That the Hungarian Government is resolved to pursue a sound financial policy was amply demonstrated by the Prime Minister's announcement that the 1937-38 Budget, which will be submitted to Parliament in April, will be drawn up on a conservative basis. It will still, however, disclose a deficit, in spite of the good actual returns, revenue estimate. The Premier's warning against excessive hopes of providing for ambitious schemes involving an increase in the permanent expenditure (as advocated by certain political and other groups at home) was very timely. Those in charge of Hungarian financial policy have learned the bitter lesson of the 1931 deficit, which was the result of a steady increase in permanent expenditure. It is now realised that certain permanent expenditure items, like pensions, are bound to increase in the next few years, whether receipts continue to rise or not. Furthermore, a modest investment programme will have to be financed out of taxation; under the system of Hungarian accounting, items which really provide for the replacement of obsolete plants or the repair and re-equipment of buildings have often been entered in the past as capital expenditure; the Government certainly deserves credit for striving to adopt a more adequate policy. In order to satisfy these needs there is to be no reduction of taxation on any appreciable scale in spite of strong pressure from certain political and business circles.

Foreign Debt Problems

The improved budgetary position led certain groups of foreign creditors to believe that Hungary could increase transfers for the service of debt. This is, however, not the case. With the exception of direct transfers for the interest service on the League loan, amounting to 3½ per cent. (instead of the original 7½ per cent.), foreign exchange has not been available for the service of other debts unless foreign creditors sacrificed some of their claims to finance the so-called additional export schemes. These exports are encountering increasing difficulties, and in the case of the United States countervailing duties have entailed their suspension altogether. This instance is a timely reminder to both Hungary and her foreign creditors that debt settlement cannot be based on exports fostered by the methods practised at present. Hungary's capacity to transfer cannot be gauged as long as additional exports at varying pengő rates are in force.

The short-term creditors received about 2 per cent. interest in their original currency from the proceeds of the blocked pengő balances, and some more as capital repayment. The long-term bondholders (other than the holders of State loans) received in blocked pengő 5 per cent. interest; this they could sell to third parties for sums amounting to 1½-2 per cent. in their original currency; or they could freely spend it within Hungary, where their returns would correspond to about 3½ per cent. The Treasury billholders receive from the proceeds of the 2½ per cent. (paid in pengő) about 1½ per cent., in convertible foreign exchange. The worst treatment at present is meted out to the pre-war bondholders of what is known as the Caisse Commune debts. There is little doubt that the whole complex of the pre-war debts, in which not only Hungary but the other Successor States, notably Roumania and Jugoslavia, are interested, must be put on a more satisfactory basis. The service of the bonds since 1931 has been—to say the least—erratic, and has differed according to the nationality of the holders; and, if any, only a fraction of the original scale of the Paris Protocol was paid. On the other hand, in the case of the post-war debts, Hungary has faithfully observed the right of equal treatment to all national groups. The pre-war debts, though they show a very impressive figure at their nominal value, are far less significant to-day than the post-war debts.

Since a very considerable part of Hungary's bonded foreign loans has been repatriated, it is rather difficult to arrive at an exact figure of the country's outstanding foreign debt at present. Mr Tyler's last report quotes an estimate of 2,400 million pengő. Other estimates range around 2,000 million pengő. Another difficulty is to

translate those pengő estimates into foreign currencies. It is perhaps safe to say that Hungary's foreign debt which in 1931 was estimated at £150 millions (4,300 million pengő) is now less than £100 millions, and that the value of interest paid in pengő in direct and indirect transfer is about £2 millions; and about £1 million has been handed over for capital repayments. This corresponds roughly to an average interest rate of 2 per cent., but the interest paid on different loans varied from 3½ per cent. paid on the League loan to about half of that in the case of other loans (except the Caisse Commune bonds).

Japan

A Stop-Gap Government

Tokyo, February 10.—The temper and hostility of the Lower House against the Army forced the resignation *en bloc* of the Hirota Ministry on the re-opening of the Diet after the New Year recess. General K. Ugaki was sent for, but on account of the bitter and determined opposition of the military authorities, he failed to form a Cabinet. General S. Hayashi, the War Minister in the Okada Cabinet, was then charged with the formation of a Ministry. After an unsuccessful attempt to organise a Radical Government, he agreed to recruit the Services Ministers from the moderate elements. His Cabinet was installed on February 2nd. The Premier himself took the portfolio of Foreign Affairs, and Mr T. Yuki, Governor of the Japan Industrial Bank and President of the National Chamber of Commerce and Industry, became Finance Minister. The two major parties, the Minseitō and the Seiyūkai, were not represented in the new Cabinet. Thus the new Ministry is, like its predecessor, a stop-gap Government.

The new Government has withdrawn the Finance Bills and other measures introduced by the preceding Ministry and has drastically amended most of the reform programme. The new Finance Minister has dropped the sales tax and the general property tax; he has discarded the proposals which would accelerate the rise in prices (such as the general revision of the tariff); and he has suspended the plan for the reform of local taxation which might have led to the disintegration of local government. On the other hand, he has reduced expenditure by some 270 million yen. The new Budget policy has been generally well received, particularly in financial circles. Opinion has been much relieved by the continuation of the collection of income tax at the source in respect of deposits and debentures.

Rapid Rise in Imports and Prices

Cotton spinners have been speeding entries in anticipation of import restrictions, and cotton imports last month reached a record monthly total in the past decade. The January returns show that imports, at 304,126,000 yen, were 59,187,000 yen, or 24.2 per cent., in advance of those of January, 1936, and exports, at 200,370,000 yen, had risen by 25,823,000 yen, or 14.8 per cent. Although raw cotton accounted for three-quarters of the increase in imports, there were other notable increases in crude rubber, iron and steel, and beans. The chief declines were in wool and petrol. In exports, an advance in cotton piece-goods was nearly offset by a decrease in raw silk. The import surplus for the month amounted to the unusually large sum of 103,756,000 yen, which is 33,364,000 yen greater than a year ago.

The Bank of Japan's wholesale price index number for January registered a further steep rise of 8.6 per cent. This was an advance of 21.6 per cent. on a year ago, and the highest since August, 1926. The output of cotton yarn during January was 130,468,000 lbs., 190,000 lbs. less than in December; and rayon production last month totalled 25,260,000 lbs., a decrease of 244,000 lbs. on the preceding month. The New Year holidays were responsible for the decline in both cases. The aggregate value of all shares listed on the Tokyo Stock Exchange on February 1st had risen by 227.9 million yen, or 3 per cent., compared with a month ago.

Letters to the Editor

American Floods and Strikes

TO THE EDITOR OF THE ECONOMIST

SIR,—In your issue of January 30th (page 230), under the heading of "Floods and Strikes," there is a certain amount of incorrectness, I believe.

In the first place, according to information available to me, stronger Federal control of our national economy is not necessary for flood prevention work, because there has always been, as nearly as I can discover, Federal control of all navigable streams; and various Congresses have been appropriating money for years for flood prevention. I cannot remember interference with Federal efforts along this line on the part of any State.

In the second place, your reference to the Motor Strike, in which you recite that General Motors Corporation is arbitrary, seems to be decidedly at variance with much excellent opinion here. You apparently do not remember that Lewis and his strikers muscled-in, to use an Americanism, and took possession of private property, holding it and defending it as property is seized in an enemy country during time of war. This is the principle on which General Motors Corporation has taken its stand, and it has obtained a writ to evict the strikers from its property; but up to now our executive officers have not seen fit to give their support to court orders. The proposition is fundamental. Can private property be invaded and held, and are we scrapping our judicial processes, because our executive officers prefer to support the demands of the lawless?

Very truly yours,

RALPH FORDON.

Detroit.

[1. The Federal power over navigable streams is inadequate for flood control. Not all rivers are navigable, and even of those that are, flood control may require damming of the unnavigable head waters and of the riparian territory.

2. The word applied to General Motors Corporation in the Note alluded to by Mr. Fordon was "recalcitrance," and referred to the Corporation's refusal (at that time) to obey the Federal Government's invitation to negotiations. There was nothing in our Note which could be taken as excusing the illegal attitude adopted by the strikers.—Ed., *Economist*.]

Hire Purchase Finance

TO THE EDITOR OF THE ECONOMIST

SIR,—The insertion of my letter to you of the 24th ult., is appreciated. Will you please, however, permit me to say that of the companies whose names are given in my letter, the three whose hire purchase businesses have become merged in this company and its associated undertaking, "the Lincoln," are:—

The Lancashire Wagon Company, Ltd.

The Bristol and South Wales Railway Wagon Company Ltd.

The Yorkshire Railway Waggon Company, Ltd.

The Scottish Waggon Company, Ltd., The British Wagon Company, Ltd., and Wagon Finance Corporation, Ltd., are not associated either with this company or the Lincoln Wagon and Engine Company, Ltd., in anyway.

The name of one company engaged in the hire purchase of road vehicles since 1902 was, unfortunately, omitted from my letter of the 24th ult., viz., The British Railway Traffic and Electric Company, Ltd., and they are associated with The British Wagon Company, Ltd., Rotherham.

Will you please also permit me to say with regard to your editorial comment at the end of my letter in your issue of the 27th ult., that the operations of certain if not all the companies whose names have been mentioned are not confined to railway wagons—their activities include railway locomotives and all classes of road transport vehicles, agricultural plant, machinery, aircraft, etc.

Faithfully yours,

D. W. REES.

A Road and Rail Controversy

TO THE EDITOR OF THE ECONOMIST

SIR,—Perhaps you will allow me a few lines in which to reply to the charges made by the writer of "A Railway View," and contained in his letter published in *The Economist* on February 20th.

There is no need for me to traverse the whole of his arguments, which have already been answered in your issue of last week by the writer of the road article, but your correspondent, although he agrees with me that "epithets are not evidence," goes on to charge me with garbling and with misquotation. It is perfectly true that I took a portion of a sentence of his and included it in my letter without the context. This was not in the slightest degree meant as an attempt to comment on that particular sentence, but because I thought, and indeed I still think, that the phrase which I quoted represented shortly the main complaint contained in the railway case; namely, that their rates are fixed by statute and they are not free to charge what they will.

For the rest, the letter in no way answered the main point of mine which is that the ordinary contention of the railways that the best of the traffic is taken by the roads had apparently been disproved by the writer of the article from the road point of view. The remarks which he set forward have not yet been traversed in this correspondence. Doubts have been thrown upon their legitimacy, but they have not been contradicted, nor have other figures been quoted to show that they were wrong. One can only presume that they were right.

I think that this, together with the admitted fact that 69 per cent. of the railway traffic is carried under "exceptional rates" or "agreed charges," dismisses the main complaint of the railways.

Yours faithfully,

H. E. CRAWFORD.

Books and Publications

The French Army

ONE fact which emerges clearly from Mr Davis's study* of the French army is the growing conviction among military and informed civilian opinion that France cannot be content to rely on a conscript army without a fairly substantial basis (or *cadre*) of professionals. Soon after the war, owing to the superior attractions of civilian life, there were only 50,000 professional soldiers left. In 1920, when the proposal to reduce the conscript army to a one-year service basis was made, a strong demand was put forward simultaneously in the Senate for a professional army of 150,000 men. The proposal was not accepted, but when in 1923 the period of service was reduced to eighteen months, it was agreed to have a professional nucleus of 100,000. Yet in 1926, when one-year service was established under Poincaré, these men had not been recruited, and it was only some years later that an army of 106,000 (of whom 64,300 were non-commissioned officers) was successfully enlisted. These regulars were, Mr Davis says, in imitation of the post-war German Reichswehr, the highly efficient weapon forged by General von Seeckt.

The second strengthening of the old conscript army came through the institution of "disponibilité." "Disponibilité" meant that the last two classes which had been called to the colours held themselves ready, either for general mobilisation or for specific recall to active service. Since young reservists who had just completed their training were at least as valuable as raw conscripts, "disponibilité" gave the Chamber power in a crisis to triple the size of the army. Considerable encouragement is also given to boys to acquire "elementary military training certificates" before they enter the army, but there is no such concentration upon the militarisation of youth in France (nor, it seems, are youths so willing to undertake it) as in the Fascist countries.

So much for the home forces; but France has not ignored the colonies (especially Algiers and Tunis) as a source of man power, and the expression "France—a nation of 100 million inhabitants" may, indeed, partly explain Germany's campaign for the return of colonies. Much, however, depends upon France's ability to transport her African troops, an ability which may be much weakened by an insurgent victory in Spain. The army must remain France's first line of defence. At sea her dependence upon submarines is a confession of comparative impotence. But in the air it is important to notice that she is beginning to rely more upon quality than upon quantity. Her air fleet actually fell in numbers between 1934 and 1935; but the quality both of military and of civil craft has correspondingly improved, and her factories seem to be well organised.

The disadvantage of a book such as this is that there is an inevitable time lag in the publication of military statistics. It is a pity, however, that there has also been a considerable lag between the time of writing and of publication. The return from one to two years' service in 1935, which was unavoidable in view of the "lean years" for French man power twenty years after the war is mentioned but not discussed. No comment is made upon M. Blum's Act for the Nationalisation of War Industries, nor upon M. Pierre Cot's plans for close national control of aircraft factories. The book ends on a note of gloom, if not of panic. But one might well remember that, from the time of the French Revolution onwards, it has only been in wartime that democracy has shown its full military capacities. Mere comparisons of peace-time preparations and of birth rates do not tell the whole story. In "total war" the spirit as well as the material matters.

Shorter Notice

"Thy Neighbour." By Lord Melchett. Frederick Muller. 286 pages. 7s. 6d. net.

Lord Melchett published his declaration of faith about the solution of the Jewish problem in the Jewish National Home when the Royal Commission was about to examine the underlying causes of the troubles in Palestine. His book is a moving and eloquent appeal, written with glowing sincerity and conviction, for the application by the Christian world to the Jews of the maxim common to Christianity and Judaism, "Love thy neighbour as thyself." He sees in the British declaration of 1917 about the establishment of the Jewish National Home, "an outstanding act of dramatic significance in the history of many centuries." The return to Palestine is "a question of the bare and bitter necessity which drives the Jew out of a Europe which ruthlessly persecutes him."

The theme of the book is the achievement and promise of Zionism, and the place which the Jewish National Home should take in the British Empire; to Lord Melchett's mind the destinies of the English and the Jews are interwoven. He prefaces a survey of Jewish persecution throughout the ages, and of Jewish misery in Eastern and Central Europe to-day. He has a gift for picking out the essential and dramatic incidents, which enables him to compress the story of the Jews, "from Abraham to Disraeli," in less than fifty pages. He has a gift, too, for simplifying the problem of to-day in Palestine. It may be that he over-simplifies it and has too little regard for the national feeling of the Arabs. For him it is enough that Jewish settlement in Palestine brings social and economic improvement to the Arab population. The Government, he thinks, must uphold firmly the principles of the Mandate; it must allow Jewish expansion in Trans-Jordan; it should set up a Jewish Defence Force in Palestine to withstand any outbreak, and so make it unnecessary to maintain a large body of British troops; and it should be prepared to constitute a Legislative Council of Arabs and Jews on a basis of parity, if the Arabs would accept the principle of the National Home.

The Arabs, he believes, are developing a social conscience; thanks to Jewish example, a democratic ideal will gradually pervade their community. His enthusiasm and his conviction help him to leap over obstacles which may seem serious to the Royal Commission; but his pleading is always straightforward and wholehearted. The world, he insists, must face up to the Jewish problem. There is no hope for Jewry save in the establishment of the National Home. "We must go back to Eretz-Israel; it is our Destiny, it is our own acknowledged Right."

MONEY AND BANKING

Four Years of American Banking

It is exactly four years this week since the collapse of the American banking system reached its sensational climax. On Saturday, March 4, 1933, the day on which Mr Franklin Roosevelt became President of the United States, every bank in the country was closed.

It is difficult now, short though the intervening period has been, to recapture the atmosphere of those days, or, in the conditions of to-day, to realise the magnitude of the contrast between now and then. Then there was a "liquidity panic"; now liquidity is a burden to the banks rather than a hysterical ambition of the depositor. Then loans were being called on every hand; now the borrower is eagerly sought after. Then to be a banker was to be a leper; now once more the profession is respected, even though it is no longer so all-powerful as in the past. The most striking sign of the change is to be found in the figures relating to bank closings. In the nine fat years to 1929 the average rate of bank failures was exactly two a day. In the two years 1934-35 the average rate was less than two a week. In the circum-

look of American banking has been the metamorphosis which came over the whole economy of the nation at the same time. Whether it was Mr Roosevelt's merit, or merely his good fortune, it is in any case certain that since March, 1933, the American economy has been expanding, activity has been increasing and prices are rising. Moreover, unlike the nineteen-twenties, exception need not be made for the agricultural districts where bank failures had been most plentiful. In such circumstances it requires quite egregious mismanagement to cause a bank failure.

These two factors really tell the whole story; for the remaining changes in American banking are merely incidentals. The recovery of liquidity has, for instance, been powerfully assisted by the enormous inflow of gold from Europe since 1933. But gold was, on balance, flowing into the country before 1933 (though, of course, in very much smaller quantities). Further, the public's confidence in the solvency of the banks has been buttressed by the existence of the Federal Deposit Insurance Corporation. But there have been few calls upon the corporation's services. Congress has been busy with banking legislation. But, in broad outline, the organic structure of the system is substantially unchanged. In particular, nothing has been done about the salient

(Index Numbers, December 1932=100)

Reserves, Deposits and Loans, refer to Reporting Member Banks (101 cities to September 1934, 90 cities thereafter, the two indices linked); The Debits curve is derived from the Standard Statistics Co's index.

stances of American banking, it can be said that the endemic disease of bank failures has been cured.

What has worked the miracle? First and foremost, the restoration of confidence. Mr Roosevelt's great achievement in his first weeks of office was primarily psychological; he persuaded his fellow-countrymen that the worst was passed. It is, of course, true that some recovery was almost certain to follow so complete a collapse. When every bank was closed, it was possible for the first time to believe that there would be no more failures, that every "sore spot" had been exposed and every weakness detected. It is characteristic of the history of banking crises that, once the panic is stayed, recovery comes quickly.

The second cause of the surprising change in the out-

weakness of American banking, namely, the existence of a myriad of individual unit banks, each too small to secure proper diversification. Substantially, the American banking system is unreformed, and he would be a bold prophet who would deny the possibility of another panic in the next period of deflation.

The story of the last four years is told in the accompanying statistical table and also, graphically and with less detail, in the diagram. The most remarkable occurrence has been the very large increase in the Member Bank reserves—"bank cash." This has not been due, to any substantial extent, to deliberate expansion of the credit base by the Reserve authorities. The Reserve Banks made some purchases of securities in 1933, but since October of that year their portfolio has been unchanged. Nor is the expansion due to the devaluation of the dollar. The great bulk of the "profit" resulting from that transaction is still impounded in the Treasury. It has been entirely due to the inflow of gold.

As can be seen quite clearly from the chart, the total of deposits has been quite unable to keep pace with this rapid expansion of reserves. As a result, there has been a large amount of "excess reserves" (a phenomenon for which banking theorists had made no provision),

and the Reserve authorities have had to absorb the excess by doubling the ratios of reserves required by law until a New York or Chicago bank must now hold cash to the amount of more than a quarter of its demand deposits. The last increase in reserve requirements had not taken effect by the latest date shown in the table.

The increase in deposits, compared with anything but the simultaneous increase in reserves, has been very rapid, and the total is now back to, or above, the level of 1929. Two interesting facts should, however, be noticed. In the first place, the increase in the total turnover of money, as reflected in bank debits, has only just kept pace with the increase in demand deposits; in other words, the velocity of circulation of money still remains at the very low level touched at the bottom of the depression. Undoubtedly what has occurred (though there can be no proof of it) is that many deposits have been turned over with increasing rapidity, but that this has been offset by the continuous creation of new deposits which have lain idle. Light can be shed on this by the second fact to which attention may be directed, namely, that the increase in deposits has not been accompanied by any increase in loans. The new deposits have been brought into existence entirely through the medium of purchases by the banks of Government securities. Moreover, the new securities have been created for the purpose; they represent the deficit.

The story of the last four years in American banking can thus be summed up in five words: gold imports and Budget deficits. They have combined to produce a quite astonishing degree of liquidity. But they have also combined to change, at least for the time being, the dominant function of American banking. For the banks now finance the Government rather than industry, while it is the Government, through its expenditure and its credit institutions, which, to an increasing extent, finances industry. That the Federal Reserve authorities are determined to use every weapon in their formidable armoury to prevent liquidity from begetting inflation, is clear from their recent actions. Whether they also have answers to the other questions raised by the development of American banking since the crisis of 1933 is a matter which can usefully be discussed four years hence.

Financial Notes

The Banks and Gilt-edged.—A writer in the latest issue of the Midland Bank's *Monthly Review* has advanced a new explanation of the February decline in the gilt-edged markets. In brief, he says that "for a number of weeks from the middle of January there was a sharp, much more than the usual seasonal, shrinkage of cash reserves." The writer ascribes this to exceptionally large revenue receipts by the Treasury; to the operations of the Bank of England; and to the currency requirements of the public. He draws the natural inference that a shortage of bank cash, persisting over more than a brief period, compels the banks to restrict credit, thereby bringing about a rise in interest rates and a fall in capital values. This is an interesting explanation, but it is difficult to reconcile it with such facts as are so far available. For example, the Bank of England returns for January and February show the following position:—

	Jan. 13	Jan. 20	Feb. 17	Feb. 24
	£ mill.	£ mill.	£ mill.	£ mill.
Note circulation	455.0	450.5	453.3	455.1
Securities in banking department	116.4	105.9	109.0	110.2
Public deposits	12.4	13.6	24.4	13.0
Bankers' deposits	106.7	100.3	90.6	100.4

Apart from a temporary drop in bankers' deposits on February 17th, due to passing inequalities in the dates of Treasury bill payments and maturities, there is no evidence of any serious reduction in the supply of bank cash, nor of the existence of any of the underlying causes suggested in the Midland Bank's *Review*. On the other hand, it was believed in the money market that the Midland Bank itself was unusually short of cash during

most of February, but that this shortage did not extend to the remaining banks. The absence of any increase in public deposits at the Bank of England proves that as the revenue surplus accrued it was applied to the redemption of Treasury bills, but it may be that while the Midland Bank's customers paid their full quota of taxes, the Midland Bank only held a small proportion of the maturing Treasury bills. This would explain the Midland Bank's shortage of cash, but it is far from establishing the existence of a general shortage of bank cash, of which at present there is no evidence.

Nevertheless, the writer of this article has aroused one or two interesting lines of thought. First as to the effect of heavy revenue collection upon the money market. Broadly speaking, as the revenue surplus is applied to the redemption of Treasury bills, the banks recover in Treasury bill excess maturities the cash lost by them in the form of tax payments by their customers. This recovery, however, is not quite instantaneous, and at a time when large sums of money are passing to and fro between the banks and the Treasury, each individual bank may not quite know where it stands, while the net result may be that some banks gain cash at the expense of the others. Hence the banks display a certain caution in lending, and so these months of heavy revenue collection cause a certain "stickiness" rather than "stringency" in the money market. Another interesting point is that while, since January 9th, there has been a reduction of £94 millions in the total Treasury bill issue, £15 millions of this reduction was in tap bills and only £79 millions in tender bills. Due allowance must be made for a simultaneous increase of £10 millions in Ways and Means advances from public departments, but it certainly looks as if some of the money collected recently in revenue has not re-emerged in redemption of tender Treasury bills. Whether the departments have been acquiring longer-term securities, or whether the Exchange Equalisation Account has been buying gold, is a matter for surmise, but in any case the net absorption of bank cash is insufficient to explain the sharp setback in gilt-edged prices.

The Spanish Default.—An interesting situation has developed concerning the Spanish trade bills drawn under the "Madlon" agreement and accepted by various London houses. When these matured at the end of February, payment was not forthcoming. It transpired that the Bank of Spain had previously lodged with one of the London clearing banks funds more than sufficient to meet the maturing bills, which total about £200,000. When, however, instructions to pay were issued, the clearing bank refused on the ground that it was not satisfied that there was any authority to issue such instructions. This may be considered to be a surprising step, although it is claimed to be in line with the cautious policy adopted by banks as regards payments concerning countries involved in war, especially when, as in the present case, the territory is divided between the two sides. However, as the clearing bank had accepted these funds, after the outbreak of the revolution, from the Valencia Government, which is still legally recognised by this country, its action is open to grave question. But this does not excuse the default, which throws the burden on to the acceptance houses, who are entirely innocent of these political complications and are only concerned with the Bank of Spain. The Spanish Government would have been well advised to have met the maturing bills out of the other sterling balances which they are understood to hold in London, and having acquitted themselves and the acceptance houses, to have brought a legal action against the clearing bank for the recovery of the deposit. There can be little doubt as to the issue of such an action; and it is, it must be supposed, what the clearing bank is waiting for, so that

it may be relieved of the necessity of taking a decision that might conceivably involve it in a heavy loss. The situation at present is a deadlock, and until action is taken by the Bank of Spain, will remain so. It will be interesting to see what happens in the case of the "Moreno" bills which begin to mature, and are for a much bigger sum. It would be best for the name of the Spanish Government in the City that they should be promptly met, whatever complications there may be concerning the Spanish funds held by London banks.

"Insurance Accounts Without Tears."—An expert actuarial correspondent raises some important questions regarding the leading article on insurance accounts which appeared in last week's issue of *The Economist*. He contends that although the Act of 1909 provided for the separation of insurance funds, and, indeed, specifically stated that each fund shall be absolutely the security of the policy-holders of that class, this intention is rendered nugatory because investments of these separate funds are not required to be segregated. This is a distinction which is well known to the insurance world, though it is not stressed by some legal authorities. It does not, of course, affect the general principles on which insurance accounts are prepared, and our article was intended to provide no more than a simple exposition of the accounting methods applied to insurance business. For that reason it adopted terminology calculated to appeal primarily to the layman rather than that which our insurance correspondent might have used. It may, however, be remarked that the problem of segregating the assets of each fund received special attention by the Clauson Committee, whose report of 1927 contained a draft Bill providing for the segregation of assets as well as funds. This Bill, however, still remains on the stocks, but the Departmental Committee which is now considering compulsory insurance is understood to have devoted some attention to the matter. So far, indeed, as life assurance is concerned, a change in the law is probable. As regards other departments, it is a highly debated matter. It is hardly necessary to emphasise that, so far as the great British offices are concerned, the segregation of assets would in no way increase their massive security.

The Money Market.—It has been a fairly quiet week in the money market. Conditions have been easy in spite of the drop in bankers' deposits, but at least one of the clearing banks has been calling every day, possibly owing to substantial revenue payments not entirely offset by redemptions of Treasury bills held by that bank. Rates are a shade easier.

	Feb. 11, 1937	Feb. 18, 1937	Feb. 25, 1937	Mar. 4, 1937
Bank rate	2	2	2	2
Clearing banks' deposit rate	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Short loan rate:—				
Clearing banks	$\frac{1}{2}$ – $\frac{1}{2}$ *	$\frac{1}{2}$ – $\frac{1}{2}$ *	$\frac{1}{2}$ – $\frac{1}{2}$ *	$\frac{1}{2}$ – $\frac{1}{2}$ *
Others	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$	$\frac{1}{2}$
Discount rates:—				
Treasury bills	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$
Three months' bank bills	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$	$\frac{1}{2}$ – $\frac{1}{2}$

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The clearing banks have been buying a few April and May maturities at their minimum rate of $\frac{1}{2}$ per cent. The discount market is very quiet and the prospect of an extra £5,000,000 at Friday's tender makes little difference.

The Foreign Exchanges.—The foreign exchange market has been dominated of late by the ever-increasing rumours that some further measure of depreciation of the franc will shortly be decided upon by the French Government. This has caused heavy selling of francs, particularly against dollars, which have accordingly been very strong, to the extent of requiring occasional official intervention. The franc spot rate has remained held at about Frs. 105.15, but the three months forward

discount has been out as far as Frs. 3 $\frac{1}{4}$. The French market was closed on Thursday owing to the national holiday of *mi-carême*. It may be possible that if these sellings of francs continue the market may become saturated, and many operators may be unable to keep their positions open and will have to buy back francs. Owing to movements of this kind the paradox often occurs that a currency is devalued in a bad market. The guilder has been strong in sympathy with the dollar, as when the cross-rate rises enough the Netherlands Bank indulges in arbitrage operations. Other currencies have been uninteresting. The effects of the lower brokerages and reduced margins recently agreed upon appear to be working out against the brokers, owing to the very large proportion of direct dealings. However, a longer period is needed before the full effects of the change can be ascertained.

The Bank Return.—There has been a considerable rise of £5.9 millions in the note circulation, which may be attributed partly to end of the month influences and partly to the beginning of a seasonal spring upswing in general activity.

	Mar. 4, 1936	Feb. 10, 1937	Feb. 17, 1937	Feb. 24, 1937	Mar. 3, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	200.6	313.7	313.7	313.7	313.7
Note circulation	404.0	455.0	453.3	455.1	461.0
Banking Department:—					
Reserve	57.3	59.1	60.8	59.3	53.6
Public deposits	7.9	11.7	24.4	13.0	15.2
Bankers' deposits	104.5	99.2	90.6	100.4	93.8
Other deposits	36.6	37.3	36.7	37.9	37.7
Government securities	83.4	81.2	83.1	85.0	85.1
Discounts and advances	11.9	6.5	5.5	4.9	4.3
Other securities	14.7	19.5	20.4	20.3	21.9
Proportion	38.4%	39.8%	40.1%	39.1%	36.5%

There has been a corresponding fall in bankers' deposits of £6.6 millions, while public deposits have risen by £2.2 millions. For the first time in several weeks there has been practically no rise in Government securities.

Hongkong and Shanghai Banking Corporation.—The accounts of this bank for 1936 suggest that the devaluation of the Chinese dollar and the demonetisation of silver in November, 1935, have ultimately had a beneficial effect. Evidence of increased activity is to be found in the rise in the notes in circulation from \$119.0 millions to \$127.6 millions, and in the increase in current accounts from \$568.1 to \$649.3 millions at the expense of a slight fall in fixed deposits. Discounts and loans have also risen from \$435.9 to \$493.8 millions.

	December 31, 1935	December 31, 1936
	Sterling equivalent £'000	Sterling equivalent £'000
Liabilities:—		
Capital	1,302.1	1,239.6
Sterling reserve	6,500.0	6,500.0
Silver reserve	651.0	619.8*
Notes in circulation	7,748.1	7,910.8
Current accounts	36,987.8	40,244.9
Fixed deposits	13,543.5	11,690.2

Acceptances	154.1	204.9
Assets:—		
Cash	10,037.8	12,238.7
Bullion	2,728.5	41.9
Investments	17,072.5	18,681.7
Discounts and loans	28,376.5	30,606.1
Bills receivable	8,644.3	6,996.9
Net profits	12.1	15.1
Dividend per share	£5 10s.	£5 10s.
Exchange rate	1s. 3 $\frac{1}{2}$ d.	1s. 2 $\frac{1}{2}$ d.

* Now Hongkong currency reserve.

As a consequence of the compulsory surrender of silver stocks to the Hongkong Government, silver coin to the value of \$141.5 millions has been handed over in return for Certificates of Indebtedness, which are included in the item "cash." The lowering of the exchange rate from 1s. 3 $\frac{1}{2}$ d. to 1s. 2 $\frac{1}{2}$ d. has made a difference of nearly 5 per cent. in the calculations of the items in terms of sterling, so that the increases appear less in the sterling

equivalent. Profits for the year have been substantially higher, being \$15.1 millions, against \$12.1 millions in 1935, but the dividend remains at £5 10s. per share, compared with £6 in 1934.

Insurance Notes

Britannic Assurance Company.—The usual annual valuation of this company has been made, and the results, together with those of 1935, are given below:—

	1935	1936
Ordinary Branch—		
Surplus earned during the year	390,599	396,824
Brought forward from previous year.....	138,153	124,311
	528,752	521,135
To Bonuses to policyholders	265,076	275,457
„ Shareholders' account	34,365	34,539
„ Investment reserve fund	30,000	40,000
„ Staff pension fund	5,000	10,000
„ Strengthening of reserves	70,000	...
„ Carried forward to next year	124,311	161,139
	528,752	521,135
Industrial Branch—		
Surplus earned during the year	682,150	674,592
Brought forward from previous year.....	126,166	140,081
	808,316	814,673
To Bonuses to policyholders	238,235	241,500
„ Shareholders' account	265,000	265,000
„ Investment reserve fund	70,000	60,000
„ Staff pension fund	95,000	90,000
„ Carried forward to next year	140,081	158,173
	808,316	814,673

The basis of valuation was the same as in 1935, namely A1924-29, in the ordinary branch using 2½ per cent. for participating policies and 3 per cent. for other contracts, and the E.L. No. 8 (Males) Table combined with interest at 3 per cent. in the industrial branch. The ordinary branch rate of bonus is again 38s. per cent. on the sum assured; as usual the cost of the bonus, including shareholders' proportion, is well within earnings. Policy-holders in the industrial branch have no contractual right to participate in profits, but out of the 1929 surplus a voluntary allocation of £50,000 was made to them; the amount of the allocation has been increased in each subsequent year, and for last year, as will be seen from the table, was £241,500. In the ordinary branch new business increased from £3,654,000 to the new record total of £3,865,000, and the net rate of interest fell by 3s. 9d. per cent. to £4 8s. 1d. per cent. Total expenses of £177,000 are equal to just under 13.2 per cent. of premium income, a rate which must be considered distinctly favourable compared with the average of other offices, especially when it is borne in mind that new business is large in relation to the size of the fund and that the average new policy is for a sum assured of only about £200.

In the industrial branch new sums assured increased from £9,427,000 to £9,886,000, and, what is of more importance, the premium income increased by £136,000 to £3,784,000. The expense rate declined further from 34.4 per cent. to 33.2 per cent. of the premium income. There has been a steady fall in this rate since 1920, when the peak figure of 47.4 per cent. was registered. Probably future years will show some further reduction in the expense rate, but in view of the extraordinary services rendered by industrial insurance agents a figure of anything approaching 30 per cent. is really modest. As the chairman of the Pearl recently pointed out, the industrial insurance agent acts as "guide, philosopher and friend" in the homes he visits, and renders many services of great value, not otherwise readily available to the people he deals with, extending beyond his apparent functions of procurement of new business and collection of premiums. Total assets increased from

£26,288,000 to £28,159,000. During the year there were no major movements in the classification of the investments. Loans at £4,421,000 were smaller by £73,000, but British Government securities increased by £1,271,000 to £6,587,000. Indian and Colonial Government and Municipal securities showed little change, but the corresponding holdings of Foreign Securities were considerably reduced. Debenture, preference and ordinary stocks each showed moderate increases to £3,012,000, £2,456,000 and £3,977,000. The book values of the assets stand at or below cost. In the aggregate these book values are doubtless considerably below market values. In addition to this hidden reserve specific investment reserves in the ordinary and the industrial branches now amount to £500,000 and £1,000,000 respectively. During the year £100,000 was transferred to general reserve, which now stands at £425,000. The strength of the financial position is obvious, and each report gives evidence of energetic expansion on sound lines. The dividend declared is 50 per cent. free of tax.

Clerical, Medical and General.—Although 1936 was the first year of a new quinquennial valuation period, new business advanced to the fresh record figure of £2,843,000 against the previous year's record of £2,511,000. Annuity consideration moneys also expanded substantially from £254,000 to £376,000. The net interest earned on the life fund fell by ¼d. per cent. to £4 2s. 3d. per cent. Death claims were £374,000 against £340,000, and surrender values £124,000 against £87,000; premium income, exclusive of single premiums, increased from £864,000 to £904,000. It has previously been the custom of this Society (as of the Sun Life Assurance Society) to furnish with the Report a list showing the nominal amount and book value of each Stock Exchange holding. On this occasion, both offices have departed from this practice, and adopted that of the general body of offices in not furnishing any details of individual investments. Total assets increased from £14,376,000 to £14,908,000. Loans of all kinds increased from £4,655,000 to £5,055,000; loans on medical practices under a special scheme of the Society showed a large increase from £66,000 to £480,000. British Government securities, which form only a little more than 5 per cent. of the total assets, appeared at a somewhat lower figure, as did also combined Indian, Colonial and Foreign Government securities. Debenture stocks at £2,220,000 were also slightly smaller. Practically the whole of the ordinary stocks held refer to the shares of subsidiary companies, and there is little change in their book values. Freehold and leasehold properties increased from £1,714,000 to £2,149,000. The financial position of the Society is one of great strength, and in owning the entire share capital the Employers Liability possesses an excellent investment.

United Kingdom Provident Institution.—New sums assured of this institution increased from £4,551,000 to a fresh record of £4,621,000, and the rate of interest was 1d. per cent. higher at £4 3s. 6d. per cent. Death claims were £691,000, a reduction of £9,000; in the temperance section the actual claims were about 81 per cent. and in the general section about 85 per cent. of those expected by the A1924-29 table. The bonuses in the temperance section are somewhat higher than in the general section as a result of the more favourable mortality, but even in the general section the rates are above the average. The institution has expanded vigorously in recent years; compared with five years ago the premium income has increased from £1,378,000 to £1,675,000, against £1,362,000 at the end of 1926. Total assets in the year increased from £23,766,000 to £24,594,000. There was a further movement in loans from £5,121,000 to £5,764,000, and British Government security holdings again fell, from £4,403,000 to £3,582,000. Debenture stocks decreased by £453,000 to £2,826,000; preference stocks were slightly greater, and ordinary stocks at £2,363,000 showed an increase of £513,000.

THE STOCK EXCHANGE

Gaumont-British Questions

WHEN directors fall out, shareholders prepare for the passing of dividends. The future of the Gaumont-British Picture Corporation—the head of the largest group in the British film industry, with £5,036,718 of debenture stock and £6,250,000 of share capital—is the subject of a conflict in the board room which raises considerations of fundamental investment importance.

The facts, for the most part, are not in dispute. The Gaumont-British Picture Corporation at the date of its last balance sheet (March 31, 1936) owned, controlled or managed 341 theatres, dance halls, restaurants, etc., carried on business as film producers, renters and printers, manufactured wireless sets and components, and had an interest in television. The control of Gaumont-British is vested in a company called the Metropolis and Bradford Trust, which owns 2,915,000 of its 5,000,000 ros. ordinary shares. The Trust has a curious voting system of its own, by virtue of which the brothers Ostrer, as owners of 51 per cent. of an "A" voting capital of £10,000, control the Trust, with its total capital of approximately £420,000. And the Trust, in turn, controls Gaumont-British, with its debenture and share capital of £11½ millions. The Trust has an important American non-controlling shareholding, representing the Twentieth Century-Fox interests. Last October it was announced that another British film group, the Associated British Picture Corporation, Limited, had agreed to purchase the Ostrer Bros. holding. The exact details of the deal have never been divulged. It would appear, however, that the deal fell into two parts, and that the first, but not the second, has been completed. Consequently, the non-Ostrer interests, including both Mr John Maxwell of the Associated British group, and the American representatives, now have four out of a total of nine seats on the board of Gaumont-British—or, it might be true to say, in the light of the new appointments to the board this week, five out of eleven. Thus, they can still be outvoted on vital issues.

British company annals afford few examples of such "pyramiding" in *excelsis*, which is reminiscent rather of railway empire-building in America on the lines we described in *The Economist* a fortnight ago (February 20, page 398). If British law were to lay down a rigid principle of "one vote, one value"—and still more if it were to prohibit the formation of holding companies—it might well be that many arrangements would become illegal which are now recognised, by common consent, as being convenient and equitable. But all "privileged voting" should be confined within limits which a disinterested observer would recognise as reasonable; and should be such that no possible conflict can ever arise between the pecuniary interests of the controlling management and those of the body of shareholders. In this case, with control dependent on so small an ultimate holding, it is clearly possible to envisage conditions in which such a conflict might arise.

The position of Gaumont-British draws attention, however, to another criticism of the present state of British company law, which makes no provision for the annual publication of consolidated revenue accounts and balance sheets of parent companies and subsidiaries. The disclosed results of Gaumont-British for the four years to March 31, 1936, are summarised at the head of the next column.

The impression given by these figures is that total earning power, after rising sharply in the year to March, 1934, was subsequently well maintained. Actually, the 1936 report disclosed that the directors "considered it

GAUMONT-BRITISH PROFITS AND DIVIDENDS

Year to March 31	Profit £'000	Earned after Debenture Service £'000	Earned for Ordinary £'000	—Ordinary— Earned %	Paid %
1933	463	311	217	9.3	7*
1934	692	419	255	9.0	7
1935	720	413	234	8.0	7
1936	716	376	197	8.6	Nil

* And capital bonus of 20 per cent.

prudent" to appropriate £200,000 of profits for a special reserve in respect of film production or distribution. At the meeting on November 2nd a motion was carried for adjournment pending the presentation of consolidated accounts. These, which were duly considered and passed on December 17, showed that the cash position of the group was decidedly stringent, since cash holdings and debtors together totalled only £692,000 against liabilities for creditors, charges and tax, of £974,000 and a secured bank overdraft of £1,577,000—the whole question of the group's liquidity thus turning on the basis of valuation of work in progress, etc., given at £1,379,000.

Since December events have moved rapidly. On January 21st, Mr Isidore Ostrer, the President of Gaumont-British, who has now rejoined the company's board as chairman, suggested that the company might abandon film production. On February 19th the directors announced a full half-year's payment of dividend on the £3,250,000 of 5½ per cent. cumulative preference capital and referred to substantial losses by a film producing subsidiary company. Four days later Mr Maxwell revealed, in a Press statement, that the preference dividend decision was a 5-4 majority ruling, from which he and three other directors dissented, and that the total figure for subsidiary company losses, estimated to December 31st last, was £623,000. It is possible that extant reserves may cover this loss; but in any case the Companies Act does not specifically prohibit a holding company from paying a dividend by taking credit for the earnings of profitable subsidiaries and allowing unprofitable subsidiaries to carry forward their losses in their own books.

Matters approached their *dénouement* in the closing days of last month. On February 24th it was announced that the board had abandoned film production and that "delicate and complex negotiations" were on foot. The nature of the negotiations was revealed, three days later, in a statement that Gaumont-British had agreed to co-operate with another group, General Film Distributors, on a fifty-fifty cost basis, in the production of a strictly limited number of pictures. General Films would do the group's distribution, and Gaumont-British would cease to produce major films at its Shepherd's Bush studios. The news was interpreted as an intimation, broadly, that Gaumont-British was liquidating its interests in production and distribution. Like its predecessor, the decision was taken by a five to four directorial majority. Last Tuesday, Mr Maxwell, the head of the dissentient directors, made a statement to *The Financial News*, which in substance was an indictment of the entire transaction. Mr Maxwell declared that the agreement was a salvage operation by an administration which had failed in its management of a potentially successful production business; that offers of pictures for distribution had been made by Mr Maxwell's own company and by another British producer; that both the

offers and a request for a week's delay had been refused, and that an excellent sales organisation was thus being jettisoned. The whole matter, he suggested, had been rushed, for the American companies had themselves been refused a 48-hours delay. The net result, he declared, was that Gaumont-British ordinary shareholders would have no prospect of dividend for some years to come, since the income from the theatre subsidiaries would probably be static. A heavy writing-down of ordinary share capital would be inevitable; for one-and-a-half million pounds of production and distribution assets were being scrapped. In addition there was a large trading loss, and certain other book assets would require drastic writing-down.

Clearly, matters cannot remain in this position, but it is difficult to see, at the moment, what outside shareholders can do. For the present, they are powerless spectators of a titanic struggle, whose outcome must affect the earning power of this company for many years ahead. The peculiar irony of the situation is that, if preference dividends were unpaid, the preference shareholders would obtain votes which would make them a *tertium quid* whose voting influence would be decisive if it were allied, for example, with that of the dissenting section of the board. But if the group's losses are held to be of a capital nature—in the light of the latest agreement—there may be no bar in law to the maintenance of preference dividend payments out of other profits. So far as the deal with General Film Distributors is concerned, the one obstacle seems to be that the trustees of the 4½ per cent. first mortgage debenture stock of Gaumont-British may take the view that the proposed transfer of assets might jeopardise their security. Meanwhile, the market price of Gaumont-British 10s. ordinary shares, which touched 14s. 10d. last year, has fallen to 7s. 9d. It is quite impossible to say what valuation investors ought to put on these shares until the whole question of the company's future assets and activities has been threshed out. Obviously a good deal more must be, and will be, said on that point. But meanwhile investors may ask themselves one question. Would the position of Gaumont-British have been better, or worse, to-day, if British law had contained provisions for (a) annulment by the Court, on the application of a substantial body of shareholders, of any special voting rights which appeared inequitable or inexpedient in their general effect; (b) regular publication of consolidated income accounts and balance sheets by holding companies; and (c) an obligation on all such companies to set off the losses of unprofitable against the earnings of profitable subsidiaries, before the payment of any dividend?

Investment Notes

Course of Share Values.—February was a month which few investors will recall with pleasure. The Government's decision to borrow approximately £400 millions, out of a total expenditure of £1,500 millions in five years, was widely interpreted as the death knell of low interest rates. The inevitable marking-down of gilt-edged securities was more than adequately reflected in the prices of the best equity securities. There was madness in the market's method; for while the price of every ordinary share has an "interest element," the marking-down appeared to pay little heed to the very different "equity element" in the prices of such shares as J. Lyons and Marks and Spencer. The decline was great enough to bring *The Financial News'* ordinary share index back to the level of the early autumn. London and Wall Street, after moving for many months in parallel, have pursued opposite courses since the beginning of this year, as our customary chart shows. Wall Street continues to believe that prosperity is stronger than strikes—or, more correctly, that any increase in industrial costs, which is the price of labour settlements, can be absorbed in the ocean of prosperity. The omens are that, in the immediate future, New York will continue

its general advance and London will recover, but not to the level prevailing before this year's decline set in. The market may now have more accurate ideas of the

BRITISH AND AMERICAN INDUSTRIAL SHARE VALUES OVER THE PAST TWO YEARS (1928 = 100)

British: "Financial News" Index of 30 Ordinary Shares
American: "Standard Statistics" Index of 50 Common Stocks

capacity of the national savings to meet the Government's probable demands, but it is also more aware of the importance of rising costs in industry.

Provincial Brokers Register.—The Register of Country Stockbrokers, compiled by the Stock Exchange Committee, came into operation last Monday. The complete Register contains the names of no more than 135 firms, and even allowing for exclusion of brokers operating within the London area, it seems that the total comprises a relatively small proportion of the firms who, while carrying on a *bona fide* stock and share business, neither belong to the Associated Provincial Brokers Association, nor are members of the various Provincial Stock Exchanges. It is understood that the Committee have, in fact, ruled out all applicants whose normal activities go beyond stockbroking. Throughout the provinces there are many smaller firms which conduct a legitimate stockbroking business as an adjunct of some professional or semi-professional activity, such as accountancy, or insurance broking. The full rebate of commission will, of course, still be allowed to members of the provincial Stock Exchanges, and of the Associated Provincial Brokers Association. Since the latter already includes many firms who carry on ancillary professional activities, it is reasonable to expect an influx of new members to the provincial institutions.

It may be noted, however, that no reasons have been officially given where applications for admission to the list have been rejected, and only formal notifications have been issued both to the members sponsoring applications and to the unsuccessful applicants themselves. Among the latter, certain substantial provincial firms who have been important collectors of business for their London connections over a long period of years have expressed themselves strongly both on the presumed basis of the Committee's method of deciding upon the applications, and upon the method of communicating their decisions. Whether these opinions have relevance or not, it is suggested that while the new Rule 203 may successfully check the indiscriminate rebating of commission on the maximum 50 per cent. basis, it may not achieve much more. The suggestion, when the proposal was first mooted last November, that some guide would be provided

regarding the status of outside provincial brokers by their inclusion or exclusion from the list, appears to have lost much of its force, according to this argument.

Electricity Distribution and the Investor.—The Minister of Transport's unexpected announcement that the Government has decided to implement the findings of the McGowan Report on electrical distribution (with certain modifications) is discussed on page 515. It is somewhat early to assess the investment significance of the Minister's proposals, but certain general observations can be made. The scheme is understood to provide for the lowering and levelling of electricity charges, and this policy would undoubtedly hasten the reduction of tariffs which many supply companies have effected in recent years. Broadly, these have maintained the companies' net revenues, owing to the steady increase in consumption, and there is no reason to anticipate an increase in earnings if further reductions in charges are secured. Conceivably, certain undertakings which have made generous provision for depreciation might be able to take up the slack comfortably, but our standard depreciation calculations do not suggest that these cases are predominant. The investor who holds electricity supply shares on the long-term expansion argument may have to consider whether its fruits will not be passed on (as they have been in recent years) to the consumer. Electricity supply shares, in that event, would become well-secured but stable interest securities. It will be noticed, however, that the Government's proposals do not specifically include the problem of the holding company. Nor has direct consideration been given to the electrical equipment undertakings. These, it would seem, may be the main beneficiaries from the standardisation of supply. Considerable economies in production of lamps and other equipment should be possible through standardisation, and in the long-run the demand for domestic appliances might be considerably increased. It would follow that the supply companies would themselves benefit directly from any resulting increase in demand at off-peak periods. The investor, however, can hardly reach firm conclusions until more detailed plans are published.

The Week in the Bond Market.—While the rest of the world continues to provide the bond investor with opportunities, Europe prefers to strew problems in his path. Rumour produced a fall of seven points, for example, in Polish 7 per cent. Stabilisation Loan on Monday. Poland is now observing the dubious principle of "no means, no coupons," and has applied this treatment to American holders, who now receive only 35 per cent. of their coupons. But since Poland's active trade balance with this country last year amounted to £3,300,000, her proposal to cut the sterling interest to the same rate after the April coupon lacks even this dubious economic justification. The sterling bondholders will support their representatives in the strongest resistance to this proposal. Of the Danzig position, the bondholder may take a rather serious view. The 6½ per cent. sterling bonds are specifically secured, but the report of the Bank of Danzig includes a suggestion that holders of Danzig loans may be asked "to accept a reduction of interest." Danzig is being *gleichgeschaltet*, and the suggestion, therefore, has a somewhat sinister ring. Finally, the Roumanian Government have made a disappointing proposal regarding the 4½ per cent. Gold Loan of 1913 and the 4 per cent. Consolidation Loan of 1922, of which 45 per cent. of interest is offered, without any provision for amortisation. Altogether, the glittering prizes in the foreign market are hardly to be found in Europe.

Bond Movements in February.—The course of the market, in fact, shows that the "commodity bonds" in the South American list are still making most consistent headway. The "Municipal and General" Index

Short Particulars

THE HOUNDSDITCH WAREHOUSE

COMPANY LIMITED

Authorised.	SHARE CAPITAL	Issued or to be Issued.
£800,000 in 800,000 5 per cent. Redeemable Cumulative Preference Shares of £1 each	...	£800,000
£800,000 in 3,200,000 Ordinary Shares of 5s. each	...	£800,000
£1,600,000		£1,600,000

The Company is entitled to redeem the whole but not a part of the 5 per cent. Redeemable Cumulative Preference Shares at a premium of 2s. 6d. per Share, plus accrued Dividend, on or after the first January, 1942.

The Subscription List will Open and Close on Wednesday, 10th March, 1937, for an

ISSUE OF

800,000 5 PER CENT. REDEEMABLE CUMULATIVE PREFERENCE SHARES OF £1 EACH AT £1 PER SHARE and 1,000,000 ORDINARY SHARES OF 5/- EACH AT 15/- PER SHARE

(Of which 200,000 Ordinary Shares have been underwritten firm and will be allotted in full.)

The Prospectus shows, inter alia, that:—

- The Company was formed to carry on the business of General Warehousemen, Importers, Exporters, and Merchants.
- The business was founded in 1922 by the present Joint Managing Directors. A modern freehold building, in Houndsditch, consisting of seven floors of an acre each was completed and fully occupied in 1934. The business employs over 1,000 persons and comprises about 30 departments, including:—
Ladies' Coats, Gowns, Furs, Millinery, Underwear, Hosiery, Footwear.
Men's and Children's Clothing, Underwear, Footwear.
Furniture, Carpets, Curtains, Linens, China, Glass, Hardware.
Leather Goods, Sports Equipment, Cutlery, Stationery and Toys.
- Net Assets (exclusive of goodwill) ... £1,311,570
- Profits before Directors' Fees, Managing Directors' Remuneration, Depreciation, and Income Tax:—
Fifteen months to 31st March, 1929 ... £74,763
Year ended 31st March, 1930 ... £94,550
" " " " 1931 ... £109,634
" " " " 1932 ... £116,214
" " " " 1933 ... £135,877
" " " " 1934 ... £164,923
" " " " 1935 ... £190,125
" " " " 1936 ... £216,484
NINE months ended 31st December, 1936 ... £225,247

On the basis of the Profits for the nine months ended 31st December, 1936, the Directors are of opinion that the results for the full year to 31st March, 1937, would show a profit of not less than £270,000. On this estimate the average of the Profits for the three years ending 31st March, 1937, would amount to £255,536.

After the above profits are adjusted by deductions for Directors' Fees and Salaries, and Joint Managing Directors' remuneration, Depreciation, amortisation of leaseholds, and allocation to staff fund, there will remain, after making all necessary deductions other than Income Tax:—

Average adjusted profits for three years ending 31st March, 1937	...	£201,427
Adjusted profit for the year ending 31st March, 1937	...	£241,445

5 The average figure of £201,427 for the three years to 31st March, 1937, would cover the dividend on the 5 per cent. Preference Shares, requiring £40,000 per annum, over five times.

The above figure of £241,445 for the full year to 31st March, 1937, would cover the Preference dividend over six times, and after payment of that dividend there would remain a balance equivalent to approximately 25.1 per cent. on the Ordinary capital of the Company at par, or 8.3 per cent. on the Ordinary Shares at the issue price of 15s. per share.

6 The Directors are confident that the progress of the business shown in successive years in the past will, given normal trading conditions, be maintained in the future.

Prospectuses and Application Forms on the terms of which applications will be accepted for Shares of the above issue, are available from:—

BARCLAYS BANK LIMITED, New Issue Department, 54 Lombard Street, London, E.C.3, and Branches, and from the Brokers, MYERS & CO., 19, Throgmorton Avenue, London, E.C.2, and Stock Exchange.
NATHAN & ROSSELLI, 7, Adams Court, London, E.C.2, and Stock Exchange.

of foreign bond movements shows a two-point rise over the month at 119.0. Defaulted bonds again made more rapid progress in February, being assisted by a vigorous rise in defaulted Chinese issues, which has contributed to the advance in the Far-Eastern index from 116.2 to 120.0. Our usual table follows:—

January-June 1934=100

Feb....	102.9	120.0	99.6	131.8	131.8	131.8	119.0	108.1	131.4

A progress report issued by Foreign Government Bond Trust this week provides some interesting comparisons between the Index and movements of individual securities. Between April, 1934, and February, 1937, the Index shows a rise of 17.7 per cent. (identical, incidentally, with the appreciation shown by the Bond Units, although the latter are not identical in spread compared with Index). The range of appreciation of selected individual investments between 3.7 per cent. and 55.8 per cent., is sufficient illustration of the need for diversification in bond investment.

Company Notes

Newcastle Investments.—Tyneside's recovery from economic desolation (as we suggest in a review on page 511) has been somewhat less rapid than in other areas to which the speculative investor has been attracted. There are, perhaps, two main features in a representative list of Newcastle shares. The first is the relative stability of dividends which they show—surprising at first sight for an area whose fortunes are associated with the capital goods industries. In part, this steadiness may be due to Newcastle's position as a market centre, whose hinterland feels the effect of economic fluctuations directly and more deeply. The second feature is the absence of obvious bargains in a selection of Newcastle issues. The stable dividend issues, like North-Eastern Electric and other public utility concerns, deserve their high investment rating. But among the recovery shares, dividend yields exceeding 4 per cent. are still uncommon. Newcastle Breweries, which achieved a sharp rise

Company and Share Denomination	Earned for Ordinary		Ordinary Dividend		Ord. Share Price	Yield %
	Previous Year	Latest Year	Previous Year	Latest Year		
Associated Breweries (£1)	8.0	9.2	7½	7½	36 0	4 3 6

‡ Plus 15 per cent. tax free bonus from capital profits. § Plus 4½ per cent. tax free from investment profits.

in earnings for 1935-36, are valued on a 3½ per cent. yield basis, and Associated Breweries, with a steadier recovery record, yields fully ½ per cent. less than some of the representative brewery shares in the South. On the prospect that the heavy industries may recover something of their normal stature, these yields may be justified by dividend performance. The investor, at any rate, is taking a more confident view of shipbuilding prospects on Tyneside. This week's report from Clarke Chapman (which is a marine and general engineering concern located at Gateshead) shows an appreciable improvement to justify this view. Swan, Hunter and Wigham Richardson have announced a 7 per cent. ordinary dividend for 1936, compared with 5 per cent. for 1935. Again, Parsons Marine Steam Turbine and Wallsend Shipway and Engineering each have increased Admiralty and mercantile business on hand. Apart from these fairly familiar issues, however, Newcastle's investment attractions are more evident to the operator with good local connections and a due endowment of patience.

Courtaulds' Report.—The Courtaulds' profit figures have been available for the past fortnight. The full report amplifies the preliminary statement without producing surprises, for the balance sheet is again illustrative of the company's state of progressive development. The net value of properties is up by £1¼ millions; stocks are nearly £500,000 higher; and the progress of the undertaking is being financed in comfort from its massive holdings of securities, which have fallen from £16 millions to £15.4 millions. Meanwhile, as we showed in *The Economist* of February 20th (page 442), the effective dividend rate has been increased from 9.68 per cent. to 10.28 per cent. On what basis should the investor value Courtaulds? At the present price of 52s. 7½d. ex dividend the yield is £3 18s. 3d. per cent.—a return more in keeping with a stable industrial equity than a high-powered recovery share. But Courtaulds' attraction for the serious investor lies in its long-term possibilities. It is characteristic of the company's cautious management

that it records, for a year in which British rayon output increased by 17 per cent., that operations were "rather more profitable." Similarly, the company sold much more stable fibre, but since the Greenfield factory was not fully employed until a few weeks ago, this business yielded little profit. Again, the selling policy adopted for rayon is to be applied to "Fibro": to quote the report, "the lower cost of production which we expect to obtain (from the Greenfield plant) will be necessary to enable us to secure the bulk business which we look for." American trading conditions have improved, but the Viscose Company now deducts the 10 per cent. tax on dividends to Courtaulds. The report, then, is the familiar record of progress, tinged with warning to those who would expect too much. In the differences of view between Mr Samuel Courtauld and the more optimistic speculator, the former has invariably been right.

English Steel Results.—The first of the results of the Vickers group for the initial period of re-armament was a little disappointing to the market. That the English Steel dividend should have been merely maintained on the increased capital seemed insufficient to speculative investors who had been expecting bumper returns. The actual figures, however, show very clearly the remarkable earning power of English Steel—the bottom layer of the group. The trading profit, this year struck after an unspecified allowance for contingencies, has increased from £845,204 to £1,059,446. The net profit, after debenture interest and very generous depreciation, is £722,452, compared with £522,218. Earnings on the deferred capital were therefore nearly 50 per cent., and after paying 20 per cent., the directors put £300,000 to reserve. The actual dividend, which is of course shared between Vickers itself and Cammell Laird, is the equivalent of 5.8 per cent. free of tax on the latter's capital, while Vickers receives £310,600 net, representing 5.4 per cent. free of tax on its ordinary capital. These figures, however, are of little real significance, in view of the obvious directorial policy of financial consolidation to meet the strain which the re-armament programme, although very profitable, must cause. The Navy Estimates show a further substantial increase in prospective demand for armour plate, of which English Steel is one of the only three producers. In 1933-34 the Admiralty contracted for £396,000 worth of armour; in 1935-36 it contracted for £954,700; in the current year the estimate is £1,632,940, and it is estimated at £3,502,100 in 1937-38. This increase has involved a five-fold increase in the nation's armour-producing capacity, part of which, it appears, is financed by the Government itself. Clearly, such an increase demands strong financial resources and consolidation. The indirect shareholders of English Steel will benefit in the long run, but at present the directors are likely to continue their conservative policy of consolidation.

Cammell Laird.—The results of Cammell Laird and Company likewise disappointed the market. Here again the directors have been cautious. The net profit has increased from £110,688 to £171,653, and the earnings on the increased capital amount to 10.8 per cent. But the directors have only stepped the dividend up from 3½ per cent. to 5 per cent., and the market marked the 5s. shares down to 14s. This company, too, must needs wait some time before large profits can be shown. Its holding in English Steel, as we have seen, is likely to be more fruitful as a hidden reserve of great strength than as a source of rapidly increasing revenue. For the latter, the company must depend upon its naval shipbuilding, and this will not reach its peak until 1938-39. The capital ship which was laid down in January will bring in more in 1938 than in 1937. The aircraft carrier "Ark Royal," on the other hand, will be launched next month, and probably less will be earned on that account this year than in 1936. Broadly, however, the company's naval shipbuilding will bring in increasing profits as the re-armament programme gets under way. And, finally,

the Metropolitan Cammell Carriage and Wagon Company, though still far from dividends, is improving its position and may be expected to contribute to the parent company's revenue in, say, two years' time. Cammell Laird 5s. shares, which have recovered to 15s., offer a trivial dividend yield, but the earning power behind them is indubitable, and they appear to be well valued as a medium-term holding.

Brick and Cement Dividends.—By valuing London Brick on the highest yield basis accorded to a first-rank industrial, the market expected too little. In addition to the maintenance of the 22½ per cent. dividend on the ordinary capital, which was raised during 1936 from £1,600,000 to £1,800,000, a scrip bonus of one in nine is to be issued. Associated and British Portland Cement have raised their dividends from 20 per cent. to 22½ per cent. The Associated Company's payment is declared after providing £417,150 for depreciation, writing down trade investments by £10,000, and allocating £87,500 to contingencies. Although a decline in residential building has begun, the market for materials for other construction purposes is still expanding. London Brick has a large area of supply, it enjoys great financial strength, and can smooth out the inevitable fluctuations in building activity to some extent by making for stock. The £1 ordinary stock rose to 75s. on the announcement. This is not a riskless share, but it is clearly the leader in the brick industry. Associated Portland Cement, which stand at 103s. 9d. to yield £4 9s. 3d. per cent., have a wider interest in constructional activity both for peace and re-armament.

Revival in Rubber Shares.—Since the boom in commodities began at the end of last year, market favour has swung from one commodity and its associated

shares to another. Last week, base metals were the centre of attraction. This week, rubber has again taken the stage. The immediate cause has been a revival of confidence following the settlement of the General Motors' dispute in the United States. But much more positive factors have been at work. The opinion appears to be growing that the exporting areas will have difficulty in fulfilling their permissible quotas, which increase this year from 75 per cent. of standard assessments in the current quarter to 80 per cent. in the next and 85 per cent. in the third quarter. Shipments in January amounted to no more than 70 per cent. of the quota, and the position since appears to have been but little eased. The main immediate difficulties are a shortage of shipping facilities and the inadequacy of native labour supplies. Meanwhile consumption is going ahead and stocks continue to decline. In face of this situation, a more vigorous price advance has only been restrained by a kind of informal American buyers' "strike," reminiscent of a famous phase in the unfortunate Stevenson scheme, which ended ultimately in a disastrous rise in prices. There is no suggestion that history will repeat itself in all respects, but it seems unlikely that American consumers will be successful in preventing a further moderate rise in prices in the future.

* * *

Rubber companies find themselves, therefore, in an enviable position. Though they may not all be capable of producing their full permitted quota, they can look to considerably higher average prices during the current year. As most companies show a greater response to higher prices than to quota releases, this is perhaps no great hardship; the prospective increase in costs may also tend to reduce profit margins per pound of output, and will thus increase still further the relative advantage of increased prices over increased output. If the speculator looks well ahead, he may find the prospect of output at, say, 90 per cent. of standard and profit margins

in excess of 6d. a pound decidedly alluring. But the market, at any rate, is showing more discrimination than during last December's boom. Yet large discrepancies in share valuations based on prospective earnings still exist. The accompanying table gives a selection of some six companies of high efficiency and possessing a considerable equity in price advances:—

Company and Share denomination	Id. per lb. on equity capital with 100% quota	Latest costs per lb.	Estimated total profits with 9d. price + 80% quota	5% increase in quota + 80% on equity capital	Latest divs.	Current share price	Yield on latest divs.	Yield on estimated earnings with 9d. price + 80% quota
Bikam 2/-	3.8	4.1	14.9	0.9	3	3/3	1.8	9.2
Broome (2/-)	6.3	4.3	21.4a	1.5	8½	4/4½x	3.8	9.3
Cicely (2/-)	6.5	4.2	25.0	1.6	6	5/7½	2.3	9.5
F.M.S. (4/-)	4.9	4.2	18.8	1.2	6	2½x	2.7	8.4
Hoscote (4/-)	5.3	5.0	17.0	1.1	4	1½	2.1	9.0
Patallag (4/-)	5.8	3.9	23.7	1.5	7	2½	2.7	9.1

(a) After Debenture interest = £3,750 or 2.3 per cent. on ordinary capital.

It will be observed that these shares are still priced to yield between 9 and 10 per cent. on estimated earnings, assuming an average price of 9d. and a quota of 80 per cent. The price has been taken conservatively to cover the prospective increase in costs this year.

* * *

Company Results of the Week.—Our usual analysis of profit and loss accounts appears on page 562, and includes in particular many important stores and textile company results. The principal results are discussed on page 562 under the heading "Shorter Company Comments."

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—London Midland and Scottish Railway, Refuge Assurance, Scottish Widows' Fund and Life Assurance Society, Standard Life Assurance, British Assets Trust, Midland Counties Electric Supply, Borax Consolidated, Selfridge and Company, Anglo-French Exploration, London and Lomond Investment Trust, and Padang Langkat Rubber Estates. Sir Josiah Stamp's address at the London Midland and Scottish meeting was discussed in last week's issue of *The Economist* (page 480). Mr Gordon Selfridge, at the Selfridge and Company meeting, expected a general increase in merchandise prices in the coming year. Mr J. Wilcock Holgate, at the Refuge Assurance Company meeting, ascribed the proverbially light mortality rate of annuitants to their carefree income, and gave an analysis of fatal accidents. At the Scottish Widows' Fund and Life Assurance Society meeting, Lord Kinross commented on the continued decline in the number of surrendered policies. Addressing Borax Consolidated shareholders, the vice-chairman, Colonel J. W. Reid, discussed the use of borax as an agricultural fertiliser. Mr F. R. Robinson, at the Anglo-French Exploration Company meeting, discussed certain of the company's interests, in particular Apex (Trinidad) Oilfields and tin investments. At the Padang Langkat meeting, Mr H. A. Barrett pointed out that most of the company's investments had fixed redemption dates. Mr George Balfour informed Midland Counties Electric Supply proprietors that in four years the total number of consumers connected had been doubled. At the British Assets Trust meeting, the chairman discussed the inauguration of an income reserve fund. The Hon. W. B. L. Barrington explained to London and Lomond Investment Trust shareholders the difficulty of assessing the current year's prospects, owing to the possibility of increased taxation in this country and the United States. At the Standard Life Assurance meeting, the chairman contrasted the amount of life assurance per head in America and in this country.

THE WEEK IN THE MARKETS THE STOCK EXCHANGE SETTLING DAYS

TICKET: MARCH 16 ACCOUNT: MARCH 18

THE new Account opened in fairly good style, but there was no disposition to follow the rather bullish lead of early dealings. Adjustments in over-high or over-depressed quotations have rather been the order of the week. The tone is better and investment support, while not excessively generous, is sufficiently faithful to maintain a general appearance of better times. On Thursday, conditions had become somewhat dull, with most interest in mining shares.

Gilt-edged opened in firm style, with the few remaining bears seeking cover. Sabre-rattling, however, checked the movement on Tuesday and conditions subsequently passed from steadiness into dullness.

In the foreign market, Polish Sevens fell 7 points on Monday, but regained the fall on Tuesday, on threats to the service (which are discussed on page 535) and Danzig issues were also depressed for similar reasons. Chinese bonds were again well supported, the railway issues receiving special attention. Brazilian loans opened firm, but were sold on a fair scale later. Chilean issues, however, made a good response to rising copper prices.

A gloomy opening in the home rail market brought half-point falls, which were repeated on Tuesday. Mid-week conditions, however, were better on the good traffic figures. Argentine rails enjoyed a firmer market, and buying was resumed on the week's satisfactory traffics. Rhodesia Railways debentures opened at 3-2 discount.

Prices have been reasonably firm in the industrial markets during the week. The iron and steel section opened well, with Indian Iron still on the upward grade, and Clarke Chapman stimulated by the report. Profit taking caused irregularity later, and Cammell Laird and Swan Hunter both fell on disappointment with the higher dividends. The abolition of import duty on pig iron had little effect on prices. Settle Speakman were strong in the coal group, on the dividend distribution. Business was good in the motor section at the beginning of the week, but eased off later. Morris Motors rose sharply in mid-week. The aircraft group were rather neglected, with Rolls Royce lower at first on the strike report. Electrical equipment issues were firm to strong throughout, with Telegraph Construction in the lead on the report; in mid-week there were heavy dealings in General Electric.

Brewery issues opened well, but weakened later, and were not impressed by the output figures. Great Universal and Harrods attracted some attention among store shares, and Unilever were inquired for in the catering group. Textiles were quiet. Movements in the miscellaneous industrials section were irregular, with most consistency shown by building material and cement issues, which improved steadily. The cement and brick dividends are discussed on page 537. Radiation went ahead in anticipation of the final dividend and on record sales figures. Carrier Engineering were better and improvements were shown by several engineering issues.

Conditions were quiet throughout the week in the oil market, mainly by hopes of a further increase in the price of petrol, but the advance was discriminating. Anglo-Iranians were in demand at the end of last week, but the new account opened with an unusually small volume of business. Eagles, especially Canadian, were in request, though the general tendency was irregular.

Rubber shares, however, enjoyed an excellent week. Substantial rises have been achieved all round, but the turnover has been small, opinion being practically unanimous as to prospects. In rather contrary circumstances the tea market has encountered a mild depression. Prices have receded slightly all round.

Recent large South African purchases made for quieter conditions in the mining market at the end last week, and there was a certain amount of cash selling for the end of the account, some profit taking even being noticeable on copper shares. But improvements were registered in the new account, more especially among Rhodesians. Diamond shares have done fairly well, but the trend in Kaffirs was mainly downwards. Their rally was shared by base metals.

OVERSEAS STOCK EXCHANGES

NEW YORK

BUSINESS ended last week in a dull mood, with most prices below the level reached at the end of the previous week. The strongest sections were packing and steel issues. This week opened with rumours, which were rapidly substantiated, that Carnegie-Illinois were to agree to bargain with the Lewis union, and several independent steel companies announced higher minimum wages and a 40-hour standard week. Steel issues shot ahead, with U.S. Steel in the lead. Chrysler were strong on hopes of a settlement of their conference with the motor union, and aviation issues gained on the Navy Appropriation Bill. Rail and farm implement shares shared in the improvement. Prices continued to improve through the week, and the prospect of higher wage costs produced no hesitation in the markets, since the steel industry anticipates a continued increase in demand at rising prices. Railroad shares have risen

COMMERCIAL SERVICE

The Bank has over 370 Branches in Africa, and Agents and Correspondents throughout the World. The closest touch with Trade and Industrial conditions is maintained, with special attention to Commercial and Credit Intelligence. This service is available to Exporters, Importers and others wishing to develop trade with South, East and Central Africa.

THE STANDARD BANK MONTHLY REVIEW is sent post free on application. It gives the latest information on all South, East and Central African matters of Trade and Commercial Interest.

NOW READY

Published February 22, 1937

51st Year

Containing fuller and more up-to-date information than any other book of reference

MINING YEAR BOOK 1937

compiled by

WALTER E. SKINNER.

Price Twenty Shillings net.

Post free (Inland), 20s. 6d.; Post free (Abroad), 21s. 6d.
1,040 pages. In Demy 8vo, bound in RED Cloth.

The International Standard Reference Work on the World's Mines

The book is invaluable to everybody interested in the Mining industry, its contents comprising complete, up-to-date and reliable particulars concerning 1,323 of the principal Mining Companies of the World.

Gold, Silver, Copper, Tin, Diamond, Platinum, Iron and other Mines, Collieries, Exploration and Mining Investment Companies, arranged in alphabetical order.

SOUTH AFRICAN, WEST AFRICAN, EAST AFRICAN, AUSTRALASIAN, CANADIAN AND FOREIGN MINING COMPANIES ARE FULLY DEALT WITH

PARTICULARS given of each Company include the Directors and other officials; date of establishment; seat of operations; description of the property, with the purchase consideration; plant erected or in course of erection; present working results; ore reserves, details of capital; calls; dividends paid; and the financial position as disclosed by the latest accounts; highest and lowest prices of the shares for the last three years; also latest prices.

DIRECTORS (3,731) and Mining and Consulting ENGINEERS and MINE MANAGERS (1,127), and their addresses, and names of the Companies with which they are connected.

DICTIONARY OF MINING TERMS.—An up-to-date glossary covering 430 Mining terms, by the use of which Mining developments can easily be followed, and the difficulty of understanding technical phraseology quickly mastered.

To be OBTAINED from all Booksellers, or direct from the Publishers,

AND
"FINANCIAL TIMES," 72 Coleman Street, London, E.C. 2

steadily since the end of last week. Practically the only easier group in the market was the utility section. In mid-week the bond market attracted a large volume of business and prices advanced rapidly. *Iron Age* estimates steel mill activity at 85 per cent. of capacity, for the week, which is 2 per cent. up on the previous week, and higher than any figure touched since October, 1928.

PARIS

HOME affairs and the foreign exchange market were the pre-dominating factors during February, a quick response to day-to-day events being more noticeable than any actual change in tendency. Rentes were the most sensitive to changes in feeling, but although, as in the previous month, French equities were often resistant, at other times they moved in sympathy with Rentes. After a firm beginning to the month, the fall in the franc soon caused nervousness, and the weaker prices were accentuated by the increase to 30 per cent. in the cover required for bargains for the account. The Finance Minister's statement earlier in the month that exchange dealings would not be controlled brought an immediate improvement in Rentes, but the following sessions were irregular. A setback followed the announcement that the carry-over rate would be raised from 6½ per cent. to 8 per cent., although soon after, rumours of a Government reorganisation and hopes of some change of financial policy caused appreciable gains. The chances of fulfilment of such hopes became more remote after M. Blum's speech at St. Nazaire, and with the exception of Internationals, prices generally were marked down. The month closed more quietly, but for political reasons weakness was again evident at the beginning of March.

BERLIN

The share market in February was dull and irregular, with slightly lower quotations for standard industrials and for the leading shipping issues, but an advance on dividend expectations of most leading commercial banks. The first half of the month witnessed active speculation in Railway Corporation preference, a consequence of the changed status of this undertaking. Raw material securities, minor industrials in the "cash" list, and certain unofficially quoted shares were favoured later. In general, however, dealing in shares was featureless, but increasing public interest was shown in fixed-interest securities, which advanced from week to week. Mortgage bonds and certain new Four Year Plan debentures were heavily bought. Colonials were quiet and irregular, with the exception of Otavi copper, in which a strong market developed late in the month. Certificated dollar bonds had practically no market, but converted bonds, though also dull, were in part slightly higher. Dealing in other foreign-currency securities was checked by uncertainty as to the impending official restrictions; but at the close of the month these securities were heavily sold in the belief (justified by an ordinance of February 27th) that they would be virtually confiscated. The official share index (1924-26 = 100) for January was 106.43, as against 105.40 for December, 1936; bonds index 96.67, against 96.36.

AMSTERDAM

With business active on the whole, the centre of interest shifted more than once during February. The main feature was the increasing attention paid to industrial shares, to American securities and, in common with other Stock Exchanges, to metals. Royal Dutch were prominent early in the month, and reacted slightly only after touching a new "high." There was at first a good demand for rubber and tobacco shares, but activity slackened as the market turned more to industrials (Dutch Ford in particular) and to metal issues. But when quieter conditions, partly under London influences, prevailed towards the end of the month, rubber securities were an exception, rising quotations resulting from fears of a spot shortage. Expecting some decision on the possible American taxation of foreign investments, the market adopted a waiting attitude in mid-month, but later resumed with a considerable demand for American issues.

CAPITAL ISSUES

ACTIVITY in the new issue market has subsided this week, and there are, in fact, only two public issues to discuss. *Charles Hammerton and Company* has issued £400,000 4 per cent. debenture stock at 99. This company has acquired the brewery undertaking of the same name, and the proceeds of the debenture issue are attributable in large part to cash purchase considerations and for working capital. The stock is redeemable finally in 1965, but the company has reserved a wide option to repay at various prices from 1938 onwards. The debenture is covered for interest and sinking fund some 5½ times by average profits after providing for depreciation. In view of the steady earnings record of the business, the stock is well secured, and its redemption terms have been well devised to meet contemporary investment problems at a period when interest rates appear to be rising. The *Prince of Wales Theatre* 5s. shares, which are issued at par, are of a speculative nature. The company is to acquire a new theatre, when completed, which it will then lease for a term of 35 years, at an exclusive rental, to West End Attractions, Ltd. The shares are thus equivalent to a maximum dividend security, but they are not free from the risks inherent in theatrical finance. In addition to three tender issues, statements for information have been published this week by *Alexandre, Ltd.*, *Evered and Company*, and *Bent and Sons*.

LONDON ACTIVE SECURITY PRICES AND YIELDS

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

Evered and Company, Ltd.—Issued capital, 125,000 5½ per cent. cumulative £1 preference and 125,000 £1 ordinary shares. Manufacturers of metal tubes and synthetic mouldings. Profits, before debenture interest, after depreciation: 1934, £27,130; 1935, £25,441; 1936, £38,030. Outstanding debenture stock, £32,428 to be redeemed. (Birmingham Stock Exchange.)

Bent and Sons, Ltd.—Issued capital 200,000 5s. shares. Leicester woollen outerwear manufacturers. Profits (after depreciation): 1934, £6,009; 1935, £11,976; 1936, £17,002. Total assets, £66,491. One managing director receives 5 per cent. on net profits over £4,000; the other, 2½ per cent.

BY TENDER

Plymouth and Stonehouse Gas Light and Coke Company.—Sale by tender of £90,000 ordinary stock at minimum of 173. Net revenue, year, March 31, 1936, £62,468; surplus before bank interest, etc., £11,329. Seymour, Pierce and Company place issue at 1 per cent. underwriting Commission. Proceeds to extend mains, replace cookers, etc.

Luton Water Company.—Sale by tender of sufficient consolidated ordinary stock, 4 per cent. maximum, to realise £30,930 net. Completes issue of authorised stock. Gross water rental: 1934, £46,902; 1935, £47,461; 1936, £50,104. Serves 96,600 estimated population.

Hampton Court Gas Company.—Sale by tender of sufficient 4 per cent. irredeemable preference stock to realise £35,000; minimum, 103½ which yields £3 17s. 3d. Output, 1936, 2,419,461 therms; 15,439 consumers. Net revenue, 1936, £14,996; available for ordinary dividends, £10,010. Dividends paid, 7½ per cent.

BONUS ISSUE

London Brick Company, Ltd.—£200,000 of balance standing to credit of profit and loss is to be capitalised and applied to payment in full of 200,000 unissued ordinary shares to ordinary stockholders registered March 6, 1937, by issue of one fully paid share in respect of each £9 of ordinary stock held.

ISSUES TO SHAREHOLDERS ONLY

Henry Meadows.—Issue of 121,600 5s. ordinary shares at 20s., in the proportion of one for every six ordinary held on February 20th.

A. W. Gamage, Ltd.—Issue of 200,000 10s. ordinary shares at 27s. 6d. each to ordinary shareholders on register February 23, 1937, in proportion of one new for every four ordinary shares held.

Anglo-Java Rubber and Produce.—Issue of 4,440,000 new 1s. shares to holders on February 13th at par.

FORTHCOMING ISSUE

Houndsditch Warehouse Company, Ltd.—Lists will open on Wednesday next, March 10th, for an issue of 800,000 5 per cent. redeemable cumulative £1 preference shares at par and 1,000,000 5s. Ordinary Shares at 15s. The prospectus will show that earnings for the latest full year would cover the preference dividend over 6 times and would leave a balance equivalent to 25.1 on the ordinary capital, or 8.3 per cent. on the issue price.

RESULT OF ISSUE

The Rhodesia Railways, Ltd.—Issue of £21,750,000 4½ per cent. debenture stock. It is understood that the total applications by way of conversion and cash amounted to about £10,850,000, the balance being taken by the underwriters.

COMPANY MEETINGS

LONDON MIDLAND AND SCOTTISH RAILWAY COMPANY

IMPROVED RESULTS FOR FOURTH SUCCESSIVE YEAR

NET RECEIPTS INCREASED BY £1,115,000

ORDINARY DIVIDENDS RESUMED

UNECONOMIC ROAD COMPETITION

INADEQUACY OF EXISTING PROVISIONS

SIR JOSIAH STAMP'S ADDRESS

The fourteenth annual general meeting of the London Midland and Scottish Railway Company was held at Friends House, Euston Road, London, N.W.1, on Friday, February 26, 1937. Sir Josiah Charles Stamp, G.C.B., G.B.E., chairman of the company, presided.

The Chairman: I will now ask the secretary to read the notice convening the meeting.

The secretary (Mr Owen Glynne Roberts) read the notice.

The Chairman: Ladies and Gentlemen,—I now lay on the table the report and accounts for the past year, and as they have been in your hands for some days, I presume you will as usual take them as read.

RESULTS OF THE YEAR

For the fourth year in succession the results of the year show an improvement, for railway receipts expanded by £2,805,000. All traffics contributed to this, and we were assisted by the additional day due to leap year. The increase in first-class passengers of £150,000 brings us back to a higher figure than in any year since 1930. Both this and the increase of £569,000 for

third-class passengers are due largely to a further recovery of long distance traffic and the creation of new traffic. Improved trade conditions were also an important factor, and this is reflected in the increase of £58,000 in workmen's fares. On the other hand, season ticket receipts were £18,000 worse than in 1935, our previous worst year. This is largely an indication of the growth in the use of the private car for short distance residential traffic, but is partly due to a change over from season tickets to the tickets we sell for business firms, under our bulk travel arrangements, which realised £648,000 last year, compared with £573,000 in 1935.

Freight train receipts improved by the substantial amount of £1,932,000, of which £452,000 was from coal and £1,480,000 from other classes of merchandise; the receipts from heavy industries improving appreciably from their recent low levels. A year ago I told you that, compared with 1929, we had suffered a decline of 14 per cent. in passenger receipts and of 18 per cent. in merchandise, the overall decline being 16 per cent. In 1936 the corresponding figures were 11 per cent. passengers, 14 per cent. merchandise and 12 per cent. for all traffics.

STANDARDISED ON 1929

GROSS AND NET RAILWAY RECEIPTS L.M.S. COMPARED WITH RAILWAYS OF GERMANY AND U.S.A. YEARS 1930-1936

Main Source of Business News in America . . .

Dow, Jones & Co., Inc., publishers of The Wall Street Journal, gather and analyse more news on industrial, financial and economic matters than any other news source in America.

American industrialists, bankers, investors, economists depend on The Wall Street Journal for their information as to current business developments and trends. It is a 54-year-old publication—accurate and authoritative.

To any one who must keep in close touch with American affairs, The Wall Street Journal is of prime importance.

Free specimen copy, with subscription or advertising rates, furnished on request at London Office.

because freedom from all restriction would be an additional safeguard in time of war. The Act should, therefore, he thinks, be revised in the light of war policy. Now a stiff price can properly be paid for war preparation in time of peace. But that price ought to be paid by the right people, and that price for war-time ought never to be chaos in peace-time.

There is no reason why a national war insurance should be paid solely by railway shareholders and the coal and heavy industries and the other road users. Moreover, anything that weakens the railways financially (and, therefore, physically) in time of peace is a far greater risk in time of war than can be made good by a mere surplus of road vehicles.

Sir William Beveridge has the wrong end of the stick in this matter. In an emergency he wishes to invoke the potential surplus of expansion, but though it is of crippling importance in time of peace, it is quite small in relation to the main corpus of 450,000 vehicles in the country (about which little question arises), and the number in question by Sir William would be available by mere deflection from other uses. He has remedy and disease in the wrong proportions.

I do not propose to discuss in public our plans in the event of bridge damage and the allied question of alternative railway routes, except to state that I totally disagree with the suggestions I have read. Neither do I propose to discuss in public the vulnerability of road bridges.

WAR-TIME PROBLEMS

Experience shows that the skeleton emergency service possible for a week of an industrial dispute, teaches us nothing about the full-bodied, long-period requirements of war. Considering the problem from a national aspect, visualise the position if the transport output of the railways, with their great flexibility to meet exceptional demands, were thrown on to the highways. Strings of lorries, with, of course, a driver for each, would attempt to take the place of trains averaging 34 wagons of 12 tons capacity and moving 50,000,000 ton miles of freight a day, while many cars, buses and coaches would attempt to cope with the 60,000,000 passenger miles a day now being dealt with by railway, together with the immense milk, fish, mails and other express traffic carried in passenger trains.

The result would be hopeless congestion, no matter how the road system were vastly extended, and cause a greatly increased demand on man power. Only a railway can provide the capacity and average speed necessary to bear the brunt of the nation's essential traffic requirements, and recollect that in this country it relies on *home-produced* fuel and not imported fuel. It is clear to me that the framework of the country's transport must be formed by the railways if economy and efficiency are the tests, and to me it is also clear that this is of even greater importance in times of war than in times of peace. A policy of sapping the railways in times of peace, whether by legislative or administrative action, will be to the nation's detriment in times of war.

WAGES

In 1935, the three railway unions asked for the restoration of the remaining 2½ per cent. "cut," and for the restoration of the old rates for night duty, overtime, and Sunday duty, which existed prior to 1931.

The negotiations continued till June, 1936, when the N.U.R. and R.C.A. decided to carry their claims to the Railway Staff National Tribunal, but the A.S.L.E. and F. put forward new claims for improved conditions of service for footplate staff and engine cleaners, which included a six-hour day, payment at the rate of time and a half for night duty and overtime, payment at the rate of double time for Sunday duty, and 12 days' instead of six days' annual holiday with pay.

The claims of the N.U.R. and R.C.A. were heard by the Tribunal in July, 1936, the third union not being a party to that hearing. As a result the Tribunal unanimously reduced the 2½ per cent. deduction to 1½ per cent. and increased the overtime payment from time and one-eighth to time and a quarter. The decision applies for at least a year from August, 1936, and was adopted for all the grades affected.

The change from 2½ to 1½ per cent. deduction also applies by agreement to railway shopmen.

The total cost to the company is estimated at £553,000 per annum.

In December, 1936, the Tribunal found against the further claims of the A.S.L.E. and F., who have since considered the decision and intimated that they are not prepared to accept it. Further discussions between the Society and the companies have taken place and have been adjourned until early in March, when the accounts of the four companies will be available.

Our average number of staff employed increased in 1936 as compared with 1935 by 3,100, but at December 31st our staff was 6,841 more than at the same date in 1935. With the growth of work and the increase in the rates of pay, our labour bill for 1936 was a little over £1,000,000 greater than in 1935.

OUTLOOK

I have little time left to consider the future. The year 1936 in the final event was rather better than my restrained optimism a year ago estimated. I see no reason why 1937 should not be a still further advance, and this should reflect itself in our gross receipts. But whereas our receipts per unit of work done do not rise, but may be even still further depressed by competition, our costs per unit of work done are going up.

For example, on material purchases alone we can see three-quarters of a million additional in price advances. Although economies in methods of operation will continue to fructify, and to offset this factor to some extent, it is becoming increasingly difficult for us to get back to a figure of net receipts, compared with 1929, on a gross traffic volume equivalent to that year.

But in the way in which our recovery is taking place we can compare with the railways of any other countries of the world, though many of our difficulties are greater, and our officers and staff deserve the thanks of the shareholders and the public for the zeal with which they have pressed along the road to recovery.

The Chairman concluded by moving the adoption of the report and accounts.

Mr E. B. Fielden (deputy-chairman) seconded the resolution.

CONGRATULATIONS OF STOCKHOLDERS

In the course of a discussion, several stockholders congratulated the directors and management on the improved results, and also expressed their appreciation of the services of the staff in the efficient running of the system.

Mr Wilson felt that the introduction of a penny a mile single fare would enable the companies to regain much of the traffic they had lost to road competitors. With regard to competition from road hauliers, he said it was unfair that their competitors should escape all the obligations of common carriers that the railway bore, and also that the rates laid down for the railways should be open for others to inspect and undercut.

Sir Charles Stuart-Williams, on behalf of the British Railway Stockholders' Union, expressed their pleasure at receiving even a modest dividend once more. He felt it was the wish of all stockholders that the wages question should be settled on terms which would have some permanence for a considerable time, and, if possible, on terms which would bring stockholders and employees together in some common bond. With regard to the vulnerability of railways in times of war, he would guarantee railwaymen to make good any damage long before a county council had begun to think of repairing a road.

Mr Leslie Boyce, M.P., after congratulating the directors on the results, said that it was a great disappointment to him personally that the Road and Rail Traffic Act still left so much to be desired, in view of the part that he had played in getting that measure on the Statute Book.

Lord Lamington urged that measures should be taken to effect the introduction of the 24-hour clock on the railways.

The Chairman said that he was grateful to the stockholders for their remarks. He was afraid that it would not be possible to pay shareholders "in kind," as it were, in lieu of dividends, either in accountancy or in law. As to a 24-hour system on the railways, although they might be ready to make the change, it was no part of their duties to force it upon the public.

With regard to the suggestion that the £3,000,000 refund of rates should have gone to the ordinary stockholders, the profits for the years in question showed that in no year would those payments have made any difference to the holders of ordinary stock.

The resolution was carried unanimously, and the other formal business of the meeting duly transacted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to:—

REFUGE ASSURANCE COMPANY, LIMITED

ASSETS EXCEED £65,600,000

INCOME £12,900,000

RECORD ORDINARY BRANCH NEW SUMS ASSURED

BONUS £1 16s.

SIGNIFICANT ACCIDENT FIGURES

The seventy-third annual ordinary general meeting of the Refuge Assurance Company, Limited, was held, on the 1st instant, at the chief office of the company, Oxford Street, Manchester.

Mr J. Wilcock Holgate (the chairman of the company) presided.

The Secretary (Mr John W. Moss), having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, which were taken as read, said:

Gentlemen,—In the addresses which I have been privileged to make to you in recent years on occasions such as this I have referred to the gradual recovery which has been discernible in the industry of this country; and to-day it is possible to remark not only upon the continuance of this improvement but also upon its accelerated progress during the last twelve months. Progress has been made upon sound lines, with the avoidance so far of those boom conditions which carry within them the seeds of their own dissolution; whilst even those areas most affected by the past depression, and in which recovery has been so serious a problem, may well benefit from the special requirements of the times. A factor of importance is that coupled with a very real revival of our domestic trade we have in these special requirements another energising influence operating in one direction only, and of which, it must be remembered, the lifetime is definitely limited.

The future progress of this recovery is a matter in which, unfortunately, we are hardly the architects of our own fortunes. A great deal now depends upon the future course of events in the sphere of international politics; and it is most fervently to be hoped that with the passage of time there will develop a realisation of the fundamental change which is taking place in world relations through the influence of modern civilisation in drawing closer together the nations of the world, and that as a result not only will the fear of war be removed but also the barriers now obstructing the interchange of goods and commodities will be lowered, to the universal good.

In the enlarging prosperity of the present day your company has continued to play its part. Our new sums assured in the ordinary branch were greater than in any previous year in our history; whilst in the industrial branch not only did our premium collection percentage emerge at a figure higher than we have ever yet recorded, but also the number of policy-holders falling out of benefit through the non-payment of premiums showed a further gratifying decrease as compared with the corresponding figure for 1935. This decrease, which has been a feature in each of the last four years, is one which I regard with particular satisfaction since, although no doubt attributable in part to the increase in prosperity consequent on trade revival, yet it is at the same time evidence of the success we are securing in one of our deliberate aims—that is, by a careful selection of business and by constant service to play our part in encouraging our policy-holders to maintain their contracts in force until the due emergence of the claim, whether by death or maturity. It is true, of course, that if a policy-holder falls out of benefit after his contract has been in force, even for so short a period as two years, or in many cases one year, he is automatically entitled to a free policy for a reduced amount; and in the nature of things, the issue of such free policies must be anticipated. Nevertheless, the loss of any portion of the original assurance benefit is always to be regretted, and we exert every effort to avert it.

COMBINED RESULTS

Turning now to the results of the year's working, our total premium income for the year amounted to £10,289,775, showing, as compared with the previous year, an increase of £305,111. The net interest income was £2,584,875, showing an increase of

£31,776 over the corresponding figure for the preceding year. The amount paid in claims by death or maturity during the year was £6,732,764, including £3,848,051 by way of maturities alone, the total figure representing the payment of over £22,000 each working day; and the total sum paid under this head since the inception of the company is now £103,054,088. The aggregate surplus shown by the valuation of the two branches of the company was £2,061,962, and the total assets now stand at £65,628,156, having increased by £2,661,224 during the year.

MORTALITY

During 1936 our experience as a whole, though not so favourable as in the rather exceptional twelve months which preceded it, was satisfactory.

The total sum paid in death claims during the year was £2,884,697, and the value of this very large sum in the homes amongst which it was shared can readily be imagined. More particularly perhaps, would this be the case where accident, sudden and unexpected, was the cause of death, perhaps of the breadwinner of the family; and in this connection I would refer to the distressing number of fatalities which arise as the result of road accidents and to which our attention is so often called by the Press. It will be of interest to you to know that in this matter your company plays a part of some importance in that during the period from June to December last, in the course of which no less than 372 of our policyholders lost their lives on the highways, we paid out in claims thereunder a sum aggregating over £13,800.

ORDINARY BRANCH

Turning now to the results for the year in the ordinary branch, I desire again to draw your attention to the new business secured by way of policies subject to renewal premiums. The number issued was 56,191 at annual premiums of £487,586, showing an increase of £6,234 as compared with the previous year, the sums assured thereunder amounting to £8,562,134, a figure greater than we have ever previously been able to record. In addition there were issued during the year 1,005 single premium contracts, the premiums applicable thereto amounting to £176,459, an increase of £43,183 over the corresponding figure for 1935. It is again interesting to observe that of the total of £8,766,070 new ordinary branch sums assured issued last year 32 per cent. represented individual assurances of £500 and over. The point is, of course, that too many people are apt to have regard only to the sum assured by their policies and to overlook the consideration that their dependents will depend for financial support not upon their capital, but upon the income from it. Expressed in this way, a sum assured of £1,000 assumes a very different aspect.

It has been said with truth that life assurance ranks with the greatest of modern inventions in that it has revolutionised the old method of provision for dependents. No longer is it necessary to rely upon years of individual saving, with the ever present fear that death may interrupt the process before it is completed. On the contrary, the payment of the first premium creates immediately an estate, secure from all depreciation; and how much this contributes to the peace of mind of the individual can hardly be overestimated. That the mental condition of man has a direct influence on his physical well-being is a matter beyond dispute; and by taking over from him his anxiety regarding the future of his dependents, or his own old age, a life office relieves him of at least one influence inimical to health, and so makes a definite contribution towards the increase in longevity so noticeable a feature of our national statistics. A noteworthy example in this connection is the class of annuitants, which experiences a rate of mortality the lightness of which is proverbial and which is undoubtedly attributable in no small measure to freedom from care regarding their income—a freedom due entirely to the confidence

universally, and justifiably, placed in the stability of the life offices which issue such contracts.

The ordinary branch premium income for the year was £4,598,791, showing an increase of £152,096 over that of the previous year. The net interest amounted to £1,502,423, showing a net yield of £4 3s. 11d. per cent. on the assurance fund. The expense ratio was slightly lower than that of the previous year, being 14.89 as against 15.05 in respect of 1935, and the life assurance fund now amounts to £37,015,908, showing an increase of £935,988 during the year, in addition to which there is an investments reserve fund of £1,750,000.

ORDINARY BRANCH BONUS

The annual valuation was again made on a 3 per cent. basis, and the resulting surplus was £1,710,039, which includes £640,136 brought forward from the preceding year. It is proposed to declare a reversionary bonus at the rate of £1 16s. per cent. on with-profit policies, absorbing £912,606, to allocate £101,401 to the shareholders, and to carry forward unappropriated the sum of £696,032.

I need not recall to your minds my remarks on previous occasions regarding the effect on the net yield on our funds of the low rates which have constituted for some years a distinguishing feature of the financial picture. A further point of importance is, of course, the increase in the rate of income tax during the year, and possible future developments in this connection; and the Board has given due weight to these considerations in their decision as to the allocation of the surplus.

INDUSTRIAL BRANCH

In the industrial branch our premium income amounted to £5,690,983, showing an increase of £153,014 over that of the previous year. The net interest income was £1,082,452, representing a net yield of £4 14s. 2d. per cent. on the life assurance fund, which increased during the year by £1,703,864, in addition to which there is an investments reserve fund amounting to £1,700,000.

It is interesting to record once again an increase in the average duration of the premium-paying contracts on our books, which is now eleven years and ten months, whilst another point of importance is a further small decrease in the expense ratio, which is now 34.27 per cent., this figure having shown a continuous decrease during the last ten years. Another feature to which I might draw your attention is the fact that in the industrial branch the number of free policies on our books is now 1,168,701, having increased by 74,447 during the year. Contracts of this character are to-day accepted as natural features of the business, a fact which affords yet another indication of the growing approximation of industrial branch conditions of assurance to those ruling in the ordinary branch; and though naturally the sums assured individually are small, it is our experience that the policies are retained and produced when the claim emerges. It is, in fact, an instruction to our representatives to inquire of any claimant as to whether or not any free policies are in existence; and our valuation records show that during 1936 this company paid out the sum of £193,911 by way of death benefits and surrenders for cash under free policies, together with a further sum of £53,093 in respect of similar contracts which matured by survivance of the endowment terms.

INDUSTRIAL BRANCH VALUATION

As indicated in the report, the valuation basis has again been strengthened, and is materially more stringent than any previously employed by the company in this branch. The rate of interest assumed is 3 per cent., except in respect of whole-life assurances under tables 1, 2 and 3, which are valued on a 2½ per cent. basis.

The resulting surplus is £351,923, which includes £132,282 brought forward from the preceding year. After the transfer of £50,000 to the investments reserve fund, it is proposed to set aside £133,027 for allocation amongst the policyholders in this branch, and from the remainder to allocate to the shareholders the sum of £48,599, the amount carried forward being £120,297.

As last year, the profit allocated to policyholders will be applied in favour of premium-paying contracts under tables which are not permanently increased to the latest and best scales of benefit, for the purpose of paying according to the latest scale of benefit claims under these tables arising by way of death within the coming twelve months.

SIGNIFICANT ACCIDENT FIGURES

I referred last year to the number of claims under policies of short duration in the ordinary branch which inevitably arise

through death by accident or sudden illness. To-day I would like to draw your attention to another aspect of the same subject in its relation to the industrial branch, and this I can do most easily by referring you to the following figures showing the number of policies becoming claims by death due to accident or other violent cause during the past year:—

Classification.	Age at death.				Total.
	0 to 15 years.	16 to 65 years.	66 years upwards.		
Falls at home or in the street	11	175	1,074	...	1,260
Motor and road accidents	71	492	428	...	991
Accidents at work	...	9	458	73	540
Fire	...	44	78	164	286
Drowning	...	29	118	54	201
Other causes	...	61	823	428	1,312
	225	2,144	2,221		4,590

The total amount paid by the company in respect of these claims was £64,565, and the record will repay careful study. It emphasises a truth regarding which many of us, unconsciously perhaps, seek to deceive ourselves—that no age is free from the onset of the unexpected, nor is any one place secure. The figures—which are in no way exceptional and represent the experience of a normal year—show that accident is no respecter of person or place; and since so often it is a result of human fallibility, the details I have given may serve a useful purpose as a reminder of the risks from which nobody is immune.

INVESTMENTS

Referring to the balance sheets, I have already drawn your attention to the fact that the assets of the company now amount to £65,628,156, having increased during the year by £2,661,224.

The principal change as regards the amounts appearing against the various classifications is a further addition of £978,666 to our holdings of British Government securities and securities guaranteed by the British Government, now amounting to £23,945,567, constituting 36.49 per cent. of our total assets and 45.90 per cent. of our total stock exchange securities. With regard to the latter I am able to state that during 1936, in the aggregate, considerable further appreciation occurred, the margin between the book values and the market values of the securities at the end of last year being greater than on any similar occasion. In addition there exist our investments reserve funds of £3,450,000, including £50,000 which has been added during the year.

The geographical distribution of our investments shows little variation from last year, as follows:—

	Per cent.
Great Britain	82.75
Indian and Colonial	12.09
Foreign	5.16

As already stated, the net interest received during the year amounted to £2,584,875, against £2,553,099 in 1935. With respect to the yield which this interest produced, I need hardly remind you that the year under review witnessed a further extension of the cheap money period which commenced in 1932. This has been the dominating factor with respect to the rate of interest obtainable on funds available for investment, either by way of new money, the proceeds of repayments, or conversions. Under these circumstances and having in mind the increase in the rate of income tax during the year, you will, I hope, regard with satisfaction the fact that our net yield on the combined assurance funds is £4 7s. 11d. per cent., as against £4 10s. 3d. per cent. in 1935, the corresponding gross yields being £4 18s. 4d. per cent. and £4 19s. 4d. per cent. respectively.

NATIONAL HEALTH INSURANCE

Dealing now with another branch of the company's activities, I have to report that on behalf of the National Amalgamated Approved Society, we administer the national health insurance of a membership of 660,000. During the year 1936, payments of benefit were made amounting to £675,840, including £74,603 in respect of maternity benefits. In addition, the further considerable sum of £61,564 was received by "Refuge" members by way of non-cash benefits. The number of new members admitted during the year in the "Refuge" section of the Society was 47,493.

TRIBUTE TO STAFF

Before I close I wish to pay a tribute to the efforts made by the company's staff, in the field and at chief office, during the

year to which the accounts refer, which have resulted again in substantial progress being made in both branches of the company's business. The work, both indoor and outdoor, has once more been performed with that efficiency which we are accustomed to expect and to receive, and I have pleasure in expressing my thanks to all concerned. The company's relations with the staff organisations which represent its employees, both at chief office and in the field, remain cordial, and I confidently expect that this feeling, founded on a basis of mutual understanding and respect, will always be maintained as an asset of real value both to staff and company.

CONCLUSION

Gentlemen, I have now much pleasure in moving the adoption of the annual report and accounts.

The report and accounts were adopted.

Messrs James Proctor-Pearson and John W. Moss were re-appointed directors.

Messrs. Walton Watts and Co. were reappointed auditors.

The meeting closed with a vote of thanks to the chairman.

SELFRIDGE AND COMPANY, LIMITED

RECORD YEAR—INCREASED DIVIDEND

The twenty-ninth annual ordinary general meeting of Selfridge and Company, Limited, was held, on the 26th ultimo, at the company's store, Oxford Street, W. Mr H. Gordon Selfridge (chairman and managing director) presided.

The Chairman, in moving the adoption of the report, said: I am glad to be able to point, for 1936, to record results in many directions. The net profits for this store for the past several years are as follows:—1936, £485,086; 1935, £414,190; 1934, £375,139; 1933, £355,644; and the profits for the past year are the highest this store has been able to show. Furthermore, the increase over the preceding year is also a record in itself of increase.

These figures refer only to this individual store, but if we wish to compare our figures with similar groups of distributing houses here in England, in France and the United States, we must include the results of Wm. Whiteley, Limited, and the Selfridge Provincial Stores. The Selfridge group, therefore, shows a total net profit for the year of approximately £830,000, which represents an increase over 1935 of about £107,000.

The balance sheet which has been before you for some days pretty well tells its own story—the chief differences from that of last year being the increase in the net profit of £70,000 and the increase of the dividend on the ordinary shares from 10 per cent. to 15 per cent.

I may be excused for mentioning several interesting facts concerning our business for 1936. The net profits are the best on record. The expense per cent. is the lowest for many years. The cash discounts are the highest on record.

An increase over figures of 1935 is shown in 165 departments; the greatest annual returns were shown in 75 departments; the greatest yardage, poundage and number of transactions have been placed to our credit; the greatest number of customers have been served; the greatest number of letter orders and telephone orders; the greatest amount of returns in the bargain basement; the greatest number of transactions in the bargain basement; the greatest number of employees are on our payroll; the greatest amount has been paid on average to each employee per week.

Our increase in profits is attributable to a handsome increase in our annual returns, but perhaps most of all to a more nearly universal recognition of the London shopping public of the obvious advantages of this great centrally located store as a regular supply centre for the weekly requirements of the family and the individual. Absolute confidence in and dependability upon Selfridge's are growing more evident all the time.

There have been during the last six months of last year some few advances in the cost of goods. Our profits have not seriously been advantaged by these few changes, but everything now points to a general increase of costs of merchandise all along the line.

The greatest item in our expense account (which includes nearly 250 individual items) is, of course, the pay roll. This, in money, is the highest we have ever shown. We feel that our staff, as a whole, or even individually and in detail, are perhaps more wisely experienced and finely intelligent in their work than at any time since the business was opened nearly twenty-eight years ago.

We begin this new year with utmost confidence.

Mr Herbert J. Clarke seconded the resolution, which was carried unanimously.

SCOTTISH WIDOWS' FUND AND LIFE ASSURANCE SOCIETY

PREMIUM INCOME OVER £2,000,000

LORD KINROSS ON YEAR'S PROGRESS

The one hundred and twenty-third stated annual meeting of the Scottish Widows' Fund and Life Assurance Society was held, on the 2nd instant, in the society's head office, Edinburgh.

The Rt. Hon. Lord Kinross, K.C. (chairman of the Ordinary Court of Directors), presided.

In moving the adoption of the report and accounts, the Chairman said:—The new business again shows a substantial increase and for the first time exceeded £5,000,000 before deducting the amounts reassured with other offices. The net new sums assured, less reassurances, reached the record total of nearly £4,850,000—an increase of £380,000 over the corresponding figure of 1935.

ADVANTAGE OF LIFE ASSURANCE

A life assurance policy is not only a first-class investment; it is also the only investment which will secure for a man's dependants, in event of his early death, a sum many times greater than the amount he has invested. In other words, it is the only investment which can give adequate cover, and the fact that every year we have to report the death of 700 or 800 members is a vivid reminder of the importance of this cover. Not the least advantage of life assurance is that it helps to convert into a fixed habit that good intention so many people have to save money every year.

In the revenue account our large new business is reflected by an increase of £100,000 in the premium income, bringing the total over £2,000,000 for the first time.

The amount paid in claims by death was slightly larger, and the total—almost 1½ million pounds—is a substantial testimony to the service which the society performs for its members and their dependants. Our mortality experience was again favourable as compared with the standard on which we base our calculations, and resulted in a satisfactory contribution to surplus. Claims by survivance were higher, but these merely represent payments for which full provision has been made.

Despite the fact that claims by death are a mixture of policies of short and long duration, the excellent results under with-profit assurances are clearly brought out by the statement in our report that the claims paid under such policies in 1936 were on the average £161 for each £100 originally assured. This figure over the past ten years has varied but little, for it has never been less than £154 16s. and has been as much as £164 19s. During the same period in over 2,300 cases the amount paid has been more than double the original sum assured, and in some cases it has been more than treble. In 1936 there was one claim paid of more than 3½ times the original face value.

A sign of better times is to be seen in a further reduction in the amount of surrenders of policies, which had increased considerably during the years of depression.

Our interest income shows an increase corresponding to the growth of the funds, and the average gross rate yielded was £5 4s. 10d. per cent., which is 10d. greater than the rate in 1935. An addition of 3d. was made to the rate of income tax in the last Budget and, largely as a result of this, the net rate of interest, after deduction of income tax, was 5d. lower at £4 6s. 10d. per cent., but this is actually larger than the corresponding figure of three years ago—the year following the conversion of War Loan to a 3½ per cent. base.

ADDITION TO FUNDS

By the operations of the year nearly £700,000 has been added to the funds, bringing the total to nearly 33 million pounds, and the balance sheet shows how these funds are invested.

You will see appended to the balance sheet the customary statement that the Stock Exchange securities stand at or under their market selling prices at December 31, 1936. Once again there has been an increase in the substantial margin between the market and book values of the investments which forms such a comfortable buffer against adverse changes in the future. The advantage of such a margin is illustrated by the fall in prices which has taken place since December 31st.

The management of our large funds is never an easy task, but we can regard the outcome with satisfaction in view of the surplus value of our investments at December 31st and the high level at which our interest income has been maintained.

The directors' report, and the accounts as audited, were adopted unanimously.

THE STANDARD LIFE ASSURANCE COMPANY

BONUS OF 42s. PER CENT. ANNUAL AND COMPOUND

DECLARED FOR THE TENTH SUCCESSIVE YEAR

RECORD NEW BUSINESS

NET INTEREST RATE EARNED OVER 4½ PER CENT

The hundred and eleventh annual general meeting of the Standard Life Assurance Company was held in Edinburgh on Tuesday, March 2, 1937, Mr George W. Blackwood in the chair.

The manager and actuary having read the auditors' report, The chairman, after referring to general trade conditions, said:

IMPROVED NEW BUSINESS RESULTS

The improvement in trade has naturally had a favourable effect on our business. If you will turn to the directors' report you will see that the new ordinary life business effected during the year, after deduction of reassurances, amounted to £4,074,000, and I am glad to be able to state that for the fourth successive year the total of the net ordinary life business constitutes a record in the history of the company; moreover, on this occasion for the first time the four-million pounds mark has been passed. Our branch in Canada has contributed materially to this excellent result, the new business department there having taken full advantage of the improved economic conditions in that country. In addition to ordinary life assurance, the Standard, as you know, transacts group life assurance for industrial firms and other bodies, and last year, as you will see, the amount of this class of business effected was £502,000, so that our aggregate net new assurances amount to over £4,576,000.

The revenue account of the life assurance and annuity fund shows that our premium income is now £1,784,000, representing an increase of over £120,000 for the year. Our other main source of income, namely interest revenue is £1,150,000; it also shows a considerable increase over the comparable figure of last year. I commented last year on the fact that the yield on money continued to rule at very low levels and pointed out the difficulty which all insurance companies had in finding new investments, attractive both from the point of view of security and interest yield. Notwithstanding the continuance of these conditions throughout 1936 and the fact that during the year the rate of income tax in this country was raised from 4s. 6d. to 4s. 9d. in the £, I am glad to be able to report that our net rate of interest has again exceeded 4½ per cent. The surplus income of the guarantee fund which has been transferred to the credit of the life assurance and annuity fund amounted to over £38,800. Most members are no doubt aware of the fact, but the point is so important as to deserve repeated emphasis, that not only does the surplus income from the guarantee fund swell the income of the life assurance and annuity fund, but the amount of the guarantee fund, £1,700,000, is available as additional security for our life assurance and annuity contracts over and above that afforded by an exceptionally strong life assurance and annuity fund.

As regards the company's assets set out in the balance sheet I need only say that the very considerable appreciation to which I referred last year in the market value of our investment holdings has materially increased during 1936; in other words, there was a still greater margin between the market and balance sheet figures. As is our custom no credit whatever has been taken in the accounts for any capital appreciation.

STRENGTH OF THE VALUATION BASIS

In valuing the actuarial liabilities the manager and actuary made use of the same bases as in the previous year. The mortality table employed was the most up to date available, being based on the experience of lives assured with British offices during the six years 1924-29 and known technically as "The A. 1924-29 Experience." As regards the rate of interest entering into his calculations the exceptionally low rate of 2½ per cent. was again adopted and the usual special reserves were also set up.

After making this very ample provision for liabilities and making the transfers of £100,000 out of revenue to which I have already referred, the directors were able to declare an annual compound reversionary bonus of £2 2s. per cent. with corresponding bonuses in respect of policies issued under our minimum premium or cash bonus plan of assurance. The company has now completed its 111th year of existence, and I would remind you that when it was 100 years old its constitution was changed from that of a company owned and controlled by shareholders to a company owned and controlled by its policyholders. The success of the company

under mutual principles has, I think I may claim, been striking, and it is worth stressing that for each of the past ten years the directors have been able to declare a compound bonus at the high rate of £2 2s. per cent.

NECESSITY OF ADEQUATE LIFE ASSURANCE COVER

There is one subject to which I would allude in concluding my remarks on the year's work. Time after time it comes to our notice that a man has insufficiently insured his life. I am informed that the amount of life assurance per head of the population in certain other countries such as the United States of America is considerably greater than in this country; whether that be the case or not it seems to me that very few men in this country sufficiently provide by way of life assurance for their dependants. The matter is one of greater importance than ever in these days when investment yields are not what they were say ten years ago. A much larger sum is now needed to produce a given income and the toll of death duties has not diminished. I would suggest to our members the necessity of giving this subject very careful consideration. I may point out that the Standard exists solely for the purpose of rendering service to its members, and the officials of the company at head office and branches are always ready to help a member in the choice of the type of assurance best suited to the circumstances of his case.

The report was unanimously adopted.

BRITISH ASSETS TRUST, LIMITED

DIVIDEND INCREASED—FAVOURABLE OUTLOOK

MR A. W. ROBERTSON DURHAM'S REVIEW

The thirty-ninth ordinary general meeting of the British Assets Trust, Limited, was held, on the 3rd instant, in Edinburgh, Mr A. W. Robertson Durham, Chairman of the Company, presiding.

In moving the adoption of the report and accounts,

The Chairman said: I now submit for your approval the report and accounts for the year ended January 15, 1937, which have been in your hands for some time now and which, with your approval I propose to hold as read.

You will see from the accounts that the gross income for the year amounted to £309,925, as against £286,104 last year, which shows an improvement of approximately £24,000, and we are glad to be able to recommend a dividend for the year of 7½ per cent. on the ordinary stock, as against 3 per cent. last year. In this figure of £309,925 no arrears of dividends or underwriting commissions have been taken into account.

As you are no doubt aware, many American companies paid out by way of dividend during 1936 the greater part of their earnings for the year, with a view to avoiding the new tax which they would otherwise have had to pay on undistributed earnings. Wherever possible, we have earmarked any special dividends which appeared to have been declared for this purpose, and these have not been included in the revenue account.

INCOME RESERVE FUND

As you will see from the report, the directors have decided to open an income reserve fund and have transferred sums thereto amounting to £75,000. Of this sum approximately £25,000 is made up of arrears of dividend, underwriting commissions and the special dividends on American investments referred to above received during the current year. A sum of about £16,600 representing arrears, underwriting commissions, etc., for the previous year has been transferred from contingent fund, and the balance has been transferred from the carry forward. It is our intention to invest this fund in a separate account with a view to its being readily available to help maintain the dividend during times when the revenue is falling, and the board has no doubt this will meet with the approval of the stockholders.

On the payments side of the accounts the management expenses show a slight increase, partly due to the fact that during the year we opened an office in New York. We have taken this step in view of our large interests in the United States, and feel that it will prove beneficial to the company. Income tax has increased by approximately £8,600, due to the larger gross income and also the increase in the rate of income tax compared with the previous year.

VALUATION SURPLUS

From the balance sheet you will see that the investments, after deduction of the capital reserve fund and contingent fund, amounted to £7,395,576, which shows an increase of approximately £470,000 as compared with last year. We have again taken advantage of

LONDON AND LOMOND INVESTMENT TRUST, LIMITED

INCREASED REVENUE

The sixth ordinary general meeting of the London and Lomond Investment Trust, Limited, was held, on the 4th instant, in London.

The Hon. W. B. L. Barrington (the chairman of the company) presided.

The notice convening the meeting having been taken as read, Mr Ian Wright, of Messrs Grahams, Rintoul, Hay, Bell and Company (the secretaries), read the auditors' report.

The Chairman, in moving the adoption of the report and accounts, said:—

PROFIT AND LOSS ACCOUNT

The income received during the year ended January 31, 1937, amounted to £73,636, as compared with £61,709 in the previous year. It has to be borne in mind that the issue of share capital and debenture stock during the year contributed towards the increase in the income. A full year's revenue was, however, not derived from the investments made with the new money. The net revenue, after charging expenses of management, interest, and income tax, amounted to £33,999, the figure for the previous year being £27,858.

THE DIVIDENDS

The directors recommend payment of a dividend of 3½ per cent. actual on the original £200,000 ordinary stock, making 5½ per cent. thereon for the year and a dividend of 3½ per cent. actual on the additional £40,000 ordinary stock created last August. The unappropriated surplus revenue for the year, amounting to £1,834, added to the balance of £5,484 brought forward, makes a total of £7,318, which the directors propose should be carried forward to next year.

Your board considered whether they should recommend the distribution to the ordinary stockholders of a larger portion of the net revenue for the year. However, having regard to the unsettled state of world politics, notwithstanding the increased prosperity in this country and in America, and having in view the desirability of providing as far as possible for stability of dividends in less prosperous times, it was decided to continue to conserve the revenue position of your company. The unappropriated surplus revenue for the year is equivalent to approximately 20 per cent. of the income received. The dividend on the ordinary stock in the previous year was 5 per cent.

INVESTMENTS

The value of the investments increased further during the year, and at January 31, 1937, showed an appreciation of £427,912 over the balance-sheet figure. The following is a summary showing the surplus of assets over liabilities and capital as compared with the corresponding figures as at January 31, 1936:—

	1937.	1936.
Appreciation in investments	£427,912	£250,447
Capital Reserve	80,000	50,000
General Reserve	30,000	20,000
Carry forward	7,318	5,484
	£545,230	£325,931

The net improvement during the year is thus £219,299, and your company is now well placed to withstand any recession in values of securities which may take place in the future.

A full list of the investments is, as usual, attached to the report and particulars of their distribution, based upon the valuation at the end of the year are shown as before.

