. Imports of cotton manufactures of all kinds showed a decline of Rs. 72 lakhs in value. Imports of cotton piece-goods declined by Rs. 1,15 lakhs, but the loss was partly made up by larger imports of cotton twist and yarn. The total quantity of piece-goods imported, however, actually increased from 944 million yards to 947 million yards.

CHIEF EXPORTS (In crores, lakhs, and thousands of rupees)			Percentage of Total Exports of merchandise in 1935-36
	1935-36		
Cotton, raw and waste	34,47,03	21.47

Germany	10.6	5.9
Japan	9.1	13.4
United States of America	8.7	10.1

It will be seen that Great Britain has lost a large part of her share in the Indian market during the last twenty years.

IRISH FREE STATE

THE Census of Population taken in April reveals that the population of the Free State has fallen from 2,971,992 in 1926 to 2,965,854. In view of the cessation of emigration to the United States, this result was rather unexpected. In recent years emigration to Great Britain has grown to large proportions, and this movement may be expected to continue because of the growing British demand for labour. The Census further shows that the population of the rural areas fell by 4.8 per cent. in ten years, while the population of the towns increased by 9.7 per cent. These figures reflect the agricultural depression, and the growing industrialisation of the country. The population of Dublin increased by no less than 15.7 per cent.

Agriculture.—The existence of a "flight from the land" is disappointing, in view of the numerous measures that have been taken to encourage intensive cultivation and rural employment. Large sums have been devoted to increasing the cultivation of tillage crops, but the increase in the area tilled has been negligible. It is becoming more and more apparent that the prosperity of Irish agriculture depends upon the profitability of live stock and live stock products, and that these articles must be produced for export on a large scale. The renewal of the so-called "coal-cattle pact" with Great Britain helped to stimulate the cattle trade, but exports still remain at a very much lower level than they reached in 1931 before the outbreak of the "economic war."

Foreign Trade.—The improvement in the quantity and in the price of agricultural exports, particularly of cattle and sheep, is reflected in the statistics of external trade:—

Year ended	Imports	Exports	Balance
December, 1935	37,347,860	19,920,062	17,427,798
December, 1936	39,915,652	22,523,365	17,392,287

The magnitude of the credit balance on the invisible account cannot be estimated with statistical accuracy, but it is generally believed to be sufficient to outweigh the visible passive balance. This opinion is supported by the figures published by the Currency Commission, showing the excess of sterling assets over sterling liabilities held by the Irish banks, which increased from £69,982,000 in the September quarter of 1935 to £71,970,000 in the corresponding quarter last year. These figures suggest that the Free State was a creditor on the total external payments account, and disprove the allegation that its external assets are being dissipated.

Industry.—The industrial protective policy was intensified during the year, with undoubted effects on the volume of

investment and employment. In the absence of official statistics, it is impossible to state precisely the quantitative results of the industrial drive, but it is obvious that many new industries have been established behind the Tariff. Criticism is not lacking of the quality and price of the articles produced, and of the quality of the employment afforded by these new concerns. An elaborate code of industrial regulation has been instituted under the Conditions of Employment Act, which provides for maximum working hours, holidays with pay, and other amenities for workers. In the absence of machinery to stimulate the efficiency of labour, these desirable provisions operate to raise costs of production to a point where the possibility of developing an export trade in industrial products is definitely excluded; and prices in the home markets have been increased to the detriment of the non-industrial sections of the community in particular. The farmers' costs of production are also raised by the policy of decentralising the new industries with the object of providing employment in the rural areas.

Public Expenditure.—The volume of industrial activity generated by the protective policy is probably considerably less than that resulting directly and indirectly from public expenditure. A very extensive housing programme is being pursued, and other public works are being undertaken. It is estimated that the total expenditure of public authorities during the year amounted to £44,000,000. A large part of this expenditure was financed by borrowing, and possibly the most disquieting feature of the economic life of the Free State is the rapid increase in the public debt, much of which must be regarded as unproductive, however it may be described in the public accounts. It is understood that this problem will be dealt with at length in the forthcoming report of the Banking Commission.

NORTHERN IRELAND

THE year 1936 in Northern Ireland was one of steadily improving prosperity. Conditions in agriculture showed a definite improvement in practically all directions. The potato crop during 1935-36 season was remunerative to farmers, and 244,000 tons of potatoes were exported during the 12 months ended August 31, 1936. The price averaged about £3 10s. per ton. Prices during the last quarter of 1936 averaged 3s. 8d. per cwt., compared with 2s. 9d. during the corresponding quarter of 1935. The volume of exports has been reduced, because of the decline in production; the yield of potatoes in 1936 was 6 tons per acre, compared with 6.9 tons per acre in 1935. The price of milk during the greater part of 1936 was also remunerative, although the price of feeding stuffs rose. The Joint Milk Council recently agreed, however, to a temporary increase from 1s. to 1s. 2d. in the wholesale price paid to farmers for Grade B and Grade C milk, for a period of three months. After deducting the levies payable on this milk, the net price to the farmer is 1s. 1½d. for Grade B and 1s. 0½d. for Grade C.

Pigs.—The main progress in agricultural production has been made in the production of pigs. The estimated output of pigs in 1936 was 700,000, compared with just under 300,000 in 1931. The breakdown of the contract system in Great Britain has caused some uncertainty about the future of the Pig Marketing Scheme in Northern Ireland. The original price structure which was adopted for Northern Ireland for 1937 was linked to the price under the Greig award for Great Britain. The Pig Industry Council for Northern Ireland has, however, introduced a price formula for pigs sold to Wiltshire curers in Northern Ireland, based upon the realised price of bacon; and producers in Northern Ireland have now an assurance that the Pig Marketing Scheme will continue irrespective of developments in Great Britain. As long as quantitative control of imports is maintained by the Imperial Government, producers will enjoy a regulated market for their pigs.

Flax.—The average price of flax during the last quarter of 1936 was 9s. 2d. per stone, and was unchanged from the corresponding quarter of 1935. The relatively small production of flax in Northern Ireland remains a matter of concern to the linen industry, and in 1936 less than 10 per cent. of the total flax used in the linen trade was home produced. There has been an increase in the production of linen, but it is claimed that this has been to some extent offset by increased costs of production. There is, however, a gradual expansion in the demand for linen in the United States of America, in the United Kingdom, and to a less degree in the Dominions. The percentage of unemployment in the linen industry in 1936 was 20.1 per cent., compared with 24.25 per cent. in the previous year.

III. COMMERCE AND TRADE

FOODSTUFFS

WHEAT

THE summary of the world wheat situation for the 1935-36 season, published by the Food Research Institute of Stanford University, California, runs as follows:—

Disasters to crops of North American spring wheat and in Argentina more than offset good out-turns in many importing countries. The 1935 world crop ex-Russia was therefore little larger than the small crop of 1934. Total wheat utilisation exceeded the year's production, and drafts upon stocks reduced the world carry-over ex-Russia to the lowest point since 1928.

International trade in wheat and flour shrank below the low level of 1934-35, as import demand from the Orient fell off and that of Europe again disappointed expectations. Net exports of wheat exporting countries totalled some 525 million bushels. Canada, resuming her rôle of premier wheat exporter, supplied nearly half of the total. Contributions to this outcome were the huge Canadian carry-over, limited supplies of good milling wheat in the United States, the short crop in Argentina, and a change in Canadian Wheat Board personnel and policy in December, 1935. Australia, with new wheat of excellent quality, shared in dominating open world markets after the Argentine debacle. The United States, with a moderate carry-over but a small crop of inferior quality, imported bread wheat heavily. Her net imports were exceeded only by those of the United Kingdom, Belgium and Brazil.

Prices of British import wheats averaged 14 per cent. higher than in 1934-35, reflecting the definite passing of a period of abundant supplies. Price advances were even larger in Argentina and Australia, but much smaller in the United States and Canada. In many countries, prices were fixed or supported at levels stimulating further expansion of wheat acreage. In June-July, 1936, however, adverse weather again led to sharp advances in open market prices, correctly presaging another short world crop.

Since the end of the 1935-36 season the position of the

wheat trade has improved substantially, and though still not prosperous relatively to other industries it has largely recovered from its peculiar depression. Prices have risen steadily and appear gradually to be approaching 1929 levels. The world crop is likely to be short once again, and stocks are down to their "normal" post-war level. The following table, based upon the calculations in the monthly crop reports issued by the International Institute of Agriculture, gives the main data:—

WORLD PRODUCTION, TRADING STOCKS AND PRICES OF WHEAT
(In millions of bushels)

Season	World production (a)		World exportable supplies (b)		World import requirements	World exportable end-of-season stocks	Average Brit. Import (c.i.f.) Prices (shilling per cwt.)
	Exporting Countries	Importing Countries	Season's surplus	Total (incl. carry-over from previous year)			
1926-27 ...	2,397	999	...	1,010	812	191	s. 12.12
1927-28 ...	2,534	1,077	872	1,063	817	252	11.87
1928-29 ...	2,849	1,077	1,124	1,376	898	444	10.20
1929-30 ...	2,242	1,223	617	1,061	671	434	9.98

normal, it is nevertheless founded on a fortuitous succession of droughts and diseases in the American continent, which cannot be expected to last. And it is still uncertain to what extent the protective measures taken during the years of depression, especially in Europe, for the protection of home producers in the main importing countries will be maintained in the future. The fear of war will probably contribute towards their maintenance, and lead, moreover, to the accumulation of stocks.

AVERAGE PRICE OF ALL WHEAT (C.I.F. BRITISH PORTS)

(In shillings per cwt.)

Period	1929-30	1930-31	1931-32	1932-33	1933-34	1934-35	1935-36	1936-37

Average ...	9-98	6-10	5-76	5-77	5-21	5-83	6-65	...

The table of acreage and production for individual countries, drawn up by the International Institute of Agriculture, is given below. It will be seen that a slight increase in aggregate acreage is anticipated, though the crop seems at present likely to be smaller than in 1935-36 and well below the average of 1929-33. Despite the falls, the relative position of Europe as a producer will probably improve once again.

ACREAGE AND PRODUCTION OF WHEAT

(Excluding countries whose crop in 1934/35 was less than 15 million bushels.)

Countries	Acreage			Production†		
	Average 1929-33	1935-36	1936-37	Average 1929-33	1935-36	1936-37

Despite an anticipated fall in acreage and output, the position of the British producer under the operation of the wheat subsidy, remains considerably better than in the slump years. An analysis of imports of wheat flour, and other cereals, is given in the table following.

BRITISH IMPORTS OF WHEAT AND OTHER CEREALS

	Quantity			Value		
	1929	1935	1936	1929	1935	1936

* Including other items not given above.

British imports were considerably higher last year, especially in value terms. The distribution of supplies has shown some remarkable changes in recent years. Thus, shipments from Russia, which had been negligible in 1929, totalled almost 7,000,000 cwts. in 1935 but declined to small dimensions last year. Imports from the U.S.A. were also very small, but Canadian shipments were much heavier in the year under review.

SUGAR

The year 1936 saw some improvement in the position of the sugar planters, but the trend towards economic nationalism continues and conditions are far from being really satisfactory. Apart from the Soviet Union, production of beet sugar, however, has declined somewhat, though cane sugar has increased a little all round. The table below gives Dr Mikusch's estimate of production of raw sugar in the leading countries, as well as his estimates of world production and consumption in recent years:—

WORLD PRODUCTION OF RAW SUGAR

(Excepting countries whose crop in 1936-37 is expected to be less than 100,000 tons)

1936	878	334	237	640	2,983		4	9

(a) Calendar year.

We take the following account of the position from *Weekly Prices Current*, published by Messrs Czarnikow, Ltd.:—

From the point of view of the return which the open market producer received, there is perhaps very little to choose between 1936 and its predecessor. The average price throughout the year at 4s. 8½d. per cwt. c.i.f. was ½d. higher, but rising freight rates in the second half of the year were not immediately compensated by an advance in c.i.f. prices. More orderly marketing on the part of the producers was a feature of the year. There was no anxiety over the adequacy of supplies (as the price trend indicates), but little pressure was noticeable. The market was taken by surprise when the expected plethora of supplies was found not to have materialised. By the end of the year San Domingo, Brazil, and Peru had practically finished their sales; and it was found that much of the Cuban quota for non-United States sale had been diverted to the manufacture of molasses. The year therefore closed with signs of much strength and activity.

The trend of world consumption was highly satisfactory. In some areas the expansion had little effect on the open market, but in most an increased absorption of unprotected sugar was noticed. In some places worsening economic conditions reacted to the advantage of sugar, as in Germany as

a result of the fat shortage. But the greatest increase took place in Great Britain, where 200,000 tons has been added to our consumption since the beginning of the depression, and a rise of 4 per cent. over 1935 has been shown in the figures for January to November.

Turkey and Iran have joined in the race towards national self-sufficiency in sugar. But the greatest progress has been made in British India, where production in the 1935-36 season rose to 954,000 tons, as compared with 617,000 tons in the previous season. The prospect of throwing some of her surplus stocks on the open market, and the fall in the revenue from import duties on sugar, is causing much alarm in industrial and Government circles. Despite the change in machinery needed by the United States Administration, as a result of the Supreme Court's decision, the wise handling of the situation remains an outstanding feature of sugar affairs in America. In this country the British Sugar Corporation, set up by the Sugar Industry (Reorganisation) Act, passed in 1936, commenced its functions on April 1st.

TEA

In contrast to many other primary products, there was little improvement in the world demand for tea during the past year. Average prices were slightly higher, but only because of the restriction of supplies under the international

AVERAGE TEA PRICES (per lb., London Sales)

Year	North India	South India	Ceylon	Java	Sumatra	All Tea

1933	11-64	10-62	13-48	8-06	7-20	11-67

The Milk Reorganisation Commission for Great Britain, reported in December, and proposed that a Permanent Commission, entirely appointed by the Government, should take over from the Milk Marketing Board the fixing of wholesale prices. The Report was discussed in detail in *The Economist* of December 5, 1936. No official action on the Report has yet been taken, but the Milk Act of 1933 (due to expire in March, 1936) was extended until September 1937. The Act provides, *inter alia*, for the grant of a subsidy to raise the price of manufactured milk. Meanwhile, the

Statutory Order (S.R. & O. 1936, No. 356), which came into force on June 1st, reduced the number of special grades of milk to three—viz., "tuberculin tested," "accredited" and "pasteurised."

The apparent consumption of butter in the U.K., according to the Imperial Economic Committee's figures, showed a slight decline from 25.2 lb. per head in 1935 to 24.8 lb. last year, a movement which was associated with some increase in the output of margarine. Home production of creamery butter again increased, but there was a further substantial fall in the output of farm butter. Imports, at 9,752,000 cwts., attained a record level, and were 1.5 per cent. in excess of the previous year's figure.

The increase in total imports of butter took place despite a 5 per cent. drop in entries from the Dominions; the latter accounted for 53 per cent. of the total, against 57 per cent. in 1935. New Zealand was again the chief source of overseas supplies, sending a record volume of butter. Entries from this source comprised almost 30 per cent. of the total, and were 6 per cent. above the previous year's level. Denmark, which sent rather less than in 1935, was again second on the list, accounting for 22 per cent. of the total. Australian shipments were adversely affected by weather conditions, and showed a drop of 20 per cent. on the year. A feature of the year was the sharp recovery in imports from the Netherlands, which were no less than 60 per cent. above the 1935 level.

BRITISH IMPORTS OF BUTTER AND CHEESE

Country of Origin	Volume in '000 cwt.			Value in £'000		
	1929	1935	1936	1929	1935	1936
Butter:—						
New Zealand	1,304	2,838	2,792	11,277	11,572	13,445
Australia	768	2,113	1,894	6,342	8,388	7,673
Irish Free State	566	488	468	4,580	1,505	1,694
Denmark	2,204	2,186	2,171	19,737	9,966	10,771
U.S.S.R.	290	503	415	2,299	1,670	1,648
Total (including other countries)	6,397	9,608	9,752	54,706	39,328	44,424
Cheese:—						
New Zealand	1,801	1,763	1,681	8,300	4,199	4,774
Canada	723	471	603	3,412	1,237	1,928
Netherlands	193	199	182	777	302	325
Total (including other countries)	2,994	2,714	2,676	13,913	6,649	7,790

As in the case of butter, consumption of cheese appears to have suffered a slight reduction in 1936; *per capita* consumption was put at 8.8 lbs. by the Imperial Economic Committee, against 9.1 lbs. in 1935. After declining in 1935, imports fell by a further 1.5 per cent. last year. The aggregate of 2,676,500 cwts. was the smallest in any year since 1922. Ninety per cent. of this smaller total came from Empire sources, against 88 per cent. a year earlier. New Zealand entries, despite a slight contraction compared with 1935, still accounted for 63 per cent. of the total. The long-term decline in supplies from Canada was reversed last year, imports from this source rising by 28 per cent. to comprise 23 per cent. of the total. On the other hand, Australian entries were 32 per cent. down on the year. Imports of Dutch cheese were 9 per cent. smaller than in the previous year, while Italian supplies were heavily curtailed owing to the operation of "Sanctions." Meanwhile, in contrast to recent trends, there was an increase in farm cheese production in this country, and a corresponding fall in the output of factory cheese.

The following prices, based on the official returns of the London Provision Exchange, represent averages of the top prices of a range, and are taken from the Imperial Economic Committee's *Weekly Dairy Produce Notes* :—

LONDON PRICES OF BUTTER AND CHEESE (Shillings and pence per cwt.)

Averages of Weekly Figures	Butter			Cheese	
	New Zealand Finest Salted	Australian Finest Salted	Danish	New Zealand Finest White	Canadian Finest White
1935—March	s. d. 75 9	s. d. 74 6	s. d. 105 9	s. d. 45 6	s. d. 62 0
June	87 3	84 9	101 0	44 6	64 0
September	111 0	110 6	127 0	54 9	55 9
December	90 3	89 6	127 9	54 0	59 6
Annual average	91 9	90 3	113 0	49 0	60 3
1936—March	84 3	84 0	122 6	50 3	63 0
June	108 3	107 0	115 6	59 9	67 6
September	107 9	107 6	125 3	68 9	71 3
December	100 6	98 9	114 9	62 9	71 9
Annual average	101 3	100 6	119 6	61 0	67 3

Prices continued on the upgrade last year. Quotations for New Zealand and Australian butter rose by 10 per cent. and 11 per cent., respectively, compared with 1935, following increases of 25 per cent. and 28 per cent. between 1934 and 1935. Danish rose by a further 6 per cent., against 14 per cent. in 1935. British creamery butter prices showed a gain similar to that of imported descriptions, while home-produced farm butter was also dearer than in the previous year. Prices of New Zealand and Canadian cheese rose by 24 per cent. and 12 per cent., respectively, in the year under review. During the second half of the year, English farm Cheddar rose in price, while throughout 1936 factory Cheddar was dearer than in the previous year. Cheshire and Caerphilly were also dearer than in 1935.

EGGS AND POULTRY

THE year was notable for the refusal of the producers to submit an egg marketing scheme to the Minister of Agriculture; imports accordingly remained free from statutory limitation. Of the decline in the home production of eggs, the Imperial Economic Committee write as follows (*Weekly Dairy Produce Notes*, January 22, 1936, page 11) :—

Production of eggs in the United Kingdom experienced a marked expansion in post-war years to a peak in 1934. A reduction in the following year reflected the smaller total number of fowls in the country. There was a further slight decline as at June, 1936, although the number of young birds showed some recovery. Although an accurate calculation is not yet possible, the total output of eggs in the United Kingdom in 1936 may be provisionally estimated at about 37.7 million great hundreds, compared with 38.9 million great hundreds in 1935. On this basis the total consumption of eggs in shell was equal to about 159 per head of the population in 1936, against 150 in 1935 and 151 in 1934. Egg consumption was probably greater than in any previous year, although home supplies accounted for only three-fifths of the total, against two-thirds in 1935.

Meanwhile, as the following table shows, egg imports rose by 25 per cent. last year, and were higher than in any year since 1931 :—

IMPORTS OF EGGS AND POULTRY

	Quantity				Value (£'000)			
	1929	1934	1935	1936	1929	1934	1935	1936
Eggs in shell ('000 gr. hundreds)	24,964	18,734	19,777	24,653	17,856	7,051	7,768	9,902
Eggs not in shell ('000 cwts.)	782	818	787	890	3,621	1,698	1,661	2,156
Dead poultry ('000 cwts.)	554	452	423	422	2,960	1,613	1,690	1,657

Last year's increase was entirely from foreign countries, which sent 33 per cent. more eggs than in 1935 and accounted for 81 per cent. of total imports. Shipments from Denmark rose by 22 per cent. to comprise 32 per cent. of the total, while Dutch entries, which were increasing rapidly in the previous year, rose by a further 42 per cent. in 1936. Other important suppliers were: Poland, the Irish Free State, Australia and Roumania. Imports of dead poultry showed little change last year, an increase of 13 per cent. in supplies of chickens being offset by reductions in other classes. Despite a 12 per cent. drop in her shipments, Hungary remained the chief overseas source of supply, accounting for 25 per cent. of the total.

The following table of monthly average top prices quoted on the London Egg Exchange has been compiled from *Dairy Produce Notes* :—

EGG PRICES AT LONDON (Shillings and Pence per 120)

Averages of Weekly Figures	English N.M. Specials	Danish 18 lbs.	English N.M. Standards	Danish 15½ lbs.
1935—March	10/8	9/11	9/8	8/3
June	12/9	10/1	11/8	8/4
September	18/5	13/—	17/3	11/9
December	22/2	17/11	20/8	15/8
Annual average	15/10	12/8	14/9	10/11
1936—March	11/7	10/4	10/7	9/—
June	13/1	10/3	12/1	8/6
September	18/6	—	17/6	12/8
December	21/11	—	19/9	13/—
Annual average	16/9	—	15/6	11/3

Prices generally recorded a further advance last year. On the average, National Mark specials and standards were 6 per cent. and 5 per cent., respectively, above the 1935 level. The gain was rather less marked in the case of imported descriptions, the increase in Danish prices amounting to about 3 per cent.

FRUIT AND VEGETABLES

THE weather was by no means favourable to the horticulturalist in 1936. Cold and damp conditions early in the year were followed by harsh winds and persistent ground frosts after Easter. In the vital period from June to September, there was a notable absence of sunshine, coupled with excessive rainfall.

The area under orchards, which rose in 1935, last year fell by almost 2 per cent.; but there was a slight recovery in the area under small fruit. Strawberries suffered from the wettest season for two or three decades, but fruit crops generally were fairly heavy, despite the absence of sunshine. Crops did not, however, attain the high level reached in 1934. The weather adversely affected demand, and this, coupled with abundant supplies, had a depressing effect on fruit prices. During the year a raspberry marketing scheme was again drafted for Scotland, but was decisively rejected by the growers.

AREA UNDER CERTAIN FRUIT AND VEGETABLE CROPS IN ENGLAND AND WALES (In thousands of acres)

	1930	1933	1934	1935	1936
Orchard fruit	247.0	249.6	254.9	262.4	257.7
Small fruit	66.2	60.0	61.0	59.5	59.9
Total	313.2	309.6	315.9	321.9	317.6
Potatoes	424.7	518.9	487.6	462.8	455.9
Green peas	56.4	63.7	74.3	63.6	67.7
Cabbage*	30.6	33.1	37.0	37.5	43.5
Sprouts	26.3	35.9	34.0	34.1	35.0
Cauliflower	14.6	20.7	20.1	19.5	20.5
Carrots	9.0	12.9	16.4	15.8	16.9

*Including savoy, green kale, and sprouting broccoli for human consumption.

Last year witnessed further increases in the area under vegetables for human consumption. The most notable gain (plus 16 per cent.) was recorded by cabbages, while the only significant reduction was recorded by potatoes. With a shortage of supplies of some classes of kitchen

vegetables, prices were generally satisfactory. The glass-house section, however, was adversely affected by the absence of sunshine and disease was rife. Thus the yield of tomatoes and cucumbers was rather below average; but, since weather conditions did not favour the consumption of salads, prices were disappointing. During the year the growers decided not to proceed with the proposed marketing scheme for tomatoes. The producers of potatoes had another good year, assisted by the restrictive activities of the Potato Marketing Board. The salient statistics for this crop are as follows :—

Potatoes	10-year average	1935	1936
Production in England and Wales ('000 tons)	3,156	2,879	2,814
Yield per acre (tons)	6.4	6.2	6.2
Imports ('000 tons)	384	191	316
Price of best English (s. per cwt.)	—	6.27	7.70

In consequence of the fact that the 1935 crop was rather below normal, there was a slight deficiency of home supplies early last year; imports were also below normal, owing to conditions ruling on the Continent. Despite the protests of the Potato Marketing Board, the import duties on main crop potatoes were temporarily relaxed in March. Meanwhile, the new home crop was frequently diseased; and the fear that supplies would not keep gave rise to some disorderly marketing in the early autumn, with a consequent drop in prices. This situation was, however, purely temporary, and quotations closed the year at a higher level than that ruling twelve months earlier.

FISH

THE fortunes of the herring industry were rather better in 1936 than in the previous year, partly owing to the activities of the Herring Board. The total catch was larger—2,858,000 cwts., against 2,654,000—but realised better prices than in 1935. Thus British landings of herrings sold for an aggregate of £1,212,000, compared with only £868,000 a year earlier. The export markets also showed some

improvement after a period of severe depression. Total exports, it is true, amounted to only 3,768,000 cwts., against 3,786,000 in 1935; but the aggregate value of these shipments rose from £2,402,000 in 1935 to £2,653,000 last year. During the year the Sea Fish Commission issued its report on the white fish industry, putting forward a number of recommendations for the improvement of the industry. These included the setting up of a Fish Industry Development Commission, with fairly wide powers to reorganise the industry. The British Trawlers' Federation, which disagreed with certain of these suggestions, drafted a scheme of its own for regulating the marketing of fish under new legislation similar to the Agricultural Marketing Acts. No official action has, however, yet been taken.

The past year was not a prosperous one for the white fish section. Largely on account of prolific catches of Bear Island and Murman Coast fish, British takings of white fish rose from 11,397,000 cwts. in 1935 to 12,637,000 cwts. last year. Due to a sharp fall in the price of the principal descriptions, however, the aggregate value of the catch suffered a reduction of 3½ per cent., falling from £10,954,000 in 1935 to £10,601,000 in the period under review. Imports of fresh and frozen fish into the United Kingdom fell from 2,174,000 cwts. in 1935 to 1,957,000 cwts. last year, while the aggregate value of these shipments fell from £2,840,000 to £2,812,000 in the past twelve months.

RAW MATERIALS

COAL

In contrast to 1935, the past year saw a decided, if belated, improvement of conditions in the coal trade. Total production rose from 223 million tons in 1935 to 229 million tons in 1936, although exports (including bunkers) declined from 51 million tons to 46 million tons. This shows that home consumption increased by no less than 10 million tons as a result chiefly of increased activity in the iron and steel trades, while towards the end of the year even exports, aided by the resumption of trade with Italy, showed an appreciable advance over those of 1935. The average price of coal was throughout the year at a considerably higher level than in 1935 and even in the third quarter of the past year profits were as high as 5d. per ton; this is the first time since 1924 that the third quarter's operations have not shown a loss.

The outstanding event of the past year was the coming into operation on August 1st of the central selling schemes. These vary from district to district, and are complete only in Lancashire, where the District Board has the exclusive power of disposal over the coal mined in the district, and determines the supply which each owner must offer and the share of each in the total sales. In most other coalfields the regulation of prices and sales has been delegated to a number of sales committees, which operate under the general directions of the Executive Board. Thus the sale of coal has actually only been centralised in districts representing about a third of the output, and it remains to be seen whether the increased co-ordinating powers of the central council will be used to bring about greater national unification.

The Coal Mines Bill, which was introduced in May, 1936, ended in a dismal fiasco. It was designed to give the Coal Mines Reorganisation Committee authority to impose colliery amalgamation schemes on a minority of colliery owners. However, in deference to the opposition of the colliery owners, Mr Runciman introduced three vital amendments whereby amalgamations were not to become compulsory within two years; an impartial authority was to be established to hear objections to any scheme; and collieries owned by undertakings interested primarily in the supply of coal for manufacturing processes were to be exempted. The Government was then caught between the fires of those wishing to proceed with the original Bill and the colliery owners, who continued to view with alarm any plan, however remote, providing for compulsory amalgamation. In the end the Bill was withdrawn, with the promise of re-introduction later on. Moreover, the Government have also promised to introduce a Bill for the unification of royalties this year.

A description of developments in the chief producing areas of the United Kingdom is given in the following extracts from the *Iron and Coal Trades Review* of January 15, 1937:—

South Wales.—The year was principally outstanding for the revolutionary change made in marketing, following the introduction of the central selling scheme. This was followed later by the abandonment of minimum prices. When the danger of a stoppage was removed at the end of January, demand showed a considerable falling off, and overseas trade remained on a quiet scale until the closing months. This market felt the full effects of the loss of business with Italy and, in the second half of the year, of the suspension of shipments to Spain; exports consequently showed a decline of over 2,000,000 tons from the 1935 level. The French trade provided a series of surprises, while the seasonal trade with Canada provided the brightest feature of the anthracite section. Happily, 1936 was free from major stoppages. The tone at the close of the year was distinctly brighter and prospects for 1937 were better than those marking the opening of a new year for some time past.

Northumberland.—The year will stand out owing to the complete change which took place in the system of marketing; it is hoped that the result will be seen in higher average prices and greater stability in the trade. The markets have been built up mainly owing to large inland and Irish consumption, but there is also a gratifying improvement in demands from abroad. This is due largely to trade

agreements with Scandinavia. The persistent home demand early in the year resulted in a higher level of inland prices; but this had little effect on export prices, and it was considerably later before there was any improvement on this market. The year closed with strength in every section. Indications point to a higher average level of prices and continued healthy trading conditions. Given freedom from labour troubles, there is every reason to anticipate further improvement.

Durham.—Conditions have been less satisfactory than in Northumberland. Collieries are able to report better trading results, but the improvement was almost entirely due to increased home consumption; although as the year advanced the improvement was gradually accelerated, general conditions of trade cannot be regarded as satisfactory, taking the period as a whole. For many months producers found it impossible to secure sufficient trade to avoid idle times, and until the later months short-time working was a regular occurrence. Export trade has been very disappointing, the loss of the Italian market being a direct cause. Trade with France and Belgium, markets which were for many years main outlets for Durham coals, has also been considerably below normal. The most consistent class has been screened steam coals, which have benefited more than any other section from trade agreements—particularly with Scandinavia. Other Durham qualities have been erratic, but cokes have been a bright and consistent feature throughout 1936.

South Yorkshire.—The past year has justified all the predictions concerning improved trade. Increased activity in the industrial field has reacted advantageously on the coal trade, while the steady absorption of labour, consequent upon the general economic improvement, has stimulated the demand for domestic fuel. More workers are engaged than a year ago and slightly better time is being worked; but the development of mechanical mining precludes the possibility of the bulk of the large number of mine-workers who are unemployed being absorbed into the industry. But the employees have received some tangible share of the recovery in trade. The advantages of co-ordinated selling systems should bring further improvement and assure stability in the industry.

Derbyshire.—The domestic fuel market has been characterised by a shortage of supplies, largely due to restriction of output under the quota scheme. There has also been a shortage of most kinds of industrial fuel, and there has never been any stock of nutty slack. Activity in the iron and steel market has been reflected in the demand for oven coke, practically the whole output of the larger kinds having been sold under contract. Contract sales in general have

constituted a much larger proportion of output than for some years past, which is in keeping with the general improvement in trade conditions.

Scutland.—The year began with a plethora of orders, and demand was accentuated by cold and foggy weather. Home consumption shot ahead, with the result that the export branch of the trade was kept comparatively bare. Happily, the wage question was amicably settled and an easier tendency developed. As the year drew to a close order books were full, and local markets were expanding, ensuring a complete clearance on the eve of the holidays. Inquiries were maturing into business over 1937, and in some cases right into 1938, buyers generally having realised that nothing was to be gained by waiting.

OIL

World production and consumption reached new records in 1936, output showing an increase of 8.9 per cent. and consumption one of 10.0 per cent. over 1935.

PRODUCTION AND CONSUMPTION OF CRUDE OIL AND RELATED FUELS

(In millions of barrels)

Source: Messrs. V. R. Garfias and R. V. Whetsel.

Both production and consumption in the United States increased by 10 per cent. between 1935 and 1936. Output outside the United States was 6.7 per cent. higher than in 1935, and consumption showed a rise of 8.7 per cent. The United States was responsible for 61.8 per cent. of world production, against 60.9 per cent. in 1935, while the United States' share of the world consumption increased from 61.3 to 62.0 per cent.

The rise in consumption outside the United States was fairly evenly distributed over the large consuming countries. Russia was again second in the list of producers, Venezuela third, Roumania fourth, and Iran fifth. In all these countries output rose appreciably. Among the smaller producing countries, the rise of the Bahrein output from 1,264,000 barrels in 1935 to 3,600,000 barrels in 1936 was outstanding. The Bahrein Islands, which started production on a very small scale as recently as June, 1932, are now seventeenth among oil producing countries. So far production has been restricted owing to lack of refining facilities, but in 1937 expansion will be more rapid, an output of some 7 million barrels being anticipated.

In view of the strong position of the United States, both as a producer and as a consumer, the situation of the oil market in that country deserves attention. Apart from the remarkable rise, both in production and consumption, nothing of outstanding interest occurred in that country during 1936. The new form of production control, which was discussed in the *Commercial History* of 1935, has worked fairly well in the past twelve months. Price-cutting has disappeared, and the States co-operating under the Interstate Compact have announced their intention of extending this agreement for another twelve months from September, 1937. The improvement of the organisation of the oil industry in the United States is an important factor in the greater stability of the international oil market.

Apart from the marked improvement in the United States oil industry, another factor contributed towards the restoration and maintenance of peace on the world oil market. The Near Eastern oil problem, which appeared to be a source of increasing trouble for a number of years, was solved in 1936. The production of the Iraq Petroleum Company has now reached the capacity of the pipe-line to the Mediterranean, and the distribution of the oil shipped through the pipe-line has provided no difficulties. Towards the middle of August, Italy disposed of its controlling interest in Mosul Oil Fields, Ltd., to Iraq Petroleum Company, so that possible future competition between these two Iraqi producers has been removed. Russia's export pressure continued to decline in 1936; moreover, the danger of price-cutting by Roumania has disappeared as a result of the barter agreements and long-term oil supplying contracts concluded by Roumania with France, Germany and the countries of the Little Entente. In addition, the Standard Oil Company of California and the Texas Corporation concluded an agreement in June, 1936, according to which all oil produced by the subsidiaries of the Standard of California east of the Suez Canal is to be distributed by the Texas Corporation. This agreement covers not only the whole of the Bahrein oil, but also the new oil discovered by the California Arabian Standard Oil Company in Saudi-

Arabia. As the Texas Corporation has an extensive distributing organisation in India, China, Japan, Indo-China, the East Indies, Philippines, Australia and New Zealand, the Bahrein and Arabian oil will go eastwards and will not endanger the stability of the South European and the Mediterranean markets. The fact that Iraq Petroleum Company has taken up search for oil in Arabia in 1936, and that Italy has started an intensive prospecting and drilling programme in Abyssinia, is not likely to disturb the stability of the Near Eastern market in the near future.

The improvement in the oil markets during the past year is reflected in the rising tendency of prices, revealed by the table below:—

OIL PRICES

	End of			
	1933	1934	1935	1936
Best crude oil, U.S.A. (\$ per barrel):—				
Pennsylvania	2.12	1.72	2.02	2.17
Mid-Continent	1.08	1.08	1.08	1.18
Gulf	1.14	1.14	1.14	1.22
Gulf bulk export, gasoline 64-66 deg. (cents per gallon)	5½	4½	5½	5½
England and Wales petrol, first grade (wholesale per gallon)...	1s. 5d.	1s. 4d.	1s. 5d.	1s. 5d.

Oil producers have pursued a cautious price policy in all parts of the world during 1936. Since the end of 1936, some independent producers in the United States have increased their crude oil prices by 17 cents per barrel, and a general increase of 10 cents per barrel in American crude oil prices is expected in the near future. British wholesale and retail prices of first-grade petrol were advanced by ½d. per gallon from January 14, 1937.

Drilling for oil in Europe for strategic reasons was actively continued in 1936. In this country the first of the wells (the Portsdown well, near Portsmouth) reached a depth of over 5,000 ft. by the end of 1936, while the second well (near Henfield, Sussex) was approaching the 4,000 ft. level on December 31, 1936. No oil has been found so far, but the drilling programme will be continued at full speed, and in the summer of 1937 operations (which have so far covered the South of England only) will be extended to the Midlands and the North. In Germany, too, the energetic search for oil was continued during 1936, but after a marked increase in previous years Germany's oil production remained stationary last year. Production of oil from coal made more rapid progress in 1936 than in any other year in the very short history of this industry. In relation to the production of mineral oil, however, the output of oil from coal remains insignificant.

Throughout the past year the leaders of the international oil industry have remained in personal contact. No international control scheme, however, was aimed at and no negotiations are in progress towards that end. This indicates that the basic position of the international oil market improved to such an extent in the past twelve months that oil leaders find an international scheme to secure stabilisation no longer necessary.

VEGETABLE OILS AND OILSEEDS

SUPPLIES of oilseeds generally were not so heavy as in the previous year, and with a rather better demand prices all round were on a higher and more remunerative level.

The Argentine linseed crop was smaller, but the deficiency was in part made up by larger Indian supplies, due to the higher prices ruling. Argentina and Uruguay together exported 1,542,000 tons, 335,000 tons less than in the previous year: India exported 306,000 tons, an increase of 180,000 tons. Including small supplies from the Baltic ports, world shipments aggregated 1,855,500 tons as against 2,018,500. Seventy-five per cent. of this was shipped to Europe, a decline of 138,500 tons. Shipments to the United States, down very little, absorbed most of the balance. So far as Great Britain was concerned, Plate linseed, subject to a 10 per cent. import duty *ad valorem*, was less in demand than Indian, which constituted 83 per cent. of imports as against 23 per cent. in 1935. Prices were at a moderate level in the first half of the year, the lowest being around £10 15s. for Plate on spot, advancing on reports of shortage to £13 in August. Expectations of a large crop later caused a sharp fall. The new crop for December-January shipment was down as low as £10 10s., but it subsequently stiffened when the prophecies of a 2,000,000 tons yield were belied. Rather more linseed was crushed in U.K. mills than in 1935, but crushers considered production unprofitable in the face of keen competition from the Continent. They enjoyed, however, a larger share

of the home market, thanks to the £5 per ton specific duty, which halved imports from abroad. The export trade was far from satisfactory, and shipments were even less than in 1935. The average spot quotation for the whole year for raw linseed oil ex Hull was £26 7s. 3d. per ton, as against £23 11s. 8d. in 1935, and £20 2s. 9d. in 1934.

Imports of cotton seed into England, mainly from Egypt and the Sudan, exceeded 600,000 tons, but were 50,000 tons less than in 1935. Prices fluctuated widely in consequence partly of a marked shortage of seed between the old and the new crop, and partly, towards the close of the year, of the very strong markets for commodities used in the production of edible oils. The peaks were £9 per ton black Egyptian on spot at Hull in August, and £9 17s. 6d. for new crop in mid-December. The average for the full twelve months was probably about £8.

The shrinkage of American demand caused a large fall in cotton oil exports; but supplies of edible oils were small enough for the home market for cotton oil to be consistently good. In the later months resumed American buying and the advance in seed prices combined to raise the price of crude oil from its lowest level, £23 10s. ex Hull per ton, to £32 10s., a range of £9.

The new duty on soya beans and the strong competition of cakes and oil in markets abroad reduced imports of soya beans to a half of the 1935 quantity. Oil production was thus limited. The tendency of prices was markedly upwards: crude extracted rose from £25 10s. in February to £34 10s. in December. A big demand from Germany raised palm kernels by 50 per cent. Crude oil also advanced from £19 10s. in April to £37 per ton ex Hull. A strong Continental demand, probably due to the shortage of olive oil, raised the price of ground nuts materially. Less rape-seed went to the mills, but trade was normal despite heavy arrivals of foreign made oils, prices moving between £32 and £34 10s. per ton. Trade in castor oil was well maintained, though there was severe competition from India. Prices rose steadily from £37 to £41 per ton (in barrels) for first pressure.

The following table gives the main statistics:—

BRITISH SUPPLIES OF VEGETABLE OILS

	(In tons)				
	1932	1933	1934	1935	1936
Home Production:					
Linseed oil	121,397	81,905	61,360	85,767	90,920
Cottonseed oil	71,620	76,313	90,980	109,207	100,352
Other seed oils	42,059	43,068	44,774	46,764	31,746
Palm kernel oil	71,106	57,605	61,158	67,540	65,258
Ground nut oil	38,290	52,547	50,792	68,367	82,815
Copra oil, etc.	59,532	61,748	60,506	73,634	77,996
Total	404,004	373,186	369,570	451,279	449,087
Deduct Exports:					
Unrefined	38,604	27,741	34,480	51,467	36,730
Refined	13,650	21,192	23,798	43,646	11,357
Remainder	351,750	324,253	311,312	356,166	401,000
Add net imports ...	171,256	154,171	196,489	223,326	212,891
U.K. Supplies	523,006	478,424	507,801	579,492	613,891

The principal cause of the reduced exports was the decline in shipments of cotton oil, which (refined and unrefined) amounted to 24,104 tons as against 42,800 in 1935. Imports of vegetable oils from abroad consisted of, refined, 16,988 tons, and unrefined, 195,993 tons. Coconut, olive and palm oils (which are not produced in Great Britain) constituted the unusually high proportion of 68 per cent. of imports. The estimated supply of oilcakes and meals, including net imports, was 1,530,000 tons in 1936 against 1,660,000 tons in 1935 and 1,460,000 tons in 1934.

RUBBER

The following extract is from Messrs S. Figgis and Company's report for 1936:—

The past year has been a better one for rubber producers than for some time past, and the outlook much more promising than for many years. Fluctuations in price have been exceedingly small until the last three months, and for long periods the quotation only moved one-sixteenth of a penny, which for those dealing in the article made trading very difficult, though the sharp rise in price, when it came, has no doubt been beneficial. Shipments of rubber have been kept well within the regulation quota, Sarawak being the only country to show any appreciable excess. The Dutch have controlled the native shipments within their allot-

44 THE ECONOMIST. COMMERCIAL HISTORY & REVIEW OF 1936 [Feb. 13]

ment by increasing the tax as the market went up, until at the end of 1936 it was 57 cents per kilo.

On October 27th the International Rubber Regulation Committee fixed the permissible exportable amount of the basic quota at 70 per cent. for the first six months of 1937, and on December 15th they increased this to 75 per cent. for the first quarter and 80 per cent. for the second quarter. On January 26th the Regulation Committee met and decided to fix the July-September production at 85 per cent., but no alteration was made in the percentage for the first six months. During the first six months of 1937 we estimate the shipments under the basic quotas, including Siam, French Indo-China and the rest of the world to be:—

BASIC EXPORT QUOTAS

	1937 Whole year	First Six Months	77½ per cent.
Straits Settlements, F.M.S., U.M.S., and Brunei	589,000	294,500	= 228,237
Netherlands Indies	520,000	260,000	= 201,500
Ceylon	81,000	40,500	= 31,388
India	12,500	6,250	= 4,844
Burmah	9,000	4,500	= 3,487
State of North Borneo	15,500	7,750	= 6,000
Sarawak	31,500	15,750	= 12,208
Siam	40,000	20,000	= 18,000
French Indo-China (estimated shipment)	45,000	22,500	= 22,000
Rest of the World	25,000	12,500	= 12,500
			= 540,168

Total shipments of rubber for 1936 were 855,000 tons, including latex, and 8,000 tons from Africa, the Philippines, etc., against 872,000 tons during 1935.

STOCKS AT THE END OF THE LAST THREE YEARS
(In tons)

	Dec. 31, 1934	Dec. 31, 1935	Dec. 31, 1936
Stock in America	352,632	303,000	218,844
Stock in United Kingdom	134,931	164,549	78,493
Dealers' stocks in Singapore, Penang, etc.	51,255	22,385	18,017
Port stocks in Singapore and Penang	10,887	5,919	8,952
Stocks in Province Wellesley, Labuan and Malacca	3,757	3,038	3,268
Dealers' stocks up-country	10,683	7,608	5,833
Stocks on Estates of 100 acres and over	12,500	23,369	26,044
	578,645	529,868	359,441

There has been little or no new planting during the past year. The revised figures for the planted areas at the end of 1935 are as follows:—

AREA UNDER RUBBER
(In acres)

Ceylon	607,000	British North Borneo	
Malaya, Malacca	3,195,000	and Sarawak	350,000
Dutch East Indies		India and Burma	230,000
Java, Sumatra, etc.		French Indo-China,	
(excluding native		Siam and other	
areas)	1,480,000	countries	600,000

No excessive speculation took place in 1936, and it must be remembered that most estates had sold a fair part of their crop and therefore had less to sell for forward shipments. The spectacular rise in price during the last two months of the year has been entirely different from the state of the market during the first nine months, when for long periods there was practically no movement. The advance was rapid and became accentuated in the last week of the year. The year opened with the price of 6½d. for spot standard sheets, and advanced to 7d. on January 22nd; by the middle of February it was 7½d. and in April 7¾d. From then onwards to the end of June it remained mostly about 7¾d. In July the price rose to 7¾d. and remained between this and 7½d. until the beginning of October. The market then began to be distinctly firmer, the price rising to 8d. on October 27th, to 8½d. on November 17th and to 9d. on December 4th. Advances then became greater, the trade continually wanting spot or near rubber, and stocks were considerably reduced here each week; also by this time many estates had sold a fair part of their 1937 crops. The price of spot sheet jumped to 9½d. on December 16th, to 10½d. on the 24th, and to 11½d. on the 28th, after the Christmas holidays.

CONSUMPTION OF RUBBER (PARTLY ESTIMATED)
(In tons)

	1934	1935	1936		1934	1935	1936
America	464,500	493,000	573,500	Japan	70,000	58,000	62,000
U.K.	110,000	95,000	99,700	Russia*	47,000	38,000	31,000
France	50,000	52,000	55,000	Australia	10,000	10,000	14,000
Germany	59,000	63,000	72,000	Italy	21,000	24,000	17,000
Belgium	9,000	8,000	10,000	Other countries			
Canada	28,000	27,000	30,000	World	73,000	68,000	68,000
					944,000	943,000	1,033,000

Several of the 1935 figures have been altered from our estimates in our last Annual report.

* These are Russian figures for deliveries from warehouses. Imports into Russia in 1936 were more than 40,000 tons.

It is most gratifying to see that the consumption of rubber continues to increase, and, as the invisible supplies were absorbed to a considerable extent in 1935, there has been a greater visible consumption during the past three months than was expected, chiefly in America.

Consumption has reached the record total of 1,033,000 tons. We gave no estimate for the whole year in our last annual review, but for the first half we did calculate 500,000 tons consumption, and that there would be a reduction of 92,000 tons in the United Kingdom and United States stocks by the end of June; the actual reduction was 99,000 tons. At the end of the year stocks were reduced in the United States and here from 467,295 tons (Bulletin figures) to 297,327 tons.

There is no doubt that the modern car requires considerably more rubber than one manufactured a few years ago. Since 1932 consumption has increased from 692,000 tons to 1,033,000 tons—at the average rate of 68,200 tons a year. In the previous five years—1927-31—consumption increased from 597,000 tons to 684,000 tons, by only 90,000 tons, but during this period it had jumped to 805,000 tons in 1929, and in the two following years came the slump.

COPPER

A REMARKABLE advance in price of over 40 per cent. on the year occurred almost entirely during the second six months. Standard cash, at about £35 at the beginning of January, 1936, did not reach a monthly average level of £38 until August, at about which time the series of successive quota increases began. An increase of 5 per cent. to 75 per cent. in the output quota of the countries adhering to the international restriction scheme, was announced to operate as from August 1st, but the quota was again raised to 80 per cent. from October 1st, to 85 per cent. from October 15, to 95 per cent. from November 1st, and to 105 per cent. on November 5th. Since the period covered by the following review, which summarises briefly Messrs Brandeis, Goldschmidt and Company's annual survey, restriction on copper output has been abandoned until further notice.

The advance in price between the first and last days of 1936 of approximately £15 was, as for lead and spelter, one of the largest ever recorded for any peace-time calendar year, the last quotation for 1936 being also the highest, at £49 7s. 6d. standard cash. The upward movement had gained impetus during the second half and particularly towards the close of the year. The preponderance of the increase in the consumption of the United States over other countries will be noted, resulting from far greater progress in electrification and the use of the automobile in the United States, but consumption is still much below that for the boom years. During the past two years stress has been laid on the large amounts the United States public utility companies will shortly have to spend on necessary replacements and expansion. The estimate of the 1936 consumption outside the United States shows a slight falling off against last year. Russian consumption, however, is growing rapidly, and will probably continue to develop in proportion to home production, though imports show no increase. It is unlikely that consumption outside the United States during the next few years will approach total productive capacity, which is at least 1,650,000 to 1,750,000 long tons per annum.

* Estimated

Production continued under strict supervision during the year. Of the 912,000 long tons of the world's mine production outside the United States, Japan and Russia, the producers' combine controls by far the larger part. In August it was officially announced that the rate of production under the agreement would be raised from 70 per cent. to 75 per cent. of "agreed" capacity, which, it was immediately apparent, was much smaller than the actual productive

capacity. The estimated full capacity of the large participants is 980,000 long tons, against the 70 per cent. original curtailment quota of 416,000 long tons. That the basis of capacity was more or less nominal had to be officially conceded when the successive increases brought the quotas to 105 per cent. This rate would mean an increase of 210,000 long tons per annum in the production of these properties over their original curtailment quotas.

The 1936 decrease in stocks is slightly larger than the preceding falls. Of the quantity held by producers outside the United States, it is estimated that perhaps 30,000 long tons or so could be considered excess. Some authorities have estimated excess blister stocks at between 50,000 and 100,000 long tons. The excess of world consumption over production is estimated at 105,000 long tons. The total of copper produced last year from secondary sources and marketed in alloyed or unalloyed form can be estimated at 320,000 to 350,000 long tons, not all of which is included statistically.

As regards 1937, an increase in consumption of 80,000 tons over 1935 is all that should reasonably be expected. Outside the United States 1937 production can be estimated at 1,050,000 tons and consumption at 1,040,000 tons, which, with American exports of 60,000 tons, gives excess production of 70,000 tons. To forecast copper consumption for the United States is far more difficult than for Europe. Can consumption be expected to go to and stay at the boom record of 1,120,000 short tons per annum without the help of the heavy takings by the public utilities that swelled the figures during the expansion of the 'twenties? The United States copper producers certainly seem to expect a lasting increase in demand. They are equipping properties for a greatly enlarged output and opening up mines closed in the depression. Even with an ultra-optimistic view of the situation, it is hardly possible to picture a cessation of American copper exports, but should such an unlikely event take place it would merely result in further tapping of the reserve capacity of other countries. But if the large increase in American mine production should find a smaller outlet in the domestic market than now expected, the accumulating surplus might exercise a disturbing influence on the European as well as the American markets. The equilibrium of the market can again be upset by a number of factors. Until these can be more exactly appraised, the course of events and the movement of prices should be watched closely. Nevertheless the position at the moment is sounder than for a good many years.

LEAD

THE marked rise in the price of lead was one of the chief events in the metal market in 1936. The quotation of £15 10s. in January exceeded £28 10s. by the end of the year, an increase of over 80 per cent. After a slight fall and then some irregularity early in the year, the price advanced steadily until the end of October, when the rapidity of the rise became spectacular. Except in U.S.A., where consumption remained considerably below that of the boom period, stocks were insufficient to meet the growing demand due to re-armament in particular, and also to activity in the building and electrical industries. The following summary of the year's movements is taken substantially from the annual report of Messrs Brandeis, Goldschmidt and Company:—

During the year there was a spectacular rise in the price of lead. The market had behaved during sanctions in 1935 much the same as it did towards the end of 1936, and there is no doubt that re-armament has been largely responsible—without meaning that the demand for ordinary peace-time industry has not increased. Despite the slight falling off in building activity in Great Britain, consumption is apparently on the increase, while stocks continue low. The quotation (which was at an average of £14 5s. in 1935) was £15 10s. at the beginning of the year for January shipment, and shortly after fell to the lowest point of £14 8s. 9d. The weakness was due partly to a seasonal slackening of building and partly to the liquidation of purchases made three months previously at far higher prices. By early February the undertone changed, and from then until mid-July fluctuations were comparatively narrow. In May the removal of sanctions tended to weaken the market, and in August the contango disappeared. The upward price movement was gradual until the end of October, when it increased in rapidity, partly owing to a large speculative interest. The highest price touched was on December 29th, with £29 2s. 6d. for March lead.

In the U.S.A. the market had meanwhile presented a rather different picture. The New York price advanced from 4.50c. to 5.50c. on December 15th, and closed the year at 6c. This advance was far smaller than that in London. Stocks had increased during the summer, being over 230,000 short tons in July, and though they fell sharply towards the end of the year, they were still relatively greater than those elsewhere. Neither production nor consumption approached the 1929 figure, but domestic demand was enough to prevent exports to Europe. Consumption has jumped by about 25 per cent. over 1935 and about 80 per cent. over 1932, but the per capita consumption only amounts to about 60 per cent. of the boom years 1928-9, and less than half of the corresponding English figure. In the world as a whole consumption outstripped production by

less than 100,000 tons, this tonnage being available in the U.S.A. in excess of immediate requirements, while stocks elsewhere were not enough to meet the sudden increase in demand.

Lead has become of ever increasing importance as an armaments metal. The development of the automatic rifle and the use of machine guns calls for vast quantities of small ammunition, for which lead is a prime essential. The increase in mechanisation has also brought an enormous demand for making battery plates and bearing metals. Another great field is in the covering of cables for electrical conduits, and there has been a large increase in the use of small cables for the wiring of factories and houses. So far as production is concerned, in countries like England and America, the influence of scrap material may seriously diminish the demand for virgin metal.

The very high price ruling at the end of the year is bound to encourage production from fresh sources, but the lack of new discoveries will prevent new supplies from reaching the market for some time. It is more likely that

THE SYSTEM
OF NATIONAL FINANCE

By Sir E. HILTON YOUNG (Lord Kennet)

The Times says:—"We do not remember to have seen before any book which gives so clear, so concise and so correct an account of the procedure by which the finances of the United Kingdom are managed." 3rd Revised Edition. 7s. 6d. net.

LONDON: JOHN MURRAY

existing large producers, particularly in Canada, Australia and Mexico, will step up production. Part of the deficiency of Spain may be produced by Yugoslavia. In the U.S.A. an increase in production is possible, but is likely to be absorbed in the home market. The outlook for 1937 is quite good, but to avoid encouraging too much economy in the use of the metal, and to ensure the continuation of a healthy market, it would be better if a reasonable price level were maintained for some time. If the price were to rise enough to encourage indiscriminate production, whilst curtailing normal peace-time industrial demand, it would have a decidedly harmful influence.

SPELTER

In relation to lead, price changes in spelter in 1936 have behaved abnormally. The advance between the beginning and end of the calendar year was only £6, against £13 for lead, while a margin below lead prices of about £1 (against a normal £3 above) became converted in the course of the year to a lag of over £8. The rise did not begin till the latter part of the year, largely as a result of speculative support when the lag behind lead began to appear unjustified. An interesting feature has been the approach of U.S.A. consumption nearer to pre-depression levels than in the case of other base metals. The following survey for the year is extracted from Messrs Brandeis Goldschmidt and Company's annual report:—

At the beginning of the year the outlook was none too promising, and it appeared that without some kind of Cartel production would outstrip consumption considerably. The quotation of £14 5s. for January shipment at the beginning of the year did not seem unduly low in the circumstances. During the spring a rather firmer tendency developed, partly on account of rumours, found to be unjustified, about a re-formation of the Zinc Cartel. By early April the price, until then slightly below lead, began to lag, and for the rest of the year, the margin between the two metals grew wider. During June the market fell below its January level, and the lowest price for the year came on July 8th, with £13 3s. 9d. for July shipment. A level of £14 was not reached until early September, and even this improvement was lost early in October. By then lead had advanced to over £18 and the spread between the two metals was not considered warranted. Speculators began to enter the market for spelter, and as a result the price followed lead upwards, but the margin continued to widen and reached about £9 by the end of the year.

† November.

The 1936 spelter consumption of the U.S.A. was not far short of the 1928-9 level, being 500,000, against 535,000 long tons, and nearly double the 1913 consumption of 270,000 long tons. The use of brass can hardly be diminishing, although the higher price for copper has made it more expensive, while the tonnage required for re-armament must be large. A steady decline in the popularity of galvanised products, however, may be assumed to be taking place. The chief reason for the discrepancy between the demand for spelter in the U.S.A. and in Europe is probably the progress of die-casting, requiring alloys containing the highest grades of zinc. For various reasons the U.S.A. have made greater progress in die-casting than the rest of the world, but it is difficult to foresee whether a similar increase in consumption for die-casting will take place in Europe. The outlook is favourable, as other uses are being found all the time in the alloy field through the use of high-grade spelter.

In Great Britain refiners have been dissatisfied with the price and have intimated that they might have to close down unless they receive additional tariff protection. Competition, however, does not come from foreign spelter but from Empire metal, which in 1936 accounted for 139,565 out of 170,907 tons of raw spelter imported (against 122,858 out of 148,015 tons in 1935—the relative position in 1934 being similar). Imports from Australia appear to be increasing more rapidly than those from other countries, and this is likely to continue.

The potential production of spelter is undoubtedly great, if the price remains at an economic level. The amount that is obtainable as a by-product of lead-zinc and copper-zinc ores, for instance, in Canada, is very large. So it is not only the zinc price itself but the prices of lead and copper, not to mention silver and gold, that will determine the course of actual production.

Whether spelter will regain its popularity sufficiently to restore the former margin of about £3 over lead is still an open question, but the experience of a spread of £9 in the opposite direction has certainly strengthened doubts. The outlook for 1937 is not unfavourable, and even if the present margin between spelter and lead is not likely to disappear, it will probably be substantially reduced. Consumption is running at the highest rate ever recorded, taking the world as a whole, and with stocks in the U.S.A. reduced to about the 1929 level, representing under one month's consumption at the present rate, the prospects can be viewed with greater confidence than for many years.

TIN

THE year has witnessed comparatively erratic price movements. Prices ranged between £172 per ton for three months' tin, to over £241 in November, the £200 mark being re-crossed at the end of September, when Holland and the Dutch East Indies abandoned the gold standard. Uncertainty as to the amount of the quota in successive quarters was in part responsible for much of the irregularity. Only in the last week of June was the third quarter quota known, and the agreement with Bolivia was not concluded till later. Reported difficulties with Siam also had their influence. The following summarises the annual report of Messrs Brandeis Goldschmidt and Company:—

During the whole year tin has been strictly controlled, and it might therefore have been expected that the price would have remained comparatively steady. This was not the case, standard cash being on January 2nd £217½-£218, on July 3rd £175-£175½, on November 10th £244½-£244½, and on December 31st £233-£233½. A fluctuation of £70 in four months, when world trade generally was enjoying a normal upswing, is certainly not an indication of a sound market. A backwardation of £10 between cash and three months during the earlier part of the year changed to a contango of about 10s. at the end. This took place fairly gradually and represents at last a real improvement in the market position. Stocks of tin in English warehouses, previously at 300 tons, increased to about 1,300 tons by the close of the year, but this is still too low for normal requirements. Incidentally, the disappearance of the backwardation caused an increase in business on the London Metal Exchange.

At the beginning of the year the producers under the restriction scheme were operating on a 90 per cent. quota, reduced during the second quarter to 85 per cent. This was interpreted to be connected with preliminary negotiations for a renewal of restriction. Until June 25th, uncertainty as to what would happen on July 1st caused a fall of as much as £10 in a single day. On the announcement of the raising of the quota back to 90 per cent., the market became weaker still, the three months' quotation falling to a low point of £172. It became known later that the 90 per cent. quota did not apply to Bolivia, who had to cede arrears equal to 15 per cent. to the other participants. The unproduced tonnage involved was about 10,000 tons, equal to over 75 per cent. of the visible supplies at the time. The market then began to recover, and by the end of September the price advanced to £200. On September 23rd it was announced that the quotas would be the same for the last quarter. Meanwhile it was known that negotiations with Siam had not been progressing too smoothly, and this gave the market an irregular undertone. When an agreement for the next five years was reached the three months' price advanced to £242½ per ton before it was announced that quotas for the fourth quarter would be increased retrospectively by 15 per cent. all round—i.e. to 90 per cent. in the case of Bolivia and to 105 per cent. for the other signatory countries. Finally, it was announced that the new agreement would, if ratified, last for five years from the beginning of 1937, starting with a basis of 100 per cent., with special scales for Siam and the Belgian Congo.

Visible supplies have increased steadily during the year to about 22,000 tons, compared with 14,000 tons at the end of 1935. But as regards consumption, the total of deliveries declined in the case of every country except the U.S.A., Russia and France. The U.S.A. took about 25 per cent. more than during 1935. So far as production is concerned, there has been a falling off in the proportion pro-

COTTON

As will be seen from the following table compiled from the January, 1937 issue of *Cotton Statistics*, published by The Liverpool Cotton Service, world production rose sharply in the 1935-36 season and is expected to increase still more in the present season:—

* Total British imports of raw cotton in 1933: Quantity, 21,742,996 cents; value, £70,570,547.

Total imports, it will be seen, showed an appreciable increase in 1936—an indication of the improvement in home demand.

A survey of developments in raw cotton during 1936 is given in the following summary from Mr F. W. Tattersall's *Cotton Trade Review*, dated December 31, 1936.

On January 2, 1936, the quotation for middling American cotton on the spot in Liverpool was 6.44d., the price in the following weeks, but recovered towards the end of March. After little change in April and May it advanced steadily to its highest point of 7.66d. on July 11th. By the end of August it had fallen again to 6.60d., but throughout the remainder of the year quotations ruled higher, and closed on December 31st at 7.10d.

The American cotton crop for 1935 was 10,638,000 bales, against 9,636,000 bales in the previous season. At the end of last season the carry-over was about 7,000,000 bales. The main feature of the season was the reduction of the United States Government holdings from 6,000,000 to 3,000,000 bales. The first Government estimate of the area under cultivation was 30,621,000 acres, and the amount left for harvest on December was announced to be 30,054,000 acres. For some years the Department of Agriculture's crop forecasts have been remarkably correct, but this year the officials did not maintain their reputation. In August growth was estimated at 12,481,000 bales: but the September forecast caused some sensation, as the amount given had fallen to 11,121,000 bales. In October it rose again to 11,609,000 bales, in November to 12,400,000 bales, and in December to 12,407,000 bales.

An important development of the Government policy of crop restriction and control of prices was the reduction in the amount of loan cotton. The Commodity Credit Corporation has recently announced that some of the 3,000,000 bales of 1933-34 cotton, on which the Government had made loans, will be released during February and March of this year.

The world consumption of American cotton, at 12,500,000 bales, turned out to be larger than expected; and there is every expectation of a continued rise to, say, 13,000,000 bales in the current twelve months.

On January 2, 1936, the quotation for Fully Good Fair Sakellaris Egyptian cotton on the spot in Liverpool was 9.62d. In the next twelve months the price declined, touching bottom at 8.67d. on May 29th; but it rose steadily to 12.04d. on November 29th, and closed the year at 10.40d.

Egyptian production and production from other sources, most of which are competitive against the American staple, continue to increase.

SILK

SUPPLIES of raw silk have been tending downwards for a number of years and a further reduction took place in the season ended June 30th last. The following table, based upon the estimates of Messrs Morel-Journal and Company, shows that the reduction was general except in the case of exports from Shanghai, which recorded a marked recovery. An increase in the European crop, and a decline in supplies from other sources is forecast for the current season:—

WORLD SUPPLY OF RAW SILK
(In metric tons)

* Estimates.

Following the recovery recorded in 1935, prices again rose in the year under review. The following table, showing the trend of quotations at Lyons, is compiled from Messrs Morel-Journal and Company's annual review:—

RAW SILK PRICES—END OF DECEMBER
(In Francs—Lyons Terms).

	1929	1933	1934	1935	1936

„ best 1 par 13/15	180-185	50-52	48-49	58-59	90-91

After an indifferent period from January to May, producers raised their prices in June and the rise continued until August. Following the devaluation of the gold bloc currencies at the end of September, silk prices shared in the general rise in commodities, only to relapse in December, following the publication of the American consumption statistics for November.

WOOL

THE improvement in the raw wool markets that started in 1935 was continued in 1936. Despite the fact that the world wool clip has slightly increased, the index of raw wool prices, compiled by the *Weekly Wool Chart*, rose from 72 for 1935 to no less than 91 for 1936.

The following table, compiled by the Imperial Economic Committee, shows production of raw wool in the leading export countries:—

WORLD WOOL PRODUCTION
(In millions of lbs., greasy basis)

Season	Production						Index of Wool Prices (July, 1914 = 100)
	Australia	Argentina	New Zealand	Union of S. Africa	United States	United Kingdom	
1928-29	968	547	272	290	384	114	3,888
1929-30	938	353	273	309	400	112	3,915
1930-31	912	361	271	302	433	111	3,847
1931-32	1,007	378	283	314	464	113	3,846
1932-33	1,062	388	288	330	441	119	3,863
1933-34	996	385	301	284	460	120	3,745
1934-35	1,015	370	276	222	451	115	3,681
1935-36	992	350	317	251	453	109	3,668
1936-37	990†	375	295	285	450†	108†	91

† The figures in this column refer to the earlier calendar year. ‡ Provisional.

The next table brings out the great decline in New Zealand stocks in the course of the last year, a decline that leaves total stocks smaller than at any time in recent years:—

STOCKS OF RAW WOOL AT END OF SEASON
(In millions of lbs.)

	Australia (a)	Argentina (b)	New Zealand (a)	South Africa (a)
	In Store at Selling Centres	All Centres	All Centres	At Ports (unsold)
1932	44.5	67.0	84.0	17.0
1933	12.9	9.0	59.9	2.0
1934	65.0	41.9	26.0	2.0
1935	26.0	13.0	64.0	4.0
1936	23.2	18.0	17.0	7.0

(a) Season ended June 30th. (b) Season ended September 30th.

The third table shows that wool prices have now recovered to above the level reached in the 1933-4 boom:—

WOOL PRICES IN LONDON

In pence per lb. Fleeces Wools	July, 1914	Dec. 5, 1928	Mar. 15, 1933	Jan. 18, 1934	Dec. 6, 1935	Dec. 2, 1936

Recent changes in the wool market are summarised as follows in the *Weekly Wool Chart*, dated December 31, 1936:—

During the greater part of the year 1936 the course of trade in the wool textile industry was somewhat featureless: the position generally was sound and the 1935-36 wool clips were disposed of without difficulty. The carry forward of unsold wool at the sources of supply was substantially less than it was at the end of the previous season. After the opening of the 1936-37 wool selling season, developments were more exciting, and during the last quarter general progress was made. The United Kingdom was chiefly responsible for the change, but there were indications of advance also from the raw material countries.

In all the primary markets there has been a keen demand for raw material with an upward tendency of prices. In spite of the absence of Japanese support, from May onward—owing to tariff disputes with the Australian Government—offerings at Australian sales were disposed of at an average price per bale for the first half of the season of fully 1/1 above the average for the whole of the previous season. The Japanese demand for merino wool was concentrated in South Africa, where the price of Cape wool was forced well above the relative value of tops in the United Kingdom and the Continent. This had the effect of increasing the European demand for wool in Australia. In the Argentine and Uruguay, German, United States and Japanese buyers were active and so overbid Bradford importers that an unusually small proportion of the clip has been bought for the United Kingdom to date. The New Zealand season opened buoyantly, and

exceptionally heavy Japanese buying at the pre-Christmas sales were largely responsible for the almost complete clearance of the offerings at prices that caused an all-round advance in Bradford quotations for crossbred tops,

OTHER TEXTILE FIBRES

THE trend of the prices of Manila hemp and East African sisal continued upwards in 1936. The quotations for most other textile fibres showed a fall, however, for the first time since 1932.

A description of developments in the fibre market, taken from the annual review of Messrs. Wigglesworth and Company, Ltd., is given below:—

The upward movement of Manila which set in in 1935 progressed still further, carrying the price to a higher point than any touched since 1929-30. Low prices had fostered increased consumption, and now that shipping is more active and the demand for roping increased, supplies of raw material are failing to keep pace with demand. Efforts to reform methods of the growth and preparation of flax are making but slow headway, and it is evident that there is not sufficient weight and enthusiasm behind those who are devoting brain and capital to modernise the industry.

Flax.—A study of the linen industry during 1936 reveals two sharply contrasting periods. Looking back, one is amazed at the transition from the gloom and poor trade of the first six months to the activity and almost boomlike conditions of the second half of the year. At the outset there

was a very considerable discrepancy between raw material costs and the selling prices of yarn and cloth, and except in the fine end of the trade business was exceedingly poor. Fortunately, the month of July witnessed a distinct increase in the demand for yarns and cloth. The natural result was a reversal of the downward movement in prices experienced over the first six months of the year. The foregoing remarks refer particularly to the trade in Great Britain, where a relatively stable exchange and freedom from industrial disputes greatly assisted manufacturers to maintain and in some cases expand their hold on the export markets. In the other centres of the linen industry conditions were less favourable, and in France and Belgium there was serious dislocation owing to strikes and recurrent difficulties with labour. It was not until February that any important transaction in flax was carried through. In that month about 14,000 tons of Soviet material were sold. In April, a further sale of Russian material, totalling about 16,000 tons, took place at a reduction of £10 per ton on the price accepted in February. Although conditions were quiet for the next two months there was no further serious fall in values. The greatly increased demand for yarns which developed in July and August encouraged shippers to cover their raw material needs, and this resumption of buying quickly revealed the underlying strength of the raw material position. Prices advanced rapidly from the low point of £68 for IV Group Slanitz, £58 for Latvian Livonian and £48 for Rato Raw No. 8, to £81, £78 and £65 respectively. By the end of November exceptionally large quantities of new crop Russian and Baltic flaxes had been sold, and sellers were then showing reluctance to back further quantities.

In 1936 there was no marked difference in the area under flax in the chief producing countries, except in Germany, where no less than 110,000 acres were sown compared with 55,000 acres for 1935, the yield of fibre being estimated at 30,000 tons. In Northern Ireland, the area unfortunately showed a decrease of more than 2,000 acres. The output in many countries was down as a result of a prolonged spell of hot dry weather which prevented the plants from reaching full growth.

Indian Hemp.—Bombay.—Following the great activity of the autumn of 1935, the market opened the New Year with a declining tendency. From an opening price of £16 5s. Fine Jubbulpore declined during the first six months to £14 5s. per ton, little above the lowest price recorded in recent years. After the usual quiet summer period there was an improvement in demand during the autumn, followed by a slight increase in values, the highest touched by Fine Jubbulpore in the closing period being £15 10s.

Jute.—Control of production resulted in an average price of £18 7s. 6d. for Firsts for the year 1936, which runs close to the average of £18 10s. per ton for 1935. Early in the year the price of Firsts was £20 10s. per ton; later prices declined, Firsts reaching £16 5s. per ton by the middle of the year. It was soon evident that the discounting of prices had been overdone and that the crop would not be sufficient for world requirements unless considerably in excess of the estimate. After a period of comparative steadiness in autumn prices moved up, Firsts again passing £19. The Government has now issued instructions that an effort be made to reduce the 1937 sowings by three-sixteenths of the 1934-35 area, and it is feared that, in view of expanding demand, restriction may be overdone.

ESTIMATED PRODUCTION OF HARD FIBRES

	1933	1934	1935	1936
Philippine manila	Tons	Tons	Tons	Tons
152,625	175,000	187,375	181,875	
Philippine manila	5,760	10,950	13,550	22,200
Mexican henequen	93,000	92,000	90,000	94,000
East African sisal	102,000	111,000	132,000	139,000
West African sisal	6,000	10,000	12,000	11,000
Java and Sumatra sisal and cantala	85,000	80,000	80,000	77,000
Do. Do. Abaca (manila)	10,000	5,000	4,000	5,000
West Indian sisal	6,000	10,000	6,000	8,000
New Zealand hemp and tow	6,400	4,900	4,500	6,500
Mauritius	500	500	600	600
	467,285	499,350	530,025	525,175

Manila Hemp.—The year may be regarded as satisfactory, many factors contributing to an improvement which gave producers and manufacturers a better margin of profit. The first five months showed no particular change of values. From then onwards a radical change set in, and by mid-summer a strong market was firmly established. A sharp

advance of 16s. per ton in European freights was arranged from October 1st, its notification stimulating buyers and helping activity through the customary dullness of summer time. At the end of May supplies of United Kingdom qualities at origin were stated to be 67,000 bales, but the loose hemp coming forward was insufficient to meet current demand, so that by the end of October stocks dwindled to 15,000/20,000 bales, barely two weeks' supply. Statistically, the general position is sound. Supplies have fallen from 1,480,000 bales to 1,295,000 bales. Stocks at origin have been reduced from 197,000 bales in January last to the present figure of 128,000 bales. Unexecuted inquiries indicate that European consumption would have been greater had the material been available.

East African Sisal.—The outstanding feature of the Sisal market during 1936 has been its remarkable stability in price. The year opened under firm conditions, with No. 1 ruling between £28 and £29. It closes this month equally firm at £29 to £29 10s., so that except for two brief periods during May and August, when it fell to £26, the average price of No. 1 for the year is £27 10s. per ton.

Contrary to general expectation, the higher values now ruling for Sisal have failed to yield a larger production, doubtless because of overcutting during the previous years of low prices and postponement of normal planting to replace cut-out areas. Increases in the cost of production and of freight, combined with a shortage of labour, have contributed to a fall in output. There are no indications of such a change in the situation as would justify any substantial increase in next year's crop.

Java and Sumatra Sisal.—Generally speaking, the market closely followed African, fluctuations being within 2s. 7d. to 2s. 5d. basis "A" grade.

Mexican Henequen.—Judging by the exports, the production has been stable throughout the year on the basis of the reduced output of previous seasons. It is therefore concluded that, in spite of much higher prices, existing conditions preclude any early expansion of the crop. The price has enjoyed similar stability to that obtained by African and Java.

The next table shows British imports of flax, hemp and jute in 1934, 1935 and 1936:—

BRITISH IMPORTS OF FIBRES

Total.....	194,618	173,242	181,743	2,871,707	2,911,179	3,328,127

Imports of flax and jute, it will be seen, showed an appreciable increase.

MANUFACTURES

IRON AND STEEL

ACTIVITY in the iron and steel industry was intensified during the past year. Output of pig iron rose from 6.4 million tons in 1935 to 7.7 million tons in 1936, the highest recorded since the war. The output of steel ingots and castings established an absolute record by rising from 9.8 million tons in 1935 to 11.7 millions in 1936. Prices rose rapidly throughout the year, the index of iron and steel quotations, published in the *Board of Trade Journal*, rising from 102.1 (1930 = 100) in December, 1935, to 110.5 in the corresponding month of 1936. The demand for steel has been so strong that the industry has not only been working to capacity, but has suffered from a shortage of skilled labour, and has not had the material available to maintain its exports, which actually showed a slight decline.

The agreement between the British Iron and Steel Federation and the International Steel Cartel was established on a regular basis in July, 1936. The quota of imports permitted under this agreement is admitted at a reduced tariff rate of 20 per cent.; but this has since been supplemented by a licensing system, which came into operation in November, 1936, whereby licences are issued by organisations authorised by the Governments of the Cartel countries to export firms, whose products may then also be admitted at the reduced rate of duty.

During 1936 the industry has felt the long delay in plant modernisation and in the instalment of new capital equipment, and has had to consider to what extent it should now undertake large schemes of expansion, the fruits of which could hardly be reaped until after a delay of a year or two. One of the most outstanding of these plans for new capital equipment has been that for the rebuilding and modernisation of Richard Thomas's works at Ebbw Vale. The development of the industry in recent years is summarised in the following table:—

BRITISH IRON AND STEEL INDUSTRY

Year	Output (Thousand Tons)		Iron, Steel and Manufactures thereof (Thousand Tons)		Price of Cleveland G.M.B. No. 3 per ton	Unemployment

Year	6425	7687	9842	11699	1152	1479	2372

A description of the year's developments in the principal producing areas of the United Kingdom is given in the following extracts from the *Iron and Coal Trades Review* of January 15, 1937:—

North of England.—Still by far the largest pig-iron producing area in the country, and retaining by a slight margin its supremacy in steel production, the North-East Coast has enjoyed a year of unparalleled prosperity. The actual course of events has surpassed the most sanguine anticipations. Producers have been struggling in the wake of an ever-increasing demand, and, although outputs have been rapidly increased, stringency of supplies has been an almost chronic condition. The continuing pressure for supplies is such

that more plant will certainly be brought into operation early this year. This unexampled activity has derived its inspiration exclusively from the enormous expansion in home demand, and it is likely that domestic requirements will continue to provide full employment for the bulk of the plants now in operation. Apprehension is, however, expressed at the continued neglect of the export market, which has been necessary to keep pace with requirements of home consumers. A substantial export trade is still vital to the local industry. Expansion of pig-iron production has been limited by the fact that so many of the existing blast furnaces had fallen into decay through disuse. There are now 31 furnaces operating, against 28 a year earlier.

Scotland.—The pig-iron market was extremely active throughout 1936, the number of blast furnaces operating having varied from 12 to 15. England and India supplemented the local make, while Russian iron made its first appearance in the market. These were absolutely necessary to meet the requirements of the trade. Owing to lack of fuel it has not been possible to bring more blast furnaces into operation. Makers of light castings have been busy throughout the year, but have found it difficult to get sufficient Middlesbrough iron to meet their requirements. There has also been great difficulty in getting sufficient supplies of hematite, and the position has become more acute as time passed. The manufactured iron and steel industry has passed through a period of record activity, the expansion of business having exceeded expectations. Export business, while showing an increase, has varied considerably in the different sections. A steadily rising home trade has provided by far the most important outlet, and there is every indication of a continuance of these exceptionally active conditions for some time to come. Prospects for 1937 are thus very encouraging.

Sheffield and District.—The year has been a notable one. So great are present demands that the preparations made to cope with increased business have proved in many instances altogether inadequate, and extensions to plant and buildings have been imperative. The output of steel in 1936 surpassed all records. Throughout the year the iron market favoured producers—in eloquent contrast to conditions in recent times. Consumers were willing to place heavier contracts, particularly for foundry pig, than makers were always prepared to accept, and in some cases the latter were compelled to close their books for a time. Consumption of hematite was unusually heavy, and in the second half of the year considerable

difficulty was experienced in securing full deliveries. The year was satisfactory for makers of finished iron, while a retrospective view under the heading of steel gives cause for great satisfaction. On every hand the outlook is such that there is a spirit of high confidence.

North-West of England.—A production that at its fullest was inadequate, and at its lowest was far too small to satisfy needs, and further development of plant were the cardinal features of a memorable year in the hematite pig-iron trade. The year began with seven furnaces in blast; for several months the total was nine, but at the close output fell to seven, with no prospect of a restoration to the maximum till April or May. Deeply disappointing was this contraction of production. The swelling volume of demand caught makers at a period when their plans for setting the industry on a more satisfactory footing technically had still to be completed. The industry is paying for the inaction enforced by a long period of depression. Apart from this, makers have had difficulties with foreign ore supplies, and efforts are now being made to increase production of local ore.

South Staffordshire.—A considerable tonnage of billets was brought into South Staffordshire during the period under review. Despite the heavy demand, there have been few changes in prices except in the case of hematite pig iron. The position at the end of 1936 was exceedingly strong. All through the year the demand for semi-finished steel has been good. The chief feature of the pig-iron trade was the expansion in demand from the general engineering, motor and jobbing foundries. In hematite pig iron conditions were moderately good at the beginning of the year, but afterwards considerable improvement in the call for this class of iron was noticeable from many sources. The year must be considered the most satisfactory for some years in respect to finished iron, and it has been an exceptionally good one for the steelmakers.

South Wales.—The iron and steel industry experienced almost unprecedented activity in 1936. In the later months producers, being unable to cope with the pressure for deliveries, became much in arrears. The condition of the steel industry is dependent on that of tinplates and sheets, which absorb approximately two-thirds of the total production of South Wales and Monmouthshire. The tinplate industry was better employed, at 60 per cent. of capacity, compared with 53 per cent. during 1935, and at the end of the year more activity was noticeable. The improvement is practically entirely due to expansion of the home trade. There were indications at the commencement of the year of an improved export demand, but these faded, and the final figures for the year are only expected to equal those of 1935. The outlook is most encouraging as makers of tinplates have been filling up their order books. The heavy steel makers also have full order books and are already assured of a busy time over the first half of 1937 and beyond.

The following table, compiled by the British Iron and Steel Federation, shows that production of iron and steel increased in the majority of countries in 1936:—

† Includes the Saar.

The expansion of world production of steel was even greater in 1936 than in the preceding year, and for the first time output exceeded the level of 1929.

The final table, taken from the *Iron and Coal Trades Review*, shows the extent of the rise in British prices of a number of iron and steel materials:—

IRON AND STEEL PRICES

ENGINEERING

ACTIVITY in the engineering industry continued to expand vigorously during the past year, when it reached the highest level since the war. As a result of the large-scale re-equipment and extension of the capacity of British industry, which is still in progress, the flow of orders to the engineering industry has been increasing rapidly. Moreover, the re-armament programme and the revival in shipbuilding. Home orders increased to such an extent that domestic output has had to be supplemented by heavier imports, while exports made no further headway. Moreover, the past year drew to its close without any decline in the pressure of demand. The expansion of activity, as the following table shows, has been accompanied by a substantial fall in unemployment:—

BRITISH ENGINEERING INDUSTRY

Year	Exports of Machinery	Unemployment		
		General Engineering	Electrical Engineering	Marine Engineering

Year	380,987	378,782	12.7	8.5

The following description of developments in the industry is summarised from the Annual Trade Review of the *Chamber of Commerce Journal*:—

It seems that the engineering trade is passing through a period of comparative prosperity, which cannot, however, be wholly accounted for by the re-armament programme. The improvement has been general, ranging from mass-produced articles for the multiple stores, the "tin toyshop," to electrical equipment, locomotives, dams and bridges.

The chief trouble is the shortage and rising price of iron. Supplies of ore are held up, and iron is being imported regardless of tariffs. But domestic steel plant is increasing in amount, and technical advances, especially in welding, have reinforced the tendency for "fabricated" steel structures to replace iron castings for large pieces of machinery, e.g. for the carcasses of turbo-alternators and big bed plates. The electrical engineering industry has been exceptionally prosperous, and now employs 10,000 more men than a year ago. Exports have increased by over 10 per cent., though imports have gone up by 28 per cent. The outstanding

event of the year has been the opening of the new Fulham power station. The Central Electricity Board has spent nearly £10 millions on the stations connected with the grid. Bridge building has taken much steel during the year, and has included the Stormstrong Bridge in Denmark, 2½ miles long.

Great changes have been made by the armament programme in the aeronautical engineering industry. For years the standard design of military aeroplanes in this country has been a braced biplane with a fabric-covered stress-bearing framework. That design has now been largely abandoned in favour of one in which the skin of the machine plays a part in the stress-supporting structure, and in which the monoplane arrangement takes the place of the biplane.

† At end of year. ‡ According to "Fairplay." § Average.

CONSIDERABLE improvement in British shipbuilding can be recorded for 1936. The tonnage commenced was 58 per cent. above 1935, and though well below the 1929 level, was the

highest since that year. Towards the end of 1936, it is true, 45 per cent. of berths remained idle (against 57 per cent. for 1935), and the percentage of unemployed insured workers in mid-December was as high as 26.9 per cent.; but these figures give a misleading impression of the possibility of expansion, owing to the shortage in some districts of certain classes of skilled labour.

Wage increases were given amounting to 2s. per week for time- and 4s. per week for piece-workers. Another illustration of the year's progress is given by the sharp fall in the net tonnage laid up, which was almost halved in the last quarter of 1936. The decrease in Newcastle alone accounted for 17½ per cent. of the total fall in 1936. About a third of the laid-up tonnage at the end of 1936 had been out of commission for a year or more.

TONNAGE LAID UP IN UNITED KINGDOM

Laid up on:—	(Thousand tons net)			
	Average, 1927-30	1934	1935	1936
January 1	355	1,240	878	423
April 1	433	1,079	706	452
July 1	554	1,042	586	457
October 1	460	818	502	373

Unlike 1935, the increase in mercantile shipping launched by British shipbuilders was relatively greater than that for foreign countries, being 72 per cent. against 57 per cent. But a somewhat smaller proportion in this country was for foreign owners—10.9 per cent. against 12.8 per cent.—though the ratio as recently as 1930 was 44 per cent. The average tonnage launched in the world over the five years 1932-36 was, however, still 1,369,000 tons below the average for 1909-13.

Only one vessel of over 20,000 tons was launched in Great Britain, but 11 others each exceeded 10,000 tons. The proportion of tanker tonnage, at 17.4 per cent., although higher than in 1935, remained considerably below the highest recorded. Again, though still not the highest, the proportion of tonnage fitted with internal combustion engines comprised 48 per cent. of the steam and motor total. As before, the Clyde launched the greatest tonnage—282,000 tons out of 856,000—the improvement on the North-East coast also being considerable; the only important decline was shown by Belfast.

Particulars of mercantile tonnage launched abroad as given in the following table, show substantial increases by Germany, Japan, Sweden and the United States. The German output, for instance, was the highest since 1925, and the Japanese more than twice that for 1935. Merchant vessels launched in Sweden were almost entirely motorships, but most of the Swedish output was destined for registration elsewhere—particularly Norway. The foreign tonnage launched included 14 vessels of over 10,000 tons each, while 62 per cent. of the total consisted of steel motorships.

Tonnage under construction is of greater interest than usual on account of rearmament. According to Mr F. E. Rebeck, the president of the Shipbuilding Employers Federation, 20 per cent. of berths are occupied with naval work, and the naval tonnage added to the mercantile brings total activity back to the 1929 level, when, however, the amount of warship work was trifling. Another characteristic, according to the same authority, is that present construction is mainly for home account, so that in effect naval work has replaced the lost export work. The loss of foreign connections in the last four years is viewed with concern.

The freight markets witnessed a transformation in the second half of the year, after months of despondency that might have been still worse but for the occupation of the Italian tramp fleet elsewhere, and the strikes of Spanish seamen. The 42 per cent. rise in the freight index between June and December was initiated by fears of poor North American crops. The increased River Plate chartering (accentuated by poor European harvests), and the higher consumption of ores for war material were among the more important factors contributing to this movement.

Percentage British	63.0	61.4	60.2	59.9	60.4

As shown by the above table, the proportion of entrances and clearances in British vessels has not altered appreciably. The tendency for the British percentage of entrances to fall has continued, albeit at a slower pace, while a similar tendency among clearances has been reversed.

MOTORS

THE British motor industry had another record year in 1936. The salient statistics in regard to private cars are set out in the following table:—

UNITED KINGDOM—PRIVATE CARS AND TAXIS

Year to September 30	Production	Imports	Exports	Total in use
1929	182,347	21,520	33,792	1,047,492
1930	189,669	9,751	23,209	1,123,664
1931	188,997	2,118	18,992	1,142,988
1932	171,244	2,762	31,797	1,188,052
1933	220,779	3,619	41,028	1,266,946
1934	256,866	10,851	43,907	1,374,039
1935	311,544	13,563	54,260	1,533,500
1936	353,743	12,650	64,787	1,713,108

In consequence of growing prosperity at home, and stimulated by the development of new housing estates outside the large towns, sales of cars attained record dimensions last year. The improvement in demand was most marked in the 11–14 h.p. class, and there was apparently a decline in the popularity of the smallest class of car. The rapid expansion of imports in 1934 and 1935 was mainly a reflection of the growing demand for higher-powered cars in the post-depression years. A growing home production in this category was mainly responsible for the check to imports last year. On the other hand, exports forged ahead, and were 19 per cent. larger than in 1935; the main increase was to Empire countries. The growth of exports has been assisted by the reduction in the horse-power tax, which gave a fillip to home demand for larger cars, and thus brought about a lowering of costs. Cut-throat competition is, however, common on the export markets, there being a tendency for the British manufacturer to use exports to compensate for the seasonal fluctuations in home demand.

The development of the commercial vehicle section is epitomised in the table below:—

UNITED KINGDOM—COMMERCIAL VEHICLES

Year	Production	Imports	Exports	Total in use
1929	56,458	16,264	8,219	412,241
1930	66,859	1,527	6,545	435,859
1931	67,310	1,490	5,320	445,082
1932	61,475	310	8,381	454,523
1933	65,508	400	10,664	473,447
1934	85,633	1,637	13,742	501,510
1935	92,176	1,838	13,648	508,500
1936	107,609	2,700	16,926	554,542

Production achieved a further striking advance last year. Largely in consequence of Government policy, the improvement was most marked in the lighter goods vehicles and in the medium to heavy passenger vehicles. On the passenger side, the Diesel is making rapid progress, though it received a setback last year on the goods side. An item of growing importance is the sale of trolley buses. The growing tendency for American trucks—such as Dodge, Studebaker and Reo—to gain a footing on the English market is reflected in the growth of imports. On the other hand, the unpopularity of the heavy lorry on the English market is forcing the British manufacturer in this class to seek an outlet overseas. His success in this quest during the past year may be seen in the remarkable growth in the export figures.