CURRENT YEAR'S PROSPECTS

The outlook for the current year is somewhat clouded by the probability of increased taxation both here and in the United States of America. A further complication which makes it difficult to form an estimate of our revenue is the practice adopted by some American corporations of paying what are termed extra dividends. While it is possible that such dividends may continue to be received during the current year we have no assurance that this will be so. Your board hope, however, that should these unfavourable factors in maintaining the stability of your company's revenue materialise they may be offset by general increases in dividends which may reasonably be expected.

The report and accounts were unanimously adopted.

The retiring director, the Hon. W. B. L. Barrington, and the auditors, Messrs Moores, Carson and Watson, Chartered Accountants, were re-elected.

the low rates of interest prevailing by further increasing our short-term indebtedness, and the deposits and loans have risen by about £200,000, and the terminable debentures by £165,000.

The increase in both sundry debtors and sundry creditors as compared with last year is accounted for by increased amounts being due to and by stockbrokers on account of investments purchased and sold as at the closing date of the accounts. With regard to the valuation, this again shows a surplus over the figure at which the investments appear in the balance sheet. After valuing our holding of Second British Assets Trust, Limited, ordinary shares at the same conservative figure as last year, this surplus amounted to approximately 19 per cent.

With regard to revenue, a careful estimate has been prepared which leads us to expect that in ordinary circumstances the income for 1937 should be not less favourable than it has been in the past year.

An analysis of the investments, based on the market values but excluding our interest in the Second British Assets Trust, Limited, shows that we have about 39·6 per cent. in Great Britain, 17·3 per cent. in British Dominions and Colonies, 37·6 per cent. in the United States of America, and 5·5 per cent. in other countries. The proportion in bonds, debentures and preference stocks amounted to 27·8 per cent. and in ordinary stocks to 72·2 per cent.

Last March the Marquess of Linlithgow intimated his retirement from the board on his appointment as Viceroy of India. The directors accepted his resignation with great regret as he had rendered valuable services to the company and had always taken a very keen interest in its affairs. I feel sure you will join with me in extending to him our best wishes in successfully fulfilling the great task for which he has been chosen.

The Chairman completed his remarks by moving the adoption of the report and accounts and the payment of the dividend recommended therein.

The motion was seconded and adopted.

PADANG LANGKAT RUBBER ESTATES, LIMITED

STRONG FINANCIAL POSITION

The fourth annual ordinary general meeting of this company was held, on the 26th ultimo, in London.

Mr H. A. Barrett (the Chairman) said that the balance sheet showed a strong financial position, investments showing an increase of some £3,000 and cash £2,000. Nearly all of their investments had definite redemption dates, and stocks of that description had been less seriously affected than "undated" stocks in the decline which had recently taken place in the values of all gilt-edged and fixed interest stocks.

Instructions had been given for the replanting of some 400 acres of the older rubber areas, the programme being to fell and replant 200 acres this year and 200 acres next year.

The company's standard of assessment under the restriction regulations had been provisionally fixed for 1937 at 1,598,436 lbs., and for the financial year which ends September 30, 1937, their export allowance should approximate 1,100,000 lbs., of which they had sold spot and forward 536,800 lbs. at an average price equivalent to 8½d. per lb., London landed terms.

Of the immediate future of rubber one could speak almost with confidence, and he thought that next year they might reasonably expect to have before them accounts which would be even more pleasing than those under consideration.

The report and accounts were unanimously adopted, and the dividend as recommended declared.

Name

Address

BORAX CONSOLIDATED, LIMITED

INCREASED PROFITS—ENCOURAGING OUTLOOK

The thirty-ninth ordinary general meeting of Borax Consolidated, Limited, was held, on the 3rd instant, at Southern House, Cannon Street, E.C.

Col. J. W. Reid (vice-chairman) presided in the absence of the Rt. Hon. the Earl of Leven and Melville, K.T. (the chairman of the company), owing to indisposition, and read the speech which had been prepared by him.

Lord Leven's address first referred to the loss the company had sustained by the death of Mr R. C. Baker (the managing director), and continued: Ladies and gentlemen,—The net profits are £384,526, or £45,630 more than in the previous year, when they were £338,896. Our carry-forward from last year is £232,459, hence we have to deal with a total of £616,985. The first and second debenture stock interest amounted to £112,500, the dividends on the preference shares to £44,000, and the sinking fund on the first debenture stock to £5,825. We have placed £60,000 to buildings and plant depreciation reserve, and the total of these items amounts to £222,325. Deducting this sum from the total of £616,985, there remains a balance of £394,660. We propose to deal with this amount by the payment of a dividend of 6 per cent. for the year on the preferred ordinary shares, to pay a dividend of 1s. 6d. per share, or 7½ per cent., on the deferred ordinary shares, to place to income tax reserve £20,000, and to pensions and grants fund £5,000. This will leave £236,160, or £3,701 more than last year, to carry forward.

BALANCE SHEET FEATURES

Referring to the balance sheet you will notice that the issued capital of deferred ordinary shares now stands at £1,300,000, the increase representing the issue made on May 11, 1936, of 150,000 deferred ordinary shares. These were issued at 27s. per deferred share, the offer being confined to our preferred and deferred shareholders, and the issue was considerably over-applied for. The premium, less expenses of the issue, has been added to the share premium account. We have written off to the buildings, plant, etc., depreciation reserve the sum of £59,369 after allocating £60,000 to the reserve.

Our buildings and plant are always maintained in good repair out of revenue, but owing to the cost of additional plant we deemed it only prudent to provide a larger sum this year for depreciation.

The capital amortisation fund shows an increase of £15,817, bringing the figure now to £360,032, representing the present value of the Sun Life Assurance policies for the redemption of the first debenture stock.

There is an increase of £3,611 in the mines and deposits account, represented by additional acquisitions of mining properties. There is also an increase of £17,564 in capital invested in subsidiary mining and trading companies. The item of freehold land, buildings, plant, etc., shows an increase of £64,790, representing mainly improvements in plant and sundry extensions in the United States. Stocks are about £10,700 higher than the previous year, but are all of a liquid nature, readily disposable. Our holdings in British and foreign Government securities and cash at bankers and in hand represent a total of £476,481—an improvement, compared with the figures of the previous year, of £220,000, which I am sure you will agree represents a very satisfactory position.

The reduction in "Advances to and current accounts with subsidiary companies" is of an ordinary trade nature. Shareholdings in associated companies figure at £571,887. In the previous account this item included advances which have now been paid off.

TRADING CONDITIONS

Our business, as you know, is world wide and subject to the trading and financial conditions prevailing in various countries. During the year under review five foreign countries exercised their right to devalue their currencies, causing disturbing reactions at first. Buyers and sellers, however, soon adapt themselves to the new conditions, and it is to be hoped that under the present international understandings the very delicate question of exchange between the various countries has now reached a more permanent and stable basis so necessary to international trade.

In general, a steady demand for our goods has continued throughout the year. The use of our products is spread over so wide a variety of industries that we can count on participating wherever there is an improvement in trade. There are still a number of foreign countries whose trading capacity is limited by

all kinds of restrictions, mainly due to lack of the necessary foreign exchange, and until there is an improvement in this connection, the interchange of commodities with those countries is severely handicapped.

We have derived certain advantages from plant additions and improvements in our processes, and contemplate further expenses in this direction which we feel confident will yield a profitable return and still further strengthen our position.

CURRENT YEAR'S OUTLOOK

So far as the current year is concerned, as you know, I always hesitate to assume the rôle of a prophet, since conditions throughout the world are still far too unsettled to permit of any long view. There is no doubt that the trend of costs throughout the world is in an upward direction, but any consequences thereof must apply equally to our competitors and are therefore unlikely to disturb our connection.

Our orders booked for the five complete months of the new financial year are fully equal to last year's figures. I refer to the orders booked advisedly, since on account of the shipping strike which prevailed on the whole Pacific Coast of the United States for fourteen weeks and was not settled till February 5th, it was only possible to ship by indirect routes, such as Canadian or Gulf ports, involving substantial additional expenses. Consequently, heavy arrears have been accumulating, while reserve stocks in Europe have been severely depleted. We are endeavouring to overtake these arrears as fast as shipping opportunities from the Pacific Coast permit.

THE USE OF BORON IN AGRICULTURE

Since I made a passing reference at our last meeting to a new development in the borax industry, you will be interested in any progress I have to report. I refer to the rôle played by boron—the active principle of borax—in the healthy growth of a number of plants. Investigations are being conducted by agricultural research institutes and by Government experimental stations with the object of discovering to what extent deficiencies in minor elements are the cause of diseases in plants. In the work that has been done and is still being carried on there are strong indications that the absence of available boron in the soil is responsible for certain diseases to which sugar-beets, swedes and turnips are liable, particularly in dry seasons. I understand that last year well over 100,000 acres were treated with a very small amount of borax. According to reports received from various countries, its application is being substantially extended. However, it is important to remember that the proportion of borax added at best is necessarily a small one and that agricultural experiments have to be repeated a number of times for results to become accepted generally. Research continues, and if confirmation is obtained it may prove highly desirable to include a small proportion of borax in fertilisers normally applied to a number of crops.

THE UNITED STATES POTASH COMPANY

As announced in our report, we received a small maiden dividend on our holding of common shares in the above during the past financial year, which has already been followed by a further interim dividend of like amount during the current year. The consumption of potash throughout the world is steadily increasing, and since the company in which we enjoy a holding is excellently equipped both in resources and processes for producing the highest grades, we have every reason to be well satisfied with this investment.

Assuming that you approve our proposals, dividend warrants will be posted at once, but I wish to make it clear that exactly as in the past year and for the same reason it is not proposed to pay dividends on the preferred or ordinary shares on account of the current year until the accounts are made up.

The pleasant task remains to record our appreciation of the services of our staff in all countries, and I should like to add how much I appreciate their loyalty and excellent work. (Applause.)

The Chairman concluded by moving the adoption of the report and accounts.

Mr J. Gerstley, in seconding the motion, also referred to the great loss the company had sustained by the death of the late managing director, Mr Baker, and said that he had been deputed by their managers and staffs in Europe and overseas, and especially by his many friends in America—a country which he visited so often—to express their admiration of his sterling qualities. He was a source of inspiration to all of them, and he had left behind him a magnificent tradition which it would be their pride to try to maintain.

The resolution was carried unanimously and the dividends as recommended were approved.

MIDLAND COUNTIES ELECTRIC SUPPLY

FURTHER PROGRESS

The twenty-fourth ordinary general meeting of the Midland Counties Electric Supply Company, Ltd., was held on the 3rd instant, at Winchester House, Old Broad Street, London, E.C.

Mr George Balfour, J.P., M.P. (the chairman), said: Regarding our last year's activities, business has been satisfactory in all departments, and progress made in both transport and electricity supply undertakings. I have, for several years past, been able to report an improvement in our transport business and that our transport services earned a satisfactory return on the capital employed. Last year we still further improved our position, and I can say with confidence that at the present time the transport undertakings are on a very sound commercial basis. We command a fleet of buses which are well maintained—the latest type of vehicles being regularly employed to replace older types. We again left all revenue from this source in the reserves of the transport companies to provide still further for the full value of our statutory rights. If the business continues as at present we should feel free to bring into this company's accounts revenue from this branch of our business in the future. After paying all operating, management and other expenses, including taxation, we provided £29,797 for depreciation and earned a surplus of £44,636.

Turning now to the electricity supply business, during the year we again extended our services and reduced charges in many districts, at the same time continuing our policy of consolidation.

The total units sold were 363 millions compared with 324 millions for the previous year, and deducting large bulk and special commercial contract the units sold for the whole of our miscellaneous power and domestic consumers amounted to 262 millions compared with 220 millions, or an increase of 19 per cent. Our export to the Central Board was 98½ million units, for which the Board consider we are only entitled to receive 10d. per unit or even less as a contribution to our outlay for coal and other running costs.

EXTENSION OF SERVICES

We still continue to make rapid progress with the extension of our services, and last year connected 15,972 consumers compared with 16,734 during the previous year, making the total number of consumers connected at the end of last year 108,266. The intensity of our development can be best illustrated in our last four years' growth. At January 1, 1933, the total consumers connected was 51,533, and at January 1st last 108,266. You will therefore see that in four years we have more than doubled the total number of consumers connected. It is too much to expect such a high rate of connection to continue, but I am glad to say that it is certainly being maintained at present, and it will be many years before we reach saturation point.

Last year we again increased the mileage of main transmission lines and distribution cables, and have now in service 1,516 miles of high-tension lines or cables and 1,746 miles of low-tension distribution. Many additional sub-stations were installed during the year, and we now have 1,075 sub-stations of various sizes in addition to sub-stations on consumers' premises. We have also added to our two street lighting supplies, and now provide street lighting in two street lighting boroughs, 16 urban districts and 124 rural parishes. Our electricity services were carried into 27 parishes hitherto unserved, and we now supply in three boroughs, 31 urban districts and 549 parishes.

We made reductions in prices affecting a large number of consumers as from June 30th last. Here is a picture of what we have done for our consumers last year by price reductions. We reduced on bulk supply charges to local authorities to the extent of £25,600, and to our domestic consumers we made reductions from June 30th last, that is, for a half-year, amounting to £26,200, or a reduction for a full year of £52,400. In addition, we benefited our industrial consumers to the extent of £24,450 by waiving charges payable by these consumers for increased cost of coal under their coal clause.

There is available sufficient to pay a final dividend of 5½ per cent. on the ordinary shares, making 8 per cent. for the year, an increase of ½ per cent., and to carry forward £11,647 to the next account. Regarding the outlook for the current year, you can judge from what I have already said that we have started well, and I see no reason why we should not look forward to a continuation of increased output, and I hope with growing consumption we may still further reduce certain charges. Your directors are pleased to be able to recommend a small increase in the dividend on the ordinary shares of half of one per cent.

The report and accounts were unanimously adopted, and a resolution increasing the capital of the company to £6,500,000 was unanimously approved.

ANGLO-FRENCH EXPLORATION COMPANY, LIMITED

INCREASED PROFITS

The forty-seventh ordinary general meeting of the Anglo-French Exploration Company, Limited, was held, on the 3rd instant, at Winchester House, London, E.C.

Mr F. A. Robinson (the chairman) said that the year had been one of great mining activity and expansion in South Africa, and the company had participated to no small extent in the prosperity which had prevailed. The balance sheet showed that the cash at bankers was the satisfactory amount of £128,620, while the net cash assets, Government securities, and other liquid assets, less current liabilities, amounted to £124,093, as compared with £57,893 last year.

The gross profit was £153,325 and the net realised profit £132,714, as compared with £122,235 and £93,796 respectively last year. The net profit constituted a record for many years. They had written off £11,948 for depreciation, transferred £15,000 to the newly established reserve fund, proposed to vote £15,000 to the staff fund, and to pay a dividend of 10 per cent. It was the fourth year in succession that they had paid 10 per cent., and this year it should be remembered they were paying it upon the increased capital of £750,000.

As to the reserve fund, this year they proposed to add the premium received on the recent issue of shares, £35,000, and to transfer £15,000 from profit and loss, thereby bringing up the reserve fund to £100,000.

VALUATION OF INVESTMENTS

The report, as usual, gave the classification of their investments, together with a list of the companies in which their chief interests lay. The customary valuation had been made at the close of the year, when the net value had amounted to £1,610,433, showing a surplus of £860,433, as compared with £444,626 last year—in fact, the surplus had nearly doubled. Of course, the dividend they proposed to pay had to come off, but against this there had been an increase in value since the end of the year. The auditors' certificate stated the proportion of their holdings having quoted prices. It was no less than 96 per cent., against 94 per cent. last year. Their main interests were, of course, in South Africa, as they had always been.

With regard to Apex (Trinidad) Oilfields, the temporary setback referred to in his speech last year had been more than made up, and the prospects for the current year were favourable. In January last the company had made an issue to its shareholders of 200,000 shares at 20s. The issue was underwritten, free of commission, jointly by their friends the British-Borneo Petroleum Syndicate, Limited, and themselves. The issue had been well subscribed, and very few shares were left for the underwriters. The Apex company, from small beginnings, under its very able management in London and in Trinidad, was again the largest producer in Trinidad last year, a position which it had maintained for some years past.

COMPANY'S TIN INTERESTS

The Anglo-Burma Tin Company had not done so well during their year ended June 30, 1936. There was a falling off in profits of about £9,000, which was mainly owing to the average price of tin being £13 less, which in itself accounted for over £6,000. The outlook for tin had improved; the demand had increased considerably and was now about 154,000 tons per annum. The restriction agreement had been renewed for five years as from January 1st last. The developments on the Ward and Newbery Areas would make an important addition to the company's ore reserves.

In addition to their tin interests in Burma, they had considerable holdings in some of the best mines in the Malay States. Practically the whole of those investments showed a substantial appreciation in capital value during the year, and they were paying satisfactory dividends. Their tin investments had done well and might be expected to do even better.

It would be seen from the list of their holdings that they had interests in copper. The demand for copper was still increasing and the restriction of output was terminated in January, whilst the price had doubled within the last twelve months. In those circumstances a further increase in output and profits might be confidently expected.

Unless something unforeseen happened he saw no reason why the improved position of the company should not be maintained. He thought they might look back upon the year with satisfaction and look forward to the future with confidence.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended February 27, 1937, amounted to £26,113,000, against ordinary expenditure of £19,060,000. After allowing for an increase in Exchequer Balances of £215,786, the operations for the week, as shown below, decreased the gross National Debt by £6,612,000, to approximately £7,926 millions.†

CENTRAL AND SOUTH AMERICAN EXCHANGE RATES

THE BANK OF LONDON AND SOUTH AMERICA, LTD., issues the following details relative to quotations for certain of the South and Central American exchanges. All these exchanges, with the exception of that of Bolivia, are related to the United States dollar, and the approximate sterling rates may be obtained by applying the dollar-sterling exchange rate:—

Bolivia.*	"Official" commercial rate was 50.60 bolivianos per £ on December 18, 1936.
Colombia.*	Sight selling rate 175½ pesos per 100 United States dollars on January 12th. This rate applies to holders of permits buying in the "open" market.
Ecuador.*	Sight selling rate on New York was maintained up to January 15th at 10.50 sucres per United States dollar.
Guatemala.	Sight rate on New York is maintained at 1 quetzal per United States dollar, but a commission of 1 per cent. is charged by the Banco Central for the sale of drafts.
Nicaragua.*	Official buying rate was 110 cordobas per 100 United States dollars on January 14th. Open market rate for 70 per cent. of export exchange negotiable to importers is around 2 cordobas per United States dollar.
Salvador.	Sight rate on January 9th was 2.49½ colones per United States dollar.
Venezuela.	Sight rate on New York was 3.93 bolívares per United States dollar on January 2nd.

* Exchange controls are operative in these countries.

GOLD MARKET

Messrs Samuel Montagu and Company write on March 3, 1937:—
The Bank of England gold reserve against notes amounted to £313,660,661 on February 24, 1937, showing no change as compared with February 17th. In the open market about £1,075,000 of bar gold was disposed of at prices which showed a small premium over dollar parity at the time of fixing. The main proportion of the supplies available continue to be secured for shipment to the United States of America.
The s.s. "Mooltan," which sailed from Bombay on February 27th, carries gold to the value of about £262,500. The Southern Rhodesian gold output for January, 1937, amounted to 65,572 fine ounces, as compared with 64,106 fine ounces for December, 1936, and 66,178 fine ounces for January, 1936.

SILVER MARKET

The expectation of the Indian Bazaars of an increase in the duty on imports of silver into India proved to be justified, the Budget presented to the Indian Legislative Assembly on February 27th, proposing to raise this duty from 2 annas to 3 annas an ounce. There was some Indian re-selling following the announcement, but there has since been forward buying by the Bazaars, this demand being instrumental in causing a rise in prices to-day of ½d. As a result of bear carrying operations, the difference between the quotations for the two deliveries widened, silver for cash delivery being quoted at a premium of ½d. since March 1st.
The tendency of the market for the near future is not well-defined, and the maintenance of the present level of prices depends upon continued support from India, as American interest is only in evidence at lower rates. Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard	Price of Silver New York per ounce .999 fine
			Cash	Two Months
Feb. 25	142 2½	11 11.37	20½	20½
" 26	142 3	11 11.33	20½	20½
" 27	142 3	11 11.25	20½	20½
Mar. 1	142 3½	11 11.29	20½	20½
" 2	142 2½	11 11.37	20½	20½
" 3	142 2½	11 11.37	20½	20½
Average	143 0	11 11.33	20.229	20.104
Mar. 4	142 4	11 11.25	2½	21

The highest rate of exchange on New York recorded during the period from February 25th to March 3rd was \$4.89½, and the lowest \$4.88½. Statistics for the month of February, 1937:—

Highest price.....	20 ½d.	20½d.	142s. 4d.		
Lowest price.....	19 ½d.	19½d.	141s. 11d.		
Average.....	20-0833d.	20-0469d.	142s. 1.27d.		

Mr Ian Fairbairn has been appointed a director of White Drummond and Company, Ltd.

Mr Herbert Strickland has been appointed managing director of Boulton Paul Aircraft, Ltd., and Mr J. D. North, chief engineer, retaining his seat on the board. Mr S. W. Hiscocks has resigned from the company.

Mr Emil Pusch has decided to retire from the board of Lazard Brothers & Company, Ltd., owing to reasons of health. Mr P. Horsfall has been appointed a managing director.

Vickers, Ltd., announce that General Sir Herbert A. Lawrence wishes to be relieved of his duties as chairman from the conclusion of the forthcoming annual general meeting. He will retain his seat on the board for the time being. Mr A. A. Jamieson will succeed Sir Herbert Lawrence as chairman.

Mr J. Oxley Parker has joined the board of the Equitable Life Assurance Society.

DIVIDEND ANNOUNCEMENTS

FIELD, SONS AND COMPANY.—Profit for 1936, £45,367. 7 reserve £11,475. Preference dividend £4,800. Final ordinary dividend 10 per cent., making 15 per cent., and absorbing £20,749, and bonus 24 per cent. £3,458. Preferred ordinary dividend at 10 per cent., £65,249. Carry forward £39,947.

(a) Includes Jubilee Bonus, 2½ per cent. (c) Includes a Jubilee Bonus of 2½ per cent. tax free. (d) Paid on a larger capital. (e) Also bonus of one share for each £9 ordinary stock held. (f) Free of South African normal income tax.

FIRST PROVINCIAL FIXED TRUST "RESERVES" SERIES.—Second distribution on series "Reserves" certificates will be at the rate of 4.404625d. net per sub-unit. This includes 2.22875d. net per sub-unit realised on sale of rights, etc.

FOREIGN GOVERNMENT BOND TRUST.—Dividend for half-year to February 26, 1937, at rate of £6 15s. 6d. gross per cent. per annum on initial price of 20s. The managers have issued a review covering the Trust's working since its inception in 1934. Copies may be obtained from the Managers, Municipal and General Securities Company Ltd., 9, Cloak Lane, London, E.C.4.

LONDON BRICK.—Final dividend 7½ per cent., making 22½ per cent. for 1936, before. Also bonus of one share for 49 ordinary stock held.

SHELL UNION DIVIDEND.—The Shell Union Oil Corporation has declared quarterly dividend of \$1-37½ on its \$38,816,800 of 5½ per cent. cumulative convertible preferred stock, payable on April 1st to holders on March 10th.

OTHER COMPANY RESULTS.—The four brewery results available this week (including those of CANNON BREWERY, MEUX'S BREWERY and TAYLOR WALKER), show comparatively little change. It would seem that marked expansion in brewery profits occurred mainly in the industrial areas. DAVIS AND TIMMINS' profits of £33,517 are more than doubled, and although the dividend is increased from 8 per cent. to 17½ per cent., it again absorbs less than half the available earnings. Among the seven stores reports, WILLIAM WHITELEY, LTD., shows slightly lower profits at £82,086; PETER ROBINSON, LTD., reduce their dividend from 3½ per cent. to 2½ per cent.; A. W. GAMAGE, LTD., make the same 15 per cent. distribution, although profits are 20 per cent. higher at £100,375, while HARRODS show a substantial increase from £729,431 to £800,321. The progress made by BRITISH HOME STORES continues, but at a reduced rate. Net profits of £100,149 compare with £93,483. The directors maintain their policy of making substantial bonus share issues, although earnings are not increasing at the same rate. Although the 5 per cent. dividend is unchanged, I. AND R. MORLEY, LTD., profits are 14 per cent. higher at £113,294. Another remarkable recovery is the rise from £34,028 to £72,417 in the profits of WOLSEY LTD. The small WOOLCOMBERS' setback is a disappointing exception to textile recovery, but the 26½ per cent. tax free dividend is unchanged. Further investment trust results include the results of the first year's working of BAY HALL TRUST and GREENFRIAR INVESTMENT. GAINSBOROUGH PICTURES (1928), who have converted a 9 per cent. dividend and a profit of £12,283 into a £98,182 loss, point out that costs

were the highest in the company's history; moreover, losses on a valuation of films in stock at the end of the previous year are provided for in the accounts. Trading profits of H.P. SAUCE continue to advance at a rapid rate; the 1927/203 compare with 1918,065 exclusive of the profit on the sale of securities. A marked improvement in all branches is reported by TELEGRAPH CONSTRUCTION AND MAINTENANCE, who have resumed dividends with a 7½ per cent. distribution out of earnings of £29,115.

TEMPERANCE PERMANENT BUILDING SOCIETY.—The report for 1936 shows an amount at credit in the share department of £2,823,163, and in the deposit department £1,995,240—an increase of £544,616. £1,284,408 was advanced to purchasers of house property, or £176,189 more than was advanced in the preceding year. Total mortgage asset, £5,518,909, an increase of £552,682. Total assets, £5,707,477, an increase of £497,279.

THE HALIFAX BUILDING SOCIETY.—The income for year to January 31, 1937, was £37,885,893. Advances made were £20,488,752. The amount owing on mortgage securities has increased by £6,253,600, and now stands at £92,195,988, and the average amount owing on all the Society's mortgages is only £407 each. Share and deposit funds increased by £5,931,541, and total shares and deposits is now £109,306,258. Total assets increased by £6,240,109 to £114,327,576.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

AN event of considerable importance this week was the removal of the 33½ per cent. duty on imported pig iron, and the reduction from 20 to 10 per cent. of the duty on iron and steel products imported with a quota certificate and certificate of origin. Consumers of these materials are accordingly anticipating some relaxation of the present stringency in the near future. Meanwhile, however, open-market supplies of iron and steel are scarce and prices are hardening. Certain sorts of coal are also in short supply. Many of the collieries are fully booked for some time ahead and are frequently unable to take advantage of export inquiries. In the circumstances, interest attaches to the statement of the Minister of Mines in the House of Commons on Tuesday that the Whitehaven (Cumberland) pits are to be re-opened.

The strength of the non-ferrous metal markets was a feature of the week. Copper, tin, lead and spelter were all dearer, rising to the highest level since 1930, 1928, 1926 and 1927, respectively. The volume of speculation in copper is now abnormally heavy. Interest was centred on Friday's meeting of the International Tin Committee, but the quota decision for the second quarter of the year had not been announced when we went to press.

Among textile raw materials, cotton showed a hardening tendency under the influence of a growing demand, while a strong tone was displayed at the Coleman Street wool auctions. Jute was also dearer, with other textiles about unchanged. The rubber market staged another advance, a further decline in United Kingdom stocks being accompanied by a moderately active trade demand. The market in oilseeds and their products showed an improving tone, although business was rather limited. Wheat was a little dearer after last week's decline, and raw sugar was also a firmer item.

Prices again moved upwards in the United States. Thus, on Wednesday last, Moody's daily index of staple commodity prices (December 31, 1931 = 100) stood at 211.9, against 207.3 a week earlier, 206.1 a month ago and 169.7 on the corresponding day last year.

COAL

SHEFFIELD.—There is considerable pressure for supplies both on home and export account, but outputs were larger during February, with the result that demand was more satisfactorily met. Encouragement has been given to shippers and exporting collieries by the intimation that South Yorkshire pits have secured a share in important contracts for locomotive coal for the Swedish State Railways. Collieries are booking well for export forward delivery for all qualities. Home demand for industrial coal is expanding and prices are tending to advance. Small coal is well sold forward on inland account and quotations are very firm. There is a heavy demand for blast furnace coke, and foundry coke requirements are growing. On the other hand, gas coke has quietened to some extent.

NEWCASTLE-ON-TYNE.—Consumers abroad are now turning their attention to covering their requirements over next year, large quantities having been bought at full current prices; but collieries are now less inclined to sell, believing that still better prices will be obtained by waiting. The current position gives no indication of any ease. Northumberland collieries are fully sold, and a similar position exists among Durham coking and gas collieries. Patent oven coke is becoming more difficult than ever to obtain, there being every indication—owing to the scarcity of this commodity on the Continent—that prices will further appreciate.

GLASGOW.—Conditions of stringency are still general in the Scottish coal market, and there seems little likelihood of an early improvement. The collieries are fully booked for some time ahead, and as regards export are unable to take advantage of the steady inquiry coming forward. Shippers on occasion find difficulty in obtaining even contract supplies. The bulk of the output is, of course, absorbed in the home market, where demand remains exceptionally keen; orders cannot be covered until after a waiting spell. Much inconvenience continues to arise through unofficial labour stoppages, which are happening at a time when the resultant reduction in output cannot be made good elsewhere.

CARDIFF.—The pressure of demand for prompt shipment is not quite as great as it was earlier in the year, but the collieries at work are fully employed under their contract commitments, and there is a scarcity, particularly of the washed and sized grades, for spot positions. For most classes prices are firm at their recently improved levels, except for washed dry nuts, which are slightly easier. Shipments continue to improve. Last week they were 70,000 tons greater than in the corresponding period last year, and the increase for the nine weeks ended February 28th just exceeds 400,000 tons. The Executive Board under the District Regulation Scheme has applied for a supplementary quota of 750,000 tons for the current quarter. Coke is firm and patent fuel steady, but Portuguese pitwood is a shade easier. The report of the joint accountants for the three months ended January last shows a credit balance of £276,825. These are the first profits made since the corresponding period ended January, 1936; for the past twelve months the trading results record a loss of over £70,000.

IRON AND STEEL

LONDON.—Business in the iron and steel markets has been on a restricted scale owing to consumers' difficulty in placing fresh orders, says the official report of the London Iron and Steel Exchange. The situation is further complicated by the normal seasonal expansion of consumption.

Already most of the steelworks have orders sufficient for three or four months, and they are usually reluctant to accept new business. All pig iron producers are concentrating upon making deliveries against contracts, and overtaking arrears. Some producers have temporarily withdrawn from the market, and it is impossible to place fresh orders for certain brands of pig iron. The position in semi-finished steel is becoming increasingly stringent, and consuming works are hard pressed to maintain operations; outputs are insufficient to meet the demand. All the makers of this class of material are inundated with orders; but many of them are only able to accept business for unspecified delivery. Demand for finished steel appears to be increasing; but many manufacturers have the whole of their production earmarked for some time to come against existing contracts. It is difficult to arrange export business in these circumstances, but efforts are being made to retain old-standing connections in foreign markets.

MIDDLESBROUGH.—Shipments of pig iron from the River Tees to foreign destinations during February amounted to 5,203 tons, whilst coastwise shipments amounted to 1,785 tons. Shipments of manufactured steel during February amounted to 33,474 tons, of which 21,108 tons went abroad. Imports of foreign ore into the Tees during February amounted to 233,040 tons. A number of steamers on passage, which should have arrived before the end of January, were delayed by bad weather, so that the quantity imported during January was only 124,860 tons.

Market conditions are unchanged. Producers of Cleveland foundry pig iron and East Coast hematite are rationing home users, and are still able to supply small quantities for shipment either coastwise or abroad. Prices are maintained, the official figures being: No. 3 Cleveland foundry pig iron, 81s. per ton; East Coast hematite mixed numbers, 97s. 6d. per ton, subject to a rebate of 5s. per ton; all for delivery in this area. It is, however, impossible to arrange new business.

The announcement of the removal of the import duty, and the restoration of pig iron to the free list, will, it is hoped, enable Continental producers to ship some iron to this country, and thus relieve the pressure for supplies. Supplies of semi-manufactured steel have diminished considerably of late, and re-rollers are suffering inconvenience. The pressure for all classes of finished steel continues. It is expected that steel prices will be revised at the end of May. Meanwhile, the price of iron bars has been advanced by 27s. 6d. to £11 17s. 6d. per ton. So far, no official figures have been announced for heavy melting steel scrap, but it is understood that transactions are taking place at 67s. per ton, delivered at the works.

SHEFFIELD.—The reduction of the tariff on imports of pig iron, and the cutting to 10 per cent. of the duty on iron and steel, which came into effect on Wednesday, will do much to ease the shortage of raw materials which has been hampering work in this area for some time. Pig iron producers are finding it difficult to maintain full deliveries under existing contracts, and do not welcome new business in foundry and basic. In forge pig, conditions are less stringent, but orders are not easily placed. Only a few small parcels of material have been on the market this week. With regard to hematite, the position shows very little alteration. Conditions all round, however, are expected to become easier. Finished iron prices have been advanced 27s. 6d. for all grades, for England. Crown bars now stand at £11 17s. 6d.; No. 3 at £10 5s., and No. 4 at £10 15s. Iron strip is quoted up to £12 15s. The price of marked bars is as yet unaltered, but that it will shortly be raised is fairly certain. The scheme to control iron and steel scrap supplies, allowing the export of certain classes only by permit, and stabilising home prices, does not appear to have been unanimously welcomed by merchants. What the actual official quotations will be is not yet known, and this week merchants have been dealing at last week's prices. With the production of basic steel billets at a record level, it is still impossible fully to cope with orders, and the position is becoming decidedly difficult. As to acid billets, although the pressure is not quite so great, the position is becoming less easy every week. Stainless steel sheets, and bars and strip, are all in heavy demand, as is structural steel. High-speed steel is in active request, and an increase in quotations is expected.

GLASGOW.—For a number of weeks past the situation in the West of Scotland iron and steel trades has been one of considerable anxiety, both for steel makers and steel users, on account of the uncertainties regarding deliveries of raw materials. The announcements made on Wednesday regarding the withdrawal of the duty on imported pig iron and the reduction of duty on imported iron and steel have given reason to hope that supplies of imported material will soon be available. While steel-makers have so far been able to keep their plants fully employed, the position as regards re-rollers has been less fortunate; in several branches it was found necessary in recent weeks to reduce the number of mills in operation. There has been no falling off in demand, and steel makers, makers of semis and producers of finished steel have all well-filled order books. If hopes regarding supplies of material are realised, makers should be able to find employment to capacity for all plant for some months to come.

CARDIFF.—There is a temporary scarcity of tinplates for prompt supply, and premiums on the scheduled cartel f.o.b. price of 19s. 9d. per basis box have further increased to 2s. and 2s. 6d. per box. The output quota remains unchanged. Shipments are still active, and last week they totalled 6,308 tons compared with 3,473 tons in the corresponding period last year. Galvanised sheets are comparatively quiet but firm at the recently increased minimum prices, while steel bars are unchanged at £6 2s. 6d. per ton. The action of the Government in suspending the 33½ per cent. import duty on pig iron and reducing the duty on cartel steel from 20 per cent. to 10 per cent. is welcomed in South Wales, but normally the local steel furnaces consume more than twice as much steel scrap as pig iron, and the scarcity of scrap remains very acute.

OTHER METALS

COPPER.—After an early reaction the price of copper recovered sharply and closed on Wednesday at £70 15s., a gain of £3 17s. 6d. on the week, and the highest level since 1930. The basic position has not changed very much this week. Consumers are still engaged in increasing their holdings and, at the same time, speculative buying is heavy. The speculative bull account is believed to be now over 200,000 tons, against the normal figure in recent years of about 50,000 tons. There is still not the slightest evidence of Government buying. Any major reaction in prices will be dependent on an increase in production and stocks; this will certainly take some time, although reports from all important mining centres are quite encouraging.

Sales on the London Metal Exchange: 5,600 tons on Monday, against 12,400 tons last week; 4,800 tons on Tuesday, against 8,000 tons last week; 4,750 tons on Wednesday, against 5,050 tons last week. Domestic spot was quoted at 16-12½ cents per lb. in New York on Wednesday, against 15-2½ cents a week ago and 12-72½ cents a month ago. Wednesday's official closing price for standard cash in London was £70 15s. to £70 17s. 6d., compared with £66 17s. 6d. to £67 a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 34,933 tons, showed a decrease of 1,308 tons, while stocks of rough copper, at 607 tons, were 100 tons smaller.

LEAD AND SPELTER.—After early fluctuations, both metals staged a sharp recovery on Wednesday, and closed the week on the highest levels since 1926 and 1927, respectively. Turnovers on the London Metal Exchange have been smaller this week, but demand is still large and offerings are not substantial. The scarcity of high-grade zinc helps to keep spelter prices very strong, and the difference between lead and spelter prices has now contracted to slightly more than £1. From a technical and statistical point of view, these metals are in the soundest position of the "big four" and further rises in prices are quite probable if demand is maintained.

HONGKONG AND SHANGHAI BANKING CORPORATION

(Incorporated in the Colony of Hongkong. The liability of members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony.)

ONE HUNDRED AND TWENTY-FIRST REPORT OF THE BOARD OF DIRECTORS to the Ordinary Yearly General Meeting of Shareholders, held at the Offices of The Hongkong and Shanghai Banking Corporation, 1, Queen's Road Central, Hongkong, on Saturday, the 27th February, 1937, at 11.30 a.m.

TO THE PROPRIETORS OF THE HONGKONG AND SHANGHAI BANKING CORPORATION

GENTLEMEN,—The Directors have now to submit to you a General Statement of the affairs of the Bank, and Balance Sheet for the year ending 31st December, 1936.

The net profits for the year, together with \$3,327,060-03, balance brought forward from last account, after paying all charges, deducting interest paid and due, and making provision for bad and doubtful accounts and contingencies, amount to \$18,434,235-22.

The Directors recommend writing off Bank Premises Account the sum of \$1,000,000.

After deducting \$1,000,000, the Interim Dividend of £2 10s. 0d. per share, paid on 10th August last, viz.:—£400,000 at 1/3 3/4 = \$6,269,387-78, and remuneration to Directors, there remains for appropriation \$11,085,327-66 out of which the Directors recommend the payment of a final Dividend of £3 per Share, viz., £480,000, which, at 1/2½, the rate of the day, will absorb \$7,744,537-82.

The Balance \$3,340,789-84 to be carried to New Profit and Loss Account.

ABSTRACT OF ASSETS AND LIABILITIES			
31st December, 1936			
LIABILITIES	Sterling Equivalent	Dollars

	£70,077,833	1	3
	\$1,130,667,558-61		

Sterling Exchange taken at 1/2½.

The sterling equivalents of the Assets and Liabilities are shown at 1/2½, the rate ruling on the last day of the year.

DIRECTORS

Mr. G. MISKIN has been elected Chairman for the year 1937, and Mr. M. T. JOHNSON has been elected Deputy Chairman.

The Hon. Mr. S. H. DODWELL, The Hon. Mr. J. J. PATERSON and Mr. A. H. COMPTON retire in rotation, but being eligible for re-election, offer themselves accordingly.

Messrs. W. H. BELL, C. C. KNIGHT and J. A. PLUMMER, on leaving the Colony, resigned their seats, and Messrs. J. K. BOUSFIELD, J. R. MASSON and K. S. MORRISON joined the Board.

AUDITORS

The Accounts have been audited by Mr. JOHN FLEMING, C.A., and Mr. H. R. FORSYTH, C.A., who offer themselves for re-election.

J. J. PATERSON, Chairman.

HONGKONG, 9th February, 1937.

V. M. GRAYBURN, Chief Manager. A. MORSE, Chief Accountant. J. J. PATERSON, G. MISKIN, M. T. JOHNSON, Directors.

We have audited the above Balance Sheet with the Books, Vouchers and Securities at the Head Office and with the certified Returns from the Branches and Agencies made up to 31st December, 1936, with the exception of certain distant offices where the year is closed on 31st October or 30th November. In our opinion such Balance Sheet is full and fair, and properly drawn up so as to exhibit a true and correct view of the Corporation's affairs according to the best of our information and the explanations given to us and as shown by the Books of the Corporation.

JOHN FLEMING, H. R. FORSYTH, Chartered Accountants, Auditors.

HONGKONG, 9th February, 1937.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM: LONDON, March 3rd.

THE ECONOMIST

Vol. CXXVI

MARCH 13, 1937

No. 4881

recognised this forthwith by substituting MR EDEN for SIR SAMUEL HOARE as Foreign Secretary; and though the latter was subsequently reinstated in the Cabinet as First Lord of the Admiralty, he would be a bold Prime Minister who, two months or so from now, decided to pursue a foreign policy with which MR EDEN—and a vast number of voters in the country—were not fully in accord.

MR CHAMBERLAIN during the past three critical years has sometimes seemed like a circus acrobat, with one foot on the back of an isolationist pony, the other on the back of a League mount. But he is certainly aware how much of the present support for the Government's rearmament programme in the country is dependent upon the widespread conviction that arms should be used primarily to implement, and be governed in their scale by, our League obligations. MR EDEN still stands as a symbol of that belief. The Government have asked for political unity in face of grave dangers. Once again the country has responded. But nothing could be more calculated to destroy national unity than an abrupt *volte face* in the foreign policy which British armaments must subserve. MR CHAMBERLAIN's choice of his Foreign Secretary will be regarded as a test whether he still stands in spirit, as well as in the letter, by the pledges of 1935.

Other appointments will have a home political flavour rather than international importance. It is believed that MR CHAMBERLAIN desires as far as possible to preserve the "National" character of the Government, and that, therefore, the Chancellorship of the Exchequer is, if possible, to go to the National Liberals. But the tipsters cannot make up their minds between MR RUNCIMAN and SIR JOHN SIMON. The plain man would have supposed that if appointments were to be made in accordance with fitness, the lawyer should go to the

Woolsack and the man of affairs to the Exchequer. But our recent history contains examples of lawyers who have done notable things with our finance—witness the late LORD OXFORD and MR LLOYD GEORGE. It may well be that the decision may be influenced by opinion among the National Liberal and National Labour members of the House.

If MR RAMSAY MACDONALD goes upstairs to the Lords, and VISCOUNT HAILSHAM retires, there will be chances of promotion for younger men. But who are the Government's promising candidates? MR HORE-BELISHA has made his mark with energy; and he is also a National Liberal. So is MR ERNEST BROWN; but his handling of labour problems has been cramped by the Government's vacillations in policy. Presumably MR W. S. MORRISON will stay at the Ministry of Agriculture, where he has just been installed, though he may be cast for higher things. MR MALCOLM MACDONALD, MR ELLIOT and MR DUFF-COOPER may stay where they are; but EARL DE LA WARR—MR M. MACDONALD's National Labour colleague—may find a place in the New Cabinet. Two older candidates for high office, who command general respect and whose presence in any Cabinet would greatly strengthen it, are SIR AUSTEN CHAMBERLAIN and MR WINSTON CHURCHILL. These, says Dame Rumour, are non-starters in the new Cabinet stakes.

Whoever wins those stakes, any Government in the next two or three supremely critical years must appeal for the widest support in the country. A refurbished National Government may present a good enough face to enable the appeal to be made. But they will only secure that response if they base their foreign policy on clear-cut principles, if they do everything to preserve democratic institutions at home, and if they use all the means at their command to strengthen democracy in the world.

The Next Budget

THE ominous rise in defence expenditure has lent an unusual significance to the discussions of public finance which, at this season of the year, make their annual appearance in the limelight of public attention. The estimates for the defence services have made it abundantly clear that, in spite of the Defence Loan, more money must come from taxes. Until Budget Day, which is still at least a month away, the individual citizen will be anxious to glean any indications that are available from the published figures of the demands that will be made of him in the coming year. The process of forecasting the task which the CHANCELLOR OF THE EXCHEQUER will have to face when he opens his Budget is thus of more than usual interest this year.

The starting-point for any discussion of the prospects for next year must necessarily be the figures for the present year. In his Budget last April MR NEVILLE CHAMBERLAIN estimated the year's revenue at £798,400,000 and expenditure at £797,900,000. Up to the present, with three and a half weeks of the year still to go, the revenue has been coming in very satisfactorily. Over nine comparable weeks of the present quarter, 1937 tax revenue has exceeded that of 1936 by an average of £3,850,000 a week. Moreover, the increase in comparison with last year shows no signs of falling off. The remaining period between the latest weekly return and the end of the year is one calendar day longer this year than last, but (owing to the inter-vention of Easter) one working day shorter. If the present rate of increase in comparison with last year continues, the total tax revenue should be about £4½ millions more than the estimate. If the non-tax revenue

exactly equals the estimate (it may be more) the total revenue will be about £803 millions.

On the expenditure side, the provision made for the Consolidated Fund services can be taken as fixed, since its largest item, the service of the National Debt, must, by law, absorb the whole of the provision made for it. Expenditure on the Supply Services is more difficult to estimate. The average increase over last year since January 1st has been £1,800,000 a week. If this rate of increase is continued to the end, the total expenditure on Supply Services will be £564 millions, or only £1½ millions more than the original Budget estimate. This would give a surplus of about £3,000,000. But in each of the last two weeks, expenditure on the Supply Services has been in excess of £18 millions. If we have suddenly come to the period of heavy expenditure on re-armament, this rate of expenditure may continue throughout March. If it does, the surplus of £3,000,000 may be converted into a deficit of £17 millions.

For the present, however, and subject to this proviso, we can estimate that 1936-37 will close with a small surplus and with Supply Service expenditure at about £565 millions.

We are now in a position to turn to the prospects for next year. With the appearance of the Air Estimates (discussed in detail on page 579), the Supply Service Estimates are complete. In the following table they are compared with the original Estimates of a year ago, which are much smaller than the actual expenditure, and smaller even than the Budget estimate, since MR CHAMBERLAIN allowed a margin of £25.6 millions for Supplementary Estimates.

ORIGINAL ESTIMATES, 1936 AND 1937

	(£ millions)		
	1936	1937*	Change
Civil Services	365.3	408.1	+ 42.8
Revenue Departments (exc. Post Office)	13.5	13.9	+ 0.4
Navy	69.9	105.1	+ 35.2
Army	49.4	82.1	+ 40.8
Ordnance Factories		8.1	
Air Force	39.0	82.5	+ 43.5
Total	537.1	699.8	+ 162.7

* Gross totals, including amounts to be borrowed.

From this increase of £162.7 millions several deductions have to be made. In the first place, the actual expenditure of the current year will be, as estimated above, about £28 millions more than the original Estimates. Secondly, the Estimates for 1937-38 include £22,500,000 of expenditure on roads which has hitherto been met out of the autonomous Road Fund. The revenue of the Road Fund will be brought into the main Budget next year. These two deductions reduce the increase to about £112 millions. Finally, from this still very impressive total, £80 millions has to be deducted, so far as the taxpayer is concerned, in respect of the money to be raised by the Defence Loan, divided more or less equally between the three Services.

The net increase of estimated expenditure that has to be provided out of revenue, compared with the probable expenditure of the present year is thus reduced to £32 millions. Provision will, however, once more have to be made for Supplementary Estimates. In some cases, such as the Special Areas and the shipping subsidy, items have been omitted from the Estimates because Parliament has not yet sanctioned the expenditure. Moreover, it is doubtful whether estimating for the needs of the defence forces is more exact this year than it was last year, when £20 millions had to be allowed in the Budget for defence Supplementaries. The nearest that we can get to the exact position is to say that in 1937-38 the yield of taxation will have to increase by something more than £32 millions, and possibly by as much as £60 millions, above its amount for the current year.

We have now surveyed the present year and the estimated expenditure for the coming year. Following the traditional pattern of a Budget speech, we must now turn to the prospects for revenue in 1937-38. We must first of all take account of the fact that the tax increases made in the last Budget do not produce their full effect in the current year. From this source an automatic increase of revenue of £3.7 millions can be looked for in 1937-38. What can be expected from the natural buoyancy of the revenue in a period of expanding trade? After making all adjustments for the effects of changes in the rates of taxation, 1934-35 produced £23.1 millions more revenue than 1933-34; the increase in the next year was £38.9 millions, and if the estimate given above of revenue for the current year is realised, the "adjusted" increase will be £36.0 millions. What can be expected for next year? The yield of Customs and Excise will, of course, depend upon the course of trade in the twelve months beginning on April 1st. The commodities most important from the point of view of yield are tobacco, beer, spirits and petrol. The guess may be hazarded that the consumption of these articles will continue to increase at about the rate recently experienced. If so, the increased revenue from this source will be between £10 millions and £12 millions, say £11 millions. Death duties depend partly upon the death-rate among millionaires, partly upon the course of security values. This is always a difficult item to estimate, and it is perhaps best to leave the figure unchanged. The same

applies to stamps, though it is unlikely that the long series of increases in this item will be interrupted next year. An increase of £1,000,000 may perhaps be allowed.

The yield of income tax should be more susceptible of estimation, since the tax to be collected in 1937-38 will be assessed on incomes already earned. In the case of companies, the profits to be taxed will be those earned in the companies' financial years ending between April 6, 1936, and April 5, 1937. This means that the period in which the profits have been earned is an earlier one than April, 1936-April, 1937, perhaps six months earlier (i.e. October, 1935-September, 1936). But *The Economist's* statistics of profits are compiled, not according to the period in which the profits are earned, but according to that in which they are declared, which is some months later. On balance the correct period to examine for the trend of profits would seem to be the calendar year January to December, 1936. According to our figures, profits declared in 1936 were 12.7 per cent. higher than in 1935, while those of 1935 were 15.9 per cent. higher than in 1934. In other words, the rate of increase of profits has declined and the yield of income tax, so far as profits are concerned, can be expected to show a smaller proportionate increase next year than it is showing this year.

Company profits, however, are by no means the only source of income-tax returns. We must also attempt an estimate of the yield from tax on other incomes, which include not only salaries but also professional earnings and the profits of businesses other than joint-stock companies. Here again a time-lag must be allowed for, since the instalment of tax on salaries payable on July 1st next is the second half of the tax on the incomes of 1935-36. On the whole, the calendar year 1936 would again seem to be the most relevant period for comparison. The total of other incomes might be expected to fluctuate very roughly in proportion to business activity in general and, according to *The Economist's* Index of Business Activity, 1936 showed a considerably greater increase in comparison with 1935 than 1935 did in comparison with 1934. This part of the yield of income tax should, accordingly, show a larger increase next year than this. Offsetting the one result against the other we may guess that the yield of income tax as a whole, irrespective of changes in the rate of tax, will increase next year in the same proportion as this, that is by about £17 millions. A similar rough estimate for surtax would seem to justify an increase of £4 millions, which is considerably less than the increase estimated by the CHANCELLOR for the current year.

In this way we have accumulated increases of about £37 millions, each item being conservatively estimated. One further item can be added. The income of the Road Fund in the present year already amounts to £27.2 millions, and, in view of the speed with which the number of motor vehicles is increasing, it does not seem extravagant to put it at £28.5 millions for the whole of next year. But the road expenditure appearing in the Estimates amounts to only £22.5 millions. The death of the Road Fund will therefore benefit the Exchequer to the tune of about £6 millions.

It is thus possible, on perfectly reasonable assumptions, to foresee an increase in the revenue next year, without any increase in taxation, of about £43 millions. This would make it possible to allow £11 millions for Supplementary Estimates, over and above the expenditure already foreshadowed. Whether this will be sufficient margin we shall have to wait until Budget Day to discover. But even if increases in taxation are necessary, it does not seem likely that more than £10 millions or £15 millions extra revenue will be required. For this, a further 3d. on the standard rate of income tax would be fully sufficient. It looks as if the taxpayer can breathe again. He may not even have to bear any new burden.

Britain and India

THE first series of Indian provincial elections under the new Constitution, which are now complete, have provided a triumph for the Congress and its organisation. That such an inclusive judgment is possible is itself significant; for the Congress is an all-India organisation, with an all-India platform centring round the demand for full national autonomy, while the elections were for provincial assemblies and councils, concerned only with provincial affairs. There must thus necessarily be a certain contrast between the polling results and their consequences in actual government; for a party calling itself Congress or Muslim in Bengal, faced with practical problems of government or opposition, may find itself adopting a very different policy from that of a party calling itself by the same name in Bombay. Yet the projection of national groupings and national issues upon the provincial plane was as inevitable as the projection of the Conservative-Labour conflict upon the plane of local government in England. The success of the Congress is to be largely ascribed to the very fact that it had a national appeal and a national organisation, complete with slogans, funds, and constituency machines.

Its success was much greater than had been anticipated even by its own optimistic adherents. Evidently it obtained the support of a high percentage of the newly franchised voters, who number 120 millions against the 7 millions previously entitled to the vote. The Congress has secured absolute majorities in the single or lower chambers of Bihar, Orissa, the United Provinces, the Central Provinces, Madras, and Bombay. It also forms the largest single party in Bengal and Assam, and is the largest party with any real cohesion in the North West Frontier Province. Only in Sind and the Punjab does it take a minor place. A proper estimation of the results, however, requires a review province by province.

In the Frontier Province, either the Independent Muslims (23 in a House of 50) or the Congress (19) could on paper form a Government with the support of the Hindu-Sikh Nationalists (7). But a number of the Muslims are doubtless sympathetic towards the Red-Shirt brand of Congress ideas, and a Congress Government is therefore on the cards. In the Punjab, the Unionist Party (all communities) has an absolute majority of 99 seats out of 175, and SIR SIKANDER HYAT KHAN has already formed a Government. The Opposition includes 30 Congress supporters. In the Sind Assembly, with 60 seats, there is a possibility of an alliance of the Sind United Party (18) with the Sind Muslim Party (4) and Independent Muslims (9), or with other minor groups. In Bombay the Congress, while filling exactly half the 26 seats in the Council, just failed to secure a majority of the 175 seats in the Assembly; but the acceptance of its whip by other members has since brought up its pledged support to the required 88. Local Congress leaders are already bickering over the question who is to head the Government. In Bengal, Congress supporters fill 55 seats out of 250, the Proja Party 40 and the Muslim League 39. The Proja Party is a Muslim peasant group opposed to the Communal Award, and therefore has much in common with the Congress, but its leader, MR FAZL-UL-HUQ, has accepted an invitation to form a Government with the assistance of the more communally-minded Muslim League. The position in the Council will be similar to that in the Assembly. In Assam, the Congress holds 35 Assembly

seats out of 108, and most of the other groups are individually very small; but they seem likely to bind sufficiently well for a moderate Government to have a fair prospect of maintaining itself. On the Council, Congress is unrepresented.

In the United Provinces the Congress has only 8 seats out of 52 in the Council, but 133 out of 228 in the Assembly, its nearest rivals being the Muslim League (27) and Independent Muslims (29). In the Central Provinces the Congress secured 71 seats in an Assembly of 112, the remainder being scattered among independents and small groups. In Bihar, with 95 Assembly seats out of 152, the Congress will be able to fill a large number of the 12 Council seats reserved for election from the Assembly; and in Orissa they have 36 seats out of 60 in the single chamber. Madras gave them a majority in both the Council and the Assembly (159 seats out of 215); the Justice Party was a bad second with 21 seats, and the People's Party had only one of its 55 candidates returned. Nowhere was the supremacy of the Congress machine more strikingly displayed. In these five central and southern provinces a Congress Government is the only alternative to the complete nullification of the reforms.

These figures give the measure of the responsibility that lies upon the shoulders of the Congress leaders in their decisions whether or not to take office, and, if they do, how they will interpret their duties. They have it in their power to make democratic government impossible in most of the Indian provinces, either by refusing office and blocking the work of the Ministries, or by accepting office and acting in such a way as to compel the Governors to exercise their reserve powers. Both the Governors themselves and British opinion (which is the ultimate sanction of the Governors' authority) would be reluctant to see those powers enforced. They would be even more reluctant to restore the authoritarian regime under which India was governed before the Montagu-Chelmsford reforms and to which India would revert if the present provincial constitutions were made unworkable. Responsible opinion in Great Britain will applaud the declaration of SIR HYDE GOWAN, Governor of the Central Provinces, that his advice, energies and good offices will always be at the disposal of Ministers, no matter to what political party they may belong, provided their object is the same as his—the good government of the Province. It is in India's, no less than Great Britain's, interest that the new system should be given a fair trial; that it should be a mile-stone rather than a mill-stone.

It is in such a spirit that the results of the provincial elections can best be reviewed. The campaign was a test of the working of the new electoral machinery, and of the political feeling of the enlarged electorate. Its results are the beginning of a test of the realism of Congress policy and the capacity of Congress leaders for practical leadership and government. The programme they presented to the electors may have owed some of its success to its evasions and its appeal to popular generalisations. But it was a realistic programme in the sense that it struck boldly at the great problems of India to-day—agricultural debt and land tenure, working conditions in industry, untouchability and communalism. By their actions in these matters, now that the opportunity and the responsibilities of office are within their grasp, the leaders of Congress will be judged, both by the people of Great Britain and by the people of India.

The Great Cities of Britain—VI

The Tradition of Sheffield

THE industrial development of Sheffield falls, broadly speaking, into two periods. Until the beginning of the nineteenth century its economic life was centred mainly in the cutlery trades, for which it had been renowned since the Middle Ages. In 1811, when Sheffield had a population of 53,000, the manufacture of cutlery provided employment for about 7,000 workers; a further 800 were employed in the allied silverplate trade, introduced in 1743, but the steel industry, though long established, as yet employed only a few hundred workers. As the century advanced the extended use of machinery, the development of railways and the many other technical changes of the period, combined to create a rapidly increasing demand for iron and steel; and Sheffield's steel industry expanded at a phenomenal rate in response to this stimulus. By the beginning of the present century the heavy steel trades had drawn level with the cutlery trades as regards numbers employed, and to-day they occupy first place amongst the city's industries.

At the Census of 1931 Sheffield had a population of 511,757, of whom 245,977 were gainfully occupied. The various metal industries employed 98,981 workers, just over 40 per cent. of the total; of this group the most important sections were smelting, converting, refining and rolling of iron and steel (39,401), cutlery and small tools (27,712), silver, electro-plate, etc. (9,705), various branches of engineering (9,992), and founding and other secondary processes (6,074). The only other primary industry of any importance is coal-mining and quarrying, employing over 11,000 persons. The lighter metal trades provide considerable employment for women on actual processes, there being a tendency, in fact, for women to displace men. The heavy trades and coal-mining, on the other hand, naturally offer very little scope for the woman worker except on the clerical side. Secondary industries—commerce and finance, public administration and defence, personal service, transport and communications, public utilities, building and so on—account for the bulk of the remainder of the occupied population.

Of the leading English cities none is so predominantly industrial, in the narrow sense of the term, as Sheffield. Relatively to population Sheffield has fewer people engaged in commercial, financial and professional activities than any of the other five towns with populations exceeding 350,000 (i.e. Birmingham, Liverpool, Manchester, Leeds and Bristol). The result is that Sheffield has a smaller middle class than any other large town. It has been estimated that of the 134,000 heads of families in Sheffield in 1934, some 4 per cent. received over £10 a week, 15 per cent. between £4 and £10, and 81 per cent. under £4. The middle group accounts for a smaller proportion of the total than in any other town with a population of 150,000 and upwards, with the exception of Stoke and Coventry.

The preponderantly industrial character of Sheffield's population is to be explained primarily by the somewhat isolated geographical position of the city. Enclosed on three sides by hilly or mountainous country, Sheffield

had for centuries only one outlet for trade with the outside world, the Don valley *via* Rotherham. It was not until 1870, for instance, that Sheffield obtained a main-line connection by rail with London; until then it had been served by a branch from Rotherham. Hence, lying off the main trade routes of the country, the town never acquired importance as a commercial centre. To-day, despite the possession of excellent transport facilities, Sheffield differs from such towns as Manchester, Leeds and Birmingham in that it is not the focal point of a densely populated urban area with similar industrial interests. With the exception of Rotherham, there are no towns of any size within twelve miles of Sheffield, and, moreover, the main industry of the surrounding district is not steel but coal.

The steel and cutlery trades of Sheffield present a most interesting contrast in organisation, scale of production and location. The former are for the most part conducted on a large scale, and include a number of huge integrated concerns turning out every conceivable type of steel product. They are located in the Don valley east of the city, with easy access to the main-line railways. In the cutlery trades, on the other hand, there is a curious mixture of ancient and modern forms of organisation. Four types of firms can be distinguished: (i) large-scale firms owning their own factories and carrying through all the processes of manufacture, but sometimes also giving out materials to be partially or completely worked up by outworkers; (ii) merchant firms giving out materials to outworkers; (iii) outworkers, who are either sub-tenants of manufacturing firms or tenement occupiers in public factories; (iv) little masters, small-scale craftsmen working on their own materials. There is no very hard and fast line between the little master and the outworker working up materials for other firms. The premises of the cutlery firms are to be found mainly in the back streets in the centre of the town. Mechanised large-scale production is extending at the expense of the smaller craftsmen, but the transition to factory production is proving a slow process; the better qualities of cutlery are still made largely by handicraft workers. The development of the factory system is likely to be accelerated by the establishment in 1933 of a Trade Board for the cutlery industry, since it was the smaller firms on the whole which formerly paid wages below the minimum rates fixed by the Board.

During the post-war years Sheffield suffered severely in common with other steel-producing areas. The war demand for munitions had led the local firms hastily to expand their productive capacity and induced a large influx of labour into the city; Sheffield is estimated to have turned out 70 per cent. of the privately produced munitions used during the war. After the collapse of the post-war boom the steel industry found itself burdened with surplus capacity, and confronted with intensified foreign competition and a low level of domestic demand. At no time since 1921 has Sheffield had fewer than 20,000 registered unemployed, i.e. about 12 per cent.

of the insured population. Even in such comparatively good years as 1928 and 1929 an average of 25,000 were out of work; and in the worst years, 1921, 1931 and 1932, the total sometimes exceeded 60,000, over one-third of the insured population. The unemployment situation has been mitigated by a steady migration from Sheffield, estimated at about 40,000 between 1921 and 1931; in consequence the census population was practically the same in the latter year as in the former, despite the excess of local births over deaths.

In spite of the prolonged slump, the leaders of industry in Sheffield retained a confident belief in the inevitability of revival; their firms had survived many slumps in the past and would do so again. The ruthless writing down of capital, scrapping of obsolete plant and modernisation of equipment, especially in the later years of the depression, have enabled the firms in the heavy industries to emerge from a difficult period with restored finances and the most up-to-date technique. At the present time Sheffield is undoubtedly enjoying boom conditions; its output of steel in 1936 is estimated at 1,600,000 tons, 14 per cent. of Britain's output, and the highest on record. Sums running into several millions have been and are being spent on extensions. Many sections of the industry are working to full capacity, and already there is a scarcity of labour in certain branches, especially machine tools. The unemployed, however, still number over 20,000.

Three main factors are responsible for this boom: the

expanding demand for capital equipment which normally characterises a period of recovery, re-armament, and the steel tariff. Of these, by far the most important is the first, which alone would have been sufficient to create boom conditions; re-armament is an accentuating factor which is likely to increase in importance in the next year or two; the steel tariff probably counts for little at the present juncture, since foreign competitors are also enjoying a boom in their own markets. Local opinion leans to the view that the combined effect of general trade recovery and re-armament will keep the boom going, so far as Sheffield is concerned, for another four or five years at least. Monetary policy and the movement of interest rates, as factors bearing closely on the short-run prospects of Sheffield's industries, are being carefully watched.

Long-run prospects are much more difficult to evaluate. So far as the bulk production of the cheaper qualities of steel is concerned, Sheffield is probably rather less well placed than some other areas, such as Lincolnshire, as all its pig iron has to be imported from other districts. But, thanks largely to the discoveries of its own research workers, Sheffield has acquired a world-wide reputation for its special steels, particularly stainless steel; and it seems safe to prophesy that Sheffield will concentrate to an increasing extent on the production of these high-grade steels, in which it has the advantages of knowledge, experience and a goodwill not possessed by any of its rivals.

Railway Wagon and Train Loads

FEW countries possess more detailed railway statistics than Britain, and it is regrettable that more widespread use is not made of them. It is true that caution is indispensable before reaching conclusions about the bearing of the figures on questions of progress and efficiency. Properly interpreted, however, the figures throw valuable light on certain tendencies in railway evolution which are of wide public interest to-day. In the following article we propose to discuss one of the most important of these tendencies—namely, the loading-factor and its bearing on economical working, as illustrated by the figures of certain key years since the amalgamation of the railways into four large groups.

It is often claimed that railway companies ought continually to strive to obtain bigger train and wagon loads, since obvious economies are realised by carrying freight in bulk and increasing the "paying load" per train-mile worked. The cost of working a train is not seriously enhanced either by the addition of a few wagons to a train or by the better loading of a given number of wagons. This contention is well-founded; but, in the absence of a railway monopoly, commercial as distinct from cost considerations may suggest that regularly booked freight trains should be despatched at relatively frequent intervals. Such a policy obviously must militate against a good train load; for trains must be despatched to preserve duly advertised regularity and speed, whether they are fully loaded or not. To avoid delay, again, "through wagons" must be worked from point to point, despite the fact that better average wagon loads might be obtainable by the transshipment of freight with a view to "bulking" consignments intended for similar destinations. What is right or wrong, in any given instance, depends upon circumstances. The eternal conflict between high quality of service at high cost, or a low quality at low cost, takes on a new importance in these days of road competition.

For this reason, special interest attaches to the official figures of the average wagon load carried on British railways. These figures are based on two statistical measurements. The first is the number of tons of each traffic multiplied by the number of miles over which they

were transported, i.e. the total ton-miles. The second, similarly, is the product of the number of wagons and their mileage, i.e. the total wagon-miles. When ton-miles are divided by wagon-miles, we have the average wagon load, which varies considerably for separate groups of traffic. Very different results are obtained from (say) merchandise traffic on the one hand and coal traffic on the other. The average wagon load for *all* traffic, therefore, varies on each of the four railways, according to the proportions of each class of traffic carried. Fortunately, however, average wagon-loads are available for the following classes of traffic: (i) Merchandise (excluding Classes 1-6, which comprise certain of the heavier traffics like iron ore, steel, etc.) and Livestock; (ii) Minerals and Merchandise (Classes 1-6); (iii) Coal, Coke and Patent Fuel.

Broadly, traffics in category (i) are mainly high-grade merchandise and those in category (ii) low-grade merchandise. In Tables I, II and III, on the opposite page, we show the average wagon loads, on each railway, for the three categories, respectively. We have inserted figures for 1924, to give an approximate picture of conditions shortly after the amalgamations of 1923, although the returns are not strictly comparable with those of subsequent years, owing to the re-classification of goods traffic in 1928. Annual figures go only to 1935; for the Ministry of Transport complete statistics for 1936 are not yet available, and the Ministry's monthly returns, regrettably, do not give cumulative figures. We show, however, the figures for November, the latest month available.

Reference to Table I will show that in the Great Depression, which produced a drastic fall in railway goods traffic, there was a substantial fall in the average wagon-load for the higher grades of merchandise, the most noticeable declines occurring, as might be expected, on the two Northern lines. On the London, Midland and Scottish the figure fell from 2.91 to 2.68 in 1932; and on the London and North-Eastern from 3.01 to 2.75, respectively. To what extent have the figures been improved since 1932? By 1935, the Northern lines and the Great Western all showed a rise,

but the improvement was slight, and left the returns still well below the pre-depression level. If we turn, however, to the heavier traffics, shown in Table II, the picture is more encouraging. On the L.M.S. there appears to have been a steady rise as between each of the periods taken. If we regard 1924 as approximately comparable, for this purpose, we find that a figure of 8.47 in that year had risen to 8.92 in 1929, and despite the depression, to 9.38 in 1935. The L.N.E.R. suffered a setback between 1929 and 1932, but has subsequently well exceeded the 1929 figures. As regards coal traffic (shown in Table III) a slight improvement has occurred since 1929, both on the L.M.S. and the G.W.R.; the former having a return of 9.00 for 1935 as compared with 8.80 for 1929, and the latter of 10.42 against 9.87. The L.N.E.R. shows a very slight fall from 9.97 to 9.92.

Altogether, the available evidence suggests that the extent of changes in the average wagon load, effected since amalgamation, has not been particularly striking. The figures, indeed, may disappoint those who are impressed with the immense technical possibilities of increasing wagon capacity and the average wagon load in Great Britain, and who believe that costs and charges—particularly for coal destined for industry or for export—might consequently be substantially reduced. The figures suggest, indeed, that the railway companies have not seen their way to embark upon any far-reaching or effective policy of change in this respect. In the case of minerals and merchandise, progress, though more noteworthy, can hardly be regarded as dramatic in view of the time that has elapsed since amalgamation. In the case of the higher grades of merchandise, the average load has fallen, whether comparison be made with 1929 or 1924.

So much for the trend of average wagon load. We may next examine the statistics relating to the average train-load, i.e. the number of wagons per train. Table IV gives the necessary figures for all wagons, whether loaded or empty, while Table V is concerned with loaded wagons only. At the time of amalgamation it was generally expected that the new grouping would afford opportunities both of avoiding wasteful duplication of services and of combining streams of traffic destined for common destinations; and that better train loads would produce

more economical working conditions. Later on, it was further hoped that the Pooling Schemes of 1932-33 would have similar results. What, in fact, has happened?

It will be seen from Table IV that during the period following amalgamation, from 1924 to 1929, only one of the companies—the G.W.—showed an improvement in the average train load (including all wagons). Between 1929 and 1932, there was a falling off on every line, although the decline on the L.M.S. was commendably slight, in view of the heavy fall in traffics. Since 1932 there has been some recovery on three of the four lines, but only on the L.M.S. is the position better than in 1929. On all four companies the figure is lower than in 1924. Table V, which sets out average wagons per train, excluding "empties," shows very similar results.

The same general trend is also reflected in Table VI, which shows the average net train load over the same periods. On each of the four lines, the average net train load was lower in 1935 than in 1929, the pre-depression year. The decline was greatest on the L.N.E., where the figure fell from 138.07 to 130.81 tons. On the G.W. the figures were 138.47 in 1929 and 131.77 in 1935; on the L.M.S. 126.64 and 123.76, and on the Southern 107.66 and 104.41.

Clearly, hopes of substantial economies have been disappointed. There has been no obvious, substantial and uniform increase either in the average wagon load or the average train load. To some extent this must be attributed to the need of giving high quality and frequency of service to the trading public, to the effects of road competition, so far as competition has increased the need for attracting and retaining demand by giving high quality and frequency of service. It is significant that the least satisfactory showing, from the railways' point of view, is made by the load figures for those traffics which are most vulnerable to attack by road transport. But it remains a moot point whether the companies might not have benefited themselves as well as industry had they concentrated on increased effort on better loading and consequently lower costs, and had thereby been enabled to charge lower rates. So long as the relations between road and rail remain competitive, the question will have special importance both for the companies and for transport users.

WAGON- AND TRAIN-LOADS ON FOUR BRITISH RAILWAYS

(The "Average Wagon-Load" figures are those of Ton-miles divided by those of Loaded Wagon-miles. The November figures relate to four-weekly periods ending Nov. 30, 1935, and Nov. 28, 1936. In Tables I, II and III, the statistics for 1924 are not strictly comparable with those of subsequent years, owing to the re-classification of goods in 1928).

Outer Europe

THE two great dictatorships of Central Europe recently decided that European politics should hereafter revolve round the Rome-Berlin axis, and the Fascist Grand Council duly gave its blessing to this proposition. Both countries were to help in polishing off democracy in Spain; and the retreat of the two democratic Western Great Powers to the Western tip of the Continent was to facilitate the achievement of a Fascist condominium over Outer Europe—that mass of lesser States between the Rome-Berlin axis and the vast bulk of Soviet Russia. In Germany's sphere of interest were to fall Poland, the Baltic States, Czechoslovakia and Roumania; into Italy's, Hungary, Yugoslavia, and Bulgaria; and Austrian integrity was to be preserved as the keystone holding both Fascist sides of the Central European arch in delicate adjustment. In other words, the Italo-German entente has as its aim the isolation of France's associates, the Little Entente and Russia.

The reaction to this move is by no means the same in all these countries. Czechoslovakia and Roumania have always been more concerned than Yugoslavia to uphold the Little Entente; since the advent of the Nazi regime in Germany, Nazi propaganda and economic penetration have been the order of the day in Roumania and Yugoslavia; and a Nazi propaganda offensive against Czechoslovakia has long been waged. Because of its geographical position it is the latter country which has the gravest cause for alarm.

In Czechoslovakia there exists a strong German minority—about one-fifth of the total population, concentrated in the industrial regions just inside the German frontier—and the slump in international trade has hit precisely those Czech industries that employed this population. In 1933 the *Südetendeutsche Party*, under the leadership of HERR HENLEIN, began to demand a measure of autonomy for the German people which, though partly justifiable under the Czech Minorities Treaty of 1919, was most embarrassing to the Czech Government. The kind of autonomy demanded has been termed *Völkisch*, i.e. for all the German people in Czechoslovakia, despite the difficulty of drawing a geographical or logical line between "racial" autonomy and complete administrative autonomy. In the elections of 1935 the Henlein Party gained about two-thirds of all Germans' votes, the rest going to three non-Henlein German Parties—Social Democrats, Agrarians, and Christian Socialists—who, unlike the Henlein Party, entered into the present Coalition Government.

Since then Nazi influence among the Henlein group has so increased as to make the Czechs doubt the good faith of HERR HENLEIN'S Party; and they have dealt that Party a telling blow by concluding an extensive agreement with the three non-Nazi German Parties, by which the Germans will receive far-reaching cultural and economic concessions. The Czech Government can reasonably ask how, after the events in Danzig, Austria, the Saar, and Spain, they are to be expected to throw important industrial and strategic areas—together with their strong Czech and non-Henlein German minorities—into the hands of a Party taking its orders from Berlin. As long as German threats continue, so long is this dilemma likely to last. Clearly, any agreement between Prague and Berlin whose execution in good faith would be guaranteed by other Powers would tranquillise a dangerous situation in Central Europe.

But Germany and Italy, now both Fascist collaborators in European policy, have the common aim of dissecting the Little Entente. How far have they gone in achieving it?

Yugoslavia, like her partner in that Entente, Czechoslovakia, has a grave federal problem. The Croats are mainly Catholic, and formed part of the Austro-Hungarian Empire. They have long demanded autonomy within the Triune Kingdom of Serbs, Croats and Slovenes. All three elements are united only in opposition to Italy; the Croats are sympathetic to the Habsburgs, to Vienna, and to Germany; while the Serbs, the military and administrative oligarchy, fear—as, after the murder of King Alexander they have reason to—that to grant Croat and Slovene autonomy would lay these federated Governments open to powerful pressure from Germany, Italy, or a re-established Habsburg dynasty at Vienna. The Serb oligarchy therefore retains the reins of authoritarian power, and postpones negotiations for autonomy until the majority of the heir to the throne. Meanwhile, Yugoslavia finds herself the unenviable possessor of large sums of blocked marks in Germany, the proceeds of those exports to Germany which alone increased during the depression. With the recent rapid rise in world prices of primary products, this German trade proves less attractive; for other markets are expanding; and trade which piles up blocked marks, unfreezable only by extra imports of munitions, photographic apparatus, and heavy industrial equipment, must necessarily be limited for a country like Yugoslavia.

Accordingly, in recent months Yugoslavia's vulnerability to German economic—and political—penetration has lessened. The outbreak of a scandal involving the German foreign trade company in Yugoslavia, led by an ex-Hungarian Communist in Nazi pay, has had a sobering effect in Belgrade.

The third State of the Little Entente, Roumania, is actually nearest to a domestic Fascist regime. The notorious Iron Guard, a Fascist organisation supported by local Nazi agents, has already the murder of a Prime Minister and of many editors, journalists, professors and students and Jews to its discredit. Dissensions in Roumanian Cabinets, themselves torn by conflicting aims and policies, prevent this nettle from being grasped. Last autumn, the politicians most favourable to an independent Roumanian foreign policy—which, in effect, means an approach to the Italo-German system—ousted M. TITULESCU from the Foreign Ministry, and called a halt to his policy of close association with Czechoslovakia and Russia. Meanwhile, the Tatarescu Cabinet maintains an unstable equilibrium; for the Iron Guard, by sheer acts of terrorism and riot, blocks the path towards unification of the democratic forces in the country. Of these, the Peasant Party is by far the strongest; and in Roumania, as in the other two Little Entente countries, the mass of the population, who are peasants, are strongly anti-German and anti-Italian in foreign policy, and equally anti-Fascist in domestic politics. But the Peasant Party has lost its former unity; if it regains it, Roumanian politics may change overnight. The position of KING CAROL is delicate; for his recall from exile was a democratic gesture; whereas now Roumanian politics, and even his own throne, threaten to become the objectives in the Iron Guards' campaign of open and unchecked illegality.

While, therefore, the Balkans to-day are more settled than before the last war, the nearer one comes Westward towards Germany or Italy, the more critical becomes the danger of international incidents. Russia, Germany and Italy, with their warring ideologies, have stepped into the Central European arena, only partially vacated by France. The two political "isms," armed and arming, are to-day contesting for the mastery of States stretching

from the Baltic to the Adriatic and Aegean. That arena is still the powder magazine of Europe and if explosions occur it may well spell disaster for democracy throughout the continent of its birth. The two democratic Great Powers of Europe, with their rich resources and rich democratic associates in the West, must to-day read the writing on the walls of Outer Europe. What is happening in Spain, at the extreme Western end of the Continent and at a decisive strategic point, can only be too easily repeated by desperate adventurers anywhere between Russia and the Rome-Berlin axis, and thus provoke the dreaded conflagration.

The only alternative, the only safeguard against war, is not less democracy but more. In Hungary, Poland and even Roumania there are signs of a drift away from dictatorial principles towards firm democratic government. Czechoslovakia is slowly but surely treading the

path of democratic progress. The weakest links in Outer Europe must be strengthened by their own efforts, accompanied by all the material and moral aid of which France, Britain, and their democratic fellows can still dispose. Their assistance, both economic and moral, is to-day far more potent for real welfare than the eagles and trumpets, the authoritarian trappings of dictatorship. The moment is ripe for Britain and France to assure all States in Outer Europe of their active assistance to secure democratic issues from present afflictions. If European democracy is to survive, it must show that it is as powerful for good to-day, both nationally and internationally, as it was when it made the world ring with its achievements. If, by default, it allows Fascist States to weaken and undermine its solidarity, its adherents will hang separately. In no region of Europe will that process begin quicker than in Outer Europe.

Notes of the Week

Parliamentary Procedure.—The House of Commons spent the whole of last Monday in debating a point of procedure arising out of a Financial Resolution on the Special Areas. The enormous increase in the business of Parliament during the last two generations has involved the multiplication of devices to ensure that urgent measures shall be dealt with expeditiously; but there are obvious dangers in any restriction of Parliamentary speech. The Government's sole right to initiate expenditure has been accepted with little question since the days of Queen Anne. A money resolution, which nowadays must precede the introduction of a Bill involving public expenditure, may not be essentially amended or fully discussed in detail. If the operative clauses of a Bill are sharply defined in the Financial Resolution, they are adopted when the resolution is adopted; and the further discussion of the Bill is correspondingly less effective. On Monday members of all parties complained that the Resolution preceding the Bill for the Special Areas was drafted in such detail that it was practically the Bill itself. In effect, it was contended, the Government was employing a device of Parliamentary procedure to ensure that the scope and purposes of policy in a highly controversial matter would pass unchallenged. Mr Attlee, in a speech of model restraint, called attention to the danger of Members losing their privileges by the growth of usages contrary to the traditions of the House. Mr Baldwin stressed the importance of keeping responsibility in the hands of the Government, but he scarcely met the case put forward by the Leader of the Opposition. Mr Lloyd George alleged that the Resolution had been drafted with "demoniacal ingenuity" to prevent the raising of every vital issue that affects the Special Areas, and asked that the House of Commons should be given a fair chance. Whatever the upshot of this particular controversy, we welcome the promise of the Government to set up a Select Commission to examine the grievance about procedure.

Special Areas.—In the debate on the Special Areas Financial Resolution on Tuesday the chairman was violently heckled for his refusal to allow a large number of Labour amendments; and the Minister of Labour was for some time unable to make himself heard in the uproar. Government spokesmen for the most part followed the White Paper in claiming that a great deal had already been done for the Special Areas, and in stressing the fall in unemployment, and claimed that all that was needed to make the existing machinery and policy satisfactorily effective was included in the new proposals. It would now be possible, they declared, to give financial help to new undertakings outside as well as within the Areas. The proposed fund of £2,000,000 would amply supplement the activities of the Special

Areas Reconstruction Association; the proposed contributions to rent, rates and taxes were an invaluable innovation which would hasten the movement of new private industries to the Special Areas; and the Defence Programme would do the rest. The Opposition were not satisfied. They accused the Government of timidity and delay, argued that the new powers and the new fund were hopelessly inadequate, and declared that the Government had shelved the vital question of the national planning of industrial location by relegating it to a Royal Commission. Moreover, the Commissioners were still exposed to the rigid control of the Treasury, and dependent at every turn on the sanction of various Ministries. There should be, it was argued, an independent and responsible Minister for the Special Areas. There is force in all these contentions. Despite Government protestations, the problem of the Areas is still far from solution. The re-armament programme is only a relatively temporary and dangerous palliative; many measures of reconstruction suggested by experts have been ignored, and wider matters of policy, such as the necessity for further freedom of international trade, have been relegated to the proverbial limbo of good intentions. In short, the Government's proposals inspire little confidence, even among sympathetic observers.

Raw Materials and Colonies.—On September 11 1935, Sir Samuel Hoare, then Foreign Minister, proposed in the League Assembly that an investigation should be made into the problem of access to raw

materials. This was to meet the complaint of Italy and other so-called Have-not Powers that they were deprived of access to these commodities. The League's Committee for the Study of Raw Materials duly met at Geneva for the first time last Monday. They have spent the first three days in demonstrating the variety of problems involved. For this country, Sir Frederick Leith Ross argued that the trouble was not some countries' lack of colonies but the restrictions imposed even by plaintiff countries on the exchange of raw materials, and the maintenance—again even by plaintiff countries—of artificial currency levels. As an expert, Sir Henry Strakosch pointed out that the difficulty did not arise merely from the commercial policy of sellers. Some countries, e.g. Argentina, found no difficulty in buying raw materials; those which did had largely their own policy to blame—those who preferred guns to butter could scarcely complain. For the United States, Mr Grady shared in the general deprecation of trade restrictions, and declared that the United States had already made tariff concessions in the hope that other countries would follow suit. He suggested, however, that it was not simply a question of policy. Clearing agreements, cartels and the widespread control of production had seriously augmented the problem; but the recent general collapse of world trade was largely responsible.

There were unfortunately no representatives of Italy and Germany to bring the wheel full circle; but the comments of the Polish and Japanese experts were illuminating. M. Rose attributed the difficulties of Poland to surplus population and the general ban on immigration. Mr Shudo went further; countries with colonies must expect other Powers to pursue forward imperial policies until immigration was made universally free. It is unfortunate that the discussions, while surveying the whole ground of trade and colonial policy, have so far tended to run on lines of national interest. Sir Frederick Leith Ross contributed nothing constructive to the debate by his allegation that colonies were a liability rather than an asset; that they cost a great deal in capital development; that the Open Door would be prejudicial to their progress; and that to buy from them was dearer than to purchase in the world market. This sounds like a long declaration that colonial grapes are always sour. It will be fastened upon in Germany as a proof of colonial Powers' perfidy and of British hypocrisy. There has been a tendency for the experts from colonial Powers to narrow the discussion to the trade and monetary policies of those less fortunate. And, on the other hand, the Polish and Japanese experts have tended to see no further than their lack of colonies and the impediments to the emigration of their people. It has been ruled, however, that transfer of colonies is outside the competence of the Committee. A statistical committee has been set up, consisting of Sir Henry Strakosch, Mr Ivar Høgbom and Mr Henry Grady, to draw up a plan of research for the League experts and two committees still to be appointed. The actual needs of particular countries will then be the staple of further inquiry; and the vain and interested verbal fencing between the different kinds of countries will, it is to be hoped, be avoided from now on.

A Visitor From Sweden.—Hr. Rickard J. Sandler, Foreign Minister of Sweden, who at Mr Eden's invitation is paying an official visit to this country, arrives in London next Monday. Hr. Sandler is a more than nominally welcome guest. Few, if any, statesmen in post-War Europe have exercised a more constructive and profoundly pacifying influence than this modest and reticent Swede. Whether he happens to be at his office in Stockholm or attending some conference; whether he is in Geneva—where he is greatly respected—or in Oslo and Copenhagen, Hr. Sandler never renounces the struggle for peace and for improved economic conditions. It is not generally known that before he became Minister for Foreign Affairs he specialised in economic questions. In the late Hjalmar

Branting's first Cabinet he was Finance Minister; in that statesman's last Government Hr. Sandler was Minister of Commerce. At the age of forty he succeeded his leader and friend in the Premiership, which he held for nearly two years. But after resigning from the highest office in the State in 1926 Hr. Sandler became chief director of the Central Statistical Bureau, remaining in that modest position until the formation of Hr. Hansson's Cabinet in 1932, when he deserted statistics for diplomacy. He is one of the principal sponsors of Scandinavian economic and political co-operation, and of late he has assumed more and more the rôle not only of his own country's representative but of spokesman for the whole of Northern Europe. This "voice from the North" deserves all possible consideration, for it comes from people who have given many proofs of their anxiety for the maintenance of peace and democracy.

"Is It Inflation?"—In a stimulating article in *The Times* on Thursday, Mr J. M. Keynes essayed an answer to this question about the Government's borrowing for re-armament. He takes inflation to be a state of affairs in which increasing demand fails to elicit an increase of output, i.e. where monetary demand still increases, but spends itself in merely raising prices. "When this point is reached, the new demand merely competes with the existing demand for the use of resources which are already employed to the utmost." We remark, in passing, that this point has already been reached in certain industries in this country. Using a revised multiplier of "two to three" for the difference between primary expenditure and the ultimate expenditure resulting from it, Mr Keynes concludes that an expenditure of £80 millions on re-armament from loans may become an increased general demand of £240 millions at present prices—requiring a 5½ per cent. increase in national output. This kind of calculation is always largely a matter of surmise, and in connection with the Government's armaments expenditure from loans it may well be that the multiplier is as high as 4. For such expenditure is concentrated on trades where capacity is already short, and further capital extensions are necessary. Thus, the loan expenditure for arms will necessitate further civil investment, with a doubly cumulative effect on consumers' expenditure. Mr Keynes next points out that our 12½ per cent. unemployed are now largely those from export trades, from seasonal jobs, or unemployables. He goes on:—

Unless we make a liberal allowance for overtime and more output from those already in employment, it would need more planning and transfer of labour than is practicable in the time to increase the national output in 1937 by 5½ per cent. over what it was in 1936; although over (say) a period of three years it might be possible.

Mr Keynes explains, however, that the Chancellor may be able to avoid inflation, granted certain conditions and certain action by the Government. First, he says, his multiplier may be below 3—since savings may increase more rapidly than prosperity—requiring an increased output of only £170 millions, or 4 per cent. instead of 5½ per cent. of the national income. This, as we said, seems unjustifiably low. Secondly, Mr Keynes powerfully reinforces the argument—advanced in these columns since the re-armament borrowing was announced—that the best safeguard against an inflationary rise of prices is to take active measures to increase our imports, and therewith our exports:—

It remains particularly advisable to do anything possible to stimulate our staple exports. For it is there that our reserves of surplus labour are chiefly to be found. It is no paradox to say that the best way of avoiding inflationary results from the Chancellor's loan is to increase both imports and exports. In any case, we can make a deduction of (say) 15 to 20 per cent. on account of increased imports, which brings down the increase in the national output (apart from exports) necessary to avoid inflation to a figure between 3½ and 4½ per cent.

Thirdly, it is in the general interest to place armament

factories and contracts in the Special Areas, and so to use resources now unemployed. Fourthly, "new building may easily fall short of last year by £20 millions, which would provide a quarter of the Chancellor's requirements." Finally, capital developments by railways, local authorities and public boards, though partly necessitated for new re-armament facilities, can be controlled. A net increase of 3 per cent. in the national income might, he thinks, see us through without inflation. The Chancellor's programme need not be inflationary, but it may be near the limit. Reiterating his demand for a central economic planning and advisory organisation, Mr Keynes concludes with words whose burthen will be familiar to readers of *The Economist*. "It is easy to employ 80 per cent. to 90 per cent. of the national resources without taking much thought how to fit things in . . . But to employ 95 per cent. to 100 per cent. of the national resources is a different task altogether."

The implications of Mr Keynes's article are that inflationary effects may be expected to follow loan expenditure on armaments if parallel action is not taken by the Government to increase the whole field of production and trade. Already, with "bottlenecks" increasing in key industries, prices and wages are rising high enough to divert labour and resources from current civil production; and this, on Mr Keynes's definition, is partially inflationary; partial, as yet, because this state of affairs is confined to re-armament industries and their suppliers. If the Government take action—e.g. by expanding our foreign trade and damping down other capital expenditure—to ensure adequacy of labour and supplies, they may enable the national economy to produce the extra armaments without making inroads upon our normal civil business. The important point is that the productivity of the country must be increased to satisfy the Government's demands. Whatever the value of Mr Keynes's calculations—and he himself warns us that they are subject to a wide margin of error—he has confirmed that, without measures to broaden the basis of our national production, we are running risks of inflation at least during the next two years.

The Air Estimates.—These Estimates for 1937–38 issued on March 5th, show at £82,500,000 an increase of £31,800,000 over the figure for the current year (including Supplementaries) of £50,700,000. Of this vast increase, however, £26,000,000 is to be met by loans, i.e. issues out of the Consolidated Fund; so the taxpayer has only to bear the increase of £5,800,000 in the Budgetary provision for the Air Force. At the full net figure of £82.5 millions the Air Force in the coming financial year will cost us almost five times its total cost (£17.7 millions) in as recent a year as 1934–35, two years ago; and for the first time it costs more than the Army.

	1932	1933	1934	1935	1936* (Estimate)	1937 (Estimate)

* Includes Supplementary Estimates of £11,700,000 in July 1936, and of £100 on March 3, 1937. † Maximum number to be borne. ‡ Plus £12,000,000 to be defrayed out of loans. § Plus £14,000,000 to be defrayed out of loans. || Plus £26,000,000 from loans, by issues out of Consolidated Fund.

The personnel of the Force is fast increasing; on April 1st it will be 4,850 officers and 51,000 airmen; and the R.A.F. will comprise 100 squadrons at home out of the 124 envisaged by April, the equivalent of 20 with the Fleet Air Arm, and 26 overseas. During the summer the home force (including 20 squadrons of the Auxiliary Air Force) of 124 squadrons, some skeleton, and 1,500 first-line machines will be attained; and thereafter these will be filled out to reach the envisaged 1,750 first-line strength of the metropolitan air force. During 1937–38 ten special units of the A.A.F. are to operate the London balloon barrage, for which balloons are now being delivered; the Fleet Air Arm is to be increased from 217 to 278 first-line aircraft; and the four new home Commands—Bomber, Fighter, Coastal, and Training—will be fully functioning in place of the former Air Defence of Great Britain Command, which ceased to exist in 1936. The Secretary for Air admits that deliveries of airframes under the original scheme for a 1,500 first-line strength by the end of March, 1937, have been too optimistically guaranteed by makers; there is some delay here. But engines are coming in fast; six engine factories are in course of erection, to be completed within a few months; and two new airframe factories are under construction. The "shadow factories," being erected by firms who will manage them for the Government, are distinct from the extensions to existing aircraft firms and outside firms, now involved in the current expansion scheme.

Of the increase of £31.8 millions in the Estimates, £17.0 millions is for technical and warlike stores, of which again £12.0 millions is to be provided out of loans. Of the total vote of £43.5 millions for these stores—more than half the Air Force Estimate—provision for aeroplanes and spares rises from £19.6 millions this year, including Supplementaries, to £29.0 millions next (including costs of manufacture under the "shadow" scheme); for armament and ammunition from £3.6 millions to £7.5 millions; for petrol and oil from £1.6 millions to £2.8 millions; and for balloons and hangars from £118,000 to £690,000—this latter item being for the London barrage balloons, hydrogen supplies, winches, etc. The 1937–38 Vote for works, buildings and lands is, at £4.0 millions, actually down by £5.4 millions on this year's Vote and Supplementaries, simply because the gross increase of £8.7 millions is exceeded by the proposed borrowing of £14.0 millions from the Consolidated Fund for this Vote alone. New works, extensions and alterations are, at £12.0 millions, to cost £4.8 millions more and cover an exhaustive range of old and new stations all over the country—many items showing increased estimates of total cost. Works and lands for factories at £4.0 millions are to cost £3.5 millions more. These are the "shadow" factories for airframes, engines, etc., for the item covers both the cost of acquisition of sites, erection of the

factories on behalf of the Air Ministry, and of the bedded-down power-driven equipment in them. They are to supplement the output of the industry during the expansion, and to be available thereafter as reserve sources of supply. An intriguing item under "new works, additions and alterations" in the vote for works, buildings and lands is a total estimate of £6.0 millions for aircraft storage units, to store reserve aircraft, of which £1.6 millions falls to be paid in 1937-38. This reflects the vast increase in the ratio of reserves to first-line aircraft.

* * *

L.C.C. Elections.—The results of the London County Council Elections, announced on March 4th and March 5th, show that the Labour Party has actually increased the majority which it won in 1934. The respective strengths of the parties on the Council are now 75 to 49; of twenty aldermen 12 are followers of Mr Morrison. That Labour has been given this opportunity to "finish the job" is a proof that the electors of London did not allow their attention to be drawn aside to non-essentials. No amount of argument has proved Mr Morrison to be a Communist disguised; nor has it been demonstrated that London is in duty bound to return a Council pledged to support the Government of the day. Indeed, the under-representation of progressive opinion in the House of Commons was probably a strong incentive to liberally-minded voters to support Labour in London. In the last resort it was clearly seen that the proof of the pudding was in the eating. The Green Belt, housing, and the extension and improvement of the public services were the Labour Party's claim to the suffrages of the electorate. Even in the field of municipal finance, Mr Morrison's administration had won between 1934 and 1937 an incontestable reputation for sound policy. The Municipal Reform Party mistakenly tried to deny these achievements; and they relied too much on the twin bogeys of Communism and extravagance. Mr Morrison has very aptly shown that economy, so far from being parsimony, is wise expenditure. He justified his spending with his policy, and he won an election in which substantially more of the electors (42.4 per cent.) voted than in any contest since 1913. It is undoubtedly a portent that the largest city in the world should elect at this moment to be ruled again by Socialists. But it is equally significant that three years of office and of power should have convinced the ordinary liberally-minded citizen of London that progress and a constructive policy can be expected from a Labour administration without any revolutionary consequences.

* * *

Speculation in Commodities.—Our prediction in *The Economist* of January 9th (page 53) that a steep and sharp rise in the prices of primary products was at hand has, unfortunately, been justified by events. Consumption of primary products in recent months has been rising faster than production, and stocks of the principal materials have been reduced to normal dimensions. Meanwhile, the trend of consumption remains upwards, but some time must elapse before output can be increased proportionately. At the present moment, markets are passing through a dangerous phase, during which supplies are temporarily limited and prices are sensitive to concerted pressure by consumers and speculators. The probability of an increase in supplies later on is of no avail as long as consumers, fearing a shortage, are anxious to cover their requirements now for a long period ahead. The existence of this temporary bottle-neck is being exploited by speculators, anxious to snatch a quick profit. As long as the buying movement persists, even if it seems unjustified by the long-term supply-demand trend, prices may continue to advance, though a collapse is bound to come sooner or later. At the moment, however, a serious reaction in quotations does not seem imminent, and there is undoubtedly some danger that the upward movement may determine the cost structure of certain industries.

During the past few weeks, for example, procedure on the non-ferrous metal markets has resembled that of a casino. Wednesday's quotation for copper, at £77 2s. 6d. per ton, was £7 per ton higher than a week ago. Tin was rushed up by £50 per ton to £301 per ton, while the quotations for lead and spelter rose from £32 8s. 9d. to £35 18s. 9d. per ton and from £31 1s. 3d. to £36 5s. per ton, respectively. The price of rubber advanced from 10½ pence per lb. to 11½ pence on increased demand, raw sugar was marked up from 6s. 4½d. per cwt. to 6s. 9d., and American raw cotton was rushed up from 7.58 pence per lb. to 8.01 pence per lb. Wheat, too, after a slight reaction due to heavy Argentine shipments, has resumed its advance. Moreover, as supplies of the new crop will not come on to the market until the summer, and as stocks are none too plentiful, the rising tendency may continue. In view of the danger of an orgy of speculation during the next few months, the immediate necessity is the suspension of any of the remaining limitations on output. Consumers themselves might break the force of the advance by abstaining from any attempt to cover their requirements for increasingly long periods. Moreover, steps might be taken to render gambling less easy by technical restrictions until increased supplies of primary products become available.

General Franco Drives Ahead.—This week General Franco's forces have redoubled their efforts to invest Madrid. South of the city they are still hammering at the main defence lines; but this week a strong and rapid advance has been made by the German and Italian corps fighting for General Franco from Sigüenza, to the north-east of the city. The Government's forces have thus been caught on two opposing flanks; and if the advance from Sigüenza continues, the final escape from Madrid to Valencia on the coast may be cut off from the north-east at Guadalajara and from the south-east. The capital will then be invested; its fall will be a matter of days; for its food supplies are already low. In north-west Spain, the Asturias miners have been consolidating their grip on Oviedo and ousting the rebels; while elsewhere all has been quiet in view of the concentration of effort round Madrid. Differences among the leaders on the Government side, and regional jealousies between Madrid, Valencia and Barcelona, are to a certain extent responsible for the jeopardy in which Madrid now stands; but it is quite clear that General Franco's recent hurried acquisition of about 20,000 fresh Italian troops has enabled him to bring both sides of the pincers together round Madrid.

* * *

Non-intervention is due to be supervised this week-end; and it is now obvious that Italy and Germany did not agree to co-operate in this supervision until sufficient German and Italian troops, guns, tanks and aircraft had been landed in Spain to ensure the rebels' military success. It is reported that even last week, before supervision was in force but after Signor Mussolini had agreed to send no more volunteers, some thousands more of Italian troops were landed at Cadiz. This week, General Franco's cruiser "Canarias" met and sank the Government's ship, "Mar Cantabrico," laden with aircraft and munitions from America, though the cargo ship was masquerading as an English vessel; and a French cargo boat has been bombed by an aeroplane from the Balearics belonging to General Franco's forces.

* * *

President and Supreme Court.—Mr Roosevelt has sometimes been accused of lack of courage in fighting his battles. But the accusation certainly does not apply to his conduct of the campaign for reform of the Supreme Court. It is true that he took pains, as a skilful politician, to choose the most favourable opportunity for stating his views. But he was perfectly well aware that he was arousing more widespread opposition by his attitude to

the Court than he has ever before encountered. The opposition to him at the time of the election was both bitter and vocal, but it was confined to a relatively narrow section of opinion. This time he finds himself opposed by persons taken from nearly every shade of political opinion in the country. In fact, his real opponents, the Republicans and Conservatives, have been able to remain silent, leaving all the vocal uproar to the Liberals and Progressives. The President, however, is not in the least daunted, and he has shown no sign of wishing to retreat and compromise on something less than his original demand. In two speeches, one at a dinner on March 4, the other over the radio to the entire nation on March 9, he has re-stated his case with both vigour and clarity. He is making no attempt to hide behind the issue of old age among American judges; he tacitly admits it to be no more than an expedient. His case is that the United States is faced with a "silent crisis," and that the elected Congress and the elected President cannot take steps to meet the crisis of poverty and economic instability because the Supreme Court insists on giving decisions based not upon the Constitution but upon the individual Justices' political opinions. And he is able to quote with telling effect from minority decisions given by the Justices in support of this contention. The present indications are that, as in the election, the mass of silent electors agree with him. Indeed, it is hard to deny the logical strength of his position, and the opposition are not attempting to do so. But American politicians have always been strangely loth to admit the democratic proposition that when the people have clearly declared their wish they should be allowed to implement it, and the issue of the present campaign will be doubtful until the moment of the final decision.

* * *

Mr Lewis Marches On.—Mr John L. Lewis, leader of the Committee for Industrial Organisation, is not allowing himself to be deflected from his ultimate purpose of "organising" labour in the large American mass production industries by the ease with which he has secured his victories hitherto. The surprising reversal by the United States Steel Corporation of its hitherto immutable policy has given him a very definite psychological advantage, which he is exploiting to the full. It is true that the Corporation has not recognised the C.I.O. union as the collective bargaining agent for more than its own members, and that collective bargaining will continue between the Corporation and its "company unions." But the Corporation has never hitherto recognised the existence of any outside union. If the rulers of the Corporation (who are closely related to the masters of other mass-production industries) made this concession in the hope of buying industrial peace, they have soon discovered their mistake. Strikes have been called in the Chrysler and Hudson motor plants at Detroit and in the Firestone rubber factory at Akron, Ohio. In addition, workers in the textile and oil industries are being vigorously enrolled. Indeed, the C.I.O. feels itself strong enough to complete its secession from the American Federation of Labour and to set itself up as a complete rival organisation, granting charters to its subordinate unions. It is the general opinion that the C.I.O. soon will have more members than the A.F.L., even if it has not already. Labour organisations which enjoy spectacular, but short-lived, success are not unknown in American labour history. But the C.I.O. has the appearance of being more permanent, as it has certainly been more successful, than any of its predecessors. It is too soon to predict a complete transformation of American politics as a result. But that contingency cannot by any means be dismissed from the realm of possibility.

* * *

Belgium's Dilemma.—Belgium is showing fresh symptoms of discomfort over the indefinite prolongation in Western Europe of a provisional state of affairs. A year ago Herr Hitler shattered the Locarno Pact; and,

ever since then, the three Western parties to it—Belgium, France and Great Britain—have been in a provisional defensive military alliance with one another, while none of them have been in any treaty relation whatsoever with Germany. The efforts of British diplomacy to secure a new agreement between all the Locarno Powers, Germany included, are no further advanced to-day than they were on the morrow of the German military re-occupation of the Rhineland; and the Belgians are becoming impatient of their country's present status, in which she is a co-guarantor, with Great Britain and France, of the security of all three countries. Belgian opinion is in favour of harking back towards the neutrality which was Belgium's recognised status before the war, and which not only was but still is the policy of Holland, Switzerland and the Scandinavian countries. But the Belgians do not appear so far to have thought out the crucial question whether, in a world in which collective security is virtually in abeyance, the neutrality of a small country is better secured by seeking particular guarantees or by withdrawing into absolute isolation.

* * *

Already, however, some Belgian voices are deprecating the idea of either a German or a French guarantee, on the ground that both would be compromising. They prefer a solitary British guarantee—forgetting, perhaps, that no diplomatic guarantee from any Power can be of practical value under modern conditions of warfare unless it is implemented by technical naval, military and air conversations to arrange in advance for its execution at a moment's notice. And technical conversations, as we now know, mean commitment up to the hilt. On this reasoning, the Dutch Government recently declined Herr Hitler's offer of a formal guarantee while taking note of his willingness to give one; and this week the Danish Prime Minister has dismissed as "utopian" the idea of a defensive combination between Denmark and—not any Great Power, but even her own Scandinavian neighbours. This week the Swiss Federal Council has taken note of an unconditional declaration by Herr Hitler, in an interview with M. Schulthess, a former member of the Swiss Government, that Germany would respect Switzerland's neutrality and integrity. Neutrality is thus forging ahead in Europe; so far, perhaps, that we shall all soon be neutrals—until we find ourselves attacked.

* * *

Bad News from Palestine.—For the first time since the cessation of guerilla warfare in Palestine last November there has been a renewal of violence. The new wave of violence was rising all last week, and at the week-end it culminated in a number of serious

outrages, resulting in at least one fatal casualty. The man who lost his life was an Arab, though the majority of the victims appear to have been Jews. Up to date, this fresh disturbance of the peace has been confined to the Jerusalem district, but there have also been signs of unrest in Galilee. It was perhaps only to be expected that something like this should happen during the difficult period of waiting before the Royal Commission present their report—and there must inevitably be a delay, for although the Commission are known to be working as hard and as fast as they can, it is their duty to take all the time necessary for going thoroughly into the momentous issue on which they have to make so responsible a pronouncement. One clear moral is that no recommendation for a settlement will be any good if either party is left with a genuine sense of injustice—and a sense of injustice means, for this purpose, a belief that the national existence of either the Arab or the Jewish community in Palestine is being left, or placed, in jeopardy. If either party continues to feel that, there will be no permanent peace in Palestine, though there may be a temporary repression of recalcitrant forces. This would be a gloomy prospect, for sheer repression will break down sooner or later in Palestine as surely as it did in Ireland.

Australia's Referendum.—The Australian electorate came up to expectations in rejecting by referendum the constitutional amendment giving the Commonwealth power to control marketing, but overran them in rejecting at the same time the amendment extending federal powers over air navigation. The latter was not politically controversial, and plainly suffered from the company it kept. There is, doubtless, some fraction of truth in Mr Lyons' impatient comment that "the referendum results reveal an amazing anti-federal spirit among the people." The aftermath of the slump does seem to have aroused among many Australians a sense of jealousy towards the Commonwealth Government, whose budgetary wealth has contrasted with the continued deficits in the States and has given it an uncovenanted mastery over them through control of the purse strings. This feeling was a useful ally to those State Governments which resented the Commonwealth's cavalier treatment of their own plans for overcoming the marketing difficulty after the Privy Council's judgment of last July. It was also useful to the Labour Party, which is usually in favour of greater federal power, but demanded (no doubt for political reasons) a complete overhaul of the constitution instead of piecemeal amendment. The result is not a good omen for the Government in the approaching general election. It may also weaken the Govern-

ment's internal cohesion; for the Cabinet has rejected both the Country Party's proposals for dealing with the situation—namely, a constitutional convention, and bounties to primary producers paid either out of corresponding excise or out of general revenue. Instead, it has turned over responsibility for marketing schemes to the States—a just nemesis indeed.

Changes in Britain's Trade.—At a moment when the possibility of relieving international trade of a few, at least, of its shackles is being eagerly canvassed abroad—less eagerly, perhaps, in British official circles—special interest attaches to the charts shown on this page. They portray the course of the slump, and the modest subsequent recovery, in Britain's imports and exports between 1929 and 1936. The value figures are based on pounds sterling, equated to 100, in either case, in 1929. The volume figures are derived from a recalculation, by the Board of Trade, of the quantities in each year, at the prices of a datum year. Originally, the 1929 figures were based on 1924 and those for subsequent years on 1930, but for purposes of comparison we have linked the two series together and re-expressed them on the basis 1929=100. The figures are derived from *The Board of Trade Journal*, and are given regularly in our *Monthly Trade Supplement*. It will be observed that Britain's imports suffered a comparatively small decline, so far as volume is concerned, in the depression years, but were obtained at much lower prices than in 1929. The volume of our exports, on the other hand, fell heavily until the abandonment of the gold standard. Thereafter, the relatively higher prices of our exports enabled us to maintain the volume of our imports by a considerably reduced volume of exports. The terms of trade were moving in our favour during these years—a tendency which is now being reversed by the rapid rise in commodity prices, particularly those of raw and semi-finished materials, to which reference is made in a Note of the Week on page 580. Incidentally, the Board of Trade has just announced that, in future calculations of volume of trade, the prices of 1935 are to be used as a basis.

Mining Royalties.—A definite decision has now been taken in the protracted wrangle between the Government and the owners of coal royalties over the amount of compensation to be paid when those royalties are "unified" in accordance with the Government's general election promise. A sum is to be fixed as the proper compensation for all the royalties to be acquired, and individual owners will be compensated according to their

Value and Volume of Britain's Imports and Exports, 1929-36.

share of the total. Lord Justice Greene, Mr Justice Clauson, and Lord Plender, are to assess the total value of the royalties on the basis of a sale in the open market by a willing seller. It is agreed between the two parties that the average annual net income derived from royalties in the years 1928 to 1934 shall be taken at £4,430,000—this being the income after payment of mineral rights duty and the levy of 1s. in the £ made since 1926 for pithead baths. The tribunal is called on to decide how many years' purchase are to be applied to this figure of £4,430,000 to give the total compensation. The Mineral Owners' Joint Committee has agreed to accept the Tribunal's decision as binding. The Government, however, can reject the decision by giving notice within six weeks, in which case they will try to reach a direct agreement with the mineral owners' committee. The composition of the Tribunal, which consists of two lawyers and a famous accountant, is a guarantee that the question will be investigated solely within the terms of reference, and nothing will be heard of the suggestion that royalties are an unethical form of property. Lord Plender was chairman of the board which negotiated the agreement of 1921, a profit-sharing arrangement which still substantially governs wages in mining industry. He and his colleagues will make their own inquiries, but it is difficult to forget the calculation made for the Samuel Commission in 1925 by Mr Howell Thomas, Chief Valuer of the Board of Inland Revenue, who put the total sum required at £92,000,000—or £100,000,000 to allow for all contingencies. The levy since made for pithead baths will reduce that estimate by 5 per cent., and there would seem to be a strong case for applying not more than twenty years' purchase to the annual income of £4,430,000, or a capital sum of £88,600,000. If the Government should finally accept a higher figure, they will at least have an effective answer for those who criticise "unification" of coal royalties as socialism: since by coming in first they will have secured higher compensation for those expropriated than a less sympathetic administration might have given them. But the Government have so far firmly resisted the royalty owners' demands.

South Wales Survey.—The Second Industrial Survey of South Wales, published this week, attempts to answer certain specific questions about the future of that area. In three lengthy volumes it describes the state of employment in South Wales, the facilities which the region can offer to new industries, the sort of industries which might be introduced, and the places where they might best be located. The Survey is concrete and detailed, and is based on a full analysis of facts and figures, and on a host of interviews with business men, Trade Unionists and other experts. Though there are signs of haste in the vast amount of work done, the information and conclusions are invaluable. Excellent in every way are such features as the assessment of the surplus working population in the next six years, the analysis of foreign markets, the comments on industrial reorganisation, the novel survey of the distributive trades, the detailed survey of natural, transport, public, financial and labour resources, and the specific application of the theory of industrial location to the realities of South Wales. This is a sound, stimulating and constructive piece of research. The conclusion "that it is possible to substitute a positive programme of industrial development for a negative policy of waiting" is a timely challenge.

Tin Quota Unchanged.—At its meeting in Paris on Friday of last week, the International Tin Committee maintained the production quota for the second quarter of 1937 at 100 per cent. of the new standard tonnages. This decision had been anticipated on the metal markets and thus had little effect on prices. From the communiqué issued last week-end, it appears that the Committee regards the present price level as excessive. The reduction in the visible supply last month, the

Committee points out, was due to special causes, and the maintenance of the 100 per cent. quota should add some 1,600 tons to stocks each month. This calculation assumes that production will fall short of the permissible level in certain areas and that consumption will proceed at the rate of 170,000 tons annually. The Committee did not consider it expedient to check the present upswing of prices by raising the quota; but the speculator is warned that there is a substantial reserve of production available—"if necessary at very short notice"—above the standard tonnages fixed under the control agreement. The warning went unheeded this week, and the cash price was raised to over £300 per ton. With the market in its present mood, it cannot be assumed that the limit has yet been reached.

International Coke Convention.—The details of the scheme for the creation of an International Coke Export Cartel have now been approved by the majority of the coke producers in the United Kingdom, and the Convention is to come into operation from the beginning of next month. It embraces the principal coke-producing and exporting countries of Europe. The initial basic percentages of the exporting countries are: Germany 48.43 per cent., the United Kingdom 20.88 per cent., the Netherlands 17.83 per cent., Belgium 9.66 per cent., Poland and Danzig 3.20 per cent. These proposals do not quite conform to the relative position of the exports of these countries in 1936. Germany's exports last year totalled 7.2 million tons, those of the United Kingdom 2.3 million tons, of Holland also 2.3 million tons, of Belgium 1½ million tons, and of Poland about 300,000 tons. For the purposes of the scheme the principal importing countries have been divided into four groups, namely: (1) The United Kingdom, the Irish Free State, the United States and Canada; (2) the Scandinavian and the other Baltic countries; (3) the Western and Central European countries; and (4) Spain, Portugal and countries on the Mediterranean seaboard. In addition to the sharing of the available export trade within these markets the Convention provides for the enforcement of minimum prices. These may be fixed and varied with the support of 75 per cent. of the votes cast by the members of the Management Committee. It is expressly stated to be the intention of the Convention "to effect a continuous adjustment of prices to circumstances so as to ensure that the prices obtained shall be the most favourable prices which are for the time being obtainable without prejudicing the immediate or future development of the export coke industry." The newly-formed British Coke Export Sales Association has accepted responsibility for the observance of the Convention by the United Kingdom, and has drawn up its own constitution for the control of the export trade. Intimation has been given that the system of regulation may be extended to the inland trade of the countries concerned at a later stage. Its immediate application will affect an export trade of between 12 million and 13 million tons per annum.

Recovery in Scotland.—The Clydesdale Bank has published the fourth of its annual surveys of economic conditions in Scotland. Once more a tribute

must be paid to the industry and ingenuity with which information on the state of Scottish trade has been collected, and the wish expressed that similar surveys could be compiled of other definite regions of the country. The story that the survey has to tell is, in the main, cheerful; 1936 is described as "a year of quickening progress." Reference is again made in the survey to an annual index of business activity in Scotland which the Clydesdale Bank has calculated on the lines of *The Economist* Index of Business Activity for the United Kingdom as a whole. We are enabled, through the courtesy of the Clydesdale Bank, to show the two indices graphically in the following diagram. It must be pointed out that the Scottish index is incomplete and, in some respects, approximate; it must therefore be considered as being subject to a substantial margin of error:—

INDICES OF BUSINESS ACTIVITY,
(1924 = 100)

Between 1935 and 1936 the Scottish curve shows a slightly more rapid rise than the United Kingdom curve (7.1 per cent., as compared with 6.3 per cent.). This more favourable experience is due to the fact that recovery, in its present stage, is powerfully affecting the heavy industries in which Scotland specialises. The survey suggests that the prospects for other industries are less rosy since "the scope for further advance is limited, and can hardly be expected to broaden except as labour in the depressed areas is restored to a wage-earning status." Nor can much improvement in the export trades be confidently anticipated. On balance, the Clydesdale Bank expects "a continuance of the upward trend in Scottish economic affairs," but it is suggested that "the prospects for a quickening of the rate of improvement are by no means so assured."

Shipping Freight Index.—As measured by our monthly index, the general level of cargo freights fell by 1.0 per cent. during February, following a rise of 5.8 per cent. during January. The current figure of 134.3 compares with 90.6 in February, 1936, and 81.4 in February, 1935. Details of the index number are as follows:—

	Average, 1913	Feb., 1936	Dec., 1936	Jan., 1937	Feb., 1937
European waters	110.0	88.3	142.5	135.5	144.0
North America	113.1	89.0	105.6	117.2	116.6
South America	123.4	85.1	127.8	141.8	124.0
India	106.3	99.7	125.0	130.7	148.9
Far East and Pacific	117.4	90.9	126.2	140.5	132.2
Australia	127.9	90.8	142.1	147.8	140.5
Total	116.3	90.6	128.2	135.6	134.3
1913 = 100	100.0	77.9	110.2	116.5	115.5

Liverpool and Newport report quieter conditions, but there is a steady demand for tonnage at Hull. The situa-

tion in South Wales is uneven. Cardiff reports a firm market, and rates have been well maintained at Swansea.

	Index No.	Inc. or dec. Points		Index No.	Inc. or dec. Points
Home trade	129.8	+18.2	South America:—	79.4	-10.5
By—outwards	146.8	...	Outwards	168.6	-25.1
By—homewards	208.1	+21.0	Homewards	109.8	+ 8.7
Mediterranean:—			India—outwards	148.9	+18.2

Homewards	139.4	- 9.0	Far East, etc.	140.5	- 7.3
North America	116.6	- 0.6	Australia		

Movements are becoming a little more uneven.

Wholesale Price Advance Continues.—During the past fortnight there has been a further sharp increase in wholesale prices, which was not entirely confined to the minerals group. *The Economist's* complete British index number has risen by 3.3 per cent., while the British primary products index number has risen by 5.9 per cent. These are very big movements for a single fortnight. In the United States the primary products have advanced by 6.4 per cent. and the complete Irving Fisher index number by 0.2 per cent. French wholesale prices have risen by 1.5 per cent. and German by 0.2 per cent. Since the present advance began last May, British wholesale prices have risen by 21.9 per cent. for all commodities and by 36.9 per cent. for primary products alone. The American increases are 12.2 per cent. for all commodities and 40.5 per cent. for primary products. The French increase, which covers last October's devaluation, is 39 per cent. for all commodities.

* These figures refer to Mar. 3rd.

All groups in *The Economist* index number have registered advances. The minerals group has risen by 9.0 per cent.

	The Economist Index (1927 = 100)			
	Sept. 18, 1931	Feb. 10, 1937	Feb. 24, 1937	Mar. 10, 1937
Cereals and meat	64.5	88.3	87.5	87.9
Other foods	62.2	68.7	68.6	70.2
Textiles	43.7	68.8	68.9	71.9
Minerals	67.4	99.3	105.4	114.9
Miscellaneous	65.8	82.8	82.9	83.9
Complete index	60.4	81.5	82.3	85.0
1913 = 100	83.1	112.2	113.3	116.9
1924 = 100	52.2	70.5	71.1	73.4

Wheat and maize have risen in price during the past fortnight. Among other foods there were advances in tea, cocoa, sugar, butter and coco oil. There was a general increase in textile prices and heavy advances in non-ferrous metals. Iron bars and tinplates are also dearer.

Fear of Executive Power

NEW YORK, March 2.—Political Washington is concerned with the contest between the President and Congress over the proposed enlargement of the Supreme Court; administrative Washington is concerned with devising a programme for dealing with hot money; business is concerned with the epidemic of strikes and threatened strikes; and the man in the street is concerned with the rising cost of living.