BUILDING

DURING 1936 building activity in this country was maintained on a high level. The improvement may be traced in the movements of *The Economist* index (1935=100) which, after reaching a "low" of 57 in 1932, rose to an average of 107 last year. Judging by the slight decline in the index since the summer, any further expansion in general building activity would appear unlikely. Despite a further

influx of workers into the industry, the decline in the percentage of operatives unemployed continued last year. From a peak of 29.2 attained in 1932, this percentage fell to a monthly average of 16.8 in 1935, and of 14.9 in 1936.

The record number of 339,538 houses was completed in England and Wales during the twelve months to September 30, 1936, but the number built by private enterprise was slightly below the previous year's figure—274,348, against 275,069. During the six months ended September 30th last, 127,727 houses were completed by private enterprise. This was 2,000 more than in the corresponding period of the previous year, but 19,000 fewer than in the half-year ended March 31, 1936. House-building by local authorities in the

second half of 1936 constituted a record. House-building for slum clearance under the 1930 Act and for the relief of overcrowding under the 1935 Act may be sufficient to prevent any serious fall in total residential building during 1937.

An indication of the probable level of activity in coming months is provided by the building plan figures. Plans approved for houses last year by 146 Local Authorities fell to £75,061,000, against £78,145,000 in 1935. On the other hand, plans approved for non-residential purposes rose from £35,573,000 to £41,963,000 in the period under review thus carrying the total to a new high record. Meanwhile, the rise in costs, which became marked in 1935, continued last year, and the wages of craftsmen were again increased by 3d. per hour to 1s. 7d. per hour, and of labourers to 1s. 2½d. per hour from February 1, 1937.

BRITISH BUILDING INDUSTRY

	Value of Plans Approved by 146 Local Authorities in Great Britain (£'000)			Percentage Unemployed	Index of Building Costs* 1935=100	Index of Building Activity† 1935=100

highest hopes, and is now being manufactured also in Germany, the United States and Japan.

Imports rose somewhat, but it should be remembered that by no means all of them are competitive with domestic products. Exports have shown a slight decline in value, as a result of trade restrictions, and the Empire market is now first in importance to the trade.

It has been a good year for tar products, particularly for cresylic acid, the price of which has more than doubled in the last twelve months. Naphthalene, with a growing demand and an embargo on German exports, has been an active item, and is now almost beyond the reach of manufacturers of firelighters.

Prices have risen as a whole, some considerably, in the latter half of the year, chiefly as a result of rising metal and other raw material prices. The chief exception has been the fall, following increased supplies, in the quotation for acetic acid.

World production and consumption of fertilisers, as recorded by the British Sulphate of Ammonia Federation, showed a marked increase in the past year:—

WORLD PRODUCTION AND CONSUMPTION OF PURE NITROGEN
(Years ended June 30th. In Metric Tons)

	1931-32	1932-33	1933-34	1934-35	1935-36

* Including nitrogen products used for industrial purposes (except Chilean nitrate) and ammonia in mixed fertilisers.

Both output and consumption in the year ended June, 1936, were substantially higher than in 1929-30.

COTTON TEXTILES

The following table, giving mill consumption of raw cotton, has been compiled from the publications of the International Federation of Master Cotton Spinners' and Manufacturers' Associations. Recovery has continued. World consumption was higher than at any time since 1929, and United States demand has shown a remarkable rise after the decline of the two previous years.

WORLD CONSUMPTION OF RAW COTTON

(Thous. running bales, excluding linters)

Season ended July 31	United Kingdom	Other European Countries	United States	Asia	Other Countries	World
1929	2,800	8,112	7,023	6,720	1,217	25,872

† No returns from Germany.

† No returns from Germany or Italy.

The statistics of the British industry continue to be satisfactory but for the uninterrupted decline in the export of piece goods. Imports of raw cotton are now above the 1929 figure; yarn exports have increased; and the unemployment percentage has fallen from 20.9 in 1935 to 15.5 for 1936, the figure for December being as low as 12.4—little above that of the country as a whole. Average earnings are well on their way back to the pre-slump level.

BRITISH COTTON TRADE STATISTICS

Year	Imports of Raw Cotton		Exports		Prices—Middling American (Spot)	Unemployment	Average Earnings

The following description of developments in the spinning and manufacturing branches during the year is drawn from Mr F. W. Tattersall's *Cotton Trade Review*, dated December 31, 1936:—

Conditions in the Lancashire industry at the end of 1936 were distinctly better than at the beginning of the year. The first six months were not very favourable, but in the middle of the summer demand began to improve, and a larger and increasing business was done during the last three months. As a result of the contracts on the books, the year closed with spinners and manufacturers in a stronger position than for many years past.

During the last few months of the year there were signs of demand overtaking supply, and prices for manufactured goods hardened, irrespective of raw cotton values. The costs of spinners and manufacturers were increased by the higher wages for the operatives, dearer coal and mill stores, and the levy under the Cotton Spinning Industry Act.

Price-fixing schemes in the spinning branch were extended, and now a large proportion of the yarn produced is being sold under an arrangement for minimum prices. The Cotton Spinning Industry Act has come into operation for dealing with redundant spindles. The first levy was paid on September 14th; it will amount for a full year to £500 for an average-sized mill. No official information is available yet as to the number of spindles purchased by the board.

An important development during the last twelve months has been the greater disposition on the part of members of the industry to unite to protect their interests.

WOOL TEXTILES

The continued rise of raw wool prices and production has again been accompanied by increased activity in the wool textile industry in most countries. But as the table below shows, the advance has been by no means universal:—

RETAINED IMPORTS OF RAW WOOL
(In millions of lbs.)

Year	United Kingdom	France	United States	Germany	Japan	Italy	Belgium
	Jan.-Dec.	Jan.-Nov.	Jan.-Nov.	Jan.-Dec.	Jan.-Nov.	Jan.-Oct.	Jan.-Nov.

† January-September.

The greatest progress has been shown in Great Britain, the United States and Belgium, while there have been remarkable declines in Germany, France and probably Italy (where wool substitutes are playing a rapidly increasing part).

The striking developments in the British industry are summarised in the following table:—

BRITISH WOOL TEXTILE INDUSTRY

Year	Retained Imports	Exports		Price of Raw Wool* per Lb.	Unemployment (Woolen and Worsted)	Earnings (Ministry of Labour Figures) Wool Textile Industry per Week
	Sheep's and Lambs' Wool	Woollen Tissues	Worsted Tissues

* Provisional.

It will be seen that Japan is now the largest producer of rayon, but difficulties with the supply of pulp and increasing trade restrictions make further increases in her share of world trade uncertain. In the United States a remarkable recovery took place in 1936, and, after the lean years of 1934-5, an urgent need for new plant has shown itself. Italy by now is by far the greatest producer of staple fibre, and the large additional output of "Lanital" wool substitute (made from casein) shows that synthetic textiles now play a great part in the affairs of that very nationalist economy.

The British industry suffered in the latter half of 1936 from a temporary over-production, for which national mourning and a wet summer were largely responsible. There has been a tendency for business to be concentrated upon the lower quality and cheaper yarns, which in some cases has led to the production of goods the public would not touch. Much progress has been made in the spinning of rayon with cotton and wool; and in the worsted industry, despite a prosperity that has impeded the making of experiments, a leading company is going ahead with a demonstration worsted spinning plant to attract the attention of spinners to the possibilities before them.

The outlook for 1937 is in the main good, and the manufacturers appear to have considerable faith in the future of the industry.

Transparent Paper.—An increasing number of trades used transparent cellulose wrappings in 1936. In Great Britain the tobacco trades took much more, and two of the best-known brands of cigarettes have been wrapped in the product since June. The new British Cellophane factory is nearly complete, and is expected to be in operation very shortly. Moisture proof qualities of transparent paper have steadily risen in popularity, and efforts are being made to produce this type of paper in the actual manufacturing process and not by after-treatment as is the present practice. A heat-scalable quality is now employed for giving a glazed finish to showcards, display cards, etc.; further developments are expected.

Imports of Japanese transparent paper at very low prices led to an appeal for protection being made to the Import Duties Advisory Committee; but the quality was very poor and no permanent success was likely to attend it. Domestic competition remains keen. Progress has been considerable in France, Germany, Canada and the United States; and the future of this industry is very promising.

LEATHER AND FOOTWEAR

THERE was a large increase during the past year in the demand for leather in this country, accompanied by a

continued rise in the price of hides. The index of sterling hide prices, calculated by the United Tanners' Federation, rose from 80 (1923 = 100) in January, 1936, to 90 at the end of December in the same year. The improvement of demand in this country is reflected in the increase in imports of hides and leather, shown in the following table:—

Developments in the market for hides and leather, and in the footwear trade, are summarised in the following extract from a survey in the *Leather Trades' Review*:—

The leather and allied industries do not appear to have shared in the industrial awakening of the year 1936 to any great extent. Throughout the year there was an atmosphere of expectancy which somehow just failed to merge into strong and brisk trading. All through the year the prices of raw materials have been on an ascending scale. The predominant cause was greater strength in the general world demand and, in some cases, a tendency for supplies to shrink. The average price appreciation over the year was about 7 per cent. The boot and shoe manufacturers put up a remarkably stiff resistance against higher prices. One of the difficulties is that "fixed price" footwear is a feature of quite a large part of the retail shoe trade. Until October, however, there was a steady upward trend of leather prices. Since October there has been a lull in the leather market; sales have generally been on a small scale, and leather prices may be described as firm, but practically unchanged.

The activities within the industry during the year have been more than fully maintained. Production has been on a fairly full scale, and there has not been much stock accumulated. In October there were nearly 1,000 persons more employed in the tanning and currying trades than at the corresponding date in 1935. The export of leather showed no marked alteration from the figures for 1935.

RETAIL TRADE

In 1936 preparatory work for the extension of the statistical information available with regard to retail trade was undertaken, but no information in greater detail than for the previous five years has yet been published. The only source is still the voluntary inquiry initiated jointly by the Retail Distributors Association and the Bank of England. The figures in the monthly returns relate to the trade of a number of department stores, of concerns operating multiple shops,

of independent retailers and of a representative section of the Co-operative societies. In the first five years of the inquiry the number of collaborating concerns grew rapidly from a small beginning until the sample became representative of large-scale distribution as regards class of trade, type of organisation and geographical area. By now the turnover of contributing firms amounts probably to more than 15 per cent. of the total retail trade of the

country. But no practical way has yet been devised of including a representative sample of the trade of small independent shops. Apart from the difficulty of persuading a sufficient number of such businesses to contribute regularly and punctually, the expense of analysing some tens of thousands of schedules each month would be considerable.

In the circumstances pressure has been revived from several quarters for the institution of a Census of Distribution. This would make it possible at stated intervals to take stock of the progress of distribution as a whole and would give added significance to the inter-censal figures obtained from this voluntary inquiry. The matter has been recently ventilated in the House of Commons and in a debate nationally broadcast; but it is to be feared from the reply of the Government spokesman that there is little likelihood of the institution of such a Census unless there is a much more determined and general demand for it from business circles in the future than there has been in the past.

Percentage changes as compared with the corresponding period a year earlier in the aggregate value of retail turnover from February, 1934, to December, 1935, are given in the following table together with changes in the value of stocks at cost.

PERCENTAGE CHANGES ON THE CORRESPONDING PERIOD IN THE PREVIOUS YEAR

	Value of Sales (at Selling)						Value of Stocks (at Cost)		
	Month			Year to Date			Month		
	1934-35	1935-36	1936-37	1934-35	1935-36	1936-37	1934-35	1935-36	1936-37

Jan..	+4.2	+10.8	...	+3.3	+6.5	...	-1.2	+2.3	...

The decline in the money value of retail turnover ceased in the middle of 1933 and there has since been an uninterrupted increase—apart from dislocations due to the changing dates of Easter and Whitsun.

The rate of increase, which grew steadily throughout 1935 reached its peak early in 1936, and has since been stabilised at rather over 6 per cent. It must be remembered, however, that this fairly high percentage is now showing after three and a half years of steady improvement so that further acceleration in the rate of increase was hardly to be expected. The third series is particularly interesting in that during 1936 a definite increase in the cost of stocks has manifested itself. The rise in stocks during 1934 was to be explained by the necessity of general re-stocking at the end of the slump. In 1935 increased turnover was achieved without any further increase in stocks. During the latter half of 1936 the anticipation as well as the fact of rising prices has no doubt been partly responsible for a significant increase in stocks which can hardly fail before long to be passed on to the consumer in higher retail prices.

Rather more than one half of the turnover considered above consisted of food and perishables, a category including sweets and tobacco and café and restaurant sales in addition to the more obvious products. The value of sales in this group increased during the period February to December, 1936, by 7.9 per cent., while non-food sales in the same period increased by 4.5 per cent.

The principal changes in the sub-divisions of the non-food group were as follows:—

Increases: Boots and shoes (+6.3 per cent.); furnishing departments (+5.5 per cent.); women's wear (+5.1 per cent.); hardware (+4.6 per cent.); fancy departments (+3.9 per cent.); men's wear (+2.6 per cent.); sports and travel (+2.3 per cent.); and miscellaneous sales not included above (+6.4 per cent.).

Decreases: The only sub-division to decrease was piece-goods (-0.8 per cent.). The whole of this decline was attributable to dress piece-goods (-3.0 per cent.). Household piece-goods increased (+2.5 per cent.). The decline in piece-goods was thus much less severe than for many years and it would not be surprising to see an increase in 1937.

Turning to geographical divisions, London Suburbs show the largest increase for the eleven months (+7.4 per cent.), followed by South of England (+7.3 per cent.), North of England (+6.0 per cent.), Scotland (+5.5 per cent.) and London West-end (+3.6 per cent.). For the second year in succession substantial increases are recorded in every geographical division and not least in Scotland and the North—which include the whole of the distressed areas. Recovery started far sooner in London West-end than in the other areas so that the lower percentage increase probably represents a larger measure of prosperity than higher percentages in the areas which have only recently improved.

The Bank of England index numbers of Retail Sales shown below are based on the average daily sales in the year 1933 = 100. These indices are compiled from the same material as the percentage change figures described above. Separate indices are available for Food Sales, Non-Food Sales, and Total Sales split up by geographical areas.

The only other statistics which throw more detailed light on particular aspects of retailing are the Retail Distributors Association index numbers of Department Store Sales. Probably the experience of department stores does not differ very widely from that of other types of large-scale retail organisation and with some reservations conclusions drawn from these figures may have a wider application. The R.D.A. index numbers are based on the monthly average of sales in the year 1933-34 = 100. These indices represent twelve monthly moving totals of the money value of sales and refer to a constant sample of department stores. Taking the monthly average sales of the year 1933-34 = 100 the number for January, 1931, was 107. It fell to 103 by January, 1932, and to its lowest point—97—in April, 1933. By January, 1934, it had recovered to 100, by November, 1934, to 101.4, by November, 1935, to 102.3, and by November, 1936, to 106.4. Nearly all the ground lost since 1930 had thus been recovered by the end of 1936 and more than half of it during that year. The index number of transactions in November, 1936, stood at 107.9, having increased more rapidly than the value of sales though latterly this tendency has been less pronounced.

Taking individual categories of merchandise in these same Department Store series the outstanding feature of 1936 has been the renewed boom in furniture departments. Another welcome feature is that sales of piece-goods have at last ceased to decline. Other categories have continued to improve steadily, in line with the aggregate index number.

The rate of stock turn in this constant sample of stores has steadily improved during 1936, in spite of the rise in stocks due to higher wholesale prices. These rates—obtained by dividing total sales (at selling) for all departments for each successive period of twelve months by the

average stocks (at cost) during the same period—have in recent years been as follows:—

RATE OF STOCK TURNOVER

January, 1931...	6.37
1932...	6.53
1933...	6.54
1934...	6.91
1935...	6.95
1936...	7.22
November, 1936...	7.44

The steady increase in these rates through periods of falling and rising prices and their maintenance at a level distinctly higher than five years ago suggests that these stores are much more efficient than before the depression.

An international comparison of department store turnover is given in the following table.

	Great Britain	U.S.A.	Canada	Germany	Belgium	
					Clothing	Furniture
January, 1931...	129	120	111	173	103	119
" 1932...	119	95	91	144	95	106
" 1933...	106	73	76	126	85	99
" 1934...	116	85	83	82	79	92
" 1935...	117	88	80	85	67	84
" 1936...	122	94	79	88	78	97
November, 1935...	110	135	131	100	91	89
" 1936...	113	154	126	...	94	98

British stores have suffered less severely during the depression than stores in the other countries compared. Progress in America and Canada has recently been rapid from very depressed levels. Recovery in Belgium seems well under way and there has even been some improvement in Germany during 1936.

J. A. McLEOD, President.

H. F. PATTERSON, General Manager.

Auditors' Report to the Shareholders:
We have examined the above General Statement of Liabilities and Assets as at December 31st, 1936, and compared it with the books at the Chief Office and with the certified returns from the Branches. The Bank's investments and cash on hand at the Chief Office and at the Toronto and Montreal Branches were confirmed by us at the close of business on December 31st, 1936. We have obtained all the information and explanations that we have required, and in our opinion the transactions of the Bank which have come under our notice have been within the powers of the Bank. We report that in our opinion the above statement discloses the true condition of the Bank and is as shown by the books of the Bank.

TORONTO, CANADA, 15th January, 1937.

The Bank of Nova Scotia conducts a general banking business. Fully equipped for Exchange, Collection and Letter of Credit Transactions with all parts of the world. Particular attention is devoted to business with Canada, Newfoundland and the West Indies, where Branches of the Bank have long been established.

LONDON OFFICE: 108 OLD BROAD STREET, E.C.2.

E. C. MACLEOD, Manager.

The Toll of Armament

THE White Paper on Defence Expenditure issued by the Government on Tuesday confirms the gloomiest forebodings. Even those who accepted the CHANCELLOR OF THE EXCHEQUER's argument that some portion of re-armament could legitimately be defrayed out of borrowed money might have hoped that Defence Loans would at least set a limit to the rise in the amount of defence expenditure to be met by taxation. MR CHAMBERLAIN has falsified even those expectations. He has told the country that it would be imprudent to expect the total cost of re-armament in the next five financial years to be less than £1,500,000,000. And as he can raise, under the financial resolution debated on Wednesday and Thursday, as much as £400,000,000 of this by borrowing, we must also expect our annual Defence Votes to average £220,000,000 during the next five years—that is, just double their average amount in the five years between 1930-31 and 1934-35.

In these columns last week we described the enormous cost of this additional five years' defence programme—i.e. the excess over the normal defence expenditure in recent years—as four times the cost of the Boer War. But the final figures, in MR CHAMBERLAIN's words on Wednesday, challenge comparison with our vast expenditure in the Great War itself—which was the chief source of the dislocation of our economic life during the entire post-war epoch, of the crushing burden of our towering National Debt, of the world's currency troubles and of the unemployment of the Great Depression. In simple terms, the total cost of our re-armament in the next five years is equal to the cost to this country of waging the last war for a whole year.

From another angle, the contemplated Defence Loan considerably exceeds the total repayments of National Debt that have been made since 1924 when MR BALDWIN came into power. Thus are the effects of twelve years of frugality swept away. The comparison is not, however, one of scale alone. The Government's proposals inevitably recall the steps taken during the Great War to divert our economic resources into war channels. Now, with its trebled expenditure on defence, the Government is going to bid in almost every basic market—including the all-important labour market—against manufacturers and traders engaged in normal production. Further controls and the regimentation of industry must inevitably follow.

Again, the White Paper conveys political implications of the gravest nature. Thus, as we show in a series of Notes on pages 400 to 402, despite the gentleman's understanding that our capital ship programme would in fact conform to the Washington Treaty, the Government have given the naval race a titanic impetus. Before us, therefore, looms the prospect of renewed competition with Japan; and as we add to our capital ship programme, we raise the effective strength of the 35 per cent. of our tonnage which Germany can build. Crucial questions, also, of strategy have been dropped in the haste for re-armament; as, for example, the bomber v. battleship dispute. The answer is, we are to have both. As in the famous Caucus race, all have won, and all are to have prizes.

On the financial side of the Government's plan, the CHANCELLOR on Wednesday sought to put the best face on a bad business. He suggested that the country's credit

A

could comfortably stand a Defence Loan or Loans of £400 millions; the setback in gilt-edged was not so important, nor so unhealthy; and the fears of an inflationary cycle set up by re-armament expenditure were exaggerated. But the CHANCELLOR cannot, unfortunately, assume that our credit will come through this crisis unscathed. The announcement of his intentions last week was quietly received in the City; but in the last seven days uneasiness over its effects has been growing. However it may be financed, this stupendous programme must constitute a very heavy burden on the productive capacity of the country. Not one penny of the whole £1,500 millions will enlarge our resources or revenue-producing assets. Indeed, as more and more of our resources and economic activity are diverted to the production of armaments, the current and future annual charges for their efficient upkeep and obsolescence must expand.

The proposals also have a bearing on economic policy generally. The White Paper reveals, for example, that the Government are to lay up—presumably by entering the open markets—big stores of fuel, both for military and civil purposes, and of raw materials essential to those branches of industry vital to the defence services. This raises at once the question of our tariff system. Are the Government proposing to borrow from the people in order to spend part of the money by out-bidding manufacturers and traders working for civil demand—thus driving prices up faster than they are at present rising—and, in addition, giving the Exchequer the extra customs duties on Government purchases from abroad? We trust not. They should import free of all duties; and should take instant steps to free the British industrialist, and the British consumer, from

the effects of the fiscal measures introduced in the depression. It will be intolerable if the cost of living, the wages that depend on it, and the basic costs of British industry, are henceforth sent rocketing upwards by a combination of the protectionist and monopolistic devices which this same Government introduced into our national economy in quite other circumstances. We have especially in mind the import quotas on foodstuffs, and the monopoly of the home market, as well as the effective fiscal autonomy, granted to the British Iron and Steel Federation. Now that world prices of these vital commodities are rising, to maintain protective measures and intensify their effect by adding this vast unproductive defence expenditure would be madness. A headlong boom in costs and prices would be the outcome—no safe preparation for the stress of war.

It is natural that the debate in the Commons on Wednesday and Thursday should have been concentrated on the CHANCELLOR'S proposal to defray part of our defence expenditure out of loans. It is natural that the British Dominions should welcome the United Kingdom Government's willingness to lay on the inhabitants of this country the cost of Imperial defence. It is no less natural that Germany should welcome the British Government's adherence to a re-armament policy and financial canons which the German Government have chiefly propagated. It is also natural that the members of the potential bloc of States prepared to co-operate against an aggressor should welcome, *en défaut de mieux*, this access of British military strength. But, when all is said and done, the Government's programme and MR CHAMBERLAIN'S finance—in spite of the exordium in the White Paper—cannot be taken as bull points either for peace or for prosperity.

The Mediterranean and the Empire

THE recent scares over the alleged intervention of Germany in Morocco and of Italy in the Balearics are the latest of a long series of events which have focussed attention upon the problem of defending the vital communications of the Empire. The Abyssinian war and the consequent Anglo-Italian tension have been followed in rapid succession by the disturbances in Palestine, by the Egyptian treaty, by the Spanish civil war and by the Anglo-Italian accord. This sequence of events has produced two effects on British political opinion: namely, anxiety over our strategic situation in the Mediterranean, and renewed interest in the problem of Commonwealth co-operation in Imperial defence. For the Mediterranean is a unique focus of the vital interests of most of the self-governing Dominions, of India and of a large part of the dependent Empire, and is thus a test case for the working of Commonwealth co-operation in defence, and therefore in foreign policy.

The 1923 Imperial Conference laid down certain principles of Imperial defence, which were re-endorsed by its successor in 1926. It is a rather disparate list, for it includes the primary responsibility of each self-governing member of the Commonwealth to provide for its own local defence, the adequate safeguarding of maritime communications, the provision of naval bases, the maintenance of a one-Power naval standard, and the need for uniform technique in air defence throughout the Commonwealth. The 1926 Conference added the provision of an adequate chain of air bases. In the application of these principles, the earlier Conference took note of "the necessity for the maintenance of safe passage along the great route to the East through the Mediterranean and the Red Sea."

The nature of this joint obligation depends on the

interpretation given to the phrase "safe passage." It might mean that British diplomacy, backed by defensive strength, must make it impossible for any Power to deny free passage through the Mediterranean to vessels under the British flag. "Impossible" in this context would mean that such a denial must involve a challenge to war, in which the hostile Power would be surely defeated by the Empire and its associates. Viewing the Mediterranean in isolation, British statesmen may feel satisfied that the duty is performed. So long as the League of Nations means anything, so long as we have the goodwill of France, so long as we retain at least our present ratio in naval armaments, no single Mediterranean Power or group of Mediterranean Powers could hope to succeed in a contest with the British Empire. "Safe passage" might be interpreted, however, to mean securing the flow of British shipping through the Mediterranean during a world war into which the Commonwealth had been drawn for quite other reasons than a direct challenge in the Mediterranean. The doubt whether the duty can be performed in this larger sense is causing hard thinking both here and in the overseas Empire.

In the Great War, the Mediterranean was kept open for a number of reasons. Both the chief Mediterranean naval Powers were on the Allied side. Neither Turkey nor Austria-Hungary had any first-class naval force. The greater part of the German navy was bottled up in northern ports, and the British fleet was adequate to keep it there and at the same time to supply convoy for Allied merchant ships. To-day conditions have changed. The German navy may be weaker, but the Italian navy is stronger, and we are obliged to regard Germany and Italy as potential allies. The Anglo-Japanese alliance,

which enabled the British battle fleet to evacuate the Pacific, and the Washington Conference system which replaced it, have both been swept overboard. The growth of air power presents a new threat to safe passage through narrow waters.

Recognition of these facts prompted recent rumours that British naval plans were now based on the assumption that safe passage through the Mediterranean would be out of the question in a world war. On the outbreak of hostilities, therefore, it was said, both ends of the Mediterranean would be navally sealed, and transport to the East and to Australia would be diverted round the Cape. Colour was lent to these rumours by the visit of the South African Minister of Defence to London last year to discuss the future of the Capetown defences.

Second thoughts, as well as emphatic denials by Ministers, made it clear that this picture of Imperial strategy could not be complete. The extra length of route would absorb a dangerously large proportion of a depleted merchant fleet. The British Empire has direct defensive responsibilities towards more than one Mediterranean country—Egypt, Palestine, Malta, Cyprus. And the Mediterranean is not merely, as Mussolini described it, a maritime short cut for the Empire. It is also a vital section of the main air routes, civil and military, between Great Britain and Africa, India, Australia and the East. Here again South Africa comes into the foreground of the new picture, since her statesmen are tending more and more to regard the air route as a vital lifeline which she must help to defend. Hence, even though the Mediterranean can never be wholly safe for merchant shipping in time of war, the maintenance of naval and air strength in the Mediterranean zone will continue to be of supreme importance in British Commonwealth defence policy. The defensive development of Malta and Cyprus is thus to be regarded as complementary to the development of bases along the alternative route, and air defence as complementary to naval strength.

What is the co-operative Commonwealth aspect of Mediterranean defence, which in so many ways is the

clue to Imperial defence as a whole? For some time to come the local defence of the Dominions will remain their chief peace-time contribution towards the defence of the whole Commonwealth. But that is by no means a negligible contribution, especially as the interpretation of local defence by the several Dominions is not always narrow. For South Africa, for instance, it may include the security of all southern Africa and perhaps of the East African air route. In a world war, such local defence must rank first. In a localised Mediterranean war the Dominions' contribution might be more direct. Two Australian cruisers (one of them on exchange with a British cruiser in Australian waters) served with the Mediterranean fleet in the period of Anglo-Italian tension. That is perhaps the sum total of naval force that the Dominions could spare, since none of them but Australia has a navy designed for more than purely local defence. But different conditions apply to the air. Each of the Dominions is building up a respectable air force, and the concentration of these forces in a threatened zone is a question chiefly of available bases and ground equipment. The 1926 resolution on this subject was a first move towards a new plan for Commonwealth defence co-operation.

Such co-operation demands, however, one prerequisite—mutual understanding in foreign policy. If Great Britain's foreign policy is purely national in conception, she can rely only on her national defence resources. An indispensable condition of willing Empire co-operation is a conviction in all the Dominions that Great Britain's interests are their own, that every possible method of maintaining these interests, short of war, has been tried, and that victory itself is an Imperial interest—and the only one. And it is difficult to envisage any cause in which Great Britain could rightly and righteously take up arms, to which these conditions would not apply. In any case, however, it is evident that this country must still bear the main brunt of actual expenditure on Imperial defence. The more urgent, therefore, does the need for co-ordinated foreign policy and defence policy become.

The Uses of Advertisement—!

How Much is Spent on Advertising?

WE spend a great amount of time in these days in trying to escape from the more assertive features of our civilisation. With a little ingenuity we can evade the talkie, the crooner and even the motor car; but no amount of effort will keep away the advertiser. The newspaper, the hoarding, the bus, the tram, the train, the things we eat and drink, and even the sky above, are pressed into his service. He shapes our culture and environment; and it behoves us to look at his business, to ask if what he does for us is good or bad, and if it is all worth while.

The object of all this advertisement is to bring to our notice things which we may want or need, and to persuade us to buy them. There are so many of us, and so many things to be sold, that manufacturers are ready to spend a great deal of money in a great many ways to attract our attention. It is not easy to work out the cost of advertisement, because it is hard to say exactly what is and what is not advertising, and because very little precise information is published. But some forms of publicity are obvious. Goods are displayed in shop windows, their merits are vaunted on posters; and we are told about them by post. Science lends a hand, and we are cajoled by flashing street signs, on the screen

at the cinemas, and even, in lesser countries without the B.B.C., over the wireless.

Perhaps the most persistent medium of advertisement, however, is the Press. Newspapers publish what they charge for advertisements, and it is therefore easier to estimate what is spent on publicity of this sort than it is to calculate the cost of other ways of advertising. A recent series of articles in *The Economist* (January 2nd, 9th and 16th, pages 3, 51 and 103 respectively) showed the importance of advertising in the finances and the policy of newspapers; how over half the revenue of a representative daily may be derived from advertisements; and how the race for circulation between newspapers is intended to attract advertisers and so to increase revenue.

The amount of money spent on Press advertising is growing year by year. Given knowledge of newspaper charges by specified lengths and positions, it is possible by a process of painstaking computation to reach a moderately close estimate of the amount of money spent each year on certain forms of advertising. Thus, by the courtesy of the London Press Exchange, we are enabled to give the following figures of expenditure on "display" advertising of manufacturers' branded

goods, exclusive of financial, retailing or classified advertisements. It will be seen that in the last five years the annual total has risen by 37 per cent. :—

	Cost of Display Advertising of Branded Goods	Increase over Previous Year
1931	13,299,867	£
1932	13,829,095	529,228
1933	14,764,158	935,063
1934	15,777,253	1,013,095
1935	17,464,401	1,687,148
1936	18,269,867	805,466

The first and most striking feature about this important part of Press advertising, therefore, is that the amount spent upon it is rising year by year. The Great Depression may have temporarily checked the rate of its advance, but it has done no more. A second characteristic is the marked rhythm which recurs in display advertising expenditure every year. Advertising is a highly seasonal industry; some months are profitable from the viewpoint of the advertiser and others are his bugbear. Here, for example, are the figures of branded goods display advertising for every month of 1936, shown as a percentage above or below the monthly average figure of £1,524,155. The figures for December were unfavourably affected by the abdication crisis:—

NEWSPAPER DISPLAY ADVERTISING OF BRANDED GOODS, 1936

Deviation from Monthly Average of Computed Expenditure

It will be seen that expenditure on this form of advertising tends to be greatest, on the whole, in the months preceding public holidays. In March, May and October-November, respectively, we are prepared for our buying at Easter, Whitsuntide and Christmas.

The third significant feature of branded goods advertising is that it is by no means evenly divided throughout the available newspapers of the country. The "national" daily papers, which enter more than a million homes each day, receive the greatest revenue from advertising. Of the total of £18½ millions the national morning papers received nearly as much (43 per cent.) as the Sunday papers, the weekly papers, the evening papers and the provincial papers put together.

When we turn from branded goods advertising in the newspapers to other forms of Press advertising, and still more to advertising through other media than the Press, we are compelled to abandon even the most approximate attempt at measurement and to rely on a process of assumption based on fragmentary and unsatisfactory data. A few broad facts are known; as, for instance, that

the total expenditure on Press advertising considerably exceeds the figures for branded goods display, which have already been quoted, and that the value of advertising in other media than the Press is probably at least equal to, or even greater than, that of Press advertising proper. There are at least four other kinds of advertising on which considerable annual sums are expended, namely, poster advertising, mail advertising, window display, and a miscellaneous group of relatively new media, like the radio, the films, the electric sign and the sky itself. The following figures show the result of one attempt to convey some idea of the order of the amounts involved, but they are far too tentative to justify any but the most provisional conclusions:—

	£
Press advertising (including display and classified advertisements in all periodicals).....	35,000,000
Poster advertising (including recognised sites, railways and transport vehicles).....	4,000,000
Direct mail advertising (based on an estimate by the Postmaster-General).....	25,000,000
Window display.....	20,000,000
Miscellaneous—Radio.....	320,000
Films.....	300,000
Sky and neon signs.....	380,000
	1,000,000
Total.....	£85,000,000

Even now, the limits of the total field of advertising have not been reached. Sometimes it is hard to decide where the cost of making and selling an article ends and where the expense of advertisement begins. Some types of chocolates are packed in boxes; but handsome boxes do more than contain chocolates: they attract customers. Business men must write letters; but if they use elaborate stationery it will catch the eye of possible clients. Goods have to be delivered to customers; but decorated delivery vans, sometimes fantastically shaped like an onion or a bottle, call the attention of other people to the firms and the things they have to sell. The cost of this quasi-advertising cannot even be guessed at; but it is by no means negligible.

In the light of these facts, we can safely say that the annual advertising bill runs to a very large absolute total. Even if some of the figures we have quoted have a wide margin of possible error, it remains true to say that business men spend on advertising each year a sum which is not unworthy to be compared, say, with the average amount Mr Chamberlain proposes to borrow for defence; or, again, with the par value of the issued capital of a great industrial enterprise like Imperial Chemical Industries.

It is obvious that the expenditure of annual amounts of this order must produce tangible results from the advertisers' point of view; otherwise the amounts would not be so large and they would not be continually growing. From the broader social viewpoint, the indirect consequences of advertising on this huge scale must needs be momentous. They bear on national amenities, they have a subtle influence on æsthetic standards, and some of their repercussions which are less obvious may be hardly less important. For example, we have already shown (see *The Economist*, January 16, 1937, page 104) that the money spent by advertisers enables newspapers to give their readers more special features, a better news service and bigger papers generally than they could afford in its absence. But if advertising is effective from the advertisers' point of view, it must do more. It must produce an increased demand for the products advertised—in other words, it must significantly affect the direction of the stream of annual consumption. Here, indeed, advertising touches the national life most closely. Which industries are the largest advertisers? What methods do they employ? And how do their efforts affect demand for goods and services? These questions will form the subject matter of a further article.

Britain's Overseas Markets

THE main feature of Britain's overseas trade last year, was a marked increase which occurred in imports, as a result of expanding activity and increasing prosperity at home. Total imports in 1936 showed an increase of 12 per cent. in value and of 7 per cent. in volume over the figures of the preceding year. British exports, however, registered an increase of only 3½ per cent. in value and of 2 per cent. in volume, partly owing to the inability of certain important industries to meet the expanding requirements of both home and overseas customers, and partly owing to the imposition of sanctions on Italy. A rise of 9 per cent. in the value of re-exports between 1935 and 1936 was due entirely to higher prices, and the volume of re-export trade actually declined by 1½ per cent.

These general tendencies, which were discussed in *The Economist* of January 23rd and February 13th, are reflected in the changes in the distribution of our overseas trade during the past year, analysed by the Board of Trade in the Trade and Navigation Accounts issued this week. On the whole, the increase in imports from individual countries was much more marked than the expansion of exports to them. But, as far as individual customers and sources of supply are concerned, the actual distribution of Britain's trade was largely conditioned by a multiplicity of special factors whose influence cannot be considered in isolation. The economic and financial policy of foreign countries, for example, exercised a powerful influence in shaping their foreign

Import Duties Act and the Ottawa Agreements afford only a partial explanation. Imports from the Empire consist mainly of raw materials and semi-manufactured goods, which have been in relatively greater demand in this country than other commodities. Exports to Empire countries have been influenced by the fact that the majority of these countries have experienced a substantial measure of recovery, due to currency devaluation, expanding sales abroad at rising prices and preferential treatment in our home market. South Africa's purchases from the United Kingdom in 1936 were actually about £5,000,000 higher than in 1929, due largely to the boom in gold-mining, caused by devaluation. While changes in Britain's tariff policy are partly responsible for the relative decline in imports from foreign countries, this tendency is also due, in part, to the different nature of the commodities exported by them, taken as a group, and by the greater degree of economic recovery attained by the Empire. Thus, the overvaluation of the former gold bloc currencies, only recently corrected, militated against an improvement in the purchases of these countries in the British market, though British imports from France, Holland and Switzerland showed a considerable increase. Exports to Germany failed to expand, but British purchases from that country rose substantially—an indication that all countries will ultimately be influenced by the rising tide of world trade.

As the table on page 442 shows, the value of exports of British produce per head of the population in importing countries is highest in the case of the Empire. New Zealand, the Irish Free State, Australia, South Africa, Canada and Malaya all purchased commodities in this country in excess of £1 per head. New Zealand, the largest importer from the United Kingdom on a per

SOURCES OF BRITAIN'S IMPORTS, 1929-36

DESTINATION OF BRITAIN'S EXPORTS, 1929-36

trade with the United Kingdom. Again, the varying measure of recovery attained in countries overseas affected, to some extent, the value of their purchases in the United Kingdom.

Changes in the value and direction of British trade since 1929 are shown in the two annexed charts. For detailed figures, country by country, we would refer our readers to the tables on page 442. One of the most striking changes in the distribution of Britain's overseas trade in recent years is the relative increase in the export of commodities with Empire countries. After falling from 29.4 per cent. in 1929 to 28.9 per cent. in 1931, the proportion of Britain's imports derived from the Empire rose to 37.6 per cent. in 1935 and 39.2 per cent. in 1936. Exports showed a similar tendency, though the shift in sales to Empire countries was less marked than in the case of imports. In 1936, 49.2 per cent. of domestic exports were consigned to the Empire, compared with 48.0 per cent. in 1935, 43.7 per cent. in 1931 and 44.5 per cent. in 1929. Of this tendency, the

capita basis, increased her purchases in this country from £8 11s. 5d. in 1935 to £11 os. 5d. in 1936 per head of the population. Among foreign countries, Denmark, Norway, Sweden, Holland, Argentina, Finland and Belgium were the only countries to whom British goods were consigned last year in excess of £1 per head. With the exception of Argentina, all these countries are now engaged in negotiations to establish a freer-trading bloc of Powers.

In general, the Empire has so far benefited most from the increase in British imports. To some extent, the increase in the proportion of Britain's trade with the Empire is the result of natural forces. But to accentuate this shift deliberately, as has been done in the past, is scarcely calculated to contribute to the political appeasement of the world. The time has come, therefore, when Britain should once more give a lead in an attempt to free the channels of international trade. In our present economic position, reason and interest counsel such a step.

A Railroad Empire

THE recent deaths, in rapid succession, of the two Van Sweringen brothers have closed a chapter in one of the most extraordinary stories of financial virtuosity that has ever emerged even from that library of curiosities, the history of the American railroads. Reputed to have been worth \$100,000,000 in 1929, the brothers died poor (the estate of one of them amounted to \$3,067). But their story is not yet finished, for the amazing empire they built is still intact, and with the return of prosperity its various provinces are once more beginning to flourish.

The Van Sweringens started their career in the real estate business, and became interested in railways by the accident of having to provide a rapid transit line for their suburban development outside Cleveland, Ohio. In 1917, to secure a needed right of way, they bought control of the Nickel Plate Railroad from the New York Central. The first transaction reveals their financial method as it was practised to the end. A holding company was formed to buy the Nickel Plate, and raised funds to do so by an issue of preferred stock to the public. The common stock was issued without cash return to the brothers. The public provided the money; the brothers retained the control. The method was not, however yet perfected, for the brothers made an unnecessary investment in the preferred stock (unnecessary, that is, to secure their control) of some \$500,000. They never repeated this act of supererogation and are not known ever to have invested another dollar of their own in their empire.

Throughout the dozen years that followed, the same formula was repeated over and over again. Money derived from the earnings of their railroads and from sales of fixed-interest non-voting securities to the public was used to buy railway after railway. Their empire at its height stretched from New York and Chesapeake Bay to the Mexican Border and (through a working arrangement) to San Francisco. In addition to railways, it included hotels, a department store, a coal company and a great deal of miscellaneous real estate.

The Van Sweringens were supreme artists in the craft of constructing an empire for themselves with other people's money. The technique can be illustrated by a brief outline of the pyramid they built, as it stood before the crisis. The base of the pyramid is the Chesapeake and Ohio Railway, whose main revenues come from transporting West Virginia coal to tidewater. But the Chesapeake and Ohio is as much a holding company as a railroad. It controls five other railways, through the ownership by a subsidiary company of a majority of their voting stocks. Taking the securities of all these railroads at par, they amounted (1931 figures) to a total of \$1,424 millions. Of this total, control rested with only \$101 millions—a majority of the common stock of Chesapeake and Ohio. This would be enough gearing to satisfy most; but it was only the base of the Van Sweringen pyramid. The Chesapeake and Ohio shares were held by a holding company named Chesapeake Corporation. Here we encounter a typical Van Sweringen device. Chesapeake Corporation had outstanding, on December 31, 1931, over \$44 millions of "collateral trust debentures." These are bonds secured by the Chesapeake and Ohio shares, which are the Corporation's chief asset—they are debentures secured upon equity shares, and highly geared equity shares at that. A majority of the common stock of Chesapeake Corporation is held by another holding company, Alleghany Corporation. Once more the collateral trust debenture device is repeated. Alleghany also has very heavy issues of preferred stock, with the result that its common stock is only a small part of its capitalisation. Yet mastery of the whole structure rests with the owners of a majority of the common stock of Alleghany Corporation, who were, of course, the Van Sweringens. Control of the group of railways rested, as has been noted, with about 7 per cent. of the aggregate capitalisation. The controlling interests in Chesapeake Corporation and in Alleghany Corporation were 44 per cent. and about 14 per cent.

respectively. If the arithmetic is worked out, it will be found that the controlling interest at the top had a beneficial interest in less than 0.5 per cent. of the railway properties at the base.

Still we have not finished. A structure of this sort needs a constant flow of dividends to keep it steady. Moreover, when assets are pledged in collateral trust indentures, they will be impounded by trustees if their market value falls. This is what happened to the Van Sweringens. All through the depression they were struggling to find cash to shore up their empire. In the struggle, they pledged all their personal possessions, including the vital Alleghany shares, as security for a loan of some \$48 millions from a syndicate of New York banks. The loan was defaulted, and control passed to the banks.

Now for the sensational *dénouement*. The banks decided to sell the collateral by auction. At the sale, the vital shares were bought for \$3,121,000. The buyer was a certain Mid-America Corporation, present in the person of Mr O. P. Van Sweringen. This was in November, 1935, and the story of the Mid-America Corporation has since been revealed. Mid-America is constructed on the familiar formula—heavy bank loans, large issues of preferred stock and a diminutive equity. The equity was in fact subscribed by two unknown Middle Western manufacturers, Messrs George A. Ball and George A. Tomlinson, the former owning two-thirds of the whole. An agreement was made whereby the Van Sweringen brothers should vote 55 per cent. of this common stock, and should have an option to buy it at any time. Control of this whole vast empire, now once more earning money, was thus centred in 8,250 shares of the common stock of the Mid-America Corporation. As *The Economist* observed at the time of the auction, "Truly it was not only the monastic brothers of the Middle Ages who could balance myriads of angels on the point of a pin. These brothers of the Middle West run them very close."

This was the last and most astounding deal the brothers ever accomplished. Within a year after the auction both were dead, and the startled Mr Ball found himself Emperor *malgré lui*.

Every good story has a moral. In this case there is an embarrassing surfeit of morals. In America, opinion tends to be shocked by the fact that it was railways which underlay the "star-pointing pyramid," since the ownership of railways has always been considered to touch very closely the exercise of sovereign power. But the method is applicable to any form of enterprise. Or again, the story of the Van Sweringens is used to illustrate the consequences which can flow from the competition of individual States of the Union to secure revenues by the laxity of their incorporation laws. But though some of the more rococo accounting methods would have been illegal in some jurisdictions, the main principle of the holding company is recognised everywhere.

Indeed, we can take the argument outside the United States. Nothing that the Van Sweringens did and which was essential to their purpose would have been illegal under the British Companies Acts. Our financiers have not yet succeeded in balancing quite so many angels on a corporate pinpoint. But they are doing their best. In one respect, their task is easier in Great Britain, for if they take the elementary precaution of inserting a layer or two of sub-holding companies they can prevent the public from even knowing what they are up to.

The Van Sweringen brothers should stand as an example of the abuses that are possible under the present organisation of joint-stock companies. The theory which justifies the grant of votes to one class of security, and their withholding from others, is that control should be exercised by the risk-takers. But by what stretch of language can it be said that the owners of the collateral trust debentures of Alleghany Corporation were not taking a risk, or that the Van Sweringen brothers, who operated entirely on other people's money, bore the financial risks of their empire? The holding company has its legitimate uses. But when one holding company is piled on another the device serves merely to subordinate genuine enterprise to the demands of high-wire finance and the imperialist ambitions of headstrong manipulators.

"... Upon All Prisoners and Captives"

(By a Correspondent)

WITHIN the last eighteen months there have been published two books on prison life which everybody ought to read.* Both tell the story from inside because they are written by ex-prisoners—Mr Macartney who did ten years at Parkhurst and an anonymous author who did five at the more gentlemanly Maidstone. And what a difficult job it is to write a good book about your own life in prison! Without the help of notes or documents, relying on memory alone, you must present a record of five or ten years of monotony, loneliness, bad food, bitterness, petty hatred, resentment, torturing passion. You must adjust your prisoner's perspective to that of the reader who has never been in prison and does not understand how values change inside a prison's walls; who has never thought how things that are trivial in a free atmosphere grow into overwhelming burdens in captivity; who has never realised how nerves can crack and sex become a revolting obsession to men caught up for seven or eight years in the unnatural routine of penal servitude. You must do all this; and then when your book is published you will be told by distinguished reviewers that it is marred by inaccuracies.

In places these two books probably are inaccurate. How many of us, indeed, could write a history of five years in our own lives without the aid of memoranda and without inaccuracy? If an ex-prisoner is to be deterred from publishing his experiences by the fear of slipping into minor inaccuracies, then he will never write at all, and it would be a deplorable thing if men who are fitted to tell us of the life that prisoners lead were forced by this or any other cause to keep silence. Let every man who can write or talk about his experience in prison and find a publisher or a society to give him an audience take the opportunity with both hands, remembering that the speed of prison reform varies with the knowledge of prison life that the public possesses. Reform in general does not spring from the generous impulse of a politician or the zeal of a civil servant but from an accession of public interest. Most of the milestones on the road of prison reform mark the spots at which the public had the problem thrust under its nose.

The prevailing notion about prison in the minds of most intelligent men is that far fewer people are sent to prison now than were sent there thirty years ago, and that the treatment of those who do go is much better than it was. Both these notions are correct, and the following figures of average prison population reflect at once the more humane treatment of offenders and prisoners and its unquestionable success:—

Daily average prison population					
1905	..	..	..	..	21,360
1934	..	..	..	..	12,238

But it is also commonly believed that because things have improved any further reform is unnecessary and might even lead to a dangerous standard of physical and intellectual comfort. That is incorrect. If by any chance you are worried by the thought of that particular danger you are worried by the thought of that particular danger you are worried by the thought of that particular danger provide you with the following breakfast: 6 ozs. brown bread, $\frac{1}{2}$ oz. margarine, $\frac{1}{2}$ pint porridge (without sugar or milk) and 1 pint of tea. Eat that and leave instructions for her to serve the following dinner at night: 8 ozs. brown bread, $\frac{1}{2}$ oz. margarine, a slice of cheese and 1 pint cocoa. Do yourself as well as you like at midday; but just eat that breakfast and that dinner for a fortnight. Then tell yourself that the prisoner eats that, and nothing but that, morning and evening for 365 days in every year of his sentence. You will still have to make allowance

* "Walls have Mouths." Gollancz. "Five Years for Fraud." Sampson Low and Marston.

for the inferior quality of his food and for the meal that he must fill his belly with at midday. Even without those allowances, however, you will probably agree after a couple of meals that there is an overwhelming case for improvement in the prison diet without any dangerous approach to the standard of the Ritz or the Carlton.

Then on Sunday (if the personal note may be continued) try another flight of the imagination. As you drive off to the links or make yourself ready for church with your family, spare a thought for the prisoner in the first stage of his sentence and for the Sunday that he is spending. Solitary confinement is, you understand, a thing of the past. Nevertheless, you must think of the man's week-end in this way. Locked into his cell at four o'clock on Saturday afternoon, he will be given, say, an hour's exercise on Sunday morning, and will attend chapel twice in the day. That will absorb perhaps 3 hours. The other 35½ hours, which drag along between 4 p.m. on Saturday and 6.30 a.m. on Monday, will be passed by him in the silence and confinement of his cell, without speech, without companionship and almost without books. But surely the prisoner is allowed books from the library? Certainly. He is allowed a ration of two books every Monday morning, which last him till next Monday. And how much of these two books is likely to be left unread when the grey dawn of Sunday breaks? To appreciate the full quality of this punishment get well into your mind the Sunday picture of a prisoner turning over again the pages of his two books in a desperate search for some point of interest that escaped him on previous readings, thumbing the pages till he is sick of the sight of them. Then read the chapter on sex in prison in "Walls Have Mouths." Then ask yourself if, as a responsible citizen, you like the picture.

Lastly, perhaps you will forgive a true story that illustrates the helplessness and unnecessary misery of a prisoner up against a harsh or indifferent officer. This is a point that must be made with all appropriate qualifications and with the most emphatic proviso that harshness and indifference are not the hall-mark of prison officials. Many officials, undoubtedly, are carrying out the most difficult of tasks with an ability and an enthusiasm that are beyond praise. But there are in the prison service too many harsh machine-minded men, and this particular prisoner spent a time of mental torture through one of them. He found the sight of his left eye was failing and he reported sick. A prison doctor examined him, told him that the sight was gone for good and that in a short time the other eye would inevitably go too. So the man, under sentence of blindness, went back to his cell, "which was almost as much as to see himself go into his grave; for which, and all the discomforts that will accompany his being blind, the good God prepare him."

However sure the doctor was of his diagnosis it was a piece of callous brutality to tell the man about his fate while he still had a considerable part of his sentence to serve. And actually the diagnosis was wrong, for the man on leaving prison went to hospital and learnt that the bad eye might recover and that the good eye would certainly not be affected. But he had been through hell in prison.

Now, if we as citizens, let alone as Christians, must take responsibility for the condition of our prisons; and if the impetus to reform comes more often from outside official circles than from inside; and if there are still many reforms that ought to be introduced—then how shall we discharge our conscience? In part at least we can do it by helping to keep alive a strong and healthy public opinion, which is the first condition of a decent prison system. And in particular we can do it by supporting that admirable society, the Howard League.† The central curse of every prison system is this: that spiritually as well as physically it shuts the prisoner off from the community and shuts the community off from the prisoner. To lower that barrier is what the Howard League stands for; and by membership of the League we shall at least be doing something to mitigate the curse.

Notes of the Week

The Spanish Struggle.—It seems that yet another rebel offensive against Madrid, this time from the south of the city, has been checked. At one time it looked as if the only way of retreat for the capital's defenders, the road to Valencia, had been cut. But a Government offensive this week has rolled back the advance guards of the rebel forces, and the position is again one of stalemate. On the south-eastern littoral, General Queipo de Llano's forces, co-operating with unknown warships and aircraft supplied by Germany and Italy, have been harrying the flight of thousands of refugees from Malaga, and inflicting a heavy toll of life. The rebel forces here, reinforced by drafts of Italian so-called volunteers, cannot advance more than a certain distance towards Valencia or Madrid owing to the large contingent of Government forces in the Teruel region which could attack from the rear and jeopardise communications. The chief obstacle to a rebel victory still seems to be the inadequacy of the rebel forces, including their German and Italian coadjutors, to hold down the population all over the country and to safeguard communications. Meanwhile, the new unified Government command of all operations under General Miaja has made a favourable beginning.

Last week-end the report of the commission of investigation from the British churches appeared. The commission of inquiry, invited to see for themselves by Señor Largo Caballero, make it plain that the Spanish Government and their supporters are neither anti-God nor anti-religion. The number of prominent Catholic priests and apologists supporting the Government should have made it impossible without disingenuousness ever to make such an assertion. The investigators state that the Government sympathisers are incensed with clericals who have aided the rebels or lent the use of their churches as munition depots; the Catholic hierarchy have been identified with big landowners; and churches have been destroyed and priests killed when found to have been concerned in aiding the rebels. On the other hand, no hindrances of any kind had been imposed on Protestant priests. The investigators conclude that if Spanish Catholics had confined their religious zeal to the sphere of belief and charity, political passions might have been less inflamed. This inquiry brings a welcome breath of reason and impartiality to the heated disputation over the rights and wrongs of the Spanish struggle.

Non-intervention at Last.—The Chairman's sub-committee of the London Non-intervention Committee have agreed on the necessity to inaugurate the ban on aid to either side in Spain next week, and to begin the supervision of Spanish frontiers by March 6th. The German and Italian Governments have agreed to these steps; and only the Portuguese Government has delayed sending instructions to its London representative. The French Ambassador in London, M. Corbin, who returned from Paris last week-end, announced the firm intention of his Government to alter their whole attitude to non-intervention unless the Committee—which in effect meant the German and Italian Governments—proceeded forthwith to do something effective to secure non-intervention. Faced with this blunt declaration, the Fascist Governments—save only that of Portugal—seem to have decided to conform, at least nominally, to the Franco-British proposals to make non-intervention effective. Thus, for the present, ends a bout of diplomatic activity which began long before Christmas. Meanwhile, tens of thousands of Italian and German so-called volunteers, with full equipment, have been poured into Spain on General Franco's behalf; and the democratic Great Powers, France and Britain, have hitherto been badly worsted in the diplo-

matic arena. Perhaps from now onwards the welcome French initiative will galvanise the British Government into ensuring that non-intervention, hitherto a six-months' figment, will be made a reality. The test of this will be the extent to which the democratic Powers represented in London are henceforth prepared to ensure the isolation of Spain. That is not what the Spanish Government is legally entitled to; but, after a lamentable six-months' record of Fascist achievements in face of democratic hesitancy, it is the most for which we dare hope.

The White Paper.—The Government's White Paper (Statement Relating to Defence Expenditure, Cmd. 5374) affords little precise information of the extent of the Government's plans to increase and accelerate their re-armament programme. It does not say at all *what* elements of our defence expenditure will be covered by borrowed money. But, reading between the lines of so general a statement of policy, we can gauge how far this White Paper exceeds the scope of its famous prototypes of March, 1935, and March, 1936 (Cmd. 4827 and 5107). It is now stated that the "shadow" aircraft and munitions factories, mainly extensions of existing plant, are being built and commissioned to fulfil part of the current programme. They are being built and run "under arrangements which ensure their retention over a period of years after the existing orders have been completed, in a form capable of rapid turnover to munitions in the event of emergency." It is understood that the reserve funds of the firms concerned, and to a certain extent their bankers, are financing the extensions on Government guarantee of a profit rate sufficient to amortise their cost over the period envisaged. No one knows how long this is. The White Paper states that factories are being dispersed throughout the country in case of aerial attack; and that "in some cases a degree of duplication of essential services is necessary even at the cost of some increase in expenditure." Moreover, in addition, a number of new Government factories for the manufacture of explosives and filling of shells and bombs are being built or planned. They are due in part to removal of existing establishments, and in part to additions to capacity.

More interesting still is the announcement that vital industries are not to be paralysed, in emergency, by shortage of raw materials; and that in consequence adequate reserves for these and other purposes will involve very substantial expenditure. Special measures are in hand to ensure supplies of fuel and their replenishment, both for defence and civil purposes. Thus, the Government is presumably, directly or indirectly, to enter commercial markets already booming, and buy with a blank cheque in order to secure delivery. The country should at least secure assurances that this will not raise prices still further. And, in the case of raw materials produced under restriction schemes, or subject to British customs duties or quotas, the country may justifiably demand that it be not required to make a double contribution to the Exchequer—once in the rise of price of the raw material, and again through the customs tariff itself. Moreover, we hope the Government will insist on a freeing of the iron and steel industry from the import restrictions secured, monopoly-wise, by the British Iron and Steel Federation in 1933 and 1934. There is a long list of extra home defence measures in the White Paper: e.g. two expanded anti-aircraft Territorial divisions, provision of gas-masks, gas-training, balloon-barrages, new types of guns, more searchlights, greater reserves of ammunition, and additional fire-fighting appliances. The White Paper gives no precise figures either of total cost of the five-years' programme, or of the cost in any year, be it peak

year or not. But it states categorically, in conclusion, that to expect total expenditure on defence during the next five years to be much less than £1,500 millions would be imprudent. This staggering sum—a net addition to the £450 millions we have spent in this and the two preceding financial years—is the measure of our peace-time preparations for war. More than ever does it seem that the economic burden of war itself would mean the collapse of Western civilisation.

'Rebuilding the Navy.—The White Paper states that "an even spread of new (naval) building is impossible, and for some years the country will be constrained to undertake a series of heavy building programmes." The reasons given are the obsolescence of the bulk of the fleet and the delay in building "certain types" after the war. What these types may be is not stated, but it is fairly clear that capital ships, aircraft carriers, and battle cruisers are meant; for the White Paper announces that, in addition to the two new capital ships laid down, at a cost of about £8 millions each, on January 1st, three others will be laid down early in the 1937-38 financial year. Thus, five will have been laid down in the current *calendar* year; and they will cost about £40 millions in all. Similarly, the five cruisers laid down in the 1936-37 financial year, increased to seven a month or two ago, are to be reinforced by seven more in 1937-38; and the two aircraft carriers laid down in 1936-37, only one of which was provided in the estimates a year ago, are probably to be reinforced by two more in 1937-38. Moreover, the Fleet Air Arm is to be substantially increased in numbers; its aircraft are to be re-equipped; the naval personnel is to be increased; capital ships and cruisers not yet obsolete are to be modernised at heavy cost; anti-aircraft equipment is to be improved; stores of fuel and ammunition are to be increased, and new works and establishments thereby rendered necessary constructed.

The bill for new building alone has risen from an annual average of £12 millions in 1931-34 to nearly £50 millions in 1936-37, and will be "substantially higher" in 1937-38. The total annual cost for the Fleet Air Arm, shipbuilding, repairs, maintenance, naval armaments, warlike stores, works, buildings, etc.—i.e. excluding wages of personnel, victualling, pensions, medical, Admiralty, R.N. Reserves, scientific services, education, etc.—was £23 millions in 1932, £29 millions in 1934-35, £36 millions in 1935-36, about £50 millions in 1936-37, and may be as much as £80 millions next financial year. It must be remembered that the programme decided in the current financial year (1936-37), including the additional measures of acceleration, involves scarcely more than a few hundred thousand pounds of account pay-

ments for the contracts allocated this calendar year, after the expiry of the London Naval Treaty last December 31st. The bulk of the current year's programme will fall for payment in 1937-38 and 1938-39; and to this increment must be added the proportions of the 1937-38 and 1938-39 programmes falling for payment in those financial years. It looks as if the naval estimates for next financial year will greatly exceed £100 millions, compared with original total naval estimates of £70 millions a year ago, and only £56.6 millions in 1934-35. By the time that we reach the 1938-39 and 1939-40 naval estimates, they may well be up at the £150 million mark; for those will be the years in which the bills for the bulk of the total rebuilding and expansion programme will fall to be paid.

Air Force Expansion.—The White Paper describes the strength of the Royal Air Force as of paramount importance; but it says nothing of the rate of expansion, of the stage reached, or of the possibility of defraying part of the Air Force expenditure out of the proposed defence loans. Larger stores and reserves of fuel, additional motor transport, newer and more costly types of aircraft, the construction of big new aerodromes and of 75 new operational, training and other stations at home and abroad, and greater reserve machines for the increased first-line strength—all these items are listed, and left at that. The personnel of the Force rose from 31,000 in 1934 to over 50,000 in 1936, and a further large increase is contemplated in 1937-38. The Government admit in this connection that, even after the initial expenditure on the expansion programme has been met, the scale of maintenance expenditure will be very greatly increased. This is more obvious in the case of the Air Force, since modern military aircraft must be amortised at the rate of 50 per cent. per annum. They are obsolete in two years after entry into commission.

Some idea of the magnitude of the expansion of the Force can be gleaned from figures recently given by Sir Thomas Inskip, Sir Philip Sassoon, and Mr Simmonds, M.P. The proportion of the Air Force stationed at home has now reached 1,000 first-line machines, compared with the 1,500 which were to have been ready by the end of next month under the original expansion from the 575 first-line machines at home in May, 1935. Under the further expansion contained in the White Paper of last March, an additional 250 were to be added in 1937-38. The Fleet Air Arm and the R.A.F. overseas were together to account for a further 650 first-line machines by the end of 1937-38. Moreover, as the White Paper now reminds us, sufficient reserves of precisely the same quality must be carried "to ensure that the first-line strength can be adequately maintained on active

Member of the Federal Reserve System, the New York Clearing House Association and of the Federal Deposit Insurance Corporation

service," and before the factories can replace casualties. This ratio of first-class reserves to machines of the first-line differs from country to country; but in this country there is reason to suppose that the ratio has latterly been increased, and that, at the minimum, there will be 1½—and, in time, perhaps 2½—first-class reserves to every first-line machine in a squadron. Sir Philip Sassoon's statement that the total orders for new aircraft under the expansion programme were more than the total of orders in the 17 years since the end of the war argues a figure of some 10,000 brand-new machines—for first-line, reserve, and for training. In fact, however, the cost of new aircraft, though rising, is not as great a proportion of our total re-armament bill in the next 5 years as might be supposed. Even if we multiplied our 1934 bill for new aircraft and spares by five in any financial year (it has been multiplied by three in 1936-37), it would only be £35 millions. For the R.A.F., a lot of expenditure in future is likely to be taken up by aerodromes, quarters, works, stores, extra pay for increased personnel, etc., as the new aerodromes and stations at home and abroad are completed and commissioned. The Government are more likely to defray part of this cost out of loans, on the plea that it is capital, than to pay out of capital for aeroplanes that have to be written-off in two years.

Modernising the Army.—The White Paper is most oracular over the Army. Two of the four new battalions of infantry for overseas provided in last year's White Paper are "to be raised in the near future"; and, under the present White Paper, two new tank battalions and "certain ancillary troops necessary to enable a modern force to operate effectively in the field"—whatever that peculiar phrase may mean—are also to be raised in the near future. Measures to stimulate recruiting will increase maintenance charges; but the main increase in expenditure falls to equipment. All branches of the Service are to have completely modernised equipment, while progress with the provision of a complete system of motor transport and mechanisation is being accelerated. Heavy capital expenditure will be incurred in the necessary extensions and new construction of barracks, stores, etc., during the next few years—which is, perhaps, a hint that these costs, too, will be defrayed out of loans. The Territorial Army, for its primary work of home defence, will be given facilities to train with the latest weapons and equipment. Nothing is said about the stage reached in the progress of re-equipment, mechanisation, etc., nor is any mention made of the cost. New patterns of rifle, machine gun, tanks, artillery, etc., are costly, and involve costly alterations in the factories supplying them. All we hear is to the effect that the progress of re-armament is slowest in the Army.

The Dominions and Defence.—The huge British re-armament programme makes the defence provisions of the Dominions (see *The Economist*, January 2nd, page 9; January 23rd, page 167) seem rather small beer. Their trend, however, has been uniformly upward; it has, moreover, been setting definitely in the direction of greater material self-sufficiency in defence. The Government of the Union of South Africa has formed a War Supplies Board to discover what war supplies—munitions, clothing, raw materials, fuel—can be produced in the Union, and to plan, in consultation with the General Staff, how the mobilisation of man-power and industry should be conducted in time of war with the minimum interference with the country's economic life. The Government has also signed an agreement with Imperial Chemical Industries for the erection of a munitions factory at Pretoria to produce 10 million rounds of machine-gun ammunition a year; and £110,000 is being spent on anti-tank rifles. The Union air force is being considerably expanded, and—in anticipation, no doubt, of the production of sufficient machines in the Union itself—the British Government is to supply a hundred Hawker Hartbeestes (a general-purpose version

of the standard R.A.F. "Demon" two-seater fighter planes) at the rock-bottom price of £200 each. According to Mr Pirow they are excellent for training purposes and by no means obsolete for actual defence. This vigorous and practical co-operation contrasts with the timid strictly localised defence policy forced on the Canadian Government by political exigency. Their difficulties in carrying their enlarged defence estimates through Parliament at Ottawa have not been eased by Sir Samuel Hoare's recent appeal for closer Dominion co-operation in Commonwealth defence. The Canadian Defence Minister is reported to have described his Government's programme as a purely Canadian defence policy framed for the defence of Canada's shores and the preservation of her neutrality. It seems obvious, however, that if Canadian neutrality can be preserved in a world war, it will be by the force of other arms than hers.

The Low Countries and Germany.—Both Belgium and Holland are defining their position in the precarious state of European affairs. On February 12th the Belgian Government handed in its reply to the British note of November 18th on the proposed Western Pact. On the 14th, the Dutch Minister for Foreign Affairs replied in a public speech to Herr Hitler's offer to make Holland as well as Belgium "an untouchable and neutral region for all time" as far as Germany was concerned. This pair of replies makes it clear that both the Low Countries are now seeking shelter in a policy of neutrality and isolation; but this in different degrees. Belgium is still willing to have her inviolability and neutrality guaranteed by other Powers—including Germany as well as Great Britain and France—but she is not willing permanently to serve as a guarantor as well, as she is serving under the present emergency tripartite arrangement. This arrangement between herself, France and Great Britain has temporarily closed the gap made in the security organisation of Western Europe by Germany's destruction of the Locarno Pact.

Holland's feet are on the same road, but a long stage further on; for she sees more embarrassment than security for herself in a guarantee from one of her great neighbours, at any rate, if it is to be a unilateral guarantee from Germany alone—and that is the only offer that Holland has received so far. No doubt the Dutch are wise in politely rejecting Herr Hitler's advances; for they might easily find that a bilateral German-Dutch agreement, which seemed superficially to be exclusively for Holland's benefit, was actually a tie that would bind Holland to Germany hand and foot. Immobilising the Low Countries seems, in fact, to be the immediate goal in the West upon which the Third Reich is now concentrating. The ideal for German diplomacy would be to immobilise the whole bloc of West European countries while Germany obtained, and made use of, a free hand in the East. But, from the German point of view, the immobilisation of the Low Countries alone would at any rate be a consolation prize for a failure to run rings round France and Great Britain. The two Great Powers in the West might at least be hampered if their two smaller neighbours were to be caught in German toils.

Church and State in Germany.—With every month that passes, it is becoming clearer that the successful resistance of the Christian churches in Germany to the Nazi policy of unification is a phenomenon of deep significance, not only for Germany herself, but for the world at large. All the other institutions of German life—political parties, universities, component States of the Reich, and the rest—were ironed out flat by the Nazi steam-roller within six months of Herr Hitler's advent to power in January, 1933. Yet now, when the Nazi Führer is entering upon his fifth year of dictatorship,

the churches are still going strong as spiritual powers that have maintained their independence of blood and soil, totalitarianism, and all the rest of it. Within the last few days, fresh crises have arisen out of the persistent attempt which the self-appointed Nazi "champions of Christianity" in Spain have been making to stamp upon Christianity in their own country. Last Sunday, at Munich, Cardinal Faulhaber preached a sermon in which he demanded an honest observance of the Concordat on the Government's part. On leaving the church he received an ovation in the streets. Still more remarkable was the similar public ovation which was given to the Bishop of Berlin—a city in which the Catholics are a small minority—after he had likewise preached a sermon in the same terms on the same subject.

Meanwhile, the parallel contest between the Protestants and the Reich had come to a head two days before—on Friday, the 13th—in the resignation of the Evangelical Reich Church Committee, which had been set up in October, 1935, by Herr Kerrl, Reich Minister for Church affairs. The members of this committee had been selected for their supposed tameness; but they have been gradually goaded into indignation by the Government's continued bullying of the Confessional Opposition and continued encouragement not only of the so-called German Christians, but of Herr Rosenberg's Neo-pagans as well. That these certified sheep should now turn and bite must have been disconcerting to Herr Kerrl. His own intention seems to have been to retort by putting the administration of the Protestant Church in the Reich under a naked governmental dictatorship. Herr Hitler has been cleverer. He has decided that there is to be an election to a general synod, which is to provide for a new church government. His calculation appears to be that the fervent church-going Protestants of the Confessional school will prove to be outnumbered by the lukewarm nominal members of the Protestant Church who pay their church dues and are therefore entitled to vote in church affairs. In an election, the natural preponderance of this element could doubtless be further weighted by governmental pressure. These are adroit tactics; but there seems to be an irreducible core of Christian principle which even the tamest German Protestants are determined not to surrender.

The Lords and Colonies.—Wednesday's debate in the House of Lords on Lord Noel-Buxton's motion was a pertinent commentary on the Chancellor of the Exchequer's concluding declaration, in another place, of his "feeling of disgust and shame that civilisation is trying to break its own back instead of trying to settle its differences by give-and-take and turning its energy to pursuits which might bring prosperity and contentment to all." Lord Noel-Buxton called upon the Government to consult with the Governments of the Dominions and of other Colonial Powers with a view to the application of the mandate system, in suitable cases, to British and other colonies; and also to the extension, in territorial scope, of the 1919 Convention of St. Germain, which provides for free trade in "the conventional Congo Basin," an area which is much wider than the physiographical basin that is drained by the Congo and its tributaries. Lord Lugard then moved an amendment which struck out the proposal to extend the mandatory regime—which involves economic opportunity under trust, as well as equality of economic opportunity—but at the same time kept the economic part of Lord Noel-Buxton's motion intact. It remained for Lord Plymouth, Under-Secretary of State for Foreign Affairs, to reject both the amendment and the original motion on the Government's behalf.

The furthest the Government would go was to suggest a declaration of willingness to be guided by the spirit of Article 22 of the Covenant in colonial administration and to commend the forthcoming deliberations of the

Committee on Raw Materials which is to meet at Geneva. Thus Mr Chamberlain had hardly uttered his pious desire for give-and-take in international relations before it was whittled down to vanishing-point by one of his own colleagues in another place. No doubt the Government could find chapter and verse for demonstrating that Herr Hitler would be no better satisfied with Lord Noel-Buxton's offer than with Lord Plymouth's. But are we really to alternate between sitting on the safety-valve and stoking up the boiler, till the explosion comes? This uncompromising spirit is terribly familiar. It is the old spirit of 1914-18 which made both sides reject all possibilities of a moderate peace. It is because the last war was carried on to a knock-out that we are threatened, within less than twenty years, with a repetition of the disaster. Is "setting our teeth," in Mr Chamberlain's words, the only thing of which either Westminster or the Wilhelmstrasse is capable?

Block Grants.—The text was issued on Wednesday of the Local Government (Financial Provisions) Bill, embodying the conclusions reached by the conference of local authorities. For some months past they have been reviewing the working of the formula for calculating block grants from the Treasury to local governments as laid down in the Local Government Act of 1929. That Act prescribes formulae for calculating not only the total contribution to be made by the Exchequer, but also its distribution between the different authorities. The grants as so calculated are fixed for a period of years at a time and the second of these periods is just drawing to a close. As regards the total amount of grants, the Act provides that the total shall increase in rough proportion to the expenditure of local authorities. This would entail an increase of £4,427,000 per annum in the next period. The new Bill provides, however, for deductions from this sum of £2,187,000 in view of the relief to the rates arising from the national assumption of responsibility for the able-bodied poor, and of £133,000 in respect of the transfer of trunk roads from county councils to the Ministry of Transport. On the other hand, it is proposed to abolish the male servants' licence duties, the produce of which at present goes to the local authorities, and the block grants will be increased by £115,000 in compensation. The effect of these changes, together with a further small contribution from the Exchequer, is to increase the national contribution to local authorities' revenues by £2,250,000 to £46,172,000 per annum.

The distribution of these sums is governed by an extremely complicated formula in the Act of 1929. A gradual change is in progress, period by period, from a

distribution based mainly on the losses of revenue sustained by the individual local authorities as a result of the de-rating and other changes of the Act of 1929 to one which apportions the grants according to a measure of need. This in itself would have automatically increased from £14,993,000 to £26,886,000 the sum distributed according to needs, and would have correspondingly assisted the depressed areas. But it has also been decided to increase still further the weighting accorded in the formula to heavy unemployment and to sparsity of population. This will enable some of the more depressed areas to effect substantial reductions of rates. The counties of Cumberland, Durham, Glamorgan and Monmouth will be able to reduce rates by amounts varying between 1s. 9d. and 3s. 2d. in the £. In the county borough of Merthyr Tydfil the reduction will be as much as 5s. in the £. Some of the richer areas will have their grants reduced, but the largest loss is in Halifax, where it amounts to 5.2d. in the £. The Bill also contains provisions for an equalisation of rates between the different Metropolitan boroughs in the County of London. The Bill is thus one of minor amendments rather than of new departures in principle, but that will not reduce the welcome it will receive, especially in the very hard-pressed areas which continue to suffer from especially heavy unemployment.

Labour Disputes in the United States.—The outcome of the General Motors strike has been fairly generally interpreted as a partial defeat for Mr Lewis, though hardly as a victory for General Motors. Mr Lewis, however, is apparently not of this opinion, for he has plunged straight into another dispute in his own industry of coal-mining. The current agreement on wages and hours in this industry expires on March 31st next, and the Union is already making tall demands. As in the General Motors case, it is probable that a strike would suit Mr Lewis's purpose better than a peaceful granting of his demands, so the outlook for peace is not very bright. There is reason to believe that a stoppage in the bituminous coal industry would be both more complete and more damaging to industry as a whole than the General Motors dispute. Coal is closely allied to steel, for many of the largest mines, and the most insistent opponents of collective bargaining, are subsidiaries of the big steel companies. It has long been an open secret that Mr Lewis's ultimate objective is the "organisation" of the steel industry, and it begins to look as if the year will see a long series of bitter disputes, each leading logically to the next. The prospect is not very encouraging.

New Plans for American Farmers.—President Roosevelt is losing no opportunity of demonstrating that he regards his re-election as a mandate to proceed with the policies of his first term of office, in spite of the obstacles which have been placed in his way by the Supreme Court. Those wistful conservatives who forecast an "era of good feeling" immediately after the election, and interpreted their own forecast as meaning an era of passivity on Mr Roosevelt's part, are rapidly learning their mistake. The latest sign that nothing has been changed from the original outline of the New Deal is the Message which was sent to Congress on Tuesday outlining a new agricultural policy. The emphasis is now laid on the alarming spread of tenancy, and its derogation from "the American dream of the family-size farm owned by the family which operates it," and the remedy is the acquisition by the Government of farm land which would be improved and re-sold on advantageous terms to owner-occupiers. It is realised, however, that a long-term policy of this nature will do little to alleviate the immediate needs of the farmers, and proposals are accordingly added for the rehabilitation of groups now prepared to take over their own farms, for various other forms of rural assistance and for the removal from cultivation of marginal lands. But behind these recommendations is the realisation that nothing can be done to assist

the farmer unless he is guaranteed a satisfactory real income. So the Message comes back to the principles of the A.A.A., with its major purpose of "equalising" incomes in town and country. With post-election frankness, the Message declares that the States acting independently can do nothing and that "most Americans believe that our form of Government does not prohibit action on behalf of those who need help." With all his political skill, President Roosevelt is illustrating and supporting his demand for some modification of the static veto of the Supreme Court. Nothing is better calculated to gain political support for that purpose than a reminder that the Supreme Court blocks the way to agricultural relief.

Japanese Army in Power.—General Hayashi's Cabinet has approved a new Japanese Budget to replace that of the deceased Hirota Cabinet. After a cut of Yen 270 millions, the total expenditure is still Yen 460 millions greater than the 1935-36 total. As total revenue is reduced by Yen 170 millions, the amount to be raised by borrowing will be only Yen 100 millions less than was proposed in Mr Baba's Budget. Of the total expenditure of Yen 2,769 millions only Yen 1,910 millions will come from taxation and normal revenue, of which the army and navy demand about 70 per cent. The army and navy have accepted a cut of Yen 23 millions each, while the Home Office vote is cut by Yen 162 millions—which means no aid from the Government for the prefectures, and no taxation relief for agricultural regions. Mr Yuki, the new Finance Minister, by his declaration that radical economic changes must be avoided, has suggested that the concern of the army is to propitiate the financial interests and not to relieve the direct burden on the peasantry. This seems to indicate that the proposal to nationalise electricity supply and to co-ordinate the economic Ministries in one army-controlled system are not to be pursued.

Though General Hayashi, the new Japanese Prime Minister, emphasised this same spirit of concession to independent financiers in his address to the re-opened session of the Diet, most of his speech dealt with foreign policy. To meet the widespread criticism of the army's pact with Germany, he declared the Government would try not to err in its execution, and appealed to the Russians to co-operate with Japan. The whole world, apparently, misunderstands the Japanese. The new Cabinet will make no change in the policy of non-menace and non-aggression she has consistently followed. It is a mistake to suggest that her army has annexed Manchuria, and is ambitious of reaching the Yellow River; the pieces of China that Japan holds merely came off in her hand, and her only anxiety is to restore them to the Chinese. The statement, in fact, seems to mean that there will be no modification in the army's policy. But not all the Prime Minister's diplomatic language succeeded in calming the Diet, for no sooner was the session re-opened than the political parties were back at their attack on the army for interfering in politics. General Sugiyama, speaking for the army, declared that interference in politics by officers and men on the active list was strictly prohibited. And it is reported that a conference of army leaders subsequently decided to demand dissolution of the insolent Diet; though General Hayashi has punished the politicians already by failing to appoint any Parliamentary Vice-Ministers, so that departments of the Government will be represented by their permanent officials. The way of a Japanese politician is hard in these outspoken times.

Waterloo Bridge.—Waterloo Bridge, once the symbol of a famous victory, is still a battleground between the National Government and the elected representatives of the citizens of London. In 1924 the bridge first showed signs of structural weakness. In 1926 the London County Council sought and received the per-

mission of Parliament to borrow the necessary money for its demolition and the building of a new bridge. Delay followed, while the aesthetic merits and relative advantages for navigation and road traffic of different designs were being discussed. In 1932 the Council again approached Parliament for permission to borrow, but this time the application was refused on the grounds of economy. The Labour Party came into power on the London County Council in 1934 and publicly declared their anxiety lest Waterloo Bridge should be like Lambeth Bridge, which was closed to traffic for twenty-seven years before being rebuilt. A new approach to Parliament was supported by the Minister of Transport on the ground that the traffic required a bridge to take six lines of traffic. The application, nevertheless, was refused, the argument being advanced that it would be unfair to grant to a Labour Council what had been refused to a Conservative one. As Londoners of all parties were agreed that a new bridge was necessary, especially in view of the navigational difficulties which would have arisen from any attempt to recondition the old bridge, the Council decided to build, in the hope that Parliament, on reflection, would again change its mind. In 1936, permission was given to borrow the money. Now, despite the appeal of a deputation, representing all parties of the Council, the Minister of Transport has refused to give a grant, and Londoners will thus be saddled with an additional £720,000. As Londoners contribute over £4½ millions—some 15 per cent.—of the Road Fund and receive on the average only 5 per cent. of grants from it, they may well feel that their "Waterloo" has been won at high cost.

The British Industries Fair.—Last Monday the various sections of the British Industries Fair were opened at Olympia, the White City and Castle Bromwich. This annual exhibition of British skill and versatility has steadily grown in size and variety since it was first started during the war. This year there are beautiful and ingeniously fashioned articles on every stall. British manufacturers have clearly adapted themselves with remarkable success to the requirements of a rapidly changing world. The Coronation dominates the scene; it is worked into garments of all kinds, and stamped everywhere, from the wonted mug to lordly silver dishes. On all sides, too, there is optimism. Mr Runciman said on Monday night's dinner at the Mansion House that industrial activity had come to stay. But, though the Coronation is our own, recovery belongs to the world; and many of the fair hopes of this exhibition depend for fulfilment on the expansion of world trade and the steady revival of British exports. Mr Runciman said nothing of the fate of the movement for freer trade. The British manufacturer may make his goods truly and well, but unless the British Government is ready to throw its full weight into the campaign which has begun against the strangulation of world trade, there will only be a very limited market for what he has to sell. Or perhaps he will be too busy preparing for the next war to bother.

Shipping and Freer Trade.—Mr Runciman might be appropriately inspired to more decisive action by the very strongly-worded Annual Report of the Liverpool Shipowners' Association. The report calls for resolute action; the ships of all nations must be given equality of opportunity in our ports; and every encouragement should be given to the formation of a low tariff group of countries. The failure of British industry to re-establish its selling power in the markets of the world, in spite of a widespread tendency towards trade recovery, is attributed to the restrictive policy of governments, including our own. The report maintains that the difficulties of British shipping are due far more to the shrinkage of world trade than to subsidised competition—a claim which sheds some light on the relevance of the Merchant Shipping Bill, which has just emerged unamended from Committee in the Commons. The unsubsidised ships of Norway, Denmark and Greece have been the chief

gainers from the decline of British trade with Europe. British merchant tonnage has fallen from one-half of world tonnage in 1913 to one-third in 1936; but its proportion of world trade has fallen in the same time from one-half to one-fifth. The decline has been largely in the share of trade carried between foreign countries; and the cause has been the strangulation of trade by restrictive devices.

Shipping and War.—The prosperity of the Nation and of shipping depend upon the restoration of our export trade. To have the largest and most efficient mercantile marine in the world is not enough. A general lowering of tariffs is essential. Moreover, the possibility of war increases the urgent need for such a policy. No adequate solution has yet been provided for the problem of war-time supplies. The Liverpool Shipowners' report points out that if shipping can be kept in adequate employment by the restoration of world trade, British shipping will be able to maintain imports of foodstuffs and raw materials in time of war. There are, however, two further difficulties; existing centres for inland storage and distribution are insufficient; and the consumption of fuel oil by all forms of transport has increased so largely that a greater quantity of specialised tanker tonnage is necessary.

Anxiety about the increased consumption of fuel-oil is not confined to the Liverpool Shipowners. Our coal trade is a necessary condition of prosperity in the depressed areas; and it is not only far below the volume of 1913, but it has notably continued to decline since 1931. Over one-half of the existing merchant tonnage of the world uses oil wholly or in part; barely one-quarter of the ships built last year were designed to burn coal exclusively. Moreover, it is uncertain that oil burning is really worth while for any but small low-powered vessels and speedy liners. A conference of shipowners, shipbuilders and engineers has already met, under the chairmanship of the Secretary for Mines, to discuss this problem. It is to be hoped that the smaller committee which is to proceed with the examination will bear in mind the shortage of tanker tonnage for war needs without overlooking the necessity for efficiency in time of peace.

Australia and the Ottawa Agreements.—International trade agreements invariably represent a compromise between politics and economics, and the Ottawa agreements were no exception. From Australia comes an echo of the bickering between those two forces

that has been revived by the approach of a necessary revision of the agreements. Mr Lyons told an anxious deputation of manufacturers last week that the Imperial Conference would not consider revision in detail, but merely review the general effects and indicate the future action desirable. Australia would probably give notice of denunciation of her agreement with the United Kingdom before the Commonwealth general election, so that a new agreement might be discussed early next year. Some alterations, he said, were inevitable, but all interests would be consulted before the Government framed a policy for a new agreement. There is a significant contrast between this dilatory attitude of a Government which will soon have to fight for its life at the polls, and the action of the newly returned Canadian Government in promptly negotiating a fresh detailed agreement in anticipation of the Imperial Conference. This point is underlined by the report that the Australian Government is anxious to be relieved of the undertaking to conform to the recommendations of the Tariff Board concerning preferential rates of duty. In view of the spasmodic policy of "trade diversion" initiated last year contrary to the Tariff Board's policy, this suggests a desire for a higher protectionist policy as an attraction for the workers' votes.

Indian Election Results.—The Congress has been doing better than was expected in the Indian provincial elections. It has secured majorities in Bihar, Orissa, and the United Provinces, and in Assam it is the largest single party, with 35 seats out of 108. In Bengal it has exceeded expectations, though here the Burdwan-Ghuznavi pact foreshadowed a coalition Government of Moslems and non-Congress Hindus. In the Punjab Sir Sikander Hyat Khan's Unionist Party has an absolute majority of 89 seats in a House of 175. In Sind the United Party has so far secured 23 seats and the Congress 7 in a House of 60; Independents and smaller parties will have most of the remainder. Results are not yet known in Bombay, Madras, the Central Provinces, and the North-West Frontier Province. It is on the cards that the Congress may control five or even six provincial legislatures. Grave problems therefore face the leaders of the Party, which is pledged to opposition to the new constitutional scheme, though decision on the question whether Congress men should accept ministerial office in the provinces was delayed until after the provincial elections. The likelihood is that where the Party has an absolute majority it will accept office, but will otherwise pursue a policy of obstruction. There will be difficult days ahead, not only for provincial Governors, but also for the Coalition Governments that must be formed in some of the provinces, since cohesion has not been a notable feature of parliamentary groupings in India. Burma has already given a foretaste of the difficulties. U Ba Pe's Party is the largest single group in the legislature, but it has only 43 seats out of 132, and it received a sharp initial rebuff when its candidate for the Speakership was decisively rejected.

A Code for Workers.—The Factories Bill was read a second time on Tuesday, and it will now be possible, within the limits of Government tolerance, to bring the measure up to date by the insertion of amendments at the Committee stage. The Bill has been defended as it stands because, unlike its abortive predecessors, it reached the floor of the House; and it is certainly true that the Bill of 1937 is an advance on the Act of 1901, which is the prevailing law. It is equally true, however, that the Bill will leave the conditions of employment for women and young persons considerably more onerous than the best modern standards both in this country and abroad; what are virtually abuses will still be possible. With the Gresford disaster fresh in mind, a physical fitness campaign on hand, and an Act to raise the school-leaving age actually on the statute-book, the Government should listen intelligently and with care to

its critics. This Bill is a rare opportunity to vindicate on a broad social front the leadership which is claimed for British industry at the British Industries Fair. We have lagged behind in the standards of factory life; we have now a chance to take the lead again.

The Fitness Council.—The Government has gone far afield in its choice of thirty-one members to serve on the National Advisory Council, which is to supervise and co-ordinate physical training and recreation. Almost all the relevant organisations already in existence are represented, the Boys' Clubs, the Girls' Clubs, the Juvenile Organisations Committee, the Y.M.C.A., the Y.W.C.A., the Boy Scouts, the Girl Guides, the National Playing Fields Association, the Institute of Morris Dancing, the National Union of Teachers and the League of Health and Beauty. Moreover, the individuals chosen are not merely *ex officio* representatives; they are actively interested in the problem of fitness. Some are famous athletes, like the chairman, Lord Aberdare, Mr Philip Noel-Baker, Lord Burghley, Mr W. W. Wakefield, and Miss Dorothy Round; others like Mr S. F. Rous, Secretary of the Football Association, are in day-to-day touch with the sporting life of this country. Almost all are associated with either the youth movement in one or another of its many forms, or with education. They are beginning a novel task with fresh minds, and some at least realise that there are criticisms to be faced. The coincidence of this scheme with intensive re-armament was unhappy. It would be still more unfortunate if the results were formal and stereotyped. There is still the undernourished tenth of our population to be catered for—as a separate problem, not to be solved by physical jerks and marching, but by food, clothing and shelter. The task of the Council will be difficult; its powers are nebulous; and its stated objectives are not very clear. But the men and women who have been chosen will probably do the job as well as it could be done.