The resistance of Congress to the President's Supreme Court proposal has astonished everyone. One-third of the Senate has sponsored the scheme, with another third in opposition, and the remaining third not yet declared. It is understood that the House is similarly divided. As things now stand one would look for delay while the Administration rallies its forces. The episode shows significantly that while the Democratic Party in the last election enlarged its already overwhelming majority in both Houses, this majority is not the exact equivalent of a majority in Parliament. The Supreme Court proposal must be considered together with the plan to reorganise the Executive. Some people are inclined to combine the two in their thinking, regarding both as efforts to aggrandise the Executive branch of the Government. To these persons, therefore, the defence of the Supreme Court is an outpost action preliminary to the defence of Congress later in the session.

Hot Money Policy

Administrative Washington is debating the ramifications of the international capital movement, a problem which, under the generic name of "hot money," takes as many forms as Proteus. Some are concerned about the inequity of taxing citizens heavily on capital gains while foreigners enjoy a free ride; others about the effect on valuations of a continuous absorption of American securities by aliens; still others about the conflict with current concepts of neutrality, since the safeguards of the "cash and carry" provision were frustrated by the anticipatory accumulations of large reserves of American cash or its equivalent. The original worry over the effects of possible sudden withdrawals has now largely, although by no means entirely, subsided. The reverse of the hot money shield is the inflow of gold, and while the December policy neutralised the inflationary possibilities of this movement, it merely transferred the problem from the Reserve Banks to the Treasury—preferable as an alternative, but hardly a permanent solution in itself, unless circumstances change. Administrative Washington welcomed the statement that the British Government would discourage British insurance companies and investment trusts from making further placements in our market; but it is realised that these funds are only a small part of the total. There is much talk of taxation, but the difficulty of formulating an effective tax programme to cover capital gains, without involving an exchange control, is formidable. Nevertheless, inaction should not be construed as apathy.

Strikes and Rising Prices

The threat of sit-down strikes seems universal. These are characteristically small affairs, but numerous. Sometimes they represent concrete demands about hours and wages, and sometimes they are about organisation. It is impossible to understand the current phase of American industrial relations if it is regarded simply as a contest between employer and employee. Basically it is a contest

between the groups affiliated to the Committee for Industrial Organisation and those affiliated to the Federation of Labour. This is illustrated by the events reported from Grand Haven, Michigan, where workers who belong to a Federation Union occupied a leather factory in order to prevent its seizure by a C.I.O. group. The occupiers were not on strike, and the management acquiesced in the action without being a party to it. The Federation unions represent more or less the skilled crafts and the C.I.O. concentrates its attention on the unskilled labour which predominates in the mass-production industries. In this controversy the employer finds himself caught between two fires; and there is a widespread tendency to avert labour disturbances of any kind by raising wages and shortening hours without waiting for a strike. We are distinctly in a seller's market for labour.

It remains to be seen if we are in a seller's market for goods. Notwithstanding the lethargy of the official indices, the recent rise in prices is almost reminiscent of the spring of 1933. The rise in wholesale prices is rather better illustrated by the sensitive *Journal of Commerce* index than by the more comprehensive index of the Bureau of Labour Statistics. The *Journal of Commerce* index shows the following advances since the last week in October:—

Groups	Percentage Rise since October, 1936
Non-ferrous metals	36.9
Textiles	15.7
Building materials	10.5
Fuels	9.9
Pulp and paper	9.2
Paint materials	7.3
Iron and steel	6.7
Chemicals	4.4

The rise in primary commodities (where there was clearly a seller's market in the last days of the year) has now combined with the consequences of higher wages and shorter hours to produce a strong rise in retail prices. A large part of the emphasis in retail advertising is an appeal to the fear motive, i.e. buy now because prices are about to go up. With the possible exception of metal shares, there is not much of a boom atmosphere in the stock market; but there is no lack of it in consumer goods merchandising, where the abundance of consumer credit finds free play. The close restriction on the use of credit in stock market speculation has demonstrated its effectiveness; the complete absence of any restriction of credit in consumer buying of merchandise is also demonstrating its effectiveness, but in the opposite way.

Our economy is now entering an interesting phase. A combination of forces, of which one of the most effective is the shortened work-week, is raising prices to the consumer. Two questions arise: (a) whether the consumer can pay the prices asked without reducing the volume of demand; and (b) what effect, if any, this situation will have on the corporate profit margin.

The Defence Loan

PARIS, March 11.—The position of the Treasury has proved untenable. The Government was unable to attract more money either at home or abroad. M. Daladier was urging M. Auriol to find money for military expenditure; and the opposition of the Radicals grew daily, and notably in the Senate. M. Blum decided to remain true to the Tripartite Agreement, because control of the exchanges might lead to dictatorship. He adopted the liberal course; this entailed the suppression of the differential tax on gold, the setting up of a committee of three liberal experts to administer the Equalisation Fund, an economy of 6,000 millions of francs on the extraordinary Budget, and finally the issue of a large Defence Loan.

The loan ought to be a success. It has been voted by a great majority in the Chamber, with a clause specifying that no control of the exchanges may be instituted without legislative sanction. Conservatives emphasise, however, that the "breathing space" must not be simply for the period of raising the loan. They claim that financial liberalism will be nonsense without economic liberalism, and that the Government must go further towards the reversal of its general policy. They ask notably for a revision of the forty-hour week. But, it is evident that as soon as the loan has replenished the Treasury, the extremists will demand new social reforms on the ground that they have made concessions in the financial field and that prices have risen. They tend to regard the present measures as a necessary evil, not to be repeated; whereas their opponents of the Right look upon the new concessions as the beginning of a more healthy policy. The extreme Left will not easily permit the Cabinet to abandon its social policy.

Political Dilemma and Economic Recovery

If the Cabinet resists, it will be in contradiction to the policy of the Popular Front; if it yields, it will be retracting the promises given to Parliament at the time of the Tripartite loan. If new financial difficulties arise what will be made the scapegoat? Will it be the Tripartite Agreement which has been supported by the Cabinet, and may bring back French money, or the economic and social policy of the Government, who may be accused of using the money badly?

Whatever the answer is, it appears—and this is the great result, not sufficiently emphasised, of the reversal of Cabinet policy—that recent events have shaken the supporters of the Popular Front. Accordingly, if the Blum Cabinet falls, a successor may come without riots in the street. In that sense, the danger of a revolution is past.

Business is definitely recovering. Railway receipts have risen by 10 per cent.; unemployment has fallen considerably (5,000 less last week); fiscal receipts are rising, and the extraordinary Budget has been decreased. These facts may be important, if success of the Defence Loan and a return of flight capital bring about a rise in the Rentes and a lowering of the rate of interest. A progressive French recovery in the frame of the world revival would bring new strength to the Cabinet, whatever the political situation may be.

Fiscal receipts in January were 3,177 million francs, or 207 millions more than the receipts (in Poincaré francs) of January, 1936. Metallurgical production in January showed an increase; 603,000 tons of steel were produced against 591,000 in December and 561,000 in January, 1936. Pig iron production was 587,000 tons against 558,000 tons in December. This improvement, which was secured despite the forty-hour week, is explained by the increase in staffs, by the increase in yield, and by the regularity of Government orders.

Germany

Confiscating Foreign Securities

BERLIN, March 10.—The buying up of foreign securities by the Reichsbank and by exchange banks on its behalf began last week. Under the confiscation decree of February 27th, these securities may be sold only to the Reichsbank, and, quotations on the Bourse having been suspended, at the Reichsbank's own price. There is, however, no compulsion to sell immediately; and securities will pass into the Reichsbank's hands only when the owners themselves desire to realise them. This will partly depend on the price which the Reichsbank offers. The securities in question are all those foreign currency bonds and stocks which before the decree were officially quoted on the Bourse, those which, though not officially quoted, were dealt in on the Bourse, and certain unregulated securities, mostly of the class of pre-war Russians, and therefore almost *non-valeurs*.

Early last week offers to the Reichsbank of securities on the confiscation list were very considerable, but later declined. In general the Reichsbank paid prices roughly corresponding to the Bourse prices of immediately before the February decree. Marks received by sellers in compensation went partly into home shares, which were correspondingly firm, and in particular into colonials, which advanced sharply. In order to obtain foreign currency, which is the object of the confiscation, the Reichsbank must sell the securities abroad. This cannot be done at once. Securities in companies which are members of international combines, e.g. I.G. Chemie and the Linoleums, cannot be sold at all; because this would weaken Germany's influence in the combines.

Under the general transfer moratorium of June 9, 1933, which was recently prolonged until the end of June, 1937, the Conversion Office announces the issue of 3 per cent. dollar funding bonds against dollar interest liabilities maturing between July 1, 1934, and December 31, 1936. According to American reports the present issue is for about \$69 millions. The interest on the bonds will be payable in foreign exchange. German holders must offer their funding bonds to the Gold Discount Bank, which last October declared its readiness to buy them up at 75 per cent., 25 per cent. being deducted on the ground that the interest rates on foreign loans were unreasonably high. Funding bonds already issued are selling in Europe at a much heavier discount.

The *Deutscher Volkswirt* publishes the following provisional foreign payments balance (in millions of Rm.) for 1936:—

Current Account		
Foreign Trade + 4,768 (exports) — 4,218 (imports)		+ 550
Services (net)		+ 450
Interest + 100 (received) — 600 (paid out)		— 500
Surplus.....		+ 500
Capital and Credit Account		
Gold and Foreign Exchange.....		+ 15
Capital movement + 430 (inflow) — 900 (outflow)		— 470
Unexplained balance		— 45
Deficit		— 500

The interest actually transferred, as the compilers state, was not Rm. 600 millions but only Rm. 220 millions; so that the real surplus on the current account was Rm. 880 millions. Following the official precedent of 1934 and 1935, the compilers book the untransferred Rm. 380 millions as a short-term loan to Germany. This, together with Rm. 50 millions of repaid Russian trade debt, accounts for the Rm. 430 millions "capital received" in the table. The Rm. 900 millions capital outflow consisted of Rm. 100 millions removed by emigrants and Rm. 800 millions repaid debt.

The Mechanism of German Foreign Trade

Important changes have been made in the control of foreign trade, in the compensation and Aski systems. Compensation trade is barter. Under the Aski system the foreign deliverer acquired in Germany a blocked

Reichsmark credit, which he sold to a purchaser of German goods; the transaction usually represented a German import of raw materials and an export of manufactures. In 1935 some 15 to 20 per cent. of total German exports was by compensation or Aski arrangements. The assumption was that such German exports were supplementary and would otherwise have been impossible. As the number of German clearing agreements increased, the scope for such special arrangements was restricted. It was, moreover, objected that many of these exports were not really supplementary but competed with and supplanted ordinary exports. The foreign seller of raw materials paid to the foreign buyer of German goods a bridging premium, even if the German goods could have competed without any premium. At the end of 1935, certain goods were entirely excluded from compensation transactions, and in November, 1936, all compensation deals of under Rm. 50,000 in value were entirely prohibited.

Under the new decree, compensation and Aski transactions with Egypt, the Sudan, British India, Ceylon, Burma, Siam, the Straits Settlements, China and the Philippines are prohibited. With South America Aski deals, which had led to a great expansion of trade, were already specially regulated; and with Australia and New Zealand compensation arrangements had already been forbidden and Aski transactions were much restricted. There seems still to be room for this kind of trade with British East and West Africa; but under a new circular the number of commodities which may be exported by way of compensation to any country has been again reduced. The report on the distribution of foreign trade in 1936 shows that nearly Rm. 300 millions of the Rm. 550 millions export surplus went to increase the active balance with Europe, and the remainder mainly to reduce the passive balance with both Americas. The following table shows the year's changes, and the movements since 1932:—

	Trade Balances in Millions of Marks		
	1932	1935	1936
Total trade	+ 1,073	+ 111	+ 550
With Europe	+ 2,147	+ 561	+ 851
„ Africa	— 145	— 138	— 134
„ Asia	— 190	— 33	— 28
„ America	— 623	— 261	— 117
„ Australasia	— 86	— 11	— 14
+ = Export Surplus. — = Import Surplus.			

Food Shortage

The shortage of food still continues. Eggs are unobtainable; in Berlin meat, except the dearer sorts, has also been unobtainable at times. Flour of a particular grade may be had (contrary to regulations) only if the miller or consumer buys some flour of inferior grade. After March 15th bakers' wheat flour will contain 7 per cent. of maize flour. The reason given for this measure is that maize is more easily purchasable in the world market than wheat.

The industrial position has not changed materially. Measures are being taken to compel manufacturers to take on elderly workmen. The seasonal decline of industrial activity in January was greater than in January, 1936. The turnover of department stores in 1936 increased by 8.5 per cent., falling therefore little behind the increase in total retail trade, which was 10 per cent. The West German report of the Institute for Trade Research shows that the Ruhr has reached the limit of its production capacity. The export of machinery in January reached the high total of 37,200 tons, against 32,400 tons in December. The production of tinplates in 1936 was 239,500 tons; and export, which in 1929 was only 30,100 tons, was last year 121,700 tons. The Steel Trust (Vereinigte Stahlwerke A.G.) has increased its dividend from 3½ to 4½ per cent., after writing off Rm. 134 millions on plant. The Loanstock Law, which expires this year, has been prolonged for another three years. It is announced that the excess dividends impounded in the Gold Discount Bank under this law, and invested mainly in Municipal Conversion Loan, will be duly paid out to shareholders after the expiry of the first term. This was unexpected.

Belgium

The Coal Shortage

LOUVAIN, March 3.—At the beginning of the year Belgium faced a threatening social crisis. The Government had asked Parliament after the strikes in June to vote a bill instituting the forty-hour week in dangerous occupations. At the end of the year the miners became impatient and sent an ultimatum to the Government; and a forty-five hour week was instituted in the collieries for underground workers from February 1, 1937. The reduction of the working day does not necessarily imply the maintenance of the weekly wage. But in the coal industry an increase of the hour wage scale was possible, and practically the same wages are now paid out for forty-five working hours as previously for forty-eight.

The reduction of the working day has raised a delicate problem, since the country has been suffering from a shortage of coal. Coal for coking is particularly scarce. The coke famine has been so severe that steel production has slackened and two blast-furnaces have been temporarily extinguished. Moreover, the Christian trade unions have long been opposed to the recruiting of foreign miners. Finally, however, they agreed that 2,000 Polish miners should be allowed to work in the Belgian pits. These supplementary hands have not yet arrived.

In the meantime an attempt has been made to recruit men at home. Though there are still 5,000 men out of work in the coal industry, it is impossible to find here the necessary workers, because the unemployed are too old or unfit. Another way to increase the coal output was to allow exceptions to the law reducing the working day. Work is now permitted by law for forty-eight hours in the week, on condition that wages are raised 25 per cent. for the extra hours. The trade unions, however, have refused to admit these exceptions, although the stocks of coal have declined to an abnormally low level.

The effect of the reduction of working time is not yet known. Preliminary research suggests that the production per working day per man is reduced by about 6 per cent. in the Campine coalfields, and by 3 to 4 per cent. in the southern districts. The present coal famine is a great obstacle to the progress of recovery, especially in the metal trades. A great many foreign orders for machinery have been received, especially from South America, but producers hesitate to accept them because they cannot get the necessary iron and steel.

Economic activity has been increasing in recent weeks. Exports have risen rapidly both in quantity and in value. Domestic trade is less vigorous, but in certain trades revival seems spreading. The Government decided on account of this to abate part of the programme of public works. This decision was made at the end of February, and a special committee has the matter in hand. The 1938 Budget will provide for less extraordinary expenditure than the previous one did.

GOVERNMENT'S ELECTRICITY PROPOSALS

A guide to the McGowan Committee's proposals and what their carrying out would mean is to be found in the "Report on the Supply of Electricity in Great Britain," published by P. E. P. (Political & Economic Planning), December 1936, which gives a comprehensive account of the development of the electricity supply industry and its problems.

Price 8s. 6d. cloth bound, 6s. paper board covers. (Postage 6d. extra). Crown Quarto, 171 pages, 40 statistical tables, map and graphs.

P. E. P. (Political & Economic Planning)

WHitehall 7245

An Open Market Policy

The 1936 financial year will probably show a surplus on the ordinary Budget. Capital is so abundant that Belgian Government securities have been quoted as favourably as before the war. The Government is issuing a new type of State loan, $3\frac{1}{2}$ per cent. at 97. For Belgium these terms are extremely favourable. The National Bank is to be entitled to pursue an open market policy, which was not possible before. The maximum amount of Government securities which the Central Bank will be allowed to buy will be fixed at 1,500 million francs, about 5 per cent. of its sight liabilities. Up to now the State securities guarantee fund and the gold surplus from the National Bank have been used in order to buy and sell Government securities and to give and withdraw purchasing power. Thus, the policy is not new and is merely transferred from the Government to the National Bank. The movements of the Belgian franc in the exchange market have emphasised Belgium's largely creditor position. The country has not only enjoyed an inflow of gold which enlarged the gold reserve of the National Bank, but it has repaid foreign debts. On the other hand, the increase in the gold reserve of the issuing bank does not represent the total increase in the gold stock; since last autumn the Treasury has converted into gold certain franc assets amounting to 600 million francs.

Bulgaria

A Spurious Election?

SOFIA, February 26.—The Government has fixed the municipal elections for March. These will be the first elections since the *coup d'état* of May 19, 1934. By a special decree the candidates must not belong to any of the former political parties. No political campaigns will be allowed. For the first time women (mothers only) will have the right to vote. Under such conditions the political parties, although deprived of any legal existence, have declared themselves against the elections, and have instructed their members to vote with blank papers. It may therefore be expected that nearly 50 per cent. of the votes will be invalid, and so indirectly cast against the Government.

The Budget for 1937 estimates revenue and expenditure at 6,913 million leva, an increase of 750 millions (11 per cent.) over the figure for 1936. The expected increase in revenue is based on the larger receipts which followed the passing of certain new fiscal decrees in 1936 and on the steady improvement in the economic situation of the country. The Budget returns for the past year totalled 6,425 million leva, which represents an increase of 225 millions over the estimates. Because of the marked improvement in the economic position of Bulgaria, the Budget yielded for 1936 a surplus of 162 million leva. It is expected that the increased revenue will enable the Government to balance the new Budget.

During the last three months of 1936 the foreign exchange position of the National Bank of Bulgaria improved substantially. The Bank was able to purchase gold on the foreign markets to the value of 87 million leva. The gold reserve was thus increased from 1,618 million leva at the end of November, 1936, to 1,705 millions at the end of January last.

Egypt

The Cost of Defence

ALEXANDRIA, March 3.—The Government continues to devote most of its energy to the Capitulations and Budget problems. Military reorganisation and the entry of Egypt to the League of Nations are also receiving increased attention. The main discussion of the abolition of the Capitulations is about whether the Egyptianisation of the Mixed Courts should start at once and proceed at a rapid pace during the suggested transitional

period of 12 years; or whether less sweeping changes should be effected during the coming years and radical modifications be left until later. Political opposition to the Ministry has been gathering strength of late; and it is predicted in some quarters that the Government may be driven to adopt a less compromising attitude than originally forecast.

Estimates of the 1937-38 ordinary Budget forecast that it will be balanced at £E36,100,000. No particulars have yet been given of the extraordinary Budget to cover new military expenditure. The Minister of Finance let it be known that all disbursements arising from the Anglo-Egyptian Treaty, like those for strategic roads or barracks, would be paid out of the reserve fund. Subscriptions for the National Defence Fund will serve to offset the first expenses of Egypt's new army. Because of the Capitulations, the Government will have to wait until the Montreux Conference for freedom to introduce fresh taxes to cover the new charges. Local politicians are realising that even the moderate increase contemplated in the country's army from 12,000 to 20,000 men, and its equipment with up-to-date weapons, will be a costly business.

Cotton Manufactures

Foreign trade recorded a partial setback in 1936.

	1935	1936
	£E.	£E.
Exports	35,693,162	32,979,204
Imports	32,238,859	31,515,816

The falling-off in exports was due mainly to a decrease of 8.8 per cent. in shipments of cotton, which was but partly offset by an increase of 4.2 per cent. in the average value per unit. The total value of cotton exported amounted to £E25,118,421, against £E26,566,968 in 1935.

Observers are inclined to take a hopeful view of the future. Cotton exports, which were behind last season's figures during the autumn months, have caught up since the beginning of 1937, and now stand higher than a year ago. On the other hand, the rise in the price of imported manufactures has stimulated local industry, especially textiles. The silk industry, which owned only 400 looms at the end of 1935, when the new duties came into force, will have 2,000 before the end of 1937. Most of the country's requirements of about 15 million square metres will then be supplied by local plants. Imports of natural silks have already fallen from 13 million square metres in 1935 to 5 millions in 1936.

Following the steep decline of French exports to Egypt, which now reach only half the amount of Egyptian sales to France, a French economic mission visited the country to find out how to improve the balance. This was the first foreign commercial delegation to come over since the signing of the Anglo-Egyptian Treaty.

India

Road and Rail Transport

BOMBAY, February 17.—The outstanding economic event of the month has been the presentation of the Railway Budget this week. With a greater volume of goods traffic an anticipated deficit of Rs. 3½ crores has been turned into a small surplus of Rs. 15 lakhs. The Railway Board is concerned lest the improved conditions registered in the past few months may not continue. The Government has just placed a motion before the Assembly for the reorganisation of the Road Fund, the money for which is obtained by an addition to the tax on petrol. In future, the due share of the Fund may be withheld from any Provincial Government which fails to take such steps as the Governor-General may recommend for the regulation of motor vehicles within the Province.

The Income-Tax Inquiry Report was issued in January, and if the Government endorses the recommendations there will be a marked increase in the receipts from the tax. Hitherto, there has been no liability on the citizen voluntarily to make a return. It is proposed to close this loophole; and assessments will

be retrospectively valid for six years. The outstanding recommendation is that agricultural income, though not itself liable for income-tax, should nevertheless be taken into account in fixing the amount of tax payable on other incomes.

Security Against the Moneylender

The Legislative Assembly has passed a bill concerning the attachment of salaries and wages for debt. The object is to give wage-earners greater protection against moneylenders. Under the old law, the wages of labourers and domestic servants were exempted without limit; and in the case of Government and railway servants salaries below Rs. 40 a month were exempted. In its report submitted in 1930 the Royal Commission on Indian Labour held that, owing to the facility with which salaries and wages could be attached, credit became too easy; and there was a temptation for industrial workers to borrow beyond their capacity to repay. The result was that moneylenders were given too great security, and the State, the railways and owners of factories became easy agencies for collecting debts. The Commission recommended that salaries and wages of every employee drawing less than Rs. 300 a month should be exempt from attachment. The Government of India, after consult-

ing Provincial and local authorities, found that the evil was real, but the suggested remedy was too drastic. The present Bill gives complete exemption from attachment to salaries not exceeding Rs. 100. It also provides that the pay of Government, railway and local authorities' employees, where it exceeds Rs. 100, shall be exempt for the first Rs. 100 and one-half of the remainder.

The latest report of the Public Health Commissioner is full of interest, although it relates to 1934. The Commissioner pleads for the formation of a permanent Central Malaria Bureau to deal with the disease which in India causes the greatest mortality, morbidity and economic loss. In 1934, it is estimated that malaria accounted for no less than 1,319,000 deaths. On the subject of India's food resources, the report states: "In the present state of our knowledge it is not safe positively to assert that food production cannot keep pace with population increase. Although there is evidence of widespread under-nutrition in India, there is no evidence to show that the ryot is worse fed now than he was in earlier days. Rather is it probable that the absorption of foodstuffs has, over a period of years, risen in proportion to the population. This cannot, however, be proved with our present statistics and there is a great need for a general survey of food production in India."

Letters to the Editor

Remote Newcastle

TO THE EDITOR OF THE ECONOMIST

SIR,—Your well-informed contributor's article on Newcastle (*The Economist*, March 6th) must help to remove some of the misunderstanding as to the true industrial position on Tyneside.

On only one point does your contributor appear to slip, and that is in the sentence "Thus Newcastle, in fact if not by definition, comes near to being a Special Area." Newcastle, and the whole of Tyneside, is in fact and by definition a Special Area; and industrialists on Tyneside can therefore benefit by the operation of the Special Areas Reconstruction Association, which advances capital to new and developing industries, the Lord Nuffield Trust, and also by the other additional facilities included in the new Special Areas Bill.

The title of the article—"Remote Newcastle"—may, however, create an impression that the city is far removed from the rest of the country. In fact, Newcastle is within four hours' journey of London by express train, it has overnight railway goods services to the south and other parts of the country, it is within 115 minutes of London by air, 40 minutes of Edinburgh, 45 minutes of Manchester, 70 minutes of Birmingham and 50 minutes of Glasgow. The Industrial Survey, prepared by Armstrong College for the North-East Development Board, also shows that within 125 miles of Newcastle there is a population of 16,500,000, compared with a little more than 16,000,000 within 100 miles of London.

Yours faithfully,

LEONARD FLETCHER.

Publicity Officer,

Tyneside Industrial Development Board
and North-East Development Board.

Newcastle-upon-Tyne.

Devaluation and Winter Sports

TO THE EDITOR OF THE ECONOMIST

SIR,—I am indebted to the chief of the Grindelwald Kurverein for the following facts and statistics bearing on the effect of the franc devaluation upon Swiss winter sports receipts. Grindelwald is, of course, only one of numerous winter sports centres, and so the data supplied can only be regarded as a sample. Still this sample is particularly useful, for together with the neighbouring resorts of Wengen and Murren, Grindelwald is one of the centres where English

visitors congregate. The chief test to be applied is that of the number of visitors, and with this may be combined the details of the total of "visitor-nights"—a composite figure, analogous to "engine-miles" and other railway expressions, which takes account of the length of stay of each visitor as well as of the number of visitors. The period covered by the table containing these statistics is the month of January. December is unrepresentative as the season only opens in the middle of the month, while February was not complete at the time these data were compiled:—

	Visitors		Visitor-nights	
	January, 1936	January, 1937	January, 1936	January, 1937
British	605	1,022	9,550	14,398
Swiss	249	604	1,534	3,273
French	89	56	665	646
German	21	40	186	329
Dutch	18	43	314	364
Others	7	112	347	1,316
Total	989	1,877	12,596	20,326

The increase in the number of British visitors is approximately 70 per cent., but the increase in the number of British visitor-nights is only 51 per cent. This discrepancy is impossible to interpret accurately, as January "visitor-nights" arise partly from visitors arriving during December and staying into January. Still, the visitor-night increase

is the more important from the point of view of the income accruing to Grindelwald. The really interesting result is the increase in the number of Swiss visitors, many of them week-enders. It is impossible to escape the conclusion that Switzerland is much more prosperous this year than last. To what extent has Grindelwald itself benefited from this increase? The Kurverein estimates the average daily expenditure of each visitor, including his hotel bill, at Frs. 25 to Frs. 30. Taking a mean figure of Frs. 27, and applying this to the visitor-nights figures, the gross receipts from visitors have apparently risen from Frs. 340,000 to Frs. 550,000, for January alone. Not all these amounts are retained in the village, or even in Switzerland, because some food and other necessities for visitors have to be imported from abroad. So far there has been no rise in charges to visitors as the result of devaluation, for strict regulations are imposed by the Price Control Office, with headquarters in Berne and branches all over Switzerland. Still, prices of milk, eggs, butter and other things are beginning to rise, so that it is becoming an open question how long charges to visitors can be kept unchanged.

More intimate details are equally illuminating. The Kurverein levies a tax of Frs. 1.50 per day on each visitor, which covers most of the expenses of winter sports, including compensation to the farmers over whose land and through whose fences the principal ski-tracks run. The Kurverein's total income has thus risen by 63 per cent., this being the increase in total visitor-nights. Attendances at the ski-school up to February 18th in each season have risen from 1,005 to 1,452. This is proportionately less than the increase in the number of visitors, and it may be that

devaluation has enabled a number of trained ski-runners to return to Switzerland. For the season up to February 17th, the number of "day classes," again a composite term, has risen from 128 to 205, and as each instructor receives Frs. 15 a day, the total amount paid out in salaries has risen from Frs. 1,920 to Frs. 3,100. At a rough guess the number of instructors employed regularly has risen from 10 to 17. Thus there is no doubt about the increase in internal prosperity.

On the whole Switzerland must have strengthened her foreign exchange resources. Each English visitor, of course, pays less in sterling this year than last, for as the cost to him in francs is unchanged he gains the full benefit of the 21:15 devaluation of the Swiss franc. Even so, if this ratio is applied to the increase of 51 per cent. in British visitor-nights, the increase in sterling expenditure by British visitors to Grindelwald works out at 8 per cent. The increase in guildler expenditure by Dutch visitors is, of course, equal to the 16 per cent. increase in Dutch visitor-nights, for the Swiss franc and the guildler were devalued *pari passu*. There is, of course, the offset of increased imports of food for visitors, but after allowing for this, the franc must have gained in strength.

The net result is that the devaluation of the franc has brought immediate relief to Switzerland, both in a restoration of internal prosperity and in an addition to her foreign exchange resources.

I remain,

Yours faithfully,

London, E.C.2

FRANCKMARK.

Books and Publications

Moscow in the Making

THIS book,* by a group of experts in various aspects of civic life, is a small mine of information. The authors visited the city for a month in the autumn of 1936, during which time they interviewed many officials of the City Soviet, studying education, finance, housing and the great plan for the reconstruction of the city in ten years. None of the party speaks Russian, and all are fully conscious of their limitations as observers. Yet their book may be placed alongside that of the Webbs as a sound text-book of factual knowledge by people of great experience in the collection of certain kinds of information.

Dr Robson, in the opening section, tells us about the Soviet electoral and administrative system itself, making comparisons, at many points, with the civic administration of Manchester and London. The Soviet system, involving small, closely-knit constituencies (i.e. factories, offices and works units of all kinds), and a vast plenum of representatives implies, he thinks, a continual and close contact between the people and their leaders. On the other hand, the responsibility of the small Presidium of the City Soviet to the higher organs of the R.S.F.S.R. and the U.S.S.R. has unmistakably authoritarian implications. The problem of the precise meaning of Democracy when each organisation is responsible, both to the electorate and to the superior organs of the hierarchy, is the main bone of contention among the authors of this book. Perhaps Sir Ernest Simon comes closest to the mark in his analysis of the part played in the system by the Communist Party, which dominates both the electorate below and the higher organs, such as the Council of People's Commissars and the Presidium of the Moscow Soviet above. Yet the essential question of the extent to which the Party represents the working masses of the people is not sufficiently dealt with by any of the authors. On this point we are referred to the Webbs.

Professor Jewkes examines industry and finance from an orthodox liberal angle. As an indication of the extent to which the Moscow Soviet is in reality little more than an organ of the Central Government, he points out that most of the capital expenditure of

the city is financed, not locally, but by direct grants from the State Budget. He is at a loss to explain why the local political constituencies and Soviets should be regarded as suitable areas for the control of local industries. Applying the liberal criterion of "consumer's sovereignty," he finds it anomalous that so many resources should have been devoted to building the Metro at a time when the housing problem was worse than ever before. Indeed, the complete elimination of "consumer's sovereignty" leaves Professor Jewkes baffled, but undaunted.

Lady Simon examines carefully the system of pre-school and elementary education, and describes the various openings for children who have reached the age of 15, the normal school-leaving age. She finds that there is much less pre-school education per head in Moscow than in Manchester, but that its quality is very high indeed. Elementary education, she thinks, is rather better and more varied in England than in Russia, but the opportunities for secondary education, technical training and university courses are much more generous in Russia than at home. She rather deplores the complete uniformity of the Russian system and its firm subjection to the Party, whose knowledge either of pedagogy or pedagogy is not necessarily all that it should be.

Sir Ernest Simon, of course, deals with housing. He shows clearly that the Russians have a very long way to go before the housing of the people will approach Western standards, and he describes vividly the truly appalling living conditions of the bulk of Moscow's citizens. On the other hand, he envies the City Soviet its tremendous powers; and he is inspired by the opportunities now facing the city, with its ten-year plan of complete reconstruction. He remarks that all Mr Herbert Morrison's hopes and aspirations, regarded as mere dreams in London, are actually in slow process of realisation in Moscow, where the great bugbear of compensation for private property interests does not impede the city planner at any point.

After hinting at the rigidity and brutality of much in the Russian system, Sir Ernest concludes:—"Can we achieve something of the leadership and enthusiasm of Moscow while maintaining the freedom of minorities and the kindly tolerance of England? That is the problem on the solution of which the future of British democracy depends." This is well said.

Shorter Notices

"L'Activite Economique en France." By Professor Achille Viallate. Paris: Marcel Riviere. 1937. Fr. 60

Professor Viallate's new book is a comprehensive economic history of France from 1760 to 1935, and contains an astonishing quantity of the sort of information one wants about a foreign country. The seven chapters deal with seven separate periods in increasing detail as the present day is approached, and each is usefully divided into sections and sub-sections giving the main incidents and the most significant statistics. English readers will find this a most useful adjunct to Professor Clapham's "Economic Development of France and Germany" in the first four chapters dealing with the period up to the war. The remaining pages give by far the best account we have seen of later developments, bringing out with great clarity the peculiar nature of the problems facing the last great democracy on the Continent.

It is a pity, however, that the author for the greater part of the book keeps interpretation—and for that matter, imagination—to the absolute minimum. The reader cannot but feel that his teacher has left the hardest part of the work to the pupil. And he is obviously a teacher of exceptional experience. When in the concluding pages Professor Viallate relaxes a little, it appears that he is a Liberal more or less of the new school. To him the great danger is the dominance of industry by the State, either through Socialist interference or nationalism. He is anxious for industries to promote corporate research into technique and marketing, and for the State to control monopolies or semi-monopolies through quasi-judicial bodies appointed by the President, and independent of the politicians (of whose motives he has indeed a very lively distrust). But nowhere does he consider the planning of an employment policy as a possible function of the central authority.

"The Bank and Insurance Shares Year Book, 1937." The Trust of Insurance Shares, Ltd. 626 pages. 5s.

All who are interested in bank and insurance shares and have hitherto had to seek their information from a variety of sources or from a laborious study of balance sheets will appreciate a handbook of this kind. Quite apart from its comprehensiveness and convenience, the amount of new compilations it contains makes it of greater value and interest than the ordinary work of reference.

The main feature of the book is a statement for each company giving, in the case of banks, a comparison of the percentage distribution of assets for the past seven years, an analysis of the profit and loss accounts, and much useful miscellaneous information. The insurance section analyses results and premium income. A price and yield record for each company from 1916 onwards is a new departure, while the appendix tables dealing with groups of companies in the aggregate will be found of considerable general interest. There is every likelihood that this year-book will become one of the recognised sources for the study of investments.

MONEY AND BANKING

The French Financial Reforms

AT the end of last week the French Government announced a new series of financial reforms, which were passed by the Chamber last Tuesday. Briefly, the penal taxation on any exchange profits derived from the repatriation of funds is abrogated. Instead, the Banque de France will give general authority for the free import and free negotiation of gold inside France, and will buy gold at a price in francs to be announced from time to time and to correspond with the world price. Control of the Exchange Equalisation Fund is to be vested in a special committee, consisting of M. Labeyrie (the Governor of the Banque de France), M. Charles Rist, M. Paul Baudoin and M. Jacques Rueff. Public expenditure is to be stabilised with no further increase except for the purpose of improving very small wages and salaries; and general economic improvement will permit of a slackening of public expenditure on the unemployed. Finally, a national defence loan is to be issued which will not exceed the amount of Frs. 10,000 millions, which is estimated to be required for defence. The details of this loan are described in a Financial Note. Its significant feature is that it carries a guarantee against exchange loss arising from any future depreciation of the franc.

The background of these reforms deserves close examination. Although the devaluation of last autumn has been followed by a general improvement in the economic condition of France, there has been further deterioration in her financial condition. Even the economic improvement has been tempered by increased costs which have actually offset the rise in wholesale prices. While wholesale prices rose between September and February by 27 per cent., the Paris cost-of-living index has risen by 17 per cent. The new social legislation must bear part of the responsibility for this development, although the 40-hour week is not yet being generally enforced. Meanwhile, there has been no repatriation of French funds, but, on the contrary, a further drain. The gross borrowing needs of the Treasury, including the railways deficit, were recently estimated at about Frs. 30,000 millions. The previous policy of pegging the franc at Frs. 105.15 to the pound made it entirely safe for speculators to "bear" the franc; for the devaluation law of last October permitted a depreciation to about Frs. 112, and there was no prospect whatever of appreciation. Thus, the financial position was clearly fraught with danger, in the absence of ameliorative Government action.

Opinion in London is, on the whole, favourable to the reforms, and rates their prospects of success fairly high. It was somewhat unfortunate that the Government first announced that the new loan would be issued on Monday, and only later discovered that special legislation must first be passed. The necessary Bill, however, was passed by both Chamber and Senate with a minimum of opposition, and the terms of the loan were published on Thursday. Politically, M. Blum has appreciably strengthened his position. It may be doubted, possibly, whether a loan of Frs. 10,000 millions is sufficient in proportion to the Treasury's total needs. A defence loan, however, will make a powerful psychological appeal to French patriotism; and if the reforms succeed in bringing home the bulk of the expatriated French capital, M. Blum may be held to have succeeded in his main object—at the cost of an exchange guarantee limited to Frs. 10,000 millions. On the other hand, if the reforms failed in their main purpose, and the Government were compelled to make a fresh appeal for funds in a few months' time, the result would be disastrous, psychologically and materially. M. Blum, in fact, is taking a chance, and staking the future financial stability of his Government and his country on the outcome.

The effect of the reforms will necessarily involve London and New York, as well as Paris. The repatriation of funds to France in 1928-31 drained the Bank of England of gold and left Britain vulnerable to the financial crisis of 1931. There is, of course, no fear of a similar result to-day, but certain possible reactions should, nevertheless, be carefully considered. First, there may be prolonged French selling of gilt-edged, Kaffir and other British securities, and the London stock market may, consequently, have a reactionary trend. Next, there may be consistent withdrawals of French funds from the British banks, either by way of balances now held with the banks or of the proceeds of French sales of securities. Meanwhile, the British Exchange Equalisation Account will be selling gold to Paris and using the sterling proceeds to redeem part of the tender issue of Treasury bills. In 1935-36 an *influx* of funds into London coincided with an increase of £150 in tender issues of Treasury bills, and a drop of £225 in tap issues, despite the mitigating influence of last summer's gold sales by the Exchange Account to the Bank of England. We must now envisage the possibility of a reverse movement of this magnitude, accompanied by some French dishoarding of British currency. The net result, so far as the British banks are concerned, may well be fourfold, since it may involve:—

- (1) A drop in their deposits, due to French withdrawals.
- (2) A contraction in their discounts, as Treasury bills are transferred from "tender" to "tap."
- (3) Some increase in their cash, due to French dishoarding.
- (4) A consequential improvement in the banks' cash ratios and increase in their liquidity.

The only way to offset these consequences would be for the Bank of England to resell gold to the Exchange Account without increasing the fiduciary note issue, i.e. to reverse the procedure adopted last summer. Whether such a policy will be followed is an open question. The authorities may possibly consider that gold sales by the Bank would have an unfavourable psychological effect, and, again, that if the banks become more liquid, they will be better able to support any impending defence loans—in effect, that bank investments against armaments may appropriately replace bank discounts against the Exchange Account's gold. More detailed discussion of these questions, however, must await the event of large-scale repatriation of French funds.

In New York, French repatriation may prove an unexpected but wholly rational solution of the hot-money problem. Any export of gold which was withdrawn from the Reserve system would tend, *pro tanto*, to reduce the member banks' excess reserves. Again, if the movement is considerable, Washington may reverse its previous policy and decide to lower the member banks' legal minimum reserve requirements. Meanwhile, any weakness in Wall Street on French selling might well be largely offset by buying on behalf of the American investors, whose confidence in the maintenance of rising Stock Exchange values continues unabated.

These, however, are matters for the near future. Meanwhile, the French Government may be congratulated on a decision which carries France and the world generally a step further towards monetary and economic equilibrium, which is an indispensable prelude to freer world trade and finance. The reforms continue the work of reconstruction initiated last autumn by the tripartite monetary agreement and the subsequent devaluations, and they deserve all possible success.

Financial Notes

The French Defence Loan.—Some of the terms of the new French Loan (referred to in the leading article on the preceding page) became available as we went to press. The initial tranche is one of Frs. 5,000 millions, or half the total authorised amount. The lists opened at 2 a.m. on March 12th and are to close on March 25th. The rate of interest is $4\frac{1}{2}$ per cent., and the issue price is 98. The loan is to be redeemable by drawings or purchase over a period of 60 years; the redemption price is not yet known, but will presumably be par. As had been expected, the exchange guarantee takes a complex form. The interest coupons are to be payable either in French francs in Paris or in Swiss francs at the Bank for International Settlements in Basle. The B.I.S., however, will also designate certain banks, who will be prepared to pay the coupons in either sterling or dollars, and the coupons will be expressed in all four currencies. Exchange rates will have to be fixed between the four currencies for the purpose of determining the amount represented by each coupon in the three foreign currencies, and the initial belief was that these would be the average exchange rates current during the three days March 9th-11th. The proposal is an ingenious way of circumventing difficulties arising from the Johnson Act in the United States and the restrictions on foreign lending in London. These will prevent the loan from obtaining a Stock Exchange quotation in either centre, but it is to be presumed that the Governments concerned will not object to one or more of their banks being designated by the B.I.S. Meanwhile it will be the duty of the Banque de France to keep the B.I.S. in sufficient funds to meet all coupons encashed in any of the three foreign currencies. The yield on the new loan contrasts strongly with that on the $4\frac{1}{2}$ per cent. rentes, lately quoted at 75. Doubts are already expressed as to whether the exchange guarantee can be maintained for as long a period as sixty years. Still, the new loan deserves a good response from the French investor, and the invocation of the assistance of the B.I.S. represents a happy solution of the exchange difficulty.

Italy's Gold Reserves.—Official details issued a week ago give the size of the Bank of Italy's gold reserves on February 20, 1937, at 4,021 million lire. Ostensibly this total compares with one of 3,936 million lire for October 20, 1935, but any direct comparison is complicated by last autumn's devaluation of the lire by 40.94 per cent. and the proportionate revaluation of the Bank of Italy's gold stocks. To illustrate this, both totals are set out below in pre-devaluation (old) and post-devaluation (new) lire:—

BANK OF ITALY'S GOLD		
	Old lire	New lire
October 20, 1935.....	3,936	6,660
February 20, 1937	2,380	4,021
Difference.....	1,556	2,639

The differences show the extent of Italy's intervening gold loss, for while from the internal standpoint (e.g. the backing to the note issue) she can claim a small net addition to her gold stocks, there is no escape from the fact that the Bank has lost a physical quantity of gold as illustrated above by the two methods of valuation. In fact, the Bank has lost nearly 40 per cent. of its October, 1935, gold holdings. A further point of doubt is that in October, 1935, the Bank's return contained an item, "gold deposited abroad due by the State, 1,773 million lire," representing gold lodged as collateral in London under the Anglo-Italian war debt agreement. Has this gold since been merged in the new 1937 total of the Bank of Italy's gold holding? This is a point which ought to be cleared up, for if it has, the free gold of the Bank of Italy now amounts to only 607 million pre-devaluation or 1,028 million post-devaluation lire—equivalent to a loss of 84 per cent. of the 1935 gold

stocks. On the other hand, it is stated that the latest return does not include the Italian Treasury reserves, consisting of gold given to the Government by the Italian people and the devisen and foreign securities fund held by the Institute of Exchange. The note circulation is returned at 15,678 million lire, against 15,271 million lire in October, 1935, but it now includes some 1,500 million lire in Abyssinia, so that in reality there has been a contraction. The internal currency position has thus apparently been kept well in hand, but the new details of Italy's gold reserves throw little real light on Italy's foreign exchange position.

The Foreign Exchanges.—The market has been dominated by the French financial reforms, and while there were no heavy dealings, there were wide fluctuations in rates. The unpegging of the French franc from its former fixed rate of Frs. 105 $\frac{1}{2}$ was followed by a relapse to Frs. 108 $\frac{1}{2}$, but the news that free internal dealings in gold were permitted and that the defence loan with its exchange guarantee was about to be issued quickly stimulated a demand for francs. This demand continued until finally the spot rate has strengthened to Frs. 106 $\frac{1}{2}$. Moreover, so soon as the rate fell below Frs. 107 $\frac{1}{2}$, the French Control intervened and bought sterling to prevent too rapid an appreciation of the franc. Forward rates have also strengthened, though at one time there was some irregularity due to the delay in the issue of the defence loan. The closing rate on Thursday was Frs. 1 $\frac{1}{8}$ for three months, equivalent to only $4\frac{1}{2}$ per cent. per annum. The London-New York has naturally been affected by the movements of the franc, and at one time the rate was under \$4.88. It has since risen to \$4.88 $\frac{3}{4}$. Dutch guilders have weakened, this being another consequence of the general demand for francs.

February Clearing Bank Averages.—The February returns of the ten English clearing banks bear evidence of the seasonal collection of revenue and redemption of Treasury bills. This explains both the £33 millions drop in deposits and the larger reduction of £51 millions in discounts and call and short loans combined. It may also explain a small part of the increase in bank advances, for reasons only too familiar to certain taxpayers, but the bulk of the expansion in advances is probably due to the new French sterling railway credit.

(In £ millions)

	Feb., 1936	Nov., 1936	Dec., 1936	Jan., 1937	Feb., 1937
Capital and reserves ...	131.8	131.8	131.9	132.5	132.5
Acceptances, etc.	105.9	106.6	108.8	110.4	115.0

Cover for acceptances, premises, etc.	150.7	151.5	153.5	154.3	159.0
Total assets.....	2,322.9	2,487.4	2,517.6	2,512.4	2,483.7

So far as can be deduced from the Bank return, the contraction in clearing bank cash is unconnected with revenue collection. Apart from fortuitous movements there is no real increase in public deposits, and the drop in bankers' deposits shown in the Bank return is mainly accounted for by a decrease in other securities. The contraction in clearing bank cash, however, has reduced the bank's aggregate cash ratio to only 10.1 per cent., so that it is not surprising that money became a little less plentiful during February. One consequence of this was that the banks only added £1.9 millions to their investments, though their operations in securities were also limited by the expansion in advances.

The Money Market.—It has been a quiet, uneventful week in the money market. The heavy payments of revenue are still the dominating factor; but, although they may occasionally affect the cash position of some of the banks, this is purely temporary, and the clearing banks as a whole are not affected. However, at least one bank has been calling every day. Rates remain unchanged.

	Feb. 18, 1937	Feb. 25, 1937	Mar. 4, 1937	Mar. 11, 1937
Bank rate	2	2	2	2
Clearing banks' deposit rate	1	1	1	1
Short loan rate :—				
Clearing banks	1-1*	1-1*	1-1*	1-1*
Others	1	1	1	1
Discount rates :—				
Treasury bills	1	1	1	1
Three months' bank bills	1-1	1	1-1	1-1

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The clearing banks have been buying May and early June maturities, but the market has not been eager to sell. The extra £5,000,000 of Treasury bills issued at the March 5th tender seems to have had little effect.

The Bank Return.—The most notable feature of this week's Bank return is the expansion of £3.5 millions in the note circulation. This is the fourth return in succession that has recorded a rise. This is partly a seasonal trend, as a reference to previous years will show, but this year the expansion that leads up to the Easter peak has begun earlier than usual and shows no signs of being broken by a fall in the middle of the month.

	Mar. 11, 1936	Feb. 17, 1937	Feb. 24, 1937	Mar. 3, 1937	Mar. 10, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department :—					
Gold	200.6	313.7	313.7	313.7	313.7

Public deposits	14.2	24.4	13.0	15.2	17.0
Bankers' deposits	91.6	90.6	100.4	93.8	93.8
Other deposits	36.1	36.7	37.9	37.7	37.7
Government securities	78.6	83.1	85.0	85.1	90.1
Discounts and advances	9.9	5.5	4.9	4.3	4.2
Other securities	14.8	20.4	20.3	21.9	22.3
Proportion	40.0%	40.1%	39.1%	36.5%	33.7%

In the banking department, bankers' deposits have not changed, but revenue payments have raised public deposits by £1.8 millions. Government securities have risen substantially from £85.1 to £90.1 millions.

British Linen Bank.—The accounts of this Scottish bank for the year ended January 15th show that, in common with most banks in 1936, it has considerably increased its liquidity. Deposits have certainly risen substantially by £2,703,000, from £33,339,000 to £36,042,000, but this is hardly proportionate to the rise in cash and short money by £644,000, when it is remembered that in previous years also the cash resources of the bank have increased considerably.

	January 15th 1935	1936	1937
	£'000	£'000	£'000
Liabilities :—			
Capital	1,250	1,250	1,250
Reserve	2,000	2,000	2,000

Notes	2,577	2,465	2,641
Assets :—			
Cash and short money	7,548	8,653	9,297
British Government securities	18,579	20,896	23,346
Bills and advances	9,295	8,915	9,028
Net profits	286	290	293
To reserve	...	50	75
To contingencies	50	50	...
To pension reserve	80	50	50
To property account	...	...	...

Discounts and advances, including Treasury bills, have risen from £8,915,000 to £9,028,000, and a sub-division of this item might well be of interest in showing to what extent industry in Scotland is making use of bank

finance. Investments have naturally increased very considerably, from £20,896,000 to £23,346,000, and are now 64.6 per cent. of its deposits. Still, net profits are £3,000 higher than in 1935, and last year's dividend of 16 per cent. is repeated.

Irish Banking Returns.—The banking return for the quarter published by the Irish Free State Currency Commission is shown in condensed form below. The figures refer to the total business of all banks operating in the Irish Free State. Some of these banks have extensive business in Great Britain and Northern Ireland.

	Dec. Quarter, 1935	Sept. Quarter, 1936	December Quarter, 1936		
			In I.F.S.	Else-where	Total
Liabilities :—					
Capital, reserves, etc.	17,257	17,429	10,234	7,137	17,371
Notes in circulation	8,595	8,755	5,141	3,648	8,789
Current, deposit and other accounts	164,132	163,695	118,945	45,790	164,735
Other liabilities	5,037	4,798	3,169	2,408	5,577
Total	195,021	194,677	137,490	58,983	196,473
Assets :—					
Cash and balances with London agents and other banks	15,155	13,504	5,375	9,593	14,968
Money at call and short notice	10,255	10,603	3	10,706	10,709
Bills	5,355	6,245	4,947	1,366	6,313

(a) Government	78,270	79,425	3,567	74,946	78,543
(b) Other	9,396	9,944	3,531	6,857	10,188
Other assets	7,981	7,651	3,294	4,630	7,924
Total	195,021	194,677	64,848	131,625	196,473
Excess of assets outside I.F.S. over liabilities outside I.F.S.	74,470	71,970	...	72,642	...

The outstanding impression conveyed by these statistics is that of stability. Deposits have slightly increased, but the Chairman of the Bank of Ireland has drawn attention to a decline of deposits in the rural branches, reflecting no doubt the difficulties of agriculture. The figure relating to loans and advances probably understates the amount of new borrowing, since many advances previously made to private individuals and local authorities are being repaid. As usual, the greater part of the banks' investments are external, and it is this feature that confers on the Irish banking system its peculiar strength, and its capacity to resist periods of depression. The increase in the net external assets since the September quarter suggests that the balance of payments was favourable to the Free State during the later months of last year.

The Anglo-Portuguese Colonial and Overseas Bank, Limited.—The accounts of this bank show that it has had another successful year, and several items reflect increased activity. Deposits have risen, while investments have increased after having fallen during each of the previous three years. Discounts have expanded, while acceptances and confirmed credits are substantially higher.

	1935	1936	January 31, 1937
	£'000	£'000	£'000
Liabilities—			
Capital	1,000	1,000	1,000
Deposits	735	839	985
Acceptances and confirmed credits	633	536	788
Contingent liabilities—			
Forward exchange contracts	1,290	1,547	1,233
Endorsements	312	277	148
Assets—			
Cash	351	379	379
Balances with banks abroad	175	202	63
British bills	407	663	684
Foreign bills	37	28	29
Investments	365	234	278
Advances	235	235	399
Banco Nacional Ultramarino account	134	84	159
Goodwill at cost	95	95	95
Net profit	20	17	17

Profits are unchanged, probably because the low level of interest rates has neutralised the increase in resources. The bank's assets are very liquid, and there are no commitments subject to standstill agreements.

INSURANCE

The Prudential

THIS unique institution moves tirelessly and with gigantic strides to fresh records. Last year alone showed an increase of £13½ millions to £316 millions in the total assets. Policies in force increased by nearly half a million and reached the immense total of 28½ millions. Premium and interest income flows steadily into the coffers of the company at the rate of fully £1,000,000 each week. Such astronomical figures suggest something of the incessant burden of control and investment policy resting on the shoulders of the directors and officials. Clearly, only a high degree of organisation and delegation of responsibility could grapple successfully with the intricacies of the duties involved.

ORDINARY BRANCH

The number of policies issued in 1936, at 106,494 shows only a slight increase on the preceding year, but new sums assured were £2 millions greater at £30½ millions. Consideration for annuities, however, fell from £2,340,000 to £1,387,000. Death claims increased quite normally to £2,604,000, but maturities fell sharply from £12,557,000 to £9,568,000. Surrenders, as seems to have been the common experience of offices last year, were substantially reduced, but both premium and interest income showed considerable expansion. The net rate of interest earned on the Fund was 1d. per cent. higher at £4 9s. 4d. per cent. Following on the steps taken by the Austrian Government to liquidate the affairs of the Phoenix of Vienna the treaty with that company automatically terminated last year, and a similar treaty with a Polish company has been cancelled by mutual agreement. As a result the Prudential no longer transacts foreign life re-assurance business on the Continental plan, and the usual revenue account for this class of business has disappeared from the accounts.

INDUSTRIAL BRANCH

The increase in premium income from £20,691,000 to £21,456,000 suggests a satisfactory state of permanency in the policies assured. Direct confirmation of this tendency is afforded by the statement in the report that the average duration of the whole life premium-paying policies in force is no less than eighteen years. Not even the least sympathetic critic of industrial assurance could regard this result as anything but a remarkable tribute to the efforts made to prevent policy "wastage"—particularly when it is remembered that the shorter durations are weighted by a steadily increasing volume of new business. In 1920, the expense rate was 40.5 per cent. of premium income; a progressive reduction has since been achieved, and last year's figure was a new low record of 22.8 per cent., against 23 per cent. in 1935. The Outdoor Staff receive bonuses each year out of the surplus, and it is, perhaps, debatable whether these bonuses should not be treated as expenses in calculating the expense ratio. The effect in 1936, when the bonuses amounted to £671,000, would be to increase the ratio to 25.9 per cent., but that figure would still be considerably lower than that of any other company. The net rate of interest on the Industrial Branch Fund was £4 12s. 8d. per cent. against £4 12s. 5d. per cent. in 1935.

ACTUARIAL VALUATION OF LIFE ASSURANCE LIABILITIES

The results brought out in the valuation as at December 31st last, with the corresponding figures for 1935, are given as follows.

	1935	1936
Ordinary Branch :—		
Surplus earned during the year	2,504,953	2,873,636
Capital profits	220,299	85,327
Brought forward from previous year	622,199	558,742
	3,347,451	3,517,705
To Bonuses to policyholders	2,509,838	2,629,149
„ Bonuses to shareholders	264,971	277,528
„ Special contingency fund	13,900	14,600
„ Carried forward to next year	558,742	596,428
	3,347,451	3,517,705
Industrial Branch :—		
Surplus earned during the year	6,588,295	6,680,810
Brought forward from previous year	986,609	577,636
	7,574,904	7,258,446
To Bonuses to policyholders	3,970,812	4,026,737
„ Special contingency fund	289,000	293,000
„ Bonuses to shareholders	875,654	878,722
„ Bonuses to outside staff	661,802	671,123
„ Strengthening reserves	1,200,000	800,000
„ Carried forward to next year	577,636	588,864
	7,574,904	7,258,446

In the Ordinary Branch, the reversionary bonus declared is again 46s. per cent. for whole life and 40s. per cent. for endowment assurances, both rates being calculated on the sum assured. In the Industrial Branch, the remarkably high reversionary bonus of 32s. per cent. is declared, as in 1935. For policies in the Industrial Branch of the British Widows' Assurance Company, whose business was transferred last year to the Prudential, the method of allotting bonus adopted by that company has been retained and enlarged in scope.

GENERAL BRANCH

In this branch, which is concerned with the various forms of insurance other than life assurance, net premium income fell from £3,004,000 to £2,605,000. There was a decrease of £481,000 in sinking fund premiums and an increase of £82,000 in other classes of business. A summary of results in the last two years is given below :

	1935	1936
Fire	75,335	111,091
Employers' liability	— 473	— 14,350
Motor	17,251	15,844
Miscellaneous	— 1,337	3,107
Sickness and accident	60,691	42,616
Other profits	151,467	158,308
	34,971	2,310
Net interest earnings	116,496	155,998
	102,143	111,282
Cost of dividend allocation	218,639	267,280
	116,667	133,333
	101,972	133,947

The customary reserves for unexpired risk and for outstanding claims are maintained in the separate departmental accounts. A departure from common practice, however, is made this year by the transfer of all departmental Additional Reserves to a central account called the "General Branch Additional Reserve Fund Account." The amount of this Fund at the close of last year was £1,096,000, an increase of £121,000 over the total of the departmental additional reserves at the end of 1935. The balance sheet is sub-divided, in respect

both of liabilities and assets, into six groups, of which much the largest refer respectively to the Ordinary and Industrial Branches. The distribution of the combined assets of these two branches, within broad groups, is given below, both for 1935 and 1936:—

	1935		1936	
	Amount	% of total assets	Amount	% of total assets
	£		£	
Mortgages, including loans on policies	44,316,344	15.4	48,672,183	16.2
British Government securities and T.F.A. stocks	83,028,214	28.8	87,113,347	28.9
Indian, Colonial & Foreign Government securities	17,736,889	6.2	16,693,727	5.5
British Municipal and County securities	10,164,214	3.5	5,302,950	1.8
Colonial, etc., Foreign Municipal & Provincial securities	5,575,317	1.9	5,734,641	1.9
Debenture stocks	43,588,880	15.1	48,042,759	16.0
Preference & guaranteed stocks	24,740,233	8.6	26,622,079	8.8
Ordinary stocks	30,852,522	10.7	34,194,079	11.4
Reversionary interests, properties and other assets	28,058,702	9.8	28,512,442	9.5
	288,061,315	100.0	300,888,207	100.0

The "B" shares are entitled to 75 per cent. and the "A" shares to 25 per cent. of the divisible profits in the General Branch. The "B" shares do not, however, participate in the life assurance surpluses. Dividends are free of tax; the rates declared have been increased for the "A" shares from 93½ per cent. to 95½ per cent. and for the "B" shares from 43½ per cent. to 50 per cent.

Insurance Notes

Refuge Assurance Company.—The results of the last two valuations of this company are given in the following table. In each case the surplus shown in the industrial branch is arrived at after making provision for increased stringency in the basis of calculating the actuarial reserves:—

	1935	1936
	£	£
Ordinary Branch:—		
Surplus earned during the year	1,117,627	1,069,902
Brought forward from previous year ...	634,496	640,137
	1,752,123	1,710,039
To Bonuses to policyholders	933,287	912,606
Shareholders' account	103,699	101,401
Investment reserve fund	75,000	...
Carry-forward to next year	640,137	696,032
	1,752,123	1,710,039
Industrial Branch:—		
Surplus earned during the year	247,769	219,640
Brought forward from previous year ...	131,933	132,283
	379,702	351,923
To Bonuses to policyholders	127,118	133,027
Shareholders' account	46,301	48,599
Investment reserve fund	75,000	50,000
Carry-forward to next year	132,283	120,297
	379,702	351,923

The bonus in the ordinary branch is reduced from 38s. per cent. to 36s. per cent., calculated on the sum assured. In the industrial branch the amount under claims arising in the current twelve months will be the same as would have been paid under the latest scale of benefits. In the ordinary branch total new sums assured increased from £8,457,000 to the record figure of £8,766,000 and the net rate of interest fell by 2s. 1d. per cent. to £4 3s. 11d. per cent. In the industrial branch new sums assured increased from £15,701,000 to £16,157,000 and the

premium income from £5,328,000 to £5,691,000. The net rate of interest was £4 14s. 2d. compared with £4 17s. 4d., and the expense ratio, which has shown continuous decrease during the last ten years, fell further from 34.37 per cent. to 34.27 per cent. Total assets increased by £2,661,000 to £5,628,000. Loans were £268,000 smaller at £10,267,000, but British Government securities, which now represent 36 per cent. of the total assets, increased by £979,000. Debenture stocks amount to £1,342,000 compared with £12,742,000, and preference stocks increased by £941,000 to £7,072,000. Ordinary stocks form only 1 per cent. of the total assets, and increased during the year from £573,000 to £660,000. The margin between the book values and market values of Stock Exchange securities is stated by the chairman to be greater than on any previous occasion. Apart from this inner reserve there exist investment reserve funds of £1,750,000 in the ordinary branch and £1,700,000 in the industrial branch.

* * *

Indemnity Marine Assurance.—The premium income of this company, which is controlled by the Northern, increased by £46,000 to £362,000. Claims accounted for 28.9 per cent. and expenses for 6.3 per cent. of this income, leaving 64.8 per cent., compared with 63.3 per cent. in the 1935 account, for future claims. By itself, this is a satisfactory figure, but 1937 so far has been a year of heavy losses, and the 1936 account is likely at the end of this year to reflect these adverse conditions. Of the 1935 premium income, 26.2 per cent. is unexpended, contrasted with 26.8 per cent. and 21.8 per cent. in the two previous years. After transferring £15,000 to profit and loss the balance of the underwriting account is £485,000, equivalent to 134 per cent. of last year's premiums; in addition, there is a reserve account of £100,000 and a free profit and loss balance for a somewhat greater amount. Total assets amount to £1,756,000, including Government and other securities of £1,617,000; as these securities are taken at or under cost considerable concealed reserves no doubt exist. The 1936 dividend is at the same rate as in the previous year, namely 8½ per cent.

* * *

Sun Life Assurance Society.—In a Note on this Society in *The Economist* of February 20th we gave results for the two quinquenniums 1927-31 and 1932-36. In the absence of any published results—and we only make use of published figures in these Notes—of the profit earned in 1932 or the cost of strengthening the valuation reserves last year, our table of comparative results for the two periods necessarily gave a distorted picture. The only alternative, however, would have been to give no comparative statement at all. Since our Note was written, certain additional information has been given in the chairman's speech at the annual meeting on February 23rd. With the aid of this information we are now able to present an adjusted table giving a more correct view:—

	1927-31	1932-36
Trading profit	£4,365,593	£4,570,490
Carry forward	297,306	1,432,000
	£4,662,899	£6,002,490
To policyholders	£2,716,070	£3,251,747
Shareholders	305,723	378,080
Staff pension fund	209,106	339,102
Strengthening valuation reserve	...	400,000
Carry forward	1,432,000	1,633,561
	£4,662,899	£6,002,490

Various reasons must necessarily determine the allocation of disclosed information between the printed report and the annual meeting in individual cases. As a rule, however, the publication in the annual report of information relating to profits, reserves, etc., is the preferable course from the viewpoint of the outside commentator.

THE STOCK EXCHANGE

Shipbuilding Shares Analysed

WHEN mercantile shipbuilding was still in the slough of depression, alert speculative investors were to be observed picking up shipbuilding shares at bargain prices. They argued, rightly in the event, that the prospect of substantial naval construction, after the London Naval Treaty lapsed at the end of 1936, was inviting to a purchaser. These early operators have since witnessed a recovery in mercantile shipbuilding, the extent of which was analysed in *The Economist* of February 13th. Neither the increase in naval building nor the mercantile recovery, therefore, is a new investment factor, and by this time the market has been largely cleared of bargains. Selectivity, henceforth, must be the investor's motto. But on what lines shall he select?

There is, in the first place, evidence that mercantile shipbuilding should recover further. British shipowners usually budget for their ships to earn their depreciation over a twenty years' life. Consequently the grist coming to the shipbuilders' mill is measured, largely, by the volume of tonnage approaching the twenty-year age. The following comparison between 1928 and 1936 indicates the favourable movement of age-groups in recent years:—

		(000 gross tons)					
At June 30	Up to 5 yrs.	Over 5 and under 10	Over 10 and under 15	Over 15 and under 20	Over 20 and under 25	Over 25 years	Total
1928 ...	4,483	5,392	3,395	2,927	1,819	1,738	19,754
1936 ...	1,636	4,375	4,127	3,912	1,769	1,364	17,183

The increase in the 15-20 year group augurs well for future mercantile demand. Shipowners have disposed of over 3,000,000 tons since 1930, when the British mercantile fleet reached a peak level of 20,322,000 gross tons. The previous depreciation earnings of this tonnage, plus the proceeds of breaking-up or sale, are now available for new building. This reasoning is supported by the shipping balance-sheet summaries published by *Fairplay*, which (while covering a varying number of concerns from year to year) show a marked downward trend in debentures, loans and creditors, and a concurrent rise in cash and debtors.

These two factors—the average age of the mercantile fleet and the finance to replace old tonnage—therefore suggest the possibility of a further advance in mercantile construction. Moreover, the abnormally low level of British tonnage at present laid up suggests that, apart from replacements, a modest new expansion may be encouraged if the current demand for shipping services is even maintained.

But the effects of a further revival in mercantile demand, superimposed on the urgent naval programme, are not wholly favourable. The shipbuilding recovery came late and it followed a prolonged depression, during which skilled workers were attracted elsewhere and recruiting was sub-normal. The double expansion in demand now finds the industry with adequate equipment but insufficient labour, and while the Admiralty work is reducing the competition among the builders for mercantile orders, it is claiming priority in the labour market. Both wages and raw materials have already risen, and may rise further. Consequently, our competitive ability to attract foreign orders, which formerly provided an important market, has declined, and there is a danger that when the naval programme is complete some former customers will permanently have turned to other suppliers.

Two investment conclusions immediately follow. First, while profits in the present state of the industry will be a better than for many years past, rising costs and a shortage of labour may well prevent them from being

maximised. It would, indeed, be prudent to await results before assuming boom earnings. Secondly, the admittedly abnormal factors in demand are likely to make for conservative financial policies, more particularly where reserves need replenishing. But these general conclusions may be further qualified if the shipbuilding group is divided into three main classes. First, we may distinguish the companies with a predominantly re-armament interest; secondly, there are mixed companies capable of considerable naval work, but normally considered as mercantile builders; thirdly, come the "cripples" of the depression.

The re-armament group comprises Vickers (through its Vickers-Armstrong subsidiary), John Brown and Cammell Laird. Each is capable of handling warships of the largest size. Vickers could accommodate two such ships, and is at present working on a battleship and two aircraft carriers. In addition, the company has two cruisers, four destroyers and five submarines. There is still room for further work in the group. John Brown, with one large berth occupied with the sister ship to the "Queen Mary," could still handle a battleship. It has one cruiser on hand, and can accommodate further naval work. Cammell Laird now have one battleship, one aircraft carrier and two submarines, and this again is not the limit of capacity. Since this re-armament group will share the burden of heavy naval building with the Royal Dockyards, it will no doubt enjoy a certain priority for labour and general requirements. The naval programme will not reach its full expenditure level until 1937-38 and the following year, and an increase in the profits of this group, therefore, seems assured. Vickers, as suppliers of armaments as well as shipbuilders, will attract the largest share of revenues (and profits), and will presumably seek to restore the £1 parity of the ordinary shares on which the present rate of dividend can be maintained. John Brown, again, can supply a fair proportion of armaments and armour and controls the important Firth-Brown interests. For the investor, either John Brown or Vickers appear preferable to Cammell Laird, whose present price discounts the more expansive prospects of 1938.

The second, or mixed, group contains the widest range of companies. It includes Fairfield (of which only preference shares are publicly held); Hawthorn Leslie; Swan, Hunter and Wigham-Richardson; John I. Thornycroft; J. Samuel White; and Yarrow. Of these Fairfield and Swan, Hunter could accommodate the largest ships, while Hawthorn Leslie specialise in cruisers and Thornycroft, Whites and Yarrow in destroyers and lighter craft. In addition, each has a mercantile business in craft of comparable size. Thornycroft and Whites specialise in yachts, while Yarrow produce boilers and machinery for a wide range of mercantile shipping. In view of the urgency of the naval programme, this group can count on substantial contracts for the next few years. Thus, Fairfield are at present working on one cruiser and two destroyers; Hawthorn Leslie on one cruiser; Swan, Hunter on one cruiser and two destroyers; and Thornycroft on two destroyers, two sloops and other vessels. Whites and Yarrow are also occupied on naval work. In addition to Admiralty contracts, each company should accommodate its share of the expanding mercantile demand.

In this group of shares, the yields are higher. The return of over 4 per cent. offered by Swan, Hunter, a leading firm with strong finances, seems relatively attractive for the industry, but circumstances in 1936 were not altogether favourable. Potentially high yields are offered by the Fairfield preference shares and the 6 per cent.

cumulative preference issue of Thornycroft, which carry substantial arrears, as shown in the table below. These shares, and the Thornycroft 7½ per cent. non-cumulative participating preference issue, are covered by earnings, though no dividends have been paid for lack of liquid resources. Such "bargain" elements as remain in the industry are probably covered by these issues. The 6 per cent. cumulative preference issue of J. Samuel White offers a return of over 5 per cent. on current payments, and the price includes 4s. 10d. gross arrears. The prospects for Hawthorn Leslie suggest interesting dividend possibilities, when the naval programme is in full swing, but the shares discount these prospects for some time to come. Yarrow, with a high earnings cover for the dividend, yields 1½ per cent. more than Hawthorn Leslie.

The third group, which we have called the "cripples" of the depression, includes Beardmore and Harland and Wolff. On these, it is difficult to form an opinion. Harland and Wolff are the largest mercantile shipbuilders in the world. They have a good technical record, and have recently been concentrating on motor ships. The company does not handle naval work normally, but it is building one cruiser. It could accommodate ships of the largest size, though battleships are likely to be given to yards with naval experience. Some part of the cruiser programme may go to the firm. In addition, Harland and Wolff should profit from mercantile business while other firms are preoccupied on naval contracts. The company's finances are stronger than might be expected, but the burden of defaulted prior charges is undiminished. Some £4,332,687 of deferred creditors' certificates were inherited from the R.M.S.P. crash, and they carry £866,537 of unpaid interest. There are also £5,565,608 of matured bills of exchange and guarantees (accrued interest £1,041,340), of which part must be reckoned as an effective prior charge. Earnings will no doubt recover, but the prospect for the first preference shares depends upon such unknown factors as a funding scheme for the prior charges.

William Beardmore reduced its shipbuilding interest by the sale of the Dalmuir Yards in 1930. It retains, however, an interest in armaments and marine engineering, and must benefit from the re-armament expenditure. Before that can percolate to the preference shares, however, 5 per cent. registered interest certificates, amounting last year to £170,894, must be paid off out of profits, 6 per cent. interest provided on £626,554 of income debenture stock, depreciation charged against plant, and some cash assets accumulated. The recovery will need to be substantial. Here, as with Harland and Wolff preference, the shares can only be considered speculative counters at present.

The present prices and yields of the leading shipbuilding shares are set out in the following table:—

Share and denomination	Latest Year		Price	Dividend Yield
	Earnings %	Dividend %

 ‡ With 4s. 10d. gross arrears.

The right-hand column brings evidence enough that successful investment in shipbuilding must be selective before all else. When shares stand at two or three times their par value and yield less than gilt-edged stocks they are discounting a good deal. The current yields, in fact, are inadequate to invite any but the specialised investor who is prepared to study the Naval Estimates in detail.

Investment and Company Notes

The Polish Default.—It was announced last week that the Polish Government has decided to default on interest payments on the 7 per cent. Stabilisation Loan, 1927, to the extent of 65 per cent. The coupons falling due on April 15 will be paid in full, but for the succeeding coupons the holder is offered 35 per cent. of its face value, in cash or new 3 per cent. twenty-year funding bonds to the full amount of the coupon. If he declines both offers, the zloty equivalent of his coupons will be placed to a blocked account. The same offer has been made to holders of dollar bonds. This proposal is apparently a sequel to the partial default announcement of last June. The sums involved are not large: only about £1,220,000 sterling bonds are outstanding, and the loss of interest is approximately £60,000. But the loan is specifically secured as a first charge upon Customs receipts, which, while recovery proceeds in Poland as much as elsewhere, are rising substantially. And £60,000 is a small sum out of an active trade balance of £3.3 millions for 1936. The Polish authorities, who express their concern over the exchange position, apparently hold that since there is a faintly plausible case why some creditors should suffer, it is equitable that all should share the burden. It remains to be seen whether the English creditors will submit patiently to the implications of this curious logic.

Steel Company Results.—The first of the steel company dividends and results for 1936 have not excited the market. Yet the results have come up to reasonable expectation. *Baldwins Ltd.* has decided to pay a dividend of 10 per cent. on the ordinary shares, an increase of 2½ per cent. The *Lancashire Steel Corporation* full results are in every way satisfactory. The Corporation's income has increased from £456,771 to £548,204, and after allowing more for depreciation, the directors have declared a dividend of 5 per cent., compared with 4 per cent., on the ordinary shares. The consolidated balance sheet, which includes all subsidiaries except the Wigan Coal Corporation, is remarkably strong: liquid assets exceed current liabilities by £1,281,329. The following table shows the last three years' results:—

	Years to December 31,		
	1934	1935	1936
Gross income	393,597	456,771	548,204
Interest, fees, tax, etc.	75,215	89,902†	101,637

Earned %	Nil	6-7	7-9
Paid %	Nil	4	5

Reserve..... Nil Nil *45,000
 Staff fund..... Nil Nil 25,000
 Carried forward 62,955 68,876‡ 76,732

* Includes £20,000 to stock reserve. † Includes item of £50,000 "reserve for contingencies including provision for future income tax." ‡ After providing £66,775 issue expenses, etc. § £120,000 for current year and £230,000 arrears.

The gross income has actually increased more rapidly than the increase in the output of wire rods and rails, the Corporation's specialities. But the report shows the difficulties with which the steel industry must now contend. The allocation of £20,000 to a reserve against possible future fluctuations in the price of raw materials is significant. The Corporation is in part meeting the difficulty by a long-term agreement with Stewarts and Lloyds, under which semi-finished steel supplies will be

guaranteed. This, indeed, is the best safeguard against embarrassments from the hectic activity in the steel industry.

Vickers and Swan Hunter.—The market was also disappointed with the *Vickers* dividend. The company will pay a 10 per cent. dividend, on a capital increased last year by a 50 per cent. capital bonus. A year ago 8 per cent. was paid on the smaller capital. The current distribution, therefore, represents an increased payment of some £220,000 net, which seems satisfactory. The market, however, was expecting a further capital bonus and the shares were consequently marked down to 34s. 1½d. At this level they yield slightly over 3 per cent. They have modest prospects of capital appreciation, however, for the re-armament programme from which the *Vickers* group is the chief beneficiary is hardly yet under way, and in two years' time the company may well have achieved the 10 per cent. payment on the old par of £1. The *Swan, Hunter and Wigham Richardson* results, too, met with disapproval, yet the figures are more satisfactory than they appear at first sight. The shipbuilding profit has fallen from £209,425 to £134,518, but the chairman last year pointed out that the 1935 profit was exceptionally high and that its repetition in 1936 could not be expected. Of more significance, perhaps, is the 60 per cent. increase in the dividends from subsidiaries. These dividends still represent only 3½ per cent. on the investment holdings, and a further considerable increase is likely. In any event, the directors' confidence in the future is shown by the increase in the dividend from 5 per cent. to 7 per cent., despite the fall in total earnings. The company's prospects in naval work and in the recovery in mercantile shipbuilding are examined on page 597.

London and North-Eastern Meeting.—Mr William Whitelaw's speech at the L.N.E.R. meeting last Friday was sombre, even for a railway meeting. The chairman could again point to a substantial increase in passenger journeys and to a moderate improvement in freight traffic. But poor agricultural freights did much on the L.N.E.R. last year to offset the improvement in iron, steel and coal; while the growing road competition for lighter merchandise has been fought by increasing the expenditure on collection and delivery services. The cost prospect, however, is of particular concern to the L.N.E.R., in view of its failure to achieve a recovery comparable with that of the other lines. The company last year opposed the partial restoration of cuts—at a time when net revenue had not risen to the level prevailing when the cuts were made—but had to accept the decision of the other companies. Further restorations, the chairman disclosed, would be opposed until revenue had risen to the 1930 figure. A further increase in traffic is to be expected this year, but the chairman also stressed the rising costs of coal, steel and stores. Indeed, it is possible that the company may reduce or abandon some of the works contemplated under the Railways (Agreement) Act of 1935. The recovery in the fortunes of the L.N.E.R., indeed, has come in a period of rising prices. The company has to cut its coat, so far as renewals are concerned, according to its cloth, but it now finds that a given sum buys much less cloth. This situation, unfortunately, must confront a railway whose renewals are not financed on a provision basis, and it may be contrasted with the position of the L.M.S. The railway year has hardly opened auspiciously, but for the London and North-Eastern Railway the portents are perhaps least favourable.

Canadian Pacific Results.—The preliminary results of the C.P.R. for 1936 do not make exciting reading. Gross earnings are 6.8 per cent. higher, but the greater part of the increase has been absorbed in working

expenses. Net earnings, therefore, show an increase of no more than 4.1 per cent., and "other income" has provided no less than \$2,053,000 towards the \$2,966,000 improvement in total income. Earnings available for preference dividends are ostensibly increased from \$2,832,083 to \$6,029,184—an amount which would appear to cover the full preference dividend and a fractional payment on the common. Closer examination of the following statement, however, suggests reasons for discounting this apparent improvement:—

	1934	1935	1936
	\$	\$	\$

WIDOW, 32, requires situation urgently. Where child of 3 not objected to. Capable, good cook, write P. Box 208, Daily

EVERY year illness or accident leaves thousands of families to face the world alone. In most cases they are not well provided for. Few men are in a position to put aside money enough to maintain their dependants at a satisfactory standard of living in the event of death. It is only fair to your family and to yourself that you place this burden on broader shoulders.

Consider the 'SAFEGUARD' PLAN

which provides a guaranteed income of £3, £6 or £9 per week tax free for a period of years after your death and a cash sum, if desired, when the income commences. When the annual income ceases a cash payment of £1,000, £2,000 or £3,000 is made. If you survive the period of your family responsibilities it can be arranged for the cash sum to be payable to you.

An enquiry for full details and for an illustration suited to your own circumstances will cost you nothing; rest assured you will incur no obligation by doing so.

**LEGAL & GENERAL
ASSURANCE SOCIETY LTD.**

10 FLEET STREET, LONDON, E.C.4

General Manager: W. A. WORKMAN, F.I.A.

Established 1836.

Assets exceed £36,000,000

Of the increase in "other incomes" (described as "special income" in earlier years) dividends and interest receipts account for the bulk. The net earnings of the steamships still do not cover the depreciation charge, and hotel net revenues have been static. In other words, a significant part of the 1936 improvement is due to increased dividends from Consolidated Smelters, in which Canadian Pacific has a substantial interest. But the backlog of special charges has yet to be caught up. The "Soo" line guarantee required \$3,659,645 during 1936—a cash payment which is taken into account in paying dividends, but is, nevertheless, charged against surplus. Abandoned lines written off, another annual item, are also charged against surplus, but do not affect the directors' decisions regarding dividends. Assuming, however, that the "Soo" guarantee only is properly chargeable against profits, it would appear that the 1 per cent. preference dividend has been earned with only a \$1,000,000 margin. On these results the preference stock seems generously priced at 57½, while the \$25 common shares, at 16½, reflect their perennial state of overvaluation. The market may put the shares higher, but hardly on solid investment arguments.

★ ★ ★

New Issues in February.—Although there was no appreciable decline in the number of issues during the month, the amount of direct cash subscriptions to new issues was considerably smaller than in January. Totals for recent months are shown below:—

(000's omitted) Excluding Conversions

Monthly Average (Old Basis)	United Kingdom	British Posses- sions	Foreign Countries	Total
1933	17,520	2,429	449	20,398
1934	11,474	2,494	125	14,093

January, 1936	450 42,864	3,055	1,299	47,668
January, 1937	300 32,778	5,061	96	38,235
February, 1936 ...	50 24,520	2,235	280	27,085
February, 1937 ...	150 26,416	13,714	1,057	41,337

On the new basis, however, the situation is reversed, although the advance on the previous month is only small. The introductions included several operations involving over £1,000,000 each, and in particular the "Writs" introduction involved nearly £10,000,000 of new money.

★ ★ ★

County of London and City of London Electric. The Act of 1925, which regulates these undertakings within the L.C.C. area, provided for their amalgamation. The report of the City of London company states that the directors have considered co-ordination of supply in London, and will submit proposals to the shareholders. It reveals a substantial improvement in earnings, and the amount available exceeds the 7½ per cent. dividend by about 2½ per cent. gross on the ordinary capital. The new tariff which the company has introduced may enable it to increase the dividend under the sliding scale.

★ ★ ★

The accounts of the County of London Company, which are summarised below, show a remarkable increase in sales of energy. There was a period when the

company was open to criticism on the ground of neglecting the potential development in its area. For some years the justification for such criticisms has gone, and the 1936 results offer ample evidence of the characteristic progress of the company. The following table summarises the results of the past three years:—

	1934	1935	1936
Energy sold to consumers (million units)	776.1	885.4	1,034.6
Increase	12.0%	14.0%	16.8%
Energy exported to C.E.B. ...	274.7	682.3	831.0
Revenue from sale of energy ...	3,007,059	3,452,530	4,002,900
Net revenue from operations...	1,653,343	1,677,981	1,860,290
Total income	1,869,096	1,907,921	2,120,081
Depreciation and sinking funds	625,304	669,706	699,385
Interest on debentures, loans, etc.	298,706	285,518	342,918
Taxation reserve	20,000	30,000	50,000
Preference dividends	227,099	282,915	282,915
Ordinary stock:—			
Earned	697,987	639,782	744,863
Paid	599,246	599,246	599,246
Earned %	12.7	11.4	13.8
Paid %	10½	10½	10½
General reserve and No. 2 reserve	50,594	48,310†	107,741†
Carry forward	395,188	387,413	425,289

† And a further £76,690 in 1935 and £42,259 in 1936, from profits on investments realised.

The report, unfortunately, still makes no distinction between that part of its undertaking which is controlled under the 1925 Act and that which is not so restricted. It may be hoped that the company will follow up its progressive commercial policy by giving shareholders fuller information in the annual report.

★ ★ ★

Metropolitan Electric.—The development of industrial districts around London has been particularly rapid in the western area served by the Metropolitan Electric undertaking. The accounts for 1936 thus disclose a remarkably large increase in earnings. The earnings derived from the London area within the L.C.C. boundaries are controlled by the 1925 Act. The company's direct business in the western area consists of industrial sales and bulk supply sales to the subsidiary companies. The latter mainly supply domestic and small industrial consumers, while the parent company (with its longer franchise) directly controls the high tension transmission system from which larger supplies are usually given. It appears, therefore, that the industrial load rather than the domestic load is mainly responsible for the notable increase in profits shown below:—

	1934	1935	1936
Gross revenue from sale of energy:—			
London area	490,790	498,716	537,830
Western area	622,812	721,551	874,124
Total gross revenue	1,113,602	1,220,267	1,411,954
Net revenue:—			
London area	131,969	141,964	174,623
Western area	195,540	212,595	313,868
Interest and dividends, etc. receivable	127,242	173,505	200,994
Total net revenue	454,751	528,064	689,485
Sinking funds and depreciation and reserve funds	150,753	178,220	242,511
Interest payable	46,409	57,551	57,186
Preference dividends	22,500	22,500	22,500
Earned for ordinary	235,089	269,793	342,288
Ordinary dividends	250,000	250,000	331,250*
Earned %	9.4	11.0	15.1
Paid %	10%	10%	10%†‡
To No. 2 reserve fund	5,242§	12,677	12,496
Carried forward	135,792†	143,215†	151,104†

* Dividend of 10 per cent. less tax, plus jubilee bonus of 2½ per cent. tax free. † Includes profit on redemption of investments, of £950, £308, and £9,347 respectively, and after deduction of £25,000 premium on debentures redeemed in 1936. ‡ To contingency account.

The report suggests that the western area has been rather more favoured in the cost of its purchase of power than the area controlled by the sliding scale. The increase in cost of purchased current in the London area last year was 5.5 per cent., compared with an increase of 7.8 per cent. from sales. For the western area, however, the increase in cost of current was 9.8 per cent., but revenue from the sale of current advanced by no less than 21.1 per cent.

★ ★ ★

North Metropolitan Electric.—The report for 1936 shows that the remarkable rate of expansion which has for some years characterised this company was more than maintained in 1936. The figures below show the increase in the number of units sold to be in excess of 20 per cent., but the report discloses that sales through the company's distribution undertakings advanced by more than 25 per cent. The latest results are summarised below:—

	1934	1935	1936
Number of consumers (supplied directly or indirectly)	254,735	296,606	336,722
Number of units sold (millions)	423½	495	597½
Increase on previous year.....	20%	17%	21%
Net revenue	768,589	794,825	855,443
Interest charges	61,031	65,031	80,374
Depreciation and reserve funds	322,682	327,670	337,352
Reserve and redemption funds	31,762	31,762	31,762
Preference dividends	84,000	84,000	84,000

Ordinary shares:—			
Earned	269,113	286,362	321,955
Paid	210,277	251,001	278,151
Earned %	13.6	11.8	12.1
Paid %	10	10	10
Contingency account	50,000	30,000	30,000
Carried forward	44,501	49,862	63,666

In each of the last three years expenditure on capital account has been only of the order of 11 per cent. The area served by the company, which extends from the northern fringe of London to the outer boundaries of Hertfordshire, is likely to enjoy further rapid development, but the company's results measure the success of its commercial policy no less than the natural potentialities of its market.

★ ★ ★

Electrical Distribution of Yorkshire, Ltd.—This company, which serves by retail a large part of the area covered by the associated Yorkshire Electric Power Company and a further extensive area in Lincolnshire, Cumberland and Nottingham, reports another year of steady progress, and a rather more than proportional increase in profits. The following table gives the results for the past three years:—

	1934	1935	1936
Number of consumers connected.....	72,668	82,675	93,161
Increase	13.9%	13.8%	12.7%
Number of units sold (millions).....	37.0	42.7	48.6
Increase	15.2%	15.8%	13.7%
Net revenue (after tax)	188,045	195,483	232,863
Interest and bank charges	1,280	2,877	9,606
Depreciation and reserve account	50,000	50,000	70,000
Prof. dividends	25,457	32,550	32,025

Earned for ord.....	111,308	110,056	121,232
Ord. dividend	104,625	104,625	102,938

Earned %	9.7	9.6	11.1
Paid %	9	9	9
Issue expenses written off	...	...	4,351
Carried forward.....	36,807	42,237	56,181

The allocation to depreciation and reserve account, while more than for 1935, is not, apparently, excessive. If the company applied our "standard" scale, there would be little surplus beyond the dividend payments.

★ ★ ★

Joshua Hoyle Scheme.—Since 1929 Joshua Hoyle and Sons have paid no preference dividend, and earnings have sufficed merely to pay a reduced rate of debenture interest and to cover spasmodic transfers for depreciation. The company's record has admittedly been

HALIFAX

THE WORLD'S LARGEST

BUILDING SOCIETY

THE LATEST ANNUAL FIGURES

TOTAL ASSETS EXCEED £114,000,000

Extracts from the 84th Annual Report to be presented to the Shareholders at the Annual General Meeting at Halifax on Monday, March 22nd, 1937.

MORTGAGES During the year the sum of £20,488,752 was advanced upon new mortgages, granted mainly upon security of dwelling-houses acquired by members for their own occupation. The total sum due upon mortgages increased during the year by £6,253,660, and now stands at £92,195,988, the average amount owing on all the Society's mortgages being only £407 each.

The mortgage accounts are in a very satisfactory condition, and there are no properties in the possession of the Society at the end of the year to be reported in the statutory schedule and no properties in possession of Receivers on behalf of the Society as Mortgagees.

LIQUID ASSETS The surplus funds of the Society, invested in short-dated Trustee Securities, have been maintained, and, together with Cash at Banks and in hand, amount to £21,397,721.

SHARE AND DEPOSIT FUNDS The Share and Deposit Funds increased during the year by £2,984,317 and £2,947,224 respectively, and the total funds of Investing Shareholders and Depositors now stand at £109,306,258.

TOTAL ASSETS The total Assets of the Society now amount to £114,327,576, an increase of £6,240,109.

ACCOUNTS The new accounts opened during the year numbered 86,751, and the total number of accounts open at the end of the year was 682,615, being an increase of 23,106 accounts.

PROFITS The balance of profit for the year, after payment of expenses and provision for income tax and all interest due to Depositors up to the date of the accounts, and for depreciation of office properties, amounted to £2,904,665, out of which appropriations have been made to shareholders of interest and bonus £2,432,197; to Staff Superannuation Fund £50,000; and to Reserve Accounts £411,419.

RESERVE FUNDS The total Reserve Funds and Undivided Profit now amount to £4,667,342.

The Directors heartily congratulate the Members on the Society's continued progress and prosperity, and the strong financial position disclosed in the Statement of Accounts.

**THE "HALIFAX" HAS OVER 375 BRANCHES
THROUGHOUT THE KINGDOM**

inauspicious. But the reconstruction proposed this week is unexpectedly severe, and its presentation is, in some respects, open to criticism. As recently as November last year, the chairman referred to a material improvement in the outlook and to the healthier position of the company's order books. Yet the scheme calls for the writing down of fixed assets and other items by no less than £1,775,000—a sum which absorbs all the ordinary capital and over three-quarters of the 7 per cent. preference capital. It is proposed, first, to cancel 16s. on each £1 preference share, together with all arrears and preferential rights, and 19s. 6d. on each £1 ordinary share, and the balances will be consolidated into new 2s. shares. Secondly, the 7 per cent. debentures, on which only 5 per cent. has been paid since 1933, are to be replaced by a 4½ per cent. issue, carrying an option up to 1940 to convert into the new 2s. ordinary shares at the rate of 5 shares to £1 stock. The loan creditors are invited to accept five-year notes in full settlement of their claims. These proposals are drastic. Given the company's present position, preference shareholders are not unfairly treated on the whole, but they have one contingent grievance. Every holder of 100 preference shares will receive 200 ordinary shares, and will be entitled to subscribe for 400 further shares at par, together with a three-year option to subscribe for 400 additional shares at 3s. The existing ordinary shareholder will receive 25 new shares, but he is offered subscription rights at twice the rate extended to the preference shareholder—that is, 100 new shares at par, and an option over 100 further shares. As all rights offered to existing ordinary shareholders are, in this case, *ex gratia* in character, why should the opportunity to participate in recovery be offered them on a proportionately wider basis than is offered to the preference holders? The latter, in fact, have now become the involuntary holders of the equity, and ought to have their full share in its perquisites.

* * *

Building Material Shares.—With the publication of the Pinchin Johnson results the investor may take stock of building material share prospects. The *Associated Portland Cement* group and *London Brick* dividends were discussed in *The Economist* last week. The full *London Brick* report, which has since appeared, endorses our relatively favourable conclusion. Total profits have, in fact, fallen slightly from £594,041 to £591,569, but the figures are again struck after writing off reconstruction of kilns. In consequence, the 22½ per cent. ordinary dividend is only slightly exceeded by earnings. Although financially these results may appear static, the company has actually achieved a new record turnover, has reduced its prices and has increased its wages. In the balance sheet the customary position of strength is disclosed. Net current assets again amount to over £1 million, and during the year the group's fixed assets have been consolidated and written down to £2,100,000 by transferring £1,350,000 from depreciation reserve. A one-in-nine capital bonus shows that the board has no lack of confidence in the outlook. For the speculative investor who seeks a high yield, *London Brick* are not as some other brick shares. Assuming the maintenance of the 22½ per cent. dividend, the £1 ordinary stock at 72s. 6d. cum bonus yields £7 1s. per cent.

* * *

To some extent, doubtless, the company is affected by rising costs for wages and fuel. These items, indeed, are specifically mentioned in the *British Portland Cement* report, but cement companies are less dependent upon residential building. Last week's service estimates, with their emphasis on new construction work, suggest good prospects for *Associated Portland Cement*, which now stand at 98s. 9d. to yield £4 14s. per cent. *Pinchin Johnson* show an increase of £21,232 in net profits to £379,362. The directors maintain the 20 per cent. dividend, but propose a one-in-ten capital bonus. A further

similarity with *London Brick* is found in the writing down of assets. The cost situation of this concern is decidedly interesting. It would appear that last year's advance in profits was attributable to the inclusion of earnings by an overseas undertaking, which were struck too late for inclusion in the 1935 accounts, since the directors declare that selling prices, for the record turnover in 1936, lagged behind rising costs. Since, however, the directors expect the lag to be made good this year, the prospect seems fair. The 10s. shares, at 49s. 3d., yield £4 15s. 3d. per cent. on an "ex-all" basis. Similar considerations also apply to *International Paint*, whose 16 per cent. dividend is well supported by increased profits of £125,624 against £115,090.

* * *

Enfield Cable Profits.—The 1936 results of *Enfield Cable* are extremely good. Profits have risen by no less than 60 per cent., keeping pace with the "Beama" index for heavy electrical machinery orders. While the ordinary dividend has been maintained at the rate of 25 per cent. on the ordinary shares, the increase in the ordinary capital from £400,000 to £500,000 requires a proportionately larger cash distribution. The directors have, however, decided to plough back the greater part of the increased profits. The general reserve is raised to £200,000, while the share premium account stands at £150,000. The following table shows the company's progress during the last three years—

	Years to December 31st		
	1934	1935	1936
Net profits	124,062	141,915	223,395
Directors' fees, tax reserve and depreciation	13,450	13,801	22,876
Preference dividend	15,000	15,000	15,000
Ordinary shares—			
<i>Earned</i>	95,612	113,114	185,519
<i>Paid</i>	100,000	100,000	125,000
<i>Earned %</i>	23.9	28.2	41.8
<i>Paid %</i>	25	25*	25
Reserve	1,260	10,000	80,000
Carried forward†	25,350	29,906	14,737

* Also capital bonus of 25 per cent. on ordinary shares.
† Including profits on investments.

Prospects appear to be good. Although the "Grid" is completed, there is still a good demand for secondary cables, and the requirements of the Post Office and the railways continue at a high level. The chief threat comes from the rapid rise in copper prices, but the cable industry has shown itself to be well organised in the past, and rising costs may well be largely passed on to the consumer. The ordinary shares stand at 110s. ex dividend, giving a satisfactory yield of £4 11s. per cent.

* * *

Consolidated Mines Selection.—Our Mining Correspondent writes: This Anglo-American financial company last year secured a net profit of £281,780, compared with £227,320 in 1935, the net surplus on share dealings rising from £186,440 to £225,150. The dividend was increased by 2½ per cent., making the year's total 30 per cent., or 3s. per 10s. share. The reserve fund again receives £50,000, and a balance of £27,100 is carried forward, as compared with £18,640 brought in. Promising developments have occurred recently in the newer Rand companies in which the company is interested, as well as in *Mawchi Mines*—a tin-wolfram concern whose shares now stand at a record quotation. C.M.S. shares are quoted at about 50s., against 57s. 6d. earlier in the year. On the basis of the latest dividend the yield is 6½ per cent.

* * *

New Kleinfontein.—This Witwatersrand company treated a record tonnage of ore during 1936 of an improved grade and with appreciable economy in working costs. As a result, the operating profit amounted to £272,760, against £166,400, the average per ton being

6s. 10d., against 4s. 10d. Accordingly the company was able to increase its dividend from 10 per cent. to 15½ per cent., carrying forward £72,400, as compared with £96,000 brought in. Out of last year's earnings, £83,600 was transferred to capital expenditure, but nothing was required for Excess Profits Duty, and the appropriation account was in fact credited with nearly £4,000 from the excess put aside in 1935. The Apex section was mainly responsible for an expansion of 384,400 tons in the ore reserves, now 2,596,300 tons, and they show, as a whole, a slight improvement in average value at just under 5 dwts.—despite a small increase in the stoping width. Although the company's future now depends mainly upon the Apex section, large areas have yet to be explored in the old mine, and hopes are entertained regarding the "upper leaders" in this section.

* * *

Other Company Results.—A further large number of important results are now available, including those of *Sir W. Arrol and Company*, *Fife Coal*, and *Lancashire Dynamo*. Our usual analysis of about sixty profit and loss accounts appears on page 623, while the results are discussed on page 609, under the heading "Shorter Company Comments." As we go to press, it is announced that *Hudson's Bay Company* is to pay off six years' preference arrears, involving £350,700. The profit for the past year amounts to £226,695, after charging £150,000 depreciation. An amount of £112,525 is transferred from insurance reserve, and the credit balance is reduced from £43,990 to £33,211.

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—*National Bank of Egypt*, *Anglo-International Bank*, *Hungarian General Creditbank*,

London and North-Eastern Railway, *Britannic Assurance*, *United Kingdom Provident Institution*, *Scottish Equitable Life Assurance Society*, *Harrods*, and *Davis and Timmins*. Mr William Whitelaw's survey at the annual meeting of the *London and North-Eastern Railway* is discussed in a Note on page 599. At the *Hungarian General Creditbank* meeting it was reported that both ordinary and new business had been increased. Although other earnings had advanced, profits were affected by a reduced interest margin and by a rise in expenditure. Mr Jefferson, addressing *Britannic Assurance* shareholders, expressed satisfaction that the company was doing more whole life business. The average sum assured per new policy had risen in the past year from £177 to £191. At the *Scottish Equitable Life Assurance* meeting, Viscount Younger of Leckie stated that at the end of each year in the present quinquennium the margin between market and book investment values had increased. Sir Bertram Hornsby included in his speech to the proprietors of *Anglo-International Bank* a survey of the state of trade in Germany and in various Central European countries. At the *Harrods* meeting, Sir Woodman Burbidge discussed the improved trading results of the company's subsidiaries, and mentioned a proposal to include in next year's balance sheet a figure for the D. H. Evans investment closer to its real cost. In informing Davis and Timmins' shareholders that the company's order book was in a better state than for many years since the War, Mr F. Le Neve Foster pointed out that armaments contracts represented only a very small proportion of the whole. Sir Edward Cook gave a general review of the Egyptian situation at the *National Bank of Egypt*. The present position, with an active market for cotton and maize, was stated to be very favourable. At the *United Kingdom Provident Institution*, Sir Ernest J. P. Benn welcomed the indications that interest rates would be allowed to rise, and to prevent a trade boom of unnatural dimensions. The rise in the amount of whole-life assurance written by his company was particularly welcome.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: MARCH 16

ACCOUNT: MARCH 18

The Stock Exchange still finds itself immersed in technical adjustments in which selling is predominant. Commodities have provided the week's headlines, and the rubber and tin groups have been among the most responsive sections in the "House." Perhaps French liquidation of gilt-edged and mining favourites has taken some of the bloom off this week's dealings, but the market's *malaise* seems deeper rooted.

Gilt-edged opened with a sharp fall, and only bear-covering on Tuesday accounted for a harder close. In mid-week, the Funds improved further, but failed to maintain their advance, and Old Consols closed no better than 76.

In the foreign market, French Rentes and railway bonds were bought in anticipation of the new loan and in response to M. Blum's success in the Chamber. Japanese issues improved further, and Chinese bonds also advanced. Brazilians, after a bout of selling, were in demand at lower levels, led by the Funding issues. Among the European group, Polish Sevens became steadier after the threat of default, but Danzig and German bonds were still uneasy.

Home Rails opened in poor style, and Tuesday's recovery was succeeded by disappointment on the traffics. London Transport "C" again fell, reaching 90 in mid-week. In the foreign rail market, Argentine issues receded, and Brazilian stocks were quiet and dull.

Falling prices have been the order of the week in industrial markets, which have been completely overshadowed by commodities. There have been numerous instances of disappointment with dividends announced, which although higher than last year have not come up to expectations. Vickers were an example of this kind, and the 10 per cent. dividend, against 8 per cent. last year on a smaller capital, was followed by a lower price for the shares. Practically the only bright point in the iron and steel section was the keen demand for Projectile and Engineering, following the increase in dividend from 12½ per cent. to 20 per cent. on a larger capital. Coal share prices were lower. Morris Motors stood firm in a sagging motor group, and aircraft issues were uncertain pending settlement of the strike difficulties. Electrical equipment shares were generally lower, and electric supply issues adversely affected by the declared intention of the Government to implement the recommendations of the McGowan Committee.

Distillers were prominent in the brewery section in the hope that there will be no increase in taxation in the coming Budget. Textiles were quiet, and Courtaulds lost some of their previous gains after the chairman's remarks. Bank shares were lower in sympathy with gilt-edged. Movements in the miscellaneous industrials section were generally adverse to holders; the outstanding exceptions were cement and some building material shares which returned to favour toward mid-week.

The oil market has not had a very cheerful time this week. Paris sold on a substantial scale and the attractions of other speculative markets were irresistible. With the uncertainty regarding the Mexican Government's policy and the continued disappointment of the hope of a further rise in retail prices, a general decline in prices ensued, in which Mexican Eagles suffered most.

The great excitement of the week has followed the boom in rubber shares. Conditions had improved steadily throughout last week and over the week-end dealers received an avalanche of orders from the public. These, with speculative buying to help, bore fruit in a chaotic market throughout Monday, when dealing continued by telephone long after the market had closed. On Tuesday there was a wave of profit-taking, but the turnover remained very large and losses were small. They were all retrieved late on Wednesday when the further rise in the commodity price removed any apprehensions which the cautious may have experienced. The tea market was quiet throughout the week, though tea-cum-rubbers shared in the rubber boom.

Paris selling affected Kaffirs and base metal issues this week. Even copper shares failed to make much headway for this reason. Gold shares generally remain dull, but later in the week the boom in commodity prices produced a sharp recovery in base metal shares, in which the tin group was prominent.

NEW YORK STOCK EXCHANGE

On Monday of this week there developed a reaction from the upward movement which had lasted throughout the previous week and had carried prices to new recovery high levels. The reaction was attributed in part to technical causes, and in part to the progress of the battle on the labour front for industrial unionisation. The agreement of the steel companies to accept collective bargaining had led to an optimistic hope that the issue was solved; second thoughts showed that only a major stoppage had been averted, and that there would be continued skirmishes and minor campaigns for a long time to come. Further strikes in the motor and steel industries led to a drop in motor and steel issues; oil and copper shares were higher against the trend on Monday. Tuesday saw renewed optimism struggling with strike news to control the market, and in mid-week the former won. One of the major causes of the rapid rise which occurred on Wednesday was the meteoric performance of commodities; under this influence steel and motor issues, oils and other commodity shares were strong, with sugar shares an outstanding exception. In the bond market industrial convertibles have been supported, but Treasury issues have been sinking steadily. The business outlook continues to be excellent, and *Iron Age* estimates steel mill activity for the week at 87 per cent. of capacity, against 85 per cent. last week.

By courtesy of the Standard Statistics Company, Inc., of New York, we print the following index figures of American values calculated on closing prices (1926=100):—

	1936		1937		Be- ginning of Year 1937	Feb. 24, 1937	Mar. 3, 1937	Mar. 10, 1937

THE PRUDENTIAL ASSURANCE CO. LTD.

Points from the Speech of
SIR EDGAR HORNE, Bart.

Chairman of the Company, at the 88th Annual General Meeting held at
Holborn Bars, London, E.C.1, 11th March, 1937.

Record Figures for 1936

ASSETS over £315,000,000.

NEW BUSINESS in Ordinary Branch exceeds £30,760,000.

EXPENSE RATIO in Industrial Branch again reduced and now at 22.8 per cent.

A Year's Work

PROGRESS IN THE EMPIRE. For life assurance business the Prudential is now well established in all the principal parts of the Empire. Overseas new business for 1936 over £8,000,000.

NEW BUSINESS. In the Ordinary Branch the new sums assured were £30,760,000, a record.

WAGE EARNERS' ASSURANCE. In the Industrial Branch the amount paid in claims by death and maturity of endowments was £8,700,000. Bonus additions to claims and surrenders amounted to over £1,900,000. The total working costs were reduced to 22.8 per cent., the lowest on record.

POLICYHOLDERS' BONUSES. The rates of reversionary bonus are: Ordinary Branch £2.60 per cent. for Whole Life, £2 per cent. for Endowment Assurances, and Industrial Branch £1.120 per cent.

PROVISION AGAINST ACCIDENTS. With the increase in road and other accidents, it is more and more apparent that the public should protect themselves by accident insurance.

COVER FOR FIRE RISKS. Experience shows that the business community does not sufficiently recognise that the loss of profits due to fire can to a great extent be covered by insurance.

BRITISH ASSETS. Over 81 per cent. of the assets are invested in the United Kingdom. Five years ago the corresponding figure was 68.1 per cent. Only 9.3 per cent. of the present assets are invested outside the Empire.

Total Income Exceeds £1,000,000 A WEEK

In calculating yields on fixed interest stocks noted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated by reference to the latest dividends, a count being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

CAPITAL ISSUES

THE new issue market has again passed a quiet week, although it has produced the first large-scale issue of recent times in *Houndsditch Warehouse Company* 5 per cent. redeemable preference shares at par and 5s. ordinary shares at 200 per cent. premium. This concern, which appears under good investment auspices, has a steady record of expanding profits. The goodwill payment is accordingly large, and the earnings yield basis on the issue price of the shares is low. The ordinary shares, however, are a speculative investment with apparently favourable long-term prospects to compensate for a small present yield. *R. B. Pullin and Company*, whose 2s. shares have been offered at 100 per cent. premium, is a scientific instrument concern. Three years ago the earnings of this company were no greater than £2,976. An 11·4 per cent.

Investment For Appreciation
by L. L. B. ANGAS

Author of *Coming Rise in Gold Shares* (Feb. 1931); *Coming English Boom* (Sept. 1931); *Coming Rise in Wall Street* (Apr. 1933); *Coming American Boom* (Aug. 1934), etc., etc.

Macmillan & Co., Ltd., St. Martin's St., London. Price 61 net

yield basis for this issue is not unduly high, for although the company's technical status is good, its capital is small and the marketability of its shares may in due course be affected. Statements "for information only" have been published by *Nunnery Colliery Company*, *Lake George Mining*, *J. F. Willis (Cinderella Shoes)*, and *Clifford Williams and Son*.

COMPANY MEETINGS

THE NATIONAL BANK OF EGYPT

BANK'S INCREASED PROFITS

EGYPT'S STRONG POSITION MAINTAINED

EFFECTS OF ANGLO-EGYPTIAN TREATY

SIR EDWARD COOK'S REVIEW

The thirty-seventh ordinary general meeting of the shareholders in the National Bank of Egypt was held on Thursday, March 11, 1937, at the head office of the bank in Cairo.

Sir Edward Cook, C.S.I., C.I.E. (the governor), presided.

DIRECTORS' REPORT AND ACCOUNTS

The directors' report was as follows:—

The directors present to the shareholders the balance sheet and profit and loss account for the year ending December 31, 1936.

The gross profit for the year, after providing for depreciation on the bank's buildings and furniture, for rebate of discount and for doubtful debts, amounts to:

£	s.	d.	£	s.	d.
			948,106	3	2

After deducting from this sum:—

For directors' fees	16,729	0	0
For current expenses	458,491	10	9

475,220 10 9

there remains 472,885 12 5

In conformity with Article 49 of the Bank's statutes a dividend of 4 per cent. is payable on the share capital 120,000 0 0

After this distribution there remains 352,885 12 5

Adding to this the balance brought forward from last year 206,984 4 0

the amount available is 559,869 16 5

From this amount the directors recommend the payment of an additional dividend of 11 per cent. on the share capital which will absorb 330,000 0 0

and to carry forward the balance of 229,869 16 5

The total dividend for the year will thus be at the rate of 15 per cent., equivalent to £1 10s. 0d. per share. An interim dividend of 8s. having been paid on September 1, 1936, there remains to be distributed the balance of £1 2s. 0d. per share.

REPORT OF THE AUDITORS

We have examined the books of the National Bank of Egypt and in our opinion the above balance sheet is properly drawn up so as to exhibit a true and correct view of the state of the bank's affairs as shown by the books. We have also verified the cash, notes and securities at the head office and at the Cairo and Alexandria branches and have found the same correct. The London returns have been audited and certified by Messrs Deloitte, Plender, Griffiths and Company, Chartered Accountants.

J. C. SIDLEY,

W. G. CARMICHAEL,

Chartered Accountants.

Cairo, February 8, 1937.

GOVERNOR'S SPEECH

Two events of major importance to Egypt have occurred since we last met: the re-alignment of certain European currencies and the conclusion of the Anglo-Egyptian Treaty.

No one among you and, I should think, scarcely anyone engaged in public affairs or with business interests here, will deny that Egypt stands to gain by anything which makes for greater freedom in her commercial relations with other countries. Her prosperity, her very solvency, depend on her export trade. She happily has many customers, for her cotton is the finest in the world. But if would-be purchasers are impoverished, or are pre-vented by restrictions imposed by their own governments from venting by transferring funds in payment, or are obliged to insure heavily against fluctuations in the exchange values of their currencies, the market for her cotton becomes narrowed, the price she obtains is affected and her own prosperity suffers.

We have therefore welcomed the currency changes made by several important countries last autumn, not because of their immediate consequences, but because of what, as we hope, they are leading to. I mean, first of all, the stabilisation of the leading currencies *inter se* and, secondly, the gradual demolition of that grotesque edifice of exchange restrictions, quotas, bi-lateral barter arrangements, sky-scraper tariffs and so on, which has at times threatened to bring international trade almost to a standstill.

The exchange arrangements made in September last, aiming at the relative stability of the pound sterling, the dollar and the franc, appear, so far as our information goes, to be working smoothly and there are indications that the leading countries are slowly evolving a new monetary technique, a new and more elastic form of the old gold standard. Other countries, whose currencies are in some measure dependent on or connected with one or other of those three, have felt the benefit of more stable exchanges. A promising beginning has also been made, by certain groups of countries, towards the removal of the restrictions I have referred to. In short, it is not too much to say that there has already been a substantial restoration of monetary equilibrium which, added to the recovery of raw commodity prices, has come as a tonic to the whole world.

All this is much to the good. We in Egypt, whose interests are so much concerned in the general well-being, earnestly hope that nothing will occur to arrest the extension of the improvement. We realise that, in a world which is busy re-arming, we do well to moderate our optimism. There are, moreover, other difficulties to be overcome. There is, for example, a belt of restrictionist countries which have got into a situation out of which they will not find it easy to extricate themselves. Even in those countries which are economically freer there are certain elements which should warn us against complacency. The boom, now so noticeable in Great Britain and elsewhere, is mostly confined to internal trade and appears, in some measure at least, to be dependent on the success of the arrangements made last autumn turns on the ability of the devaluing countries to maintain economic equilibrium at the new levels of their currencies; there is some danger of this proving difficult owing to an excessive rise in internal prices and in costs of production.

GOOD CONDITIONS

None the less, it cannot be denied that over a large part of the world, recovery is a fact; probably much of it will remain when

the artificial stimulus of re-armament expenditure comes to an end. Egypt has already felt the benefit. Nature, too, has been kind. This season's cotton crop has been of record size and there has again been a keen demand for it on the part of spinners abroad; the cultivators of cotton must have received this season from the merchants and exporters something in the neighbourhood of £E.26 millions, probably about £E.3½ millions more than in the previous year. The food crops have been good. The mortgage indebtedness of landowners is substantially less than before the war, while the prices of agricultural products are somewhat higher; those who are not hopelessly involved should now, therefore, be able to make headway in discharging their debts, assisted as they have been by the arrangements made by successive Governments on their behalf during the past five years with the mortgage institutions. As for the small agriculturist, who needs working capital for his seed, manure, etc., the facilities he can now obtain from the Crédit Agricole must have helped a great deal to keep him out of the hands of the moneylender. All the signs—such as savings bank deposits, the consumption of sugar, the state of the import trade—point to an appreciable increase in the national purchasing power. Egypt has further been fortunate in not having been obliged, like so many countries, to grapple with intractable problems of State finance or to add to the national debt in order to finance a series of Budget deficits. Even in the lean years of the slump, she was able to maintain her high reputation for the excellence of her financial administration. Her budget is well balanced; there is a substantial Treasury reserve, the accumulation of past surpluses; the balance of trade is satisfactory: her currency has for a generation been maintained without difficulty at a fixed ratio with the pound sterling; and her public debt, omitting the amount bought in by the State, is little more than two years' public revenues and only some £5 per head of the population.

RESULTS OF TREATY WITH GREAT BRITAIN

Is this enviable position likely to be compromised by the other important event of 1936, namely, the conclusion of the Treaty with Great Britain? We are not here concerned with its political aspects, though we may allow ourselves to welcome cordially an alliance between Egypt and a country which is not only a great world power, but also her best customer and bound to her by many years of co-operation. There are, however, in some quarters apprehensions of eventual repercussions, in the financial and economic fields, of the political freedom which Egypt has now obtained. Time alone can prove whether the Cassandras are right. I myself can only speak of what I see. Previous Governments, however desirous of ameliorating the condition of the people and of consolidating the country's economic strength, have been handicapped by the overshadowing of internal affairs by questions arising out of Egypt's political status. From that preoccupation His Majesty's Governments will henceforth be free. I have had too much experience of the results of putting new wine into old bottles to have retained any illusions as to the miracle-working power of political changes or reforms. But I am unaware of any reason why an administration, that is more responsible to and dependent on the people's will, should be less regardful of the people's interests. I have so far seen no signs, rather the contrary, of any desire to depart from those traditions which are the foundation of Egypt's financial strength—to adopt tempting but unhealthy expedients, to follow the broad and easy path of inflation, or to tamper with the sound position of her currency—and, until I do, I remain an optimist as to Egypt's financial future.

Elsewhere, both economists and practical financiers, marking the trade revival, which in some countries has just commenced and in others is already well-established, are now discussing what steps should be taken to prevent the boom from getting out of hand and how best to avoid, or at least to mitigate, the usual post-boom slump. Financial technique has greatly evolved in the last twenty years and no doubt we shall learn a good deal from the issue of this debate. But of one thing I am confident. If, despite the efforts of eminent planners, trade cycles refuse to be flattened out and if the present years of prosperity are again followed by a series of lean, those countries will suffer least which have most closely held to the old and well-tried maxims and meet the slump with their national finances in order, their budgets in equilibrium and their currencies undamaged by manipulation—as Egypt's are to-day.

PROBLEMS BEFORE THE GOVERNMENT

I do not mean that the task before the Government is simple. Many problems confront them. Egypt's defence expenditure has hitherto absorbed an exceptionally small proportion of her

revenues; there will now, as the result of the Treaty, have to be financed a heavy initial outlay, together with some new recurring charges. We know that this matter is receiving the careful attention of those responsible for the financial administration; Egypt has fortunately her "bas de laine" in the form of a good reserve and, with a continuance of the present growth in prosperity, I have no doubt that the necessary funds will be found without undue strain on the national resources or postponement of those schemes for the betterment of living conditions which, by common consent, are so urgently needed.

A more difficult problem, which can only be solved by long-range methods over a number of years, arises from the fact that the population is increasing faster than the growth of the cultivable area. Thanks to the efforts and enthusiasm of a group of far-seeing men, the number absorbed in local industries has of late years substantially increased. But such possibilities are limited, and, though not immediately pressing, the problem will sooner or later have to be solved how to anticipate and prevent in Egypt those social and other difficulties which have so often arisen from increasing pressure on the soil.

But this is looking far ahead. Meanwhile, in the new era that has opened for Egypt, you will, I am confident, desire us to continue our policy of close co-operation with whatever Government is in charge of the administration. Three years ago I spoke to you of the evolution of the Bank since its foundation in 1898 and of the much more responsible position it had gradually come to occupy in the country. I reminded you that consideration for the public interests and our duty to the Government obliged us on occasions to be guided by motives other than those of profit-making and also, as a general rule, restricted the character of the business in which we engaged. At the same time, our purely commercial business is of importance, both to the country and to you as shareholders. The general improvement in business conditions in Egypt during the past year is reflected in the figures which you have before you, from which you will see that the net profits, after making full provision for bad and doubtful debts, depreciation and other contingencies, have increased from £426,684 to £472,885. We propose, with your approval, to pay a dividend of 15 per cent., absorbing £450,000, and to add the remaining £22,885 to the carry-forward, on which, you will remember, we made a draft of £23,315 in the previous year.

FURTHER IMPROVEMENT IN SUDAN

There has been a further improvement in conditions in the Sudan, the total of whose foreign trade has increased for the third year in succession. Her cotton, cotton-seed and gum, which account for 75 per cent. of the exports, were again in good demand. An abnormally large quantity of maize was exported, and the stocks accumulated from previous years were quickly liquidated. The import statistics show that the purchasing power of the people continues to increase: it is satisfactory to note that the Sudan is now purchasing more of her requirements from Egypt. The past few years have shown a remarkable increase in the yield obtainable from cotton in the important Gezira area; this is mainly the fruit of painstaking research which has evolved a type of cotton much more resistant to pests than that formerly sown. The cultivation of rain-grown cotton in the Nuba mountains and the Kordofan provinces is being further extended by the Government, and the conditions in the Tokar area are also very satisfactory.

The general improvement in conditions is reflected in the financial position of the Government. The Budget is well balanced, and the Government, while providing for various administrative improvements, is prudently building up reserves against the less favourable years that experience shows are to be expected. As for future prospects, it is difficult to look far ahead, owing to the great dependence of Sudanese trade on climatic conditions, but the outlook is good; weather conditions have been favourable in the important cultivated areas, crops throughout the country are excellent and it seems certain that another prosperous year is in sight.

CHANGES IN THE BOARD

There have been several changes in the board since our last meeting. By the resignation of Dr Hafiz Afifi Pasha, we have lost a valued colleague and a wise counsellor; our loss is, however, the country's gain, for no more suitable representative could have been chosen as Egypt's first Ambassador in London.

During the course of the year we invited two new members, Sadek Wahba Pasha and Ahmed Abdel Wahab Pasha, to join the board. Both of them have rendered distinguished service to their country, the former both as a Cabinet Minister and as a representative of Egypt abroad, the latter as Under-Secretary of State,

and subsequently as Minister for Finance. Abdel Wahab Pasha's great experience and exceptional insight into Egypt's economic and financial problems are of particular value to the board of the National Bank.