Road-Rail Appeal Decision.—Last Monday the Road and Rail Traffic Appeal Tribunal confirmed the renewal by the Metropolitan Licensing Authority of an "A" (public carriers') licence to Messrs Bouts-Tillotson Transport, Ltd., road transport contractors, against the appeal of the four main line railway companies. The Tribunal refused to consider the case as one testing the claim of the railways to a monopoly of traffic over trunk routes, since it was not part of its function to decide that question. The Tribunal agreed that the Licensing Authority had no jurisdiction over road charges even when they were less than railway rates, and stated, further, that the Act did not require a licensing authority to decide which goods should be rail borne, and which should go by road. For the remedy of these grievances, the railway companies were advised to go elsewhere—presumably to Parliament. The Act allows a licensing authority to withhold a licence if "suitable" transport facilities already exist. The Tribunal did not attempt to define "suitable" facilities, but declared that such facilities should be "suitable" for current commercial and industrial conditions. The railway service was admittedly physically adequate, but was not necessarily suitable, as the evidence of Messrs Bouts-Tillotson's customers showed. The appeal was, therefore, dismissed, despite the fact that Messrs Bouts-Tillotson were carrying traffic formerly handled by rail.

This decision marks an advance on the position previously taken up by the Tribunal (see *The Economist*, December 19, 1936, page 572). A road haulier may now retain business which he originally gained at the expense of a railway; and the fact that a better service is provided by the road operator may count as a relevant consideration when the suitability of existing facilities for transport is in question. Road transport business need no longer fear relegation to the position of a feeder

to the railways. But the Tribunal required satisfaction that no material change had occurred in the circumstances of Messrs Bouts-Tillotson's business, and licences were only granted for those vehicles which were fully employed during the period for the first licence. It seems, therefore, that no considerable expansion of road transport business is as yet to be allowed.

Lower Iron and Steel Production.—Mr Chamberlain's announcement regarding the proposed re-armament loan has served to re-focus attention upon the stringent position now existing in the iron and steel markets. In the majority of the producing areas output fails to keep pace with current demand and makers are frequently forced to ration their customers. The position was aggravated last month by the incidence of the New Year holidays in Scotland—a factor mainly responsible for the sharp setback in the iron and steel production figures during January. However, an expansion of output is fully expected during the current month; two furnaces which had been temporarily damped down were restarted in January and two additional furnaces were blown in. Monthly production figures, as issued by the British Iron and Steel Federation, are as follows:

(In thousands of tons)

Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	638.6	185.9	414.1
1929	832.4	803.0	235.2	364.9
1932	297.8	438.5	132.7	157.4
1933	344.7	585.3	80.9	160.2
1934	498.2	738.3	113.9	187.8
1935	535.3	821.6	96.0	197.7
1936	640.5	974.8	123.6	183.8
1936—January	595.5	911.7	119.9	164.8
February	584.7	938.5	123.2	167.8
March	633.6	980.1	130.3	163.4
April	629.8	984.2	120.8	177.5
May	661.0	963.0	117.5	204.1
June	644.1	965.9	110.6	173.5
July	665.6	974.1	170.3	216.1
August	635.8	972.7	141.8	164.0
September	650.8	1,027.0	165.0	183.0
October	670.3	1,060.5	101.0	194.4
November	643.1	1,001.3	90.7	193.3
December	671.4	1,019.2	94.8	204.8
1937—January	650.7	998.9	83.1	215.0

Owing to the simultaneous expansion of demand in countries overseas, it is becoming increasingly difficult to obtain supplies from abroad. Thus imports fell to a low level in January, the decline compared with 1936 being most marked in shipments from Belgium. The most encouraging feature of the past month's returns was the unexpectedly large increase in British exports. Compared with 1936, substantially increased quantities were consigned to markets as far apart as South Africa, Denmark, China and Argentina. In view of the long-term importance of the British industry's export connections, it is profoundly to be hoped that this improvement will be maintained in coming months.

Overseas Trade in January.—There was a welcome expansion in our export trade last month. Though imports were well maintained, the discrepancy between the relative rates of increase of imports and exports has lessened; the visible adverse trade balance last month was only 0.8 per cent. larger than a year ago. The following tables give details for the past three years:—

MONTH OF JANUARY (000's omitted)

	1935	1936	1937	Change between 1936 and 1937
Total imports	£ 61,916	£ 69,954	£ 75,581	+ 5,627
British exports	35,481	34,460	39,101	+ 4,641
Re-exports	5,034	4,320	5,076	+ 756
Total exports	40,515	38,780	44,177	+ 5,397
Excess of imports over exports	21,401	31,174	31,404	+ 230
Transshipments under bond	2,022	2,397	2,942	+ 545

The rise in imports was more pronounced in the raw materials group, where there were larger purchases of hides and skins, raw wool and raw cotton. Increased purchasing power is reflected in heavier imports of meat

and grain and flour, whilst the growing needs of the home industry have necessitated bigger imports of non-ferrous metals and machinery. Although there has been a revival in coal exports, 70 per cent. of the increase in British exports occurred in the manufactures group.

Trade by Commodities.—Recent movements in the more important imports retained in this country are shown below:—

RETAINED IMPORTS—MONTH OF JANUARY

Item and Measure	1935	1936	1937
Wheat	5,425	6,612	5,286
Beef and veal	851	1,018	1,177
Mutton and lamb	503	524	595
Sugar (unrefined)	2,324	4,042	3,888
Iron ore and scrap	387	579	472
Raw cotton	1,037	1,377	1,575
Sheep's and lambs' wool	687	719	786
Flax, hemp and jute	43,196	55,800	59,707
Crude petroleum	26,725	43,383	51,067
Hides, wet and dry	131	119	101
Wood pulp	203	221	143
Rubber	457	102	— 6
Unwrought copper	21,406	20,242	22,025
Pig lead	29,339	27,542	25,903
Tin	—	—	—
One and concentrates	3,930	5,062	3,237
Blocks, ingots, slabs and bars	628	232	720
Iron and steel manufactures	130	120	83
Machinery	5,523	6,811	10,091

The volume of wheat shipments has declined, particularly from Australia and Canada; in value, wheat imports show a rise. Meat supplies from the Argentine, Australia and New Zealand have been on a larger scale. Sugar imports are lower, but Empire countries have increased their shipments. The strong demand for fibres reflects the growing activity of the textile trades. Machinery imports show a considerable increase, especially machine tools from the United States.

The principal British exports are set out below:—

BRITISH EXPORTS—MONTH OF JANUARY

Item and Measure	1935	1936	1937
Coal	3,410	2,793	2,987
Iron and steel scrap	26,900	15,328	33,074
Pig-iron and ferro-alloys	14,010	8,190	13,796
Railway material	10,400	6,869	17,968
Total iron and steel manufactures	179,026	164,772	215,030
Textile machinery	5,565	4,925	4,810
Cotton yarns	12,990	12,912	13,761
Cotton piece-goods	187,253	166,679	160,635
Wool tops	5,815	4,342	4,466
Worsted yarns	3,305	2,378	2,430
Woollen tissues	6,814	7,315	7,848
Worsted tissues	3,472	3,429	3,980
Linen piece-goods	8,167	8,254	9,398
Leather boots and shoes	24,898	26,299	27,746
Leather	23,947	24,956	29,558
Paper and cardboard	336,201	335,859	371,788
Locomotives (complete and parts)	1,883	1,871	1,831
Motor vehicles and chassis	5,530	6,235	8,871

The improvement in coal exports is encouraging; trade with Italy has been resumed, while French purchases show a big increase. There has been some improvement in our exports of iron and steel manufactures; South Africa is mainly responsible for the increase in exports of railway material. Demand for textiles in general is on the up-grade, and in the United States and China there is still an active market for linen piece-goods. Exports of British motors continue well above the level of recent years.

The NATIONAL BANK of NEW ZEALAND, Limited

Established 1872

Head Office:—8 MOORGATE, E.C.2

Subscribed Capital - £6,000,000

Paid-up Capital - £2,000,000

Overseas Correspondence

From Our Special Correspondents

United States

The New Deal of 1937

WASHINGTON, February 4.—The President is determined to see enacted the abolition of child labour, and the minimum wage and working standards imposed by the N.R.A. Mr Richberg, once keeper of the now deceased Blue Eagle, is again a frequent White House visitor, and has laid before the President a plan to write the labour provisions into existing anti-trust legislation, leaving a strengthened Federal Trade Commission to formulate the standards and supervise enforcement. General Johnson, the original N.R.A. administrator, proposes a penalty tax on employers who fail to maintain predetermined labour standards. Senator O'Mahoney advocates a Federal licence for all undertakings engaged in interstate commerce, the maintenance of proper labour standards being required as a condition of holding a licence. The Supreme Court has ruled that it is constitutional to bar prison-made goods from States which prohibit prison labour; and this precedent is seen as a possible solution of the problem. The Chamber of Commerce is drumming for State compacts, an echo from the Landon campaign.

One could catalogue an equally diverse range of proposals for American intervention in Europe, a topic much under discussion at the White House. The President would like to do something if he could be assured of its effectiveness in Europe and simultaneously of its popularity at home, but so far no suggestion is receiving publicity which thus squares the circle. The professional peace leaders have his ear, and they leave him with confidence that he is ready to act, once he can find a suitable policy.

The Tactics of the President

The President in this case, as in the matter of labour legislation and the Constitution, follows his characteristic course of letting the discussion simmer around him, heating it up now and again by his own discreet intervention, and then waiting to see whether the brew appears to have a chance of being both popular and constructive. This being the start of a new four-year term, and of dealings with a new Congress, the method has its advantages; and it is being followed on almost every controversial subject. Only in giving direction does the President contribute a clear indication of his own mind. This he did in his inaugural and in his first message to Congress. He has done it since in his handling of the power and labour issues. He has rejected the proposal of the power pool in the T.V.A. district as a warning to the public utilities not to negotiate and litigate at the same time. The fact that the utilities, who have tied up the T.V.A. with drastic injunctions, asked for these

long before the pooling conference was called, and the President knew that the applications had been made, did not save them from his wrath. Chairman Morgan, of the T.V.A., made a strong case for peace with honour between the Government and the utility companies, but the power fight is symbolic, and even an honourable peace would be misconstrued by the President's Liberal friends.

In the General Motors controversy the President had to listen to a peremptory demand from Mr John L. Lewis that he should take the side of the automobile strikers in payment of his political debt to the workers who voted for him. And he had to endure the refusal of Mr Sloan, of General Motors, to attend a conference with Mr Lewis, at the invitation of Secretary Perkins. He mildly rebuked Mr Lewis without naming him, and scolded Mr Sloan by name. But the Administration, in asking Mr Sloan to sit down with Mr Lewis, and by rebuking him for refusing to do so, turned public opinion against General Motors, and so helped the strikers at one stage of their struggle. The two actions, ending the pooling conference with the power companies, and rebuking General Motors in the labour crisis, set the compass for the New Deal, 1937. The emotional "worth" is the common man and not the big corporation.

Reforming the Supreme Court

NEW YORK, February 9. — The Ohio floods have apparently passed their crest, and submerged towns are reappearing on the face of the waters; the General Motors strike, likewise, appears to have passed its crest, and something like conclusions are appearing above the surface of the negotiations. The President's proposal to appoint six additional members to the Supreme Court caused a three-hour flurry in the stock market, which then resumed its normal tenor. Although the announcement was unexpected, it was hardly surprising. The constitutional issue has long been familiar. The idea of a constitutional amendment has never seemed very realistic to Wall Street on two counts: (1) doubt that an amendment could be drafted that the States would ratify; and (2) the prospect that ratification would be a slow process. The relatively simple Child Labour Amendment was launched in 1924, and has not yet been ratified. The alternatives were the one outlined in the Annual Message (i.e. to proceed without any change in the *status quo*), or to ask authorisation to pack the Court, a procedure of which that Message gave no hint, but which has long been an obvious possibility. The announcement has divided opinion into four groups: those in favour of it; those who are opposed to tampering with the Courts and the Constitution; those who advocate a more radical approach to the problem; and the fourth, and by far the largest group, which, like Gallo, "cares for none of these things."

Gold in American Trade

In about six weeks the gold purchased by the Treasury for the "inactive account" amounted to \$142 millions, which indicates that the general nature of the gold flow was not altered by the Tripartite Agreement. From the standpoint of credit control, it is no doubt preferable that the Treasury rather than the Reserve Banks should buy this gold; but if the initial weeks are to be taken as typical, it will be seen that the burden assumed by the Treasury is not light; and the present disposition may not be a permanent solution. A recent comment of Mr Wallace (Secretary of Agriculture) was: "... it would seem that after a time the people of the United States will find it necessary to think through

to the realities of exporting indefinitely the labour and natural resources of the continent in exchange for nothing more usable than shining metal. Some day it will be asked what it all means in the long run for the standard of living of the American people."

Statistically speaking, it is not the "labour and natural resources of this continent exclusively" that are currently exchanged for the "shining metal." Our merchandise trade is almost perfectly balanced, and the "shining metal" seems to be exchanged for our securities and for dollar balances, and so becomes "hot money."

The classified reports of our merchandise trade for 1936 have been published, as follows:—

MERCHANDISE TRADE OF THE U.S. (\$000,000)

	Exports		
	1934	1935	1936
Raw materials	653	683	668
Raw foodstuffs	59	59	58
Manufactured foodstuffs ..	167	157	144
Semi-manufactures	342	350	394
Finished manufactures	878	994	1,152
	2,099	2,243	2,416
	Imports		
	1934	1935	1936
Raw materials	441	582	733
Raw foodstuffs	254	322	349
Manufactured foodstuffs ..	264	319	384
Semi-manufactures	307	410	490
Finished manufactures	350	405	460
	1,616	2,038	2,416

Our exports of semi-manufactures and finished goods have steadily risen, while the other three groups have barely held their own. These three years included two major droughts, which somewhat influenced the totals. Nevertheless, the general trend has been in the same direction over a long period. On the other hand, all categories of imports have been rising.

Short Term Rates Recover

Since the middle of December short-term money rates have been markedly firmer in the New York market. This has been associated with the two steps taken to control credit: the purchase of gold by the Treasury, and the announcement of the increase in reserve requirements. Whether this is merely a flurry, or a more lasting change, it has been most welcome to the banks. Last year the yield of Treasury 90-day bills was 0.8 per cent. in February, 0.23 per cent. in May, and then 0.10 per cent. in November. There were actually instances of subscription to these bills on a no-interest basis. During the year, long-term Governments climbed from about a 2½ per cent. basis to a little better than a 2½ per cent. basis; while the 3-5 year notes rose from a 1.21 per cent. basis in January to about a 1 per cent. basis in December. At the present time, the 9-months' bills are selling to yield about 0.42 per cent. and 5-year notes about 1.20 per cent. At the low yields of last year, the return on the bills hardly exceeded the book-keeping costs of institutional holders, and the return could scarcely be described as an interest rate. The current returns on Treasury bills, say 0.25 per cent. for 3-months', 0.32 for 6-months', and 0.42 for 9-months', while still not very remunerative, are not quite so anomalous; although they are still below the London equivalents. The rate on long Governments fell last year, but not in calculable relation to the shorts.

There is little in the way of commercial paper in our market at present. Acceptances which last year had a limited market at about ½ per cent. are now quoted ¾ at 90 days; commercial paper is in small supply at ¾ per cent., but call money was successfully pegged at 1 per cent. in June of last year, and has been held there since. It is not easy to get statistical information as to the cost of customers' loans (the equivalent of the British overdraft, but commonly secured by collateral of some sort). The Federal Reserve Bulletin publishes a table showing that the New York City banks averaged about 2½ per cent. in 1936, eight northern and eastern cities about 3½ per cent., and 27 southern and western cities a little under 4½ per cent.; but these rates represent local financial customs. In all cases, a substantial and continuous decline since 1932; and the respective averages for 1928 were 5.15 per cent., 5.34 per cent., and 5.70 per cent.

France

A Breathing Space?

PARIS, February 18. — The Government has been urged by its supporters to lay before Parliament a number of measures for social reform: one for a national unemployment fund, another for old-age pensions for workers, and a third for the relief of agricultural distress. These measures would involve some billions of new expenditure. Moreover, the civil servants have been pressing the Government to readjust their wages, because of the increased cost of living. The Senate thereupon warned the Government through M. Caillaux that any bill entailing new expenditure would be automatically rejected, if not accompanied by real economies. M. Blum has obtained from the workers who are preparing the Paris Exhibition a pledge that they will work day and night, in spite of the forty-hour week, to get the Exhibition ready by May 1st. He told the civil servants over the wireless that they must be patient. He declared that it was time for a breathing space, for a respite in expenditure.

But a breathing space for wages would be an absurdity if not accompanied by a pause in the rise in prices. Therefore, the Government intends to check this rise by preventing unjustifiable advances, by lowering a number of import duties, and by expanding new quotas. The last measure is recommended by M. Rist, who protests that "at a time when the tendency of prices has been reversed by the world rise and by devaluation, the Government continues to apply measures, the origin and justification of which were the prolonged slump of prices which is finished." One difficulty is that the relaxation of the tariff will increase the import surplus unless it is balanced by an increase in domestic production, which the forty-hour week makes difficult.

The Government's Prospects

The desire of M. Blum to get out of the vicious wage-price spiral, and his determination not to let the Budget deficit grow inordinately, are welcome. But will they be made effective? Will they lead to the repatriation of capital which is so necessary when the money market is being pumped dry by Treasury and private requirements? The Prime Minister and M. Auriol firmly adhere to the monetary alignment, and hope to derive much economic advantage from the Paris Exhibition. But they will have a hard struggle against those who advocate the control of the exchanges and foreign trade; these are alleged to include the Minister of Economy, the Governor of the Bank of France, the Trade Unions, and the Left extremists.

Will the Government obtain from the Conservatives and from its foreign supporters sufficient confidence to accelerate the progress of recovery during the breathing

space? Or will a continued rise in prices and the Budget deficit bring about a new political disequilibrium, ending in the autumn in a fusion of the Communists and the Socialists to try out some new experiment? Such a change would not pass without political disorder, and further economic difficulties in the international markets.

A Rapid Rise in Imports

In January there was a huge increase in the value of imports, and a much smaller increase in exports. Both movements were the result of the rise in prices, since the imported and exported tonnage were virtually the same.

	Francs (000,000 omitted)		
	January 1936	December 1936	January 1937
Imports:—			
Foodstuffs	564	880	886
Raw materials	1,157	1,707	1,959
Manufactured goods	291	425	473
Totals	2,014	3,013	3,319
Exports:—			
Foodstuffs	191	293	283
Raw materials	330	503	575
Manufactured goods	681	839	914
Totals	1,203	1,637	1,773
Import surplus	810	1,376	1,546

Thus, for the first four months after devaluation, the import surplus was nearly Frs. 5,000 millions, against a year's surplus of Frs. 10,000 millions in 1936, and Frs. 5,000 millions in 1935. The Government, to prevent foreign dumping and the internal rise in prices (by increasing temporarily the import quotas, notably for foodstuffs) has obtained from the Chamber power to alter the customs duties by decree for one year. The Minister of Commerce emphasised that international free trade was his ultimate aim, but that he had first to protect French production.

The monthly figures of the Statistique Générale, showing industrial production in France, were (1913 = 100):

	Dec., 1935	Oct., 1936	Nov., 1936	Dec., 1936
General index	96	98	99	100
Engineering	96	98	102	105
Iron and steel	83	89	92	89
Textiles	71	69	74	75
Mines (adjusted figures)	101	103	95	98
Building Do.	66	57	57	56
Leather Do.	90	100	95	91
Paper Do.	118	151	151	150
Rubber Do.	883	947	941	915
Motors Do.	406	491	532	560

Some 13,367 motor-cars and 1,871 lorries were put on the road in December, against 13,439 and 1,825 in November. Railway receipts during the third week of the year showed an increase of 7.09 per cent. Loaded wagons during the first three weeks of 1937 were 821,329 against 776,269 for the same period of 1936. Unemployment, after the January peak, has fallen from 426,072 to 420,880. It was 483,155 last year at the same time.

Holland

The Rewards of Devaluation

AMSTERDAM, February 12.—The ex-Minister of Economic Affairs stated in a recent speech that it was indisputable that the devaluation of the guilder had been the predominant factor in the Netherlands in the year 1936. Before September Holland did not participate in the all-round improvement of world trade, but after September did. Until October the number of registered unemployed was growing by 25,000 to 40,000 persons a month; last October the increase was only 13,000, followed by 6,000 in November, and the latest figures show a decrease. A good proportion of our industrial enterprises, especially in the metal and cotton trades, are now provided with several months of work at full capacity, which is a situation they have not

known for many years. It is only since devaluation, too, that the repatriation of capital has enabled the capital and credit market to provide cheap money for industrial development. The possibility of readily procuring cheap loans has only presented itself since September 26, 1936. Credit has been restored subsequent to and as a result of devaluation. A pronounced improvement is already to be seen in the revenue returns, which are an immediate reflection of the economic activity of the country.

More substantial results will gradually manifest themselves as time goes on. Many branches of industry are closely dependent upon others. Building activity, transport, some branches of commerce, retail distribution, and agriculture to some extent, will only feel the full benefit of the revival when the activity in other sections has begun to tell.

No Guilder Stabilisation Yet

Uncertainty has prevailed for some time about the monetary tactics to be pursued by the Government. For the time being there is no question of the guilder being stabilised. If a further depreciation of sterling, the dollar or the French franc were to endanger the competitive power of Dutch trade and industry, a resort to further devaluation is still possible. After an official statement, the guilder weakened, and the Equalisation Fund was relieved of the necessity to operate on a large scale in the purchase of foreign currencies.

The unemployment returns continue to show a declining tendency. The sale of stamps for the compulsory old age pensions insurance for the past ten years reveals that employment is now on almost the same scale as during the years immediately preceding the world depression. From this it may be concluded that the present state of unemployment is due largely to the growth of the population and to the increasing mechanisation of industry. The Government is aiming to reduce the number of more or less permanently unemployed as far as possible, and, when there is an increase in the demand for labour, persons who have been unemployed for a protracted period are to be put to work as far as practicable. The question of special provision for rendering assistance to permanently unemployed persons is under consideration by the Government.

Improved Foreign Trade

Our foreign trade returns continue to make a satisfactory showing. According to the returns compiled by the Central Statistical Bureau, the value of imports amounted to 106 million guilders in January (114 millions in the preceding month and 79 millions a year ago), and of exports to 73 million guilders (80 million in the preceding month and 50 millions a year ago). These figures do not include gold and silver.

	Imports (In million guilders)		Exports	
	1936	1937	1936	1937
January	79	106	50	73
February	74		50	
March	79		55	
April	81		57	
May	76		53	
June	77		53	
July	80		60	
August	82		63	
September	82		72	
October	92		75	
November	101		77	
December	114		80	
Total	1,017	106	745	73

Wholesale prices in the Netherlands are still moving gradually upward. The general index figure of the Central Statistical Bureau (1926-1930 = 100) was 73.0 in January, 1937, compared with 71.0 in December, 1936, and 62.6 in September, 1936 (prior to the devaluation of the guilder). The cost of living, however, has only risen to a very insignificant extent. Now that the third monthly index figure of the cost of living since the depreciation of the guilder has been compiled by the Bureau of Statistics, it is possible to review the

influence of depreciation during the entire quarter subsequent to the abandonment of the gold standard on September 26, 1936. The index figure in December (basis pre-war = 100) was 133.4 compared with 132.0 in September, or a rise of 1 per cent. In November it was 133.9, or 1.4 per cent. higher than in September. From November to December there was thus a drop of 0.4 per cent.

In the Netherlands capital market, interest rates are still on the downward track. Municipalities can now procure an abundance of funds for conversion at 3½ per cent., and, in addition to the new 3 per cent. Netherlands loan, a 3 per cent. Netherlands Indies conversion loan has appeared on the market. It is expected that the Government will shortly proceed to the conversion of the 4 per cent. loans. The Central Statistical Bureau has published an account of the history of the National Debt. It stood at 2,870 million guilders on January 1, 1937, against 1,147 millions in 1900 and 2,916 millions in 1925.

Austria

Trade with Germany

VIENNA, February 9.—The Minister for Trade, Professor Taucher, recently granted an interesting interview to Mr John Gatehouse. In this he answered questions on the Austrian Government's attitude to the recent Austro-German trade agreement, signed on January 27th, and on Austrian economic policy vis-à-vis those countries which devalued their currencies last September. As these are easily the chief items of discussion in informed Austrian circles to-day, considerable interest attaches to the interview, of which the following is an authorised summary.

Dr Taucher said that the constant endeavour of the Austrian Government had been to create increased possibilities for employment in industry, and had necessitated particular attention to the development of foreign trade. In this connection the Government had never adopted a one-sided policy. It had always been prepared to facilitate imports, at the same time trying to increase exports. The volume of trade with Germany had to be increased, in both respects, by the establishment of some fair agreement. The conclusion of the new commercial treaty with Germany, and the supplementing of already existing agreements, bore witness to this tendency. Some such development of reciprocal trade relations was necessary with Germany—a State which holds the leading place in Austria's foreign trade, participating to the extent of 17 per cent. in her imports and 16 per cent. in her exports. The new agreement should be instrumental in serving this purpose. Since in the case of new agreements it is always necessary to build on former experience, the examination of previous years' statistics gives useful information. The following are the statistics of trade with Germany for the last five years:—

	In Million Schillings				
	1932	1933	1934	1935	1936
Austria's imports from Germany ..	277	215	198	200	210
Exports to Germany ..	126	117	136	140	153
Total of trade	403	332	334	340	363
Import surplus	151	98	62	60	57

Quite apart from the fact that an effective export increase can, as a rule, only be brought about by an increase in imports, the present clearing arrangements also demand an equalisation of exports and imports, if extremes, which might otherwise harm trade, are to be avoided. It is anticipated that there will be an increase in Austrian exports to Germany of important agricultural articles, such as cattle, horses, butter, cheese, milk, cord wood and split timber, and of certain industrial products. In the latter case, where present exports are below the general level, special steps have had to be taken in order to try to bring about a rise. This was necessary with a number of Austria's normal export articles, such as iron and steel goods, leather, hosiery and piece-goods. Facilitation in respect of payment for

films and for copyrights and royalties was another necessity under the new agreement. Another important clause is that which refers to the provision of increased means for the financing of German tourists to Austria.

As far as Germany is concerned, her exports to Austria of, for example, paper and heavy industry exports will as a result of the new treaty be facilitated.

The most important aspect of the agreement is that an agreed regulation of mutual trade exchanges will follow, whereas formerly trade between the two States depended on unilateral decisions. This regulation must from the very nature of the thing be somewhat elastic. But it provides a certain frame for the development of trade and traffic. For this purpose, there had been formed Governmental committees, whose duty it would be permanently to observe and control Austro-German trade in order to effect mutual benefits.

The Effects of Devaluation

Before answering the second question as to the effect of the devaluation (in other countries) on the Austrian export trade, a comparison of the figures for the last quarters of 1935 and 1936 must first be studied. The following statistics show this trade with those countries which have devalued their currency:—

SHARE OF THE VARIOUS "DEVALUATION" COUNTRIES IN AUSTRIAN EXPORTS, DURING THE MONTHS OF OCTOBER, NOVEMBER AND DECEMBER, 1935 AND 1936.
In 1,000 Schillings

	October		November		December	
	1935	1936	1935	1936	1935	1936
Total Exports	83,390	85,272	83,734	84,565	90,608	94,746
of which: to						
Italy	9,467	7,404	12,107	6,059	13,887	11,302
Switzerland	4,485	4,194	4,365	3,974	5,280	5,107
Czechoslovakia	7,708	6,725	6,088	6,498	5,599	6,039
France	3,152	3,970	3,454	3,853	3,818	4,401
Latvia	26	42	29	35	43	35
Holland	1,380	1,335	1,404	1,192	1,373	1,582

SHARE OF THE VARIOUS "DEVALUATION" COUNTRIES IN AUSTRIAN IMPORTS, DURING THE MONTHS OF OCTOBER, NOVEMBER AND DECEMBER, 1935 AND 1936.
In 1,000 Schillings.

	October		November		December	
	1935	1936	1935	1936	1935	1936
Total Imports	121,690	116,698	118,302	118,754	123,400	129,646
of which: from						
Italy	4,016	5,380	4,141	5,118	4,040	6,005
Switzerland	4,477	4,297	3,844	3,325	3,321	3,672
Czechoslovakia	15,582	14,250	17,290	14,634	14,979	12,488
France	3,676	3,360	3,201	2,978	3,376	3,637
Latvia	41	67	35	71	65	48
Holland	2,639	2,385	2,484	2,751	1,983	2,534

These figures show that only in the case of Italy have Austrian exports suffered any noteworthy setback, particularly in the month of November, 1936. In December, 1936, the value of exports to Italy, however, had again considerably increased, but was still less than that of December, 1935, by 2½ million schillings. The figures for the other countries do not show on the whole any marked reaction as a result of devaluation. But it should be noted that three months is too short a period to draw anything but restricted conclusions about the future. In the case of imports no marked alteration has taken place. Therefore it can be said with satisfaction that Austrian trade has not up to the present been heavily affected by (external) measures of devaluation.

The third question as to the effects of devaluation (in other States) on Austria's foreign tourist traffic can also, in general, be satisfactorily answered. According to the latest available statistics, giving the number of foreign

BRITANNIC ASSURANCE COMPANY LIMITED

visitors to 115 of the most important Austrian tourist centres in December, 1936, (a) the total of visitors was 1.3 per cent. greater than in December, 1935; (b) the number of visitors from foreign countries was 13.3 per cent. greater; and (c) the number of Austrian visitors had decreased by 4.5 per cent. The number of visitors from the "devaluation" States showed a not altogether retrogressive tendency. For example, there was an increase in the number of Italian tourists to the Austrian provinces of 9.5 per cent. (compared with December, 1935), and increases in visitors to Vienna of 5.2 per cent. from Switzerland, 25.4 per cent. from Holland, 5.4 per cent. from Great Britain and 5.6 per cent. from France. Tourist traffic from Germany both to the provinces and to Vienna has developed in a thoroughly positive manner. Lastly, the number of visitors from the United States and Canada has increased by 23 per cent. and from other overseas countries by 14.6 per cent.

Norway

Old Age Pensions

OSLO, February 5.—Politically the chief event since the turn of the year was the re-assembly of the Storting on January 11th, and the submission of the Budget proposals for the financial year 1937-38. The Budget is the highest since 1919-20, and shows an increase over the current Budget of nearly 38 million kroner. Practically the whole of this amount represents the contribution of the Government towards old age pensions, and will be covered by a special old age levy on income. Appropriations for relief of various kinds amount to about 65 million kroner against 80 million kroner for the current financial year. Although new taxes will not be levied, the estimate for taxes and duties of about 415 million kroner represents an increase of 54 million kroner compared with the Budget for 1936-37. The amount reserved for National Debt service amounts to 40 million kroner. The figures for the first half-year of the current financial term show a surplus of about 22 million kroner, against 12.9 million kroner for the same period of the preceding year. The surplus arises from an increase in revenue of about 23.5 million kroner.

Business Activity

The publication of the balance sheets of the banks have attracted special interest. The accounts indicate increased activity, although—generally speaking—deposits have fallen much below the figures of 1935. By a prudent investment and lending policy, the banks have been able to maintain an ample liquidity, and dividends have been declared at the same rates as those of the preceding year, and in some cases even slightly higher.

The figures of foreign trade for December, 1936, show a further expansion; imports amount to 93.44 millions against 95 millions in November, and exports amount to 74.5 millions against 69 millions in November. The total value of imports and exports in 1936 amounted to 922 million and 685 million kroner respectively; the import surplus was thus 237 millions against 220 millions in 1935. This deficit is, however, covered by the net freight earnings of 1936, and there is a small active surplus of some 10 million kroner.

Industrial production is well maintained, and the merchant fleet is now employed to practically its full capacity; the amount of laid-up tonnage is only 19,000 tons. Prices continue to rise; the wholesale price index of the *Ökonomisk Revue* rose by 4 points during January, and there is at the present nothing to indicate a change in this tendency. Activities on the Bourse have been exceptionally brisk during recent weeks; whaling and shipping shares were favourites, and industries have been somewhat irregular, although on the whole with a firm tendency. Bonds, especially gilt-edged, are now in better demand, and prices, after a long period of comparative stability, are rising steadily.

Canada

The Use of the Canadian Forces

OTTAWA, February 8.—In the Parliament there have recently been interesting and illuminating debates upon two issues of major importance; the question of Canada's attitude in the event of another war, and the reform of the Constitution. The personnel of all three services, Army, Navy and Air Force, is to be increased; but since the Government's programme contemplates only the better defence of Canadian territory and no overseas adventures, most of the additional money is to be devoted to the enlargement of the Air Force and the strengthening of coastal defences. Mr Woodsworth, the leader of the C.C.F. party, moved a resolution urging complete neutrality for Canada in the event of a European war; and he criticised the increase in the defence estimates as intended to build up forces which could be fitted like spare parts into an Imperialist war machine. The Government took the line that since participation in war was for Parliament to decide, its hands must not be tied by any pronouncement for neutrality. Canada need not necessarily go to war because another part of the Commonwealth is at war, and her foreign policy would be framed primarily in the light of Canadian interests. The resolution was negatived without a division.

A Conservative Constitution

The issue of constitutional reform has been brought into high relief by the recent decision of the Privy Council, which reaffirmed the judgments of the Supreme Court of Canada and pronounced invalid some of the most important measures of the New Deal programme of the late Conservative Ministry. There is now general agreement that the present Canadian Constitution, embalmed in the British North America Act of 1867, is operating as a brake upon the wheel of Canadian progress. In view of the latest decisions it can slow down the pace of social and industrial reform to the rate acceptable to the most reactionary of the provinces. Ministers contend that reform of the Constitution can only be achieved by negotiations with the provinces. Mr Bennett and others differ from this view and argue that the Federal Parliament is competent to secure amendments of the constitution with the help of the British Parliament. The Ministry is awaiting the full text of the Privy Council's decisions before it makes any further move. It is understood to be contemplating the appointment of a Royal Commission with some eminent British economist like Sir Arthur Salter as Chairman to study the financial basis of Confederation.

National Control of the Railways

The Minister of Transport has introduced a Bill for the creation of a Board of Transport Commissioners who will be armed with wider powers than the present Railway Board, and another for recasting the capital structure of the Canadian National Railway system. The latter Bill provides for the complete wiping out of about \$1,500 millions of nominal obligations of the railway to the Federal Government. There will also be adjustments by the exchange of stocks between the Government and the railway; the result will be to obliterate the 100 odd component units and subsidiaries of the system, and to make for greater efficiency. Mr Bennett, for the Opposition, approved of the general purpose of the plan, but declared that violence would be done to the principles of sound finance, if the amount of money which the country had invested in its railway enterprises were not clearly set forth in the annual accounts.

The adjustment of the last remaining points of the revised Anglo-Canadian fiscal agreement has been completed and the document is ready for signature. The approval of Parliament will be sought in a separate measure, which will probably be introduced just before or just after the Budget. The imminent shortage of power which is now facing the Hydro-electric Commission of Ontario has compelled it to seek an accommodation with one of the Quebec Power Companies

whose contracts were arbitrarily cancelled two years ago. Negotiations for a new contract for power are now in progress between the Commission and the Ottawa Valley Power Company.

The general index of the Bureau of Statistics for the week ending January 23rd was 120.4, a new high level since recovery began; it slipped back, however, more than 3 points in the following week.

Week ending—	Car-loadings	Wholesale Prices	Bank Clearings	General Index
February 1, 1936	71.3	72.6	95.8	104.3
January 16, 1937	90.8	81.9	101.2	120.4
January 23, 1937	86.5	81.7	118.5	121.5
January 30, 1937	81.1	81.6	116.3	118.4

There has been no set-back in the activity of the mining

industry and it is contributing to the prosperity of various trades. The heavy industries have had their prospects improved by the placing of heavy orders for railway equipment. British Columbian ports have profited greatly by the shipping strike on the west coast of the United States, and this province is more prosperous than it has been for years. The Federal Government has just succeeded in placing successfully in New York, through Morgan Stanley and Company, a refunding loan at the lowest rates of interest ever offered for a Dominion loan. It consists of \$30 millions 2½ per cent. seven-year bonds, issued to the public at 99½, and \$55 millions 3 per cent. thirty-year bonds issued at 98, and it has been readily absorbed.

Letters to the Editor

A Road and Rail Controversy

TO THE EDITOR OF THE ECONOMIST

SIR,—Major Crawford, in his letter published last week, asks certain questions and makes comments on my article headed "A Railway View." Might I deal with these in his order?

(1) He is unable to see what is the railway case in this controversy. I refer him to the third sentence from the end of the article which states: "There should be like treatment of the two means of transport as regards the fixing and regulating of rates and as regards publication, non-discrimination and the obligation to carry."

(2) He asks "On what are railway rates based?" A broad outline of the many laws on this subject is given in paragraphs 51 and 52, 57 to 61, and 73 to 86 of the final report of the Royal Commission on Transport (of which Major Crawford was a member). Paragraph 86 of this lengthy survey explains that there are many other important provisions. These others include the factors laid down by Parliament as the basis of classification of railway rates:—value, bulk in comparison to weight, risk of damage, cost of handling, saving on forwarding large quantities, and all other relevant circumstances.

(3) My article giving a railway view stated that "Rail rates are, therefore, finally determined upwards by statutory restraint and downwards mainly by competition; road rates, on the other hand, are fixed by competition, limited only by cost of service." Major Crawford comments on this by saying that "railway rates are dismissed as finally determined by statutory restraint"—a gross misquotation.

(4) Having garbled the quotation, he proceeds: "Furthermore, whatever the original basis may have been, it can hardly have achieved 'finality' if 69 per cent. of railway freight revenue is derived from exceptional rates and agreed charges, and if this figure is accurate, it must tend to make railway rates, as a whole, approximately more and more closely to cost of service." The figure is accurate as a figure, but Major Crawford's description of it is not, as it excludes coal carried in freight trains. Very probably the overall proportion is greater than 69 per cent. Certain railway rates must by reason of road competition approximate to road rates, but their relation to cost of service by rail is a different matter.

(5) Major Crawford complains that the 69 per cent. and other figures were not shown to be inaccurate. The "expert in road transport" stated in the first article that a study of the figures suggests that in practice road and rail rates gave much the same average net return per load for all classes of traffic. He gave a table of average receipts, including those "per loaded wagon forwarded," which presumably were his opening figures in arriving at the railway net return. These figures are not shown in the published Railway Returns, and how they were compiled was not stated, but however they were made up the writer's conclusion was apparently based on—

	Per Load	
	Railway Traffic	Road Traffic
Receipts	(a) £2 2s. 3d.	(d) Unstated
Expenses	(b) Unstated	(e) Unstated
Net	(c) Unstated	(f) Unstated

He also showed (g) the average railway wagon load

(7·10 tons) in freight trains (a correct quotation from the published Railway Returns), but gives no corresponding figure (h) for road loads. Without details of the six missing figures, it is hardly worth while discussing the accuracy or otherwise of (a), or even the conclusions to be drawn if (c) and (f) are much the same and (g) and (h) differ materially.

(6) Major Crawford states my article was confined to blunt contradictions. There was a blunt contradiction of one statement, namely, that "consignments on the railways must be charged according to what the traffic will bear."

If after examining the law on the matter, Major Crawford will say where this is enacted the contradiction can be discussed further.

(7) "Epithets are not evidence." I fully agree and suggest that the same applies to statements by the expert on road transport that (a) minus (b) is much the same as (d) minus (e) without evidence of the amount and content of each factor.

(8) A further complaint is that I did not give a statistical statement showing the true position. Perhaps Major Crawford will explain where the receipts, expenses, loads and other necessary data relating to the conveyance of merchandise by road can be obtained—apart from those of the road operations of the railway companies.

(9) Allocation of overhead costs is, we are told, merely a matter of book-keeping. Quite, if the allocation is made; but the expert on road transport made no mention of "overhead costs" or whether he had allocated them in his unspecified (b) and (e) and if so how this was done.

(10) In his final paragraph Major Crawford asks is it possible that I cannot answer the "case for road transport" except by abusing the plaintiff's attorney? I did not abuse the plaintiff or his attorney or anyone else, and if pointing out to Major Crawford that he has misquoted me, or that dogma and arithmetic are not one, is regarded as abuse, I confess an inability to understand his meaning of that word.

Yours faithfully,
THE WRITER OF THE ARTICLE.

The Army Reserve

TO THE EDITOR OF THE ECONOMIST

SIR,—There is general misapprehension about the sending of Army Reservists to Palestine last autumn. Mr Amery has sneered at it as "scraping up something like a division by mobilising our Reserves, to the laughter of Europe." Lord Winterton attributes it to "the appalling state of army recruitment." Your Note of the Week (February 13th) gives, as the object of the present Bill, "to increase to the statutory limit of 6,000 the number of men who, having served seven years with the Colours and five with the Reserve, are still liable to be called up in times of emergency." Perhaps a further brief note might help some of your readers.

It was no improvisation, laughable or other, but the use of the statutory machinery provided fifty years ago or more for just such a minor emergency as Palestine presented. When the Cardwell system began to transmute our then long-service, reserveless army into the Old Contemptibles of 1914, it was foreseen that we might require to put a few home battalions in the field without calling out the Reserve by Proclamation. A Cardwell home battalion, whatever the state of recruiting, always contains a proportion of young soldiers requiring to be replaced by fully-trained men; and Section A of the Reserve exists for no other purpose. It consists, not of men who have done twelve years of Colour and Reserve service and are still liable to be called up, but of men fresh from the Colours, picked men in their prime not yet firmly resettled in civil life, who volunteer to come up without a proclamation if required within the first two years of their reserve service, in consideration of an extra 6d. a day while the liability lasts. No man is, in fact, still liable to be called up, even by proclamation, at the end of twelve years from his enlistment, unless he deliberately engages to prolong his reserve service for four years (Section D).

As an incident of the Government policy of limitation of armaments, the strength of Section A has of late been limited to 3,000 men and they just sufficed for Palestine; but in order to reach quickly the full statutory 6,000, now seen to be necessary, men are to be allowed to stay in Section A up to five years instead of two, and to return

to that section from the main body of the reserve (Section B) for further service within the total of twelve years from enlistment.

These special and presumably transitory provisions for quick filling are the sole business of the Bill, which has nothing whatever to do with the "real problems of military strength."

May I add that it does not seem to be universally understood that no Section A reservist draws less than 1s. 3d. a day (1s. 6d. if enlisted before 1931), the pay in Sections B and D (under the same condition as to date) being 9d. and 1s. a day respectively?

Yours, etc.,

C. HARRIS.

Cookham.

War Loans Again

TO THE EDITOR OF THE ECONOMIST

SIR,—I am somewhat at a loss to understand the accounting arrangements set up between the Treasury and the Defence Departments for dealing with the forthcoming capital expenditure on arms, and I have tried to reduce the matter to a simple problem of household finance.

If my wife wheedles an expensive fur coat out of me on the grounds that it is an investment and not an extravagance, apparently I proceed as follows. I arrange to borrow the money on overdraft from the bank at a rate which at the moment cannot be determined. At the same time I inform my wife that the loan will be booked to her, and is redeemable over a period of 10 years. Heaven knows when I can pay off the overdraft, but since she has no money of her own, every year I increase my wife's household allowance so that she can pay interest and redemption to me. Or, alternatively, I may have to borrow annually from the bank so that I can lend the money to my wife in order that she can pay interest to me, which I can use to repay the bank. If from year to year I solemnly record these transactions in the household accounts, am I behaving as a sensible prudent husband or merely being very foolish?—

Yours faithfully,

London, N.2.

Books and Publications

Can We Save Democracy?

SEÑOR DE MADARIAGA is known as a Liberal. His book* is primarily addressed to his fellow Liberals, who, in his opinion, need to take stock of the present position of their creed in view of the victories of dictatorships of the Right and the Left. The first complaint he has to make is of the mental inertia of many men of affairs who seem to take it for granted that "all that lies on the Left is Liberal," whereas he says that the dogmas of Liberalism are treated with even greater contempt by Communists than by Fascists. In the next place he complains of a certain complacency or false sense of security in the democratic countries, which may be doomed to lose their cherished institutions unless they "meet the problems of the day with a brave heart and a creative brain." The events of recent years should have taught the lesson that Liberal democracy was too weak, in many countries, to withstand the attacks directed against it, and it behoves Liberals in those countries where it has not already been destroyed to study the causes of that weakness with the object of curing them. Such a study is the theme of this lively and thought-provoking book.

The decay of Liberal institutions began during the war, the author claims, with the exploitation of national necessities by selfish producers, the organisation of nations on hierarchic lines to meet the emergencies of the times, and an accelerated tendency towards international collaboration among belligerents on both sides. The Peace Conference was the occasion of an abuse of power by the representatives of the great democratic

States which tarnished the reputation of democracy for wisdom and justice. The post-war reaction bred a spirit of cynicism and indifference among the younger generation, this book alleges, because they did not understand the foundations on which their comfort and well-being were erected. The trend of events and the atmosphere of the times were unfavourable to the guardians of freedom, and, in one country after another, liberty was allowed to perish almost without a struggle. A system that proved so unresistant to attack must surely have had some inherent weakness. This is the criticism which occupies the first or critical half of Señor de Madariaga's book.

Liberal democracy was perhaps vulnerable because of the axioms and postulates on which it rested and also because of the abuses which it developed in practice. Señor de Madariaga states that the practice of Liberalism bears the same relation to the philosophic foundations of the Liberal creed that depreciated paper does to gold; the principles of liberty, equality and individualism have been debased and distorted until they have become the parents of disintegration, atomism and anarchy. Liberal principles, he says, have been disfigured by the party system, by timid leadership, by bureaucracy, by the intrusion of powerful economic forces into political life, and by the blind acceptance of the verdict of a majority, which is a recognition of "statistical" rather than "organic" democracy. The irresponsibility of financial interests and of the press magnates incurs the author's special disapproval, but his observations on the part played by central banks are scarcely worthy of such a gifted critic.

The second, or constructive, part of the book attempts to outline a method of preserving the merits of demo-

cratic Liberalism while avoiding the sources of weakness that have injured it in the past. The social structure is shown to be an organism depending for its successful working on inequality and diversity of function, and great importance is laid on the need for selection of the wielders of power. "A government is always an oligarchy and ought to be always an aristocracy." The discussion of these matters, which is highly stimulating and original, cannot possibly be summarised here; but it should be read and deeply pondered by every student of politics. The actual measures necessary to translate "unanimous organic democracy" into practice will be different in different countries, and the fatal mistake of confusing democracy with the British parliamentary system must be avoided at all costs. The outstanding lesson to be derived from this provocative book is that Liberalism must put its house in order if it is to survive, and that Liberals in the remaining democratic countries must awake from their complacency if they are to preserve what to them is most precious. Unfortunately, the author is least precise on how all this is to be done.

Needless to say, Señor de Madariaga does not confine himself to the internal aspects of national policy; some of his most memorable passages are those wherein he pleads for the emergence of a world patriotism and a world leadership to grapple with the "problems of world size which have no men of world size to deal with them." Pending the appearance of such Titans, the cause of peace will best be served by the triumph of individualism; the totalitarian State is the enemy of other countries as well as of its own citizens.

Shorter Notices

"Unemployment Policy, with special reference to Australia." By E. Ronald Walker. Angus Robertson, Ltd. 258 pages. 5s.

The problem of unemployment has usually been discussed from the point of view of predominantly industrial countries, and this book is particularly welcome in that it emphasises the special difficulties which have to be faced by a country whose exports consist almost entirely of agricultural and pastoral products. Dr Walker shows himself thoroughly familiar with European as well as with Australian labour questions, and discusses briefly but adequately the various types of unemployment and the remedies which have been suggested and adopted in a number of countries. His chapters on wages policy and on the shorter working week deserve special mention; they give a lucid and well-balanced analysis of a subject which is only too often treated in a partisan manner.

Dr Walker thinks that tariff policy may be more important as a means of assisting employment in Australia than in other countries, because high tariffs stimulate the import of capital, of which there was a considerable need in the years after the war owing to the large increase in the working population. Yet although he rejects the simple case for Free Trade as applied to Australia, he is no out-and-out Protectionist, and prefers to combine moderate tariffs with exchange depreciation whenever it becomes necessary to correct the balance of trade. Much of his reasoning is based on the familiar theory that employment can only be increased if investment is encouraged, and he shows that the various measures actually adopted in Australia have had this as their main object.

The last chapter contains a useful account of unemployment insurance and relief in Great Britain, Germany and Belgium, with which is compared the unemployment insurance system of Queensland, the only Australian State which has gone beyond the mere provision of emergency relief. This book is to be recommended not only to those primarily interested in Australian problems, but also as an excellent introduction to unemployment policy.

"Country Conditions." By Valentine Ackland. Lawrence and Wishart. 2s.

This book contains a description of the conditions in which agricultural labourers live in England. The picture is drawn in very sombre colours, but there is no denying the fact that rural labour has failed to obtain its fair share of the general improvement that has taken place in the standard of living in recent years. Money wages are lower than in urban occupations, and real wages even lower owing to the bad housing and the lack of social services and amenities in the countryside. This is a state of affairs which

is generally recognised and deplored, and it is regrettable that the author of this descriptive essay does not suggest any method by which it can be improved. The author admits farmers are unable to pay higher wages than they are paying. The bent of the author's mind is disclosed, however, in the appendices, from which the reader is expected to infer that the application of Communism, on the Russian model, is the sole hope of raising the standard of living of the English agricultural population.

MONEY AND BANKING

Hire Purchase Finance

THE hire-purchase system of financing retail trade has developed at a phenomenal rate in recent years. In the United States, where progress has been more rapid than in any other country, hire-purchase paper ranks third in importance of the varieties of discounts held by Federal Reserve Member Banks. In London, the banks are concerned in the financing of the hire-purchase companies to a much smaller, though to a growing extent. There has been a strong prejudice in the City against the whole hire-purchase system, which is now being broken down. This particular form of conservatism was based very largely on the principle that the retail purchaser of consumers' goods, unlike the wholesaler or the manufacturer, should pay for his purchases before enjoying their use—that credit should be used to finance production and distribution, but not consumption. Even now, the extent to which the banks are concerned in the latter function is confined to the making of relatively short-term advances. A hire-purchase agreement running anything from six months to two years is too long a commitment for the ordinary bank—although the effective average period of the advance is shorter than its nominal term, since money is being repaid all the time. Hire-purchase business, again, appears to most banks to involve a greater risk of bad debts than they are willing to incur. The hire-purchase companies, on the other hand, contend that a number of well-spread commitments affords better ultimate security than, say, a single factory, which can readily be distrained upon but has probably little complete realisable value apart from its specific business function. Nevertheless, few bank managers are likely to welcome the prospect of realising the assets involved in a large number of hire-purchase agreements, and, in spite of the attractive profits which the system holds out, the banks have touched only its fringe. So far they have accepted only the better-class bills, and in many cases have stipulated that these should have only three months, or less, to run.

That the hire-purchase system as a whole, however, has been making headway is attested by the rapid growth of the leading firms. The oldest and largest of them, the United Dominions Trust, started in 1919 with a capital of £5,000, and earned a profit six months from its inception. The Trust now has share capital and reserves exceeding two million pounds, and the Bank of England is its largest shareholder. An example of more recent developments is afforded by the experience of the Assurance Finance Trust, which started business in 1933 and increased its turnover fourfold between 1935 and 1936. The proportion of retail sales financed by hire purchase varies with different articles, and exact statistics are not available. Independent estimates, however, have put the proportion of wireless sets sold on hire-purchase terms at 75 to 80 per cent., and that of motor cars at about 70 per cent. Among other articles, household appliances have a high percentage of hire-purchase sales.

The method of finance adopted varies with the different companies engaged in the business, but the principle is the same throughout. A distinction must be made between hire purchase and deferred payment. Under the hire-purchase system the ownership of the goods does not pass to the consumer until the last instalment is paid, and the goods can be taken back into possession at any time in the interim if the purchaser defaults. In that event, the instalments already paid may be forfeited and a further sum exacted to cover depreciation. This system is not applicable, however, to goods such as special equipment which have no alternative use, and are consequently of little second-hand value and hardly worth

distraining upon. In such instances the ownership of the goods passes at once to the consumer, and payment is arranged on deferred terms, which vary in individual cases.

We are concerned in the present article with the first and more widespread of these methods—the hire-purchase system proper. In the majority of cases the mechanism of the operation is as follows. The customer effects his purchase from a local dealer, but his agreement to pay over a period of time is made with a hire-purchase finance company, which pays cash direct to the dealer. The business then passes outside the dealer's hands. The disadvantage of this method is that it reduces the element of personal contact between retailer and customer, for the latter is left to deal with a finance company of which he may never previously have heard. This process, however, is made largely inevitable by the necessity of conforming to the provisions of the Moneylenders Act. A slightly different method, nevertheless, which is more in accordance with the realities of the transaction, has been evolved by the United Dominions Trust. In this case the actual hire-purchase agreement is made between customer and dealer, and the latter subsequently makes his own agreement with the Trust. The Trust is a registered banking firm, and can thus arrange, as the dealer's banker, to collect the instalments as they fall due.

The rates actually charged vary according to the amount of business offered and accepted. Both security and rates charged are, as in any other banking transaction, a matter of confidence between the finance company and the customer. Though detailed information is thus unavailable, it is known that in the case of small agreements the companies are content to assure themselves as to the status of the purchaser through their own investigation machinery. The necessary information can usually be obtained within twenty-four hours, and frequently within twelve. In the larger transactions the same security is expected as a banker would ask for when making an advance. In this connection the use of the trade bill has been revived, particularly by the United Dominions Trust, and in many cases a single endorsement is considered sufficient security.

The rates charged on hire-purchase business are often higher than they appear to be at first sight. The customer who pays £105 in monthly instalments over a year, instead of £100 cash, is probably under the impression that he is paying interest at the rate of 5 per cent. per annum. Actually, as the capital is reduced with each instalment, the effective average rate is about 9.5 per cent. The rates charged at present vary, in fact, between about 5 and 8 per cent; and as the companies are themselves able to borrow at about 2½ to 4½ per cent.—by way of bank advances, acceptance credits, and discounts—the gross margin of earnings is substantial. On the other hand, the work involved, even for a small transaction, is considerable. Allowance has to be made, naturally, for bad debts, but these are significantly small. They do not normally amount to as much as 1 per cent. of total transactions, and one large company has never exceeded one-tenth of 1 per cent. in any year.

It is not within the scope of this article to examine the impact of the hire-purchase system on the community. The flagrant abuses and injustices which in some instances have been alleged against the system cannot be attributed to the large and reputable firms with which we are here concerned. The touting of small articles from door to door, however, with payments exacted weekly on the tally system, has undoubtedly caused much suffering, though those who have practised it may have

kept on the right side of the law. It has been suggested that Great Britain should follow the example of Denmark, where, when the value of a sale is less than £13 10s., the vendor can only recover possession, in the event of default in payments, by crediting its value, less depreciation, to the defaulting purchaser. Defenders of the present British system admit that such a reform would prevent many injustices, but they claim that it would greatly complicate the administration of a system which renders the community a distinct service.

We have lately drawn attention to the consequences for the City of London of the virtual disappearance of the inland bill and the reduction of the number of international trade bills by trade depression, restrictions and exchange clearings. These developments have changed both the functions of the discount houses and the distribution of the banks' earning assets, which are increasingly lodged in Treasury bills and Government securities. The development of the hire-purchase system offers an opportunity both to banks and discount houses to resume some of their former functions, provided they are able to adopt a less austere attitude towards this new form of finance. In view of the considerable volume of business they transact, the present position of the hire-purchase companies is anomalous. Closer co-operation with the banks and other houses would enable them to become an integral part of the financial structure, the benefits of which should be mutual.

Financial Notes

The Difficulties of M. Blum.—Recently French State employees have been pressing for an upward adjustment of their salaries to compensate for the rising cost of living. M. Blum adopted the unorthodox means of conciliation of admitting in a broadcast speech the justice of their cause and appealing to them to be patient. He did not attempt to conceal the fact that a further charge on the State finances might at the moment prove disastrous to the already insecure public credit, and that a breathing space is badly needed. Whatever may be the success of M. Blum's appeal as regards State employees, its efficacy is doubtful as regards the wider body of workers, who are seeing their newly-won wage increases now being eaten away by rising prices. Between September and December wholesale prices rose by 23.6 per cent. and the cost of living by only 7.1 per cent., and it is only since the New Year that the rise in wholesale prices has begun to take full effect on the cost of living. A further wage increase would only aggravate the causes of the price rise, and the only solution is to prevent prices from rising further. This M. Blum hopes to do by means of his newly-acquired powers to alter by decree the Customs duties and quota systems. This is a matter of increasing urgency, as the danger of being caught in the vicious spiral of rising costs and prices is very great.

The Foreign Exchanges.—The franc has been somewhat unsteady during the past week, but there has been no consistent adverse pressure. Rumours that the French Government were either going to free gold or stabilise the franc has been the cause of passing movements in favour of the franc, but on the whole the general tone is still bearish. The guilder has been erratic, owing, it is understood, to misunderstanding in New York of the effect of the further lowering of the gold price of the Netherlands Bank to Fl. 2,009.25 per kilogram, against the London parity of Fl. 2,052.50. In practice the bank price is not effective, as there is an internal gold market in Amsterdam which quotes the higher price, although the gold embargo prevents the export of gold so bought. Heavy American selling of guilders following the news of the lowered gold price was countered by buying by the Netherlands bank, and the rate has now returned to its normal strength. Swiss francs have varied slightly,

moving in sympathy with the day-to-day fluctuations of the dollar, which have not been great. Movements in other rates have been insignificant.

The Money Market.—Money has definitely been more usable during the past week, and one or more of the clearing banks has been calling each day. This is possibly due to heavy revenue payments coupled with the weekly instalments of the French credit, which take £8 millions from the banks each Friday. Rates remain unchanged, except for outside money against bonds, for which ½ per cent. is charged.

	Jan. 28, 1937	Feb. 4, 1937	Feb. 11, 1937	Feb. 18, 1937
Bank rate	2½	2½	2½	2½
Clearing banks' deposit rate	2	2	2	2
Short loan rate:—				
Clearing banks	1½-1*	1½-1*	1½-1*	1½-1*
Others	1	1	1	1
Discount rates:—				
Treasury bills	1	1	1	1
Three months' bank bills	1½-2	1½-2	1½-2	1½-2

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

There has been a firmer tendency in the bill market, and although rates are unchanged, there has been no price-cutting and bills are more easily obtained.

The Bank Return.—The note circulation has fallen this week by £1.7 millions, which is normal for the middle of the month. It is still at a very high level, being £56.4 millions above last year:—

	Feb. 19, 1936	Jan. 27, 1937	Feb. 3, 1937	Feb. 10, 1937	Feb. 17, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	200.6	313.7	313.7	313.7	313.7
Note circulation	396.9	452.3	457.3	455.0	453.3
Banking Department:—					
Reserve	64.4	61.8	56.8	59.1	60.8
Public deposits	11.1	12.1	12.2	11.7	24.4
Bankers' deposits	107.6	98.4	96.1	99.2	90.6
Other deposits	36.0	38.4	38.3	37.3	36.7
Government securities	78.7	78.6	80.4	81.2	83.1
Discounts and advances	11.7	8.0	8.5	6.5	5.5
Other securities	18.1	18.7	18.9	19.5	20.4
Proportion	41.6%	41.4%	38.7%	39.8%	40.1%

The rise of £12.7 millions in Public Deposits and the fall of £8.6 millions in Bankers' Deposits is a result of the lag between Treasury bill payments and maturities. Nearly all last week's bills were paid for on Friday as they fall due on Coronation day, and this week's maturities come late in the week, so that the balance which is struck on Wednesday shows a temporary change over between the two items.

Insurance Notes

F Sun Life Assurance Society.—The latest accounts of this highly individual society are of special interest, since they give the result of another completed quinquennium. The society was unfortunate in the date of its previous quinquennial investigation, which was made on December 31, 1931, when market values were at a very low ebb. On that occasion, indeed, the book values of the investments were in excess of market values by a sum equal to 5 per cent. of the total assets of £38 millions. The method adopted of meeting this temporary situation was to declare one year's bonus in respect of 1927, the first year of the quinquennium. At the end of 1932 market values had risen substantially and were once more in excess of book values. A fresh investigation was made, and bonuses were declared in respect of the four years 1928-31 inclusive. In the

following comparative table the results of the two investigations have been suitably combined:—

	1927-31	1932-36
Trading profit	£5,253,415	£3,282,668
Carry forward	297,306	2,319,822
	5,550,721	5,602,490
To Policyholders	2,716,070	3,251,747
„ Shareholders	305,723	378,080
„ Staff pension fund	209,106	339,102
„ Carry forward	2,319,822	1,633,561
	5,550,721	5,602,490

Under the special contribution method adopted, bonuses vary according to the age at entry and the number of years a policy has been in force. The rates of bonus on this occasion are practically the same as in respect of the previous quinquennium, except that for very long durations some small reduction appears to have been made. The published scale varies from about 35s. per cent. per annum in the case of a policy effected at age 30 and five years in force to about 45s. per cent. per annum for age 50 at entry and 30 years in force, these rates being calculated on the sum assured only. As on the previous occasion, the rate of interest used in valuing participating contracts “ exclusive of bonus additions ” and annuities is 3 per cent.; for bonus additions and non-participating policies the rate of interest is reduced from 4 per cent. to 3½ per cent., so that some considerable, but unspecified, amount has been applied to strengthen reserves. The mortality bases for assurances and annuities are unaltered.

* * *

New sums assured in 1936 amount to £20,720,000 compared with £17,423,000 in 1935, and the net rate of interest on the combined assurance and annuity fund at £4 3s. 1d. per cent. fell by only 8d. per cent. For some years prior to the beginning of the late quinquennium the society issued a great volume of tax-saving single premium types of policies, under which almost the whole of the single premium was advanced by the society. Such policies have been rapidly going off the books by surrender and maturity. The movement in these two items should in future be normal, but last year the maturities fell further from £3,003,000 to £1,436,000, surrenders from £403,000 to £354,000 and policy loans from £2,942,000 to £2,726,000. At the end of 1929 policy loans amounted to fully £18 millions. During the year there was evidence of considerable movement in investments. Mortgages in the United Kingdom increased from £3,152,000 to £3,959,000, probably as a result, largely, of the society's house-purchase scheme, while loans on “ parochial and other public rates ” also showed a large increase from £2,374,000 to £3,326,000. On the other hand, British Government securities, which form 40 per cent. of the total assets, fell from £10,580,000 to £10,039,000, but foreign and colonial securities showed little change. Debenture holdings were somewhat greater; preference stocks increased from £313,000 to £472,000, and ordinary stocks from the relatively insignificant figure of £49,000 to £756,000.

* * *

Scottish Life Assurance Company, Limited.—

New sums assured by this office last year easily surpassed the preceding year's record figure, being £2,389,000 (net of reassurances), against £2,153,000. This achievement reflects credit on the agency forces. Not only was 1936 the first year of a new quinquennial period, when some falling off in production was to be expected, but the rate of bonus was reduced for the quinquennium ended December 31, 1935, from 48s. per cent. per annum, calculated on the sum assured, to the moderate rate of 42s. per cent. per annum. Life premiums increased from £591,000 to £625,000, and net interest from £324,000 to £336,000. Death claims were £232,000, compared with the low figure of £166,000 in 1936, but the mortality experience is stated to be favourable. The net rate of interest earned on the assurance and annuity funds at £4 4s. 2d. per cent. showed a fall of only 2d. per cent.

Loans of all kinds increased from £1,103,000 to £1,284,000, but holdings in British Government securities fell by £195,000 to £1,323,000. There was also some reduction in foreign Government and municipal securities. On the other hand, debenture, preference and ordinary stocks increased by £44,000, £224,000 and £175,000 respectively to £2,138,000, £1,661,000 and £921,000.

* * *

National Mutual Life Assurance.—The following table shows the results brought out at the last two biennial accounts of this well-known society:—

	1933-34	1935-36
Trading Surplus.....	£308,430	£321,470
Investment Profit	896,314	513,646
Brought forward.....	254,253	278,947
	£1,458,997	£1,114,063
Bonuses to Policyholders	301,342	330,334
Valuation expenses and Staff Profit-sharing Scheme	5,598	3,500
Strengthening of Valuation Basis.....	123,110	293,900
Reserve Fund	600,000	150,000
Investment Reserve Fund	150,000	13,729
Staff Pension Reserve	278,947	322,600
Carried forward	£1,458,997	£1,114,063

For the past biennium the rates of bonus declared are the same as on the previous occasion, being 52s. 6d. per cent. per annum for whole-life and 45s. per cent. per annum for endowment assurances—both calculated not only on the sum assured but also on the existing bonus. These rates are, of course, extremely high; they are, indeed, unequalled. Some 10s. of the 52s. 6d. bonus and 7s. 6d. of the 45s. bonus are declared to be in the nature of a special distribution. The same distinction was made at the previous declaration. The “ normal ” rates of 42s. 6d. per cent. per annum and 37s. 6d. per cent. per annum are well within current earnings, and are in themselves satisfactory rates. This dual distribution may be in a sense a temporary expedient until such time as the outlook is clarified in regard to rates of interest. In the meantime the society has felt it to be equitable on account of the “ very favourable trading experience ” during each of the past two bienniums, and “ in view of the society's strong financial position,” to distribute trading profits up to the hilt.

* * *

The exact financial position can be much better gauged than is the case with other insurance companies, since Stock Exchange securities appear at their market values on the date of closing the accounts. The position is readily seen to be one of great strength. The assurance contracts are again valued by the “ bonus reserve ” method, assuming future bonus at 30 per cent. per annum, but rate of interest used is reduced from 3½ per cent. to 3¼ per cent., while the annuity contracts are valued at 3 per cent. against 3¼ per cent. in 1934. In addition, the portion of the premium income reserved for future expenses is increased. From published statements by the society it may, we think, be fairly deduced that the present basis of valuation is as stringent as a net premium basis of O^m 2½ per cent. In addition to the actuarial reserves, amounting to £6,285,000, there is a reserve fund of £750,000, an investment reserve fund of £150,000 and a carry-forward of £323,000, making a total of £1,200,000. Turning to the affairs of 1936, new life assurance business increased from £810,000 to £903,000, but new sinking fund assurances fell from £157,000 to £108,000. The net rate of interest on the assurance fund, excluding reversions, was unaltered at £4 6s. 1d. per cent. Loans increased from £711,000 to £810,000, but British Government securities, which in 1934 were £1,519,000, and fell in the following year to £1,236,000, show a further reduction to £1,000,000. Debenture and preference stocks were shown somewhat greater, while ordinary stocks, which form 20 per cent. of the total assets, increased from £1,227,000 to £1,595,000.

THE STOCK EXCHANGE

Prospect for Home Rails

THE publication of the full reports for 1936 of three of the four main-line railways of Great Britain enables the investor to take stock of his position after the most progressive year the railways have experienced since recovery began. The report of the London and North-Eastern is not yet available, but it is unlikely seriously to modify the conclusions suggested by the figures of the London Midland and Scottish, the Great Western and the Southern companies.

The results, as a whole, have satisfied the reasonable expectations of the market. During 1936, *The Economist* index of business activity rose by 6 per cent. The three railways secured an increase in gross receipts of slightly over 4 per cent., an experience more favourable than in the earlier years of industrial recovery. The L.M.S. again leads the field with an increase of 4.7 per cent. in gross receipts, while the Great Western shows a rise of 3.3 per cent., and the Southern of 3.2 per cent. The L.M.S., as the largest industrial line, appropriately discloses the largest increase in goods traffics, its increase of no less than 5.4 per cent. comparing with a little over 3 per cent. for the two others, despite its inability to secure a significantly increased receipt per ton.

The past year was the first of a new rating quinquennium; and as it also witnessed the final settlement of a protracted legal struggle over the basis of railway rating, the expense figures have a finality which did not appertain, in all cases, to those of the previous year. In 1935, the Southern alone was able to arrive at a firm rating figure. The L.M.S. made a provisional allowance, which proved very near the mark, but the Great Western made no provision for any possible overpayment. This year all the figures are on an actual and uniform basis; and as special interest now attaches to working costs some principal heads of expenditure are given in the second section of the accompanying table.

Let us examine each company's expense accounts in turn. The directors of the L.M.S. state that salaries and wages required approximately £1,000,000 more during 1936, owing partly to increased employment and partly to the 1¼ per cent. wage restoration last August. Fuel costs rose by £279,000 (6.5 per cent.), against an increase of 3.7 per cent. in engine miles. The management has achieved this increased mileage with 2½ per cent. fewer engines. The recent engine reorganisation has reduced the total number from 8,000 to 7,691 in two years, and 140 more are due for relegation. This is a testimony to efficient working whose importance can hardly be minimised. Of an increase in railway expenditure of £1,690,000—part of a rise in total expenditure of £2,115,000—maintenance charges account for £539,000, locomotive expenses for £625,000 (due almost entirely to coal and wages increases) and traffic expenses for £506,000. The L.M.S., in fact, has preserved 41 per cent. of its gross railway increase net. A moderate improvement in net receipts from ancillaries has been wholly offset by diminishing receipts from general interest—a factor common to all the companies, owing to their reduced floating assets.

The Great Western results, whose excellence took the market by surprise, are explicable by two factors. Total maintenance for permanent way and rolling stock was actually £27,000 lower than for 1935, and the company made no allowance for the rating refund in 1935. But the increase in operating expenses was comparatively moderate—fuel, for example, cost only £56,000 (3.5 per cent.), against a comparable increase in engine miles—and the Great Western was thus able to preserve as much as 94½ per cent. of the increase in railway gross receipts as net. Allowing for the reduction in rates, however, the percentage retained net is reduced to 48.

GROSS RECEIPTS, EXPENDITURE AND NET REVENUES

† In 1935 Appropriation Account, £122,990 was credited from profit on investments realised and £710,000 from Contingency Fund. ‡ Excluding superintendence.

Compared with these somewhat exceptional results, the Southern figures present a more normal appearance. Maintenance charges have been increased by £118,000, and running expenses by £256,000. Consequently, some 69 per cent. of the company's gross increase was absorbed by increased expenditure—though some part of the maintenance charged may be attributed to the cost of the electrification programme. The charge for electric current increased, incidentally, by 18 per cent., although the electric motor vehicle mileage rose by only 7½ per cent. last year.

Disregarding the abnormal features in the accounts, we may conclude that the L.M.S. have fared relatively best, after spending substantially increased sums on rolling stock and works repairs during the past year—apart from major renewals, which are accounted for on a “ provision ” basis, which does not change greatly from one year to another. This company has transferred £3,180,000 for rating relief for 1931-34 to railway renewal funds to replace the heavy drafts made in recent years. The Great Western, with equal propriety, has placed the whole sum (£1,737,800) recoverable up to 1935 to contingency reserve, whence nearly £4½ millions have been drawn during the 1931-35 quinquennium to maintain the 3 per cent. ordinary dividend. Finally, Southern has credited £1,200,000 direct to general reserve (£500,000) and revenue work suspense (£700,000) after taking the 1935-36 overpayments into revenue. Meanwhile, the L.M.S. and Great Western benefit from the reduction in the agreed rating assessment for the current quinquennium—the Southern alone pays more—and all should enjoy eventually some surplus of earnings from the projects which are now being financed by the

Railway Finance Corporation, at a net cost to the companies of about 2½ per cent. per annum.

What of the debit side of the account? Any prospective increase in expenses would fall primarily upon the holders of the "marginal" stocks. A 5 per cent. increase in L.M.S. fuel costs would be equal to ½ per cent. on the ordinary stock. Last year, Southern used 32,526 tons of rails in maintaining its permanent way; an advance of, say, £2 10s. per ton for rails would be equivalent to ½ per cent. on the deferred. Great Western, which showed remarkable facility in avoiding increased running costs last year, may be more vulnerable as existing contracts expire. It was intimated at the recent wage hearings that the 1935 quantities of coal and stores now cost £2,000,000 more for the four group lines.

All railway stockholders should carefully consider the probability of a rise in costs, during 1937, under another heading—that of wages. A restoration of the remaining 1½ per cent. wage cut, indeed, looms close on the horizon. It is an open question, however, whether the unions will be content with this objective. The increase in the companies' wages bill to the beginning of December has been put at £2,400,000. If the amount due to the restoration of the 1½ per cent. cut last August is assessed at £550,000 for 1936, it is reasonable to suppose that a similar restoration during the second half of 1937 would cost something more. Apart from increasing employment, therefore, the railway stockholder may have to consider an additional wage burden this year, compared with last, of well over £1,000,000.

This, indeed, is a lean prospect for the stockholder, even if a further increase in traffic of last year's order can be envisaged. And the market, in its present cautious mood, seems to be adopting the correct strategy. So far as an industrial equity can be found in the home rail market, L.M.S. ordinary alone appears to fill the bill. Southern, in the midst of a remunerative electrification programme, offers a valuable recovery medium in the deferred stock, for the investor who is prepared to wait for the long-term fruits of electrification. Great Western ordinary, on the other hand, is best regarded as a 3 per cent. fixed-interest stock, during recovery and depression alike. The L.N.E.R. position is enigmatical; no investor can assess the net revenue significance of a 3 per cent. increase in traffic owing to this company's variable renewals provision policy. These conditions are reflected in the current valuation of marginal and prior charge stock, which is shown in the following table:—

HOME RAIL SECURITIES

	Prices				Prices		
	Range, 1936	Feb. 17, 1937	Yield (%)		Range, 1936	Feb. 17, 1937	Yield (%)
L.M.S.				G.W.R.			
4% deb.	111½-108½	108½	4.0	4% deb.	119½-110½	107	3.8
4% pref.	92½-81	83½	4.8	5% rent charge	136½-130½	125½	4.0
4% pref. (1923)	83½-52½	75½	5.3	5% pref.	126½-116½	117½	4.3

Deferred	7½-4½	5½	...	Deferred	27½-20½	22½	2.2

When gilt-edged stocks are falling a point each day, interest rates have serious relevance for holders of home railway prior charges. Since last year's high levels were reached and passed, first debenture stocks have fallen by 10 to 12 points. Even the marginal stocks of yesteryear have lost several points, despite their improved cover this year. Great Western ordinary, similarly, has reverted to a 5 per cent. yield basis, while of the "true equities," only L.M.S. ordinary is within close reach of last year's high. If the drag of rising interest rates upon the prior charges continues, caution may be the investor's best watchword in the home railway market. Only L.M.S. ordinary and—in the long-term—Southern deferred, carry a real equity—and the value of that equity depends on the result of the forthcoming race between rising traffic and rising costs.

Investment Notes

Hard Times for Gilt-Edged.—The fall in the values of fixed-interest securities is proceeding with a rapidity greater than was forecast even by the most pessimistic prophets. No striking recovery occurred after the market had taken the first impact, last week, of the announcement of the Government's borrowing programme. The fall in prices was renewed after the publication of this week's White Paper, for the psychological effect of £1,500 millions to be spent is even more powerful than that of £400 millions to be borrowed. Selling has come, as before, from holders large and small, not excluding some institutional holders. The market has read significance into the fact that the downward movement of values in January was accomplished despite the purchase of £9½ millions of investments by the clearing banks. The pace is doubtless much too fast, and when the sentimental signpost of a clean 3½ per cent. on War Loan is reached (the present price includes about ½ per cent. accrued interest) the retreat may be stayed. But, meanwhile, the market, having jumped the rubicon between a mere fluctuation in gilt-edged prices and a rise in interest rates, has this week been marking down railway and industrial prior charges, and even stable-dividend ordinary shares.

* * *

Although the fall in Government security values has been substantial since the beginning of this year, it is not generally realised that it has accounted, in fact, for only about one-third to one-half of the total ground lost since quotations passed their peak in January, 1935. The following table summarises the story of the recession:—

"UNDATED STOCKS"—REDEEMABLE AT GOVERNMENT'S OPTION ONLY

Stock	Highest Price, 1935	Price, beginning of Jan., 1937	Price, Feb. 17, 1937	Fall from Highest	Fall This Year	Present Yield (%)

It is clear that while 2½ per cent. Consols have suffered most, and short-dated redeemable stocks least, mere redeemability has afforded holders no protection. The process of marking down quotations by fractions, or by points, each day, appears moreover to have resulted in a number of anomalies which, presumably, will be rectified in due course. Meanwhile, Achilles sulks in his tent, and there has so far been no evidence of that "discreet handling of the market" which, one observer has suggested, is sufficient to enable the Treasury to make the long-term rate of interest what it chooses.

Other Losses and Gains.—In the other sections of the market, movements have responded with 100 per cent. accuracy to the form book. Industrial debentures and preference shares have become a very difficult market, and jobbers have incurred no little comment on their tactics. Yet it is difficult to find an alternative to their policy. When the market itself gives no signal that the downward course of prices has been stayed, no jobber can be wholly blamed for strictly matching his business, although his profits on the bull tack have long been unexampled. But his task of "taking a view" has been the more difficult owing to the failure of stable industrialists to find their grounding level. Every section, indeed, now takes its cue from gilt-edged, and this explains the complete absence of bids for such stocks as Gas Light and Coke 3 per cent. debentures, which were called 80 sellers only on Wednesday, compared with a "high" of 93½ last year. Industrial preferences, as the next table shows, have also been friendless—most friendless, indeed, where their security is ample and interest factors have enjoyed full sway:—

	Price Ranges		Dec. 31, 1936	Feb. 10, 1937	Feb. 17, 1937	Yield (%)

† Free of income tax.

Apart from special fears of increased taxation, which may have contributed to the fall in brewery and tobacco shares, a considerable number of industrials which are not ordinarily regarded as stable dividend payers—including, for example, such well-favoured issues as British Oxygen, and Turner and Newall—have shown a considerable decline this week. Turner and Newall, after reaching a "high" of 112s. 6d. this year, have fallen as much as 10s., and the fall in Woolworth, from 96s. 3d. to 76s. 3d., is even more disturbing.

* * *

The real running, inevitably, has been made by arms shares. The table above shows four typical movements. Shares such as Vickers, Cammell Laird, and Hadfields have an obvious interest in the accelerated naval programme. Carrier Engineering and some of the other engineering equities which were issued early last year are again moving upward. The market, however, entertain no exalted notions regarding the aircraft group. The best shares on the Air Ministry's contract list have advanced further, but fortunately no ill-informed support for the speculative counters has been evident. Finally, the news that the Government contemplates a commodity stock programme, together with the inflationary character of its financial proposals, has produced a resounding bull point for commodities and commodity shares. Judged upon this week's movements, the market appears to be at the parting of the ways between "honest business shares" (as Mr Arthur Chamberlain would doubtless describe them) which are likely to be affected either industrially or fiscally by the programme, and shares which offer a direct or indirect re-armament equity. Investors with powers of discrimination must prepare to use them now.

FOR SECURITY: STABILITY: STRENGTH:

SECURITY FIRST TRUST

£5. 3s. 6d. PER CENT.

at the current price of sub-units is the return from cash dividends only which investors in Security First Trust have received for the year ended Feb. 1st, 1937. This yield does not include an additional return of 10/- per cent. which was derived from the sale of rights, etc. The income distributed was derived from 23 first-class companies, representing some of the strongest and soundest elements in British industry, over the shares or stock of which the funds of the Trust are spread.

LLOYDS BANK LIMITED
are Custodian Trustees of the underlying securities.

Security First Trust is one of the eight unit trusts managed by Fifteen Moorgate Unit Trusts Ltd. In the trusts of this Group, which is associated with Dawney Day & Co., Ltd., Merchant Bankers, the public has invested over £10,000,000.

"Hot Money" in Wall Street.—On Monday of this week the President discussed with his special committee some possible measures to prevent the influx of foreign capital to America. The administration shows growing concern over the large amount of American securities held by foreigners, presumably because large selling might jeopardise the market. At the end of 1935 the Treasury estimated the total foreign investment in America at \$5,035 millions, of which \$2,951 millions were represented by stocks and bonds. Great Britain was calculated to own over 27 per cent. of the total. Treasury reports show a net capital influx into the U.S.A. during the first nine months of 1936 of \$870 millions, of which \$464 millions represented security purchases. The British share of the latter was \$124 millions. The size of these interests—and the large British and Canadian proportions—are a nightmare for those who fear that the foreigner might sell out overnight; but they also suggest that if America adopts the proposed "cash-and-carry" principle of neutrality, the foreigner might still be able to influence the direction of the American economy to a large degree in the event of war. But although the Administration is concerned over these matters, it is difficult to find a solution. The presence of the taxation expert of the Treasury at the conference, and the insistence of Governor Eccles that definite action would follow, have suggested the possible use of taxation as the desired corrective. The President might choose heavier taxation on dividends paid to foreigners; or apply heavy taxation on security transfers to foreigners, or on foreigners' capital gains. Each measure has its own difficulties, and to European eyes it seems that the United States is too sensitive to a possible outward flow of capital. But no objection really overrules the possibility that the administration may, in fact, apply some measure intended to reduce the attraction of Wall Street as a haven for foreign capital. But, balancing Mr Eccles' statement that "something will be done" with Mr Morgenthau's declaration that the matter is still in the "study stage," the British holder of Americans need not fear action—yet.

TO INVEST MONEY

through ordinary channels advantageously is to-day extremely difficult. The interest yield is either too small on first-class securities or too high to be safe on others. But here is an investment which combines safety with an attractive interest yield.

FIRST PROVINCIAL "B" Certificates

are issued by MIDLAND BANK EXECUTOR & TRUSTEE CO. LTD., who act as Custodian Trustees for investors and collect and distribute the income from the 31 Government, Bank, Insurance, Commercial, and Industrial Securities comprising the Unit. Sums of £25 and upwards may be invested, giving an interest yield of

Industrial Profits in January.—The rate of advance in industrial profits was almost unchanged in January at 15.92 per cent. The relative stability of the percentage rate of advances over the last eight months suggests that no decisive changes in earning power are in progress. The recent figures appear below:—

Reports published in	No. of Companies	Rise in Profits*	Reports published in	No. of Companies	Rise in Profits*
1935—			1936—		
September	77	9.28	May	269	9.41
October	166	29.19	June	214	13.50
November	160	17.47	July	228	15.69
December	159	12.27	August	47	14.21
1936—			September	107	12.32
January	128	13.66	October	146	18.09
February	205	9.00	November	177	13.49
March	236	17.39	December	175	15.49
April	254	9.66	1937—		
			January	110	15.92

* After payment of debenture interest.

The total net profits covered by the January reports amounted to £13,222,882, compared with £11,407,108 for the preceding year. Of the total increase of £1,815,774, shops and stores contributed nearly one-quarter, thanks to the Woolworth's results, and tobacco companies brought a large share of the total. Some sixteen rubber companies show an increase of no less than 156 per cent. Apart from the South Metropolitan Gas setback, no group shows a significant reverse.

Company Notes

Courtaulds Profits.—Pre-dividend selling of Courtaulds shares suggested that, for once, the market was disposed to adopt Mr Samuel Courtauld's invariable caution towards the affairs of his company. In fact, the 1936 profits statement, which was issued on Wednesday afternoon, contained a mild surprise for, following a change in the dividend basis from tax free to less tax, a slight increase has been effected in the 1936 payment. After reworking the 1935 payment to a less tax basis, it is equivalent to 9.68 per cent., compared with 10.28 per cent. to be paid for 1936. The net profits are 8½ per cent. higher at £2,391,458, compared with an increase of 17 per cent. in rayon output for this country last year. Except that the amounts charged for income tax and excise duty are not shown, the following table, based on the preliminary statement, gives the full comparison of profits during the past three years:—

	Years to December 31,		
	1934	1935	1936
Net profits	2,217,790	2,203,064	2,391,458
Pensions fund	...	70,000	100,000
Preference dividend...	400,000	400,000	400,000
Ordinary shares:			
Earned	1,817,790	1,733,064	1,891,458
Paid	1,800,000	1,800,000	1,881,000
Earned %	7.8†	7.2†	10.33‡
Paid %	7½	7½†	10.28‡
Carried forward	269,228	202,292	212,749
	† Tax free.	‡ Less tax.	

At the present price of 53s. 7½d., the £1 shares yield £3 18s. 9d. per cent. There are arguments in favour of the shares, even on this yield basis, provided that the investor is prepared to wait. Several recent large-scale extensions to the Courtaulds plants—such as the Preston rayon factory, the North Wales staple fibre works and the Bridgewater cellophane factory—have as yet to achieve their full earning capacity. Nor has the long-term price policy of the company been fully developed, and meanwhile raw materials costs are rising. In America the Viscose interests, after making a slow recovery, should produce better earnings during the current year. Finally, the company has an arms equity which, in the last resort, would provide a significant rearmament hedge, though its importance need not be stressed at present. Patience, in the case of this first-class share, should pay well.

Imperial Tobacco Pointers.—The fall in Imperial Tobacco ordinary stock this week coincided with Lord Dulverton's speech at Tuesday's meeting. The market was inclined to seize upon some suggestions in the speech which were none the less significant for being cautiously framed. The chairman pointed out that leaf tobacco costs are now steadily rising, and though short period fluctuations can be evened out by the company's stock policy, a long-term increase must affect profits, unless the tendency is offset by higher consumption. The directors, however, feel that consumption would be vulnerable to attack by the Chancellor of the Exchequer, and the chairman was at pains to emphasise that the present load of duty was as much as the trade could bear, although there had been no previous impression in the market that tobacco might be called upon to bear more. The very suggestion, in the present mood, suggested doubt rather than reassurance to the market, which has already been disappointed in its capital bonus expectations. The retreat of the ordinary stock this week from 8½ to 7½ marks the conviction that Imperial Tobacco carries too few guns to resist rising interest rates, despite its inherent excellence.

★ ★ ★

Coal Company Results.—The first colliery reports and dividend announcements show that the coal industry is climbing fairly rapidly out of its depression. The sales schemes have no doubt played some part, but they can hardly have yielded their full benefits yet, since they were introduced as recently as August last. The final position of the industry under the much discussed but still prospective legislation for the unification of royalties and internal re-organisation has still to be decided and enforced. Meanwhile, recovery has not waited for the Government's decision, although it has been brought sensibly nearer by the rise in coal prices a year ago. Indeed, four recent colliery results show that dividends have been raised by significantly large amounts, and the reports show even greater improvement in some cases. The *Bolsover Colliery* dividend is raised from 9 per cent. to 11 per cent. Despite higher wages, trading profits, at £587,588, are one-fifth higher, and even after an increased charge for taxation (£135,000 against £95,000), the ordinary shares have earned 19.3 per cent. against 14.3 per cent. *Shireoaks Colliery* shows the remarkable increase of 74 per cent. in profits at £51,320, although the 1935 earnings were much below those for 1934. The 1935 earnings were much below those for 1934. The 3 per cent. dividend compares with 1½ per cent., and is well covered by earnings of 4½ per cent. Higher wages required an additional £24,956—equivalent to nearly 5 per cent. on the ordinary capital. Other impressive dividend increases have been reported by *Blackwell Colliery*, which pays 8½ per cent. compared with 6 per cent., and *New Hucknall Colliery*, which pays 8 per cent. against 7 per cent. The Mines Department survey showed a profit for the whole of Great Britain during the September quarter of 4.88d. per ton compared with 1.75d. for the September quarter in 1935. Two districts including Derbyshire and Nottinghamshire (the counties in which the collieries mentioned are situated) each earned more per ton than the country as a whole, owing to lower costs. The outlook for the Midlands coal companies continues, therefore, to be promising, and investors have been giving the shares further attention during this week.

★ ★ ★

Cotton Textile Shares.—The fall in cotton shares this week may have been partly due to the general market uncertainty, but there can be no doubt that, for technical reasons alone, some correction of the recent rise was overdue. For some weeks past, London's speculative reasons for buying have been seriously questioned by the trade. There is no reason to deny what the trade admits—that some appreciable progress is being made in Lancashire—but the suggestion that the cotton industry offers a recovery medium comparable to the steel

£265,000		£265,000

The Subscription List will open and close on Tuesday, the 23rd February, 1937, for an

ISSUE AT PAR OF
**90,000 6 PER CENT. CUMULATIVE PREFERENCE
SHARES OF £1 EACH**
and
415,000 ORDINARY SHARES OF 4s. EACH.

The Prospectus will show inter alia that:

- The Company has been formed to acquire the businesses of two Companies comprising one of the largest and best known undertakings of retail furniture dealers in the Union of South Africa with important premises in Johannesburg, Pretoria and Bloemfontein, and branches at Kroonstad and Brandfort, Orange Free State.
- The Company is also acquiring the whole of the share capital of a Company owning an important freehold block of business premises in Bloemfontein, part of which is occupied by the undertaking, the remainder being leased to two substantial tenants.
- The total net assets of the Company, exclusive of Goodwill, will be sufficient to cover the nominal amount of the Preference Shares more than 2½ times.
- The combined profits of the businesses being acquired by the Company before providing for interest on Mortgages and Loans which are being repaid and on other Loans which are not being assumed by the Company and before providing for Directors' remuneration but after deducting South African taxation, were:—

1933	...	...	£15,116
1934	...	...	£21,425
1935	...	...	£24,451
1936	...	...	£30,189

(The 1936 figure included only 10 months' profits of one of the businesses being acquired.)