Ali Maher Pasha cannot be called a new member, for he was first elected to the board in 1929. Since he was last a member he has held with great distinction the highest office in the State, and, now that he is once more a private individual, I am sure you will welcome his return.

These three nominations require your confirmation. The directors retiring by rotation are M. Léon Suarés and Sir Otto Niemeyer; I am glad to say that they offer themselves for re-election.

HUNGARIAN GENERAL CREDITBANK

SUCCESSFUL RESULTS—INCREASED PROFIT

BOARD'S SOUND DIVIDEND POLICY

At their meeting, held on March 2nd, the board of directors of the Hungarian General Creditbank approved the balance sheet for the business year 1936. The profit and loss account closes (apart from the profit brought over from 1935), after deducting the amounts proposed to be written off, totalling 986,961.07 pengő, shows a net profit of 2,388,741.93 pengő, as against 2,214,569.68 pengő in the previous year. This amount, plus the balance of 1,801,217.90 pengő brought over from 1935, leaves 4,189,959.83 pengő available for the general meeting.

ALLOCATIONS

With respect to the appropriation of the net profits, the board—with a view to the general interest of credit policy attaching to this question—decided, duly weighing all considerations, to propose to the general meeting to suspend again the payment of a dividend this year. Accordingly, the board resolved to move to the general meeting, convoked for March 19, 1937, to allocate out of the amount at their disposal: 500,000 pengő for the endowment of the ordinary reserve fund, 200,000 pengő for the depreciation reserve fund, 1,000,000 pengő for the employees' pension funds, and to carry forward to the account of 1937 the remaining 2,489,959.83 pengő.

The Bank was again able during the past year to increase its current business activity and enlarge its custom accordingly. The brisk trend of the Bank's business is shown by the extension of the field of both ordinary and new business, in particular, in the rise in the turnover of foreign exchanges and of current accounts, in the advance of the cash turnover and, also, in the increase in the number of customers. The significant advance in the amount of deposits entrusted to the Bank is likewise deserving of mention.

INCREASED DEPOSITS

Deposits advanced, as against the previous year, by 9.3 million pengő (from 199.2 to 208.5 million pengő) whereof 3 million pengő (66.2 as against 63.2 million pengő in the previous year) represent the increase in savings deposits, and 6.3 million pengő (from 136 to 142.3 million pengő) that of current account deposits. This advance is particularly remarkable in view of the slow pace at which the accumulation of capital moves in Hungary, especially since it proceeds but to a slight extent from undertakings belonging to the sphere of interests of the Bank, and is due, in the main, to deposits on behalf of new customers.

FOREIGN LIABILITIES

Foreign liabilities, which in the balance sheet are included in the item "Sundry Creditors," stand at 29.5 million pengő, and show, as compared to their figure of 43.9 million pengő last year, a setback of 14.4 million pengő. It must be observed here that the foreign liabilities of the Bank declined by the end of the year 1936 to one-third of their amount in 1931.

Cash in hand and clearing account deposits aggregate 21.2 million pengő, as against 22 million pengő in the previous year. The amount of debtors and bills, standing at 214.6 million pengő, shows likewise no notable change, as against last year's figure of 216.2 million pengő; debtors figure at 129.6 million pengő and bills at 85 million pengő.

BOARD'S CONSERVATIVE VALUATION

Stocks and participations figure at 58.1 million pengő, as against 58.7 million pengő in the previous year. Last year, already, the

LONDON AND NORTH-EASTERN RAILWAY COMPANY

IMPROVED RESULTS

The fourteenth ordinary general meeting of the London and North-Eastern Railway Company was held, on the 5th instant, at the Hotel Great Central, London.

Mr William Whitelaw (the chairman), in the course of his speech, said: The development of our passenger traffic has continued in a gratifying manner, about five and a half million more passenger journeys, exclusive of season tickets, having been added to the previous year's increase of eight millions, and our receipts have increased by £482,000. Receipts from first-class fares showed an increase of £69,395, from second-class £9,979, from third-class £367,000, and from workmen's fares £36,246. Receipts from parcels and miscellaneous traffic increased by £27,000.

There has been a welcome, though moderate, improvement in our freight carryings. From merchandise (excluding Classes 1 to 6) and livestock traffic we have obtained an increase of about £551,000, while our receipts from minerals and merchandise in Classes 1 to 6 were £174,000 higher. These increases would have been considerably larger but for the poor agricultural results of the year. The originating tonnage of sugar beet fell by 370,000 tons, or 30 per cent., and our potato traffic was 55,000 tons lower (or 9 per cent.), these decreases being due partly to poor crops and partly to road competition. On the other hand, iron and steel originating traffic of all kinds increased by 1,851,000 tons, or 17 per cent., and timber traffic by 142,000 tons, or 7 per cent. An increase of £488,000 in receipts from coal and coke was entirely due to landsale business. The originating tonnage of landsale coal increased by 3,237,000 tons, or 8½ per cent., while the originating tonnage of shipment coal decreased by 511,000 tons, or 1½ per cent. The continued decline in the tonnage of coal carried for shipment affects both our rail and dock revenue to a serious extent.

NET REVENUE AND WAGES

Net revenue declined after 1930 until it reached the low level of £26,425,000 in 1932. Then an improvement began, and net revenue gradually increased until it stood at £35,731,000 last year. That figure is still £1,985,000 below the net revenue for 1930, and, on the results of that year, wages and conditions were modified by the Wages Board in Decision No. 119, which was accepted by all.

The position to-day is that wages and conditions of labour have been improved since March, 1931, to an extent which has cost the companies nearly £2,500,000 a year, while their financial position is, at the end of 1936, still worse by nearly £2,000,000 than it was at December 31, 1930, on the accounts of which year Decision No. 119 was based.

In the view of your directors no further improvement in salaries and wages of the conciliation grades or in the conditions of labour is warranted until the financial position of 1930 has been secured to the stockholders.

The judicial decisions of the House of Lords as to the interpretation of the Railways (Valuation for Rating) Act, 1930, to which reference was made last year, resulted in negotiations between the local authorities and the four main line railway companies which culminated in an arrangement as to the amount at which the annual value for rating purposes of those parts of the undertakings of the four main line railway companies which are situated in England and Wales should be fixed. Under that arrangement the amount of this company's valuation for each of the years 1931-41 was agreed at a compromise figure of £1,100,000, which compares with a previous valuation of roughly double that amount.

PROSPECTS

In speaking of our immediate prospects we are entitled to anticipate some improvement during the year in our traffic of all kinds, especially in the carriage of coal; on the other hand, we cannot ignore the certainty that our locomotive coal will cost us more as our older contracts expire, and that the higher rates of wages which ruled for only 4½ months last year will be payable for the full twelve months of the current year. There is also the certainty that the prices of iron, steel, copper and all electrical equipment will show large increases over those ruling during 1936; it is possible that increased costs will be so considerable as to require us to modify or even abandon some of the works which we have in contemplation in connection with the Railways (Agreement) Act, 1935.

The balance available enables us to recommend the payment of the dividends on the first preference stock and the redeemable preference stock at the full rates, and a dividend of 10s. per cent. on the second preference stock.

The report was adopted.

assessment of stocks and participations was well below their market rate at December 31, 1935. The reserves resulting herefrom have experienced quite a considerable rise since, for the very noteworthy advance of quotations within the year 1936 was altogether disregarded.

The mortgage loans of the Bank aggregate 31.2 million pengő, as against 32.6 million pengő in the previous year.

The guarantees of the Bank stand at 41.1 million pengő, and show, as against the previous year, a numerical decline of 3 million pengő. This, however, is attributable wholly to the depreciation in rates of foreign exchanges, whereas, apart from this decline in rates, an advance of guarantees, undertaken on behalf of customers in Hungary, might be registered.

PROFIT AND LOSS ACCOUNT

With regard to the profit and loss account, it is to be mentioned that, owing to the further shrinkage of the interest margin, the yields from interest have suffered a decline, as against the previous year, whereas other earnings show an advance. The results of the goods departments continued to be favourable. Expenditure, on the other hand, shows an advance, due partly to the an increased outlay for personal expenses, consequent to the engagement of new employees, made necessary by the lively business activity and partly to the increased burdens of taxation. Social measures for improving the situation of the staff, for placing the unemployed younger generation and extraordinary donations for charitable purposes also contributed to raise this item.

Finally, the board is able to show that last year the Bank's business activities, embracing all fields of Hungarian economy, have materially increased, owing to the gradual revival of economic circulation and by exploiting intensely all business opportunities that offered. These business activities being based on the ever-extending custom of the Bank, on the one hand, and on the undertakings belonging to her sphere of interests, on the other, the Bank means to continue cultivating as hitherto with an equal care her relations to these two important factors of her economic activity.

ANGLO-INTERNATIONAL BANK, LIMITED

CONSERVATION OF LIQUID RESOURCES

The eleventh ordinary general meeting of the Anglo-International Bank, Limited, was held, on the 5th instant, in London. Sir Bertram Hornsby, C.B.E., the chairman, in the course of his speech, said:—During the last six years Austria has steadily pursued a policy of retrenchment and reform. Her banking structure has been reorganised, the currency has been kept stable, external credit has improved, and in November last it was considered unnecessary to prolong the regime, instituted in 1922, under which the national finances had been subject to the control of the League of Nations.

Czechoslovakia's foreign trade increased in value by about 1,307 kronen, the total turnover in 1936 being 15,996 million kronen. The balance in her favour fell, however, from 1,203 million kronen to 176 million kronen.

According to such figures as are available, Germany's foreign trade, which showed for 1934 an adverse balance of 284 million marks, and for 1935 a favourable balance of 111 million marks, yielded a surplus of 550 million marks in 1936—an improvement over the three years of 834 million marks. It is regrettable that this striking improvement has not resulted in substantial payments to Germany's foreign creditors and that it has been necessary to agree to a prolongation of the German Standstill Agreement for a further year with only minor modifications.

Hungary has benefited considerably during the past year from higher grain prices, her tourist traffic is proving an increasing source of revenue and her Budget is in a healthier condition than at any time during the last seven years.

Jugoslavia's State finances have improved, and she would appear to be justified in looking forward to a steady return to prosperity.

In the still unsettled state of international affairs we are adhering to the policy of keeping all available resources in liquid form; in all the circumstances, revenue must necessarily be restricted; on the other hand, we are effecting every possible economy, and I may say that since 1931 our expenses have been more than halved; current expenditure is more than covered by current income.

The report was unanimously adopted.

BRITANNIC ASSURANCE COMPANY, LIMITED

PROGRESS IN ALL BRANCHES

STRONG FINANCIAL POSITION

MR J. A. JEFFERSON'S ADDRESS

The seventy-first annual ordinary general meeting of the shareholders of the Britannic Assurance Company, Limited, was held on March 5 at the chief offices, Broad Street Corner, Birmingham, Mr J. A. Jefferson, F.I.A., chairman and general manager, presiding.

Mr Jefferson, in moving the adoption of the report, said:—

The directors' report of the year's working is one of sound and solid progress in all branches—the increase in funds for the year of £1,860,000 constituting a record.

You will appreciate that the finding of new investments has been extremely difficult. We have had to buy gilt-edged stocks despite the belief that they would ultimately depreciate in value, and indeed some of our purchases made in the last two or three years already show some depreciation, but, on the other hand, I am pleased to tell you that any fall that has occurred in Government stocks during the past year has been covered several times by the appreciation of our ordinary stocks during the same period.

In view of these remarks I offer no excuse for again transferring £100,000 to investment reserve fund, namely, £40,000 from the ordinary branch and £60,000 from the industrial branch surpluses.

At our meeting last year I expressed the opinion that our financial strength was not exceeded by that of any other life office in the country, and I feel it will give pleasure to everyone connected with the Britannic—policyholders, staff and shareholders alike—when I state that our position at the end of 1936 was even stronger than at the end of 1935.

NEW INDUSTRIAL BRANCH PROSPECTUS

I referred last year to the introduction of a new industrial branch prospectus, and it is now possible to review a complete year's working. The prospectus was designed to attract more business at the younger ages and on the lives of the bread-winners, and I am pleased to report that our efforts to this end have had the desired effect—the average sum assured per policy issued showing a welcome increase.

GENERAL BRANCH

As stated in the directors' report, the premium income amounted to £184,614, being an increase of just over £14,000 on last year's figure. The profit for the year of £9,475 shows a substantial advance.

REPORT AND ACCOUNTS

In the life branches the total funds now amount to £27,687,738. The total income in these branches amounted to £6,432,000, representing an increase of £224,000 over the previous year. The total claims during the year were £2,390,000, which is actually some £240,000 less than in the previous year. The total claims paid by the company to date amount to over £45,000,000.

ORDINARY BRANCH

Our premium income amounted to £1,340,656, showing an increase of £40,863 over the previous year. The average sum assured per new policy issued was £191 as compared with £177 a year ago, and our records show that we are doing more and more whole-life business, which to me is a pleasing feature.

Whilst we are still able to show the excellent gross rate of interest of £5 4s. 2d. per cent., this is some 3s. per cent. less than that reported for 1935, and as the result of heavier income tax our net rate of £4 7s. 8d. per cent. shows a reduction of no less than 3s. 10d. per cent.

Claims by death are practically identical with last year, but maturities are lower by over £127,000.

Despite the increased amount of new business to which I have already referred, I am pleased to say there has been a slight fall in the total expense rate. This rate now amounts to 13.19 per cent., which I consider very satisfactory.

Notwithstanding the fall reported in the net rate of interest

Mr Britt was able to report a small increase in the surplus earned, and the directors have, therefore, no hesitation in maintaining the present rate of bonus to policyholders, namely, 38s. per £100 sum assured.

After making the transfers shown to investment reserve fund and to the staff pension fund, the total ordinary branch funds at the end of the year passed the tenth milestone and amounted to £10,515,284, showing a record increase of £722,151.

INDUSTRIAL BRANCH

The premium income in the industrial branch is now £3,784,107, showing an increase of £136,253 over the previous year. The total funds amount to £14,250,000, and show a record increase of £866,045.

The gross interest yield in this branch, which still stands at the very satisfactory figure of £5 5s. 8d. per cent., shows a drop in comparison with last year of 2s. 10d. per cent. Here again, owing to heavier income tax, our net yield shows a still greater drop of practically 4s. 4d. per cent. Despite this we are still able to show an excellent net yield of just over £4 13s. per cent.—a yield which still gives a satisfactory margin of £1 13s. per cent. over and above our valuation rate of 3 per cent.

On the other side of the account our claims by death amounted to the record figure of £1,216,620, and included in this figure is the substantial sum of £57,794 added voluntarily as cash bonuses.

In regard to our claims under maturing policies, including the sum of £40,821 added voluntarily as bonuses, we paid away to living clients the sum of £533,992. Surrenders for cash amount to £132,770 which I am pleased to say shows a further reduction of just £10,000, and reflects the more prosperous times we are now experiencing.

There has been a reduction in our total expense ratio in this branch of 1.15 per cent. to 33.24, and this is the more gratifying following as it does the decrease in our expenses of three-quarters of one per cent. in the previous year.

Once again we have allotted the substantial sum of £225,000 to be used for the benefit of Britannic policyholders, and the sum of £16,500 has been set aside for British Legal policyholders.

BALANCE SHEET

On the liability side the general reserve fund has been increased to £425,000 by again transferring £100,000 from profit and loss account. This is in accord with our policy of building up reserves during times of prosperity.

Our investment reserve funds now amount to £1,500,000, being £500,000 in the ordinary branch and £1,000,000 in the industrial branch, and I am sure you will be pleased to know that they are reserves in every sense of the word, as the market values of our assets are far in excess of the values as shown in the balance sheet.

Turning to the assets side, British Government securities have increased by £1,288,435 and constitute 23.08 per cent. of our total assets.

Our holding under the heading of municipal and county securities has increased by £116,712, and this is largely made up of money lent to municipal authorities on short-term mortgages.

We have, during the year, reduced our holding in foreign government securities from £614,496 to £474,212, and foreign municipal securities also show a substantial decrease of practically £64,000; in fact, our entire holding in foreign securities of all kinds amounts to only four and a half per cent. of the total assets.

Debenture stocks and preference stocks show an increase of £81,782 and £175,914 respectively, and once again our ordinary stocks show the second highest increase during the year of £367,347. Our holdings have been selected with the greatest care, and at the beginning of 1936 they showed a very considerable appreciation over cost prices, whilst during the year 1936 this appreciation improved still further so that our position in regard to these investments is very satisfactory.

The directors' report concludes with an expression of thanks to the staff of the company both inside and out.

Mr Murray Laing, in seconding the report, said a most satisfactory feature of the year's results had been the fact that both in the ordinary and industrial branches they had been able not only to maintain the rate of bonus to policyholders out of the profits earned in the year, but to add to the unallotted balance carried forward to the succeeding year.

The report and accounts were unanimously adopted.

SCOTTISH EQUITABLE LIFE ASSURANCE SOCIETY

INCREASE IN NEW BUSINESS

STABILITY OF INTEREST RATES

The annual general meeting of the Scottish Equitable Life Assurance Society was held, on the 11th instant, in Edinburgh.

The Right Honourable the Earl of Stair, D.S.O. (president of the society) was in the chair.

In submitting the report and balance sheet for approval, the chairman of the board of directors, Lieut.-Col. the Right Honourable the Viscount Younger of Leckie, D.S.O., D.L., referred to the fact that the accounts covered the period from March 2 to the fact that the accounts covered the period from the directors' December 31, 1936, the broken period arising from the directors' decision, announced in the Press in October last, to change the date of the society's accounts to correspond with the calendar year.

Various considerations led to this decision, the most important being that future legislation may probably make such a change compulsory. Further, in view of the anticipated adoption at the next actuarial investigation of the new mortality tables, which are now available, duplication of work is avoided by making the change in the financial year now.

RATE OF INTEREST MAINTAINED

Over the ten months the average gross yield has been at the rate of £5 os. 8d. per cent. per annum on the whole funds. To get the true effective gross rate the balance sheet reserve of £250,000 and the carry-forward of £131,198 should be omitted from the calculation, which brings out a yield of £5 4s. 3d. per cent. A comparison with the figures for the previous years of the quinquennium is instructive:—

	Per cent.
10 months to December 31, 1936	£5 4 3
Year to March 1, 1936	5 4 3
Year to March 1, 1935	5 4 1
Year to March 1, 1934	5 4 10

The variations are negligible and, in view of the general decline in interest rates over the period, the stability of the society's interest earnings may be regarded as very satisfactory.

CLAIMS EXPERIENCED

Claims by death fluctuate materially from year to year, and, as was anticipated, the exceptionally low mortality which was referred to at last year's meeting has not been continued, the period under review exhibiting results approximating to the society's normal.

APPRECIATION IN STOCK EXCHANGE SECURITIES

A valuation of Stock Exchange securities shows further appreciation. At the end of each year in the present quinquennium an increase in the margin between our book values and the corresponding market values has been recorded. The hidden reserve thus created is a substantial one, and it is important to have such a buffer against depreciation in Stock Exchange values—a minor example of which has been seen in many classes of securities since the date of our accounts.

INCREASED NEW BUSINESS

New proposals completed amount to £2,013,347, or £1,595,132 after deducting reassurances, which is £166,101 in excess of the corresponding period of the year to March 1, 1936. The directors deem it prudent to observe a strict limit in respect of the amount at risk on any one life.

The adoption of the report was duly carried, and, on the motion of Sir Robert Gilmour of Liberton and Craigmillar, Bt., the retiring directors were re-elected and Mr Howard F. Bowser was elected an extraordinary director of the society.

UNITED KINGDOM PROVIDENT INSTITUTION

ANOTHER RECORD YEAR

The annual meeting of the members of the United Kingdom Temperance and General Provident Institution was held, on the 10th instant, in London.

Sir Ernest J. P. Benn, Bt. (the chairman), in the course of his speech, said:—There are differences of opinion about the virtues attaching to cheap money and low interest rates, and for my part I view with satisfaction the recent indication of an end of the period of abnormally low figures. There was until quite recently a danger that the authorities, with the acquiescence of the big banks, might endeavour to prolong the period of cheap money unduly, thus bringing about a trade boom of unnatural dimensions. As I reminded you last year, insurance premium tables and bonuses are calculated upon rates above those obtainable in the last few years and if money were always to be artificially cheapened then premiums would have to advance and bonuses would need to be reduced. You will see, therefore, that we are not in any way alarmed by the present indications of a return to more normal conditions.

GROWTH IN FUNDS

Turning to our own fund, I was able last year to report to you that the book figure of £23,000,000 at which our life fund stood was appreciably below the real value of our assets. Your investment department has functioned to such good effect that no less than three-quarters of a million was added to our appreciation during 1936. We have escaped the worst of the recent fall in market values, and even to-day our secret reserves are in round figures as substantial as they were a year ago. This is, of course, quite apart from, and in addition to, the £800,000 increase in our funds shown in your accounts.

Commodity prices rose between 1933 and 1935, and, in view of the abundant and growing output of gold, are likely to continue to rise. Similarly, interest rates commenced to rise in the years 1935-36, and it would seem that, apart from some new sort of official manipulation, they are likely to continue to rise for some time to come.

Last year I was able to report an increase of net new business of more than £500,000 over the preceding year, an exceptional increase due to special circumstances, such as the revision of premium rates and the fact that 1935 was our bonus year. It is therefore the more gratifying to report that once more all previous records have been broken. Our satisfaction in this result is increased by the fact that the new business of 1936 is of a more satisfactory character. There was a satisfactory rise in the amount of whole life assurance written by us. For the past two years I have stressed the special value of this type of cover, the original and still the best and cheapest of all forms of assurance, and the argument is as good as ever to-day.

Speaking from this chair only three years ago, Lord Clwyd remarked that we were within measurable distance of the £4,000,000 mark. Now we have passed the £4,600,000, and although we have still some distance to go to attain the £5,000,000 I, for one, should hesitate to say that our wonderful field force will not, in the very near future, reach the next milestone in their unending marathon.

Both gross and net rates of interest earned on the life assurance fund show a rise of one penny as compared with the rates earned in 1935. Seeing that we have also managed by means of careful exchanges of investments to secure a further appreciation of capital values, this result may be regarded as highly satisfactory. The mortality of our members during the past year has been decidedly lighter than the general average and appreciably better than that of the previous year.

DOUBLE SECURITY PENSION POLICY

In recent years there has developed a strong desire to insure a guaranteed income rather than a lump sum, and our Family Man's policy was the first important manifestation of this tendency. In addition to the lump sum at death the Family Man's policy provides an income payable to dependents in the event of the premature death of the assured and continuing during the period when this provision is most likely to be required. We have recently introduced the Double Security Pension policy. The new policy, while not superseding the Family Man's contract, makes greater provision for those cases where death takes place later and the widow survives her husband by a long period. We believe this policy makes a definite step forward in the practice of life assurance.

The report and accounts were adopted.

HARRODS, LIMITED

LARGE INCREASE IN PROFITS

The forty-seventh annual general meeting of Harrods, Limited, was held, on the 8th instant, Sir Woodman Burbidge, Bt., C.B.E. (chairman of the company), presiding.

The Chairman, in moving the adoption of the report and accounts, said:—I always look forward with pleasure to these annual meetings, but my pleasure is increased this year by the very satisfactory results I am able to put before you. The total net profit for the year, after charging all working expenses, depreciations and directors' fees, is £800,320, an increase over the previous year of £70,889. This net profit is the second largest in the history of the company. We still maintain our succession of increases in net profit. Comparing the year 1933 with the year 1937, a period of five years, the increase in net profit is £161,671, or more than 25 per cent.

The gross profit on trading shows an increase of £141,400 at £2,434,864. This result is a reflection of the very satisfactory increase in the total volume of our trade for the year. Dividends received from the subsidiary companies, Dickins and Jones and D. H. Evans, amounted to £126,856, an increase of £6,690.

I now come to the profit and loss and appropriation account. There is a balance available for distribution of £640,776. It is proposed to pay a final dividend of 11 per cent. (making 16 per cent. for the year) and a bonus of 2½ per cent. on the ordinary stock, leaving a balance to carry forward of £191,725. In future the directors propose, assuming, of course, that the annual net profits of the company justify it, to pay a dividend on the ordinary stock of 16 per cent., and any increased distribution recommended will be in the form of a bonus.

RESULTS OF SUBSIDIARIES

The trading results of our Manchester branch for the past year were satisfactory. We are in the favourable position of being able to report an increase, not only in the volume of sales, but also in the net profit earned.

The subsidiary, Dickins and Jones, Limited, also shows improved trading results for the year. The net profits (before deducting debenture interest and preference stock dividend) amount to £120,504, an increase of £6,361. They have raised the dividend on the ordinary stock to 12½ per cent., against 10 per cent. for the previous year. The net profit, after charging debenture interest, shows an increase of £55,000 over that of four years ago.

The net profit for the year of our subsidiary D. H. Evans and Company, Limited, is £114,477, which is a small decrease of £974 on the previous year. I consider this an exceptionally good result, having regard to the fact that during the whole of the period under review they have been rebuilding the front portion of the store on Oxford Street.

After crediting the surplus arising from the sale of the eastern block of the Oxford Street premises, this company's general reserve amounted to £802,000, and with subsequent transfers from profit and loss it now stands at £822,505. D. H. Evans propose to capitalise £599,806 of their general reserve account and to issue fully-paid ordinary shares for this amount as a bonus to Harrods.

The investment in D. H. Evans appears in Harrods balance sheet at £581,502. This amount represents the cash consideration of £281,308, and the par value of the 300,194 Harrods ordinary shares of £1 given to D. H. Evans shareholders in exchange for their shares. Although these Harrods ordinary shares were issued at par, they were quoted on the market at the time of issue in June, 1928, at more than three times this figure, and it will, therefore, be seen that on this basis the real cost of the ordinary shares of D. H. Evans was considerably in excess of the present book figure of £581,502. An adjustment to bring this figure more into conformity with such real cost may be given effect to in the reserve in Harrod's balance sheet next year.

CURRENT YEAR'S OUTLOOK

As to the prospects for the current year, I take quite a hopeful view, not only as to a continuance of the trade recovery, but I believe the current year will witness a greater and even more widespread development than the year 1936.

Coming to our own particular business, I am of the opinion that the retail distributive trade has even better times ahead. My review with you to-day cannot, I feel sure, have failed to impress you as to the financial strength and stability, efficient organisation and sound administration of this business, also that in every other respect we are prepared and well equipped to reap the fullest advantage from the continuing prosperity to which I have referred. It is still true that "there is only one Harrods."

The report and accounts were unanimously adopted.

DAVIS AND TIMMINS LIMITED

DIVIDEND DOUBLED—GOOD PROSPECTS

The thirty-eighth annual general meeting of Davis and Timmins Limited was held, on the 10th instant, in London.

Mr F. Le Neve Foster (chairman) presided, and in moving the adoption of the report said that the results showed a substantial advance on those of the previous year. The net profit carried down was £35,218, which was more than double the figure for the previous year of £17,118. In addition, following the precedent of the last two years, they had retained a proportion of the profits of their principal subsidiary company in that company as a measure of prudence. The directors recommended a final dividend on the ordinary shares of 12½ per cent., making 17½ per cent. for the year, as against 8 per cent. for last year. The balance shown on general reserve and undivided account of £82,071 exceeded the amount of ordinary capital and covered goodwill and patents, £39,307, more than twice.

It was proposed to subdivide each of the issued and unissued £1 ordinary shares into four shares of 5s. each. It was also proposed to make an issue of 20,000 ordinary shares of 5s. each by offering the same with renunciation rights to the ordinary shareholders in the proportion of one new share for every 16 ordinary shares of 5s. each held. The price proposed was 15s. per share, which compared with the market price should represent a small free-of-tax bonus to shareholders.

Their order book to-day was in a better state than for many years past and perhaps on record, outside the war years. Of the orders on hand, armaments contracts represented only a very small proportion. With the benefit of increasing works efficiency they had every reason to look forward to another good year.

The most striking event affecting their business which had happened since last they met was a substantial rise in the price of copper and other base metals affecting their raw materials.

During the short period from the commencement of this year, the price of brass rod had increased by over 60 per cent. Some reasonable and steady rise in commodity prices from the low level of the past few years was to be expected, but it was difficult to believe that so steep an increase was attributable entirely to genuine trade requirements.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended March 6, 1937, amounted to £27,904,000, against ordinary expenditure of £27,128,000. After allowing for a decrease in Exchequer Balances of £317,891, the operations for the week, as shown below, increased the gross National Debt by £1,657,000, to approximately £7,928 millions.†

INCREASED TIN DIVIDENDS.—Some important tin dividends are announced. Sungei Besi Mines is paying an interim of 2½ per cent. against 7½ per cent. Ayer Hitam Tin Dredging is paying an interim dividend of 15 per cent., also a bonus of 5 per cent., against an interim of 5 per cent. a year ago. Pelephat Tin is paying an interim dividend of 2½ per cent. on March 22nd, and Kepong Tin is maintaining its interim distribution at 2½ per cent. Tanjong Tin is paying an interim dividend of 5 per cent., and Pari Tin an interim of 7½ per cent. against 2½ per cent. Tronoh Mines interim of 12½ per cent., against 7½ per cent. Jdris Hydraulic Tin is paying an interim dividend of 5 per cent., against 2½ per cent. Kinta Tin pays 5 per cent. against 2½ per cent. and Southern Tronoh Tin is paying 7½ per cent., against 2½ per cent.

MAYPOLE DAIRY.—Deferred ordinary dividend of 5 per cent. for 1936, against 4½ per cent.

HOME AND COLONIAL STORES.—No dividend on ordinary shares for 1936 (as for 1935).

MEADOW DAIRY.—Dividends for 1936 of 10 per cent. on preferred ordinary and 5 per cent. on ordinary (same).

SETTLE, SPEAKMAN AND COMPANY.—Ordinary dividend 8½ per cent. for year against 7½ per cent.; to reserve, £15,000 (against £10,000); forward, £14,174 (against £11,451).

CABLES INVESTMENT TRUST.—Interim ordinary dividend 2 per cent. Dividend for first 11½ months 1½ per cent.

CAMMELL LAIRD AND COMPANY.—Net profit £171,653 for 1936, compared with £110,688 for 1935. Ordinary dividend raised from 3½ per cent. to 5 per cent. £22,389 carried forward.

D. GESTETNER.—Interim ordinary dividend 17½ per cent., against 15 per cent. The net profit for half-year to February 28, 1937, £104,869; £81,882 in the corresponding period of last year. Both home and export sales for the six months have beaten all previous records.

SWAN AND EDGAR, LTD.—Net profit for year to January 31, 1937, £129,409, compared with £128,380. Ordinary dividend 8½ per cent., against 6 per cent. To staff pension fund £5,000, as before. Carry forward increased from £7

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

THE past week witnessed another burst of speculative activity on some of the principal commodity markets. Consumers, frightened by rumours of a coming shortage of supplies, are anxious to make sure of their requirements over a longer period; speculators, knowing that supplies cannot be increased appreciably in the short-run, are also bidding for the limited quantity of materials available. Consequently, quotations are being rushed up out of all relationship to the long-term trend of supplies and consumption. The implications of these developments are discussed in a Note of the Week on page 580.

The non-ferrous metal markets, in particular, have been caught in this vicious circle. Thus, the quotation for tin rose by no less than £50 per ton during the past week. Copper rose from £70 15s. to £77 2s. 6d. per ton, while the quotation for spelter was rushed up from £31 1s. 3d. to £36 5s. per ton and that of lead from £32 8s. 9d. to £35 18s. 9d. per ton. These movements cannot be explained by reference to underlying statistical trends. Nor is it possible to "take a view" concerning the future trend of quotations under present conditions. Among other primary products, rubber, cotton, raw sugar and wheat were also marked up sharply this week. Since the heavy shipments of wheat from Argentina during the past few weeks were absorbed without much of a setback in prices, a further marked advance during the next few months, that is until this year's crops are harvested, is a probability.

The stringency of iron and steel materials is as pronounced as ever; and, since supplies are not increasing at a rate proportionate to the expansion of demand, prices may be expected to continue their upward trend. Even coal supplies, which have been in excess of requirements until recently, are now deficient in certain districts and for certain purposes.

In the United States, too, quotations for many primary products turned sharply upwards during the past week. Thus, on Wednesday last, Moody's daily index of staple commodity prices (December 31, 1931 = 100) stood at 218.2, against 211.0 a week earlier, 205.8 a month ago and 170.4 on the corresponding day last year.

COAL

SHEFFIELD.—Inland demand for all classes of industrial fuel is strong and the requirements of the heavy trades and of general industry leave only a comparatively small tonnage for export. Collieries are working up to the quota. Coking smalls are becoming increasingly difficult to obtain, and the position is likely to become still more stringent on completion of the big extension of coking facilities at present in hand in the district. Supplies of all grades of metallurgical coke are on the short side. There is a big inquiry for gas coke. Household fuel requirements are heavy as a result of the inclement weather. On the export market there is a further strengthening of demand. There are plenty of inquiries for shipment, and collieries can easily dispose of all available supplies. The higher prices ruling have not deterred foreign buyers of steam and coking coal.

NEWCASTLE-ON-TYNE.—The active conditions ruling since the beginning of the year, continue, and, under persistent demand, collieries are now pretty well sold for this year. Northumberland steam collieries are heavily booked, and during the last week have received substantial orders from the Scandinavian State Railways for delivery over this year. These steam collieries also have a good trade to home ports from which there is a strong demand for sized coal. In the Durham section demand for gas and coking coals is as keen as ever, whilst bunkers have a steady trade to foreign coaling stations.

GLASGOW.—Work has now resumed at the collieries recently on strike, and business is now moving more evenly, but the supply position generally remains tight, and difficulties continue to be experienced in arranging new business. This applies chiefly to export trade. Little coal is now available for shipment this month, while some of the collieries are fully booked up for a longer period ahead. A strong position rules in the home market, where industrial demands remain on a heavy scale, and only limited tonnages are coming on offer. Prices remain strong all round. The monthly ascertainment of the results of the Scottish collieries for January showed a profit balance of £198,063, equal to 1s. 8-6d. per ton, against £193,837, or 1s. 7-14d. per ton in January of last year. The proceeds this year were 13s. 10-87d. per ton, against 12s. 11-2d. per ton a year ago.

CARDIFF.—Shipments at the South Wales docks continue active, and practically all classes of coal are still scarce. On Wednesday the Central Council granted supplementary allocations for output, inland supply, and export supply, and the official view has been expressed that these will enable the coalfield to meet current demand. Prices for prompt position are very firm and for both large and small best steam grades they are averaging from 5s. to 6s. per ton above the old minimum schedule. There are several forward contract inquiries in the market, and actual commitments already assure the coalfield a considerable increase of exports over those in the first half of 1936. To meet this greater demand the original quotas for the second quarter of the year which have already been allocated are substantially in excess of actual shipments in the corresponding period of last year. The market in coke is also strong, and there is a fair demand for patent fuel. Foreign and coastwise shipments at the South Wales docks last week totalled 402,400 tons, against 294,346 tons a year ago, and for the ten weeks ended March 7th the increase over the corresponding period in 1936 exceeds 500,000 tons.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that little new business has been transacted during the past week owing to the difficulty of finding suppliers in a position to accept orders. The scarcity has become accentuated, and whilst the demand is increasing as a result of the normal spring expansion in trade, production seems to be in danger of declining owing to the scarcity of raw materials, and few of the steelworks are prepared to take fresh business except for far forward delivery.

The output of pig iron for the next month or two is earmarked against contracts, and although there may be some increase in home production in the near future it is very unlikely that this will be sufficient to meet the heavy demand from the steelworks and the foundries.

In the semi-finished steel department the pressure to obtain supplies is growing, and in several cases consumers have had to curtail severely their production of finished steel owing to lack of supplies. Deliveries of Continental steel against the quota are much in arrears, and there seems no likelihood of an early improvement in the position.

There is still a scarcity of finished steel although the works are operating as near at capacity as their supplies of raw materials will permit. Great efforts are being made to maintain deliveries, but consumers complain of the interruption to work caused by delays. Little export trade has been transacted of late, and, for the time being, most of the steelworks are refusing orders in an attempt to overtake home demand.

MIDDLESBROUGH.—Producers of both foundry pig iron and East Coast hematite are fully sold. After the requirements of their own foundries have been met, any surplus is taken up immediately against existing contracts, chiefly with home users, but small parcels are being shipped to the Continent against contracts of long standing.

Re-rollers are still anxious to obtain supplies of semi-manufactured steel; although the output of this class of material in this area is at capacity, it is not sufficient to cover requirements. Finished steel of all classes is in strong demand.

It is understood that heavy steel scrap will now be graded into three qualities, and although official prices have not been announced, it is stated that 69s. per ton has been paid for No. 1 quality, 67s. for No. 2, and 62s. for No. 3, all delivered at works. Arrivals of iron ore are up to last month's level, but little is heard of new business, the last freight paid Bilbao-Middlesbrough, being 11s. 3d. Blast furnace coke is extremely scarce, the quotation of 27s. 6d. per ton delivered at furnaces here being nominal with the tendency upwards.

SHEFFIELD.—At the moment interest is centred on iron and steel scrap. The scheme designed to control the distribution of supplies and to stabilise prices has not met with unanimous approval, but it is hoped that as a result of further meetings a plan will be evolved in which all merchants will feel able to co-operate. The shortage of materials is causing much difficulty to scrap consumers, and it remains to be seen whether the present proposals will have the effect of bringing supplies more readily into the market. At the moment there is little or no indication of this. It is stated that the official prices for the Sheffield area are as follows: Heavy basic steel, 65s. per ton; light basic, 57s. 6d.; low sulphur and phosphorus acid steel, 72s. 6d. and 80s.; high-speed steel up to £55, according to specification; alloy steel with a 3 per cent. nickel minimum, £8 5s.; heavy wrought iron suitable for shearing, up to 74s.; heavy steelworks cast iron, 67s. 6d.; light ditto, 62s. 6d.; foundry cast iron, up to 75s. according to quality and specification.

Business in the iron market is hampered by the inability of makers to accept new business, the majority being fully booked under contract over the next few months. Foundry pig iron is scarce, and only a few small parcels of forge are obtainable for early delivery. The freeing of pig iron imports from the duty is not expected to bring in much material in view of the increasing Continental demand and rising prices. Makers of hematites are refusing to add further to their commitments for the present. The higher quotations for finished iron have not hampered the flow of business, and the raising of the price of marked bars by 27s. 6d. per ton this week was fully expected. Demand for basic steel billets continues to outstrip supply, and deliveries are falling into arrears. Acid billets are also in strong request. Official returns show that steel production in Sheffield in January totalled 136,000 tons, of which basic open-hearth steel accounted for 77,100 tons. There is a steady flow of orders to all the great steel producing and engineering firms in this area, some of the latter having sufficient work in hand to last over the next two years.

GLASGOW.—Consumers are finding it almost impossible to place business with West of Scotland steelmakers and others. Existing contracts are sufficient to absorb the bulk of the possible supply for some months to come and the uncertainty regarding supplies of raw material being available in sufficient quantity to enable work to be continued on the present scale has not been removed. The situation in regard to the re-rolling industry is not yet showing signs of improvement. All branches have well filled order books and buyers are numerous, but regular deliveries of raw materials cannot be obtained either from home or Continental makers. The demand for all classes of finished steel is exceptionally heavy. Machinery makers are overwhelmed with work and structural and other engineering trades in this district are all busy and have work on hand to keep them steadily employed for many months. They also are finding new business plentiful.

CARDIFF.—The demand for tinplates is very active and further premiums have been realised on the minimum schedule prices. Sales have been arranged on the basis of between 22s. and 23s. per basis box, and of the works are fully employed at their allocated quota of 70 per cent. of capacity. Steel bars are unchanged at £6 2s. 6d. per ton, but it is expected that the prices will be substantially increased from April 1st. Galvanised sheets are unchanged at £15 15s. per ton f.o.b. Shipments of tinplates at the Swansea last week totalled 7,788 tons, compared with 3,812 tons in the corresponding week last year, and the increase to date this year is 30,000 tons, or 87 per cent.

OTHER METALS

COPPER.—Although the market position showed no new developments, the cash price advanced this week by a further £6 7s. 6d. to £77 2s. 6d. a ton, the highest since 1929. On Monday the United States producers, who had been trying to keep their domestic price down, were forced to raise it from 15 to 16.25 cents a lb., to prevent large exports to Europe. This movement was itself a consequence of earlier increases on the London market, but it was, nevertheless, seized upon here as a fresh bull point.

MAKING THINGS EASIER

WIDE practical experience lies behind the advice and assistance which the National Savings Committee is able to offer to employers who wish to introduce a sound but simple savings scheme for the benefit of their employees.

SUCH a scheme makes it easier for employees to provide for the needs of both the near and the distant future, including retirement. Thousands of firms have introduced one or another of the National Savings ways of saving with memberships ranging from 5 to 5000 and over.

THE National Savings Committee will always be pleased to arrange for one of its representatives to visit a firm with a view to ascertaining on the spot what are the particular requirements, and to suggest ways of meeting them. Concrete schemes, based on data provided by individual firms, can be submitted.

EVERY assistance will be given in starting the scheme, including the provision of a speaker to address employees, and the preparation of a special circular letter for distribution. Membership cards, books, etc. are supplied free.

Please write to the
NATIONAL SAVINGS COMMITTEE (Dept. 214) . LONDON . S.W.1
 No postage stamp required

Following the recent increases, a wide "backwardation" has developed—i.e., "forward" copper is considerably cheaper than spot; this development indicates the unhealthy nature of the present copper boom.

Sales on the London Metal Exchange: 3,750 tons on Monday, against 5,600 tons last week; 4,500 tons on Tuesday, against 4,800 tons last week; 7,100 tons on Wednesday, against 4,750 tons last week. Domestic spot was quoted at 17-25 cents per lb. in New York on Wednesday, against 16-12½ cents a week ago and 13-17½ cents a month ago. Wednesday's official closing price for standard cash in London was £77 2s. 6d. to £77 10s., compared with £70 15s. to £70 17s. 6d. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 32,121 tons, showed a decrease of 2,812 tons, while stocks of rough copper, at 507 tons, were 100 tons smaller.

LEAD AND SELLER.—On Tuesday of this week, the price of spelter overtook that of lead—a development which had been expected for some time past, despite the undoubted fact that lead is in a stronger position than its "sister" metal. But spelter is attracting attention at the present time on the assumption that the United States may shortly become an importer. There has been no news of importance for either market this week, and present indications are that lead and spelter will continue to move in sympathy with other metals.

Sales of lead on the London Metal Exchange: 4,000 tons on Monday, against 3,000 tons last week; 3,500 tons on Tuesday, against 2,100 tons last week; 9,000 tons on Wednesday, against 2,750 tons last week. The New York quotation on Wednesday was 7-75 cents per lb., against 7-00 cents a week ago and 6-00 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £36 per ton, compared with £32 8s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 6,500 tons on Monday, against 3,500 tons last week; 8,000 tons on Tuesday, against 3,600 tons last week; 7,700 tons on Wednesday, against 5,000 tons last week. Wednesday's quotation in East St. Louis was 7-50 cents per lb., against 7-00 cents the week before and 6-40 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £36 5s. per ton, against £31 1s. 3d. last week.

TIN.—Tin was the centre of attention on the London Metal Exchange this week. At its meeting in Paris on Friday of last week, the International Tin Committee decided to maintain the production quota unchanged at 100 per cent. of the standard tonnages during the second quarter of the year. As we point out in a Note of the Week, the Committee expressed the view that this decision would involve the addition of 1,600 tons to stocks monthly; moreover, the Committee also drew attention to the surplus capacity available for use if needed.

Less than three weeks ago, it was argued by Messrs Vivian Younger and Bond, Ltd., that tin prices would decline in the absence of a reduction in the quota. Yet neither last week's decision on the quota, nor the communiqué of the International Committee, was able to check the advance of prices. The market appears to consider the I.T.C. as unduly bearish, and has rushed up the price to over £300 a ton this week. It is thought possible that restriction may be suspended altogether, for the time being. But, with the market in its present mood, it is impossible to foresee how prices are likely to develop in the immediate future.

Sales of tin on the London Metal Exchange: 950 tons on Monday, against 425 tons last week; 900 tons on Tuesday, against 350 tons last week; 1,400 tons on Wednesday, against 1,075 tons last week. The New York quotation on Wednesday was 65-75 cents per lb., against 56-87½ cents a week ago and 50-65 cents a month ago. Wednesday's official closing quotation in London for standard cash was £301 to £301 10s. per ton, compared with £250 5s. to £250 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 1,698 tons, a decrease of 754 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £14 6s. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £75 per ton ex warehouse, the same as last week. Chinese wolfram for "March-April" shipment was quoted at 46s. 6d. to 47s. 6d. per unit, c.i.f., compared with 46s. to 47s. last week. Refined platinum was steady on Wednesday at £11 15s. an ounce.

TEXTILES

COTTON.—**Manchester.**—All other matters have been overshadowed by the further stiff advance in raw cotton prices. Spinners and manufacturers have put up their quotations and, considering the advances required, a fair amount of business has been done. Numerous offers from foreign customers, however, have lagged behind Manchester rates. The rise in raw cotton prices has been due to heavy trade and speculative buying. It is expected that by the end of this month 1,000,000 bales out of the 3,000,000 bales of loan cotton held by the Washington Government will have been sold. It is probable that the Government will control the next crop, but many private firms are estimating an increase in the acreage of fully 10 per cent. A good deal of the speculative buying of cotton has come from London and France.

Yarn quotations have again been advanced to meet the rise in raw cotton prices. A healthy demand has been experienced, especially in American twists. Ring yarns are decidedly scarce, reports being received of looms standing idle owing to the impossibility of getting yarn. The rising trend of prices in Egyptian qualities has stimulated business, total sales being more encouraging.

Inquiry in the cloth section has been active and numerous buyers have searched the market for manufacturers who are in a position to grant early delivery terms. Despite the scarcity of many styles, turnover has been fairly encouraging. Indent business, however, for India has been at a low ebb, but a fair amount of buying has taken place in fancies and Rangoon. A little more activity has shown itself in fine fabrics for and white shirtings. Printed and dyed sorts have moved off fairly well for Java and the Straits Settlements. Useful lines have been booked in for Java and the Straits Settlements. Dress materials have been sold for the Dominions and more contracts have been arranged in standard goods and fancies for the home trade.

JUTE.—**Dundee.**—Strikes were in progress in several mills in India for nearly one month, and, when they were extending, they suddenly collapsed on February 28th. Since then, however, there have been fresh Calcutta goods market is therefore very steady, but prices are not strikes during February, stocks of hessians at the end of that month showed an increase of 4½ million yards in Calcutta, heavy goods remaining is contemplating intervention on the working hours question in the Indian jute mills, but so far nothing definite is known on that matter.

Inquiries are being made in the Dundee market for three million sand bags for export, and there has been a fair business in jute yarns for export. Prices remain quite firm all round. The raw jute market continues to waver of speculation in the Calcutta "futka" market. The mills are meantime showing little interest. One or two of them have been buying new crop fibre, though sowings have not yet commenced in the majority of districts. Weather is stated to be satisfactory for ploughing.

The full group of Daisee-2/3 is offered at £19 5s. per ton and short groups at £19 10s., with PR quoted at £19 12s. 6d. and Daisee-4 at £17 17s. 6d., while Tossa-2/3 is rather higher at £20 for the full group nominal in the absence of offers and CCP Hearts have been sold at £19 5s., March-April.

Hessian yarns are being sold steadily at 2s. 1d. for common 8 lb. cops and 2s. 2d. for 8 lb. spools for early delivery, while ½d. more has been obtained for export. Twist has continued firm at 3½d. lowest for 3 ply 8 lb., but sucking 24 lb. weft has been done at 2½d. and 8 lb. chains at 3½d. Rove is quiet at the unchanged rates of £21 for 48 lb. and £16 15s. for 200 lb., and the finer yarns are quiet at 2s. 4d. for fourth grade Rio 8 lb. warp.

A moderate business is taking place in jute cloth at from 2½d. for 10 oz. 40 in. and 2½d. for 8 oz. Buyers are endeavouring to purchase at less but manufacturers are refusing to shade these terms, and indeed, can command ½d. more in the case of some widths and weights, notably the wide widths. Linoleum hessians and heavy goods are quiet.

GRAIN MARKETS

WHEAT.—Last week's improvement has been well maintained, and wheat prices have scored a fresh advance, despite large shipments and increasing port stocks in the United Kingdom. The major factor in this week's rise has been renewed purchasing by Germany and Italy.

On Wednesday last, "May" futures were quoted in Chicago at 137½ cents per bushel, against 133½ cents the week before and 135½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 53s. to 53s. 6d. per 496 lbs., against 51s. 6d. to 52s. a week ago; No. 2 Northern Manitoba, ex ship, 52s. to 52s. 6d., against 50s. 6d. to 51s. 6d. a week ago. According to *The Corn Trade News* total shipments of wheat and flour last week totalled 1,979,000 quarters, against 2,017,000 quarters in the previous week and 1,289,000 quarters in the corresponding week a year ago.

FLOUR.—In sympathy with wheat, flour has become dearer this week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 40s. 6d. per 280 lbs., against 39s. 6d. a week ago; delivered inner London, 40s., as compared with 39s. a week ago. Manitoba patents, ex store, 40s. 6d. to 42s., against 39s. to 40s. 6d. a week ago. Australian, ex store, 33s. to 33s. 6d., against 32s. to 32s. 6d. last week.

BARLEY.—The price of barley is gradually improving. There are few offers of English barley on the market. "May" futures were quoted at 8½ cents per bushel in Winnipeg on Wednesday, against 80½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed," at farm, 36s. to 38s., as against 34s. to 36s. a week ago; "English malting," at farm, 38s. to 45s., against 36s. to 45s. last week. Californian (new), ex ship, 51s. to 60s., against 54s. 6d. last week; Chilean, brewing (new), ex ship, 44s. 9d. to 50s., against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "May" futures were quoted at 48½ cents a bushel in Chicago, against 45½ cents a week ago and 51½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 24s. to 26s. per 336 lbs., against 24s. to 26s. a week ago; "English White," at farm, 24s. to 26s., against 24s. to 26s. a week earlier; mixed Canadian feed (Vancouver), landed, 23s. 9d. per 320 lbs., compared with 23s. 3d. last week.

MAIZE.—In response to an active demand, maize prices are again higher this week. "May" futures were quoted on Wednesday at 108½ cents per bushel in Chicago, against 104½ cents a week ago and 107½ cents last month. Quotations in London, Wednesday: "Plate," landed, 26s. per 480 lbs., compared with 25s. 6d. a week ago; "Plate," ex ship, 25s. as against 24s. 6d. a week ago; "Plate," March, 25s. 9d., as against 25s. 3d. a week ago; yellow maize meal, ex wharf, was quoted at £6 17s. 6d. to £7 per ton, as against £6 10s. to £6 12s. 6d. last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Mar. 11, 1936	Dec. 30, 1936	Mar. 3, 1937	Mar. 10, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82½	84½	84½	129	127½	132½
Chicago (No. 2, Winter) —Cents per 60 lb.	86½	101½	99½	135½	133½	137½

The visible supply of wheat in Canada amounts to 88,101,000 bushels against 91,247,000 bushels last week, and 116,718,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933-34 to 1936-37:—

	1933-1934	1934-1935	1935-1936	1936-1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to March 6	295,205	247,335	283,632	244,731
27 weeks to March 6	8,450,484	10,067,969	10,217,728	7,574,716
Average price of English wheat per cwt.	s. d. 4 5	s. d. 4 7	s. d. 6 3	s. d. 8 11

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
	Cwts.	Cwts.	Cwts.	s. d.	s. d.	s. d.
March 4, 1933	208,323	119,878	52,127	5 2	6 5	6 1
March 3, 1934	285,205	109,025	72,315	4 5	8 9	6 4
March 9, 1935	247,335	144,518	40,565	4 7	7 10	6 9
March 7, 1936	283,632	136,739	51,787	6 3	7 9	6 0
February 27, 1937	258,841	181,535	74,140	9 1	10 0	8 4
March 6, 1937	244,731	133,058	64,833	8 11	9 10	8 2

OTHER FOODS

BACON.—Demand showed an improvement this week, and the market had a better tone. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 86s. to 90s.; Canadian, 77s.; Danish, 86s., against 86s. to 90s., 77s., and 86s. last week. Arrivals in London last week included: Danish, 13,410 bales; Canadian, 6,889; Dutch, 2,318; Lithuanian, 1,061; and Polish, 3,021; as against 14,127, 6,642, 2,365, 1,195 and 3,017 bales, respectively, in the previous week.

BUTTER.—Demand for butter was more active and prices showed a firmer tendency. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 94s. to 95s.; Australian, choicest salted, 95s.; Danish, 125s.; compared with 91s., 91s., and 120s., respectively, a week ago.

CHEESE.—There was a firmer market for New Zealand cheese this week, with other makes steady. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 86s. to 88s.; Canadian, finest coloured, 71s. to 72s.; and New Zealand, finest coloured, 57s. 6d. to 58s.; against 86s. to 88s., 71s. to 72s., and 56s., respectively, a week ago.

COCOA.—London prices remain on the up grade, but the New York market has suffered a slight setback. The spot quotation in New York on Wednesday was 11½ cents per lb., as against 11½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, March-April, was quoted at 51s. 3d. per 50 kilos, c.i.f. Continent, against 50s. 3d. a week ago. Last week's movements of cocoa in London were as follows: Landed, 27,682 bags; delivered, for home consumption, 5,248 bags; exported, 119 bags; stocks, 167,763 bags, against 128,902 bags a year ago.

COFFEE.—The London spot market was quietly steady. The New York market was quiet and unchanged. On Wednesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week and 9½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered, for home consumption, 35 cwt.; exports, 12 cwt.; stocks, 3,234 cwt., against 11,382 a year ago. Central and other South American: Landed, 11,040 cwt.; delivered for home consumption, 3,109 cwt.; exported, 1,744 cwt.; stocks, 81,828 cwt., against 84,696 last year. Other kinds: Landed, 3,269 cwt.; delivered, for home consumption, 5,266 cwt.; exported, 899 cwt.; stocks, 117,992 cwt., against 154,961 last year.

EGGS.—The markets have been liberally supplied with English and Irish eggs this week, and prices have eased. At Smithfield, on Wednesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 11s. 9d. to 12s. per 120, as against 13s. 3d. to 13s. 9d. last week; while Danish (15½ lb.) made 11s. 6d. to 11s. 9d., as against 11s. 9d. to 12s. 6d. last week.

FRUIT.—A steady business has been transacted at Covent Garden this week, according to *The Fruitgrower's* report. Prices remain moderate. The inquiry for apples is consistent, and prices for all imported varieties are maintained at a moderate figure. Pears continue to sell well, and prices are well maintained considering the heavier arrivals from South Africa and Argentina. Hothouse grapes, in short supply, are firm in price; but the much larger arrivals of South African grapes sell at lower rates. South African plums are going out well at steady prices, while peaches from the same source show little change. A few English forced strawberries have put in an appearance. Good samples of oranges are firm, and lemons are doing rather better; but grapefruit are a slow item.

MEAT.—Business at Smithfield has been on a rather quiet scale this week, with prices showing little alteration. On Wednesday last, Argentine chilled hindquarters were quoted at 3s. 4d. to 3s. 10d. per 8 lbs., as compared with 3s. 4d. to 3s. 10d. per 8 lbs., against 3s. 4d. to 3s. 10d. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,390 tons, a decrease of 375 tons on the corresponding week last year. Beef and bacon 1,160 tons, as compared with 5,360, 2,623 and 1,162 tons, respectively, in the same week of 1936.

PEPPER.—On Wednesday, Singapore white Muntok, spot, was quoted at 6d. per lb. in bond, against 6d. per lb. a week earlier. Black Lampung, spot, in bond, was quoted at 3½d. per lb. sellers, compared with 3½d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 3 tons; delivered, 6 tons; stocks, 1,786 against 1,684 last year. White, landed, 68 tons; delivered, 27; stocks, 11,814, compared with 12,951 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 10s. 3d. per cwt. a week

ago. "March-April," in singles to Continent and U.K., was quoted at 8s. 10½d. per cwt., against 9s. 1½d. last week. Movements in London last week were as follows: Landed, 2 tons; delivered, 40; stocks, 1,094 tons, against 2,890 a year ago.

SUGAR.—Raw sugar has been a firm market in London this week. The New York spot quotation, after advancing on Monday to 3-60 cents per lb., was 3-55 cents on Wednesday, as compared with 3-48 cents per lb. last week and 3-55 cents per lb. a month ago. Wednesday's sales of raw sugar in London included "May" delivery at 6s. 8d. to 6s. 8½d., against 6s. 4½d. to 6s. 5d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 3,058 tons, against 11,473 in the previous week and 5,053 in the same week of 1936; deliveries, 16,366 tons, against 15,341 and 17,897 tons, respectively; stocks, 220,532 tons, against 233,840 and 243,581 tons, respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
Mar. 5, 1936	13-07	13-12	15-17	11-05	10-33	11-94	13-39
Jan. 28, 1937	13-77	12-49	15-92	12-60	11-42	12-69	14-18
Feb. 4, "	13-63	13-38	15-78	13-22	11-23	12-68	14-06
Feb. 11, "	13-72	13-73	15-87	12-59	11-29	13-00	14-16
Feb. 18, "	14-04	14-19	16-15	13-35	11-93	13-21	14-53
Feb. 25, "	14-82	14-71	16-60	14-35	11-94	13-65	14-84
Mar. 4, "	14-34	14-76	16-78	13-35	12-24	13-52	14-92

The quantities catalogued for this week's public auctions comprised 52,018 packages of Indian and 19,291 packages of Ceylon tea. Demand for the Indian grades was fairly active and the market was about steady. At Tuesday's Ceylon auctions an irregular tendency was apparent. Teas up to 1s. 3d. a lb. were fully firm, but fine teas, especially light liquoring types, were inclined easier.

VEGETABLES.—Supplies of cucumbers are increasing at Covent Garden, says *The Fruitgrower*, and prices are easier. Canary Island tomatoes have also declined in price. English and French asparagus are receiving fair attention, and the former is slightly dearer. House-grown beans are an increasing item and have been reduced in price, while Madeira beans are also easier. Mushrooms show an advance, and onions are a better trade. Greenstuff continues plentiful, while forced rhubarb is coming in for an improved inquiry.

The Potato Marketing Board announced this week that the available supply of maincrop potatoes in Great Britain, as at midnight on February 13th-14th, was approximately 980,000 tons. This estimate is stated to indicate the possibility of a slight deficiency. It was also announced this week that a Committee, representing the Potato Marketing Board and the National Federation of Fish Friers, will be set up immediately to secure greater co-operation between these two bodies. Meanwhile, the potato trade at the various London markets shows few new features. Best samples remain in steady demand, and at the Borough on Tuesday best siltland King Edward were again quoted at 9s. to 9s. 6d. per cwt., ex market.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Oilseeds generally are steady but business is of only moderate volume. A fair trade has begun in new crop Indian linseed, shipment of which will begin very shortly. Up to £14 7s. 6d. per ton has been paid for Bombay and £14 for Calcutta, March loading, with about 2s. 6d. less for April. Some business has also been done in Plate in near positions to Hull around £12 plus duty. The quantity of linseed afloat for Europe has increased to 186,000 tons (including 8,600 tons from India), due to extraordinarily heavy shipments at River Plate ports. Last week Argentina shipped no less than 74,000 tons, bringing the total export of the new crop to over half a million tons, equal to 30 per cent. of the estimated total yield. A very large proportion was destined for the United States, so that there is now afloat for that country over 119,000 tons, against 32,000 tons a year ago. America is reported to be negotiating for new crop Bombay. A fair amount of interest has been shown by the Continent in Plate seed. Cottonseed is steady in sympathy with Alexandria, and some demand in near positions is reported, but later shipment is neglected.

Vegetable oils generally are steadier. Linseed oil is in fair demand by consumers, and is slightly dearer on the week and about 20s. per ton above the figure of a month ago. Cotton oil is in some request, and Egyptian crude ex Hull is reported sold at £28 10s. per ton, naked, March-April delivery. Soya, ground nut and palm kernel oils are firmer, and rapeseed steady and unchanged. Oilcakes continue in good demand and late quotations are maintained.

FURS.—On Monday last a large silver fox sale opened in London, which occupied the greater part of this week. Total offerings amounted to approximately 100,000 skins, consisting mostly of medium and low qualities. The sale was well attended by London merchants, who bought large quantities on their own and on Continental account. Foreign visitors, however, were not very numerous. Prices tended slightly easier, being approximately 5 to 10 per cent. lower than in January. The decline was mainly due to the smaller interest in the cheaper quality skins and not to weakness in the undertone of the market. The basic position remains strong, a fact which was also demonstrated by the strong opening prices paid at Leningrad. Detailed reports of the Leningrad sale, which opened on Sunday, have not yet reached London, but prices were generally slightly higher than those quoted of late on the free market here.

RUBBER.—Prices have recorded a sharp advance this week. The movement was due partly to more active buying by genuine consumers (including certain American interests) and partly to the action of speculators, who have been encouraged by the heavy decline in U.K. stocks and by the strength of commodities in general. Interest now centres round the action likely to be taken to relieve the threatened shortage of near rubber by the International Committee at its meeting next Tuesday. The spot price in New York on Wednesday was 23½ cents per lb., compared with 21½ cents per lb. a week ago and 21½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 11½d. per lb., as against 10½d. on the corresponding day last week. In forward positions, business has been done at 11½d. to 11½d. for "April" shipment, as against 10½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 59,829 tons, against 63,793 tons a week earlier. A year ago stocks amounted to 154,889 tons.

WHOLESALE COMMODITY PRICES

The Progress of British Oxygen	652
--------------------------------	-----

The Air Force, as SIR PHILIP SASOON told the House on Monday, is being expanded so as to be able to combat the strongest foreign air force within striking distance of our shores. In no other element is the scale of the arms race more apparent than in the air. In 1937-38 the Air Force, which was not in existence in 1914, receives for the first time more money than the Army. We shall, besides rebuilding and expanding the Navy, be building a first-line Air Force, including first-class reserves in a ratio of 3 to 1, of about 7,500 machines. A vast number of new stations is being built up and down the country; old stations at home and overseas are being enlarged; and a big shadow aircraft industry is being organised alongside the normal aircraft industry.

MR DUFF COOPER did not indicate on Tuesday the extent of the revolution now taking place in the organisation and equipment of the Army. But the Army and Ordnance Factory Estimates show it. It is now known that the Army is to be highly mobile, mechanised to as great a degree as any Continental army. It is to be completely refurnished with the latest types of machine-guns, field guns, light transport, and equipment. Moreover, the increase of £8½ millions in the 1937-38 Estimates for guns and ammunition over those of 1936-37, coupled with the borrowing of an additional £8 millions this year for the Ordnance Factories, reflects the reorganisation of the Army's artillery which the new combined howitzer and field gun is to achieve. While the WAR

SECRETARY did not enter the controversy over the future use of a British Army as an expeditionary force, it is clear that the Army is being reorganised as a formidable striking or stemming force, capable of being swiftly thrown into any theatre of war at home or abroad.

In all three Services, the exigencies of modern warfare have decreed a vast increase in expenditure on semi-permanent works: naval and air bases at home and overseas, wireless stations, fuel, munition and reserve aircraft stores, Government and shadow factories, and transport vehicles. The net impression created by the Estimates for the first year of the Five-Years programme is that the enforced abandonment of the "no major war for ten years" presumption has endowed each Service with the funds to meet any and every one of its requirements. From now onwards in this country, as in our European neighbours' camps, the watchword is to be "on a war footing." We are all to proceed as though war to-morrow were the predominant possibility.

In these circumstances the British citizen-taxpayer, while conceding to his Government the duty and the means to re-arm, will devoutly pray that the men may be found to emancipate a hag-ridden Continent from its besetting war psychosis. And if, unhappily, fears do not prove liars, the British citizen can only pray that, at least at home, we shall not lack statesmen of vision and energy.

Germany's Reply

AFTER a silence of nearly four months the German Government have now resumed the diplomatic conversations which began on the morrow of March 7, 1936. That was the day when HERR HITLER shattered the Pact of Locarno by his military re-occupation of the Rhineland. On the 12th of this March the Ministry of Foreign Affairs in Berlin handed to the BRITISH AMBASSADOR a reply to the hitherto unanswered British Memorandum of November 19th, and HERR VON RIBBENTROP has returned to his post in London to discuss this document with MR EDEN.

These long and interrupted exchanges of views arose from HERR HITLER's offer—made at the moment when his troops were crossing the Rhine—to take an active and leading part in the negotiation of a general and permanent settlement for the whole of Europe. At that moment—and it was a gloomy one—the offer was greeted by all men of goodwill in the West European democracies as the bow in the cloud. This hope of a better future played its part in reconciling us to an indefensible *fait accompli*. In the months that followed we watched with dismay the gradual fading of the light. If it were now to be rekindled we should welcome it, perhaps more cautiously but certainly not less sincerely, than a year ago.

This country and France are of one mind in their deep and constant desire for a general and lasting European settlement; and if once it became apparent that this was what Germany, too, was genuinely seeking, then the Germans would immediately find the West European Powers disposed to make their own contributions, with alacrity and with no small-mindedness. Financial assistance to Germany and arrangements for her access to colonial raw materials and even the restitution of some, at any rate, of her former colonies are possibilities which would assuredly become practical politics if HERR HITLER's offer of March, 1936, were to materialise in March, 1937.

On the other hand, public opinion in this country as

well as in France would be less willing than ever to make concessions to Germany as long as there was any suspicion that, so far from obtaining a general settlement in return for them, we should merely be facilitating German diplomatic manoeuvres for disrupting the solidarity of the peace-loving countries, side-tracking the League of Nations, and securing in advance for Germany the maximum degree of immunity in the event of her attempting to make herself mistress of Central and Eastern Europe by naked aggression. The political and military control over the strategic backbone of the Continent would invest Germany with the hegemony of Europe.

Thus, eager though we are to make the most of every chance of a general settlement, we are not prepared to negotiate with Germany under all conceivable conditions. The first step now is to look into the conditions which Germany has put forward during the last few days, and to set out our own conditions side by side with them. This may give us some idea whether fruitful negotiations are probable. The German Memorandum has not been, and perhaps will not be, published; but its purport may be gathered from versions which have appeared in the Parisian and Belgian Press not long after copies of the document had been communicated to the Quai d'Orsay and the Belgian Foreign Office from the Wilhelmstrasse.

The gist of the German proposals seems to be this. First, HERR HITLER is contemplating this March an exclusively West European settlement to be confined to the ex-Locarno Powers. It is not to be the first chapter of a settlement embracing Europe as a whole. He makes three suggestions in regard to the West. The first suggestion is that the neutrality of Belgium should be guaranteed by all the four other parties on condition that Belgium on her side undertakes to abstain from assisting any of them in the event of their being at war. This abstention is to be construed in the strictest sense of denying them passage and other facilities, as well as

denying them military aid. The second suggestion is that Great Britain and Italy should resume their Locarno rôle with one important addition. As in the Locarno Pact, they should serve as guarantors of Germany and France without obtaining for themselves the benefit of also being guaranteed. But they should now also act together as arbiters of any claim on the part of France to carry out her mutual assistance pacts with countries east of Germany and Italy (e.g. Poland, Czechoslovakia, Yugoslavia, Roumania and Russia). The third of HERR HITLER's three suggestions is implicit in the other two, but is not for that reason any less important. It is that the settlement—even this local West European settlement—should be lifted right out of the framework of the League of Nations. Belgium is to contract out of her obligations under Article XVI; and the question whether France's obligations under her mutual assistance pacts with East European countries have come into play in a given international crisis is to be answered, not by an application of the principles and the machinery of the League as is laid down in all these treaties, but by an arbitral, and possibly arbitrary, Anglo-Italian decision.

Our British comments on these German proposals are quite clear. In the first place, we have no use for a West European pact unless it is being negotiated, from first to last, as part of a general European settlement. We have no objection to taking up the West European chapter of the new peace treaty first; for obviously the whole of Europe cannot be dealt with at one breath. On the other hand, we have no intention of tying our own hands in Western Europe unless and until Germany ties hers in Eastern Europe; and this is what we mean by insisting that all parts of a European settlement must be interdependent.

As for Germany's local West European suggestions, our first comment is that we want any substitute for the Locarno Pact to be based upon the League in just the same way as the Locarno Pact itself. Our second comment is that we should deeply regret to see Belgium divest herself of her obligations under Article XVI. Such a change in Belgium's status would not only increase the

insecurity of Great Britain and France; it would also make it difficult for any of Belgium's guarantors to make the necessary arrangements in advance for executing their guarantee, should the *casus foederis* arise, on Belgium's own behalf. Of course, Belgium is as free as any other State-member of the League to withdraw from it or, short of withdrawing, to ask for some relief from her obligations under the Covenant. But we have no reason whatever to suppose that the Belgian Government is contemplating any such step.

Next, we do not see why this country should be pushed back into her Locarno rôle of being only a guarantor without also enjoying a guarantee, instead of continuing to draw the benefits of the present provisional Anglo-Franco-Belgian understanding, under which each party guarantees each of the others. If we are to come to the help of France in the event of her finding herself at war with Germany by reason of French obligations in Eastern Europe, then we ought also to be able to count upon France coming to the help of Great Britain supposing that we were to find ourselves at war with, say, Italy or Japan because we were fulfilling our League obligations in the Mediterranean or in the Far East. The British Commonwealth—scattered over the face of the earth—is far too vulnerable to be able to waive valuable guarantees to which it has an equitable claim.

The point in the German proposals which we like least of all is the suggestion that we should be joined with Italy as arbiters of French obligations which are at present left to the judgment of the League. Apart from our conviction that Geneva is the proper court of appeal, we object most strongly to being invited to usurp the League's functions in collaboration with a Power which was lately certified as an aggressor by ourselves, in company with an overwhelming majority of our fellow States-members.

Here we stand. It is now to be seen whether the British and the German conditions can be reconciled with each other. We trust that the Government will make their conditions for conference at least as clear as those of the Government of Germany.

Postage One Penny

INVENTORS are notoriously ill-rewarded for their ingenuity, and prophets are frequently without honour in their own country. SIR ROWLAND HILL, whose momentous pamphlet on Post Office Reform was exposed to a sceptical world almost exactly one hundred years ago, was no exception to these rules; for he received but shabby treatment from the Government of SIR ROBERT PEEL. Busily engaged in the scientific organisation of colonial projects, he was called from his labours and an annual stipend of £800 to superintend the introduction of the cheap and uniform postage which he had proposed. When the success which he had forecast seemed in sight, he was summarily dismissed without pension or reward. General recognition and his knighthood came tardily.

From its earliest days *The Economist* gave SIR ROWLAND HILL its consistent and enthusiastic support. ADAM SMITH had proclaimed the discovery of the Indies to be the greatest event in the history of Europe, but we reserved that distinction (in our issue of November 2, 1844) for two other events: the inauguration of the penny postage and the invention of the steam engine. We declared that to have brought public opinion to "a right view of the true importance of a postal establishment" had earned for the statistically-minded schoolmaster and Empire builder the title of "one of the greatest benefactors of modern times."

To-day, with the added experience of nearly a hundred years, can we do less than reiterate our confidence in SIR ROWLAND HILL's achievement; and ask if we can still discern in the operations of the Post Office the right view of its true importance? Do we still deplore "the intimate association in our ideas of revenue and postage"? Would we still denounce as "a very Goth" any man who proposed to "make public revenue out of the facilities for public intercourse"?

In 1844, the issues seemed clear and straightforward. The carriage of letters should be cheap, and the charges should be uniform. The posts were a public service, and were not properly a source of revenue. To apply these criteria in modern times is more difficult, for the Post Office has changed markedly in scope and organisation since the Hungry Forties. The Bridgman Committee in 1932 described the Post Office, with its quarter of a million employees, as the largest trading organisation in the country. Among its functions the Committee included, not only the postal service, but also the telegraph and telephone services, the postal and money-order services, the inspection of wireless and the examination of wireless operators, the management of a savings bank, the issue of War Loan and National Savings Certificates, the payment of pensions and the sale of insurance stamps and licences. This list is compendious; but the postage stamp remains, nevertheless,

at the heart of Post Office activity. Postal services contributed 59 per cent. of Post Office revenue in 1935-36, against 34 per cent. from telephones and 7 per cent. from telegraphs.

SIR ROWLAND HILL's own scheme was based on a "bit of paper, just large enough to bear the stamp, and covered at the back with a glutinous wash." The "bit of paper" retains its relative importance to-day, and its absolute importance, in the interim, has increased on a scale of whose magnitude its creator never dreamed. Moreover, SIR ROWLAND's precepts are every whit as applicable to most of the new duties of the Post Office as to the postal service itself. To-day, however, as soon as we apply his principles of cheapness, uniformity and public service, we enter the field of controversy. Eight years ago, LORD WOLMER excited public debate by enumerating in the columns of *The Times* the defects which he had discerned during his connection with the Post Office. He alleged that its profits were obtained from excessive charges for an indispensable public service. The department, he declared, lacked enterprise, initiative and efficiency, and commerce and industry were being penalised. In that same year, 1929, a petition for the restoration of the penny postage was supported by the Chambers of Commerce, the Stock Exchange and the Federation of British Industries. The existing letter rate of three-halfpence was denounced as a handicap to the progress of trade. The petition echoed a widespread opinion that to obtain revenue by means of postal rates in excess of the cost of postal services was a pernicious form of taxation, which bore hardest on those least able to support it. The spirit of SIR ROWLAND, clearly, was still abroad. To many it seemed that abuse of the State's monopoly of the postal services meant hindrance to essential intercourse between persons, districts and countries, and that a profit was being made out of the necessities of civilisation. After eighty-five years we were in danger of reversion to the state of affairs which *The Economist* had thus denounced, in January, 1844:—"Whether it be in the Post Office or the Customs House, it seems to be a standing rule that the public is a *pigeon*, the plucking of which is merely a matter of ingenuity or taste."

A Committee was thereupon set up to find a reasoned answer to these criticisms. Even this constitutionally cautious body admitted that the tendency to regard the Post Office as a revenue-producing department obscured and impeded its primary function—the service of the public. At the back of the Committee's mind, obviously, was the conviction that it was not feasible for the Post Office, at one and the same time, to serve as a milch cow to the Treasury, to develop on commercially efficient lines, and to provide social amenities for which a purely commercial justification was lacking. Yet that is precisely what it was, and is, required to do. The case for the reform of the Post Office rests, fundamentally, on the contention that if its finance were as self-contained as that of the Electricity Grid or the London Transport Board or the Mersey Docks, it would develop its business and improve its services for the benefit of the public, without restraint or reservation.

It is interesting to speculate on what the pioneer of penny postage would say if, recalled from Elysium, he were asked to compose a confidential memorandum for MR BALDWIN's Cabinet, reviewing the progress of the Post Office since his day, and making any necessary recommendations. We may confidently presume that SIR ROWLAND HILL would not be sparing in praise of Britain's largest trading organisation, for the variety of its services and the great improvements it has effected in technical ways, in speed and in loads carried. He would point out that in 1844 only one ounce could be sent at the standard letter rate; while to-day, though the rate is 50 per cent.

higher, the maximum is two ounces. He would dwell upon the usefulness of such additional services as the carriage of postcards, circulars and printed papers at cheaper rates, the inception of the parcel post, and the development of the telegraph and telephone. With a few apt figures, he would emphasise the immense growth in the size and scope of the Post Office's business since its establishment.

GROWTH OF THE POST OFFICE		
	1843-44	1935-36
P.O. income	£1,702,000	£79,091,467
Letters carried	230,000,000	7,000,000,000

But these figures, in themselves, would scarcely dispel SIR ROWLAND's anxiety. "What does the Treasury make out of all this?" he would be constrained to ask. And he would discover that the receipts of the Treasury from the Post Office are, in fact, very considerable. In the year 1935-36 the Post Office contributed to the Exchequer £11,670,000, some 14.7 per cent. of the total Post Office income, and more than enough to cover any net loss of income from a reversion to the Penny Post.

If SIR ROWLAND HILL were disquieted by these figures, would not many of our readers share his uneasiness? What can be said to justify the apparently permanent abandonment of the penny post? Improvement in speed of transit and frequency of delivery are the normal milestones of social and scientific progress. The Post Office cannot capitalise on its own account the achievements of the locomotive and the internal-combustion engine. It is difficult to rebut the charge that, if the object of a postal system is maximum cheapness compatible with efficiency, then to obtain revenue by charging rates in excess of the cost of service is as barbarous as the raising of tolls and dues from commerce on the highways. Friends of the Treasury may urge that a rise of 50 per cent. in the standard letter-rate is not disproportionate to the general rise in the price level since SIR ROWLAND's time. But, in fact, prices to-day are not 50 per cent. higher than they were when the penny post was instituted; in fact, they are lower:—

BRITISH WHOLESALE PRICES (1900 = 100)		
1839 (institution of Penny Post)	153	
1844	115	
1900	100	
1913	113	
1929	153	
1936	118	

It remains true, when all is said in recognition of a century's improvements in the postal services, that cheapness of communications is vital, and that habitually to use the Post Office as a source of national revenue is an unfortunate, regressive and clumsy method of taxation. A hundred years ago it was said that to cheapen the letter rate would reduce the revenue from the carriage of letters. But faith moved the mountain of prejudice, the penny rate was instituted, and the revenue rose. It may be that the demand for the carriage of letters is more inelastic to-day, but it is not wholly inelastic, and over a reasonably long period the revenue might suffer much less than is sometimes believed from a reduction in the rate. But that, after all, is not the decisive consideration. Given a reasonable assurance of postal surpluses adequate to cover the depreciation of assets and to provide amply for developments, the primary object of the State monopoly in postage should be to secure the maximum cheapening of communication. We may fittingly conclude by re-expressing our views of 1844: "The Penny postage suggests manifold feelings of the deepest interest—of increased business, and increased intercourse between thousands who only a year ago were too poor to spare even their pence for letters; . . . the increased circulation of literature and science; increase, in short, of all that contributes to the social, moral and physical happiness of our country, or to the pleasures and blandishment of private life."

The Railway Prospect

IN recent articles in *The Economist* (February 27th, page 454, and November 13th, page 574) we have shown that the prosperity of Britain's railways has been closely connected with the prosperity of the country as a whole. In the depression of 1930-32 the companies suffered their full share of misfortune. Subsequently, railway earnings have improved concurrently, though not proportionately, with the general revival in trade. Any general discussion of railway prospects, therefore, must closely concern itself with those of the country as a whole. If a substantial recession of industrial activity occurs in the near future, then the immediate outlook is gloomy indeed. If, on the other hand, the Government's armament programme helps to maintain, or to increase, industrial production, the trend of railway gross receipts may be satisfactory as long as the programme lasts.

While this consideration is fundamental, it is no more than the starting-point for a study of future prospects. For if trade and armament activity are maintained or increased, it is inevitable that many railway costs will rise. Demand for the products of the semi-protected and cartelised iron and steel industry is already considerable, and there is little possibility of an early and spectacular increase in productive capacity. The cost of maintaining and purchasing rolling stock, rails and other railway equipment may therefore be expected to rise. The price of coal, similarly, is more likely to rise than to fall, given the continuance of quota schemes and pressure from the workers for higher wages. The railways, incidentally, will feel the effect, this year, of the increase in coal prices early in 1936 from which their long contracts for coal supplies have hitherto shielded them.

Another material factor is the level of wages on the railways themselves. It may be broadly true to say that railway wages, by whatever negotiating machinery they are governed, incline to relative stability—in the sense that they neither rise nor fall in proportion to changes in gross or net railway earnings. Recently, however, the Unions have been prompt to demand a share in the fruits of returning prosperity, and it has not been held either wholly just or expedient to refuse their request. That they have a moral claim to participation has now been more or less explicitly recognised by the Railway Staff National Tribunal. In the Tribunal's statement last January, which refuted the somewhat extravagant claim of the Associated Society of Locomotive Engineers and Firemen, these words occurred:—

The Tribunal considers that, if the present improvement continues, railway employees should obtain a share in the improvement without waiting for the large increase in railway profits that would be required before the revenue contemplated in 1921 [i.e. the Standard Revenue] can be reached.

It is unlikely, therefore, that any future increase in railway receipts will inure wholly to the benefit of the railway stockholder. There remains the possibility of some radical change in policy which may greatly increase operating efficiency and reduce costs. But in view of the slow progress made in such an important direction as that of improving average wagon loads and train loads—on which we commented in our article last week—it may be safer not to expect any dramatic developments on these lines. In short, there seems every likelihood that increased costs will follow a rise in gross receipts, and at no great distance.

Another factor which has an intimate bearing on railway prospects is the future development of road transport. To what extent is the railway equation likely to be modified by the operation of the Traffic Act of 1930 on the passenger side, of the Act of 1933 on the goods side, or of any future legislation which may affect operations generally? So far as passenger transport is concerned, it is doubtful whether any measure or measures will prevent a continued expansion of travel by road, though this will by no means be all at the direct expense of the railways. The number of privately owned cars is still increasing, and will, no doubt, continue to increase.

Even if the initial cost of a private car is raised, directly or indirectly, as a result of the armaments programme, increased popular purchasing power and improvement in the national system of roads will probably more than offset this factor. Aided by a well-organised second-hand car market, members of the artisan and wage-earning classes are becoming potential private motor-car owners to an ever-increasing extent.

So far as public service vehicles are concerned, the long-distance motor coach will always be a potential competitor with the railways. In this field the share of available traffic taken by road transport is not likely to increase, but it is even less likely to be drastically curtailed. The combined effect of the Road Traffic Act of 1930 and the financial interest taken by the railways in many road passenger operating companies has been, broadly, to stabilise fares and facilities, and no great change is expected in the near future.

On the goods side the position is more uncertain. The decision of the Metropolitan Traffic Commissioner in the Bouts-Tillotson test case, which the Appeal Tribunal has now upheld, showed clearly that the claim of the railways for a monopoly of long-distance transport will not be granted by those who at present are responsible for administering the provisions of the Road and Rail Traffic Act of 1933. It is undeniable that the Act has given the railways a potentially valuable measure of protection from road transport. Not only have legal regulations increased the level of road transport costs, but the conditions for any expansion of general road haulage business have been made sufficiently onerous to bring about a virtual stabilisation of that industry. But the Act specifically lays down that the Licensing Authorities have no power over rates charged. And individual business firms retain absolute freedom to own and operate their own ancillary fleets of vehicles under "C" licences.

The Transport Advisory Council is at present giving serious attention to the whole question of transport co-ordination, with a view to recommendations for the Minister of Transport. But as all forms of transport are represented on this Council, it is highly probable that any unanimous recommendations which the Council will see its way to make will have the character of a compromise. They are unlikely, therefore, to envisage the drastic curtailment of one form of transport at the expense of another. Even so, it is conceivable that they might, ultimately, affect railway traffics favourably. The necessary legislation, however, could not, even in most favourable circumstances, reach the Statute Book for another year or two. And for transport legislation of a restrictive character it is becoming more, and not less, difficult to command the support of a majority of the present House of Commons. The effects of such legislation, finally, would require some little time to manifest themselves. Altogether, therefore, we may conclude that the relationship now existing between road and rail is not likely to undergo any early and radical legislative change, and that the conservative conclusions, from the railway viewpoint, suggested in the course of this survey, retain their validity.

The Anatomy of Unemployment

WITHIN the last two years a striking change has come over discussions of the problem of unemployment. It is no longer the fashion to view unemployment in the mass, or to prescribe oecumenical remedies for unemployment of all kinds, at all times, in all places. Parliament has abandoned its regular series of debates on unemployment, and has substituted a series, almost as regular, on the Special Areas. The change is symptomatic of more than the progress of industrial recovery, for there has been a similar shift in the theoretical approach to the problem. It is now realised that, in Sir William Beveridge's words, "the beginning of an

understanding of the problem of unemployment is to break it up."

Unemployment can be analysed in a variety of ways. But from the point of view of economic policy a particular three-fold distinction is very illuminating. This is the analysis of unemployment into Normal, Cyclical and Special Unemployment which was attempted in a special Survey of British Economic Prospects contained in *The Economist* of June 13, 1936. Figures were then given for one month in each of the three years 1929, 1932 and 1935. The same method has now been applied to the figures for each month from January, 1929, to January, 1937, and the results are depicted in the diagram at the foot of this page.

Normal Unemployment can be defined as that temporary unemployment which exists at any time in a dynamic, changing economy. It is due to the inevitable interval of time which elapses between one job and another, or to seasonal fluctuations, or to casual labour, or to any of the other frictions which prevent a perfect adjustment between the demand for and the supply of labour. This type of unemployment will be present in good times as in bad.

Cyclical Unemployment is created by the fluctuations of the trade cycle; at the height of a boom it disappears altogether, but at the bottom of a slump it may well overshadow Normal Unemployment. Special Unemployment is that variety which has afflicted the Depressed Areas ever since the war. It is not normal, in the sense of being temporary or actuarially calculable, nor is it particularly subject to variation by the trade cycle; but it is due to a more permanent, or, at any rate, non-cyclical, change in the economic position of the areas affected. In any particular case, Special Unemployment may be difficult to distinguish from Cyclical, but the distinction in principle is perfectly clear.

In giving statistical form to these conceptions, several necessarily arbitrary assumptions have to be made. The first step is to assume that a certain percentage of the insured population is, at any time, subject to Normal unemployment. What this percentage should be cannot be exactly determined. Before the war the trade union percentage sometimes fell to little more than 2 per cent. A figure for the post-war world, and for a universal unemployment scheme, must be considerably higher than that, and the Unemployment Insurance Statutory Committee, in their latest report, comment on "a tendency for the fall of unemployment through

industrial recovery to become arrested even in the most prosperous counties at a minimum of 5, 6 or even 7 per cent." For the purposes of this calculation the Normal percentage has been assumed to be 5½. It is fully possible that a larger percentage than this should be assumed for 1936 and a smaller for 1929; if so, the effect would be to increase the amount of Cyclical Unemployment in 1929 and to diminish it at the present time.

The next assumption is that Cyclical Unemployment is evenly spread over each of the ten geographical divisions into which the United Kingdom is divided by the Ministry of Labour. If this assumption is correct, the amount of Cyclical Unemployment is given, at any time, by the extent to which unemployment in the most prosperous division exceeds the normal minimum. Thus, if the percentage in the South-Eastern division (which, throughout the period, has been the most prosperous), after elimination of seasonal fluctuation, is in any month 7.5, Cyclical Unemployment in that month is assumed to be equal to 2.0 per cent. of the insured population of the whole kingdom. Special Unemployment is what remains after Normal and Cyclical Unemployment have been deducted.

The diagram should be examined in the light of this explanation of the methods of calculation, and with the reservation in mind that it is no more than a first approximation to the truth. The main lesson of the diagram is clearly visible—namely, the great increase in Cyclical Unemployment in 1930-32 and its almost complete disappearance in 1933-36. The movements in the twelve months following the departure from the gold standard in September, 1931, are of particular interest. The first effect was to reduce Special Unemployment, i.e. there was an improvement in precisely those industries which, ever since the war, had been particularly depressed. But in 1932 it was realised that there was little prospect of an immediate and large-scale revival in international trade, and these industries relapsed again. It is further noticeable that virtually all of the reduction of unemployment in 1933 and 1934 was in the Cyclical category. Since the beginning of 1935, however, there has been some reduction in the great disparity of experience between the home counties and the rest of the country, and, as a result, Special Unemployment has fallen more rapidly than Cyclical.

It is our intention to bring this calculation up to date periodically, with such revisions in method as appear to be justified.

UNEMPLOYMENT IN THE UNITED KINGDOM, 1929-1937
(Seasonal Fluctuations Eliminated)

Manchoukuo

"Two facts about Manchoukuo are commonly known in the Western world. The first is that, in the Western view, it does not exist. The second is that it lives on soya beans. Both statements continue to be true. The outer world still follows Mr Stimson, formerly American Secretary of State, in sending its letters to the old address. And the signs of prosperity which became evident in Manchuria, after 1935, were due primarily to higher prices, a better crop, and reviving exports of the soya bean and its products.

This year the new and unrecognised regime celebrates its fifth anniversary. The past five years have seen a steady expenditure by Japan, mainly in order to consolidate her military, political and economic controls over the territory. It has been estimated that, since the Mukden affair of 1931, Japan has poured into Manchuria investments and military expenditure totalling something like 2,000 million yen. For this expenditure she has not yet obtained concrete reward. Her prospects may be excellent, in her own opinion, but they remain prospects. To realise them there must be still greater future expenditure. And most plans of future development raise the problem whether Manchuria is to be an independent economic regime, with its own raw material and processing industries, or merely a colony and feeder of Japan.

The achievement to which the spokesmen of the regime point with the greatest pride is their consolidation of the monetary system. Up to the middle of 1934 the newly formed Manchoukuo yuan was an inconvertible, managed silver currency, with a stable exchange rate on Shanghai. But the appreciation of silver created difficulties for Manchuria as for China. The yuan was consequently allowed to break away from the Chinese dollar, and after a period of adjustment was tied, yuan for yen, on the Japanese monetary system.

Second in importance to the consolidation of the monetary system has been the purchase of the Chinese Eastern Railway. This has placed the entire railway system of the country under the operative control of the South Manchurian Railroad system, and eliminated the most fertile cause of trouble between Russians and Japanese. The Chinese Eastern Railway is now marked for a decidedly inferior economic rôle. Transport to Vladivostok has ceased, and the new port of Rashin has been developed. The present railway system of Manchuria is based on radial lines from Mukden, Hsinking, and then south to Dairen or east to Rashin.

The third important development in economic relations with the outer world was the signing in Tokyo last April of a trade agreement between Germany and Manchoukuo. The motive for this treaty appears to have been not to show political and ideological alliance with Germany, but more directly to secure economic benefits. Germany has competed in the past with Egypt as Manchuria's best customer for the soya bean, which, with its products, accounts for over fifty per cent. of the value of Manchurian exports. By the agreement Germany undertook to take up 100 million yuan of Manchurian goods, to be paid as to three-quarters in foreign exchange, and as to one quarter in blocked marks, which Manchuria was to use for the purchase of German goods. Germany was to use any surplus foreign exchange, obtained in her trade with Japan, for further purchases in Manchuria. If the scheme works according to plan, Manchuria should derive considerable benefit. In 1935 she sold to Germany goods to the value of no more than 33 million yuan.

Apart from this agreement with Germany, the effect of Japan's conquest has been to concentrate an ever larger percentage of Manchurian trade in Japanese hands. In part, this result has been achieved directly—as, for example, in the oil trade, where deliberate steps have been taken to eliminate foreign interests from the retail trade. In part, it has been obtained by the persecution of the employees of foreign firms. But mainly it has been the inevitable result of Japanese control of

government. Thus, in 1936 something like 50 per cent. of Manchuria's exports went to Japan, which supplied 80 per cent. of Manchuria's imports. China took about 20 per cent. of the exports, and supplied about 6 per cent. of the imports; opium, for the enfeebling of Chinese stamina, was Manchuria's chief unofficial export over the Great Wall. Most observers appear to agree that this tendency to monopolise trade with Manchuria will continue.

A large part of Japanese exports to Manchuria during the past five years has been construction materials and machinery. Manchurian cities, particularly Hsinking, have enjoyed a building boom, while agriculture has been depressed. There is now a tendency for Japanese imports to fall off, partly because the building programme is coming to an end, and partly because Manchuria is developing her own industries, such as cement manufacture. But the problem of securing agricultural prosperity and building up the industrial capital of the country remains fundamental.

The South Manchurian Railroad, which is Japan's principal agent in her continental development schemes, has an annual budget appreciably greater than that of the Hsinking Government itself. Plans for the future are being made on an ambitious scale. In 1935, the Railroad announced a five-year building programme. In the past, it has obtained capital for industrial development by issuing debentures, and by making calls on non-official stockholders. The Japanese Government has a large holding in the South Manchurian Railroad, but has not yet made a contribution in cash. And ordinary stockholders and private capitalists have recently shown reluctance to make further contributions for schemes which do not promise any rapid return on the outlay. Undeterred by such difficulties, the South Manchurian Railroad announced, last November, that it proposed to raise some 2,450 million yuan over the next five years to encourage production of coal and iron, to develop agriculture and communications. Earlier in the year a similar five-year plan had been announced at Hsinking, for building roads, electric power plants, canals and encouraging agriculture. Last autumn also, the Manchurian Industrial Bank was formed, with a paid-up capital subscribed half in Hsinking and half by the Bank of Chosen. The Bank has power to issue debentures up to 15 times its paid-up capital of 15 million yuan, and the Hsinking Government will guarantee principal and interest on any debentures issued outside Manchuria.

Ambitious proposals have also been made from Japan for settling Japanese emigrants in Manchuria. Four experimental settlements have been made in the last few years, and all have failed. The reason for the failure suggested by the administration is the unsettled political conditions and the banditry which have prevailed—a contention which in itself disproves the claim of the army to have put an end to banditry. The new emigration plan calls for settlement, during the next twenty years, of some five million Japanese at an estimated cost of 2,000 million yuan. And already attempts are being made to restrict the flow of Chinese into Manchuria, which was formerly one of the world's largest mass migration movements.

The nature of these plans suggests two conclusions. The first is that the authorities now recognise that Manchuria must develop independent industries for her own support, regardless of the possibilities of friction with competing Japanese industries. Manchuria has been a disappointing source of Japanese raw materials. The second conclusion is that development will require capital resources which, in the opinion of many Japanese, are beyond their country's capacity in the middle of a naval and military armaments race. This probability, however, offers little consolation to the foreign manufacturer who may be looking to Manchuria as a possible market for his wares. The purchasing power of the Manchurian peasant remains very low. And even if Japan finds external support necessary for capital development, she will endeavour to limit it to the financial field, with herself as an intermediary. The Open Door in Manchuria, in short, seems destined to facilitate the departure rather than the arrival of Manchuria's non-Japanese guests.

Notes of the Week

Raw Materials.—The preliminary discussion by the League Raw Materials Committee of the general problems of supply and access was not very helpful. The British contention that colonies were of no great value was flatly contradicted by the Polish and Japanese claim that colonies and emigration were the only important issues in the raw material problem. The closing stages of the debate were illuminated by the American representative's sympathetic and impartial survey of the difficulties. The Russian representative claimed that for the Soviets there was no problem of raw materials and declared that Russia was ready to export materials freely to any country in the world. The discussions closed with the approval of a preliminary report, in which the Committee stated its decision to make a statistical survey of all important foodstuffs and raw materials, and its intention to consider the possibilities of an extension of the Open Door policy, of a relaxation of quotas and trade restrictions, and of the co-ordination of supply and demand. Sub-committees will report on June 21st, and the full Committee will then deal with restrictions on the supply of raw materials and with obstacles to the international equalisation of resources. The Committee has, however, declined to consider the distribution of the territories from which raw materials are drawn; nor will it promise "to propose appropriate solutions." Does this self-denying ordinance mean that the Committee will shun the political aspects of the problem? If so, almost certainly, no solution will be found.

* * *

Sir Austen Chamberlain.—The sudden death of Sir Austen Chamberlain on Tuesday in his seventy-fourth year removes from the political scene a keen fashioner of foreign policy, an impressive parliamentary debater, a picturesque personality, and one of our last parliamentary links with the great Victorian Age. The eldest son of "Joe Chamberlain" entered the House of Commons forty-five years ago as a Birmingham Unionist free-trader; and his maiden speech on the second reading of the 1893 Home Rule Bill drew such comments from Gladstone as to delight "Joe." Austen Chamberlain joined his father in the latter's raging, tearing campaign for tariff reform; entered the Cabinet as Postmaster-General in 1902; and ran neck and neck with Walter Long for the reversion of the Party leadership after Mr Balfour's retirement. He had, through his two years' tenure of the Financial Secretaryship to the Treasury in 1900-02, of the Chancellorship of the Exchequer in 1903-5, his chairmanship of the Royal Commission on Indian Currency and Finance in 1913, and his return to the Exchequer in January of 1919, an intimate and precise knowledge of financial detail. But his mark was really made as Foreign Secretary from 1925 to 1929, after the abandonment of the Geneva Protocol by the British Dominions and by the new Conservative Government of Mr Baldwin in the former year. Austen Chamberlain then showed himself as a good European, a friend to France as many said, but hardly less a friend of Gustav Stresemann. By comparison with what followed 1929, Austen Chamberlain's quinquennium at the Foreign Office was the halcyon period of post-war European politics. Latterly, he intervened but rarely in debates, for his genius for self-effacement was almost as great as that of his famous predecessor, Lord Grey. But when he intervened, it was always with the dignity of an elder statesman, the force of a still energetic man, and the sincerity of a passionate patriot jealous of British prestige. The absence of the impassive lean face, the paternal monocle and the upright figure—with a back as straight to the last as that of the Duke of Wellington—will be long and genuinely mourned by all at Westminster.

Carbide in the Highlands.—The Caledonian Power Bill, by which an industrial company would have been empowered to establish a factory to make calcium carbide with hydraulic power in the Highlands of Scotland, was rejected by the House of Commons a week ago. The Government left the decision to a free vote of the House; but the Secretary for Scotland, on behalf of the Cabinet, stressed the vital importance of calcium carbide in national defence, and announced that if this Bill were thrown out the Government would thereupon take steps to secure an adequate supply of carbide by the establishment of a private factory—which might even be situated in the Highlands. With the Whips off, however, the iron hand in the velvet glove was ineffective. The House was more impressed by the arguments of those who opposed the Bill; that to expropriate the crofters for private profit was unjust; that the industry should be located in a distressed area like South Wales; and that to encourage hydro-electric production would be detrimental to the staple industry of coal. The Bill claimed rating concessions for a private trading concern, and was a threat to the amenities of the Highlands, where it was not wanted by the very localities which would be affected. The reply of the supporters of the Bill was that the proposed scheme would be the making of the Highlands by enabling the depressed crofters to earn a decent living; that hydro-electric production would be greatly cheaper than production by steam; and that a safe source of the carbide supplies necessary on strategic and national grounds would be ensured by the scheme. The proposals have been defeated, and the singular beauty of Inverness-shire will not be tampered with. But the problems remain. We import each year some 50,000 tons of carbide, largely from Norway, where electricity is cheap; and the Government is determined that this dependence must be ended. Moreover, the Highlands are sadly impoverished; and any national plan for industrial location must examine the possibilities of industrial development in these remote regions. Sir Thomas Inskip announced in the House of Commons on Wednesday that he was taking steps to set up a small committee to advise the Government how the country could best be provided with a supply of calcium carbide. The terms of reference will be wide; and the needs of Scotland (the Minister said) will not be lost from sight.

* * *

Hectic Dealings in Commodities.—The unsatisfactory features of the commodity markets to which we drew attention in *The Economist* of March 13th (page 580) persisted this week. On Tuesday the International Rubber Regulation Committee fixed permissible exports of the countries adhering to the restriction scheme at 90 per cent. of the standard tonnages during the second half of 1937, but decided to maintain the quota for April-June at 80 per cent. Instead of staying the upward trend of prices, the announcement was followed by an increase in quotations to over a shilling per lb. on the expectation that supplies cannot be increased as rapidly as consumption. Actually, world consumption last year exceeded exports by 144,600 tons, or nearly 17 per cent. Last January, shipments fell 14,400 tons below consumption. Consequently, stocks outside the regulation areas at the end of January were equivalent to only 3.7 months' requirements at the current annual rate of consumption. The implications of the developments on the rubber market are discussed in the succeeding Note.

* * *

The cotton exchanges, similarly, witnessed hectic dealings and, as a result of the operations of syndicates of speculators, quotations for Egyptian Sakellaris fluctuated violently and closed on Wednesday 13 per cent. higher than a week ago. Wheat, which has been

kept at a reasonable level in recent weeks by heavy Argentine shipments, resumed its upward trend under heavy purchases by consumers and speculators. Quotations for the leading non-ferrous metals, danced about to the tune of contradictory rumours, but, on Wednesday, copper, lead, spelter and tin all closed substantially lower on the week. On Friday last week the International Tin Committee decided to raise the quotas of the restricting countries to 110 per cent. of the standard tonnages during the second quarter of this year, in the expectation that stocks will increase by 2,700 tons per month at this level of output. At the same time the Committee asked the Governments of the producing countries to permit the exports of any available stocks irrespective of the quota. Following the announcement of these decisions, the quotation slumped by £20 per ton only to advance subsequently by £25 per ton in the belief that the leading producing countries will be unable to expand output to the extent of the increase in quotas.

* * *

The unsatisfactory conditions on some of the leading commodity markets are due to the short-term inelasticity of supplies. But the position has been aggravated by consumers who, fearing a real shortage, are all trying to secure supplies for longer periods than previously, thus providing speculators with an opportunity to exploit their anxiety. In the long run, production of most materials, stimulated by higher prices, is bound to increase beyond requirements at current quotations. And then there will be a crash. Meanwhile, producers should ease suppliers as far as possible, while consumers as a body might do well, in their own interests, to refrain from an attempt to cover their requirements for longer periods. Otherwise there is no limit to the rise in prices until the temporary tightness of the markets has passed.

* * *

Rubber Committee's Decision.—It is regrettable, both on economic and strategic grounds, that the International Rubber Committee did not see their way, this week to follow the example of the copper producers and suspend the operation of restriction altogether for the time being. The differences in the two cases will be readily recognised. The copper producers, admittedly, are a relatively compact body of substantial financial interests, while the Rubber Committee represent a host of disparate and on the whole small companies. Further, the ability of many of the most important signatories to the copper scheme to produce well above their theoretical quota was not in dispute, whereas many rubber companies would have been prevented by labour and other difficulties from reaching a 100 per cent. level for some considerable time. But it is recognised, with equal unanimity, that a price of anything like a shilling a pound must have unfavourable repercussions on rubber consumption. If the price goes still higher, the Committee will have manifestly failed in its main purpose, which

was to improve the long-term position of producers by encouraging the greatest possible increase in the world's rubber absorption. Possibly the suspension of restriction would not have added any considerable amount to near-future supplies; but it would have put the Committee in the strongest possible tactical position, whenever rubber history chose to repeat itself, and the next slump made the re-imposition of some form of regulation appear advisable. The argument that suspension would have been interpreted in the market as the throwing in of the Committee's hand, and would consequently have resulted in a still higher price, will not bear close examination. If the decision had resulted in the addition of a single ton of rubber to world supplies, that alone should have been a conclusive argument in a market which is tending to run amok on psychological fears of a shortage. The Committee, with the best of intentions, appear to have missed a great opportunity and given colour to the traditional reproach that producers are always, at heart, unduly complacent when a price squeeze is threatened.

* * *

Disorders in Paris.—Although M. Blum's Government has considerably strengthened its position by the success of the Defence Loan, the recent disturbances at Clichy show that there are still grave political difficulties to be overcome. Rioting on Tuesday between members of the Fascist *Parti Social Français* and demonstrators of the Extreme Left led to police intervention. The death roll is so far five; others are still in danger, and the total casualties were about 300. On Wednesday, the Cabinet publicly appealed to all citizens and parties to refrain from violence and provocation. There is no doubt that the Communists are restive and anxious; they believe that the police took a pro-Fascist line on Tuesday; and, in general, they fear a betrayal of the Popular Front. They are demanding the immediate dissolution of Fascist parties, and have inspired the Confédération Générale du Travail and other labour organisations to contemplate strike action. The Seine Department of the C.G.T. called a strike of over a million workers on Thursday in Paris. Feeling is running high, and M. Blum will find it hard to control his followers without making some concession to their fears of Fascism.

* * *

The Week in Spain.—The violent offensive launched against Madrid last week by one or more of the four divisions of Italian troops, as well as Germans and insurgent forces, has been checked by the hurried transfer of Government troops from the beleaguered city's south-western front. The Government aircraft, of American pattern made in Russia, have again demonstrated their—and their pilots'—superiority; for their operations against the Italian vanguard south-west of Sigüenza (north-east of Madrid) turned a check into a rout. Thus the ding-dong struggle goes on. Elsewhere,

as last week, operations have been halted; though the miners investing Oviedo have pressed forward, and, on the other side, Italian forces are manœuvring in Andalusia. It is reported that many of the Italians captured by the Government forces have enlisted on the Government side, stating that they engaged to fight in Africa and were surprised at being landed in Spain. The total estimate of the Italian forces actually in Spain has been significantly raised during the last few days. In well-informed quarters in Paris and London it is now placed at 100,000. This constitutes, with the many thousands of German troops, a formidable foreign army of occupation in Spain, south of France's third land frontier; the other two land frontiers of France are already occupied by Italian and German troops. The quiescence of pro-Franco voices in France is quite comprehensible. This week, the Non-intervention Plan for supervising Spanish frontiers has been worked out in some detail. A hitch was caused by the Italian and German desire to discuss the disposition of the Spanish Government's gold placed abroad—mostly in Paris, but some in London—but the objections of the Russian representative were effective in preventing, at least for a time, so broad an interpretation of non-intervention.

Russia's Foreign Policy.—A manifestly authoritative and important exposition of the foreign policy of the Soviet Union was made in London last Saturday by the Soviet Ambassador, M. Maisky, at the Second National Congress of Peace and Friendship with the U.S.S.R. The importance of the speech is that it was addressed both to the three aggressive Powers and to the two West European democracies; and M. Maisky's message to both groups was the same:—

"I can say to-day, with full responsibility for every word, that at the present time we are strong enough to repel any attack on our territories on the part of any foreign Power or any combination of Powers, and we can do this single-handed."

In addressing the aggressors, he following up this warning with the offer of a golden bridge:—

"We would welcome Germany and Japan back to the League if they came there really determined to work for peace."

In this country, however, we are more concerned with M. Maisky's summons to the West European democracies to make their choice between the policy of collective security and "the so-called localisation of war," which M. Maisky described as "the way of submission in the face of the aggressor in the ridiculous hope that perhaps, after all, this ravenous wolf will not devour Red Riding Hood." The Soviet Union, M. Maisky declared, stands for the collective system because, while she is sure enough that she can win any war, her main pre-occupation is to prevent war from ever breaking out, and she cannot prevent it single-handed.

"Now it is the turn of the other countries who stand for peace and democracy to make their choice and with all clarity to show that they also are prepared to take risks, and if necessary, to bear sacrifices, in the struggle to prevent war from coming."

The lesson of M. Maisky's speech for this country can best be appreciated by reading it in connection with a speech made two days earlier in the House of Commons by Sir Samuel Hoare, in which the First Lord of the Admiralty mentioned, almost casually, that it was "essential that the [British] Navy should be able to

carry out its duty in both the Eastern and Western hemispheres." This means that the British Empire has a far stiffer problem of defence than the Soviet Union has to face. The Russian Army has to be equal to repelling a simultaneous attack on two land frontiers from Germany and Japan; the British Navy has to be equal to repelling a simultaneous attack from Japan, Germany and Italy in three seas. Can anyone imagine that we are capable of maintaining this "two-hemisphere" standard of naval power on our own unaided resources? As we cannot, so we cannot afford to answer M. Maisky's question in a way that would move Russia to withdraw into isolation.

Britain and India.—The Congress Working Committee has decided to permit acceptance of Ministerial office in the Indian provinces where the Congress is in a majority; provided the party leader in the Legislature "is satisfied, and is able to state publicly, that as long as he and his Cabinet act within the Constitution the Governor will not use his special powers or set aside the advice of his Ministers." That the test is to be the satisfaction of the Congress leader, not a pledge by the Governor himself, is evidence that the condition is a face-saving, and that the majority of the Congress are anxious to seize their opportunity of government. No Governor could be expected to give a pledge not to use the special powers embodied in his instructions under the conditions for which they were designed. As the Viceroy pointed out in his speech last Monday, the provincial Governors and the Governor-General have a dual responsibility: to the elected majorities on the one hand, and to the minorities and the millions without the franchise on the other. They can renounce neither one nor the other without a breach of duty and of the spirit of the Constitution. In Lord Linlithgow's words, they will collaborate with the Provincial Ministers "in a spirit of sympathy, helpfulness and co-operation." That, he said, was the spirit in which the Constitution was offered to the Indian people. It is to be hoped that, if and when they accept office, that spirit will grow among the leaders of the Congress.

India: A Correction.—A typographical error unfortunately crept into the leading article on this subject last week. The number of voters newly enfranchised in the provinces is not 120 millions, but 20 millions.

Tyneside Local Government.—The Report of the Royal Commission on Local Government on Tyneside goes far beyond the economic and administrative difficulties of the area under review in its implications. The problem of local government on Tyneside concerns a vast conurbation on both banks of the Tyne, stretching from Newburn and Blaydon in the west, through Newcastle and Gateshead, Wallsend, Hebburn and Jarrow, to Tynemouth and the Shields at the mouth of the river—continuously built up for over ten miles, with a population of over half a million people, and administered by twelve separate and distinct authorities. The Report states categorically that the present division of administrative functions does not allow of efficiency or economy. It recommends sweeping changes: that local government services should be divided into regional and local; that regional services should be administered by an authority larger than any at present existing on Tyneside, including both rural and urban areas and forming a single central authority; that such an authority should administer on Tyneside all Public Health, Education, Public Assistance, Police, Fire and Highways; and that for the administration of local services on Tyneside the present urban areas should be amalgamated into one municipal borough, to be known as the City of Newcastle-upon-Tyne. The scope of these

proposals is stupendous. The County Boroughs in the area will lose their status, and even the civic distinctions of the City of Newcastle will only be preserved by a special provision. The middle-sized authorities will be vehement in protest; and a minority report protests against so extensive and unrestricted an amalgamation of local authorities; but the present position is clearly anomalous and artificial. Out of the economic necessities of Tyneside has come a bold vision of a great urban authority. Whatever criticisms may be made of the project, it has its lessons for all the conglomerations of urban population into which the people of this country are increasingly concentrated.

Iron and Steel Shortage.—The latest returns of the British Iron and Steel Federation clearly indicate that output of iron and steel has reached a limit for the time being. Despite the pressure of consumers for new supplies, the output of pig-iron and steel ingots and castings in February—a short month—showed a decline on the total for January. The shortage of materials has been rendered more acute by the decline in imports:—

(In thousands of tons)				
Period	Production		Foreign Trade	
	Pig Iron	Steel Ingots and Castings	Total Imports	British Exports
1913—Monthly Average	855.0	698.6	185.9	414.1
1929 " "	832.4	803.0	235.2	364.9
1932 " "	297.8	438.5	132.7	157.4

" February	603.7	895.9	82.9	200.5

As a result of the scarcity of semi-finished materials, a number of plants have been forced to curtail the output of finished steel products. There are no indications of early improvement, and as demand is still increasing there is some danger that the Federation, with the best intentions of the world, may be unable indefinitely to prevent prices from getting out of hand. Exports in February, though lower than in the previous month, showed an appreciable increase over the corresponding month a year ago, as a result, mainly, of heavier shipments of tubes, sheets and tinplates. These shipments, however, represent orders placed many months ago, before the shortage was acute. Whether exports can be maintained at the current level, when home demand is going partly unsatisfied, remains to be seen. In view of the present shortage of iron and steel and the danger of a further rise in prices, the results of the Import Duties Advisory Committee's investigation, shortly due for publication, are awaited with considerable interest.

Employment in February.—On February 22nd, employment in Great Britain, at 11,187,000, reached a new high level. The total was 81,000 more than in January and 662,000 more than in February a year ago. Moreover, the improvement was well spread among the more important industries; the largest increases occurred in building, public works contracting, tailoring, cotton, engineering, and in the motor vehicle and aircraft industry. At the same time, the number of unemployed on the registers fell to 1,627,845—a total of 61,378 less than a month ago and 397,176 less than a year ago. Of this total, 1,391,932 were wholly unemployed, 161,834 temporarily stopped and 74,079 normally in casual

employment. About 40 per cent. of those applying for benefit or unemployment allowances had been out of work for less than 6 weeks; some 57 per cent. for less than 3 months; and 69 per cent. for less than 6 months; while only 22 per cent. had been on the registers for 12 months or more. The incidence of unemployment by industries is shown below:—

Industrial Group	Feb. 24, 1936	Jan. 25, 1937	Feb. 22, 1937
Coal mining	189,121	138,409	136,796
Iron and steel manufacturing	33,869	21,979	21,172
Engineering	73,698	47,736	45,574
Metal goods manufacture	48,812	33,095	32,403
Shipbuilding and repairing	54,047	38,848	38,572
Motor vehicles, cycles and aircraft	22,313	16,319	13,960
Public works contracting	129,764	120,460	117,213
Building	191,682	173,578	158,309
Cotton	75,292	47,942	45,436
Tailoring	23,991	24,727	18,708
Dressmaking and millinery	8,161	8,061	6,006
Boots and shoes	17,014	17,146	14,191
Pottery, earthenware, etc.	16,012	12,551	10,456
Distributive trades	235,926	200,582	201,703
Shipping service	42,261	33,060	31,236
All persons registered	2,025,021	1,689,223	1,627,845

The returns of the various administrative areas show that the decline in unemployment was general throughout the country. By far the largest reduction occurred in the north-western division; this was followed by the Midlands, the northern division and the London area.

Overseas Trade in February.—The growing activity of our export trade is encouraging. The recent level of British exports has been well maintained, while re-exports have made further headway. Thus, though imports continue on a large scale, the ever-widening gap between total imports and exports, which was a feature of our trade last year, is less pronounced; the visible adverse trade balance for the year to date is only 9.2 per cent. larger than last year. Detailed figures for the past three years are set out below:—

MONTH OF FEBRUARY (000's omitted)				
	1935	1936	1937	Change between 1936 and 1937
Total imports	£ 56,432	£ 62,289	£ 71,653	+ 9,364
British exports	34,098	35,110	38,572	+ 3,461
Re-exports	4,408	5,651	6,928	+ 1,277
Total exports	38,506	40,761	45,500	+ 4,739
Excess of imports over exports	17,926	21,508	26,153	+ 4,645
Transshipments under bond	1,793	2,033	3,092	+ 1,059

FIRST TWO MONTHS (000's omitted)				
	1935	1936	1937	Change between 1936 and 1937
Total imports	£ 118,223	£ 132,131	£ 147,139	+ 15,008
British exports	69,578	69,863	77,656	+ 8,092
Re-exports	9,441	9,967	12,030	+ 2,063
Total exports	79,020	79,830	89,686	+ 10,155
Excess of imports over exports	39,203	52,601	57,454	+ 4,853
Transshipments under bond	3,817	4,442	6,041	+ 1,599

The increase in imports was well spread between the three main categories. There were heavier purchases of grain and flour and of non-ferrous metals; but here some allowance must be made for the recent advance in price

BRITANNIC

Reserve Fund - £1,000,000
Currency Reserve - £500,000

The Bank has branches throughout New Zealand and conducts every description of Banking business with that Dominion.

of certain commodities. The sustained demand of the home industry for machinery products is reflected in a continuance of imports on a large scale. There has been a further increase in coal exports, though the major advance in British exports has taken place in the manufactures group.

Trade by Commodities.—Recent changes in the more important categories of imports retained in this country are shown below:—

RETAINED IMPORTS—MONTH OF FEBRUARY

Item and Measure	1935	1936	1937
Wheat	7,811	6,614	10,008
Beef and veal	856	885	811
Mutton and lamb	591	520	578
Sugar (unrefined)	2,670	3,393	2,724
Iron ore and scrap	368	542	536
Raw cotton	871	1,145	1,161
Sheep's and lambs' wool	544	742	590
Flax, hemp and jute	41,277	33,574	40,115
Crude petroleum	47,214	38,313	22,142
Hides, wet and dry	109	138	105
Wood pulp	150	173	106
Rubber	350	—	5
Unwrought copper	24,133	16,695	21,229
Pig lead	30,346	27,116	28,984
Tin:—			
Ore and concentrates	3,255	5,162	4,405
Blocks, ingots, slabs and bars	1,442	1,155	699
Iron and steel manufactures	103	123	82
Machinery	5,144	5,976	11,743

Wheat imports show a substantial rise which is due mainly to increased Argentine shipments. Though imports of beef are lower, the proportion coming from Australia has risen. Australia, again, is chiefly responsible for the increased imports of mutton; Argentina has sent us larger quantities of lamb. Sugar shipments have declined, but the share of Empire countries is still on the up-grade. Demand for textile fibres is being maintained. Machinery imports continue on a larger scale; machine tool supplies from the United States have increased fourfold. British exports are set out below. The recovery in British coal exports continues; increased purchases have been made by France, Italy, Argentina, Norway and Sweden. Though home demand for iron and steel manufactures is still at a high level, exports of these commodities show some improvement. Of the textile group, linen piece-goods alone met with a stronger demand. The steady progress of the export trade in motors is again noticeable.

CRUDE STEEL PRODUCTION IN LEADING COUNTRIES

(World Total—Thousand metric tons—1929, 120,271; 1932, 50,701; 1936, 122,242)

BRITISH EXPORTS—MONTH OF FEBRUARY

Item and Measure	1935	1936	1937
Coal	2,796	2,582	2,616
Iron and steel scrap	12,261	9,336	23,863
Pig-iron and ferro-alloys	11,756	6,973	13,563
Railway material	13,784	14,380	8,124
Total iron and steel manufactures	171,163	167,845	200,498
Textile machinery	6,219	4,894	4,274
Cotton yarns	30,174	32,662	30,676
Cotton piece-goods	12,282	13,480	12,575
Wool tops	174,329	169,490	160,417
Woolen tissues	6,573	4,139	3,524
Worsted tissues	3,111	2,516	2,145
Worsted piece-goods	6,792	7,889	7,475
Linen piece-goods	3,412	3,447	3,973
Leather boots and shoes	6,964	7,776	8,134
Leather	27,697	31,300	30,259

Motor vehicles and chassis	1,566	2,424	1,874
Motor vehicles and chassis	6,419	7,033	8,365

International Steel Production.—Steel forms the basis of the industrial structure of modern countries. Hence the output of steel provides a useful indication of the industrial activity of countries, such as France, Germany, the United Kingdom, the United States and the U.S.S.R. The output of steel in these countries before, during and after the depression, shown in the diagram below, reveals striking differences. In France and in the United States, production of steel in 1936, like general business activity, was still below the pre-depression level. Clearly, deflation has held down French steel production, while quite other forces were at work to cause the big American steel slump. In this country and in Germany, where economic recovery began at an earlier stage, output in 1936 was well above the level of 1929. In the U.S.S.R., which was scarcely affected by the world depression, production more than trebled between 1929 and 1936. Here, however, a long-run trend of industrial development has carried steel production steadily along with it. While the trend of world steel production remains upwards, the experience of the United States, where output fell to less than 25 per cent. of the pre-depression level in 1932, suggests that the farther mechanisation proceeds, the greater are the swings between boom and slump. This lesson should not be overlooked in planning for the future. Re-armament is now playing a considerable part in the steel boom in every country. Probably some check, due to reaching the limits of present capacity, will soon be imposed on steel production—at least for a time.

Rising Labour Costs

NEW YORK, March 9.—It would probably be necessary to go back to the 1916-19 period to find price phenomena in any way comparable to the events of the last four months. To illustrate this, three well-known indices are given below:—

WHOLESALE PRICE INDICES

	October, 1936	Current
Bureau of Labour		
Statistics	Avg. Oct. 81.5	Last wk. Feb. 86.1
Annalist	Avg. Oct. 127.3	(Mar. 3) 139.5
Moody's	(Oct. 31) 181.8	(Mar. 6) 214.7

In this period, Moody's index (the most limited and most sensitive of the three) rose 18 per cent.; the Annalist index rose almost 10 per cent.; and the B.L.S. index about 5.6 per cent.

Yet the current phase of the movement is quite different from the earlier phase. The initial rise came in primary commodities, and was traceable to the effect of demand on supply, supply being represented not merely by current production, but also by diminishing accumulated stocks. The present phase is marked by increased labour costs, and by the effort of the producer to pass on these increased costs to the consumer.

The recent increase in labour costs has been general but irregular. The increase is due either to the raising of hourly wage rates, which is the more usual cause, or to the shortening of the working week, usually to forty hours. Indeed, the 30-hour week (five 6-hour days) has now been established in the New York building trades. The 40-hour week was recently introduced in units of the steel industry, and replaced a 44-hour week; the idea was to increase the number of persons employed in the industry. The 30-hour week in the building trades was established to increase the amount of overtime, which is paid at the rate of time-and-a-half. In addition to higher hourly wages and a shorter working week, there is a noticeable tendency to insist upon the abandonment of piece work in favour of payment by time; or, in the case of line production in the mass production industries to slow down the rate of the conveyor belt, which determines the speed of production for a gang of men. Another feature has been the general movement to increase the hourly wage rates of "common labour," by establishing flat daily or hourly minima; there is, for instance, a 75 cents an hour minimum in the General Motors Corporation, and a \$5 a day minimum (for 8 hours) in the Steel agreement. Such minima have so far tended to reduce the difference in remuneration between unskilled and skilled labour.

It is impossible to generalise as to the effect of these tendencies on labour costs. Furthermore, the movement is still in flux. For example, an increase in the minimum wages in a large industry is invariably followed, with some time lag, by a readjustment of the wages of the skilled workmen, and often (usually much later) by some readjustment of clerical salaries. Consequently, although it would hardly be statistically justifiable to say that, in manufacturing industries generally, there had been an increase of nearly 20 per cent. in labour costs in the last four months, something of that order has been and is occurring. This is superimposed on a substantial rise in the price of primary commodities; and is being rapidly passed on to the consumer in the form of higher retail prices. But the consumer has not yet felt the full impact.

January Surplus of Imports

There has been a relatively small rise in rents compared with other prices. Unfortunately, the statistical data are far from satisfactory. The Bureau of Labour cost-of-living index shows rents at 105 with 1913 as the base year; while the cost of construction index of the *Engineering News Record* now stands at about 225 (also on a 1913 base). This latter index is now higher than at any time during the building boom of the 20's, and has risen about 20 per cent. in the past year.

At the present time, it is quite impossible to assess the general consequences of so abrupt and comprehensive a movement. In recent weeks, several million persons have received substantial pay increases—but there are supposed to be about 50 million people capable of gainful employment, and over 40 million persons actually gainfully employed. Wide as has been the application of increases, it is probably safe to say that a majority of all persons employed has received no rise. At the same time the prospect of rising retail prices is probably in part responsible for the very active retail trade of the current season.

Our foreign trade figures for January repeat more emphatically the trend of recent months towards a passive trade balance:—

FOREIGN TRADE OF JANUARY

	1936	1937
Merchandise exports	199	222
Imports	187	240
Net silver imports	58	2
Net gold imports	46	121

An import surplus in January is a very rare event; but the increase in merchandise imports over last January (about 20 per cent.) is comparable to the rise in the index of production in the same period. The most striking change is the shrinkage in our silver imports. Since the price of silver was quite steady in January, it would appear that the silver market found in that month an equilibrium ex our treasury operations.

France

Success of Defence Loan

PARIS, March 18.—The issue of the two tranches of the Defence Loan was a great success, and the major part of the subscriptions was taken up by Frenchmen. The repatriation of funds has begun, and it is hoped that the Paris Exhibition in May will do the rest. When totally issued, the Defence Loan will ease the position of the Treasury. The requirements for 1937 were finally estimated by M. Vincent Auriol at 40,000 million francs;

**BANKERS TRUST
COMPANY**
NEW YORK

London Office:
26 OLD BROAD STREET, E.C.2.

Incorporated with
Limited Liability
in the U.S.A.

but 8,000 million francs have been already subscribed, and 6,000 millions of public works expenditure has been abandoned. Therefore when the Defence Loan has been issued the sums to be furnished by the middle or short-term market will be about 16,000 million francs—20,000 millions including the repayment of the £40 millions loan. These sums should not be beyond the resources of the French market, if a return of confidence provokes a recovery in the Rentes.

The revival of business is shown by the increases in railway receipts (10 per cent.), in fiscal receipts in January and February, and in production. Unemployment has fallen to about 400,000, a drop of 85,000 compared with a year ago. The Chamber will begin a two months' recess at the end of the week. They will thus have no time to pass the Bill to establish an unemployment fund. This is perhaps fortunate; this and other measures will prove expensive, and they might endanger financial equilibrium and the political truce.

Rise in Prices and Fiscal Receipts

The main problem now is the rise in prices, which endangers both wages and exports at a time when re-armament and recovery are causing a considerable increase in imports. The rise of international prices is not actually balanced by the fixed price of wheat, which is kept at 145 francs, against a world price of about 130 francs. An increased demand and a shortage of labour are causing this rise in prices, which is interfering with business and wiping out the benefit of wage increases. The Government believe that production must be encouraged to increase supplies, and so to provoke a reaction on the markets. The question is how to reconcile the 40-hour week with the shortage of skilled labour. The Minister of Economy told the National Economic Council that the workers will consent to examine the proposals for delays and exceptions in the application of the 40-hour week to various industries. Such a decision might have the same favourable effects as the return to a free gold market in the financial sphere.

The Statistique Générale de la France has just published its monthly figures:—

	PRICES			
	June, 1936	Sept., 1936	Feb. 6, 1937	Mar. 13, 1937
Wholesale prices.....	372	407	515	533
Domestic products.....	415	457	541	546
Imported products.....	296	319	467	510
Foodstuffs	396	447	522	516
Industrial products ..	352	373	510	548
Retail prices	458	463	577	...
Lighting and heating ...	79	88	93.8	...
Clothing	57	61.2	86.3	...

	INDUSTRIAL PRODUCTION			
	Jan., 1936	Nov., 1936	Dec., 1936	Jan., 1937
General index	97	99	100	100.5
Engineering.....	97	102	105	109
Iron and steel.....	83	92	89	93
Textiles	71	74	75	71
Mines (adjusted figures)	101	95	98	97
Building " " ..	68	57	58	61
Leather " " ..	91	95	91	91
Paper " " ..	123	151	150	147
Rubber " " ..	909	941	915	818
Motors " " ..	428	532	560	542

In the motor industry, 12,937 automobiles and 1,810 lorries were put on the road in January, against 13,815 and 1,932 in December. The number of bankruptcies in February was 541, against 592 in January and 599 in December; bankruptcies and judicial liquidations were 735, against 843 in January and 844 in December.

Fiscal receipts in February were 2,695 million francs, of which 2,513 millions were ordinary receipts. These results are much more favourable than those of January. The receipts are actually 96 million francs higher than the estimates, while in January they were 67½ millions lower than the estimates. Moreover, the yield of indirect taxes has risen by 355½ million francs compared with that of February, 1936. For the first two months of the year fiscal receipts were 29 million francs higher than the estimates and 546 millions higher than the yield of the same period of 1936. It will be noted

that the February surplus comes principally from the increase of customs, which realised 105 million francs. The turnover tax produced, in the two months, 603 million francs, a surplus over the estimates of 93 millions a month in Auriol francs, but a deficit of 52 millions in Poincaré francs.

Germany

Inadequate Information in Foreign Countries

BERLIN, March 16.—The amount of the Reich 4½ per cent. loan was last week increased from the original Rm. 500 millions to Rm. 700 millions. This was a consequence of the abundance of cash, another indication of which was the increase of the Gold Discount Bank's circulation of promissory notes to nearly Rm. 1,200 millions by the end of February. In three months this circulation has risen by Rm. 750 millions. The syndicate banks had large cash reserves and at once paid in their subscription quotas in order to make an interest gain; and the public rushed to subscribe, apparently fearing that the loan might be rationed. Because of the loan and of the quarterly demand for income tax, money this week is dearer.

The complaint by the American Securities and Exchange Commission, issued on March 2nd, about the Reich's incorrect debt reports was here suppressed. The statement, which was issued in connection with the registration of the German Conversion Office's issue of dollar funding bonds, would not have given Germans, had they been allowed to see it, a high opinion of the efficiency of foreign Governments in defending the interests of their nationals. Though naturally eager to get information about German indebtedness, the S.E.C. did not discover the Reich's so-called secret or unrecorded debt until November, 1936, and then discovered it only because a semi-official report issued by the Trade Research Institute and already a year old came to its notice. The statement shows that the S.E.C. did not know that this was an old problem, which had been dealt with in detail repeatedly, not merely by the semi-official Institute but by the official Reich Statistical Bureau, and even by the Minister of Finance. There has, indeed, never been any secret debt, but only secrecy as to the amount. Naturally a Commission which confessed such innocence failed to induce Berlin to give new information, and learned only that the Reich's funded debt was Rm. 11,620 millions, and the floating debt Rm. 2,918 millions, which is just what the monthly debt returns show.

It is also strange that the S.E.C. should reproach American bankers for getting better terms for themselves as creditors than they got for the bondholders whom they represent. The better treatment of the Standstill bank creditors arose automatically. When the first Standstill agreement was concluded, the bonds were being fully served, and it was not envisaged that bond transfers would ever be curtailed. The bondholders were therefore then the favoured party. It was the default on bonds in June, 1933, which gave the creditor banks an apparent priority for their claims. It is an observed fact that the slackness of foreign Governments in protecting their citizens' rights against the excesses of German exchange-legislation is often due to imperfect information; and the S.E.C. affair is therefore worth noticing.

Rising Prices and International Agreements

The wholesale prices index number for March 10th was 106.1, against 106.0 on March 3rd. Recently this index has steadily risen. The "price-stop" decree of November 26th permits so many exceptions—imported goods, new materials, and certain agricultural products—that it cannot prevent a rise in the average of prices. According to another official wholesale prices index (1928 = 100), the index number for January, 1937, was 75.2; the agricultural component stood at 76.8, manu-

Spain

Progress in Mining

BARCELONA, March 2.—In an interview the Minister of Commerce for Catalonia gave some account of the present economic position of Catalonia. He pointed out that war conditions had forced Spain to rely largely on her own resources; and that in Catalonia alone some 50,000 workers were now employed in newly-established industries. Many mines have been reopened, in particular the lead mines of Bellamunt, Mola, Oso and Martorell; and a newly-discovered zinc mine is likely to yield a daily output of from 10 to 20 tons. Copper ore of high quality has been found in the Catalan Pyrenees.

In the three months since October 1, 1936, Catalan exports were valued at 46.2 million pesetas (about £783,000 at the official rate of 59 pesetas to the £) and imports, exclusive of certain foodstuffs, at 30 million pesetas (about £508,000 at the official rate). Exports of textiles were valued at 6.5 million pesetas, of cork at 6.2 millions and of almonds at 6 millions. Foodstuffs to the value of 11 million pesetas were imported, raw cotton to the value of 2.7 million pesetas, and coal to the value of 2.5 millions.

Trade Policy and Food Shortage

The Spanish Government has made a new trade treaty with France: some 60 per cent. of Spanish exports to France will be compensated by imports of French produce, 25 per cent. will be paid for in foreign currencies, and the remainder will be devoted to the repayment of debt. Similar compensation agreements have been made with Holland and Switzerland. A number of temporary reductions in import duties have been decreed for goods most in need in Spain. These range from cuts of from 50 to 90 per cent. in the duties on pig iron, scrap, brass and copper ingots, wire, machinery, methylated spirit and telegraph sets to 35 per cent. in the case of sawn timber. The duties on coal, live cattle and unwashed wool will be cut by 75 per cent. and on foodstuffs by from 50 to 75 per cent.

The Minister of Commerce declared that the prime need of Spain to-day was for foodstuffs. The Valencia Government has decided to purchase 300,000 tons of grain, and large quantities of meat and fish. In return textiles, potash, wines, almonds, nuts and olive oil will be exported from Catalonia. Special Catalan Export Agencies have been set up abroad, and Catalonia is included in all the commercial agreements concluded by the Central Government. There is no suggestion, the Minister concluded, that the Spanish Government is likely to repudiate foreign claims arising out of engagements made by former governments in Spain.

factured capital goods at 82.6, and manufactured consumption goods at 74.7. The cost of living index (1928 = 100) stands at 82.1. While the national income rose between 1931 and 1936 from 5,750 million marks to 6,200 millions, the retail turnover sank from 2,850 million marks to 2,780 millions; it has increased considerably, however, since 1932. Railway car loadings in January were 7.3 per cent. more than in January, 1936. In February the number of unemployed fell by 243,000 to 1,611,000, and was 904,000 below the figure of February, 1936. Pig-iron output in February was 1,190,800 tons, against 1,292,100 tons in January. Several new undertakings, among them a daughter corporation of the I.G. Farbenindustrie A.G. for "Buna" rubber production, have been founded under the Four-Years Plan.

The Reichsbank's Foreign Holdings

The Reichsbank held its annual shareholders' meeting on March 16th. The profit and loss account for 1936 shows a gross profit of Rm. 170 millions, against Rm. 153 millions in 1935, the main change being an increase of Rm. 16 millions in the profit from bills. Expenditure rose from Rm. 112 millions to Rm. 129 millions, mainly because of increases in the amount put to the note-printing reserve and to the reserve for new construction. Dr. Schacht reports that the new head office is costing more than was estimated. The net profit, Rm. 40 millions, is almost exactly the same as last year. The dividend remains at 12 per cent.; one-third of this will go into the loanstock. Of 13,682 shareholders owning 1,498,615 shares of Rm. 100 each, 1,576 holding 262,208 shares, are foreigners. The foreign holding has of late only very slightly declined. The total balance for December 31, 1936, was Rm. 15,824,004,113 against Rm. 11,733,543,757 last year. In addition to the gold reserve, the balance sheet shows the following foreign-exchange holdings and claims, not specified in the weekly returns:—

	Rm.
Foreign currency deposits (part is booked in the returns as note cover).....	14,518,189
Foreign banknotes	2,275,603
Foreign bills and cheques	94,497,981
Foreign exchange at the bank's disposal.....	31,038,229

The only foreign currency liabilities specified amount to Rm. 433,028.

The completion of the International Cement Cartel and the progress made towards a Coke Cartel have attracted favourable attention. This is particularly true of the Coke Cartel plan because it seems to foreshadow an international coal agreement. The German export of cement has trebled since 1933, largely because of increased purchases by South America, but it is only two-thirds of the 1929 figure; and the average export yield has fallen in this period from Rm. 30 to Rm. 12-13 a ton. Trade journals talk of possible international agreements about certain manufactured goods, such as special machinery, which though not adapted to cartelling are in demand owing to re-armament. There is a characteristic discussion about whether Germany should cut down her exports of machinery because they help foreign competitors. The rise in the price of International Steel Cartel exports has badly hit those machine-manufacturing countries which obtain their raw materials from abroad. It has benefited Germany twice over: firstly because her machinery manufacturers are getting steel at unchanged prices; and secondly because the steel industry obtains better export prices. Because of this dual improvement, the "Avi" price-rebates on steel consumed by home manufacturers for export will, it has been announced, be reduced. These price rebates were for a long time a matter of international controversy, and led to conflicts with the United States. There is some doubt about the way in which company dividends exceeding 8 per cent. (which have been impounded under the Loanstock Law) will be paid. Consequently quotations for shares with impounded dividends fell last week. Reichsbank shares, which pay 12 per cent. and have a claim for an impounded portion, were quoted scarcely higher than industrials paying 7½ per cent.

China

The Kuomintang in Conference

HONGKONG, February 28.—China has just started another year, and the outlook is brighter than it has been for some years past. Rising prices throughout the world promise better returns for the produce of China and for the labours of its people. Already there are signs that purchasing power is on the upward grade, and, despite areas where Communism on the one hand and Japanese aggression on the other are disturbing factors, the country as a whole is on the road to recovery.

Six months have passed since the control of the Central Government was made effective in Canton. A month or more ago it looked as if the general in command of the troops in Kwangtung was acquiring power at the expense of the civil officials. Both the Chairman of the Kwangtung Provincial Council and the Mayor of Canton were absent for some time, but the Chairman has now resumed office, while the Mayor has gone to Nanking to represent Kwangtung at the Plenary Conference of the Kuomintang Party. So far the proceedings of the Conference have hardly got beyond the preliminary stage, but the earlier speeches indicate a desire to avoid ruffling the feelings of the Japanese Government. The business will probably be confined as much as possible to domestic affairs. The extension of the national currency to the southern provinces appears to have made no progress; nor has there been any reform of the currency in the neighbouring province of Kwangsi, where the war lord Pei Chung Hsi continues in office, despite the understanding that he would leave the province and allow it to be administered by the Central Government.

The Effects of Re-armament

The figures of the trade of Hongkong for 1936 show an increase of 23.9 per cent. for imports and 29.5 per cent. for exports in local currency compared with the previous year. Measured in sterling, there is a decrease of 19.3 per cent. and 10.9 per cent. respectively; but as the average rate of exchange for 1936 was 1s. 3½d., against an average rate of 1s. 11½d. for 1935, the dollar figures are probably a closer indication of the actual volume of trade passing through the colony. Imports from Japan showed a further increase. They rose to 12.8 per cent. of the total, compared with 11.8 per cent. in 1935; and imports from Germany rose from 4.5 per cent. to 5.2 per cent. On the other hand, there were slight decreases in imports from the United Kingdom and U.S.A.; the respective percentages were 6.4 and 7.1, compared with 6.5 and 7.3 in 1935.

The Hongkong shipbuilding yards are looking forward to a busy year and are already well occupied. Two Blue Funnel steamers of 10,000 tons each are to be built at the Taikoo Docks; and the rival company at Kowloon has orders for two Indo-China S.N. Company steamers and for a steamer for the Burns Philp Australian line. The Taikoo Dock will also be engaged on the conversion of several Blue Funnel steamers from coal to oil burning. Such activity in the shipbuilding trade of Hongkong has not been experienced since the closing years of the War. The British Government's re-armament policy may also provide work for the two dock companies; the regular naval establishment is only able to cope with a limited amount of refits and repair work required by the China Fleet. Extensive preparations for military works have been proceeding here for many months past, and with the lapsing of the Washington Treaty it is presumed that the defences of the colony will be greatly strengthened. Two new aerodromes are under construction, while increased barrack accommodation will be provided for the military forces. All this activity will be of benefit to the colony in circulating money; but the commercial community would be far happier if prosperity were derived from normal trade with South China rather than from the pockets of the British taxpayer.

Argentina

The Early Stages of a Boom

BUENOS AIRES, March 3.—There are signs that Argentina is on the threshold of a boom, the full effects of which will not begin to be felt for two or three months. During the first six weeks of the current year shipments of wheat and maize showed an enormous increase over the corresponding figures of the two previous years:—

(Shipments in tons during first six weeks of the year)

	Wheat	Maize	Linseed
1935	722,466	630,106	375,752
1936	143,115	1,016,782	246,395
1937	1,066,961	1,351,008	328,793

The increased movement of cereals has brought about a great improvement in the position of the railways. In the week ended February 6th, for instance, receipts of the Buenos Aires Great Southern (the chief wheat-carrying railway) were 4,028,000 pesos against 2,889,000 pesos in the same week of last year. Other lines showed similar if less striking improvement. Central Argentine receipts rose from 2,244,200 pesos to 2,988,450 pesos, while Buenos Aires Pacific Railway receipts improved from 1,660,000 pesos to 1,870,000 pesos.

Meat exports show no remarkable change compared with former years; these are less liable than cereals to violent fluctuations in price and volume. In the first four weeks of the year Argentina exported 371,077 quarters of chilled beef, all of which went to the United Kingdom, compared with 413,591 quarters in January, 1936, and 372,626 quarters in January, 1935. The announcement last month that the Argentine Government would subsidise stockbreeders and meat exporters to a maximum of 15,100,000 pesos annually, as a reply to the British tax on Argentine beef, was not unexpected. The President of the Republic and the Minister of Agriculture had already indicated that the interests of the stockbreeders would not be overlooked in negotiating the recent Anglo-Argentine agreement. Argentina has had considerable experience in the last few years of managed economy; the chief industries are controlled by Government boards. But the subsidising of cattle breeding, the oldest and greatest Argentine industry, seems paradoxical. The landowners, however, are still the most influential class in the country.

Export Surplus Rapidly Rising

The foreign trade returns for 1936 show that compared with the previous year exports rose by 5.3 per cent., while imports fell by 5 per cent. The export surplus was 535,737,647 pesos, against 394,367,834 pesos in 1935 and 328,501,534 pesos in 1934. This is remarkable when it is recalled that, during the first half of 1936, the surplus fell by more than 100 million pesos compared with the first half of 1935. The whole of the recovery, therefore, took place in the second half of the year and most of it in the last quarter. In imports in 1936 the big increases were in machines and vehicles, metals and food products; the most notable decreases were in textiles and tobaccos.

The United Kingdom in 1936 maintained her predominant position as a supplier of Argentina. The United States, Germany and Belgium all lost some ground compared with 1935. Italy improved her position very considerably. Japanese exports to Argentina showed a considerable fall. The diminution of competition by Japanese cotton cloth manufacturers was particularly marked, especially towards the end of the year; and it is reliably reported that Japanese cotton exporters have increased their prices by between 30 and 60 per cent.

The extraordinary sessions of Congress ended without the Bill for the purchase by the Government of the Córdoba Central Railway being considered. The passage of the Bill is by no means certain, as the Government lacks a working majority in the Lower Chamber. The recent decision of the Government to provide funds for the rebuilding of the Argentine section

of the Transandine Railway between Punta de Vacas and Mendoza, which was destroyed in the Río Plomo disaster of January, 1934, is dictated almost entirely by political motives. The Transandine Railway was never an economic proposition, but it helped to cement bonds of friendship between Chile and Argentina; and it brought Chile a fortnight's journey nearer to Europe.

New Zealand

The Limits of Public Expenditure

OTAGO, March 1.—The present Government is in a very strong position. The previous administration was discredited during the depression; and the new Ministry took office when export markets were showing signs of rapid improvement. Moreover, the previous Government had pursued a policy of exaggerated economy and deflation, with the result that the Reserve Banks had accumulated sterling balances in London of £24 millions. Wool prices have risen by 80 per cent. in the past twelve months. Consequently, the new administration can expand its commitments freely without bothering unduly about the external balance of payments, and without making unorthodox calls upon the Reserve Banks.

Nevertheless, public spending cannot be increased indefinitely without resort being had to the bank for credit; which would cause external strain and internal inflation. It is true that while large sterling balances are held and export prices rise, the problem will not occur. But lavish local expenditure encourages imports; and if

the guaranteed price for dairy produce is fixed higher than the export price to please the farmers, the same will happen. The present policy of expenditure rests precariously on the present favourable terms of trade; and the Government may eventually be compelled to adopt exchange control, import rationing and currency depreciation to protect its policy. The limits of monetary expansion are fixed by the external balance of payments.

Freer Spending but Prudent Policy

The keynote of policy has been freer spending. The number of pensions has been raised from 41,840 in 1935 to 47,743 in 1936, and the annual cost of pensions from £1,776,414 to £2,475,000. An old age pensioner draws 22s. 6d. per week. Roads, tunnels and railways are being laid down and completed, with the aid of up-to-date machinery and relief labour (at 19s. 7d. per day).

But there is little financial anxiety. Taxes, in particular on land and incomes, have been increased considerably, but incomes are rising, and revenue is buoyant.

Labour legislation, e.g. the forty-hour week, has put up costs. Waterside workers, for instance, have been awarded 5s. 4d. per hour for Sunday work of at least three hours. Much of the sweeping legislation has not, however caused undue alarm among employers, because the present Cabinet is composed of practical men, whose administrative practice is not likely to be as drastic as their legislative powers. The Government has shown a sense of realities; the sales tax has not been removed, nor has the currency been appreciated. Much of the new spending was necessary, and the Cabinet is unlikely to overstep the bounds of prudence.

Letters to the Editor

Railway Wagon and Train Loads

TO THE EDITOR OF THE ECONOMIST

SIR,—The article in last week's issue under the above heading raises some interesting points, but I should like to mention certain aspects which it ignored.

On the tables I to III, giving average wagon loads for the three main groups of railway traffic, the following conclusion was reached: "Altogether, the available evidence suggests that the extent of changes in the average wagon load, effected since amalgamation, has not been particularly striking. The figures, indeed, may disappoint those who are impressed with the immense technical possibilities of increasing wagon capacity and the average wagon load in Great Britain."

The average wagon loads which are quoted are arrived at by dividing ton miles by wagon miles for the three main groups of traffic. But the averages are not accurate averages of the loads obtained unless there is uniformity in the length of journey of each wagon load. As the larger

wagon loads move the shorter distances the figures published in the article understate the average load. The proper test of the loading of wagons is to divide the total tonnage loaded by the number of wagons loaded, and this information has been published in the Ministry of Transport returns since 1926. I give the figures in the attached table.

It should be borne in mind that these averages may rise or fall without alteration in loading efficiency if the nature of the traffic alters. I refer below to the reasons why considerable increases have not been achieved.

It is impossible to relate the average wagon load to wagon capacity stated in tonnage because a wagon may be fully loaded with empty crates weighing only 5 cwt., and if light-weighting traffic increases disproportionately to the whole, the average load stated in tonnage distorts comparisons. As regards coal and mineral traffic, the question of the use of higher capacity wagons has been considered by the railways and traders for many years, but up to the present efforts in this direction have met with only partial success and it was only with some difficulty that the 12-ton wagon was introduced in recent years. The bulk of the coal in this country is carried in privately-owned

wagons and higher capacity wagons are regarded by the industry as unsuitable for this traffic.

With regard to the average wagons per train and the average net train load, the statement is made that: "At the time of amalgamation it was generally expected that the new grouping would afford opportunities both of avoiding wasteful duplication of services and of combining streams of traffic destined for common destinations; and that better train loads would produce more economical working conditions. Later on, it was further hoped that the Pooling Schemes of 1932-33 would have similar results."

As a test of these expectations, it is unsound to examine the average number of wagons per train and the average net train load. In considering these statistics, no account has been taken of the fall in tonnage between 1924 and 1936, which reached its lowest point in 1932 and since has steadily increased, but not yet even to the level of 1930. Where regular trains are worked at fixed times, the fact that the number of wagons on a train may fall by four or five does not warrant its withdrawal. Nor is the tendency of traders to carry smaller and more diversified stocks, and to rely on transport systems supplying them with even a single article from wholesale warehouses within a day or two of their order, taken into account. Further, something almost in the nature of a revolution has taken place in recent years in the speed of delivery, and the impossibility of holding back traffic for big train loads is a factor not to be overlooked.

These are the main reasons why the average wagon load, the average number of wagons per train and the average train load statistics do not show marked increases, and as it will be appreciated they are factors over which the railways have little control. As a matter of fact, there have been considerable economies by avoiding wasteful duplication of services and combining streams of traffic to common destinations and by pooling, but, for the reasons mentioned, these are not reflected in the number of wagons per train and train load. The average net train load statistic is obtained by dividing ton miles by train miles and consequently is open to the same objection as the average wagon load, that unless there is uniformity in the length of the journey of each weight of traffic the figures are not records of the loads obtained, and the figures quoted in the article were understated.

I suggest, therefore, that the statement that the railways might have benefited themselves and industry more had they concentrated on increased effort and better loading, is not justified.

Yours faithfully,
JOHN R. HIND.

The British Railways Press Office,
35 Parliament Street,
Westminster, S.W.1.

(Mr. Hind in no way undermines our argument and conclusions, but in certain respects his comments strengthen them. The Ministry of Transport publish: (a) Average wagon loads (ton-miles ÷ loaded wagon-miles), and (b) average wagon loads at starting points (tonnage forwarded ÷ number of loaded wagons forwarded). We published the former; Mr. Hind submits the latter. Since "the larger wagon loads move the shorter distances," the throughout wagon load is in most instances lower than the starting point wagon load. But this is precisely what the throughout wagon load is intended to bring out. It is more serious for wagons to be worked "light" (say) from London to Scotland, than from London to a point 20 miles away. Every one with railway knowledge will appreciate Mr. Hind's

remarks about "empty crates weighing only 5 cwt., and the carriage of mineral traffic. Here we were careful not to impugn the railways, since we recognise their many difficulties. Finally, Mr. Hind suggests that no account was taken of the demand for regular trains and increased speed of delivery. He will find, however, that in the second paragraph of our article we argued at length that all the figures quoted would be examined only in the light of the necessity to provide such "qualities of transport," and that we explicitly declared that this must militate against good train and wagon loads. The purpose of our article was not to criticise railway policy, but to draw attention to far-reaching facts.—Ed. ECON.]

Growth of a Monopoly

TO THE EDITOR OF THE ECONOMIST

SIR,—Of the many tendencies which give rise to anxiety at the present time, none is more alarming than the tendency of our fiscal system to establish the machinery of monopoly. In Scotland, the best example of this is to be found in iron and steel, our greatest heavy-manufacturing industry (or rather group of industries). Here, within a year or two, a great socialistic monopoly has grown up.

Free trade within the iron and steel industry has gone. Under the wings of a high protective tariff (now temporarily modified on account of the shortage of supplies) and strict quota control, the industry has been transformed into a network of "rings." The control is effective and ruthless.

Any producer in any section of the industry who showed resistance quickly found, first, that the cost of his supplies was raised, then—if he still resisted—that the source of his supplies was blocked. The Scottish iron and steel producer is no longer a free agent. His prices are fixed for him—and his prices have risen. To the users, who far outnumber the producers, the recent lowering of the iron and steel duty is welcome; but it brings only temporary relief, and the strict quota control remains.

The State does not control the iron and steel industry, but it aids and abets with a tariff, normally high, which is now free from the embarrassing conditions originally attached. The State has "fathered" the present control. The machinery of socialism has been installed. It is being operated in the iron and steel industry as a monopoly, in the interests of the combined producers at the expense of the users and consumers. A socialist government would have no difficulty in adapting this machinery to its own uses.

Prophecies that we are approaching a struggle between Fascism and Communism in this country may be based on extravagant imaginings; but it would be idle to deny that in the iron and steel industry a kind of industrial fascism has sprung up under protection. There has already been exploitation. If it is not checked, as it should be checked before the armaments programme is further advanced, those who want a good argument for socialism will not have to go far to find it.

The way out of an awkward dilemma might be found if the complete reorganisation of production and marketing in the iron and steel industry—based on "profit-sharing," not "profiteering"—was made an absolute condition of continued State aid.

Yours faithfully,
RANALD M. FINDLAY.
Edinburgh.

Books and Publications

The Balance of Payments

THE period between Britain's departure from the gold standard and the devaluation of the French franc was one in which British and French economic policies were usually widely divergent. In this book,* written in June, 1936, Professor Aftalion offers a systematic theory of international equilibrium which should receive wide attention in this country, particularly as it challenges many of the assumptions on which our present monetary and fiscal policy is based.

* *L'Équilibre dans les Relations Économiques Internationales.* By Albert Aftalion. (Paris) F. Loviton et Cie. 466 pages. 60 francs.

Professor Aftalion's most important contribution in this work is his theory of the balance of payments on current account (balance des comptes), and his discussion of the factors which are likely to aggravate or mitigate disequilibrium. He rejects the classical theories of gold movements, price changes and variations in the Bank rate as being too mechanical, and bases his own treatment on an examination of the relation between the value of national production and the total national income. The difference between these two quantities constitutes the favourable or unfavourable balance of current payments which, except in cases of bankruptcy, will correspond with the net exports or imports of capital. Equilibrium, it is emphasised, is the exception rather than the rule, and capital movements, though often

desirable in order to stimulate the development of backward or distressed countries, always have disturbing influences and tend to counteract any existing tendencies towards equilibrium. Thus, by living on its own capital invested abroad, or by borrowing from other countries, a country will encourage the continuation of an unfavourable balance. "Les richesses amassées dans le passé empêchent le présent de se libérer par son propre effort."

The great merit of this treatment is that it fixes attention on the total national income and production. This enables Professor Aftalion to give a systematic account of the influence of a number of factors which are too often in traditional theory dismissed under the phrase "other things being equal." Furthermore, the new theory is admirably linked up with the "income theory of money," as it may be called, which has been one of Professor Aftalion's most important contributions to economic thought. To English readers his attacks on the quantity theory of money and on the traditional teachings of the currency school may at times appear rather too vehement. This is particularly true of his all-too-brief discussion of the rôle played by the rate of interest. There are passages, too, in which he appears to deny that the supply of money can have any effect upon prices. Nobody would now deny that the earlier crude formulations of the quantity theory were unsatisfactory; but the modern versions, which lay such stress upon the influence of changes in the monetary situation on incomes and expenditure, do, as a matter of fact, agree far more closely with Professor Aftalion's own theory than he seems willing to recognise. A more tolerant understanding of these modern theories might have prevented such statements as (page 388): "Or la théorie générale des prix est adjouré'hui une théorie principalement psychologique." One is left with the feeling that Professor Aftalion has not yet satisfactorily cleared up in his own mind the exact relationship between economic and psychological forces.

In the applications of his theory, Professor Aftalion, as always, shows a real understanding of concrete realities and of the need for an empirical justification of purely abstract propositions. He never loses sight of political and other non-economic factors, and ruthlessly rejects all hypotheses which do not fit the facts. His interpretation of post-war European economic history is an admirable combination of analytical logical and political understanding, and his discussion of the German transfer problem lays bare some of the mistakes made by English writers on this subject. Indeed, this book will be read as much for its historical as for its theoretical insight.

Shorter Notice

"Labour Conditions in Western Europe, 1820-1935." Jürgen Kuczynski. Lawrence and Wishart. 118 pages. 4s. 6d.

The first part of this book attempts to survey the general problems of the measurement of labour conditions. The author rightly emphasises the necessity of correcting the official indices of wage rates in order to allow for unemployment, short time, social contributions, social service benefits, etc. Indeed, where any deductions can be made from the official figures, he makes them. He does not recognise, however, that there are other factors of which statisticians must also take account, e.g. the average size of the family, and the downward bias given to the official wage index owing to the constant transference of labour from worse to better-paid occupations. The reason for these omissions is that the author finds some difficulty in making the facts fit his social theory. "The only individual factor of whose trend we can always be certain is the working intensity. It is always increasing." But no proper account is taken of the enormous reduction in working hours during the last hundred years.

The second part of the book gives the author's figures of money and real wages in England, Germany and France since 1820, but all details of the exact determination of the allowances and deductions are omitted. His construction of an "index of relative wages," which purports to show the relation between real wages and national production, is surprising. He arrives at the conclusion that this index has fallen in England from 124 in 1859-68 to 78 in 1924-32, and in Germany from 170 in 1860-67 to 44 in

1924-35! One would have thought that national income figures would afford the best measure of the relative share of labour, but these Mr. Kuczynski ignores.

Mr. Kuczynski does make some good points—e.g. the importance of Britain's Imperial possessions and foreign investments in maintaining the standard of living of the British workers, but he certainly has not helped the cause of Socialism by his assumptions. A far better case can be made out, based on scientific methods.

MONEY AND BANKING

Treasury Bill Trends

IN recent articles we have shown that useful, though indirect, light is thrown on the relations between the Treasury and the City of London by a division of the returns of the issue of Treasury bills into two categories, namely bills issued by tender and bills issued through the "tap." The tender bills are taken up directly by the banks, the discount market, insurance and financial institutions, and other public applicants. The "tap" bills are those taken up by Government departments, the Exchange Equalisation Account and, possibly, by the Bank of England either for itself or for other central banks.

Since we first made these calculations sufficient time has elapsed to afford some indication of the long-term trend of both tender and tap bills. There are four main forces determining the size of the tap bill issue. First, there are the sterling resources of the Exchange Account, which, broadly speaking, vary inversely as its holding of gold and *devises*. Next there is the magnitude at any time of the funds held by Public Departments other than the Exchange Account. Next, there are the Departments' holdings of long-term Government securities, for obviously the more securities the Departments hold, the less Treasury bills they take up through the tap. This influence is directly dependent on the extent to which the authorities are supporting the gilt-edged market, or any new Government loan, at any moment. A final influence is the amount of bills obtained through the tap (rather than by tender) by the Bank of England for itself or other central banks.

Obviously, given all these imponderables, only general conclusions can be suggested. In the first place, the figures afford some indication of the incidence of the Exchange Equalisation Account and its operations on the floating debt, which consists mainly of Treasury bills. The chart on this page shows a net increase in the total Treasury bill issue, since early in 1932, of approximately £80 millions—from £600 to £680 millions. But of the latter figure an unknown proportion represents tap bills held in the Exchange Equalisation Account, while a further unknown amount consists of bills issued by tender solely because of the Exchange Account's gold purchases. There is, in fact, a gold asset against these Treasury bills. If we presume their total to be not very far removed from the total of the Exchange Equalisation Account itself, which is nominally £375 millions, we may put the effective Treasury bill issue for National Debt purposes alone at £680 millions less £375 millions—say about £300 millions. This is a modest figure, whose significance may emerge when defence borrowing begins.

Reference to the chart will show, further, that the tap bill curve has been steadily falling since the end of 1934, while, apart from seasonal fluctuations, the tender bill curve has been rising. Both movements may be largely attributed to the influx of French funds into London, which forced the British Exchange Equalisation Account to buy gold and to turn out tap Treasury bills. This, in turn, involved an increase in the tender issue. In effect, when the Government bought gold from France it borrowed at short term from the banking system to pay for

FLUCTUATIONS IN TREASURY BILL ISSUES, 1932-37

it. Another material factor has been the tendency of public departments to underwrite new Government issues of longer-dated stock, and to take up part of their commitments with the intention of gradually selling the stock on the market. This procedure reduces the tap and so increases the tender issue. To that extent new refunding issues do not immediately serve to reduce the effective floating debt. Further, to the extent that the banks must absorb more Treasury bills, they are less able to take up long-term stock. Conversely, the sharp increase in the tap issue last autumn was ascribed by us at that time to rapid clearance sales of stock by the departments in readiness for the underwriting of a fresh loan. The appearance of the November Funding Loan, a week later, substantiated our forecasts.

The most significant fact brought out by the diagram is that the tap bill curve has now declined to within measurable distance of its level of early 1932, before the establishment of the Exchange Equalisation Account. The inference would seem to be that the departments are holding less bills and more securities than five years ago; or that the Exchange Equalisation Account to-day consists almost entirely of gold. The Account is notoriously full of gold, as its sale of gold to the Bank last December suggested. But it cannot have been entirely denuded of Treasury bills, if only because it must still hold some, at least, of the bills it took over from the Bank in exchange for its gold. The departments, therefore, must have increased their holdings of securities.

The banking system, in short, is to-day carrying the larger part of the Treasury bill issue. How long is this likely to continue? In an article last week (page 592) we discussed the possible consequences of a repatriation of funds to France. We then suggested that the British Exchange Equalisation Account might need to sell gold to France and take in more tap bills, thereby reducing the quantity of tender bills held by the banking system. Action on these lines would reverse the present trend of both the tap and tender curves, for it would cause the former to turn upwards and the latter to turn downwards. The Government would, in effect, be reducing its short-term borrowings from the banking system for the purpose of holding gold, and so leaving the banks free, if necessary, to take up more long-term securities for the purpose, e.g., of financing re-armament. Whether events move in this way will be evident if and when a large-scale repatriation of French funds gains momentum.

Financial Notes

The French Defence Loan.—The French authorities were so satisfied with the reception of the first *tranche* of Frs. 5,000 millions of the new defence loan that a second *tranche* of Frs. 3,000 millions was issued this week on exactly the same terms. When we went to press last week only the preliminary details of the former issue were available, and so we summarise the complete terms below. The loan consists of 4½ per cent. rentes, redeemable in 60 years at the latest. The price of issue is 98 per cent. Interest is payable half-yearly, and the exchange guarantee or option operates as follows: the holder of a bond for Frs. 500 may choose to receive his interest in one of four ways. First, he may encash his coupon in Paris for 11.25 French francs. Next, he may present it for payment in Swiss francs at a place indicated by the Bank for International Settlements in agreement with the French Government. Payment will then be made in Swiss francs of an amount equivalent to 11.25 French francs at the rate of exchange current on the day of payment. Next, he may demand payment of the equivalent in francs of 2s. 1d. sterling, calculated from the average official Paris rate of exchange for the three Bourse days ending two days before the date of payment. Finally, he may demand the franc equivalent of 51 United States cents calculated in the same way. These last two options guarantee the bondholder exchange rates

of Frs. 106.95 to the pound and Frs. 21.90 to the dollar, these being the rates current immediately before the issue. Obviously, if either the pound or the dollar rises above these rates, it will pay bondholders to exercise their options. The amortisation of the loan receives the same guarantee. It is definitely stated in the loan decree that bonds for Frs. 1,000 French equal £9 7s. or \$45.66, while Article 5 of the decree says that redemption of the Frs. 500 bonds will be effected by repurchase on the Bourse or by drawings either at the nominative Frs. 500 in francs or the equivalent, £4 13s. 6d. or \$22.83, calculated in the same way as the interest. The State reserves the right to anticipatory redemption of all or part of the bonds outstanding as from March 1, 1942. The exchange options are necessarily complicated, but the French Government was unable to issue a loan either in sterling or in dollars, owing to the British control over foreign borrowing and the Johnson Act in the United States, and so was forced to resort to this device.

* * *

While the immediate London reactions to the French financial reforms were favourable, feeling this week has been less assured. The issue of the second *tranche* within a day or two of the first cannot be called a breach of faith, but even when further borrowing powers exist it is usual to wait a few months before coming on the market again. This gives the holders of the first *tranche* the assurance of a settled market for their bonds. Another and more vital point is that the whole of the money due is payable on March 22nd, and it is uncertain what the French Government will do with this enormous influx of funds. If they simply let them lie on deposit at the Banque de France, as has happened before on several similar occasions, there will be a sudden shortage of cash in France which will create stringency in the Paris market. On the other hand, the Government does not need all this money at once, while Paris still lacks an organised bill market which would enable the authorities to release these funds temporarily. It seems difficult to see why payment for the bonds was not divided into several calls spread over a sufficiently long period. This course would at least have prevented any disturbance to the French banking system or the Paris market.

* * *

The Money Market.—Conditions have remained easy in London, apart from calling by one of the clearing banks on every day of this week, which has created a moderate afternoon demand for loans. The clearing banks have bought some May and early June Treasury bills at ½ per cent., while there has been special buying of early April Treasury bills.

	Feb. 25, 1937	Mar. 4, 1937	Mar. 11, 1937	Mar. 18, 1937
Bank rate	2	2	2	2
Clearing banks' deposit rate	½	½	½	½
Short loan rate:—				
Clearing banks	1½	1½	1½	1½
Others	1½	1½	1½	1½
Discount rates:—				
Treasury bills	½	½	½	½
Three months' bank bills	½	½	½	½

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

There is likely to be some pressure for funds on March 30th. The market will be applying heavily for Treasury bills to be paid for on that day, so as to secure June maturities; and March 31st bills may not be easy to secure, as they have a day less to run and so the Government may try to obtain a higher price. Conversely, the market will have few bills maturing that week before April 1st, as it did not apply for bills to be paid for at the end of December. It is suggested that the special buying of bills already in evidence is designed to ease the pressure at the end of this month, by putting the market in funds before that date. This week's increase of £4.8 millions in Government securities held by the Bank may indicate the origin of this buying. It is also possible that the Exchange Equalisation Account has

been taking in Treasury bills against its recent gold sales to France, but this would not appear in the Bank return, though, of course, its effect is complementary to the Bank's purchases.

* * *

The Bank Return.—This week there is a slight reduction in the note circulation. With Easter only ten days ahead there normally would have been an increase, as Easter shopping is already beginning, while the banks must be replenishing their various local currency reserves. Thus the reduction provides strong evidence of French dishoarding, which is supported by reports that notes of large denominations are being paid back into the banks:—

	BANK OF ENGLAND				
	Mar. 18, 1936	Feb. 24, 1937	Mar. 3, 1937	Mar. 10, 1937	Mar. 17, 1937
	£ mill.	£ mill.	£ mill.	£ mill.	£ mill.
Issue Department:—					
Gold	200.6	313.7	313.7	313.7	313.7
Note circulation	404.4	455.1	461.0	464.5	463.8
Banking Department:—					
Reserve	57.0	59.3	53.6	50.1	50.8
Public deposits	16.9	13.0	15.2	17.0	22.8
Bankers' deposits	90.8	100.4	93.8	93.8	94.0
Other deposits	37.2	37.9	37.7	37.7	37.3
Government securities	80.2	85.0	85.1	90.1	94.9
Discounts and advances	8.6	4.9	4.3	4.2	3.8
Other securities	17.5	20.3	21.9	22.3	22.9
Proportion	39.3%	39.1%	36.5%	33.7%	32.9%

The chief changes in the banking department are an increase in Government securities, explained in the Note on the money market, and an increase in public deposits. The latter is due partly to the revenue influx and partly to the week's discrepancies between Treasury bill payments and maturities. The two movements have cancelled each other out, so far as the supply of bank cash is concerned, and bankers' deposits are therefore unchanged.

* * *

The Foreign Exchanges.—Both spot and forward francs were bid early in the week, and so the spot rate came down from Frs. 106.50 to Frs. 106.38, while the three months' discount narrowed to Frs. 1½ discount. Tuesday's riots in Paris had an unsettling influence, and in spite of official support the spot rate rose slowly to Frs. 106.65. Control operations then brought it down to Frs. 106.60 and, after a further temporary lapse, to Frs. 106.45. The discount on three months' francs, however, has widened to Frs. 1½-¾. The other rates have been very steady, but with some demand for sterling against belgas and Swiss francs. The New York rate shows little change at \$4.8860. Guilders now move entirely with the dollar, and so the sterling rate has also remained steady at Fl. 8.93½. Forward guilders are at a slight premium.

* * *

The National Bank of Egypt.—Sir Edward Cook in his address to the shareholders of the National Bank of Egypt was able to cite convincing evidence of the way in which the primary producing countries were sharing in recovery. The Egyptian cotton crop had been of record size, and sales to merchants and exporters were about £26 millions, or probably £3½ millions above those of the preceding year. The mortgage indebtedness of landowners was less than it was before the War, and those who were not hopelessly involved should be able to make headway in discharging their debts. The facilities provided by the Crédit Agricole should help the small cultivator to keep out of the hands of the money-lenders. To sum up Egypt's position, the State finances were sound, and the trend of import trade, savings bank deposits and the consumption of sugar all pointed to an appreciable increase in the national purchasing power. Indian foreign trade had also increased for the third year in succession. Egypt is not the only primary producing country which is improving her position in this way, and this general recovery holds out new hopes both for British export trade and also for British banking and finance.

Bank of Canada.—Mr Towers, the Governor of the Bank of Canada, gave a very interesting review of Canadian economic conditions in his address at the second annual meeting of the bank. So far as the bank's own position was concerned, more active trade, higher prices and also the year's statutory reduction in the chartered banks' note issues had led to an expansion of \$28.8 millions in the bank's note circulation. The bank's capital had also been increased by \$5.1 millions, as the result of issue shares to the Federal Government under the amending Act of last year. The bank, however, had added \$46 millions to its investments, so that the net result of these and certain minor changes was an increase of \$12.6 millions in the chartered banks' cash. Thus Canada, like other countries, has expanded the credit base, and the immediate consequence is that Bank rate has remained unchanged at 2½ per cent., while there has been practically no need for the bank to offer loan or rediscount facilities. Mr Towers, it should be said, regarded the bank's acquisition of securities from a different angle, for he was at pains to point out that the sale of these securities to the bank did not necessarily mean that the savings of the public had diminished. Surely the real point is that the Bank of Canada has seen fit, presumably in execution of its functions as a central bank, to buy securities to a point which has increased the chartered banks' cash resources and expanded the credit base. The secondary consequences of this policy are to be seen in the improvement in internal trade, in the achievement of an active external balance of payments, and in the repayment or repatriation of external debt; and here Mr Towers made the point that a large active balance is characteristic of the early period of a Canadian recovery. Meanwhile the Canadian dollar has exhibited a remarkable steadiness, its range of fluctuation in New York for last year being less than 1½ per cent. It would be obviously wrong to ascribe Canadian recovery wholly to the banking policy of the Dominion, but Mr Towers erred on the side of modesty by omitting an explanation of the way the Bank of Canada's purchase of securities had enabled the banking system to expand the supply of credit in conformance with the progress of the Dominion, and so to promote recovery still further.

* * *

Australian Banking Trends.—The latest half-yearly report of the Commonwealth Bank shows that the trend of bank deposits and advances is still upwards. Total figures for the trading banks, including the Commonwealth Bank itself, are shown in the following table:—

	December 1934	1935	1936
Deposits (bearing interest)	£A. mill. 222.4	£A. mill. 211.2	£A. mill. 215.1
" (not bearing interest)	113.2	121.0	127.0
Total deposits	335.6	332.2	342.1
Savings Bank deposits	212.9	220.5	224.2
Advances	254.9	269.2	277.5

The total of advances excludes Government securities. The table shows that, no doubt because of the trade revival, there has been a further change over from time deposits (bearing interest) to demand deposits. Bank clearings have also expanded since 1935, but are still below the 1938 level. The ratio of advances to deposits has remained practically unchanged during 1936, but the Commonwealth Bank suggests that the year's higher export receipts have enabled many frozen advances to be repaid. This implies an improvement in the quality of the advances. The report states that the export price index rose in January, 1937, to its highest point since August, 1928. There should therefore be an appreciable favourable balance of payments for the current year to June 30, 1937. This should be replenishing the banks' London funds, and the report expresses the hope that this is being done. Unfortunately, the banking statistics given in the report are incomplete. It would be very helpful if separate returns, covering a term of years, could be given for the Commonwealth Bank and the trading

banks, and also if these returns could include cash, London funds, investments and other important items, as well as deposits and advances. At the moment it is difficult to deduce from the report any complete picture of the trend of Australian banking, and in particular of changes in London funds, which, for good or for evil, are the main cash reserves of the banking system. The report states that money is now more plentiful, while the rising trend of interest rates has now been arrested and may even before long be succeeded by a decline. It would be useful to have complete details of the changes which provide the basis for these views.

Insurance Notes

Standard Life Assurance.—For the tenth successive year the annual rate of bonus declared by this company is 42s. per cent., calculated on the sum assured and existing bonuses. The ability, even in these days, to maintain this high rate is as clear as the apparent intention of the directors not to declare an even higher rate. The valuation basis is very stringent, being based on the A¹⁹²⁴⁻²⁹ Ultimate Table, strengthened by the use of select premium and combined with interest at 2½ per cent. This rate of interest is also used in valuing the large annuity business, while all annuitants are treated as select lives at the date of valuation; in addition, an extra reserve is held to allow for exceptional longevity of annuitants. The results of the last two valuations are given below:—

	1935	1936
Surplus earned during the year	£429,665	£458,175
Surplus income transferred from Guarantee Fund	38,509	38,802
Brought forward from previous year	31,229	30,970
	499,403	527,947
To Bonuses to policyholders	368,433	396,582
„ Transfer to inner reserve	85,000	85,000
„ Pension fund	15,000	15,000
„ Carried forward to next year	30,970	31,365
	499,403	527,947

New ordinary life business amounted to £4,074,000 compared with £3,910,000, and constituted the fourth successive record year. In addition, group life assurance amounts to £502,000. Immediate annuity consideration moneys fell sharply, however, from £561,000 to £219,000, while premium income of £1,784,000 showed a substantial increase of £121,000 in the year; the increase in the renewal premiums was greater, as single premiums fell from £78,000 to £32,000. Death claims actually fell, by £25,000, to £560,000, and surrenders, by £46,000, to £219,000. Some £85,000 is again transferred from the life account to inner reserve; on the other hand, that account is credited with £39,000, being surplus income from the guarantee fund.

* * *

The guarantee fund of £1,700,000, consisting of £850,000 5 per cent. perpetual stock and £850,000 general reserve, is available as additional security for the life assurance and annuity contracts; in the event of a winding-up the stockholders would have no claim for capital until the claim of the policyholders and annuitants had been met, and then only to the extent of £850,000 of the surplus assets. Theoretically this additional security may be regarded as of special importance to the without profit policyholders and to the annuitants, but the point is not one of any practical importance owing to the extreme remoteness of the contingency. There is nothing, remote, however, about the surplus income from the guarantee fund, which meets about 10 per cent. of the whole cost of the annual bonus. The net rate of interest on the life fund is only 3d. per cent. smaller than in 1935 and amounts to £4 15s. 2d. per cent. While the Standard no doubt enjoys special investment facilities from its international activities, this specially high net rate of interest is due also to a conservative valuation of the securities and to the taxation

advantages accruing to a large annuity business. Again, interest on that portion of the funds applicable to foreign business is not taxed in this country. Total assets increased from £27,166,000 to £28,228,000. Some £224,000 of this increase is due to an item appearing for the first time, and consisting of loans to a subsidiary named "The Heritable Securities and Mortgage Investment Association Ltd." Loans at £3,199,000 were £642,000 greater; British Government securities showed some decline, as did also combined Indian, colonial and foreign Government securities. Debenture stocks at £7,921,000 and preference stocks at £2,461,000 were practically unchanged, but ordinary stocks increased from £2,877,000 to £3,667,000. This holding of ordinary stocks excludes £250,000, the book value of the entire issue of 50,000 shares of £7 each fully paid in the subsidiary mentioned above.

* * *

Equity and Law Life.—New life assurances in 1936 constituted another record for the Society, being £4,659,000 net of re-assurances against £3,931,000; in addition, new sinking fund policies showed very large expansion from £997,000 to £4,794,000. The Equity and Law has become particularly identified in recent years with annuity business, and obtains a considerably greater volume of this class of contract than any other office in the country. Last year consideration moneys for immediate annuities amounted to £2,510,000, entailing annuity payments of £208,000 against £2,399,000 and £201,000 in the previous year. Mortality appears to have been particularly favourable in 1936, as the amount paid in death claims, namely £363,000, was the smallest for many years, and compares with £466,000 in 1935. The gross annuity payments during the year increased by no less than £186,000 to £670,000, and one striking effect of the large annuity business is seen in the low effective rate of income tax, now 11d. for each £1 of gross interest credited to the life assurance account. The net rate of interest earned on the entire funds, excluding reversions, increased by 1s. 6d. per cent. to £4 8s. 6d. per cent. During the year total assets rose sharply from £21,559,000 to £26,045,000. There were large increases in mortgages—those on properties in the United Kingdom from £3,544,000 to £5,691,000, and on properties outside the United Kingdom from £5,000 to £235,000. Loans on personal security amounted to £240,000 against £93,000, but policy loans showed some small reduction at £1,699,000. British Government Securities rose from £1,761,000 to £2,060,000, but combined Indian, Colonial and Foreign Government Securities fell by 17 per cent. to £1,389,000. Debentures and Preference Stocks showed moderate increases, while Ordinary Stocks increased by £1,332,000.

* * *

Scottish Equitable Mutual Life.—The close of the financial year of this Society, which was formerly March 1st, has been altered to December 31st, and the accounts now published refer to the ten-month period March to December, 1936, inclusive. New sums assured amount to £1,595,000, compared with £1,918,000 for the whole of 1935, and the net annual rate of interest earned on the life assurance fund fell from £4 5s. 9d. per cent. to £4 2s. 7d. per cent. Total assets increased from £11,396,000 to £11,611,000. There was no pronounced change in the classification of the assets; a reduction of £73,000 in British Government Securities and of £17,000 in Indian and Colonial Government Securities contrasted with an increase of £36,000 in Foreign Government Securities. Debenture Stocks at £2,984,000 compare with £2,973,000 in the previous year, and Preference Stocks increased by £48,000 to £806,000. Ordinary Stocks, excluding the shares of the Society's subsidiary, the Standard Property Investment Company, declined by £17,000. The shares in that subsidiary have now been made fully paid, resulting in an increase in the holding from £74,000 to £244,000. The Reserve Account remains unaltered at £250,000, and the market values of the investments are stated to be substantially in excess of the book values.

THE STOCK EXCHANGE

The Progress of British Oxygen

To the philosophical investor, the life history of companies is no less fascinating than the study of men. Some companies struggle against apparent doom and reach high eminence; some are weakling speculative enterprises fated never to reach manhood's estate; others attain a respectable but somnolent middle-age. But comparatively few in this competitive world achieve their jubilee and retain their youthful vigour. This latter state, however, is that of the British Oxygen Company. In 1881 the scientist, Brin, published details of his oxygen process. Five years later Brin's Oxygen Company was formed—the foundation of the British Oxygen Company of to-day. Brin's method has long been superseded, and the company's operations now extend far beyond its descriptive title. By the modern process, the component gases of the atmosphere are "fixed"; in the broad sense, therefore, the company has unlimited raw material for producing oxygen, nitrogen and the rare atmospheric gases. Other important industrial gases, including acetylene and hydrogen (for welding and steel cutting) and nitrous oxide, familiar to those who seek painless relief in the dentist's chair, are now produced in the group's plants, of which there are 31 at home and 23 in Africa, Australia and India.

The company, despite its fifty years, serves a group of industries which, from the technical aspect, are mainly new. The oxy-acetylene flame—the legendary ally of the safe-breaker—has opened up new methods of steel construction, while the electrical welding process, in which British Oxygen is interested through Quasi-Arc and Ferro-Arc, is now being widely adopted. Sir Josiah Stamp's recent speech to L.M.S. stockholders endorsed the advantages of welding for rolling-stock construction, and its importance for engineering, shipbuilding and armament work is obvious. British Oxygen does not enjoy a monopoly in the welding business, nor is welding its sole concern. But this branch symbolises the position of British Oxygen as an essentially modern concern.

How has the company's position been achieved? Eleven years ago, its ordinary capital stood no higher than £750,000, and £236,000 of debentures were outstanding, bearing interest at the significantly high rate of 8 per cent. In that year the amount earned for ordinary dividends was no higher than £13,105, but the directors, with greater confidence in the future of their undertaking than the circumstances of the time appeared to warrant, over-distributed the earnings of 1925-26 and of the following year. Their anticipation proved right; earnings rose rapidly in 1929-30, and the company, strengthened by the absorption of the Allen-Liversidge group, made vast strides as soon as economic recovery began. In 1933, and again in 1934, ordinary earnings doubled, and the total earnings reached the record level of £359,601 for 1935.

The onset of depression, paradoxically, gave the company an opportunity to augment its technical strength. At the end of 1930 it acquired control of the most formidable competitor in the acetylene business—Allen-Liversidge and its two subsidiaries. In 1932 this process was carried a stage further by the acquisition of the patents operated by Metal Industries for the storage and transport of liquid oxygen. Another oxygen business was absorbed in 1934, and within the last three months British Oxygen has taken over Quasi-Arc, previously controlled by Turner and Newall, for £170,000 nominal ordinary stock, and also the capital of Ferro-Arc Welding, with which British Oxygen had been previously associated.

The present organisation of British Oxygen, as our

chart suggests, is simpler than that of most companies of its size. The predominant operating interests are controlled by the parent company itself, for interests in subsidiary companies account for little more than one-quarter of total assets, which slightly exceed £4 millions. British Oxygen is thus primarily an operating company and only secondarily a holding company. Among its subsidiaries we may distinguish four companies which control the company's overseas interests. Two industrial gas companies and Shorter Process—which operates a metal-hardening process—form a second group. The newly-acquired welding companies may be distinguished in a third section, and the Sparklets interests provide a fourth.

In the past, it is not unfair to say that British Oxygen has tended to take a less advanced view than some of its industrial peers of the merits of detailed financial disclosure in its annual accounts. By its decision last year, however, to include the full share of profits due from subsidiaries in the parent company's accounts, and to set up a central depreciation reserve, the board comes into line with the most modern practice. In past years the profit and loss account has provided only a partial indication of the group's total earnings. For 1935, in particular, profits were struck after providing as much as £250,000 for depreciation, and the subsidiaries also retained a substantial part of their profits to meet capital expenditure.

Yet even this partial record (as the accompanying table shows) shows spectacular progress. And it is backed by a strong balance sheet—strong in the sense that visible reserves are not large but that assets are carried on conservative valuations. But the past decade has proved that British Oxygen is not immune from trade fluctuations by the mere fact that it is interested in new industries. The fall in earnings during the depression may have been due in part to prudent directorial estimation, but in general the fluctuation in earning power was comparable in degree with that of concerns like Associated Portland Cement and Turner and Newall. It has been the coincidence of industrial recovery with the rapid growth in the industries served by British Oxygen which has produced the unusually sharp expansion in profits during the past four years. Is this trend likely to continue?

In the market's judgment the answer is affirmative. British Oxygen £1 ordinary stock stands at 121s., and yields no more than 2.22 per cent. on the dividends and 2.45 per cent. on the earnings of 1935. A substantial increase in earnings and dividend is thus expected; while capital bonus possibilities are always present in the mind of the optimistic buyer. But to restore the shares to a 4 per cent. dividend yield basis the distribution for 1936 must be increased to 24 per cent., compared with an average of 13.44 per cent. for 1935. This figure suggests a readiness on the part of investors to discount the fruits of 1937. Clearly, British Oxygen is not a cheap share for the short-term speculator; its investment merits are of a more solid order.

Justification of the present level of the shares depends, in fact, on two things: first, the maintenance of a high level of activity in the large-scale construction industries; and, secondly, on a further increase in the part played by welding in modern building practice. On neither score should there be serious doubts. British Oxygen may not be an armament share in the direct sense, but it serves a range of direct re-armament industries. British Oxygen combines a progressive peace-time trade with a significant re-armament interest. And the

recent tendency for commercial construction to take up the slack in house building should favour the company.

The prospects for British Oxygen, therefore, seem favourable. On the supply side, the company is not markedly vulnerable to the effects of rising costs. But it depends upon imported calcium carbide for the production of acetylene. Early in 1936 powers were sought by the company to erect a hydro-electric station in Inverness, but two private Bills promoted by the company have been rejected outright on second reading. In last week's debate on the second measure, the economies of hydro-electric power, as opposed to steam generation, were stressed, and one speaker mentioned a difference of £112,500 between the two processes—equivalent to over 4 per cent. on the ordinary stock. The implications of Parliament's free vote in this matter are discussed on page 636 of this issue, but for the time being a promising development of the company must remain in abeyance.

The investor, however, need not take an unduly serious view of this set-back. Clearly, the company's expansion will not be checked over the next few years merely on this account. And there remains a possibility that some scheme of the nature the company envisages will ultimately secure Parliamentary approval. On strict investment merits, British Oxygen ordinary stock, though not cheap, is reasonably valued in relation to prospects over the next few years. It ranks among the progressive industrials, like Murex and Turner and Newall, which combine the advantages of expanding technical scope with strong finances. And for the more speculative investor, Metal Industries "B" shares at 50s. offer an important equity in British Oxygen and a relatively cheap participation in the scrap steel industry.

Investment Notes

Outlook for Industrial Shares.—There is a tide in the affairs of the market which, taken at the ebb, leads on to fortune. But although buyers have been nibbling at the solid investment issues, like bank and electricity shares, the industrial market's improvement this week has been in tone rather than in quotations. The three-week holiday account has obviously set a limit to renewed speculative interest. Yet the feeling that the recent fall in industrials has been overdone is widely held in professional circles. It is argued, in particular, that the fall in brewery shares is now less justified, since the Chancellor has introduced the Defence Loans procedure and is within sight of a small surplus. But pre-Budget guessing, however reasonable, is always speculative, and the taxation argument may not apply so readily to tobacco shares. Among industrials generally, the argument that shares with progressive industrial or re-armament prospects are still conservatively valued is attracting some consideration. The *Financial News* index of 30 active industrial ordinary shares reached its "high" of 124.9 in the middle of November, and fell as low as 118.1 towards the end of February. But on Tuesday this week the index stood no higher than 116.3. Since the end of February, in fact, a partial recovery of 2.2 per cent. has been succeeded by a further drift of 3½ per cent. The significant improvement, however, in the index by Thursday (when it had advanced by 1.8 points to 118.1) suggests that prices may have grounded, at least, and that the technical clearing-up which has been so markedly in evidence during the past few weeks is steadily accomplishing its task.

The investor, however, is now fully aware that he must treat every industrial share strictly on its merits. And the larger issue which confronts him is to choose the winners in the race between rising costs and rising prices for manufactured goods. The spectacle of creditable dividends and profits, followed by a setback in share prices has been prevalent recently, and is not so irrational as it appears. Many industrial ordinary shares stood recently at levels which discounted a fairly marked

increase in earnings; others are still valuing the prospects of 1937 by yield levels significantly below 4 per cent. In other words, the mere maintenance of profits is not sufficient to maintain the majority of current share prices. And if an increase in turnover is offset by reduced profit-margins arising through higher costs—a phenomenon for which the Radiation and Indestructible Paint results this week may perhaps be called in evidence—an adjustment of share values is not unreasonable. But among the "progressive earnings shares" (to which new recruits may be attracted as increased costs are passed on, through such co-operative action as the paint industry has announced), the downward adjustment may have been carried far enough for the time being. Yields of 4½ per cent. on Associated Portland Cement and good coal and engineering shares, at least, do not suggest excessive valuation by present standards.

Commodity Share Week.—Whatever problems may be exercising the industrial investor, the commodity share operator continues to reap his speculative harvest. Again, it has been a rubber week, on the rise in the commodity to 12½d. Dealings have been heavy, yet the willingness to take intermediate profits has also been evident. But no especial significance appears to attach to the fact that prices closed slightly below the best from Wednesday, for the shares have been advancing strongly for some weeks. Yet on the calculation that the prevailing level of prices does no more than discount tenpenny rubber, this week's advance in rubber shares cannot be regarded as unjustifiable on prospective earnings considerations. Within the present context of restriction, the possibility for a further advance in rubber shares cannot be ruled out, for the Committee (as we show in a Note on page 637) has evidently lost its whip hand over the market, and all criteria of "reasonably remunerative rubber prices" have been swept aside in the speculative rush to cover consumers' demands. Similar technical conditions appear to apply to tin—which is probably the strongest among the base metals—but the irregular fluctuations in the metal market, after breaking through £300 per ton at the end of last week, have given the share market no definite lead. Special selling, in anticipation of the N'Changa issue, appears to have been responsible for the poor condition of the Rhodesian market, and the trend of the metal itself, after the publication of the February figures, was not auspicious. Meanwhile, speculation is spreading among the lesser known commodity shares, such as Sudan Plantations, on the sharp movements in Egyptian cotton. And the market would welcome a good equity in rising wheat prices—if it could find one. Canadian Pacific common, even after this week's setback to 15½d., are not attractive in relation to earnings prospects, and Hudson's Bay ordinary shares are already on a low earnings yield basis. There are signs, perhaps, that speculation in commodity shares is being overdone—and the adjustment of copper and diamond shares, together with oil shares, should give the exuberant operator ground for thought. It is conceivable, however, that opportunities exist among oil issues, which have been obscured in the frenzied gambling in base metals and rubber shares.

Investment Trusts and Treasury Policy.—Events have endorsed our suggestion that the purpose of the Foreign Transactions Advisory Committee was not to mitigate but to perpetuate the Treasury's control of foreign issues. Recently an intimation was privately made that the Committee, in effect, did not regard institutional investment in overseas securities as necessarily outside their purview. One aspect of this question has been given additional prominence by the reply of Mr Chamberlain to a question in the House of Commons by Sir J. Mellor on March 16th. The Chancellor declared that he concurred in the Committee's opinion, expressed through their chairman, Lord Kennet, that investment trust companies proposing to make new issues should

confine the proportion invested abroad "to the minimum necessary to the conduct of the business in accordance with the ordinary practice of investment trusts," and, further, that if the actual proportion were "unusually high" it should be reduced as occasion might serve. It is immaterial whether the initiative in this question came from the Committee, or whether the Treasury handsomely confirmed its own suggestion after sending it to the City for stamping. The important point is that the process of mapping out the territory of control is tending, inevitably, to impose increasing restriction on business as it has been carried on in London for well over half a century. What is now in issue is not the expediency, for exchange or other reasons, of maintaining an official censorship over exports of British capital, but the expediency of effectively extending its area by progressive re-definition on bureaucratic lines.

Whatever the merits of the Committee's (or the Treasury's) policy in itself, however, there can be no defence of vagueness and uncertainty in official pronouncements. What is "the ordinary practice of investment trusts" in the matter of overseas holdings? In the course of a detailed analysis of investment trust finance, in a Special Supplement to *The Economist* of December 1, 1934, we showed (page 7) that in 1933 some 97 companies published geographical figures of their holdings, which were distributed as follows:—

Percentage Distribution	U. Kingdom	Rest of Empire	U.S.A.	Cent. & South America	Europe	Rest of World
	%	%	%	%	%	%
Calculated on market values (41 Co.'s) ...	48.0	11.3	11.8	11.7	11.6	5.6
Calculated on book values (56 Co.'s) ...	40.4	13.2	10.2	15.2	13.1	7.9

It will be seen that, in 1933, on each basis of valuation taken, the holdings of this large and representative sample of companies were, to the extent of more than half the total, outside the United Kingdom. Even if the British Empire holdings were excluded, the "foreign" percentages were as high as 40.7 (market values) and 46.4 (book values) respectively. The distribution may, of course, have changed somewhat since 1933. Holdings in the United States, for example, probably represent a larger proportion to-day. But an analysis prepared by a Stock Exchange house, incorporating reports up to October 22, 1936, shows that of 126 investment trusts publishing particulars of their geographical distribution, some 85 had less than 50 per cent. invested in the United Kingdom last year, and only 41 had 50 per cent. or more so invested. Empire holdings outside the United Kingdom were given separately for 107 companies. They accounted for less than 15 per cent. of the whole in 63 instances and for 15 per cent. or more in only 44 cases. The evidence suggests, therefore, that a significant share of investment trust money is still invested in foreign countries. We suspect, however, that any new trust which proposed to place anything like half its resources overseas would have difficulty in persuading the authority that its own view of "the ordinary practice of investment trusts" coincided with that of Mr Chamberlain.

I.C.I. and the Lords.—The House of Lords has now delivered judgment on the scheme of Imperial Chemical Industries for consolidating its deferred capital with its ordinary capital. The judgment found the scheme fair and equitable in substance, but irregular in its presentation at class meetings of the different shareholders. In the opinion of Lord Blanesburgh, the deferred shareholders' meeting was not a separate meeting within the meaning of the Company's Memorandum of Association. Nevertheless, the extraordinary resolutions might be taken to have been duly passed, because the regularity of the meetings was not directly in issue on the petition which the Court was considering. The company's action, in short, was criticised *in modo*, but confirmed *in re*. It is now possible, therefore, to summarise the lessons for investors generally which emerge

Fifteen Moorgate Unit Trusts Ltd.

offers widely diversified investments in British industry, combining a high degree of safety with a good income yield. These include:—

INVESTORS FLEXIBLE TRUST

Results for complete financial year not yet available. Yield for first half-year at the rate of £5 : 7 : 4 per cent. gross, per annum at the current sub-unit price.

INVESTORS SECOND GENERAL TRUST

The actual distribution for the year ended March 1st, 1937, was equal to a yield, derived from cash dividends only, of £5 : 4 : 0 per cent. gross, at the current price of sub-units.

PROVIDENT INVESTORS TRUST

Results for complete financial year not yet available. Estimated yield £4 : 12 : 0 per cent. gross, at current sub-unit price.

HUNDRED SECURITIES TRUST

Yield for last completed year equal to £4 : 15 : 1 per cent. gross, at current sub-unit price.

SECURITY FIRST TRUST

Yield for last completed year equal to £5 : 8 : 1 per cent. gross, at current sub-unit price.

7, Pall Mall, Manchester, 2

from an incident which all concerned would, we may presume, have gladly avoided if possible. It is generally admitted that the deferred shares in Imperial Chemical Industries were regarded, at the time of the company's creation in 1926, as a species of anticipatory capitalisation of the considerable economies which the merger of the constituent companies was expected to bring forth in the fulness of time. And no secret is betrayed by saying that the present board, which has done so much to bring many of these economies to fruition, does not, possibly, take quite the same dynamic view of the investment possibilities of the company's equity capital as was taken by its first chairman.

To-day, the position of the I.C.I. approximates in many ways to that of a great public utility concern. And one implication of this fact is the recognition that its consumers and its workers, no less than the holders of its capital, have a claim to a share of the earnings of efficiency and increased demand. Undoubtedly, under such a dispensation, the deferred shares had become an anachronism, and the existence of their peculiar rights was a handicap on the company in meeting potential requirements for increased future capital. Nevertheless, those investors who bought and held I.C.I. deferred under the impression that they were obtaining a high-gear equity, had a certain grievance. To the super-tax payer, in particular, the shares were attractive, less for their dividend possibilities than their prospect of substantial capital appreciation. And it is disappointing for the purchaser of a high-powered sports car to find himself merely the owner of a comfortable family model. The real mistake, we suggest, was made when the shares were first issued. The moral would seem to be that the traditional objection to the capitalisation of future financial benefits is wholly sound.

Business systems are of little value without fire protection, for in an hour records that have taken a lifetime to create may be destroyed by fire.

The prudent man protects against fire the books, letters and documents which are the very soul of his business. They represent years of labour and are the foundations upon which the future of the business depends. They are vital things which cannot be insured.

Industrial Profits in February.—Reports published in February show that for the first time since last May the percentage increase has fallen below 10 per cent. February, however, is normally a quiet month for industrial company reports, and the decline, therefore, has no special significance. The recent figures appear below:—

Reports published in	No. of Companies	Rise in Profits*	Reports published in	No. of Companies	Rise in Profits*
1935—			1936—		
October	166	29.19	June	214	13.50
November ...	160	17.47	July	228	15.69
December ...	159	12.27	August	47	14.21
			September ..	107	12.32
1936—			October	146	18.09
January	128	13.66	November...	177	13.49
February	205	9.00	December ...	175	15.49
March	236	17.39	1937—		
April	254	9.66	January	110	15.92
May	269	9.41	February ...	208	8.95

* After payment of debenture interest.

The total net profits covered by the February reports amounted to £27,956,588, compared with £25,659,684 for the preceding year. The Imperial Tobacco profits alone account for about 40 per cent. of the February profits, but contributed only £368,000 to the increase. Roughly, one-fifth of the total profits are attributable to the utility groups, whose earnings are steady. Investment trusts show a 12 per cent. improvement.

Company Notes

International Nickel Report.—When a company issues complete information regarding its earnings each quarter there is nothing for the market to seize upon in the annual report. The International Nickel report has suffered this penalty of market neglect, but its story is impressive. Sales of nickel have reached a new record of 168.9 million pounds—an increase of 30 per cent. over the 1935 figure. The alloy metals also achieved high levels, and copper sales increased by 14 per cent. The past year, in fact, confirmed the wisdom of development work carried out in earlier years and continued in 1936 by the expenditure of \$11 millions on new capital works. Its fruits are apparent in an increase of 41 per cent. in total profits and 45 per cent. in common stock earnings:—

(Figures in U.S. dollars)

	1934	1935	1936
Total income*	27,997,090	38,666,706	54,689,038
Expenses and taxes	4,188,480	6,108,257	10,008,780
Interest, depreciation and other provisions	5,321,131	6,471,922	7,814,731
Net profit	18,487,479	26,086,527	36,865,526
Preferred dividends	1,933,899	1,933,899	1,933,899
Common dividends	7,289,085	10,933,627	18,951,620
Common shares—			
Earned (\$ per share).....	1.13	1.65	2.39
Paid (\$ per share)	0.50	0.75	1.30
Adjustments	42,050†	114,524‡	260,352‡
Transferred to capital surplus	1,000,000	...	...

Earned surplus 30,990,016 44,094,493 59,896,144‡
 * Including "other income." † Adjustment for taxes.
 ‡ Premium on debenture redemption. § Includes share in surplus of subsidiary acquired in 1936.

These results, achieved by a conspicuously moderate price policy, are the best augury for the far-sighted investor. Between 1934 and 1936 nickel prices were roughly stabilised, and this year a reduction of £20 per ton has been announced. Contrasted with rocketing base metal prices, this long-range policy has an almost archaic simplicity. But it is one of the reasons why International Nickel, at \$71½, are priced to yield only 1.8 per cent. on dividends and only 3.3 per cent. on earnings. Essentially, Nickel is a share for the long-term holder, who, though he accepts a low present yield, can rely upon the company's further development and intensive

research. Meanwhile, he has a report which deserves to be read for its own sake and as a pattern to others. It gives the stockholder all the information which he could possibly require—including the somewhat surprising fact that the number of common stockholders fell from 80,174 at the end of 1935 to 74,287 at the end of 1936.

* * *

The London Brick Outlook.—Sir Malcolm Stewart's speech at the London Brick Company's meeting on Monday was full of interest for shareholders. After giving a charming memoir of Sir Halley Stewart—a great Victorian, and founder of Forders—the chairman reviewed the present building situation in relation to the prospects of London Brick. Private house-building diminished somewhat last year, especially in London and the South, but State-aided house-building under the Overcrowding Act raised the total number of houses built to a record figure, and factory construction had also increased rapidly. Sir Malcolm had no fears of a sudden and simultaneous attainment of saturation point in all branches of the industry. He described in some detail the long-run policy pursued by the company. Clay land has throughout been valued at its agricultural price, and kilns, machinery, plant, etc., stand at the very low figure of £1 per thousand bricks. The works supplying the West of England have been doubled, and a new office has been opened in Birmingham to meet the expanding demand in the Midland areas. A new mechanically produced sand-faced brick, similar to the hand-made type, and well suited for house-building, will shortly be in large-scale production at a low price. The speech betrayed no suggestion of the market's fears for the future earnings of the company. Rather it was couched in optimistic terms. The company is not exposed to localised fluctuations in building activity, and it can secure the economies of an immense scale of production and marketing. Many companies whose shares stand well below the London Brick 7 per cent. yield level may well envy its strength, and even its prospects.

* * *

London Associated Electricity.—The report of London Associated for 1936 covers the first full year's operation since the amalgamation of the seven "West End" electricity undertakings operating under the 1925 Act, and the results will be studied with great interest. Our extracts from the report, tabulated below, show an increase of 10½ per cent. in units sold, with a small reduction in the average price received:—

	1934	1935	1936
Units sold (millions)	314.5	350.1	386.1
Average price (d. per unit).....	1.800	1.686	1.624
Total revenue from all sources	2,603,816	2,764,658	2,898,455
Cost of electricity purchased	1,030,923	1,046,076	1,104,256
Operating and management...	694,816	713,930	768,672
Sinking funds	348,456	340,293	362,860
Total costs and provisions...	2,171,975	2,265,475	2,338,500
Balance of revenue	431,841	499,183	559,955
Profits divisible under 1925 Act	496,912	522,986	540,101

Dividends paid by operating companies	518,783	518,281
Net earnings of parent company	478,960	518,380
Preference dividends	82,647	120,420
Ordinary dividend	324,329	325,604
To Stockholders' reserve account	55,000	55,000

The dividends paid by the operating companies were covered with a margin of some £40,000, of which about £22,000 was divisible, but was retained in the No. 2 reserve funds for the ultimate benefit of the stockholders. The parent company has again paid only the standard 7 per cent. dividend, reserving the surplus dividends payable against the ultimate extinction of the undertaking in 1971.

of

85,000 6 per cent. Cumulative Preference Shares of £1 each at par and

293,334 Ordinary Shares of 5s. each at 7s. 9d. per Share.

The Prospectus will show, *inter alia* :—

The Company is an amalgamation of the following three undertakings:—

STEEL & COMPANY (HOLDINGS) LIMITED (formerly called Steel & Co. Limited), Engineers, Ironfounders, Metalworkers and Builders' Merchants, of Sunderland; GUNTON, SONS & DYBALL LIMITED, Builders' and Plumbers' Merchants, of Norwich; NORMAN TURNER ENGINEERING CO. LIMITED, Engineers and Air-Conditioning Specialists, of London.

Net Assets, exclusive of goodwill, amount to £210,883.

Net Profits, after providing for all expenses, including depreciation, except Directors' fees, Directors' remunerations and Income Tax, were:—

Year ending within the year to 31st January, 1933	£9,953
Year ending within the year to 31st January, 1934	£15,008
Year ending within the year to 31st January, 1935	£15,326
Year ending within the year to 31st January, 1936	£20,908
Year ending within the year to 31st January, 1937	£31,604

On the basis of the profits of the three businesses for the last financial year, after deducting Directors' fees on the basis arranged for the future, £28,154 remains as net profit, which is sufficient to cover the dividend on the issued Preference Shares over four times and after payment thereof to leave £21,554, a sum equivalent to 19.5 per cent. on the nominal value of the Ordinary Shares of the Company now issued, or over 12.5 per cent. on the price at which they are offered for sale.

Prospects: In the opinion of the Managing Director, who considers that the amalgamation of the three businesses, which are closely associated in their activities, will effect substantial economies by way of unification of control, centralised selling and large-scale buying, the net profits for the first financial year should not be less than £35,000.

Application may be made for either Preference or Ordinary Shares separately.

—**And Future Prospects.**—The results for 1937 will reflect the new tariffs which were introduced at the end of 1936. These will no doubt reduce the average price received this year. Under the 1925 Act, the operating companies would then be able to increase their dividends, though for the first year of the new tariffs, earnings might fall short even of the standard dividends. Since, however, the operating companies have a credit balance of £224,000, they might perhaps be willing to draw upon it until the increase in sales induced by the new tariff brought earnings up to the amount divisible. A reasonable increase in the provision made for the benefit of stockholders under the sliding scale may thus be expected in due course. If it were possible to reserve an average of 2 per cent. net on the ordinary capital each year to 1971—when the undertakings are transferred to the London and Home Counties Joint Electricity Authority—the ordinary shares should, on liquidation, rank for an amount substantially in excess of the present market price of some 32s. 6d. There is no justification, therefore, for regarding the shares as a wasting asset, and the yield of rather more than 4½ per cent. seems attractive.

★ ★ ★

North-Eastern Electric.—During the depression this undertaking did much to offset the fall in its industrial load by an intensive development of the domestic consumption and of electrification of coal lines in its area. With the partial economic recovery which has occurred in the district, the company's earnings now show considerable expansion, which justifies an increase in the dividend from 6 per cent. to 7 per cent. The recovery in earnings is analysed in the following table:—

	1934	1935	1936
Net revenue	1,088,290	1,096,505	1,244,590
Reserve for special depreciation and contingencies ..	275,000	235,000	300,000
Plant renewal and improvement.....	70,000	70,000	100,000
Debt and other interest	224,644	230,959	250,806
Debt sinking fund.....	...	65,515	66,770
Preference dividend	185,482	185,482	185,482
Ordinary shares:—			
<i>Earned</i>	333,174	309,549	341,532
<i>Paid</i>	285,595	285,595	333,194
<i>Earned %</i>	7.0	6.5	7.2
<i>Paid %</i>	6	6	7
Carried forward	86,512	134,082	158,036

Provision for depreciation is less than the amount suggested by our standard scale, but the company usually makes a handsome charge against revenue for repairs and maintenance. Although information is not provided on this point in the report, this course was doubtless followed last year. There is little doubt that, in total, the company has made conservative provision for depreciation.

★ ★ ★

Unilever Stores Group Results.—The results of the Unilever Stores group are mixed, but not unprogressive for a year of reorganisation, rising prices but, fortunately, increasing turnover. The position of the *Home and Colonial Company* itself has long been appreciated in the market, and the fall in net profits from £177,584 to £138,898 was not greeted with any surprise. The directors intimated last September that the first quarter of 1936 showed a decline in profits, which the later recovery has not made good. Meanwhile, the modernisation programme has been pushed forward, and turnover rose despite the closing of unprofitable shops. A reserve totalling £154,000, which was set up to meet the cost of improvements, has been drawn upon to the extent of £92,738, and the directors consider that the

balance of £61,262, with the normal depreciation provision from profits, will suffice for their modernisation programme. Since, however, the preferred and preferred ordinary dividends were short-earned to the extent of £68,354 in 1936, the dividend prospects of the 4s. ordinary shares cannot be regarded as assured. Of the other companies in the group, *Lipton* and *Maypole* have done better—Lipton's profits have, in fact, increased by 20 per cent. to £24,794, while the Maypole Dairy has earned £15,000 more at £268,028. The Meadow Dairy figures are also slightly improved. Judged as a whole, the group has increased its total profits during a year in which profit margins per unit have fallen. The first stage of reorganisation is apparently proving successful, but it has been aided by increasing purchasing power, and competition in the provision trades remains as keen as ever. The present price of Home and Colonial ordinary can appeal only to long-run dividend hopes.

★ ★ ★

United Africa Progress.—This branch of the Unilever group, however, reveals a sharp recovery on the improved conditions in West Africa. The profits of *United Africa* itself are over 23 per cent. higher at over £1½ millions. The report points out that the turnover in merchandise and produce has increased both in value and volume. Although the dividend has been raised from 8 per cent. to 10 per cent., the amount earned exceeds the payment by 4 per cent., the surplus being used to raise the reserve provision from £225,000 to £300,000, and the carry forward by £37,000. A growing volume of trade is reflected in the balance sheet, which shows stocks of merchandise and produce at £7,574,000 against £5,335,000, due to larger physical stocks, and also to higher prices. This scale of progress has enabled *African and Eastern Trade Corporation*, whose assets consist chiefly of United Africa shares, to pay the maximum 12 per cent. dividend on the preferred ordinary and a 7½ per cent. ordinary dividend—the first since 1927—although earnings for the ordinary, however, fall short of the distribution by 2½ per cent. African and Eastern 1s. ordinary shares are highly geared, and the present price of 4s. 1½d. discounts favours to come.

★ ★ ★

Gaumont-British Developments.—Further news has come to hand this week regarding the Gaumont-British position. Mr Isidore Ostrer has announced that the deal between Gaumont-British and General Film Distributors has been submitted by the Law Debenture Corporation (as trustees for the debenture holders) to counsel, whose opinion is that nothing has arisen to justify their intervention as trustees. On Tuesday, an application was granted in the Chancery Division for leave to serve notice of a motion to restrain the Gaumont-British Picture Corporation from paying the preference dividend on March 31st. This application follows the decision of a committee of shareholders to apply for an injunction, on the ground that the preference payment would amount to a charge on capital. The motion was heard on Friday, after we had gone to press. Meanwhile, the Stock Exchange Committee has acceded to the request of a number of dealers that the 5½ per cent. preference shares of the corporation should not be marked ex dividend. Normally, the shares would have been dealt in ex dividend on Monday last, and the ruling presumably implies that the shares will remain cum dividend until the payment is made.

★ ★ ★

Crown Mines.—This company treated a record tonnage of ore last year. But the grade was slightly inferior to that of previous years, and the average price for the gold produced was somewhat smaller, falling 1s. 10d. below the 1935 average to 140s. 1d. As a result, the working profit decreased, although the net surplus was increased by a big reduction in the taxation charge. In

addition, expenditure on capital account was substantially smaller. After payment of an additional 20 per cent. in dividends, a slightly increased balance is carried forward. From the remarks of the consulting engineer, it appears that this year's capital expenditure will, at any rate, not exceed that of 1936. The results are analysed below:—

	1933	1934	1935	1936
Ore, milled, tons ..	3,480,000	3,558,000	4,003,000	4,277,000
Revenue per ton ..	37/9	39/-	34/10	33/6
Costs per ton	19/11	19/10	18/6	18/6
Profit per ton	17/10	19/2	16/4	15/-
Working profit	£3,105,540	£3,415,290	£3,262,040	£3,211,870
Net profit	£1,629,950	£1,898,610	£1,834,940	£1,949,330
Earned per cent.....	172.8	201.3	194.5	206.7
Paid per cent.	142½	170	170	190
Amount	£1,343,860	£1,603,210	£1,603,210	£1,791,820
Capital expenditure ..	£207,090	£210,200	£263,290	£142,990
Carried forward ...	£582,480	£667,240	£635,680	£639,650
Ore reserves (available), tons	15,829,390	17,334,920	19,817,130	20,071,400
Value, dwt.	5.9	5.7	5.1	5.1

A small increase in the development footage bore fruit in an increase of about a quarter of a million tons in the available ore reserves. Owing to the recent setback in the Kaffir market, Crown Mines shares can be bought to give a gross yield of nearly 6½ per cent.

DOW, JONES & CO., INC., 44 Broad St., New York.

Once more the mining market was unexciting, more unexciting indeed than the outlook would seem to imply. The liveliness of the tin market scarcely affected the shares; the gradual rise in copper issues seems to have come to an end, with substantial selling of Rhodesians, particularly Roans. Kaffirs, however, were on the whole firmer, though the volume of business was once again small.

Highest 1936 : Ordinary Shares 124.9 (Nov. 18); Fixed Interest 138.8 (Feb. 10).
Lowest 1936 : Ordinary Shares 107.4 (Jan. 2); Fixed Interest 136.2 (Sept. 23).
Highest 1937 : Ordinary Shares 124.8 (Jan. 4); Fixed Interest 136.6 (Jan. 4).
Lowest 1937 : Ordinary Shares 116.3 (Mar. 16); Fixed Interest 126.5 (Feb. 28).

On Tuesday last the index of 178 industrial equities stood at 86.0, as against 87.4 a week ago and 90.2 a month ago. The corresponding yields are: 4.10, 3.98 and 3.81 per cent. Below is a selection from the component indices:—

A GENERAL reaction set in towards the end of last week, and continued strength was evident only in the rubber, leather and alcohol groups. Government issues fell sharply on a heavy turnover, on fears that the rise in commodity prices might cause the administration to restrict credit. This week the general trend has again been downward, rails being the outstanding exception. The principal causes for the rise in rails were the increasing net income figures, and the agreement with the unions on pensions. Steel issues were irregular although *Iron Age* estimates that steel mill activity for the week was 89 per cent. of capacity against 87 per cent. last

* 50 Industrial Common Stocks. (b) Oct. 14th. (c) December 23rd. (a) April 8th
d) March 17th. (e) December 2nd. (f) March 17th. (s) February 10th. (t) January 13th.

* March 6th. † January 4th.

* Two-hour session.

THE resumption of activity in the new issue market this week has been marked by two features—the issue of preference capital by two large concerns and a further increase in industrial issues. *Midland Counties Electric* 4½ per cent. £1 preference shares, issued at 20s. 6d., are covered securely by earnings, and are a first-class preference share investment. The 5½ per cent. £1 preference shares of *Hoover, Ltd.*, issued at 21s. 6d. are covered nine times on latest earnings, and 6½ times on the profits of 1934. Although the preference issues of companies whose equities remain in private hands do not attract wide attention when the market has settled, their security, as a rule, is good. The prospectus states that the company is considering the manufacture of a wider range of household appliances. The largest industrial issue is of 4s. ordinary shares in *Scottish Machine Tool Corporation* at 25 per cent. premium. This concern has been formed to amalgamate five machine-tool and ironfounders' companies in the Glasgow area. The operations of these companies for years ending in 1934 showed a loss of £11,045; for 1935, profits amounted to £298; and for 1936 to £17,628. On the basis of profits for five and six month periods for four companies, and a full year's figures for the fifth, it is computed that net profits in a full year would now amount to £49,545. But since the shares are offered on an estimated 10 per cent. earnings basis calculated by the broken period method, they must be regarded as highly priced, even with orders on hand totalling £740,000. The vendors' profits, moreover, appear rather generous for this issue. The

In calculating yields on fixed interest stocks quoted below allowance is made for interest accrued since the last date of payment, less income tax at the standard rate. Where stocks are definitely redeemable at a certain date the yield includes any profit or loss on redemption; where stocks are redeemable at or before a certain date the final date of repayment is taken when the stock stands at a discount and the earliest date when the quotation is above par. The return on ordinary stocks and shares is calculated as a reference to the latest dividends, account being taken of any enhancement or reduction of interim dividends. Allowance is made for accrued dividends in calculating the yield on "cum div." shares.

NORTH METROPOLITAN ELECTRIC POWER SUPPLY COMPANY

CONTINUED GROWTH OF COMPANY'S BUSINESS

RECORD NUMBER OF UNITS SUPPLIED

LORD ASHFIELD'S REVIEW

The ordinary general meeting of the North Metropolitan Electric Power Supply Company was held, on the 16th instant, at Caxton Hall, Westminster, S.W.

The Rt. Hon. Lord Ashfield, P.C. (chairman and managing director), in the course of his speech, said: Last year the number of units supplied by your company reached the record total of roundly 598,000,000 units, representing an increase of 102,000,000 units compared with the number in the previous year, or nearly 21 per cent. Moreover, this high rate of increase has been maintained now over a period of years, and I think you will be interested to know that within the narrow compass of five years the number of units supplied by your company has exactly doubled.

LARGE INCREASE IN INDUSTRIAL POWER CONSUMPTION

A particularly satisfactory feature of the growth in your company's business during the last five years has been the increase in the number of units sold to industrial power consumers, which has rather more than doubled, the exact rate of increase being 112 per cent. Another feature of your company's business which shows a continuous and rapid growth is that of street lighting.

At the end of last year the number of consumers supplied either directly or indirectly by the company was roundly 337,000, an increase of 40,000 consumers during the year, or 13½ per cent. Of this total the number of consumers supplied directly by the company was 212,598, an increase of 29,640, or over 16 per cent. Another satisfactory feature is that the average consumption per domestic consumer has also increased, having risen from 528 units five years ago to 597 units in 1936.

In order to deal with this rapid growth your company expended on capital account during the last five years an average of £817,000 each year. During the year under review the capital expenditure amounted to roundly £926,000. The Station Company also incurred capital expenditure during the year amounting to roundly £271,000.

Another matter to which I wish to call your attention is the establishment of a pension scheme by your company during the year. Retirement is now compulsory at 65 in respect of men and 60 in respect of women. The permanent staff have now been afforded an opportunity of joining one or other of the pension funds, one for the administrative and technical staff, and the other for the operative wages staff, and I am glad to say that membership of the new funds was accepted by practically every member of the staff who was eligible to join the funds.

SUCCESS OF THE "ALL-IN" RATE

I think that you will be interested to hear what has been the effect of standardising the "Follow-on" charge for electricity under the "All-in" rate at ½d. per unit for both summer and winter months, which became effective as from February 1st last year. We expected that this reduction in the "Follow-on" charge would encourage a wider use of electricity for all purposes in the home, and the results have fully borne out this forecast. Over 20,000 existing consumers transferred from other rates to the "All-in" rate during the year, and in addition over 8,000 new consumers elected to take supply under this rate. The aggregate increase in "All-in" rate consumers during the year was 28,500, which compares with an increase of only 14,800 in 1935. At the end of the year the total "All-in" rate consumers numbered roundly 80,000, representing 38 per cent. of the total consumers, compared with only 28 per cent. at the end of 1935. While, however, the number of consumers on the "All-in" rate represented 38 per cent. of the whole, it is significant to observe that the number of units of electricity sold to these consumers in 1936 was equivalent to 71 per cent. of the total units sold to domestic users. The average price for electricity paid by the domestic consumers on the "All-in" rate fell from 1.19 pence per unit in 1935 to .95 pence per unit in 1936.

It is thus true to say that Northmet "All-in" rate consumers, using electricity in their homes not only for lighting but also for other domestic purposes, are now paying on an average less than 1d. per unit for their electricity. The reduction in the "Follow-on" charge under the "All-in" rate was, as you will remember,

the last of a series of reductions in the rates of charge which have been made over a period of years and which represent in the aggregate very substantial concessions to our consumers.

It will, I think, be of interest to you to know that principally as a result of these concessions the average price paid by domestic consumers during the last five years has been reduced by nearly one-third.

The gross operating revenue for the year amounted to £2,633,795, being an increase of £348,825, or just over 15 per cent. The operating expenses amounted to £1,810,015, being an increase of £289,583, or 19 per cent. The expenses for the year are on a somewhat higher basis than those for the previous year, and I should add that everything points to a further substantial advance in our expenses in respect of supplies, and more especially coal, during the current year.

If you will now turn to the report and accounts you will see that there is a balance from working of £803,480, which is £38,942 more than the balance last year. Adding to this sum interest and dividends received from our investments, amounting to £51,963, and the balance brought forward from the last account amounting to £49,861, there is a total sum available of £905,304. On the other side of the account you will see that interest on mortgages, debenture stocks and loans amounts to £80,374, which is £15,343 more than last year, mainly due to the interest on the new 3½ per cent. debenture stock which accrued from January 1, 1936. There is no change in the amount of the reserve fund for the 5 per cent. mortgages, or in the redemption fund for the 4 per cent. debenture stock.

ALLOCATIONS TO DEPRECIATION AND RESERVE

The allocation to depreciation and reserve account amounts to £337,352, or £9,682 more than last year, and a sum of £30,000 is again allocated to the contingency account, as in the previous year. After making these deductions, the amount available for appropriation is £425,817, and your directors recommend that this amount be applied in the payment of the dividend on the 6 per cent. cumulative stock, amounting to £84,000, the same as in the previous year, and a dividend on the ordinary stock of 10 per cent., of which 4 per cent. has already been paid, amounting to £278,151. Although the rate of 10 per cent. is the same as last year, the amount required to pay this dividend is £27,150 more than in the previous year, due to the fact that in respect of the year 1935 only the final dividend of 6 per cent. was paid on the £678,737 ordinary stock which was issued in July, 1935. If these appropriations are approved, the amount carried forward will be £63,666, or £13,804 more than in the previous year. In view of the substantial cost to your company of the reduction in the "Follow-on" charge under the "All-in" rate which became effective on February 1, 1936, to which I have already referred, I suggest that the results for the year must be regarded as satisfactory.

POLICY OF THE COMPANY

While I am dealing with the accounts I should again like to remind you of the policy which your company has pursued for many years and which I have explained on previous occasions, whereby the reserve funds of the company (and you will remember that these funds also take account of the depreciation of the assets of the station company) are used for financing capital expenditure and are therefore invested in the business and not in outside securities.

One result of this policy is that the nominal amount of the issued capital of the two companies is in the aggregate less than the total amount which has been actually spent on capital works. The difference, which at December 31st last amounted to £3,451,680, has been provided out of reserves. To arrive at the real return upon the capital invested in the two undertakings it is therefore necessary to relate the amount paid out by way of interest and dividends to the total capital expenditure of the two companies.

In the case of the year 1936 the total amount which has been disbursed, or which it is now recommended should be disbursed, in payment of interest and dividends by both companies amounted to £519,087. If this sum is related to the total capital expenditure, it will be found that the average return upon the total capital investment is only 4.6 per cent.

You will have observed in the notice convening this meeting that a resolution will be submitted to you to increase the number of directors from five to seven, and it is proposed that Mr A. Vassall, who is one of the directors of the Harrow Company, should be invited to become a director of your company. I hope you will agree that what I have said about the affairs of your company cannot be otherwise than pleasing to you. And if I look to the future, I see no reason why we should not anticipate a continuation of our good fortune.

The report and accounts were unanimously adopted.

COUNTY OF LONDON ELECTRIC SUPPLY COMPANY, LIMITED

YEAR OF UNUSUAL DEVELOPMENT

The forty-third ordinary general meeting of this company was held, on the 16th instant, in London, Sir Bernard E. Greenwell, Bt. (chairman of the company), presiding.

The Manager and Secretary (Mr John C. Dalton), having read the notice convening the meeting and the auditors' report,

The Chairman said that the turnover for the year had been 2,072 million units, an increase of over 311 millions. Of those, 1,034 millions were sold to their own consumers, against 885 millions in the previous year, actually a percentage increase of 16.8 per cent. The Central Electricity Board took 831 millions, against 682 millions—also an increase of about 150 millions—the balance being used in works and transmission. The increase in sales for the year was thus 298 millions over 1935. The gross receipts at £4,377,469 showed an increase of more than £557,000, but there was a proportionate increase in expenditure of over £379,000. The increase in revenue from sale of current was 15.9 per cent. £2,142,000 was spent on capital account during the year. The net revenue of £2,162,340 showed an increase of £177,729 as compared with the previous year. It was proposed to pay the usual dividend of 10½ per cent. and to transfer £150,000 to general reserve, leaving £425,288 to be carried forward to 1937. Shareholders would agree that the accounts showed a very satisfactory and sound position.

PROGRESS OF THE COMPANY

New works had been put into commission and substantial reinforcements of existing works carried out to meet the growth of load. During the year they had established 170 new substations, laid down 191 miles of high-tension lines and 494 miles of low-tension mains.

Their policy of making supply available as widely as possible over the company's large areas and following up this development with active selling campaigns had been justified. Those selling campaigns in turn dictated the spread of schemes for assisting consumers to wire their premises by easy payments and for the installation of all classes of electrical apparatus with hire-purchase facilities. The large addition of electrical appliances—of which over 34,000 had been sold during the year—on to their mains was due in its turn to the very cheap rates of supply which the company was able to give to consumers.

During the year they had extended the zone of the ½d. per unit rate under the two-part tariffs and at the end of the year were able to announce reductions in the lighting flat rate. The flat rate for London had become 4½d. per unit from January 1st; for the Outer London areas the flat rate was 5½d., and for the very rural parts of their area, embracing Essex and similar areas, the flat rate was to be 6d. per unit. They had also adopted this uniformity throughout the areas of their subsidiary companies. It would interest shareholders to know that 76 per cent. of consumers under the two-part tariffs paid an average rate last year of 1.64d. per unit for all supplies—that was cooking, lighting and heating—and that average rate covered the whole of the company's areas from London to the most rural parts of Essex.

NEW STREET LIGHTING CONTRACTS

Expansion of the street lighting programme continued. During the past year important contracts had been received from Wandsworth, Chelmsford, Epping, Hornchurch, Banstead and Godstone. With those contracts the total street lamps installed would be nearly 14,000, covering 420 miles of main roads and streets. The subsidiary companies were obtaining similar contracts for street lighting and during last year had lighted 75½ miles of streets, mainly in the London area.

Continued development in the domestic field had necessitated the expansion of showrooms, of which there were 22 in the County of London Company area, and a total of 60 taking the County Company and its subsidiary and associated companies together. It had been decided, in view of the forthcoming Coronation Celebrations, to repeat the offer made during the Jubilee period of free electricity to local authorities for the floodlighting of public buildings and the decoration of streets, in order that the occasion should be marked with fitting display.

With a view to giving every assistance possible to the needs of Home Defence by encouraging recruiting in the Territorial Army the board had decided that employees enlisting in the Territorial Army should receive ten days' leave with pay for the purpose of attending camp, in addition to any annual leave to which they might be entitled.

The report and accounts were unanimously adopted.

METROPOLITAN ELECTRIC SUPPLY COMPANY, LIMITED

STEADY PROGRESS

The fiftieth ordinary general meeting of this company was held, on the 16th instant, at Winchester House, London.

Mr George Balfour, M.P. (the chairman), said that the last financial year had again disclosed steady progress in their commercial and technical development. The acquisition of the ordinary share capital of the Notting Hill Company had been duly completed and considerable progress had been made in popularising the electricity supply in the district. A new agreement for ten years, satisfactory to all concerned, had been made with the London Power Company, from whom they received the whole of their supply in bulk.

During the year they again made rapid progress in popularising all classes of domestic electric apparatus in their districts and supplied approximately 8,000 appliances, bringing the total up to 28,000. They connected an additional 18,500 new consumers and the total, including Notting Hill, was now 168,500 and they sold during the year 348 million units in addition to supplying 89 million units in bulk to other undertakings. With 18½ million units distributed in Notting Hill the total sold to all customers was over 366 million units. If nothing untoward happened seriously to increase their costs it was proposed as from June 30th next to make a substantial lowering in the unit rate of their two-part tariff. With their already low fixed charge this reduction would give them what was, he believed, the cheapest supply of any authority supplying under like conditions.

The final dividend proposed of 7 per cent. would make 10 per cent. for the year. To mark their Jubilee year a sum equal to 5 per cent. of the annual wage bill was being distributed to the staff and employees as a bonus and a special bonus of 2½ per cent., tax free, was being paid to all ordinary shareholders.

To provide capital to liquidate loans and provide for current requirements, the directors proposed to issue the balance of capital, namely, 350,000 ordinary shares, as rights to the ordinary shareholders of the company, and they anticipated taking this step without delay.

The report was adopted.

NATIONAL PROVIDENT INSTITUTION

RECORD NEW BUSINESS

The one hundred and first annual meeting of the National Provident Institution for Mutual Life Assurance was held, on the 12th instant, in London.

Mr Robert E. Dickinson, the chairman, in the course of his speech, said the steady expansion shown in recent years had been continued, and during 1936 they transacted a larger new business than in any previous year, having issued 3,036 policies for sums assured of £1,960,000, of which £1,880,000 had been retained at their own risk.

As a result of the larger new business the annual premium income showed a further increase. The gross interest income had also expanded, but the average rate of interest earned showed a small fall, being £5 4s. 2d. per cent., as compared with £5 7s. 5d. per cent. in 1935.

The result of the year's work had been that the life assurance and annuity fund had been increased by £352,000 and now stood at rather over £12,000,000.

Their Stock Exchange securities stood in the books at or below the selling price on December 31st last, and a valuation at that date disclosed a margin of over £1,000,000 as an internal reserve.

The net premium valuation had been made by the A/1924/29 mortality tables, which represented the latest and most up-to-date experience of assured lives, and had been strengthened by the addition of the customary special reserves for expenses and profits on limited payment and paid-up policies, etc., and also by the inclusion of a special "additional reserve" of £200,000. A surplus of £1,286,000 was disclosed, of which they had decided to divide £897,000 and to carry forward £389,000.

Once again they had found it possible to allot bonuses at the rate of £3 per cent. per annum to whole-life policies.

In the case of endowment assurance policies they had also been able to maintain the basic rates paid on the occasion of the last distribution and to grant once again a special bonus payable only on survival to maturity. On this occasion the special "survival" bonus was being paid at the rate of 5s. per cent. per annum on the sum assured.

The report was unanimously adopted.

EQUITY AND LAW LIFE ASSURANCE SOCIETY

FURTHER RECORDS

The annual general meeting of the Equity and Law Life Assurance Society was held, on the 16th instant, at 18 Lincoln's Inn Fields, London.

The Rt. Hon. Sir Dennis Herbert, K.B.E., M.P. (the chairman), in the course of his speech, said: Our total gross new life business was 1,947 policies against 1,756, for a total amount of £5,144,660 against £4,655,332, the annual premiums amounting to £121,145 against £120,203, and the single premiums to £1,292,355 against £1,020,367. The net new life business amounted to £4,658,909 against £3,931,322.

The sinking fund business was 150 policies against 74, for £4,794,254 against £997,012, thus making a total net new life and sinking fund business of £9,453,163 against £4,928,334. The number of immediate annuities granted was 1,855 against 1,761, for annual sums amounting to £208,046 against £200,833, the consideration received being £2,510,226 against £2,398,634.

The total amount of assurances in force at the end of the year was £34,907,760 against £27,585,957. The immediate annuities in force were £817,785 per annum against £628,950 per annum. All these figures, it will be observed, show increases on the preceding year, and all of them are record figures in the society's history. Our total funds at the end of 1936 amounted to £24,935,078 against £20,977,583 for the previous year, and the total is now well over £25,000,000. The net rate of interest earned was £4 8s. 6d. against £4 7s. for the previous year, and £4 7s. 9d. for the average of the quinquennium ending December 31, 1934.

Our annuity business, I believe, is larger than that of any other life office in this country. I have heard it questioned whether this immense annuity business is really satisfactory and profitable; but I can assure you that you need have no doubt about it.

DISTRIBUTION OF THE FUNDS

I turn to the investment of our funds, now amounting, as I have told you, to over £25,000,000, according to book value. The question of distribution of our funds in different types of investment was the subject of an editorial note on our accounts in one of the important financial papers a few days ago; that note, though of a generally complimentary nature, ended with a passage introduced by a "but," to the effect that our investments in ordinary stocks and shares had risen steeply to a figure of approximately £4,600,000. It was not actually suggested that this was an indication of an unsatisfactory condition of affairs, but I am anxious to remove any impression to that effect which may exist in anybody's mind.

In the first place I would remind you that this item, "Railway and other companies ordinary stocks and shares," which we are obliged to state separately under that heading by the Board of Trade regulations, covers ordinary stocks and shares of banks and insurance companies, and high-class investment trust companies. But that there is no need for anxiety in regard to this item in the accounts will, I hope, be sufficiently established by the fact that the actual market value of the investments which thus appear at the book value of £4,603,012, is no less than £5,143,546.

THE NET INCOME YIELD

This prompts me to explain what puzzles some people—though many of you know the explanation—namely, the high income yield on our funds. The yield for last year of £4 8s. 6d. per cent. net, equivalent to over 5½ per cent. gross, does not mean that our money is invested to produce that yield on the amount invested. The figure of net income yield is increased above the actual average rate of income on our investments by reason of several factors; the chief of these is that it is the income yield on the book value of our funds, which is much below their intrinsic or market value. It is by reason of our cautious policy of applying certain profits to reducing the book value of our investments that we are able to face the prospect of a decline in the income yield of money, without having to fear a failure to maintain good rates of bonus.

The short but important point is that the great success of the society's business in recent years, combined with good management and conservative distributions, has enabled us to build up a very strong financial position.

As regards our position and prospects for the future, I have said on previous occasions that the growth of our business in recent years has been such that we cannot expect it to continue indefinitely to the same extent, but all the indications at present are favourable.

The report and accounts were adopted.

LANCASHIRE STEEL CORPORATION

FURTHER EXPANSION

The seventh ordinary general meeting of the Lancashire Steel Corporation, Limited, was held, on the 17th instant, at 34 Leadenhall Street, E.C.

Mr John E. James (the chairman), in the course of his speech, said:—The earnings of the corporation and its wholly-owned subsidiary companies for the year under review amounted to £548,204, representing an increase over the earnings of the previous year of £91,433. In view of the substantial increases in costs of raw materials which have taken place during the year, increases which have not been paralleled by advances of corresponding amounts in realised prices of finished steel, I think you will regard this as a satisfactory achievement.

The net profit for the year, together with the balance brought forward from the previous year, amounts to £462,846, from which falls to be deducted the liability of the companies in the group in respect of income tax. Two further appropriations of profits have been made—one of £20,000 being a reserve against possible future fluctuations in values of raw materials, which your directors consider advisable in view of the present high levels of costs of raw materials and correspondingly high costs of semi-finished and finished steel. The remaining appropriation of £25,000 has been transferred to general reserve. The board recommends a final dividend of 2½ per cent. (making 5½ per cent. for the year) on the 5½ per cent. non-cumulative redeemable second preference shares, and a final dividend of 3½ per cent. (making 5 per cent. for the year) on the ordinary shares.

I am glad to have this opportunity of affording the shareholders information regarding the agreement between Stewarts and Lloyds, Limited, and the corporation relating to the construction of rolling-mill plant at Corby. This important development is one in which both companies will participate, the semi-finished materials for use in the rolling mill being supplied from the Corby works of Stewarts and Lloyds, while the corporation will control the manufacture of the products. The lease of a site has been entered into, and it is hoped that a portion of the plant will be in operation during the present year. This arrangement will involve the transference to Corby of some of the corporation's business now being done at Warrington.

The agreement also contains a provision whereby the corporation undertakes to use at its rolling-mill plants at Irlam and Warrington a yearly tonnage of steel to be supplied from the Corby works, thus enlarging the scope of your corporation's activities in Lancashire. Your directors are confident that the agreement will be to the advantage of both companies.

PRICES OF RAW MATERIALS

In my speech to the shareholders at the last ordinary general meeting, I referred to the establishment of a scheme of central selling in the coal industry which came into operation during the previous year, and expressed anxiety regarding the possible effect of resulting increases in prices of raw materials. During the past year prices of many raw materials, including coal, have risen substantially, and I feel it incumbent on me to repeat my view that, should prices continue to advance, the situation is one which, in time, must be regarded as holding the possibility of serious consequences for industry in this country.

The production of the corporation and its subsidiary companies during the year 1936 was higher than that attained in any year since the formation of the merger, and although the existing uncertainty makes it more difficult than in ordinary times to forecast what may eventuate during the remaining months of 1937, I am glad to tell you that the production and profits up to the present time are as satisfactory as for the similar period of 1936.

The results shown by the corporation for the past year are a reflection of the prosperity of the steel industry as a whole. During 1936 the output of steel ingots and castings in the United Kingdom was 11,698,200 tons, a record in production, and 1,839,500 tons in excess of the output for 1935, which, in itself, was a record. I feel bound, however, to comment again on the position of the industry in relation to iron and steel exports. Despite this increased output our exports for the year 1936 amounted only to 2,236,600 tons, which was approximately 135,000 tons less than for the previous year. I do not think we can regard the iron and steel industry in this country as established on a permanently prosperous and satisfactory basis until that enjoyed last year, and I should welcome any step which might be taken with a view to bringing about an improvement in this connection.

The report and accounts were unanimously adopted.

D. NAPIER AND SON, LIMITED

IMPROVED RESULTS

The twenty-third ordinary general meeting of D. Napier and Son, Limited, was held, on the 12th instant, at Acton.

Sir Harold Snagge, K.B.E. (the Chairman) said that a year ago, after making the usual deductions for directors' and management remuneration and depreciation, and after drawing upon general reserve for £50,000 and upon other reserves for £15,000 to meet heavy development expenditure, they had shown a net trading loss of £19,959. This year, after making the same usual deductions, but after taking £50,000 only from reserves, compared with £65,000 a year ago, there remained a trading credit balance of £6,901. In other words, the trading result showed an improvement of £26,860 on its predecessor.

They believed they had now passed the days of unremunerative turnover and the orders they now had in hand entitled them to look forward without undue optimism to much better trading figures during the current year.

Their factory was now full of work in connection with Air Force requirements, besides which they were busy turning out Power-Napier engines for the Power Boat Company's famous speed boats. Indeed, their hopes for the Sea Lion looked like being realised to the full.

They were in production on a moderate scale with both "Rapier" and "Dagger" engines, the latter of which would be seen this year on Empire Air Day and at the Royal Air Force Display at Hendon in Hawker "Hector" machines; they were fully maintaining their work on Admiralty contracts; they were very busy turning out Sea Lions and, with production work to support them, they were, in their experimental and development sections "hatching out" new engines to give performances at least comparable with those of their friends and competitors who had wrested the lead from them on the death of the old "Lion" and had held it for some years past. It was not permissible to disclose particulars of those new engines, but there was no harm in saying that they had reached a stage at which they were encouraged by the Powers-That-Be to entertain good hopes of their future.

The report was adopted.

MOSS' EMPIRES, LIMITED

INCREASED PROFITS

The thirty-eighth ordinary general meeting of shareholders of Moss' Empires, Limited, was held, on the 17th instant, in the company's London offices.

Colonel J. J. Gillespie (chairman), in moving the adoption of the report and accounts, said, *inter alia*:—

1. The bonus distribution of ordinary shares carried at last year's meetings had increased the ordinary share capital by £21,000, which fact must be taken into account in considering the dividend recommended to be paid on the ordinary shares.

2. £2,000 of 4½ per cent. debenture stock had been redeemed out of the sinking fund set up in terms of the trust deed.

3. The reserve fund stands at £439,513 before adding the transfer of £15,000 to reserve now recommended. In estimating the true value of the company's reserves, regard must be paid to the surplus values of the freehold and leasehold properties and to the fact that no credit is taken in the accounts for goodwill.

4. Theatre furnishings are £10,000 less after debiting the cost of additional furnishings and writing off depreciation.

5. Investments are £4,000 less, principally owing to certain investments falling in at face value, and the bank balance is increased by £37,800.

6. The national crisis and the influenza epidemic affected business in the latter part of the year.

7. Net profits from theatres, etc., brought into profit and loss account show an increase of £8,400 over 1935. The balance of profit carried to the balance sheet is £118,680, being an increase of £4,775.

8. No definite change of policy intended by the board. The successful management of once-nightly theatres in the Provinces presents difficulties.

A final dividend on the ordinary shares of 5 per cent. actual, less income tax, making 10 per cent. for the year 1936, was carried by the shareholders.

A resolution to convert the issued preference and ordinary shares into preference and ordinary stock was also carried.

The directors' report and accounts were adopted and the retiring directors and auditors were re-elected.

CONSOLIDATED MINES SELECTION COMPANY, LIMITED

SATISFACTORY RESULTS AND PROSPECTS

The forty-first ordinary general meeting of the Consolidated Mines Selection Company, Limited, was held, on the 15th instant, at River Plate House, London.