- On the basis of the above figures the average profit for the last three years is sufficient after payment of Directors' remuneration and London Office expenses to cover the Preference dividend nearly 3½ times and to leave a balance (subject to any allocations to reserves) equivalent to approximately 9 per cent. on the Ordinary Shares. On the same basis the aggregate profits for the last year were sufficient to cover the Preference dividend nearly 4½ times and to leave a balance (subject to any allocations to reserves) equivalent to approximately 12½ per cent. on the Ordinary Shares.
- Continuity of management is assured by the fact that the founder of the business and members of his family who have been associated with him for many years in building up the undertakings of the vendor companies, have entered into agreements to act as Managing Director and Assistant Managing Directors respectively for a period of five years.

Copies of the full Prospectus, on the terms of which alone applications will be considered, and forms of application can now be obtained from:—

industry three or four years ago is patently exaggerated. An article appearing in *The Economist* of December 19th last, which reviewed the prospects for the industry, appears to have given rise to some comments in the trade. In that article our estimates of the Lancashire Cotton Corporation's present capacity were based on information contained in the Corporation's public prospectus of 1931. Each step in arriving at a final figure of 250 million lbs. of yarn for the current output of the Corporation was derived from official information. It would however appear, in the light of more recent knowledge, that a fairer figure to adopt as the basis of the Corporation's earning power might be in the region of 180 million lbs. of yarn per annum. This compels a revision of the prospective earnings estimates given in our article. Assuming an increase of $\frac{1}{4}$ d. in the margin, this scale of production would represent an increase of £187,000 in profits. If we further assume that earnings have recently covered some depreciation provision, the increased margin would suffice to cover the full preference dividend. The position of the ordinary shares, however, becomes more exposed, and even granted a further increase in earnings, the directors may well be disposed to adopt a cautious distribution policy until adequate reserves have been accumulated.

English Electric Recovery.—This company is now receiving its share in the prosperity of the electrical equipment industry in full measure—the 1936 profits of £357,000 were over one-third higher than in 1935—and it has finally extricated itself from such adversities as a debit balance of over a quarter of a million pounds at the end of 1933, and preference dividend arrears from 1926. Preference payments have now been paid to date, and about 6.9 per cent. has been earned for the ordinary shares (after charging three years' preference payments) or 17.1 per cent. after deducting one year only. The debenture conversion and the disappearance of the

Willans and Robinson charges have made some contribution to this healthier position, but it is due in no small measure to the careful financial management during recovery. Improved liquidity is shown by the balance sheet, for surplus liquid assets amount to £1,779,760 against £1,390,938. This difference is due to increased stocks, which stand at £1,519,550, and represent 29 per cent. of the total assets. At the current price of 32s. 6d., the ordinary shares yield 10 per cent. on the "normal" earnings for the latest year.

Sugar Share Prospects.—Sugar, for many months the Cinderella among commodities, has recently taken a decided upward turn. Eager speculators, seeking undiscarded opportunities, quickly discovered that sugar had markedly lagged behind in the general upswing in commodity prices at the end of 1936. A considerable bull account was thus rapidly built up, at steadily rising quotations. But a real improvement in the commodity's statistical position has provided a more substantial basis for the present strength of the market. In the last four years, world consumption of sugar has exceeded production by a handsome margin, and "visible supplies" are now at their lowest level since 1927. Fundamentally, however, the sugar market remains in a highly artificial state. No more than 10 per cent. of world supplies are traded on the free market, which is thus vulnerable to small changes in sentiment. For this reason, the forthcoming International Sugar Conference in London is particularly welcomed. Output in the two chief exporting areas, Java and Cuba, is now well under control. If the conference can find measures to protect the recent statistical improvement against undue expansion in the smaller producing areas (many of which form part of our Colonial Empire) the future of sugar prices would appear to be promising.

Investors wishing to participate in this prospective improvement have a fair range of available opportunities. The Empire cane producers, such as Booker Brothers McConnell, Gledhow-Chaka's Kraal and Ste. Madeleine, provide the most direct equity. In recent years drastic production economies have been effected, and, even with the extremely modest improvement in prices, profits are again being made. Such shares are decidedly speculative in character, but since revenues respond appreciably to changes in sugar prices, current share quotations might not discount the future unduly—if it can be secured. The merchants and refiners, which include such market leaders as Tate and Lyle and Manbré and Garton, should also benefit from increasing consumption, provided that their profit margins can be maintained—a reasonable presumption. Tate and Lyle, however, are steadily increasing their stake in cane-sugar growing, through such recent acquisitions as the Caroni Sugar and Waterloo Estates in Trinidad. There is, finally, the domestic beet sugar industry, now represented solely by the British Sugar Corporation. As the subsidy, which forms the *raison d'être* of the corporation, varies inversely with the world price of sugar, no advantages can accrue from rising prices. Improvements in efficiency offer the only source of larger profits, and the ordinary shares at around par must be regarded as an essentially long-term equity.

"Chartered" Results.—The report of the British South Africa Company for the year to September last is very satisfactory. The increased distribution—1s. 6d. per 15s. share, compared with 1s.—has been known for some weeks. Actually, the accounts show a net profit of £521,514, compared with £301,727 for the preceding twelve months, but dividend income is £52,418 lower at £325,550, while royalty income is £14,839 higher at £115,942. But 1935-36 was an active market year, and

"Chartered" profited to the extent of £246,134 on investment sales—a result which has no compare since 1929—against a mere £35,460 for 1934-35. Practically 30 per cent. of the company's securities, standing in the books at £8,255,067, consists of gilt-edged and fixed-interest stocks, while 25.2 per cent. consists of Rhodesian railways investments and 32.5 per cent. of Rhodesian mining investments. The directors' report devotes considerable space to these interests, and in particular to the scheme of financial reorganisation for the railways—of which this week's debenture conversion operation is the main feature—is described. The saving of £180,000 per annum in debenture interest should materially accelerate the payment of maximum dividends of the combined system. The railways benefit directly from free copper production, which thus indirectly benefits "Chartered." But its direct participation, in turn, is through the royalty of 2 per cent. on the value of copper production. For the current year copper production and prices are likely to be considerably higher, and the Rhodesian copper share market is doubtless affording profitable opportunities to the company. A few months ago it seemed that investors would need to wait for a thorough recovery from "Chartered." The latest accounts bring that time nearer. Meanwhile this week's events shows that favourites have their weaknesses, for Paris has indulged in some heavy selling in London. The shares are quoted at 39s. 9d. to yield £3 18s. 6d. per cent.

San Francisco Report.—Owing to labour troubles, writes our mining correspondent, last year's operations were confined to eleven months, but thanks to the carbonate mill, which started mid-way through the preceding year, a record tonnage was milled. This increase, coupled with substantially higher metal prices, provided a working profit of £204,600 (after writing off strike expenses totalling nearly £20,000), against £146,440 for the year to September, 1935. After providing for increased taxation and £13,440 for doubtful debts the net profit is only £7,400 higher, at £85,030. The company has renewed dividends with a payment of 9d. per 10s. share—the first since 1930, when 1s. was paid. The recent advance in the shares is based upon market calculations of largely increased earnings. The profit for the December quarter, indeed, amounted to \$384,470, compared with \$269,210 for the September quarter. Total ore reserves, at 2,747,300 tons (including material not fully developed), show an increase of 51,900 tons over the last computation. The sulphides show a reduced gold value, while the average of the carbonates is 4.20 grammes, against 3.57 grammes. But the company's main equity lies in base metal values generally. On the basis of last year's output, the ore reserves represent between six and seven years' supply for the mill. The shares yield 3 per cent. after their recent attention from the base metal share operator.

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Imperial Tobacco Company (of Great Britain and Ireland), General Mortgage Bank of Palestine, Provident Mutual Life Assurance, Scottish Life Assurance, Lancashire Electric Light and Power, Power Securities Corporation, Margate Estates, Railway Share Trust and Agency, Railway Debenture and General Trust Company, Wandsworth and District Gas, and Bah Lias Rubber Estates. Lord Dulverton's survey of Imperial Tobacco Company prospects is discussed in a Note on page 423. At the General Mortgage Bank of Palestine meeting, the chairman was able to report that political disturbances, though causing a setback to the country, had left the Bank's business unaffected. Mr Frank H. Jones, at the Wandsworth and District Gas meeting, referred to the importance of industrial uses for gas in the future development of sales. The chairman, addressing Margate Estates shareholders, expressed satisfaction that

improved profits could still be shown in spite of the bad summer. It was stated at the Provident Mutual Life Assurance Association meeting that the net rate of interest earned had been £4 9s. 6d., though new investments during the year were calculated to bring in only 3½ per cent. At the Scottish Life Assurance meeting, Sir John Macleod alluded to improvements made in the company's guaranteed options scheme, which was in line with the most modern practice. Mr Richard Guinness informed members of the Railway Share Trust and Agency that the improvement in the values of their investments was due mainly to United Kingdom securities. At the Railway Debenture and General Trust meeting, he referred to the recovery of arrears of income on certain holdings. Addressing Lancashire Electric Light and Power Company proprietors, Mr George Balfour pointed out that the number of new domestic consumers connected had increased by 15 per cent., while the consumption per consumer was nearly 10 per cent. higher. At the Power Securities Corporation meeting, Mr Balfour stated that the value of uncompleted work, excluding the Kut contract, was valued at approximately £2½ millions. Mr Eric Miller, at the Bah Lias Rubber Estates meeting, reported that the Netherlands Indies Government were considering some modification of the scale of the export duty payable by the company.

Company Results of the Week.—Company results are now forthcoming at a faster rate, and our usual analysis on page 443 comprises about eighty profit and loss accounts. A number of textile firms, including *Bradford Dyers* and *William Hollins*, have published their reports, and some interesting recoveries, such as *Bristol Tramways*, also appear. The reports are discussed on page 431 under the heading "Shorter Company Comments."

FIRE! Think of all that word might mean—to you! Not one of your fire insurance policies covers the vital books, documents, plans and records of your business—things which are to a business what nerves are to the human body.

If fire should come, will it leave your business paralysed beyond repair? Or will its 'nerves' be preserved and ready for orderly re-organisation? . . . WHICH?

The Chatwood Fireproof Equipment offers you security and peace of mind.

Illustrated lists will be sent upon request; or a technical representative will gladly be placed at your service.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE

SETTLING DAYS

TICKET: MARCH 2 ACCOUNT: MARCH 4

THIS week the markets have bitten the re-armament bullet. Week-end consideration of the arms finance proposals brought in further sales of gilt-edged, which dropped a full point on Monday. On each succeeding day the market has seemed ripe for recovery, but the short-lived support which appeared on Tuesday has since completely hidden its head. It has proved difficult to deal in the gilt-edged market, for the general expectation spread abroad that the next resistance point would be met when War Loan reached a 3½ per cent. yield basis. In a wide range of industrial debentures and preference shares, home rail prior charges and stable industrials, pronounced falls have marked the absence of support and the reluctance of jobbers to take a view. This week's palms are few, and they go to arms shares and commodities.

The market, indeed, has reacted to the re-armament finance plan like an open book. We show, on pages 420 and 421, the measure of the fall in gilt-edged and a range of industrial securities, compared with last year's levels, and the movements of the week will be found in our table of active securities. Wednesday's fall merely on the publication of the White Paper and not because its contents were news, combined illogicality with deadly effectiveness. Old Consols and Local Loans fell by 1½ on Wednesday and by 1½ on Thursday and the blight affected Indian stocks, Dominion issues and Home Corporation issues.

In the foreign market, German loans responded to the satisfactory trade figures. Japanese bonds, made further progress, until mid-week. Brazilian funding issues again improved, after a quiet interlude.

Home rails have experienced an extremely bad week. Prior charges, as was to be expected, have continued to fall heavily, in sympathy with gilt-edged. But despite excellent traffic returns, ordinary stocks have shared in the slump, Great Western and Southern suffering particularly. In the foreign railways section San Paulo have been in strong demand, but movements in the Argentine group have been irregular.

The industrial market was governed by the arms programme. Arms shares generally advanced, and other

shares fell. The iron and steel section naturally was among the brightest. Apart from the general movement, Indian Iron were in demand on report that a new company is being formed. Projectile and Engineering found a keen demand. Coal issues went ahead on rising export and higher production figures. The aircraft section, apart from a few bright features, was easier in the first part of the week, but the arms programme produced a strong general demand in mid-week, in which De Havilland and Hawker Siddeley were prominent. Prices fell slightly in the motor section despite the higher registration figures. Electrical equipments were firm at the beginning of the week on trading reports, but turned easier later, although the renewed dividend distribution stimulated a demand for Telegraph Construction.

Store issues were generally lower, and provision and catering shares irregular. In the textile group, prices fell off after the sustained improvement of recent weeks. The dividend announcement was followed by active dealings in Courtaulds, but the improvement was not maintained. Brewery and tobacco shares were lower, and insurance shares declined in sympathy with gilt-edged. Apart from a few isolated issues, prices in the miscellaneous industrial section were generally lower.

The oil market continued extremely active throughout the week. Despite a good deal of intermittent profit taking, the trend of prices was steadily upward. Demand was well distributed, and extended to many of the more speculative securities. Trinidad Leaseholds remained the leading feature of the market but Anglo-Iranian responded to reports of an impending capital bonus.

Rubber shares enjoyed some improvement later in the week, but they were not general. Professional buying, encouraged by recent figures for American consumption in January and the settlement of the General Motors dispute, was mainly responsible for the advance. Rises in tea shares were more numerous than for two months past. Professional and public support was considerable, and extended to a wide range of shares. The volume of business, as usual, was small, relatively to the rises in prices.

Conditions in the mining market have been only moderate. The best record is that of copper, principally Rhokana, the price of which, though higher than at any time since 1930, was still being talked higher. Diamonds have been active once again, with De Beers and Premier as the centre of attention. Tin shares were firm among the base metals.

Miscellaneous (59) ...	81.8	81.9	80.9	3.83	3.99	4.04

NEW YORK STOCK EXCHANGE

THE sharp rise in prices which occurred toward the end of last week on the strike settlement was not maintained during the present week, when prices slipped back again on the general technical position, the discussion at Washington on measures to make it more difficult for foreigners to invest in America,

and on the opening of Mr Lewis's unionising campaign in the coal industry, with possible extension to the steel industry. At the opening of the week the industrial section met most of the attack and there were many substantial falls in prices. By mid-week there were signs of a more stable sentiment, and progress was made by railroad issues, and by several metal stocks. Motor issues were higher, particularly Studebaker and Hudson, but General Motors slipped back. The bond market showed a similar improvement, and the more speculative railroad bonds were in demand. The Stock Exchange Committee announced a new margin rule, effective from March 1st, which aims at eliminating the free-ride obtainable at present by the use of the three-day grace period in putting up margin. In future no firm is to permit a transaction requiring initial or additional margin which is provided by a subsequent liquidation of the same or other commitments. Business reports are good; *Iron Age* estimates steel mill activity at 82.5 per cent. for the week compared with 81 per cent. last week, and the industry is experiencing a growing effect from the demand from railroads. British interests are looking for pig-iron and scrap.

The Barrow Barnsley Main Collieries, Ltd.—Issued capital 333,004 £1 ordinary shares and 129,788 10 per cent. cumulative £1 preference shares. 7 per cent. debenture stock £203,131, and £36,000 issued bankers' collateral security. Formed 1899. Operates Barrow and the Barnsley Main collieries, Yorkshire. Barrow Hematite Steel Company sells to Leadenhall Securities Corporation £109,225 of the Barrow Barnsley Company's debenture stock at £104 3s. 5d., 69,788 preference shares at 28s., and 179,059 ordinary shares at 28s. 10-11d. Total assets £897,240. Combined profits six months to December 31, 1936, £45,700, after interest, before depreciation.

FORTHCOMING ISSUES

Bradlow's Stores.—Lists will open on Tuesday, February 23rd, for an issue of 90,000 6 per cent. cumulative £1 preference shares and 415,000 4s. ordinary shares at par. The company has acquired two furniture retailing businesses in the Union of South Africa. The prospectus will show that the preference shares are covered nearly 4½ times on the latest profits, leaving a balance equivalent to 12½ per cent. on the ordinary shares.

ISSUES TO SHAREHOLDERS ONLY

Middle Witwatersrand (Western).—Issue to existing shareholders 40,000 5s. shares at 10s. per share in the proportion of one in four.

Dubilier Condenser.—Issue of 513,125 1s. ordinary shares at 2s., in proportion of one new for every two held on February 6th.

Triplex Safety Glass.—Issue of 100,000 new 10s. ordinary shares at 70s. each.

Lancegay Safety Glass.—Issue of 800,000 new 1s. shares at 3s. each in proportion of one new for every three held.

Roberts (Charles) and Company.—Issue of 140,000 £1 ordinary shares at 34s. each in proportion of 64 new shares for every 100 held on January 27th.

Great Southern Railways (Irish Free State).—Issue at par £237,892 4 per cent. debenture stock, redeemable at par April 1, 1942, for the purpose of increasing further the earning power of the company, by the continued acquisition of road transport concerns, additions to the rolling stock and other forms of development.

Slough Estates.—Issue of 147,000 £1 ordinary shares at 50s. in proportion of one for every four shares held.

BONUS SHARES

Gold and General Investment Trust.—Scrip bonus of one share for every five held.

D. H. Evans and Company.—The directors propose to capitalise £599,806 out of the general reserve fund of £822,505 and to issue 599,806 £1 fully-paid ordinary shares to Harrods as holder of the entire issued ordinary shares.

Eburite Corrugated Containers, Ltd.—This company proposes to create 100,000 new 5s. ordinary shares and to issue them as bonus, credited fully-paid, to holders of issued ordinary shares in proportion to their holdings.

James Booth (1915).—It is proposed to offer to ordinary shareholders 100,000 ordinary at £1 per share in the proportion of one new share for every three ordinary held.

SHORTER COMPANY COMMENTS

OTHER COMPANY RESULTS.—PETER WALKER AND ROBERT CAIN have increased their profits from £350,459 to £400,227, and the dividend is raised from 5 per cent. to 6 per cent. Another substantial advance is reported by WHITEWAY'S CYDER, whose earnings of £82,471 are 28 per cent. higher. MANCHESTER SHIP CANAL maintain their 1½ per cent. dividend, and net revenue is slightly higher at £278,159. Some eight further gas company results are available, including those of the LIVERPOOL, SHEFFIELD, and SOUTHAMPTON companies. MATHER AND PLATT'S net earnings of £180,339 show only a small improvement, but the previous year's figure of £192,346 included £14,329 profit on investments realised. The directors of D. H. EVANS AND COMPANY consider the net profit of £114,477, against £115,451, satisfactory in view of the rebuilding operations on the new premises. The earnings of J. SEARS AND COMPANY of £262,168 are somewhat disappointing since, like the FREEMAN, HARDY AND WILLIS figures, they are a little lower than in 1935. An increase in profits, from £95,540 to £162,705, by BRISTOL TRAMWAYS is among the outstanding improvements of the week. Investment trusts again report moderate progress, accompanied in every instance by a higher dividend: MERCANTILE INVESTMENT, for example, earned £239,930, against £229,690, and pays 11½ per cent., compared with 10½ per cent. The 1936 results of textile companies are mixed. BRADFORD DYERS' deficit after debenture interest is lower

at £20,102, and again £50,000 is taken from reserve. FLEMING REID'S profits (£155,479, against £178,694) are disappointing, but WILLIAM HOLLINS AND COMPANY have converted a deficit of £8,492 into a profit of £50,577. BOVRIL earnings have again improved, being £250,194 against £214,187, while the deferred dividend is raised from 4 per cent. to 5 per cent. Further wagon company results show little change, though BRITISH WAGON are raising their dividend from 18 per cent. to 20 per cent. The gross profits of CONSOLIDATED SIGNAL are nearly 50 per cent. higher at £45,014, and the 30 per cent. dividend reflects the payment of normal preference dividends last year. ILLUSTRATED NEWSPAPER profits of £126,550 have risen by nearly 40 per cent. J. & N. PHILIPS AND COMPANY, the warehousemen and drapers, are paying 2 per cent. (the first dividend since 1930), after earning £81,737, against £61,629. HALL TELEPHONE ACCESSORIES have more than doubled their profits, at £70,755. The LONDON ELECTRIC dividend is unchanged at 8 per cent., profits being £121,087, against £114,260.

GOVERNMENT &c.

CHINESE GOVERNMENT SALT ADMINISTRATION (Salt Revenues, 1936).—Preliminary figures show total revenue during 1936 of \$205,433,000, an increase of \$21,223,900. The collection of Salt Revenue under the administration of the Inspectorate has shown steady increases in the last seven years. The \$205,433,000 compared with \$61,071,000 (excluding Liaoning) for 1929, an increase of \$144,362,000. All foreign loan obligations secured upon the salt revenue, including amortisation and interest payments for the Hukuang, Anglo-French, Crisp Loans, and the Vickers-Marconi Loans, have been duly met during the year.

MISCELLANEOUS

EDMUNDSONS ELECTRICITY CORPORATION.—Operations of the Edmundson group of companies during January, 1937, compared with January, 1936, show an increase of 13 per cent. of units sold.

PRICE BROTHERS' REORGANISATION SCHEME.—A scheme designed to provide funds for the repayment of the \$11,610,000 of 6 per cent. first mortgage bonds to provide working capital, and to eliminate preferred dividend arrears has been published. The following issues are proposed: \$12,000,000 of 20-year first mortgage bonds; \$3,000,000 of two-six-year serial first mortgage bonds: \$4,268,300 of 4 per cent. convertible debentures, carrying the right to convert into common shares on the basis of \$30 debentures per one common share. Holders of 6½ per cent. preferred shares to be asked to exchange into 5½ per cent. \$100 preferred shares entitled to a cumulative dividend from January 1, 1939, plus 1½ common shares. The 4 per cent. convertible debentures are being offered to common shareholders at 98 per cent., in the proportion of \$10 of debentures for each common share held.

RADIO CORPORATION OF AMERICA.—Net income for 1936 is 11.2 per cent. higher at \$11,500,000 (£2,300,000), against \$10,343,200 (£2,068,640). Estimated net profit, \$6,100,000 (£1,220,000), against, \$5,126,900 (£1,025,380), an increase of 19 per cent.

BRISTOL TRAMWAYS AND CARRIAGE.—Net profit for 1936, £162,705, an increase of £67,165. Ordinary dividend, 8 per cent., against 6 per cent. To contingencies reserve, £15,000 as before. Carry forward increased from £10,366 to £15,556.

COMPANY MEETINGS

IMPERIAL TOBACCO COMPANY (OF GREAT BRITAIN AND IRELAND), LIMITED

RECORD OF STEADY PROGRESS

LORD DULVERTON'S SPEECH

The thirty-fifth ordinary general meeting of the Imperial Tobacco Company (of Great Britain and Ireland), Limited, was held, on the 16th instant, in Bristol.

The Rt. Hon. Lord Dulverton (the chairman), after expressing regret at the death of Mr W. N. Mitchell, who, he said, had had a long and distinguished career in the tobacco trade, and also that of Mr S. P. Davies, who had retired from the board less than four years ago, said: Turning to the balance sheet, you will observe that land, buildings, plant and machinery at cost, less amounts written off, are stated at £4,962,703, which is £150,084 higher than last year's figure. During the year under review we have made additions which, in total, exceed the deductions from this item which are attributable to depreciation and sale of plant.

The investments in subsidiary and associated companies at cost, less amounts written off where depreciation has taken place, now stand at £12,111,012, an increase of £74,967. As noted in the balance sheet the market value of the investments in associated companies is in the aggregate largely in excess of their book value, and this is principally due to our holdings in the British-American Tobacco Company, Limited, and in some of its associated companies, holdings which represent this company's interest in the export trade, and produce substantial revenue to our company.

Loans to and current accounts with subsidiary and associated companies total £1,217,264, a decrease of £164,879. Stock-in-trade, including leaf in transit at approximate cost, and advances to branches abroad for purchase of leaf, etc., amounts to £33,304,786, an increase of £2,064,889. This is the third year in succession in which this item has shown a large increase.

THE LEAF POSITION

It is appropriate here to digress for a few minutes from the figures of the balance sheet in order that I may say something about the leaf position. At a time when commodity prices generally are rising, leaf tobacco has been no exception to the general rule. In fact, for the last four years the average cost of our raw material has been going up. Our practice of carrying large stocks of leaf to mature in bond tends to even out temporary fluctuations in cost, and enables us to maintain an unvarying standard of quality in our brands, but obviously, when the general trend of prices over a series of years is in the upward direction, the rate of profit must be adversely affected. The 1936 crop in America was, owing to adverse weather conditions, a small one, and our purchases have necessarily cost us more per pound.

Returning to the balance sheet, debtors, after making full provision for discounts to be allowed and for doubtful debts, amount to £8,791,197, an increase of £415,907, which is attributable to the increased volume of our business. Government and other securities taken at cost, less amounts written off in those cases where depreciation has taken place, stand at £7,702,771, a decrease of £128,470. The market value of these investments, as at the date of our balance sheet, was £8,240,098. Loans to corporations and public boards and other investments not officially quoted stand at £2,245,615, a decrease of £402,035, certain loans having been repaid during the year. Cash at bankers and in hand, £3,640,744, was down by £189,457.

LIABILITIES

Turning to the other side of the balance sheet you will see that the deposits by, and current accounts with, subsidiary and associated companies amount to £739,085, an increase of £213,156. Creditors, provisions for taxation and bonus to customers, amounts set aside for obligations to pension fund and for contingencies, including fluctuations in the value of leaf tobacco stock, etc., amounting in all to £17,126,322, show an increase of £853,045.

In addition to an increase in trade creditors, larger provision had to be made for bonus to customers and for income tax. As regards the latter item, not only did we have to provide for tax on higher profits, but, owing to the increase in the standard rate from 4s. 6d. to 4s. 9d., we had to provide for it at a higher rate. The balance on Widows' and Orphans' Benefit Account amounts to £178,786, a decrease of £14,171, which is due to the payments during the year having exceeded the interest credited to the account. This account is, of course, entirely distinct from the company's contributory pension fund, our contributions to which are a charge on the business and have been provided out of profits.

The general reserve account stands at £6,760,000, including the sum of £250,000 transferred from the profit and loss account.

PROFIT AND LOSS ACCOUNT

The net profit for the year, after providing for all charges, bonus to customers, taxation, directors' fees, and depreciation and renewals of property, plant, etc., together with income from investments and loans, which include substantial dividends from companies operating outside the United Kingdom, amounted to £10,636,316, an increase of £368,106.

After transferring £250,000 to the general reserve account there remains a balance of profit for the year of £10,386,316. Adding to that figure the undivided balance of £1,040,421, a total of £11,426,737 is arrived at. Out of this sum the dividends, totalling £852,209 on the three classes of preference stock, have been provided, leaving for disposal a sum of £10,574,528.

An interim dividend at the rate of 7½ per cent., free of income tax, was paid on September 1st last, and it is now proposed, subject to your approval, to declare a final dividend of 7½ per cent. and a bonus of 10 per cent., both free of income tax, making a total distribution for the year of 25 per cent., free of income tax, which is 1 per cent. more than for the previous year. The balance then remaining to be carried forward to the accounts of the current year will amount to £1,183,766.

The year under review has been one of appreciable recovery in general trade. Just as, however, the tobacco trade suffered less than most in the recent period of depression, so, in contrast, is its improvement under present conditions less marked. The adverse factor of increased leaf prices has had, as I warned you a year ago it would have, a considerable effect, and it is thanks to a continued expansion of tobacco consumption, and to our share of the increased trade that we are able to produce results which are better than those of the preceding year. I regard this outcome of the year's trading as eminently satisfactory.

As you are aware, we have thought it well for a number of years past to mark our appreciation of the loyal and willing service of our employees by a gift over and above the ordinary salary or wage, and I am confident that you will, as in past years, endorse the decision of the directors to make a gift to the staff and workpeople of a sum equivalent to 16 per cent. of the total salary or wage received from the company during the twelve months ended October 31, 1936.

CURRENT TRADE AND PROSPECTS

For many years the tobacco trade has borne a heavy load of duty which is still at the highest figure at which it has ever stood, a figure to which it was raised in the emergency Budget of 1931. While some other commodities and some classes of taxpayers have received relief from the additional burdens imposed at that time, there has been no lightening of the weight of taxation on tobacco. As I have said before, I believe that the present rate of duty is as much as the trade can bear, and I should, in fact, have no hesitation in saying that any further increase in duty would have an immediate and definite restrictive effect on consumption.

Given, however, a continuance of the present conditions in the tobacco industry and maintained improvement in general trade, I think that the consumption of tobacco may be expected to show some further expansion. It will be our endeavour and our hope to secure for your company, through the excellence of our products both in quality and value, our share of such increased trade. Already for the first three months of the current year our sales show an encouraging increase.

Throughout this company's history the aim of the board has been steady progress. Indeed, looking back over the post-war period and contrasting our results over that period with the considerable fluctuations of many other businesses—and, indeed, of the national prosperity—I think we can say that our objective of steady progress has been and is being realised. I hope it will continue in the year upon which we have already entered. We shall again have to face a substantial increase in the cost of leaf, but if nothing takes place to disturb the conditions under which we trade I see no reason to anticipate that the results of the current year will be less satisfactory than those that have been reviewed to-day.

The report and accounts were adopted.

GENERAL MORTGAGE BANK OF PALESTINE, LIMITED

DIVIDEND OF 7½ PER CENT.

BUSINESS UNAFFECTED BY THE DISTURBANCES

The fifteenth annual general meeting of the General Mortgage Bank of Palestine, Limited, was held on February 7th last in the bank's offices at Tel-Aviv.

Mr S. Hoofien (the chairman) said that the year under review had unfortunately been marked by a prolonged period of political disturbances. Much harm had been caused to the fair name of the country and much misery to peasants and labourers, whose sole endeavour was to follow their peaceful avocations, and who had no real quarrel with their neighbours. All this was the more regrettable as it was unnecessary. If a reasonably firm and consistent policy had been followed the country need not have gone through this experience. It was to be hoped that the recommendations of the Royal Commission which had recently been inquiring into the underlying causes of the disturbances would show the way towards a constructive and consistent policy.

SATISFACTORY RESULTS

While naturally the country had suffered a certain setback, it afforded the directors great satisfaction to be able to state that the bank's business had not been affected in any way whatsoever. At no time had there been any drop in house property values to such an extent as to cause any concern; all instalments of capital repayment and interest had come in with the utmost regularity. During the whole year under review not one forced sale of mortgaged property had been necessary. The present year was the fourth consecutive year regarding which this satisfactory statement could be made. Arrears outstanding at the end of the year on all interest maturing until November 30, 1936, amounted to 1½ per mille of the total loans outstanding.

The directors had naturally followed a rather conservative policy in the matter of granting fresh loans, and new business had been accepted by them only after the most careful examination. Even so the item "Mortgage Loans" in the balance sheet had gone up by £P199,805, and it now stood at £P2,103,453. There were 2,690 loans outstanding, all of them repayable in quarterly instalments terminating at various periods up to the year 1957. The fact that all the loans were repayable in instalments and that those instalments had been carefully calculated to be within the reach of the borrowers deserved to be stressed, as it constituted the best guarantee of the stability of the bank's business. Members had more than once been told that in estimating the value of the mortgaged property the bank entirely disregarded the value of the building site, and it was, therefore, in no way concerned with the ups and downs of the land market.

ADDITIONAL WORKING CAPITAL

During the year under review additional working capital had been provided through the issue of a further £P320,000 five per cent. twenty-year debentures. After the close of the year the share capital had been brought up to £P450,000 through the issue of £P100,000 ordinary shares.

The results of the business had been gratifying. After making ample provision for contingencies and for debenture interest, there remained a net profit available for distribution of £P41,422, out of which the directors had transferred an amount of £P15,000 to reserve account. It was proposed to pay a dividend of 7½ per cent.—in 1935 it was 7 per cent.—on the ordinary shares, and one of 6½ per cent.—in 1935 it was 6½ per cent.—on the 6 per cent. cumulative preference shares. As announced last year, the bank had now inaugurated the policy of declaring on September 1st interim dividends on the ordinary as well as on the preference shares.

The report and accounts were unanimously adopted.

PROVIDENT MUTUAL LIFE ASSURANCE ASSOCIATION

INCREASED NEW BUSINESS

The annual general meeting of the Provident Mutual Life Assurance Association was held, on the 17th instant, in London, Mr Owen Hugh Smith, chairman of the association, presiding.

The manager and actuary (Mr. C. R. V. Coutts, F.I.A.) read the notice convening the meeting and the report of the auditors.

The Chairman said: Our accounts reflect the industrial recovery which has spread during the past year in so many directions. The new life assurance business exceeds the corresponding figure for the previous year by over 16 per cent., and is actually 75 per cent. higher than five years ago, when the depression was at its worst. In addition to our life assurance business we have transacted a considerable volume of deferred annuity business amounting to a total of £146,000 per annum.

Another welcome feature is the substantial fall in the amount paid for the surrender of policies. During the last four years there has been a reduction of 40 per cent., from £171,000 in 1933 to £103,000 last year.

Notwithstanding the increase in our new business the ratio of expenses to premium income has remained the same as in the previous year at the very moderate figure of 14.5 per cent.

A year ago I called your attention to the exceptionally low figure for the death claims, which for the year 1935 amounted to only £153,000, a lower amount than in any year since 1928. It is not surprising, therefore, that there was an increase in 1936 to a more normal figure.

The endowment assurances maturing during the year have increased by £17,000 and involved us in payments of £480,000, which is by far the largest item of outgo in our revenue account.

POSITION OF FUNDS

Turning now to the position of our funds, during the year the assurance fund has increased by £675,000, the largest addition we have ever made in the course of one year. Our broad policy has been, as in the past, so far as is practicable, to cover our liabilities which are spread over the next fifty or sixty years by long-dated but ultimately redeemable securities. Our British Railway holdings are mainly in railway prior charge stocks, which, I am glad to say, are now paying their full dividends. When they were much cheaper than now we made considerable investments in British Public Utilities, such as gas, water and electricity companies, which have proved very successful.

It is not our practice to bring into revenue any capital profit whether realised or arising from appreciation in market values. The result of this policy at December 31st last was that the market values exceeded the values in the balance sheet by £1,532,000 without taking into account the investment reserve fund of £1,000,000. There is therefore in effect a total reserve of £2,532,000 on a fund of £10,500,000. The corresponding figure last year was £2,035,000. The realised profit and net appreciation in value during the year has therefore amounted to £497,000. This is, of course, very satisfactory so far as it goes, but it has its gloomy side. The general rise in the capital values of investments, which means that new capital can be raised at low rates of interest, is no doubt a benefit to the country as a whole. But if prices continue at their present levels, the cost of life assurance must inevitably increase.

The rate of interest we earned last year, before the deduction of income tax, was £5 5s., which is identical with that of the previous year and higher than in 1934. The net rate of interest was £4 9s. 6d., showing a fall of 1s. 5d., due mainly to the increase in income tax. You must not, however, infer from this that we have been able to invest our funds during the year at nearly 4½ per cent. net. On the contrary, it is calculated that our new investments have been made to bring in only 3½ per cent. net. The reduction in the rate over our funds as a whole which these new investments would have made has been almost exactly balanced by increased dividends on some of our existing investments.

FAVOURABLE QUINQUENNIAL PROSPECTS

We are now in the final year of our quinquennium, and I am glad to be able to tell you that our actuarial investigations show that unless there is some disaster before this time next year we shall be in a position to declare a bonus at at least as high a rate as that which I had the pleasure of announcing in 1933. We have therefore again had no hesitation in continuing the interim bonus rates for the current year at the full rates declared at the last division of profits.

The report and accounts were adopted.

SCOTTISH LIFE ASSURANCE COMPANY, LIMITED

NEW RECORD FIGURES

In the absence of His Grace the Duke of Atholl, who is at present abroad, Sir John Lorne MacLeod, G.B.E., LL.D., chairman of directors, presided at the annual meeting of the Scottish Life Assurance Company, held on Thursday, February 18th, in Edinburgh.

In moving the adoption of the report, he said that they had created a new high record in new business figures. Their net total this year came out at £2,389,000, an advance of £236,000 on 1935. The net premium income of the year was £624,000, which included a smaller amount of single premiums than usual—£49,000. The renewal premium income totalled £575,000, an increase of no less than £37,000 over the previous year. The interest income was £335,000 after deduction of income tax.

INTEREST RATE

The net rate of return on the life and annuity funds was £4 4s. 2d. per cent. against £4 4s. 4d. per cent. for 1935.

Claims by death at £231,000 were £65,000 more than in 1935, while endowment assurances maturing by survivorship had totalled £302,000, an increase of £33,000. The mortality, however, had been light. Surrenders had been somewhat swollen by sums which had been paid away to policyholders who had surrendered bonuses for cash, a feature which always followed a quinquennial investigation.

EXPENSE RATIO

The ratio of expenses and commission to premium income was a little higher at 17.1 per cent., as against 16.5 per cent. last year. Certain non-recurring expenses incidental to the quinquennial investigation were, however, included this year.

The life assurance and annuity fund had increased by £237,000, and now stood at £8,285,000. In conclusion, he dealt with improvements made in the company's guaranteed options scheme, which should make an even greater appeal to the assuring public than before, being entirely in line with the most modern practice.

MR R. M. GUILD'S SPEECH

Mr R. M. Guild, in seconding, said that the mainstays of their new business were the whole life non-profit section—which included the "changing" and "flexible" policies—and the endowment assurance with profits class. The former gave the largest immediate life cover and was popular with young men, while the latter catered for the client who was thinking more of investment. In recent times the once popular limited payment policy seemed largely to have suffered eclipse, yet it was really about the best kind of policy a man could select for his first assurance. Referring to the balance sheet, he said that a year ago the chairman stated that, having regard to current market values of securities, the company was well fortified against any possible reverses of fortune. Relatively they were in an even better position to-day.

THE DIVIDEND

The report was adopted and a dividend of 5s. 6d. per share, less tax, was declared in respect of the past year. It was further decided that the dividend for the ensuing year would be payable in two instalments and an interim dividend of 2s. 9d. per share, less tax, was declared payable on September 1, 1937.

A vote of thanks to the Branch officials, moved by Mr Lewis P. Orr, was acknowledged by Mr J. A. Hay, London manager.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "The Economist Newspaper Ltd.,"

8 Bouverie Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

LANCASHIRE ELECTRIC LIGHT AND POWER COMPANY, LIMITED

STEADY PROGRESS

The ordinary general meeting of The Lancashire Electric Light and Power Company, Limited, was held, on the 18th instant, at Winchester House, London.

Mr George Balfour, M.P. (the Chairman), said that the accounts presented indicated moderate and steady progress. Trade during the year showed a regular increase, and, in fact, each month showed an increase in Lancashire trade compared with the corresponding month in the previous year, and as trade indications at present were satisfactory, the company should be able, in the absence of any untoward event, to look forward to further progress during the year.

During the year the company expended upon capital account £630,435, of which £411,697 was on generating stations, £448,000 having been spent on Kearsley, but £36,000 was written off plant in Radcliffe station and £217,704 was on distribution system. The expenditure in connection with the generating stations included the balance of payments, except certain retentions, on the first 50,000 k.w. turbo-generator plant and boilers. This 50,000 k.w. set was fully loaded for the first time on November 5th, and after being thoroughly tried out under commercial load conditions, the installation of the set was commemorated by a tablet fixed in the power station, which was unveiled on December 21st by the Earl of Derby. An interesting feature in connection with the Kearsley extension was the cooling tower, which, owing to it being the largest in the world, had attracted a good deal of attention and publicity.

This year the company should receive from the Central Electricity Board a contribution towards the capital charges on the 50,000 k.w. set installed last year. During the year they had received direction from the Central Electricity Board to instal a second 50,000 k.w. turbo-generator set in the Kearsley Station, to be completed by the autumn of 1938, and this plant was now in hand. Until the company's own demand required part or all of the output from this set the statutory charges on the capital employed were payable by the Central Electricity Board.

ADDITIONAL CONSUMERS

During the year the company connected 5,927 additional domestic consumers, compared with 5,680 during the previous year, being an increase of about 15 per cent. Out of a total of 39,123 domestic consumers connected at the end of the year 33,377 had adopted the two-part tariff. Revenues from this source had increased although tariffs had been reduced, and the unit consumption per consumer had increased nearly 10 per cent. overall. The overall unit price to the low tension consumers fell from 2.061d. to 1.92d. The units sold were approximately 370 millions, compared with 330 millions for the previous year, and the amount taken by the Central Electricity Board was 184 million units, compared with 167 million units.

With regard to the results for the year, the trading profit of the subsidiary company and interest amounted to £426,056, an increase of £41,762 as compared with the previous year. After providing for income tax, placing £113,000 to depreciation, and carrying forward in the subsidiary company £8,078, they had a balance paid over to this company of £288,296, which together with management fees and sundry receipts gave them a total of £301,607. After transferring £40,000 to reserve, the directors recommended an additional dividend at the rate of $\frac{1}{2}$ per cent. per annum on the participating preference shares and a final dividend of 5 per cent. on the ordinary shares, making $7\frac{1}{2}$ per cent. for the year on both classes of shares.

Turning to the balance sheet, the total investment in debentures and shares at cost was increased by £533,000. This increase was due to additional debentures and shares taken up by this company to put the subsidiary company in funds to enable them to provide payments in connection with the plant extensions. A year ago the company had cash at bankers amounting to £283,000, but this year they owed their bankers £237,516. The difference was accounted for by payments for extensions to plant and mains, etc., during the year. Further capital would be issued at an early date to liquidate the loan and provide funds to meet expenditure on extensions in hand, and it was proposed to submit a resolution for the purpose of increasing the capital of the company.

The report and accounts were unanimously adopted, and resolutions converting the shares of the company into stock and authorising the creation of 1,000,000 new shares of £1 each were unanimously approved.

POWER SECURITIES CORPORATION, LIMITED

YEAR OF ACTIVITY

The fourteenth annual general meeting of Power Securities Corporation, Limited, was held, on the 17th instant, at Winchester House, Old Broad Street, London, Mr George Balfour, J.P., M.P. (the chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said that he was sure they all felt that at the present time there was some reason to hope that they were in sight of more normal conditions. There were active signs at present that in this country they had at last realised that they could no longer promote and ensure world peace by disarmament alone, and that they, who were genuine peace lovers, must be adequately armed if they were to be able to confound those who, claiming at one and the same time compassion and acquiescence in their defalcations, for too long exploited this patience and toleration. He sincerely trusted that those nations which had forced them reluctantly to face a huge expenditure on their defence programme now realised clearly that the people of this country were determined to place themselves in a position to repel any unprovoked assault on their liberties or possessions. This country had paid a very heavy price for the exploration and demonstration of the new diplomacy, but it would prove to be money well spent if the vast new electorate learn the lesson which their recent experiences had taught and thus were able to make their contribution in the near future to a more stable diplomacy founded as of old upon the simple principles of honour and fair dealing.

Last year the company completed a considerable amount of work on hand and negotiated new business. Included in the work carried out they built an important factory for cement production which was likely to be one of the cheapest, if not the cheapest, producing in the country. The work on the important barrage which the company was building for the Irak Government at Kut was progressing, but unfortunately the abnormal floods completely deranged the programme at the end of last year. Every effort, however, was being made to complete within a very short period of the time originally contemplated.

MUCH MISCELLANEOUS WORK

During the year the company had also completed a large volume of miscellaneous hydro-electric work, extensions to several steam and oil generating stations at home and abroad, including power station and transmission line work in East Africa, Tanganyika and the Malay States.

Work on the tunnel to connect Loch Garry to Loch Erich would be completed in the autumn of this year, according to programme. This tunnel was approximately five miles in length and was probably one of the longest stretches which had been driven from two points only. With the completion of this work and the dam at the Dalwhinnie end of Loch Erich, the Erich dam would be available for storage to its full height. In a month or two they would start upon the next development connecting Lochs Seilich and Quoch by aqueducts and tunnels to the existing Erich reservoir to serve the plants already installed, all of which had been designed to utilise the additional water resources.

A year ago he mentioned that the company had on hand some £2,000,000 of uncompleted work, which included the uncompleted work in Irak; at the present time, excluding the Kut contract, they had on hand or awaiting immediate settlement approximately £2,250,000.

PROFIT AND DIVIDEND

The gross profit for the year, including interest, dividends, commissions and transfer fees, amounted to £134,517, an increase of about £300 on last year. Administration and general expenses and provision for taxation were lower by £1,400, and the balance carried to the balance sheet of £103,427 showed a net increase over 1935 of approximately £1,700. After transferring £30,000 to general reserve account, the directors recommended a dividend of 7 per cent., less income tax, on the ordinary shares for the year, leaving to be carried forward £31,339, an increase of £4,000.

In regard to the outlook, he had already stated that the company had £2,250,000 of work in hand unexecuted, apart from the Irak work. They were therefore well placed for some time to come, and, in addition, they were dealing with quite a lot of concession work, engineering and miscellaneous work, which should mature in due course. The exchange difficulty still hampered the expansion of their business into countries not linked to sterling.

The report and accounts were unanimously adopted.

MARGATE ESTATES COMPANY, LIMITED

SATISFACTORY YEAR—FAVOURABLE OUTLOOK

The third ordinary general meeting of this company was held, on the 16th instant, in London, Mr John Henry Iles, J.P. (chairman and managing director), presiding.

The Chairman said: We meet again to review another satisfactory year's accounts. In so doing, shareholders, I feel sure, will be impressed with the solid and reliable character of our business. In past years I have frequently stressed the point, "We have so many strings to our bow" that we can rely upon a general good result in spite of bad weather conditions. All can recall a miserable summer, and we can still show an improvement on our profits.

It is pleasing to me and my colleagues that investors are realising more and more the attractiveness of our shares and debentures. To-day it is much easier to sell than to buy, and all stand at a good premium.

The printed report refers to the prospects of the coming season. If we are fortunate enough to have a reasonably fine and warm summer, I believe we shall do record business. We cater for the masses, and the nimble sixpence. Our patrons are good spenders when wages are good. It is general knowledge that wages continue on the up grade. I think, therefore, that it is reasonable to be optimistic about our future.

There is only one other point to which I would like to direct your attention. As you all know, the company started its operations with a considerable sum standing to the credit of capital reserve, and this has been added to by the premium on our recent share issue. This has enabled us to write off the balance of £3,197 expenses on the last issue, and to apply the sum of £1,999 9s. 10d. in reduction of the capital value of park amusements. I am certainly looking forward with much pleasure to meeting you all again next year.

The Chairman concluded by moving the adoption of the report and accounts and the payment of a final dividend on the ordinary shares of 4 per cent., together with the confirmation of the interim dividend of 4 per cent. already paid.

The resolution was carried unanimously.

RAILWAY SHARE TRUST AND AGENCY COMPANY, LIMITED

FURTHER SUBSTANTIAL IMPROVEMENT

The forty-eighth ordinary general meeting of this company was held, on the 18th instant, in London.

Mr Richard S. Guinness, the chairman, said that the accounts reflected the full year's benefit both of their refunding operation and the issue of an additional £100,000 3½ per cent. debenture stock, in addition to a further general improvement in revenue account. The gross income of £131,105 represented earnings of practically 5½ per cent. on the book cost of their investments and compared with £124,940 last year. The net balance available for the ordinary stock amounted to £52,324, or 8.7 per cent., on the £600,000 ordinary stock. The comparable figure last year was £41,538, or 6.9 per cent.

The balance available not only enabled the board again to transfer £10,000 to reserve but to recommend that the dividend on the ordinary stock be increased from 5 per cent. to 6 per cent., absorbing £36,000, and leaving to be carried forward £42,187, which was equivalent to somewhat more than one year's dividend at the new rate.

The valuation of their investments at January 15th last reflected to a marked degree the recovery power of their holdings. This year the appreciation over the book cost of investments amounted to £470,602, and compared favourably with the valuations published from time to time by various statisticians. The improvement in values was again mainly due to their United Kingdom holdings, but it was pleasing to record that the holdings in the United States of America had improved considerably in capital value as well as in revenue. The Argentine, Brazil and Canada also showed substantial improvements during the year.

The company was healthy and virile, its balance sheet was sound, enabling it to take advantage of improving conditions when they arose and to withstand those checks which were part of their heritage. It might be that values would not always stand on such a high plane, but in such a case there would remain the consolation that the burden of the search for remunerative investments answering to their standard would be eased.

The report was unanimously adopted.

RAILWAY DEBENTURE AND GENERAL TRUST COMPANY, LIMITED

INCREASED REVENUE AND DIVIDEND

The sixty-fourth ordinary general meeting of this company was held, on the 18th instant, at Winchester House, London.

Mr Richard S. Guinness, the chairman, said that the report and accounts for the past year showed the capital and the reserve to be intact and an improvement in revenue for the past year of £4,346. After charging expenses, debenture interest and preference dividend, the net amount available for the ordinary stock was £44,365, or 6.83 per cent., against £40,220 or 6.19 per cent. last year. After allocating £5,000 to reserve account and providing for income-tax adjustment, the balance available enabled them to recommend that the dividend on the ordinary stock be raised by $\frac{1}{2}$ per cent. to $5\frac{1}{2}$ per cent.

The gross income for the year amounted to £142,351 and showed a return of 5 per cent. upon the book cost of the investments. This was the third year of progression following the low point of 1934, when income in round figures amounted to £134,000.

Conversions to a lower interest base and repayments had continued to operate against them. On the other hand, with improved and improving conditions at home and abroad certain of their investments were yielding arrears of income and their revenue account this year included a sum of approximately £5,500 under that heading. Further arrears still remained due, but it was impossible to say what proportion thereof would eventually be received. That aspect was taken into consideration by the directors when deciding upon the proportion of income which it was deemed prudent to retain in the company, and it was through the consistent application of that policy of strengthening reserves that they could hope for steady improvement in revenue account. The present revenue had an increasingly sound foundation by reason of the improvement in security resulting from the numerous conversions to a lower interest basis which had taken place in the past few years in debentures and debenture stocks. In addition, it should be a factor of safety that 58 per cent. of their income was attributable to their holdings of United Kingdom investments and that the fixed interest bearing investments in the United Kingdom alone contributed 46 per cent. of the total income.

The report and accounts were unanimously adopted.

WANDSWORTH AND DISTRICT GAS COMPANY

RECORD SALES OF APPARATUS

The annual ordinary general meeting of this company was held, on the 16th instant, in London.

Mr Frank H. Jones, the chairman and managing director, presided, and in moving the adoption of the report and accounts said that the net result of the year's working came out at £268,422 as against £245,511 last year, and, after bringing in the balances from the late Leatherhead and Walton companies, there was a balance in the profit and loss account of £130,454. In spite of the mild weather experienced there had been a satisfactory increase in the sale of gas to consumers of 5.3 per cent., and, provided normal weather conditions prevailed during the current year, an extension in the sale of gas might be expected to be maintained. The increase in the price of coal by 1s. per ton and in the wages of gas workers had necessitated increasing the price of gas by one-fifth of a 1d. per therm.

During the year a five-year contract had been received from the Wandsworth Borough Council for the lighting of 103 miles of roads with new and improved lamps, and large extensions of public lighting within the company's area of supply had also taken place for several other local authorities, while important progress had been made in the sale of gas for industrial uses. The development of gas for multifarious industrial uses could be looked upon as a most important factor in the development of gas sales in the future.

As regarded the domestic sale of gas, the number of consumers showed an increase of 6,753 during the year to a total of approximately 200,000. The sale of apparatus again created a record, 33,000 major appliances having been sold.

The amount received by the sale of residuals had been up to expectations, with the exception of sulphate of ammonia, and showed an improvement over the previous year's trading. The sale of coke to the smaller domestic consumers had been particularly satisfactory, due to a policy of encouraging the use of coke for domestic purposes.

The report and accounts were unanimously adopted, and the dividend recommendations, including 7 per cent. upon the consolidated stock, were approved.

BAH LIAS RUBBER ESTATES, LIMITED

DIVIDEND OF 9 PER CENT.

The annual general meeting of this company was held, on the 17th instant, in London.

Mr H. Eric Miller (the chairman), in the course of his speech, said: The crop was the largest ever harvested by the company, and would have been greater but for the fact that export licences representing 388,821 lb. were sold in 1935 to the Netherlands Indies Government. Expenditure has been strictly controlled, and the increase in cost of production is due in the main to a new item over which we have no control, in the shape of a fiscal export duty imposed by the Netherlands Indies Government on rubber shipped from their territory, which came into force as from January 1, 1936.

If the method of calculation for 1938 were to follow the practice adopted for 1936 and 1937, the duty might well amount to 5 cents per half kg., or 1.2d. per lb., and representations have been made to the Government pointing out the injustice of singling out the plantation rubber industry for a special tax contribution of this magnitude. The Netherlands Indies Government are therefore considering some modification in the scale of this duty, which, if adopted, will reduce it appreciably.

We have written off £7,500 against profits as depreciation of mature areas. We are then left with a credit balance of £31,539, the whole of which we propose to distribute. A dividend of 9 per cent. will encroach on the carry-forward, but only to the extent of £70, leaving a free balance of £39,469 18s. 5d.

We have made forward contracts at rising prices for a total of 630 tons smoked sheet to be shipped during 1937 at an average price of 8.82d. per lb. c.i.f. This represents about 38 per cent. of our estimated exportable allowance for 1937. The crop we will account for in our current working year looks likely to be upwards of 3,500,000 lb., and we should have no difficulty in producing this on a conservative system of tapping. We have also sold 108 tons for shipment during 1938 at 10½d. per lb. c.i.f.

Barring any major setback to the general recovery now in progress, indications point to further steady expansion in the demand for our product, and, having nursed our estates during the depression, we stand to benefit accordingly in the better times now at hand.

The report and accounts were unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended February 13, 1937, amounted to £31,348,000, against ordinary expenditure of £11,134,000. After allowing for an increase in Exchequer Balances of £244,055, the operations for the week, as shown below, decreased the gross National Debt by £19,745,000, to approximately £7,948 millions.†

GOLD MARKET

Messrs Samuel Montagu and Company write on February 17, 1937:—
The Bank of England gold reserve against notes amounted to £313,660,661 on February 10, 1937, the same as on February 3rd. Bar gold to the value of about £1,670,000 was available in the open market during the week. Although prices showed a premium over dollar parity at the time of fixing, most of the gold offered was secured for the United States of America. The s.s. "Mongolia," which sailed from Bombay on February 13th, carries gold to the value of about £71,000.

SILVER MARKET

The market has maintained a steady tone, and business has been of a fairly general character. Buying for America has again been in evidence, and there has been some speculative buying, demand being offset by further reselling of holdings and sales on China account. The Indian Bazaars have also resold, besides making a few fresh forward purchases. There is at present no indication of any wide variation from the present level.

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard		Price of Silver New York per ounce .999 fine
			Cash	Two Months

MIDLAND COUNTIES ELECTRIC SUPPLY.—Final dividend 5½ per cent. against 5 per cent., making 8 per cent. for 1936, compared with 7½ per cent. for 1935.

TELEGRAPH CONSTRUCTION AND MAINTENANCE.—Dividends resumed on ordinary shares, with a payment of 7½ per cent. This is the first dividend since 1930, when 7½ per cent. was paid.

MYSTRE GOLD MINING.—Final dividend for 1936, 20 per cent., payable 23rd March, less 2s. 7d. tax, making 27½ per cent., as before.

CHAMPION REEF GOLD MINES OF INDIA.—Final dividend for 1936 27½ per cent. against 30 per cent. payable 31st March, less 2s. 6d. tax, making 45 per cent. against 42½ per cent. Payable on capital enlarged by £65,000.

BRITISH ROPES, LTD.—Dividend for 1936 25 per cent., compared with 12½ per cent.

UNIT TRUST DISTRIBUTIONS

KEYSTONE GOLD DEPOSIT RECEIPTS.—Distributions for half-year to December 31st: first series, 10-7791d. per sub-unit; second series, 7-481d.; third series, 5-889d.

THIRD BRITISH FIXED TRUST.—Coupon payable February 15, 1937, 8-6d. per sub-unit, free of tax.

FIRST PROVISIONAL FIXED TRUST.—Sixth distribution, payable February 20th, at rate of 4d. net per sub-unit.

SECOND BRITISH FIXED TRUST.—A payment of 5½d., free of tax, on coupon No. 9, will be made for half-year to February 14th.

SELECTIVE FIXED TRUST SERIES "B."—Distribution of 5-9036d. net per sub-unit for period July 20, 1936, to January 16, 1937, against 4-8890d. for same period last year.

INVESTORS SECOND GENERAL TRUST.—Third distribution (1st March) 1½d. net, payable on sub-units issued up to 29th January.

BRITISH EMPIRE FIXED TRUST.—Half-yearly distribution on series "B." for half-year to 29th January, 1937, of 3-6887d. net, on 1st March, 1937.

BANK INSURANCE AND FINANCIAL SHARES TRUST.—Income distribution 9½d. per unit, free of income tax, for half-year to December 31, 1936. A credit balance of 98284d. per unit is carried forward. During the half-year the price of the units appreciated from 18s. 6d. to 19s. 6d. At 19s. 3d. the yield is 4½ 1/8 per cent.

SHORTER COMPANY COMMENTS

(Continued from page 431)

PEARL ASSURANCE COMPANY, LTD.—For 1936 a reversionary bonus is declared of £2 on each £100 assured on all policies in the ordinary branch entitled to participate in full profits. £758,904 allocated as bonus to policyholders in the Industrial Branch.

CHRYSLER CORPORATION.—Net profits for 1936 of \$62,110,000 (equal to \$14-25 per share) were the highest in the company's history. This compares with \$34,976,000 for 1935 equal to \$8-07 per share. First quarter's dividend of \$1-50, against \$1-00 a year ago. Common stock dividends for 1936, \$52,190,000, compared with \$8,665,000 for 1935.

ELECTROLUX CORPORATION.—Net profit for 1936 was \$3,025,688-39 as compared with \$2,807,804-48. The net profit for the fourth quarter ended December 31, 1936, was \$834,356-18, against \$818,193-95 for the corresponding quarter in 1935.

JOHN BARKER & CO., LTD.—Net profit, £390,201, for year to January 31, 1937, after all expenses and debenture interest. Balance-ordinary dividend of 10 per cent., making 15 per cent., as before, £150,000 to rebuilding and modernisation reserve—£10,000 to employees' pension and benevolent fund—£50,000 to be written off fixtures, plant, etc., £191,868 carried forward, against £223,791 brought in. Proposed to apply £150,000 from rebuilding and modernisation reserve to reduce book value of properties involved in rebuilding.

MANCHESTER SHIP CANAL.—Ordinary dividend maintained at 1½ per cent., £36,204 placed to contingencies and repairs reserve, against £35,000; £31,951 carried forward, compared with £32,792.

MARGATE ESTATES COMPANY, LTD.—Net profit for year to September 30, 1936, £20,449, compared with £18,513. Ordinary dividend raised from 7½ per cent. to 8 per cent. Carry forward, £2,968. Total assets, £637,193, compared with £583,904 on September 30, 1935.

THE BRADFORD DYERS' ASSOCIATION, LTD.—Accounts for 1936, show profit after £153,605 depreciation, of £38,048. Debenture interest, £58,150; net loss £20,102. After transferring £50,000 from the reserve fund, balance of £40,504 carried forward.

FLEMING REID AND COMPANY, LTD.—Net profit for 1936, £155,479, against £178,694. To general reserve, £25,000, against £35,000; shop insurance fund, £5,000 (same); shop extension and replacement fund, £10,753, against £20,000. Ordinary dividend and bonus, 20 per cent., as before. Carry-forward, £57,755, against £59,676. Proposed to capitalise £175,000. General reserve issue of 175,000 bonus, £1 shares. Total assets £1,755,460, against £1,708,922.

D. H. EVANS AND COMPANY, LTD.—Net profit for year to January 31, 1937, £114,477, against £115,451. Ordinary dividend 30 per cent. (same). To reserve £10,248, against £10,345. Carry-forward raised from £35,309 to £37,480. Proposed to capitalise £599,896 of £822,505 of reserve. Total assets, £1,587,122.

Sales of tin on the London Metal Exchange: 425 tons on Monday, against 325 tons last week; 300 tons on Tuesday, against 225 tons last week; 175 tons on Wednesday, against 175 tons last week. The New York quotation on Wednesday was 51.62½ cents per lb., against 50.65 cents a week ago and 51.10 cents a month ago. Wednesday's official closing quotation in London for standard cash was £231 10s. to £231 15s. per ton, compared with £226 5s. to £226 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,185 tons, an increase of 198 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted

on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £14 6s. per flask of 76 lbs., against £14 6s. a week ago. Chinese antimony was quoted at £67 per ton ex warehouse, the same as last week. Chinese wolfram for "February-March" shipment was quoted at 36s. 6d. to 37s. per unit, c.i.f., compared with 35s. 6d. to 36s. last week.

TEXTILES

COTTON.—**MANCHESTER.**—Although there has been less activity in the Manchester market, the undercurrent of demand has continued extensive, and despite many difficulties in arranging prices and delivery dates, an encouraging turnover has taken place. Spinners and manufacturers do not expect that trade can continue for an indefinite period on the scale experienced during January. Producers remain in a strong enough position to demand profitable prices. Demand for cotton has somewhat fallen off, and owing to the uncertain outlook, speculative interest remains dormant. Since the beginning of the month comparatively little "loan" cotton has been released in the United States, and the opinion is held that the conditions will have to be more favourable before there can be an increase in sales. A certain amount of uneasiness has arisen owing to Mr Wallace, the U.S. Secretary for Agriculture, making a speech in which he referred to the "ever normal granary" system. The intention seems to be to create a reserve of cotton in big yield years and release it in small production years.

Although buying of piece goods has been more irregular than recently, some fairly substantial contracts have been arranged. Varied reports have been received concerning the turnover for India. Some merchants are complaining that the prices ruling in the bazaars are relatively poor. Most of the bids for Calcutta have been disappointing, but scattered sales have taken place. Fair lines have been booked for Karachi, while fancies of various kinds have been wanted for Bombay and the up-country districts. Despite heavy purchases for several weeks in dyed fabrics for Java, further orders have been reported. Moderate transactions have taken place for the Straits Settlements, Egypt and South America. There has been more activity in dress materials and heavier goods for the Empire markets, especially South Africa. There has been plenty of demand for the home trade and some producers have been able to extend their order lists.

Demand in American yarns has revived and spinners have had no difficulty in selling their output. Some users have been prepared to pay a premium for quick delivery of certain qualities. In the Egyptian section the price maintenance scheme, on a legal basis, will operate from March 1st. The general demand for Egyptian yarns has continued healthier and sales have increased.

WOOL.—**BRADFORD.**—There has been a sharp reaction in the wool trade. The position differs materially from that obtaining towards the end of last year, when expanding markets lifted prices for the raw material to a level not known for many years. The climax was reached when Japan resumed buying in Sydney with the opening of the auctions early in January, competition from that section being such that prices were lifted to an unjustified level. After the first flush of buying had passed, Japanese buyers slackened their bidding, and reduced limits, the result being that for several weeks the market was very irregular at all Australian selling centres. On the average, prices are now 10 per cent. below the highest point of last January, with definitely limited competition. The result is that at consuming centres like Bradford a totally different spirit obtains compared with the latter half of last year; in fact, there is practically no market at all at the present time, everybody being concerned regarding the future.

There is very little new business passing, and prices are tending downwards. While 39d. was obtained for warp 64's tops early in the year, these could be bought to-day at 36d. Average 64's have been sold as low as 34d. Crossbreds too are irregular, with decidedly less turnover. At the same time wool is selling well overseas, and considerably above what can be made in Yorkshire for tops or yarns. The tendency throughout the whole market is in favour of the buyer, although we cannot see any justification for any serious setback. Stocks nowhere are heavy, and the outlook for the industry seems still good.

GRAIN MARKETS

WHEAT.—After a quiet week, prices closed on Wednesday a shade below the previous week's level. Germany was again the principal buyer in the early part of the period under review, but Antwerp purchasers were also in the market for nearby Plate wheat. Italy has apparently ceased to operate for the time being.

On Wednesday last, "May" futures were quoted in Chicago at 135½ cents per bushel, against 135½ cents the week before and 130½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 52s. per 496 lbs., against 52s. 3d. a week ago; No. 2 Northern Manitoba, ex ship, 50s. 9d., against 51s. a week ago. According to *The Corn Trade News*, total shipments of wheat and flour last week totalled 1,777,000 quarters, against 1,866,000 quarters in the previous week and 1,242,000 quarters in the corresponding week a year ago.

FLOUR.—Both imported and home milled flour have been in quiet request, with prices unchanged on the week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 40s. per 280 lbs., against 40s. a week ago; delivered inner London, 39s. 6d., as compared with 39s. 6d. a week ago. Manitoba patents, ex store, 39s. 6d. to 41s., against 39s. to 40s. 6d. a week ago. Australian, ex store, 32s. 6d. to 33s., against 32s. 6d. to 33s. last week.

BARLEY.—Imported feeding barley is in quiet demand, but prices remain firm. Best samples of English malting barley are scarce. "May" futures were quoted at 83½ cents per bushel in Winnipeg on Wednesday, against 81½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed," at farm, 34s. to 36s., as against 34s. to 36s. a week ago; "English malting," at farm, 36s. to 45s., against 36s. to 45s. last week. Californian (new), ex ship, 54s. 6d., against 54s. 6d. last week.

Chilean, brewing (new), ex ship, 44s. 9d. to 50s., against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "May" futures were quoted at 50½ cents a bushel in Chicago, against 51½ cents a week ago and 51½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 25s. to 26s. per 336 lbs., against 24s. to 25s. a week ago; "English White," at farm, 25s. to 26s., against 24s. to 25s. a week earlier; mixed Canadian seed (Vancouver), landed, 23s. 3d. per 320 lbs., compared with 23s. 3d. last week.

MAIZE.—Following the rise reported last week, prices have remained firm and sales have been substantial. "May" futures were quoted on Wednesday at 106 cents per bushel in Chicago, against 107½ cents a week ago and 107½ cents last month. Quotations in London, Wednesday: "Plate," landed, 25s. 6d. per 480 lbs., compared with 25s. 6d. a week ago; "Plate," ex ship, 24s. 6d., as against 24s. 6d. a week ago; "Plate," "February," 25s., as against 25s. a week ago; yellow maize meal, ex wharf, was quoted at £6 15s. per ton, as against £6 12s. 6d. to £6 17s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Feb. 19, 1936	Dec. 30, 1936	Feb. 10, 1937	Feb. 17, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82½	84½	83½	129	128½	127
Chicago (No. 2, Winter) —Cents per 60 lb.	98½	101½	98½	135½	135½	135½

The visible supply of wheat in Canada amounts to 94,927,000 bushels, against 97,520,000 bushels last week, and 123,550,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933-34 to 1936-37:—

	1933-1934	1934-1935	1935-1936	1936-1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to February 13	343,621	352,111	335,649	175,140
24 weeks to February 13	7,493,526	9,194,243	9,238,827	6,853,430
Average price of English wheat per cwt.	s. d. 4 5	s. d. 4 8	s. d. 6 5	s. d. 9 0

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.

February 6, 1937	168,810	216,708	56,494	9 3	10 3	8 4
February 13, 1937	175,140	153,166	64,626	9 0	9 10	8 3

OTHER FOODS

BACON.—No change was made in the official quotations last week-end and the market has had a steadier tone. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 90s.; Canadian, 77s.; Danish, 86s., against 86s. to 90s., 77s. and 86s. last week. Arrivals in London last week included: Danish, 13,297 bales; Canadian, 7,175; Dutch, 2,102; Lithuanian, 1,217; and Polish, 2,676; as against 13,272, 7,484, 2,296, 1,334 and 2,388 bales, respectively, in the previous week.

BUTTER.—The market has been rather slow, with prices slightly easier. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 84s.; Australian, choicest salted, 84s.; Danish, 120s.; compared with 86s., 86s., and 122s., respectively, a week ago.

CHEESE.—The market has been quietly steady this week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 86s. to 88s.; Canadian, finest coloured, 71s. to 72s.; and New Zealand, finest coloured, 52s.; against 86s. to 88s., 72s. to 51s., to 51s. 6d., respectively, a week ago.

COCOA.—The spot quotation in New York on Wednesday was 10½ cents per lb., as against 10½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, March-April, was quoted at 46s. 6d. per 50 kilos, c.i.f. Continent, against 47s. 6d. for February-April a week ago. Last week's movements of cocoa in London were as follows: Landed, 15,992 bags; delivered, for home consumption, 16,475 bags; exported, 114 bags; stocks, 139,333 bags, against 132,611 bags a year ago.

COFFEE.—The spot markets in London and New York have again been steady. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week and 9 cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 84 cwt.; delivered, for home consumption, 137 cwt.; exports, 4,147 cwt.; stocks, 3,639 cwt., against 12,070 a year ago. Central and other South American: landed, 6,007 cwt.; delivered, for home consumption, 2,498 cwt.; exported, 2,210 cwt.; stocks, 63,958 cwt., against 69,146 last year. Other kinds: landed, 9,498 cwt.; delivered, for home consumption, 4,963 cwt.; exported, 1,497 cwt.; stocks, 114,831 cwt., against 136,377 last year.

EGGS.—Prices scored a sharp advance this week, owing to a considerable reduction in imported supplies. At Smithfield, on Wednesday, English (ordinary packing, Grade 1; about 15-15½ lb.) realised 14s. to 15s. per 120, as against 13s. to 13s. 6d. last week; while Danish (15½ lb.) made 10s. 9d. to 11s. 3d., as against 9s. 3d. to 9s. 6d. last week.

FRUIT.—With rather better weather, business at Covent Garden has shown some improvement, states *The Fruitgrower*. Prices, however, remain moderate generally. Apples are in steady demand, but with heavier supplies of imported, prices remain low. Pears continue to meet a steady inquiry, but are also easier on heavier arrivals of South African. English hothouse grapes are limited to a few Colmar, which are worth from 2s. to 4s. per lb. South African grapes are now a prominent feature. South

African peaches, although of fine condition and colour, are not selling too well; plums, however, encounter a consistent demand. Oranges are doing rather better, with all grades of Jaffa and Spanish a point firmer. Lemons are also inclined dearer, but grapefruit is a slow item, with prices moderate.

MEAT.—Business at Smithfield was generally slow, except for fresh mutton and lamb, and prices were lower in certain instances. On Wednesday last, Argentine chilled hind-quarters were quoted at 3s. 10d. to 4s. 2d. per 8 lbs., as compared with 4s. to 4s. 4d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,917 tons, an increase of 3,307 tons on the corresponding week last year. Beef and veal accounted for 5,241 tons, mutton and lamb 2,991 tons, and pork and bacon 1,004 tons, as compared with 3,290, 1,878 and 831 tons, respectively, in the same week of 1935.

PEPPER.—On Wednesday, Singapore white Muntok, spot, was quoted at 6d. per lb. in bond, against 6d. per lb. a week earlier. Black Lampung, spot, in bond, was quoted at 3½d. per lb., sellers, compared with 3½d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, nil; delivered, 2 tons; stocks, 1,766 against 1,600 last year. White, landed, 33 tons; delivered, 70; stocks, 11,765, compared with 13,096 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 10s. 3d. per cwt. a week ago. February-March in singles to Continent and U.K., was quoted at 9s. 3d. per cwt., against 9s. 4½d. last week. Movements in London last week were as follows: Landed, 45 tons; delivered, 106; stocks, 1,179 tons, against 2,224 a year ago.

SUGAR.—The markets in London and New York were steady this week. The spot price in New York on Wednesday was 3.55 cents per lb. as compared with 3.55 cents per lb. last week and 3.75 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "March" delivery at 6s. 1½d. to 6s. 1½d., against 6s. 0½d. to 6s. 0½d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 3,877 tons, against 3,526 in the previous week and 21,603 in the same week of 1936; delivered, 15,419 tons, against 14,618 and 14,860 tons respectively; stocks, 228,077 tons, against 239,619 and 274,481 tons, respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mining Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
Feb. 13, 1936	13-24	13-10	14-15	10-96	10-61	11-92	13-23
Jan. 7, 1937	12-82	12-66	15-14	11-87	10-64	12-12	13-31
Jan. 14, "	13-12	12-85	15-42	11-75	10-71	12-21	13-53
Jan. 21, "	13-47	13-26	15-58	12-41	11-68	12-31	13-83
Jan. 28, "	13-77	12-49	15-92	12-60	11-42	12-69	14-18
Feb. 4, "	13-63	13-38	15-78	13-22	11-23	12-68	14-06
Feb. 11, "	13-72	13-73	15-87	12-59	11-29	13-00	14-16

prices to be reported. Oilcakes are in good demand and are a satisfactory feature.

RUBBER.—After the settlement of the strike among the General Motors operatives, the rubber market scored a fresh advance at the end of last week. Quiet conditions subsequently prevailed and London quotations reacted in sympathy with New York. The cash price accordingly closed on Wednesday only $\frac{1}{8}$ d. above the previous week's level. The spot

price in New York on Wednesday was 21 $\frac{1}{8}$ cents per lb., compared with 21 $\frac{1}{8}$ cents per lb. a week ago and 21 $\frac{1}{8}$ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 10 $\frac{1}{2}$ d. per lb., as against 10 $\frac{1}{2}$ d. on the corresponding day last week. In forward positions, business has been done at 10 $\frac{1}{2}$ d. to 10 $\frac{3}{4}$ d. for March shipment, as against 10 $\frac{1}{2}$ d. a week ago. Stocks in London and Liverpool at the end of last week totalled 65,861 tons, against 68,555 tons a week earlier. A year ago stocks amounted to 159,559 tons.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM: LONDON, February 17th

The prices in the following are revised with the assistance of an eminent firm in each department

CEREALS AND MEAT				POTATOES—				WOOL—			
GRAIN, Etc.—				English King Edward				English Southdown, greasy, per lb.			
Wheat—				per cwt.				Lincoln hog, washed			
No. 2, N. Man. 496 lb.				0 0 9 6				Queensland, scd. super cmbg.			
Eng. Gaz. av., per cwt.				0 31				N.S.W. greasy, super cmbg.			
Barley, Eng. Gaz. av. ...				0 6				N.Z., grey, half-bred 50-56			
Oats, ...				0 81				Crossbred 40-44

The Times, urges the need to turn the nation in peace on to a war footing, with a General Staff for the home front in peace and war. Such civil measures on top of re-armament, though necessary, would mean an added burden. However great the country's financial resources may be, both for taxation and for loans, our defence works cannot be borrowed from posterity. We must pay high prices and wages to get people to make them, rather than to meet civil demand.

Thus, our new expenditure on arms—at thrice the cost of those we maintained in 1934-35—will certainly unleash a vicious spiral and lead to a crash, unless immediate steps are taken to control, by comprehensive policy, the pace of re-armament. If we are to re-arm for an isolationist foreign policy, the reckoning will be more certain and more swift. Isolation works both ways; the Powers from whom we are isolated will also put on a spurt in the arms race; and then, in proportion to the speed-up of our unproductive activities, so will the reckoning be worse. The strain of diverting the peace economy to a war footing will bring breaking-point nearer, according as the unproductive element battens, cancer-like, on the productive system.

It is for this reason that some international economic agreement is to-day imperative. Indeed, such agreement has by now become the condition precedent of any international arms agreement; for in many countries, our own included, employment and production have come to depend to an undue extent on Government orders for

arms. The demobilisation of war industries, and their diversion to a peace footing, will raise problems as acute as those raised in a peace-time economy by the outbreak of war. It is encouraging to note in all countries the growing realisation that international trade must be expanded, if ever the slack of disbanded war industries is to be taken up and grave social upheavals avoided. *The Times* suggests that new methods must be found to increase our exports, while protective measures are retained. It is amusing to observe to what lengths of circumbulation the protectionist mind is being driven in its attempts both to maintain tariffs and to jump over them, to retain import quotas and to circumvent them. But, as Mr S. M. BRUCE urged this week, we must buttress peace by *freeing* trade. The Western nations are frantically piling the Pelion of armaments on the Ossa of protectionism. The only safeguard is to broaden the basis of their commerce.

There is still a way out from the disastrous course into which a re-arming world has rushed; and the British Government is best fitted to show it. Let us negotiate agreements for political security and for the removal of trade barriers with all those countries who will reciprocate. Security against aggression will restore confidence, and expanding trade will furnish a timely buffer to the impact of war finance. Then we can really secure both peace and plenty—which we can never do by a semi-mobilisation of our resources for a hypothetical war.

Non-Intervention at Last

THE London Committee's long and hitherto mostly barren labours have at last borne some fruit in the general acceptance and implementation of a scheme for extending the principles of non-intervention in Spain from war materials to volunteers. As from midnight last Saturday, February 20th, a ban upon the departure of any further volunteers to Spain came into effect in all the countries represented on the Committee. Several of the States are already reported to be taking the requisite legislative or administrative measures for extending the ban to their own nationals. So far, implementation of the agreement is solely dependent on the national action of each of the countries concerned. If the non-intervention plan were to be left at that, it would hardly be worth the paper it was written on, in view of the record of certain Governments in respect of the fulfilment of their existing pledges not to supply the Spanish combatants with arms. This national action is, however, to be supplemented by international control round the land frontiers as well as the coasts of Spain; and these international measures on the spot are to come into force on the night of March 6th.

The naval arrangements for patrolling the Spanish coasts have not been so difficult to work out. The sectors in the insurgents' hands will be patrolled by the British, French and Russian navies, and those in the legitimists' hands by the Italian and German navies. It is possible that some awkward questions might still arise if, as a result of the ebb and flow of the Spanish civil war, some port were to fall into the hands of the Spanish *protégés* of an ex-interventionist foreign Power which had been assigned that particular sector to patrol just because its own Spanish friends were *not* in occupation there. Such difficulties, however, will be capable of adjustment if all the parties to the agreement act with the bare minimum of good faith.

The problem of supervising the land frontiers of Spain has been more delicate. Here the British and French Governments deserve praise—the French for having put the perverse kind of national pride in their pocket in

consenting to allow foreign observers on French territory, and the British for having induced the Portuguese to accept—not, indeed, an international control on the same footing as the French, but a British collaboration in a Portuguese national control which will probably in practice amount to the same thing.

This Anglo-Portuguese agreement has surmounted the obstacle of Portuguese intransigence, which has hitherto been one of the chief causes of the delay and obstruction which have dogged the London Committee's steps. It is still something of a mystery how far Portugal has been obstructing on her own initiative and how far she has been serving as the cat's-paw of Italy and Germany. Ideologies make strange bedfellows. The present Fascist masters of Portugal are so terrified at the possibility of the Spanish Fascists suffering defeat that they have thrown themselves into the arms of the two Powers that have the most keenly whetted appetites for colonial acquisitions. It is an odd way of safeguarding the national independence of Portugal and the integrity of her colonial empire. No doubt it is a perception of the dangers of this course that has moved the Portuguese Government to veer round again towards Portugal's oldest ally.

The thirteenth hour is a melancholy time of day; and the non-intervention plan has so palpably come into effect just too late, instead of just in time, that it is impossible to greet it with any great enthusiasm. In any case, the delay has added enormously to the agony of Spain and her people. And the sceptics will wonder whether this plan would ever have been allowed to come into force at all if it had not been calculated that the moment when it could have proved effective had already passed. The working of the London Committee over the Spanish civil war has, in fact, borne a most unpleasant resemblance to the working of the League of Nations over the Italian crime against Abyssinia. In 1935 there was one aggressor; in 1936 a number of aggressors intent upon exploiting the Spanish tragedy to their own advantage. On the other hand, there has been a band of

pacifically-minded Powers which have had no temptation to commit aggression on their own account, but also hesitated to cross an aggressive neighbour's path for the sake of rescuing his victim and upholding international law. In these circumstances, the professedly respectable Powers appear to have stumbled on a method of compounding the aggressors' misdeeds without officially losing face.

On the one hand, if we find that the new arrangements about non-intervention in Spain are on the whole *bona fide*, we shall be inclined to view them as a valuable precedent. On the other hand, if they prove to be a collusive and face-saving cloak for international penetration-without-tears, history will record that the French and British Governments preferred to leave the Spanish Government, as they left the Abyssinian Government, to its fate rather than come into collision with the aggressor.

In this latter case, we may ask ourselves whether the same technique would work if the criminal's victim happened to be some country in whose fate the police Powers were genuinely concerned for their own selfish reasons. For instance, would the Russian Government show itself so accommodating if HERR HITLER had been doing for the German minority in Czechoslovakia what he has been doing in Spain for GENERAL FRANCO? Or would the French and British Governments be content to bolt the door of their neighbour's house after the burglar had made his entry, supposing that the scene of

the crime were not Spain but Belgium, and that German "volunteers" had been streaming across the Meuse to fight the battles of a Flemish or Rexist insurrection?

The answer raises many complex considerations. One is that few nations have fully realised that insistence on the rule of law in international affairs is in their own most vital interest; and even if they are dimly perceiving it, they have little confidence that other nations appreciate and will act on this fundamental fact. Hence all this hesitation. And when there is lack of confidence it is easy to find excuses for the face-saving technique in the circumstances of the victim himself—such as the excesses on both sides of the Spanish struggle and the unexpectedly sudden collapse of Abyssinia. The moral is that neither Abyssinia nor Spain provides any precedent for forecasting what is likely to happen if the gangsters transfer their beat one stage nearer still, north of the Pyrenees, Alps or Dolomites. Moreover, if international quarantine on Spain works at all, it may serve to revive some small measure of confidence in collective action. A century hence, posterity may look back on the Abyssinian and Spanish episodes of the nineteen-thirties as the peak in the ascending curve of Fascist power-politics. If that is to be the verdict of history, it must be the business of European democratic Governments to guard against diplomacy by *agents provocateurs* and politics by penetration. If Europe learns that lesson from Spain, the Spanish tragedy and the farce of non-intervention will not have been fruitless.

The Uses of Advertisement—II

Advertising and the Public

IN the first of these articles we discovered that business men spend on all forms of advertising eighty-odd million pounds a year. Of this about two-fifths is spent on advertising in the newspapers, the remainder being devoted to the hoardings, to window display and to other forms of publicity.

We have still to find exactly who spends this money, and with what effect. Not all industries advertise, and those which do so employ a great variety of methods and technique. Hence the total bill for advertising is not spread out equally over all businesses; nor is advertising expenditure uniform among businesses of the same kind. A comparison of the estimated figures for 1931 and 1935 (supplied to us by the London Press Exchange) shows how press advertising by certain large industries has increased in recent times:—

SUMS SPENT ON DISPLAY ADVERTISEMENT OF BRANDED GOODS IN THE PRESS		
	1931	1935
Food and Drink	3,291,030	3,947,663
Household Equipment	2,207,972	2,698,750
Patent Medicines	1,737,193	2,559,750
Soaps and Toilet	1,711,067	2,405,200
Tobacco and Cigarettes	1,514,861	1,517,295
Motor-cars and Accessories	1,253,352	1,527,036
Clothes	862,945	1,008,947
Miscellaneous	721,449	1,799,760

There was no great change in the distribution of spending among the different industries between these two dates, although there was a general increase in expenditure. In both years, firms advertising food and drink, household equipment, patent medicines, soaps and toilet requisites spent the most money. The chart overleaf shows how different groups of advertisers contributed to the total in 1931 and in 1935.

The same story is told by the actual number of firms engaged in advertising various products. In 1935, some 739 firms were engaged in advertising foodstuffs in the Press. Patent medicines were brought to our notice by

557 firms, beauty preparations by 190, and beer and stout by 114.

In most instances, however, a comparatively few very big advertisers predominated and spent most of the money. Of the 81 firms advertising confectionery, two were responsible for 50 per cent. of the expenditure on display advertising in newspapers. Three tobacco companies spent 35 per cent. of the total amount paid by 80 firms to advertise cigarettes. Similarly, in the case of beer and stout, nearly half (49 per cent.) of the total expenditure was spent by 3 out of 114 concerns.

It would not be true, however, to say that every much-advertised commodity was mainly popularised by a few big concerns. Of the 103 advertisers of wireless sets, only two firms spent more than 5 per cent. of the total amount; and only 3 manufacturers spent more than 10 per cent. of the total cost of advertising motor cars.

Moreover, not all advertisement is alike. The figures we have been examining relate to branded goods display advertising in newspapers, and cover only about one-fifth of the total advertising bill. As we saw in the first of these articles, postal advertising, window displays and posters are very widely used to persuade us of our wants and needs, and to tell us how best they can be satisfied.

The purposes of all these methods of advertisement are similar; but they differ in the way in which they set about their task. All advertising aims to inform and to persuade: to tell the world what there is for sale and to persuade people to buy it. But while some advertisements are almost entirely informative, others are nearly all persuasion.

The ways of an advertiser with his public are familiar. He always begins by telling us what he has to sell. He may stop there, with a curt notice that "Messrs Smith will sell a consignment of soap." But he may go on to "brand" the soap he has for sale and urge us to buy. "Smith's Soap." More enthusiastically, he may present

his soap to us as the only soap—"Buy Smith's Super Soap and Refuse all Others." In other words, he may be content to sell soap; or he may want to sell more soap than other people; or he may be eager to sell *all* the soap, to create a monopoly.

If his aim is to sell all the soap, he will seek to bend us to his will. Dozens of skilled experts will analyse the possible reactions of our secret fears and hidden longings to the problem of soap; and we will be shocked, amused, alarmed or inspired in the cause of Smith's Super Soap.

These quasi-psychological appeals and warnings have become almost a part of the air we breathe. There is the single arresting phrase: "Don't meet your wife" before which we halt to read on, "till you have used Smith's Super Soap." There is the pseudo-scientific warning, "Bacteria kill thousands daily, use Smith's Super Soap"; the social threat, "Cleanliness means popularity, use Smith's Super Soap"; the appeal to snobbery, "Lady Blimp uses Smith's Super Soap, why don't you?"; and the appeal to our ambition, made in a pictorial series of the man who used Smith's Super Soap and became chairman of a public company.

PROPORTION OF TOTAL EXPENDITURE ON DISPLAY ADVERTISEMENTS OF BRANDED GOODS, ATTACHABLE TO VARIOUS GROUPS OF INDUSTRIES

Thus from grave to gay the advertiser pursues our income. He splits our sides with a cartoon, and opens our mouths with alarm. He repeats himself, over and over again, until we know him and the wares he has to sell; we see his slogans everywhere, and we learn them by heart, "More hope in Smith's Soap." With ceaseless repetition he wages his campaign, and most of us can bear witness of his success.

But these are the more spectacular forms of advertisement. The basis of all advertising is information, and a large amount of advertising is still purely informative. If the object of advertisement is to bring to our notice the things which we may want and may need, informative advertising is a necessary and unexceptionable function of modern life. There are so many people with so many requirements that contacts must be deliberately made between supply and demand.

It is, however, the more complex forms of advertising which engage, perhaps, a disproportionate amount of our attention. Actually, these more spectacular forms of advertising are limited to a much narrower range of industries than is generally supposed. We have already seen the preponderance in "display" of food and drink, patent medicines, household equipment and toilet requisites; and we know from experience the importance of only a few sorts of articles in the advertisements we see.

In fact, there would appear to be certain well-defined conditions without which elaborate advertising is impracticable and uneconomic. There must be a name to begin with; there must be a reasonably elastic demand for the article advertised; there must be a considerable degree of standardisation, and considerable economies in increased output must be possible. No advertiser can command an infinitely expanding market, of course; there are definite limits to the amount of money we have available at any time to spend on the sort of things he has to sell. But he will be satisfied if by his advertising he can hold a market already big enough to make large-scale economies feasible; and he will try to capture year by year a steadily increasing demand, as shops and houses grow in number.

Only a limited number of articles fulfil these conditions. Many of these are largely luxuries or semi-luxuries. Is there a danger that producers of such goods may not be content merely to tell the consumer what there is to buy, but will endeavour to persuade him that there are no satisfactory substitutes for the advertiser's goods—i.e. to create a monopoly? Such a danger may be inherent in the sale of branded goods, as such; for every *brand* is a monopoly of the firm which has the right to use it. But responsible newspapers to-day take an increasingly serious view of their duties as media for advertising. Their ultimate power of veto of advertisements which endeavour—explicitly or implicitly—to decry the products of the advertisers' competitors is a weapon which is none the less effective because the occasions for its use are now, happily, rare. Advertisers and their expert advisers have learned, indeed, by experience that derogatory advertising does not pay, in the long run; and the same condition applies to advertising which makes extravagant claims, e.g. for medicinal products, or otherwise offends public canons of truth or good taste. Recognition of the implications of this fact is the consumer's best protection against unscrupulous and extreme forms of advertising. It has also played a part in the development of "collective" advertising, whose aim is usually to develop a habit, to change a taste or to speak for an industry as a whole. In 1931, £55,341 was spent on collective advertising; in 1935 the figure was £342,330.

The ultimate safeguard for the consumer against the least desirable forms of advertising is the fact that he holds the national purse-strings. Public opinion, the Press and the advertising industry itself may need to be constantly on guard against the type of advertising which avowedly makes an appeal to ignoble or anti-social instincts, like ignorance or cupidity. In some instances, the drawing of the line of permissibility may involve a nice problem. Whether advertisers, for example, should be permitted to make unqualified statements in praise of products whose market is wide, but whose social merits are contested by a substantial body of opinion, is a question to which only an empirical answer may, at present, be possible. The same remark may apply to advertisements of products whose market depends on a popular fashion like the present vogue of a *svelte* feminine figure; for the ultimate effect on public health of such a fashion may be debatable.

On the whole, advertisers have learned that a successful business must be based on a continuing market and that the best advertisement of all is a satisfied customer. The larger an advertiser's allocation, the stronger is his realisation that publicity may sell an inferior article once—but once is not enough. The artistic standards and technique of the advertising industry have greatly improved in recent years. On the whole, the standard of truth in advertising has similarly risen as the standard of living has improved and the public has become more discriminating.

The Great Cities of Britain—IV

Commercial Bristol

"BRISTOL (Brigstow, Briston, Bristow, Bristole)," the Encyclopædia Britannica remarks "is one of the best examples of a town that has owed its greatness entirely to trade." And, indeed, hidden in a little bowl formed by the confluence of the Avon and the Frome, surrounded on all sides by substantial hills, and eight miles from the estuary of the Severn, it was little fitted for anything else before the advent of modern communications. But it would be hard to imagine a better position for a port.

The first details known about Bristol concern its trade: in the reign of CANUTE the town was exporting English wool, and, rather surprisingly, English slaves to Ireland. The connection seems to have flourished in succeeding centuries almost to the extent of making Dublin a colony, administered by emigrant Bristolians. With the great producing area of the Cotswolds nearby, the town could then open an additional trade in wool with the Baltic, and start as well importing lime from France, not long after the Conquest. Later, one BLANKET set up looms and founded a prosperous cloth trade. WILLIAM CANYNGE, the greatest of the fifteenth century merchants, and five times mayor, could rebuild St. Mary Redcliffe out of his own pocket. The Merchant Venturers pushed the boundaries of Bristol's commerce as far as the Levant. The CABOTS were not the only men to start from Bristol on voyages of exploration. The Canaries and the Spanish Colonies in America became used to the sight of Bristol ships.

When England started on her Colonial career Bristol, while keeping up her older connections, took no small part. Many of her capitalists had large tobacco and sugar plantations in Virginia, the Carolinas and the West Indies. Her ships did a thriving triangular trade carrying goods to Africa, exchanging them for slaves, and exchanging the slaves for sugar in the West Indies and tobacco in Virginia. Despite the calamities of the Civil War and London's growing power, Bristol by the eighteenth century, with a population of 40,000, was claiming to be the second city of the country. Of this period it is recorded that "Bristol had a good deal of style and even grandeur in its social life." A certain rich brewage, as MACAULAY termed it, was current in Bristol: it was called milk not only because it was as common here as milk in other places but "because the inhabitants esteem it as pleasant, wholesome and nourishing." BURKE represented the city in Parliament. CHATTERTON and SOUTHEY were born here. And though the town was "small, densely populated and dirty" the influence of her energetic community of Quakers, and of her Methodists, helped to relieve the ordinary squalor of Georgian town-life. Its citizens, then as now, were proud of their two mottoes: "No age, nor time, can wear out well-worn fame" (CANYNGE's epitaph), and "Ship-shape and Bristol fashion."

But at the beginning of last century Bristol faced the great crisis of her history: the wool trade was declining fast, due to the growth of Irish competition and the emigration of Industry to the north; the slave trade, partly owing to the efforts of Bristol's own humani-

tarians, was abolished; Liverpool, once its cotton trade was established, showed itself an equally or more convenient port; and the local vested interests, banded together in sleepy monopolies, barred the way to rapid adaptation. It seemed possible that Bristol would go the way of Winchester or Wisbech: small wonder that Bristol people went radical, and showed their representatives with some energy, in the great riots of 1831, that they wanted reform, and intended to get it.

Since then the history of Bristol has been the history of her triumph over the impending danger. The port, now municipally owned, has continually been increased and repeatedly re-equipped, and it now extends to the mouth of the Avon

and along the banks of the Severn. Despite Bristol's pioneer efforts in the building of Atlantic steamships, the size of modern ships prevents them from approaching closer than Avonmouth, though it is still no uncommon sight to see the masts of substantial tramp steamers rising in the centre of the old city. Bristol still imports tobacco, cocoa and sugar in great quantities (the port contributes about £30 millions in excise annually) and has added grain, fruit, timber, hides, cattle and much else. Grain, in particular, accounts for 37 per cent. of the total traffic of the port and about one-tenth of the total grain imports of the country. Last year the registered tonnage entering the port reached a record figure.

The outstanding development of the last century, however, has been the growth of manufacturing industry. To-day Bristol is said to possess 300 separate industries and 2,000 factories. Some of these, such as the celebrated tobacco and chocolate firms, and the lesser known shipbuilding, flour milling, and soap industries, are a natural and profitable development of her traditional import trade. Others—boots and shoes, smelting, paint and glass, for example—are less firmly rooted in the past, though they all make use of the port for obtaining their raw materials. Yet others—such as engineering and the manufacture of aircraft (now in a state of boom)—are a somewhat newer departure, and one of great interest. The first commercial aircraft factory was established at Bristol.

In a population of 400,000, Bristol has an insured population of about 150,000, and unemployment of about 10 per cent—a figure rather below that of the country as a whole. But prosperity is really greater than this figure would indicate. The proportion of female labour is exceptionally high, and helps to maintain a good family income; and furthermore the city possesses an unusually large number of professional and business men. Again, the great variety of industries and the fact that the port is predominantly concerned with imports have helped to save Bristol from the worst of the depression. Above all, her industries are mainly concerned with cheap luxuries having a stable and nationwide demand, and more or less immune from home or foreign competition. At the bottom of the slump it was the building and engineering trades, proportionately quite a small part of the total industry of the city, that contributed most to the total of unemployment. These

have now recovered, and are likely to remain prosperous for some time. The city's deposits in the Post Office Savings Bank are now second only to those of London; and a recent marketing survey estimated Bristol's purchasing power per head at 13 per cent. above that of the average of the hundred largest towns of the country.

Bristol, therefore, is blessed with a singularly well-balanced economy, and a large share of good fortune. Wool exports declined just when sugar and tobacco grew, and England took to importing agricultural produce just about the same time as shipbuilding moved north. By and large, Bristol has so far maintained almost continuous prosperity; and there are no reasons why that prosperity should diminish. The city possesses an enterprising municipality and an energetic

Development Board. Of the 25,000 houses built since 1919, the Corporation can claim a half. A civic centre is in process of creation: two new arterial roads will reduce the congestion in the centre of the town. Trams are to be replaced by buses, owned jointly by the city and the existing private company. There is a municipal and a military airport. New schools, libraries, clinics and nurseries are being built. The town has a university of its own (where MARSHALL first taught), endowed very largely by the members of the WILLS and FRY families, latest in the long line of Bristol's local benefactors. A social survey, financed locally, is now in course of preparation; it should provide a most interesting account of the success (and failures) of capitalism at its best. It cannot fail to emphasise the adaptability of Bristol's economic life.

British Railway Receipts

THE history of British railway finance since the amalgamations of 1923 falls into three fairly distinct periods. During the first period, from 1923 to 1929, there was a steady, but not in any one year a drastic, fall in gross receipts on each of the four companies' lines, except in 1926, the year of the general strike and the coal stoppage. The adjustments required by changes in traffic during this period, though important, were never of an alarming character. The managements were largely preoccupied, at first with the problems resulting from amalgamation and later with the growing menace of road competition. In the second period, between 1930 and 1932, however, sharp declines in traffic were recorded. As will be seen from the chart on this page, and from the detailed tables on page 501, the reductions in gross receipts in this second period were of quite a different order of magnitude to those of the first. They led to important changes both in the provision of freight services and the level of passenger fares. The third period lasted from 1933 to the present day. The results of 1933 showed that the tide of depression had turned, and there has subsequently been a slow but sure improvement every year, which was more than maintained in 1936. In our more detailed tables, we have selected the figures of gross receipts, etc., for certain key years for closer examination. These years are as follows: 1924, the first year after amalgamation proper; 1929, the last year before the great depression; 1932, the year when railway traffics and receipts reached their lowest point; and the two most recent years, 1935 and 1936.

The extent to which the great railway undertakings of this country are able to adjust themselves to-day to changing conditions may be contrasted with the experience of pre-amalgamation days. In those times, unless falling revenues had been at once offset by some change in services, some reduction in costs, or some alteration in the basis of fares or charges, the smaller undertakings would soon have been threatened with financial ruin. To-day, whole sections of a complex railway system may continue to be worked on a relatively unprofitable basis for a considerable period, till the cumbrous machinery of large-scale adjustment comes into action. Moreover, on many matters of policy the Big Four railways act together. This not infrequently means that the pace is set, not by the company which is most desirous of making a change or most convinced of its efficacy, but rather by the company to whom the wisdom of the change is least obvious, i.e. by the slowest member. Nevertheless, the capacity of the railways to adjust themselves to changing external conditions will ultimately determine their profitability. We propose, therefore, to consider their figures from this special angle.

If the total gross receipts of 1929 be compared with those of 1924 (the figures include both railways proper and ancillary services), it will be seen that while all the companies suffered declines, those of the "Northern"

lines were the more substantial. On the two "Southern" lines, indeed, gross receipts in 1929 were virtually identical with those of 1924, the fall being less than 1 per cent. in each case. During this period the growth of road competition was rapid; for the railways did not enjoy the benefits of any protecting Acts, such as they obtained later. The Road Traffic Act was enacted in 1930 and the Road and Rail Traffic Act in 1933. The "Southern" lines, however, were compensated for the increase of road traffic by the comparative prosperity enjoyed by the South of England; and in the case of the Southern Railway electrification made, and has continued to make, a special contribution to the maintenance of receipts.

TOTAL GROSS RECEIPTS, EXPENDITURE AND NET RECEIPTS ON FOUR GROUP RAILWAYS, 1923-36

In this first period, however, the movement of industry from north to south was an unfavourable factor for the two "Northern" lines. The London, Midland and Scottish receipts showed a total decline of 5.5 per cent. between 1924 and 1929, the corresponding figures for the London and North-Eastern being 2.8 per cent. But these changes are chiefly remarkable for their small size, by comparison with those of the following period. Between 1929 and 1932 the L.N.E.R. suffered a fall in gross receipts of no less than 23.6 per cent. The G.W.R. and the L.M.S. had declines of 21.3 per cent. and 19.8 per cent., respectively, and the Southern a decline of 15.9 per cent. The railways felt the full force of the great depression, and were set a hard task in meeting their difficulties. Finally, recovery has been common to all lines from 1933 to 1936. In the last four years the L.M.S.R. has secured an increase of 11.0 per cent. in

gross receipts, the L.N.E.R. of 10.9 per cent., the Southern of 8.7 per cent. and the G.W.R. of 8.2 per cent.

So much for the course of gross receipts since the time of amalgamation. The data for a similar survey of total expenditure will be found on page 501. The figures bring out the fact that, between 1924 and 1929, the percentage falls in total expenditure in every case exceeded the percentage falls in gross receipts, but not in any substantial proportion. The economies of amalgamation, obviously, were not striking. On the L.M.S.R., for example, a fall of 5.5 per cent. in gross receipts was matched by a fall of 7.5 per cent. in total expenditure. The two "Southern" lines, whose gross receipts remained virtually unchanged between the two years under review, showed falls in total expenditure of only 5.3 per cent. on the G.W.R. and of 3.7 per cent. on the Southern Railway. Their total net receipts thus increased only to a small extent.

The railways, in short, had achieved few large-scale economies up to the eve of the great depression. To what extent can railways rapidly adjust their expenditure in order to cope with falls in gross receipts of the magnitude of those experienced between 1932 and 1929? Their capacity depends upon the extent to which they are dealing, respectively, with passengers or with freight, since opportunities for rapid adjustment are greater in the latter than in the former. Actually, between 1929 and 1932, falls in gross revenues ranged between 23.6 per cent. on the L.N.E.R. and 15.9 per cent. on the Southern. On what scale was total expenditure reduced?

War in the Air

It is a commonplace that the aeroplane has revolutionised both peace and war. In peace, it bids fair before long to put Puck's girdle round the earth in forty minutes. But it is in warfare that the third element becomes supremely important. Within a generation Western peoples have been forced to realise that their society may be more fundamentally, and far more speedily, revolutionised by the military aeroplane than it was when gunpowder first spanned mediæval moats and pulverised city walls.

Quite the most alarming feature of aircraft is the accelerating rate at which they have been, and are being, improved. To-day Glasgow, Liverpool and Cardiff are all within 2½ hours' flight of Kiel by the latest fully-loaded medium bombers; London is within the same time-distance of Milan; Berlin of Paris; and Rome of Marseilles or Munich. The ceiling—the upper limit of effectiveness—of a medium bomber has risen in the last few months to between 22,500 feet and 25,000 feet; while its speed has risen to 250 m.p.h. on the average, and the weight of its bomb-cargo to half a ton. Compared with ten years ago, the single-seater fighter and interceptor machine, fitted with fixed guns firing forward, and perhaps carrying a light bomb rack, accounts for far less of modern air force strength, as the realisation has grown that "the bomber will always get through." It is significant that to-day even the defensive-minded nations—e.g. Britain, France—have increased the percentage of bombers in their air forces at the cost of fighters; so much so that to-day the British Air Force is working to a ratio of about 70 per cent. bombers (including medium bombers and light bomber-fighters), whereas in 1925 the figure was almost reversed at about 30 per cent. It is commonly assumed to-day that the only effective aerial defence against aerial attack is the threat of overwhelming reprisals in kind—a view that is sanctified in our own Government documents and in every Western country.

What are to-day the most likely tactics of air attack and defence? First, it may be taken as axiomatic that no offensive-minded Power will in future stop to declare war before launching surprise knock-out blows at his victim's military, industrial and communications centres. In the air, the Napoleonic element of surprise is magnified in importance to the nth power. Secondly, it may be unpalatably, but equally axiomatically, assumed that

Railways in general, and very large railways in particular, are confronted with peculiar difficulties when traffics and receipts fall substantially, since a large proportion of working costs does not vary with the volume of traffic moved. In the light of this fact, the achievements of the British railways during this period are distinctly creditable to their managements. The fall of 23.6 per cent. in gross receipts on the L.N.E.R., for example, was accompanied by a reduction of no less than 17.9 per cent. in total expenditure. Reductions on the other three lines were 14.4 per cent. on the L.M.S.R., 14.9 per cent. on the G.W.R. and 12.4 per cent. on the Southern.

During the period of recovery gross receipts have risen in every case by more than 8 per cent. But from the shareholders' point of view the eventual results have been disappointing, for expenditure has closely followed receipts. The rise in gross receipts of 11.0 per cent. on the L.M.S. has been matched by a rise of 5.1 per cent. in total expenditure. On the other three lines increases in expenditure have ranged from 7.6 per cent. on the L.N.E.R. to 3.6 per cent. on the Southern and 1.7 per cent. on the G.W.R.

The conclusion strongly suggested by this survey of thirteen momentous years is that although the fruits of railway amalgamation were somewhat delayed, they came most opportunely to the help of all concerned in the great depression. The fruits of recovery, however, have been much less striking, and in every case, net receipts were lower in 1936 than in 1929.

the same offensive-minded Power will, from the outset, be as concerned to strike panic into civil populations and destroy the civil man-power of his victim as he is to annihilate military works and formations. In an article in *The Times* this week Sir William H. Beveridge makes these assumptions in what he terms a logical spirit; and, unwilling though we may be to do so, we must make them too if we are to survive. It is clear from our experience in the last war that an increasing proportion of the fit and skilled population must be retained at home to turn out the complicated material of war; therefore an attacking air force will certainly try to spill the economic life-blood, or else continuously to disorganise the industrial life, of an enemy country. Germany has already guarded against this danger by spacing out the component shops of important factories and equipping them with underground bomb-proof and gas-proof shelters for all employees.

Again, densely populated regions offer the best targets from the air. In the London Transport Area are 9,500,000 persons; docks, alimentary and transport equipment for as many as 18,000,000 people; the principal power stations, flour mills, gas plants, waterworks, railway heads and factories in the South of England; and the largest aggregation of dwellings in the world. Fifty tons of bombs—containing gas, thermit (an incendiary substance which burns so fiercely that water thrown upon it merely explodes as steam), explosives—can be dropped by 100 machines. There will be much waste of explosives; but there will certainly be extensive damage to life and property; and if raiding be continuous, panic may seize the suffering population.

This raises the question of land defence against air attack. The anti-aircraft gun, and much more the range-finder, have been greatly improved in the last two or three years. But the range-finder cannot ensure that, from the time the shell is fired, the air-target will continue to move in the same direction, at the same speed, at the same altitude, and with identical wind direction and velocity. Aircraft will zig-zag in three dimensions; the wind will change; and artillery accuracy diminishes alarmingly with the height of the target. Bombers that come low (i.e. below 5,000 feet) to sight specific objectives—e.g. railway sidings, flour mills, power stations, waterworks, arsenals, shipping in river fairways, docks and wharf equipment—will run great risks

of being hit by pom-pom anti-aircraft guns which spray explosive shells in a wide orbit, like machine-guns. But a thermit bomb on a flour mill, or a high-explosive on a ship near the entrance to a big dock, will be worth it to the attackers: *Paris vaut bien une messe!* Defending aircraft can operate against a veritable attacking armada, close and compact as they cross the frontier. But no one yet knows if the attackers will be as obliging as this; they may come in twos and threes from different points of the compass, on wireless bearings which converge on the objective. Or, if they come as an armada, they will bring their own fighters with them. The latest single-seater fighters are capable of speeds up to 400 m.p.h.; at which accurate sighting—to say nothing of the strain on the pilots' faculties—is almost impossible. Thus, progress tends towards stalemate in aerial combat. The opposing fighters may engage in single combat while the bombers sail on, to the discomfort of the population. We may even have to envisage running engagements between air armadas—the bombers surrounded by their own fighters who first give battle. Then the whole idea of interception will be superseded by tactics for line of battle.

If we presume that the defending fighters can actually intercept the attackers, the latter may lose as much as 40 per cent. of their attacking power; the other 60 per cent. will then be launched against so-called civil defences—artillery, balloon barrages, and anti-gas and anti-fire organisations. Of these, the balloon barrage seems more calculated to act as a barrage against public anxiety than against attacking bombers.

The lesson of the last war, of the Abyssinian campaign and of the desultory fighting over Madrid and Malaga is that an aerial offensive upon specific objectives can cause chaos to the communications and com-

missariat of the victim, even when adequate aerial defence is available. The Great and Lesser Western Powers reckon their first-line machines in thousands; their reserves are as many as twice their first-line strength; and the aircraft themselves are becoming both swifter and larger. Aerial fleets of modern bombers and bomber-fighters are being built, to be launched against navies, military land operations, industrial centres, communications and civil populations. In the modern arms race, and in a literal sense, "the sky's the limit"; and the initial advantage in war will lie with the Power which first launches a surprise aerial offensive.

There are, however, still obvious limitations on the decisive use of the air arm. It may temporarily harry and even paralyse the enemy's military and civil operations; but it cannot occupy, still less hold, territory. Its efficacy is greatest in striking a blow; and therefore greatest in short, sharp conflicts. It has so far failed to provide a method of inflicting immediate and crushing defeat on an equally-matched enemy. Its destructive power bids fair to attain terrible proportions; but that power is as strong on one side as on another; and a ding-dong battering match, ending in the exhaustion of both combatants, spells eventual stalemate in the air. The dislocation of land and maritime communications by aerial bombardment can be minimised by multiplicity of routes, frequent (and secret) variation of journeys, and the organisation of army operations in defined military zones, self-sufficient in forces, munitions and foodstuffs. However terrible in its immediate effects, the terror that flies by day and by night is still an auxiliary force. It will aid military decisions in a campaign; but the decision of a campaign itself is likely for some time to come to rest with armies, navies, and the economic resources that maintain them.

Notes of the Week

Pointers to Freer Trade.—Addressing the Birmingham Chamber of Commerce at the British Industries Fair on Wednesday, the High Commissioner for Australia, Mr S. M. Bruce, reminded his hearers that Britain's financial and commercial strength in the past, which had made her a Great Power, had been based on the export trade. A dangerous position in this country had been reached when manufacturers had to turn away export orders, or quote unacceptable delivery dates, before the new re-armament programme was even set in motion. We should increase foreign trade; but as Governments would inevitably encounter formidable resistance to relaxations of trade barriers from vested interests, we should capture popular imagination by demanding freer trade in the interests of raising the standards of living in the United States, France, and this country and the Dominions. Economic leadership is required, and Britain should give it. Thus an Australian voice powerfully reinforces that of General Smuts a fortnight ago in demanding the unshackling of world commerce.

On Wednesday, also, Mr Runciman addressed the National Liberal Club, and supported President Roosevelt's and Mr Secretary Cordell Hull's policy of increasing world trade as a means of establishing world peace. He made, however, one egregiously ambiguous observation when he said that American and British tariff policy might move along parallel lines. This has prompted American observers to wonder if such parallel lines "are never to meet in the Anglo-American reciprocal trade agreement which the Roosevelt Administration desires to conclude." Americans must be aware that just as the Ottawa agreements are handcuffs on the British Government's wrists, preventing the freeing of our import trade in foodstuffs and primary commodities, so the American industrial tariff prevents payment for extra British imports from the United States by extra British exports of our manufacturers thither. The shrill voices of die-

hard American protectionist senators were again heard on Wednesday; and our own Chancellor of the Exchequer, in his closing speech on the first day of the Defence Expenditure debate, uttered the ominous warning that our Ottawa preferences were not merely based on economic considerations. If such narrow views prevail on both sides of the Atlantic, the best intentions of the French, Dutch, Belgian and Scandinavian Governments—to say nothing of the British and American administrations and those of the British Dominions—will be brought to nought. In fact, the opportunity was never greater than it now is for the Anglo-Saxon democracies to lead their French, Dutch, Belgian and Scandinavian fellows to widen the ambit of reciprocally freer trade. These Powers stand to lose most if they miss this opportunity to establish peace on a sounder economic basis. They stand to gain most if they determine to take it.

Distressed Areas.—The eagerly awaited Special Areas Bill, which will be explained and justified in a White Paper to be issued next Monday, has already cast a gloomy shadow before it. *The Times*, in an inspired forecast, implies that the scope of the work proposed will be limited, and that there will be no changes in the definition of Special Areas. No existing areas will be excluded, and no new ones will be added. The Minister of Labour has chosen this moment to make public a report delivered to Sir Malcolm Stewart by the firm of Sir Alexander Gibb and Partners last November. These consulting engineers were asked to consider the possible prospects for South-West Durham. They give little hope and suggest no comprehensive cure. The coal workings of South-West Durham, they declare, are defunct, and almost the entire population of 170,000 is congregated around permanently idle pits. Some 42 per cent. of the workers are unemployed; and there is no work, no traffic

and no industry. Nor is there, the report maintains, any means of securing effective industrial employment in the area. It is proposed that South-West Durham should be liquidated. Some part of the area must revert to farming, but in the main the solution must be found otherwise. Villages, it is urged, must be abandoned and the population transferred elsewhere—to the Team Valley trading estate and to small factories sponsored by the Special Areas Reconstruction Association. Nature has done her worst for South-West Durham; the coal is largely finished. But has man done his best? The Special Areas Bill is to be preceded by a financial resolution. But the time is past when the spending of money alone can solve the problem of the Areas, whose chief hope is the restoration of foreign trade.

* * *

The Lessons of Gresford.—The magnitude of the disaster at Gresford Colliery in September, 1934, when 265 men lost their lives, was exceptional; but the conditions which caused the explosion may not have been so unusual. Nothing in the Chief Inspector's report (discussed in *The Economist* of February 13, 1937) and nothing in the deeply serious debate in the House of Commons on Tuesday evening served to allay anxiety for the present safety of workers in British mines. Many of the necessary conditions of safety were absent at Gresford mine; ventilation was inadequate; the roof and sides were improperly supported; and the available exits were insufficient. Yet the House was told by the Secretary for Mines that the inspectors were not at fault. Captain Crookshank said that we must learn the lessons of Gresford. We must; but we cannot proceed by trial and error when human lives are the price of our mistakes. We cannot really be sure that existing safeguards are adequate, or that the present methods of inspection are effective. But we should like to be assured, beyond all peradventure, that "adequate inspection" will refuse to tolerate the sacrifice of safety to considerations of output and profit; or to allow "speeding-up" to override the requirements of the law. That the Attorney-General should now be considering drastic action in the Gresford case is proper but belated; for 265 men lie dead in the still-sealed pit. There were 777 mining fatalities in our mines last year; and we are told that these were the lowest of any normal year. The country will tell the Ministry and the Royal Commission on Safety in Mines that this must stop.

* * *

Unemployment Insurance.—A year ago it was found possible, not only to reduce the contributions of employers and workmen to the Unemployment Insurance Fund, but also to estimate a surplus in the operation of the Fund. Since then, the wheel of economic recovery has rolled on, and the estimated surplus has been exceeded by a considerable margin. The surplus for 1936 was £6,700,000 more than was anticipated; that for 1937 will probably be £12,000,000 more than the previous estimate. The annual report of the Statutory Committee, issued on Monday, recommends that some £16,500,000 of these surpluses should be devoted during the next eight years, together with interest accruing of £750,000, to the improvement of benefit conditions. It rejects the suggestions of a minority report that contributions should again be reduced; or that the surplus should be applied to the speedier reduction of the debt which the Fund owes to the Exchequer and is paying off at the rate of £5,000,000 a year. It is proposed to reduce the number of days for which a man must wait after losing his job, before claiming benefit, from six to three (the original "waiting period" of the 1920 Act); and to increase the number of extra days' benefit beyond the present limit for a man who has been fairly regularly in work for five years.

A man who loses his job will still have to wait for anything up to eleven days before drawing any benefit. Nevertheless, the reduction of the waiting period will make it less necessary for men to resort to public assistance in the interim; and some 60,000 fewer men will come under the Means Test because of this measure. The extension of the benefit period will have similar consequences. At present, a man who has paid 30 contributions in two years may claim, not only 156 days' benefit, but also 3 days' extra benefit for every 5 contributions paid, less 1 day for every 5 days' benefit drawn in the past 5 years. In future, now the Government has endorsed the report, his extra days' benefit will be reduced, not by one for every five days' benefit already drawn, but by one for every eight days. These are welcome advances on present practice; and it is only fair that the workless should derive some benefit from the return of prosperity. But less than half of the unemployed persons in receipt of payments are chargeable on the insurance fund, since long-period unemployment was taken over by the Unemployment Assistance Board. The more serious problem remains the prospect of employment for those outside the insurance scheme.

* * *

Future Employment Conditions.—This is a period of active trade. There is a considerable shortage of labour, although some 1,600,000 persons are still unemployed, which is about 12 per cent. of our registered workers. It is reckoned that there must normally be an unemployment percentage of at least 5, due to labour mobility and seasonal fluctuations. The remaining 7 per cent. of present unemployment is largely accounted for by special factors, by the plight of the coal industry, and by the sad state of some of our staple export trades, brought about by the deliberate strangulation of world commerce by Governments, including our own. The Unemployment Insurance Statutory Committee, and its chairman, Sir William Beveridge, have expressed the belief that it is unlikely that this hard core of unemployment will be further reduced. It is pointed out that the improvement in the Insurance Fund, and the reduction of unemployment which made that improvement possible, were caused by the recovery in world trade; and that the boom will be artificially prolonged for some little time by the gigantic defence programme now in train. But after this, the deluge; the boom will be followed, they forecast, by a severe recession, made more severe by the dead-end of re-armament. Unemployment over the next eight years will average, it is estimated, 16½ per cent. What can be done about it? In particular, what can be done for the depressed areas and for the forgotten rural districts of Scotland and Wales, to say nothing of the black-coated workers who now oscillate between respectability and the Means Test? We can nurse only two hopes: the Special Areas Bill, the text of which will be known next week,

COLLECTION of Bills

on all Scandinavian places through
our offices at Gothenburg, Stockholm and Malmö.

**SKANDINAVISKA
KREDITAKTIEBOLAGET**

may possibly relieve the dark shadows which hang over those places where unemployment is as high as 30 per cent.; and the Government may be inspired to take a strong hand in the liquidation of tariff madness and kindred disorders. In both cases experience may lessen our optimism; but, if justice is to be done, and if prosperity is to be really national, our hopes must needs be realised. Exports are more vital than munitions for the future of British employment.

* * *

Baron Neurath in Vienna.—The incidents that accompanied the German Foreign Minister's visit to Vienna this week show how precarious is the present balance of forces in Austria and, in consequence, the present entente between Germany and Italy. Upon his arrival, Baron Neurath was greeted with shouts of "Heil Hitler" from throngs of Austrian Nazis who had lined the streets along which he was to drive. This Austrian Nazi demonstration, of course, throws little light on the relative strengths of parties in Austria. Even a small minority is capable of making a big uproar. The Austrian police were gentle in their treatment of the demonstrators; and counter-demonstrations were quickly evoked from the Patriotic Front. Have the Austrian Nazis been broken up or merely driven underground? The same question applies to the Austrian Social Democrats. And we may also ask ourselves how far Dr Schuschnigg and his colleagues really rejoice in their clientage to Italy, upon which they lay so much public emphasis. It may be sheer *raison d'état* which inwardly goes against the grain with them as much as with any patriotic Austrian of another political persuasion.

* * *

The greatest puzzle of all is the question whether, even with Italy's support, Dr Schuschnigg is strong enough to withstand the Nazi pressure upon him if he merely rests upon the *status quo*. Is not this poor little Austrian Republic indissolubly associated with memories that are too depressing for it to be cherished by anybody as a sign in which Nazidom can be conquered? Dr Schuschnigg has done what he can to brighten up a dismal house. He has given it a corporative façade, and has posted a squad of smartly turned out troops at the door. But, sooner or later, will he not be forced to attempt to restore the Habsburg dynasty, as the only device which would have any real prospect of making Austria once more a positive thing-in-itself? This question was perhaps at the bottom of Baron Neurath's visit. For, from the standpoint of the Third Reich, the present Austro-German agreement is a *modus vivendi* which must not be used as a breathing space to give time for Dr Schuschnigg to take any step which would rule out the eventual *Anschluss* of Austria to Germany. Of all the alternative steps that Dr Schuschnigg might take, a Habsburg restoration is the one that would be received by Herr Hitler with the greatest alarm and resentment; and it would divide him from Signor Mussolini. Did Baron Neurath go to Vienna in the hope of extracting some assurance that a restoration was not, after all, in the offing? If he did, the official Austrian denial, repeated this week, may satisfy him.

* * *

Reconciliation in Czechoslovakia.—On February 10th it was announced at Prague that a large measure of agreement had been reached in the negotiations that had been taking place between the Czechoslovakian Government and the three German political parties in Czechoslovakia which have held aloof from the Henlein front. The requests which the Government has conceded are, first, a fair quota of Government contracts (e.g. armaments contracts) for the German areas; second, the appointment of German officials in numbers proportionate to the ratio between the German element and

the total population of the republic; third, an increase in the grants for social services to the German districts; fourth, an allocation to the German districts of 20 per cent. of the total grant for State theatres; and, fifth, certain concessions in regard to the official use of the German language in the German-speaking parts of Czechoslovakia. This agreement is equally creditable to President Benes and his Prime Minister, M. Hodza, on the one side, and to the non-Henlein German leaders on the other. It is notoriously difficult to make concessions when one is under pressure—as the Czechoslovakian Government is at this moment from Henleinism at home and from Nazidom just beyond the frontiers. In making the present agreement under the present untoward conditions, the Czech statesmen have made a substantial contribution to their country's security. Once again, Czechoslovakia has proved herself to be, as she claims to be, a country with a thoroughly Western standard of enlightenment.

* * *

It is not only the Czechs who have shown wisdom in this affair. The minority of the German minority in Czechoslovakia has been equally wise, on its side, in coming to terms with its fellow-Bohemians of Czech nationality, instead of placing itself in the hands of a raging, tearing Nazi movement which is as implacably hostile to Christianity as it is to democracy and to Socialism. No doubt Herr Henlein and Herr Hitler will now cry aloud with one voice that these Czechoslovakian Germans who have compounded with the Czechs are as unrepresentative as they are traitorous. To this the pertinent answer is that the German leaders who have conducted these successful negotiations with the Czech Government have actually obtained satisfaction for the greater part of the demands that Herr Henlein himself has put forward. The Czechoslovakian Government is now proposing to enter into negotiations on similar lines with the Polish and Magyar minorities. A country which has taken such wise and timely steps to forestall any possible justification for any German act of aggression against her is more than ever entitled to receive our covenanted support if, all the same, she were eventually to be attacked.

* * *

Berlin and Prague.—Dr Goebbels has explained that the German Government never meant that the newly constructed Czech aerodromes—described by certain English publicists as plague cells of Bolshevism—were actually Russian property, but that they would be used by Russians. No doubt they would, for purposes of defence against any wanton attack on Czechoslovakia; just as British aerodromes would be used by French or Belgian aircraft, and theirs by our aeroplanes in the event of wanton aggression in the West. That is not plague-carrying; rather is it antiseptic action. The German propaganda has therefore shifted ground. It is now attacking the Czech Government for its attitude to the Bohemian Germans. Not all of these are in the Henlein party; for three other German parties have their Ministers in the present Czech Government. While Herr Henlein personally did not originally claim that the Sudetenland and its Germans should be absorbed into Germany, the organisation of his party from Berlin has made that the aim, and so weakened his position and influence as nominal leader. The Henlein Party to-day effectively stands for the dismemberment of the State to which it owes allegiance. And Herr Hitler on January 30th claimed the right to supervise all German minorities abroad. On the other hand, two of the three non-Henlein German Ministers in the Czech Coalition Government last week declared themselves against any attempt to alter the Czech frontiers or to make the Sudetenland problem into an object of international bargaining or manoeuvring. It seems as if the exploitation of the Sudetenland minority question by the German Government's Propaganda Ministry will also prove barren.

The Coronation Oath.—Smaller changes have been made in the Oath to be taken by His Majesty upon his coronation than were suggested by the general air of mystification that had been allowed to hang over the issue. We have not been reduced to the absurdity of having a separate oath for each self-governing member of the Commonwealth. The King will swear to govern "the peoples of Great Britain, Ireland, Canada, Australia, New Zealand and the Union of South Africa," of his possessions and any territories belonging to them, and of the Empire of India, "according to their respective laws and customs." The phrase "according to the statutes in Parliament agreed on" disappears—a tribute both to the difficulty of inventing a formula which would cover the existence of six sovereign Parliaments, and to the unquestioned legislative supremacy of Parliament in these days, by contrast with the seventeenth century when the phrase first appeared. The use of "Great Britain, Ireland . . ." instead of "the United Kingdom of Great Britain and Northern Ireland, the Irish Free State . . ." is in parallel with the present Royal Style and Titles; it is also taken as keeping open the door that leads to an ending of the formal partition of Ireland. The oath to maintain the Protestant Reformed religion established by law is to be confined to the United Kingdom, in which alone the King has powers to carry it out. The Church of England itself, of course, is an oecumenical body; otherwise the changes in the Oath might be said to have drawn a line between the imperial duties of the King and those he owes as Governor-General of the United Kingdom.

* * *

Britain's Balance of Payments.—The official estimates of the balance of payments of the United Kingdom in 1936, together with revised figures for the two previous years, appeared in this week's *Board of Trade Journal*. The figures are as follows:—

BALANCE OF PAYMENTS OF THE UNITED KINGDOM (£ millions)				
	1934	1935	1936	
Excess of imports of merchandise and silver	294	260	347	
Excess of Government payments*	—	2	2	
Total	294	262	349	
Excess of Government receipts*	7	75	95	
Net national shipping income†	70	75	95	
Net income from overseas investments	170	180	195	
Net receipts from commissions, etc.	30	30	30	
Net receipts from other sources	10	10	10	
Total	287	295	330	
Estimated total credit or debit balance	— 7	+ 33	— 19	

* Including some items on loan accounts.
† Including disbursements by foreign ships in British ports.

The final result for 1936 is broadly in accordance with expectations, though the debit balance of £19 millions is surprisingly large. There is reason, however, for believing that some of the credit items have been underestimated. Thus the *Journal* specifies items under both the last two heads which have increased in the past year; but the entry is not altered. On the other hand, a generous allowance has been made for shipping income. The estimate for net income from overseas investments differs in some particulars from Sir Robert Kindersley's figures, but the entries in the table have been revised downwards in the light of his latest estimates.

* * *

There is, of course, no reason for alarm in the appearance of a debit balance. As the article in the *Journal* points out, the "adverse balance of merchandise trade" appears to increase and diminish in alternate years, doubtless due to the time-lag between increased purchases of food and raw materials by the United Kingdom and the consequent increase in purchases of British goods by the primary-producing countries. Furthermore, if the attempt is made to draw conclusions about the future of sterling from the figures of the balance of payments, it should not be forgotten

that the balance of payments concerns the whole of the United Kingdom's transactions with overseas countries, while sterling is affected by the balance of transactions between the sterling *bloc* as a whole and the rest of the world.

* * *

Budget Prospects.—The last quarter of the financial year is now more than half over. It is still hazardous to make forecasts of the probable outcome of the year's working, as the ultimate figures are liable to be influenced by last-minute transactions both within and without the Treasury's control. But the indications confirm the prophecy which we made at the beginning of January, namely, that "if there is a deficit it will be no larger than the debt reduction which will be accomplished out of the allocation for interest and management of the National Debt . . . and it is by no means impossible that there may be a small surplus." Indeed, it is now the small surplus which appears the more likely possibility. The deficit on December 31st was this year £24.8 millions larger than last year. Last year closed, however, with a surplus of £2.9 millions. For revenue and expenditure this year to be exactly balanced the fourth-quarter surplus would thus need to be £21.9 millions larger than last year. In the period January 1st to February 20th this year revenue has exceeded expenditure by £133.0 millions, compared with a surplus of £123.1 millions in a period two days longer last year. If this rate of improvement continues, the surplus on the full fourth quarter will be £24.1 millions, or about £2 millions more than is required for an exact balance. Moreover, "surplus" is here used in the official sense, and does not include the sum of about £12 millions by which expenditure on the interest and management of the National Debt will fall short of the amount provided.

* * *

This favourable result is due in the main to the admirable buoyancy of the revenue. But it has also been assisted by a surprising failure of expenditure to come up to the full estimates. Expenditure will, of course, be higher than was allowed for in the Budget, but considerably lower than appeared likely at one time. On January 1st expenditure of £215.8 millions was needed to equal the Budget estimate. At the rate of expenditure prevailing in the intervening weeks, the total for the quarter will be about £220 millions, or only about £4 millions more than the Budget estimate, in spite of Supplementary Estimates (other than those provided for in the Budget) of over £18 millions. There may, of course, be a rapid increase in armaments expenditure in the next six weeks, which would affect all these calculations. But the time is too short for any substantial modification to be made in the picture as it is now beginning to take shape.

7, CHANCERY LANE, LONDON

Civil Estimates.—The Estimates for the Civil and Revenue Departments have been issued. The figures are as follows:—

	1936-37 (Final Estimate)	1937-38	Change
1. Central Government and Finance.....	2,423	2,549	+ 126
2. Foreign and Imperial.....	9,506	8,988	- 518
3. Home Department, Law and Justice.....	19,243	23,940	+ 4,697
4. Education.....	61,510	62,801	+ 1,291
5. Ministry of Health, etc.....	30,878	26,550	- 4,328
Old Age, etc., Pensions	59,321	61,319	+ 1,998
Labour and Unemployment.....	77,819	82,298	+ 4,479
6. Board of Trade, etc.....	3,314	1,373	- 1,941
Agriculture.....	13,294	12,084	- 1,210
Transport, Roads, etc.....	2,295	17,926	+ 15,631
7. Works, Stationery, etc., ...	9,508	9,899	+ 391
8. War Pensions.....	44,991	43,934	- 1,057
9. Contributions to Local Revenues.....	45,199	54,392	+ 9,193
Total Civil Estimates....	379,302	408,054	+ 28,752
Revenue Departments.....	13,488	13,897	+ 409
Post Office.....	69,004	72,328	+ 3,324
Total Civil and Revenue Departments.....	461,795	494,278	+ 32,483

The gross increase of £32,483,000 needs considerable interpretation. In the first place, £3,324,000 of it is the estimated increase in the expenditure of the Post Office, which will, of course, be recouped out of Post Office revenue. Secondly, the Estimates reflect the approaching demise of the Road Fund, and consequently include expenditure on roads. This amounts to £22,500,000, spread mainly over Classes VI and IX. It is impossible to say whether this represents an increase or not in expenditure on roads until the accounts for the Road Fund for the present year appear. The estimated income of the Fund for the present year is £26,500,000. But it does not necessarily follow that all of this will be spent.

Omitting the Post Office, and allowing for the expenditure on roads, the estimates show an increase of £6,659,000 millions over last year. Moreover, a warning is appended that Supplementary Estimates will be necessary, especially for the Special Areas and for the continuation of the shipping subsidy. The Home Office shows a very large increase, presumably at least partly in connection with its Air Raids Precautions work. Another substantial increase is under the head of Labour and Unemployment and is attributable to the approach of the "second appointed day" when the Unemployment Assistance Board will for the first time assume its full responsibilities. The increase in Class IX, in so far as it is not due to road expenditure, reflects the revised block grants. On the whole, these Estimates show that reasonable economy is being practised. It is a necessary, but unfortunate, corollary of defence lavishness that the civil estimates should be kept down as much as possible, even though relaxation here and there would bring immediate benefit to the nation.

A Dangerous Rise in Prices.—Events of the past week have shown that the danger of an inordinate rise in commodity prices is at hand. Until the autumn of last year the prices of raw materials and crude foodstuffs rose gradually with the improvement in demand and the steady reduction in stocks, hastened in the case of copper, rubber and tin by restriction of output. In general, stocks of international primary products are now little higher than in 1929, but the trend of demand is still upwards. The present position is thus providing speculators with a happy hunting-ground, especially as the output of many materials cannot be increased substantially at short notice. This week's developments in the market for base metals provided a foretaste of boom conditions. The Government's White Paper on the progress of re-armament, containing a reference to the need for the accumulation of raw materials, provided specu-

lators with an excuse for spreading rumours of a coming scarcity of base metals. The price of copper, which at one time rose to over £73 per ton, closed on Wednesday at £66 17s. 6d. per ton, against £58 17s. 6d. per ton a week ago. The quotation for spelter rose from £25 12s. 6d. to £29 13s. 9d. per ton, and that of lead advanced from £28 6s. 3d. to £30 10s. per ton. Similarly, the quotation for tin was pushed up from £231 10s. to £240 10s. per ton. Except in the case of copper, which was subject to a restriction scheme in 1929, the prices of the leading base metals are now appreciably above the average for 1929. While some rise in quotations was undoubtedly justified, hectic movements, such as those which took place last week, are bound to be harmful to orderly industrial progress.

Even more disquieting is the more marked upward trend of the prices of domestic raw materials and products. The rise in coal prices, facilitated by Government legislation, is already causing concern. In the case of iron and steel the position has become dangerously tight. There is a pronounced scarcity of supplies, and prices are now being increased to an extent which threatens the consuming industries. Reports are already current of forced curtailment of output in the steel-consuming industries in the West of Scotland; for example, re-rollers have been constrained to reduce operations at a number of plants, with a possibility of further curtailment later on. Moreover, it appears that the British Iron and Steel Federation has intimated to the railway companies and other large users of steel that it is proposed to raise prices under existing contracts, to an unspecified figure, from June 1st. As we point out in a survey of the trend of business in the Trade Supplement published with this week's issue of *The Economist*, the growing scarcity and rise of prices of iron and steel may strike at the root of recovery, by leaving current demand for civil purposes unsatisfied and by raising the cost of the work on capital construction to a level which may soon prove unremunerative. In spite of Mr Runciman's reassurances in the House of Commons on February 24th, the least the Government could do at this stage is to throw overboard, while there is time, the whole of the paraphernalia of import quotas and duties with which the British Iron and Steel Federation has armed itself.

Steel Scrap.—Six and a half million tons of scrap were used by the steel industry last year in producing its output of 11,000,000 tons. About half the tonnage of scrap was provided by the steel works themselves. But some 3,000,000 tons were obtained by outside purchase, including 1,085,000 tons imported. The whole of the huge tonnage of outside scrap required by the industry (which now uses about 60 per cent. of scrap in producing a ton of steel, against 30 per cent. before the war) is now to be purchased co-operatively through the British Iron and Steel Corporation, which is the recently established trading organisation of the Federation. Central buying, moreover, is not to be confined to scrap, whether imported (imports last year were 1,085,000 tons) or of domestic origin: it is to extend also to foreign pig iron. The Federation already controls the selling prices of the steel industry, the quantities which it may export and the amounts of new and semi-finished material which it may import. With its added functions it will become one of the most powerful trade organisations in the world; and the British steel industry will be one of the more rigorously regimented of industries. The reason for this latest extension of "control" is, of course, the acute and growing world shortage of scrap and pig—the vital interchangeable ingredients of steel. This shortage is due to European trade recovery and re-armament, to the Spanish civil war, and, last but not least, to the very vigorous, if belated, revival of the American steel industry. Thanks to this revival American scrap has risen by 50 per cent. in price in recent months. The British price is now very little below the 1929 maximum.

Congress and the Indian Elections.—The successes of the Congress continue in the Indian provincial elections. They will have an absolute majority in two more provinces—Madras and the Central Provinces—and possibly in a third, Bombay. In Madras they are triumphantly repeating their victory of two years ago over the Justice Party, which was one of the few genuine political parties with a mass appeal that resulted from the Montagu-Chelmsford reforms. If Bombay also falls to them, the Congress will be in a position to form Ministries in the whole of the central portion of British India, comprising six provinces between the Himalayas and Cape Comorin. Only in the north-western and north-eastern wings are they in a minority, though in two more provinces—Assam and the North-West Frontier Province—they are the largest single party and can only be outvoted by uneasy coalitions. With the exception of Assam, with its peculiar racial and economic make-up, the provinces may be divided into two simple groups: Moslem India (the Punjab, Sind, Bengal, and the North-West Frontier) and Congress India. But that is only the beginning of a political analysis. Congress leaders have now to make up their minds whether to accept office; if they do so—as everyone expects—they will have to develop a practical programme for everyday political and economic affairs, and this process is certain to reveal that there is not one Congress party but many.

An Empire Air Base?—The long-debated question of the location of an air base in this country for our Empire services has been forcibly reopened in the last fortnight by the inauspicious delay in the departures of the first giant flying-boats of Imperial Airways to start the Empire service. The Portsmouth City Council have long been in negotiation with the Air Ministry over the provision of an air-base at Langstone Harbour, between Hayling Island and Portsmouth. The alternative schemes were for a tidal base, necessitating continuous dredging to provide the necessary depth of water for the length of runway; and a barrage scheme, which involved the damming of Langstone Harbour. The City's Airport Committee recommended the second, though the capital cost would have been £167,000 more than that of a fairway scheme. The Council then overrode them, and decided, happily only provisionally, on the tidal scheme for reasons of economy. The Air Ministry and Imperial Airways naturally prefer the barrage scheme, which would maintain a constant level and depth of smooth harbour water. Moreover, it provides adequate runways in all directions of wind, which the fairway scheme cannot do. This week, the City Council decided on the barrage scheme. This is welcome evidence of municipal far-sightedness; though some Portsmouth ratepayers have voiced objections to it. In time, the City's ratepayers may well find it a profitable investment. The tidal base seems false economy, as much for aviation as for Portsmouth; since barrages round Langstone Harbour would provide better road connections between Portsmouth, Hayling and Chichester. It is also reported that a hydro-electric plant can be profitably worked from the barrage.

Ontario Power Dispute.—The dispute between the Ontario Government and the private electric power companies has now been brought a stage nearer settlement by the conclusion of an agreement between the Ontario Hydro-Electric Commission and the Ottawa Valley Power Company, one of the corporations whose contracts were cancelled for mainly political reasons in April, 1935, by the then newly-installed Liberal Government. The Commission now contracts to buy the whole output of the company at \$12½ per horse-power, in lieu of \$15 in the cancelled contract. Although it also agrees to bear the entire cost of the operation of transformer stations, it reckons to save \$1,000,000 during the four-

and-a-half years of the contract. The company forgoes claims under legal judgments recently delivered against the Commission in the Ontario Courts. The agreement also gives the Commission an option to purchase for \$15 millions the company's interest in the Chats Falls power plant, which is to be jointly developed by the company and the Commission, but it is semi-officially stated that the option is unlikely to be exercised. It remains to be seen whether the other companies concerned in the dispute will be prepared to agree to a settlement on similar lines.

Anglo-Canadian Trade Agreement.—The text of the new Trade Agreement between the United Kingdom and Canada, which replaces the agreement made at the Ottawa Conference, was issued on Thursday evening. A first glance at its terms shows it to contain a considerable relaxation of the restrictions on Anglo-Canadian trade. Much the larger part of this relaxation, however, is accomplished by the Dominion Government; the British contribution is comparatively small. The Agreement provides for reductions of Canadian duty on a long list of British goods, which together make up about 40 per cent. of the total British exports to Canada, the most important reductions being in the duties on cotton and woollen goods. In addition to these reductions, free entry is guaranteed, the existing duty conventionalised, or the existing preference stabilised, for the great bulk of trade not affected by the reductions. Only about 15 per cent. of the British trade is not covered by one or other of these clauses.

In return for these generous and welcome concessions, the United Kingdom undertakes to maintain the present free list for Canadian goods, with the reservation that a duty may be imposed on dairy produce subject to maintenance of the preferential margin. The right is also reserved to impose quantitative regulation on dairy produce, meat and bacon "if necessary in the interests of the United Kingdom producer." A similar provision is inserted with respect to zinc. The only actual reductions of duty promised by the United Kingdom are on silk stockings and reed organs; in addition, the existing duty on Canadian motor cars is not to be increased. Compared with the original Ottawa Agreement, this new document is clearly an improvement. Trade between Great Britain and Canada is given certain differential advantages, which will not, of course, be to the taste of other countries trading with the signatories. But it can be claimed in this Agreement's defence (as it could not in that of the 1932 Agreement) that the benefits are conferred by reductions of intra-Imperial tariffs and not by increases in the duties prevailing between the British countries and the rest of the world.

L.C.C. Estimates.—The extent to which the capital expenditure of a local authority may fluctuate as the result of economy drives is well illustrated by the annual estimates of the London County Council, published this week. Actual capital expenditure receded from £8,456,000 in 1930-31 to £2,432,000 in 1933-34, and has since increased to £9,519,000 in 1936-37. Spectacular changes have been made in housing, which absorbs more than half the total, the figures under this heading having increased by over £4 millions in the last three years to an aggregate of £5½ millions in 1936-37. Larger proportional increases have occurred, however, in the figures for parks and for education, on which expenditure increased from £8,000 to £90,000 and from £110,000 to £800,000, respectively, during the last three years. The synchronisation of all this capital development with the large expansion programmes of the London Passenger Transport Board and the Metropolitan Water Board—not to mention the Government's re-armament programme—emphasises the need for better machinery to co-ordinate national investment, in order to prevent over-expansion in the active phases of business cycles and to distribute expenditure over as long a period as possible. All things considered, it is perhaps as well that the Council's capital estimates for 1937-38 are £1,300,000 below those for the current year.

Bacon Supplies.—In view of the troubled period through which the pigs and bacon marketing schemes have recently been passing, particular interest attaches to the Report of the Bacon Board for 1936. This detailed and interesting Report shows that the amount of bacon put into cure by registered curers rose by 37 per cent. from 1,736,183 cwt. in 1934 to 2,376,891 cwt. in 1935, and by a further 16 per cent. to 2,752,910 cwt. last year. Meanwhile, imports, as the following figures show, have been cut by 40 per cent. (54 per cent. in the case of foreign shipments) since 1931:—

IMPORTS OF BACON AND HAMS
(Thousand cwt.)

Year	Empire	Foreign	Total
1931	436	11,529	11,965
1932	541	11,651	12,192
1933	911	9,042	9,953
1934	1,457	6,870	8,327
1935	1,589	6,015	7,604
1936	1,898	5,343	7,241

Although the contract system has broken down, the Board of Trade is continuing the regulation of imports by reference to the estimated volume of home production. The price at which bacon pigs are sold by the farmer to the curer is now a matter for negotiation between the parties concerned, but provision has been made by the Pigs Board for grading bonuses and deductions. The object, so the Report states, is to preserve a measure of orderly marketing until a permanent basis for working the schemes can be evolved. On the question of long-term policy, the Bacon Board states that it has submitted to the Government proposals for amendments to the marketing scheme. The Board is not opposed to an increase in supplies of bacon—"provided that the home industry is adequately safeguarded"—and considers that the levy-subsidy "should form an integral part of any reconstruction of the marketing schemes." We agree that, if the home producer must be protected at all, a levy-subsidy scheme would certainly be preferable to the present method of rigid regulation by quota.

Price of Wood Pulp.—During the past twelve months wood pulp prices have been steadily advancing, some grades now being as much as 70 per cent. dearer than a year ago. The intensification of the movement in recent weeks led to the matter being raised in the House of Commons not long ago. The existence of Scandinavian and European conventions for the regulation of pulp production (to use Dr Burgin's euphemistic phraseology) has given rise to complaints by British

paper-making concerns that they are being exploited by wood pulp manufacturers. It is not easy to unravel the skein of causation, but there appear to be certain solid reasons for the advance in wood pulp prices. In the first place, the once excessive stocks in Scandinavia and North America have now been substantially reduced in consequence of greater activity in the consuming industries—including rayon production. Moreover, costs are increasing. Demand for timber showed a considerable expansion last year, and this factor, besides raising the price of the pulp manufacturers' raw material, is reported also to have reduced the supply of available labour—at least in Canada. A further important factor on the cost side is the price of coal. To the charge that they are exploiting the consumers of wood pulp, the Scandinavian producers reply that the British coal, which they are compelled to take by virtue of the trade agreements with this country, is more expensive than comparable qualities of Polish coal. Indeed, according to the *Paper Trade Review*, the excess prices paid for British coal by Norwegian producers in the past three years are estimated to represent 5,000,000 to 6,000,000 kr. On the question whether the recent rise in costs has been sufficient to justify the drastic advance in pulp prices, it is difficult to be dogmatic. But the paper makers apparently have their doubts.

Wholesale Price Movements.—This week there has been a further rise in British wholesale prices, mainly in those of non-ferrous metals. In consequence the complete *Economist* index number has risen by 1.0 per cent., while primary products have advanced by 1.1 per cent. There has been a smaller increase of 0.6 per cent. in American primary products, while the Irving Fisher general index number has risen by 0.3 per cent. French wholesale prices have advanced by 0.3 per cent., but German wholesale prices are fractionally lower:—

Outside the minerals group there has been little change in British wholesale prices, but the cereals and meat index has fallen by 0.9 per cent.:—

The Economist INDEX
(1927 = 100)

	Sept. 18, 1931	Jan. 27, 1937	Feb. 10, 1937	Feb. 24, 1937
Cereals and meat...	64.5	88.3	88.3	87.5
Other foods	62.2	67.8	68.7	68.6
Textiles	43.7	69.2	68.8	68.9
Minerals	67.4	97.2	99.3	105.4
Miscellaneous	65.8	82.2	82.8	82.9
Complete index	60.4	81.0	81.5	82.3
1913 = 100	83.1	111.4	112.2	113.3
1924 = 100	52.2	70.0	70.5	71.1

Grain prices are lower than a fortnight ago, while meat moved irregularly. The main changes in other foods were a rise in tea and a decline in butter. Cotton prices were firmer, but wool was slightly cheaper. In the minerals group there were big increases in non-ferrous metals. Among miscellaneous materials there were increases in Swedish timber and rubber and declines in hides, linseed oil and certain chemicals.

Volume of British Production.—The official index of industrial production, published in last week's *Board of Trade Journal*, confirms the marked expansion of output last year revealed by *The Economist* monthly index of Business Activity. Industrial production, as measured by the Board of Trade Index, rose by 9.7 per cent. between 1935 and 1936, while the more comprehensive *Economist* index registered an increase of 6 per cent. in general business turnover. Changes in the output of the principal branches of activity are shown below:—

BOARD OF TRADE INDEX OF PRODUCTION
(1930 = 100)

Group	Year 1935	Year 1936	1936		
			Dec. Quarter	Sept. Quarter	Dec. Quarter
1. Mines and quarries	91.7	94.4	98.1	89.7	99.1
2. Iron and steel	125.6	150.1	133.3	149.1	155.6
3. Non-ferrous metals	137.3	143.8	132.1	145.3	154.0
4. Engineering and shipbuilding	104.8	123.1	108.0	121.6	132.2
5. Building materials and building	147.0	156.8	150.2	164.3	156.2
6. Textiles	118.9	126.1	126.5	122.7	130.2
7. Chemicals, oils, etc.	110.6	114.3	119.0	110.6	119.2
8. Leather and boots and shoes	116.0	120.7	122.1	116.3	119.5
9. Food, drink and tobacco	107.6	114.5	113.9	115.2	121.2
10. Gas and electricity	132.6	148.2	(a)	(a)	(a)
Total of manufacturing industries (2-10)*	116.9	129.3	124.4	127.7	137.5
Total of all groups (1-10)*	113.5	124.5	120.7	122.4	132.1

* Includes also various industries not specified above.
(a) Quarterly particulars of gas production are not available and complete information in respect of the year 1936 cannot yet be given; a provisional estimate of the quantity made has been used for the calculation of the group index for last year. The available data for electricity have been included in the general index numbers.

The iron and steel and engineering and shipbuilding industries, it will be seen, made most headway during the past year. With the exception of the jute trade, all the industries included in the textiles index experienced an improvement. The output of building materials, food, drink and tobacco, non-ferrous metals, and footwear was also considerably higher than in 1935, but there was only a small improvement in the chemicals and coal-mining industries. The latest developments in British industry are discussed in the Trade Supplement, published with this week's issue of *The Economist*.

Fifth Census of Production.—The results of the fifth Census of Production, relating to 1935, are now being published as fortnightly supplements to the *Board of Trade Journal*. The figures are provisional, as complete returns may not have been received in all cases at the time of publication. The Census covered manufacturing industries, mines and quarries, the building and contracting trade and the productive services carried out by Public Utility Undertakings, whether publicly or privately owned. Repairing and "processing" work was included. The number of separate trades distinguished was 122. As in the case of the 1930 Census, and in the Import Duties Act Inquiries of 1933 and 1934, the output of firms employing less than eleven persons, on the average, is excluded from the returns. Comparison of the results for 1935 is made with those of the most recent previous year for which statistics are available, i.e. with those for the year 1934 in the case of the 78 trades included in the Import Duties Act Inquiry for that year, and with those of the 1930 Census in the case of the remaining trades.

Volumes I and II of the 1935 Census cover some of the textile and allied trades. The following table shows the gross value of production in these industries, as well as

the net output (gross value of output less cost of materials and work given out) and the net output per employee, together with comparable figures for 1934:—

Industry	Gross Output		Net Output		Net Output per Employee	
	1934 Thous. £	1935 Thous. £	1934 Thous. £	1935 Thous. £	1934 £	1935 £
Cotton spinning & doubling	71,321	74,073	20,554	20,147	112	111
Cotton weaving	67,593	68,809	20,538	20,334	120	123
Jute	7,823	8,079	2,966	2,906	126	120
Linen and hemp—						
Great Britain	4,248	4,803	1,640	1,638	127	121
Northern Ireland	18,438	19,145	5,519	5,406	96	97
Silk and artificial silk	32,812	36,056	12,856	14,052	176	172
Hosiery	39,528	39,385	16,922	17,206	148	150
Rope, twine and nets	5,265	5,466	2,098	2,146	144	143
Canvas goods and sacks	4,437	5,381	1,157	1,444	161	165
Asbestos goods, including engine and boiler packings	4,510	4,928	2,800	2,963	353	314
Elastic webbing	1,930	1,975	937	954	144	146
Roofing felts	1,090	1,294	481	586	328	372

Apart from the silk and artificial silk trades, the principal textiles industries made no headway between 1934 and 1935. The marked increase in the value of the output of canvas goods and sacks during this period reflects the general expansion of business activity in 1935.

Record Rubber Consumption.—Thanks largely to the growth of mechanised road transport, demand for rubber declined considerably less during the depression than that for most other raw materials. World consumption, as shown in the January issue of the *Statistical Bulletin* of the International Rubber Committee, rose to a new record in 1936. The trend of supplies, consumption, stocks and prices is shown below:—

WORLD RUBBER SUPPLIES, CONSUMPTION, STOCKS AND PRICES

	World Net Exports ('000 tons)	World Consumption ('000 tons)	Stocks outside "Regulation Areas" ('000 tons)	Average Price in London (pence per lb.)
1929	868	805	233	10½
1932	709	692	508	2½
1933	853½	825	499	3½
1934	1,032	944	559	6½
1935	829	943	500	6
1936	867	1,021	327	7½

Exports, which are regulated under an international restriction scheme, were 113,000 tons smaller than consumption. Consequently stocks declined sharply during the past year, while prices showed a marked rise towards the end of 1936. Although the actual volume of stocks at the end of last year was substantially bigger than seven years ago, the stocks outside the countries adhering to the restriction scheme at the end of last year represented only 4 months' consumption, compared with 3.5 months' and 8.8 months' consumption at the end of 1929 and 1932, respectively. Moreover, as the trend of demand is still strongly upwards, there appears now little need for restricting exports, especially as there is a danger that prices may rise to unreasonable levels.

BANK OF MONTREAL

(Incorporated in Canada in 1817 with Limited Liability)

CAPITAL PAID-UP \$36,000,000

REST AND UNDIVIDED PROFITS \$40,036,534

France

Liberalism's Last Chance?

PARIS, February 25.—M. Blum's speech at the American club dinner was very different from the speech which he delivered before the same audience six months ago. In May, M. Blum emphasised the need for stabilisation of the exchanges and the revival of trade. This view was developed again on Monday last by Mr Bullitt, the American Ambassador at Paris, who said that autarky must lead to war. But M. Blum did not answer directly, and he pointed out that no commercial collaboration was possible without peace.

Was this an appeal from France for President Roosevelt to intervene in favour of peace? Does it signify that the financial difficulties may lead France to autarky—the only alternative to the liberal way of the Tripartite Agreement—unless collaboration becomes more effective through a closer and more active co-operation of the three powers? There is reason to believe that this alternative has been considered by the French Cabinet, since M. Blum has virtually failed to bring about the collaboration of capitalists in his economic experiment.

The "breathing space" announced by M. Blum was without effect on the market, since it did not entail the repudiation of his former policy, and was not accompanied by any change of personnel in the Cabinet and the Bank of France. These changes were contemplated by M. Blum, but were rendered impossible: (1) by the premature clamours of triumph in the Conservative press; and (2) by a perceptible uneasiness in the ranks of the Popular Front, caused by the rise in prices and by the refusal of the Government to increase the wages of workers and civil servants. What is this pause worth (it is said) if it does not cause an immediate repatriation of funds? Public opinion was, moreover, unfavourably impressed by the explanation of M. Blum that France was now virtually an autarky, and that the rise in prices was due to inadequate production. Are these remarks the prelude to a change in the former liberalism of the Prime Minister?

Finally, while the tone of M. Blum's speech was designed to conciliate capitalists, the speeches of the other officials who went with him to Nantes, and notably that of M. Jouhaux, the Trade Union Leader, who recommended the nationalisation of the banks and of the key industries, were very different. The rumours of an impending Sugar Office on the same lines as the Wheat Office have largely neutralised the favourable effect which might have been produced by the revival of business. Unemployment has fallen by 70,000; partial unemployment has almost entirely disappeared; and deposits in the public savings banks have risen since the beginning of the year.

Prices Rise More Slowly

Wholesale prices on February 20th showed a slight increase:—

	Jan. 16	Jan. 23	Jan. 30	Feb. 6	Feb. 13	Feb. 20
General index ...	511	512	513	515	514	516
National products	534	537	540	541	541	538
Foreign products	470	468	464	467	467	476
Foodstuffs	527	527	528	521	522	515
Industrial products	498	500	501	510	508	517

The following table gives the retail price of a number of foodstuffs:—

Francs per unit	Jan., 1936	Oct. 15, 1936	Nov. 15, 1936	Dec. 15, 1936	Jan., 1937
Bread	1.60	2.15	2.20	2.20	2.20
Wine 9° 5	1.40	2.05	2.20	2.25	2.30
Chocolat	11.20	12	12.60	12.60	12.60
Roasted coffee	16.80	17.60	17.60	18	18
Pastes	5.20	6	6	6.20	6.60
Tinned peas	4.60	5.60	5.60	5.40	5.40

Chicken	15	15.70	17.50	17.20	18.75
Fish	7.50	4.50	7.50	6.40	9
Potatoes	0.70	0.90	0.90	0.85	0.85

The production of electricity in 1936 by the sixty-eight most important French companies was 11,385,235,000 Kwh., against 11,076,807,000 Kwh. in 1935, an increase of 2.78 per cent. The number of new cars sold in 1936 was 190,168. If exported cars (21,401) and imported cars are taken into account, the French production in 1936 was 168,646, an increase of 27.434 compared with 1935, and 16.0 compared with 1934.

Germany

The Government Borrows Again

BERLIN, February 24.—The Reich Government has announced the issue of Rm. 500 millions of Treasury certificates at 98½; the interest will be 4½ per cent., and they will be repayable at par in six equal instalments in 1944-49. Some Rm. 100 millions have already been taken up by banks. Subscriptions with blocked marks are permitted; and payments will be made in instalments between April 5th and June 5th. The Reich's decision to borrow again was determined by favourable conditions in the capital and money markets. The 5 per cent. debentures of private companies for the financing of the Four-Year Plan have so far been well taken up. Despite considerable public borrowing, loans and bonds on the Bourse have been firm; and the official index for public loans and mortgage bonds rose in every month of last year, and it has risen in every week of this year. The abundance of money is shown in various ways. The Gold Discount Bank has been able to raise its promissory note circulation to over Rm. 1,000 millions, against a former highest total in April, 1936, of Rm. 860 millions. The last Reichsbank return, for February 15th, shows that 107.1 per cent. of January month-end credits were repaid, against 98.6 per cent. in the same period of last year. The five chief credit banks show an increase of deposits in December-January of Rm. 201 millions; Rm. 190 millions ("other creditors") represent actual business and private deposits. Deposits in other banks and in the savings accounts of the great banks also increased substantially.

The Reich's funded German debt at the end of 1936 is returned at Rm. 11,383 millions, against Rm. 10,960 millions at the end of the third quarter of the year; and foreign debts were Rm. 1,495 millions against Rm. 1,655 millions. The decline in foreign indebtedness is largely due to the recent devaluations; and the untransferred

amortisation instalments of the Young and Dawes Loans, which were paid into a Reichsbank special account in marks, are regarded as paid off. The floating debt is returned at Rm. 2,440 millions, against Rm. 2,881 millions on September 30, 1936. The circulation of tax credit certificates remained practically unchanged. Consolidation loans increased by Rm. 1,951 millions in 1936. The new issue will bring Reich borrowing since the beginning of 1935 (including the Railway Corporation's Rm. 500 millions) to about Rm. 4,700 millions. The loan will certainly be subscribed in full. One of the favoured Four-Year Plan loans issued at 99 was introduced to the Bourse at 102½; and it is believed that the market will be approached for capital for the "Buna" synthetic rubber process.

Autarky and the Fuel Problem

Pig-iron production in January was 1,292,100 tons, against 1,258,300 tons in December. The steel market continues active, and new rationing measures have been taken. The export of machinery last year was 335,560 tons, against 255,435 tons in 1935; and of vehicles of all kinds 103,364 tons, against 79,201 tons. Coal output in January was 14,860,000 tons, against 13,680,000 tons in January, 1936. The trade press is discussing the coming coal shortage; which is being brought about by the high output of iron and steel, the production of building materials (the cement output has risen 4½-fold since 1932), and the production of synthetic motor fuel.

In a speech last year Herr Hitler foreshadowed the consumption of 20 to 30 million tons of coal in motor-fuel production. A recent bank report estimates that after the construction of the more important (motor-fuel) works 10 per cent. of the present Ruhr coal output will be needed for hydrogenation. On January 30th Herr Hitler remarked that "the German ironfields are unlimited; for over a thousand years Germany imported no iron, yet was able to meet her demand." The official Plan journal says that owing to the rise in world iron prices and to technical progress and cheaper smelting in Germany, the disparity in cost between iron from domestic and foreign ores may be greatly reduced. Ore imports must be reduced as much as possible, so that it may not be necessary to export semi-finished products at a loss and thereby to help foreign manufacturers. The increase in coal production involved by this and other Four-Year Plan enterprises will not be possible without heavy investment in plant. About half a dozen colliery companies are already sinking new shafts. A semi-official journal says, however, that the real difficulty will lie in the supply of labour.

The Liquidation of Independent Craftsmen?

The number of unemployed increased in January from 1,479,000 to 1,853,000, largely because of cold weather. Under a new decree metal workers may not change their employment without official permission. An older decree forbade workers to move from one industrial district to another; the new decree extends the veto to changes within the same district. The new work books, which all employees must carry, are being increasingly used to hamper freedom of movement. The Leader of the Social Department of the German Handicraft organisation has suggested that 700,000 independent craftsmen should be liquidated and forced to take work as wage-earners. This would help to meet the shortage of skilled labour. "Bourgeois prejudices" must not stand in the way of their employment in the national interest. This is a surprising utterance in view of the emphatic and almost violent Nazi preference for the independent craftsman against the wage slave.

Tendentious Accounting

The Standstill Conference, as was expected, led to no material changes. Measures which include the confiscation of property against persons suspected of the unauthorised export of capital, have been made more stringent. The Ministry of Economy's Survey of Foreign Trade in 1936 discusses why the exchange position was not improved by the export surplus. The report gives no figures, but it admits that, so far as longer export than import credits were a cause, an increase in the

receipts of cash or clearing exchange must ultimately follow. The deficit (Rm. 102 millions) in the official balance of foreign payments for 1935 on the current (trade, shipping and debt service) account caused surprise in view of the export surplus and net takings of Rm. 451 millions from shipping and other services. It was produced, it now appears, by booking the whole of the untransferred debt interest on the passive side. Debt service transfers, therefore, appeared as Rm. 650 millions, although the actual transfer was only some Rm. 250 millions. This error was balanced by booking the difference (some Rm. 400 millions) in the capital movements account as a short-term loan from the foreign creditors. The effect was to create the wrong impression that the net receipts from trade and services were insufficient to cover the debt service transfers.

The Bourse has been occupied with conjectures about the excess dividends impounded in the Gold Discount Bank under the Loanstock Law of December 10, 1934. The question is whether the money will be paid out to shareholders or whether the law will be extended. The law, which impounded dividends exceeding 8 per cent., (in certain conditions 6 per cent.) was for three years; and it laid down that the whole of the sums withheld should be returned to the companies after the close of the first year to which the law did not apply.

Italy

State Trading and Devaluation

TURIN, February 9.—In a speech to the annual meeting of the Joint-Stock Companies Associations the Minister of Finance described something of the background of the devaluation, or alignment, of the lira. Autarky, he said, unavoidably produces an increase in the price of those imports which it is no longer desired to buy from foreign countries. Duties were raised in past years against many foreign goods; for not a few of them trade was practically monopolised by the State. Wheat, for instance, was made liable to a duty of 750 lire per ton; and wheat growers were obliged to sell all their products to a public agency at a fixed price of 1,180 lire per ton. Devaluation took place when the gold price of primary products was rising; consequently the price of foreign wheat at Genoa was enhanced by two factors: world prices were rising and an increased number of lire had to be paid against dollars or pounds. It rose to 900 lire per ton. If the old duty of 750 lire were to be paid, the wheat agency could only import foreign wheat at a total cost of 1,650 lire per ton. The Exchequer could compensate the loss sustained by the agency in selling the foreign wheat at 1,180 to millers; but it was simpler to reduce the duty from 750, first to 470, and then to 180 lire per ton. Thus the duty on wheat is to-day lower than it has ever been during the last half-century.

The Attempt to Control Prices

The Government has tried since devaluation to prevent any rise in prices in paper lire. Undoubtedly the policy has been so far very successful. The policy was easy enough to enforce in certain cases: for instance, house and agricultural land rents were pegged for two years.

The MERCANTILE BANK of INDIA LIMITED

Head Office: 15, Gracechurch St., London, E.C.3
CAPITAL AUTHORISED £3,000,000
CAPITAL PAID UP £1,050,000
RESERVE FUND & UNDIVIDED PROFITS £1,249,097

Branches and Agencies throughout the East

The price of public utilities, such as water, gas, electricity and transports, cannot be raised for the same period; an increase can, however, be authorised in consequence, for instance, of rising foreign coal prices. The cost of board and lodging in hotels and boarding houses was similarly fixed.

It was much more difficult to regulate the price of other goods. The general principle was to peg prices at the level of September, 1936; but as this was in most cases clearly impracticable, central and provincial committees were created to supervise prices. The Central Committee was presided over by the Secretary of the Fascist Party and included representatives of several public Departments and of Employers' and Employees' Confederations; the Provincial Committees were presided over by the provincial Fascist Party Secretary and included representatives of the interested Syndicates. Supervision was eventually concentrated on the price of those goods which enter into the cost of living of the working classes. The system is flexible; and prices are readily adjusted to the state of supply, as recently in the cases of cheese and olive oil.

These price regulations have an important bearing on the interpretation of the price statistics and indices which are being published again (from January, 1937) by the Central Statistical Office. Before the suspension of publication in October, 1935, price statistics registered average market quotations in a number of places. Now they register the prices fixed by the Central and Provincial Committees for all regulated goods, and the market prices of unregulated goods.

The Growing Duties of the Corporations

Perhaps the most important recent piece of economic legislation was a Decree approved on January 9th by the Cabinet, which transferred from a special Departmental Committee to the Corporations' Council the duty of authorising new industrial undertakings or the enlargement of old factories. Hitherto authorisations have been given by a body in which civil servants predominated; now they will be given by a body which mainly consists of representatives of the employers and employees of the already existing factories. It will be interesting to follow the results of this change. The old Committee had perhaps a bias in favour of old factories; and the number of requests for starting new factories which were refused in the first six months of 1936 was relatively higher than the number of requests for extensions which were turned down. The bias against newcomers may change with the transfer of decisions to the Corporations' Council.

Senator Boccardo, who is the head of a great semi-public armament firm, has drawn the attention of his colleagues to one result of the obstacles to imports and the limitation of new industrial plants; there is a tendency for the few domestic producers to form cartels or trusts (*consorzi*) to fix prices on a monopolistic basis. To prevent this he asked that key industries for war purposes should be made compulsorily totalitarian; that the distribution of work between members of such "*consortiums*" should be made according to their respective productive capacity; and that maximum prices should be fixed by Corporations for the products of trustified industries. Maximum prices should be fixed on the basis of the cost of production in new and up-to-date plants.

This is truly an ingenious way of solving the thorny problem of armament firms without making armament production an exclusively State affair. The duties of the Corporations are, however, already becoming more and more exacting. It is true that the Government has the last word, through its delegates, in all Corporation decisions; but the Corporations are mainly professional and sectional bodies. If and when the Corporations' Council is transformed into the new Corporative and Fascist Chamber, some means will have to be devised to ensure that general will prevail over sectional interests. While sectional interests are rigid, the general interest is flexible. Flexibility has hitherto been the main virtue of Fascist economic policy, and has provided the best safeguard against the dangers of over-regulation in the economic field.

U.S.S.R.

Politics and Industry

Moscow, February 8.—It has often been noted that wrecking trials in Soviet Russia are accompanied or followed by revelations of serious maladjustments in State industries; and it is difficult to determine how far industrial maladjustments influence the trials, or the trials accentuate industrial disorders. Politics and industry are so closely interwoven in Russia that the agitation resulting from such trials, and from the events which lead to them, naturally disturbs the minds of men who are at the same time politicians and industrial executives.

The series of conspiracy trials which began last August has been particularly disturbing, because they have involved so many men who held key positions in Soviet economic organisations. When such men are discredited, it is presumed the men they appointed may also be tainted with political heresy, and they often follow their chieftains into exile or obscurity. State industry falters while new organisations are being created. It is not easy to find capable executives in a society where trained men are still exceptional.

Now that veteran Bolsheviks have confessed to deliberate sabotage in several major industries, the Government permits its people to learn of distressing conditions hitherto kept from them. Sabotage explains everything; revelation of gross inefficiency need not cast discredit upon central planning, which, without some such explanation, might come into disrepute.

Official Revelations of Inefficiency

Official newspapers now reveal that conditions are most unsatisfactory on the railways, and in the non-ferrous metal and chemical industries. Plants were designed hastily without an adequate knowledge of raw material resources. Capital was invested in the "least advantageous fields and those which presented the greatest difficulties for exploitation." For example, where lead and zinc ores were found together, only one or the other was utilised. Plans for new factories were altered locally, which resulted, according to one official newspaper, "in complete irresponsibility and confusion."

In the chemical industry, "plants frequently were designed with too large or too small capacities, in unsuitable places, for the production of an unnecessary assortment of goods, etc. Often plants were built at places where there was little ore." Funds were withheld from plants under construction, which often resulted in the suspension of building operations. Designs were altered after much of the construction work had been completed, which necessitated the demolition of finished buildings and their reconstruction. At the Krasno-Uralsk Combinat, the metallurgical section was built with no provision for the use of by-products.

All this, and much more, is now recorded in the official newspapers, and charged to Trotskyism. Whatever the cause may be, it is obvious that there has been terrific waste of capital funds and effort, and that thorough reorganisation of whole industries will be necessary. The official view is that reorganisation will be easy now that the wreckers in high places have been removed.

Defendants in the January trial included a number of important railway executives. The confusion resulting from their removal, together with that of men whom they had appointed, is apparent in car-loadings, which dropped from a peak of 95,000 daily last summer to 65,000 in February. There is evidence of similar disorder in the steel, rolled metal and coal industries, which are fulfilling from 70 to 80 per cent. of their plan.

The majority of the people apparently accept official explanations of industrial disorders. Because they do so, their hatred of the wreckers is intense; they blame them for the fact that the Government has been unable to raise the standard of living more rapidly, and for the numerous shortages in consumer as well as capital goods. The wreckers have thus absorbed emotions which might otherwise have aroused dangerous doubts about the success of planned economy.

Poland

The Jewish Scapegoat

WARSAW, February 13.—The ordinary Budget session of Parliament, which began in December, has been noteworthy for the frequency of debates on Jewish questions. The Jews form about 10 per cent. of the population, but they bulk very much larger than that in the work of a Parliament which is disposed to attribute most of Poland's misfortunes to an excess of three million Jews. The Prime Minister, who is also Minister of the Interior, reported on the more effective methods which the police have evolved for dealing with Communist and anti-Jewish riots; a large part of the Foreign Minister's speech was devoted to colonial interests and the mass emigration of Jews; the Minister of Education deplored the tragedy of anti-Semitic blindness which is increasingly finding expression in student disturbances; and the Minister of Industry and Commerce touched on Jews in relation to industry.

The fundamental problem is that for a hundred years the principal export from Poland's present territory was human beings (roughly, seven million Poles and four million Jews); and it is apparently an impossible task to adjust the home market to the export stagnation caused by post-war restrictions on immigration. The Jewish population now increases by about 50,000 a year; Polish and other nationalities by about 450,000. If the 3,500,000 Jews now in Poland could be evacuated overnight, the relief would hardly be more than temporary.

National Defence and Public Works

Parliament has passed two Bills, prepared by M. Kwiatkowski, the Minister of Finance, in collaboration with the War Minister; one to create a National Defence Fund of 1,000 million zloty, to be implemented and spent at the rate of 250 million zloty a year; and the other to authorise the Government to spend 264 million zloty on public works, in the fiscal year which begins April 1st. In addition to this amount of 514 million zloty, the Minister of Finance will use 136 million zloty of the recent French loan; 85 millions from the liquidation of frozen balances owing to Polish exporters by Germany and other countries; and 65 millions from various sources. Thus he will have available this year for his so-called Investment Programme 800 million zloty. The ordinary Budget of the War Department, which for 1937-38 amounts to 768 million zloty, and the military equipment to be received from France on long-term credit under the recent agreement, are separate from the Investment Programme. The Programme is a development of the four-year plan to spend 1,800 million zloty on public works, which M. Kwiatkowski introduced last June, and on which 340 millions have already been spent.

The Burden of the Next War

A large part of the 800 million zloty to be spent this year will go towards the creation of a new industrial zone in the "strategic triangle," which is roughly the territory between Lublin, Cracow and Lwow (Lemberg) in the southern half of Poland. This region is adequately provided with water-power, petroleum and natural gas, and has the advantage of not being within artillery range of any of Poland's seven neighbours. But it will take many times 800 million zloty to transform it into an industrial region on which the Polish Army could function efficiently in time of war. M. Kwiatkowski was the creator of the port of Gdynia on the Baltic, and his engineering abilities are not doubted; but from the financial side his programme is meeting with much criticism. It means that the capital market will increasingly be dominated by State borrowing, and that the money will be spent with military aims primarily in view. It also means that any hope of substantially improving the very low standard of living of thirty million workers and peasants must be deferred for several years at least, and it is hard to foretell what the political consequences of this

may be. Her leaders have never yet shown adequate appreciation of the fact that Poland is a very poor country. Moreover, in the final analysis national defence must rest on the masses having something worth defending.

Imports were valued at 1,003 million zloty in 1936 (861 millions in 1935), and exports at 1,026 millions (925 millions in 1935).

	Imports into Poland		Exports from Poland	
	1935	1936	1935	1936
	(Millions of Zloty)			
United Kingdom	116.6	141.6	181.4	221.6
Germany	123.9	142.9	139.9	142.1
United States	123.1	119.3	43.3	67.6
Belgium	25.9	43.3	57.1	84.3
Sweden	19.8	29.0	49.5	59.6
Czechoslovakia	35.2	35.6	52.9	49.1
France	41.8	43.5	32.6	43.6
Italy	25.9	16.9	29.8	22.0
Soviet Russia	14.9	16.2	11.1	9.0

The maintenance of an export surplus in 1937 will depend to a great extent on the crop situation, and on the continued export of pork products in the present volume to the United States.

Jugoslavia

Political and Diplomatic Hopes

BELGRADE, February 9.—The New Year was happily ushered in for Yugoslavia by the conclusion of the pact of friendship with Bulgaria. Since this treaty is approved by Roumania and Greece, it may mark not only the settlement of an age-long hostility, but the opening of a new era of pacification in the Balkans, in contrast to the unrest of Central and Western Europe. Of similar importance internally was the meeting of the Premier, Dr Stojadinović, with Dr Maček. This suggests that there

may be a greater willingness on both sides to discuss their differences, but there have been no tangible results yet. The Croats still demand a Constitutional Assembly, with a free hand to remodel the Constitution. The Government does not appear to be willing to do more than concede vote by ballot and provincial autonomy. A freely elected Parliament could, in any case, revise the Constitution, if it had a three-fifths majority. It is difficult, in fact, to see how the Regency can grant a Constitutional Assembly without overstepping the strict limits of its powers. Thus the deadlock still persists.

Booming Business

There was a marked expansion in foreign trade towards the end of the year, and the December figures were the highest for the last five years. Especially noteworthy is the fact that the trend of prices, which has hitherto gone against the agricultural producer, shows signs of reversing. Export prices have risen more than import prices, and the lost purchasing power of the peasant has been somewhat restored. The final harvest figures were the best since the war. The wheat yield was 29.2 million quintals, compared with 19.9 in 1935; and the production per hectare was 4 quintals more than the average. Maize showed an increase in yield per hectare of as much as 7.4 quintals. The total corn harvest was 15 per cent. above average. This, and the settlement of the peasant debt, have eased the position of the peasant considerably.

Record Employment

Production increased in most industries, particularly in timber, milling, brewing and textiles. Mining output increased by 25-30 per cent. and prices were better. During last year 355.7 million dinars of new capital were invested. Mining, which attracts most capital, absorbed 71 millions. Because of this improvement the number of employed workers rose from 600,000 in November, 1935, to 657,000 in November, 1936. The Zenica iron foundries and the Bor copper mines and smelting works have been further extended and will employ about 5,000 more men. Public works such as the building of two new railway lines, Rožarevac-Kučevo and Valjevo-Čačak, and the construction of the Belgrade river port and another bridge over the Sava, will absorb another 15,000-20,000 labourers. Wages have risen to a daily average of 22.04 dinars, 0.47 dinars more than in November, 1935. Workers have benefited from the establishment of a minimum wage of 2.50 dinars per hour, or 20 dinars per 8-hour day, which was largely the result of the strikes in 1936.

The internal debt on January 1st stood at 7,088.6 million dinars. Foreign debts were 11,182 millions. Negotiations are expected shortly with the French holders of Yugoslav State bonds, to decide on the franc basis for the payment of the coupons and redemption (gold franc, Poincaré or Blum?), and on the possible conversion of all present loans and matured obligations.

Brazil

German Gains in Import Trade

RIO DE JANEIRO, February 10.—Civil and political conditions have remained normal in Brazil since the military revolt was suppressed in November, 1935, although the Government has retained plenary powers as a guarantee of security. The amount of Government revenue collected has exceeded the estimates, but the Budget is still unbalanced. There has been a steady increase in expenditure, and the estimated expenditure for 1937 is some 639,000 contos more than in 1936. Under the Federal regime, it is not easy to refuse the regional demands for expenditure in a young and developing country. Some 10 per cent. will be applied to the service of the foreign debt, under the Aranha scheme, which is operative from April 1, 1934, to March 31, 1938.

Owing to the operation of the compensation agreement, Germany has ousted the United States from the first place in the list of countries supplying goods to Brazil. In fact, German competition is felt very strongly by all countries, including Great Britain. Brazilian imports from Germany in the first nine months of 1936 were worth £5,026,409 (gold), those from the United States £4,809,771 (gold), and those from Great Britain £2,400,450 (gold); in 1935 the figures were: United States, £4,799,768; Germany, £3,850,994; and Great Britain, £2,563,855. Great Britain, however, is still the chief market for Brazil's products, other than coffee.

Fall in Coffee Exports

Despite expensive valorisation schemes, Brazil is steadily yielding place to other producers in the world's coffee markets. Coffee, however, still remains the principal export, and the decline in shipments has been made up by those of other products, principally cotton, fruit and meat. The value of cotton shipments is now approximately one-half of that of coffee, the chief purchaser of cotton being Great Britain. Japan is also a substantial buyer. Coffee prices have improved, following the Agreement in October, 1936, between the American coffee-producing countries, to maintain prices. Taking the long view, however, there can be no return to permanent prosperity in the coffee industry until the average annual production is brought into line with annual consumption.

Australia

The Powers of the Federal Government

MELBOURNE, February 5.—The various political parties are preparing for the Referendum on the enlarging of the powers of the Commonwealth to include marketing arrangements; until the recent Privy Council decision these were supposed to be already within its constitutional powers. There is a feeling in some quarters that the Commonwealth Government ought not to be granted any further powers. Although the Privy Council decision upset several existing marketing schemes, it was strictly in accordance with the provision of the Constitution that trade between the States should be absolutely free.

The quarterly average returns (to December 31, 1936) of the ten trading banks in Australia show deposits of £291,328,415, an increase of £1,725,182 compared with a year ago; advances of £267,628,675, an increase of £6,793,927; and Government and municipal securities (including Treasury bills) to the value of £41,432,341, a decrease of £6,544,081. If the December quarter is compared with the September quarter, deposits rose by £7,048,979, because of the sale of wool and other exports. This movement tends to increase London funds, and to place the banks in a relatively easy position. But the position later in the year in view of the present scale of imports is anticipated with some doubt.

State Policy and Public Debts

Several State Governments are of the opinion that their present borrowing arrangements are inadequate for the expenditure which they wish to make on public works and unemployment relief. They blame the Commonwealth Bank, which is, however, guided by actual circumstances when it considers the size of loans which it can underwrite. The Governments consider that it is the duty of the Bank to create credit to meet their needs. The question of fresh borrowing in Australia or in London is to be considered by the Loan Council early this month, when the various Governments are expected to press their claims. Attention continues to be drawn, however, to the growth of the debts; the total for the Commonwealth and the States has risen from £1,104,028,062 on June 30, 1929, to £1,256,606,355 on September 30, 1936, an increase of £152½ millions in 7½ years. An argument against large public borrowing is that it means competition against private borrowers for the available supplies of money.

Letters to the Editor

A. Road and Rail Controversy

TO THE EDITOR OF THE ECONOMIST

SIR,—The writer of your railway article shows a quite remarkable faculty for starting up his own hares and proceeding to chase them. Unfortunately, this may have the effect of obscuring the thesis I put forward, which is, in brief, that the railways have been complaining for years that road transport "skimmed the cream off their traffic," i.e. deprived them of highly-rated merchandise traffic, but took very little of the coal and minerals. I agree that the railways have lost traffic, and that the loss has been largely in the highly-rated category, but no evidence has ever been produced that the traffic lost by the railways has been their "cream."