Mr Walter McDermott (the chairman) said that the accounts showed that a satisfactory share in the advantages accruing to the metal industries through the activity of the past year had been secured. A strong balance sheet position was shown with cash and cash assets exceeding all current and contingent liabilities by £254,497. Investment stood at £723,815, which was, at the present time, substantially below the aggregate market quotations. Out of a net profit of £274,051 a dividend at the rate of 30 per cent., less tax, was proposed, and the transfer of £50,000 to the general reserve, making that account £250,000. There had been no very marked change in the specific investments held by the company.

The Anglo-American Corporation of South Africa had had a busy year, and had raised its ordinary dividend from 2s. to 3s. The various Rand goldmining interests of T.E. Corporation were of importance indirectly to their company, which also held directly interest in various of the gold properties. They had recently taken a participation in a very large alluvial gold property in the Yukon district. Their interest in West African goldmining embraced substantial holdings in a number of the best known properties. Their interests in the copper mining industry of Northern Rhodesia were an important element in any estimate of future prospects. Directly and indirectly through Anglo-American Corporation they were particularly interested in Rhodesian Anglo-American, which was now in receipt of dividends through the profitable operation of Rhokana.

It might be fairly presumed that the company's operations of the future might be expected to yield satisfactory returns. Apart from their gold interests he thought that for some time to come they could view with equanimity the prospects of their interests in base metals production.

The report was unanimously adopted.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended March 13, 1937, amounted to £22,689,000, against ordinary expenditure of £16,548,000. After allowing for an increase in Exchequer Balances of £248,606, the operations for the week, as shown below, decreased the gross National Debt by £4,668,000, to approximately £7,923 millions.†

(000's omitted)	
(No increases)	£
Treasury Bills.....	3,739
Public Department Advances.....	95
P.O. and Teleg. (Money) Acts.....	800
Other debt (War Loan Acts)	34

COMMERCE AND TRADE

OIL OUTPUTS

(Continued on page 680)

PHENIX OIL AND TRANSPORT COMPANY, LTD.—The gross production of crude oil of the Phoenix Group for February was 56,994 tons.

of crude oil of the Fincantia Group for February, was 60,000 tons.

CAMP BIRD.—Dividend for 1936 6 per cent., against nil.
AMALGAMATED METAL.—Ordinary dividend 7 per cent. for 1936, against 6 per cent.

MIDDLESBROUGH.—Pressure for supplies of pig-iron, semi-manufactured steel, and finished steel, continues, and, under the circumstances, it is practically impossible to place orders for early delivery. Local consumers of foundry pig iron continue to be rationed and are unable to build up any stocks. East Coast hematite is scarce, but makers are doing their utmost to keep home users supplied. There is no immediate prospect of the output of pig iron being increased to any considerable extent. Shipments of pig iron from the Tees from March 1st to the 16th amounted to 6,667 tons, against 3,285 tons during the same period in February. Prices remain unaltered at the official fixed figures. The shortage of semi-finished materials is acute. The quantities imported from the Continent have not reached the quota, but endeavours are being made to obtain larger quantities. Arrangements are on foot to control the distribution of semi-manufactured material to the re-rollers.

Finished steel is in exceptional demand by home users, but fair quantities continue to be exported. Steel prices remain unchanged, but are subject to revision before June 1st. A further shipbuilding order for four small vessels has been placed with local shipbuilders. In the scrap market official prices for heavy steel have not yet been announced. Foreign ore imports into the Tees continue on a large scale, the quantity imported during the first 16 days of March being 134,300 tons, against 141,866 tons during the corresponding period last month. The market in Durham blast-furnace coke is strong. Sellers are adopting a firm attitude and are not inclined to sell below 29s. to 30s. per ton, delivered at the furnaces here.

GLASGOW.—The situation in the West of Scotland is perhaps a shade easier this week. While supplies of raw materials are still quite inadequate for the requirements of consumers, there has been some slight improvement in deliveries. Re-rollers who have been, and still are, short of supplies have been able to keep plants running without further curtailments, and it is understood that a fair tonnage of Continental material will be available before the end of the present month. There is a great deal of new business on the market for materials of all kinds and for manufactured steel articles and structures, but in many cases it is difficult to find suppliers who are able to give the deliveries required as almost all manufacturers have already contracted for the bulk of their output for some time to come. Prices continue to advance.

CARDIFF.—Arrangements have been made between Guest Keen Baldwins Iron and Steel and the British Iron and Steel Federation for a resumption of work at a 1,400-ton blast furnace at Dowlais, and it is expected that production will begin in the summer. It has been officially emphasised, however, that operations will be only temporary. In spite of the scarcity of pig iron and scrap, the tinplate works continue very active. Shipments at Swansea last week totalled 7,788 tons, compared with only 3,030 tons in the corresponding week last year, and at 76,941 tons the exports to date this year are more than double those for the same period of 1936. Premiums over scheduled prices have been further increased, and transactions this week have been arranged at 23s. per basis box. Stocks are also low. Galvanised sheets are unchanged at £15 15s. per ton and steel bars at £6 2s. 6d.

OTHER METALS

COPPER.—After touching £78 per ton, the cash price declined sharply and closed on Wednesday at £71 10s., a net loss of £5 12s. 6d. on the week. Forward copper was also easy, although the decline was less marked than in the cash position. The easier tendency was due to a considerable amount of profit-taking; to the execution of many stop loss orders, and to a reduction in consumers' demand. But the optimistic undertone still persists, and there is a widespread belief that prices will recover in the near future.

The February copper statistics showed a decline of 6,000 short tons to 330,070 tons in world stocks. Extra United States stocks showed a decline for the first time since October, 1936, falling by 1,630 tons to 192,050 tons. In view of the very heavy consumers' buying during February, this decline was not surprising, and had little effect on prices. The market was, however, very impressed by the rise of 4,831 tons to 101,681 tons in the extra-American output of refined copper, and the jump of 6,580 tons to 113,970 tons in the extra-U.S.A. production of blister copper during February. These increases are especially significant in view of the fact that February had three less working days than January. They have convinced many operators that the ability of producers to raise their output at short notice is rather better than had been expected by the market.

Sales on the London Metal Exchange: 4,850 tons on Monday, against 3,750 tons last week; 4,750 tons on Tuesday, against 4,500 tons last week; 4,600 tons on Wednesday, against 7,100 tons last week. Domestic spot was quoted at 16-7½ cents per lb. in New York on Wednesday, against 17-25 cents a week ago and 13-72½ cents a month ago. Wednesday's official closing price for standard cash in London was £71 10s. to £71 15s., compared with £77 2s. 6d. to £77 10s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 28,704 tons, showed a decrease of 3,417 tons, while stocks of rough copper, at 607 tons, were 100 tons larger.

LEAD AND SPLITTER.—In sympathy with copper and tin, and in response to many stop loss orders, both metals reacted sharply and closed at the lowest levels of the week. The United States market has also been easier, for the first time for many weeks. There is, however, no change in the basic position of the markets, apart from the fact that certain speculators have become more careful. But if copper and tin recover, lead and splitter may be expected to follow. According to the *Metallgesellschaft*, the world lead smelter output rose from 132,681 metric tons in December to 133,049 metric tons in January, the highest monthly level for several years. Production outside the United States and Spain reached 95,652 metric tons in January, against 93,116 tons in December, and 84,352 tons in January, 1936. The recent sharp increase is all the more satisfactory as, from the statistical point of view, the extra-U.S.A. lead market is the only market on which there is a genuine shortage of supplies. It is true that splitter prices have been firmer than lead prices of late, but this fact is rather based on the hope that the United States might be forced to import splitter in the near future and not so much on the actual situation over here.

Sales of lead on the London Metal Exchange: 4,500 tons on Monday, against 4,000 tons last week; 2,750 tons on Tuesday, against 3,500 tons last week; 2,700 tons on Wednesday, against 9,000 tons last week. The New York quotation on Wednesday was 7-25 cents per lb., against 7-75 cents a week ago and 6-00 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £32 18s. 9d. per ton, compared with £36 a week ago.

Sales of splitter on the London Metal Exchange: 3,250 tons on Monday, against 6,500 tons last week; 4,100 tons on Tuesday, against 8,000 tons last week; 3,600 tons on Wednesday, against 7,700 tons last week. Wednesday's quotation in East St. Louis was 7-50 cents per lb., against 7-50 cents the week before and 6-40 cents a month earlier. Wednesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £33 8s. 9d. per ton, against £36 5s. last week.

TIN.—After a week of violent fluctuations, the cash price closed on Wednesday showing a net loss of £5 5s. on the week. Consumers who had been out of the market until the beginning of this month, because they found tin at £230 and £240 too high, were willing buyers this week at prices above £300. Many operators, on the other hand, who bought tin above £300 have become frightened and have resold at £290. These facts indicate clearly the present unhealthy state of the market, and show that psychological factors play a much greater role on the tin market than sober economic considerations. To check the unhealthy advance in tin prices, the I.T.C. last Friday increased the quota for the second quarter of this year from 100 per cent. to 110 per cent., and has also asked the Governments participating in the international restriction to permit the immediate export of all available stocks irrespective of quota limits. The I.T.C. estimates that, on the basis of the present quota and the current rate of consumption (170,000 tons per annum), stocks should increase at a rate of 2,700 tons per month; so that by the end of June stocks should be well in excess of 30,000 tons. The Committee met again on Thursday of this week to settle questions connected with the release of stocks in producing countries.

Sales of tin on the London Metal Exchange: 1,000 tons on Monday, against 850 tons last week; 875 tons on Tuesday, against 900 tons last week; 400 tons on Wednesday, against 1,400 tons last week. The New York quotation on Wednesday was 65-25 cents per lb., against 65-75 cents a week ago and 51-62½ cents a month ago. Wednesday's official closing quotation in London for standard cash was £295 15s. to £296 per ton, compared with £301 to £301 10s. a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 1,504 tons, a decrease of 194 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Wednesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £14 7s. to £14 7s. 6d. per flask of 76 lbs., against £14 6s. last week. Chinese antimony was quoted at £78 to £80 per ton ex warehouse, as against £75 per ton last week. Chinese wolfram for "March-April" shipment was quoted at 54s. to 55s. per unit, c.i.f., compared with 46s. 6d. to 47s. 6d. last week. Refined platinum was steady on Wednesday at £11 15s. an ounce.

TEXTILES

COTTON.—Manchester.—The event of the week has been the advance in raw cotton prices. New records have been established in Liverpool and New York. Activity has been fostered by the encouraging trade demand for raw cotton and by reports of increasing world consumption, but the upward movement has also been stimulated by large speculative operations, especially in Egyptian Sakel cotton. In certain directions freer buying of yarn and cloth has taken place, although the higher prices and the wide fluctuations have, to some extent, checked trade. With regard to raw cotton, there has been a striking advance in quotations for Egyptian qualities, and quotations for both Sakel and Giza 7 have risen by more than 1d. per lb. in Liverpool. This advance has been due to reports of a shortage of supplies of the finer grades of Egyptian cotton. Speculators entered the market with the result that very wide fluctuations have taken place in prices. With regard to the American cotton situation, bullish advices have been received from the United States. Meanwhile, the Washington Government continues to release loan cotton. According to some reports, weather in the belt for crop preparations is now more favourable, and an appreciable increase in the acreage is considered probable. These factors, however, seem to be ignored at the moment.

Spinners have advanced yarn quotations, and are holding out for full rates. A fair business has been done in both American and Egyptian in cloth, and despite many difficulties in arranging terms of fresh contracts and also delivery dates, turnover has increased. There has been more activity for India, while steady buying has taken place for Egypt, Java, put through for Canada, with a fair turnover for South Africa. A varied business has been done in home trade fabrics.

SPECULATION IN COTTON.—Very erratic movements have taken place in Egyptian cotton prices on the Liverpool and Alexandria Cotton Exchanges. Reports were received that a syndicate taking advantage of the known shortage of desirable grades of Sakel cotton commenced speculative operations on a large scale. A big advance took place in prices on Monday, followed by a slump on Tuesday, but a recovery occurred next day. It is reported that big speculative deals are still being carried out. Business in the Lancashire cotton industry has been made very difficult by these wide fluctuations. With prices jumping 1d., and sometimes 1d. per lb. each day, traders have not been in the mood to enter into important yarn or cloth contracts. They have been waiting for more settled conditions, but it is realised that the present wave of speculation might continue some little time.

WOOL.—Bradford.—The course of prices at the recent series of London Sales has revealed the underlying strength of the market, which was continued to run full time, particularly those engaged in the production of on the increased price of wool and tops. Even spinners, having covered most of their requirements to the end of May and June, are unwilling to follow in the wake of wool, notwithstanding the general opinion that raw wool prices are likely to remain firm, and find a ready sale. At the recent auctions the home trade was credited with purchasing 40,500 bales, and the

MAKING THINGS EASIER

WIDE practical experience lies behind the advice and assistance which the National Savings Committee is able to offer to employers who wish to introduce a sound but simple savings scheme for the benefit of their employees.

SUCH a scheme makes it easier for employees to provide for the needs of both the near and the distant future, including retirement. Thousands of firms have introduced one or another of the National Savings ways of saving with memberships ranging from 5 to 5000 and over.

THE National Savings Committee will always be pleased to arrange for one of its representatives to visit a firm with a view to ascertaining on the spot what are the particular requirements, and to suggest ways of meeting them. Concrete schemes, based on data provided by individual firms, can be submitted.

EVERY assistance will be given in starting the scheme, including the provision of a speaker to address employees, and the preparation of a special circular letter for distribution. Membership cards, books, etc. are supplied free.

Continent 32,000 bales. Although no specific quantity was put down to the United States, it is understood that that country picked up a few lots of both merinos and crossbreds, particularly in shipes. The carry-forward is only 6,500 bales, which constitutes a low record. There is some anxiety regarding the quantity that is likely to be available for the next series commencing on April 26th; in all probability it will be less than at the recent sales, which, for a second series was the smallest ever known by the present generation of woolmen.

The chief question today is whether prices are getting too high to be of real service to the wool textile industry. No doubt the large buyers of cloth are facing a new level of prices that is not liked, but current quotations for both merinos and crossbreds seem justified by the present state of general business activity. Prices are being dictated not solely by the home trade, as has been the case during recent years, for activity in most countries is higher, and world consumption of wool is larger than for a long time, while supplies cannot be increased at short notice.

GRAIN MARKETS

WHEAT.—Under the influence of an expanding demand, prices have again advanced this week, and are now approaching the season's highest. Germany and Italy have again been in the market, besides other important buyers. American markets have also had a strong tone.

On Wednesday last, "May" futures were quoted in Chicago at 138½ cents per bushel, against 137½ cents the week before and 135½ cents a month ago. Quotations in London, Wednesday: No. 1 Northern Manitoba, ex ship, 54s. 6d. per 496 lbs., against 53s. to 53s. 6d. a week ago; No. 2 Northern Manitoba, ex ship, 53s. 6d., against 52s. to 52s. 6d. a week ago. According to *The Corn Trade News* total shipments of wheat and flour last week totalled 1,565,000 quarters, against 1,979,000 quarters in the previous week and 1,196,000 quarters in the corresponding week a year ago.

FLOUR.—A sharp increase in quotations occurred this week. Wednesday's London quotations (excluding quota payments) were: Straight run, delivered Home Counties, 42s. 6d. per 280 lbs., against 40s. 6d. a week ago; delivered inner London, 42s., as compared with 40s. a week ago. Manitoba patents, ex store, 40s. 6d. to 42s., against 40s. 6d. to 42s. a week ago. Australian, ex store, 33s. 6d. to 34s. 3d., against 33s. to 33s. 6d. last week.

BARLEY.—Imported barley has been a rather quiet market, both here and on the Continent. The bulk of the English crop of malting barley has now been disposed of. "May" futures were quoted at 81½ cents per bushel in Winnipeg on Wednesday, against 81½ cents a week ago. Quotations per 448 lbs. in London on Wednesday were: "English feed," at farm, 36s. to 38s., as against 36s. to 38s. a week ago; "English malting," at farm, 38s. to 45s., against 38s. to 45s. last week. Californian (new), ex ship, 54s. 6d., against 51s. to 60s. last week; Chilean, brewing (new), ex ship, 44s. 9d., against 44s. 9d. to 50s. a week ago.

OATS.—On Wednesday, "May" futures were quoted at 47½ cents a bushel in Chicago, against 48½ cents a week ago and 50½ cents last month. Quotations in London, Wednesday: "English Black," at farm, 23s. to 25s. per 336 lbs., against 24s. to 26s. a week ago; "English White," at farm, 23s. to 25s., against 24s. to 26s. a week earlier; mixed Canadian feed (Vancouver), landed, 23s. 9d. per 320 lbs., compared with 23s. 9d. last week.

MAIZE.—Prices on United Kingdom markets have advanced this week. Meanwhile, the weather in Argentina has not been favourable for conditioning the new crop and sellers have consequently tended to become cautious. "May" futures were quoted on Wednesday at 108 cents per bushel in Chicago, against 108½ cents a week ago and 106 cents last month. Quotations in London, Wednesday: "Plate," landed, 26s. 6d. per 480 lbs., compared with 26s. a week ago; "Plate," ex ship, 25s. 6d., as against 25s. a week ago; "Plate," March, 26s., as against 25s. 9d. a week ago; yellow maize meal, ex wharf, was quoted at 16 15s. to 16 17s. 6d. per ton, as against 16 17s. 6d. to 17 last week.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

Nearest Future	Jan. 2, 1935	Dec. 31, 1935	Mar. 18, 1936	Dec. 30, 1936	Mar. 10, 1937	Mar. 17, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82½	84½	83½	129	132½	136½
Chicago (No. 2, Winter) —Cents per 60 lb.	98½	101½	97½	135½	137½	138½

The visible supply of wheat in Canada amounts to 86,322,000 bushels, against 88,101,000 bushels last week, and 114,816,800 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933-34 to 1936-37:—

	1933-34	1934-35	1935-36	1936-37
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to March 13	265,153	286,254	277,912	205,919
28 weeks to March 13	8,715,637	10,364,223	10,495,640	7,780,635
Average price of English wheat per cwt.	s. d. 4 5	s. d. 4 7	s. d. 6 3	s. d. 8 11

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
March 11, 1933	Cwts. 174,923	Cwts. 79,502	Cwts. 38,344	s. d. 5 2	s. d. 6 3	s. d. 5 11
March 10, 1934	265,153	87,145	48,949	4 5	9 0	6 4
March 16, 1935	296,254	135,209	44,634	4 7	7 9	6 10
March 14, 1936	277,912	108,390	48,452	6 3	7 6	5 11
March 6, 1937	244,731	133,058	64,833	8 11	9 10	8 2
March 13, 1937	205,919	117,276	59,383	8 11	9 9	8 2

OTHER FOODS

BACON.—The improved tone last week was reflected in an increase in the official quotations. The improvement has since been well maintained. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 90s. to 94s.; Canadian, 82s.; Danish, 90s., against 86s. to 90s., 77s., and 86s. last week. Arrivals in London last week included: Danish, 12,940 bales; Canadian, 6,430; Dutch, 2,370; Lithuanian, 1,179; and Polish, 2,848; as against 13,410, 6,889, 2,318, 1,061 and 3,021 bales, respectively, in the previous week.

BUTTER.—The market was firm and active, all descriptions being higher on the week. Quotations (per cwt.) on the London Provision Exchange on Wednesday were: New Zealand, finest salted, 98s. to 99s.; Australian, choicest salted, 98s. to 99s.; Danish, 128s.; compared with 94s. to 95s., 95s., and 125s., respectively, a week ago.

CHEESE.—The market was generally steady, New Zealand showing a further price advance. Quotations (per cwt.) on the London Provision Exchange on Wednesday were as follows: English, finest farmers, 86s. to 88s.; Canadian, finest coloured, 71s. to 72s.; and New Zealand, finest coloured, 63s. 6d. to 64s.; against 86s. to 88s., 71s. to 72s., and 57s. 6d. to 58s., respectively, a week ago.

COCOA.—The rise in prices, both in London and New York, has continued. The spot quotation in New York on Wednesday was 11½ cents per lb., as against 11½ cents per lb. last week. In London, on Wednesday last, good fermented new crop, Accra, March-April, was quoted at 52s. movements of cocoa in London were as follows: Landed, 43,605 bags; delivered, for home consumption, 12,282 bags; exported, nil; stocks, 199,086 bags, against 123,341 bags a year ago.

COFFEE.—The London spot market was quiet but steady. Similar conditions ruled in New York. The New York market was quiet and per lb. in New York, as compared with 9½ cents per lb. last week and 9½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, 16 cwt.; delivered, for home consumption, 71 cwt.; exports, nil; stocks, 3,179 cwt., against 11,334 a year ago. Central and other South American: Landed, 9,108 cwt.; delivered for home consumption, 2,280 cwt.; exported, 1,256 cwt.; stocks, 87,400 cwt., against 91,640 last year. Other kinds: Landed, 3,085 cwt.; delivered, for home consumption, 5,216 cwt.; exported, 919 cwt.; stocks, 114,942 cwt., against 90,853 last year.

EGGS.—A further seasonal decline in prices occurred this week, the drop being greatest in English. At Smithfield, on Wednesday, English per 120, as against 11s. 9d. to 12s. last week; while Danish (15½ lb.) made 11s. to 11s. 3d., as against 11s. 6d. to 11s. 9d. last week.

FRUIT.—Despite bad weather, business at Covent Garden has been fairly good, with prices at a moderate level. *The Fruitgrower* states that the steady demand for apples continues, with prices steady to firm. Pears also encounter a consistent demand, quotations being well maintained now due from Australia. English and Belgian grapes are scarce, but South African are steady, while plums sell well at slightly higher rates. Reliable parcels of oranges are in demand and are making better prices, but grape fruit are a slow item. Lemons are not so firm in price.

MEAT.—Although business at Smithfield has been rather quiet, prices are higher in some instances. On Wednesday last, Argentine chilled 3s. 4d. to 3s. 10d. a week ago. New Zealand frozen mutton was 3s. 4d. to 3s. 10d., against 3s. 4d. to 3s. 10d. a week ago. According to the 9,325 tons, an increase of 496 tons on the corresponding week last year. Beef and veal accounted for 5,286 tons, mutton and lamb 2,421 tons, and pork and bacon 1,004 tons, as compared with 4,771, 2,400 and 1,102 tons, respectively, in the same week of 1936.

MILK.—Information relative to the operation of the Milk Marketing Scheme during February as issued by the Milk Marketing Board, is given in the following table, together with comparable statistics for earlier months:—

	Feb. 1936	Nov. 1936	Dec. 1936	Jan. 1937	Feb. 1937
Regional pool prices* (per gallon):	d.	d.	d.	d.	d.
Northern	14½	13½	14	14	14
North-Western	14½	13½	14	14	14
Eastern	14½	13½	14	14	14
East Midland	14½	13½	14	14	14

Mid-Western	14½	13½	14	14	14
Far Western	14½	13½	14	14	14
South-Eastern	14½	13½	14	14	14
Liquid milk price (per gallon, all regions)	15	14½	13½	13½	13½
Manufacturing price (per gallon, average)	17	17	17	17	17
Total sales under contract	65-22	64-64	63-61	64-15	60-00
For liquid consumption	44-71	46-51	47-30	48-14	45-02
For manufacturing	20-51	18-13	16-31	16-01	14-98

* On account to the nearest farthing.

Accredited producers receive 1d. per gallon in addition to the above prices. Premiums for level deliveries and for Grade "A" or special services are paid to the producers concerned in addition to the pool price from accounts. Transport charges are payable by individual producers and are deducted

PEPPER.—On Wednesday, Singapore white Muntok, spot, was quoted at 6d. per lb. in bond, against 6d. per lb. a week earlier. Black Lampong, per lb. last week, was quoted at 3½d. per lb. sellers, compared with 3½d. follows: Black, landed, 10 tons; delivered, nil; stocks, 1,796 against 1,691 last year. White, landed, 45 tons; delivered, 42; stocks, 11,817 compared with 12,864 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. 3d. per cwt., ex warehouse, on Wednesday, as compared with 10s. 3d. per cwt. a week ago. "March-April," in singles to Continent and U.K., was quoted at

Total	35,110,573	38,572,037	69,563,198	77,655,637

representatives at the sales, against the previous record of 159, reached at the March sale of last year. The value of the skins sold, at (U.S.A.) \$5,100,000, represented a new record. The turnover at the eleventh sale in July last was \$2,860,000 and at the tenth sale in March, 1936, \$3,280,000. The last sale revealed the growing international importance of the Leningrad auctions, which, have become one of the most important events of the international fur trade in the past two years.

RUBBER.—Prices have advanced by 1d. per lb. in a strong market. Although American consumers still withheld their demand, trade buying has been fairly active and speculators have also participated. At its meeting on Tuesday the International Regulation Committee fixed the quota for

the second half of the year at 90 per cent., an increase of 10 per cent. over the quota fixed for the second quarter. The market had feared a more drastic increase and prices were accordingly buoyant. The spot price in New York on Wednesday was 24½ cents per lb., compared with 23½ cents per lb. a week ago and 21½ cents a month ago. Wednesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 1s. 0½d. per lb., as against 11½d. on the corresponding day last week. In forward positions, business has been done at 1s. 0½d. to 1s. 0½d. for "April" shipment, as against 11½d. to 11½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 56,187 tons; against 59,829 tons a week earlier. A year ago stocks amounted to 151,921 tons.

WHOLESALE COMMODITY PRICES

UNITED KINGDOM: LONDON, March 17th.

The prices in the following are revised with the assistance of an eminent firm in each department

CEREALS AND MEAT

the West European Powers after their Abyssinian experience—they have halted, faced about and started to re-arm. At home, the most impressive event of the last three months has undoubtedly been the unanimity of public opinion of all shades in support of the Government's re-armament programme. And while it is true, as we have insisted, that re-armament has no virtue in itself, but only as an instrument for a brave and wise policy, we believe that MR BALDWIN and his successor, having once willed the means, will find themselves compelled sooner or later to will the end.

Nor is it only the secular peace-loving Powers that have now turned at bay. The announcements of the British re-armament programme and the subscription of the French defence loan have been followed by the publication of the Papal encyclical, with which we deal at greater length in another column. And at the moment when HERR HITLER is being reminded that a German road once led to Canossa, SIGNOR MUSSOLINI has received an equally sharp reminder that some Italian ways lead to Caporetto.

At the moment of going to press it is impossible to forecast the effect of the Italian *débâcle* at Brihuega on the ultimate fortunes of the European war in Spain. It may be that the Moors, black and blonde, who are being rushed up by GENERAL FRANCO, may succeed in checking the advance of the Government forces. It may even be that Madrid will eventually prove untenable. But whatever may happen in the Spanish theatre of war, the break in the morale of the Italian troops in Castile is a decisive event. This Italian defeat threatens to undo a large part of SIGNOR MUSSOLINI'S work. The Romagnol dictator has laboured to convince the world that it has to reckon with a rejuvenated and remilitarised Italy. If he cannot rebut the charge that the Italians lose their leonine heroism as soon as they find themselves in action against European troops with a modicum of up-to-date equipment, the prestige of Fascist Italy will slump all over Europe.

It already appears, indeed, to be slumping in

Austria, whose recent clientage to Italy has been one of the symbols of Italy's power. Last Sunday's football match at Vienna—with which we also deal elsewhere—was a bad omen for the Italians, who were hissed off the field after having lost two goals to their Austrian opponents by the time the match was broken up. Austria is said to have discovered that Italy has been selling her to Germany as a *quid pro quo* for German support of Italian ambitions in the Mediterranean. DR VON SCHUSCHNIGG, who is not the man to take a betrayal lying down, has promptly retorted by working for an understanding with Czechoslovakia and Hungary. The successor-States of the Habsburg Monarchy—ex-victors and ex-vanquished alike—have a strong common interest in standing together against Germany's drive to the south-east. It almost looks as if, at this eleventh hour, they were not only beginning to see their common interest but also to act upon it. A consolidation of South-Eastern Europe against all attempts at domination on the part of any outside Power would be an immense reinforcement to European peace.

These are signs of a turn of the tide in the affairs of Europe and of this country. We cannot be sure that they reflect a turn, and are not surface eddies. They may be an illusion; or they may be a mere backwash on the surface of the great deep. In any case, even if the current of events is really setting in our favour, we can be sure that it will not carry us to the haven where we would be if we merely sit back and congratulate ourselves on our masterly inactivity. One cannot drift up-stream; and if indeed the tide is for the moment flowing up our creek, then we must be prompt and active to take it at the flood. The dictators' extremity is our opportunity. Whatever the present turn of affairs may portend, it unquestionably gives an imperious call to our Government to throw their energies at long last into a really courageous and constructive foreign policy. Men of good will, whatever their party, should combine to work for this the moment Parliament reassembles after the Easter vacation.

Motoring at Easter

WHATEVER the calendar may say, Easter marks the turn of the year. Indeed, it is not a couple of centuries since it was customary in English official documents to date the year as beginning on Lady Day, March 25th. We emerge this week-end from a rain-swept winter into a season of fresh air, flowers and the open road. Possibly some of our readers, confronted this Easter with the inevitable figures of record holiday traffic by train, tram, bus, charabanc and private car, may ponder the implications of the fact that Britain is on the way to become a nation of motorists. What does it all mean, and where is it likely to end?

The Age of Mechanical Propulsion, in fact, has come about quite simply. Those of us who are neither very rich nor very poor are appreciably better off than in earlier days. Even if we do not earn more money—and we probably do—there are more things on which we can spend it. Our hours of gainfully occupied labour are shorter. There is more variety in what we eat and drink and wear. Whether or not we are a better nation (we are certainly soberer), we are beyond doubt better served.

The motor car ranks high among the new pleasures which are open to us under the modern regime. Before the War, motoring was a luxury and an adventure; to-day, a car still confers a certain distinction on its owner, but it is a luxury which is on the fringe of becoming a conventional necessity. There are 4,503,000

more people in Great Britain now than in 1913, an increase of eleven per cent.; but the number of cars has risen tenfold in the interim.

To-day there is one private car for about every twenty persons in the country, and the number of cars in use is steadily increasing. In 1929 it was 893,800; in December, 1936, it was 1,554,700. If the experience of the last decade is repeated, we shall have at least twice as many cars on the road in 1947 as we have to-day. The period of really rapid growth began about 1922-23, when the motor manufacturers discovered that a market which had been strictly limited so long as car prices ranged from £500 to £1,000, became surprisingly elastic in the £100 to £250 zone. For the middle-class family, the ownership of an exclusive and efficient instrument of personal transport became feasible. Moreover, as prices were further reduced, and the addition of fresh decorative and mechanical accessories provided an incentive to the frequent exchange of old for new cars, a highly organised market for second-hand cars was created. This, with the rapid extension of the hire-purchase system, has made it possible for great numbers of people, with little or no capital or savings, to acquire a car.

Even in the last ten years, the average new car has been halved in price, and at the same time improved in engine and body design, finish, springing, tyres, comfort and convenience. The following figures, compiled

by the Society of Motor Manufacturers and Traders, show that the reduction has been practically continuous throughout the period, though it has slowed down slightly since 1931:—

INDEX OF RETAIL PRICES OF PRIVATE CARS

(1924=100)

* Not yet available, but will show a further reduction

The car of to-day not only costs less to buy than its prototype of even a few years ago, but is less expensive to run, if we leave the toll of the tax-gatherer out of account—an important proviso, as we shall see later. The price of a gallon of petrol, exclusive of tax, has fallen from 3s. 9½d. in 1920 and 1s. 6½d. in 1924 to 11d. to-day; only a short time ago it was as low as 9d. The consumption of petrol per mile has been steadily reduced by improvements in engine design and in the weight of car bodies. The price of tyres has also fallen, and their life, in terms of car-miles, has steadily increased. The garage and "servicing" industry now vies in importance with the hotel industry. For an "all-in" cost varying between 2½d. and 5d. a mile men live in new places and see as much as they will of the world about them. The result, inevitably, has been new habits, wider horizons and—it must be added—a countryside of petrol pumps, road-houses, ye olde tea-shoppes and exhaust fumes.

In the 1910 Budget motoring attracted the attention of the tax collector. In 1915, under war-time conditions, the petrol tax was raised to 6d. a gallon. In 1921, this impost was temporarily abandoned and the vehicle tax was revived at the rate of £1 per unit of horse power per annum. This led to the development by British manufacturers of a new market for small cars with high-compression engines. The birth of the so-called baby car, which used very little petrol, was particularly opportune, for the petrol tax was reimposed in 1928 at 4d. per gallon and raised to 8d. in 1931. The lowering of the horse-power tax from £1 to 15s. in 1934 did not change the preference of the generality of motorists for small cars, but diverted the more wealthy owners from

medium- to high-powered models. Even for the humblest owner-driver, however, modern taxation certainly adds considerably to the cost of motoring. During the last six years the motorist has further been confronted with the cost of compulsory insurance and with an increasingly complicated system of traffic regulation. Motoring is by no means as simple as it used to be.

That restrictions and regulations are necessary is beyond argument. In 1920, seven people were killed on the road every day. In 1936, the figure was over seven-teen. And this vital problem of public safety is only one aspect of overloaded roads and congested traffic. Roads inherited from the days of the horse cannot safely cope with two millions of motor vehicles of all kinds. The process of control, consequently, has been progressive since the Road Traffic Act of 1930 required all motorists to be insured against third-party risks. Since 1935 we have had a speed limit of 30 m.p.h. in built-up areas, and a rigorous driving test. Rules and regulations, beacons and traffic lights have become the environment of motoring. The motorist's cares, in short, have grown with the motoring population, and it could hardly be otherwise in the interests of society as a whole.

Is the popularity of motoring likely to be checked? Insurance costs money; the new rules of traffic are complex and sometimes irksome; and congestion and danger reduce the attractiveness of the open road. But the number of cars continues to increase. We may protest that a positive policy of road reconstruction is long overdue. We may contend that motor traffic, and road transport generally, are being penalised to protect older modes of travel. We may grumble about the cost of taxation, garage accommodation and parking facilities. But the roads still throng with a growing host of cars, and most suburban houses are built with garages. The motor industry has become the third largest in the country. And whereas the minimum income for car ownership was put a few years ago at £450 per annum, it is now probably as low as £300.

The major problem of the future, indeed, is concerned with the road rather than the car. As long as our roads are left in their present state the traffic problem will become insoluble in a few years' time. The next step rests with the State. The traffic on the roads this Eastertide will point the moral far better than any figures or verbal argument.

Can the Commodity Boom Last?

AFTER some years of steady recovery, the commodity markets have developed a state of intense activity. Metal prices have broken away in a violent rise; rubber shows an inclination to follow suit, and most other commodities are also showing increasing strength. What has brought about this tidal wave? One theory suggests that the rapid rise represents only a natural adjustment of the commodity price level to the present state of industrial activity. But although the improving industrial position must unquestionably have an important effect on commodity prices, its influence has been apparent since 1933. Practically all prices, indeed, had shown quite a considerable recovery from slump levels before the onset of the present hectic movement. Within the last six months, however, the prices of rubber, cocoa and tin have risen by about 50 per cent., those of lead and copper have nearly doubled, and spelter quotations have increased by 150 per cent. Such movements as these cannot be satisfactorily explained in terms of "natural adjustment." They have been greater even than the rises recorded on the uncontrolled New York markets during the first six months of the Great War, and they suggest a background of urgency, amounting almost to panic, among consumers and of bullish con-

fidence among speculators, whose causes demand careful scrutiny, and whose consequences for industry may be very far-reaching.

The following table shows the course of prices for five leading commodities since the end of 1927. Monthly figures have been plotted on the chart overleaf.

End of	Tin (£ per ton)	Copper. (£ per ton)	Lead. (£ per ton)	Rubber. (d. per lb.)	Wheat. (s. d. per qr.)
1927	265.12	60.91	23.75	20.00	58 0
1928	225.75	74.00	22.25	8.69	49 3
1929	178.12	68.00	23.25	8.06	55 6
1930	116.50	46.50	16.25	4.25	24 6
1931	141.18	38.53	17.00	3.31	30 9
1932	148.44	28.56	12.50	2.42	25 3
1933	226.94	32.15	12.50	4.25	25 3
1934	228.44	28.37	12.00	6.40	30 3
1935	218.12	35.06	17.75	6.50	35 6
Sept. 1936	203.75	39.15	19.75	7.81	42 3
Oct. "	205.75	42.50	20.50	8.06	43 6
Nov. "	231.50	43.34	22.75	8.81	46 0
Dec. "	233.25	48.53	29.62	10.75	52 0
Jan. 1937	227.50	57.50	29.00	10.31	48 9
Feb. "	242.50	72.25	32.00	10.56	49 6
Mar. "	285.25	68.56	30.62	12.25	55 6

* March 23, 1937.

The figures plainly bring out the material fact that,

apart from certain artificial movements in tin prices due to the rigidity with which the restriction scheme was formerly administered, the rise in the commodity price level was gradual and orderly until the end of September, 1936. In the December quarter of last year, however, most of the leading commodity prices showed very substantial gains, which have become even more pronounced in the first three months of this year. The general rise was led by the metal group—a fact all the more remarkable since the end of one year and the beginning of the next are usually a quiet season in the metal markets. The factors which made the last quarter of 1936 a turning point are fairly clear. At the end of September the countries in the former gold *bloc* devalued their currencies, and the tripartite international currency agreement was simultaneously announced. Both measures set an effective limit on international speculation in currencies, and many professional operators turned their attention forthwith to commodities. Stocks of most materials had already been reduced to no more than normal levels, and the effect of this speculative intervention was apparent almost immediately. The increasing difficulty experienced by genuine consumers in covering their requirements except at rising prices produced something in the nature of a psychological revolution, particularly among metal consumers. The latter, who had previously been accustomed to cover only their immediate requirements, acquired in the early weeks of this year sufficiently large stocks to satisfy their needs for several months ahead. Naturally, the resulting rise, in its turn, attracted more speculators to the markets; and it was at this precise moment that the British Government declared the amount of its Defence Programme and its intention to acquire stocks of materials in connection with it. The large and efficient speculator, working behind the scenes, was joined by the small amateur—so much so that at the moment speculation in primary products like metals and cocoa has become the fashion among members of the general public who are normally strangers to the practice.

The international economic position, meanwhile, is rapidly improving. In addition to rising "peace-time" consumption, armament requirements are having an increasing influence on demand. An improvement in the general price level is certainly justified on economic grounds, and in markets where the rise has been gradual and orderly the position appears to be both sound and promising. Such abrupt movements, however, as have recently been witnessed in rubber, many metals and cocoa must be viewed in a different light. We do not suggest for one moment that a breakdown in the present price level is imminent. During the past six months available stocks have been taken off the markets, and, apart from liquidation by small speculators, which will not in any case be considerable, no forced offerings of commodities are likely in the near future. It is true that even moderate sales are capable of producing temporary but sharp setbacks, like the February slump in cocoa prices and the recent reaction in metals. The severity of the shake-out at the beginning of this week, again, exemplifies the sensitivity of the markets to even moderate offerings. On the whole, however, metal prices should be fairly maintained, and in rubber even a further rise is likely.

The danger of the recent "run-away" in the markets lies less in its immediate than in its long-term implications. High prices must needs have an adverse effect on consumption. Most of the economies secured by new uses for metals, which have been gained by technical research during the last few years, have been lost again, almost in a night. Further, at present prices the employment of substitutes becomes a factor of increasing menace to producers. So long as general industrial activity is rising and the armaments race continues, the adverse effects of the high price level may be largely obscured; but once industrial progress slows down, and the market realises the true extent of the influence of rearmament demand (which at present it greatly overestimates), a serious position will be created.

The gravest consequences, however, may ultimately be witnessed not on the consuming but on the producing

side. The present boom differs from all its predecessors since the War, because it is obtaining no support from producers, who have not yet had time to forget the lessons they learned in the slump. Already, production of uncontrolled commodities is being greatly stimulated. The same condition applies to markets subject to restriction schemes, such as rubber and tin, where basic quotas have been fixed at such high levels that many producers are able to work to the full extent of their present capacity; and to copper, where restriction has even been temporarily suspended. This is by far the most important of all the potential effects of the boom. Excessive output capacity for normal requirements has been, for the last seventeen years, the crucial problem of the commodity markets. Even to-day, potential production remains in excess of consumption. After the damping-down of output in the last few years, however, some time must elapse before production can again be raised to levels sufficiently high to enable producers to regain control of those markets which have lately taken the bit between their teeth.

It is this "certain time" which is the unknown element in the immediate equation. In the case of base metals, the interval may be limited to a few months only; in that of rubber it may last a year or more. Sooner or later, however, production will regain its swing, and substantial reductions will then be inevitable in those prices which have lately been rising over-rapidly. The sooner producers regain control of the position, the better the prospect of orderly adjustment. But if the present state of affairs is maintained for long, history will repeat itself, and the outcome of the boom will be another damaging and costly slump. Such a consummation would bring to nought all the efforts which the more far-sighted producers' representatives have made, since the last depression, to stimulate world consumption and the development of new uses for raw materials, by ensuring a fair and reasonable price level and a sufficiency of supplies.

COURSE OF PRICES, 1928-37

A New Deal in New Zealand

THE Labour Government in New Zealand came into power at the end of 1935, with a majority large enough to enable it to carry through Parliament any measure on which it was determined. Its subsequent actions have therefore needed no compromises with opponents and must be taken as interpreting Labour's own plan for the economic and political betterment of the Dominion. The party label calls up to British minds a vision of industrial nationalisation and of dilute Marxist theory. Neither of these is prominent in the principles, promises or performance of New Zealand Labour. The Party is opportunist in outlook, and has combined a measure of State Socialism in trade and finance with a reflationary spending programme and a social "New Deal." The latter includes better State pensions, shorter hours and improved conditions of work, higher wages and steadier employment.

None of these items is new in the aims or practice of New Zealand politics. The famous Joseph Seddon might well have been a leader of the present Labour Party. Indeed, as Dr. W. B. Sutch brings out in his valuable little book,* there is a strong thread of continuity with the policy of the previous regime. The complete nationalisation of the Reserve Bank diverged less far from the system of semi-public control introduced by Mr Coates than the latter itself diverged from the strictly orthodox plan originally proposed for the new central bank by Sir Otto Niemeyer. Again, the State monopoly of the sale of dairy products, combined with a guaranteed price, which the Government hopes will be the beginning of a comprehensive system of controlled external trade, is only quite a short step from the system of statutory marketing boards for primary produce which New Zealand has had for some years, and from the State regulation of meat marketing which was forced on New Zealand by the British policy of restriction. The Industrial Efficiency Act, one of the latest of Labour's measures, which applies compulsory rationalisation to any industry for which a Government-sponsored plan is accepted by a majority in the industry, is based on the definite demands of the manufacturers themselves, though it no doubt goes further than they intended. The amended Industrial Conciliation and Arbitration Act, which revived the principle of the statutory award, was in a large measure a restoration of pre-depression law; again, however, it went further in establishing a minimum basic wage, on the Australian model, sufficient to enable an adult married man with a wife and family of three to maintain himself in a condition of fair and reasonable comfort. The basic wage has been fixed by the Arbitration Court at £3 6s. a week for men and £1 16s. for women.

It would be untrue to say that the Labour Government has made no changes of principle or that the financial condition of New Zealand is as conservatively secure as it was under the Forbes-Coates regime. The outstanding change has been one from indirect to direct State control of various branches of economic life. The Reserve Bank has been fully nationalised, and its activities must now be regarded as subordinate to the general financial and economic policy of the Government. The existing Government control of the Bank of New Zealand (the leading commercial bank) is apparently to be made a reality. The railway system has been removed from the authority of a semi-independent board and placed directly under a Minister—another reversion to pre-depression practice. Among the results of this move have been the renewal of work on new lines which were certainly uneconomic a few years ago (and some of which may still be so), and a growing threat of penalisation or regulation of competing forms of transport. The Mortgage Corporation has been liquidated, with full compensation for its security-holders, as in the case of

* "Recent Economic Changes in New Zealand." (Wellington) Whitcomb and Tombs.

the Reserve Bank, and it has been replaced by a State Advances Corporation, a revived form of the Old State Advances Office. Finally, State control will impinge more and more closely upon the distribution of New Zealand's major products. This control has an international as well as an internal purpose. Unlike Labour in Australia, the New Zealand Labour Party does not stand for high protectionism, certainly not for high tariffs; it seeks to regulate trade rather than to tax it, and to bargain for external markets rather than to strive for self-sufficiency. Mr Savage has prudently postponed the promised undoing of the depreciation of the New Zealand currency against sterling until this part of his regulatory programme has been put into practice. All this inevitably puts great strain on the machinery of government. We have yet to see the full results of Labour's interesting experiment in associating all party members of Parliament with the work of administrative departments, where they serve virtually as under-secretaries for a Minister in charge.

The increase of direct State control also increases the temptation to spend public money extravagantly which is inherent in the Labour programme. "Roads and bridges," built under local pressure with an eye to electoral support, were notoriously one of the curses of pre-depression economies and political life in New Zealand. Labour will need strength of mind if this curse is not to come again in connection with the State railways and the large programme of other public works which is part of its panacea for unemployment. Much the same may be said of the State advances to people on the land, since over-borrowing on mortgages was among the chief causes of inflated land values in New Zealand and the subsequent financial destitution of agriculture. Even more dangerous is the guaranteed price system, applied at present to dairy produce and booked for extension to other goods. The price has been fixed on the basis of actual returns in the past, and the intention is to give stability by setting good years off against bad. This implies the building up of a surplus while prices are moderate or high. But will the dairy farmers of New Zealand tolerate such a system in the good years, when they are able to protest that they could have obtained better prices for themselves than the Government is paying them? A great deal turns on that question.

A final problem concerns public finance in the strict sense. Mr Savage's hints of possible reductions of interest on Government debt were hushed by Mr Nash's denials that any compulsion on bondholders was contemplated, and any such repudiation now seems most unlikely. Moreover, Mr Nash's Budget for 1936-37 was moderate and orthodox. The estimates for social services were raised by £2,500,000, which would be found out of the buoyancy of revenue, increases of income tax, and a graduated land tax. But moderate as Mr Nash may be, there are men behind him less conservative in their ideas of public finance, including some supporters of "social credit." If interest rates rise, and if the budgetary problem grows more strained, there will be strong pressure on the Government to use its control of the central bank to supply what goes in New Zealand by the specious name of "costless credit." Here is the real testing point of the New Deal. Can it be conducted within the limits of sound finance, or must its outcome be inflation and the undermining of the Dominion's credit structure?

New Zealand's prosperity and her Budget resources depend, more than those of any other Dominion, on the two-thirds of her exports which go to the British market. At the end of May, the Ottawa Agreements come up for renewal. The New Zealand Labour Government view with anxiety the possibility that the country's principal activity may be hit by any fresh protective measures for the English agriculturalist, or by any re-allocation of supplies within the Commonwealth. If that occurred, the Government would be forced to enter the Japanese and German markets. For some time the New Zealand Government can fall back on the large sterling assets built up in London. But such balances quickly waste. Labour's New Deal in New Zealand must depend, in the long run, on New Zealand's exports; and in that sphere Great Britain is still a deciding factor.

Our Limpid Lawyers

THERE is nothing that helps a man so much to clarity of thought and speech as study of the law and legal practice. From the first moment of applying his mind to this great subject, the young barrister adopts even in his common speech a precision of language, accompanied often by a rotundity of phrase, which delights those of his elders who are admitted to the privilege of his conversation. The habit, as it grows and ripens, prepares him for the later tasks of guiding a jury from the bench or drafting a Bill for the Houses of Parliament. In time he will acquire a lucidity and an impressiveness that are the envy of all who try to enshrine argument in words, and place him far above the historian, the scholar and the journalist.

To this happy fact we owe both the wise guidance of our juries, and the intelligibility of our Acts of Parliament. Who, for example, but a trained lawyer could have worded the simple penetrating sentence which occurred recently in a summing-up delivered to a jury by one of His Majesty's judges?—

Quite plainly, in my view as a lawyer, I cannot find it very difficult to see how you can fail to find that this woman is not guilty of manslaughter.

With these words ringing in their ears the jurymen retire. Let us follow them discreetly into the jury room and listen to the discussion (not very clearly worded, alas, since they are no lawyers) which springs from this direction.

"It's pretty clear anyway that he doesn't want us to bring in manslaughter."

"Wants us not to! He said we might."

"Pardon me, sir, but your memory is at fault. I memorised the words carefully. He said that he couldn't find it difficult to see how we could fail to find that she is not guilty."

"Exactly. Couldn't see and not guilty. Two negatives. And two negatives, as all educated men know, make a positive."

"No. No. It's not two negatives. It's three. Fail is a negative verb. When he said 'not fail to find' he meant 'not not find.' So there's an odd number of negatives, and the rule is that an even number of negatives makes a positive and an odd number a negative."

"Negative what?"

"Why, of course, a negative . . . Oh, I don't know, I'm muddled."

Here a third voice breaks in.

"If you gentlemen will allow me to say so, you are both wrong. There are neither two negatives nor three. There are four. In this context the word 'difficult' has the force of a negative, and what he meant was that he could see that we could not find that the woman is not guilty."

So we leave them steadily moving under skilled guidance to inevitable truth.

Let us turn now from the lawyer as director of juries to the lawyer as draftsman. At the peak of his profession stands the gentleman who drafts our Finance Acts and brings to his task a gift of straightforward, virile English prose which it is almost impertinence to praise. But even he, though pre-eminent, is not alone among draftsmen for his skill and clarity. That other gentleman who is employed by the Ministry of Transport to draft its Road Traffic Acts is very good, too, and scarcely a term passes in which his prose does not at least once come before a court of law. This term it came in the case of *Wyatt v. Guildhall Insurance Company*, which arose out of a curious problem concerned with a journey by car from Manchester to London. Mr A being about to drive to London offered to carry Mr B with him for 25s., and on the way had an accident in which Mr B was damaged to the extent of £235 2s. 10d. Mr B sued Mr A, and, having won his case, proceeded under the Act of 1934 direct against the insurance company which had covered Mr A for third-party risks.

The Road Traffic Act of 1930 set up, as we all know, a new crime—the crime of driving a car uninsured against certain third-party risks; but it did not call for an insurance of the owner's liability to passengers in the car itself unless the car was one in which passengers are carried for hire. Except, said the Act, in the case of vehicles in which passengers are carried for hire it is not necessary to insure liability to persons being carried in or upon the vehicle.

Now, the policy that Mr A had taken out excluded use for hiring, and the question inferentially arose whether, as he had accepted 25s. for the trip from Mr B, his insurance complied with the Act or not. As the Act said that cars must be covered which carry passengers for hire, things really looked rather black for Mr A. He must be a law-breaker. But wait. His Lordship is discussing the meaning of the words "carried for hire," and he comes to the conclusion that they mean not the giving of an occasional lift for money, such as this, but a regular habitual carrying for hire, which was foreign to Mr A's practice. So Mr A is all right. He is no law-breaker. He was not carrying for hire. His record remains unblemished.

Alas! Things are not so simple. His Lordship has now moved on to another section of his judgment and is discussing the words in the policy "use for hiring." And it appears that a car which is used for hiring is something entirely different from a car in which passengers are carried for hire. It is true beyond question that when Mr A took Mr B's 25s. for a trip to London he did not make his car one in which passengers are carried for hire by the terms of the Act; but he did, unfortunately, make it one that is used for hiring by the terms of the policy; so when Mr B stepped into the car in Manchester he was vitiating the Guildhall Insurance Company's policy, and the trip was made uninsured—which turns the driver of the car into a law-breaker liable to a punishment of three months' imprisonment, and this all through his being blind to the obvious and unmistakable distinction between (a) a vehicle which is used for hiring and (b) a vehicle in which passengers are carried for hire.

Our lawyers will, of course, have understood the whole thing from the outset and will say at once that the matter was plain as a pikestaff from A to Z. What Mr A ought to have done before giving Mr B a lift to London was this:—

(1) He should have secured a copy of the Road Traffic Act of 1930 and studied it carefully.

(2) He should have appreciated the fact that for his immediate purpose the sub-section that mattered was 36 (1) (b) (ii).

(3) He should have noticed that this sub-section contained both a proviso and an exception and seen that the words "persons being carried" in the proviso mean something different from "passengers carried" in the exception. He should have weighed both nicely, neither dividing the exception nor confounding the proviso.

(4) He should then have read carefully through his policy in the light of his study of the Act and seen at once that a vehicle which is used for hiring is not the same thing as a vehicle in which passengers are carried for hire, and that both of them are different from a vehicle in which persons are being carried for hire.

Altogether, the defence of ignorance which Mr A would probably set up is a defence with which one does not find it very difficult to see how one can fail not to be impatient. Our excellent Ministry of Transport, with great trouble, research and expense, invents one or two brand new crimes for the encouragement of the public; and its admirable draftsman sets the crimes forth in language to which His Majesty's judges, after some hours of argument from learned counsel, find it possible to attribute a meaning. It is our duty as citizens to anticipate the result of his Lordship's judgment on the draftsman's purpose, remembering that if we get it wrong we shall have taken that first step in law-breaking which, as all sociologists know, is so terribly difficult to retrace. Only by earnest concentration on sub-section 36 (1) (b) (ii) of the Road Traffic Act, 1930, shall a young man cleanse his ways.

Notes of the Week

* **Fenland Floods.**—For more than a week rising floods have ravaged 100,000 rich acres in the Fens. The loss to farmers and landowners is already estimated at over £1,000,000. The police, the Air Force and the Army have been brought in to help to reinforce the banks and have been brought in to help to reinforce the banks and unforeseen, as Opposition speakers pointed out in the House on Tuesday. For centuries the sea has receded on the fringes of Fenland, and more and more the Great Ouse has had to carry the flow of innumerable water courses through miles of mud flats blocked with silt and sediment. There is no clear channel and, as the drainage of the Fenland has been improved, the pressure in the bottle-neck has been made heavier. As long ago as 1931, the engineers of the Ministry emphasised the growing dangers of this situation. In recent weeks the menace has been accentuated by a combination of high tides, heavy rainfall, melting snows and strong winds. The Land Drainage Act of 1930 created a Catchment Board for the Ouse basin, an authority which might have anticipated this state of affairs, had it been financially able to do so. To improve the sea-channel over a period of ten years would cost perhaps £5½ millions, involving an annual expenditure of £300,000 for interest and repayment during 50 years. The maximum rate income of the Board is about £45,000, barely £5,000 more than the normal cost of maintenance and repair work. The onus then lay with the Government. In the last five years, the total grants-in-aid to meet the Ouse dangers have been £65,000. It is true that the work done with the partial aid of these grants has, so the Minister of Agriculture claimed on Tuesday, averted as yet the worst consequences of the present floods. It is equally true, however, that the problem has not been tackled adequately; and the 75 per cent. grants which the Government now offers are by no means large enough to enable the Catchment Board, with its limited financial resources, to avert similar disasters in the future. Fenland remains in danger, and its safety is of national importance.

* **Peace and Freer Trade.**—Nothing we can imagine could have been more disturbing and unsatisfactory, than the Prime Minister's reply to the big deputation on Monday from the 400 influential signatories of the recent manifesto for peace and freer trade. The manifesto was rejected for reasons so flimsy as to verge both on the ridiculous and the disingenuous. For example, the Government statement said that the main obstacles to trade were quota restrictions on industrial goods and exchange controls, neither of which—with the exception of the iron and steel import quota fixed by the British Iron and Steel Federation—did we maintain. Has Mr Baldwin—have Mr Runciman and Mr Eden, who accompanied him—never heard of their Chief Economic Adviser's Memorandum to the League of Nations on the effects of agricultural protectionism? Have they forgotten the rôle played in our bilateral trade agreements, so much lauded in the Government's statement later on, by the quotas we have imposed on imports into this country of bacon, pig-meat, dairy produce, meat, hops, potatoes, etc.? If we shut out agricultural produce, are we justified in railing at the corresponding import quotas placed by agrarian countries on industrial goods, as if they were the only, the causative evil? The Government state that our tariffs are not obstacles to trade, since more goods now come in over the tariff than when it was first imposed. It is scarcely possible to regard such a palpable abuse of logic as anything else than disingenuous. A sluice-gate is an obstacle until it is wide open, however the volume and velocity of water passing through it may vary. The Government's fallacious reasoning really means that, owing to domestic

recovery, this country's producers can now afford to pay the duties on more imports, so that the tariff is becoming more of a revenue kind. But they do not state that much the largest increase in our imports has been in non-dutiable, or only revenue-dutiable, goods!

On helping to construct a freer-trading bloc of countries, the statement is negative for reasons which seem more like excuses. The same British maintenance of an already abused most-favoured-nation clause, which balked the Oslo and Ouchy Conventions of concrete results over five years ago, is again pronounced. But it is reinforced by quaintly laboured arguments—e.g. that countries outside the freer-trading bloc would raise their restrictions, that political tension would increase in the world, and so forth. The Government thus prefer the best to be the enemy of the good in an economically evil world. They like bilateral agreements, and adjure other nations to reduce their tariffs first. As to the open door for colonial trade, they state that such a policy would "impair" the authority of Colonial Legislatures and impede their progress towards self-government by limiting their authority in fiscal matters." This is a travesty of human reasoning. Self-government is not a function of tariffs in colonial empires.

* **Cabinet and Colonies.**—The Government's statement rejects the mandate system for colonies. The utmost they can offer is a unilateral declaration by Powers that they will be guided in administering their colonies by the spirit of the Mandates article of the League Covenant. Somewhat lamely, the Government statement tells us that the Government do not "disguise from themselves the fact that such a declaration could have only a limited effect in lessening existing tensions; but they considered that it might usefully form part of a general settlement." If this kind of reasoning is the utmost to which the Government are able to proceed in their imminent negotiations with the United States, the British Dominions, and the "have-not" Powers, the outlook is grim. Mr Baldwin is about to retire; Mr Runciman has since 1932 surrendered his independent economic judgment; but we—and many in this country—cherished one or two hopes of Mr Chamberlain and Mr Eden. If this week's pseudo-economic statement indicates the bases of the new Government's crucial international negotiations, it is a bear point for peace and freer trade.

Cabinet Salaries.—A Bill to revise the payment of Ministers will shortly be introduced by the Government. The Prime Minister will receive £10,000 instead of the present £5,000; the minimum salary for all other Cabinet Ministers will be £5,000, and for Under-Secretaries £1,500. Former Prime Ministers will be entitled to an annual pension of £2,000; and the Leader of the Opposition will receive a salary of the same amount in virtue of his full-time work and established position in the proceedings of Parliament. The measure is sweeping, and embodies most of the reforms which have been suggested from various quarters. The proposals will impose a cost on the Treasury, but their justification is the fact that it is not good for the State that its service should involve Ministers in substantial pecuniary sacrifice.

* * *

Pensions for Black-coated Workers.—The text of a Bill to extend the scope of the widows', orphans' and old-age pensions scheme has been published. The present scheme includes manual workers, others with incomes of not more than £250 a year, and (on a voluntary basis) certain other workers in insurable employment. The qualifications for admission under the proposed new scheme will be the possession of an income of not more than £400 for a man and of £250 for a woman. The effect of these proposals will be to include a very large number of people with relatively small incomes, such as clerks, shopkeepers, farmers and ministers of religion. Benefits will be the same as in the present scheme, and, as a concession, contributions for those joining at once will also be the same, *rs. 3d.* a week for men and *6d.* for women. After the first year, however, contributions will be adjusted to the age at entry, and will vary from *6d.* a week to *2s. 11d.* At the same time, the maximum age of entry, which for one year will be 55, will be reduced to 40. These proposals will do something—but none too much—to save those persons who are not covered by existing schemes from the distress which all too frequently afflicts members of the lower middle class.

* * *

Broadcasting Problems.—The tenth annual report of the British Broadcasting Corporation shows that the income from licences was, at £2,590,705, greater by £466,906 than in 1935. This was not, however, wholly available for sound broadcasting, because the Corporation had to meet heavy charges for television out of its allocated revenue. Its allocation is 75 per cent. of the net proceeds of licence issues. The Ullswater Committee recommended that, in future, this should be reserved for purposes other than television; and that the balance of 25 per cent., which is at present taken by the Exchequer, should be regarded as potentially available for broadcasting. The Corporation anticipates only a small increase in its revenue in the next few years, and is committed to heavy expenses for the Empire service, the regional scheme, television and the extension of premises. Progress in all these directions is desirable, but the vast majority of listeners pay their fee to use the existing services. The quality of those services ought not

to be impaired by the provision and development of television. A large part of the Treasury quota might very properly be surrendered.

* * *

Washington and Detroit.—For reasons both of politics and of industrial relations, public opinion in the United States continues to be in a state of turmoil. In politics the all-absorbing topic is provided by the President's proposals to enlarge the membership of the Supreme Court. It is still impossible to predict the outcome of the verbal struggle which is being waged over the bodies of the hesitant Senators. It is fairly clear that the House of Representatives will give the President what he wants. But in the Senate, his supporters, his opponents and the doubters appear to be of approximately equal numbers. If the issue were to be decided purely by the number of words spoken or the gallons of ink spilled, it would go emphatically against Mr Roosevelt. Articulate opinion is even more one-sidedly ranged against him than it was at the time of the November election. But the result of that election is sufficient to give anyone pause, and both sides are straining to catch the first accents of popular opinion. Mr Roosevelt, on his side, is pursuing a courageous and forceful campaign. His opponents have succeeded in enlisting the support even of Mr Chief Justice Hughes himself—a departure from convention which may have been involuntary, but is almost as startling as would be an expression of opinion by the King of England on a Bill touching the attributes of the monarchy. The labour situation may perhaps prove to be Mr Roosevelt's most powerful ally. For the recent victories of the Committee for Industrial Organisation have increased, rather than allayed, the tension in some of the largest industries. An ugly situation is developing in Detroit, where stay-in strikers are openly defying the law; and there is still danger of a strike in the coal industry. As at the time of any crisis, made by Man or by Nature, the case for a strong central authority appears to be enhanced. And Mr Roosevelt has both logic and experience behind him when he claims that consistent, let alone strong, central policy is impossible under the Constitution as interpreted by the present Supreme Court.

* * *

Inflationary Fears in America.—Neither the Supreme Court struggle nor labour uncertainties are holding back the rapid progress of American recovery. Indeed, the widespread rise in labour costs, consequent upon increases in wage rates or reductions in hours of labour, is helping to accelerate the already impressive upward surge of prices. There has been a distinct renaissance in recent weeks of anxiety lest an inflationary situation should develop. The Federal Reserve authorities, by doubling the reserve requirements of their member banks, have taken steps to hinder any further increase in the quantity of bank credit outstanding. But putting a limit to the supply of credit has not lessened the demand, and many member banks have been forced, in order to accommodate their customers' demands for advances, to sell some of their holdings of Government securities. On several days recently there has been pronounced weakness in the bond market. This carries a double threat, since it endangers the Treasury's financing programme and is also widely taken as a sign of incipient boom conditions. Mr Marriner Eccles, Chairman of the Board of Governors of the Federal Reserve System, consequently thought it necessary last week to state his views on the correct policy to be pursued. He made it clear that he is still determined to prevent any runaway inflation from emerging, and his formula for preventing it was to keep down the rate of interest and to balance the Budget—but by increasing taxes rather than by reducing expenditures on relief. Thus, the authorities of Great Britain and the United States, faced with a fundamentally similar problem, are pursuing diametrically opposite policies. The British plan is to unbalance the Budget and, apparently, to let interest rates rise. The

American plan is a balanced Budget and continued cheap money. Of the two, the American plan is closer to the theoretical ideal, but it is doubtful whether the mere absence of further credit creation or deficit financing will suffice to check the very impressive momentum which American expansion has already acquired.

* * *

Italy and Spain.—The flight of the Italian troops from Brihuega last week seems to have nettled Signor Mussolini; for this week he returned a day earlier from his Libyan triumphal tour in order to deliver one of his fieriest speeches in Rome on Tuesday, the occasion of the eighteenth anniversary of the first Fascist formations. To the measured protests by two English bishops against the Italian massacre in Addis Ababa, the Duce retorted with words evidently calculated more to restore Italian morale than to refute foreign criticism. The Italian people, he said, would not forget; they would remember, and prepare themselves. Meanwhile, on the same day in London, the Italian Ambassador was exploding a bombshell in the Chairman's Sub-committee of the Non-intervention Committee. He intimated as his personal view that Italy would not withdraw any "volunteers" from Spain until the Spanish Government forces had been defeated. This runs flatly counter to the express conditions offered by the German and Italian Governments last month, when they agreed to stop sending any more "volunteers." Evacuation of those already sent was to be discussed by the same committee as was to work out the details of supervision of Spain's frontiers, control of supplies of war material, etc. Now, as if in tit-for-tat mood, Italy wishes to allow her "volunteers" to proceed to wipe out the memory of the flight from Brihuega. The Italian Government's reply to the British Government's inquiry about alleged landings of Italian troops at Cadiz on March 5th—after the entry into force of the agreement to send no more "volunteers"—was also received this week. It states that only medical supplies and a staff of doctors were landed on that date. It would be interesting to know what kind of mandate these doctors had in Spain. Meanwhile, the Spanish Government forces have rolled the Italian divisions back to the gates of Sigüenza, where Spanish rebels have been brought up to stem the rout. This has been arrested; and on the three main fronts round the capital—Guadarrama, Sigüenza, and the immediate south-west suburbs—new positions are being prepared. The defenders of Madrid have again made a miraculous escape from apparently desperate straits.

* * *

Austria Herself Again.—Last Sunday an Italian football team was hissed and booed at Vienna for giving the Fascist salute; and, when play began, the visitors had no better luck with their opponents than with the spectators. The Austrian team was leading by two goals to none at the moment when the Swedish referee put an end to a game that was rapidly turning into a free fight. In the same city on the same day, the philo-Nazi Minister for Public Security, Herr Neustädter-Stürmer, was relieved of his office; and this piece of political news has the same significance as the contemporary sporting event. The meaning is that Austria is now moving away from the Rome-Berlin axis into a different orbit. The Austrians have never had much reason for loving either of their two late partners. They cannot forget that in the last war Prussia bullied and Italy betrayed them. The post-war understanding between Austria and Italy has always been overshadowed by the martyrdom of the South Tyrol; and if Italy remains odious to Austrian Social-Democrats and Nazis, Germany remains equally odious to Austrian Social-Democrats and Catholics, notwithstanding the Austro-German truce of July 11th last. The outbreak of open warfare between the Third Reich and the Vatican has now made the prospect of *Anschluss* or *Gleichschaltung* even more unpalatable to Austrian taste than it was before.

What has made the Austrians really angry is the accumulating evidence of an Italian move to sell Austria to Germany in exchange for German support of Italy's Mediterranean schemes. First came an Italian rebuff to Austrian overtures for securing Italy's acquiescence in an eventual restoration of the Habsburgs. This indicated that Italy had made up her mind to shape her Austrian policy more to Germany's liking. But now comes the rumour that Italy has secretly acquiesced in a virtual absorption of Austria into the Reich; and this news has moved Dr von Schuschnigg to energetic action. He is said to be working now for an understanding with Czechoslovakia hand in hand with Hungary. The latter country has never been pro-German at heart, and has shed the pro-German policy of General Gömbös since the late Hungarian Prime Minister's death. Hungary has to make up her mind whether she will join with Germany in fighting to partition Czechoslovakia, at the risk of losing her independence to so formidable an ally—as she once did to Austria. There are now signs that she is inclining to moderate her demands for treaty-revision for the sake of preserving her independence. Is it possible that the vacuum left by the break-up of the Habsburg Monarchy in 1918 is at last to be filled by an all-inclusive understanding between its successor States? It would not be the first miracle to be worked by Nazi aggressiveness.

* * *

The Papal Encyclical.—Last Sunday the congregations in all Catholic Churches throughout Germany listened to the reading of a Papal Encyclical in which almost every word was a telling blow at the Nazi regime. In this historic document the Pope reviews the history of the relations between Church and State in Germany since the signature of the Concordat between the Vatican and the Reich on the morrow of Herr Hitler's accession to power. On the Papal side, it is recalled, this contract was concluded, not without misgivings, in the hope that it might promote the welfare of German Catholics and at the same time make for peace between the German Government and the Holy See. The Pope goes on to claim, with justice, that this agreement has been respected loyally by the Church. With equal justice he denounces the Nazis for their cynical breach of faith. Where the bond has not been broken in form, it has been evaded in fact; and the Pope makes it clear that this persistent Nazi bad faith has become intolerable. The guarantee, given in the Concordat, for the continuance of religious instruction in the schools is being stultified by the deliberately anti-religious tone of the teaching in the rest of the curriculum. And it is well known that the voting by parents in Bavaria for State schools instead of Church schools has been carried out under every kind of unfair and illegitimate pressure.

INQUIRIES SOLICITED

7, CHANCERY LANE, LONDON

The Pope intimates that he will not be the first to denounce the Concordat; but that there is a line at which the Church will turn and fight. This line has now been reached. He also attacks the Nazi error at its heart. Whoever, he declares, detaches race or the nation or the State from the temporal scale of values and raises them to be the supreme model and deifies them with idolatrous worship falsifies the divinely created order of things. This sharp reproof strikes not only German National-Socialism but Italian Fascism too. And the Vatican newspaper has left Italian Fascism in no doubts about its meaning; for on Tuesday the paper deplored the pro-Nazi attitude of the official Italian press comments on the Encyclical. The suddenness and vigour of the Pope's attack is as salutary as it is surprising.

* * *

King Leopold in London.—After Hr. Sandler's visit, another representative of a small country anxious to preserve both its independence and neutrality has been in London—this time King Leopold of Belgium. The visit of this young monarch, deservedly popular on both sides of the Channel, was private; but he cannot have failed to appreciate the warmth of his welcome. His long talk with Mr Eden on Tuesday afternoon is known to have been in the nature of a royal exposition of Belgium's anxiety to revise her status in the West European security system, now that this system has been rendered, by the German militarisation of the Rhineland, a stop-gap. Belgium does not wish for a perpetuation of her present status, guaranteed by, and guaranteeing, France and Britain; for that automatically involves her in their foreign policies—or lack of them. Belgium wishes her neutrality to be guaranteed by as many neighbours as possible. She will maintain defences strong enough to check and hold up any sudden attacks on her. It is noteworthy that the leading Belgian papers, commenting on the King's visit to London, have been careful to emphasise that military conversations with the General Staffs of neighbouring countries on warlike contingencies have never been ruled out by Belgium. Indeed, no guarantee of Belgian neutrality would be worth twopence without such conversations. But the decisive point remains the European settlement as a whole; and until the French or British Governments clarify their foreign policies, Belgium will naturally prefer a policy of *noli me tangere*.

GOLD PRODUCTION IN LEADING COUNTRIES

(World Total—Thousands of Fine Ounces—1929, 19,586; 1931, 22,356; 1936, 35,000 [provisional]).

Lull in France.—Since the half-day general strike in Paris on Thursday of last week the wave of feeling which had suddenly mounted to such dangerous heights has been steadily subsiding. The funeral of the persons who lost their lives in the riot at Clichy was attended by enormous crowds on Sunday, but it passed off quietly. If one reads between the lines of the subsequent utterances of the Communist leaders, one may detect a palpable anxiety not to push things to extremes. It may indeed readily be believed that the leaders have never had any stomach for a senseless campaign of violence which could have no result except to play into Herr Hitler's hands by wrecking M. Blum's present regime. It is madness for French Communists to take the offensive, as they did once again last week, against a semi-Fascist movement which is at present unmistakably in retreat. If they go on playing this suicidal game they will drive the Radicals into changing sides again; and then the Front Populaire—which, by the way, is an *expérience Blum* and not an *expérience Thorez*—will dissolve in order to make way for the familiar Bloc National. Fortunately, M. Blum is proving himself a very wise leader. In the debate in the Chamber on Tuesday night he appealed for a truce to provocative party demonstrations and political bear-baiting. He justifiably criticised the Parti Social Français for holding a provocative meeting in Clichy—it is equivalent to Blackshirt assemblies in the East End of London—and also criticised some of the police for firing without express orders. He foreshadowed the equipping of the police with non-lethal, but still effective means to dispel crowds. His speech was a first-rate performance. The Right were apologetic; the Left sullen. M. Blum's hold on French political allegiances has increased as a result of an occurrence which could easily have diminished it.

* * *

International Gold Production.—In the last analysis gold still serves as the basis of credit in modern countries, and, despite the adoption of managed currencies, the link between commodity prices and the available supplies of the precious metal has not been entirely severed. Considerable significance, therefore, attaches to the rapid increase in the world's output of gold in recent years, due mainly to increased profitability subsequent to the devaluation of the currencies of the

leading producing countries. World production of gold, as estimated by the Union Corporation, rose by nearly 80 per cent. in volume between 1929 and 1936. If allowance is made for the rise in the value of gold in terms of the principal currencies, the increase has been even more marked. The expansion of output in the leading producing countries since 1929 is shown graphically in the diagram on page 694. The relatively small increase in South Africa's output is due to the deliberate policy of concentrating on low-grade ore while costs of production remain low. Nevertheless, South Africa is experiencing a period of unprecedented prosperity. As Mr G. H. Beatty pointed out at Tuesday's annual meeting of the Transvaal Chamber of Mines, the value of South Africa's output of gold between 1932 and 1936 showed an increase of 59.2 per cent. During the same period salaries and wages in the industry rose by 38.2 per cent. and expenditure on "stores" by 63 per cent. Canada and the United States have nearly, and Australia more than, doubled their output. The most marked increase, however, took place in the U.S.S.R., which is intent on wresting the position of leading producer from South Africa. Considered in conjunction with the increase in the value of existing gold stocks, the increase in the world's gold production must necessarily strengthen the long-term prospect of rising commodity prices.

* * *

A Fitter Nation.—The Government's Physical Training and Recreation Bill has been issued. It lays down the duties and functions of the National Advisory Council and the Grants Committee; authorises the Board of Education and the Secretary for Scotland to make grants to voluntary bodies and local authorities; and considerably extends the existing powers of local authorities. The scope of the new policy will clearly be very wide. Clubs, community centres, and all sorts of voluntary organisations for social, athletic, and educational purposes will be assisted; teachers, wardens and leaders may be provided; and contributions may be made to the running expenses of all such schemes. The training of teachers will be provided for by the setting-up of a National College, and the making of special grants to existing colleges. All activities of which physical training and recreation form a part, however small, will come within the purview of the Council and the Grants Committee. National facilities will thereby be maximised, as far as an allocation of £2,400,000 for the next four years will allow. Much valuable co-ordination between the diverse agencies for social welfare will be the wholly desirable result of this Bill. A great deal now depends upon the spirit in which the proposals are put into force.

* * *

Britain and South-East Europe.—It has for some time been obvious that British prestige in South-Eastern countries has suddenly risen. After the humiliations suffered by British diplomacy in the last two years this is evidence of a welcome rehabilitation. In Yugoslavia the most important reasons are political and social; the economic factor also, however, plays an important part. According to last year's Dresden agreements, a repayment of Yugoslavia's credits frozen in Germany was arranged by which German industry should make new deliveries to Yugoslavia as compensation trade. But the disinclination of the Yugoslavs to German manufactures is becoming more and more apparent. How much this benefits British interests may be seen by referring to the 1935 import of spinning equipment. The great expansion of the Yugoslav textile industry is reflected in the total imports of such machinery, which increased from 4,500,000 dinars in 1934 to 13,300,000 dinars in 1935. Imports of English spinning machines rose from 251,000 to 5,485,000 dinars; and in 1936 the rise continued. While Yugoslavia's exports to England and the Empire have risen during the last five years from 97,700,000 to 200,000,000 dinars, and her imports from these countries from 275,500,000 to 525,600,000 dinars, and is still in-

creasing, her trade with France presents at the moment an unfavourable picture. Yugoslavia's exports to France decreased from 74,500,000 dinars in 1933 to 62,800,000 dinars in 1935; and even the improvement of 1936, in the first nine months of which Yugoslav goods to the value of 63,300,000 dinars were exported to France, is comparatively slight. The result is that Yugoslav imports from France are stagnating; for the first nine months of 1936 they were only 78,600,000 dinars, against 177,700,000 dinars in 1934 and 161,000,000 dinars in 1935.

* * *

Similar developments have occurred in Czechoslovakia. Czech trade with Britain and the Empire is expanding from year to year. Exports to Great Britain show an increase of 30 per cent.—i.e. from 375 million crowns during the first nine months of 1935 to 493 million crowns during the corresponding period of 1936. At the same time, the significance of Czechoslovakia as a market for British products and raw materials from the Dominions and Colonies is steadily growing; and the Premier, Dr Hodža, has emphasised that the most important task of Czech commercial policy is the removal of all restrictions on trade with Great Britain, who might gradually become the best customer of Czechoslovakia and her most important supplier of raw materials. Not only in Rumania and Turkey, but in Bulgaria and Greece too, there is a growing conviction among the people and in political circles that England is again becoming a decisive influence in the problems of South-Eastern Europe and its terminus, the eastern Mediterranean. The turning point in British prestige in Outer Europe has been reached from both the economic and the political sides. The improvement in world market prices for cereals, tobacco, mineral oil, wood and other products of Outer Europe provided freer and better markets, so that German compensation offers—involving political as well as economic terms—could be neglected. The end of this process is not yet in sight; but it is doubly welcome for its tardy advent.

* * *

The Coming Imperial Conference.—The agenda for the forthcoming Imperial Conference, announced by Mr Baldwin last week, cover a wide field. The three main heads are to be, first, foreign affairs and defence; second, constitutional questions; and, finally, trade, shipping, and air communications. Even more relevant, however, is the implicit or explicit omission of certain subjects from the Conference discussions. The second head, for instance, is described as covering "matters relating to Commonwealth treaty procedure and to the international status of members of the Commonwealth." There is no mention of a review of the application of the Statute of Westminster in the abdication crisis, or of the working of the machinery for consultation between

Commonwealth Governments on that occasion. Again, under the third head, matters arising from the Ottawa agreements are not to be discussed by the Conference itself, but in bilateral conversations. This procedure was foreshadowed by the conclusion of the new Anglo-Canadian agreement, and by the evident reluctance of the Australian Government to embark on a general overhaul of its system of tariffs and preferences when facing an imminent general election. Last Wednesday, the Prime Minister announced that the United Kingdom delegation to the Imperial Conference would comprise himself, Mr Ramsay MacDonald, Mr Chamberlain, Sir John Simon, Lord Halifax, Mr Malcolm MacDonald and Mr Ormsby-Gore. In addition, Mr Eden, Sir Thomas Inskip and Mr Runciman would be available for foreign affairs, Sir Donald Somervell for constitutional questions and Mr Runciman and Mr W. S. Morrison for economic questions.

* * *

South Africa's Budget.—The gold boom is writ large over Mr Havenga's latest budget. The estimated surplus of £5,000,000 in 1936-37 on an expenditure of £37,550,000 would look like bad budgeting were it not the Union Government's policy to create capital assets while times are good against the lean times that may be coming. This is a long-period as well as a short-period policy; for South Africa must always keep a weather eye on the wasting asset of the gold reefs. The gold mines are, in effect, now providing a double amortisation, one private and one public. Quite apart from their contribution to ordinary income tax, they will have paid £9,390,000 in special taxation this year, and the estimate for this item is raised to £9,500,000 for 1937-38. Of the current year's surplus, nearly £3,000,000 is to go to debt redemption, and the rest is transferred to loan account. Moreover, of the £4,350,000 surplus anticipated for 1937-38 on the present basis of taxation and expenditure, some £1,100,000 is to be transferred to loan account and £1,500,000 is reserved for debt redemption. The principal direct beneficiaries of the Union's fiscal prosperity are old-age pensioners, who are to have their allowances raised by a total of £750,000; the Native Development Account, which is to receive £233,000 more; and importers of petrol and oil, which are the chief items in Customs reductions costing £650,000. The 1937 defence votes total £1,666,000.

* * *

Coal Shortage.—Following news that the Birmingham Corporation has had difficulty in securing adequate coal supplies comes a fairly similar experience on the part of other local authorities. Two cases which have come to light during the past week (writes a trade correspondent) are those of Edinburgh and Glasgow. In the case of Edinburgh the convener of the department concerned is reported to have said that the shortage had been so serious that the gas department had been compelled to discontinue the production of benzol. He added that unless the position improved the alternative would be, if the Government did not prohibit it, the importing of coal from the Continent. The coal shortage is the subject of a report issued during the week by the gas department of Glasgow Corporation, in which it is pointed out that stocks have been steadily drawn upon for the past two months until now they stand at only 38,500 tons. In the case of Glasgow it appears that no tenders had been received by the appointed day in connection with a public health department contract, though the contractors had indicated that they hoped to be ready to present tenders in a few days' time. It is understood that both Edinburgh and Glasgow Corporations may raise the matter with the Government. The Scottish coal trade has been experiencing a stringent position for some considerable time past. Home business has rapidly increased as a result of the growing trade activity, and the extra requirements in this side of the trade have created diffi-

culties in regard to export business, orders in this field having in some cases been turned down owing to the inability of collieries to cope with them. At the moment the collieries are almost fully booked up for months ahead and they are now receiving a fair number of export inquiries in respect of 1938; though little definite business is being fixed, as the collieries are not prepared to commit themselves extensively so far ahead. Another factor which seems to be of major importance in recent times is the fact that the Scottish coal output has been steadily on the decline for a good many years past, as a result of the normal working-out of various seams. In recent months almost every colliery in the country has been working to capacity. The question of restricted outputs under the Coal Mines Act does not apparently arise. In trade circles the view is held that the present extreme shortage is likely to prove temporary and that it has been due in considerable measure to the recent unofficial strikes, which have affected output by several thousand tons daily. So far as the household and public utility undertakings are concerned, the trade is, meanwhile, at a peak level. When demands from these sources ease off in some weeks' time the position is expected to be more satisfactory. The matter, nevertheless, is one which appears to call for fuller examination by the appropriate authorities.

* * *

An Excellent Grid Report.—The Central Electricity Board, which is responsible for the national electricity grid scheme, was unfortunate in one respect, for it raised the bulk of its capital in long-term stocks before the decline in general interest rates—a matter on which it might well have been more wisely advised. In every other way, however, fortune has deservedly favoured the Board. It has been fortunate in the men who have served it, and particularly fortunate in the timing of its plans. It carried out its constructional work largely during the depression and began to give service in 1933, right at the beginning of a trade recovery whose extent has already put the earning power of the grid well ahead of its original budget estimates. Actually, the Board in 1936 achieved the position which, according to schedule, it was required to reach by 1941, for it earned the whole of its interest requirements. Last year the Board's profit was £1,689,487, against £1,087,287 in 1935. Total interest payments were £2,197,243, but of this some £680,637 was attributable to money applied to the standardisation of frequency, whose service is provided by a levy on the entire supply industry. The Board could legally have charged all the balance of the year's interest to capital. Instead, it has paid the interest on five loans out of revenue, has put £250,000 to redemption fund and increased its carry-forward to £1,419,614. Up to date, the grid has cost £30 millions, while the total capital saving from the reduction in the proportion of generating plant held in reserve by authorised undertakers has amounted to £14 millions. Since 1929, Great Britain's output of electricity has increased by over 95 per cent. against an expansion in world production of 35 per cent. Since 1932, the average fuel consumption per unit of electricity from 150 stations has declined by 14 per cent. This would have been equivalent to a saving of £1,420,000 last year if the coal prices ruling in 1935 had been maintained. Technically and financially, the grid has so far achieved resounding success, but the proviso at the end of the preceding sentence draws attention to a less favourable factor which has an intimate bearing on the future. Costs of fuel, machinery and equipment are rising, while a further substantial reduction of expenses on the distributing side presupposes far-reaching reorganisation on the lines of the MacGowan Report, and will not be achieved for years to come. A further increase in demand is certain, but the pace of the last two years can hardly be maintained indefinitely. The Board, however, has already made such good use of its exceptional opportunities that quite a moderate further advance will put its future financial stability beyond all doubt—provided only that the rise in costs does not attain unconscionable proportions.

United States

Steel's Surrender

WASHINGTON, March 4.—Peace between big industry and the Lewis labour movement has overshadowed for a moment the intense fight over the Supreme Court. Something has happened which goes against the accepted dogma of human behaviour; economic power has been surrendered without a conflict. Not a great deal of economic power, to be sure, but the point is not the amount. Mr Lewis, shortly before his contract with the Steel Corporation, had blasted his way into the General Motors plants, and the settlement made there was generally taken as only an interim peace. General Motors would presumably wait to see what happened to Lewis in Steel. If he won, they would have to continue to deal with him. If he lost, they could share with Steel the benefits of its victory. Everybody believed that the fight in Steel would take place this summer and be a fight to the finish. Steel formed the extreme right wing of conservative industry; in thirty-six years of existence it had not deviated from its announced course of refusing to deal with an outside union. The steel area was believed to be fortified to the last factory gate and the companies knew how to take care of themselves.

But Steel chose not to fight. Instead it sat down with the Lewis union. Myron C. Taylor, chairman of United States Steel, sat down repeatedly, though secretly, with Mr Lewis himself. And in full light of publicity Benjamin Fairless, president of Carnegie-Illinois, sat down with Philip Murray, Mr Lewis's right-hand man. A contract was signed, setting a \$5 minimum wage for an eight-hour day, a forty-hour week, and time-and-a-half for overtime. The wage and hour schedules were supplemented by an agreement to accept the union as the bargaining agency for its members—the limited recognition granted by General Motors—and by a pledge not to discriminate against men for being members of the union. The last point, also made in the Motors settlement, is potentially most important of all, since it assures the Lewis unions the freedom to organise. So far his membership drives have not lined up a majority of employees either in Motors or Steel, not because workers were against him, but chiefly because they were afraid to join. From now on, recruiting will lead to bigger results, particularly as the union is given credit for the wage increases.

The Interests at Stake

That Steel surrendered economic power to the Lewis movement for reasons of self-interest goes without saying. The real meaning of the decision is that big business is not going to wreck Mr Roosevelt's recovery. Big business is more interested in profits than in the crusade against Mr Roosevelt. In a sense, big business has "followed the election returns," as Mr Dooley said of the Supreme Court. The immediate consideration was the boom in steel, great enough as part of American recovery, and promising to be greater still in a year or so because of the British re-armament programme and Europe's preoccupation with defence. Here was the bird in the hand, while in the bush was no bird at all. The choice was between prosperity and a fight that might not even be won. If won, it would be a costly fight. And if the inevitable trend is towards collective bargaining, the victory could not be permanent. There was little doubt that the steel industry could be shut down. Lewis had strength in Steel, and the new weapon of the sit-down

gave him paralysing power. The fight would have to be fought against the current of public opinion; and opinion would be led either openly or indirectly by the Roosevelt Administration.

Of the three great financial empires in the United States, Morgan, Rockefeller and Dupont, two have chosen to deal with Lewis. The Rockefellers as yet have not refused; their chance to adopt the Morgan and Dupont policy will come when Lewis invades the Standard Oil plants and challenges one of the most successful company unions in the country. The Morgan hierarchy, still dominant in steel, has felt the impact of younger executives in deciding to reverse the archaic veto on unions of 1901. Dupont, largest single owner of General Motors, was undoubtedly responsible for the settlement at Detroit, for it was effected by Donaldson Brown, chairman of the finance committee of General Motors, who is known as the Duponts' personal representative. Morgan policy can also be read in the decision of General Electric to negotiate a national contract with the Lewis affiliate in its factories.

A Milestone in Labour History

The labour victory, however, must also be attributed in substantial measure to the help of the President. Some of this help is known publicly. During the critical days of the motor strike he kept the negotiators together; and it was with his backing that Miss Perkins, Secretary of Labour, made negotiations with Lewis also mandatory for the General Motors executives. Miss Perkins made social history in refusing to become excited about the sit-down strike, simply because it was illegal. She remarked calmly that unions had once been illegal, as had picketing, but laws had been changed as sentiment changed. She thus forecast a change in the legal attitude towards the strikers' trespass, and, being a Cabinet officer, her calm had influence. Her second great contribution was to refuse to exempt the steel industry from the Walsh-Healey Bill. This requires a forty-hour week from contractors selling to the Government. The Navy needed steel and was not getting it. The steel industry thus found itself in the untenable position of jeopardising the national defence programme because of its labour policy.

The Administration has paid an election debt, and Mr Lewis can now turn on those critics who berated him for supporting Roosevelt at the polls. The victory is one which could not have been won without Mr Roosevelt. From labour's standpoint, the election strategy turns out to have been the most successful political adventure of its history. Though the wage increases now coming so freely to labour will soon be melted down by the increased cost of living, labour has won a foothold it never had before. And industrial management, in agreeing to collective bargaining, has stepped with a single stride from the nineteenth to the twentieth century.

The Communists Alarm the Liberals

PARIS, March 24.—The success of the Defence Loan seems to have had more effect in the country than the disorders which unfortunately took place on the day after the issue of the second *tranche*. The decline of the Rentes from 74.25 to 70.50 was provoked more by the arbitrage of old Rentes against the new $\frac{1}{2}$ per cent. loan with an exchange guarantee, than by the recent riots. The franc, moreover, was well maintained, which seems to indicate that capital repatriation is still going on, if on a small scale.

These unprovoked riots, the general strike which followed and hampered the Parisian public, the sanctions applied by certain extremists against workers who refuse to join the Trade Unions, have all disturbed that liberal opinion which hates any kind of dictatorship. The Radical Ministers have taken the opportunity to emphasise their disapproval of such proceedings. They did not attend the solemn funeral of the victims of the riots, and on the same day the Minister of War, M. Daladier, made a speech in favour of liberty, in which he declared that to serve the Popular Front should not be to serve one's self by means of the Popular Front. It appears that the leaders were carried away by their followers. The latter could see, however, that they were still a minority, and that their wisest policy was to support the Blum Cabinet.

Recovery Continues

The rise in retail prices has been checked for the first time since June, 1936. But wholesale prices are still rising. To encourage production in order to increase the goods for sale remains the policy of the Minister of National Economy, who has urged the application of savings to production to facilitate the renovation of machinery. The number of unemployed on March 13 was 401,259 against 404,624 in the preceding week, and 477,118 in the same week of 1936. Railway receipts for the week ended March 4th show an increase of 10.83 per cent. compared with the same week of 1936. Total deposits in the four big banks of Paris show a new increase of 1,500,000,000 francs. This may, however, be due to the revalorisation of deposits in foreign currencies at their full exchange parity:—

	Francs.		
	December 31, 1936	January 31, 1937	January 31, 1937
Crédit Lyonnais	10,413,923,359	10,434,425,519	10,764,366,612
Société Générale	9,017,687,150	8,841,763,433	9,280,926,158
Compt. Nat. d'Esc.	7,456,252,232	6,926,096,096	8,112,661,978
Crédit Ind. et Comm.	1,595,801,304	1,335,617,221	1,683,194,264
Totals	28,483,664,045	27,537,902,269	29,841,149,012

Foreign trade in February showed a further rise in imports, both in volume and value. The import surplus rose to nearly 2,000 million francs, making 3,500 million francs for the first two months of 1937.

	In Francs ('000,000 omitted)		In Tons ('000 omitted)	
	Jan., 1937	Feb., 1937	Jan., 1937	Feb., 1937
Imports:—				
Foodstuffs	886	1,001	553	627
Raw materials	1,959	2,185	3,998	4,553
Manufactured goods	473	494	200	177
Totals	3,319	3,681	4,753	5,358
Exports:—				
Foodstuffs	283	237	93	83
Raw materials	575	609	2,097	2,091
Manufactured goods	914	848	211	210
Totals	1,773	1,695	2,403	2,385
Monthly deficit	1,546	1,985		

The Clichy riots and the decline on international markets caused a marked fall on the Paris Stock Exchange. International and French industrials were sold. The decline of Public Funds was accentuated, but these heavy liquidations have cleared the Stock Exchange, and the franc remained remarkably steady.

Germany

Irresponsible Finance

BERLIN, March 23.—Subject to certain items which had not been definitely fixed, the Reich Budget for 1937-38 was sanctioned on March 19th. As in the two preceding financial years the figures are kept secret. Prussia's Budget for 1937-38, sanctioned on the same day, balances at Rm. 1,991 millions, of which Rm. 47 millions will be devoted to extraordinary expenditure, mainly for land amelioration and the improvement of ports.

The Reich Budget must be given legislative sanction before March 31st. But under the law of March 24, 1933, which suspended the Constitution, legislation is enacted by Cabinet decision, and this applies to the annual Budget Law. No information is published about expenditure sanctioned in this way, but few months pass without official announcements that money has been spent for various purposes, often cultural, artistic, or personal, which could not have been provided for by the Budget, since these payments often concern issues which arose after the Budget was passed. In such cases a Budget Law amendment was not passed for the special expenditure. It seems, therefore, that individual Ministers can spend what they like; but owing to the secrecy observed and to the ban on press criticism it cannot be positively affirmed that this is so.

It is certain that if the Cabinet sanctions new expenditure without protecting itself by new legislation, the Reich Court of Auditing, which exists in order to prevent abuses of this kind, cannot take any effective action. The Court, it is true, can question any particular expenditure, not only on the ground that it does not accord with Budget Law, but even on general grounds of economy. But the independent authority which used to pronounce finally on such cases, that is, which could either hold a spending Minister responsible or overrule the protesting Court, has disappeared. Under the Constitution of 1871 this final authority consisted of the Bundesrat and the Reichstag. The Constitution of 1919, which replaced the Bundesrat with the Reichsrat, increased the Reichstag's competence in such matters. With the suspension of the Constitution in March, 1933, Parliamentary Budget Law in general collapsed, but the Court of Auditing remained in existence with its old functions. But while the Court can still question and challenge, it no longer does this to an authority independent of Ministers. The Cabinet itself decides the legal validity or the material justification of the Court's representations. Against this obviously irresponsible system certain ostensible correctives have been introduced. The Minister whose department is concerned must not be a party to Cabinet decisions on objections raised by the Court; and the Finance Minister can veto the overriding of any objection by the Cabinet. But these safeguards are nullified by a further rule that a Cabinet majority, if it includes the Chancellor, can by a second vote declare that any expenditure, even if vetoed by the Court, is in order. By a law of June, 1936, the Reich Budget Ordinance in this new form was extended to the Budget of the eleven States, and the Reich Court of Auditing also verifies State accounts. In effect, there is no real control. This is probably inevitable in view of Budget secrecy and of the disappearance of the Reichsrat and Reichstag.

Reich revenue from taxation in February was Rm. 779 millions, against 696 millions in February, 1936; in the first eleven months of the financial year 1936-37 it was Rm. 10,332 millions, against Rm. 8,746 millions in the same months of 1935-36. Nearly the whole increase came from taxes on income, property, and business, which yielded Rm. 1,439 millions more than in 1935-36. The increase in customs and excise was only Rm. 146 millions. The increase is partly due to the transfer to the Reich of the documents tax, the alteration in the rate of Corporation Tax, and the tax on long-distance motor goods traffic.

The Rationing of Steel Supplies

Waste paper is the latest commodity to be rationed, and manufacturing consumers are forbidden to buy in excess of their purchases of a year ago. Pig-iron output in February was 1,190,800 tons, against 1,292,100 tons in January. Herr Köhler, Director of the "Business Group" of Raw Materials, has published a statement about iron policy, the gist of which is that private industrial interests must be subordinated to "the necessity for securing our State and Nation against foreign enemies." Export trade in iron, says Herr Köhler, should be diverted from semi-finished to manufactured goods, and within the latter group to fully finished articles. This policy is dictated by foreign exchange considerations. Delay in delivering machinery and other finished goods to foreign buyers on the ground of lack of materials is condemned. It is officially complained that iron and steel consumers recently gave double orders to different firms in order to make sure of a supply. Under the Four-Year Plan steel will be rationed by a system of fixed monthly deliveries to different classes of consumers, the order of priority being: undertakings of public importance; material and plant for the Four-Year Plan and key industries such as engineering, shipping, motor cars, etc. There is to be a separate ration for producers of finished export goods.

The Incidence of Recovery

An official report on the number of persons engaged in the different industries in 1936 compared with 1933 brings out the rapid recovery in capital goods compared with consumption goods:—

	Number of Employed in Thousands	
	1933	1936
Iron and metal production	236	446
Machine manufacturing	272	596
Vehicles and vessels	117	309
Electrical	124	205
Building	257	920
Leather goods	53	67
Pottery	55	73
Glass	45	62
Textiles	658	778

In 1936 14.6 per cent. of all employed workmen (in 24 industries) were in building, against 6.4 per cent. in 1933; 7.1 per cent. in iron and metal production, against 5.9 per cent.; 9.5 per cent. in machinery, against 6.8 per cent.; 4.9 per cent. in the manufacture of vehicles and ships, against 2.9 per cent.; but only 1.1 per cent., against 1.3 per cent., in the leather trades; 1.1 per cent. against 1.4 per cent. in pottery; and 12.4 per cent., against 16.3 per cent., in textiles. It should be noted that the consumption goods industries suffered much less than the capital goods industries from the depression, and therefore recovered less. On the other hand, the disparity in the pace of expansion shown in the table would be much greater if 1932, not 1933, were taken as the starting-point. Already in the second half of 1932 capital goods, in particular iron and steel, had recovered very substantially.

Holland

Recovery and Rising Exports

AMSTERDAM, March 12.—Holland is now reaping substantial benefit from the general world-wide improvement in trade and industry. The enhanced prices of raw materials, such as rubber, tin, coal and sugar are all of benefit to this country through the colonies. Moreover, the Netherlands Indies are profiting by the new possibilities of increasing production. Reports from the Netherlands Indies rubber companies, for instance, show that in January and February their production was decidedly larger than in 1936. The Java sugar companies are also contemplating increased production. Initially, the Java sugar crop for 1938 was fixed at 1,200,000 tons, but now the Government has consented to a production of 1,400,000 tons. The results of the London Sugar Conference to be held in April are being

awaited hopefully. Effective international regulation to maintain remunerative prices is of vital importance to the Netherlands, because of the large amount of capital invested in the Java sugar industry.

As world prices rise the Netherlands balance of trade is making a satisfactory showing. The returns for the month of February are given in the following table compiled by the Central Statistical Bureau (in millions of guilders, and excluding gold and silver):—

	January-February 1936		February 1937	
	1936	1937	1936	1937
Imports	153	211	74	105
Exports	101	152	50	79
Percentage of imports covered by exports	65.7	71.9	68.0	75.1

Exports in February were actually 58 per cent. higher than in the corresponding month of the preceding year. In the following table the comparative figures for recent years are set forth month by month:—

	Imports (In million guilders)			Exports		
	1935	1936	1937	1935	1936	1937
January	76	79	106	55	50	73
February	70	74	105	51	50	79
March	80	79		54	55	
April	78	81		50	57	
May	78	76		58	53	
June	73	77		51	53	
July	76	79		54	60	
August	75	82		61	63	
September	76	82		59	72	
October	95	92		70	76	
November	86	100		60	77	
December	73	114		60	77	

The change which has taken place since the devaluation of the guilder in September, 1936, is strikingly illustrated.

Freer Trade Hopes

The discussions just held at The Hague between delegates of the States constituting the so-called Oslo group were intended to stimulate the extension of international commerce. Various aspects of the problems involved were examined by experts. The delegates of the different countries are now to negotiate with the object of achieving some practical result. The problems are difficult; but the delegates are not without hope that in the long run the co-operation of the Great Powers will be secured.

Because of the international political situation, the Prime Minister, Dr Colijn, has declared that Holland has resolved to increase her naval, air and military forces to provide more adequate national defences.

The financial and monetary situation remains satisfactory. Great liquidity continues to prevail on the money market, although the activity on the new issue market has somewhat subsided, because of the lack of success of several recent municipal loan issues. Generally speaking, it is believed that this setback will prove to be temporary and that capital rates will continue their downward course.

In view of this easy situation on the money market, and the continued firm tendency of the guilder, the question of Holland providing loans abroad is coming more and more to the fore. In the Netherlands, the granting of foreign credits in recent years has always

Newfoundland and the United States.

been under the control of the Netherlands Bank, and for foreign issues a form of embargo is in force. The Minister of Finance recently declared that some form of supervision for the granting of credits abroad was necessary, although he did not think that direct State control was essential. The supervision exercised by the Netherlands Bank, he considered, fully met the purpose for the time being; the existing relationship between the Government and the Netherlands Bank was a sufficiently sound basis for such supervision. The sole decisive factor is and will be the interests of the Netherlands. A Commission has already been set up to consider whether legislative measures are desirable to place the Netherlands Bank's control on a statutory basis and to regulate the relations between the Bank and private banking institutions.

Company reports display on the whole some progress in the year 1936, both in profits and dividends. The annual reports which have been issued for some of our larger banks also strike an optimistic note. The announced amalgamation of the Incasso-Bank and the Bank Associatie has attracted some interest; it is reported that the former bank is to take over the 7.8 million guilders' worth of shares of the Bank Associatie.

The coal industry has decided to raise wages by 5 per cent. The possibility of wage increases has also been discussed in other industries.

Sweden

The Sterling Rate Crisis

STOCKHOLM, March 6.—The marked rise in Swedish wholesale prices, and fears of inflation in Great Britain because of the new armament loan gave rise to persistent rumours of a forthcoming lowering of the Swedish sterling rate. Moreover, the measure was advocated by such noted Swedish economists as Cassel and Heckscher. Since the Government and the Riksbank seemed rather reluctant to reveal their intentions there was general uncertainty about the sterling rate. The situation became particularly acute in the middle of February, when big Swedish exporting concerns sold their sterling holdings on a large scale to cover future losses on exchange. As a result the Bank of Sweden's foreign currency holdings rose during the week ended February 22nd by Kr. 60 millions to a total of Kr. 792 millions. The Government then defined its future policy in a *communiqué*; it was plainly stated that for the moment no change in the present sterling rate was intended. Almost simultaneously, Mr Helmer Stén, chairman of the Swedish Banking Association, in a speech at the annual meeting of the Svenska Handelsbanken, declared against changing the present rate. Mr Stén emphasised not only the risks which a lowering of the sterling rate would involve for the Swedish export industry, but also the danger of weakening the competitive power of industries working for the domestic market. He further stressed the danger of abandoning economic co-operation with the other Northern countries, particularly with Finland, which has no intention of lowering the sterling rate. After these declarations from official and business quarters it can be taken for granted that for the moment the economists are defeated and the sterling rate crisis is over. In order to assert stronger control over the money market and the credit supply the Treasury will be empowered by the Riksdag to issue Treasury bills, which the Bank of Sweden will use for regulating the market. At the same time, the Bank of Sweden will be empowered to pay interest on certain deposits. Furthermore, the board of the Bank of Sweden has requested the Riksdag to issue a law to compel the joint-stock banks to deposit a certain proportion of their cash reserves with the Bank of Sweden. These measures are intended to check the easiness of money, which a few years ago was the origin of recovery in Sweden, but which now threatens to engender an inflation.

Continued Rise in Prices

Figures are now available for Sweden's trade with Great Britain in 1936:—

	(In million kronor)	
	1935	1936
	Jan.-Dec.	Jan.-Dec.
Exports to U.K.	322.4	371.4
Imports from U.K.	285.2	308.0
Export surplus	37.2	63.4

There was an increase in 1936 of exports to the United Kingdom of 15 per cent. The increase of imports was only 8 per cent. Total Swedish exports, however, increased by 16.5 per cent. and the increase in imports was only 10 per cent. The rise in wholesale prices continues, and the Silverstolpe price index for February shows a further rise of 3 points to 134 (which was the average level for 1929). The largest increases were in the prices of vegetable foodstuffs and metals, particularly pig iron. Even retail prices began to stiffen, and the Bank of Sweden's retail price index for commodities recorded a rise from 101.8 to 102.9 (100=September, 1931).

Industrial production continues to expand. Though unemployment usually shows a substantial increase in January, the number of unemployed rose this year only from 31,000 to 34,000 during January (compared with 61,400 in January, 1936). A shortage of skilled labour is noticeable in the metal and machine industries, and the number of unemployed in the building trade showed a seasonal rise. Reports from the banks of their activity in 1936 show generally very satisfactory results, though profits have been mainly used for consolidating purposes; and dividends have been either maintained or slightly increased.

Turkey

German Dominance

ISTANBUL, March 5.—The decision of the Central Bank of the Turkish Republic to discontinue the financing of Turkish exports to Germany is interpreted as a move to put a stop to the development of Turkish economic dependence on Germany. The following figures give an idea of the place occupied by Germany in Turkish foreign trade:—

EXPORTS TO GERMANY			
1932	TL13,722,000	representing	13% of total exports
1933	18,223,000	"	19% "
1934	34,410,000	"	27% "
1935	39,201,000	"	41% "
IMPORTS FROM GERMANY			
1932	TL19,983,000	representing	23% of total imports
1933	19,048,000	"	25% "
1934	29,349,000	"	33% "
1935	35,508,000	"	40% "

The figures available for the first nine months of 1936 already show that this proportion had risen to 49 per cent. of exports and 46 per cent. of imports. By the end of 1936 the share of Germany in Turkish exports probably exceeded sixty per cent. This movement was due to the fact that Germany offered higher prices than any other country. The more Germany bought from Turkey, the higher Turkish prices rose, and the less Turkey was able to export to other countries despite special arrangements and private compensations. One after the other, Turkish clearing agreements came to a deadlock, with the result that one country after the other restricted the shipment of goods to Turkey. Germany, in her turn, began to raise the prices of the goods Turkey purchased from her. Thus Turkey was compelled to sell her staples to Germany and to pay the high price the latter asked for her finished goods. Moreover, as the claims of Turkish exporters on Germany increased, the Turkish State Bank financed Turkish exports to Germany, using for that purpose the amounts which frozen clearing accounts had placed at its disposal.

Independent Commercial Policy

When Turkey awoke to the realisation that this system had isolated her economically from practically the rest of the world, that high prices meant a high cost of production detrimental to her economic future, and that, moreover, German claims on Turkey were on the point of exceeding all Turkish claims on Germany, present and future, she decided to reverse her policy. Her first decision was to create the financial means necessary to that operation, the second to stop the financing of Turkish staples to Germany, and the third will probably be to discount German claims on Turkey, compensating these with her claims on Germany.

As a consequence of these measures, the prices of Turkish staples have fallen, and the moment may be near when importers all over the world will again be interested in purchasing Turkish staples. Any increase in the volume of Turkish exports to countries which, like Great Britain, have a congested clearing account, will correspondingly reduce the importance of outstanding balances, and encourage British and other exporters to look to Turkey as a promising market. This is all the more important, as the Turkish commercial market is sound. The balance of Turkish staples still awaiting export is estimated at fifteen million Turkish liras only.

Irish Free State

Decline in Population

DUBLIN, March 6.—The central problem of the economic life of the Irish Free State is the fall that is taking place in the population and the probable acceleration of the rate of decline in the future. Each census since 1851 has shown a fall in the Irish population, caused, of course, by the great volume of emigration to the United States. This emigration ceased about 1929, and it was expected that the 1936 census would show that the population of the Free State had increased since the previous census of 1926. In fact, however, the census revealed a slight fall.

What has happened to produce this result is that Great Britain has taken the place of the United States as the magnet for the Irish emigrant. Emigration from Ireland to Great Britain has always been substantial, but it never was statistically measured until last year, when the census revealed that between 1926 and 1936 it amounted to 78,130, of whom 31,421 were males and 46,709 females. It is a matter of common knowledge that the movement is increasing annually, and it has been officially stated in the Dail that the net emigration to Great Britain between mid-1935 and mid-1936 was 23,700. As the average annual natural increase in the Free State between 1926 and 1936 was 16,318, it is obvious why the population is falling.

Demand for Labour in Britain

In any event, the movement to Great Britain may be expected to continue and probably to increase. There is a growing demand for labour in Great Britain arising from the industrial expansion and the re-armament programme, to say nothing of the demand for recruits for the Services, which have always been popular with young Irishmen. This demand for labour will become greater as soon as the population of Great Britain becomes stationary prior to beginning its downward course. Mr Colin Clark predicts in his new book, *National Income and Outlay*, that the coming population changes in Great Britain will cause a great increase in the demand for female labour. The existence of this demand, even at present, appears from the figures given above, and its intensification would greatly increase the volume of female emigration from the Free State, with adverse indirect effects on the net reproduction rate in Ireland. The Free State population would thus tend to be reduced in a cumulative manner, directly by the emigration itself, and indirectly by the fall in the natural increase to which the emigration would lead.

It must be borne in mind that Irish labour has always

exhibited a very high degree of mobility. Throughout the nineteenth century the Irish poured across the Atlantic in an endless stream, in spite of the length of the journey and the cost of the passage. But the journey to Great Britain is short and the cost of the passage is trivial. No passport is required, and no immigration restrictions are experienced. Moreover, as was recently explained in the House of Commons, no machinery exists for the repatriation of immigrants from a Dominion. The fact is, as is well known to employers, that the mobility of labour between the Free State and Great Britain is greater than that between the depressed areas and the rest of the country.

From the standpoint of the theory of international trade, the relations between Great Britain and the Free State are very interesting, because the international mobility of the factors of production is much greater than that of products. Trade in both directions is hampered by protective and penal duties, quotas, prohibitions and every variety of impediment; but both labour and capital are free to move without any hindrance of any kind. The result is that there is a greater tendency towards equality in the price of the factors than in that of products. The cost of living in Great Britain is materially lower than in the Free State, and the price of many individual articles differs widely in the two countries; but wage rates and interest rates are practically the same. Needless to say, such an exceptional situation is very favourable to migration when the demand for labour is increasing more rapidly in one country than in the other.

Threat to Free State Economy

There is every reason to believe that emigration to Great Britain will increase in the future to a volume that will cause a serious fall in the population of the Free State. This prospect is naturally viewed with alarm in Ireland, because it has always been hoped that the institution of autonomy would end the drain on the manhood of the country. The programme of industrial protection in the Free State has assumed a growing market as the condition of its success, and this assumption is in danger of proving false. The deadweight public debt is growing rapidly, and a declining population would tend to increase the *per capita* burden of debt charges, possibly to an intolerable degree. Finally, a great deal of the investment that is being made in housing, electricity supply and transport may prove unremunerative if the number of consumers declines.

It is difficult to see how this great migratory movement can be stopped. Great Britain will certainly do nothing to discourage it, because British industry and the Services require all the labour they can obtain, and the supply of native labour, especially female labour, will soon be reduced as a result of the coming change in population. As regards action that could be taken in the Free State, no doubt a settlement of the economic war and a revival of agricultural prosperity would do something to stem the tide; but the effect of such changes would probably be very slight so long as the demand for labour in Great Britain continued to be maintained. One is driven to the conclusion that the only successful measure that could be taken would be the prohibition of emigration by law; but it is doubtful whether any Irish Government would dare to take so unpopular a step.

Dual Taxation in Britain and U.S.A.

TO THE EDITOR OF THE ECONOMIST

SIR,—There is widespread ignorance and apathy on the part of the public in this country, as to the very onerous burden of taxation now borne by British investors in American securities. There are many well-known large British companies, industrial, commercial and financial, whose interest in U.S.A. internal trade and commerce is mainly, if not wholly, covered by their holdings of stock in American companies—usually controlling holdings. The shares of these British companies are very widely held by investors in this country, and the dividends they receive on their investments may be, and probably are, seriously affected by the heavy dual taxation, American and British, to which they are subjected.

The taxation imposed in the last U.S.A. Finance Act was only settled after long delays. The Government had to make provision to meet enormous expenditure, past, present and future, and it was inevitable that taxation scales should be heavy, and that the net should be widely cast. The undistributed profit tax was introduced in order to compel companies to distribute current earnings practically up to the hilt so that these moneys would fall into the clutch of the tax collectors. Where these moneys were distributed as dividends to foreign corporations, the distributing company was compelled to "withhold" an income tax at the rate of 10 per cent. on the gross dividend in the case of "non-residents," and to apply a rate which works out at a little over 3 per cent. in the case of "resident" foreign corporations. The "resident" foreign corporation remained liable to certain other domestic taxes which the "non-resident" escapes. "Making the foreigner pay" was not likely to be an unpopular measure, with a Presidential Election ahead.

It was, however, left open to a "non-resident" to alter its status to that of a "resident" foreign corporation by doing business and acquiring a domicile in the U.S.A. But for a foreign company which for many years had been non-resident and suddenly after the passing of the Act sought to change its status, the position was difficult and delicate. Its main business and commercial interests were already probably in the hands of an American company in which it was interested, and it was therefore scarcely to be expected that it would set up in genuine competitive trading operations in the American market, whilst "Dummy" competitive operations might bring the Sherman Anti-Trust laws into view. If the foreign company set up an entirely new and outside business, this would doubtless excite the curiosity of the Tax Department.

Assuming, therefore, that a non-resident foreign corporation is unable or unwilling to change its status, its dividends from its American business must perforce be subjected to the withheld income tax of 10 per cent. But the American business has already paid U.S.A. revenue taxes of various kinds, and the simple table following shows what happens before the U.S.A. dividend (which, with an undistributed profits tax in sight, is likely to be the same as the U.S.A. profit) reaches its ultimate destination, namely, the holder of ordinary shares of the British company owning the American investment.

Assume net income	£100
Less U.S.A. taxes borne by American Corporation.	
Capital stock tax, pay roll tax, corporation income tax	20
(but excluding excess profits tax and undistributed profit tax if any).	8
	80
Less American income tax of 10 per cent. withheld on payment of dividend to non-resident foreign corporation	8
	72
Less British income tax at 4s. 9d. deducted by British company (disregarding surtax)	17
	55
Net amount receivable by shareholder of British company	

In the case of the British shareholder liable to surtax, the situation is even worse, and with the shortly expected

rise in British taxation, and the confidently anticipated increase in the 10 per cent. rate in U.S.A., the residue which will remain to the British shareholder in those companies with large U.S.A. investments will be a very insignificant proportion of the profit earned on his capital invested there.

This question has nothing whatever to do with the "hot money" problem which is exercising the minds of the U.S. authorities. The people playing the "hot money" game are not, in the main, investors seeking dividends from trading profits in industrial or commercial or legitimate financial businesses, but are people interested principally in capital gains. The problems of this category are entirely apart from those affecting long-established and more or less permanent investments in American businesses meeting all their financial, commercial and social obligations.

It is likely, therefore, that there will be renewed agitation for favourable consideration by the British Government of this question of reciprocal taxation relief with the U.S. As and when the large body of British investors who are directly and indirectly affected awaken to a realisation of the enormous burden involved in the existing dual taxation, deputations and delegations are likely to find their way to the Treasury and the Board of Trade. By this time no doubt a new Chancellor will require to consider the reply to be given to what is an eminently fair and reasonable proposition. It is, perhaps, superfluous to add that "Barkis" in the guise of the U.S. Government "is willing."

I remain,

Yours faithfully,

CHAS. BROTHERTON.

Manchester.

The Anatomy of Unemployment

TO THE EDITOR OF THE ECONOMIST

SIR,—It is comforting to find *The Economist* and Sir William Beveridge lending their authority to the view that "the beginning of an understanding of the problem of unemployment is to break it up." Hitherto this idea has only been a commonplace in the speeches of successive Ministers of Labour at any time since the Report of the Industrial Transference Board in 1928.

But if unemployment is to be broken up, might it not prove more satisfactory to be cautious about making "assumptions" for the purpose of an over-simplified diagram? What evidence is there that cyclical unemployment is a geographical symptom spread evenly over the ten geographical Divisions of the Ministry of Labour? Are the industries of the country spread evenly over these Divisions? Is it a phenomenon of trade cycles that the incidence of unemployment, in duration or extent, is spread at all evenly over all industries? Are there any two trade cycles recorded in which the incidence of unemployment has shown any close similarity?

It may be convenient to exclude from cyclical unemployment the unemployment which exists in coal, iron and steel, shipbuilding and cotton (these are the chief industries of the Depressed Areas which are said to typify "special" Unemployment), but if so, are we not entitled to ask for a new picture of cyclical unemployment?

The writer of your article is no doubt right in saying that the figures of the unemployed conceal distinct problems of unemployment—but this rough-and-ready "geographic" delimitation obscures them none the less. For example, the dock transport industry, which cuts across the geographical assumption, shows more than twice as much recorded unemployment as the coal mining industry. How much of this is normal, special or cyclical?

There is a "geographic" problem of unemployment, but it is a social one for the community in the area, as the recent report on South West Durham shows. This social problem, quick to arouse public sympathy, may tend to obscure the industrial or economic problem of "special" unemployment, which at present is "special" for each industry in varying degree, and in the last analysis, "special" for each of the unemployed in that industry.

These mechanistic analogies with cycles are deceptive; a more accurate analogy is biological, that of over-growth in some parts, partial decay, and compensating growth. On this the November issues of the *Labour Gazette* contain

suggestive information each year, and a study of the changes in unemployment insurance legislation and administration will throw a light on some obscurities in the variations of the aggregate numbers of the unemployed.

Yours, etc.

W. GRIFFIN.

[It was made quite clear in the article in question that the method of analysing unemployment contained in it could give no more than a rough approximation to the truth. Reference was also made to an article in *The Economist* of June 13, 1936, in which the limitations of the method were set out at length. From the point of view of policy, the analysis into Normal, Cyclical and Special Unemployment is of the utmost importance. Since it is impossible to give exact, statistical embodiment to these conceptions, it is unfortunately necessary to rely upon rough approximations. —ED. *Econ.*]

Germany's Reply

TO THE EDITOR OF THE ECONOMIST

SIR,—In your article on "Germany's Reply" in last week's issue, you analyse critically the main points of the German proposals, and conclude with the statement that it remains to be seen if the British and the German points of view can be reconciled to each other. The difference seems at first very great, but a reconciliation would, perhaps, be possible by reverting to the principles which inspired the Locarno Treaty, allowing for changed conditions, and leaving improvements to a later date.

The instrument to be replaced is concerned only with a West European settlement, and it seems reasonable that the new agreement should also be confined to the west. This would not exclude the possibility of a more comprehensive settlement at a later moment. As Germany is no

longer a member State of the League of Nations, this altered situation should be allowed for by not making it a *sine qua non* condition that any negotiation should be conducted within the framework of an institution in which Germany appears to have no confidence. Likewise, the attitude of Belgium should be left to that country to decide, as the latter might wish to reconsider her obligations under the Locarno Pact and the Article XVI of the Covenant.