I have shown that, taking the "wagon load forwarded" as the relevant unit from the operating point of view, there is no substantial difference in the railway receipts per wagon-mile (loaded and empty) for merchandise, minerals and coal. I have not produced figures of expenses per wagon-mile, because none are published. It is clearly up to the railways, in the face of the equality on the side of receipts, to furnish proof that their expenses are higher per wagon-mile (loaded and empty) for coal and minerals than for merchandise. It seems *prima facie* unlikely that this should be the case, because, against the greater length of the average haul for merchandise, must be set the smaller size of the consignments, in general the smaller number of wagons per train, more complicated marshalling and handling, higher terminal charges, greater amount of clerical work, and higher expenses in connection with collection and delivery, which are not entirely recovered from the shippers. I have a shrewd suspicion that, taking all these factors into consideration, the "cream" of the railway traffic is their coal traffic.

The writer of your railway article complains that my figures were partly taken from the official returns, but "arbitrarily altered," and naively remarks, with regard to "average receipts per loaded wagon forwarded," that "these figures are not shown in the published railway returns." I do not mind admitting him into a secret. To obtain the "average receipts per loaded wagon forwarded," it is necessary to divide the total receipts by the number of loaded wagons forwarded. He will have no difficulty in obtaining the figures for each of these. My other figures he will find in the appropriate Returns, except for the allocation of empty wagon mileage between the different classes of traffic, which is not published. I have, however, taken for this figures which were recently given by an eminent railwayman under cross-examination, and which are the only authoritative source of information on the point.

Yours, etc.,
THE WRITER OF THE ROAD ARTICLE.

A Ministerial Symposium

TO THE EDITOR OF THE ECONOMIST

SIR,—Whatever criticisms may be brought against the current policy of the British Government, its skill in making the best of all possible worlds can hardly be gainsaid. I freely offer the following ministerial symposium for the use of Parliamentary and other speakers:—

Citizens of the United Kingdom: We are required to assume a heavy burden which, however, will cost us nothing because of the great economic benefits which will ensue. The sacrifice is worth making, and the time for sacrifice is now, because with the enormous elasticity in the finances of this country we shall not feel it. The huge programme of re-armament will strain the resources of the country to the utmost and lead the nation away from pursuits which might bring prosperity and contentment to all, but capital, labour and material will not be diverted from productive to unproductive purposes. Hitherto the Government has not borrowed because of the absence of economically sound projects, but here is a new opportunity to tackle the problem of the Special Areas. We cannot view the growing accumulation of burdens without a feeling of shame and disgust

that our civilisation is breaking its back, but the country is now in a position to finance re-armament without affecting the social services or the standard of life. The cost is patently gigantic and every town and county will rejoice in the prospect of receiving orders in connection with the Government's programme. The sacrifice will last a generation and have the effect of enormously diminishing unemployment.

The Government must have power to call on all the resources of the country without interfering with normal industry. Foreign nations are impressed by the readiness and determination of this country to incur a staggering expenditure which will lift a great many firms and businesses to the income tax level, and the bulk of which will go in wages. There will be no inflation and with the rise in prices we shall benefit from the increased purchasing power of the countries which buy our manufactures. The psychological effect on trade and commerce of an increase in direct taxation would be disastrous and we have taken every precaution against profiteering.

The policy of borrowing now provides a powerful weapon against a future slump. Guns mean employment, tanks mean employment, battleships mean employment, aeroplanes mean employment. We have only to set our teeth for these ripe fruits to drop into our mouths. Let us steel our hearts, tighten our belts, and march forward with a high courage into the valley of the shadow of full prosperity.

I find no difficulty in making head or tail of our Government's policy. The trouble is that it makes both at once.

I am, etc.,
ECONOMICUS.

Hire Purchase Finance

TO THE EDITOR OF THE ECONOMIST

SIR,—My attention has been called to a statement appearing in your issue of the 20th instant, under the heading of Hire Purchase Finance, to the effect that the United Dominions Trust is the oldest and largest of the leading firms engaged in the hire-purchase business, having started in 1919. Your contributor is either under a misapprehension or has been misinformed.

The following is a list of the leading firms engaged in Hire Purchase Finance, together with the years in which they were incorporated, viz.:—

Lancashire Wagon Company, Ltd.....	1857
Bristol and South Wales Railway Wagon Company, Ltd.	1860
Scottish Wagon Company, Ltd.	1860
The North Central Wagon Company, Ltd.	1861
Yorkshire Railway Wagon Company, Ltd.	1863
The British Wagon Co., Ltd.....	1869
The Lincoln Wagon and Engine Company, Ltd.	1874
Wagon Finance Corporation, Ltd.	1906

MACMILLAN & CO., LTD., LONDON, W.C.2

It is clear, therefore, that the most recently formed Company in the foregoing list was engaged in the hire-purchase business many years before the formation of the United Dominions Trust, whereas the oldest of the firms referred to was established 62 years before the United Dominions Trust.

The company with which I have the honour to be associated held its seventy-sixth annual general meeting in September, 1936, having been established, as stated, as far back as 1861.

The total capital funds of these companies exceed £6,000,000—my own company's proportion being in excess of £2,000,000 and that of our associated company "The Lincoln" approximating £1,000,000.

It should perhaps be mentioned that of the companies named in the foregoing table three have become merged in this company and its associated undertaking The Lincoln Wagon and Engine Company, Ltd.

In the light of the foregoing I venture to think you will agree this correction should be given the same publicity as the article referred to which, in all other respects, is wholly admirable. Perhaps, therefore, you will kindly allow this letter to appear in your next issue.

Faithfully yours,

for the Company,

D. W. REES,

Managing Director.

The North Central Wagon Company, Ltd.,
Rotherham.

[Our statement, as the context of the article showed, referred to the general hire-purchase companies. It was not intended to reflect in any way on the old-established wagon finance companies, which, in their own sphere, have long performed a useful function.—*Ed. Econ.*]

Books and Publications

The World Slump

THIS comprehensive study* deals with the changes in national income caused by the "Great Depression" in Europe, America and Japan, and in its distribution among various social groups. The first part of the book states the decline in production during the depression years and analyses the effects of that decline upon national income. It is estimated that the slump cost the world in reduced production of goods and services a sum which would have met the entire cost of the Great War. In the main, the contraction was confined to industrial production and the services of trade and transport. In agriculture, the reduction in output was negligible. The contraction was therefore unevenly shared by different countries. Countries for the most part agricultural were least affected; those predominantly or extensively industrial bore the brunt of the decline.

The distribution among different countries of the total world loss of income was, however, not apportioned on similar lines. Here the chief sufferers were the agricultural countries. Because of the difference between industrial and agricultural prices, Great Britain, France and Germany were able to pass on to other countries an appreciable proportion of the loss arising from reduced industrial and trade activity. Professor Woytinsky calculates that Great Britain's national income was reduced by only from £450-£500 millions during the four years of the slump, although there was a decline of £1,300 millions in industrial production and trade services.

His examination of the redistribution of income among various social groups shows clearly that the chief sufferers in the depression were working-class people. Unemployment and short time implied a reduction of income that even the comparatively generous insurance system of Britain could not make up. Those remaining in work in this country suffered no loss in real wages, because declining wage rates were largely offset by the falling cost of living. But, as the depression deepened, a spreadover of earnings to assist unemployed members of families meant, in effect, a spreadover of poverty. Capitalists suffered, but here the losses were for the most part covered by reserve funds which had been built up in earlier periods of prosperity. Professor Woytinsky's figures of savings and of variations in reserve funds during the depression years give special point to this argument. Middle-class business men and farmers experienced heavy losses; although it is noted that the position of farmers was materially improved by Government assistance and by their own initiative in developing subsistence farming.

Those faring best were the rentier and professional classes. The fall in prices during the depression years was much more severe than in any previous slump;

bondholders and those in receipt of fixed salaries had their capital and income considerably increased in consequence. This windfall was offset to some extent by loan conversions; but the author contends that Governments everywhere showed a more tender regard for their bondholders than for any other section of the community. Not many of the conclusions reached in this section are essentially new; but a large part of the statistical and other data upon which the conclusions are based is original; and this serves at least to give a new significance to opinions hitherto but half or less than half substantiated.

The task Professor Woytinsky has attempted is stupendous; and much of it yet remains to be done. There are many social consequences of the depression to which he is able to make only general and passing reference. The book contains, however, a very large quantity of statistical material, set out with unusual cogency and clearness; and where gaps occur in the available data, this is clearly indicated. It contains, moreover, many useful theoretical considerations of the interdependent action of different phases and factors in depression; those concerning the relationship between industry and agriculture and between those sections of industry producing capital goods and consumption goods are particularly valuable. Students will find in Professor Woytinsky's work much that throws immediate light upon the problem of trade depression. It is salutary to ponder these figures when the shadow of yet another slump is being thrown, however faintly, over the fair picture of present prosperity.

Shorter Notices

"Leadership in a Free Society." By T. N. Whitehead. Oxford University Press. 266 pages. 10s. 6d.

This book, written with optimism and impartiality, is an objective study of certain difficulties of social life in a modern industrial system. The author is concerned with the loss of happiness and of efficiency from which men working in modern factories and offices suffer. "For the industrial worker life is maintained in two relatively watertight compartments, one of which is all purpose and not socially satisfying; whilst the other is deficient in achievement and is apt to be overweighted by purposeless pseudo-social occasions"—so writes the social scientist, adding, "An important feature of any industrial society is the emphasis placed on purposeless activity out of working hours." Professor Whitehead thus furnishes a valuable analysis of the unsatisfied social needs of working men (of all classes). The material for this analysis is drawn from enquiries made by certain large American firms with the consent and co-operation of their employees, into the mental attitude of the worker towards his daily work and its surroundings. Some of the results described by Professor Whitehead, and not yet fully appreciated in this country, are interesting and perhaps surprising, such as—to mention one example—the faith in the fairmindedness of "The Company" of men who can find no good word for any of the Company's actual executives, especially those immediately dealing with them.

Professor Whitehead's tentative comment on this is an appeal to the American business man to exercise leadership (the trade unions he regards as "not adequately led" while "the executive ranks of business contain many of the best brains of the country.") Professor Whitehead's optimistic hope of "friendly co-operation" with the workgr proceeding unprompted from the business man of present-day society is perhaps Utopian; and his fair-minded presentation of the facts enables him to see that the social value of trade unions, though they may cause friction, justifies their acceptance by business men in the present situation.

Professor Whitehead's diagnosis is perhaps more profound than his remedy. For whatever may be the industrial society to which we are moving, the problem which he states will have to be solved; the social stresses must be resolved if a "free" society is to survive.

"The People's Year Book." Manchester: The Co-operative Wholesale Society. 351 pages. 3s.

Issued by the C.W.S., this annual volume emphasises the extent to which the consumer is neglected by the subsidies, quotas, tariffs and agricultural marketing schemes, which have been imposed by the Government in its policy of raising the level of prices by restricting available supplies. Our present dependence on imports of food and drink is made clear by details of the imports of £350,000,000 in 1935; but the costs have been raised by artificial means. Sir W. Citrine writes hopefully of the return of trade union membership to the "peak" of 1920, a 6½ million membership, to which the increasing number of co-operative employees will contribute. The latter have more than doubled since the War and reached 301,717 in 1935, the wages bill being £38,656,296. Hence the optimism with which the Ten Years' Plan for increased membership and trade is being developed; so that the centenary of the Co-operative Movement in 1944 may mark the fulfilment of the intentions of the Rochdale Pioneers.

The total retail trade of the Societies was £220,429,517 in 1935. Included in this was the turnover of the two Wholesale Societies, amounting to £117,000,000. It is claimed that only 10 per cent. of the retail trade passes through agencies that are unco-operative; but it should not be forgotten that two-thirds of the supplies of the wholesale Societies are drawn from outside concerns. Dr C. R. Fay records something of the same tendency in his review of the co-operative tea estates in India and Ceylon, which supply only 5 millions out of the 110 million lbs. of tea handled by the societies in a year. The Year Book has a warning to co-operative optimists who regard continuously advancing trade returns as inevitable; for Dr Enid Charles reveals the effect that declining population may have on a movement which has shown yearly increases. Her suggested discarding of the "economic assumptions of capitalism" does not, however, provide any means of evolving "the type of society in which people will think it worth while to reproduce." That is a problem for a future Year Book.

"Income and Outcome: A Study of Personal Finance." By Nigel Balchin. Hamish Hamilton. 312 pages. 6s.

This book, dedicated "to my Bank Manager, to whom, in truth, I owe more than I can ever hope to repay," is an attempt to investigate the domestic economy of the British middle-class family. Mr. Balchin performs his task with a great deal of good humour and not a little worldly wisdom. He has also collected forty-two "family budgets" for families with incomes ranging from £65 to £2,500. It is no detraction from the quality of the book to say that it is of more personal interest than economic value. Everybody enjoys observing how foolishly other people spend their money. But both Mr. Balchin's text and also his collection of budgets show how completely impossible it is to generalise about personal expenditure once the region of luxuries is entered and that of necessities is left behind. Suggestions are made from time to time for the calculation of an index of the cost of middle-class living. Mr. Balchin's book should serve as an effective antidote.

"Raw Materials or War Materials?" By Alfred Plummer. Gollancz. 144 pages. 3s. 6d.

Dr Plummer's book contains a number of excellent arguments, backed by much factual material, against ceding colonial territories to the "have-not" Powers. Briefly, his conclusions are that the Fascist Powers are mainly responsible for their own difficulties in that they deliberately pursue a policy of autarky which prevents

their obtaining raw materials at world prices; that this policy of autarky is designed to prepare their economies for war; and that, since to make colonial concessions would be to increase their appetites and to refuse them may mean war, the League Powers should strengthen the system of collective security in order to defend themselves against aggression. They should, in addition, free their colonial territories from such restrictions as at present hamper the expansion of trade between the "haves" and the "have-nots," and should prepare a scheme for the international administration of all colonial areas.

There can be little doubt that Dr Plummer's policy is the only one which can preserve peace in the immediate future. But if we wish to frame a long-term policy it is necessary to attempt an analysis of the dynamics of imperialism. Dr Plummer seems to imply that the revisionist policies of Germany and Italy spring from their ideologies, that is, are the epiphenomena of diseased thinking and not the expression of economic needs. Now, an ideology has its roots; and some roots of an imperialistic ideology in both democratic and Fascist countries can be found in the special needs of those interested social groups who are prepared to strangle democracy and to wage war in order to preserve an old empire or create a new one.

Mr Hawtrey's argument in *Economic Aspects of Sovereignty* stands: the character of a foreign policy may be misconceived if it is assumed that its object is welfare. And the critic who points out that it is incompatible with welfare deludes himself, if he believes that it is only necessary to show the authors of such a policy that they are in an intellectual muddle to persuade them to abandon it.

MONEY AND BANKING

Insurance Accounts Without Tears

THE British insurance offices are now pouring out their reports for 1936. Ordinarily, the issue of a limited company's report is of concern only to its shareholders. But for insurance companies the law has made special provision to ensure that the creditors—usually called the policy-holders—may have complete information regarding the accounts. But how many policy-holders will exercise their right, under Section 8 of the Assurance Companies Act of 1909, to demand a copy of the accounts which set out their cover against the hazards of life and death?

That this precaution is rarely taken is itself testimony to the strength of British insurance institutions. Investors and policy-holders alike have become habituated to a steady record of progress. But it may also be due, in part, to special features in insurance accounts which are devised for the layman's protection but, in fact, add to his general difficulty in dissecting a set of figures. It is, therefore, the purpose of this article to discuss, in a simple fashion, the fundamental principles governing insurance accounts.

From the first, the law has concerned itself with insurance accountancy methods. An office which transacts more than one class of business (and most, in fact, do) must keep a separate account of the receipts of each branch, and these must be carried to separate assurance funds "with appropriate names." The funds thus set up rank absolutely as the security of policy-holders of that class, and they cannot be applied to any other purposes. In law, therefore, each fund is completely segregated as though it belonged to a separate company. So, although the 1934 total premium incomes of British insurance offices for all classes of business amounted to £220 millions (equivalent to about 30 per cent. of the Budget revenue of the British Government and nearly 30 per cent. more than the total receipts of the four large British railways for that year), the actual accounts of the offices distributed this sum over numerous headings—such as life, fire, accident and employers' liability.

If an insured is covered for life, therefore, he will be interested solely in the state of the life assurance fund. It will matter but little to him if his insurer is quite unable to make motor business pay, or if the accident branch has experienced a heavy loss ratio. To ascertain his specific security, he need merely turn to the account of the fund which provides his cover. But here a further complication arises. Some risks, like fire or accident, are underwritten for a fixed period, at the end of which any excess of premiums over the payments made for claims constitutes the insurers' underwriting profit. In practice, the actual accounts are complicated by such matters as unexpired risks and unpaid claims, but, in principle, such insurances present no accounting difficulty; the surplus on each fund, subject to the creation of suitable additional reserves, can be taken directly into profit and loss account.

But the profit from life business is very different. Although the insurer can calculate his expected liability on any particular life risk within much closer limits than he can assess the chance of a particular accident, the liability which the life fund must cover is contingent until the death of the assured or the maturity of the policy; it does not expire from year to year. If an office accepts life business on the calculation that the proposers have an average expectation of life of thirty years, it would be involved in heavy loss if the insured survived for no longer than twenty-five years. Conversely, if the average expectation of life is extended during the period of insurance, the company enjoys a

longer period of premium payments, and thus obtains a higher return than it originally anticipated.

It is impossible, therefore, to assess the true liability of a life fund without an actuarial valuation, and the law compels such valuations to be taken at least once every five years. Its object is to assess, at the date of the valuation, the "present value" of the company's liability, as represented by the life assurance policies then outstanding, having regard to rates of mortality, future premiums and expenses, and the expected rate of interest to be earned by the fund. The total amount of this liability is then set against the assets in the life fund, and the difference between the two represents the surplus available in the life fund at the date of the valuation.

To see how this surplus is dealt with it is necessary to revert to the running experience of the company. Let us assume that a valuation is taken every five years. During each of these years the life fund will be receiving premiums and interest on its investments, while it will be paying out claims and also having to bear the cost of commissions and its proper share of the general management expenses. Any surplus between these receipts and payments, however, must not be regarded as a profit. It must be left to accumulate in the fund (i.e. added to the fund's assets) until the end of the valuation period. Thus at the end of the period the fund's assets consist of its original assets at the beginning of the period *plus* the surplus of receipts over payments accrued during the whole of the period.

The actuary then comes in and makes his valuation of the fund's liabilities, as described above, and the surplus of assets over liabilities is then determined. Three claimants now appear for this surplus. First, there are the holders of the "with profits" policies. The directors of the company will no doubt decide to declare a reversionary bonus. This is not distributed to the policy-holders in the form of cash, but is applied so as to augment the value of their policies. Therefore, from the accounting point of view, all that happens is that the assets of the life fund remain intact, but the liabilities are increased. This, of course, reduces the surplus.

Next, the directors may decide to allocate part of the surplus as an inner reserve in the life fund. This, again, causes an increase in the liabilities of the fund, while leaving the assets intact. Finally, part of the surplus will be transferred to general profit and loss, where it will be available, together with underwriting profits from other branches of the company's business, for strengthening the general reserves of the company or for distribution as dividends. Incidentally, the shareholder has in some cases a special claim on the profits of particular classes of the business, including the life business.

Again, assuming a five-year valuation period, the transfer to profit and loss is made indirectly. Immediately after each valuation, the part of the surplus allocated to profit and loss is transferred to a suspense account. At the end of each of the succeeding five years, one-fifth of this amount is brought into the profit and loss account of the year in question, and is shown as such in the company's accounts. By the end of the new valuation period, these annual debits will have exhausted the amount transferred at the end of the previous period, and so the suspense account will be empty in readiness for the new transfer based on the results of the new valuation. The profits distributed during, say, the years 1931-35 are those derived from the valuation made at the end of 1930—that is, from the augmentation of the life

fund's assets which took place during the five years 1926-30. These profits for the years 1931-35 bear no relation to the actual incomings and outgoings of the life fund during those same five years, for the surplus for those years will only be finally determined when the new valuation is made at the end of 1935. There is thus a time-lag equal to the length of the valuation period, and this time-lag only disappears if the company is one that makes its actuarial valuation at the end of every year.

Insurance company balance sheets are, finally, formidable documents. They analyse the liabilities and assets of each of the separate funds. They then add the shareholders' balance sheet (which in law, as we have seen, is wholly separate) and usually total each category of asset and liability in one final column. For members of companies like the Prudential Assurance, whose 1935 balance sheet total exceeded £300 millions, simple statements of accountancy procedure can have only limited relevance. In fact, however, the general balance sheet is an extended description of each of the individual funds, augmented by such items as investment reserve and the balance of profit and loss. The third schedule of the Assurance Companies Act requires that the assets of each fund shall be set out in elaborate detail, so that the policy-holder may readily assess the quality of his cover. And although there is, inevitably, considerable stability in the investment policy of a mature life fund, changes in investment distribution are not without their interest for the general investor.

Such, in its simplest terms, is the general nature of an insurance company's report. If the lay reader recognises the principle of segregation before attempting his analysis, his task will be the easier. He may still feel that the mastering of the average report can best be attempted by those with expert knowledge. But at least a knowledge of the broad lines on which insurance company accounts are drawn up will help him to appreciate the force of the comments made by writers like *The Economist's* insurance correspondent, in the notes on individual offices which, at this season, are a regular feature in our pages.

Financial Notes

The New Standstill Agreements.—The renewal for another year of the old Standstill Agreements with only slight alterations is undoubtedly a disappointment to the British creditors, whose position, as we pointed out during the negotiations, is such as to justify special treatment. It was understood that the two British delegates were pressing for a certain measure of capital repayment, but their return to England for a further conference with other creditors was an indication that German opposition to this suggestion was very strong. The only substantial changes are an extension of the grounds for the cancellation of unavailed credit lines. Credits which have remained unavailed for three years may now be cancelled, and it is henceforth permissible to cancel part of a credit line against the release of Gold-discountbank guarantees to the extent of twice the amount of the guarantee released. A small measure of capital repayment will be secured by the imposition of a licence fee of ros. for every 100 registered marks purchased, the proceeds of which will be used for the reduction of credit lines. It is estimated, however, that this will not realise much more than £1,000,000 in the year, and, in any case, it will tend to increase the discount on registered marks, and hence the losses of those creditors who choose to liquidate their commitments in this way. Thus the repayment of one set of creditors is made possible only by a heavier charge on the others. Moreover, it is expected that the rate for registered marks will have to depreciate to maintain the inducement to tourists to make use of them. Altogether, the new agreements cannot be regarded as a success.

Foreign Exchange Brokerage.—The protracted negotiations that have been carried on with a view to removing the handicaps of excessive brokerages and unduly wide spreads between buying and selling rates in the London foreign exchange markets have at last been successfully terminated. By agreement between the Foreign Exchange Committee and the Foreign Exchange Brokers Association the brokerages on the principal currencies have been considerably reduced. In francs brokerage payable by each side has been reduced from 1s. 6d. to 1s. per Frs. 100,000, and in dollars from 30s. to 20s. per \$100,000. Rates for Argentine pesos, Canadian dollars, free Reichsmarks and guilders have been similarly reduced, but in other exchanges they remain unchanged, except in the case of the Scandinavian, Finnish and Czechoslovakian currencies where it is a matter of negotiation. The reduction of the spread is of even greater importance. Artificial margins are no longer being maintained, and on Tuesday, the first day following the agreement, the quotations were considerably narrower. In the case of the franc it was initially one centime, and later two centimes against three centimes previously, and for the dollar .01 cent and later .03 cent against $\frac{1}{2}$ cent previously. It is hoped that the combination of these two measures will restore the supremacy of the London market, and it is presumed that brokers are relying on an increased turnover to counteract their reduced charges. Nevertheless, in view of the prevalence of direct dealing between the banks, it will probably result merely in the reduction of brokers' earnings, and may even make business impossible for some of the smaller firms. It will be interesting to see how the new arrangement works out in practice.

The Money Market.—Money has been slightly easier during the last week, although there has been a certain amount of calling every day. The discount on three months' bank bills is unchanged at $\frac{9}{16}$ per cent., but the tendency is weak.

	Feb. 4 1937	Feb. 11 1937	Feb. 18 1937	Feb. 25 1937
Bank rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate:—				
Clearing banks	$\frac{1}{2}$ - $\frac{1}{2}$ *	$\frac{1}{2}$ - $\frac{1}{2}$ *	$\frac{1}{2}$ - $\frac{1}{2}$ *	$\frac{1}{2}$ - $\frac{1}{2}$ *
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Three months' bank bills	$\frac{9}{16}$ - $\frac{1}{2}$	$\frac{9}{16}$ - $\frac{1}{2}$	$\frac{9}{16}$ - $\frac{1}{2}$	$\frac{9}{16}$ - $\frac{1}{2}$

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The clearing banks have been moderate buyers of April and early May maturities at their usual minimum rate of $\frac{1}{2}$ per cent. The payment of the £8 millions instalment of the French loan on Friday of last week made no noticeable difference in monetary conditions.

The Bank Return.—Following last week's disequilibrium between Treasury bill payments and maturities, bankers' and public deposits have now returned to normal, with the former once again above the £100 millions level.

	Feb. 26, 1936	Feb. 3, 1937	Feb. 10, 1937	Feb. 17, 1937	Feb. 24, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	200.6	313.7	313.7	313.7	313.7
Note circulation	399.9	457.3	455.0	453.3	455.1
Banking Department:—					
Reserve	61.5	56.8	59.1	60.8	59.3
Public deposits	8.8	12.2	11.7	24.4	13.0
Bankers' deposits	106.2	96.1	99.2	90.6	100.4
Other deposits	35.5	38.3	37.3	36.7	37.9
Government securities	82.1	80.4	81.2	83.1	85.0
Discounts and advances	11.0	8.5	6.5	5.5	4.9
Other securities	14.1	18.9	19.5	20.4	20.3
Proportion	40.8%	38.7%	39.8%	40.1%	39.1%

The note circulation has risen by £1.8 millions, which is a normal increase for the end of the month. The only other change is a slight rise in Government securities.

The Foreign Exchanges.—The only interesting features in an otherwise quiet week have been the reduction of brokerage charges and spreads, and the imposition of a licence fee on registered marks both of which are discussed elsewhere. As far as registered marks are concerned, it is expected that not only will the demand for them fall off with the lower effective rate but the supply will also fall, as creditors may well refrain from cutting their losses by accepting registered marks, and will hold out for capital repayment, for which this licence fee is devised. At present, however, the demand for registered marks is strong, and any changes will come after the new regulations come into force. The franc has been comparatively steady during the week, the spot rate being pegged at Frs. 105½. The three months' forward discount, after coming in to Frs. 2½ on Monday, widened on Thursday to Frs. 2½. The Swiss forward rate for three months was offered on one occasion and went to ½ centime premium, but returned later to 2 centimes premium. Dollars have been strong at \$4.88-90, and have been consistently bid.

* * *

Canadian Statistics.—The Bank of Canada has issued the first number of an admirable statistical summary, which in form has much in common with the monthly publication of the Bank of England. Information obtained from a number of different sources is collated, simplified and clearly set out in well-constructed tables, the majority of which are illustrated by graphs. The statistics cover a wide range, including the position of the Bank of Canada and the chartered banks, security prices, public finance, exchange rates, trade figures, and price and productive indices, and the whole forms a comprehensive survey of the Canadian economy. It is always the complaint of the economist that statistical information is inadequate, and where available, requires complicated adjustment to make the figures comparable. Consequently, any new statistical service of this breadth and authority is doubly welcome.

Insurance Notes

Provident Mutual Life Assurance.—This Association transacts a large proportion of its business among wage-earners belonging to certain occupational groups, for example, railway and transport workers. By the facilities which it has secured in regard to mass collection of premiums and otherwise it is able to give to these members the full advantages of life assurance at the same level of premium rates as are charged by other offices for ordinary life assurance. Last year the number of policies was 23,900, the sums assured aggregating £2,662,000, against 21,300 and £2,272,000 in 1935. Considerations for annuities increased very substantially from £29,000 to £101,000, and on this occasion a reference is made to the granting of deferred annuities, presumably under staff pension schemes, amounting to £146,000. Of special interest is the increase in the net rate of interest earned on the life assurance fund from £4 9s. 2d. per cent. to £4 9s. 6d. per cent. Surrender values paid in showing still further reduction from £114,000 to £103,000 no doubt reflect the more prosperous industrial conditions. Total assets increased from £11,103,000 to £11,915,000, but there was no particular movement in the various investment groups. Loans at £984,000 and British Government securities at £2,283,000 were practically unchanged, while debenture stocks amounted to £1,941,000, compared with £1,811,000, and preference stocks to £2,367,000, against £2,005,000. Ordinary stocks were £49,000 greater at £1,945,000. There is an investment reserve fund of £1,000,000, apart from inner reserves due to the method of valuing Stock Exchange securities "at or below" middle market prices on December 31st last. For 1937 it has been decided to maintain interim bonuses at the rates declared at the quinquennial valuation in 1933.

Pearl Assurance Company.—New sums assured in the ordinary branch increased further from £8,598,000 to £8,802,000. In the industrial branch new sums assured at £21,250,000 showed an increase of £347,000, but in this branch of insurance special importance attaches to the maintenance of premium income. In this respect the published figures are very encouraging, since they show an increase from £8,077,000 to £8,424,000. The net rate of interest on the mean fund in the ordinary branch was £4 6s. 6d. per cent., against £4 6s. 5d. per cent., but in the industrial branch was 3s. 7d. per cent., smaller at £4 9s. 9d. per cent. This fall was due entirely to the greatly increased assessment for income tax, which rose sharply from 1s. 2½d. in the £ calculated on the gross interest in 1935 to the unusually high rate of 2s. in the £ in 1936. The usual annual valuation was made, and the trading results of the last two years are given below:—

	1935	1936
Ordinary Branch		
Surplus earned during year	1,060,951	1,098,206
Brought forward from previous year	362,458	249,126
	£1,423,409	£1,347,332
To Policyholders' Bonus.....	829,315	844,884
„ Shareholders' Account	204,725	209,000
„ Investment Reserve Fund	100,000	...
„ Staff Pension Fund	40,243	40,318
„ Carry forward to next year	249,126	253,130
	£1,423,409	£1,347,332
Industrial Branch		
Surplus earned during year	1,545,628	1,370,855
Brought forward from previous year	651,278	639,080
	£2,196,906	£2,009,935
To Policyholders' Bonus.....	638,069	758,904
„ Shareholders' Account	410,000	480,000
„ Investment Reserve Fund	100,000	...
„ Common Contingency Fund.....	300,000	...
„ Staff Pension Fund	109,757	109,682
„ Carry forward to next year	639,080	661,349
	£2,196,906	£2,009,935

There was some strengthening in the valuation basis in the industrial branch.

* * *

The rate of reversionary bonus declared in the ordinary branch is again £2 per cent. on each £100 assured. In the industrial branch the rates of bonus are increased in the whole life class from 14s. to 16s., and in the endowment assurance class from 11s. to 12s. for each weekly premium of 1s. Profit-sharing in this branch was inaugurated in 1929 in respect of policies issued prior to 1923; the policies participating in respect of 1936 are those effected prior to 1930. In each of the miscellaneous branches, of which the fire department is much the largest, premium income increased, but due to much higher claims—and commission, which amounted to 29 per cent. of premium income, against 21 per cent. in 1935—in that department a moderate net profit was converted to a substantial loss. The results of the various departments are given below:—

Department	Premium Income	Underwriting Profit	Percentage
Fire	£1,138,265	£152,250	13.4
Employers' Liability	31,930	6,159	19.3
Accident	84,868	20,949	24.7
General	169,668	18,437	10.9
Motor	212,455	4,956	2.3
	£1,637,186	£111,610	

Total assets, which are separated from the ordinary and industrial branches, and for the miscellaneous departments, increased from £91,240,000 to £96,522,000. Loans were somewhat larger, but British Government securities decreased slightly from £32,496,000 to £32,167,000, while foreign and Colonial Government securities fell by £753,000 to £13,160,000. On the other hand, British municipal securities increased by 19 per cent. to

£6,175,000, and large increases were registered in debenture, preference and ordinary stocks. Thus debenture stocks were £2,047,000 greater at £12,965,000; preference stocks £1,395,000 greater at £6,894,000; while ordinary stocks at £9,439,000 showed an increase of 34 per cent. The rate of the shareholders' dividend has been increased from 50 per cent., free of tax, to 51½ per cent., free of tax.

* * *

National Provident Institution.—The 1936 report is of more than usual interest, as it gives the results of another triennial valuation of the liabilities. The same rate of interest as before has been used, namely 3 per cent., but for assurance contracts the OM table is replaced by A¹⁹²⁴⁻²⁹; this change brings out higher reserves than by the old basis. The results of the two latest triennial valuations are given below:—

	1931-1933	1934-1936
Trading profits earned during valuation period	898,146	947,958
Brought forward	409,695	358,690
	1,307,841	1,306,648
To Bonuses to policyholders.....	929,151	897,270
„ Staff Superannuation Fund.....	20,000	20,000
„ Carried forward	358,690	389,378
	1,307,841	1,306,648

The basic rate of bonus allotted to whole-life policies remains at 3 per cent. per annum calculated on the sum assured. Varying substantial addition to this minimum rate is made where the life assured has survived his expectation of life; this addition is slightly smaller in all cases than in 1933. The basic endowment assurance bonus varies with maturity, age and duration; an additional bonus is given payable only on survival of the endowment term.

* * *

Examples of the basic rates of bonus, which are identical with those allotted in 1933, are given below. The additional survival bonus, however, is reduced from 8s. per cent. per annum to 5s. per cent. per annum, calculated on the sum assured:—

ENDOWMENT ASSURANCE—ANNUAL REVERSIONARY BONUS CALCULATED ON THE SUM ASSURED		
Age at Maturity	Duration :	
	18 years or less	21 years or over
50	39/—	49/—
55	43/—	53/—
60	48/—	58/—
65	53/—	63/—

New sums assured at £1,882,000 marked a fresh record, but the net rate of interest fell by 3s. 7d. per cent. to £4 5s. 3d. per cent. This fall seems somewhat large, as other company accounts, issued to date, have generally reported either trifling decreases or increases. After the abnormally small death claims in 1935, namely £254,000, an increase last year to £340,000 is not surprising. Over the past four years the mortality experience has been 88 per cent. of the amount expected by the A¹⁹²⁴⁻³⁹ valuation table. Total assets increased from £12,035,000 to £12,547,000. Loans fell by the substantial sum of £329,000 to £3,088,000, but British Government securities show little change. Debenture stocks at £3,078,000 compare with £2,717,000. Preference stocks increased from £487,000 to £787,000, and ordinary stocks were 70 per cent. greater at £667,000. No special investment reserve is held, but it is stated that no Stock Exchange security stands above market selling price as at December 31st last, and that "there is in the case of the majority a large margin."

* * *

Scottish Provident Institution.—New sums assured at £3,166,000 were slightly smaller than the previous year's record figure of £3,207,000, but annuity considera-

tion amounted to £249,000 compared with £174,000 in 1935 and £129,000 in 1934. The net rate of interest calculated on the total funds, including the investment reserve fund of £600,000, increased from £3 15s. 8d. per cent. to £3 16s. 9d. per cent.; calculated on the assurance fund alone, the rate was 1/5 per cent. greater at £3 18s. 11d. per cent. Premium income was £1,223,000 against £1,207,000. Death claims showed an increase of £78,000 to £1,022,000, and surrender values at £136,000 were slightly smaller. A sum of £130,000, being the amount reserved in the assurance and annuity fund for members of the staff presently on the retired list, has been transferred from that fund to staff pension fund trustees. Further contributions, it is stated, will be made from time to time, presumably with the end in view of maintaining a legally separate pension fund for both the serving and retiring staff. Credit is taken in the Revenue Account for income tax at 4s. 9d. in the £ on the £130,000 transferred, namely £30,875, but this item has not been allowed for in arriving at the net rates of interest shown above. Total assets increased from £24,665,000 to £25,117,000. Policy loans showed considerable further reductions at £1,391,000 against £1,539,000; three years ago the total was £1,725,000, and the fall is a little surprising, as at this period the Institution took the unusual step of reducing its policy loan rate of interest, which is now well below the average of the offices. Little change occurred during the year in total loans other than policy loans. Slight increase took place in British Government securities, but British Municipal securities rose from £196,000 to £410,000, while Foreign and Colonial Government securities increased by £123,000 to £1,472,000. Railway debentures, preference and ordinary stocks, which are shown separately in the balance sheet, fell by an aggregate amount of £61,000, but other types of debenture, preference and ordinary stocks increased from £2,579,000 to £2,674,000; £2,210,000 to £2,481,000; and £2,720,000 to £3,107,000 respectively.

* * *

Scottish Widows' Fund.—For many years there has been an almost uninterrupted succession of records in new sums assured of this Society, and last year's total of £4,849,000 contrasted with £4,465,000 in 1935 and £2,445,000 in 1926. In spite of its one hundred and twenty-three years, there is no indication that the Scottish Widows is approaching any static condition; on the contrary, annual premium income has increased in the last decade from £1,634,000 to £1,970,000 and total assets by nearly £7,000,000 to over £34,000,000. Last year both claims and maturities showed some increase, but surrenders fell by 16 per cent.; although the gross interest increased by 10d. per cent. the net rate fell by some 5d. per cent. to £4 6s. 1d. per cent. On the assets side there was a further movement—less accentuated, however, than in 1935—towards higher yielding securities. Loans increased by £568,000 to £4,669,000, but British Government securities were £777,000 smaller at £7,192,000. Debenture and preference stocks each showed a moderate increase, while ordinary stocks, which now form 13 per cent. of the assets against less than one-third of 1 per cent. in 1926, increased substantially from £3,619,000 to £4,531,000.

* * *

Scottish Temperance and General.—New business increased from £1,446,000 to £1,524,000 and premium income from £588,000 to £600,000. Death claims at £233,000 were greater by £65,000, but mortality is stated to have been favourable. Surrender values fell from £80,000 to £51,000. The rate of interest on the life fund fell by 11d. per cent. to £4 2s. 4d. per cent., and total assets increased from £7,904,000 to £8,236,000. Loans were £150,000 smaller at £2,026,000, but British Government securities and Foreign and Colonial Government securities also showed little change. Debenture stocks, however, increased by nearly £100,000, preference stocks by £222,000 and ordinary stocks by £113,000.

THE STOCK EXCHANGE

Retreat from Gilt-Edged

THE Luddites had a proverb: "Enoch makes 'em and Enoch breaks 'em"—Enoch being the big hammer which was equally invaluable for engineering construction or destruction. An identical rôle has now fallen to Mr Chamberlain, who made a gilt-edged market boom by a debt-conversion speech on June 30, 1932, and finally broke it by a debt-augmentation announcement on February 11, 1937. It is true that gilt-edged prices had been rising before the first pronouncement and falling before the second, but the psychological effect was decisive in both cases, for it substituted a general trend for a mere anticipatory tendency.

Gilt-edged prices reached their highest prices for the present interest-cycle in January, 1935, when $2\frac{1}{2}$ per cent. Consols touched 94 $\frac{3}{4}$. This has generally been recognised, however, as a false peak, due to extravagant hopes of a par quotation for Consols, as a prelude to a Local Loans conversion. For the greater part of 1936, the price seemed relatively stabilised around a level of 85. On Tuesday this week the stock fell at one time to 74 and at the moment of going to press its price is 76. Three and a half per cent. War Loan has declined this year from 110 $\frac{1}{2}$ to 102. This, the largest stock in the market, is repayable after December, 1952, at the Government's option only. At 110 it was classed as a redeemable stock; to-day it has become irredeemable from the market's viewpoint.

The extent of the decline in the prices of long-term Government stocks may be seen from the table of quotations in the next column:—

EXTENT OF FALL IN LONG-TERM GOVERNMENT STOCKS

Stock	Highest Price, 1935	Price, beginning of Jan., 1937	Price, Feb. 24, 1937	Fall from Highest	Fall this Year	Present Yield (%)
2 $\frac{1}{2}$ % Consols	94 $\frac{3}{4}$	84 $\frac{3}{4}$	76	18 $\frac{1}{2}$	8 $\frac{1}{2}$	3 6 3
3 $\frac{1}{2}$ % War Loan (after Dec. '52)	110 $\frac{1}{2}$	105 $\frac{1}{2}$	102	8 $\frac{1}{2}$	3 $\frac{1}{2}$	3 9 3
4% Consols (after Feb. '57)	118 $\frac{1}{2}$	112 $\frac{1}{2}$	108 $\frac{1}{2}$	10 $\frac{1}{2}$	4 $\frac{1}{2}$	3 8 6
3 $\frac{1}{2}$ % Conversion (after Apr. '61)	112 $\frac{1}{2}$	106 $\frac{1}{2}$	100 $\frac{1}{2}$	12	4 $\frac{1}{2}$	3 9 8
3% Local Loans	98 $\frac{1}{2}$	96 $\frac{1}{2}$	88 $\frac{1}{2}$	9 $\frac{1}{2}$	8 $\frac{1}{2}$	3 8 2

Broadly, the ruling rate of interest on long-term Government stocks has risen from 3 per cent. to 3 $\frac{1}{2}$ per cent. in a couple of months. The movement has been disconcertingly fast, and its area has broadened with every increase in its velocity. Its main impetus has come from a large number of small and medium-sized holders. That the process, once it had attained large dimensions, would spread to other fixed-interest stocks, including industrial and railway debentures and preference shares, and even to high-grade ordinary shares, was inevitable, for there is a varying but appreciable "interest element" in the make-up of every security quotation.

The consequences of a prolonged fall in gilt-edged prices are so far-reaching that the market may rightly ask whether the authorities have made, or propose to make, any disposition to meet it. From the market's point of view, the Government's stage management,

THE "NINETIES" AND THE "THIRTIES"

Note.—In the 'nineties "Consols" bore interest at 2 $\frac{1}{2}$ %. They were reduced to this level, from 3%, under the Goschen plan, which provided for a further reduction to 2 $\frac{1}{4}$ % as from 1903.)

this year, has not been of the best. It is impossible to please everybody, but the market feels that the announcement, for example, of the figure of £1,500 millions for defence, having duly impressed the nations of the world, might well have been followed by the consolatory explanation—for the benefit of investors and taxpayers—that, after all, this was only an addition of £110 millions a year, income and capital, to expenditure on the Services for the next five years. The Chancellor might also have added that he had no intention of offering £400 millions of new stock in a single operation and was unlikely to make any issue whatever in the immediate future. For the present slump is largely psychological. Fear breeds fear, and a serious decline brings forced selling, as collateral loans are uncovered.

The authorities, presumably, have not lost sight of the fact that present conditions have at least a superficial resemblance to those under which the famous gilt-edged boom of the 'nineties came to an end. On the accompanying chart we have plotted the course of unemployment, Bank rate and Consols' prices from 1890 to 1900, and from 1928 onwards. It will be seen that Bank rate (together with short money rates generally) has remained low, and the fall in unemployment (i.e. the rise in industrial activity) has continued for a longer period in the 'thirties than the 'nineties. It was at approximately the present stage in the earlier cycle that Consols began their historic fall. And, at the turn of the century, the national debt was swollen by the costs of a war.

To-day, in contradistinction to conditions forty years ago, we have, ostensibly, a "managed" currency and a number of official "controls" in the capital market. Let us examine the present constitution of the market, and the nature of those controls, and endeavour to discover their bearing on official policy. In the first place, movements in gilt-edged prices are governed, not by the policy of holders of the entire £8,000 millions (approximately) of the National Debt, but of those holding probably not much more than a quarter of the total amount. In an analysis made in *The Economist* of February 9, 1935, page 318, we estimated that of a then total debt of £7,936 millions some £1,695 millions was in "non-marketable" holdings (including Britain's External Debt, the Exchange Equalisation Account, etc.) and a further £3,617 millions in "inert" holdings, including Savings Certificates, and the holdings of Savings Banks, insurance companies, friendly societies, the charity commissioners, and inactive private settlements and trusts. Finally, of the remaining £2,624 millions of potentially "marketable" holdings, we estimated that as much as £1,175 millions might be in the hands of British and overseas banks and a further £1,000 millions in the more active private holdings, settlements and trusts. Clearly, a certain rigidity—over a short period at least—must be postulated here also, for trustees will be reluctant to make extensive changes at the beginning of a falling market, while the idea that the banking system will hurriedly liquidate a large share of a total holding of well over £1,000 millions of Government stocks is quite unthinkable. It would seem, therefore, that dealings in gilt-edged are much more a one-way market than is generally realised, since actual buying in a rise and selling in a slump is carried on by a relatively small minority of total holders.

A second important feature is the extent to which market conditions for the last five years have been artificial (as their critics would say) or officially regulated (in the phrase of their defenders). The basis of the entire British credit system has been broadened and the banks, with increased deposits and a decreased demand for discounts and advances, have largely increased their gilt-edged holdings. At the same time, the market has been protected by the ban on foreign issues and the strict regimentation of borrowing by home corporations. More recently, there have been successive offerings of Government funding loans at prices somewhat above current market levels. These have been largely subscribed by Government departments, presumably in the expectation that a further fall in interest levels would enable them to unload in due course. At no time has it been possible to say what the level of gilt-edged prices would have

been had the Government allowed all new borrowers to take their fill of cheap money.

The market, indeed, has—rightly or wrongly—come to regard the authorities in the light of a self-appointed director, controller and oracle; "the unseen guest at every meal, the silent listener to every conversation." Indeed, the degree to which the market has come to look to the Treasury for guidance makes it particularly important that some indication of the official view should be given at this moment. Of course, if there is a real shortage of savings for the needs of the gilt-edged market, manipulation by the Treasury will not avail to reverse the upward trend of interest rates. But is it not far too premature to assume that this is so? The sum of £80,000,000 per annum is by no means large compared with the volume of the national savings. And British investment may well vary by this amount between one year and another. It may be that the recent fall in prices has been due not to any calculation of the exact effects of a Defence Loan but to a purely psychological feeling that the tide has turned, and that, for the moment, there is no criterion by which to judge how far the fall may go. If so, it lies well within the powers of the Treasury to check it. And every consideration of policy dictates that those powers should be used. Indeed, recovery from Monday's gilt-edged levels is already evident, but investors who wish to insure against the possibility of a resumed fall and are temperamentally or legally debarred from investment in speculative industrial or commodity shares, have a limited range for protective "switching." The following table contains a select list of stocks with unimpeachable security, which are repayable, at par, at varying dates during the next three decades:—

REDEEMABLE LONG-TERM STOCKS

	No. of yrs. to latest red.	Prices			Yield to latest red.
		Highest since 1932	Begin. of 1937 Jan. 4	Feb. 24 1937	
<i>Government Stocks</i>					
2½% Conversion 1944-9.....	12	103½	101½	96½x	2 16 9
3% Conversion, 1948-53.....	16	107½	103½	99½	3 2 0
2½% Funding, 1952-57.....	20	98½	98½	93½	3 6 0
2½% Funding, 1956-61.....	24	95½	92½	87½	3 4 9
3% Funding, 1959-69.....	32	106	101½	96½	
<i>Government Guaranteed Stocks</i>					
Railway Finance Corp., 2½% 1951-52.....	15	98½	95½	92½	3 2 9
London Elec. Transport 2½% Gtd. Deb. Stk., 1950-55.....	18	92½	92½	90½	3 4 3
<i>Not Government Guaranteed</i>					
*Railway C. House, Rly. Freights Rebates Loan, 2½%, 1937-52.....	15	97½	22½†	96½	2 16 3

* Not a trustee stock. † £20 paid.

Investment in these stocks involves an inescapable loss of income. But beneficial holders are at least assured of the eventual return of their capital, whatever the intervening vicissitudes of general interest rates.

The Distinctive System of The Scottish Provident Institution

Under *The Distinctive System* the premiums are so moderate that, at early and middle ages, the annual sum charged elsewhere for a Whole Life Assurance of £1,000, with profits, will here secure from the first as much as £1,300 or thereby with right to share in the Surplus.

Investment Notes

Mr Keynes on Interest Rates.—Mr Keynes's annual tonic talk on interest prospects, at the meeting of the National Mutual Life Assurance Society, came opportunely this week for holders of gilt-edged securities who (as we suggest in a leading article on page 476) have been sorely distressed by a fall in market quotations which, within six weeks, has raised the yield on long-term Government securities from under 3 per cent. to nearly $3\frac{1}{2}$ per cent. Mr Keynes has no doubt that the sums which the Chancellor of the Exchequer proposes to borrow for re-armament are well within the national capacity, particularly if they bring the unused resources of the Special Areas into employment. He agrees with the view we have recently expressed in our columns, that the Government must have a concerted policy for retarding other postponable capital expenditure, if congestion is to be avoided. But he takes exception to the suggestion that the Chancellor will be unable to obtain his money without producing conditions of inflation. Mr Keynes apparently believes that an appreciable share of the resources which annually accrue by way of public board and local authority sinking funds, repayments by building society mortgagors, growing savings bank deposits and increased company reserve allocations, can, and should, be made available for defence loan subscriptions. Nor does Mr Keynes believe that the Chancellor, in deciding on the terms at which he will borrow, should feel himself encompassed by a sense of financial sin, still less of predestination. The Treasury, guided by its past experience, should afford encouragement to the supporters of the gilt-edged market, in proportion to its own need and theirs.

The form which this support can best take seems to be, in Mr Keynes's view, the issue of relatively short- and medium-dated securities. For the British debt, Mr

Keynes suggests, is, on balance, unduly "long." Apart from Treasury Bills, some £5,000 millions out of a total of £6,000 millions have no fixed repayment date within the next twenty-five years, whereas in America practically all Government debt is repayable within that period, and there are notes or bonds falling due in almost every year. Undoubtedly, British trustees and gilt-edged holders generally would welcome a new borrowing technique which, in fact, assured them of the return of their capital intact, within the space of a single generation. Mr Keynes's contention, however, that this course would be equally profitable to the Treasury—since it is expensive for the Treasury to keep the long-dated market in relative over-supply—depends on the assumption that, over a long period, average interest rates will be lower, and not higher, than they are to-day. On this point, Mr Keynes appeals to the verdict of past history. Between 1837 and 1914, when our average capital wealth was lower, and we were simultaneously providing for an increasing population and investing abroad, there was not a single five-year period when the average yield on long-term gilt-edged securities was as high as $3\frac{1}{2}$ per cent. Possibly the gilt-edged market, which is admittedly taking a shorter view at present than Mr Keynes, is in fact taking too short a view. And perhaps the distinction between what is and what should be, which Mr Keynes quite properly made as the Chairman of a responsible insurance office when drawing up his society's accounts, explains the attitude of the gilt-edged market to-day, pending more definite assurance that the Treasury has taken Mr Keynes's advice to heart.

Recovery in Industrials.—The recession in high-grade equities which continued over last week-end, produced further heavy declines in quotations on Monday. These were falls, for example, of 3s. in Associated Portland Cement, 3s. 6d. in Distillers, and 2s. in Turner and Newall. Even the armament group was affected. It was obvious, however, that the market had allowed its nerves to better its judgment—particularly in accepting comparable falls in leading industrials, whether they were recovery counters or stable industrials. Buyers were, therefore, early abroad on Tuesday, looking for cheap stock, and prices were quickly adjusted. Some typical movements in the industrial market are set out below:—

	Range, 1936	Dec. 31, 1936	Highest 1937	Feb. 19, 1937	Feb. 22, 1937	Feb. 25, 1937	Change this Week
"Stable" Industrials							
Gas Light & Coke	28/6-25/10½	26/9	27/-	25/-	25/-	24/9	- 3d
Midland Bank...	98/9-91/-	94/6	94/6	87/6	86/9	85/-	- 2/6
United Dairies	67/-59/6	60/-	60/4½	57/6	55/-	56/3	- 1/3
"Tax Vulnerable" Equities							
Distillers	126/3-95/6	124/3	124/9	109/-	104/3	110/3	+1/3
Guinness	160/-140/6	142/-	143/-	130/-x	122/6x	129/6x	- 6d.
Imperial Tobacco	9½-7½	9½	9½	7½	7½	7½	+ *
Arms Equities							
Bristol Aero. ...	71/9-61/10½	64/6	64/6	62/6	61/6	60/-	- 2/6
Hadfields	31/4½-18/-	33/3	41/1½	41/6	42/-	41/-	- 6d
Vickers	39/6-20/-	34/4½	37/7½	38/3	37/10½	37/6	- 9d
Recovery Equities							
Assed. Portland Cement	110/9-65/-	108/9	110/3	105/-	100/7½	102/9	- 2/3
British Oxygen	135/-86/10½	120/-	138/9	126/3	121/3	123/9	- 2/6
Turner & Newall	112/7½-70/3	111/6	112/6	103/9	103/-	106/-	+ 2/3

This week's movements are clearly more selective than those of last week. It is evident that industrial movements in 1937 will be the resultant of a tug-of-war between rising interest rates, rising costs, and further recovery. Shares in which the latter factor now predominates against the depressing effects of falling gilt-edged and rising prices are now few. But the market's partial correction of the falls in such shares as Associated Portland Cement, Turner and Newall, Courtaulds, and British Oxygen, suggested its recognition of this fundamental necessity for discrimination.

"Hot Money" and Treasury Control.—No concrete proposals have yet emerged from the President's conference to find means of controlling the influx of foreign money into the United States. Three different reasons seem to be responsible. A number of influential persons hold the reasonable view that the problem is not so potentially dangerous as it is currently painted. In the second place, those who wish to control foreign investment in America are finding it difficult to invent effective means. And thirdly, it has been suggested that American action is being made unnecessary because the British Treasury has itself tightened up its control of British operations in American and Canadian securities. It is difficult to judge the force of this last argument. The control exercised by the Treasury is not bound by rigid limits. The Foreign Transactions Advisory Committee was intended, according to the Treasury's own explanation, to give advice on borderline cases. It has been suggested recently that the border has been shifted so as to exclude investment in American securities by investment trusts and insurance companies. There does not seem to be any substance in this rumour, and the memorandum sent early this week by the Committee to the Association of Investment Trusts and Insurance Companies is reported to be merely a re-statement of existing discriminations. These cover new issues and private placings on the initiative of foreign bodies, but do not disallow reasonable purchases of foreign securities by British buyers on their own initiative. Such action as the Treasury appears to have taken can hardly satisfy those Americans who wish to limit private foreign participation in American security markets.

Company Notes

Bristol Shares.—Bristol (whose historical development is described on page 453) lays claim to no specialised group of shares—such, for instance, as Birmingham's knowledge of motors and Manchester's expertise in cotton shares. In fact, the city's economic development has remained closely associated with the colonial trade which she pioneered. Tobacco and cocoa remain the focus of Bristol's economic interests, and no other large-scale industry is likely to supplant them. Yet neither industry has a purely Bristolian representation in the Stock Exchange List. The firm of *Wills* has merged its identity in the *Imperial Tobacco* organisation; the house of *J. S. Fry*, although known to the local investor until recently through a wide range of preference shares, has undergone a financial reorganisation. But, against this background, the general prosperity of Bristol as a large trading and consuming centre is

Company and Share Denomination	Earned for Ordinary		Ordinary Dividend		Ord. Share Price	Yield (%)

evident. Bristol's thirst is assuaged by *Bristol Brewery Georges*, by *Bristol United Breweries* and by *Bristol Industries*. The important "bulk breaking" trade of the port is reflected in the enviable profit record of *E. S. and A. Robinson*. In *Bristol Gas* and *Bristol Tramways* the city has two progressive public service undertakings. Recent constructional expansion is suggested by the record of such building suppliers' concerns as *Hollychrome Brick*, *Metal Agencies* and *Bath and Portland Stone*. And, finally, Bristol's strategic position is called

to mind by *Bristol Aeroplane* and *Parnall Aircraft*—the lineal descendants of the West Country engineering tradition. Dependence upon the relatively stable consumption trades of the area suggests that Bristol's typical equities have considerably less elasticity of profits than, say, a collection of Glasgow shares. Their attractions may thus be diminished during recovery, but they carry considerable resistance to depression.

L.N.E.R. Report.—The full report of the London and North-Eastern Railway confirms the impression given by last Friday's preliminary statement, announcing that a $\frac{1}{2}$ per cent. dividend is to be paid on the second preference shares—the first since 1931. After allowing for a credit of £755,000 in respect of reduced rates, the railway net receipts actually fell by £15,765. A total increase of £1,737,836 in railway receipts, therefore, was more than absorbed by an increase of £1,753,601 in operating expenses, exclusive of the rating saving. With the inclusion of the rating credit, net revenue is £770,022 higher, and the payment of the full first and redeemable preference dividends leaves an amount of £306,952 available for the $\frac{1}{2}$ per cent. second preference dividend, which has thus been short-earned to the extent of 0.037 per cent. The following table analyses the results of the past three years:—

	1934	1935	1936
Receipts:—			
Railway	44,913,974	45,145,649	46,883,485
Total	51,376,257	51,818,934	53,943,907
Expenses:—			
Railway	36,932,444	37,156,391	38,154,992
Total	43,521,169	43,945,267	45,146,124
Net receipts:—			
Railway	7,981,530	7,989,258	8,728,493
Total	7,855,088	7,873,667	8,797,783
Net revenue	8,348,147	8,371,373	9,141,395
Debt interest	4,253,298	4,263,350	4,274,263

† After transferring £50,000 from general reserve each year.

Passenger receipts increased by 3.1 per cent. and goods traffic by 4.4 per cent., and for the first time since 1930 ancillaries have broken even. This, however, is but small compensation for the complete absorption of increased revenue in "normal" operating expenditure. The explanation is chiefly to be sought under maintenance of rolling stock, which owing to the absence of a "provision" system for renewals has increased by £728,096 (9½ per cent.), while maintenance of the permanent way has cost £260,000 more and locomotive expenses £303,000 more. The company, in fact, is faced with a considerable rolling-stock programme, but, unlike the L.M.S., it is compelled to build at a time of sharply rising costs. Under these conditions—and apart altogether from rising coal costs (which required £78,500 last year) and the full effect of last August's wage restoration—it is impossible to estimate what proportion of increased gross traffic may be retained net with any claim to accuracy. And since the L.N.E.R., alone among the group lines, shows a loss, of £24,000,

for the first seven weeks of this year, 1937 has hardly opened auspiciously. The second preference stock at 23 is discounting fruits which are hardly within the company's grasp.

* * *

First Railway Meetings.—Coincident with the issue of the L.N.E.R. report, Sir Robert Horne, Sir Josiah Stamp and Mr Holland-Martin have addressed their stockholders in general meeting. These speeches stressed one factor common to all railways—the certainty that increased costs will accompany a further recovery in traffics. There is, as Sir Robert Horne emphasised at the Great Western meeting on Wednesday, a full year's wage restorations to be financed in 1937, compared with only 4½ months in 1936, apart from wage increases for other grades based on cost of living. Coal costs are now 1s. per ton higher (for the G.W.R. accounts last year were specially assisted by forward contracts at the old price), while the general rise in cost of stores may be illustrated by a 40 per cent. increase in the price of sleepers. Sir Robert did not disclose the estimated cost of these items in 1937, but it is clear that the company will have some difficulty in repeating the relatively favourable running experience of the line last year. Expectation of increased traffics is based on the Coronation (on which, in part, the chairman of the Southern Railway based a confident hope of progress in 1937) and upon some degree of recovery in South Wales, where Sir Robert strongly advocates Government assistance to the coal industry. The chairman, however, would not commit himself to a "confident forecast"; he was merely "hopeful" that net earnings would not fall below those of 1936. Altogether, there is little in Sir Robert Horne's speech which justifies the assumption that Great Western ordinary stock, at 58, carries any considerable recovery equity in the immediate future. For the time being it is a 3 per cent. maximum equity, and on this basis it is not unreasonably valued. Southern stockholders, however, may well have been impressed by the programme of electrification drawn up for the next three years, which should afford a progressive long-term equity.

* * *

L.M.S. Outlook.—Sir Josiah Stamp's speech was of more eclectic character. Stockholders were taken behind the scenes to review such matters as staff education, and the latest developments in rolling stock and permanent way construction. Sir Josiah had no difficulty in proving that the application of scientific methods in each of these branches can make a significant contribution to net revenue. The same treatment of operating problems has enabled the L.M.S. to achieve, between 1929 and 1936, a 25 per cent. increase in engine miles per day for each locomotive in use. Stockholders, again, must welcome the news that on rolling stock the company is ahead of its normal requirements, and will have appreciably fewer renewals to meet for some years after 1937. A "respectable proportion" of renewable railway assets has been wholly renewed in late years. That the L.M.S. is ahead of its renewals programme—having re-equipped during a period of low prices—does not, however, relieve it from increased current operating costs. Sir Josiah put the total wage cost arising from the 1½ per cent. restoration of last August at £553,000 per annum, and some 7½ months extra will be paid in 1937 compared with 1936. On purchases of materials, the company is faced with an additional expenditure of £750,000 to cover price advances alone. There is, finally, the prospect of further wage negotiations shortly. It is

becoming increasingly difficult, indeed, for the line to recover the 1929 level on the same volume of traffic. That is a function, not merely of increased costs, but also of the persistent erosion of the upper ranges of railway rates through road competition. The recent proceedings before the Appeal Tribunal established under the Road Transport Act of 1933, were inaugurated by the railway companies to test the actual force of the legislation, but they regard the decisions obtained as reducing the application of the statute to a minimum of practical importance. But the chairman at least sees the prospect of a further rise in gross receipts and, indeed, an increase of £125,000 for the first seven weeks of this year is reasonably good augury for a year which must inevitably bring increasing cost conditions.

* * *

Gaumont-British Preference Payment.—Since the issue of the Gaumont-British consolidated balance sheet last December, preference shareholders have been doubtful if the half-year's dividend, due at the end of March, would be paid. The announcement that the payment would be made, issued at the end of last week, has been followed, however, by further disturbing disclosures regarding the group's position. According to a statement made by Mr John Maxwell to the *Financial News*, payment was voted by a five-to-four majority of the directors, and the dissenting directors included Messrs Maxwell, Boardman, Balfour and Kent (the last two being represented by alternates). The dividend, apparently, will be short-earned by the consolidated earnings of the group, for the Corporation is taking into account the profits of certain subsidiaries and leaving the losses of other subsidiaries out of its reckoning. This procedure is perfectly legal (as the law at present stands). But as the losses of the less fortunate subsidiaries amounted to £623,000 up to the end of December last, the decision invites special consideration of the present financial position of the Corporation.

* * *

A loss of this order, indeed, would absorb the special reserve of £200,000 which was set up in last year's accounts, and the greater part of the existing £500,000 reserve fund. The situation emphasises one of the most serious *lacunae* in the Companies Act of 1929. Until fully consolidated revenue accounts are required by law, it will always be open to boards of directors to pay out dividends in these circumstances. But Gaumont-British is not merely a holding company; it is also a layer in a pyramid, controlled by Metropolis and Bradford Trust. So long as preference dividends are paid, the controllers of the Trust have full sway. But after any cessation of dividends, holders of 3,250,000 preference shares obtain votes; and if a strong minority of the 5,100,000 ordinary shares voted with them they might obtain an absolute majority. Apart, however, from questions of strategy, this week's announcement that large-scale film production is to be discontinued suggests that the Corporation is not at present prepared to commit any more of the shareholders' money in one of the most speculative forms of enterprise of modern times. Gaumont-British shares still do not appear to be under-valued.

* * *

Midland Counties Electric.—Increased dividends from electric supply companies are rare in these days—successive increases are indeed remarkable. Midland Counties, however, has further increased its distribution to 8 per cent., and excellent earnings figures accompany it. The results, set out overleaf, also show the significance of our attempts to show electricity supply results on a comparable basis of depreciation. It is impossible completely to apply our standard basis in this case, for the company owns certain traction properties in addition to its supply undertakings. But our standard depreciation

basis would probably give earnings some £50,000 and perhaps even £75,000 greater than those shown, the equivalent of, say, 12 per cent. on the ordinary capital. The results are analysed in the following table:—

	1934	1935	1936
Trading profit of subsidiary co's...	550,228	628,101	664,703
Depreciation	211,544	281,647	306,955
Revenue paid to parent company...	338,544	347,641	353,660
Net earnings of parent company...	323,899	332,600	337,480
Debt and other interest	31,000	31,000	34,197
Preference dividends	93,000	93,000	91,500
Ordinary shares:—			
<i>Earned</i>	199,899	208,600	211,783
<i>Paid</i>	162,750	174,375	183,000
<i>Earned %</i>	8.6	9.0	9.2
<i>Paid %</i>	7	7½	8
Investment reserve	10,455	...	...
Reserve account	27,000	32,665	25,000
Added to carry-forward	—305	1,560	3,783

It is somewhat paradoxical that this company's shares should be on a somewhat higher yield basis than those of some supply concerns with more stable dividends and less generous depreciation policies. The £1 ordinary shares yield £4 2s. 3d. per cent. at 40s.

* * *

Northampton Electric Report.—This undertaking has again shown steady progress. A 14½ per cent. increase in sales is slightly below the average for the whole country, and is somewhat lower than the company's active development of the less densely populated area round Northampton might have suggested. A new 30,000 kw. generating set came into operation during the course of the year, and, though the actual date is not stated, an increase of some 10½ per cent. in coal costs compared with an increase of 17 per cent. in total sales suggests that the new set showed appreciable economy during a year of rising coal prices. For 1937 there should be a further improvement. The following table analyses the results of the past three years:—

	1934	1935	1936
Units sold (excluding sales to C.E.B.) (millions)	58.8	65.9	75.6
<i>Increase (excluding sales to C.E.B.) (%)</i>	11	12	14½
Revenue (excluding sales to C.E.B.)	262,584	283,050	320,645
Net profit	161,223	182,890	205,145
Depreciation	55,161	58,068	70,727
Debt and interest, etc.	20,276	18,319	19,831
Preference dividends	2,625	2,625	2,625
Ordinary shares:—			
<i>Earned</i>	83,161	103,878	111,962
<i>Paid</i>	72,500	72,500	87,000
<i>Earned (%)</i>	11.9	14.6	13.7
<i>Paid (%)</i>	10	10	10
Extra depreciation	...	10,000	10,500
General reserve	10,000	10,000	15,000
Carried forward	12,352	15,031	18,445

The provision made for depreciation (excluding "extra depreciation") accords closely with our standard basis. The excess of earnings over the 10 per cent. dividend suggests that a reduction in prices might be due shortly, which would doubtless accelerate the increase in sales. The £1 shares are quoted at 48s. 3d. xd., to yield £4 3s. 1d. per cent.

* * *

London Electric Supply Corporation.—This undertaking and City of London Electric alone remain independent among the companies operating under the London Electricity Acts of 1925, which are now largely absorbed into the County of London, Metropolitan, and London Associated groups. The position of the L.E.S. Corporation is, therefore, of particular interest; but it is impossible clearly to assess its position, since the greater part of its revenue is derived from the supply of power

for traction to the Southern Railway. It is clear, however, that the company's position is one of great strength. For 1936, in addition to an extra 1 per cent. dividend beyond the standard rate of 7 per cent., a sum approximately equivalent to a further 1 per cent. was available for dividend under the sliding scale. This, however, was carried to the appropriate special reserve account, which now totals £107,000, a sum equivalent to 12½ per cent. on the ordinary capital. The £1 ordinary shares stand at 38s. and yield £4 4s. per cent.

* * *

U.S. Debenture Corporation.—This company has always supplied its stockholders with more information than most investment trusts consider necessary. The accounts for the year to January 31st contain a set of tables giving analyses, for each year since 1929, of the geographical classification and the distribution of investments, market and book values, and the distribution of gross income under six heads. The comparison between market and book values of the portfolio shows the actual amount of any appreciation, while the income distribution table gives particulars of the average yield for each year. Stockholders, moreover, have reason to be satisfied not merely with the form of the accounts, but also with the improved position which they disclose. Gross revenue of £256,706 compares with £240,598, and the increased dividend of 9 per cent. is covered by earnings of 12.2 per cent. The amount retained by the company, £26,047, is the highest during the nine years covered by the comparative tables. The average yield of 5.4 per cent. compares with 5 per cent. for each of the two previous years, and while the chairman's speech (circulated with the report) contains an explicit warning against placing undue importance upon break-up values, an appreciation in the portfolio of 26 per cent. (against 8 per cent.) is distinctly satisfactory. Comparable appreciation is shown in the report of *Mercantile Investment*.

MINING YEAR BOOK 1937

compiled by
WALTER E. SKINNER.

Price Twenty Shillings net.

Post free (Inland), 20s. 6d.; Post free (Abroad), 21s. 6d.
1,040 pages. In Demy 8vo, bound in RED Cloth.

The International Standard Reference Work on the World's Mines

The book is invaluable to everybody interested in the Mining industry, its contents comprising complete, up-to-date and reliable particulars concerning 1,323 of the principal Mining Companies of the World.

Gold, Silver, Copper, Tin, Diamond, Platinum, Iron and other Mines, Collieries, Exploration and Mining Investment Companies, arranged in alphabetical order.

SOUTH AFRICAN, WEST AFRICAN, EAST AFRICAN, AUSTRALASIAN, CANADIAN AND FOREIGN MINING COMPANIES ARE FULLY DEALT WITH

PARTICULARS given of each Company include the Directors and other officials; date of establishment; seat of operations; description of the property, with the purchase consideration; plant erected or in course of erection; present working results; ore reserves, details of capital; calls; dividends paid; and the financial position as disclosed by the latest accounts; highest and lowest prices of the shares for the last three years; also latest prices.

DIRECTORS (3,731) and Mining and Consulting ENGINEERS and MINE MANAGERS (1,127), and their addresses, and names of the Companies with which they are connected.

DICTIONARY OF MINING TERMS.—An up-to-date glossary covering 430 Mining terms, by the use of which Mining developments can easily be followed, and the difficulty of understanding technical phraseology quickly mastered.

whose ordinary dividend is increased from 10½ per cent. to 11 per cent. *British Assets*, which is high-g geared, even for an investment trust, pays 7½ per cent., against 3 per cent., net revenue having risen from £112,197 to £129,284. The *Merchants' Trust* dividend is unchanged at 8 per cent., but is now fully earned.

* * *

Oil Share Situation.—One of the first groups to recover from this week's "shake-out" was the market in oil shares. Two halfpenny advances having been made in the price of petrol, it is confidently expected that a further advance will be made before long. The rates for clean oil tankers from the Gulf to this country have risen from 13s. 6d. per ton in September last year to 20s. per ton in January and to 25s. per ton last week, the last 2s. 6d. having been added since the last halfpenny advance in petrol. Part of this remarkable rise in Gulf tanker freight rates was due to the oil strike in Venezuela last month, which diverted demand to the Gulf ports. But apart from the rise in tanker freights, the Gulf export markets in gasoline remain extremely firm, in spite of the seasonal overproduction of gasoline. Although gasoline stocks at the refineries have risen considerably, in terms of current demand they are at about the same level as a year ago, namely, 53 days' requirements. As the domestic demand for gasoline in December was 16.8 per cent. above that of December, 1935, it is reasonable to anticipate at least a 10 per cent. increase in America's consumption this summer, so that existing stocks of gasoline do not represent a real danger. Certainly it is significant that, in spite of the gasoline oversupply and the increase in crude oil production, there has been no sign of "distress" gasoline being offered in the market, as is usual at this time of the year.

* * *

The investor's attention has naturally been drawn to the oil companies which benefit directly from the increase in British petrol prices, namely Anglo-Iranian Oil and Trinidad Leaseholds. It is estimated that a penny increase in petrol in the year is equivalent to £1,000,000, or 7½ per cent., on the Anglo-Iranian ordinary capital. In 1935 Anglo-Iranian declared a disappointing dividend of 15 per cent., which was attributed in the market to political considerations. Now that Abyssinia is a *fait accompli* it is felt that the shareholders will receive some compensation this year in the shape of a capital bonus as well as an increased dividend. In our leading article of January 16th we estimated that a dividend of 20 per cent. was possible, but even this figure is below market estimates. Anglo-Iranian shares have risen sharply from 5½ to 6½ in the past six weeks. Trinidad Leaseholds, as producer and distributor, benefits in the same way as Anglo-Iranian, but with a much smaller capitalisation the effect on earnings is even more marked. The company's sales of Regent petrol are steadily expanding, and market estimates of 50 per cent. earnings for the year ending June do not appear fantastic. "Shell" Transport shares have been active up to 7½ in anticipation of their being marked ex the bonus of one in five next week, and Burmah Oil, as a large holder of Anglo-Iranian and "Shell" Transport, have risen in sympathy. On the whole, the strength of the oil shares is one of the most reassuring features of the stock markets.

* * *

A Mexican Scare.—Comment has been aroused by the extraordinary fluctuations which occurred in Mexican Eagle shares this week. On Monday a statement was published in the Press to the effect that an official law had been drafted, tending towards the gradual elimination of foreign oil companies in Mexico. In the absence of any denial by the company, a sensational fall occurred in the shares—from 29s. to 23s. At the lower level buyers came in and the shares recovered sharply, the present quotation being 27s. 7½d. On Wednesday an official statement was made by President Cardenas of Mexico that the new petroleum legislation would not affect the legitimately acquired interests of

foreign companies. The company then announced that its management was assured that the legislation was not directed against Mexican Eagle. Apparently the new oil law will liquidate the Government-owned petroleum company and will create a Government Oil Department to handle all the Government's oil business, including the collection of rentals and royalties. The Government Oil Department will be granted the lease of all new oil fields which hitherto might have been granted to foreigners. This may have the effect of cancelling the leases recently granted by the Government Oil Company to independent interests, but it will not disturb the leases of Mexican Eagle or other established foreign oil companies. The Mexican Government officials have explained that the new Oil Department is not designed to create an oil monopoly or to drive out foreign interests. Indeed, they are anxious to encourage a more intensive development of the national oil reserves. It is regrettable that ill-founded reports, of which Mexican Eagle appears to attract more than its fair share, should cause shareholders to sell their shares at heavy losses and provide speculators with handsome profits.

* * *

Metal Prices and Base Metal Shares.—In this week's boom and slump in the metal markets, copper has led the way. Copper shares have followed with some wild fluctuations, though movements in general have been less violent than in the metal itself. This has been speculators' week *par excellence* and "quick turn" operators have been most in evidence. In the end, quotations were slightly higher, without suggesting that the market views with any great confidence the current level of copper prices. In view of company earnings prospects for the current year, however, share quotations should be little disturbed. Unfortunately, since the removal of output restriction, it has become impossible to make close estimates of probable profits. On the reasonable assumption that outputs for the year ending next June will average about 100 per cent. of the quota under the former scheme, and that prices will average about £45 a ton, net earnings should approximate to 100 per cent. for Roan Antelope, 80 per cent. for Rhokana, 20 per cent. for "Rho Anglo" and about 22 per cent. for Rhodesian Selection Trust. At present share prices, prospective earnings yields range from over 6 per cent. for Roan to about 4 per cent. for R.S.T.—by no means excessive figures. With prices over £60 a ton and output probably approaching the equivalent of 120 per cent. of the standard quotas, however, the current rate of earnings amounts to more than double these 1936-37 estimates. In general, the shares may not prove excessively priced, though the further profit calculations are projected into the future, the more problematical is the maintenance of current metal price levels, or even current production costs.

* * *

Other base metals, including tin, lead and spelter, have closely followed the upward trend of copper, but have shown more resistance to speculative liquidation. Tin shares, comparatively quiet for some months with tin prices virtually stabilised around £230 a ton, have responded appreciatively to the £20 jump this week. Unless the Tin Committee is prepared to see another major spurt in prices, it appears unlikely that production quotas will be reduced for the second quarter of the year, as at one time appeared possible. Company outputs, therefore, will continue to be based on a 100 per cent. quota—equivalent to over 70 per cent. of standard assessments for the Malayan producers. Assuming that tin maintains an average price of £230, tin shares would appear to be rather more reasonably priced than, say, copper shares. Yields of over 10 per cent. on the current year's prospective earnings are not infrequent, and the risk of a big fall in tin is perhaps less formidable than for other base metals. Companies with the highest equity in price gains and a reasonably low cost of production, such as Petaling, Malayan Tin Dredging and Southern Malayan, would seem to be among the most attractive, despite the recent advance in share prices.

Lead-Zinc Shares.—This group has carried somewhat further the almost uninterrupted rise in prices which has taken place since last November. For these companies increased profits this year will result almost exclusively from better metal prices, as outputs show no appreciable gains. But for the year ending next June, average prices are likely to exceed those of the previous twelve months by about £8 a ton for lead and £5 a ton for spelter. In percentage profit terms, the significance of these advances varies considerably for the different companies. But in nearly all cases they involve almost a doubling of the profits earned for 1935-36. To-day, profits are running at a much higher level, but despite the possibility of a reaction in metal prices, the shares do not appear to discount future prospects unduly.

* * *

Company Results of the Week.—About 60 further reports are analysed on page 502. The results, which include those of nine investment trusts, and of a number of miscellaneous industrials—among them Borax Consolidated—are discussed on page 503 under the heading "Shorter Company Comments."

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Great Western Railway, Southern Railway, Pearl Assurance, Scottish Provident Institution, National Mutual Life Assurance Society, Sun Life Assurance Society, Manchester Ship Canal, Bovril, Illustrated Newspapers, Mid Southern Utility, English Electric, Peter Walker (Warrington) and Robert Cain and Sons, General Investors and Trustees, and San Francisco Mines of Mexico. Reviews of the railway outlook by Sir Robert Home and Mr Holland-Martin at the Great Western and Southern meetings are discussed on page 480. At the Sun Life Assurance Society's meeting,

Sir William Goschen drew attention to the increase in four years of 35 per cent. in the sums assured and bonuses. Sir George Tilley informed Pearl Assurance shareholders that the expenses in the industrial branch had for the first time fallen below 30 per cent. of the premium income. The chairman reported to the members of the Scottish Provident Institution that the market value of their Stock Exchange securities so far exceeded book values that any further addition to investment reserve fund was unnecessary. Mr J. M. Keynes' views on interest rates disclosed to the National Mutual Life Assurance Society meeting are discussed on page 478. Sir Frederick West, at the Manchester Ship Canal meeting fully explained the reasons for maintaining the dividend; a known increase in expenditure must be met, and a policy of full provision against contingencies was desirable. Lord Luke described to Bovril shareholders the work done by the company as pastoralists in the Northern Territory of Australia. The chairman of Illustrated Newspapers outlined the plans for issuing Coronation publications. Addressing Mid-Southern Utility members, Mr B. W. Edwards reported a 3.4 per cent. increase in gas consumed, despite the smaller consumption of modern apparatus. The chairman of the English Electric Company informed the shareholders that assuming the payment of only 12 months' preference dividend, the balance of profit would have been £161,476, or 11.2 per cent., on the ordinary capital. At the beginning of 1937 the company had the largest order-book in its history. At the San Francisco Mines of Mexico meeting the Earl of Denbigh pointed out that, so far, rising metal prices had enabled them to meet the increased cost of wages. Lord Brocket, at the Peter Walker (Warrington) and Robt. Cain meeting, discussed the effects of the revival of trade in Lancashire upon the company. At the General Investors and Trustees meeting, Mr S. T. Moody remarked that, in the 30 years of the company's life, 264 per cent. had been paid to the ordinary stockholders.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: MARCH 2 ACCOUNT: MARCH 4

AFTER a day which rivalled the "Black Mondays" of tradition, the market struck out with fresh heart. Tuesday's gains were still of a tentative order, but on Wednesday and Thursday buyers had found new courage and the whole market went forward on a broad scale. Heavy buying of base metals continued throughout the week, although a partial reaction in copper shares was reported on Tuesday. Gilt-edged, after losing up to a point on Monday, recovered sharply on Tuesday after a poor start, and showed a more confident half point rise on Wednesday, and a jump of up to a point on Thursday. We examine the prospect for gilt-edged in a leading article on page 476. The better tone in gilt-edged was accompanied by a recovery in Dominion stocks which had fallen to attractive yield levels.

In the foreign bond market, Chilean bonds advanced on the recovery in copper, but Brazilian issues remained dull. Chinese issues were weaker, and Japanese loans were subjected to moderate selling. German bonds lost their recent firmness, "Dawes" loan falling to 61½ in mid-week on reports of a new internal loan.

Home rails weakened owing to lack of support, and later to a little selling pressure. The decline persisted in the prior stocks, but buyers were attracted to the ordinaries at the lower levels, and in mid-week responded to good traffics, particularly L.M.S. The L.N.E.R. preference dividend announcement had been well received at the end of the previous week; the full accounts are discussed in a note on page 479. London Transport "C" was weak on fears of a possible increase in petrol costs. The trend in South American rails was similar. Argentine prior charges, following the lead of the rest of the markets, continued to fall back. Ordinary stocks, led by B.A.G.S., also receded, but on Wednesday improved on the traffics.

The industrial market opened with an especially heavy break after the week-end. The fall in high-grade equities, bank shares, and the like has taken place as expected. But breweries, tobaccos, and motors fell, too, in fear of increased taxation. Electricals followed down and even armament, steel and aircraft shares have shown a curious weakness.

Substantial rises occurred in almost all insurance shares, in cement (with a jump in Associated Cement) in steel, especially Pressed Steel, in Turner and Newall, in Courtaulds, and in shipping shares. The extent of this week's improvement is shown on page 478. Outside buying, from the small investor and the provinces, however, brought welcome support from Tuesday onwards, and the more surprising falls were cancelled out. The market as a whole appeared to have lost much of its recent uncertainty by mid-week. As a result, the bargain-hunters discovered that prices which were not firm to sellers a week ago were surprisingly firm to would-be buyers. Electrical equipment issues shared in the advance, and motors—including Leyland, Austin and Morris—were quick to recover from the recent fall.

Outstanding in the oil shares market was the collapse in Eagle issues at the beginning of the week, on the reported intention of the Mexican Government to nationalise the oil industry, to which we refer on page 482. Subsequent reassurances by the Government that the legitimate interests of foreign investors would not be prejudiced led to a recovery movement, and in mid-week oil shares were fairly strong. The market was encouraged by talk of a further increase in price of petrol in England and by the rise in Pennsylvania crude. Phoenix were

higher on the decision to resume dividends. In the rubber market prices were firm, but the volume of business was small; the recovery in the commodity price was encouraging, but did not have any marked effect. Tea shares opened the week with a further rise in prices, but reacted in mid-week.

The Kafir market was overshadowed by spectacular developments in base metal issues (discussed on page 482) and were generally lower at the end of last week and the opening of this, although conditions improved later, and in mid-week prices improved considerably. Good support came from the Cape, and finance shares were prominent. West African issues were subdued. Rhodesian copper issues were the centre of the firework display produced by the rise in commodity prices, although conditions became more restrained toward the end of the account. The week-end rise in the price of tin was naturally reflected in an initial sharp improvement in tin shares.

NEW YORK STOCK EXCHANGE

LAST week ended on Wall Street with steel and copper issues strong and other issues generally irregular. Markets were closed on Monday of this week, and when business was renewed on Tuesday there was an outburst of profit-taking which put most shares lower, particularly in the steel and mining groups. The reasons offered for this reaction were the technical position of the market, the prospect of growing labour troubles, the renewed fears of trouble in Europe, and the rumoured action of the British Treasury to limit English participation in American markets. In mid-week there was a modest improvement, and copper issues were particularly firm. The bond market was weak, with Treasury issues lower through lack of support, pending disclosure of the Treasury's intended borrowing during March. The S.E.C. has implemented its recent report, and members of exchange firms and partners in exchange firms trading on their own account must find full margins.

ADVICE ON AMERICAN STOCKS

Recognizing the demand of both private investors and financial institutions in Europe for first-hand advice regarding American securities and the cyclical trend of the American Stock Market, Major L. L. B. Angus of 301 Park Avenue, New York City, who is now established as Investment Counsel in America, is prepared to accept enquiries regarding this service.

CAPITAL ISSUES

MARKET fluctuations have not been allowed to stem this week's flow of new issues. The principal operation of the week is the *Rhodesia Railways* conversion on which we commented in detail last week. Six offers for sale and one direct issue have appeared this week. The largest concern is *Smith and Nephew Associated Companies*, whose 4s. shares are offered at 112½ per cent. premium. This is a surgical dressings concern whose profits show a rapid advance during 1936. Of the total issued capital of 2,500,000 4s. shares, the vendors of the constituent businesses retain 1,500,000 shares. The prospectus, very fairly, sets out the computed value of the "effective goodwill," based on the terms of the offer at £692,247—an innovation which might be adopted in other offers for sale. Although last year's increase in profits cannot be repeated indefinitely, and the goodwill element in the terms of the offer is considerable, the shares compare favourably with some recent issues on which comparable premiums have been demanded. Next in size is *Calthrops, Ltd.*, whose 5 per cent. preference shares are issued at par, while the 10s. ordinary shares are priced at 35 per cent. premium. This is a cattle food concern. The prospectus sets out the earnings cover on the basis of the average profits for the past 5½ years, but it was not until 1934 that high profits were made. The valuation of the shares on the latest six months' profits should be examined in the light of this fluctuating record, and due consideration should be given to the possible effects of higher prices on the company's business. *Bradlow's Stores* is a South African furniture retailing concern whose 6 per cent. £1 preference and 4s. ordinary shares are issued at par. Of the net assets of £180,160, some £123,549 net is outstanding on hire-purchase contracts, guaranteed by the chairman. *Peerless Kitchen Cabinets* 6 per cent. cumulative participating 10s. preference shares are offered at 6d. premium, and the 2s. ordinary shares at 200 per cent. premium. To some extent this company must depend upon the level of dwelling-house building activity, but it has made rapid progress since its selling organisation commenced in 1933, for profits have increased from £2,229 in 1934 to £31,082 in 1936. Since, however, the £130,000 capital is divided into £80,000 6 per cent. participating (maximum 7½ per cent.) preference capital, the ordinary capital is subject to decidedly high gearing. The offer of *Brilliant Signs* shares is of 6 per cent. 10s. preference shares at par and 4s. ordinary shares at 75 per cent. premium. In this case the total £120,000 capital is equally divided between preference and ordinary, although a straight ordinary capitalisation would have seemed reasonable. *Cowenry Machine Tool* 4s. shares are offered at 37½ per cent. premium. These terms are stated to show a 9 per cent. earnings yield, but the earnings employed are, in fact, calculated on broken periods for the two concerns acquired, of nine months and four months. The smallest issue of the week is of *Wm. Neill & Son (St. Helens)* 2s. shares at 50 per cent. premium. This industrial, chemical and structural engineering concern has a capital of £60,000. Its profits jumped from £3,869 in 1935 to £15,131 in 1936, and £27,747 of its net assets of £64,498 consists of stock. An earnings yield of 14 per cent. for an issue of this security and size is not tempting. Statements "for information only" have been published by *North-West Midlands Joint Electricity Authority*, *Puket Tin Dredging*, *Masson Scott & Co.*, *Geo. W. King*, and *William Duxford and Sons*. In this place in last week's *Economist*, the earnings yield on the recently issued ordinary shares of *George Wilson Gas Meters* was stated to be 9 per cent. This yield is shown on the average profits for the past three years; for the latest year the yield is calculated at 13 per cent. on the issue price.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum. div." shares.

COMPANY MEETINGS

PEARL ASSURANCE COMPANY, LIMITED

RECORD POST-WAR INCREASE IN INDUSTRIAL BRANCH
REDUCTION OF EXPENSE RATIO
THE "MARRIED COUPLE'S" POLICY
SIR GEORGE TILLEY ON A YEAR OF GRATIFYING PROGRESS
STRONG FINANCIAL POSITION

The seventy-third annual general meeting of the Pearl Assurance Company, Limited, was held, on the 25th instant, at the registered offices, High Holborn, London.

Sir George Tilley, F.C.I.I., the chairman of the company, presided.

The secretary (Mr G. R. L. Tilley, M.A., F.C.I.S.) having read the auditors' certificate,

The Chairman said: Ladies and Gentlemen,—On the occasion of our last annual meeting I said that it was a matter for congratulation that, under the stress and strain of recent years, this country and the Empire had revealed a notable reserve of economic strength, together with the political wisdom to use that reserve of strength to advantage.

The experience of the past year has given us cause to deepen that note of congratulation. The anxious and unsettled state of a great part of Europe, accompanied by vast increases in national armaments, has compelled our own Government to embark on a great scheme of national defence, involving an expenditure which may reach, or even exceed, the enormous sum of £1,500 millions.

That this outlay, as to the broad necessity of which there can be no question, will impose a heavy burden on the resources of the country is obvious. It will call for sacrifices. It will demand intensive efforts in the maintenance of our normal industrial output. It will almost certainly necessitate some upward adjustment in price levels. But I believe that both industrially and financially the country will prove equal to the task that has been forced upon it.

TRADE IMPROVEMENT

There is fresh encouragement alike in the continued buoyancy of the home market and in the evidence of marked improvement in our export trade. The latter has been materially helped by the rise in commodity prices throughout the world, whereby the nation's customers are enabled to increase their purchases from us.

Another helpful factor is the Anglo-American-French currency agreement, as a result of which the leading European currencies have at last been brought broadly into line with sterling and the dollar. This is probably the most valuable single step that could have been taken towards the restoration of international trade.

I should like to add that from the standpoint of our own company, with its interests in so many countries throughout the world, a general revival of prosperity is likely to be of material advantage in its effect on both our foreign business and our investments abroad.

A notable feature of our national life during the past year has been the continued attention paid to the improvement of the health and well-being of the people. The Midwives' Act, which will shortly come into operation, should prove of material assistance in reducing maternal mortality.

The Factories Bill, now before Parliament, will do much to raise the standard of health, safety and general welfare among the millions of people employed in our factories and workshops. The national campaign for physical fitness which has been launched by the Government is a striking advance towards the ideal of an A1 nation.

Turning now to the affairs of our own company, I desire to say at the outset that we are once more able to congratulate ourselves on a most satisfactory year.

In the ordinary branch the total of the sums assured is now over £100,000,000.

In the industrial branch the increase in premium income is a record for a normal fifty-two-week year in the post-war period, and in other branches, such as fire and general and employers' liability, we are able to report steady progress.

The financial position of the company, with its ample reserves and its more than adequate allowance for contingencies and liabilities is one of exceptional strength and stability. With this

background of achievement we are able to face the future with confidence.

ORDINARY BRANCH

In the ordinary branch, as I have already mentioned, the sums assured, together with the accrued bonuses, exceed £100,000,000. The new policies, assuring a sum of over £8,800,000, show a definite increase over last year in both number and amount assured.

During recent years, the low rates of interest obtainable in gilt-edged securities have stimulated the public interest in annuities and single premium assurances. Once more the sum received in respect of the purchase of annuities reached a high figure, while the single premiums showed an increase of £60,000.

The expenses of the ordinary branch remain at the very low level of 11.1 per cent. of the premiums, while, despite the increase in income tax, the net interest yield on the branch funds has been maintained at the very satisfactory rate of £4 6s. 6d. per cent.

This continuation of low expenses and an excellent interest yield is reflected in the rate of the bonus.

We have again declared a simple reversionary bonus of £2 on each £100 assured in respect of Pearl ordinary branch policies entitled to participate in the full profits.

INDUSTRIAL BRANCH

The premium income in the industrial branch has risen by nearly £350,000, the highest annual increase in the post-war period, if we rule out the years where the total was swollen by the inclusion of a fifty-third week.

A gratifying feature is that this increase in the volume of business has been accompanied by an improvement of the position in respect of arrears of premiums outstanding. How greatly these arrears have fallen relatively will be appreciated when I say that the total this year is very little larger than the total when it first appeared as a separate item in 1925, when the premium income was millions of pounds lower.

The amounts paid in claims, including bonuses, established new records alike in payments made on the death of the assured and in payments falling due on the maturity of endowment. The term of endowment is never less than 10 years, and the fact that £1,115,000 was paid under matured endowments emphasises the change that has been taking place in the character of industrial assurance business.

"MARRIED COUPLE'S" POLICY

I announced last year that we had launched in the industrial branch our "Married Couple's" policy, a new plan of assurance enabling married people to augment the provision made under the State scheme of old age and widows' pensions and at the same time providing for the expenses in connection with the death of the husband should that occur during the lifetime of the husband and before the policy matures at the husband's pension age.

There is no need for me to stress the social advantages of greater financial protection for the family or the amelioration of private distress which such provision brings. It is with much satisfaction, therefore, that I am able to say that our "Married Couple's" policy has taken its place as a regular part of our business, and that the policies in force assure £3,250,000 payable on the death of the husband.

No feature of industrial assurance attracts more public attention than the expense ratio, and, may I add, no feature of the business causes more misunderstanding among those who lack the knowledge essential to its proper appraisal.

For the first time in the history of our company the expenses in the industrial branch represent less than 30 per cent. of the premium income.

It is customary to speak of the "expenses" of the industrial branch, but I feel it would be more appropriate—and more accurate—to talk of the cost of the services of the industrial branch.

Our representatives collect small sums at short intervals from the homes of our millions of policyholders in all parts of the country. They are always available to give advice and guidance and when death occurs they are there to ensure the prompt payment of the claims, again at the homes of the policyholders and without any avoidable formalities.

It is not appreciated, I feel, to what an extent the industrial assurance agent is guide, philosopher and friend in the homes he visits. He shares their interests and anxieties, and many a family problem is brought to him. The "insurance man," as he is generally called, has earned for himself the respect and regard and friendship of the people he serves.

INDUSTRIAL BONUS PLAN

In connection with the valuation at the end of 1929, we instituted a system of reversionary bonus distribution to industrial branch policies.

The higher rates of bonus now declared mean, broadly, that holders of policies effected before January 1, 1930, on which premiums are being paid on March 8, 1937, will receive additions to their sums assured of nearly one-third of the premiums paid during the year on whole life assurances, or nearly one-quarter on endowments or endowment assurances.

FIRE AND GENERAL BRANCHES

We are again able to report a considerable growth in the premium income, to which growth all departments have contributed. The total premium income for the year amounted to £1,637,185.

The fire department produced a loss ratio to earned premiums of 50.5 per cent., which is not excessive having regard to the increase in the premium income. The business in the United States has shown a rapid expansion during the past two years, and this has necessitated a considerable reconstruction and extension of our organisation in that country, with the opening of new branches in order to secure close control over the very wide territory in which we now operate.

PERSONAL ACCIDENT

The personal accident account produced an underwriting profit of £20,948, which, with interest earnings of £6,186, yielded a balance of £27,134, out of which £20,000 has been transferred to the profit and loss account.

EMPLOYERS' LIABILITY

The employers' liability account continues to show improved results, the loss ratio to earned premiums being only 42.7 per cent. This account closed with a profit including interest of £7,794, and we have transferred £5,000 to the profit and loss account.

GENERAL ACCOUNT

The general account again shows a satisfactory increase in premium income, and maintains a steady improvement in the underwriting results, with a surplus of 10.8 per cent., as compared with 4 per cent. in the previous year. The balance, including interest, amounts to £24,653, which is much the best result ever produced by this account.

MOTOR ACCOUNT

It is common knowledge in the insurance world that during the year the difficulties inherent in motor business have not diminished. We have succeeded in showing a profit, after crediting interest, but it would be unduly optimistic under present conditions to look for materially improved results. The high accident rate, the infrequency with which a motorist escapes liability when an accident happens, and the tendency to award large damages when cases come before the courts, all combine to make motor insurance an anxious problem. Motorists are necessarily aware of their insurance premiums as a material item in their expenses, and it cannot be too forcibly impressed on them that the amount of the premium depends in the main on the cost of accident claims, and therefore on their attention to safe driving. It would be well if it were thoroughly understood that motorists as a body pay for one another's accidents.

CAPITAL REDEMPTION BUSINESS

After its rapid expansion last year by reason of some large single premium assurances, this fund has settled down to more normal growth. The valuation of the fund discloses a small surplus which is being carried forward in the fund.

INVESTMENTS

The valuation of the company's securities as a whole at the end of the year revealed an excess of market values over the book values greater than that shown at any previous valuation.

In the circumstances, we have felt that further transfers to the investments reserve funds were not called for on this occasion.

SURPLUSES AND PROFIT AND LOSS ACCOUNT

The surpluses in the life funds, including £888,206 brought forward, amount to £3,357,267, and these have been appropriated as follows: To policyholders £1,603,788, to staff pension fund £150,000, and to profit and loss account £689,000, leaving £914,479 to be carried forward.

The balance of the profit and loss account at the end of the year was £216,099. After the addition of the amounts to be transferred from the life branches, there will be a balance of £905,099, out of which it is proposed to pay £315,000 as a final dividend to the ordinary shareholders.

The report was adopted, other ordinary business was transacted and the proceedings terminated with a vote of thanks to the chairman.

GENERAL INVESTORS AND TRUSTEES, LIMITED

DIVIDEND OF 11 PER CENT.

The thirtieth ordinary general meeting of General Investors, and Trustees, Limited, was held, on the 22nd instant, in London, Mr Gerald T. Moody (chairman) presiding.

The Chairman, in moving the adoption of the report and accounts, said: The profit and loss account shows that, after debiting interest charges and expenses, the sum available for distribution among members amounts to £57,068. Dividends were paid at the rate of 4½ per cent. per annum on the preference stock on July 1, 1936, and on January 1, 1937, and of 4 per cent. actual on the ordinary stock on October 1, 1936, absorbing together £25,665. It is now proposed to pay a final dividend of 7 per cent. actual on the ordinary stock, making 11 per cent. for the year, and to carry £10,000 to reserve account. This will allow the carry forward to be increased from £5,171 to £5,437. The board had some hesitation in advancing the rate of dividend on the ordinary stock from 10 per cent. to 11 per cent.; but a consideration of the strong position of the company both as to revenue and assets made it inequitable to deprive the stockholders of a dividend commensurate with its prosperity. To-day we are holding the thirtieth annual general meeting of the company, and it may interest you to know that the company has paid in all to the holders of ordinary stock 264 per cent., or an average annual dividend of £8 16s. per cent. In addition, it has accumulated a general reserve of £300,000, equal to 76 per cent. net on its ordinary stock, and has placed with trustees a staff superannuation fund which is ample to meet its liabilities.

Reviewing the position at the end of the thirty years, I venture to think we may be well satisfied with the outcome of our operations.

The investments are very widely spread and shareholders may rest confident that those who have the responsibility of safeguarding the funds entrusted to them are fully alive to the value of conservatism and will not base their policy on being too optimistic during periods of inflation or unduly pessimistic in times of adversity.

The report and accounts were unanimously adopted.

OFFER TO NEW READERS

GREAT WESTERN RAILWAY COMPANY INCREASED PASSENGER AND GOODS TRAFFIC SIR ROBERT HORNE ON THE OUTLOOK

The annual general meeting of the Great Western Railway Company was held, on the 24th instant, at Paddington Station, London, W.

The Right Hon. Sir Robert Horne, G.B.E., K.C., M.P. (the chairman), in the course of his speech, dealing with the principal features of the accounts for the past year, said: Gross receipts from railway working rose by £991,126, passenger train receipts for an increase of £352,578, whilst goods train and miscellaneous traffic receipts increased by £638,548. The general improvement which has taken place in our home trade is mainly responsible for these augmentations.

Gross expenditure on railway working during 1936 increased by £54,080, but for comparative purposes allowance must be made for the over-payments in respect of rates and rate relief in 1935, pending the re-assessment of the company's undertaking as the outcome of our claim before the Courts. The alteration of the basis of our liability for rates and rate relief resulted in a saving last year of £327,000. Leaving this out of account our expenditure would still have been only £381,000 in excess of the previous year. Irrespective of the saving in rate payments, therefore, our additional expenditure absorbed only 38.5 per cent. of the increased receipts. This is a highly satisfactory result, upon which our management and staff are to be congratulated.

NET REVENUE FIGURES

The gross receipts from our dock undertaking show a decline of £61,762, due to a further diminution in the coal exports from South Wales. The net revenue amounted to £119,701, but had it not been for a reduction of approximately £120,000 in our liability in respect of rates and rate relief, there would have been a decrease of £47,000 in the net revenue, as compared with the previous year.

The net revenue from all sources amounted to £6,314,830, an increase of £864,271. Adding the balance brought forward from the previous year of £44,373 and deducting interest on loans, debentures and pre-ordinary stocks, there remains a balance of £1,364,686 available for dividend on ordinary stock.

During the past five years we have experienced one of the worst periods of trade depression ever known in this country, and, although we have always been confident that trade would ultimately revive, the continued recourse to our free reserves in order to maintain dividends naturally caused us a great deal of anxiety. This year, for the first time since 1930, our earnings have been sufficient to cover the payment of a 3 per cent. dividend on the ordinary stock. For a continuous period of sixty-seven years Great Western ordinary stock has received a dividend which has never been less than 3 per cent., but there have been several occasions during this period—apart from the last five years—when the result has only been possible through the cautious policy of building up reserves when opportunity offered.

PASSENGER AND GOODS TRAFFIC

I will now deal with the operating side of our business. The passenger traffic figures are somewhat disappointing, the increase in the number of passengers carried (exclusive of season ticket holders) being only 328,000. The increase would have been considerably greater but for the depression in Monmouthshire and South Wales, as in these areas the number of passengers originating showed a decrease of over 1½ million over the previous year, whereas in all other districts there was an increase. Our receipts from passengers improved to the extent of £282,000, which is attributable to the development of long distance traffic and an increase in the number of first class passengers carried.

Receipts from parcels, mails and miscellaneous traffic increased by £70,000, which is satisfactory by comparison with 1935, as the lower charges which were in operation throughout 1936 only obtained for six months in the previous year.

The earning of the additional passenger revenue of £352,000 involved the running of 1,300,000 more train miles, but this was done at a smaller percentage increase of cost than the percentage increase in receipts. The average speed of our passenger trains was higher than in any previous year, and the standard of punctuality was fully maintained.

Turning now to our activities on the freight side, we conveyed during the year an additional 1,411,000 tons of general merchandise and mineral traffic, which created an increase in our receipts of £525,000. Although our coal carryings decreased by over a million tons our receipts from this class of traffic increased by £61,000. This is explained by the increase in the average

length of haul. The improvement in merchandise traffic followed the greater measure of prosperity experienced by our domestic trade. The decline in coal traffic was entirely due to a further falling off in the export trade, but on the other hand there was a considerable increase in the inland trade, due partly to the recovery in the iron and steel industry.

DOCKS TRAFFIC

The volume of traffic dealt with at our docks during the year showed a further decline owing to continued difficulties in the markets in which South Wales competes. The fall in coal exports from Monmouthshire and South Wales has been much greater than from any other exporting district in Great Britain. This is due to some extent to national policy and in a considerable degree to foreign subsidised competition from which South Wales is the chief sufferer. Unless some action is taken by the Government to enable the coal industry to meet this subsidised competition from foreign countries there would seem to be little hope of regaining some of the lost markets.

The net revenue of £119,000 from our dock undertaking last year was secured solely by reason of the long overdue reduction in our liability for rates and rate relief, and without it we should not have earned any profit whatever on the £21 millions invested in our docks. Everything possible has been done to effect diminutions in expenditure by reducing the number of appliances available for traffic and by the temporary closing of Penarth Dock. We have now reached the limit to which expenditure can readily be reduced without impairing the efficiency of this part of our undertaking, and can only anxiously await the result of the Government's plans for the resuscitation of the Special Areas in the hope that they will include measures which will revive the export coal trade.

THE OUTLOOK

You will probably expect me to say a few words about the prospects for the current year. There are certain known factors in regard to expenditure which must be borne in mind. The increased cost resulting from the further partial restoration of the cut in salaries and wages was only felt during the last four and a half months of the past year, while this additional expenditure will now operate over the full twelve months of 1937. There will also be increased payments to a considerable number of the staff in the lower grades, whose wages have been increased as from January 1st last on account of the rise in the cost of living. We have to face, too, additional expenditure in respect of coal, as all new contracts for locomotive coal are now being fixed on the basis of an extra 1s. per ton. There has also been an increase in the price of commodities generally, particularly railway sleepers, which are up by over 40 per cent.

On the revenue side, we may assume that our passenger traffic will benefit on account of the Coronation. As regards goods traffic there is every indication of a further improvement in trade, and we should derive benefit from the proposals of the Government to establish certain armament factories on the company's system, the construction of which had either not commenced or had made insufficient progress to yield us much traffic last year. During 1936 seventy-three new firms established themselves on the company's system, from whose traffic we may expect to reap advantage in the current year. We may also look forward hopefully to the results of the efforts now being made to establish new industries in South Wales, and to the various measures which it is understood the Government have in contemplation for relieving the severe distress in that area. It is known that important proposals have been laid before the Government for the establishment of a large works in South Wales for the extraction of oil from coal, which would bring in its train the manufacture of many by-products. Development along these lines must eventually take place if Britain is not to lag woefully behind.

With regard to our dock undertaking, it is hoped to recover a considerable proportion of the million and a-half tons in our shipments to Italy which we lost last year, and we also anticipate increased exports to France, to coaling depots abroad, and, in a minor degree, to the Argentine and Brazil.

In conclusion, I think you will all appreciate that, with so many varying factors, it is impossible to make any confident forecast as to the results of the coming year, but taking all circumstances into consideration, including the cost of working the additional traffic which we anticipate, I am hopeful that our net earnings will not fall below those of last year.

The directors' report and statement of accounts were approved and adopted, and the resolutions which were put to the meeting and to the special general meeting which followed were duly passed.

SOUTHERN RAILWAY COMPANY

INCREASED RECEIPTS

The annual general meeting of the Southern Railway Company was held, on the 25th instant, at Southern House, Cannon Street, London.

Mr Robert Holland-Martin, C.B., the chairman said that the railway gross receipts had increased by £608,000. The total number of passenger journeys, including those made by season ticket holders and workmen, amounted to 360,000,000 in 1936, as compared with 349,000,000 in 1935. This increase of 11,000,000 passenger journeys was reflected under all headings.

The number of passengers in the electrified area increased by over 8½ millions, with an increase in receipts of £245,000. As compared with 1932 the increase in the number of passenger journeys throughout their system was no less than 43,000,000, and of these the electrified area claimed 35,000,000. This represented a growth in the number carried in the electrified area of 15 per cent. and an increase in the passenger receipts in that area for 1936 of no less than £1,054,000, or nearly 17 per cent. Under the heading of goods train traffic receipts there was an improvement of £136,000; an increase of £132,000 and nearly 180,000 tons in the higher classes of traffic.

Turning to the expenditure side of railway operation, they found there was an increase of £381,000, £40,000 of which was attributable to the restoration of the percentage deduction in wages from 2½ per cent. to 1½ per cent., which took place last August. The net receipts from railway working were higher by £227,000.

Although there was a welcome recovery in their Continental traffic, the fact was not reflected in their steamboat revenue, for the reason that the bulk of the increased passengers travelled by the Ostend route, owing to the cheapness of fares via Belgium as compared with the fares via France. As shareholders were aware, the boats on the Ostend route belonged to the Belgian Government and not to the company. The traffic, however, had begun to revert to the French routes, and their steamboats were benefiting accordingly.

LARGE NET REVENUE

They found themselves with an increase of net revenue for the year of £153,863, and this enabled them to recommend a dividend on the deferred ordinary stock of one half of one per cent.—the first dividend on this stock since 1930. They had reopened the general reserve account with £500,000 of the moneys received in respect of rates and rates relief.

They had undertaken to expend during the next five years practically the whole of the amount of the loan from the Railway Finance Corporation in extending the system of electrification, and they proposed to bring the various extensions into use in accordance with the following programme:—

London to Portsmouth via Guildford, Woking to Alton via Aldershot and Staines to Weybridge in July, 1937; London to Portsmouth via Horsham, including the lines from Three Bridges to Horsham and from Worthing to Fratton and the branches to Bognor Regis and Littlehampton in July, 1938; Staines to Reading, Ascot to Aldershot and Aldershot to Guildford in January, 1939; Sevenoaks to Hastings via Orpington and Crowhurst to Bexhill in July, 1939, and Gravesend and Swanley to Chatham and Gillingham and Strood to Maidstone in 1940.

At Southampton he was able to report an activity unequalled in previous years. The number of ships in and out was 6,792, an increase of 570, or 9.2 per cent. The tonnage of shipping entering the docks was the highest ever recorded, as was also the number of passengers dealt with.

The account of their stewardship of their varied businesses for the past year was a record that the board and officers presented with pride, and he could not but think that the stockholders would be proud of it too. It would always be their aim to do everything that would tend to increase the popularity and prosperity of their line, and in working for that object they realised fully that the getting of increasing traffics did not lie with London alone. They were endeavouring to make it realised that the Southern Railway was not merely a London business that had somehow or other reached certain towns in the country but a real local partner of those towns, ready to co-operate in any way that would add to their popularity with the public.

In the coming season, with the festivities of the Coronation and the Naval Review, and the thousands of visitors from our Dominions, and, indeed, from the whole world, the prospect would seem good, and he would hope that next year he would be able to put before them an even better statement of progress.

The report was unanimously adopted.

MANCHESTER SHIP CANAL COMPANY

SATISFACTORY RESULTS

The annual meeting of this Company was held, on the 25th instant, at Milton Hall, Manchester, Sir Frederick J. West presiding.

The Chairman, in the course of his speech, said:—From the accounts you will have seen that last year's trading, shows an improvement upon that of 1935 and you will have realised that this improvement is even better than it appears on the surface, as certain provisions, are being made against commitments to which I shall refer in the course of my address.

I would introduce my review of the year's traffic by pointing out to you that the tonnage carried over the Waterway last year was the highest in the history of the company, save for the year 1929, which was an exceptionally good year, and for 1926, which was an altogether abnormal year, in which large quantities of coal were imported owing to the protracted coal strike.

Dealing with the actual figures, the result in the net revenue for the year for the whole Undertaking was £709,807. There remains an available balance of £310,951, compared with £310,588 in 1935, and it is recommended that the following dividends amounting to £242,795 be paid:—3½ per cent. on the Manchester Ship Canal Corporation 3½ per cent. preference stock, 3½ per cent. on the Preference Shares, 1½ per cent. on the Ordinary Shares, carrying forward £31,951 to next year's account.

I anticipate that many of our shareholders, in view of the improvement our monthly receipts have shown over those of 1935 and having regard also to the general improvement in trade, looked forward to an increased dividend and are now faced with disappointment. Your directors were naturally anxious, if it were possible, to recommend a higher dividend and regretted to find themselves unable to do so. This matter has received very careful consideration, and I want to give you, briefly, the main reasons governing the decision.

Looking ahead, and particularly in 1937, we are confronted with a known increase in expenditure. Not only are there specific increases, as for instance the repairs to Barton Road Swing Bridge, but in addition, as you are all aware, there is an upward trend in working costs which we cannot overlook. Such being the case, your directors unanimously decided that it would be a mistake even to contemplate an increase in dividend which we could not see a definite prospect of being able to maintain. The provisions made enable us to face the coming year with greater confidence.

You will have appreciated from your examination of the accounts that notwithstanding the fact that the balance available for dividends and reserve is much the same as last year, yet we have had a reasonably good year.

Our usual appropriation to the reserve for contingencies and repairs has this year been slightly increased in order to bring this main reserve of the company up to the round figure of £300,000.

I have on previous occasions made reference to the absolute necessity of adequate provision being made in our accounts for renewals and repairs to plant and machinery and for contingencies. I stress this point again because the provision we have made in this respect has been criticised at these annual meetings and in letters from shareholders. Your directors feel strongly that the best interests of the shareholders will be served by making wise provision against known and likely contingencies, and this policy has the strong support of your professional auditors.

You will appreciate that the extent of your dividends will be reflected by a prudent policy in this matter. The provision we have therefore made in this year's accounts and which it will be necessary to make in the future for such items as repairs to lock gates, new locomotives, cranes and tugs, is one which should commend itself to the shareholders.

There is an impression that a period of seven lean years has come to an end and that the relative prosperity which we are enjoying to-day will grow. Are we going to share in this? What is the position?

New industries have been attracted here; existing industries have extended, there has been a satisfactory movement, within the area, of labour into the expanding industries; employment has improved, and our bank clearings have increased and, as you already know, the traffic and receipts of our Undertaking have shown definite improvement.

We face the future with confidence, the improved trade of the country should be reflected in a greater demand for the imports and exports which the Port of Manchester can handle with such advantage to the immense industrial area surrounding us. And in these additional demands, which we venture to hope will be made upon the Port, you may rest assured your directors and officials will use every effort to further your interests to the greatest possible advantage.

The report and accounts were adopted.

THE SCOTTISH PROVIDENT INSTITUTION

MUTUAL LIFE ASSURANCE

SATISFACTORY RESULTS

RATE OF INTEREST AGAIN INCREASED

The ninety-ninth annual general meeting of the Scottish Provident Institution was held in Edinburgh on Tuesday, February 23, 1937, Mr Hugh F. B. Sharp in the chair.

The Chairman, in moving the adoption of the report, said,—You will see that the net new business completed was £3,165,899, which is little short of last year's record figure.

The annuity business has again increased, and we received £248,737 in single payments, some £75,000 more than we did last year.

The aggregate claims in the past year amounted to £1,403,629. This shows an increase of over £129,000 on the aggregate claims of the previous year. As the office grows older the claims must of naturally grow larger in amount and I am glad to be able to state that the increase presents no unfavourable feature, our mortality experience having indeed been most satisfactory.

STAFF PENSION FUND

You will note the step which the directors have taken in establishing a staff pension fund. I need hardly say that no member of the Institution's staff who has retired after having rendered us loyal and efficient service has been allowed to do so without the award of an adequate pension. But the board felt that it would be more satisfactory and in accordance with modern practice if a pension fund were created under which members of the staff could qualify by age and length of service for a pension to which they would be legally entitled. The necessary procedure was accordingly carried through and the sum of £130,000 was transferred from the life assurance and annuity funds. This amount, I may explain, was already reserved in these funds as the actuarial equivalent of the pensions payable to members of the staff on the retired list. An annual contribution sufficient to meet the pensions of the present staff, as the need arises, will be made in future. I have little doubt that the establishment of this fund, which has already been welcomed by the staff, will be approved by the whole body of members.

The total funds amount to £24,748,391, showing an increase of £291,472. This increase, while more than double that reported in 1934, is less than last year's figure, but you will bear in mind the £130,000 transferred to the staff pension fund and the increase of practically the same sum in the amount of our claims.

I am glad to say that the gross rate of interest realised, £4 10s. 3d. per cent., on all the funds has again increased and shows an improvement of 1s. 2d. over the previous year, while the net rate of interest is up to £3 16s. 9d. per cent. Remembering that the income tax was increased last April, this is a not unsatisfactory achievement.

THE INVESTMENTS

There are no material changes in the position of our assets in the balance sheet. The market value of our Stock Exchange securities is so much above their book value as to render it unnecessary in our opinion to add to the investment reserve fund, which stands, as before, at £600,000. Government securities stand at much the same figure as in 1935, and we have participated to some extent in the recent issues of Municipal and County securities in this country, having increased our holding from £196,000 to the present figure of practically £411,000. Our ordinary stocks and shares have increased by £400,000. This category represents under 15 per cent. of our marketable securities and is almost entirely located in this country. It may interest you to know that nearly 93 per cent. of our assets is invested in the British Empire.

DEMAND FOR ENDOWMENT ASSURANCE

Of the devising of new schemes with which to attract the potential assurer there seems to be no end. The insuring public calls for variety, and there are fashions in policies just as there are fashions in dress. Present-day conditions no doubt account for the popularity of a contract such as our adequate income policy, which provides for an annual sum being paid for a limited period to a policyholders' dependants in event of his premature death. But whatever may be the temporary needs of a generation I do not think that the fundamental and essential requirements of man-

kind—protection for dependants and provision for old age or, in other words, whole-life and endowment assurance—will ever change. It has always been the policy of this institution to advocate whole-life assurance, preferably by limited payments, as being best fitted to meet the real requirements of the majority; but there is a large and increasing section of the community who have to consider the necessity for providing some capital which they can use in their old age, and to these an endowment assurance makes the stronger appeal. There is, moreover, a considerable demand for endowment assurance to-day from men in the thirties and forties who are in possession of a good income. Looking ahead, they visualise their children starting life when they themselves have entered the sixties. For such men it is a pleasant thing to have an endowment assurance maturing. They can apportion the proceeds amongst their family as they wish and watch them enjoying it. To those who can afford to open an endowment assurance the Scottish Provident offers a very attractive policy in the form of a non-profit assurance. Our rates for such endowment assurances have recently been revised and reduced, and I would advise all those who are contemplating the opening of an endowment policy to consider our new tables, which can now be obtained from the branches and agents.

To all those who carry on the business of our branches and to our many loyal and interested agents who have helped us during the year I would offer the sincere thanks of the directors and the management.

The motion for the adoption of the report was seconded by Lord Blackburn and carried unanimously.

The directorate was thereafter constituted and Mr Francis More, C.A., was reappointed auditor.

ENGLISH ELECTRIC COMPANY, LIMITED

RECORD ORDER BOOK

The eighteenth ordinary general meeting of this company was held, on the 24th instant, in London, Mr J. H. Nelson (chairman and managing director) presiding.

The Chairman, in the course of his speech, said that the excess of liquid assets over current liabilities had increased from £1,390,938 at December 31, 1935, to £1,779,760 at December 31, 1936. The latter figure covered the debentures nearly one and a half times. The trading profit was £356,992, against £262,619 for 1935. After providing for prior charges and depreciation, the net profit for the year was £235,305. The preference dividends for 1934, 1935 and 1936 absorbed £221,490, and after bringing in the carry-forward for 1935 there was a credit balance on profit and loss account of £36,278, which the directors proposed to carry forward. Although it had not been possible at that time to recommend a dividend on the ordinary shares, if 1936 had been a normal year with only twelve months' preference dividend to pay, the remaining balance after paying that dividend would have been £161,476, which represented 11.2 per cent. of the ordinary capital.

The company entered 1937 with the largest order-book in its history. The rate of production for the last three months of 1936 was double that of the first three months, and further increases in production had been planned. The company's export trade, in spite of severe competition, had reached a figure of 32 per cent. of the total order-book. Among orders which had been received were those from the Admiralty, War and Air Departments and the B.B.C.; also Diesel electric propelling machinery equipment for a new vessel for Trinity House.

They continued to receive substantial orders from the Southern Railway. Orders had also been received from the New Zealand Government for complete motor coach trains and electric equipment for locomotives, from British-owned railways in the Argentine for over 100 complete Diesel rail coaches, and from the Ceylon Government Railways for Diesel electric trains.

There was every expectation that the results of the current year would show further progression.

The report and accounts were adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

NATIONAL MUTUAL LIFE ASSURANCE SOCIETY

RECORD NEW BUSINESS

The annual general meeting of the National Mutual Life Assurance Society was held on the 24th instant, in London.

Mr J. M. Keynes, C.B. (the chairman), in the course of his speech, said: Our new business during the past year, with gross and net totals of £1,327,200 and £1,011,200 respectively, constitutes a record in the society's history, while the life business proper—namely, £903,227 net—is only a little less than our previous best. With an old-established society such as ours, however, where the annual wastage from claims, etc., reaches a large figure, the progress of the yearly premium income is perhaps the best index of the extent to which new business is more than making good what we are losing by the efflux of time. It is, therefore, satisfactory to be able to report an increase in the yearly premium income of approximately 10 per cent. during the last two years—namely, from £363,514 in 1934 to £397,117 last year.

As a result of the annual valuation of the assets, we are again able to report a substantial appreciation, amounting to £365,793, on our Stock Exchange securities, or 6.2 per cent. of their mean value. The net result is to show a balance of capital profit on assets realised and revalued amounting to £310,758. During the past year the period of appreciation on gilt-edged and other fixed-interest securities has come to an end, and, in these circumstances, we consider so substantial a capital gain to be satisfactory.

The balance available, after making allocations, amounts to £661,693, out of which we are declaring bonuses of 52s. 6d. per cent. and 45s. per cent. compound per annum respectively for whole-life assurances and endowment assurances with full profits and 17s. 6d. per cent. per annum compound for low-premium policies with reduced profits. This distribution, which repeats the distribution made two years ago, in 1934, is the highest in our history, and is, we believe, higher than the distribution by any other mutual office in this country which calculates bonuses on terms which can be compared with ours. I emphasise this point in order to make it clear that our very large accumulation of surplus resources has been compatible with a liberal treatment of our policyholders.

GOVERNMENT FINANCE PROSPECTS

The end of 1936 may prove to have been a specially favourable date for the valuation of our assets, for, on the one hand, industrial securities had probably felt by then the major effects of industrial recovery apart from any temporary top-knots due to actual boom conditions; while, at the same time, gilt-edged securities were still retaining the major part of their large gains. The subsequent disclosure of the Government's rearmament programme certainly seems to postpone for some time the prospect of an industrial recession, but the effect on the gilt-edged market has been severe; and an assurance society is, of course, much more largely interested in fixed-interest securities than in equities. Are we entitled to take a cheerful view?

I feel no doubt that the sums which the Chancellor of the Exchequer proposes to borrow are well within our capacity; particularly if as much of the expenditure as possible is directed to bringing into employment the unused resources of the special areas. Over a period of five years there should be no difficulty in finding the resources required. The sinking funds of public boards and local authorities in respect of past expenditure, the huge repayments which the building societies are now collecting as the new houses of recent years are cleared of indebtedness by their owners, the steady growth of deposits in the Post Office and trustee savings banks in times of good employment, the large sums which industry will be able to put to reserves out of its profits—these alone should amount to something like £400,000,000, not in five years, but in one year.

Thus it lies within the power of the Chancellor to get his money without producing conditions of inflation, but what will he have to pay for it? This, to my mind, is entirely a matter of management and how the task is handled. The calls to be made on the gilt-edged market are a reason for encouraging the supporters of that market, and this, with their past experience to guide them, is what I should expect the Treasury to do.

It is a popular error to suppose that the rate of interest to-day is exceptionally low. During the half-century preceding the war the average yield on consols was approximately 3 per cent. Even with the Treasury's requirements I see no justification in the years to come for a long-term rate of interest higher than 3 per cent., and, indeed, it should be lower.

The report and accounts were unanimously adopted.

SUN LIFE ASSURANCE SOCIETY

RECORD NEW BUSINESS

The general meeting of members of Sun Life Assurance Society was held, on the 23rd instant, in London, the Hon. Sir William Henry Goschen, K.B.E. (the chairman), presiding.

The Chairman, in the course of his speech, said: Our life assurance new business for last year was represented in round figures by 31,000 policies for over £20,700,000 of sums assured, which compares with 25,000 policies for £17,400,000 of sums assured completed in 1935.

The society has for many years shown steadily mounting new business totals, but an increase in sums assured of well over £3,000,000 surpasses all records, and there is, therefore, every reason to be fully satisfied with our progress, more especially as this record in new business has been accompanied by an appreciable fall in our expense ratio.

At £4,250,000 our premium income for 1936 was £329,000 ahead of that for 1935. Deducting the single premiums, the renewable premium income showed an increase of £365,000, the largest increase ever achieved by the society in any one year.

The usual valuation of our Stock Exchange securities was made as at December 31st last and disclosed market values appreciably in excess of the values at which they appear in the balance sheet. This excess provides a substantial buffer against the contingency of a formidable depreciation in future market values.

The funds of the society have increased in the year by £2,367,996 and amounted to £40,728,088 at December 31st last.

That concludes my review of the year's operations, and I now have pleasure in directing your attention to the results of the valuation, which discloses the surplus available for distribution and gives you the best measure by which to judge the extent of our success during the past four years.

VALUATION

The society had on its books as at December 31st last, in round figures, 255,000 policies for £140 millions of sums assured and bonuses, compared with 205,000 policies for £103 millions in force at the end of 1932. An increase in four years of 35 per cent. in the sums assured and bonuses is eloquent testimony to the vitality of this society's business in the one hundred and twenty-seventh year of its existence.

The bonuses allotted to participating policy-holders for the five years ending last December are at similar rates to those declared since 1926, and in these days of cheap money should prove very satisfactory to our with-profit policy-holders.

After making provision for the liabilities in respect of the bonuses now to be allotted and for all the liabilities in respect of the life assurance, annuity, sinking fund and accident funds, there remains a surplus carried forward unappropriated of £1,633,560.

At the last valuation, at December 31, 1932, a surplus of £2,319,822 was carried forward unappropriated, and a word of explanation is necessary to account for the apparent reduction. Owing to the prolonged period of cheap money, the directors have considered it desirable on this occasion to increase the stringency of the valuation basis by valuing the without-profit business and the bonuses at a rate of interest one-half per cent. less than that previously adopted. As a consequence, approximately £400,000 has been withdrawn from the unappropriated surplus to strengthen the valuation reserves.

The next valuation is due to be made as at December 31, 1941, and the directors have adopted the recommendation mentioned on page 9 of the report that interim bonuses be allotted to such with-profit assurances as may become claims or be surrendered before that date.

On page 10 of the report the share of the divisible profits apportioned to the proprietors is set out, and, while it would be rash in these troublous days to guarantee the dividends of the future, the directors hope, in the absence of unforeseen circumstances, to be able to declare during the ensuing five years half-yearly dividends, free of income tax, each of 2s. per share.

And what of the future? The expansion of our new business is accompanied by a reduced expense ratio, our interest yield is satisfactory and our mortality experience is favourable and improving. All these factors which contributed to the splendid results of the past four years still subsist in 1937, and I have, therefore, every justification for my confidence that, if it should be my privilege to present to you the results of the valuation as at December 31, 1941, they will be no less favourable than those which I have had the pleasure of submitting to you in respect of the valuation period just concluded.

The report and accounts were unanimously adopted.

ILLUSTRATED NEWSPAPERS, LIMITED

SUBSTANTIAL PROGRESS

MR WILLIAM GRAHAM'S SPEECH

The eleventh annual general meeting of Illustrated Newspapers, Limited, was held, on the 24th instant, at Southern House, London.

Mr William Graham, the chairman of the company, presided, and in moving the adoption of the report and accounts said that the profit upon publications and dividends from investments amounted to £175,884, as compared with £129,870 last year—an increase of £46,013. It was satisfactory to report so considerable a progress to prosperity, and he hoped shareholders would agree that it reflected credit on all the trading departments of the company. With the amount brought forward from last year of £67,192, there was left an available balance of £193,742, as compared with £164,842. The board had already paid out of those profits a full year's preference dividend, less tax, amounting to £96,862, and proposed to carry forward the balance of £96,879 to next year.

The accounts of the Illustrated London News and Sketch, Limited, for the period to November 30, 1936, showed profits on publications, dividends and investments, less interest payable, working and general charges, of £76,029, as against £73,836. That was an increase of £2,192, notwithstanding the fact that trading for the year 1935 was such as had caused the board considerable pride and gratification, reaping as it had the profits of the two wedding numbers recording the marriage of the Duke and Duchess of Kent and the marriage of the Duke and Duchess of Gloucester, and also the extensive revenue derived from the numbers recording the Jubilee of the late King George. During the year 1936, however, they had reaped considerable advantage from portraying the funeral of King George V.

CORONATION PUBLICATIONS

He was happy to say that during the short period of the current year the company showed a satisfactory increase over the same period of last year. This year should be an exceptionally favourable one for the company in view of the forthcoming Coronation and festivities connected therewith. Mr Bruce Ingram, the editor of the *Illustrated London News*, had produced a magnificent Coronation record number. Many thousands of copies had already been despatched to America, Canada and the other Dominions to satisfy orders already received, and the paper would be on sale to the public within a very few days. Their shipment to America and Canada was the biggest single shipment of newspapers ever recorded, and he was sure that when shareholders bought the paper, as all of them should, they would agree that it was one of the finest, if not the finest, production that had ever been produced from a newspaper office. It should result in a substantial profit.

They would also publish special double numbers on May 8th and May 15th for the *Illustrated London News* and *The Sphere*, and on May 19th *The Tatler*, *The Sketch* and *The Bystander*. The prospect for the preference shareholders this year was most favourable; the accounts showed a carry-forward of £96,879, and, in addition, they had in immediate sight the dividends from investments in the Illustrated London News and Sketch, Limited, amounting to £45,659, so that the preference dividend for the year was already considerably more than covered without any profits accruing from the general business of the company during this year.

The report and accounts having been unanimously adopted, The chairman gave a brief outline of the proposals in reference to an offer of 7s. per share likely to be made to the ordinary shareholders. Very shortly special meetings of this company would be called to consider proposals for alterations in the rights of the preference and ordinary shareholders, the passing of which was a condition precedent to the agreement for the sale of ordinary shares. Briefly, the preference shareholders would receive approximately one year's arrears of preference dividend in cash, but not out of this company's assets. They would be asked to agree to the amount of the cumulative preference dividend being reduced from 7 per cent. to 5½ per cent., against which they would be given a participation of an extra ½ per cent. upon distribution amongst the ordinary shareholders of 1 per cent., and a further ½ per cent. upon the distribution of another 1 per cent. to the ordinary shareholders. It was also proposed to distribute to the preference shareholders by cession from the ordinary shareholders two 5s. shares—into which the ordinary shares were to be converted for every five £1 preference shares held by them.

The proceedings terminated with a hearty vote of thanks to the chairman, directors and staff.

BOVRIL, LIMITED

A SATISFACTORY YEAR

Presiding at the fortieth annual general meeting of Bovril, Limited, held, on the 25th instant, in London, the Lord Luke, K.B.E. (chairman), said it was with pleasure that they met again and were able to present the shareholders with such a satisfactory report and set of accounts.

If they would turn to the "Profit and Loss Account," they would see that the "Gross Profit on Trading, less Advertising Expenses" was £361,948, an improvement on the previous year; whilst the "Dividends Commission Interest, etc.," at £41,391, was practically the same as in 1935.

The net profit for the year stood at £250,194, against £214,187 for 1935.

To this profit of £250,194 fell to be added the amount brought forward of £76,705, giving an available balance of £326,899.

PROBLEMS OF PASTORAL PIONEERS

Bovril had been doing pioneer work as pastoralists in Northern Australia for about 29 years, and in very unpromising country had gradually built up a large stock of cattle; in fact, their heavy mortality losses in the drought of 1936 suggest that they had overstocked their areas, though they happened to be much larger than the Principality of Wales.

After this spell of drought it was indeed pleasant to hear that it started raining on Victoria Downs Station on Christmas Eve, and since then over 38 inches of rain had fallen.

He read in *The Times* recently that £17 millions had been spent on Northern Territory without achieving any success whatever. He could assure them that none of that money seemed to have reached the "drudges of North Australia," that is to say, the hard-working pastoralists who had been endeavouring since the beginning of the century to make useful these vast areas by raising cattle. That, he feared, was the only possible way of utilising them, unless, some day, mining brought together a well-off population which could bring prosperity to that empty land and also incidentally provide local consumers for beef.

SIR JAMES CRICHTON-BROWNE ON NATIONAL FITNESS

Sir James Crichton-Browne, seconding the adoption of the report which had been submitted to the shareholders, said that he felt that he need add nothing to what Lord Luke had said in recommending it to their approval.

He would say, however, that he thought the annual meeting ought to afford them a double satisfaction. They had reason to feel satisfied with the financial situation which Lord Luke had explained with his usual lucidity, and they had reason to feel satisfied with the part which Bovril had played in the epidemic of influenza which had recently visited this country and which, indeed, was still continuing. It had been said that the disease was of a mild type, but those who had had a dose of it didn't think so, and whether mild or not it left a trail of debility behind it.

FIGHTING INFLUENZA

There was no cure for influenza, and the only effectual way of dealing with it was to resist its invasion, to be able to say to it when it reached the nostrils and lips, "Thus far but no further," and it was by fortifying the system against attack that Bovril was so valuable when influenza was prowling about.

It seemed highly probable that the essential cause of influenza had been detected, in a virus or poison so infinitely minute that it could pass through a porcelain filter, but even should this identification be confirmed mankind would be no nearer the direct control of a disease so subtle and so widely diffused. The best policy would still be to keep it at bay, by the vital antagonism of a well-nourished body and of a calm and defiant mind.

It was by its power of augmenting this vital antagonism that Bovril was so helpful not only against influenza but against other maladies. It contributed to that national fitness of which so much had been heard of late. Bovril was a body builder, for not only was it itself a food, but it promoted the assimilation of other foods, and he might say that recent researches had proved incontestably by experiments, not on white rats, but on human beings, that Bovril had an altogether singular power of increasing the gastric secretions and so of stimulating digestion, assimilation and nutrition generally.

The report and accounts were carried.

SAN FRANCISCO MINES OF MEXICO, LIMITED

INCREASED PROFIT—DIFFICULT LABOUR CONDITIONS

The twenty-fourth ordinary general meeting of this Company was held, on the 24th instant, in London, the Rt. Hon. the Earl of Denbigh, G.C.V.O. (chairman of the company), presiding.

The Chairman, in the course of his remarks, said:—Operations were suspended for one month by the strike of the workmen to which I referred last year. In the remaining 11 months a record tonnage of 519,310 tons was treated.

The total revenue of the company increased by £176,804, part of this being due to the higher metal prices and part to the larger tonnage. On the other hand, wage rates were higher and the cost of production rose accordingly. On balance the net operating profit per ton showed a satisfactory increase. The end result is an operating profit for the 11 working months of £224,322. The strike cost £19,756, and the operating profit for the year was thus reduced to £204,566. A profit of £85,026 remains to be carried to the balance sheet. Your directors recommend a dividend of 9d. per share which, together with the directors' additional remuneration in respect thereof, will absorb £77,049.

Our active development programme continues. Development at our original property continues to be encouraging, and we do not yet know what tonnage of ore it will finally yield—although we believe it to be large.

In accordance with our usual practice the ore reserves were recalculated at the end of the year. After replacing 519,310 tons milled, there is a net increase of 51,940 tons. The fully blocked and partly blocked ore reserves are now nearly 2,750,000 tons, or about five years' milling at our present rate.

BURDEN OF INCREASED WAGES

During the year under review we conceded two further increases in wages and other benefits to the workmen at the mine. At the present moment a fresh collective contract is in negotiation, which will certainly involve the payment of still higher wages. Luckily the sharp upward movement in the price of metals has so far enabled us to shoulder these burdens. But if one day prices fall, then the increased cost of wages will naturally mean that operations will become unremunerative at an earlier date and will cease sooner than they otherwise would have done.

Labour conditions are being changed too frequently. No sooner is one collective contract signed, sealed and delivered than another comes into view. It is, in any case, a complicated and delicate business to manage the affairs of a company which has to find, develop, mine and treat a complex ore and sell its products in the world markets; but it adds tremendously to the difficulties of those in charge if they never know what the wages scales will be from one day to the next.

We are not only willing but anxious to pay reasonable and proper wages. But we do now ask for a period of peace, which will enable us to adapt ourselves to the already drastically changed conditions, and which will give us some encouragement for the investment or reinvestment of the further sums which may be required from time to time. Wages scales are now likely to be more than 80 per cent. above the level of 1934. We hope, therefore, that the Mexican Government and the Mexican Labour Unions will allow the collective contract which is now being negotiated to work out its period undisturbed.

THE OUTLOOK

I expect you would like me to say something about the prospects. The operating profit for the first quarter was \$384,000, as compared with \$269,000 for the preceding quarter. Owing to the increase in metal prices, current operating profits are at an even higher level. There is some prospect that world production of zinc and possibly of lead will increase substantially in a couple of years or so, but it is hoped that consumption will keep pace. Meanwhile the immediate statistical position of both metals is excellent. This has led to heavy speculation, which no doubt accounts for some of the recent rapid advance in prices, especially in zinc. Under these conditions it is hard to say what the next move will be; but it is fairly certain that the average prices which will be obtained by your company for the current financial year will be substantially higher than the figures for the last financial year which I gave at the beginning of my speech. In short, if there is no major setback in metal prices, and if conditions continue as at present in Mexico, the outlook for the current year is good.

The report and accounts were unanimously adopted and a dividend of 9d. per share was approved.

MID-SOUTHERN UTILITY COMPANY

SUBSTANTIAL PROGRESS

The annual meeting of the proprietors of the Mid-Southern Utility Company was held on the 25th instant, at Farnborough.

Mr R. W. Edwards, who presided, said: The Electricity department continued satisfactorily to extend its sales and, as anticipated, the low tariffs for purposes other than lighting led to an increased use in the various apparatus, offered on attractive terms. The nett increase in sales, compared with 1935 (excluding consumptions on our various works and subsidiary undertakings) represented 39.5 per cent. Appliances added during the year increased the load by 19,819 kw., compared with 7,079 the previous year.

The sale of gas for the year showed an increase (excluding consumptions on our works and for public lighting) of 3.4 per cent. It should be pointed out that a large number of cookers have been replaced by modern apparatus, thereby substantially reducing the consumption. The climatic conditions prevailing in 1936 were, on the average, of a similar order to 1935, the nett average night temperature being 42.3 degrees, compared with 42.9. The following apparatus were added during the year: Cookers, 2,735; fires, 671; water heaters, 848. The amount recovered from residuals was better than in 1935, and represented 59.5 per cent. of the cost of coal, compared with 46.6.

The Water department has been satisfactory, and the various plants, reservoirs, and underground works have been well maintained. The reconstruction of No. 1 Pumping Station was completed during the year, and the station is now in commission. The total rainfall recorded by us for the year was 31.26 inches, compared with 34.3 in 1935.

For the three undertakings the amount of authorised capital is £1,926,367 14s. 2d. Of this there has been received £1,740,753 os. 2d. The nett expenditure is £1,568,696 12s. Over the past year, deducting depreciation of £31,942 14s., the capital expended was £118,834 13s. 1d. During the year we added in all departments (including subsidiary undertakings) 10,448 consumers—making a net increase of 47,848 in thirteen years.

The report and accounts were adopted.

PETER WALKER (WARRINGTON) AND ROBERT CAIN AND SONS, LIMITED

A YEAR OF FURTHER PROGRESS

At the fifteenth ordinary annual general meeting of Peter Walker (Warrington) and Robert Cain & Sons, Limited, held, on the 25th instant, in London, the Chairman, the Rt. Hon. Lord Brocket, reported a year of steady progress in the business, which had been helped by the effects of the revival in trade in Lancashire and district. Better prices and higher wages were improving the staple industry—cotton. Re-armament and the "Scrap and Build" policy had revitalised engineering and shipbuilding, but there was still very considerable unemployment in Liverpool.

During the year output had been increased, and it was again necessary to extend the bottling plant.

A reminder was given of the disastrous effects of the 1931 Budget, when the policy of over-taxation defeated its own object by reducing the consumption to such an extent that even now, after several years of recovery, the standard barrelage of the whole country was 12½ per cent. less than in 1930.

The policy of rebuilding and modernising houses had been continued, and licensing magistrates were realising the advantages of allowing progressive brewery companies to improve and rebuild their houses to the mutual good of all concerned.

The principal change in the balance sheet was the increase in liquid assets by some £124,000, against the increase in creditors by £18,000. During the year £10,500 nominal of 4½ per cent. debenture stock had been redeemed by operation of the sinking fund.

The combined profit of the company and its subsidiary was approximately £50,000 more than in the previous year. After making provision for debenture interest, preference dividend and debenture stock sinking fund (£10,927; in previous year, nil); the available balance was £229,299, out of which a dividend of 6 per cent. was declared, absorbing £136,200, £60,000 was allocated to general reserve, £21,000 to improvements reserve, £10,000 to staff superannuation fund, and the carry-forward was increased by £2,099 to £84,538.

The report and accounts were adopted.

The subsequent extraordinary general meeting approved the conversion of the issued share capital into stock units of £1 each.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended February 20, 1937, amounted to £31,147,000, against ordinary expenditure of £16,472,000. After allowing for a decrease in Exchequer Balances of £327,057, the operations for the week, as shown below, decreased the gross National Debt by £15,003,000, to approximately £7,933 millions.†

(000's omitted)	
Public Department Advances...	£ 3,270
2½% Funding Loan	39
Treasury Bills	17,549
National Savings Certificates...	50

GOLD MARKET

Messrs. Samuel Montagu and Company write on February 24, 1937:—
 The Bank of England gold reserve against notes amounted to £313,660,661 on February 17, 1937, showing no change as compared with February 10th.

In the open market the amount of bar gold disposed of at the daily fixing was about £2,700,000, most of which was taken for shipment to New York. There was very little movement in prices, which continued to show a small premium over dollar parity at the time of fixing. The s.s. "Viceroy of India," which sailed from Bombay on February 20th, carries gold to the value of about £255,000.

SILVER MARKET

The market has continued to show a very steady tone and during the week under review the cash quotation varied only between 20 1/2 d. and 20 3/4 d., whilst that for forward remained unchanged at 20 1/2 d. There have been no new features; America has given support and the Indian Bazaars have made forward purchases, buying off-set by further sales to liquidate holdings and small sales on China account. Neither buyers nor sellers have been disposed to press, orders being so limited as to price as to render the market narrow. Quiet conditions are expected to prevail pending the announcement of the Indian Budget, which is to be made on February 27th.

Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard	Price of Silver New York per ounce .999 fine

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE general trend of the prices of primary products remained upwards during the past week. The proceedings on the non-ferrous metal markets, however, at times resembled those in the Sporting Palace at Monte Carlo rather than in one of London's sale rooms. Quotations for copper, lead, spelter and tin were pushed up like the stakes in a game of poker by speculators intent on a quick profit. The tendency of prices to be violently manipulated to the tune of scarcity rumours is, to say the least, deplorable. Some of the wider implications of these latest tendencies in the commodity markets are discussed in a Note of the Week on page 460.

In contrast to the hectic dealings in base metals, the markets in rubber, linseed and linseed oil were fairly steady this week. Among textile raw materials, wool was unchanged in price on the week, but cotton was slightly dearer. The wheat market, which can now draw on the heavy supplies available in Argentina, was not very active and quotations tended to sag. Raw sugar continued to advance in price. Beef and mutton, as well as Australasian butter, sold at higher prices, and eggs were also dearer.

As far as domestic industrial materials are concerned, reports of the scarcity of coal in certain districts, and of advances in quotations, are increasing. Moreover, the stringency of iron and steel materials is becoming increasingly acute, while the upward trend of prices continues.

In the United States, commodity prices, except cereals, showed a firm tendency. Thus, on Wednesday last, Moody's daily index of staple commodity prices (December 31, 1931 = 100) stood at 207·3, against 207·0 a week earlier, 207·1 a month ago and 169·0 on the corresponding day last year.

COAL

SHEFFIELD.—Demand for coal is well maintained, and good progress is being made in catching up with the arrears of output from last month, due to the influenza epidemic. Users of industrial fuel are securing more satisfactory deliveries and a heavier tonnage is available for shippers from the Humber ports, who are experiencing a better inquiry for shipment over the next few months. There are keen inquiries from Belgium for coking coal, and France is seeking supplies for doubles and singles, but home demand is taking a high proportion of output. There are plenty of inquiries for prompt shipment. The inland market for all industrial fuels remains very good, coke being particularly active.

NEWCASTLE-ON-TYNE.—Coal prices are high and firm in the North East area, demand being as keen as ever. While household requirements will contract as the spring approaches, there is little doubt that foreign demand, which is persistent, will absorb any free coal. Northumberland steam grades are in good demand from the Scandinavian countries, best Blyth screened being 19s 6d. f.o.b., whilst grades sorts are 19s. to 20s. f.o.b. Durham manufacturing coals have a steady sale locally, and any surplus is easily sold for export. In the coke section makers have no difficulty in obtaining full current prices for all they can produce.

WORKINGTON.—The coal trade is brisk. There is a scarcity of all descriptions of coal and supplies have to be brought in from Scotland, Northumberland and South Wales. Even then, owners cannot satisfy Irish needs, and the cross-Channel shipments are at least 5,000 tons weekly below those in the winter of 1935. Small coals for coking and steam coal are in heavy demand. Owners are concentrating largely on the land sale market, and consumers are able to satisfy their needs of house coal fairly promptly. Prices are steady.

GLASGOW.—The stringency of supplies continues unrelieved. Collieries are fully booked for some time ahead—some having export orders into 1938—and this fact and an unwillingness to engage in further commitments limit business. A large proportion of production is, of course, absorbed by the home market and in coastwise business, and even in these branches delivery dates tend to lengthen, especially as regards washed smalls in Lanarkshire. It is to be regretted that progress cannot be made with export business, of which a considerable amount is offering; but to some extent this increased inquiry results from the tightness in other producing countries. If such complaints as that made by Norwegian importers this week are justified, however, the position calls for serious consideration.

CARDIFF.—Coal shipments at the South Wales ports continue to show gains over the corresponding period last year. The Great Western Railway Company returns for the foreign and coastwise trades last week give a

MATHER AND PLATT, LTD.—Net profit for 1936, £180,339 compared with £178,017. Ordinary dividend, 11 per cent. (against 10 per cent.), with an extra 2 per cent., as before, not liable to tax, by taking £27,273 from special reserve on account of realised capital profits. Carry-forward increased from £60,636 to £70,972. Total assets, £2,526,356.

ILLUSTRATED NEWSPAPERS, LTD.—Net profit for year to November 30, 1936, £167,245, compared with £118,217. Preferred dividend absorbed £96,863. Carry-forward increased from £67,192 to £96,880. Negotiations pending for sale by Inveresk Paper Company of part of its holding of Illustrated Newspapers, Ltd., ordinary shares, and an offer will be made to the other holders at the same price of 7s. per share.

BRITISH ROPES, LTD.—Profit for 1936, £231,535, against £169,593. Ordinary dividend 25 per cent. A new wire mill, etc., to be erected in South Africa. New issue of 869,488 ordinary shares of 2s. 6d. at 10s. to be made.

CABLE AND WIRELESS, LTD. (INDEX NUMBERS).—Monthly working day average of receipts, 1929 = 100, for January, 1937, 85·8, compared with 96·4 for December, 1936, and 71·2 for January, 1935.

total of 360,900 tons, as compared with 323,738 tons a year ago, and for the eight weeks ended February 20th the increase over the same period last year is 343,000 tons, or 11 per cent. There is still a scarcity of supplies are spot positions, and for transactions in small isolated parcels prices are substantially above the old minimum schedule. Outputs, however, are slowly increasing, and are now averaging between 780,000 and 790,000 tons per week, against only about 678,000 tons during the first three weeks of February, 1936. The Italian State Railways are reported to be inquiring for 100,000 tons, and the Swedish Navy for 8,000 tons. Coke is still strong and scarce, and prices for patent fuel and pitwood are firm.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that attention is concentrated on the scarcity of steel and the efforts which are being made in many departments to alleviate the situation either by rationing consumers or by endeavouring to obtain fresh supplies of scrap and pig iron. Production of iron and steel continues at a high rate; but further expansion is limited by the shortage of raw materials.

In the pig-iron market it is becoming increasingly difficult to place orders for near delivery. For some months consumers have been rationed, and producers claim that by this method they have made the best of a difficult situation. There seems little prospect that it will be possible to overtake the arrears of delivery for some time.

The semi-finished steel department is probably more hardly hit by the shortage than any other section of the iron and steel trade. British works producing this class of material have their output earmarked for some time to come against contracts, and Continental producers are behind with their import quota. So stringent is the position with regard to this material that some of the re-rolling works are faced with the possibility of having to curtail operations.

In the finished section of the market the pressure to obtain supplies is equally severe, and some of the consuming industries complain that their work is held up. Producers are in many cases seeking to ease the situation by instituting a system of rationing.

MIDDLESBROUGH.—Conditions in this area continue stringent without much prospect of alleviation, though Messrs. Dorman Long & Co. will shortly put a new furnace into blast for the production of basic pig iron. Whilst the present position continues there is little likelihood of any parcels of pig iron being available for prompt delivery on the open market. Producers of both Cleveland foundry iron and East Coast hematite are, by a process of rationing, managing to keep home consumers sufficiently supplied to meet present requirements and have during the past week been able to supply merchants with a few parcels for shipment abroad, about 880 tons having been shipped to Denmark, 400 tons to Belgium, 500 tons to India, 220 tons to Finland, and 185 tons to the Netherlands. Total shipments of pig iron from the Tees during the first twenty-three days of February, both coastwise and foreign, amounted to 5,751 tons, against 6,436 tons during the same period in January. Prices are unchanged at the last official figures.

The scarcity of semi-manufactured steel is becoming more acute, whilst local makers cannot take any further orders, being fully booked for this class of steel. Imports of foreign supplies are decreasing. Finished steel of all kinds is in strong demand. Plant continues to be run at full capacity, but supplies fall short of requirements.

Export prices of sheets have again been advanced. Current quotations are: black sheets (24 gauge), £12 per ton for home and £13 per ton for export; galvanised corrugated sheets (24 gauge), £14 per ton for home and £15 15s. for export. Ferro-manganese has been advanced by £2 per ton, the price being £13 15s. to £14 5s. per ton loose and £14 15s. to £15 5s. per ton packed.

A new arrangement between the steelmakers and the scrap merchants has been concluded, but official prices have not yet been announced. Mean-time 67s. per ton has been paid in this area for heavy melting steel scrap. Arrivals of foreign ore in the Tees during the first twenty-three days of February amounted to 196,685 tons, against 86,661 tons during the same period in January.

SHEFFIELD.—So great is the pressure of business that in hardly any section is it possible to guarantee fixed delivery dates. Producers of foundry and basic pig iron are fully booked for months ahead. Deliveries to consumers are inadequate for their requirements. Forge users are in a more enviable position and they experience little difficulty in obtaining full supplies. Output appears to have reached its zenith for the present. In hematite the situation is unchanged and makers are in a position to accept only very limited new business. With regard to finished iron, demand is well maintained, common and marked bars being in active request. Prices are those operating at the time of delivery, the suggested increase of prices not having taken place.

The pressure for basic billets shows no sign of easing and deliveries are falling behindhand. Acid billets are also very active. There is a further increase in business in wire rods and stainless steel sheets and strip. It is difficult to handle all the structural steel business offering. There is no official change in prices. Chief interest centres in iron and steel scrap dealings following the conclusion of a control agreement. This will have a steadying effect upon the market. Business generally has been active this week without much change in quotations, except that light basic steel now costs from 57s. 6d. to 60s. delivered.

The figures month by month since 1930 appeared in our January 23rd issue, page 214.

EAGLE STAR REORGANISATION SCHEME.—Proposed to reduce the four classes of ordinary shares (all £3 shares, but with various amounts paid up), to two. Paid-up ordinary capital to remain unchanged. Each fully-paid share to be converted into six fully-paid 10s. shares every 100 shares £1 paid to become 120 fully-paid 10s. shares, and 80 £3 shares 10s. paid; every 100 shares 15s. paid to become 60 10s. shares fully-paid, and 90 £3 shares 10s. paid; shares with 10s. paid remain the same. Odd shares to be paid in cash.

BORAX CONSOLIDATED.—Net profit for 1936 £181,201, up £25,629 in 1935. Depreciation and tax reserve increased by £10,000 each. Deferred dividend raised from 5 per cent. to 7½ per cent. Carry forward up £3,700 to £236,161.

RAWLPLUG COMPANY, LTD.—Net profit for 1936 £62,074, against £55,331. Dividend on ordinary shares up 5 per cent. to 35 per cent. Carry forward £20,436 (£2,874 more).

WORKINGTON.—The North-West Coast hematite pig-iron market is to all intents and purposes idle. Makers have sold all they can produce during the next four months and refuse to enter into further commitments. The output of the seven furnaces in blast between Workington and Barrow is sufficient to satisfy local needs, but it is inadequate to cope with the requirements of overseas, Midland, South Walian and Scottish users. It is estimated that if the weekly output were 6,000 tons higher there would be no more than sufficient to go round. Some relief will be forthcoming in May, when one of the big furnaces now being relined is put into draught. Prices are firm. Bessemer mixed numbers are £4 18s. per ton at Glasgow; £5 3s. 6d. at Manchester; £5 6s. at Sheffield; and £5 9s. 6d. at Birmingham, with 5s. 6d. to 16s. 6d. per ton extra for special qualities. Malleable iron is in keen demand at £6 15s. per ton delivered at Birmingham; ferro-manganese is going into consumption at from £13 15s. to £14 5s. per ton, home. Steelmakers are so well off for orders that the mills can be kept in engagement for another fifteen months. Workington is rolling rails, billets, bars and slabs, and Barrow is on rails, hoops and strip. Native ore, at 16s. 6d. to 17s. 9d. per ton, is a local trade. No metal can be spared for other districts.

GLASGOW.—In the West of Scotland conditions still give cause for anxiety. While steelmakers have up to the present been able to keep plants fully employed and have much work on books, there is uncertainty as to future programmes on account of the continued shortage of raw materials and fuel supplies, the latter having been accentuated by local troubles. Re-rollers are unable to secure adequate supplies of semis, either from home or continental makers, and it has been necessary to curtail operations at a number of plants by closing down sections of their mills. There is a probability of further curtailments of output should there be no betterment as regards deliveries of semis at an early date. There is no decline in demand and, despite the impossibility of giving early deliveries, considerable tonnages have been booked, both for home and export trade. Machinery makers in Glasgow and district have an exceptionally large amount of work on hand, and practically all users of steel in the West of Scotland are working to capacity and have work on books to keep plant occupied for many months to come.

CARDIFF.—Conditions in the tinplate trade are fairly good, and although the scheduled cartel prices are nominally unchanged at 19s. 9d. f.o.b. per basis box, merchants are realising premiums of from 1s. to 1s. 6d. per box above this figure for prompt shipment. Galvanised sheets are unchanged at their recently advanced price of £15 15s. per ton. Steel sheet and tinplate bars are unchanged at £6 2s. 6d., but an advance is believed to be imminent. Shipments of tinplates at Swansea last week totalled 6,958 tons, against 4,118 tons in the corresponding week last year, and for the first seven weeks of the year exports totalled 50,344 tons, compared with 27,130 tons in the corresponding period last year.

OTHER METALS

COPPER.—During the past week's hectic boom on the London Metal Exchange, copper led the market. After jumping from £58 17s. 6d. per ton on Wednesday of last week to £73 10s. on Monday, the cash price reacted to £65 on Tuesday. On the following day, however, a recovery to £66 17s. 6d. occurred. It is scarcely necessary to point out that the boom in copper prices is not justified by the basic market position. The rise in extra-United States stocks in January, despite the unusually high level of deliveries that month, is proof that copper production is at least equal to the current rate of consumption. During the past three weeks, moreover, the output of the principal producers has substantially increased—a tendency whose continuance must, sooner or later, be followed by a sharp setback in copper prices.

Sales on the London Metal Exchange: 12,400 tons on Monday, against 4,000 tons last week; 8,000 tons on Tuesday, against 4,000 tons last week; 5,050 tons on Wednesday, against 4,300 tons last week. Domestic spot was quoted at 15·7½ cents per lb. in New York on Wednesday, against 13·72½ cents a week ago and 12·37½ cents a month ago. Wednesday's official closing price for standard cash in London was £66 17s. 6d. to £67, compared with £58 17s. 6d. to £58 18s. 9d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 36,241 tons, showed a decrease of 1,450 tons, while stocks of rough copper, at 707 tons, were 50 tons smaller.

LEAD AND SPELTER.—Spelter was again more active than lead, the difference between the price of the two metals at one time narrowing to a mere 10s. a ton. Lead rose during the week by £2 3s. 9d. to £30 10s. a ton, whereas spelter gained £4 1s., advancing to £29 13s. 9d. at the close on Wednesday. The speculative advance in spelter is mainly due to the knowledge that during the last war spelter rose more rapidly than any of the other metals, and the assumption that it will enjoy a like benefit from the present armaments race. But the strength of spelter during the war was traceable to the occupation by Germany of Belgium—the leading zinc smelting country outside the United States—and the consequent shortage of spelter. From the viewpoint of wartime needs lead is undoubtedly the more important of the two, being used for ammunition, and in the manufacture of batteries for tanks, lorries, aeroplanes, etc. Spelter is chiefly employed in the form of brass and the quantities needed for this purpose are not so large.

Sales of lead on the London Metal Exchange: 8,500 tons on Monday, against 1,000 last week; 5,500 tons on Tuesday, against 2,300 tons last week; 2,450 tons on Wednesday, against 4,100 tons last week. The New York quotation on Wednesday was 6·50 cents per lb., against 6·00 cents a week ago and 6·00 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £30 10s. per ton, compared with £28 6s. 3d. a week ago.

Sales of spelter on the London Metal Exchange: 10,700 tons on Monday, against 4,800 tons last week; 6,000 tons on Tuesday, against 3,750 tons last week; 3,750 tons on Wednesday, against 6,250 tons last week. Wednesday's quotation in East St. Louis was 6·80 cents per lb., against 6·40 cents the week before and 6·00 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £29 13s. 9d. per ton, against £25 12s. 6d. last week.

TIN.—Although price movements were erratic, the trend was again upwards, and in unofficial dealings prices up to £260 a ton were occasionally quoted. A speculative advance was tempered by the consideration that stocks are gradually mounting and that, in view of recent price movements, there is little chance of a reduction in the quotas at next Friday's meeting of the International Committee. Tin is not much affected by re-armament needs—its chief use in time of war being in the form of tinplate cans for food storage.

Sales of tin on the London Metal Exchange: 1,350 tons on Monday, against 425 tons last week; 700 tons on Tuesday, against 300 tons last week; 575 tons on Wednesday, against 175 tons last week. The New York quotation on Wednesday was 54·35 cents per lb., against 51·62½ cents a week ago and 50·10 cents a month ago. Wednesday's official

closing quotation in London for standard cash was £240 10s. to £242 10s. per ton, compared with £231 10s. to £231 15s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 2,005 tons, a decrease of 180 tons on the week.

PLATINUM.—Following last week's reduction, the market has again had an easy tone, the price falling on Monday by a further £1 5s. to £11 15s. an ounce. As was forecast in this column, the recent advance called forth an increasing supply of old platinum which has had a depressing influence on the price. Although speculative interest remains fairly active, a further reduction would not occasion surprise.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £14 6s. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £70 to £72 per ton ex warehouse, as against £67 per ton last week. Chinese wolfram for "February-March" shipment was quoted at 45s. to 47s. per unit, c.i.f., compared with 36s. 6d. to 37s. last week.

TEXTILES

COTTON.—Manchester.—General demand has continued quieter, but on the whole the undercurrent of inquiry has been encouraging. Spinners and manufacturers who have been in a position to grant fairly early delivery terms have not had much difficulty in securing fresh contracts. Many buyers, however, seem somewhat afraid of committing themselves further ahead at present.

A rather firmer feeling has prevailed in the raw cotton markets. Trade demand has continued more restricted, but prospects for world consumption remain healthy. Much interest has been taken in the announcement by the Commodity Credit Corporation in the United States that loan cotton released up to February 18th was 251,000 bales. The sales have been accomplished without depressing prices.

Spinners of American yarns have held very firmly to quotations, there being a tendency towards higher rates. Demand has centred chiefly on twists, especially ring beams, which are heavily sold. A steady trade has been done in Egyptian qualities, chiefly medium numbers.

Sales of cloth have been smaller than in any week since the beginning of the year. A fair amount of business, however, has been done in small lots, and the position of manufacturers has not been weakened in any way. With regard to India, miscellaneous transactions have been put through, but there has been an absence of bulk lines. Local merchants seem to be waiting for more favourable advices from the other side as to clearances in the bazaars. Steady buying has again occurred in dyed goods for Java, and some of the contracts will not be completed until early next year. Irregular operations have been reported for Egypt and the Near East in bleaching styles and cloths for dyeing. Some sellers have again done well for South America in printing and finishing qualities. In certain directions the offtake for the Dominions has improved. A fairly encouraging mixed business has been done in home trade fabrics.

HOLIDAYS WITH PAY.—The discussion in Parliament this week and the decision of the Government to set up a Committee of Inquiry on the question of holidays with pay has caused some comment amongst the employers and the trade union officials in the Lancashire cotton industry. For many years there has been an agreement between employers and operatives concerning holidays, and latterly this has amounted to 15½ days per annum, but without pay. It is understood that the proposal now being made is that wages should be granted for seven or eight days. It must be remembered that, so far as the cotton industry is concerned, piecework is in force, and there might be some difficulty in ascertaining the average earnings of the employees. It has been suggested, however, that it might be found practicable to adopt the same methods as for compensation for accidents under the Workmen's Compensation Act. According to Mr Thomas Ashurst, the Secretary of the Cotton Manufacturers' Association, the proposed concession would mean an increase in the costs of production of about 4 per cent.

JUTE.—Dundee.—Jute markets are very quiet, and little business is taking place in any section. Nevertheless, prices of all jute products are maintaining quite a steady tone, and the fact that the Indian jute mills will be at liberty to increase their working hours and their number of looms after the end of this week has had no adverse effects on the market. Three Indian jute mills are affected by strikes, with the loss of production from 5,263 looms, which may be responsible for the steadiness of the prices of Calcutta goods. Raw jute is very quiet, and imports into Calcutta to date suggest that the final forecast of September last year, at 8,711,000 bales, may be considerably exceeded. The total crop is likely to reach about 10,500,000 bales, once again demonstrating the uselessness of these forecasts, and this in spite of the fact that the Government of India did all it could to restrict sowings this season. The same procedure will be carried on this year, but it is expected that the natives will pay little heed to the attempts to restrict the crop to 8 million bales. Ploughing for next season's crop has already begun in some districts and sowings will soon be commenced, growers being fully aware of the increased quantity required as a result of the increase in the working hours by the mills. The Indian mills are reported to have bought some of the new jute crop already, paying a premium over present prices, but sellers here are reluctant to mention new crop so far.

The price of Daisee-2/3 is £18 15s. for the full group, and PR is offered at £19, with Daisee-4 at £17 10s., Tossa-2/3 at £19 10s. for full group, and £20 15s. paid for good quality, and fours offered at £18 15s., February-March. Good First Marks are quoted at £22, and Lightnings are nominal at £20, while Hearts are obtainable at £19 5s., February/March.

Jute yarns are quiet but steady. Common 8 lb. cops are being sold in small quantities at 2s. 1½d. and 8 lb. spools at £19 10s., while twist remains at 2½d. for 3 ply 8 lb., and sacking yarns are firm at 2½d. for 24 lb. web and 3½d. for 8 lb. chains. Rove is also firm and makers are busy. For 48 lb. £21 is still lowest, and for 200 lb. not less than £16 15s. would be accepted. The finer yarns are quiet at 2s. 9d. for second quality 8 lb. warp, 2s. 6d. for third and 2s. 4d. for fourth and carpet yarns are more or less neglected meantime. Orders for jute cloth are generally small and for quick delivery. This week there was an urgent demand for 9½ oz. 40 in. hessians for the cable companies and 2½ d. is being paid, while 10 oz. 40 in. can be bought at 2½d. and 8 oz. at 2½d. Linoleum hessians are quiet, but there is still a fair demand for heavy goods.

Calcutta goods have shown little change during the past few months.

THE WHITE CITY.—The Textiles Exhibition at the White City is more representative of the trade as a whole than it has been in recent years. The different sections of the trade are no longer in water-tight compartments, and the introduction of staple fibre for spinning on both cotton and worsted machinery is an interesting example of the way in which textile manufacturers are prepared to break new ground. Cotton spinners are using wool, rayon staple, linen and pure silk for various effects, and the varied yarns used by the weavers are even more remarkable. Staple fibre is of particular interest at present on account of the high price of wool, and some attractive suitings and dress materials in wool and fibre blends are produced by piece dyeing instead of the usual sub-dyeing process which would have to be undertaken to produce similar effects in 100 per cent. wool. The wool knitting trade is producing remarkable fabrics for dresses, which are in direct competition with the similar goods produced on the loom. Warp knitting of rayon has also made some remarkable strides on these lines, and some interesting cloths are produced which are to all intents and purposes similar to special woven constructions, but have the advantage of the knitted handle, which is being stressed in alliance with the keep-fit movement. Hand block and screen printing on Continental lines, now carried on in various parts of England, is regarded as superior to foreign printing of the more exclusive type, and there are some striking examples in both silk and rayon fabrics.

GRAIN MARKETS

WHEAT.—Although Germany again made some substantial purchases towards the end of last week, demand generally has died down this week and prices have consequently sagged. There is more pressure to sell Manitoba, but Plate, on the other hand, is fairly firmly held.

On Wednesday last, "May" futures were quoted in Chicago at 131½ cents per bushel, against 135½ cents the week before and 126½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 50s. to 51s. per 496 lbs., against 52s. a week ago; No. 2 Northern Manitoba, ex ship, 49s. to 50s., against 50s. 9d. a week ago. According to *The Corn Trade News*, total shipments of wheat and flour last week totalled 1,663,000 quarters, against 1,777,000 quarters in the previous week and 1,566,000 quarters in the corresponding week a year ago.

FLOUR.—Flour is slightly cheaper in response to a quiet demand. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 39s. 6d. per 280 lbs., against 40s. a week ago; delivered inner London, 39s., as compared with 39s. 6d. a week ago. Manitoba patents, ex store, 38s. 6d. to 40s., against 39s. 6d. to 41s. a week ago. Australian, ex store, 31s. 9d. to 32s. 6d., against 32s. 6d. to 33s. last week.

BARLEY.—Prices for imported feeding descriptions declined in a dull market. English malting barley has, however, been in better demand at higher prices. "May" futures were quoted at 80½ cents per bushel in Winnipeg on Wednesday, against 83½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed," at farm, 34s. to 36s., as against 34s. to 36s. a week ago; "English malting," at farm, 36s. to 45s., against 36s. to 45s. last week. Californian (new), ex ship, 51s. to 60s., against 54s. 6d. last week; Chilean, brewing (new), ex ship, 44s. 9d. to 50s., against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "May" futures were quoted at 47½ cents a bushel in Chicago, against 50½ cents a week ago and 49½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 24s. to 26s.

per 336 lbs., against 25s. to 26s. a week ago; "English White," at farm, 24s. to 26s., against 25s. to 26s. a week earlier; mixed Canadian feed (Vancouver), landed, 23s. per 320 lbs., compared with 23s. 3d. last week.

MAIZE.—Prices have given way this week, in response to a less active demand. "May" futures were quoted on Wednesday at 103½ cents per bushel in Chicago, against 106 cents a week ago and 106½ cents last month. Quotations in London, Wednesday: "Plate," landed, 25s. per 480 lbs., compared with 25s. 6d. a week ago; "Plate," ex ship, 24s., as against 24s. 6d. a week ago; "Plate," "February," 25s., as against 25s. a week ago; yellow maize meal, ex wharf, was quoted at £6 8s. 9d. to £6 12s. 6d. per ton, as against £6 15s. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Feb. 26, 1936	Dec. 30, 1936	Feb. 17, 1937	Feb. 24, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82½	84½	85½	129	127	124
Chicago (No. 2, Winter) —Cents per 60 lb.	88½	101½	100½	135½	135½	131½

The visible supply of wheat in Canada amounts to 92,442,000 bushels, against 94,927,000 bushels last week, and 121,345,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933-34 to 1936-37:—

	1933-1934	1934-1935	1935-1936	1936-1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to February 20	319,717	330,246	365,488	217,714
25 weeks to February 20	7,813,243	9,524,489	9,604,315	7,071,144
Average price of English wheat per cwt.	s. d. 4 5	s. d. 4 8	s. d. 6 4	s. d. 9 1

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
February 18, 1933.....	Cwts. 218,315	Cwts. 146,655	Cwts. 48,981	s. d. 5 3	s. d. 6 10	s. d. 6 0
February 17, 1934.....	319,717	328,774	71,420	4 5	9 3	6 6
February 23, 1935.....	330,246	232,191	51,072	4 8	8 3	6 11

February 13, 1937.....	175,140	153,166	64,626	9 0	9 10	8 3
February 20, 1937.....	217,714	190,476	73,233	9 1	10 0	8 3

OTHER FOODS

BACON.—Demand remains fair and a steady tone has ruled in the market this week. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 90s.; Canadian, 77s.; Danish, 86s., against 86s. to 90s., 77s., and 86s. last week. Arrivals in London last week included: Danish, 13,136 bales; Canadian, 7,004; Dutch, 2,374; Lithuanian, 1,101; and Polish, 2,782; as against 13,297, 7,175, 2,102, 1,217 and 2,676 bales, respectively, in the previous week.

BUTTER.—After the recent easiness the market for Colonial makes has had a firmer tone this week. Danish, on the other hand, is a shade cheaper. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 88s.; Australian, choicest salted, 88s.; Danish, 116s.; compared with 84s., 84s., and 120s., respectively, a week ago.

CHEESE.—Cheese has been a generally steady market, with Australian and New Zealand rather firmer. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 86s. to 88s.; Canadian, finest coloured, 71s. to 72s.; and New Zealand, finest coloured, 54s.; against 86s. to 88s., 71s. to 72s., and 52s., respectively, a week ago.

COCOA.—After the quieter spell, quotations have again moved upward. The spot quotation in New York on Wednesday was 10½ cents per lb., as against 10½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, March-April, was quoted at 47s. 9d. per 50 kilos., c.i.f. Continent, against 46s. 6d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 94 bags; delivered, for home consumption, 6,652 bags; exported, 63 bags; stocks, 132,712 bags, against 126,915 bags a year ago.

COFFEE.—The London spot market was steady. In New York prices were rather dearer. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week and 9½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 4 cwt.; delivered, for home consumption, 57 cwt.; exports, 42 cwt.; stocks, 3,544 cwt., against 12,006 a year ago. Central and other South American: Landed, 11,713 cwt.; delivered for home consumption, 2,706 cwt.; exported, 1,962 cwt.; stocks, 71,003 cwt., against 73,620 last year. Other kinds: Landed, 5,492 cwt.; delivered, for home consumption, 3,887 cwt.; exported, 667 cwt.; stocks, 115,769 cwt., against 140,113 last year.

EGGS.—In response to a slackening of supplies, prices were again advanced this week. At Smithfield, on Wednesday, English (ordinary packing, Grade I, about 15-15½ lb.) realised 15s. 3d. to 16s. per 120, as against 14s. to 15s. last week; while Danish (15½ lb.) made 11s. 9d. to 12s. 6d., as against 10s. 9d. to 11s. 3d. last week.

FRUIT.—Business fluctuates at this time of the year with the vagaries of the weather, and the past week was not too favourable from this point of view. Prices were frequently lower. According to *The Fruitgrower's* Covent Garden report, English apples are in consistent demand, with

prices firmer for the somewhat shorter supplies now being marketed; all imported apples, however, are easy, with heavy arrivals. Pears sell fairly well, but are lower in price on account of increasing supplies from South Africa. South African grapes are going out well, there being little competition from other sources. Peaches and nectarines from the same source are easier, but South African plums, in better demand, clear well at slightly firmer rates. Reliable packs of oranges are dearer; lemons are steady, while grapefruit are a slow item.

MEAT.—Business in fresh meat at Smithfield Market was fairly active, but trade was quieter in chilled beef and frozen mutton and lamb. Imported beef was cheaper. On Wednesday last, Argentine chilled hind-quarters were quoted at 3s. 6d. to 4s. per 8 lbs., as compared with 3s. 10d. to 4s. 2d. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 8,932 tons, an increase of 118 tons on the corresponding week last year. Beef and veal accounted for 4,871 tons, mutton and lamb 2,320 tons, and pork and bacon 1,058 tons, as compared with 4,558, 2,623 and 970 tons, respectively, in the same week of 1936.

MILK.—Information relative to the operation of the Milk Marketing Scheme during January, as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	Jan., 1936	Oct., 1936	Nov., 1936	Dec., 1936	Jan., 1937
Regional pool prices* (per gallon):	d.	d.	d.	d.	d.
Northern	13½	13	13½	14	14
North-Western	13½	13	13½	14	14
Eastern	13½	13½	13½	14½	14½
East Midland	13½	13½	13½	14½	14½
West Midland	13½	13½	13½	14	13½
North Wales	13½	13½	13½	14	13½
South Wales	13½	13½	13½	14	14
Southern	13½	13½	14	14½	14½
Mid-Western	13½	13½	13½	14	14
Far-Western	13	12½	13½	13½	13½
South-Eastern	14	13½	14½	14½	14½
Liquid milk price (per gallon, all regions)	17	17	17	17	17
Manufacturing price (per gallon, average)	5.947	5.766	5.778	6.254	6.249
Total sales under contract	67.23	72.98	64.84	63.61	64.15
For liquid consumption	46.12	47.65	46.51	47.30	48.14
For manufacturing	21.11	25.33	18.13	16.31	16.01

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries and for Grade "A" or special services are paid to the producers concerned in addition to the pool price. Transport charges are payable by individual producers and are deducted from accounts.

PEPPER.—On Wednesday, Singapore white Muntok, spot, was quoted at 6d. per lb. in bond, against 6d. per lb. a week earlier. Black Lampung, spot, in bond, was quoted at 3½d. per lb., sellers, compared with 3½d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 14 tons; delivered, 5 tons; stocks, 1,775 against 1,601 last year. White, landed, 53 tons; delivered, 35; stocks, 11,783, compared with 13,031 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 10s. 3d. per cwt. a week ago. "March-April," in singles to Continent and U.K., was quoted at 9s. per cwt., against 9s. 3d. for "February-March" last week. Movements in London last week were as follows: Landed, 1 ton; delivered, 52; stocks, 1,128 tons, against 3,227 a year ago.

SUGAR.—The London spot market in raw sugar was firm, but in New York an easier tendency was apparent. The spot price in New York on Wednesday was 3.45 cents per lb., as compared with 3.55 cents per lb. last week and 3.75 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "May" delivery at 6s. 4½d. to 6s. 4½d., against 6s. 1½d. to 6s. 1½d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 24,978 tons, against 3,877 in the previous week and 4,636 in the same week of 1936; deliveries, 15,347 tons, against 15,419 and 14,854 tons, respectively; stocks, 237,708 tons, against 228,077 and 264,263 tons, respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
Feb. 20, 1936	d. 13.22	d. 12.80	d. 14.64	d. 10.82	d. 10.61	d. 11.84	d. 13.28
Jan. 14, 1937	13.12	12.95	15.42	11.75	10.71	12.21	13.53
Jan. 21, "	13.47	13.26	15.58	12.41	11.08	12.31	13.83
Jan. 28, "	13.77	12.49	15.92	12.60	11.42	12.69	14.18
Feb. 4, "	13.63	13.38	15.78	13.22	11.23	12.68	14.06
Feb. 11, "	13.72	13.73	15.87	12.59	11.29	13.00	14.16
Feb. 18, "	14.04	14.19	16.15	13.35	11.93	13.21	14.53

The quantities catalogued for this week's public auctions comprised 48,472 packages of Indian and 17,222 packages of Ceylon tea. The rather smaller supplies of Indian sorts encountered an active market and, under keen bidding, ordinary and medium sorts advanced in price. At Tuesday's Ceylon sales fine teas were a little irregular and sometimes easier, but other sorts were dearer.

VEGETABLES.—Supplies of forced asparagus at Covent Garden are increasing, states *The Fruitgrower*, and prices are down a point. House-grown beans, however, are short and rather dear, while cucumbers are selling better. Canary Island tomatoes are a little dearer, and good lettuce is in short supply. Mushrooms are steady, and the price of rhubarb is well maintained. Spring onions are inquired for. All varieties of greenstuff remain abundant and cheap, while carrots, turnips, parsnips and beet are all at a low level. Meanwhile, demand for potatoes at the various London markets has improved, while supplies are abundant. Prices for best varieties are accordingly steady. At the Borough Market on Tuesday last, best siltland King Edward again realised from 9s. to 9s. 6d. a cwt. ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—A steadier feeling is making its appearance though business is still far from brisk. Continental crushers have again entered the market for linseed supplies and this has had the effect of steadying prices. A little trade in Plate linseed has also been done on English account, but apparently crushers are well covered by the large arrivals and the substantial quantity afloat. Shipments at River Plate ports have declined somewhat, but a fairly considerable proportion continues to be exported to the United States. So far this year Argentina has shipped no less than 380,000 tons or 111,000 tons more than during the same period last year. A feature are the heavy shipments to the United States, which account for 124,000 tons of the total, against only 53,000 tons a year ago. Very little is being shipped by India, whose old crop is nearing exhaustion. The new seed is progressing favourably, and an exportable surplus of around 300,000 tons is spoken of. Even if this estimate should prove correct, supplies for Europe will not be much above last season's, taking into consideration the heavier requirements of America. Prices of linseed to-day are several shillings higher than a year ago, in spite of the larger quantity of seed available. The quantity afloat for Europe has been reduced to 163,000 tons (including 10,100 tons from India). Trade in linseed oil is only moderate and prices are slightly lower on the week. Egyptian cottonseed is in slow demand after re-sale in near positions at a discount. Cotton oil is quiet and quotations nominally unchanged. Demand for oilcakes is good and prices are maintained.

FURS.—The recent London winter fur sales showed the firmest tendency of all London auctions in recent years. The following table compares the chief fur prices paid at the recent Hudson's Bay Company's sale with those realised at the two preceding sales. All quotations are given in shillings and pence per skin:—

	Spring Sale, 1936	Autumn Sale, 1936	Winter Sale, 1937
Beaver, Mackenzie River (Canada) Ex Ex Large ...	73/- to 74/-	70/-	136/-
Ermine, York Fort (Canada) Ex Ex Large	5/7 to 6/1	5/10 to 6/1	7/- to 8/3
Scandinavian Ex Ex Large	4/8 to 5/-	5/10	6/8
Fisher, York Fort, etc., 1 and No. 2 dark	170/- to 370/-	165/- to 350/-	180/- to 460/-
Fox Bastard, York Fort 1 and 2	41/- to 56/-	45/- to 50/-	43/- to 78/-
Fox Blue Arctic, Dark	110/- to 135/-	135/- to 150/-	150/- to 230/-
Fox Cross, York Fort Medium No. 1	165/- to 195/-	157/6 to 225/-	105/- to 240/-
Fox Red, York Fort—Medium No. 1	72/- to 79/-	75/-	82/- to 87/-
Lapland 1 and No. 2 Pale	38/- to 46/-	43/- to 53/-	52/-
Fox White, West Arctic 1, No. 1	200/- to 202/-	Unsold	200/- to 214/-
Lynx, York Fort, etc., 1 Ex Large	280/-	Unsold	225/-
Marten, Mackenzie River, 1 pale	110/-	126/- to 129/-	166/- to 174/-
Mink, York Fort, Ex Large 1 and 2 dark	69/- to 71/-	67/-	95/-
Musquash, black U.S.A. ...	7/-	Unsold	Unsold
Otter, Canada, etc., 1 and No. 2 Ex dark	166/-	Unsold	154/- to 160/-
Skunk, York Fort 1	7/1 to 8/-	5/10 to 6/2	8/- to 8/6
Squirrel, Lapland	1/- to 1/2	Unsold	1/4 to 1/10
Wolf, York Fort, Ex Large 1	40/- to 65/-	51/-	51/6 to 70/-

Speculation is active and, since supplies are somewhat short, a further price advance in the near future would not be surprising. Later in the year, however, a reaction is believed likely. The next silver fox auctions will be held on March 8th, while a sale of Australian furs will take place on April 14th. On April 19th the Hudson's Bay Company will open its spring sale, which will be followed by a general sale of American and other skins.