Finally, although a more comprehensive scheme of mutual guarantee would appear reasonable, the difficulty of fitting it into the Locarno scheme would be considerable, as, carried to its logical conclusions, France and Germany should guarantee both Great Britain and Italy and their overseas possessions against any aggressor. A settlement reached along these limited lines would not give Germany a "free hand" in the East, as Great Britain would remain quite free, both individually and in her collective capacity, to take any action in the event of a German aggression.

The only point to be settled by arbitration would be whether an hypothetical French intervention would be justified by the French Mutual Assistance Pacts with East European countries. Should a German aggression be proved, the only consequence would be to withhold the assistance of the guarantors without affecting their freedom of action in the dispute.

If the above analysis is correct, it would appear that, apart from the technical difficulties of the selection of arbiters, which could probably be overcome, the only real obstacle would be the unfavourable German attitude towards the League of Nations.

In view of the real concession made by Germany in accepting for the first time the French Mutual Assistance pact system in Eastern Europe, it would seem advisable not to insist too much upon this point, in order to make a settlement possible.

I am, Sir,

Yours faithfully,

C. P. FODRIO.

Books and Publications

An Englishman Without Guile*

It is rare in literature, and rarest in the field of biography, for an author and his subject to be exactly in tune with each other; but when the life of a great man does fall to be written by a biographer who is in sympathy with his hero's character, and who himself commands all the gifts needed for doing justice to it, the result will be a notable book. Such is the life of Lord Grey by Professor George Trevelyan. The historian is drawn by a double bond of sympathy towards the statesman who is here his theme; for he, too, is a Liberal by tradition as well as by conviction, and he is likewise a wholehearted lover of Nature in her English dress. Accordingly, notwithstanding the interest of Professor Trevelyan's book for the student of recent international history, what the reader will find here is first and foremost the fascinating portrait of a noble man.

The straightness and trueness of Grey's character is not exactly simplicity, for it can hardly be apprehended except in a series of contrasts—some of which sound almost paradoxical. The greatest contrast is that between Grey's profound serenity and his intimate acquaintance with grief. Grey lost two dearly loved wives, as well as two brothers for whom he had a strong affection. He saw "the lamps going out all over Europe" in August, 1914, and then lived on to see the darkness begin to descend again in 1933. Two houses of his to which he was deeply attached were destroyed by fire. And he lost the eyesight that was his window on a Nature which was his natural means of access to God. His sorrows all came to a point in the thoughts that ran through his mind while he was waiting to deliver his historic speech in the House of Commons on August 3, 1914. Yet his life is a cumulative proof that "Whom the Lord loveth, He chasteneth." As Grey wrote on the morrow of his wife's

* "Grey of Faldoon." By G. M. Trevelyan. Longmans Green. 16s.

death in 1906: "I had learnt all that happiness could teach me, and now I have learnt more."

Another contrast, already famous, is that between Grey's work and his tastes. Sent down from Balliol by Jowett for idleness, he at once went into politics and never left them—though he never liked them—till he had spent thirty-one years in political harness and had deliberately sacrificed his precious eyesight to his grievous public duty. For Grey, politics meant town-life, and town-life meant an industrialism which he hated—prophesying of it, in 1912, that God might find it so abominable that he would "sweep it all away."

In politics he combined, without effort, a scrupulous honesty with a hard-headed realism. He insisted on open diplomacy in his transactions with Germany over the Portuguese Colonies, and he was careful never to lead

the Belgians to expect more from England than he was sure he could promise. Yet from 1906 to 1914, while working with one hand to keep the peace, he was always working simultaneously with the other to make sure that his own country should not be beaten if war broke out. Just because politics were so uncongenial to him, he was always conscious that, as a politician, he was working with shoddy stuff in an imperfect world. "My own ambitions and interests in life," he wrote in 1909 to Lord Morley *à propos* the Navy estimates, "are so dead that I am prepared to admit that these islands would be happier without an Empire and with ten millions only of population . . . ; but the Cabinet would not thank me if . . . I justified my continued presence in the Government by proclaiming this point of view."

Again, this lover of the open-air life—of fishing and listening to the song of birds—was the bosom friend of "intellectuals" like Haldane and Asquith, though "Hegel was a tiresome mystery to Grey, and Haldane could scarcely tell a robin from a sparrow." The bond between them was nothing other than the politics of which Grey writes, in 1909, from his cottage by the Itchen: "How awfully dull this is! Now if I tell you that one of my two bread-eating cottage robins" And again, *à propos* the Balkan Wars: "The dreary part of Foreign Affairs is that nothing can be dealt with on its merits."

Yet the greatest paradox of all is that this supremely autochthonous Englishman might have slipped into the life of a Hindu anchorite with all the ease of Kipling's Puran Dass. For he had achieved the essence of Yoga: he had liberated his spirit from all grasping. No appetite ever bound him to politics; after his wife's death, none bound him to life either; and that utter divorcement from this world came within a few weeks of his becoming Foreign Secretary. He took office in December, 1905. In January, 1906, he had his historic interviews with Cambon (Professor Trevelyan reckons this Grey's most momentous month in office save for July, 1914). On February 4, 1906, his wife died from injuries received in a carriage accident.

His detachment from office may be illustrated by a quotation:—

June 22nd and 23rd. The Government were beaten on Friday night, and we have spent these days in high hopes of an announcement on Monday which will bring the end of this terrible time in sight.

This entry in a diary was made by Grey in 1896. In 1933 he added the following explanatory marginal note:

During 1893-4-5 I had been in office as Under-Secretary for Foreign Affairs. I had become increasingly miserable at the tie to London and the curtailment of the time in the country, and the words "terrible time" simply mean being in office.

He himself balanced the *pro's* and *con's* of his detachment thus on an undated Sibylline tag:—

Living for the week-end. Work done conscientiously, but not living in thought. Advantages of detachment—nothing done to keep office. On the other hand, to desire to keep office causes concentration.

Yet this detachment from office is nothing to the detachment from life which was Grey's mood from February 4, 1906, till his own death more than twenty-seven years later. "I could manage a few years bravely, but there may be so many, and it seems impossible to keep up for thirty or perhaps more" (April 6, 1906). "I am forty-seven to-day, and I wish I was seventy-seven" (April 25, 1909). "I have had a mood this week of feeling the past very near me, and when that comes I always feel as if I might die very soon" (July 25, 1909). And here is his last word on the subject, written a few weeks after Mr Asquith's fall had allowed him at last to die that "natural political death" which he had been humorously courting as far back as the General Election of 1895.

It is a beautiful world outside of towns and much to be enjoyed if the War were over, but what I care for most is on the other side, and I am ready to go there when I can honourably do so.

Such was the man. May England long breed statesmen like him.

Short Notices

"Agricultural Prices." By Frederick Lundy Thomsen. McGraw-Hill Publishing Company. 471 pages. 24s.

Having drawn attention to the practical applications of price data, Mr Thomsen discusses such economic questions as supply and demand curves, the mechanism of price determination and the differences between spot and future prices. Later chapters have a statistical basis and are concerned with index numbers; the utilisation of statistical sources; the graphical presentation of results; the analysis of trends, cycles and seasonal variations; price forecasting and the preparation of "outlook reports." There is a chapter on price-raising methods, and the volume concludes with a series of seven chapters concerned with the prices of particular agricultural products.

"British Shipping Finance." Published by Fairplay. 600 pages. £1 1s.

The thirteenth annual appearance of this survey reveals a mass of information about British Shipping in 1937, much of it new, and all of it interesting and useful. Some 900 balance sheets of shipping companies are summarised for the past four years. There is a list of the directors and chief shareholders of 640 companies, and a record of shipping share quotations. An important section deals with the present employment and capacity of shipbuilding yards, of marine engineering equipment and of repair facilities. Marine insurance, shipping sales and coal prices are comprehensively surveyed. The book should be invaluable for purposes of reference.

"A History of England." By André Maurois. Cape. 512 pages. 12s. 6d.

This is a general history of the English people wittily and charmingly written by an enthusiastic student and admirer of England. M. Maurois is a Whig; and his account of social and economic events is weak. He knows very little about the latest research, but he has written a delightful book.

MONEY AND BANKING

How Russia Raises Capital

THE ratification of the new Soviet Constitution by the All-Union Congress of Soviets last December was said to be a considerable extension of democratic forms of life in Russia. This tendency comprises concessions to the acquisitive urges of man in the form of varying wage rates under the movement known as Stakhanovism; the allowance of small plots of land to individual peasants in collective farms, with the right to keep a cow, pigs and chickens, and to sell vegetables and home-made articles on the free market; abolition of rationing; the use of State Loans subscribed by individuals; the existence of private savings in the savings banks; and a tightening of the marriage, divorce and abortion laws. It is interesting, therefore, to see how Russia raises her capital resources.

About 99 per cent. of Soviet economic life is organised, either directly by the State, or in collectives, whether collective farms or associations of handicraftsmen who, through elected officers, purchase raw materials and arrange selling prices collectively. Money required for net investment in some economic activity is mainly derived from grants through the unified State Budget. The banking system, consisting of the Gosbank, or short-period credit bank, the savings banks, and the four special long-term credit banks, acts as a kind of accounting system under the slogan "Control by the Rouble." According to this, issue and repayment of all credits must be matched by movements of specific parcels of goods in the books of the banks.

The following are condensed Budget figures for the years since the establishment of the first Five-Year Plan:

REVENUE OF RUSSIAN UNIFIED STATE BUDGET
(In millions of Roubles)

Year	From Turnover Tax Profits and Direct Taxes	Proceeds of State Loans	Other Revenue including Balance from previous year	Grand Total
1928-9 ...	7,465.3	724.8	237.6	8,427.7
1929-30 ...	11,485.7	1,278.4	222.4	12,986.5
1930* ...	4,305.7	356.1	660.4	5,322.2

1937** ...	39,585.6	26,604.6	24,569.6	2,579.0	4,730.7	98,069.5

* One quarter only, to alter accounting years.

** Estimates.

The consolidated Budget of the U.S.S.R. derives revenue mainly from the social economy itself, in the form of turnover taxes on agricultural and extractive produce, and taxes on the profits of State industrial con-

cerns. There is a tendency for turnover taxes to become the main source of revenue, while taxes on the profits of State enterprises diminish, as a stimulus to efficiency. Direct taxation amounts only to about 3 per cent. of total revenue. The view on income tax of economists in the Soviet Union may be thus summarised: "Why allow people to earn money if you intend merely to take it away again?"

The proportion of total revenue derived from subscriptions to new loans is declining. In 1931 it was 13.6 per cent.; in 1935, 8.8 per cent.; in the 1937 estimates it is only 6.08 per cent. Since the bulk of expenditure is on national economy, the declining proportion of total revenue derived from loans or direct taxes indicates that new money capital has been found by indirect taxation, or "forced saving," rather than by any method familiar to us in private capitalist States. On the other hand, since each year the State borrows more from the public than it repays—as is shown by comparing the revenue and expenditure columns of the Budget under the headings "State Loans"—the internal National Debt has been gradually growing:—

RUSSIAN INTERNAL NATIONAL DEBT
(In millions of Roubles)

1928 October ...	1,422.1
1929 " ...	2,595.0
1930 January ...	2,586.8
1931 " ...	2,934.6
1932 " ...	6,221.0
1933 " ...	10,080.0
1934 " ...	14,369.2
1935 " ...	16,969.2*
1936 " ...	19,417.7*
1937 " ...	22,813.7*

* Estimates.

There are said to be approximately 45 million Russian bondholders at the present time, which suggests that the average holding is very small indeed. This probability is emphasised by the purchase of bonds by the masses on the instalment system out of their monthly earnings. In the summer of last year the writer visited several factories in Leningrad, Moscow and Stalingrad, and was surprised to see in each huge blackboards indicating the extent to which the workers at the bench were subscribing to the new 4 per cent. Conversion Loan. It is a frequent boast that almost every proletarian in the U.S.S.R. has invested a month or two's earnings in State Loans during the last year or so. To this extent, then, Russia's national debt, like ours, is held direct by the people; and to this extent Russia is becoming more "capitalist."

The use of State Loans, and the considerable encouragement of savings deposits—savings bank deposits rose from Roubles 1,638,000,000 to Roubles 2,461,000,000 between January, 1935, and October, 1936—are officially explained as representing "postponed consumption." Since there is a continuous slight tendency towards underfulfilment of the Plan rather than overfulfilment, there is a corresponding tendency towards a continuous inflation of wages—a rare phenomenon in private capitalist countries. This implies that, as long as prices are kept fixed, the State must either re-introduce some form of rationing or encourage workers to set cash aside for future consumption. Savings deposits and State Loans are thus regarded as a safety valve to offset the continuously rising level of money incomes. Finally, Russia has now another source of new capital; for she can envisage an active trade balance, and, with her growing gold production at falling unit costs (see the Note and Chart on page 694 of this issue), an active balance of payments. As her need to import manufactures diminishes, and her industrialisation proceeds, this last source of new capital may prove the richest.

Financial Notes

Suicide and Life Insurance.—Lord Wright has now given his judgment on the legal aspects of the appeal from Mr Justice Swift's judgment in the first court in the case of *Beresford v. Royal Insurance Company*. The appeal is allowed and *felo de se* is now a bar to claiming on a life policy. The ground on which Lord Wright based himself was the general principle *ex turpi causa non oritur actio*; and he had no doubt that *felo de se*, which is murder, is itself a *turpis causa*. In English law, it is as much murder (unless you are out of your mind) to take your own life as it is to take your neighbour's; and consequently your representatives or assignees are as certainly debarred from claiming on your policy as you yourself would be if you first murdered your neighbour and then tried to recover on his policy. The difficulty which clearly arises in reconciling this judgment with others which allow a felonious motorist to be indemnified on his third-party policy is avoided by drawing a distinction between a turpitudinous crime such as suicide and a non-turpitudinous crime such as manslaughter in a car. Practically, the judgment has the serious effect of jeopardising the savings of a man's lifetime and of impairing the security value of a life policy. Henceforward, a life policy will be unimpeachable security only to the company which issues it. Which of us can undertake that the man to whom we lend money will not commit suicide?

* * *

The Money Market.—Although one or more of the clearing banks have been calling every day this week, money has remained quite comfortable. The discount market has continued to borrow from the clearing banks against Treasury bills and from outside lenders against bonds, but there are signs that outside money is becoming a little less plentiful. In fact there were reports that some borrowers had to obtain part of their bond money from the clearing banks at one per cent. instead of from outside lenders at $\frac{3}{4}$ per cent., but other quarters stated that outside bond money was still plentiful at $\frac{5}{8}$ per cent. Business in bills was very limited. The clearing banks were not keen buyers, while the market largely missed the tender of March 19th and so had few bills to sell.

	Mar. 4 1937	Mar. 11, 1937	Mar. 18, 1937	Mar. 24, 1937

* Loans against Treasury bills and other approved bills and British Government securities within six months of maturity; 1 per cent. Treasury Bonds and other gilt-edged stocks within six months of maturity; and other collateral respectively.

The calendar is proving unusually troublesome during the last week of March. Thursday, Friday and Saturday of this week fall exactly three months after Christmas Day, Boxing Day and a Sunday, while Friday and Monday fall in the Easter holidays. Also Tuesday and Wednesday of next week correspond to the last two days of December, when no one was paying for Treasury bills. The result is that there are no Treasury bill maturities between Wednesday, March 24th, and Thursday, April 1st, and so no funds will be coming into the market. On the other hand, there will be heavy payments falling due next Tuesday for June 30th Treasury bills, while there are also the Easter currency withdrawals, and so for two days the market would normally be short of funds. Both last week and this week, however, the authorities have been buying Treasury bills maturing on April 1st and 2nd, and this will augment the market's supplies of funds over the end of March. In fact the market is having to be helped over the next few days.

The Foreign Exchanges.—The London market has been very quiet. The new French Defence Loan payments, due on April 1st, and not on March 22nd, as previously stated by us, have been the occasion for a moderate demand for francs, and the French Control has been selling sufficient francs to keep the spot rate for sterling at Frs. 106.36. Forward rates are unchanged at 50 centimes discount for one month and Frs. $1\frac{1}{8}$ for three months, but there has been practically no discount on very near positions running up to April 1st. This is because there is Defence Loan money temporarily on offer, which can be obtained up to that date at practically no cost at all. Dollars were offered at rates running from \$4.88 $\frac{3}{4}$ up to \$4.88 $\frac{1}{2}$. There has been some French selling in preparation for Defence Loan payments, but these dollars have been readily taken up by the French Control. The main influence on the rate has been the recent weakness in Wall Street, which has caused sales of American securities by foreign holders followed by the repatriation of the proceeds.

Insurance Notes

London Life Association.—The results of the annual valuation of liabilities of the London Life—including its associated companies, the Clergy Mutual and the Metropolitan Life—are given below for each of the last two years. The figure of £443,567 appearing in the 1935 results consisted of profits on realisation and revaluation of securities specially brought into account to meet a large proportion of the cost in that year of strengthening the valuation reserves:—

	1935	1936
Ordinary trading profits of the year.....	501,863	514,448
Profits on investments	443,567	...
Brought forward from preceding year	251,152	147,918
	1,196,582	662,366
To bonuses to policyholders.....	491,162	455,595
" staff pension fund	...	50,000
" strengthening of actuarial reserves ...	557,502	...
Carried forward	147,918	156,771
	1,196,582	662,366

The bases and assumptions used in valuation were the same as in 1935, namely: Rate of Interest, $3\frac{1}{2}$ per cent.; Mortality: Eastern Counties Rural Districts Table. (Future rates of reduction and future annual rates of bonus allowed for.) London Life: Reduction of Premium, $1\frac{3}{4}$ per cent. Reversionary Bonus, 30s. per cent. compound. Clergy Mutual: $\frac{1}{2}$ per cent. of sums assured increasing in the case of Whole Life Assurances by 2s. for each additional year of age over 65. Metropolitan: 4 per cent. The rate of bonus declared by the London Life is again 35s. per cent. per annum, calculated on the sum assured and existing bonuses. In the reduction of premium class the rate of reduction for the second successive year is 3 per cent.; the rate for some years prior to 1935 was 2 per cent., and it is once more stated that 3 per cent. must be regarded as exceptional. The bonus declared for the Clergy Mutual policies is the same as in 1935, namely a minimum reversionary bonus of 4 per cent. of the sum assured, but the rate of reduction of the Metropolitan has been reduced from 10 per cent.—the 1935 rate was a special one to mark the occasion of that Society's centenary—to 5 per cent., which compares with 4 per cent. in 1934.

* * *

New business fell from £2,806,000 to £2,702,000, of which £1,502,000 was assured without profits, £649,000 in the reversionary bonus class, and £551,000 in the reduction of premium class. Sinking fund business showed a large reduction from £1,080,000 to £485,000, while consideration moneys for immediate annuities fell from £168,000 to £126,000. Due, no doubt, to an increase in staff pension business, deferred and reversionary annuity contracts were issued for £216,000

per annum against £145,000 per annum in 1935. The net rate of interest earned on the total funds was £3 17s. 8d., compared with £3 19s. in the previous year; the corresponding rates earned on the valuation liabilities were £4 3s. 11d. per cent. and £4 5s. 9d. per cent. The London Life does not pay commission and in consequence the expense rate is extremely low at £5 5s. 8d. per cent. of the premium income. Total assets increased from £28,062,000 to £29,279,000. Loans were £8,023,000 against £7,324,000, and British Government Securities £4,284,000 against £4,101,000, but Indian, Colonial and Foreign Government Securities fell sharply from £2,855,000 to £2,132,000. Debenture and Preference Stocks both showed moderate increases, while Ordinary stocks increased from £2,663,000 to £3,152,000. The investment reserve fund remains unaltered at £1,400,000, and other specific reserves account for a further £632,000. In addition, the aggregate difference between market and book values of assets is given as "well over £1,000,000." There is thus an excess over valuation requirements on December 31st last of well over £3,000,000, equivalent to about 13 per cent. of the actuarial reserves.

* * *

Scottish Amicable Life Assurance.—Last year was the first of a new valuation quinquennium. In spite of a reduction in the compound rate of bonus declared for the quinquennium ended December 31, 1935, from 42s. 6d. per cent. per annum to 40s. per cent. per annum, this company succeeded in obtaining record new business of £2,073,000, compared with £1,964,000 in 1935. On this occasion a change of practice has been made in combining the life assurance and annuity funds, while the balance sheet no longer shows separate assets for the annuity fund, although it continues to do so for the capital redemption fund. On the combined life and annuity fund the net rate of interest is £4 2s. 7d. per cent., an increase of 1s. 11d. per cent. over the corresponding 1935 rate. Death claims increased from £291,000 in 1935, which was, however, a year of exceptionally light mortality for the company, to £327,000. The actual claims were only 87 per cent. of the amount expected by the A1924/29 table, against 77 per cent. in 1935. As might be expected from the age of the Society—the present is the one hundred and eleventh Annual Report—the average age at death is high, at 68.7 compared with 66.9 in the previous year. Out of 256 deaths indicated in 1936, seven were over 90 and only 116 under age 70. Total assets increased from £12,464,000 to £12,738,000, and their aggregate market value is very substantially in excess of the corresponding book value. Among loans, the only noteworthy change is the introduction of a new sub-title, "Parochial and other Public Rates," against which appears the sum of £335,000. British Government Securities at £3,032,000 were £230,000 smaller, but Debentures increased from £2,529,000 to £2,734,000, while Preference and Ordinary Stock holdings were both larger. There is every reason to believe that the earnings last year were ample to meet the current cost of bonus at the rate last declared.

* * *

Provident Association of London.—New life assurances amounted last year to £2,210,000, compared with £2,299,000 in 1935, and the net rate of interest on the total funds fell from £3 19s. 1d. per cent. to £3 17s. 11d. per cent. The life assurance fund increased during the year from £9,132,000 to £10,044,000, but the bond investment and endowment certificate funds (these classes of business are very similar to sinking fund assurances but in some cases participate in profits) from which £50,000 was again transferred to profit and loss account, fell further from £1,161,000 to £823,000. The Provident Association has now stiffened its rates for annuity business, and probably this accounts for the decrease in the annuity consideration moneys from £706,000 to the still very large sum of £539,000; even now, however, the rates for annuities are exceedingly attractive. The distinctive feature of the company lies in the facilities offered in conjunction with life assurance

or sinking fund policies for house purchase. The total of such mortgages outstanding at the end of 1936 was £7,132,000, representing 53 per cent. of the total assets, and relating to 17,228 borrowers. These loans appear to be in a satisfactory condition; in 24 cases the properties mortgaged are in possession, while in 72 cases interest is more than six months in arrears, leaving 17,132 mortgages in which interest is paid to date or is in arrears for a period not exceeding six months. These statistics may be taken as exhibiting the full position, as we understand it is not the practice of the Association to substitute new mortgages to include interest arrears.

* * *

The annual actuarial valuation of liabilities has been made on the same stringent interest bases as before, namely, $2\frac{1}{2}$ per cent. for life policies, 3 per cent. for sinking fund policies and $3\frac{1}{2}$ per cent. for annuities. Bonuses are declared on the ordinary life assurance policies at the high rate of 50s. per cent., calculated on the sum assured, thus repeating the declarations for each of the previous eight years. In the case of a special and predominant type of policy, which includes the life assurance element, the bonuses are smaller but are relatively as attractive. The financial position of the Association is very satisfactory. Total assets amount to £13,398,000, of which the above described type of mortgage accounts for £7,132,000, and policy loans for £125,000. Stock Exchange securities amount to £5,971,000 and stand in the books at or under cost; this method of valuation is stated to give a substantial margin compared with market values. In addition, there is an investment reserve fund of £500,000 and other free reserves of nearly £1,000,000. Possibly because its functions are so closely identified with house purchase this office has, perhaps, not received as much attention as some of its compeers. Nevertheless, in addition to a high degree of security it offers advantages which fully entitle it to take honourable rank among the many first class life assurance companies in this country. If we might venture, however, to make a suggestion, it would be that the form of the accounts might with advantage be brought more into line as regards presentation with those with which the general insuring public is more familiar. At present there is much descriptive detail which, nevertheless, leaves the reader in a little doubt whether he has fully understood some of the points discussed.

* * *

Merchants' Marine Insurance.—Marine premium income, which has fallen steadily for many years—in 1927 it was £400,000—suffered a further reduction last year of £3,000 to £150,000. For a number of years before 1932 the underwriting experience resulted in a large profit and loss debit balance. The company also does a small fire business, and from this branch satisfactory profits are consistently obtained. The results of the last two years are shown below.

	1935	1936
Marine	4,587	—7,857
Fire	6,125	4,676
Investment profits.....	830	1,778
Other profits	1,048	1,026
	12,590	—377
Interest	—10,143	—4,528
	2,447	—4,905

The policies in the company are all guaranteed by the Employers' Liability Assurance Corporation, which owns the entire share capital. Total assets increased from £862,000 to £867,000, inclusive of the profit and loss debit balance of £399,000 against £394,000 in 1935. Among the liabilities is a loan of £150,000, while "Sundry Creditors and Short Loan" appear at £298,000. No doubt the Employers' Liability will sooner or later take steps to improve the balance sheet condition, which at present can hardly be helpful to the search for new business—though, of course, the above-mentioned guarantee, which attaches to every policy, is a more helpful factor.

THE STOCK EXCHANGE

Lead and Zinc Shares Examined

THE past six months will long be remembered in metal market annals. As we show in a leading article on page 687, copper has risen from its so-called "pivotal" price of £40 a ton to over £75 a ton. Lead and zinc can boast even greater achievements. Since last September lead has advanced from little over £18 a ton to its recent peak of £36 a ton. Spelter completed this price-doubling performance in about half the time. These unparalleled advances have naturally produced boom conditions in lead and zinc shares. During the last two weeks, however, a distinctly hesitant note has become apparent. The headlong rush has been halted, and prices are now recovering from the £30 level registered earlier this week. Is this merely a temporary check caused by speculative indigestion, or does it portend the end of the boom in metal prices? Investment policy in the immediate future must depend upon a reasoned answer to this query.

At bottom, the extraordinary boom in the metal markets may be described as accidental. A sudden expansion in industrial demand, stimulated by the geographical widening of the recovery area after the gold bloc devaluations last September, has coincided fortuitously with an exceptional demand—or, more accurately, the anticipation of an exceptional demand—arising from the accelerated armaments expenditure the world over. It is this conjunction which accounts for the anomalous features of the boom. Though speculation on an unprecedented scale has hastened the upward rush of prices, genuine consumers' demand has nevertheless provided a substantial basis for the advance. The statistical position of lead, already strong last summer, has been still further improved by the cessation of Spanish supplies. The die-casting and brass-making trades, the building industry, and even the galvanising trade, have demanded more zinc. In addition, industrial recovery in the United States has revealed a shortage of domestic supplies and imports of foreign zinc, despite the tariff, may be required. The market position was thus already tight before the announcement of the British rearmament plan, with its suggestion of large allocations for building up reserves of war material. Industrial consumers hurried frantically to secure their forward supplies, bidding, with little heed to the effect on prices, against the speculators, who have reaped a large harvest. In the short time available, the mines have, of course, been quite incapable of expanding output to satisfy the exceptional demand.

Despite this week's fluctuations, the position still bears the characteristic signs of a temporary "bull squeeze."

As soon as consumers have satisfied their requirements, disappointed speculators may be tempted to unload on a larger scale. Armaments demand, again, may pay little regard to price, but excessive prices must react adversely on civil consumption. Finally, there are few mines on which operations were suspended during the depression which could not be profitably worked at current prices. A considerable increase in effective capacity may thus be expected in the future. Larger supplies are already in sight from Canada and Mexico, from re-opened mines in Australia, from the French North African mines, and from Yugoslavia.

It would not be wise, however, to anticipate a major collapse in lead and zinc prices. There is no precedent for such a slump in these or other commodities while industrial activity is expanding. In general, however, the outlook appears to favour greater price stability at a higher level than hitherto. There is no guarantee against prices advancing still further if increased output should be long delayed. But it is at least conceivable that the major gains have already been seen.

For lead and zinc companies, the revolutionary changes in prices imply a large increase in gross revenues. In the table at the foot of this page we have attempted to analyse these increases. Ten leading producers have been selected, and on reasonable estimates of output for their current financial years, their responses to given changes in metal prices, expressed as ordinary share earnings, have been calculated. The realised metal prices in the companies' latest years are next compared with computed average prices for the current year, based on a mean price of £30 per ton for lead and zinc for the remainder of the period, and 20d. an ounce for silver. Little need be said about silver, for its price outlook is among the most certain of all commodities. So long as U.S. Treasury policy remains unchanged, silver should be virtually pegged around 45 cents or 20d. per fine ounce. Combining the calculations of increased earnings resulting from unit increases in prices with our assumed average quotations for the current year, some rough but conservative calculations of probable profits can be made for each company. In all cases, a substantial allowance has been made for increased costs. Finally, to provide some measure of the comparative response of the different shares to further changes in metal prices, we have estimated the alteration in the earnings' yield on current share quotations which would result from unit changes in price.

More noteworthy, perhaps, even than the expected increases in profits are the differences in potential earn-

Investment Notes

Treasury Control Defined.—The Treasury has now defined the scope of its control of capital exports, but hardly in a way which will please the City of London. On Tuesday, Lieut.-Colonel Colville, replying on behalf of the Chancellor of the Exchequer to Sir John Mellor, declared that four types of financial proposals should be submitted to the Foreign Transactions Advisory Committee, namely, (1) financing on behalf of foreign authorities, (2) capital offers to the public involving remittances, directly or indirectly, outside the British Empire, (3) similar offers not made to the public but the subject of application for permission to deal on the Stock Exchange, and (4) the acquisition from foreign holders of large blocks of securities (including securities dealt in on the London Stock Exchange) with a view to their sale in this country. It would seem, therefore, that both newly formed investment trusts, and existing trusts making increases of capital for which they will desire a Stock Exchange quotation, must seek the Committee's permission, and that permission will be forthcoming so long as the Committee is satisfied that the proposed investment of the new funds is in accordance with "the ordinary practice of investment trusts." What proportion of foreign investment, however, will be regarded as being within the bounds of "ordinary practice" is still a matter on which there is no official guidance. Here, it would seem, the Committee will be left to make its own interpretative precedent—a process which might be likened to the making of "case law" were it not for the fact that neither the Treasury nor the Committee has any statutory authority whatever for this form of control. Certain anomalies, quite obviously, may well arise. For example, the existing investment trusts could, apparently, switch the whole of their existing capital of over £300 millions into foreign investments without consulting the Committee, because this capital is already quoted on the London Stock Exchange. But if any of their number wished to raise an additional £100,000, and to invest part of it abroad, the Committee could veto the transaction if it considered the foreign proportion excessive. The City, which knows the value both of freedom and of discipline in a good cause, is inclined increasingly to ask: *cui bono?*

Stock Exchange Elections.—The Ballot last Monday for the election of the thirty members of the Stock Exchange Committee was uneventful. It appears that the poll was not more than two-thirds that of last year when some questions of policy were involved. Twenty-seven retiring members offered themselves for re-election and were all duly re-elected. For the remaining three places there were eight candidates, and Mr J. B. Braithwaite, Mr E. Mason and Mr C. F. Yeomans were elected by substantial majorities. Their election should strengthen an already strong and respected committee.

Wall Street Menagerie.—The Administration has been busy during the last week putting its wolf among the bears and bulls of Wall Street. And Wall Street has been suitably scared; prices have fallen almost without interruption since March 10th. This reaction from the strong upward movement was provoked by the statements made by many official speakers emphasising the concern of the administration to prevent inflation, by the growing evidence of aggravated labour troubles, by a technical market reaction, and perhaps in part by some selling on French account. The Administration has repeatedly warned the market against a return to 1929 conditions, has attempted to put on the brakes by increases in reserve requirements for the banking system, and is now talking of a possible increase in taxation on excess profits. It seems generally to be believed that this anxiety can only express itself in cries of "Wolf! Wolf!" The talk of restraint upon foreign investments, at any rate, has not been converted into specific action.

ings yields at current share prices, for they range from under 9 per cent. to almost 30 per cent. The explanation is to be found in disparities between the investment quality of the shares in the group. Four main types may be distinguished among the ten companies shown.

First are the old-established mines with large ore reserves. Such are the "Barrier companies"—North Broken Hill, Broken Hill South, and Zinc Corporation. For all three, increased profits this year will be due almost entirely to higher prices, for output is showing little tendency to increase. Since October, 1935, moreover, the companies' wages bill has been based on a sliding scale, increasing when lead rises above £16 a ton (Australian). On this ground alone, therefore, costs may be expected to show a rapid advance. We have assumed, in fact, that working expenses per ton of ore increase by 50 per cent. in our profit calculations—an assumption which may err on the side of moderation. On the whole, the share yields of this group are roughly comparable, and do not appear unduly to discount prospects.

In a second group we may include old mines nearing the end of their working lives. This category includes two widely different companies—Burma Corporation and Sulphide Corporation. The large capitalisation of Burma Corporation damps down the company's percentage gains from higher prices, and an increase in earnings from 8.6 per cent. tax free to only about 15 per cent. tax free appears to be indicated for the current year. Since the mine's expected life is about ten years, a current yield on potential earnings of barely 12 per cent. is obviously not excessive. Sulphide Corporation is in a different position, for the mine has only three years to run, and a return of capital (for which the company is well provided) is certain in the near future. Mining operations this year should produce a considerable increase in profits, and while the company's future plans are uncertain, the shares are perhaps not unduly priced. The large equity yields in this concern are, however, almost meaningless, for earnings are likely to bear little relation to actual distributions.

Our third group includes new mines, such as Trepca, which is fully developed though still increasing its output, and Mount Isa, at a less mature stage but enjoying a prospective life measured in decades. The anticipated advance in profits for Trepca is among the largest of the group, though in view of the political risks attaching to the share—and its vulnerability to Paris selling—the earnings yield is not over-generous. Mount Isa is now busy with a technical reorganisation for producing zinc concentrates. The company is heavily burdened with accumulated deficits, but the current rate of earnings should soon wipe them out. The shares are essentially a long-term holding, and large dividends may be dependent upon the next trade boom, rather than this.

In a final group we may include the speculative counters—San Francisco Mines, Fresnillo and Mexican Corporation. Here, superimposed on political risk, there are uncertainties due to irregularity in the ore deposits and its metal content, and to the intractability of Mexican labour. On the whole, cost uncertainties appear smallest for San Francisco Mines, whose prospects depend to a far smaller extent on silver than Fresnillo. With its relatively high yield, San Francisco ranks among the more attractive of the speculative mining shares.

In general, the substantial prospective yields shown by all lead-zinc shares suggest that the market has been basing its valuations on moderate estimates of the future level of metal prices. Further capital appreciation is probably unlikely on any large scale, unless another substantial rise in metal prices occurs. An improvement has been crowded into the narrow compass of four or five months which might well have occupied several years in more normal circumstances. Nevertheless, earnings prospects in the current year appear good. Beyond that, lead and zinc prices are too intimately connected with the wider movements of the trade cycle, and, we may add, of the armaments cycle itself, for any confident prediction.

The focus of the recent collapse has been the setback in Treasury issues, despite large scale Treasury support. This has led to an increase in short-term money rates. But the pressure of rising commodity prices, of investment demand in America, and of a growing foreign demand for iron and steel for re-armament make it unreasonable to suppose that the present market depression will be long maintained. The relative strength of the railroad issues, the pension agreement with the railroad unions, and the conference of labour and capital at Detroit, are signposts which may not prove misleading.

* * *

Curbing the Share Pusher.—Mr Justice Findlay's remarks at the conclusion of a share-pushing case last week deserve the fullest publicity. He described the frauds committed as "gross, cruel and systematic," and wished that his words "could be heard in every house in the country." "Bucket shops" are only dangerous so long as investors—chiefly those with only small sums at their disposal—remain credulous. "If only members of the public who are fortunate enough to have money to invest, or who think that a change in their investments is desirable, would get advice from their bankers or go to a firm of stockbrokers—members of the Stock Exchange, bound by the rules and traditions of their profession—this sort of fraud would cease to exist, because it would cease to be profitable." In recent months the whole matter of share-pushing has received the limelight of publicity in Parliament, in the Courts, and in all sections of the Press. Yet the public seems but little better educated than before. Too little disposition is shown to question the sincerity of offers to amass quick fortunes, or to examine the sources from which ample profits are supposed to come. At a dinner last week the chairman of the Stock Exchange Committee emphasised that the chief safeguard against the fraudulent share pusher lay in continuous exposure and warning through the medium of the press. No specific advertising campaign, it would appear, is contemplated by the Committee.

* * *

Should a Balance Sheet Tell?—Insatiable thirsters for company information, like *The Economist* and the Shareholders' Protection Association, have frequently been accused of asking for more than was discreet or safe in a competitive world where secrecy is alleged to be the better part of efficiency. The critics who believe that an appeal, say, for a holding company consolidated earnings account has a temerity approached only by Master Twist's request to Mr Bumble, should read the well-argued and forceful address which an American commentator, Mr Leland Rex Robinson, delivered recently to an audience of accountants at Dallas on the subject "Are Present Forms of Financial Statements Satisfactory?"* Mr Robinson, who has done much in furthering the progress and deploring the excesses of the investment trust movement in America, is well qualified to speak both for the private and the institutional investor. No stockholder, he believes, can ascertain the true trend of earnings unless he is given figures of gross revenue and of all deductions, normal and abnormal, made therefrom before striking the net figure. To start with net income, Mr Robinson declares, is like opening the front door to find oneself in the backyard. By varying the amount of deductions from gross, a company manipulates its net figures out of all recognition. In any case, as we pointed out recently (February 13th, page 364), an investor has a right to know the true gearing of his net profits, which depends, among other things, on the dimensions of overhead charges. Objection to the publication of gross figures is sometimes based on the fear that, when profits are declining, a company will suffer in public estimation. But this, as Mr Robinson shrewdly observes, is the very reason why, in any sound policy, the figures should be disclosed.

Company Notes

Vickers' Prospects.—Since the declaration of the 10 per cent. dividend three weeks ago, Vickers 10s. shares have been subdued. The report, so far as it discloses the profits of the group, shows satisfactory progress for 1936. Net trading profits and dividends received have advanced from £1,368,279 to £1,619,243, and the 10 per cent. dividend is covered by earnings of nearly 16 per cent, leaving £275,000 to be credited to reserve and carry forward. The following table analyses the results of the parent company for the past three years:—

	Years to December 31		
	1934	1935	1936
Net trading profit	970,352	1,368,279	1,619,243
Tax and interest charges	357,091	440,174	456,633
Preference dividends	418,190	418,190	418,190
Ordinary shares :—			
<i>Earned</i>	195,071	509,915	744,420
<i>Paid</i>	190,890	254,520	469,528
<i>Earned %</i>	6.1	16.0	15.9
<i>Paid %</i>	6	8*	10
To reserve	...	242,009†	250,000
Carried forward	228,222	241,608	266,500

* And 50 per cent. capital bonus. † Also direct transfers of £2,710,572.

This, however, is only a partial record. The Vickers-Armstrongs earnings are even more impressive. Trading profits have advanced from £1,085,755 to £1,465,746. After providing an undisclosed amount payable under a profits guarantee policy in 1935 and £250,000 for its cancellation in 1936, the "A" preference dividend of this concern has now been paid up to January, 1936. Assuming normal preference dividends and without charging the £250,000 paid under the guarantee policy, earnings on the ordinary shares, which are entirely held by Vickers with the rest of the share capital, would have been equivalent to 8.9 per cent. To these results, in turn, the English Steel deferred dividend made a significant contribution. All branches of the Vickers organisation in land, sea and air, face an active year. The direct armament interests of Vickers-Armstrongs will again be fully occupied; any immediate expansion in the general engineering and shipbuilding interests may be limited for this reason. But the Metropolitan-Cammell and Associated Electric interests are likely to make further progress. The prospects, indeed, look propitious, but the market "form" of Vickers is, perhaps, as certain over the next few years as any share in the Stock Exchange List. The investor may reasonably expect, first, the writing up of the shares from 10s. to the former parity of £1 and, secondly, the payment of a 10 per cent. dividend on the new shares. The prospects thus favour gradual appreciation in the shares from the present level of 33s. 1½d.

* * *

Baldwins' Progressive Report.—The market, which had viewed the Baldwins' dividend without enthusiasm, was well satisfied with the full report, and the shares were marked up. The heavy steel associated company, Guest Keen Baldwins, showed a spectacular increase in trading profits from £258,890 to £609,201—the result of the first year's operation of the new plant at Cardiff—and its net profit increased from £95,104 to £220,950, after a payment of £50,000 for special depreciation and £50,000 for contingencies. Baldwins Limited has therefore benefited from the heavy steel company's return to the dividend list with a payment of 2½ per cent. But the business of Baldwins itself has shown an appreciable expansion—largely, no doubt, because of the hardening of the price structure in the home and export markets in sheets and tinplates—and the £118,194 increase in profits

to £630,440 is due mainly to that cause. The following table shows the earnings in the last three years:—

	Years to December 31		
	1934	1935	1936
Gross profit	502,642	512,246	630,440
Fees, pensions, etc.	16,548	17,765	21,479
Depreciation	75,000	75,000	75,000
Tax	68,535	74,256	125,395
Interest	254,259	138,652	133,598
Preference dividend	50,766	50,640	29,439
Ordinary shares :—			
<i>Earned</i>	37,534	155,933	245,529
<i>Paid</i>	26,595	96,588	158,520
<i>Earned (%)</i>	3.5	12.1	15.5
<i>Paid (%)</i>	2½	7½	10
Reserve	...	50,000	50,000
Carry-forward	36,005	45,348	45,439*

* After paying £36,918 in respect of prepayments to converting debenture stockholders.

The company has now finished its extraordinary series of conversions of the prior charges, which have, in the space of three years, changed the capital structure from extreme unwieldiness and complexity to a well-balanced simplicity. The board has taken full advantage of the favourable fall of redemption duties, so that by the end of next year no debenture stock will remain. This places the ordinary shares on a much more stable basis than other steel companies' shares, and at 11s. 6d., with the potential earnings yield, if the 1936 profits are maintained, of just over 5 per cent., they look reasonably valued.

* * *

Thomas Firth and John Brown.—This concern produces special steels, and is thus of direct re-armament interest. Jointly with English Steel, it controls Firth-Vickers Stainless Steels. It is not surprising, therefore, to find that trading profits have increased by 13 per cent. to £656,018, although this rate of increase is perhaps more moderate than some investors had expected. The 15 per cent. tax-free dividend is comfortably covered by earnings of 26.5 per cent., and the directors have again placed £100,000 to general reserve after providing £92,000 (against £72,000) for depreciation. The results are tabulated below:—

	Years to December 31		
	1934	1935	1936
Trading profit	483,458	580,344	656,018
Directors' fees, income tax and debenture interest	66,419	154,566	173,485
Depreciation reserve	72,000	72,000	92,000
Earned for dividends	345,039	353,778	390,533
Preference dividends	194,000*	48,600	48,300
Ordinary shares (tax free) :—			
<i>Earned</i>	150,639	305,178	342,233
<i>Paid</i>	72,500	181,250†	232,500
<i>Earned (%)</i>	10.4‡	21.0	22.1
<i>Paid (%)</i>	5	12.5†	15.0
General reserve	50,000	100,000	100,000
Carried forward	46,021	69,200§	78,934

* Four years' dividend. † Paid on 1,450,000 shares. ‡ Earned rate after charging one year's dividend only on preference shares, 20.4 per cent. § After £749 issue expenses.

If 1936 brought a smaller increase in profits than would satisfy the optimists, it is evident from the balance sheet, which shows stock and work in progress at £1,092,336 against £787,000 a year earlier, that 1937 promises a record level of activity. During the past year some £357,127 was spent on additions to plant, and doubtless this will serve to relieve the pressure of orders on capacity during the current year. At 88s. the ordinary shares offer a gross yield of 4 12s. per cent. on dividends and 6 15s. 9d. per cent. on earnings. The company's armour-plate business will be fully occupied for some time to come, and while profits may not expand in direct proportion to output, the prospects of a stable and well-secured return are reasonably valued in the current price.

Royal Mail Lines and R.M. Realisation.—Since the position of R.M. Realisation was analysed in *The Economist* of December 19, 1936, an important clarification has occurred. One of the last uncertainties has virtually disappeared from the picture through the Nelson Company's disposal of a large proportion (believed to be rather over one million shares) of its holding of 1,760,000 shares in Royal Mail Lines. Permission to deal in these shares was obtained last week, and business commenced at around 26s. 3d. As the claims of the creditors of the assets of the Nelson Company represent fully 23s. per share, it is clear, as we have argued in these columns, that very little will accrue to the Realisation Company as a result of the liquidation of the Nelson assets. The present move obviously implies that completion of the winding up of the Nelson Company must be regarded as an early probability, and the balance of the holding of Royal Mail Lines shares will doubtless be sold as the absorptive powers of the market allow.

* * *

The contingent equity owned by the Realisation Company in the 1,200,000 Royal Mail Lines shares held by the Meat Transports Company may also be left out of consideration in assessing the R.M. Realisation position. Apart from the R.M. Realisation's interest in direct holdings, amounting to 1,040,000 shares in Royal Mail Lines, the improvement in the latter company's position will not benefit the Realisation shareholders to any greater extent than, say, £250,000. This represents no more than 5s. per share of the Realisation Company's capital, a figure which stresses the degree of irresponsibility in the fantastic estimates circulated in recent months. Taking Royal Mail Lines ordinary at 25s. and applying the formula given on page 309 of our issue of February 8, 1936, we would adjust our estimate of the value of R.M. Realisation to 27s. 5d. nominal of Union Castle ordinary plus 6s. cash. The present price of 57s. 7½d. for R.M. Realisation thus puts the very high valuation of 37s. 9d. on the Union Castle ordinary, if our conclusions are correct. E.D. Realisation ordinary, by the same lines of reasoning, represent 27s. 4d. nominal of Union Castle ordinary plus 10s. 2d. cash. The current price of E.D. ordinary of 48s. 9d. therefore puts a price of 28s. 3d. on Union Castle Ordinary which, although generous, appears less excessive than the result of the R.M. Realisation calculation.

* * *

Mersey Power.—The Mersey Power Company's business differs somewhat from most electricity undertakings. The company serves a small but densely industrialised area on the south bank of the Mersey, and presumably depends on these industries for the bulk of its

The Distinctive System of The Scottish Provident Institution

Under *The Distinctive System* the premiums are so moderate that, at early and middle ages, the annual sum charged elsewhere for a Whole Life Assurance of £1,000, with profits, will here secure from the first as much as £1,300 or thereby with right to share in the Surplus.

Write for an explanatory booklet

The Scottish Provident Institution
London (City) Office 3 Lombard Street, E.C.3
HEAD OFFICE 6 St. Andrew Square, EDINBURGH
FUNDS EXCEED £24,000,000

load. Its expansion of revenue during 1936, therefore, has been impressive, as the following table shows:—

	1934	1935	1936
Revenue from current	236,299	235,947	269,929
Net profit	121,974	129,755	140,440
Depreciation	50,000	55,000	57,500
Debt interest	8,750	8,750	8,741
Preference dividend.....	33,000	33,000	33,000
Ordinary shares :—			
<i>Earned</i>	30,224	33,005	41,199
<i>Paid</i>	29,789	34,754	37,236
<i>Earned (%)</i>	6.0	6.7	8.2
<i>Paid (%)</i>	6.0	7.0	7.5
Carried forward	5,258	3,511	4,510

It is also appropriate that, since the undertaking may lack something of the characteristic earnings stability of the supply industry, it should lean rather to the habits of manufacturing industry in its financial policy, providing handsomely for depreciation when times are good. If provision for depreciation had been made on our standard scale, earnings for last year would have been equivalent to as much as 12 per cent. on the ordinary shares, which stand at 34s. 6d.

* * *

British Power and Light.—This company, the most recently formed large undertaking in the electric supply industry in which the investor is interested, was not favoured at its birth in 1929, immediately before the depression. In addition to this blow from the Fates, the company suffered tribulations of its own, for its principal subsidiary, the North Wales Power Company—with its hydro-electric generation—experienced shortages of rainfall in 1929-30, and again in 1933-4. The report states that for 1935 and 1936 the rainfall was still sub-normal. The figures set out below show that a cautious policy is still being followed, for the dividend is covered with a wider margin of earnings than is customary in the industry:—

	1934	1935	1936
No. of units sold (millions)	97.8	114.0	128.8
Revenue from sale of energy...	541,523	619,000	705,208
Net revenue	318,713	364,514	401,383
Depreciation	84,683	93,906	112,631
Interest, etc.	100,598	70,542	68,395
Income tax	30,125	38,531	49,740
Preference dividends	32,550	46,500	45,937
Ordinary shares :—			
<i>Earned</i>	70,757	115,035	124,680
<i>Paid</i>	49,133†	76,614	87,697
<i>Earned (%)</i>	5.3	9.0	8.5
<i>Paid (%)</i>	34.1†	6%	6%
Carried forward	40,954	41,195	62,015*

† Dividend for nine months period of holding company, earnings as reported by the company for the full calendar year 1934. * After crediting £5,384 dividends and writing £23,045 off investments.

OFFER TO NEW READERS

Any reader who makes his first acquaintance with this journal with this week's issue is invited to fill up the attached:

To Publisher, "The Economist Newspaper Ltd.,"
8 Boulevard Street, E.C.4.

In order to test the value of your publication I should like you to forward this to me by post for the next four weeks. If I then decide to become a subscriber, it is understood that there will be no charge for the copies thus received, but otherwise I shall be willing to pay 4s. to cover their cost.

Name

Address

The report of the North Wales Power Company shows that, in the last three years, a contingency reserve of £60,000, to provide against variations of rainfall, has been provided out of earnings. In addition, the company provided an extra £10,000 last year for depreciation, although the previous rate had closely fitted our standard scale. Ignoring this extra provision, the earnings for the year would amount to 8.7 per cent. on the ordinary capital outstanding at the end of the year, and at the current price of 27s. 3d. the shares show the attractive earnings yield of almost 6½ per cent.

* * *

Scottish Power Report.—During the last two years this group's interests in subsidiaries (which may be assumed to approximate to the capital expenditure of the operating undertakings) have grown from £6½ millions to £7½ millions at the end of 1936. The table below shows that trading profit has achieved a more rapid increase, and the group appears to be approaching the point at which earnings, assessed conservatively, cover the dividends paid:—

	1934	1935	1936
Trading profit of undertakings*	498,932	552,706	628,218
Depreciation and other reserves	129,406	163,120	191,689
Income tax	45,607	56,983	72,823
Net expenses of holding co.† ...	23,074	29,764	28,893
Preference dividend (net)	102,300	102,300	100,650
Ordinary { <i>Earned</i>	199,545	200,539	234,163
<i>Paid</i> (8% each year)	198,400	200,259	231,800

* Including interest capitalised. † Including interest.

It is impossible to compare the company's provision for depreciation with our usual standard, since a great part of the capital expenditure doubtless represents civil works connected with hydro-electric generation, on which depreciation is small. It is probable, however, that last year's appropriation was equivalent to our standard. The company's provision for income tax, however, appears to be based only on the tax actually paid in the course of the year. If income tax is provided at the standard rate on the dividends paid, an additional allocation of some £30,000 would appear to be required, and this would have reduced the ordinary earnings to a little over 7 per cent. If the past year's expansion is repeated, earnings in 1937 should prove sufficient to cover the dividend paid on the most conservative calculation.

* * *

Clyde Valley Electrical.—The earnings for 1936 of the Clyde Valley undertaking are rather disappointing. Despite the substantial increase in revenue from the sale of energy, the earnings available for the ordinary stock, after the allocation to contingency fund (which is again approximately the same as depreciation on our standard scale) show practically no increase. Of the £220,000 added to gross revenue since 1934, the increase in the fuel bill has absorbed as much as £100,000. The earnings record since 1934 is analysed below:—

	1934	1935	1936
Revenue from sale of energy ...	801,550	903,564	1,023,627
Net profit	384,890	410,320	428,781
To contingency fund	155,000	180,000	200,000
Preference dividends	58,000	58,000	58,000
Ordinary { <i>Earned</i>	171,890	172,320	170,781
<i>Paid</i> (8% each year)	168,000	168,000	168,000

Partly, no doubt, the rather striking proportion of increased revenues absorbed by fuel costs is due to the increasing price of coal. But this can hardly tell the whole story, and the figures suggest either that the

average rate paid by domestic consumers has decreased substantially, or that the increasing industrial load (of which, no doubt, shipbuilding accounts for a substantial part) has been supplied at a very low price.

* * *

Bournemouth and Poole Electricity.—Commenting on this company's parent, County of London Electric, a fortnight ago, we stressed the success of the company's new commercial policy. Bournemouth and Poole now appears to be achieving even greater progress by similar methods. In 1934 the company reduced its charges, inaugurated assisted-wiring schemes and hire purchase of apparatus, and opened new showrooms. The results for 1935 did not show their fruit—indeed, the increase in units sold was meagre—but progress in 1936 was impressive:—

	1934	1935	1936
No. of units sold (millions)	33.7	36.5	47.1
Increase (%).	15.9	8.0	29.1
Revenue from sale of current	350,097	372,313	425,983
Net revenue, including interest, after tax	165,616	167,014	181,673
Depreciation	45,000	49,429	51,712
Debt interest	8,662	10,850	10,675
Preference dividends	11,408	11,462	11,277
Ordinary stock :—			
<i>Earned</i>	100,546	95,273	108,009
<i>Paid</i>	86,457	86,696	85,297
<i>Earned (%)</i>	17.4	16.3	19.1
<i>Paid (%)</i>	15.0	15.0	15.0
Amounts written off	13,814	3,000	21,235
General reserve	...	5,000	5,000
Carried forward	16,500	17,077	13,554

Comparison of the 1935 and 1936 results suggests that some special factor has tended to distort the results—presumably, the introduction of the two-part tariff, which, in its year of inception, reduces the apparent

rate of progress. The 1936 increase in units sold of 29 per cent. is even more remarkable than the increase of 16.8 per cent. reported by the County company. The shares stand at 31½, to yield £4 4s. per cent.

* * *

Canadian Pacific Report.—The Preliminary C.P.R. results, discussed in *The Economist* of March 13th, are now succeeded by the full report, which suggests that the undertaking is now being usefully strengthened. Gross earnings were some 7 per cent. higher last year, but working expenses rose in the same proportion. But of the \$7,970,271 increase in working expenses, over \$4 millions was for maintenance. The 1937 programme for capital expenditure, totalling \$27,306,000, against \$6,150,000, also illustrates the resumption of a forward policy in connection with new rolling stock, which will absorb no less than \$20,723,000 of the total. The financial outlook of the undertaking is slightly more hopeful. The "Soo" guarantee has represented a serious drain of cash in recent years, but \$64,999,000 of these guaranteed bonds mature in 1938. The cash saving resulting from co-operation with the C.N.R. is still disappointingly small, being estimated at \$1,662,000 between the two companies. British investors, who now hold no less than 97 per cent. of the preference stock and 52.4 per cent. of the common, will note that the wages demands are still unsettled for the current year. The preference stock stands at 53 and the ordinary at a fairly generous price of 14½.

Prepared by the Imperial Tobacco Co. Ltd. Great Britain and Ireland, Ltd.

The growing prosperity of the entertainment industry in 1936 produced an increase in earnings of one-third, and the dividend was stepped up sharply from 15 per cent. to 27½ per cent. The bulk of the £229,415 profits was derived from the 78 per cent. owned subsidiary, whose connection with the parent concern was fully explained at the annual meeting by Mr I. W. Schlesinger. Dividends paid by the subsidiary company climbed from £20,000 in 1932 to no less than £174,000 last year, but the parent concern's £780 nominal interest in it appears in the balance sheet at par value only. The value of properties, apparently, is considerably understated at £1,361,593, for the actual value is estimated at £1,800,000, leaving a substantial surplus over the £750,327 total of debentures and secured creditors. It is proposed, however, to replace all such loans by an issue of preference shares. The detailed plans will be awaited with interest, for they involve the repayment of debentures carrying 7½ per cent. interest. The £1 ordinary shares stand at 66s. 3d.

* * *

Union Corporation Results.—In a preliminary announcement, the directors of Union Corporation report an increase of net profits for 1936 from £604,920 to £685,044. It is proposed to raise the final dividend from 5s. 6d. per share to 6s. per 12s. 6d. share (48 per cent.), which increases the total distribution for the past year from 8s. to 8s. 6d. (68 per cent.). The net profit for 1935, it will be recalled, was struck after the provision of £25,000 for staff pensions funds. For 1936, the dividends absorb £595,000, and the board also sets aside £40,000 to reserve account. A new item—"exploration reserve account"—receives £50,000, and the amount carried forward is slightly increased from £130,907 to £130,951. The 12s. 6d. shares remained unchanged on the profits figures at 10½, at which price they yield 4 7s. per cent.

* * *

Durban Roodeport Deep.—The striking expansion in last year's operations arose from the restarting of the reduction plant at Roodeport United, which this company now partly owns. The tonnage milled rose from 650,300 to 965,800, and working costs were reduced by 11d. per ton to 24s. 3d. But a sharp reduction in the grade of ore treated and the lower price received for the gold produced caused the working profit to come out only a few thousand pounds higher at £250,560. Taxation, however, required £48,120 in place of £52,600. The unaltered dividend of 12½ per cent. left a somewhat reduced balance of £223,520 to be carried forward. In 1935 capital expenditure to the extent of £199,440 was debited to appropriation account, but last year funds were provided by an issue of 160,000 shares at £2, of which only £118,190 remains unspent. A further expansion in ore treated is foreshadowed this year. Even so, the current quotation of about 67s. for the 10s. share discounts an improvement in the results, the yield on the basis of the past two years' dividends being barely 3½ per cent. Reference to the map accompanying the report indicates that something like three-quarters of the company's ground still remains to be exploited.

* * *

East Rand Proprietary.—This company's ore reserve position at the end of last year showed an improvement in average value as well as in tonnage. A slight increase in the grade of ore milled was offset by the lower average price received. The revenue of 31s. 4d. per ton was, in fact, exactly the same as for the previous year. With costs a few pence higher at 20s. 11d. per ton, the total working profit was only a trifle up at £1,178,300. Taxation charges proved lighter than in the preceding year, and after payment of dividends of 35 per cent., absorbing £630,000, as against £495,000 (27½ per cent.), the balance of £68,580 carried forward was only a trifle

below that brought in. For the current year, the consulting engineers foreshadow capital expenditure at approximately the same figure as for 1936, and a slight increase in the crushing capacity. Altogether it appears that no very substantial increase in the dividend can be looked for. On the basis of last year's payments the yield is around 4½ per cent.

* * *

Other Company Results.—Some important industries, such as Cammell-Laird, British Aluminium, and British Ropes, and also further reports from the Unilever group, are included in our usual analysis on page 739 of some 48 additional company profit-and-loss accounts. Certain of the results are discussed on page 718 under the heading of "Shorter Company Comments."

* * *

Company Meetings of the Week.—On later pages of this issue will be found the reports of the following company meetings:—Hongkong and Shanghai Banking Corporation, Mercantile Bank of India, Eastern Bank, Employers' Liability Assurance Corporation, Halifax Building Society, North-Eastern Electric Supply, Scottish Power, Law Land, African Theatres, Godfrey Phillips, Radiation, Clayton Dewandre, Pinchin Johnson, Apollinaris and Presta, Provincial Cinematograph Theatres, Maple and Company, London and Thames Haven Oil Wharves, and Sungei Siput Rubber Plantations. Mr T. C. J. Burgess discussed the London and Thames Haven Oil Wharves' interests in the new Irish refinery company. At the Scottish Power Company meeting, Mr George Balfour, M.P., described a record growth in the number of consumers served. The progress made by African Theatres, and the chairman's comments at the meeting, are discussed on page 713. Mr Edward Robson dealt with the rapid expansion of his company's sales and its bearing upon the continuance of acute competition in the paint industry at the Pinchin Johnson meeting. India's trade balance was described in detail at the Eastern Bank meeting by Mr J. S. Haskell, who alluded also to the loss of British trade in Iraq. At the Hongkong and Shanghai Banking Corporation meeting, the Hon. J. J. Paterson gave a cheerful account of the financial position in China. After commenting upon many items in the accounts of the Halifax Building Society, Sir Enoch Hill drew members' attention to the advantages of monthly investing subscription shares. At the Apollinaris and Presta meeting, the chairman reported that the Presta business had increased, despite the poor summer of 1936. Mr Mark Ostrer drew the attention of Provincial Cinematograph Theatres shareholders to the company's stability despite the growing competition from the building of redundant theatres. At the Mercantile Bank of India meeting, Lord Catto reviewed the economic position throughout the East, and the strong situation of the Bank. Mr M. E. F. Crealock discussed the nature of the demand for flats at the Law Land Company meeting. At the Sungei Siput Rubber Plantations meeting, Sir Ivor Philipps gave detailed estimates of future earnings. Sir Courtauld Thomson justified a cautious investment policy at the Employers' Liability Assurance meeting. Mr H. Yates discussed the course of costs and competition in 1936 at the Radiation Company meeting. At the Godfrey Phillips meeting, Mr Arthur I. Phillips described the financial arrangements between the company and its subsidiaries. It was stated by Mr C. C. Regnart at the Maple and Company meeting that current demand was for a distinctly better quality of goods than that demanded a few years ago. Addressing Clayton Dewandre shareholders, the chairman explained why further capital was required; funds tied up in stocks and work in progress were now running higher. Mr R. P. Sloan, at the North-Eastern Electric Supply meeting, emphasised that the results must be considered especially satisfactory in view of price reductions, and mentioned that a further reduction comes into force in the June quarter.

THE WEEK IN THE MARKETS

THE STOCK EXCHANGE

SETTLING DAYS

TICKET: APRIL 6 ACCOUNT: APRIL 8

The wavering condition of markets has continued until the eve of the holiday. Business, of course, has been limited, but further selling on French account and the aftermath of speculative excesses on the part of an international group of operators caused further falls at first in the commodity share markets. Oil and copper shares suffered most of all, and the rubber group made slighter progress than more favourable market circumstances would have warranted. Improvement, when it came, was too late to be significant.

In the gilt-edged market, a poor opening day was reported, but the cessation of selling and some moderate bear covering produced a distinct improvement on Tuesday. Conditions remained quiet in mid-week. In the foreign market a skirmish was caused by suggestions that the Brazilian debt scheme would merely be extended and not expanded, but a recovery set in later. Far Eastern issues ruled dull, and most European bonds reacted, despite an early improvement in Polish Sevens.

Home rails have enjoyed a consistently good week, without any very large business, but with continual small rises. The biggest improvements took place in prior charges. In the overseas rails market conditions were less favourable, Canadian and Argentine securities in particular suffering falls at the beginning of this week after a good showing on the preceding days.

Business in the industrial markets has been on a small scale, with prices moving irregularly. In the iron and steel section prices were lower with few exceptions. Indian Iron were erratic, and Firth Brown lower despite an increase in the dividend. Vickers held their own on the reported higher profits last year. Both motor and aircraft sections were dull. Lower prices were quoted in the electrical equipment group, and electric supply shares were fairly steady. As the week progressed support developed for brewery issues, with Guinness in the lead.

Investment support was evident in the tobacco group, where Imperial Tobacco registered good progress. Stores and provision issues moved irregularly. Early in the week good trading reports stimulated interest in the shipping section. In the miscellaneous industrials group British Aluminium were firm on publication of the report, while building materials were higher at first and lower later, Cable and Wireless junior stocks were lower on the traffic index, and Marconi Marine fell on the maintained dividend.

The oil market has encountered yet another rather gloomy week. Earlier on, French sales were large and insistent, depressing Royal Dutch and Shell in particular. But they affected Eagles almost as much with the Mexican situation still uncertain. By Tuesday Paris selling appeared to have come to an end, and after a weak start the market enjoyed a fairly universal improvement.

History has repeated itself in the rubber market. Prices have tended gradually upward, with a good demand from outside investors, but intermittent profit taking by professionals influenced by the uncertainty in the commodity market has prevented any spectacular rise in prices. After a series of very quiet weeks it would appear that a rise in tea shares is within sight at last. Prices have shown a tendency to rise, though no great activity has as yet developed.

As in the oil market, liquidation in Paris has depressed the mining market most of the week. Declines were widespread, but the sharpest falls were suffered by Rhodesians, especially Roan and Rhokana. The weakness was shared by Kaffirs despite a crop of encouraging reports. With the reversal of Continental sales on Tuesday, however, conditions improved somewhat all round.

NEW YORK STOCK EXCHANGE

DEPRESSION was the order of the day at the beginning of the week as prices continued their downward trend, disregarding excellent business reports. Labour troubles spreading in Detroit and elsewhere were largely responsible for this condition. The Administration's warnings against inflation are becoming more intense, and the possibility of increasing taxation to cut off the top layer of inflationary profits has been raised, although without a great deal of conviction as yet. Later in the week there was a slight change for better in a fairly light volume of trading. Steels, railroads and copper issues were in the lead, and even Government bonds were able to record a slight gain on balance. One of the disturbing factors with which the market is trying to reckon is the budget outlook; taxation revenue is not coming in as fast as budget estimates, and although the President hopes that higher taxation will not be needed next year, not everybody agrees with his optimism. The labour front is the scene of heavy action. Although open warfare has been postponed for the time by the agreement of officials of Chrysler to meet John L. Lewis, both parties said they came to conference only under duress, and any truce is likely to be troubled. Ahead lies the hardest nut for labour to crack, the unionisation of the Ford plants. In the general weakness which has prevailed in the markets since March 10th, utilities have been about the most resistant group, partly of course because they have enjoyed but little gain in the past. The economic outlook for utility operating companies is bright.

CAPITAL ISSUES

PRE-HOLIDAY quietude has prevailed in the new issue market this week. The dual offer of *Steel and Company* of 6 per cent. £1 preference shares at par and 5s. ordinary shares at 7s. 9d. is the larger operation of the two offers made. This merger company has interests in the engineering, casting, builders' merchanting and air-conditioning trades, but the most impressive increase in profits has recently come from one of the three companies acquired. The mixed character of the business is evident, and the earnings yield of 12½ per cent. on the issue price of the ordinary shares is no higher than their investment quality appears to warrant. *Trafalgar Engineering*, an electrical plant manufacturing concern, has a capital of no more than £90,000, in 2s. shares, of which 725,000 shares are offered at 75 per cent. premium. The profits record of this company puts even recent issues in the shade. For the last three complete years profits have been £1,274; £3,209; and £5,991, and for the latest six months no less than £11,803. Taking the latter figure as the basis for a calculation of annual earnings, a rate of 23½ per cent. is shown on the issued capital—or 13½ per cent. at the price of issue of the shares. Contrasted with this estimated figure, the actual earnings ratio on the issue price over the past 3½ years is under 3 per cent. Statements for information only have been published by *The Plessey Company* and *Wales Dove Bitumastic*.

CANADIAN PACIFIC RAILWAY COMPANY

FIFTY-SIXTH ANNUAL REPORT OF THE DIRECTORS

YEAR ENDED DECEMBER 31, 1936

To the Shareholders:

The accounts of the Company for the year ended December 31, 1936, show the following results:—

INCOME ACCOUNT

Gross Earnings	\$ 138,562,762.76
Working Expenses (including taxes)	115,251,651.83
Net Earnings	23,311,110.93
Other Income—Net	10,198,522.23
Provision for depreciation of Ocean and Coastal Steamships	8,567,151.00
	6,631,371.23
Fixed Charges	29,942,482.16
	23,913,298.24
Balance transferred to Profit and Loss Account	6,029,183.92

PROFIT AND LOSS ACCOUNT

Profit and Loss Balance December 31, 1935	\$ 139,504,688.15
Balance of Income Account for the year ended December 31, 1936	6,029,183.92
	145,533,872.07

Deduct:

Amount credited investment reserve being equivalent to advances made to Minneapolis, St. Paul & Sault Ste. Marie Railway Company to make up deficiency in amount available to meet interest obligations for year 1936 guaranteed by Canadian Pacific Railway Company	\$ 3,659,645.32
Loss on lines abandoned and on property retired and not replaced	3,857,399.34
Miscellaneous—Net Credit	15,875.98
	7,001,168.68

Profit and Loss Balance December 31, 1936, as per Balance Sheet

138,532,703.39

NOTE.—Subsequent to the end of the year, a dividend of 1 per cent. on the Preference Stock, amounting to \$1,372,569.21, was declared from the earnings of the year 1936, payable April 1, 1937.

The balance of Income Account resulting from the operations of the year 1936 available for transfer to Profit and Loss Account was \$3,197,100 greater than in 1935.

RAILWAY EARNINGS AND EXPENSES

The results of railway operations in 1936, compared with 1935, were as follows:—

	1936	1935	Increase
Gross Earnings	\$ 138,562,763	\$ 129,674,905	8,883,858
Working Expenses (including taxes)	115,251,652	107,261,381	7,970,271
Net Earnings	23,311,111	22,397,524	913,587

In 1936 working expenses, including taxes, amounted to 83.18 per cent. of gross earnings, as compared with 82.73 per cent. in 1935. Excluding taxes the ratio was 80.13 per cent. as against 79.56 per cent. in 1935.

Gross earnings showed an improvement each month over the corresponding month of the previous year, the total increase being \$8,883,858 or 6.9 per cent. The increase during the first three quarters of the year was 8.6 per cent., whereas in the last quarter it was only 2.6 per cent. The less favourable showing in the last quarter was due in large measure to the extraordinarily small grain crop which followed the severe drought in Western Canada.

Passenger earnings increased \$509,708 or 3.4 per cent. Effective June 1st, the passenger surcharges, included as part of sleeping and parlour car fares, were eliminated, and the basic fare for passengers in coaches was reduced from 3.45c. to 3c. per mile. All through fares between points competitive with United States railroads were also adjusted to meet the reductions ordered in Eastern United States by the Interstate Commerce Commission.

Freight earnings increased \$7,669,508, or 7.8 per cent., gains being recorded in practically all the principal commodities.

Working expenses increased \$7,970,271, or 7.4 per cent. More than one-half of the increase was in maintenance expenses, which were \$4,432,378, or 10.4 per cent., higher than in 1935. Almost the entire increase in maintenance of way expenses resulted from the inclusion of the whole of the Company's proportion of maintenance expenditures incurred by reason of the agreement with Dominion Government to provide work for approximately 5,000 unemployed men transferred from the relief camps which were being closed by the Government. The Government paid the wages of these men and certain incidental transportation and other expenses aggregating approximately \$1,323,000. The Company absorbed the cost of materials applied, of work train service, and of all supervisory and overhead expenses, the maintenance proportion of which amounted to approximately \$1,605,000. Snow removal expenses were somewhat heavier than in 1935. The greater part of the increased maintenance of equipment expenses was in passenger car repairs, which increased \$1,760,000. During the year 129 passenger cars were air-conditioned, involving heavy expenditures, partly chargeable to capital and partly to maintenance. Charges for retirement of rolling stock and depreciation of inland steamers were approximately \$1,024,000 greater than in 1935.

Transportation expenses increased \$2,394,237, or 5.0 per cent. The ratio of transportation expenses to gross earnings was reduced

from 36.6 per cent. in 1935 to 36.0 per cent. in 1936. The following averages indicate the continued improvement in freight train operations:—

	1931	1933	1935	1936
Gross tons per freight train mile	1,389	1,515	1,546	1,557
Gross tons per freight train hour	21,766	23,849	25,051	25,370
Pounds of fuel consumed per 1,000 gross ton miles freight	116	112	103	108

The scale of deductions from basic rates of pay of officers and employees made effective in 1935 was continued throughout 1936. During the year conferences were held between representatives of the Canadian railways and of their employees to discuss the request of the latter for the complete restoration of basic rates of pay. It was not considered that conditions warranted the granting of this request. This led to the application by the employees for the appointment of a Board of Conciliation under the terms of the Industrial Disputes Investigation Act. A Board was appointed and hearings took place in November and December. At the close of the year the Board had not made its report.*

OTHER INCOME

There was a substantial improvement in Other Income, the increase over 1935 amounting to \$2,053,027.

Dividends increased \$1,251,467. Cash dividends received from The Consolidated Mining and Smelting Company of Canada, Limited, included under this caption, amounted to \$3,365,000, an increase of \$1,177,750 over 1935.

Net income from interest, exchange, separately operated properties and miscellaneous increased \$493,993.

Net earnings from ocean and coastal steamships before depreciation increased \$317,266. There was a substantial increase in the gross and net earnings of the coastal services, reflecting the improvement in general conditions. Net earnings of ocean services were approximately the same as during the previous year. Net earnings of cruise services decreased substantially, due primarily to the change in the itinerary of the world cruise of the "Empress of Britain" made necessary by the disturbed conditions in the Mediterranean. Gross earnings of Atlantic services increased substantially but were offset by the cost of handling the additional traffic, increase in price of materials consumed, increased cost of repair work owing to higher wage rates, and an increase in seamen's wages in accordance with agreement with the National Maritime Board. Gross earnings of Pacific services increased slightly, and the expenses were considerably less than in 1935 owing principally to more favourable exchange rates. The increase in net earnings from these services was approximately equal to the reduction in net earnings from cruise services. During the year 1936 the Company's steamships made 136 regular voyages on the Atlantic, 25 on the Pacific and 35 cruises. Your fleet suffered no casualties during the year, and, apart from the disposal of one of the older coastal vessels and a transfer barge, no change was made in the fleet.

Net earnings from hotel, communication and miscellaneous properties decreased \$9,699. Your hotels enjoyed substantially increased patronage. The net earnings for the year amounted to \$672,796. While your hotels have been maintained in first class condition and the equipment modernised from time to time, the cost of renewals and replacements being charged to expenses, no provision has hitherto been made for obsolescence. After careful study of the situation, it has been decided to make an annual appropriation for this purpose. Accordingly, an amount of \$620,094 was transferred from the net earnings of hotels to hotel depreciation reserve.

STEAMSHIP DEPRECIATION

The full annual depreciation requirement for your ocean and coastal fleets, amounting to \$3,567,151, was appropriated from Income Account.

FIXED CHARGES

Fixed charges were \$246,639 less than in the previous year. This saving was due principally to the retirement of the remainder of the Five Year Notes held by the Canadian Chartered Banks out of the proceeds of new bond issues sold in Canada at lower rates of interest.

FINANCE

There were issued and sold during the year \$15,000,000 Collateral Trust Bonds dated February 15, 1936, secured by pledge of \$18,750,000 Perpetual 4 per cent. Consolidated Debenture Stock. This issue consisted of \$5,000,000 Serial 3 per cent. Bonds maturing in amounts of \$1,000,000 on February 15 in each of the years 1937 to 1941 inclusive, and \$10,000,000 Convertible Fifteen Year 3½ per cent. Bonds maturing February 15, 1951. The holders of

* Under date of January 30, 1937, the Board of Conciliation recommended: "That the existing deduction from basic rates of pay of 10 per cent. be reduced to 9 per cent. on February 1, 1937, as proposed in conciliation conferences by the railways, and that further fixed reductions during the year be put into effect unconditionally, namely, a reduction to 8 per cent. not later than August 1, 1937, and a reduction to 7 per cent. not later than November 1, 1937."

While the railways have expressed their willingness to accept the recommendation of the Board as the basis for an agreement, and have changed the percentage deduction from 10 per cent. to 9 per cent., effective February 1, 1937, the employees have indicated that they are not prepared to adopt the recommendations. The matter is still unsettled.

LONDON HOTEL SITE

In view of the necessary delay in the development of the hotel site in Berkeley Square, London, for the purpose for which it was purchased, your Directors decided to take advantage of proposals made by an outstanding firm for the immediate construction upon it of a modern building worthy of its importance. Negotiations contemplate a lease for a period of 200 years on terms satisfactory to your Company, with a limited option to purchase the freehold at a price in excess of the cost of the property to the Company.

CO-OPERATION WITH CANADIAN NATIONAL RAILWAYS

During the year two co-operative measures previously agreed upon were put into effect under the provisions of the Canadian National-Canadian Pacific Act of 1933.

1. Abandonment of the Canadian National Railway line between Itherville and Farnham and joint operation of the Canadian Pacific line.
2. Abandonment of the Canadian Pacific line between Cyr and Edmundston and joint operation of the Canadian National line.

The total annual economy from arrangements in effect at the end of the year is approximately \$1,135,000 and the Joint Executive Committee has approved and authorised the completion of formal agreements covering other projects estimated to yield savings of approximately \$527,000, a total annual saving of approximately \$1,662,000, one-half of which will accrue to each Company.

Meetings of the Joint Executive Committee were held during the early part of the year. Subsequently, under the legislation passed at the last session of Parliament, the Canadian National Trustees were replaced by a Board of Directors. Shortly after the Board assumed its duties in October, your Directors submitted to it proposals for co-operative action in a number of competitive matters, but, no doubt owing to pressure of other matters following their appointment, the Directors of the Canadian National Railway had not communicated their views to this Company at the close of the year.

STOCK HOLDINGS

The holdings of the Capital Stocks of the Company in December, 1936, were distributed as follows:—

	ORDINARY		PREFERENCE		Percentage of Ordinary and Preference Stocks combined
	No. of holders	Percentage of Stock	No. of holders	Percentage of Stock	
Canada	26,942	18.12	99	.31	11.44
United Kingdom and other	20,483	52.40	27,220	97.11	65.64
British	16,955	24.75	30	.58	17.59
United States	4,285	6.73	307	2.00	5.33
Other Countries					
	68,665		27,686		

In conclusion your Directors again acknowledge with sincere appreciation the continued loyalty and efficiency of the officers and employees.

For the Directors,
E. W. BEATTY, President.

MONTREAL, March 8, 1937.

BY OFFER FOR SALE

Trafalgar Engineering Company, Ltd.—Offer for sale of 725,000 2s. ordinary shares at 3s. 6d. Manufacturers of cable-making machinery. Profits, after depreciation, before directors' remuneration, to July 15: 1934, £1,274; 1935, £3,209; 1936, £5,991; six months to January, 1937, £11,803. Net assets, £64,230, purchased for £72,499, payable by 724,993 ordinary shares (excess of purchase price, £8,269). Sterling Securities Investment Company, Ltd., take issue at 3s. 1d., including expenses. List closed 9.5 a.m., March 24th.

Steel and Company, Ltd.—Offer for sale of 85,000 6 per cent. cumulative £1 preference shares at par, and 293,334 5s. ordinary shares at 7s. 9d. Engineers and air conditioning specialists; three businesses. Combined profits, after depreciation, before directors' remuneration, years ending in: 1934, £15,326; 1935, £20,908; 1936, £31,604. Net assets £154,444, purchased for £180,671, payable by £119,005 cash, 28,000 preference and 146,666 ordinary shares (goodwill, £26,227). Basildon Trust, Ltd., take preference shares at par and ordinary shares at 7s. 6d., including expenses.

BY STOCK EXCHANGE INTRODUCTION

The Plessey Company, Ltd.—Issued capital 1,000,000 5s. ordinary shares and 250,000 5½ per cent. cumulative £1 preference shares. Manufacturing engineers. Net assets £253,835. Profits, after depreciation, years to June 30: 1934, £13,813; 1935, £32,078; 1936, £51,109. Half year to December 31, 1936, £72,502. Messrs. Rowe, Swann and Company, take preference shares at 21s., with payment of 1s. per share and pay expenses. Managing directors receive 4 per cent. on net profits.

Wailles Dove Bitumastic, Ltd.—Issued capital, 700,000 5s. ordinary shares. Business founded 1854; manufactures Bitumastic anti-corrosive paints, cement, etc., for shipping, etc. Profits, after depreciation, years ended October 31: 1934, £16,265; 1935, £23,659; 1936, £27,026. Total assets, October 31, 1936, £272,537 (goodwill, patents, etc., £76,030). Cohen, Laming, Hoare and Peter Hicks and Company take 50,000 shares at 10s. 6d. net. Managing director receives 7½ per cent. of net profits.

PRIVATE PLACINGS

British Burmah Petroleum.—This company has placed privately 84,289 8s. shares.

Decca Record Company.—A block of 125,000 shares has been placed privately at 2s. 6d. Proceeds for acquisition of further interests.

ISSUES TO SHAREHOLDERS ONLY

Booth (James) and Company.—Issue of 100,000 £1 ordinary shares at par, in proportion of one new for three held on March 17th.

Bursledon Brick.—Issue of 31,250 10s. ordinary shares at 15s. 6d., in proportion of one new for four held on March 8th.

Clayton Dewandre.—Issue of 200,000 £1 ordinary shares at 27s., in proportion of 4 new for 35 ordinary shares held on March 11th; also 100,000 1s. deferred shares at 2s., in proportion of one new for twelve held on March 11th.

Head, Wrightson and Company.—Issue of 105,000 £1 ordinary shares at 28s., in proportion of one new for two held on March 8th.

Loloma (Fiji) Gold Mines.—Issue of 75,000 5s. shares, 1s. 6d. paid, at 16s., in proportion of one for ten held on March 11th.

Sanbra.—Issue of 500,000 1s. shares at 1s. 9d., in proportion of five new for eight held on March 10th.

Labis Bahru Rubber Estates, Ltd.—Offer for sale of 61,800 £1 shares at 30s. to shareholders of vendor companies, Java United Plantations, Besoeeki Plantations and Rubber Estates of Malaya. Area 4,112 acres: 3,193 planted, 2,986 mature. Purchase price £100,000, payable by 100,000 shares. Profits, after depreciation, years to September 30: 1934 (15 months), Dr. £854; 1935, £562; 1936, £3,590. 1937 assessment, 1,377,692 lbs. Vendors take a further 18,993 shares at 30s.

CONVERSIONS AND REPAYMENTS

General Mortgage Bank of Palestine, Ltd.—Issue of a new series of 5 per cent. debentures of £P. 300,000. The 6 per cent. debentures, series P, Q, R, are to be redeemed not later than 1938 and 1939 for £P. 81,540.

UNIT TRUST

Investment Trust Units.—(Cumulative). Managers: Trust of Insurance Shares, Ltd., Trustees: Lloyds Bank. Formed March 15th; 18–21 years' duration. Offer for sale of 9,250,000 units at 17s. 6d. Initial portfolio comprises holdings in 29 investment trusts. Securities of specified companies may be added. Service charge: initial 4 per cent., and semi-annual ¼ per cent. of market value. Trustees receive from managers ½ per cent. on sale price of units created. Fund created out of ½ per cent. from service charge for future management. £25,000 deposited with Trustees. Voting rights delegated by trustees.

SHORTER COMPANY COMMENTS

COMPANY RESULTS OF THE WEEK.—Included in the recent excellent—but not unexpected—results of the heavy industries, is CAMMELL LAIRD, with profits of £150,199, nearly three times the amount for 1935. An unusually rapid improvement is shown by the advance from £19,395 to £70,405 in the earnings of PROJECTILE AND ENGINEERING. VAUXHALL MOTORS, in reporting profits of £801,751, which are 18 per cent. higher, allude to a heavy demand such that for some months it has not been possible to fill orders, although extra facilities are now forthcoming. Shipping company results again show a notable recovery: no dividends are paid, but CAIRN LINE OF STEAMSHIPS have earned £16,771 against £3,507, and LAMPART AND HOLT LINE net profits of £43,614 are more than doubled. The increase from 9 per cent. to 12 per cent. in the JOHN LEWIS AND COMPANY dividend confirms the good impression made by recent store results generally. ERICSSON TELEPHONES, besides recording a rise of £28,000 in their profits of £140,602, point out that orders in hand show an increase. THE ASSOCIATED PORTLAND CEMENT report alludes to the maintenance of selling prices, but also to higher costs for coal and other commodities. Expansion of trade is exemplified by the increases in the balance sheet items of debtors by over £100,000 to £445,985, and of creditors by some £221,500 to £764,086, but trading profit of £1,149,494 was no more than £108,000 higher. BRITISH ALUMINIUM have earned £398,930 against £296,853, recovery being such that plant long idle is being gradually restarted, and capital is required to extend the capacity of LOCHABER POWER and of NORTH BRITISH ALUMINIUM. The depreciation and reserve accounts have again been strengthened, so that together they now stand at £2,550,000 against total assets of £10,620,482. The BRITISH ROPES dividend of 25 per cent. is double the 1935 payment, the profits of £211,575 being 34 per cent. higher; a disappointing export trade has been compensated for by better home trading conditions. The 1936 profits of VAN DEN BERGH AND JURGENS are £752,252, but the results of other companies in the Unilever group, JOSEPH CROSFIELD AND SONS, WILLIAM GOSSAGE AND SONS, and JOHN KNIGHT, LTD., show only moderate progress—and in the latter case actually a small decline in net profits. Expanding purchasing power is vividly illustrated by the rise from £192,359 to £245,273 in the net profits of ROWNTREE AND COMPANY. A record level of production attained by EDWARD LLOYD, LTD., resulted in earnings of £504,077 against £250,036. Profits of the E. LLOYD INVESTMENT COMPANY amounted to £113,445. An increase of 54 per cent. in the value of sales increased GENERAL REFRACTORIES profits of £64,388 by 17 per cent. Expanding operations in all departments of TARMAC, LTD., have resulted in a rise from 6 per cent. to 7½ per cent. in dividends. CURRYS, LTD., with profits of £73,983 against £103,889 have suffered a setback on account of keener competition in the wireless trade and the effect of last summer's weather on cycle sales. A reduction from £110,183 to £63,526 in RICHARD COSTAIN, LTD., earnings is due largely to concentration of the company's activities upon Dolphin Square.

INSURANCE

CALEDONIAN INSURANCE BONUS RESULTS.—The Caledonian Insurance Company have declared reversionary bonuses for the triennium ended December 31st last at the rate of 42s. per cent. on whole life and 40s. per cent. on endowment assurances entitled to participate at that date. Interim bonuses at the same rate will be paid on all participating policies becoming claims by death or survival during the year.

APPOINTMENTS AND PERSONAL

London Brick Company announce that Mr A. T. Worboys has been appointed deputy chairman. He has been a director since 1917 and managing director since 1927.

Mr Brian Frank Wood has been appointed secretary of the Gas Light and Coke Company.

Dr Charles Carpenter has resigned from the presidency of South Metropolitan Gas Company and the chairmanship of the South Suburban and Commercial Gas companies. He will retain his seat on each of the three boards. Mr Frank Jones succeeds him as president of the South Metropolitan Gas and in the chairmanship of the other two companies. Mr A. M. Paddon has been appointed vice-president and to a managing directorship of the South Metropolitan Gas Company.

Mr Robert McDougall is retiring on March 31st from the board of McDougalls, Ltd., but is retaining his seat on the board of McDougalls Trust. Mr T. H. Fairbrother has been appointed to the board of McDougalls, Ltd.

Mr T. L. Jacks, C.B.E., has been elected a director of Trinidad Petroleum Development Company, Ltd.

Sir Ernest Sanger, J.P., L.C.C., chairman of Sangers, Ltd., has resigned from the board for personal reasons.

MISCELLANEOUS

PROVINCIAL CINEMATOGRAPH THEATRES.—Profit to January 31, 1937, £503,925, against £494,367. Ordinary dividend maintained at 15 per cent. To tax reserve £39,250, against £38,700; depreciation £97,000, against £95,000; debenture sinking fund £13,732, against £13,078; reserve £75,000, against £70,000.

CERTIFIED ACCOUNTANTS.—The next examinations of the London Association of Certified Accountants will be held on June 1st, 2nd and 3rd, in Belfast, Birmingham, Bristol, Cardiff, Cork, Dublin, Edinburgh, Glasgow, Hull, Leeds, Liverpool, London, Manchester, Newcastle-on-Tyne, Nottingham, Plymouth and Sheffield. Women are eligible under the Association's regulations to qualify as Certified Accountants upon the same terms and conditions as are applicable to men. Particulars and forms are obtainable at the offices of the Association, 50 Bedford Square, London, W.C.1.

COMPANY MEETINGS**THE HONGKONG AND SHANGHAI BANKING CORPORATION**

[Incorporated in the Colony of Hongkong. The Liability of Members is limited to the extent and in manner prescribed by Ordinance No. 6 of 1929 of the Colony]

IMPROVED CONDITIONS IN CHINA**RELATIONS WITH JAPAN****PROGRESS IN SETTLEMENT OF ARREARS OF FOREIGN DEBTS****BRIGHTER OUTLOOK FOR CURRENT YEAR****THE HON. MR J. J. PATERSON'S REVIEW**

The ordinary yearly general meeting of the shareholders of the Hongkong and Shanghai Banking Corporation was held in Hongkong on February 27th last.

The Hon. Mr J. J. Paterson presided.

The Chief Manager read the notice convening the meeting.

The Chairman said:—Ladies and gentlemen,—The report and statement of accounts having been in your hands for some days, I will, with your permission, take them as read.

After making full provision for losses and contingencies, the net profits for the year amount to \$15,107,175.19, to which must be added \$3,327,060.03 brought forward from the previous year.

After deducting the interim dividend of £400,000 paid at 1s. 3½d. and directors' remuneration there remains available for distribution \$12,085,327.66, which it is proposed to deal with as follows:—

To pay a final dividend of £3 per share (subject to deduction of income tax)	\$7,744,537.82
Transfer to bank premises account	1,000,000.00
Carry forward to new account	3,340,789.84
	\$12,085,327.66

BALANCE-SHEET ITEMS

The figures of our balance sheet have been taken at 1s. 2½d., against 1s. 3½d. the previous year, so a comparison between the two is easier than it has been sometimes in the past.

Considering that part of the readjustment of 1935 had to take place during 1936, the difference in our figures is not so great as one might have expected and can roughly be stated as follows:—

—On the liabilities side notes and current accounts are up some \$8,500,000 and \$80,000,000 respectively, while fixed deposits are down \$20,000,000, and among our assets investments and loans show increases of \$39,000,000 and \$58,000,000 each, as against a decline in bills receivable of \$20,000,000.

It is generally agreed that the trade depression which developed in 1929 has now moved away from the greater part of the world. In fact, that almost ill-omened word "boom" is again being used in regard to conditions in some countries, particularly in England and the United States. Nevertheless, there is a wide realisation that the outlook is still obscure; that there is an artificiality about the boom, if it can be called such; that in most countries the word is applied with very little real basis; and that it is liable to disappear like a pricked balloon if steps are not quickly taken to put right certain basic economic factors which are known to be awry. But apart from economic factors there is also the political situation in Europe, which gives rise to hesitation if not alarm. Our home Government are facing a very difficult task in struggling to preserve Europe from getting embroiled in a general conflict, and the many political and economic problems which they are facing are appalling in their complexity.

CONDITIONS IN CHINA

It is a relief that my task to-day is not to review the situation as it has existed in Europe during the past year. What I am called upon to do is to direct your minds to the countries in which we operate, and particularly to China, where conditions have at any rate not been so depressingly tense as in Europe.

Let us start off with China. The year 1936 has in some ways been typical of recent years. It has again been one of changes, bright periods and periods of gloom, marchings and counter-marchings. Nevertheless, the bright moments have definitely had the best of it, and, although there will almost certainly be bad patches from time to time, yet we feel fairly confident that in due course, as the stability and authority of the Chinese Government become consolidated, the outlook will still further improve. It must not be forgotten how immense is the task of unifying and governing such a great country as China. It has often been pointed out that the proper comparison is between China and Europe rather than between China and a single country. This indicates that patience is needed and too much must not be expected yet.

RELATIONS WITH JAPAN

Relations with Japan have again dominated the political scene, and the outstanding feature of the year is that China has maintained the *status quo*. In spite of difficult periods she has shown that she is more than ever determined to stand her ground. In North China, at any rate outwardly, there is little change to be seen. The Hopei-Charhar Political Council remains under the control of General Sung Che-yuan, and the autonomous regime of Eastern Hopei still exists under Yin Ju-keng.

Negotiations, or at any rate conversations, between the Chinese Foreign Office and the Japanese Ambassador, with a view to a fundamental readjustment of the relations between the two countries, have been proceeding in an intermittent way. The Chinese attitude has, if anything, stiffened up during the year, but there were occasions when compromise seemed possible. However, both sides were responsible for set-backs; there were unfortunate incidents involving death or injury to Japanese on various occasions in different parts of China, and there were also set-backs caused by the attitude of the other side. Finally, the seizure of Chiang Kai-shek at Sian and the subsequent developments in Shensi so preoccupied the Government that discussions were held up and the negotiations between the two countries remain for the moment in suspense.

THE DOUBLE TWELFTH AFFAIR

The seizure of the Generalissimo at Sian on December 12th, which the Chinese now refer to as the Double Twelfth affair, came as a great shock to China, and although he was released within a fortnight a tragedy was at one time feared.

I believe that the Generalissimo has repudiated the title of dictator. All the same, his influence is felt everywhere in China, and either directly or indirectly his hand can be traced behind most of the progressive schemes of development which have been initiated during the last few years. He has done much for China, and his removal would be a serious blow to the progress recently made. Prior to the Sian incident the country seemed to be reasonably quiet and the Central Government firmly installed, but since then there has again been uncertainty, though the plenary session of the Central Executive Committee just concluded has, we trust, cleared the air.

I must before passing on mention the change which has taken place in the status of Kwangtung. Here in Hongkong we are particularly affected by the transfer of control, and it has been

a matter of considerable interest and importance to us. We were glad to see how firmly and yet adroitly the Generalissimo dealt with the situation prevailing last summer, and while we do not expect, and indeed do not want, very rapid changes—the situation is still too impermanent for that—we look forward to close collaboration between Hongkong and Canton in all inter-connected matters and trust that the good foundation laid by his Excellency Sir Andrew Caldecott, when he visited Canton last year, will be productive of benefit to both sides.

Your board of directors fully associate themselves with the many public expressions of regret at the transfer of Sir Andrew to Ceylon after so short a period as the Governor of this Colony. Our loss is their gain. We feel sure that he will win the confidence and esteem of Ceylon as quickly as he did of Hongkong.

CURRENCY QUESTIONS

I will now turn to currency questions. In Hongkong we started the year with exchange at 1s. 3½d., rising to 1s. 3¼d., where it remained until the middle of May. By the middle of September the rate declined to 1s. 2½d., but recovered to 1s. 2¾d. at the end of the year.

After a full year's trial we may say that our new currency has worked most satisfactorily, with a minimum of fluctuations, which has been a great help to merchants.

As you all know, China is no longer on a free silver currency standard. Her currency system may perhaps fairly be termed a managed foreign exchange standard, although her currency reserves are in fact partly in foreign exchange, partly in gold, and partly in silver. But the connection with silver is a precarious one in spite of the declaration of the Government on May 17th last that 25 per cent. of the reserve held against the note issue would be maintained in silver. It is true that silver dollars, of the old type, still circulate as a medium of payment in some of the more distant parts of China, and fair quantities are certainly hoarded, but it is probable that in time these will be melted down or come into the hands of the authorities. In due course the Government is expected to issue silver token coins, but none of these have as yet been minted.

USE OF SILVER

The arrangements with the United States made by the K.P. Chen Mission last summer, full particulars of which have not been revealed, provided, so far as is known, for the purchase by the United States of regular and substantial amounts of silver at the average monthly world prices, while China on her side agreed to enlarge the use of silver and maintain an independent currency system unlinked to any foreign monetary unit. Thus it will be seen that silver has not yet been entirely cast off, though its future influence in China seems likely to be small. The foreign banks, with the exception of the Japanese, handed over all their silver against legal tender notes early in the year, but no information is available as to the actual stocks now held by the Chinese Government. Considerable amounts have, of course, been disposed of. The legal tender note issue at the end of the year was about \$1,100,000,000—which excludes the issues of the commercial banks whose notes have not yet been entirely recalled, and of the Farmers' Bank, the position of which is somewhat obscure. According to the reports of the Currency Reserve Board, fully 60 per cent. cover against the notes of the Government banks is held in "cash," which term includes foreign currencies. These legal tender notes are now current in every province throughout China in varying degrees of popularity and they are steadily replacing other forms of currency.

SKILFUL MANAGEMENT BY CENTRAL BANK

Sir Frederick Leith-Ross has stated that the Chinese monetary reforms have been justified by their results. Everyone will agree that so far there has been no hitch, but rather there has been every sign of skilful management by the Central Bank. Occasional political scares have caused speculative manipulations, but the official rate has nevertheless been maintained without wavering, and the resources at the disposal of the Government banks have proved adequate. During the whole of 1936 the rates in Shanghai for the pound have remained between 1s. 2½d. and 1s. 2¾d., a difference of only ¼d., while the U.S. dollar rate has ranged from 29½ to 30½. These differences can be attributed in part to fluctuations in the London-New York cross rate.

I will deal with the trade figures later on, but it is obvious that the lowered rate of exchange has encouraged exports, and although imports have been adversely affected, nevertheless the steadiness of exchange has to some extent offset this disadvan-

tage. I cannot do better than quote Sir Frederick Leith-Ross's opinion of last June when he said:—

"All things considered there would appear to be every reason so far as economic factors are concerned for confidence in the present currency scheme, provided that the Chinese Government complete and carry through efficiently the programme of internal reforms including especially the reorganisation of the Central Bank and the reform of the budget."

MEASURES OF REFORM

There was much more in Sir Frederick's admirable statement which still applies with great force. He referred to the necessity of unification of the note issue, to the dependence of the currency on internal stability and to a settlement of the special situation in North China which has been, and still is, a potential danger to the Customs revenue. We understand that the Government is taking in hand the essential measures of reform which were in fact promised by Dr H. H. Kung on November 3, 1935, and while progress may seem to be slow, it is realised that Governments have many difficulties which are unknown to those outside the inner circle.

We trust, however, that it will not be long before some announcement will be made of the action taken. Managed currencies are liable to be a serious danger to merchants and bankers if the "management" is not founded on a firm and solid basis such as is implied when there is an independent Central Reserve Bank and a well-regulated budgetary system. Without such a basis "management," like monopolies, tends to become the plaything of politics instead of following natural values. Moreover, one kind of "management" leads to another. It becomes a kind of whirlpool drawing into its control industries, imports, exports, and so on until rigid State control reigns supreme.

We, of course, realise that there are few countries with a completely independent Central Bank system and that consequently politics often play a permanent part in currency matters. For this reason it will be obvious to you that very great importance attaches to the actual terms of the new Central Reserve Bank Act, which will be keenly scrutinised by all who are interested in China's currency and finance.

SIGNS OF RECOVERY

If conditions in China keep up the steady improvement which has been made recently, and if unification of the country is maintained and internal strife is avoided, perhaps China will be more willing to allow free play to the natural forces of supply and demand. The signs of recovery are clearly apparent and the excellent crops throughout the country have been a great boon, coming as they did at a time when exchange had just been fixed at a reasonably low level and when the demand for China produce was improving abroad. As a few instances we may mention the improvement in Chinese commodity prices, the rise in yarn, the demand for piece-goods, which has resulted in the reopening of closed cotton mills, and encouraging progress reported by utility companies.

Shanghai is, however, still faced with one serious handicap to entire recovery in the deadlock that exists in regard to its mortgage and real estate problem, with which is bound up the question of the right of landlord vis-à-vis tenant. There are anomalies in the laws governing these matters which require to be straightened out. Chinese property owners are just as much affected as foreigners, and we trust that the legislative authorities will deal with these points shortly, as we believe they are being urged to do.

INTERNAL DEBT CONSOLIDATION SCHEME

Early last year an internal debt consolidation scheme was presented to and accepted by bondholders, whereby the interest rate on domestic bonds was reduced to 6 per cent., and amortisation schedules were considerably extended. About the same time a recovery loan of \$340 millions was placed with the Government banks. Since then the Government have had no recourse to the domestic bond market, but have covered their requirements by other means. There have, however, been a number of provincial and railway bond issues, some of which have been secured on revenues of the Central Government.

Excellent progress has been made throughout the year in the settlement of foreign debts in arrears. Apart from the steps taken to clear off numerous commercial debts due by Government departments, the initiative taken by the Governor of the Bank of England in forming a Chinese Railway Bondholders' Committee in London has proved to be of great value and assistance. As a result of negotiations initiated by the Ministers of Finance and

Railways, terms of readjustment of the Tientsin-Pukow Railway Loans, the Honan Railway Loan, the Lung Hai Railway Loans, and the Canton-Kowloon Railway Loan have been recommended by the committee for the acceptance of British bondholders. These offers have in every case been well received in London as being the best obtainable in the circumstances.

HUKUANG RAILWAYS LOAN

A settlement of the Hukuang Railways Loan has been complicated by the international nature of the flotation, but an announcement may be expected in the near future. A settlement of the Vickers-Marconi debt has also been negotiated by another committee, and at the present moment it seems that all Chinese loans floated in London excepting the Hukuang have been readjusted as satisfactorily as can be expected. In the first few years the resultant charges on the Ministries of Finance and Railways are quite small, and this gives time for the Government to complete their plans for the rehabilitation of the finances of the country, which we see no reason to doubt can be done if political stability is assured.

Improved returns have been reported by the Salt and Internal Revenue Administrations, while the increase of \$9,000,000 in the Customs revenue for 1936 came as a considerable surprise in view of the smuggling in North China which was known to have seriously affected the collections in Tientsin and the northern ports. The Customs authorities have on the whole successfully prevented the transportation of smuggled goods southwards, but in the East Hopei district there has been practically no easing of the situation except as and when the saturation of supplies has caused a temporary slow-down in the smugglers' activities. Whatever measures the Customs take can only be palliatives, and no real solution will be possible until the political status of the East Hopei autonomous area is settled by diplomatic negotiations.

CUSTOMS ADMINISTRATION IN NORTH CHINA

It is recognised that the Customs Administration have throughout the year been confronted with unprecedented difficulties in North China, and the integrity of the service has from time to time been seriously threatened. But by the exercise of great resolution coupled with tact, Sir Frederick Maze has succeeded in maintaining the authority of the Customs inspectorate in the midst of much political confusion and unwarranted interference with its legitimate functions. The Customs service have a fine record, and again and again have they remained practically the only outward and visible sign of the prestige and sovereignty of the Central Government in regions where otherwise independent regimes existed. This record has considerable significance from a financial standpoint and has contributed very largely to the confidence placed abroad in loans secured on the Chinese Maritime Customs.

The last published financial report of the Chinese Government related to the fiscal year which ended on June 30, 1935. The deficit for that year was \$196 millions. As regards the year 1935-36, an official statement has declared that the deficit was larger than the previous year; nevertheless the Budget for the year 1936-37 only provided for \$125 millions as proceeds from loans. Without official figures it is impossible to say more, but the recent improvement in the purchasing power of the people should have a favourable effect on revenue receipts, both of the Internal Revenue Administration and the Customs, through an increased demand for internal consumption goods, as well as for imports.

DEVELOPMENT OF COMMUNICATIONS

References have in past years been made by my predecessors to the great progress in the development of communications in China. The cumulative effect of these developments is now making itself felt, and the country is being opened up in a remarkable way. It is now possible to cross China by railway, by motor, or by air. It is possible to telephone or radiophone direct from here to Shanghai and from Shanghai to Japan, Nanking, Hankow, or any one of nine adjacent provinces. Radio broadcasting stations are almost excessive in their number, but their influence is being widely felt, for instance, in the broadcasting of market prices to up-country farmers, who are thus less and less under the thumb of the middleman.

From the bank's point of view the progress in railway construction is of special interest. Since the present Minister of Railways took office in December, 1935, many very important and extensive projects have been put under way. His ambition is to complete 5,000 miles of new railways within five years, and thus practically to double the existing system within that period.

At the same time he has been bringing his business training to bear on the problems of the existing lines and he has the good fortune to point to record earnings on those two very important lines, the Peiping-Hankow and Tientsin-Pukow Railways.

Some of the agreements made by the Ministry during the year for railway construction have been on a comparatively short term and somewhat uneconomic basis, but we understand that the Chinese Government argue that it is essential to press forward on whatever terms they can best obtain credits. Their view is that many of their most serious problems will be automatically solved if means of communication can be developed rapidly. It stands to reason, of course, that the Government will gladly avail themselves of sounder and more economical finance as soon as it is available.

TRADE SITUATION

As regards the trade situation in China, the most significant change is that to be noted in the Customs figures of the export trade, which last year amounted to \$706 millions. This is 22 per cent. higher than the year before and, excluding Manchuria, the best results shown since 1931. Imports increased \$22 millions in value, but this improvement was entirely due to the higher rate of the Customs gold unit in terms of Chinese dollars, which averaged \$2.26 in 1936 as against \$1.86 in 1935. In terms of Customs gold units imports actually show a reduction of 85 millions of gold units.

The adverse trade balance was just under \$236 millions, which is the lowest figure since 1919, when China exchange was almost at its peak, and it compares surprisingly with the figure of \$1,087 millions in 1931, when exchange was at its lowest point. Any estimate of the international balance of payments must, in view of the continued lack of reliable statistics, remain highly uncertain, but the improved conditions in Malaya, the Philippine Islands, and the Netherlands East Indies, are likely to affect remittances from overseas Chinese favourably, and the balance may well prove to be in China's favour.

During the early part of the year trade conditions did not appear to warrant any optimism except as regards certain export commodities in which America was taking an interest, particularly wood-oil, but towards the autumn a definite change became apparent. The demand for Chinese produce remained steady, and, added to this, the effect of the good crops, to which I have already referred, began to make itself felt.

BUMPER CROPS

In many parts there were in fact bumper crops. In the Yangtze Valley the rice yields were exceptionally good, and have been estimated as 30 to 40 per cent. above the normal average. The wheat crop, said to be about 500,000,000 piculs, was fair, though not up to the best records. The cotton crop passed all records by a good margin. The production is estimated to have reached about 14,500,000 piculs of 133 lbs., which is over 3,000,000 piculs higher than ever recorded in the past. The acreage under production is further estimated to have increased at least 12 per cent. over the previous high mark. Much of the credit for the good cotton crop must be given to the National Economic Council, a tribute to whose work was paid by your chairman two years ago.

The improved demand for wood-oil has made that commodity the leading one in the list of Chinese exports, beating all records both in value and quantity. Other export commodities show improvements, especially tin, but one feature of the year is the trend towards monopolies and State control in the export trade, which is partly due to the conclusion of barter agreements with foreign countries. The economic wisdom of this policy is, of course, very doubtful, especially in China, where administrative experience is lacking and other internal difficulties abound.

IMPORT POSITION

The import figures which I have given might not seem to warrant much optimism, especially as an analysis shows that in many cases where progress can be traced it was due to purchases on account of the Chinese Government. Nevertheless, it is clear that far the larger part of the drop in imports was in those goods which China is well able to, and now is, producing herself in larger quantities—namely, rice and wheat, raw cotton and cheap cotton goods (imports of the latter are incidentally at their lowest point for a great many years). The effect of the improvement in the internal situation was only just beginning to be felt at the end of the year, but import merchants are generally agreed that the outlook is now more promising.

I have referred to the good crops in China during the past year and to the improved position of the export trade, but when

we turn to Manchuria, China's figures lose by comparison. Up there exports have increased no less than 42 per cent. compared with the previous year, and the total exports from Manchuria are within 20 per cent. of those of China. This improvement is mainly due to the better prices obtained for beans and bean products which actually provide not far short of half of the total exports. Imports improved by 14 per cent., and the foreign trade total of about Manchukuo Yuan 1,289,000,000 is an easy all-time record. The adverse trade balance was last year reduced considerably, but it is clear that Japan, which is responsible for about two-thirds of Manchukuo's trade, is still furnishing extensive credits to that country. Internal conditions have improved, but no noticeable benefit has yet accrued to European or American exporters, and a foreign exchange control law has increased traders' difficulties.

SITUATION IN JAPAN

The situation in Japan does not on the face of it make for optimism, and persons trained in economics are making the gloomiest of forecasts as to the outcome of the political, financial and trade situation as it exists at present. It is impossible to foretell how the political situation will develop, but we hope for the best. As regards the Budget, we must confess to misgivings. But as regards trade, the position hardly seems to warrant pessimistic conclusions. Last year's figures again showed considerable expansion and compare very favourably with those of many other countries. Exports have increased about 8 per cent. in spite of the handicap of tariffs and quotas, while the visible adverse balance of trade is believed to have been covered by invisible receipts. Shipping has been very prosperous and the tourist trade greater than ever.

The drastic exchange control measures instituted on January 8th of this year aimed at dealing with the nervousness in the exchange market caused by the unbalanced Budget and the prospects of heavy buying abroad to cover Army and Navy requirements. These measures should result in a better balance between imports and exports, but there are no indications of any serious check in the expansion of trade throughout the present year.

TRADE IN MALAYA

In Malaya, as in China, trade began to look up in the second half of 1936, mainly because of the better demand for the two chief products—tin and rubber. Prices have been at remunerative levels for producers, and the prospects for the present year are promising.

In the Philippine Islands political conditions have been normal, and the business community feel confident that they will be able to operate without legislative interference. The boom in gold mining has been coupled with higher prices for the main local commodities, such as sugar, copra and hemp, and as a result the export figures have increased considerably, while the financial position of the Government has also improved. Increased taxation on the production of mines and on corporate incomes may affect the importation of foreign capital, but the outlook is, generally speaking, good.

REASONABLY BRIGHT OUTLOOK

In conclusion, may I just remind you that in times of difficulty wide differences of opinion are to be expected in business circles, and more especially do bankers and their constituents find points of disagreement. It must be remembered that the last few years have been an exceptionally trying and uncertain period. The world is now emerging from its difficulties. Some countries have come through better than others, and the Far East has come through better than many parts. On the whole, the outlook is reasonably bright, but it is not safe to prophesy what the future holds in store. For ourselves, our desire and our duty is by collaboration with those of like mind, whether in China or in the other countries in which we operate, to work for a steady expansion of international trade, and more especially of British trade, while continually aiming at upholding the world-wide prestige of British banking.

With these remarks, ladies and gentlemen, I beg to propose the adoption of the report and accounts as presented, and after they have been seconded I shall be pleased to answer any question that may be asked to the best of my ability.

MR J. H. TAGGART'S REMARKS

In rising to second the report, Mr J. H. Taggart said:—Mr Chairman, ladies and gentlemen,—In rising to accord formal support to the motion covering the adoption of the report and

accounts, I have at the back of my mind advice made available to a shareholder—in a similar position of seconder—in connection with the flow of words deemed advisable to suitably amplify the bare expression of acquiescence, to the following effect: To think out carefully the opening sentence—to think out carefully the closing sentence—and to bring the two together as speedily as possible.

I trust that my endeavour to adhere to the principles of that golden rule will not—to-day—leave me open to charges of inadequacy, particularly in the light of the comprehensive survey which you, Mr Chairman, have so ably presented to us in relation to matters economical and political, the trend of which have such sharp reaction upon the conditions of trading encountered by the bank in its various spheres of operation. For your informative and heartening address I tender you our sincere thanks.

Turning to the financial results for the year under review I am confident I voice the unanimous desire of constituents in proffering the court of directors—and in particular to Mr Grayburn, our chief manager—and to those able colleagues who have worked in collaboration with him—our congratulations on the excellence of the results achieved as evidenced by the accounts with which we are again presented. I would add:—"Verily there are still giants in the land."

BANK'S SYMPATHETIC ATTITUDE TO TRADERS

Mr Chairman, you have stated to-day that it is the desire of the bank to work for a steady expansion of trade—and British trade in particular—in the countries within which the bank operates. In so far as this Colony is concerned—and speaking from personal experience—I would affirm that the sympathetic attitude of the bank to traders and corporations alike, covering the past years of severe depression—to which you make reference—has been indeed marked. Moreover, it has been sympathy of a degree not bounded by verbal expression alone, but endorsed by the co-operation, and active assistance, of the officials of the bank. In this relation—I may add—many concerns which have—with the aid of the bank—emerged through stormy times of a severity likely to have swamped them—bear gratitude.

It is observed that close co-operation between Canton and Hongkong is looked forward to, and I am confident that shareholders heartily endorse your hope that the foundation laid by his Excellency Sir Andrew Caldecott on the occasion of his visit to Canton will—under the present enlightened administration in that city—in due course support a structure of mutual understanding, reciprocity, and good will of a strength as will be difficult to demolish. His Excellency's rapid advancement in the Colonial Service bears testimony to the tact, ability, and administrative capacity which has been displayed to the full by his Excellency during his brief terms of office here. At the impending departure of Sir Andrew and Lady Caldecott the Colony universally holds regret.

We have also suffered the loss of a staunch supporter for the promotion of friendly relations between Canton and Hongkong in the person of the late British Consul-General, Mr Herbert Phillips. In this case also no course remains to us but to adjust our sense of regret to a consciousness of gratification at his well-deserved promotion to higher office and to express good wishes for his future well-being.

CONFIDENCE IN THE FUTURE

It is indeed gratifying to gather from your remarks that your diagnosis of the situation in the Far East embraces confidence that the better conditions which have prevailed during recent months will proceed to greater improvement. In the realisation of such an enhancement we are assured that the bank will continue in the forefront of trade expansion manoeuvres—worthily maintain the dignity and prestige of British banking, and, in its operations, further warrant its description: "The corner stone to the fabric of Far Eastern finance."

In conclusion, I desire to express to the staff—whose excellence of service and loyalty are traditional—our deep sense of gratitude at their efforts which have contributed so materially to the eminently satisfactory position displayed in the accounts which are submitted for adoption to-day.

With these few remarks, Mr Chairman, I have great pleasure in seconding your proposal that the report and accounts as presented be adopted.

The Chairman: There being no questions, as proposed by myself and seconded by Mr J. H. Taggart, the motion now before the meeting is the adoption of the report and statement of accounts as presented.

The report and accounts were unanimously adopted.

THE MERCANTILE BANK OF INDIA, LIMITED

BETTER EASTERN TRADING CONDITIONS

PROFIT INCREASED

STRIKING IMPROVEMENT IN INDIA

THE POSITION OF JUTE

LORD CATTO'S ADDRESS

The forty-fourth annual general meeting of the Mercantile Bank of India, Limited, was held, on the 23rd instant, at Winchester House, Old Broad Street, London, E.C.

The Right Hon. Lord Catto of Cairncatto, chairman of the bank, presided.

Mr J. B. Crichton (chief manager) having read the notice convening the meeting and the report of the auditors.

The Chairman said:—Ladies and gentlemen,—The report and accounts have been in your hands for some days, and I presume that, as usual, you will permit me to take these as read. (Agreed.)

As the accounts disclose, the year 1936 was a better year for Eastern banking than 1935, and the net profit available for allocation is £181,723, against £174,266 for the previous year. This has enabled us to allocate £20,000 to bank premises account, against £10,000 in the previous two years; the other allocations are the same as for 1935—namely, £12,000 to pension fund and £25,000 additional provision for contingencies. After providing for the same dividend as for 1935 the balance to be carried forward is £172,829, compared with £174,097 for the previous year.

You will recollect that when I addressed you at our last annual general meeting I was able to report that the enormous reduction in the volume and value of overseas trade of the countries in which we work had been arrested and that a slight improvement had set in. I am glad to say that in 1936 this improvement showed a notable advance, bringing a distinct increase in banking business, and the margin of banking profit is so fine that, in spite of the increased volume of business, it has been difficult to make any substantial addition to our total revenues.

INDIA

The improvement in the volume and value of India's trade in 1936 has been striking. In addressing you last year I told you that for 1935 India's balance of trade in merchandise was rather less than 25 crores of rupees. This rose to nearly 61 crores in 1936! This is specially interesting and encouraging, for it is the first year since 1930 that India has had a trade balance in merchandise which I may perhaps say is substantially in excess of her requirements for external obligations, without the export of gold. The inferences that may be drawn from this are that the tide has turned and that it may not be long before we see India again a substantial importer of the precious metals. The export of gold considerably lessened in 1936. The high point was reached in 1934, when the net export was 6,591,760 oz., valued at nearly 60 crores of rupees; in 1936 this had fallen to almost half—namely, 3,459,034 oz., valued at 32 crores.

It has been well said, and I have emphasised it in my addresses at these annual general meetings, that the prosperity of India depends mainly upon the condition of the cultivators who make up the bulk of her huge population. They cultivate small holdings and they reserve part of their crops for their own consumption. They sell the rest. Part of the money they receive is spent on fixed charges like rent, rates and interest on loans, for they are almost always in debt. The balance remaining over they spend on the purchase of cotton cloth and on other simple necessities of a simple life. At the best of times the amount available for personal expenditure is never much and in bad times the margin is apt to disappear: therefore the price of primary commodities, especially cotton, jute, seeds, grain and pulse, is of paramount importance for the cultivator and for India as a whole. I am happy to say that in 1936 the improvement in value of most of these primary commodities was noteworthy.

GOOD PROSPECTS

At such a meeting as this it would be tedious for me to quote figures: it is sufficient if I say that from my examination of con-

ditions it looks as if a period of improved trade and greater prosperity is in store for India. Of course, prosperity depends greatly on political conditions, their stability and the confidence that stable conditions naturally inspire. This will be a critical year for India. Provincial autonomy comes into being in April. All in this country, and especially those of us who keep our eyes ever on the East, will watch with sympathy and interest how these new and great responsibilities are discharged. In some parts the exaltation of self-government may prove too strong at first and bring unreasoned counsels, but we must not be too critical if there are setbacks.

SELF-GOVERNMENT EXPERIMENT

Such a vast change can hardly succeed except through much, and perhaps long, travail. But India is and always has been a land full of contradictions and her political resources in men and policies may again surprise us, just as her financial resources did by her gold exports in 1931-1936. In any case, history will have this paradox to record. At a time when Europe, always regarded as politically far in advance of the East, is passing through a period of almost unparalleled human unrest and political reaction, there is being tried in India a political ideal of self-government for teeming millions of people, which if it succeeds may prove in the long run to be more lasting and may add more to the sum of human progress than any of the spectacular political experiments at present being tried in so many European countries.

I think I have given you in as succinct a form as possible a general review of Indian conditions. It would take too long to review in detail the position of her industries, but one in particular, and that a most important one, is passing through such an extraordinary phase that you may wish me to refer to it.