RUBBER.—After an easier spell at the close of last week, the market firmed up again during the past few days and closed on Wednesday showing a gain of ½d. per lb. on the week. Meanwhile, the steady decline in United Kingdom stocks continues. The spot price in New York on Wednesday was 21½ cents per lb., compared with 21½ cents per lb. a week ago and 20½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 10½d. per lb., as against 10½d. on the corresponding day last week. In forward positions, business has been done at 10½d. for "April" shipment, as against 10½d. to 10½d. for "March" shipment a week ago. Stocks in London and Liverpool at the end of last week totalled 64,888 tons, against 65,861 tons a week earlier. A year ago stocks amounted to 156,562 tons.

Cabinet and Special Areas

A STIRING of new life is perceptible in Durham and on Tyneside, in Scotland, in Cumberland and in South Wales. Some of the staple industries of these Special Areas, the causes of their heavy unemployment, are now among the most hectically active. It is becoming more and more difficult to place orders for iron and steel in the hope of early delivery. In many places, producers have sold all they can make in the next four months, and refuse to enter into further commitments. Coal prices have been rising and promise to rise further, although output is expanding. From all the centres of deepest depression the trade reports which we print each week are vying with each other in cheerfulness.

This vigorous activity, due in part to the normal progress of recovery, in part to re-armament, is more than welcome. But the mistake must not be made of thinking that it is solving the problem of the Special Areas. Their percentages of unemployment still reach 25 and 30, against a national average of 12. Re-armament has, it is true, made inroads into the "special" unemployment of the Areas. But it cannot be a permanent cure, for they depend normally for their livelihood on great staple industries which live by exports and foreign trade. Re-armament will not open the markets of the world. Moreover, there are special districts within the Special Areas, where industry has departed or the coal has come to an end. Prosperity and comfort cannot be brought back to the men and women in these places without a radical policy of social change and economic reconstruction.

For these reasons, the Special Areas are still close to

the focus of British politics. The Government's attempt, in the autumn, to do no more than prolong the existing Special Areas Act met with determined resistance, not least from their own supporters. The result of this pressure, sustained in the meantime, has this week emerged in a White Paper, herald of a new Bill.

The White Paper goes a little bit further than some forecasts. But it is still a very disappointing document. Of its ten pages, eight are occupied with a description, somewhat self-laudatory in its terms, of what has already been done. A long list is given of the measures that have been taken. It is claimed that a movement of new light industries towards the Special Areas has already been started. Moreover, it is pointed out, this apparatus of special treatment has been strengthened by a policy of Government preference in allocating re-armament contracts. Between April, 1935, and November, 1936, orders for £24 millions were placed in the Special Areas alone and £41 millions in the depressed areas as a whole. This policy, which in the circumstances of the time is clearly justified, is to be continued. Munition factories and explosive works have been, or will be, located in South Wales, in Lancashire, in the North-East and in Scotland.

This review of the past is taken as the justification for leaving the machinery of the Special Areas Act substantially unchanged. Little attempt is made to meet SIR MALCOLM STEWART'S criticisms of the restrictions placed, by the Act and even more by its interpretation, upon the powers of the Commissioners. The pressure put upon the Government has, however, had some effect,

and the scope of the present Act is to be extended in three significant respects. In the first place the limitation that the Commissioners must not assist profit-making concerns is removed. They are to be given the power to make, at their discretion, grants to newly-established industries (though not, apparently, to struggling concerns already in existence) to defray part or all of their rent, rates and taxes for five years. Secondly, the Government is to encourage the formation of trading estates in depressed areas ("certified areas") not now included in the Special Areas. And, thirdly, the Treasury is to be empowered to make loans, up to a total of £2,000,000, to new undertakings established either on these trading estates or anywhere in the Special Areas.

The first of these extensions is, in principle, an important advance; it marks the transition from a policy of palliation of misery to one of stimulation of revival. But it remains to be seen whether it will be applied with vigour. The other two are of little practical importance, since they do not go much further than the policy already pursued, with meagre results, by the Special Areas Reconstruction Association. It is clear, from the whole tenor of the White Paper, that the Government places its reliance not upon any such measures as these but upon the defence programme. Depression and distress are to be bought off by expenditure on guns and battleships. The Special Areas plan pales into insignificance beside the re-armament programme.

It is true that the manufacture of armaments is likely to absorb men and equipment in many districts of the Special Areas—to provide, for a time, a special solution for a special problem. But it is not true to argue—as the White Paper does—that munitions will bring a permanent contribution to the well-being of the Special

Areas. Indeed, in the long run, they may make things worse. The end of the armament programme—which, presumably, we must one day envisage—will once more devastate areas that have been told to pin their hopes on unproductive activity. It is dangerous to encourage the Special Areas to put all their eggs, for the second time, into one basket. Even re-armament cannot help the black Durham villages behind Bishop Auckland, the remote industrial regions of Cumberland or some of the long Glamorgan valleys. Here, in the chronically depressed areas, will be the acid test of the policy outlined in the White Paper.

In spite of the recent spurt in activity, the Special Areas problem is thus almost as far as ever from solution. It may even be further away, since the cause of the present activity bears a strong family resemblance to the over-stimulus of certain industries which was the original root of the trouble. No reasonable person would wish to abuse the Government for failing completely to solve what all must admit to be a peculiarly intractable problem. But an indictment does fairly lie for failing to do what patently can be done. Heavy and sustained pressure has been needed to bring the Government thus far; and the Cabinet is still refusing to follow its own experts in many of the further measures suggested. There is still no sign of any action to put in motion what would be much the most powerful solvent of the Areas' troubles, the liberation of foreign trade from its shackles. We doubt whether public opinion will be satisfied with these latest proposals. We hope not; for the pressure of opinion must be maintained if the problem of the Special Areas—the gravest domestic problem the country has to face—is to be solved by any means save the attrition of time and misery.

The Duce's Pessimism

SIGNOR MUSSOLINI confirmed the forebodings of the worst pessimists by the declarations of his Grand Council on Tuesday. In so many words he told the world that he was busy with his plans for military closure of the Mediterranean, for turning Italy into one vast war machine, and for making every Italian a soldier from the cradle to the—perhaps early—grave.

If it rested with the Italian dictator to say the last word in European politics, the outlook would be gloomy indeed; but this week's superficially startling declarations in Rome also raise two heartening reflections, which neither the DUCE nor anyone else in Europe can safely ignore. First, the nation that is continually putting on spurts in an arms race runs the greater risk of cracking under the strain. The longer the race goes on in peace, the less economic stamina does that nation retain for a prolonged war. The second consideration is this: the more startling the nations' preparations for war become, the greater grows the pressure on the reasonable nations to realise the folly of the business before, individually, all nations become exhausted, or the crack of doom breaks. This realisation will drive—is, indeed, driving—the nations that seek peace to envisage something like a peace system for Europe.

As yet the omens for such a European system cannot be said to be encouraging. But the key remains, as it always has remained in modern Europe, with Great Britain. She is still the great arbiter of the Continent's peace—which is by no means the same as being the great neutral. From this point of view the debates on foreign policy in the House of Lords on February 24th and in both Houses of Parliament last Tuesday were valuable, because they were constructive.

But though the debates have been constructive, they

have not been conclusive; for while the Government can enumerate a number of highly important points on which there is already something like a national consensus, they are not justified in suggesting, as they are trying to do, that the outstanding points on which they and their critics are not yet agreed are only trivial. There is an overwhelming consensus against a policy of remaining unarmed, or of taking a pacifist line, or of refusing to have any commitments at all, or of entering into commitments without a limit. There is an almost equally wide and decided agreement that the Locarno Pact, were it possible to restore it, and the League Covenant, unreformed in either direction, are good things as far as they go. But Parliament is still not unanimous about British policy on the European continent; and here the issue can be expressed in quite concrete terms. Is the Locarno radius to be the widest range of our Continental European military commitments? Or are we to extend to all European countries the military commitments by which we are bound at this moment to France and Belgium alone? This question is not trivial; it is fundamental.

The Government's momentary formula about commitments is to be found in both LORD PLYMOUTH'S speech of February 24th and MR EDEN'S of March 2nd. It is that our armaments are already pledged for use against any unprovoked aggression upon Belgium or France; that we are ready and eager to give exactly the same pledge to Germany, on the same footing, if she is willing to join us in reconstructing the Locarno Pact which HERR HITLER shattered on March 7th of last year; that we do not at present aim to extend this pledge to any other European country beyond those three; but that on the other hand we mean to carry out, *vis-à-vis*

all States-members of the League, our obligations under the Covenant—the point being that the Covenant in itself does not commit the parties to it to go to war. We believe that this present position of the Government is untenable; and that they will be forced by inescapable facts into making a choice between retreating into the isolation advocated by LORDS ARNOLD, LOTHIAN and PONSONBY, or else advancing to that extension of our Locarno commitments from Western Europe to Europe as a whole, advocated by MR GRENFELL and MR HENDERSON. And as it is happily certain that the Government neither would nor could attempt a policy of isolation, the practical question is this: Will they make up their minds to extend their commitments in time to forestall a European catastrophe? Or will they wait until the catastrophe overtakes them and forces them to intervene? If the commitments are made now, there is a chance that we may never have to honour them. If they are not made, it is quite certain that one day we shall have to act as though they had existed.

The Covenant is no obstacle; for though it is quite true that the Covenant does not *require* States-members to take military action in vindication of Articles X and XVI, it not only allows them to do so but gives them every encouragement. We ourselves are fulfilling the Covenant in the spirit as well as in the letter in committing ourselves to France and Belgium; and the Law Officers of the Crown have expressed the opinion that the Franco-Russian Pact and the Franco-Czech Pact are as fully consonant with the Covenant as is the Locarno Pact itself. The limitation of our military commitments to Western Europe is thus admittedly not a matter of principle. SIR AUSTEN CHAMBERLAIN hinted on Tuesday that it was an exigency of home politics. If we pledged ourselves beyond this point in advance, he said, we could not be sure that the British public would allow the British Government to honour the pledge when the time came. Is the British public really so blind that the

Government are constrained to leave the peace of Europe in jeopardy by allowing that desperate gambler, HERR HITLER, to imagine that he can attack Czechoslovakia without involving himself in a war with us?

Here are some points which are certainly within the grasp of any member of the electorate of the United Kingdom. First, our Government have already publicly adopted the view that France will not be committing aggression if she honours her treaty with Czechoslovakia by going to war with Germany in the event of the Germans attacking the Czechs. But if France is involved in war with Germany in those circumstances, both our existing pledges to France and our own vital interests will make it impossible for us to stand aside and leave Germany and France to fight it out. In the second place, our vital British interest in saving France from Germany applies with equal force if Germany's victim is not France but Czechoslovakia or any other European country. For it makes no difference, from the point of view of British interests, whether a European country which Germany attacks and subjugates happens to lie west or east of the present frontiers of the Reich. What matters to us is the preservation of the European balance of power; and if Germany upsets that balance by making herself mistress of Eastern Europe, this country will then lie at her mercy. On Tuesday MR EDEN gave a categorical "No" to HERR VON RIBBENTROP'S demand for the return of the former German colonies. He thereby brought into operation the Ambassador's threat that Germany would recover the colonies "by her own strength." This means that the fate of the British Empire depends on the European balance of power. It is in Czechoslovakia that the destinies of the Empire are going to be decided. The Government should promptly declare that the new British armaments, as well as all our other resources, will be used to resist aggression in any part of Europe. This is the only way to prove the DUCE's pessimism unfounded.

The Great Cities of Britain—V

Remote Newcastle

FROM Roman times to the Union, Newcastle was important for military and ecclesiastical reasons. Built on a hill rising steeply from the Tyne, it possessed one of the strongest of all the great Northern castles and a celebrated set of walls, neither of which was often unemployed. Only a few fragments of these adornments now remain, but they were there in the eighteenth century, and the development of the town was crowded within narrow limits.

The traveller approaching Newcastle from the south is still greeted with the dilapidated survivals of this congestion. From the High Level Bridge the north bank of the Tyne presents a miserable picture of grim and unromantic decay, encumbering the approach to a great city. The account written by Defoe—a predecessor of *The Economist*—is still appropriate. "Newcastle," he remarked, "is a spacious, extended, infinitely populous place. . . . The situation of the town to the landward is exceedingly unpleasant, and the buildings very close and old, standing on the declivity of two exceeding high hills, which, together with the smoke of the coals, makes

it not the pleasantest place in the world to live in; but it is made amends abundantly by the goodness of the river, which . . . makes it a place of very great business. . . . They build ships here to perfection. . . . Here is

also a considerable manufacture of hardware, or wrought iron, lately erected after the manner of Sheffield, which is very helpful for employing the poor, of which the town has always a prodigious number." Or, as an early nineteenth-century writer more elegantly puts it: "The situation of Newcastle, however well chosen it may once have been for purposes of security, is but ill adapted to answer those of neatness and convenience." This earlier inheritance, combined with the hurried growth of Victorian times, has left the town with an ample legacy of ugliness. Perhaps no city in the

world possesses so miserable an edifice for its town hall, and, though "the Town-Hall controversy" has dragged on decade after decade, many citizens have abandoned hope of getting a worthier civic centre. Only a year ago there was some local dispute as to whether a new Labour Exchange should be placed in a prominent

situation or relegated to a decent obscurity where its activities would be less distressingly apparent. It was hidden, but the riverside ruins and the Town Hall retain their unwelcome prominence. In other respects, luckily, the city is more fortunate. Quite apart from the thousand acres of its Town Moor, it possesses fine open spaces, and has ready access to the very beautiful countryside of Northumberland.

Economically, Newcastle has always been the capital of "one of the most clearly defined geographic areas of the country," the area bounded inland by the Cheviots, the Pennines and the North Yorkshire Moors. With access to the south only by the sea or through the Northallerton gap, the town first grew in size and wealth through the monopoly it possessed of the coal for the London market, and of the shipping needed for its carriage, a monopoly that it exploited with skill and persistence over many years. When coal started to reach the Metropolis by rail from Wales and the Midlands, it must have seemed that the growth of Newcastle would be arrested. But it was hard to be unprosperous last century, and the city easily turned the corner. Any loss of differential advantages soon became negligible, with demand rising by leaps and bounds. And Stephenson in 1823 set up his iron works and made his first railway engine in Newcastle. The town played a great part in the growth of iron and steel, engineering, and chemicals. As if that were not enough, there came next the steamship to make another revolution in the economy of the whole Tyneside, bringing with it an increased specialisation upon capital goods.

Thus, at the end of the War, and with the expansion of equipment the War demanded, Newcastle was in a very vulnerable position. As we all know, Fate made full use of her opportunity. But the persistent depression of the area's chief industries has not been offset to any substantial extent by the introduction of new firms. For light industries, nearness to the main markets is a consideration of high importance: and the stranger, asked to name the largest town on the railway line between Newcastle and London, is generally surprised to find that the answer is adjacent Gateshead. "It is apparently cheaper," remarks the Industrial Survey, "to carry raw materials to more central positions and manufacture them there than to manufacture and then carry the manufactured goods elsewhere." But without such industries, despite re-armament, the adaptation of old

workshops to the manufacture of Diesel engines, and the now more prosperous Scandinavian trade, Newcastle is powerless against falling coal exports and declining shipbuilding.

To-day, with a population estimated at 292,700 persons, Newcastle embraces about a third of the population of the whole Tyneside, and just less than half its aggregate rateable value. Its birth rate, 16 per 1,000 in 1935, is very high, but the same is true of both the general and the corrected death rates. The infant mortality rate ranges from 33 to 112 for the different wards, and with a general average of 86 per 1,000 births compares badly with an average of 57 for England and Wales as a whole. But it falls short, if that is any consolation, of the figures of 90 and 92 in the neighbouring boroughs of Gateshead and Sunderland. The maternal mortality rate is 5.13 per 1,000 live and still births, against a national average of 3.93. The state of public health in Newcastle is not satisfactory, to put it mildly. Nor can these figures be explained by a rapid growth of numbers. Between 1912 and 1935, population grew only about 8 per cent. About 60 per cent. of the natural increase in numbers appears to have migrated beyond the city, and the greater part of this movement seems to have been right away from the Tyneside. Unemployment in Newcastle at the end of 1936 was given as 20,674, a general percentage of 15.8—with 20.1 per cent. for men, 8.5 per cent. for women, and 6.8 per cent. for juveniles. Even this, however, was a fall of 28 per cent. from the end of 1934, and the fall in the number of those in receipt of poor relief, from 22,529 to 19,148, was smaller at 15 per cent. A third of the total rates are required for public assistance.

Thus Newcastle, in fact if not by definition, comes near to being a "special area." At bottom its position resembles that of South Wales or Durham at its doors, in the decline of its main industries and the reluctance of new enterprise to settle in it; though, like all large cities, it has escaped the agonies due to complete specialisation. To some extent it has shared in the general recovery, and the measures to assist the Special Areas, the efforts of the Tyne Improvement Commission, the report of the Royal Commission now examining its obsolete structure of local government, and the intensification of re-armament, may all help it further. But no real solution of its problems is in sight or likely to be found without special measures on a large scale.

Is There A Trade Cycle?

THE trade cycle is very much in the news. For even Communists now admit that trade sometimes goes up, and even the stock markets admit that it sometimes goes down. Is it really a *cycle* at all, however? Or is it merely a series of irregular ups and downs? Trade, after all, can only go up, stand still, or go down; and is it so very surprising that it does first one of these things and then another? And if there is no genuine cycle, is there any reason to believe that recovery will stop just because it has already continued for about the traditional period?

Several well-known economists in many countries, including PROFESSOR CASSEL,[†] have argued that there is no cycle, but merely a succession of irregular ups and downs. PROFESSOR D. H. MACGREGOR,[‡] however, has shown by a critical analysis of the historical evidence that this is not true. He points out that there are arithmetical means of distinguishing a fluctuation or cycle from a mere irregular movement. It is true that for every series

of statistics, however irregular, it is possible to calculate a trend or average, and if the irregularly moving figures and the trend line are both plotted in graph form the areas enclosed by the moving curve above the trend line will be equal to the areas below. But this merely follows from the calculation and proves nothing.

PROFESSOR MACGREGOR postulates four conditions which a line must observe to constitute a fluctuation or cycle. The first is that it must not substantially change direction between a peak and a trough; that is, the upward and downward movements must be quite definite and clear-cut. Secondly, between each peak and trough the fluctuating line must cross the trend line; after a boom it must not fall to "normal" and then start rising again. Thirdly, the successive high points and low points must bear a definite relation to each other. This may be graphically expressed by saying that if a line is drawn joining the successive high points and another joining the successive low points, these two lines must bear a definite relation to each other: they must either be parallel, or regularly converging or regularly diverging. And fourthly, the period of time

between one turning-point and another must be long enough for the cyclical influence (whatever it may be) to make itself felt.

PROFESSOR MACGREGOR then takes the random examples of the figures of British shipwrecks and British emigrants between 1870 and 1910, and shows that the indices representing them do not fulfil these conditions. They move alternately up and down, but they do not fluctuate. Next, PROFESSOR MACGREGOR traces for the same period—the representative period of the pre-war trade cycle—what he regards as the three primary indices of economic change: those of employment, enterprise and prices. (The enterprise index has been devised by PROFESSOR MACGREGOR himself on the basis of new joint-stock company registrations.) All these indices, it turns out, do conform to the above four conditions with a remarkable fidelity. The existence of the trade cycle—at least during the years in question—would consequently seem to be an established historical fact.

What is the duration of the cycle? PROFESSOR MACGREGOR gives the high and low years of his three primary indices as having been as follows between 1870 and 1910. (It should be noted that though the figures refer to the cycle in Great Britain, it had already at this time assumed a recognisably common world rhythm during these years):—

HIGH YEARS			LOW YEARS		
Enterprise	Employment	Prices	Enterprise	Employment	Prices
1865	1865	1864	1868	1868	1870
1873	1872	1873	1878	1879	1879
1881	1882	1883	1885	1886	1886
1889	1890	1891	1893	1893	1896
1897	1899	1900	1901	1904	1903
1906	1906	1907	1908	1909	1909

[The enterprise index is Professor Macgregor's own; the employment index is the trade union unemployment percentage; and the price index is described by Professor Macgregor as "the relative prices of Sauerbeck and the Board of Trade."]

It will be seen that the interval between peak and peak, or between trough and trough, varied between five and eleven years. But whereas there was only one interval of five years, one of six years, and one of eleven years, there were nine intervals of seven years, eight of eight years, six of nine years, and four of ten years. If a simple average of these periods is taken, the duration of the cycle would work out at a shade over eight years. The war not unnaturally disturbed the rhythm of the trade cycle. But it is now generally agreed that the post-war booms of the years 1920 and 1929 bore strong resemblance to the traditional cyclical pattern. From the summer of 1920 to the autumn of 1929 was about 9½ years, a period not so very different from the pre-war average of a fraction over eight.

Forward-looking persons reading this article will doubtless by now have calculated that 8½ years after the autumn of 1929 comes the mid-winter of 1937-38. The period around next Christmas may therefore have assumed an ominous significance in their minds. And it is certainly an unassailable arithmetical fact that if the average of the historical trade cycle is calculated, and projected beyond the autumn of 1929, the answer is Christmas, 1937.

But this sort of blind empirical forecasting would, of course, be a most uncritical and unsafe proceeding. Although we cannot yet be said fully to understand the forces of the trade cycle, we are far from being compelled simply to observe its oscillations without comprehending any individual contributory factor as we would observe a single wave of the sea. It has long been clear, for instance, that the cycle is particularly closely associated

with changes in the rate of investment in capital goods, with changes in interest rates, and—probably in the recent depression—with major changes in monetary policy.

It is also now clear that, though the cycle has in general remained world-wide, major changes in policy have modified its operation in different countries. The Great Depression did not really begin in France and Belgium till 1932. Recovery began in the sterling area in the autumn of 1932, in the United States and Germany in the spring of 1933, in France in the autumn of 1935, and in Holland and Switzerland in the autumn of 1936. Moreover, it must be remembered that the clear emergence of the world cycle coincided with the general adoption of the gold standard about 1870; that Germany, France and Belgium, etc., which did not start returning to gold immediately after 1920, avoided the depression of 1920-23; and that the incidence of the cycle may be different in a world that has forsaken the gold standard.

Again, it should be remembered that, though the average period for the cycle is about 8½ years, several individual cycles have been shorter and longer. Finally, one may observe that since the war in fact suspended the working of the cycle, human action can plainly suspend it—if that action is sufficiently violent and sustained; though suspension is not abolition.

In assessing the present situation, therefore, it seems safest to assume that the trade cycle and its attendant cyclical forces are real things; that there is a certain tendency for them to work themselves out in eight to ten years; but that they are associated with, if not determined by, human policy—particularly in so far as it affects interest rates and the output of capital goods. And from this point of view, though from few others, armaments, like houses, must be accounted capital goods. The wise man will also recall that in 1937 America's recovery is about 18 months, and the late gold *bloc* countries' recovery about three years, behind that of Great Britain. It would be very surprising if Great Britain's economy turned definitely downwards while America's was still booming.

Canadian Tariff Concessions

THE trade agreement signed last week between the Governments of Canada and of the United Kingdom* has a much wider significance than derives from its character as a pact between two countries whose mutual trade totalled £98 millions in 1936. It has an intimate and direct bearing on the problem of improving the economic (and therewith the political) relations between Great Britain and the United States. And as far as British policy is concerned it must be taken as a foretaste of the general revision of the Ottawa agreements that is due this year.

As was to be expected from the replacement of Mr Bennett by Mr Mackenzie King at the head of the Canadian Government, the new pact is distinctly more liberal than the agreement of 1932 which it supersedes. But the liberal improvements are almost entirely on the Canadian side—a fact that might be defended, from the mercantilist point of view, on the ground that since Ottawa, British imports of Canadian goods have increased far more than Canadian imports of British goods. Possibly in recognition of this, and certainly in pursuit of their own policy of releasing Canada from the high-protectionism of the previous regime, the Canadian Government have reduced the duties on imports

* Cmd. 5382. Obtainable from H.M. Stationery Office.

from the United Kingdom of a long list of goods, including many important lines of cotton and woollen textiles, chemicals, iron and steel, and machinery. The reductions, which bring duties, in some cases, down to zero, affect 150 items and sub-items, covering about 40 per cent. (by value) of imports from the United Kingdom at present subject to duty. Their amount ranges up to 20 per cent. *ad valorem*, but they are mainly of the order of 2½ per cent. to 5 per cent. *ad valorem*.

On the United Kingdom side, the scope of the reductions is very much smaller. There is a guarantee that the duty on Canadian motor-cars will not be raised above its present level of 22½ per cent., and the preferential duty on silk stockings is reduced to 28½ per cent. (or 8s. per lb.), and on reed organs to nil. But it is not only in scope that the contrast is significant between the Canadian and United Kingdom undertakings. Canada transfers a large number of important tariff items from the list of those on which a minimum margin of British preference is guaranteed to the list of those on which a maximum rate of preferential duty is guaranteed, while the United Kingdom, in return, limits herself merely to a pledge to maintain minimum margins between the general and the preferential tariff. Where the actual rate of preferential duty is nil, this is equivalent to a pledge against reducing the general duty under any circumstances, whatever counter-concessions may be offered by foreign countries, or however hopeful may be any future opportunity to take part in a lowering of world tariff barriers. Even where there remains a possibility of lowering both the preferential and the general rates of duty, the promise to retain at least a certain margin of preference is bound to be a handicap to the conclusion of pacts with foreign countries for the mutual freeing of trade. The new pact, and presumably the other revisions of Ottawa agreements that are to follow it, will not merely solidify imperial preferences; over an important area of trade they will solidify the British protective tariff at its present level.

Another feature of the Anglo-Canadian agreement is even more to be deplored. It renews the exchange of a Dominion undertaking to extend the preferential tariff to exports from the British dependent empire for a United Kingdom undertaking to "invite" the Governments of the colonies (except such as are pledged to the Open Door by international agreement) to grant to the Dominion general preferential benefits and some specific preferences. These preferences include, among others, a high rate of duty on foreign rubber-soled canvas shoes, an imposition which notoriously strikes a blow at the standard of living and health of the poorest and most defenceless of His Majesty's subjects. The former Open Door in the colonial empire was shut before Ottawa; the Ottawa agreements double-locked it by making any re-opening dependent on an all-Commonwealth amendment, instead of a decision of the United Kingdom Parliament. The new pact renews this double-locking at a time when the British Government is ostentatiously sponsoring an international inquiry into access to colonial raw materials, which must depend to a large extent on access to colonial markets. The question involved is not merely one of the volume of trade between Canada and the British dependencies, but one of trusteeship for native interests and of vital issues of international policy.

Perhaps the most remarkable aspect, however, of the new pact is not what it contains but what it omits. There is no mention of Canada's Ottawa pledge that tariff protection would be given only to those industries which were reasonably assured of sound opportunities of success, and that protective duties would not exceed a level that would give United Kingdom producers full opportunity of reasonable competition, on the basis of the relative costs of economical and efficient production—subject to special consideration for infant industries. This pledge (which was repeated in the agreements with Australia and New Zealand) therefore lapses. Some enthusiasts regarded it as the greatest and most worthy innovation made at Ottawa; on the other hand, sceptics declared that if literally carried out it would exactly countervail the very *raison d'être* of international trade—differential costs of production. In the event, it has com-

mitted suicide by a judicial knife. In Australia and New Zealand it was applied, with some advantage to British industry, by boards or commissions of men expert in tariff matters, who used a rough rule-of-thumb and did not attempt to interpret the pledge rigorously. In Canada its interpretation was entrusted to a judicial board, who generally found themselves incapable of discovering "relative costs of economical and efficient production" or otherwise translating its terms into practice. Its decrease will be mourned less by British exporters than by those theorists who hoped that wrapped in its verbiage might be found the beginnings of a valuable permanent check upon excessive protectionism in the Dominions.

For the rest, the new agreement advances no further towards the settlement of British protective policy, through quotas or otherwise, for meat (including bacon and hams) and dairy produce. The position is simply kept open, as far as Canada is concerned, subject to two provisos. The first is that imports of Canadian bacon and hams will not be regulated unless they progress at an "abnormal" rate towards the figure of 2,500,000 cwt., which was allotted to Canada in the Ottawa agreement—somewhat to the jealousy of other Dominions. The second proviso is that, as regards cattle and beef, Canada shares in the favourable terms wrung from the United Kingdom Government by Australia and New Zealand last year—that is to say, there will be no duty or levy on Empire imports, nor will they be reduced by quota below recent levels. One special innovation in the agreement is the article dealing with the contingency of Canada's dumping in the United Kingdom market any products not subject to duty. On being notified that this is taking place, the Canadian Government will "take suitable steps to correct the situation complained of and, if other measures are ineffectual, will exempt United Kingdom goods" of a similar kind from special or dumping duty. The Federation of British Industries has expressed the view that this provision is vague and inadequate; certainly its value seems to lie more in the warning it gives to exporters than in its precise operative terms.

The agreement may, in fact, be summarised in a sentence. It is a Laodicean kind of document, which will please many people but satisfy none. It continues some of the more dangerous and objectionable features of the Ottawa agreements, but both sides have changed their psychology, though not their principles, since Ottawa. The present Canadian Government is more liberal than its predecessor; and the British Government has learned much since the day when its spokesman declared that Britain had not gone to Ottawa to bargain with the Dominions. An optimist's verdict would be that the agreement ought to have been much better; a pessimist's that it might well have been much worse.

Both these judgments derive added pungency from the legitimate assumption that the lines of this agreement are those that will be followed by the British Government in their negotiations with other Dominions. They have shown no sign of relinquishing the principle that all the Dominions must be accorded the same terms in this market. Hence we may take it to be the general policy of the Government to advance from the Ottawa basis in two main directions only: very minor revisions of their own tariff on Empire goods, and an exchange of the general Ottawa clauses for specific undertakings from the Dominions. The principle of quantitative restriction remains; so does the ring-fence of preferential tariffs round the colonial empire; so does the guarantee of minimum margins of preference, which prevents a reciprocal lowering of tariff barriers with foreign countries. These are grave and—in our judgment—exceedingly unfortunate decisions, in view of the hopes raised that a valuable Anglo-American economic agreement might be reached now, though possibly not later, and in view of the efforts being made by the Oslo Convention countries towards general freer trade. But the battle is not yet lost. There is no reason to believe that the Canadian Government, which has shown its own desire for more liberal trade all round, sets store by the illiberal sections of the terms it has secured from Great Britain. There is time yet for a review of British policy that will look beyond the narrow bilateralism now in evidence.

Notes of the Week

Special Areas.—The ironical comment of Dr Dalton that the Government seems willing to spend pound for pound with Lord Nuffield in aid of the Special Areas, epitomises much of the disappointment with which the recent White Paper has been received in all quarters. Equally apt was the admission of *The Times* that the Government had not "exhausted" all the suggestions which have been under consideration. Criticism has by no means been confined to the political opponents of the Government. It is generally felt that the White Paper (which we discuss in a leading article on page 509) has done no more than re-state certain valuable principles of treatment, without making either the administrative or the financial provision to render them more effective, than the tentative policy of the last two years. The stress laid on armament contracts is rightly regarded as a red herring. A broadcast comment on Monday evening from Newcastle was illuminating—"We have been busily engaged in making munitions before, and look at us now!" In South Wales, too, the temporary character of armaments manufacture has been adduced as a criticism of the new statement of policy. The common comment of experts in the Special Areas is that there is nothing that is really new in the proposals of the White Paper; and it is feared that the sums at the disposal of the Commissioners will be no more adequate than in the past to solve the basic problems. In Cumberland, in Durham and in Scotland, the fear is expressed that neither the extended powers of the Commissioner nor armaments contracts are likely to meet the needs of the areas which are really down and out, and that nothing short of Sir Malcolm Stewart's proposals for the compulsory location of industry will save them.

Iron and Steel.—The 33½ per cent. duty on pig-iron imports was suspended on Wednesday. Simultaneously the duty on certain iron and steel products was cut by half to 10 per cent. In view of the world situation, it is not surprising that the British Iron and Steel Federation has been constrained to surrender these outworks of its defences. The price of pig iron and scrap has been rising dangerously for some time under the stimulus of world recovery and re-armament. The multiplicity of protective devices has enhanced the rise; and the position has become serious. In the pig iron market it has become impossible to place orders for near delivery; dates as distant as 1938 have been quoted by Swedish sellers. Consumers have been rationed for some months; and works have been faced with the possibility of having to restrict production for lack of raw materials, in spite of the almost unlimited demand for iron and steel products. The Import Duties Advisory Committee, in recommending the alterations in the duties, suggested that the world demand for iron and steel products was tending to out-run supply; but that the existing duties and rising world prices made it unprofitable to import supplies from foreign sources. The British Iron and Steel Federation has already announced that it intends to raise prices under existing contracts to an unspecified figure from June 1st; and its decision to establish central buying for scrap and foreign pig iron was due to the acute and growing world shortage.

The revival of industry is endangered by this position; civil demand cannot be satisfied; and the cost of re-armament is correspondingly advanced. Indeed, deliveries of steel from the Continent might have been negligible, had not the quota ensured a minimum supply—a surprising rôle for a protective device. To reduce the paraphernalia

of duties and quotas in these circumstances is common sense. There is still, however, some ground for scepticism. The alteration of duty is adumbrated as "temporary . . . pending the developments which are taking place to increase supplies from home and Empire sources." The Committee is satisfied that steps are being taken by the Federation to ensure adequate supplies. We may wonder, therefore, what sort of a reduction of duty this is. Will the old rates be restored the moment the Federation snaps its fingers? What of the broader considerations of national prosperity and national defence? As *The Economist* pointed out in June last (June 13, 1936, page 596), a fiscal procedure which would allow important economic interests, rather than Parliament, to fix and alter tariff rates might too easily render the cost-basis of our industrial structure subject to the arbitrary decision of a monopoly. Altogether a right step seems to have been taken for entirely wrong reasons.

Government and Electricity Distribution.—Last summer the McGowan Committee on electricity distribution published their Report, on which we commented in our issue of July 4, 1936. Briefly, the Committee recommended that it was desirable to reduce the number of units distributing electricity throughout the country by transferring the undertakings at present operated in small units into the hands of their larger neighbours. Schemes were to be worked out by a number of district commissioners to be appointed *ad hoc*, who would clearly be expected to negotiate arrangements, as best they could, with the owners of the undertakings in the area for which they were responsible. We made two main criticisms of the proposals. First, the terms of compensation in respect of company undertakings seemed heavy. We suggested that unless the district commissioners were ready to saddle consumers with very heavy capital charges in the reorganised undertakings, it would be inevitable that the resulting organisation would consist largely of power companies operating, under sliding-scale limitation of profits, both their own present undertakings and the bulk of the hitherto publicly-owned undertakings. Our second criticism was that it was hardly likely to be possible to obtain the services, as district commissioners on a temporary basis, of men of the requisite calibre. The Committee's proposals envisaged that company undertakings surviving the reorganisation would have a tenure of 50 years, at the end of which time some sort of public ownership would be established. We took the view that if there was a case for public ownership in 50 years' time, there was a case for public ownership immediately.

On Wednesday it was announced in the House that the Government would introduce legislation, next session, to carry out the recommendations of the McGowan Committee, but with two important exceptions. First, the schemes would be prepared by the Electricity Commissioners instead of by special commissioners appointed *ad hoc*. This is obviously an improvement, for it should not be difficult for the Commissioners to augment their personnel, and they will be in a position to deal with the problem far more effectively than district commissioners. The second change naturally follows; as the Electricity Commission has become the tribunal of first instance, appeal is now to be made to the Minister of Transport, whose decisions must be confirmed by Parliament.

It is likely that there will be strong opposition from almost every interest affected, except the power companies. Local authorities owning their own undertakings will resent losing them. Many local undertakings will be merged with undertakings acquired on a much more generous measure of compensation. In the pooling of prices, consequently, their consumers will be saddled with capital charges swollen by the goodwill of adjacent undertakings. Smaller company undertakings will inevitably protest against the loss of their identity. It is likely that, unless the Minister and Parliament take a strong line, the fight over every scheme drawn up by the Commissioners will be protracted. Consequently, the 50 years which the McGowan Committee wished to interpose between chaos and thorough-going reorganisation may not even begin for some considerable time.

* * *

No Parking.—The Minister of Transport is considering the prohibition of the parking of cars in streets except to take up or to set down passengers. He has expressed the belief that private enterprise can offer cheap and adequate accommodation off the streets; and that motorists have neglected such facilities, preferring to leave their cars on streets "built at vast public expense for the passage and not the parking of vehicles." He proposes to appoint no more street parking places and progressively to diminish the existing ones. Stationary vehicles, he said in a speech on Tuesday last, must not be allowed to immobilise lines of traffic or to invade the peace of pleasant squares and quiet streets. The motorists' organisations have already protested vigorously, and they promise stubborn opposition to the proposal. They had hoped for increased parking facilities, and the proposed prohibition has come as an unexpected blow. They may take some comfort, however, from the fact that Mr Hore-Belisha's writ runs in only the 1,800 square miles of the London traffic area and, after April 1st, on the great trunk roads. Admittedly, a measure of the kind proposed is the line of least resistance. In the short run, however, the waste of time and money in traffic blocks is only less costly than the loss of life on the roads. London is a special and a serious problem.

* * *

Rumours that the Minister of Transport had said more than he actually intended to do were dispelled by an official statement that he meant every word of his original announcement. Traders are seriously alarmed, fearing loss of custom. It is pointed out, not unreasonably, that to provide adequate garage accommodation will be vastly expensive, and will take a very long time. The immediate public interest certainly requires some restrictions; but the ultimate object must be to fit the streets to the traffic, and not vice-versa. Meanwhile there is a lesson to be learned from Ramsgate, where the local Garage Proprietors Association have petitioned for the abolition of street parks. The Minister of Transport must not, in his proper zeal, play into the hands of vested interests.

* * *

Oxford University By-Election.—The result of the by-election in Oxford University, caused by the resignation of Lord Hugh Cecil, is a remarkable tribute to the personality of a leading economist and servant of the State, and to the new-born independence of an electorate whose other Burgess is Mr A. P. Herbert. Last week, Sir Arthur Salter, with 7,580 votes, had an absolute majority of 55 over the combined poll of two Conservatives—a powerfully backed, Right-wing Independent, Professor Lindemann, and a still more powerfully backed official candidate, Professor Sir Farquhar Buzzard, each of whom secured roughly half the number of Sir Arthur Salter's votes. *The Times*

ostentatiously threw its weight behind Sir Farquhar Buzzard. The *Daily Telegraph* and the *Morning Post* threw theirs behind Professor Lindemann. But the electorate, most of whom presumably read these newspapers, voted for Sir Arthur Salter. Newspapers apart, his personal backing, both within and beyond the academic circle of the University, was stronger than that of either of his opponents, and included a number of Conservatives as well as leading University Liberals and Labour men. Past elections indicate that he could count on a normal "Progressive" vote of 3,500 at most; hence the Oxford Conservatives, faced with a choice between a Die-hard, a symbol of orthodoxy, and a Radical, voted as to at least one-third for the Radical. Here, surely, is a sign that a genuine National Government at the present time would be a Government, not of the Right, but of the Left Centre.

* * *

The Naval Estimates.—The Estimates for Naval Expenditure in 1937-38 were the first Service Estimates to appear under the Government's five-year re-armament programme. Expenditure on the Navy now falls into two divisions: that defrayed out of the Budget, and that from loans, i.e. from issues out of the Consolidated Fund. "The figure which in a normal year would form the net total Navy Estimates, is, for 1937, £105,065,000, which exceeds the total Navy Estimates for 1936, including Supplementary Estimates, by £23,776,000. Of this total £27,000,000 will be provided by issues from the Consolidated Fund, subject to a statutory authority being obtained in accordance with the terms of the Defence Loans Bill now before Parliament. The figure, therefore, shown as the net total of Navy Estimates, 1937, is £78,065,000." Thus, the taxpayer in 1937-38 will only be required to find this £78,065,000—i.e. less than the estimated £81,289,000 (including Supplementaries) in the financial year now ending. Nevertheless, in 1937-38 the country will be paying, both out of savings and current income, £105,065,000 for the Navy alone; which is more than the 1932-33 expenditure on all our Defence Services, and within £2,000,000 of the 1933-34 total Defence expenditure.

Total expenditure	50,164	53,444	56,616	64,888	81,289	78,065¶

* Including Supplementary Estimates of April 28th and July 7th, totalling £11,359,000. † Maximum strength. ‡ Plus £2,000,000 for material, and £17,000,000 for contract work, to be defrayed from loans. § Plus £5,000,000 for armament stores, etc., to be defrayed from loans. || Plus £3,000,000 for works buildings, etc., to be defrayed from loans. ¶ Plus £27 millions from loans.

In 1937-38, a full annual provision must be made for the building begun in the financial year now ending, as well as for the expansion in 1937-38; which accounts for the biggest increase in any item—i.e. an increase of £14,033,215 for new construction over the 1936-37 figure. Maintenance, repairs, modernisation of capital ships, increase in personnel, stores and material, account for another increase of £9,081,985; and additional aircraft for the Fleet Air Arm are to cost an extra £516,500—in addition to an extra £278,500 for aircraft forming the initial equipment of new ships other than aircraft carriers, included in the construction cost of such ships. Thus, in 1937-38, big contract payments will be made for five new 35,000-ton battleships—two laid down on January 1, 1937 (*King George V* and *Prince of Wales*)

under the 1936 programme, and the three under the 1937 programme; two 23,000-ton aircraft carriers in the 1936 programme (*Illustrious* and *Victorious*) ordered on January 13th, probably to be increased to four in 1937-38; the seven cruisers of the 1936 programme, and the seven heralded for the 1937-38 programme; and for a host of new destroyers, submarines, light surface craft, increased stores of munitions, etc.

* * *

Of the £44.2 millions estimated to be spent during 1937-38 on building, repairs, maintenance, alterations, etc., only £3.3 millions is for dockyard-built ships, £23.3 millions is for contract-built ships, and £1.4 millions for other vessels, making £28 millions for new construction. Further, £10 millions is for repairs and alterations, £3 millions for stores, and £3 millions for fleet, port, national, and other charges—a grand total of £44 millions under the programme for construction and maintenance of ships. New works at dockyards and naval bases are increased by £1.3 millions; and additional factories, plant and extensions to naval contractors' works (for guns, armour, etc.), constitute new items totalling £3.8 millions more than the mere votes on account contained in last July's Supplementary Estimate. A striking feature of the 1937-38 Estimates is the rapid and vast increase in the value of contract work going to private firms. Industrial capacity for shipbuilding and repairing, and manufacture of ordnance and equipment, seems likely to be strained to the utmost in 1937 and succeeding years—a factor which is bound increasingly to affect civil industry, prices and wages in this country.

* * *

The Army Estimates.—The 1937-38 Army Estimates are complicated for various reasons. First, in 1936-37 they bore £551,800 for expenditure on new Government factories, whereas in 1937-38 the Royal Ordnance Factories' own Estimates cover all such expenditure, as shown in the succeeding Note. Secondly, in 1937-38 the net Army Estimate of £63,120,000—itsself an increase of £7,239,000 over the 1936-37 Estimates and Supplementaries—does not allow for expenditure on Army services of an extra £19,054,000 from the Consolidated Fund, i.e. from loans. Thus, the Army Estimates for 1937-38 are really up by £26,293,000. Finally, the Royal Ordnance Factories' Estimates in 1937-38 are made to bear an abnormal and additional £8,194,900, of which almost all (£7,946,000) is to be raised out of loans. Thus, all in all, the superficially visible increase of £7 millions odd in the 1937-38 Army Estimates should be scaled up to an increase of £34,487,900 in our military estimates (Army *plus* Ordnance). Even this does not allow for the non-recurrent £2.8 millions for military measures during the

Abyssinian crisis provided in the 1936-37 Estimates, and whose abandonment might have been expected to reduce *pro tanto* next year's Army Estimates.

	1932	1933	1934	1935	1936* (Esti- mate)	1937 (Esti- mate)

Half-Pay, Retired Pay, Pensions, etc.	8,141	8,127	8,242	9,368	8,457	8,447
Net Expenditure	36,137	37,540	39,692	44,654	55,581	63,120§

* Including Supplementary Estimates of £6,600,000 on July 6, 1936, and of £100 on February 26, 1937.

† Plus £13,000,000 for Warlike Stores, to be defrayed out of loans.

‡ Plus £19,054,000 for Works, Buildings and Lands, to be defrayed out of loans.

§ Plus £19,054,000, composed as shown in preceding two footnotes, to be defrayed out of loans.

The regular British effectives on January 1, 1937, are put at 130,249, to which must be added 58,239 British regimental troops on the Indian and Burmese establishments.

* * *

Warlike stores show the greatest increase, provision for guns and carriages having risen from £1 million in 1936 to £5.3 millions in 1937; for gun ammunition from £3.1 millions to £7.3 millions; for wheeled mechanical transport from £1.7 millions to £2.7 millions; for caterpillar transport (including tanks) from £0.8 million to £3.6 millions; and the lesser items in roughly the same proportion. Provision for machine tools, etc., to aid manufacture of warlike stores by private contractors (i.e. not Ordnance factories) has risen from £1.0 million last year to £3.3 millions this. The £13 millions to be raised by loan for warlike stores accounts for most of the £18.6 millions increase in this item. The £6.1 millions to be borrowed for land, buildings and works actually accounts for more than the net increase of £5.0 millions in this item. Military works construction and maintenance are up from £4.0 millions to £6.6 millions; and provision for land and the erection and maintenance of factories which are to be built, operated and maintained by private contractors on behalf of the War Office, is up from a mere £75,000 to £2.2 millions.

* Including Supplementary Estimates of July 6, 1936, for £293,700, and of February 26, 1937, for £100. Original net estimate £40,000.

† Composed of £4,940,640 from Navy, Army, Air Force, Dominions and Colonies for ordnance, and from miscellaneous sales of scrap, stores, etc.; and £615,760 from Navy, Army and Air Force for construction of new factories.

‡ Composed of £7,536,000 for production for the Services, Dominions, sales of scrap and stores, etc.; and of £7,946,000 from loans out of Consolidated Fund.

All of the £7,946,000 to be raised by loans for expenditure under the Ordnance Factories Vote is to be spent on building or converting munitions factories—of which, in 1937-38 alone, that at Chorley, Lancs, is to cost £2,500,000, at Bridgend £1,150,000, and at Nottingham £1,374,000. "Other sites" include six factories to cost a further £1,685,000 during 1937-38. The Chorley filling factory's total cost appears at £6,050,000; the Irvine explosives factory's at £1,006,000; the Nottingham gun factory's at £1,509,000; and an unspecified explosives factory at £2,890,000. By the beginning of April, in addition to the older Waltham, Woolwich and Enfield factories, where extensions and modernisations are being made, the new Hereford, Irvine, and Nottingham factories will just be starting work.

M. Blum's Victory in the Chamber.—The debate in the French Chamber on February 26th ended in a signal victory for M. Blum. He obtained a majority of 152 votes (361 to 209) after having stood up to a full-dress offensive from the Right, and having declared in reply that he did not intend either to retire from the field or to abandon the Front Populaire in order to put himself, like another MacDonald, at the head of a national government. The French Government's outlook in contending with their financial troubles is a different problem which is discussed below. But the political victory which they have already gained is not in doubt. The struggle between M. Blum and M. Flandin was waged over the allegiance of the Radical-Socialists, and though it is evident that M. Flandin largely defeated his own ends by the animosity which he put into his attack, the principal credit for M. Blum's victory must once again be given to the French Prime Minister's own character and personality. The Radical-Socialists believed him when he assured them that any new features in the Government's policy would be submitted for approval to all the parties of the Front Populaire before being translated into action. The Radical-Socialist Party's loyalty on this occasion to the Socialist leader of the coalition of the Left is a new departure in French politics which may be of momentous importance. For the Radical-Socialist vote is the deciding factor in the French parliamentary balance of power. It is the weakness of these good French Liberals to discharge their generous sentiments in words and then to bestow their votes on the protection of the bourgeois's pocket. But this time they have not played their traditional comedy.

The Government's economic prospects are not so bright. Gold is still leaving the Bank of France and the country; and rentiers, still shy of lending to the Government, will not repatriate their funds lodged abroad. The levels of both costs and prices have been rising fast, and this has stimulated a certain amount of industrial recovery; but the main problems are the central finances and the Government's credit. Until the stock market rises and interest rates fall, the annual service of the National Debt must continue to absorb nearly 50 per cent. of the ordinary Budget; and until Frenchmen who have lodged their capital abroad before the devaluation feel confident enough, both in the level of the franc and in the Government's unwillingness to tax away all the differential of profit upon repatriation, the pressing needs of the Government and Treasury will be concentrated on a money market in which banks, businesses and bourgeois have declared a stay-out strike. If M. Blum can maintain the goodwill of the Radicals and secure that of one or two leading financial houses, his Government can weather the rough water until the autumn, when trade recovery should bring funds home to France. There is nothing inherently weak in France's economic or financial system to-day.

Herr von Ribbentrop's Speech.—On Monday, the German Ambassador to the Court of St. James's made a public speech at the Leipzig Fair in which he took a line on a number of questions of controversy between the country which he represents and the country to which he is accredited. His main theme was Germany's claim to a restoration of her colonies; and on this the Ambassador said nothing very new. The chief lesson of the speech is the fresh light it throws on the difficulty of combining the diplomatist's career with the politician's. On the substance of the German demand, there are few people in England who feel that Germany's desire to have her colonies back is either unnatural or unreasonable; but there are still fewer prepared to enter into any serious discussion with Germany over her colonial claims, except as part and parcel of a general settlement of the kind which Herr Hitler dangled before our eyes on the morrow of his military re-occupation of the Rhineland, a year ago this week. Herr von Ribbentrop's speech carries us no further.

The German claim to colonies is put forward as a thing in itself, with no reference to its relation to the problem of armaments and the problem of Eastern Europe; and it is once again rubbed in that Germany intends to go on, whatever happens, with her Four Years' Plan à la Russe. In this context, we cannot take lightly Herr von Ribbentrop's stamp of the jackboot and rattle of the sabre in the traditional Prussian manner. A compromise on the colonial issue could be found, he declared, only in one or other of two directions—one "the solution of the problem of the restoration of the former German colonial possessions," and the other "by means of the German people's own strength." In English this would appear to mean that we are asked to give the German colonies back unconditionally, and are warned that, if we will not, then Germany proposes to take them back by force. It therefore behoves us to consider closely where it may be that Germany proposes to recruit her strength for trying a fall again with us. We presume the answer is in Czechoslovakia. Once mistress of Central and Eastern Europe, Germany would be able to turn round and tell the four West European Colonial Powers to stand and deliver. For us, of course, the moral would be to check her at her first move by fulfilling throughout Europe, up to the hilt, our obligations under the Covenant of the League. But surely there is a better way. Let Germany ask for her colonies back as part of an arrangement under which she renounces her dream of domination in Europe, and let the compact be sealed by a halt, all round, to the armaments race. This, not Herr von Ribbentrop's method, is the true way to peace with honour.

The Czechoslovakian Germans.—The Agreement on German cultural autonomy on February 19th between the Czech Government and the three non-Henlein German Parties represented in that Government was denounced by Herr Henlein in a speech at Aussig last Sunday. The leader of this Party, which at one time represented nearly 70 per cent. of the Germans in Czechoslovakia, made greater claims than he had ever before presented. Every German in the State should live under his own law, the *Sudetendeutschen* should have their own organs of administration, and the State should make good all economic damage inflicted on the German minority since 1918. These claims smack of another source than Bohemian. There is no doubt that this kind of *Völkische* (sc. popular) autonomy—clearly more than cultural autonomy—would make a State within the Czech State, to which the latter would be paying a species of internal reparations and on whose loyalty it could never rely. It is noteworthy that under the Austro-Hungarian monarchy the Czechs never demanded such autonomy; for they realised that Bohemia, Moravia and Silesia were too mixed in race and population ever to admit of clear-cut autonomous areas of the kind now claimed by Herr Henlein. It is stated in Prague that Herr Henlein's demands were made only in order that they should be refused, so as thus to enable German propaganda against Czechoslovakia to proceed on the basis that the Czechs had refused an offer of reconciliation. Actually, membership of the Henlein Party is said to be declining now that the three other German parties are co-operating in the Government to clear away all differences between Prague and the *Sudetendeutschen*. With an eye on numbers, Herr Henlein has pushed his demands higher. *Il fait la réclame*. But it should not be forgotten that hundreds of thousands of Czechs and Slovaks, to say nothing of non-Henlein Germans, would be placed within Herr Henlein's pale if it could ever be set up. "New minorities for old" is not progress; it is mere change.

Roumania's Iron Guard.—A crisis has arisen in Roumania, largely owing to lack of firm democratic defence of law and order. The Iron Guard is on the war-path again. It is a Fascist organisation, in close contact with Berlin, to whose discredit stands a long list of assassinations, from that of a Prime Minister down to those of poor students. This week the Rector of Jassy University, a liberal, was savagely attacked and nearly killed. Scarcely a day passes but Jews, or liberals, or students, or editors and journalists, or even Conservative ex-members of the Iron Guard itself are assassinated or brutally manhandled. The Iron Guard denies the more important of these outrages, and admits the lesser, in order to gain credit for its activism without opprobrium. But the murder of the late Prime Minister, M. Duca, was shown to have been committed by members of the Iron Guard. And what does the Iron Guard want? Apparently mere Fascism; friendship—and perhaps more—with Germany and Italy; and the dismissal of all friends of France, Britain, Russia and democracy in general. The Tatarescu Cabinet, after having elbowed out M. Titulescu and his pro-French, pro-Little Entente, pro-Russian policy, finds itself weak and divided in domestic politics. The Peasant Party remains aloof. And neither the King nor M. Tatarescu dares grasp a nettle. But if they do not, it will inevitably smother the Roumanian garden with weeds.

Italy and the Habsburgs.—In connection with the flutter produced by Freiherr von Neurath's visit to Vienna, it has been intimated in Rome that Italy is neither promoting nor even approving the idea of a restoration of the Habsburg Dynasty. The project, it is suggested, is both dangerous and superfluous. Austria is getting on quite well as she is. Why this talk of a change in the regime? As this intimation appears to come from official sources, we may conjecture that Signor Mussolini is drawing in his horns from Central Europe, as

Herr Hitler is raising his own horn above the Brenner. Not long ago, Signor Mussolini was credited with the plan of reconstructing a Danubian Habsburg Monarchy which should be weak enough to remain dependent for its existence on the patronage of Italy while strong enough to bar the way to Germany's drive to the south-east down the Danube valley. According to rumour, this new Habsburgia was to be compounded of post-war Austria and post-war Hungary with Slovenia and Croatia thrown in. This bold stroke would indeed have spiked Hitler's guns—if it had not brought the Little Entente into line with the Third Reich in opposition to Mussolini's purpose. But it now looks as though the Duce, with his hands full in Africa and in Spain, had resigned himself in Central Europe to an Italo-German compromise.

Rumour declares that this new bargain was struck during General Göring's recent visit to Rome, and that the basis of agreement was that the Italian effort to exclude Germany completely from South-Eastern Europe should be renounced in favour of a partition of that part of the world into an Italian and a German sphere of influence. Italy was to have Yugoslavia, Hungary and Bulgaria while Germany was to take Czechoslovakia and Roumania as her share of the feast. But this agreement depended on the negotiators' ability to strike a prior bargain over Austria. This was the crux; for Austria was a country which neither party could afford to leave in the other party's hands. It was therefore agreed, apparently, that Hitler would renounce the *Anschluss* and Mussolini the Habsburg restoration in favour of the existing state of affairs. There is not much consolation here for Herr von Schuschnigg. No wonder he is going to Rome.

"Te Duce, Caesar."—The Fascist Grand Council, whose hours are those of a night club, has been burning the midnight oil on no fewer than three nights this week. They met on the night of Tuesday to Wednesday; but the issue of a *communiqué* did not mean that they were at the end of their business—though their subsequent lucubrations were about the birth-rate. Meanwhile, the *communiqué* which we have before us is rather luridly illuminating. The preamble contains a declaration of faith that "every possibility, even remote, of a limitation of armaments is now definitely to be excluded"; and this leads on to the announcement of five decisions. There is to be yet another increase in Italy's armed forces. The powers of the Commissariat-General for War Industries are to be extended for another five years. There is to be an integral militarisation of all the active forces of the nation from the age of 18 to 55 years. The maximum self-sufficiency in military supplies is to be attained at "the sacrifice, even total if necessary, of civil to military needs." And Italian science and technique are to be called in to redress the balance of material forces, "because only by science, by valour, and by a spirit ready for any event can the less-endowed peoples resist the eventual aggression of countries rich in money and possessing greater natural resources." This *communiqué* must be as disconcerting to the Fascist rank and file as it will

be encouraging to the Chancellor of the Exchequer of the United Kingdom; for, as an undertone to the hyena's snarl we can here detect the croak of the frog who is trying to puff himself out to the size of the ox and has suddenly begun to wonder whether, after all, he may not be going just to burst instead of adding a bovine cubit to his batrachian stature.

* * *

The joke—though it is a grim joke—is that the situation in which Fascist Italy now finds herself is one which ought to be welcomed with enthusiasm by any disciple of Mussolini who has taken the Duce's teaching *au pied de la lettre*. "War alone," Signor Mussolini has written in the *Enciclopedia Italiana*, "brings all human energies to their highest tension and sets a seal of nobility on the peoples who have the virtue to face it." And now the Duce's countrymen are going to find out at first hand—and this even before the next war has broken out—what the "highest tension" feels like. Poor Italians, who were so recently assured that the war against Abyssinia—which, to do them justice, they did not want—was to be a piece of glory on the cheap! For a moment it looked as if the Duce had performed even more than he had promised. Geneva, London and Paris were successfully defied and Abyssinia successfully overrun. But there was one catch about that adventure, and this has now come to light. It was not the end of a story but only the beginning. This week's *communiqué* admits that; and in its hectic tone we catch an inkling of the Nemesis which always eventually overtakes a military dictatorship. From the beginning, Mussolini's primrose path has been none other than Louis Napoleon's. Now he, and some of his people, know it. The grinding of the mills of God is grating in his ears.

* * *

"The Blessings of Civilisation."—Italy went into Abyssinia to bring to it the blessings of civilisation. Some of these blessings have been conferred during the last week or two; and the load of dishonour which is the chief tangible fruit of Italy's conquest of Abyssinia has accordingly been piled higher. The other day, the population of Addis Ababa is reported to have been shot up by bands of Italian blackshirts and workmen as a retort to the bombing of Marshal Graziani on February 19th. The reports coming through from Paris speak of fearful atrocities; the massacre of thousands of defenceless people, inhabitants of an entire district of the town; and a veritable orgy of slaughter. These reports received a hint of confirmation in the Fascist Grand Council's commendation on Tuesday of the behaviour and achievements of the Italian forces at Addis Ababa, after the attempt on Marshal Graziani's life. The stories are now officially said to be exaggerated; but it seems to be admitted that the "punishment" of the native population was on a lavish scale. On February 24th the Abyssinian General, Ras Desta, son-in-law of the Emperor Haile Selassie, was shot in cold blood by a firing squad after having been taken prisoner in battle. To take the life of a prisoner-of-war for the offence of being captured under arms on his native soil, while fighting in defence of his invaded country, is a further step in a so-called civilised nation's regression into barbarism. One has to go back to the days when Cortes, the invading conqueror of Mexico, killed the Aztec princes, to find a parallel barbarity. The British invaders of Boer territory stopped short of shooting de Wet when he had been cornered at last, after disregarding their orders to him to lay down his arms. Nor is the new Italian touch of frightfulness in the antique Roman fashion; for the Romans did not kill a captured enemy commander out of hand. They saved him up for the triumph, then strangled him in the Tullianum on the evening of the day in which he had been paraded through the streets of the Imperial City. General Graziani did not know his book; but no doubt the Duce will see to it that the good old Roman tradition is faithfully followed next time.

The Metal Boom.—After a considerable reaction last week-end, metal prices have staged a sharp recovery and in the meantime each of the Big Four base metals has reached a new and remarkable price record. Copper is now at its highest since 1930. Tin has established a new record since 1928. Lead is higher than at any other time since 1926; and spelter has reached a new peak since 1927. Nothing shows better than this how wrong it would be to expect a break in the metal price level. The immediate future may even see higher metal quotations, as demand is still very active. In the longer run, however, the recent rise in base metal prices appears to have gone much too far. The boom has been due to very large speculative buying, the largest since 1914, on the one hand; and a complete change in the buying policy of consumers on the other. Numerous consumers, who had been used until quite recently to buy from hand to mouth, have in recent weeks piled up stocks which are sufficiently large to cover their requirements for a good number of months.

* * *

Producers of metals, however, are not taking part in the present speculation. On the contrary, production is being raised as far as possible; as on all metal markets the world's potential production is well in excess of potential consumption, including the much over-estimated armament consumption, supplies are likely to overtake consumption before very long. This is all the more likely as the present price level has an adverse effect on consumption, and at the same time stimulates the supply of scrap metals, which are a perfect substitute for new metals in nearly all branches of the armament industry. Until the rising production makes itself felt in current supplies, no major change in the trend of metal prices is likely. Once, however, speculators and consumers will have realised that their fears of a pending shortage in metal supplies has been unfounded a break will probably set in.

A Collective Bargain in America.—For months past the American air has been thick with threats of a coming assault by Mr John Lewis's Committee for Industrial Organisation on the steel industry and with the counter-challenges of the steelmakers, saying that they never would recognise any labour organisations save their own "company unions." On Tuesday, to the great surprise of the public, it was announced that an agreement for collective bargaining had been signed between the Carnegie-Illinois Steel Corporation and the Steel Workers' Organising Committee, acting for their respective principals, the United States Steel Corporation and the C.I.O. The negotiations, it appears, have been conducted by Mr Lewis and Mr Myron Taylor, chairman of the Corporation, in person. On the same day a group of other large steel producers announced a reduction of the working week to forty hours and an increase in the daily minimum wage to \$5. Several causes have contributed to this very surprising labour victory. The threat of a strike had to be taken seriously, for though Mr Lewis has not yet "organised" more than a minority of the steelworkers, his ability to bring the coal mines to a standstill is undoubted. The steel firms have also been embarrassed by the terms of an Act which limits contracts for Government work to firms working the 40-hour week. With orders for 25 million tons of steel for new warships in prospect this limitation has been a serious consideration. And, finally, the companies' readiness to raise wages is evidence of their confidence in their ability to raise prices. The agreement, in short, is a powerful encouragement to the two outstanding tendencies in America to-day: the one, in economics, towards an inflation of prices; the other, in politics, towards the emergence of a Labour Party.

* * *

Political Developments in India.—The solid bloc of absolute majorities for the Congress in the six provinces of Central and Southern India has not eventuated. In Bombay, although the Congress has over four times

as many representatives as its nearest party rival, it is just short of an absolute majority. In Madras, on the other hand, it has secured a sweeping victory, and its majority in the Central Provinces is now firmly established. Its electoral triumphs have swung a large body of opinion in the Congress towards the acceptance of provincial office, even in Bombay, where there are various possibilities of a working alliance with small groups. The only provincial Government to have been formed so far is in the Punjab, where Sir Sikander Hyat Khan, the leader of the Unionist Party, has constituted a Ministry of three Moslems, two Hindus and a Sikh. One of the most remarkable signs of the new condition of Indian politics has been the indication by the leader of the European body in South India that they might be prepared to support a Congress Ministry pursuing a constitutional programme. Meanwhile, behind the scenes at Delhi, there has been distinct, if strenuous, progress towards the realisation of central autonomy through the federation of the Princes with British India. The election of the Maharajah of Patiala as Chancellor of the Chamber of Princes, in place of the Maharajah of Dholpur, is regarded as a sign that the smaller Native States are growing more inclined towards federation. The negotiations with both the greater and the lesser States have reached the stage of the formulation of definite terms regarding the Instruments of Accession, which will be the fundamental law of federation for the Princes.

* * *

The Indian Budget.—British India, with its high defensive burden and its low taxable capacity in relation to population, has almost invariably a hard task in matching the size of its coat with the cut of its cloth. The Finance Member was faced with exceptional difficulties this year owing to the cost to the central exchequer of the separation of Burma and the introduction of provincial autonomy, which are reckoned to cost eventually Rs. 8½ crores. (A crore of rupees is equivalent to £750,000, and a lakh to £7,500.) Moreover, a serious decline of revenue has produced in 1936-37 an anticipated deficit of Rs. 197 lakhs in place of the small surplus forecast a year ago. Short falls of Rs. 216 lakhs, Rs. 37 lakhs and Rs. 28 lakhs are expected under Customs, income tax and receipts from currency respectively, the most notable failure being that of the sugar duties. In 1937, said Sir James Grigg, sugar revenue accounted for Rs. 10½ crores of revenue; now it had been reduced to Rs. 2½ crores, of which the major part was the yield of excise duty. The loss of Customs revenue had not been offset, as advocates of the protective duty had predicted, by increased receipts from income tax, because cut-throat competition in prices had eaten up profits. For the future, the height of import duties would continue to bring about diminishing returns to the exchequer; this had been for the most part expected, but it was happening, said Sir James, more quickly than had been anticipated. The metamorphosis from a revenue tariff to a protective tariff system has been almost continuous in India's fiscal history from the war years onwards, and its results have lessons for other countries that may move in a similar direction.

* * *

For 1937-38, the Finance Member anticipated a gross deficit of Rs. 342 lakhs, on the present basis of taxation, against an expenditure of Rs. 8,341 lakhs. This includes a defence budget totalling Rs. 4,462 lakhs, of which Rs. 75 lakhs is for Quetta rebuilding. Ordinary defence expenditure is down by very nearly a crore of rupees, a remarkable effort of economy in these days of almost universal re-armament, but one which the Commander-in-Chief gives warning cannot be indefinitely repeated. The gap is to be made up as to Rs. 184 lakhs from the Revenue Reserve Fund which was created out of the realised surplus of 1935-36 as a standby for the expense of the constitutional changes, and as to the remainder by an increase of the sugar excise from Rs. 1 annas 5 to Rs. 2 per cwt. (which is reckoned to bring in Rs. 115 lakhs) and an increase of the duty on silver from 2 annas to 3 annas (which is reckoned to bring in Rs. 50 lakhs).

With regard to the future financial relations between the Centre and the Provinces, Sir James Grigg announced that the Provincial Loans Fund would be wound up, and that the Provinces would ordinarily borrow from the market through the Reserve Bank. In exceptional circumstances a Province might be obliged to borrow from the Centre, but such a loan would always be for a specific sum on definite terms that would cover the expenses and risks incurred by the Centre. The Government of India would not lend normally, if at all, to cover provincial deficits. It is interesting to compare this system with the Financial Agreement operating in Australia and the loan council scheme proposed but suspended in Canada.

* * *

Mr Aberhart in Deep Water.—Nemesis faces the Social Credit Government of Alberta. At the end of August, 1935, Mr Aberhart swept into power on a platform of paying "social dividends" of some \$25 a month to the citizens of the Province. Forced to admit that this could not be done forthwith, he promised that the Social Credit system would be established in eighteen months' time. The expiry of that interval, unfortunately for Mr Aberhart, was marked by the invalidation of his Government's two most important Acts by the Courts of Canada. The reduction of interest on provincial bonds from an average of 4.9 per cent. to a flat rate of 2½ per cent., and the reduction of interest on private debts under the Reduction and Settlement of Debts Act have alike been ruled *ultra vires*. The Alberta Government responded by two measures. First, they declared an immediate moratorium of 60 days on private debts contracted before January 1, 1936, except debts due to Governments or municipalities, loans on insurance policies and the bonded debt of companies, and debts to creditors outside Alberta other than mortgages on land in the Province. Secondly, they announced that Alberta would fall into line with the other Prairie Provinces in having its finances examined by the Bank of Canada—the first step towards federal aid on terms. They are also planning a voluntary marketing board scheme under which farmers would receive a bonus in "credit" above the market price. Mr Aberhart has publicly admitted his inability to carry out his major promise, but has appealed to his supporters to declare in three months' time whether they desire his Government to continue their efforts to establish a new economic order.

* * *

Expansion of Retail Trade.—During 1936 retail trade continued to expand at approximately the same rate as in 1935, according to information given in the annual report of the Retail Distributors' Association. The money value of sales in the non-food departments last year was, however, only 14 per cent. above the 1932 level, whereas our index of business activity rose by some 27 per cent. during this period. Moreover, the improvement was by no means uniform as between the different categories. The index of the money value of retail sales in the separate departments last year was as follows (1935=100):—Furniture, 112.0; boots and shoes, 105.8; women's wear, 105.1; men's and boys' wear, 104.1; piece-goods, 93.5.

Violent Opposition to Judicial Reform

WASHINGTON, February 18.—The attack on the President's judicial reforms has gone to such excess as to make material for a psychological study of American political thought. The President, shrewd as he is in estimating public opinion, was taken aback by the fury of the upbraiding to which he has been subjected. He had been lulled by his November victory and by the absence of contentiousness since the election. He expected opposition, even bitter opposition; but he had not anticipated a neurotic outburst. And that adjective must apply to much of the discussion since the proposals were made. The President, both in his opening address before the new Congress and in his Inaugural, had asserted that the problem in the United States is not the Constitution but its interpretation. Nobody objected to this quite tenable doctrine; yet when the President took action to put the theory into practice, he was accused of trying to establish personal government, of bringing America to the brink of dictatorship, and of destroying the American system of government.

In fact, the change will affect American institutions very little, since it does not modify the Constitution or limit the power of the Court. The statement that he is seeking greater executive power is, of course, correct. The fundamental issue is whether strong Federal government is permitted by the Constitution; if it is, the executive must also be strong. In this sense, the proposals increase Mr Roosevelt's personal power while he is at the White House. But to see the proposals merely as the expression of personal ambition is to lose sight of their real significance.

The spleen of most of the President's critics was because the proposals were too slick. Wanting to be rid of four particular justices because of their narrow reading of the Constitution, the President raised the oblique issue of old age, the reactionary four being all old men. Liberal Justice Brandeis, too, is old, and so is the often-Liberal Chief Justice Hughes. But on the count, the President would lose one supporter, one frequent supporter, and four opponents if the age limit could be established. The method was infuriatingly indirect. He was packing the Court. But he was not trying to avoid the sanction of the Senate, which must approve nominations to the bench by a two-thirds majority. Thus it was a correct step, and one in which the President's power over appointments remained strictly limited.

Why the President chose just the way he took to spring the surprise is subject to various interpretations. One reason must have been that he wished to be able to present his arguments before they could be answered. He wished to point out that an age limit had been suggested before, and that it had eminent supporters, including the House of Representatives which passed it in 1869, Chief Justice Hughes, the late Mr Taft, and indeed Justice McReynolds, his arch-opponent on the Supreme Bench. No doubt he expected to make the old-age issue "stand up," if he could have the floor first. Consequently he did not take his closest friends into his confidence, since a single leak would have flooded the country with the story that he was getting ready to pack the Court. He told the Cabinet about the proposals just before he received the Washington correspondents; and he could not hide from the newshawks how happily he appreciated having kept a secret from them.

Other reasons may have prompted him to bring forward the proposals when and how he did. One was that they would overshadow his programme for reorganising the executive branch of the Government. By this the President's power will be greatly increased, and he may have feared obstruction. The reorganisation scheme has now paled into a minor issue. The other reason might have been that he wished to deflect public attention from the motor strike, which had reached an intensely emotional deadlock. A third reason was the approaching Court decisions on the Wagner labour law and on the rights of States to pass minimum wage legislation—both key cases. The proposal was so timed that adverse decisions would have rallied public opinion behind him. A favourable decision would make it possible for the President to compromise.

President's Prestige at Stake

Before this letter can be published the issue may have been decided. It looms at this moment as the most dangerous to Mr Roosevelt of any he has raised at the White House. He is in his second term, subject to the inherent difficulties of all second terms. His grip on his party members in Congress grows weaker, as they listen more to home opinion, and need less his personal leadership in an approaching national campaign. A bitter defeat, due to a popular revolt against tampering with the Court, would blow away the President's prestige in a single gust. Unlike Great Britain, where sometimes it appears that a reputation in public life is harder to lose than to make, America does not maintain loyalties to leadership, and has small pity for generals who suffer setbacks. It is one of the reasons why, in American politics, defeats on questions of principle are so seldom invited.

The opinion of the country on the Court issue is not yet determined. A week ago the President might have felt certain of victory; to-day the opposition is rising. The Conservatives no longer are the only opponents, and they are clever enough to let the Progressives and Liberals do a proportionate share of the talking. The Liberals, however, dislike the President's proposals in the main because they do not go far enough, or rather not deep enough. A compromise with them which limited the power of the Court would certainly reduce much of their hostility. But the public is impressed with the glaring fact that the President has not offended this time the Liberty League—which has remained beatifically silent—but his own Liberal supporters. So the public may not decide on basic values but by the easier criterion of personalities. The danger, then, is acute for Mr Roosevelt. That he is aware of it goes without saying, and he will probably have in view a legitimate and timely exit.

Excess Reserves and the Money Market

NEW YORK, February 23.—As the time approaches for the next increase in reserve requirements, it seems probable that the adjustments of March 1st will be made without shock. Nevertheless, rather interesting changes are taking place in our banks which can be associated with the step towards control. It will be recalled that required reserves were raised 50 per cent., effective August 15, 1936; but the announcement was made some time in advance. The following table shows certain items of the reporting member banks on selected dates:—

ITEMS OF THE REPORTING MEMBER BANKS

	July 1, 1936	Aug. 12, 1936	Feb. 3, 1937
Total loans and investments	22,619	22,324	22,579
U.S. securities	9,510	9,380	9,149
Reserves (total).....	4,487	4,855	5,330
Demand deposits adjusted	14,679	14,752	15,493

The reduction in the holdings of United States securities (following an increase of close to \$1,000 millions in the first six months of the year) was accompanied by an increase in commercial borrowing that has left the total loans and investments almost unchanged, and an increase in reserves. There was recently a rise in the yield on short Government issues, which constitute our money market almost exclusively. To an uncertain but limited extent, the long-term interest rate has been affected. The long-term 2½ per cent. Treasury obligations issued in December promptly went to a premium, which they still hold; but certain high-grade corporate issues that had gone as low as a 3½ per cent. basis have moved to a 3½ per cent. yield. Whether this should be described as an alteration of the long-term interest rate or as a realignment of corporate versus Government issues is a matter of opinion. Further, a considerable number of the new issues brought out in recent weeks has been left with the underwriters; but here again it is disputed whether this represents a temporary congestion, a tightening of the capital market, or merely errors of individual pricing. Perhaps the most that one could say positively is that our money market was on an abnormal basis in 1936, and was directly under the influence of the enormous excess reserves; the absorption of these excess reserves has gone some distance in restoring order to the money market, but as yet there is no indisputable evidence that it has exerted an influence outside the boundaries of the money market, even though such an influence may be inferred.

Stages in Recovery

It is interesting to notice and to analyse the surprisingly clear sequences of phases in our recovery. The initial movement centred in goods for individual consumption—clothing, etc.; the second phase (say late 1934-35) centred in articles for household consumption—automobiles, refrigerators, farm implements, etc., and in light industrial machinery; in 1936 it included residential building (consumer durable goods) and heavier industrial installations or replacements. In early 1937, it has very definitely advanced to include durable goods—steel, railroad equipment, cement, etc., and a certain activity in industrial building. Steel operations, for example, are 50 per cent. above a year ago. Thus far the series has been cumulative—that is, as a new set of industries came into activity, there was no reduction in the type of demand that had previously been most conspicuous. It is a little difficult to date these phases precisely on the calendar, but the sequence of phases is perfectly distinct—individual consumer goods; consumer household goods and light industrial equipment; and now heavy capital goods. While there are still some lagging industries (for well-marked reasons peculiar to themselves), it is now accurate to say that our recovery is comprehensive and complete—using recovery to mean the regaining of a previous level of activity regarded as highly prosperous.

Prices and the Cost of Living

Until June, 1936, industrial production rose by 50 per cent. without affecting the official price index. Since then, however, the price index has advanced from 79 to 85.6, or about 8 per cent. This index is still some 15 per cent. below 1926; but many commodities are at levels which would have seemed familiar in the '20's—in spite of the fact that the index of raw materials is 12 per cent. below that of 1926.

The official cost of living index in December stood at 82; the average for 1935 had been 81; for 1933 (the lowest year) it was 76. Statistically, therefore, the records show (a) that there was a great decline in the cost of living during the depression; and (b) that there has been but a negligible increase with the recovery. *The Economist's* Berlin correspondent remarked some weeks ago upon the difference in the cost of living between a statistical family and a family composed of human beings. The comment has wider application.

COST OF LIVING

B.L.S. 1913=100

	June, 1929	June, 1933	Dec., 1936
Total	173.7	129.8	143.6
Food.....	167.5	102.8	131.6
Clothing.....	165.6	122.8	142.9
Housing	151.9	108.7	106.5

little and recovered little. The key to this index is housing, and rents are shown virtually at the pre-war level, and actually lower than in 1932 or 1933; and, as rents have a substantial weight, this brings down the average materially. Obviously the collection of rental data is the most difficult statistical task in the compilation of a cost of living index; and while no one would question the statistical accuracy of the Bureau's data, the fact remains that no persons of your correspondent's acquaintance believe that rentals of equivalent dwellings are so near their pre-war level. On the other hand, it appears to be true that so far in the recovery, rents have advanced rather less than other elements of the price structure. The general increase of retail prices in recent weeks has been sharp enough and comprehensive enough to make it a matter of common fireside discussion.

France

Failure to Restore Financial Confidence

PARIS, March 4.—The situation is still characterised by the divorce between the Popular Front Government and the capitalists. The difficulties of the Treasury and the problem of the Equalisation Fund remain all-important. What can the upshot be when, as M. Blum has pointed out, no alternative government is possible? M. Blum's statement seems to be borne out not only by the state of parties in the Chamber, but also by the weight of public opinion in the country. The importance of the financial difficulties is not realised, while, on the other hand, people can see the evident revival of business. Consequently there has been an increase in the deposits in the Public Savings Banks since the beginning of the year; but the Rentes decline and currency comes on the market.

Will the further financial difficulties lead the Government to a further devaluation, which would yield 9,000 million frs. to the Treasury through a revalorisation of the gold stock of the Bank and the 10,000 million frs. of the Equalisation fund; or to a control of the exchanges? Whatever the solution adopted, will the Tripartite Agreement be abandoned?

M. Blum, however, has just declared at a luncheon given in honour of the retiring British Ambassador that: "We attach to the tripartite financial agreement an importance which is no way less than that accorded it by Great Britain. Our policy will be so directed as to do nothing which would contravene either the letter or spirit of the agreement." It remains to be seen whether this solemn declaration will finally convince investors that there is to be no nationalisation of credit or key industries, and no control of the exchanges—panaceas which are daily advocated by the leaders of the trade unions. It remains true that the Cabinet is rightly or wrongly, regarded as thriftless and prodigal by those whose confidence is sought in this crisis.

Moreover, all the concessions made by the Government, the "breathing space," and the appeal by the trade unions to their members to work harder to offset the decline in production which followed the 40-hour week, have had little effect compared with the doctrinal sacrifices which they represent. It appears, therefore, that to stem this stubborn psychological current, there must be a change in the personnel of the Government—a change in the men in office. This would, however, look like a condemnation of the Townsend policy, and M. Blum has declared against any retreat or denial of his former social policy. Moreover, is the Senate ready to play the rôle of the American High Court of Justice and to aid this change? During the last few days the Upper

House, the radical members of which represent mainly the interests of farmers and of saving, has become increasingly aggressive.

Declining Coal Production and Rising Demand

The production of coal was 3,725,130 tons in January, 1937 (21 working days), against 3,923,827 tons in December, 1936 (23 working days), and 4,172,186 tons in January, 1936 (23.2 working days). The average daily production was 177,400 tons in January, against 170,600 tons in December, 1936, and 180,000 tons in January, 1936. The number of men employed was 233,527 at the end of January, 1937, against 223,524 at the end of January, 1936. The production of coke in the coke plants of the coal mines was 329,197 tons in January, against 321,265 in December, and 348,573 in January, 1936.

The decline in the production because of the 40-hour week and the rising demand, a consequence of the revival of business and the fear of higher prices, have led the Government to increase the coal import quota from 58.5 per cent. to 65 per cent. The mines were unable to meet the demand in spite of an increase of 10,000 in the number of workers compared with January, 1936.

Meanwhile the 4½ per cent. Rentes have lost three points in two days; and the general movement of public funds, since devaluation has been as follows:—

	1936		Before Devaluation		After Devaluation	
	High-est	Low-est	High-est	Low-est	High-est	Low-est
3% Perpétuelle	81.60	65.05	73.60	65.05	81.60	70.45
4% 1917	82.10	62.95	75.95	62.95	82.10	68.45
5% 1920	106.50	83.25	103.70	83.25	106.50	92.50
4½% "A"	87.70	67.35	83.45	67.35	87.70	71.50

In spite of the failure to restore confidence, the revival of business and the rise in prices have led to a further dishoarding of capital, as shown by the downward trend of bank deposits.

	Dec. 31, 1935	Nov. 30, 1936	Dec. 31, 1936
	Francs ('000,000 omitted)		
Crédit Lyonnais	10,661	10,614	10,413
Société Générale	8,780	8,867	9,017
Comptoir National d'Escompte	6,733	7,024	7,456
Crédit Ind. et Comm.	1,417	1,507	1,595
Totals	27,591	28,012	28,481

Unemployment at the end of February was 415,580, against 420,597 in the preceding week, and against 489,639 a year ago.

Germany

The Confiscation of Private Property

BERLIN, March 3.—Although Planning is almost as popular a word here as in Russia, whence it was borrowed, and even appears in the title of a new public institution, Nazi measures for the regimentation of business seldom embody any thinking in advance. The measures have a hand-to-mouth character. It is true that in the original Party programme there appeared comprehensive schemes for the dissolution of large estates and the reconstitution of department stores as congeries of petty bazaars; but political or practical business considerations prevented the execution of these projects. Private property has been confiscated in a disorderly and piecemeal fashion, but in the end it has been done almost as thoroughly as if confiscation had been planned on ideological grounds.

It is generally believed by foreigners that the Nazi Party favours private property; and this is sometimes cited as the main difference between it and the Russians. This foreign view is correct: the Party does, in principle, favour private property, and has even, in practice, shown its aversion to State ownership. Yet the Government is being compelled by immediate unforeseen exigencies to confiscate private property all along the line. This fact is overlooked abroad because the Reich has taken no sweeping and avowedly confiscatory steps. Nevertheless, the process goes on, the main difference from Russia being that here the capital and the physical equipment of production are still privately owned,

though rigidly State-controlled. But the products are no longer privately owned. The Supervision Boards, the Nutrition Corporation, and other State organs, have taken measures which virtually constitute confiscation. This applies to nearly all raw and semi-manufactured materials, partly to manufactured goods, and to all major food products. This situation is the result of piecemeal interference without planning. The control of food and in particular the marketing policy—a long chain of ineffectual amendments—is the best instance of this. The Government believed that its policy would ensure an adequate food supply at profitable and tolerable prices; but this expectation was not fulfilled. The result has been compulsion to deliver. This was quite contrary to the original Party theory that only measures in the farming interest would be necessary.

The Impounding of Foreign Securities

The food shortage is probably the immediate cause of the new confiscation of foreign securities. This confiscation is certainly not the result of plan; for the default on the bonds service of mid-1933, was officially justified on the ground that it would facilitate the creation of new currency reserves. The regulation of crops and food imports were to help towards the same end. Just as the food shortage led to numerous partial and ineffective confiscatory measures, so has the exchange shortage. It is not publicly known what resources are available to pay for the additional food imports needed. The real reserve position is not shown in the Reichsbank's returns. Last winter the Government proclaimed an amnesty for exchange hoarders, and simultaneously decreed capital punishment for the worst offenders. The result was a panic among hoarders. According to private statements no less than Rm. 280 millions of hoarded money or securities were delivered up before the brief amnesty expired. It is said that the official collectors' desks groaned under packets of decayed Swiss and other foreign banknotes unearthed from the cellars of terrified, but not necessarily contrite, hoarders. This new foreign currency reserve does not appear in the Reichsbank's returns, which continue to show the gold and foreign exchange holdings at Rm. 73 millions.

Under the November decree, which impounded in exchange banks all foreign securities officially or unofficially dealt in on home Bourses, further exchange was gathered in. Before this week the owners of these securities were actually free to sell to private individuals; but the Gold Discount Bank induced them to sell to it by offering them 20 per cent. above the Bourse value, which had meanwhile been heavily depressed by official measures. It seems that the Gold Discount Bank escaped a book loss on these purchases by buying up blocked marks abroad at a heavy discount and paying the security sellers with these marks. As the blocked marks were depreciated by more than 20 per cent., the State got hold of the foreign securities and also made a substantial profit.

Food, Pigs, and Lack of Foresight

Nevertheless, the exchange shortage seems to be as acute as ever. When the long-concealed shortage of cereals was divulged last winter, it was estimated that Rm. 250 millions would be required for additional imports of grain and fodder. This was a major instance of miscalculation. As late as October last, when the depletion of the carry-over and the quantity of the new harvest were both exactly known, the Nutrition Corporation expressly affirmed that the supply of cereals and fodder was sufficient. The Party organ, *Deutsche Landwirtschaftliche Presse*, now gives an even less favourable account of the position than the earlier unofficial account, which estimated the shortage of cereals and of fodder at 2 million tons. According to the Party journal, an import of 3½ million tons is needed. The present 25 million pigs consume 20 million tons, against 8½ million tons needed by 70 million humans. An increase of 2½ millions in the number of pigs involves a supplementary need of 2 million tons of fodder. To this must be added a shortage of 1½ million tons of fodder for normal needs, and of ¾ million tons of cereals,

making in all 3½ million tons. The fodder problem is all-important, and it will be necessary to adapt the number of livestock accordingly, that is, to kill off the surplus pigs.

The Food Minister has inopportunely published a book condemning the alleged unnecessary "pig murder" during the war, supposed to have been one cause of Germany's defeat, and duly imputed to Jewish professors. The official reasons given for the new food shortage do not give evidence of much foresight. One reason often given is that increased prosperity caused a great rise in consumption. As this prosperity was officially predicted four years ago, its effects on the food supply ought to have been foreseen. In fact, no measures were taken until after the whole control and marketing system had collapsed.

Hungary

Rising State Revenue

BUDAPEST, February 10.—Budget receipts in the first six months of the current financial year have increased by 10 per cent. because of rising prices and better business conditions. From July to December, 1936, the revenues of the Budget proper amounted to 445.7 million pengő, against 406.4 millions in the same period of 1935. As total revenue for the past financial year was just about 800 million pengő, it is not unreasonable to hope that in the current year receipts will reach 870 million pengő. The increased receipts from taxation will enable the Treasury to finance the deficit of the State undertakings without recourse to the money market. It is one of the most satisfactory signs of the recovery that for the second consecutive year the Government did not absorb the very limited liquid resources of the country.

The absence of borrowing in the open market, however, did not stop altogether the increase of the floating debt. Indeed, according to the official figures as published in the last report of Mr Tyler, the representative of the Financial Committee of the League of Nations, the floating debt of Hungary increased by 8.9 million pengő in the last quarter of 1936, in spite of the excess of actual receipts over actual expenditure. It must be added, however, that the cash position of the Treasury has been improved considerably during the same period; and consequently the liquid public balances available at the National Bank have risen by a far greater amount than the increase of the State's floating debt and its commitments.

The deficit on the State undertakings is estimated in the Budget at 59 million pengő. It is now certain that it will not exceed 40 million pengő, and probably it will be less. Railway receipts increased by 10 per cent. in the first half of the financial year, and expenditure rose by 6 per cent., so that the chronic deficit, though likely to

Family provision scheme

A scheme to secure a Capital Sum payable at death and a regular income over a period of years for dependants in the event of early death, at a cost which is little more than that of ordinary life assurance. It is readily adaptable, and rates will be quoted on application for policies to suit the needs of each individual.