JUTE

Once the pride of India's industrial development, the jute trade at present is something of a Cinderella. But the very measure of the depth to which it has fallen may prove its salvation, for in the general economic recovery jute and jute manufactures are more than ever essential. In his recent Budget speech Sir James Grigg, Finance Member of the Government of India, had to budget for a deficit, and has had to propose additional taxation. This is unfortunate, as India already is a heavily taxed country. I might remind the Finance Member that this deficit might even have been avoided had India been deriving proper benefit from her great and almost monopolistic jute industry. It is too often forgotten that Government is practically a partner in industry, for, at any rate in the jute trade, it takes in taxation, directly and indirectly, at least a quarter of the profits. The present condition of the jute industry is therefore not just a matter which concerns the trade alone; in its wider sense it affects the whole well-being of India in general and Bengal in particular, and as it is almost entirely an export business it is of special importance to India's economic and financial equilibrium. This is not the occasion to go into details of the difficulties within the jute industry. They are capable of solution. We can only hope that wise counsels will prevail before serious harm has been done to so important a part of India's industrial structure, for in spite of existing conditions it is still one of the soundest and best organised trades in the world, and one of the few that so rationalised itself that it weathered the world economic crisis with little of the catastrophic upheavals suffered by other industries in India and throughout the world. A return of prosperity to the jute trade would also facilitate the introduction of and the carrying out of legislation to improve the conditions of labour in mills and factories which has been a feature—and a good one—of recent industrial development in Europe and in America.

I fear I have taken up a great deal of your time on the subject of Indian conditions, but these all affect the position and prospects

of the bank, for India is our most important country, as the name of the bank implies. But I must not neglect to refer to conditions, although perhaps not in such detail, in other parts of the world where the bank has large and important branches of its business.

BURMA AND SIAM

Recovery in Burma has been somewhat slower than in India, but in 1936 trading conditions generally showed improvement. The teak market, so important to Burma, was decidedly firmer. There was an expansion of demand from India and other countries at better prices and increased activity in the building trade in Rangoon. Paddy prices, although slightly below the level of 1935, ruled considerably higher than in the three years ended 1934. The current crop, unfortunately, is not too good, and the exportable surplus will be less than the previous year. Almost within a few days Burma will be separated entirely from India, and many problems of great complexity will face the new Government of that country, and it is fortunate that its task begins in an atmosphere of returning prosperity.

Siam.—In Siam drought has seriously damaged the rice crop, and, as in Burma, the quantity available for export will be much less than last year. But again, as in Burma, there has been a marked improvement in the demand for teak and prices have substantially improved. Internally Siam continues to prosper, and political conditions in 1936 were normal.

CEYLON

Ceylon.—As in India, exports from Ceylon increased during the year, while imports into Ceylon decreased. Of the total exports from the island 57 per cent. was accounted for by exports of tea and nearly 19 per cent. by exports of rubber. These figures show how greatly the island is dependent upon the prosperity of the tea and rubber industries. In tea the island had rather a disappointing year. The exports were greater by 6,000,000 lbs., but the average price realised was only 70 cents a pound, 1 cent better than in the preceding year. There has been a considerable improvement, however, in the prices realised for Ceylon tea at the London auctions since the beginning of the current year, and if this improvement is maintained it should have a great effect on the prosperity of the island. Ceylon should also benefit greatly by the substantial advance in the price of rubber. The import trade was not very good during the year, especially if it be remembered that nearly 25 per cent. of it consists of rice, which the island must import in order to feed its population. There was, however, some improvement in the import of piece-goods, and since the total stock position at the end of December was healthy, there should be a further improvement in the year 1937.

Altogether I think that with the improvement in tea, rubber, and copra prices, prospects are brighter for Ceylon than for some years past, provided there is prudent and economical administration to bring about a balanced Budget.

OTHER COUNTRIES

Mauritius.—The prosperity of this island is bound up with its staple product—sugar. It has suffered badly in the crisis years, and even now the price of sugar has not shared proportionately in the general advance of most commodity prices, in spite of the fact that for two years world consumption has exceeded world production. There are, however, some encouraging features. For two years in succession Mauritius has had a bumper crop, and the problem of low prices has not been aggravated, as in 1934, by a short crop. The general feeling is more optimistic for the island than it has been for some years.

Malaya.—The position in this part of the world is showing distinct improvement after the catastrophic declines in the crisis period. For instance, the gross import and export trade of Malaya in 1927 was valued at 2,301 million dollars, and in 1932 it had dropped to 794 million dollars. But in 1936 the total trade had recovered to 1,131 million dollars, 503 million dollars representing imports and 628 million dollars exports. The improvement was mainly in the second half of the year and was due to the marked increase in the price of the country's three chief products, rubber, tin and copra.

China and Hongkong.—I think it may be said that the general outlook in China is distinctly more favourable than a year ago. In 1936 there was a marked improvement in China's export trade, resulting in a more reasonable balance between imports and exports. Trade between this country and China showed some improvement in 1936, but it may surprise you to know that this country takes only fourth place in China's import trade; and, indeed, in 1936 we lost ground to Germany. In Hongkong trade improved somewhat in 1936, and the total import and export

trade of the colony rose from 636 million dollars in 1935 to 813 million dollars in 1936.

TRIBUTE TO STAFF

The new arrangements at head office in London, to which I referred at considerable length in my speech last year, have worked well and efficiently. We owe our thanks to Mr Crichton, the chief manager, and his two managers at head office, Mr Paton and Mr Cruden, to the chief accountant, Mr Sheldrake, and to all the members of the staff. To the managers and staff of all our branches in the East we owe our sincere thanks for their loyal work. The continued success of the bank is due to their work, and I would like to convey to them your appreciation, as shareholders, for they often have to work, as I have said to you before, in difficult conditions as to climate and health. To them I would say, too, that the prosperity and the prestige of the bank depend upon their energy and their conduct in business and in private life. I hope and believe that service and courtesy are watchwords greatly honoured by all the managers and staff of the Mercantile Bank of India, Limited. (Applause.)

THE CHAIRMAN'S RETIREMENT

In conclusion, I would for a moment like to refer to a personal matter. The chairmanship of a bank has become almost a whole-time job, and in the years I have been a director, deputy-chairman and chairman I have given freely of my time, especially in the long-drawn-out period of the economic depression, now happily passing away. The bank weathered those lean times magnificently, and, as the accounts show, the bank is in a very prosperous and strong position. I feel, therefore, the time has come when I can retire from the chairmanship with entire confidence that I am handing over my charge in splendid order. As you know, I have important business and public interests, and I find it increasingly difficult to devote the time which proper supervision of this institution requires. I feel I have quite fully, over a number of years, given of my best from a real sense of duty to the bank and for the development of business in and with India. It is likely, therefore, that before the next general meeting takes place I shall have vacated the chairmanship. I know you will give to my successor all the courtesy and support you have always given to me, and I am sure he and his colleagues on the board will not fail you. I thank you. (Applause.)

Before I propose the usual resolution, if there are any questions I will do my best to reply to them. (A pause.) Evidently my speech was so long that no one wants to ask any questions, and therefore I have pleasure in proposing: "That the report of the directors, with the audited statement of accounts and balance sheet at December 31, 1936, presented to this meeting, be and the same are hereby received, approved, and adopted, and that a final dividend on the 'A,' 'B' and 'C' shares of this bank of 6 per cent. be paid, making 12 per cent. for the year, less income tax, as recommended in the report, and the same is hereby confirmed."

Sir Thomas Smith (deputy-chairman) seconded the resolution and it was carried unanimously.

RE-ELECTION OF DIRECTORS

The Chairman:—I now propose:—"That in accordance with Articles 116 and 117 of the Articles of Association Sir C. A. Innes and Mr P. R. Chalmers, the directors retiring from the board in rotation, be re-elected directors of this bank."

Mr J. M. Ryrie:—It is almost unnecessary for me to say that I have very great pleasure in seconding the proposal put forward by the chairman for the re-election of Sir Charles Innes and Mr Chalmers. To Sir Charles Innes I would wish to pay tribute for the constant and regular interest which he takes in the work of the bank, and I am sure that you will all wish to see him and Mr Chalmers re-elected. (Hear, hear.)

The resolution was carried unanimously.

Mr J. Beilby Crichton proposed:—"That Messrs Cooper Brothers and Company and Messrs W. A. Browne and Company be re-appointed auditors of this bank."

Mr A. P. V. Cogar seconded the resolution, and it was unanimously passed.

VOTE OF THANKS

Sir Alfred Watson:—Lord Catto, ladies and gentlemen, it remains for us as shareholders to express our appreciation of the services given to the Mercantile Bank by the directors, staff, and officers. I should like to express at this point the deep regret that we all feel at the announcement which Lord Catto has just made. (Hear, hear.) His services to the bank for many years have been

invaluable, and in his retirement we shall at least have the satisfaction of feeling that he has placed the bank on a foothold from which it will not be shaken. (Applause.) We are all extremely glad that out of the increased profits of the bank it has been possible to devote a considerable sum to the officers' pension fund; they deserve all they get in that way. (Hear, hear.)

We offer to the directors, officers, and staff our warm congratulations on the results they have achieved. There were two considerations in my mind when I was preparing my speech. One was that behind the Mercantile Bank was an experience and technique of banking in India which could not be rivalled and which had made the bank, if not the largest, certainly one of the strongest institutions of its kind in the East. The second one was my belief in that recovery of India with which Lord Catto has been dealing to-day.

I feel more strongly than ever that with the improvement which has taken place in the price of almost every commodity that India produces the country is ready for a great advance in wealth and in productive and industrial capacity. We of the Mercantile Bank, I am sure, stand ready to help in every way in that improvement. It is in the conviction that the good work which has been done in the past will continue in the future that I ask leave to move:—"That the warm thanks of the shareholders be given to the directors, officers, and staff for their zealous and successful work during the past year." (Applause.)

Mr S. Pope: I am very pleased to second that, and I should like to add our warm thanks to the chairman for his able conduct of this meeting. (Applause.)

The vote was unanimously accorded.

CHAIRMAN'S REPLY

The Chairman: Sir Alfred Watson and Mr Pope, I thank you most sincerely for the way you have proposed and seconded this resolution, and you, ladies and gentlemen, for the way in which you have received it. In particular, I will convey to the staff your remarks, Sir Alfred, because, as I said in my speech, it is the staff in the East and in London that makes the prosperity of this bank. (Applause.) I thank you all, ladies and gentlemen.

The proceedings then terminated.

LONDON AND THAMES HAVEN OIL WHARVES, LIMITED

EXTENDED SPHERE OF INFLUENCE

The thirty-ninth ordinary general meeting of the London and Thames Haven Oil Wharves, Limited, was held, on the 22nd instant, in London.

Mr Thomas C. J. Burgess (chairman and joint managing director), after announcing that Lord Inverforth had joined the board, said that the divisible profit of £223,177 was just over £3,000 more than in the previous year, an increase largely absorbed by the higher income tax on the two 5 per cent. dividends, paid free of tax. The Compagnie Industrielle Maritime had had a 5 per cent. increase over 1935 in the tonnage they had handled, and their share in the importations into the port of Havre of all goods was 57.11 per cent., while their docks and tankage accounted for 2,538,988 tons, or 34.7 per cent. of the total petroleum importations for the whole of France.

For their own, Thames Haven, company the year had marked what appeared to be the beginning of a new chapter in its history. On January 1st one of their important contracts was renewed, with notice simultaneously given that it would be terminated in 12 months' time. Their other main contracts had not been disturbed, and they had entered into some new ones. During the latter part of the year certain interests with which he was personally connected received a licence for the petroleum-refining industry in the Irish Free State. To make up the loss of business the board had accepted responsibility for the finance of the Irish National Refinery Company, for whom they were to act in an advisory capacity, and it was for that reason that it was proposed to increase the capital.

The report was adopted.

Orders for the publication in these columns of the reports of Company Meetings should be addressed to the Reporting Manager of THE ECONOMIST, 8 Bouverie Street, Fleet Street, London, E.C.4.

EASTERN BANK, LIMITED

INCREASED DIVIDEND

The twenty-seventh annual general meeting of the Eastern Bank, Limited, was held, on the 19th instant, in London.

Mr J. S. Haskell (the chairman), in the course of his speech, said:—India has had a prosperous year. The stock markets have been buoyant and most sections made remarkable headway, particularly iron and steel. Exports of merchandise show a substantial advance on the previous year, aggregating £138,750,000, an increase of £18,750,000, whilst imports of merchandise, hedged by high protective duties and the rapid rise in Indian industries, declined £8,000,000 as compared with the previous year. The excess of exports over imports of merchandise amounted to £45,750,000, an amount in itself far more than sufficient to enable India to meet her obligations in sterling. As regards Britain's share of India's trade, our exports have fallen by £3,750,000, whilst our imports have increased by £8,250,000. Nearly £2,000,000 of the fall in exports was accounted for by Lancashire goods. Japan continues to be a formidable competitor in regard to the latter. Neither the trade agreement with that country nor the reduction of the Indian duty by 5 per cent. in favour of the United Kingdom has proved helpful.

With the continued increase in local manufactures the market for imported piece goods must become more and more restricted, and unless India sees fit to modify her tariff policy towards this country Lancashire exports will not even obtain their legitimate share in what market there may remain.

Our imports of cotton from India last year were more than 50 per cent. over those of 1935, whilst we took wheat to the value of £895,000 out of a total value of £1,300,000 exported. Surely it would be to the advantage of India to make some adequate concession to this country if only to encourage the export of such commodities as those mentioned, which are readily obtainable elsewhere.

INDIA'S FAVOURABLE TRADE BALANCE

As regards specie, the net movement for the year was an export of £14,250,000, against £35,500,000 in the previous year. The favourable balance in trade in merchandise and specie amounted to £60,000,000, and has enabled the Indian Government to sell council bills to an extent much in excess of their requirements. For the current financial year they have remitted £52,000,000, thereby building up a large reserve. No new loans have been foreshadowed and Indian Government securities appear to form attractive investments at current prices.

Exchange remained steady all the year round at the high rate of 1s. 6½d., and money continues very easy and difficult to employ profitably, whilst competition is very keen among the various exchange banks and the many local banks established in the provinces. The prospects in India continue favourable. During January the exports were £7,000,000 higher than the imports.

The event of the year in Iraq has been the sudden overthrow of the Yashin Government, culminating in the untoward tragic death of Jafar Pasha, who was Minister of Defence at the time. His loss is greatly to be deplored. A new Ministry was immediately formed under his Excellency Seyyid Hikmat Sulaiman. The new Premier, who inspires great confidence, may be depended upon to carry on the Government justly and advance the welfare of his country.

Trade has been very active during the year, and there has been a general improvement in the prices of commodities. For the first eleven months of the year exports of cereals aggregated £876,000, of which the United Kingdom took £662,000. In imports of iron and steel the United Kingdom had a good share, supplying £406,000 out of £744,000.

In cotton piece goods, however, Japan has practically displaced Lancashire. Out of imports valued at £811,000 the share of the United Kingdom was but £50,000. As to rayon, Japanese supplies amounted to a value of £300,000 out of a total of £385,000, the balance being divided between the United Kingdom and other countries. A much larger share of the trade of Iraq, which before the war was nearly all British, is now falling into the hands of other countries.

The net result of the past year is a profit of £131,865. An interim dividend of 3s. has been paid, and we now recommend a final dividend of 4s. per share, less income tax at the rate of 4s. 6.82d., after allowing for relief in respect of Dominion taxation, making 7 per cent. for the year, an increase of 1 per cent., transfer £10,000 to bank premises, £40,000 to contingencies, and carrying forward £74,018, an increase of £11,865 over the amount brought in, which I hope you will consider satisfactory.

The report and accounts were unanimously adopted.

AFRICAN THEATRES, LIMITED

SUCCESSFUL YEAR REVIEWED BY MR I. W. SCHLESINGER

TOTAL DIVIDENDS OF 27½ PER CENT. FOR THE YEAR

SPEECH AT SIXTEENTH ANNUAL GENERAL MEETING

The sixteenth annual general meeting of the shareholders of African Theatres, Limited, was held in the Board Room, Realty Trust Buildings, Simmonds Street, Johannesburg, on Thursday, March 11th, when there were present, among others, Messrs I. W. Schlesinger (in the chair), W. Otis Bullock, W. Thompson, Dr J. McLaws, Edward Nathan, Estate of the late Hoffman (represented by Mr Edward Nathan), Edward Nathan and Friedland (represented by Mr Edward Nathan), D. M. Burton, W. F. White, F. A. Cooper, D. H. Barnett, J. A. MacRae, A. E. Harmel, M. L. Maughan, A. Boyd, R. W. Davenport, F. Green. African Consolidated Investments Corporation, Limited, and Anglo-International Securities Corporation, Limited, were represented by proxies.

The Secretary having read the notice convening the meeting and the minutes of the previous meeting, which were confirmed and signed, also the report of the auditors upon their examination of the books and accounts for the year ended December 31, 1936, Mr I. W. Schlesinger then moved the adoption of the directors' report, balance sheet and accounts as printed and circulated, and said:—

Gentlemen.—The balance sheet and accounts before you are drawn up in the customary form, and as the auditors' certificate states, provide a true reflection of the condition of the company as at the end of its sixteenth financial year, which terminated on December 31, 1936. These accounts, together with the directors' report, have been in your hands for the usual time, and I can therefore assume that you will have acquainted yourselves with all essential particulars. Consequently, this morning I will deal more with features of our business which are not brought out in the accounts than with any close analysis of the actual figures.

DOMINANT POSITION IN ENTERTAINMENT BUSINESS

I need hardly remind you, but I do so in order that you may have a clear conception of our affairs, that the fortunes of African Theatres, Limited, are bound very closely to those of our operating company—African Consolidated Theatres, Limited. In fact, I could be even more explicit and say that the boundaries of our respective interests are virtually indistinguishable. For while the annual income of African Theatres, Limited, and the profits flowing therefrom reflect the trading results of African Consolidated Theatres, Limited, the policy of the latter, its *modus operandi*, and in fact all that it is or hopes to be are matters which fall within the control exercised by this parent or holding company.

Now, as you know, African Consolidated Theatres, Limited, is so organised as to place it in a dominant position *vis-a-vis* the entertainment business in Southern Africa—of which it does by far the lion's share. Due to the settled prosperity which this country has experienced over the past five years—and which it continues to enjoy without sign of any recession—the trading returns of our operating company have been extremely good. This is best exemplified by the distribution of profits which it has been able to make over the period to which I refer. The following table sets out the position:—

AFRICAN CONSOLIDATED THEATRES, LIMITED

DIVIDEND PAYMENTS

	£
Year ended December 31, 1932	20,000
Year ended December 31, 1933	70,000
Year ended December 31, 1934	83,000
Year ended December 31, 1935	111,000
Year ended December 31, 1936	174,000

The interest of African Theatres, Limited, in the above dividend declarations will be apparent when I remind you that our holding in the share capital of the operating company is no less than 78 per cent. of the whole. In other words, the share capital of African Consolidated Theatres, Limited, is the nominal one of a thousand pounds divided into one thousand shares of the face value of £1 each fully paid—of these shares African Theatres,

Limited, owns seven hundred and eighty, which, needless to say, gives it full and absolute control.

SOURCES OF REVENUE

But in addition to the dividends which accrue to us from our shareholding in African Consolidated Theatres we also have to take into account the properties we lease to that company. In my opinion these comprise some of the finest theatres and super cinemas extant, in saying which I do not exclude those I have seen in the most up-to-date cities of Europe and America. Situated in selected towns throughout South Africa and adjoining territories, these properties, with some odd exceptions, house the entire business activities of our operating company, and obviously have a high rental value.

Having pointed to the source whence the major portion of our income is derived, i.e. the earnings and surpluses of African Consolidated Theatres, Limited, it follows that in sympathy with the expansion of business recorded by the latter—and leaving aside all subsidiary sources—our revenue too must have been moving steadily upwards.

This is so, for in the present accounts revenue figures at £229,415, which, compared with the previous year, represents an improvement of over 45 per cent. In figures, this means £52,644, the effect of which you will notice in the board's recommendations dealing with the distribution of profits.

Being what is generally termed a holding company, the pure management costs of African Theatres, Limited, are negligible.

DEBENTURE AND MORTGAGE BONDS

The next feature to which I would draw your attention is represented by the balance-sheet items:—

	£
Debentures	329,000
and	
Secured creditors	446,327

the exact position of which, as at this date, will not be apparent unless I offer a word in amplification. These are charges, by debenture and mortgage respectively, on our real estate assets to which I have previously referred, namely:—

Properties:

Land and theatre buildings, etc., at cost, £1,361,593, which I would here remark have a realisable value greatly in excess of the book value, the latter you will observe being shown at cost. The former of these charges, i.e. that applicable to debentures, is redeemable at the rate of £25,000 per annum.

In these accounts the balance of debentures outstanding is £329,000, but since the turn of the year a further payment of £25,000 has been made in reduction of that amount. It will be obvious, therefore, that at date the actual amount remaining to be liquidated under this heading is £304,000, and not the larger sum stated in the balance sheet. As affecting the other charge, i.e. secured creditors, reductions are made in accordance with the terms of the relative mortgage bonds, which stipulate for capital repayments at varying periods throughout the year. The actual amount outstanding under this head to-day is likewise less than shown.

REAL ESTATE UNDERVALUED

Before summarising the position of our fixed indebtedness, and placing it before you in a true light, there is a further point to be observed. This concerns our annual practice of allocating from current revenue the sum of £25,000, being the equivalent of debenture bonds redeemed, and placing that sum to the credit of the general reserve account. Since the present balance sheet was drawn another of these payments has occurred, with a result that the general reserve has now been built up to £323,875.

Although not specifically earmarked for their benefit, debenture holders, no less than secured and other creditors, share in the common protection and added security which that fund offers, and in the statement which follows I would ask you to bear that

factor in mind because I have purposely excluded it from my calculations. I have already mentioned that the realisable value of our properties—land, theatre and other buildings—is very much understated in the balance sheet. According to the latest information we have, that understatement is approximately as much as one-third. Consequently I would like to lay before you what my colleagues and I regard as a conservative estimate of the true value of that asset, so that you may have a clearer understanding of the real security upon which our fixed indebtedness rests. It is as follows:—

Assessed value of properties based upon the recent appraisements of sworn Government valuers	£1,800,000
Balance of debenture bonds outstanding at this date	£304,000
Balance of secured creditors outstanding at December 31, 1936 (since reduced) ...	£446,327
	£750,327

Producing a surplus value of security £1,049,673

and leading you to agree, I hope, that the obligations to which I now refer are amply provided for. Other liabilities call for no special comment—except perhaps to observe that the balance of purchase moneys of properties acquired during the year are all long-dated payments which will be taken care of in the ordinary course of business as and when falling due.

VALUE OF INVESTMENTS

The total assets declared in the balance sheet amount to over one and three-quarter million pounds, and record a gain over last year of nearly £80,000. I have dealt with the real estate item—contrasting its present-day value with the value placed upon it in the balance sheet. I would now add that the intrinsic worth of our share and debenture investments, given at £381,266, is undervalued to an even greater degree. To give point to this statement I have only to remind you that included in the figure just mentioned is our holding in African Consolidated Theatres, Limited, which is taken into our books at its precise face value—namely, £780.

It would be difficult to place a reasonable market valuation on this holding, but it must be patent to all that the true value is immeasurably greater than the purely nominal one for which we have taken credit. The same may be said of other of our investments—also taken in at par value, all paying regular dividends and producing very satisfactory yields per cent. With two exceptions they relate entirely to subsidiary real estate companies, either owned outright by us or in which we have a controlling interest. Each of these concerns is identified with the entertainment business, and in the main derives its revenue from buildings leased for that purpose to our operating company—African Consolidated Theatres, Limited.

ADDITIONAL RESERVE

Similar to ourselves, the assets in their respective balance sheets are also greatly undervalued—a feature which, in view of present-day conditions in the Union, is likely to become accentuated. The two exceptions in our investments to which I have referred concern African Films, Limited, and African Caterers, Limited. Both are allied to us and intimately associated with the business of our operating company. Here again—and this applies with special force to our holding in African Films, Limited—we have ignored true capital value, the book and par value being identical. Although frequently urged to do so, we have always resisted any suggestion of writing up our assets to a figure bearing some resemblance to what we consider might be their break-up value. We think it wiser that things should remain as they are. The surplus provided by the two factors is looked upon as an additional reserve in the business, which by reason of its magnitude renders our general financial condition quite impregnable.

Other assets of a fixed nature have been depreciated on a generous scale and may safely be accepted at face value.

SUGGESTED NEW ISSUE OF PREFERENCE SHARES

I have dealt at some length upon the more obscure features of our affairs for the reason that I wanted you to appreciate the strength of the position in which we find ourselves at the end of this our sixteenth year of incorporation. What I have said is preparatory to telling you that the board's consideration at the moment is concentrated in the direction of a funding operation which would replace all debenture, secured and other capital loans by a preference issue. As you know, this is an age of cheap money

—interest rates being a secondary factor to that of first-class security. In the board's view, the charges it is called upon to meet in respect of the company's borrowings at times very different from these, are, in the circumstances, unnecessarily high.

As your trustees, it feels that the situation should be tackled, and I am entirely at one with my colleagues in favouring a preference issue, which would effect a very considerable economy and at the same time afford a lucrative investment for surplus funds, which are now so plentiful. When our plans are complete for the suggested issue—which will be effected on the local Johannesburg market—due notice with full particulars will be furnished you. I refer to the matter now, however, in order that you may know that this important conversion is receiving our practical consideration.

PROFITS AND DIVIDENDS

Coming now to the profits appropriation account, you will observe from the directors' report that the amount with which we have to deal this morning is £143,827 7s. 6d., arrived at as follows:—

Net profit for the year	£167,840	13	2
Amount brought forward after providing for the charges noted at the fifteenth annual general meeting ...	25,986	14	4
	£193,827	7	6

Less:

Interim dividend No. 25 at the rate of 10 per cent. paid in August, 1936 ...	50,000	0	0
--	--------	---	---

£143,827 7 6

This is over £17,000 in excess of the amount we were called upon to deal with last year and enables the directors to recommend a final dividend at the rate of 17½ per cent., which, with the interim dividend of 10 per cent. paid last August, makes a total distribution of 27½ per cent. for the year. If you will agree to this proposal and, from the remaining surplus, confirm an allocation of £25,000 to general reserve, we shall then bring forward to the current year a balance of £31,327 7s. 6d., which I think you will agree reflects a very satisfactory state of affairs.

PRESENT YEAR

Before formally putting the resolutions giving effect to these proposals I would like you to know that the present year has opened very well. The returns of our operating and subsidiary companies all record improvements over the corresponding months of last year and show every promise of enabling us to lay a position before you at our next meeting in every respect as gratifying as the one we have now considered. With the flourishing conditions which now characterise the entertainment business in South Africa and which, so far as I can see, are likely to undergo no change—except perhaps in a desired direction—African Theatres, Limited, can look forward to a sequence of highly satisfactory years; and I think it quite safe to predict that good as our shares now are as an industrial investment, as time progresses they should be even better.

RESOLUTION CARRIED

Mr I. W. Schlesinger then moved the adoption of the directors' report, balance sheet and accounts as printed and stated that in accordance with the board's recommendation it was intended that the final dividend of 17½ per cent. be paid on April 30th to all shareholders registered as at March 31, 1937. The resolution was duly seconded and adopted unanimously.

The retiring directors, Messrs W. Otis Bullock, John Alexander Macrae and Edward Nathan, were re-elected for the usual term of office.

The retiring auditors, Messrs Deloitte, Plender, Griffiths, Annan and Company, were also re-elected, their remuneration for the past audit being left in the hands of the board.

The meeting terminated with a vote of thanks to the chairman.

THE EMPLOYERS' LIABILITY ASSURANCE CORPORATION, LIMITED

INCREASED UNDERWRITING PROFIT POSITION FURTHER STRENGTHENED

The fifty-sixth ordinary general meeting of the Employers' Liability Assurance Corporation, Limited, was held, on the 24th instant, at the Incorporated Accountants' Hall, W.C.

Sir Courtauld Thomson, K.B.E., C.B. (the chairman), said that the total premium income of £6,905,000 showed a slight increase, in spite of further elimination of unprofitable business and a continued highly selective underwriting policy. The fire premiums had again increased, and produced the satisfactory profit ratio of 7.6 per cent. Their accident and general business had resulted in an increased profit of £194,000, larger even than in 1935. The total underwriting profit again showed an increase at the satisfactory figure of £222,000. Their cash and investments in stocks and shares, taken at market prices, stood at £7,770,000, an increase of £800,000, and their investments showed an appreciation of £138,000 over book values. Their Associated Life Company, the Clerical Medical and General, had once more produced excellent results. Reserves of all descriptions had been further increased and strengthened, and, as a result of the year's trading, £144,000 had been added to the carry-forward. He was sure it would be agreed that the report submitted was again satisfactory.

CONDITIONS IN U.S.A.

Business activity in the United States continued to increase throughout 1936, and at the end of the year the index figure stood higher than at any time since the boom year of 1929. There had been, however, a slight setback this year, due partly to the serious strikes in the motor industry and labour troubles generally. It seemed probable that employers must be prepared to face increased costs caused by shorter hours and higher wages. Recovery had come from almost every type of business, but it was interesting to note that in the United States there had as yet been no building boom such as contributed so greatly to our own recovery.

There were fears in responsible quarters of the United States that with an unbalanced Budget, due to a continuance of heavy Government expenditure combined with the striking rise which had taken place in commodity prices, there was a danger of currency inflation, always difficult of control.

The Corporation's motor premiums, amounting to £2,360,000, showed a slight increase on 1935, and the results were much more satisfactory. In spite of the fact that over 24,000,000 passenger cars were registered in the United States at the end of 1936, compared with 22,500,000 at the end of 1935, their motor premiums were slightly less, as they had still further pruned their business in certain parts of that country. This policy, however, had fully justified itself by the improved profits. The premium income on their home motor business had once more increased, but with a larger number of cars on the road, the continued tragic accident roll, and the ever-increasing level of damages awarded in the courts, the experience was not so good as in the previous year.

THE INVESTMENT PROBLEM

Dealing with the investment problem, the Chairman said they felt that their main object in investing funds must be to secure repayment of the principal at maturity date, to think less of investment profits than of stability, and to obtain the best yield possible subject to those conditions. They realised that they had to expect from time to time a depreciation in the highest class of investments, but the board were constantly reviewing the investments in the light of altered conditions and prospects, and where it seemed advisable they would consider varying the proportions in the different classes. At such times as these they thought it advisable to have a considerable part of their invested funds maturing year by year in the near future in order that depreciation might be limited, and through re-investment they might be in a position to take advantage of rising interest rates if and when they came.

The directors were determined to maintain the policy of further strengthening the reserves of the Corporation in every way. World conditions remained unsettled, and the problems of insurance business did not grow less. In strengthening the carry-forward the board felt that they were making the wisest use of the successful results of the year's trading. He was confident, therefore, that the shareholders would wish the policy of the Corporation to continue to be based on those prudent principles.

The report was unanimously adopted.

SCOTTISH POWER COMPANY, LIMITED

FURTHER PROGRESS

FRESH ISSUE OF CAPITAL APPROVED

The twenty-seventh annual ordinary general meeting of the Scottish Power Company, Limited, was held, on the 19th instant, at the Caledonian Hotel, Edinburgh, Mr George Balfour, M.P. (the chairman), presiding.

The Chairman, in the course of his speech, said that the report and accounts presented showed that all of their subsidiary companies continued to make steady progress. Unremitting efforts had been made to improve the efficiency and value of the company's services and their efforts were reflected in the increased number of their consumers and their consumption of electricity. They had acquired the Berwick-upon-Tweed electricity undertaking from the Edmundson Group early last year, and had been responsible for the administration of that undertaking during the last six months of 1936. During the year they had obtained a Special Order authorising supply to be given by the Scottish Southern Company in north Northumberland, embracing 166 square miles, adjoining the Berwick-upon-Tweed area, enabling them to give supplies to one or two industrial users beyond the Borough of Berwick-upon-Tweed. They had also acquired the small undertaking of the Tain Corporation, which completed the consolidation of supplies in the area of their Ross-shire Company.

CHEAP AND EFFICIENT SERVICE OVER LARGE AREA

Supplies were now afforded by their subsidiary companies from the North of England and Berwick in the south to Sutherland-shire in the north, a distance from north to south of 210 miles, with only an intervening gap of about 20 miles between Peebles in Peebles-shire and Whitburn in West Lothian. He thought that the company could really claim to have rendered a great public service in providing supplies over such a large and sparsely populated territory, more than 12,000 square miles in extent, with an average density of population over the whole area of only 119 per square mile. In no portion of their area had they a greater density in any 25 square miles than 1,700. When they compared the density of population in their areas with, say, cities such as Glasgow and Edinburgh, with something over 20,000 and 9,000 per square mile, he thought the shareholders might truly marvel at the cheap and efficient services they rendered.

They had added to their high tension and low tension electric supply mains 463 miles, making the total mileage of the mains of the subsidiary companies at the end of last year 2,901, of which 1,845 miles were high tension and 1,056 miles low tension, 1,895 miles being overhead and 1,006 underground.

RECORD NUMBER OF NEW CONSUMERS

They had connected 10,429 new consumers during the year, which was a record in the history of the company, being an increase of 36 per cent. on the number connected during 1935. The total number of consumers connected at December 31, 1936, was 60,790, which was double the number connected four years ago.

They had connected an additional 12 burghs and 35 villages to their supply during the year, increasing the total number of centres of population supplied from their mains to 91 burghs and 217 villages. In addition, they had connected many individual supplies on the routes of their transmission lines. Public lighting supplies were inaugurated during the year in eight burghs and 13 county districts, increasing their total street lighting supplies to 164 lighting areas in 60 burghs and 104 county districts.

An additional load of 27,560 kilowatts was connected during the year, the total connected load at December 31, 1936, being 202,760 kilowatts. The maximum demand in all their areas was 54,500 kilowatts, and in addition they had sold to the Central Electricity Board under their contract a maximum of 34,500 kilowatts, making a total maximum demand during the year of 89,000 kilowatts.

The gross trading profits of all the subsidiary companies amounted to £628,218, compared with £552,706 for the previous year, and the directors proposed to pay a final dividend of 5½ per cent. on the ordinary stock, making 8 per cent., less tax, for the year. In order to meet capital expenditure it would be necessary to make a further issue of capital during the current year.

The report was adopted and a resolution was passed authorising the creation of £2,000,000 additional capital.

NORTH-EASTERN ELECTRIC SUPPLY COMPANY, LIMITED

ACTIVITIES FURTHER EXTENDED

MR R. P. SLOAN'S REVIEW

The forty-ninth annual general meeting of the North-Eastern Electric Supply Company, Limited, was held, on the 23rd instant, in Newcastle.

Mr R. P. Sloan, C.B.E. (the chairman), in the course of his speech, said:—I am glad once more to be able to report satisfactory progress of the company's business. So far as new connections to the system are concerned, we have exceeded our previous year's record. You may remember that, in 1935, the new connections amounted to 66,694 horse-power (h.p.), which was far in excess of anything we had previously attained, but the connections made last year exceeded that figure by 55,381 h.p., having amounted to 122,075 h.p.

I must point out that this figure includes a connection of a special nature made during the course of the year, as a result of our having arranged with one of the largest colliery companies within our area to close down their power station and take the whole of their electricity requirements directly from our mains. Previously, this power station had, by an agreement with the owners, been operated by us, and though it was electrically connected to our system, no supply was actually taken from our mains for driving the electrical apparatus of the colliery company. Under the new arrangement this apparatus has now become a part of our connected load, and represents 48,600 h.p. of the additional connections I have mentioned. Although we have lost the income we obtained for operating the power station, we will now reap the benefit of the sale of electricity to the colliery company.

NEW CONSUMERS

The development of our domestic business in both the urban and rural areas continued satisfactorily. The number of new consumers of this class obtained during the course of last year was 19,990, while the number of new consumers of all classes was 21,377—which is an average of 58 per day—making the total number of consumers of all classes supplied directly from the company's system, at the end of the year, amount to 220,874. This figure excludes some 90,000 consumers supplied by other electricity supply authorities who redistribute electrical energy taken in bulk from the company.

As you will see from the report and accounts, the total profit is £1,244,589, and shows an increase of £148,084 over the corresponding figure for the previous year. After deducting the sums required to cover sinking fund and the transfers to reserves, and after providing for the usual preference dividends, the directors recommend a dividend of 7 per cent. (less income tax) for the year on the ordinary stock.

PRICE CONCESSIONS

I feel that members will agree that these results are highly satisfactory, particularly in view of the various price reductions that have been made. I may say that, during the last two years, the reductions in our charges to domestic and small power consumers have exceeded £110,000 per annum, which concessions I am sure have been much appreciated. As your directors always have in mind the interests of consumers, the company has recently announced a further substantial concession to domestic users which will come into force as from the commencement of the June quarter—that is, within a few days from now.

It is gratifying that, in spite of the many years of trade depression which affected the North-East Coast area so greatly, the progress made by the company has enabled its position to be considerably strengthened, and at the same time permit of reductions in prices being given.

CO-ORDINATION OF DISTRIBUTION

I referred on the occasion of the last annual meeting to the Special Committee appointed by the Government to consider the question of co-ordinating electricity distribution throughout the country. Among other things, the committee recommend the absorption of the smaller undertakings by larger undertakings, and the report anticipates that in many cases power companies, such as ourselves, will take over the appropriate smaller undertakings or adjacent to their areas.

The recommendations, therefore, are entirely opposed to the splitting-up of large and efficient undertakings, and in order to

prevent this it is suggested that the existing purchase rights of local authorities throughout the country should be suspended. I may say that the report in general conforms closely to the views held by your directors as to what should be done to improve the present state of affairs throughout the country.

I think I can say that all political parties are agreed that a reorganisation of the distribution of electricity throughout the country is a pressing need, and that development along parochial lines has been a very great mistake. This has caused not only unnecessary capital expenditure, and duplication of administration and other costs, but has given rise to the wide variation in voltages of supply, multiplicity of tariffs, etc., which have been the cause of so much dissatisfaction and criticism in many parts of the country.

It would appear, therefore, that the legislation which the Government propose will generally be welcomed, and that such opposition and criticism as may arise will be concerned chiefly with the methods by which it is proposed to bring about the results aimed at.

PROGRESS OF INDUSTRIAL SALES

So far as the company's present activities are concerned, I am glad to say that good progress has been made in the sales of electricity to practically all the industries we serve. Improvement in the shipbuilding and engineering trades has been most marked, which is evidenced by the fact that the number of ships under construction in the North-East Coast area at the end of the past year represented a total of 331,068 tons, as compared with 205,845 tons at the end of 1935.

Considerable progress has also been made in connection with our supplies to the coal mines, which appear to be in a much more flourishing condition than was the case a short time ago. One by one, the remaining collieries in our area who utilise steam for power purposes are converting their plant to electric drive, and in practically all these cases power is being taken from the mains of the company.

As to the future, we can, I think, look forward with a considerable degree of confidence. While on this subject, I feel that I must utter one word of caution by reminding you that some of the improvement in trade in the company's area, and in fact all over the country, is due, and will for a time continue to be due, to the Government's Defence Programme, and while recent statements made by the Government forecast some years of activity, the business accruing from this source must, of course, be looked upon as transitory.

INCREASE IN DOMESTIC SUPPLY BUSINESS

On the other hand, we are deriving the benefit of the improvement in general trade that has set in, which is exemplified by the increased activity in merchant shipbuilding and in other industries not affected by the Defence Programme. Further, the growth of our domestic supply business—perhaps the most stable of all—is still most encouraging, and we look forward to a continuation of progress in this section for some time to come.

New applications in the use of electricity are constantly being made not only for industrial and commercial purposes but also for convenience and comfort in the household. Its utility finds a variety of outlets on both a large and small scale, ranging, in the case of power, from the driving of heavy machinery to the operation of an electric clock. It is also being used more extensively to produce heat for furnaces, ovens, and radiators, and, conversely, it is equally efficient for refrigeration. Its success in the lighting of public highways has resulted in its popularity as a means of affording maximum safety, at night time, to motorists and pedestrians alike, while to the surgical and medical professions it has proved to be of inestimable value. There is no doubt that the use of electricity is becoming more and more important to meet the daily necessities of the community at large, the effect of which is that the consumption of electricity per head of population is an ever-increasing figure.

I think, in view of what I have said, we are fully justified in looking forward to the future with optimism.

The report and accounts were adopted.

HALIFAX BUILDING SOCIETY

CONTINUED PROGRESS AND DEVELOPMENT

SIR ENOCH HILL'S SPEECH

The eighty-fourth annual general meeting of the Halifax Building Society was held, on the 22nd instant, at Halifax, presided over by Sir Enoch Hill, J.P., F.C.I.S., President of the Society.

The President, proposing the adoption of the annual report and statement of accounts said:—The total receipts for the year, exclusive of investments realised, were £37,885,893. Of this amount, the sum of £20,488,752 was advanced upon new mortgages granted mainly for the purpose of buying or building houses for the personal occupation of the borrowers. The number of new borrowers was 31,794, and the average amount of each advance was £644. This average loan has been substantially increased by the mortgages upon groups of houses. Although the amount advanced on mortgage is slightly less than in the preceding year, yet I am sure you will agree that it is a remarkable achievement for the Society to have lent more than £20,000,000 per annum for three successive years. I can assure you that each one of these 31,794 new advances has been carefully scrutinised by the directors and they have all been considered suitable securities.

The total sum due upon mortgages has increased during the year by £6,253,660, and now stands at £92,195,988, the average amount per mortgage account being approximately £407.

The directors are pleased to report that there are no properties in the possession of the Society at the end of the year to be reported in the statutory schedule, and no properties in the possession of receivers on behalf of the Society as mortgagees. The cost of realising all properties which have been re-possessed has been met out of the profits of the year, without recourse to the Special Reserve Fund No. 2, which has been provided for such contingencies and which now amounts to £750,000.

SATISFACTORY REPAYMENTS

The directors have been gratified to observe during the conduct of the business in the past year the admirable manner in which the Society's mortgagor-members have shouldered their responsibilities and promptly maintained their monthly repayments of principal and interest. The increased prosperity of the country has no doubt contributed to this very desirable state of affairs, which has certainly been reflected in the very excellent position with regard to the number of borrowers' accounts in arrear. In fact, the condition is so satisfactory that it is hardly possible of improvement.

A perusal of the accounts will show that out of the 226,059 borrowers, 177,587 are in respect of balances not exceeding £500 each. This gives ample evidence that the Society's resources are used mainly to encourage men and women, of comparatively small means, to acquire their own homes.

THE LIQUID ASSETS

The Society has maintained through the year its strong position with regard to liquid assets, which consist of short-dated trustee securities and cash in banks and in hand. These liquid funds now amount to £21,397,721, equal to 19.58 per cent. of the total amount of the investment funds. The maintenance of this large sum, realisable on demand or short notice, if required, provides an exceptional degree of safety and protection to the Society's members and depositors.

During the year considerable restrictions have been in force upon the receipt of additional investments from members and depositors, but in spite of these restrictions the directors were able to accept and employ, including the interest added, an increase in these funds of £5,931,541. The total funds of investing shareholders and depositors now stand at £109,306,258. The excess investments constantly offered to the Society are a sign of the great confidence it inspires by its convenient facilities and the strong position disclosed by its balance sheet.

FUNDS INCREASED BY OVER £6,000,000

During the year the total assets of the Society have increased by £6,240,109, and now amount to £114,327,576.

The new accounts opened during the year numbered 86,751, and the total number of shareholders' and depositors' accounts open at the end of the year was 682,615, being an increase of 23,106 accounts.

The balance of profit for the year, after payment of expenses and provision for income tax and all interest due to depositors up to the date of the accounts, and for depreciation of office properties, amounted to £2,904,665, to which had to be added

the balance brought forward of £56,293, making together a total sum of £2,960,958. After crediting to shareholders interest amounting to £2,322,570, the directors have appropriated £50,000 to the staff superannuation fund, £58,145 to reserve fund No. 2 (making this reserve fund up to £750,000), and £353,273 to the general reserve fund (making this up to £3,850,000).

THE BONUS DISTRIBUTION

The balance of profit remaining after these appropriations is £176,969, from which the directors have allocated, subject to your confirmation at this meeting, a bonus of 10s. per cent. to the paid-up shareholders, Class 1, which is confined to shares completed by monthly subscriptions, and a bonus of £1 per cent. to the monthly subscription investing shareholders. These bonuses absorb £109,627 and leave a balance to be carried forward to next year's account of £67,342. This distribution is at the same rate as in the preceding year, and will make a total yield for the past year to the paid-up shareholders, Class 1, of £3 15s. per cent. and to the subscription shareholders of £4 5s. per cent., the income tax on both interest and bonus being borne by the Society. The question of income tax has received the directors' careful consideration, and the sum of £50,000 has been added to the provision made for future liabilities.

It should be noted that the reserve funds and undivided profit, amounting to £4,667,342, are entirely free from all liability, as all the appropriations and allocations hitherto taken from the unappropriated profit at the end of the year have been effected prior to the accounts being completed.

It is advisable to recall from time to time that the chief method originally employed by building societies to raise funds was by means of monthly investing subscription shares. This department of the Halifax Society has always been popular, but it is not used to the extent which I feel sure its facilities and advantages deserve, and I would urge upon all the Society's members and officials that they endeavour to extend this form of regular and systematic saving, in order that the Society may be instrumental in helping as large a number as possible—men, women and children—by the inculcation of the habit of thrift through monthly investing subscription shares. During the year the proportion of the total investments on deposit has increased by 9.40 per cent., compared with 14.73 per cent. in the preceding year, and the proportion in share investments has increased by 4.14 per cent., compared with 0.78 per cent. These, I am sure, are steps in the right direction.

THE OUTLOOK

You will expect me to say a word or two with regard to future prospects. I think building society circles generally are now prepared to experience a somewhat lessened demand for mortgage facilities. This is only to be expected after the great boom of recent years, but I see no reason to abandon the expressions of optimism which I have made from this platform for many years.

The attainment of saturation point in certain classes of housing in some districts may prove a factor tending to diminish in the near future the volume of new estate business in many areas, but there will be compensations in the greater development in other districts, and the normal transfer of property must, in the coming years, inevitably be upon an increasing scale and must call for mortgage financing upon a similar scale.

Among the problems of the immediate future is the certainty of the increased cost of building, but if this should prove not very severe it will not greatly check home-ownership, as proved by experience in the past.

The future of building societies must rest, along with the future of industry and commerce of our country, on the continuance of peace and prosperity, and an absence of fear in the future, which we all so much desire.

I am sure that the results of the last year's business must be gratifying to all concerned and the Society has not only made great progress, but its financial strength is greater than at any time in its successful history.

The Halifax Society, with its branch organisation second to none in the building society or mortgage world, and with its pre-eminent reputation for the quality of its service, cannot fail to attract to itself in the years which are ahead, a continued and considerable demand for those facilities which have established the Society in the proud position it occupies to-day.

The report and accounts were approved.

LAW LAND COMPANY, LIMITED

INCREASED INCOME FROM RENTS

MR M. E. F. CREALOCK'S SPEECH

The fifty-fourth annual general meeting of the Law Land Company, Limited, was held, on the 24th instant, at Brettenham House, London, W.C., Mr M. E. F. Crealock (chairman of the company) presiding.

The Managing Director and Secretary (Mr H. H. Sparks), having read the notice convening the meeting and the report of the auditors,

The Chairman said:—The most striking figure is the large increase in income from rents, due almost entirely to lettings in the two new properties—Brettenham House and Carrington House. This figure is still on the rise and the revenue from these two properties will be reflected to an even greater extent in the year 1937. In addition, our older properties—both offices and flats—show considerable improvement in income and at the present time there is very little in the office properties which is vacant. The flat properties are also improving and every effort is made to keep them bright and attractive to meet the competition to which seems ever on the increase. I want, however, to say in this connection that I look forward with confidence to a return to popularity of the large and lofty rooms which are a feature of our flats as compared with the diminutive and box-like accommodation offered by so many of the new blocks of flats recently erected in London and even in the suburbs. Whilst it is true that this criticism may perhaps be applied to Carrington House, I must point out that in the particular area in which that building is situated there is a need for accommodation of this type. I have no doubt that this design of flat will continue to be sought for in a neighbourhood which is unique for its accessibility to the theatres, clubs and parks, and is yet just sufficiently distant from Piccadilly as to be away from the noise of traffic.

At this point I should tell you that a few weeks ago a transaction was completed by which we sold our interest in Central House, Kingsway, to the adjoining owners, the General Electric Company. That company needed the building for the purpose of extending their office space. Having been approached many times during the last few years with a view to our disposing of the property (not always with a knowledge of the intending purchaser) we at length received an offer which we felt we should accept. As the matter has only so recently been concluded I feel that, without the approval of the purchasers, I should not make any further reference to the price realised.

IMPROVEMENTS TO PROPERTIES

Now to turn to the expenditure side of the profit and loss account. The "omnibus item," as it is sometimes called—Rates, Taxes, Repairs, etc., etc.—shows an increase which calls for mention. But I need only refer to that part of the item which is in respect of the expenditure on repairs. It will be understood that light, service and similar matters must of necessity cost more in view of the increased lettings. However, this does not explain the greater expenditure on repairs during the past year. As time passes the original properties call for more and more money in replacing lifts, sanitary fittings and lighting and heating installations, apart from ordinary decorative work and external repairs. It has been found necessary to undertake extensive reconditioning, and I fear that I can hold out no hope that this outlay will decrease during the next few years.

MODERN FACILITIES

Your directors continue to keep to their policy of being first in the field with new devices. Carrington House is a steel-framed building, and, in the latter, radio reception is always difficult. In order to overcome this and provide the most modern facilities for your tenants we have installed an aerial on the roof 30 ft. above the steel structure, with a protected main leading down to every flat. This enables each tenant to plug his radio set into this main and get good reception, and at the same time each tenant can tune in to whatever station he desires, and irrespective of the station to which other tenants are listening. In addition to this, there is an aerial above the roof for the reception of television, and the same facilities are provided to each tenant for television as for radio. Carrington House was the first block of flats in this country, and, we are credibly informed, in the world, to be so fitted for television reception. The work was carried out by E.M.I. Services, Limited, who, on its completion, gave a demonstration at which a large number of your tenants attended.

I would like to say that the rumours which were current a short time ago to the effect that your company was interested in the development of the Adelphi site are entirely without foundation. In any case, I should not advise my board to enter into any building venture at a time like the present, when all materials and price of labour are on a rapidly advancing market.

LOW PERCENTAGE OF EMPTIES

Mr P. H. Stevens, in seconding the resolution, said that there were two or three figures which the chairman had not mentioned in connection with re-lettings and the percentage of empties. Leaving out their two latest buildings, Brettenham House and Carrington House, and dealing with offices, during the past year 73 tenancies had fallen in for renewal, and of those tenancies they had retained the tenants either for the old and for larger accommodation for 84 per cent. The net result was that when new lettings were taken into account the percentage of empty properties in their old office blocks was less than 1½ per cent. If they took the whole of their properties, offices and flats, leaving out their two latest buildings, the percentage of empties was only 3½ per cent., which he thought was ample testimony of the policy which the company was pursuing of constantly spending money to keep their properties up to date. (Hear, hear.)

In reply to a question by Colonel Sir Stuart Sankey as to the progress of the rebuilding of Waterloo Bridge, the chairman said that that would take three years to complete, but when Waterloo Bridge was completed and the main through road from South to North was in full use, it would double the value of Brettenham House. He was afraid that it would not be in his time that that building would come to its absolute peak, but undoubtedly his successor would see that time arrive. He would like to take the opportunity of expressing on behalf of the board and himself their appreciation of the way they had always been met by the officials of the London County Council, who had always done all they could to help the company. Shareholders would realise that there must be from time to time considerable noise due to pile driving and so on, but under such circumstances it was always possible for people to help each other, and the London County Council had always done all they could to assist the company.

The report was unanimously adopted, and the proceedings terminated with a vote of thanks to the chairman and directors on the motion of Colonel Sir H. Stuart Sankey, K.B.E., C.V.O.

PROVINCIAL CINEMATOGRAF THEATRES

15 PER CENT. FOR TEN CONSECUTIVE YEARS

The twenty-seventh annual ordinary general meeting of Provincial Cinematograph Theatres, Ltd., was held, on the 23rd instant, in London.

Mr Mark Ostrer (chairman and managing director) said that the net profit for the year, including income from investments and transfer fees, amounted to £503,925, an increase of £9,557 as compared with the previous year. With the amount brought forward from last year of £122,923 there was a total available of £626,849. Deducting from this figure the amounts appropriated to reserve for income tax, depreciation reserve, debenture stock sinking fund and general reserve, and the dividends on the preference and preferred ordinary shares, there remained £199,366, out of which the directors recommended a dividend on the ordinary shares at the usual rate of 15 per cent., leaving £124,366 to be carried forward, an increase of £1,443 over the amount brought in.

He felt justified in reminding shareholders that the company had paid a dividend of 15 per cent. on the ordinary shares for ten consecutive years, which surely was conclusive evidence of the company's stability. No additional permanent capital had been raised since the issue of the debenture stock in 1929. Subsequent to that date very substantial sums had been placed to general and depreciation reserves, out of which a large number of modern theatres had been erected or acquired.

The building of redundant theatres unfortunately still continued, but the conservative policy they had pursued for many years should enable them to meet this increased competition. Their theatres had always been maintained in a first-class condition, and they were in a better state of repair than the majority of theatres in this country. The company was one of the oldest in the business. Their long experience had enabled them to create an efficient organisation for the management of their theatres, and they were in a position to book the best films on advantageous terms. With the continued prosperity of the country he was looking forward with confidence to the results for the current year being as satisfactory as those now submitted.

The report was unanimously adopted.

RADIATION, LIMITED

TURNOVER AND NET PROFIT INCREASED
RECORD SALES OF "NEW WORLD" COOKERS

The annual general meeting of Radiation, Limited, was held, on the 24th instant, in London.

Mr H. James Yates, the Chairman, presided, and in moving the adoption of the report and accounts said: Two points stand out in reviewing the trading conditions experienced in 1936. One of these is the severe competition and the other is the higher manufacturing costs occasioned by advances in wages and increases in prices for raw materials. Because of these difficulties we have not been able to maintain the same rate of profit on our sales as in previous years, but our turnover has constituted a new high record, so that, despite the lower rate of profit on sales, we are able to report an increase in the amount of net profit for the year. Considerable extensions were made to buildings and plant during the past year, which enabled the company to meet the additional demand for its products.

There is little doubt that the trading conditions which prevailed last year will continue during the present year, but we have ample resources available and we shall use them in order to keep the company in a position to meet whatever conditions arise.

It is now realised that a gas fire provides means of quickly and healthily warming a room, and this has only been attained by our inventions and developments applied to gas fires. In 1908 we were the first to introduce the vertical columnar radiant; this has gradually been developed until we introduced a few years ago our High Beam Gas Fire with both columnar and scrubber radiants, which give an increased radiant efficiency and enable us to make the whole of the fire opening aglow with warmth. The sales of our High Beam Fires again reached a record figure during the past year, and our introduction, several years ago, of the self-lighting tap, which does away with the need to use matches, has been the means of greatly extending the use of gas fires.

DEMAND FOR COOKERS

Turning to another aspect of your business, namely matters connected with cooking, I may remark that the subject of dietetics is not sufficiently studied. Both good food and good cooking are essential to maintain us in good health. The success resulting from the work done in our Research and Demonstration Kitchen at Radiation House has led us to rebuild and equip a much larger Kitchen in Birmingham, enabling us to extend our School of Cookery where we train many women who, so soon as they are expert in their work, go all over the country lecturing and giving practical demonstrations which have been appreciated by many thousands of housewives.

The demand for our "New World" Cookers during the past year again constituted a further record. We have millions of satisfied users, and it is indeed pleasing to us to continue to receive numerous letters of appreciation testifying that the "New World" Cooker is ahead of all others.

The name "Regulo" has been so widely advertised all over the world that it has become a household word and is thought by many to refer to any thermostat used with a gas oven. The word "Regulo" is our registered trade mark and refers to the specially designed thermostat supplied only with Radiation cookers. It is important that the public should realise there is only one "Regulo," and that is obtainable only with Radiation Gas Cookers, and is marked with our trade mark "Regulo."

TRIBUTE TO CHAIRMAN

In seconding the adoption of the report and accounts, Mr C. Herbert Smith said that despite difficulties the year 1936 had been a record one for the company. He paid a hearty tribute to the valuable services rendered to the company by Mr H. James Yates, founder of Radiation, Limited, and chairman since its inception. Previously Mr. Yates was the chairman and managing director of John Wright and Eagle Range, Limited, and its subsidiaries.

Mr. Yates had devoted the whole of his time to the control and guidance of the company, nursing its growth year by year, and there were now upwards of 100 acres of works and 10,000 workpeople. From his youth Mr Yates had been keenly interested in research work, and had a laboratory at his own home. Nearly forty years ago he established a research laboratory in his works. It was due to this early personal research work that we had the modern gas cooker, gas fire and other gas appliances. As a mark of their esteem the directors considered this was a suitable occasion to invite Mr Yates to have his portrait painted for the board room, with a replica for himself.

The report and accounts were unanimously adopted.

CLAYTON DEWANDRE COMPANY, LIMITED

INCREASED PROFIT AND DIVIDEND
ADDITIONAL CAPITAL ON BONUS TERMS

The eighth ordinary general meeting of this company was held, on the 24th instant, in London.

Mr C. H. Dade (the chairman) said:—

I am sure the shareholders will feel that the accounts of the year are satisfactory. Our turnover throughout was well maintained, and for the fourth year in succession our trading profit shows an increase over its predecessor of approximately 50 per cent.

Our order book can again be described as promising, though I must add that manufacturing costs are on the increase. Raw material prices are constantly moving upwards, and this factor, together with advanced rates of wages, reacts upon works costs. Any increase in these, which is not overtaken without "lag" by our sale prices prejudicially affect profit margins.

Our properties were well maintained during the year. At the inception of the company we acquired adequate buildings in which to conduct our manufactures, and we are fortunate in saving any considerable expansion expenditure on them. We have still sufficient room for accommodating the installation of the additional plant we have in contemplation to meet immediate and further manufacturing requirements.

Under development account we expended during the year the sum of £2,341, but the balance at the close of the year has been again substantially reduced out of profits.

RESERVE ESTABLISHED

The item preliminary expenses now disappears. On the other hand, we have created a new and interesting item, namely the undivided profits account, to which has been allocated the sum of £10,000. This account is intended as a stand-by against less propitious times, and it is gratifying to the directors that in addition to increasing dividend distributions, this start is made in establishing prudent provision for the rainy day.

INCREASED DIVIDENDS

We are proposing to supplement the interim dividend of 3 per cent., less tax, disbursed in October last upon the ordinary shares, by a final dividend of 5 per cent., less tax, so making the total distribution on these shares 8 per cent., less tax, for the year. We propose further to distribute a dividend of 8 per cent., less tax, on the deferred capital. After payment of these dividends our carry-forward is only a fraction different from the amount brought in.

PRODUCTS AND THEIR IMPROVEMENT

Our manufactures have maintained fully their standing and popularity. Their quality is something of which we are proud, and the continuous research we engage in enables us to introduce improvements which add to the reputation of the products themselves. In the present year we expect to initiate the manufacture of two or three additional products, and these will conform to the high quality standards of our specialties.

ADDITIONAL CAPITAL

Shareholders already know that the directors lately decided that the business could employ usefully more capital, and that having in hand a certain amount of unissued capital, this should be offered to present holders on bonus terms. The prices at which these shares are offered, compared with the prices on the open market, show advantages both to the shareholders and to the company. One effect of the increase in materials and wages is that our funds lying in stocks and work in progress must now be rated at higher levels, and there is the further factor that in the purchase of raw materials we have now to take longer views to get safe deliveries to keep our production going. We need to buy much farther ahead and in greater quantities, and this requires more finance.

To fixed equipment we shall devote also a considerable portion of the new capital. We hope to install quite a number of new machines to cope with the new manufactures we have in view.

The response of the shareholders to the issue of the additional capital is already substantial, and permission to deal in the new shares has been granted by the Stock Exchange Committee.

At a later stage we shall suggest to you the desirability of converting the shares of both classes into stock units. It will be necessary to convene special meetings of the shareholders. No shareholder need apprehend being placed at the slightest disadvantage by the conversion suggested, which is a process now becoming common as facilitating transfer work and procedure.

The report and accounts were unanimously adopted.

GODFREY PHILLIPS, LIMITED

SATISFACTORY YEAR'S RESULTS

INCREASED PROFIT

The twenty-eighth annual general meeting of Godfrey Phillips, Limited, was held, on the 23rd instant, at the registered office of the company, 112 Commercial Street, London.

Mr Arthur I. Phillips (chairman and managing director) presided, and in the course of his speech, commenting on the accounts, said:—The "reserve" still stands at the round figure of £1,000,000, and this, together with the premium reserve, now £150,000, your directors consider ample to meet any likely eventuality. The credit balance of £13,000 on "reserve for development account" shows that the expenditure during the year was approximately £37,000.

During this coming year your directors intend, amongst other things, to make a special effort, mostly by way of additional, but probably not immediately remunerative, publicity, to promote the sales of a profitable side of the trade, which, at the moment, is not proportionate to the company's sales in all other directions. Any unrecovered cost at the end of the financial year can well be provided from this fund built up for such purposes.

"Investments in subsidiary companies" is a little more, the additional sum being the purchase price of some of a few outstanding ordinary shares of one of the subsidiaries previously acquired.

It would not be out of place here to express a word or two on the position of the subsidiaries and associated companies, which are comprised in this item of "investments."

They are all in a sound financial position, and so far from its being necessary for the parent company to assist them in any way with finance, they are at present able to loan us considerable sums, as you will see from the balance sheet, under the item "loans from subsidiary companies." We pay them varying rates of interest, but invariably at rates comparable with those ruling in the open market. This system works to the common advantage.

By the association the subsidiaries are in a far better position to trade than if they stood alone; on the other hand, their output and fluid position helps the profit and loss account to quite a satisfactory degree.

ADVANTAGEOUS PURCHASE OF LEAF

Stock is some £50,000 lower. This item is to an almost full extent leaf tobacco in bond, comprising various growths and crops, held to mature for varying periods. The 1936 crop was poor and dear. Your board were happy in anticipating that the drought in the United States might produce a short yield, and possibly a quality below that of the previous crop, and were fortunately able to secure from holders a considerable quantity of the 1935 crop at a price that ultimately proved advantageous.

It is also satisfactory to know that as a result we, at any rate, shall be able to maintain without any difficulty the high quality that is associated with our products.

Turning to the profit and loss account, the net profit for the year, including dividends declared by associated undertakings, after adjusting income tax and charging advertising and all expenses except interest and directors' fees, amounts to £254,900. The result of last year's trading shows an appreciation in the profits of £7,700, which, I think, we may be justified in considering satisfactory.

Competition was no less acute—in fact, only once before, and that some while ago, has the amount expended by the trade as a whole in advertising in 1936 been exceeded.

Fortunately there was an increased consumption on the part of the smoking public which has enabled us to maintain and even slightly to increase our total profits, despite the factors of dearer leaf, greater advertising and more severe competition.

THE OUTLOOK

It is much to be hoped that there will not be any increase in the enormously high British duties, for the Chancellor will realise that any change resulting in higher retail prices must inevitably invoke the operation of the law of diminishing returns.

But our trading is not confined to the United Kingdom, and I would not care to assume that we will not have some difficulties to meet abroad, where we are not, in every instance, subject to such practical and successful financial administration as we get from Mr Chamberlain. If, as we all fervently hope, there are no drastic changes, I believe we may look forward to a trading result this year no less satisfactory than I feel we may consider the one we have just reviewed.

The report and accounts were unanimously adopted.

PINCHIN, JOHNSON AND COMPANY, LIMITED

STRONG FINANCIAL POSITION

SALES EXPANSION AT HOME AND ABROAD

MR EDWARD ROBSON'S SPEECH

The annual general meeting of Pinchin, Johnson and Company, Limited, was held, on the 22nd instant, at the Hotel Victoria, London.

Mr Edward Robson (the Chairman), in moving the adoption of the directors' report and balance sheet for the year 1936, said:—

In submitting the report and accounts for 1936, I find my task an extremely agreeable and easy one, as the figures shown represent an outstanding landmark in the history of this successful company.

The total assets amount to no less a sum than £4,041,320.

The levels at which these assets now stand may be truthfully termed "gilt-edged," inasmuch as they represent figures more than readily obtainable from a saleable point of view.

Against the total assets shown, the liabilities only amount to £337,470, and I venture to say that such a set of figures presents a picture which should please the most cautious of our shareholders.

RECORD SALES

From your directors' report you will have observed that our net profit for the year totals £379,262, after providing fully for all charges, expenses and depreciation.

The present results have been obtained in face of the keenest competition, and with selling prices ruling at the lowest ebb in the history of this industry for the past twenty years.

Our sales for the past year represent another record established in the life of this company, and I would emphasise the fact that your board consider this a particularly satisfactory feature, especially when one bears in mind the relation of record sales to any betterment of selling prices in the future.

In connection with this matter you will note that advances in selling prices of our products have completely lagged behind the increases in cost of raw material and labour. It is only now that these conditions are making themselves felt sufficiently to bring about some little co-operation in the paint industry.

A HANDSOME BONUS

Following on my remarks of last year, I am pleased to say that your board has decided to distribute a share bonus to shareholders of one new share, fully paid, for each ten shares at present held. In receiving this distribution I think all shareholders will be pleased to know that we do not anticipate any difficulty in maintaining at least the same dividend on the enlarged capital.

You will see from our profit figures and carry-forward to 1937 that we commence this year well equipped in this connection.

PROSPEROUS FUTURE

Our company's trade is now very widely spread and covers most of the regular industrial fields of activity. We are in no way dependent on the so-called Armaments Programmes of the world, and, in view of this fact, I think it can be truthfully asserted that, with industrial conditions in a fairly active state, this company cannot fail to reap yet more prosperity and benefits.

The re-election of the directors and auditors followed, and the meeting terminated after a hearty vote of thanks to the Chairman, proposed by Mr W. C. Howard.

Our Information Service

The Intelligence Branch of *The Economist* has been enlarged to meet the growing demand for economic and statistical information. The Department has been able to secure the services of a number of experts, and is prepared to supply information and reports on any branch of industry and finance as well as on international relations at a fee proportionate to the work involved.

A special feature of the Department is the preparation of regular or occasional reports, on request, for business men and industrialists anxious to keep abreast of all developments which may affect their branch of activity.

Enquiries should be addressed to the
Intelligence Branch, THE ECONOMIST
8 Bouverie Street, London, E.C.4

SUNGEI SIPUT RUBBER PLANTATIONS, LIMITED

A FAVOURABLE YEAR

The twenty-seventh ordinary general meeting of Sungei Siput Rubber Plantations, Limited, was held at Winchester House, London, E.C., on the 23rd inst.

Sir Ivor Philipps, K.C.B., D.S.O. (the chairman), said:—The profit for the year was £10,730, as compared with £2,931. Shareholders have already received an interim dividend of 5 per cent., less tax, and we now propose a final dividend of 10 per cent., less tax at 4s. 9d. in the £.

There is an increase shown in the subscribed capital which at December 31st had risen to £85,835, and the capital now stands at £120,170. Our cash resources of over £30,000 remain at a very satisfactory level and are ample for our needs, especially as they are being added to every day.

As to our recent acquisitions, including Plus Estate, this amalgamation gives the company a combined planted area of 4,162 acres, which are capitalised at £29 per acre against the share capital and £15 10s. in respect of the debenture stock. The debenture stock possesses rights of conversion into shares at 4s. per share, and on complete conversion the capitalisation of the company will stand at the low figure of £36 12s. per planted acre.

Our 1936 profit and loss account can be summarised shortly as follows: Rubber sales at 8d. net, plus ½d. for sundry receipts, less cost of production at 4½d., leaves a profit of 4d. per lb. The estimates of production costs for 1937 so far received show a further welcome reduction, and we anticipate, in view of a total export allowance of say 1,631,000 lbs., or two and a half times that of 1936, a consequent drop in overhead charges per pound, and we may hope that costs for 1937 will be under 4d.

With rubber at 10½d. and a cost of 4d. a profit of 6½d. would accrue, which on an output of 1,631,000 lbs. amounts to £44,000 sterling, say four times the profit shown in the 1936 accounts, and equivalent to 3½ per cent. on the present issued share capital after providing £3,863 for interest on the debenture stock. On the output mentioned every penny profit provides £6,750 in the year, equivalent to 5½ per cent. on the share capital.

The report and accounts were unanimously adopted.

MAPLE & COMPANY, LIMITED

INCREASED PROFITS AND DIVIDEND

The annual general meeting of Maple and Company, Limited, was held, on the 24th instant, on the company's premises, Tottenham Court Road, London, W.

Mr C. C. Regnart (the president), who presided, said that he was in the happy position of being able to report the continued progress of the company. A substantial increase in the net profits of the company had been realised, and they had been able to recommend an increased ordinary dividend for the second year in succession, and, at the same time, more than replace the sum by which the carry-forward was reduced last year. It was with considerable satisfaction that he was able to inform them that that increase was not due to any one cause, but to an all-round improvement in the various sources from which the company derived its income. The general retail sales had continued to be good, and the pleasing feature (indeed, a very satisfactory feature from the company's point of view) was that the quality of goods asked for at the present time was distinctly superior to that of a few years ago. There was a clear indication that not only had the spending power of the public improved, but what was more important the public would not be content with the cheaper articles when they were able to afford furniture and furnishings of the higher grades.

The upward costs of all materials used in the furniture trade would, no doubt, be more apparent this year and larger profits should accrue from forward buying from which their large cash resources enabled them to avail themselves.

The subsidiary companies had made a substantial contribution to the profits of the company. These companies had a lot of leeway to make up, as the times through which they had passed had been times of exceptional severity. There were signs that more prosperous days were ahead, and the board were looking forward to the future with confidence and hope.

Having studied the prospects very carefully, the directors decided to establish a branch of the business in Birmingham, the second largest city in the country. A few months ago a lease of ideal premises became available, and was at once secured.

The report and accounts and the payment of a final dividend of 6 per cent., making 8½ per cent. for the year, was approved.

APOLLINARIS AND PRESTA, LIMITED

CONTINUED PROGRESS OF PRESTA

The fortieth annual general meeting of Apollinaris and Presta, Limited, was held yesterday at the Holborn Restaurant. Mr John Douglas Broad (the chairman) presided.

In presenting the directors' report and accounts for the year ended December 31, 1936, the Chairman referred to the years of energetic service of Mr Alfred R. Holland, who had been a director of the company since 1897, and its chairman since 1920. Mr Holland, who had retired in September last, had been succeeded by Lord Lurgan, who, to the deepest regret of the board, died very suddenly last month. Seats on the board had been accepted by himself and Mr James Henry Stephens.

Economic and political difficulties continued to affect the company adversely—in particular the high German exchange and the German Transfer Moratorium.

A scheme of arrangement with the debenture holders and the debenture deferred interest certificate holders had been sanctioned by the High Court on May 20th last, and there would have to be in the near future some rearrangement of the capital structure. He emphasised that the business as such was sound, and the liquid funds sufficient for an increased turnover.

WET SUMMER OF 1936

In seconding the adoption of the report and accounts the vice-chairman and managing director, Mr Francis J. Schilling, said that in spite of the poor summer of 1936 their Presta business had increased and, given a good summer this year, they were surely entitled to look for very much better results. Apollinaris advertising was to be resumed in America, and although their general export trade was still a source of anxiety, it was hoped that an improvement in world trade conditions would be reflected in a bigger turnover, thus reducing the effect of such adverse happenings as the devaluation of the Dutch currency.

He wished to welcome the new chairman, Mr Broad, and the new director, Mr Stephen, who had already assisted the company for some time with their help, advice and influence.

The report and accounts were adopted unanimously, and the proceedings terminated with a vote of thanks to the chairman and staff.

GOVERNMENT RETURNS, &c.

NATIONAL ACCOUNTS

The total ordinary revenue for the week ended March 20, 1937, amounted to £21,575,000, against ordinary expenditure of £15,113,000. After allowing for a decrease in Exchequer Balances of £211,148, the operations for the week, as shown below, decreased the gross National Debt by £6,673,000, to approximately £7,916 millions.†

(000's omitted)	
(No increases)	
Treasury Bills	£ 6,338
Public Department Advances	220
National Savings Certificates	50
Other debt (War Loan Acts)	65
Nil	6,673

† Including £375 millions on Account of Exchange Equalisation Fund and Borrowing for Statutory Sinking Fund.

COMMERCE AND TRADE

SURVEY OF COMMODITY MARKETS

AFTER the hectic movements of the past few weeks it is scarcely surprising that the majority of the commodity markets had a quieter appearance in the pre-holiday period. The strike situation in the United States had a bearish influence in certain instances and price declines were common.

Profit taking by speculators and the slackening of demand were responsible for a further decline in metals. Copper dipped well below £70 a ton, before scoring a recovery, while tin, after heavy fluctuations, also showed a net loss on the week; lead and spelter were easier in sympathy. Although the technical position of the metal markets was improved by this week's shake-out, it is probable that psychological factors will continue to play an important rôle in the near future. Rubber was barely steady after last week's rise, while raw cotton suffered a sharp reaction following the recent bout of speculative activity. Jute, on the other hand, was firmer, the continuance of strikes in Indian mills being more than sufficient to offset the effect of the removal of restrictions on working hours in that country. Other textile fibres were generally unchanged in price.

The grain markets again had a strong tone. Wheat, which had begun to sag, firmed up on the news that the Argentine Government may find it necessary to impose restrictions on exportation; flour was marked up and maize was dearer in sympathy with wheat. Linseed was also a strong market. The London tea auctions had a good tone, a hardening of prices being general. Provisions were mostly dearer, and potatoes also rose in price.

Prices in the United States are "marking time." Thus Moody's daily index of staple commodity prices stood at 122.2 on Tuesday (December 31, 1931 = 100), against 222.1 on Wednesday of last week, 206.9 a month ago, and 170.4 on the corresponding day last year.

COAL

SHEFFIELD.—There is a very strong home demand for industrial fuel, especially steam coal. All qualities are rather scarce, but there should be some improvement with increased quotas. Furnace and foundry coke, at 26s. 3d.-26s. 6d. per ton, is in strong request; and prices show a rising tendency. Gas coke, at 31s. 6d.-32s. 6d. per ton, is rather quieter. On the export market there are plenty of inquiries for forward delivery, but collieries show no great readiness to book contracts at existing quotations.

WORKINGTON.—With the restarting of the Whitehaven pits there will be more coal for industrial users and also for the Irish market. It will be another month, however, before the output is sufficient for requirements. House coal is in vigorous demand. Prices are firm. Best round stands at 23s. 6d.; washed doubles at 22s.; washed singles at 21s. per ton, all f.o.b. Smallies are priced at 15s. 6d. Best house coal costs 35s. 8d. and house nuts 34s., at station. Gas coal costs 27s., and local coke from 15s. 6d. to 16s. 6d.

NEWCASTLE-ON-TYNE.—The advance in coke prices is a feature of a very strong fuel market in this area. Home requirements are insistent and there is an increased demand from Scandinavian countries, which apparently are unable to obtain their usual supplies from the Continent. Durham prime brands of patent oven coke are now approximately 40s. per ton f.o.b., whilst ordinary classes are 37s. 6d. per ton f.o.b. Demand for all classes of coal continues active. Northumberland steam classes are fully sold over this year and there is a regular demand from home and abroad for Durham manufacturing coal.

GLASGOW.—The market remains strong. Despite full outputs in all districts, fresh supplies remain scarce, and only occasional parcels are coming on the market. Firm prices are asked and secured for these. Home trade remains on an extensive scale. Export business is less satis-

factory on the whole, though this is due partly to the scarcity of supplies. There is a brisk forward inquiry circulating in the shipping market, with quite a number of inquiries running into 1938, but for the time being collieries are showing little desire to commit themselves so far ahead on any extensive scale. Coastwise trade is moving satisfactorily.

CARDIFF.—The approach of the Easter holidays has been marked by a considerable increase in the supply of prompt tonnage, and in the early part of the week a number of vessels were waiting their turns at the loading berths. Shipments in the foreign and coastwise trades last week totalled 398,800 tons, compared with 337,651 tons in the corresponding week last year, and for a holiday period loadings this week are likely to be heavier than for many years. All but a small percentage of current deliveries are under contracts, but there are few complaints of arrears. Prices are firm, but although peas and beans are scarce, no further advances are recorded in current quotations. The Palestine railways are inquiring for tenders for 27,000 tons of large coals. The coke output of the collieries is almost entirely absorbed by the home market; there is a steady demand for patent fuel; and pitwood is in limited supply at firm prices. The proposed terms of a new wages agreement in the coalfield are to be submitted for the approval of the owners on Thursday and to a special conference of the miners on Saturday.

IRON AND STEEL

LONDON.—The weekly report of the London Iron and Steel Exchange indicates that the volume of new business continues to be limited by the reluctance of makers in most departments to add to their already heavy commitments.

In the pig iron market producers are concentrating upon maintaining deliveries against contracts rather than obtaining fresh business. The stringency of basic iron is sharply felt and the announcement that arrangements have been made under which 400,000 tons of Indian iron will become available for this market has come as a relief to many steelmakers. Efforts are being continued to obtain further supplies of iron from abroad in order to meet the requirements of consuming industries.

Although the British producers of semi-finished steel are working to capacity, output is insufficient to meet requirements, and deliveries of Continental steel against the quota are badly in arrears. As a result, consumers are seriously harassed by the difficulty of obtaining material. The scarcity in finished steel is still acute and pressure is being exercised by consumers to secure deliveries against specifications. In most departments, however, works are in arrears with deliveries. Export business is restricted by the necessity of meeting home requirements so far as possible.

MIDDLESBROUGH.—Business in pig iron is almost non-existent owing to the fact that makers have disposed of their output for the next two or three months. Consumers of foundry iron have to depend on day to day supplies in order to keep their plant occupied. Prices are unaltered both for foundry iron and East Coast hematite. The purchase of 400,000 tons of Indian pig iron for this country will not directly influence the situation in this area, as it is expected to be sent to other districts. Re-rollers continue to complain of the shortage of supplies of semi-manufactured steel, whilst finished steel continues in strong demand. Prices for manufactured steel are unchanged except for sheets, which are dearer.

Large supplies of heavy steel scrap are required and whilst no official prices have yet been announced, it is understood that 67s. per ton is the minimum. Foreign ore is only changing hands in odd cargoes at advancing prices, freight rates from Bilbao being at least 11s. 9d. Good Durham blast furnace coke is scarce, the price to-day being 30s. per ton delivered at the furnaces here.

SHEFFIELD.—Conditions in the iron and steel market show little variation. The volume of business has slowed down on the approach of the Easter holiday. Makers of pig iron are virtually off the market, for they are not in a position to accept further business for some time to come. Some consumers are finding it difficult to keep things going and eagerly take up any small parcels which come on offer. These, however, are few and far between. Foundry and basic pig iron are especially difficult, but a few small lots of forge have been booked. There is no forward business. Makers of hematite are besieged with offers of contracts which they are unable to accept. Deliveries under contract of this material are falling badly into arrears and the position is giving rise to a good deal of anxiety on the part of users. Good business is being put through in finished iron, supplies of which are moderately good. Common and marked bars are in active request, and crown bars show considerable improvement.

VAN DEN BERGHS AND JURGENS, LTD.—Combined profits of Van den Berghs, Ltd., Jurgens, Ltd., and Van den Berghs and Jurgens Sales, Ltd., totalled £752,253 in 1936 against £645,477 in 1935, after tax. Reserve fund receives £200,000; ordinary dividend, 7 per cent.

HICKLETON MAIN COLLIERY.—Net profit for 1936 £99,105 against £70,900 for 1935. Dividend 5 per cent. tax free as before. Carry forward increased from £101,742 to £140,847.

ASSOCIATED PORTLAND CEMENT.—Trading profits for 1936 increased by £107,800 to £1,149,494. To depreciation £417,150 as before. To contingencies reserve £87,500 against nil, and £10,000 against nil to depreciation of investment in subsidiary. Ordinary dividend 22½ per cent. against 20 per cent. Carry forward raised from £192,048 to £196,665.

LAMPOR and HOLT LINE.—Profit for 1936, after all operating charges, but before depreciation, was £43,614 against £20,005. To Beet depreciation £30,000 and £3,000 for sundry depreciation. Carry forward increased from £2,770 to £13,334.

ERICSSON TELEPHONES.—Net profit for 1936 £140,602 against £112,427. Ordinary dividend raised from 20 per cent. tax free to 25 per cent. tax free for year.

THOMAS FIRTH AND JOHN BROWN.—Profits for 1936 £651,644 against £575,410 for 1935. Depreciation allowance increased from £72,000 to £92,000 and ordinary dividend shares increased from 12½ per cent. free of tax to 15 per cent. free of tax. To general reserve £100,000 as before. Carry forward increased from £69,200 to £78,933.

DIRECTORS' REPORT.

(Presented at the Eighty-second Ordinary General Meeting, 31st March, 1937)

The Directors have now to submit to the Shareholders the Balance Sheet and Profit and Loss Account of the Bank for the year ended 31st December last. These show a net profit, after providing for all bad and doubtful debts, of £677,719 18s. 10d. inclusive of £181,037 16s. 1d. brought forward from the previous year. The Interim Dividend at the rate of Fourteen per cent. per annum paid in September last absorbed £210,000. The amount now available is therefore £467,719 18s. 10d. and the Directors propose to pay a Final Dividend at the rate of Fourteen per cent. per annum less Income Tax; to add £35,000 to the Officers' Pension Fund; to set aside £40,000 on account of Contingencies and to carry forward the balance of £182,719 18s. 10d.

The Directors have to announce with regret the retirement of their esteemed colleague, Mr Archibald Auldjo Jamieson, who during his period of office, rendered valued service to the Bank as a Member of the Board.

Mr Arthur d'Anvers Willis, Mr Colin Frederick Campbell, and The Earl of Inchcape, the Directors who now retire by rotation, present themselves for re-election. The Auditors, Mr. David Charles Wilson, F.C.A., and Mr Henry Croughton Knight Stileman, F.C.A., again tender their services.

By Order of the Court,
J. F. DUNCAN, Secretary.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS.

We have audited the above Balance Sheet and Profit and Loss Account with the Books, Vouchers and Securities in London, and with the certified Returns from the Agencies and Branches. In our opinion such Balance Sheet is full and fair and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, according to the best of our information and the explanations given to us and as shown by the Books of the Bank.

D. C. WILSON
H. C. K. STILEMAN } Auditors.
Chartered Accountants.

London, 17th March, 1937.

In the steel market, demand for basic billets is far in excess of supply, and as a result of developments in the iron ore field in the Cleator Moor district it is believed that there will be available a sufficient supply of native hematite iron ore to enable two small furnaces at Ulverston which have long been idle to be relighted. In that event there will be another 4,000 tons of pig iron forthcoming for consumers outside the district. Even then demand will still be bigger than supplies. The more urgent needs will, however, be dealt with, and makers will be freer to accept orders that are being pressed upon them. Prices are to be advanced in June. Quotations are firm and unchanged. Bessemer mixed numbers cost £4 18s. per ton at Glasgow; £5 3s. 6d. at Manchester; £5 6s. at Sheffield; and £5 9s. 6d. at Birmingham, with low-phosphorus iron an additional 5s. 6d. to 16s. 6d. per ton. Malleable iron is in lively demand at £9 15s. delivered at Birmingham, and ferro-manganese at £13 15s. to £14 5s., home. The steel trade is exceedingly brisk. New orders are being booked. Makers anticipate another twelve months' activity at a high level. Workington is rolling rails, billets, bars and slabs, and Barrow is on rails, hoops and strip. Native ore is in sharp request, at 16s. 6d. to 17s. 9d. per ton.

There is no easing of the pressure for supplies of iron and steel scrap. There appears to be some doubt whether "official" prices are operating. At any rate heavy basic steel is being bought up to 67s. 6d. per ton. There has been a jump in high-speed steel to £58-£59 per ton, according to specification. Iron scrap is very difficult, very little heavy foundry cast iron is available and 77s. 6d. is given as a delivered price. Heavy steel works cast iron costs 67s. 6d. per ton and light material 62s. 6d. per ton.

The Easter set-down in most of the Sheffield works will be of brief duration in consequence of the heavy flow of orders both from home and overseas business.

WORKINGTON.—Production of hematite pig iron on the North-West Coast is quite inadequate to satisfy the needs of users in the Midlands, South Wales and Scotland and overseas. As makers are sold to the half-year end, there is very little business being accepted. There is, however, some prospect of a larger expansion of output in May than was at first thought practicable. A big furnace at Workington in the process of being

relined is to be put into commission in the course of six or seven weeks, and as a result of developments in the iron ore field in the Cleator Moor district it is believed that there will be available a sufficient supply of native hematite iron ore to enable two small furnaces at Ulverston which have long been idle to be relighted. In that event there will be another 4,000 tons of pig iron forthcoming for consumers outside the district. Even then demand will still be bigger than supplies. The more urgent needs will, however, be dealt with, and makers will be freer to accept orders that are being pressed upon them. Prices are to be advanced in June. Quotations are firm and unchanged. Bessemer mixed numbers cost £4 18s. per ton at Glasgow; £5 3s. 6d. at Manchester; £5 6s. at Sheffield; and £5 9s. 6d. at Birmingham, with low-phosphorus iron an additional 5s. 6d. to 16s. 6d. per ton. Malleable iron is in lively demand at £9 15s. delivered at Birmingham, and ferro-manganese at £13 15s. to £14 5s., home. The steel trade is exceedingly brisk. New orders are being booked. Makers anticipate another twelve months' activity at a high level. Workington is rolling rails, billets, bars and slabs, and Barrow is on rails, hoops and strip. Native ore is in sharp request, at 16s. 6d. to 17s. 9d. per ton.

GLASGOW.—The additional work which the Admiralty have decided to place with Clyde shipbuilding and engineering firms, as announced at the beginning of this week, will provide employment for thousands of operatives in the Clyde towns for about two years. The shipbuilding

(Continued from page 738)

FIRE AT SIMMER AND JACK MINES.—The following message has been received: "Fire occurred early Friday morning, March 19th, 36th level between Milner and Rhodes shafts. All underground workers withdrawn from the mine as a measure of safety." Work was resumed on the 23rd.

BIG STEEL PLAN (New Indian Company to be Formed).—Shareholders of Indian Iron and Steel have received particulars of a new company to work in co-operation at Hirapur. Proposed paid-up share and loan capital, £3,775,000, some of which for public subscription. To augment cash resources Indian Iron and Steel is to issue one share at Rs. 25 for five held.

INGERSOLL, LTD.—Net profit for 1936, after depreciation, amounted to £15,409 against £11,265 for 1935. Ordinary dividend 15 per cent. against nil. To preference dividend reserve £349. Carry forward increased from £6,014 to £8,375.

BRITISH ROPES, LTD.—Net profit for 1936, after depreciation, debenture interest and income tax, £211,575, against £157,093 for 1935 and £78,700 for 1934. Ordinary dividend raised from 12½ per cent. to 25 per cent. General reserve receives £25,000 as before and staff fund £9,500. Carry forward raised from £48,160 to £61,995.

JOHN LEWIS AND COMPANY.—Net profit for 1936 £233,227 against £192,334 for 1935. Ordinary dividend raised from 9 per cent. to 12 per cent. for year.

industry on the Clyde will be exceedingly busy for some time to come as many of the yards have a very considerable amount of mercantile work on hand in addition to Government contracts. In practically all branches of the industry in the West of Scotland there seems to be an increasing demand. Steel makers, makers of all classes of semis and of finished material are still finding output unequal to the demand and all have heavy bookings for forward delivery. While there has been some slight improvement in the supply of raw materials just recently these are by no means adequate for the requirements of producers who are unable to plan for more than a week or two ahead. Their difficulties are increased meantime by the shortage of fuel supplies. All the manufacturing industries are busy and the outlook would be very bright were it not for the delays and uncertainties in regard to deliveries of their steel supplies.

CARDIFF.—The improved demand for tinplates is being maintained, and output quotas have been increased from 70 per cent. to 75 per cent. of allotted capacity under the pooling scheme. The scheduled Cartel f.o.b. price remains nominally unchanged at 19s. 9d. per basis box, but makers are realising premiums of from 4s. to 5s. above this figure, and are only supplying against specifications. Galvanised sheets are unchanged at £15 15s. per ton and steel bars at £6 2s. 6d. per ton. Shipments of tinplates at Swansea last week totalled 6,759 tons compared with 4,316 tons in the corresponding week last year.

OTHER METALS

COPPER.—Profit-taking by speculators, coupled with a small demand, had a depressing effect on quotations. Although the technical position has been improved by this week's "shake out," the undertone of the market is nervous, and psychological factors are therefore likely to play an important part in the immediate future.

Sales on the London Metal Exchange: 4,250 tons on Monday, against 4,850 tons last week; 4,800 tons on Tuesday, against 4,750 tons last week; Domestic spot was quoted at 16-32½ cents per lb. in New York on Tuesday, against 16-77½ cents a week ago and 15-72½ cents a month ago. Tuesday's official closing price for standard cash in London was £68 10s. to £68 12s. 6d., compared with £71 10s. to £71 15s. a week ago. Stocks of refined copper in British official warehouses at the end of last week, at 25,267 tons, showed a decrease of 3,437 tons, while stocks of rough copper, at 557 tons, were 50 tons smaller.

LEAD AND SELLER.—Although the statistical position showed little alteration, both metals reacted in sympathy with copper and tin. Lead and spelter, like copper, are likely to remain vulnerable to psychological influences in view of their recent rapid rise.

Sales of lead on the London Metal Exchange: 3,800 tons on Monday, against 4,500 tons last week; 2,750 tons on Tuesday, against 2,750 tons last week. The New York quotation on Tuesday was 6-95 cents per lb. against 7-25 cents a week ago and 6-50 cents a month ago. The official closing quotation in London for soft foreign for shipment during the current month was £30 12s. 6d. per ton, compared with £32 18s. 9d. a week ago.

Sales of spelter on the London Metal Exchange: 4,750 tons on Monday, against 3,250 tons last week; 3,000 tons on Tuesday, against 4,100 tons last week. Tuesday's quotation in East St. Louis was 7-50 cents per lb., against 7-50 cents the week before and 6-80 cents a month earlier. Tuesday's official closing quotation in London for "good ordinary brands" for shipment during the current month was £30 12s. 6d. per ton, against £33 8s. 9d. last week.

TIN.—After wide fluctuations, tin prices show a net loss on the week, mainly in consequence of reserve on the part of consumers. Rumours regarding the possibility of a "buyers' strike" of American consumers were unconfirmed. The fact that the International Committee issued no statement after its meeting on Thursday of last week has had an unsettling effect on the market, but it appears that no important decision was then taken. Meanwhile, it is believed that there are no stocks available for immediate export, in Malaya. The strike movement in the United States, and the attitude of consumers in that country are likely to be the principal factors governing price movements in the immediate future.

Sales of tin on the London Metal Exchange: 450 tons on Monday, against 1,000 tons last week; 550 tons on Tuesday, against 875 tons last week. The New York quotation on Tuesday was 64-00 cents per lb., against 65-25 cents a week ago and 54-35 cents a month ago. Tuesday's official closing quotation in London for standard cash was £285 to £285 10s. per ton, compared with £295 15s. to £296 a week ago. Stocks of tin in London and Liverpool at the end of last week totalled 1,172 tons, a decrease of 332 tons on the week.

OTHER NON-FERROUS METALS.—Among other non-ferrous metals, aluminium ingots and bars for home delivery were again quoted on Tuesday at £100 per ton, and rolling billets at £102 per ton. Nickel, for home and export, was maintained at £180 to £185 per ton. Quicksilver, on the spot, was quoted at £14 7s. to £14 7s. 6d. per flask of 76 lbs., the same as last week. Chinese antimony was quoted at £79 to £80 per ton ex warehouse, as against £78 to £80 per ton last week. Chinese wolfram for "March-April" shipment was quoted at 57s. to 59s. per unit, c.i.f., compared with 54s. to 55s. last week. Refined platinum was steady on Tuesday at £11 15s. an ounce.

TEXTILES

COTTON.—Manchester.—During the past week sufficient business was done to maintain the improved position of spinners and manufacturers. Rather wider fluctuations have occurred in raw cotton prices, and, after an easier movement due to profit-taking, a recovery in prices took place. The United States Government has published its preliminary final report on the crop for the current season, the number of bales ginned being 12,130,000. It is probable that the total crop will be very near the Government's December estimate of 12,407,000 bales. It has been officially announced that the releases of loan cotton up to March 18th was 907,000 bales.

American yarn quotations have again been dearer. Spinners have put up their basis in the sections where price-fixing schemes are in operation. A healthy demand has been experienced, especially in twists. The higher prices for Egyptian yarns have somewhat checked trade, but now and again very fair orders have been booked. An encouraging inquiry continues to be experienced in piece goods. Customers in India are at last displaying more interest in Manchester prices, and a few more orders have been obtained in white yarn dhooties and fancies for Calcutta, mulls and bleached shirtings for Karachi and Madras and dyed sorts for Amritsar and Delhi. Contracts have been arranged in heavy materials for Hong Kong. Some useful lines have been mentioned in light bleaching descriptions for Egypt. Heavy shirtings and prints have been sold for West Africa with a steady demand in printing and finishing qualities for South America. Rather more activity has shown itself for the Continent in heavy makes for Scandinavia and Germany and in fine cloths for Switzerland. An encouraging business has been done in home trade fabrics, and more Government contracts have been reported in heavy materials.

JUTE.—Dundee.—The continuance of strikes at about a dozen of the Indian jute mills is responsible for an advance in prices for Calcutta goods. In addition, there is a fair consuming demand, America being a prominent buyer. This has helped the jute trade all round and the raw material has also shown a tendency to advance in price, while spinners and manufacturers have experienced such an improved demand for yarns and cloth that they have been able to raise their terms a little. Altogether, prospects for the trade are brighter. Efforts are being made by Dundee employers and employees to press the Government to give the jute industry some form of protection against the heavy imports of jute cloth and bags from India. These have increased enormously in the past two years. For the first two months of 1935 imports of jute cloth were only 10,566,000 square yards, compared with 19,872,000 square yards in 1936 and 31,165,000 square yards in 1937, while imports of jute sacks and bags were 73,301 cwt., 77,120 cwt. and 87,531 cwt., respectively. Though Dundee's export trade is also showing an increase, in spite of the heavy competition from Calcutta and the Continent, Dundee interests consider that they are not receiving a fair share in the increase in home consumption. Exports of jute cloth for the first two months this year were 23,419,000 square yards, against 19,049,000 square yards last year and 15,102,000 square yards in 1935, exports of jute sacks and bags being 175,252 cwt., 123,644 cwt. and 112,111 cwt., respectively. The Dundee Town Council called a meeting of all interests last week, but in the meantime it has been left to the employers and workers to send a joint deputation to the Board of Trade, and if that fails, then the Town Council and Chamber of Commerce will add their weight.

GRAIN MARKETS

After a rather quiet spell at the end of last week, wheat firmed up on renewed buying interest and on the announcement by the Argentine Government that some curtailment of wheat exports may be necessary in the near future. Prices accordingly showed a net gain on the week and flour was marked up in sympathy. Maize was also slightly dearer this week, despite some reserve on the part of sellers. Barley was a rather quiet market throughout the pre-holiday period.

AMERICAN WHEAT MARKETS.—The following table shows wheat quotations for selected weeks in 1935-37:—

NEAREST FUTURE	Jan. 2, 1935	Dec. 31, 1935	Mar. 25, 1936	Dec. 30, 1936	Mar. 17, 1937	Mar. 23, 1937
Winnipeg (No. 1, Manitoba) —Cents per 60 lb.	82½	84½	82½	129	136½	139½
Chicago (No. 2, Winter) —Cents per 60 lb.	98½	101½	96½	185½	198½	199½

The visible supply of wheat in Canada amounts to 85,333,000 bushels, against 86,322,000 bushels last week, and 113,923,000 bushels in the corresponding week last year.

SALES AND PRICES OF BRITISH CEREALS.—The following table gives the estimated sale of home-grown wheat during the harvest years 1933-34 to 1936-37:—

	1933-1934	1934-1935	1935-1936	1936-1937
Estimated sales of home-grown wheat—	Cwts.	Cwts.	Cwts.	Cwts.
1 week to March 20	224,839	319,248	294,866	277,345
29 weeks to March 20	8,940,476	10,683,471	10,790,506	8,057,980
Average price of English wheat per cwt.	s. d. 4 5	s. d. 4 7	s. d. 6 4	s. d. 9 0

The following is a statement showing the quantities sold and the average price of British cereals in the past two weeks, and for the corresponding weeks in each of the years from 1933 to 1936:—

Week ended	QUANTITIES SOLD			AVERAGE PRICE PER CWT.		
	Wheat	Barley	Oats	Wheat	Barley	Oats
March 18, 1933	Cwts. 137,900	Cwts. 75,016	Cwts. 43,535	s. d. 5 2	s. d. 6 3	s. d. 5 10
March 17, 1934	224,839	91,248	41,320	4 5	9 1	6 2

March 21, 1936	294,866	93,960	44,257	6 4	7 9	6 0
March 13, 1937	205,919	117,276	59,383	8 11	9 9	8 2
March 20, 1937	277,345	116,429	52,951	9 0	9 10	8 3

OTHER FOODS

BACON.—A further advance in the official quotations occurred last week-end, and the market has since had a firm tone. The official quotations (per cwt. for No. 1 Sizable) which formed the basis for dealings on the London Provision Exchange this week were: English, 92s. to 96s.; Canadian, 88s.; Danish, 92s., against 90s. to 94s.; 82s., and 90s. last week. Arrivals in London last week included: Danish, 13,639 bales; Canadian, 6,777; Dutch, 2,778; Lithuanian, 1,069; and Polish, 2,748; as against 12,940, 6,430, 2,370, 1,179 and 2,848 bales, respectively, in the previous week.

BUTTER.—Colonial makes were firmer in price this week. Quotations (per cwt.) on the London Provision Exchange on Monday were: New Zealand, finest salted, 101s.; Australian, choicest salted, 101s.; Danish, 128s.; compared with 98s. to 99s.; 98s. to 99s. and 128s., respectively, a week ago.

CHEESE.—Prices advanced in a strong market. Quotations (per cwt.) on the London Provision Exchange on Monday were as follows: English, finest farmers, 86s. to 92s.; Canadian, finest coloured, 73s. to 74s.; and New Zealand, finest coloured, 63s. 6d., against 86s. to 88s., 71s. to 72s., and 63s. 6d. to 64s., respectively, a week ago.

COCOA.—The spot quotation in New York on Tuesday was 11½ cents per lb., as against 11½ cents per lb. last week. In London, on Tuesday last, good fermented new crop, Accra, March-April, was quoted at 50s. 3d. per 50 kilos, c.i.f. Continent, against 52s. a week ago. Last week's movements of cocoa in London were as follows: Landed, 49,295 bags; delivered, for home consumption, 6,889 bags; exported, 959 bags; stocks, 238,733 bags, against 130,725 bags a year ago.

COFFEE.—On Tuesday, Rio No. 7 (cash) was quoted at 9½ cents per lb. in New York, as compared with 9½ cents per lb. last week and 9½ cents per lb. a month ago. Movements of coffee in London last week were as follows: Brazilian, landed, nil; delivered, for home consumption, 81 cwt.; exports, nil; stocks, 3,098 cwt., against 11,674 a year ago. Central and other South American: Landed, 7,684 cwt.; delivered for home consumption, 3,044 cwt.; exported, 775 cwt.; stocks, 91,265 cwt., against 93,241 last year. Other kinds: Landed, 13,117 cwt.; delivered, for home consumption, 5,337 cwt.; exported, 438 cwt.; stocks, 122,284 cwt., against 154,932 last year.

EGGS.—Prices were further reduced and an active demand was encountered at the lower level. At Smithfield, on Tuesday, English (ordinary packing, Grade 1, about 15-15½ lb.) realised 10s. to 10s. 3d. per 120, as against 10s. 9d. to 11s. 3d. last week; while Danish (15½ lb.) made 10s. 3d. to 10s. 6d., as against 11s. to 11s. 3d. last week.

MEAT.—Business at Smithfield was on a rather quiet scale. On Tuesday last, Argentine chilled hindquarters were quoted at 3s. 10d. to 4s. 2d. per 8 lbs., as compared with 3s. 6d. to 4s. a week ago. New Zealand frozen mutton was 3s. 4d. to 4s. per 8 lbs., against 3s. 4d. to 4s. a week ago. According to the Smithfield Market official report, supplies during last week amounted to 9,396 tons, an increase of 738 tons on the corresponding week last year. Beef and veal accounted for 5,091 tons, mutton and lamb 2,586 tons, and pork and bacon 1,055 tons, as compared with 4,503, 2,522 and 1,089 tons, respectively, in the same week of 1936.

PEPPER.—On Tuesday, Singapore white Muntok, spot, was quoted at 6d. per lb. in bond, against 6d. per lb. a week earlier. Black Lampung, spot, in bond, was quoted at 3½d. per lb. sellers, compared with 3½d. per lb. last week. Movements of pepper in London last week were as follows: Black, landed, 12 tons; delivered, 1 ton; stocks, 1,807, against 1,689 last year. White, landed, 54 tons; delivered, 57; stocks, 11,814 compared with 12,785 a year ago.

RICE.—The spot price of Burma No. 2, cleaned, was 10s. per cwt., ex warehouse, on Tuesday, as compared with 10s. 3d. per cwt. a week ago. "March-April," in singles to Continent and U.K., was quoted a

9s. per cwt., against 9s. last week. Movements in London last week were as follows: Landed, 38 tons; delivered, 33; stocks, 1,102 tons, against 1,273 a year ago.

SUGAR.—Raw sugar was easier, both in London and New York, this week. The New York spot quotation was 3-45 cents on Tuesday, as compared with 3-50 cents per lb. last week and 3-45 cents per lb. a month ago. Tuesday's sales of raw sugar in London included "May" delivery at 6s. 4½d. to 6s. 5½d., against 6s. 8½d. to 6s. 9d. a week ago. Movements of raw sugar in public warehouses in London and Liverpool last week were as follows: Imports, 4,436 tons, against 9,666 in the previous week and 9,402 in the same week of 1936; deliveries, 17,728 tons, against 16,366 and 15,155 tons, respectively; stocks, 200,540 tons, against 213,832 and 236,070 tons, respectively.

TEA.—The following table shows the average prices (compiled by the Tea Brokers' Association) of tea sold in Mincing Lane on Garden Account in recent weeks:—

Week ended	Northern India	Southern India	Ceylon	Java	Sumatra	Africa	Total
	d.	d.	d.	d.	d.	d.	d.
Mar. 19, 1936	12-96	13-76	14-90	11-15	10-77	11-67	13-34
Feb. 11, 1937	13-72	13-73	15-87	12-59	11-29	13-00	14-16

Mar. 11, "	14-29	15-01	16-82	14-18	12-38	13-34	14-92
Mar. 18, "	14-37	15-05	17-03	14-13	12-56	13-61	15-02

The quantities catalogued for this week's public auctions comprised 27,497 packages of Indian and 18,131 packages of Ceylon tea. At the Indian sales on Monday competition was active and a rise in prices was general. On Tuesday—the last auction before the holidays—fine Ceylon teas occasionally sold irregularly, but prices for all other grades tended upwards.

MISCELLANEOUS COMMODITIES

VEGETABLE OILS AND OILSEEDS.—Firm conditions have developed in the market for oilseeds. Following a marked rise in Argentine options, linseed further advanced in price. Demand on this side has been mainly for Calcutta seed, for which £14 10s. has been paid for shipment to July. Bombay prices are considered too dear to tempt buyers. Shipments at River Plate ports are not so heavy, and stocks at the seaboard are smaller. From now on, deliveries are likely to become smaller unless shippers take advantage of the high level of prices now ruling. To date Argentina has exported only a little short of 600,000 tons, or 33 per cent. of the estimated exportable surplus. A feature is the continuance of substantial shipments to the United States, amounting to 197,000 tons so far this season, against only 72,000 tons during the same period last year. The quantity now afloat for Europe has declined to 189,000 tons (including 12,600 tons from India) or 10,000 tons less than a week ago. Exports of the new crop from India will soon commence, but whether larger quantities will be available for export than in the past season is doubtful, though much depends upon prices being sufficiently attractive to growers. Cottonseed is very firm in sympathy with Alexandria, and prices have again advanced. Demand, however, is limited to near positions, and is small. Among vegetable oils, linseed oil is in fair demand, and is about 20s. per ton dearer on the week, in a very firm market. Cotton oil is a shade dearer, but export demand is only moderate. Oilcakes continue in brisk demand and are firm.

RUBBER.—After easing in the early part of the period under review quotations recovered and closed on Tuesday showing little net change on the week. The spot price in New York on Tuesday was 24½ cents per lb., compared with 24½ cents per lb. a week ago and 21½ cents a month ago, Tuesday's official buyers' price for standard ribbed smoked sheet on the spot in London was 1s. 0½d. per lb., as against 1s. 0½d. on the corresponding day last week. In forward positions, business has been done at 1s. 0½d. to 1s. 0½d. for "April" shipment, as against 1s. 0½d. to 1s. 0½d. a week ago. Stocks in London and Liverpool at the end of last week totalled 54,734 tons, against 56,187 tons a week earlier. A year ago stocks amounted to 150,409 tons.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, JANUARY 30, 1937

No. 1

Our New Statistical Service

We present our Monthly Trade Supplement in a new form to-day. The essential purpose of the Supplement, which has long been a feature of *The Economist*, is to enable our readers to keep their finger on the economic pulse of the world. International exchange of commodities and services has been under a cloud in recent years owing to the endeavour of many countries, for strategic or economic reasons, to render themselves more independent of the services of other nations. None the less, the prosperity of the various countries of the world is as indivisible as peace, and a sustained measure of world recovery depends in no small measure on the resumption of economic co-operation. Economic collapse in the United States, or a fall in the prices of primary products, for example, is bound, as before, to have far-reaching repercussions outside the geographical areas immediately affected.

When the Trade Supplement was last revised, in June, 1923, we assembled the most important statistical series which were then available, supplemented by comment and interpretation. In recent years, however, the range of the statistical evidence of the progress of individual countries and commodities has been considerably enlarged. The League of Nations, for example, has steadily increased its statistical series; the International Institute of Agriculture now publishes regularly information relating to the crops of the world; Governments are collecting and publishing an increased number of data; and trade associations have begun to realise the value of statistics relating to the industry which they represent.

But while many spheres of economic activity have not yet been illuminated by the searchlight of statistical evidence, the increase in the information regularly available has enabled us to recast our Statistical Service, and to provide a better view of the trend of business activity at home and abroad. As far as the United Kingdom is concerned, we have endeavoured, since October, 1933, to indicate the general economic trend by our index of Business Activity.

In the past, the four statistical pages of the Trade Supplement consisted of tables showing the production of coal, pig iron and steel, the trend of wholesale and retail prices, of imports and exports, of the notes in circulation, of unemployment, bank rates, exchange rates, capital issues and security prices in a number of countries.

The new statistical section comprises five and a half instead of four pages, as hitherto. Apart from official figures we have assembled a mass of trade statistics, not hitherto available to the general reader. The section comprises more than 500 individual series and no less than 9,000 individual statistics.

The statistics, which are drawn from official and recognised trade publications, supplemented by private information, have been arranged by countries and commodities,

instead of in the form of international tables as previously. In order to enable readers to follow the changes which have taken place, annual figures have been carried back to 1929, while monthly figures are shown from November, 1935, onwards, omitting January-May, 1936, for reasons of space. In subsequent issues, when the number of years covered will be reduced, we shall show monthly figures for the last fourteen months.

Statistics are given for most of the more important countries of the world. The first statistical page is devoted entirely to the United Kingdom, the figures being arranged under production, trade and transport, employment and wages, prices and finance. There are altogether 105 individual series, covering all spheres of business activity in this country. They are drawn from numerous sources (supplemented by private information), and cannot be found together in any other publication.

Detailed statistics relating to the United States, France and Germany, not available in any other British publication, will be found on the second page. The third page—Other European Countries—provides the essential data necessary to follow developments in Austria, Belgium, Czechoslovakia, Denmark, Finland, Holland, Italy, Norway, Sweden and Switzerland. The fourth page—British Dominions and Other Countries Outside Europe—covers Australia, Canada, India, the Irish Free State, New Zealand, South Africa, Argentina, Brazil, Chile and China. In addition to current statistical data, the populations and area are given for each of these countries. Moreover, at the foot of these two pages, which, unlike those relating to the United Kingdom, the United States, France and Germany, will be published in alternate months, will be found a table of statistics showing the trend of world industrial activity, production and stocks of primary products, as well as changes in the value and volume of international trade.

The second part of the new statistical section shows the trend of production, consumption, stocks and prices of leading raw materials and crude foodstuffs. The commodity section is arranged under three groups. Group I will be published monthly and Groups II and III in alternate months. The first group of commodities includes coal, oil, crude steel, gold, wheat, cotton and sugar. Information relating to rubber, rayon, wool and tea will be found in Group II, while Group III covers copper, lead, spelter and tin.

Finally the re-arrangement of the statistical section has enabled us to extend our monthly comments on British industrial developments and on the trend of business abroad. In the main, comment and interpretation will be confined to short-term trends rather than to long-run prospects which are discussed in *The Economist* itself.

(a) Nominal.

The Trend of Business

DURING the past year British industrial activity rose well above the level of 1929. After a slight setback in January, due partly to the previous acceleration of production in anticipation of a coal strike, business activity increased vigorously until September. This period of rapid expansion was followed by a temporary lull, but in December activity resumed its upward trend and was scarcely affected by the Constitutional crisis. Moreover, the year 1936 closed with out any perceptible loss of momentum in the progress of recovery, and there are no signs, as yet, which forbode a change of trend in the near future.

The improvement during the past year is revealed by the statistical data shown on page 6. *The Economist* Index of Business Activity reached the highest level of the year in the past month, and it registered an increase of 6 per cent. between 1935 and 1936. Despite the unpropitious weather on the day of the count and the temporary unsettlement caused by the Constitutional crisis during the first fortnight of the past month, the number of insured persons aged 16 to 64 employed in Great Britain rose to 11,132,000—an increase of 503,000 over the corresponding month in 1935 and of 907,000 over December, 1929. The expansion in business activity has been accompanied by a steady increase in industrial profits, the company reports published during the past month showing an advance of 15 per cent. over earnings disclosed by the same concerns a year ago.

The incidence of the expansion in activity underwent some significant changes in recent months. Domestic demand, for example, has been absorbing an increasing share of total production. Notwithstanding the improvement in the international background, the rate of increase in exports was considerably smaller in 1936 than in the two previous years. The imposition of sanctions on Italy was only partly responsible for the sluggishness of foreign business.

Secondly, there have been significant shifts in the relative progress of British industries. Broadly, the tendency of activity in the capital equipment industries to increase faster than in the consumption goods trades has become more pronounced. Our index of domestic iron and steel consumption rose to 134½ (1935=100) last December, when the index of general business activity stood at 109. A year ago the disparity between the two indices was much less marked, and in 1929 they were almost at the same level.

The growing disparity between the increase in the output of productive equipment and consumption goods usually indicates that the trade cycle has reached an advanced stage. It should be remembered, however, that much of Britain's industrial plant had become inefficient, especially as no large-scale re-equipment and modernisation took place in the years before the depression. But apart from re-equipment and replacement, the growing home demand necessitated considerable extensions to existing capacity in a number of industries, such as iron and steel, automobile manufacture and electricity supply.

The increase in activity, due to modernisation of plant and equipment and to extensions of capacity, has been accentuated in recent months by the re-armament programme. The effect of re-armament on industrial activity

cannot be measured by current Government expenditure and by the assistance given in the erection of certain factories. In addition to expenditure through Government contracts and indirect expenditure through loans, many industrialists have been, and are, adding independently to their capacity in anticipation of Government contracts which may, or may not, materialise. A third factor in the rapid expansion of the capital equipment industries is the revival of international trade. Since the world's merchant fleet had been substantially reduced during the depression, a slight increase in the exchange of commodities between countries has been sufficient to absorb the idle tonnage still remaining and to bring about a marked increase in freight rates. Consequently, the flow of shipbuilding orders, and the demand for the refitting of old vessels with modern machinery, has increased considerably.

Changes are also noticeable in the building industry. Constructional activity in 1936 has been maintained above the level of the previous year. The number of dwelling houses built during the year ended September, 1936, was a record. More recently, however, there has been a tendency of the centre of gravity to shift towards non-residential construction. The returns of the value of all building plans approved by 146 Local Authorities showed an increase of 4.7 per cent. over the corresponding month in 1935. Actually, plans passed for dwelling houses showed a decline,

but this was more than offset by an increase in non-residential plans. Re-armament is becoming a factor of increasing importance in industrial construction, while expenditure on public works is also increasing. It is noteworthy, however, that building costs are now tending to rise more

rapidly than hitherto. There are indications, however, that the demand for capital goods cannot continue indefinitely its recent rate of expansion. Costs are now rising fairly rapidly, and conditions of supply, especially in the iron and steel industry, are steadily deteriorating. The iron and steel industry has been operating at capacity for some time; and, as there is no more reserve plant to be brought into production, output can increase no faster than capacity. Moreover, imports cannot now be increased as easily as before owing to the growing demand abroad. The engineering industry, too, is experiencing considerable pressure for supplies, and is having difficulties in meeting requirements, despite the rise in imports. Moreover, the flow of Government orders to the industry is increasing.

But while expansion continued most marked in the capital equipment trades, the pace of the improvement in the consumers' goods industries also quickened in recent months. The rapid increase in the turnover of the cotton trade reflects the rising tide of world recovery.

The international setting, as will be seen from the article on page 226, is steadily improving. The countries producing raw materials, such as Latin America, the British Dominions, Scandinavia and some of the South European countries, are all benefiting from rising prices, while the majority of industrial countries continue to make headway, though the tempo of recovery in France is still slow and progress in the United States may be hampered by strikes.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of January. In the remainder they relate to the month of December.

COAL

The past month has witnessed a considerable improvement in the industry, and the outlook now appears to be better than for some time past. Output rose in December to 20,598,000 tons, against 19,652,000 in the same month of 1935. The employment position also showed a marked improvement and is now appreciably better than it was twelve months ago. In contrast with recent experience, exports showed a welcome expansion last month, France being by far the best customer. A feature of the December returns was the reappearance of shipments to Italy, while Germany took larger quantities than in the previous year. The export market has continued to improve since the turn of the year, forward inquiries being of satisfactory dimensions. Business in house coal was active right up to the holidays, but the seasonal slackness in this department early in January was accentuated by mild weather. Towards the end of January the position again improved. Meanwhile, industrial descriptions remain in active demand, the bulk of the output being disposed of against existing contracts. Open market business is consequently restricted.

IRON AND STEEL

The output of iron and steel during the past year has been the highest in the history of the industry. Production of pig iron rose by 19.6 per cent. between 1935 and 1936, and the output of steel ingots and castings advanced by 18.7 per cent. to 11,698,000 tons. The improvement was due to the remarkable increase in home demand, accentuated by the re-armament programme. The volume of exports of iron and steel materials actually declined by 107,200 tons between 1935 and 1936, while imports rose by 331,100 tons. The pressure of home demand has thus prevented the industry from benefiting from the expansion in the requirements of importing countries. Moreover, the past year closed without any slackening in the momentum of the upward movement of demand, which was unaffected by an average increase of 10 per cent. in the prices of iron and steel materials. And, although capacity is being gradually extended, there is some anxiety among consumers concerning the availability of adequate supplies in future, especially as foreign materials cannot now be obtained as easily as before.

GENERAL ENGINEERING

The engineering industry continued to expand vigorously in the past year, when it reached the highest level of activity since the war. As a result of the large-scale re-equipment and expansion of the capacity of British industry, which is now in progress, the flow of orders to the engineering industry has been increasing rapidly. Moreover, the expansion of demand has been accentuated by the re-armament programme and the revival in shipbuilding. Indeed, the increase in home orders has been so marked that domestic production has had to be supplemented by heavier purchases from abroad, while exports made no further headway in the past year. Imports of machinery rose from 72,500 tons in 1935 to 103,500 in the past year, while exports declined from 383,800 tons to 380,400 tons during this period. Moreover, the past year drew to its close without any decline in the pressure of demand, and the indications point to a further expansion of business this year, especially as the flow of Government orders is expected to increase. On the other hand, the industry's difficulties in obtaining prompt delivery of its requirements of iron and steel may increase with the expansion of output, while the shortage of skilled labour may also hamper progress in engineering.

ELECTRICAL EQUIPMENT

The electrical engineering industry is more active than ever before in its history. The proportion of insured workers unemployed in the industry, for example, was only 3.3 per cent. last month. Both the heavy and light sections of the industry are receiving a flow of expanding orders. The heavy section, in particular, has benefited from the rapid expansion of the demand for electricity, which necessitated the placing of a substantial volume of orders for generating equipment. During December, home orders for heavy electrical machinery were slightly smaller than in the previous month, but overseas orders showed a further improvement.

AUTOMOBILES

Automobile production remains on a high level, and the number of cars in use consequently continues to increase. Thus, in November last there were 1,530,000 private cars in use, an increase of more than 11 per cent., compared with November 1935. Production in November, at 30,667 units, compares with 27,339 a year earlier. Commercial vehicle production also remains well above the level of a year ago. Sales in markets overseas continue to make headway, December exports amounting to no less than 8,122 private cars, against only 4,852 in the same month of the previous year—an increase in value terms of £300,000 on the year. Exports of cars during the whole of 1936 amounted to 64,787, against 54,260 in the previous year. Imports of cars were also higher in December, total entries being 1,974 units, against 636 in Decem-

ber, 1935. For the whole year, however, imports were rather lower, at 11,452 units, compared with 12,331 in 1935.

BUILDING

Activity in the building industry was maintained on a high level throughout 1936, and, according to the official statistics, the record number of 339,538 houses was completed in England and Wales during the twelve months ended September 30th. The number completed by private enterprise, however, was slightly below the previous year's figure—274,348, compared with 275,069. The indications are that the peak of building activity has now been reached. Our index of building activity for December showed a further modest contraction. Unemployment increased seasonally in all the building occupations and, in the case of bricklayers and plasterers, was worse than a year earlier. The building plan figures for housing have been running recently below the previous year's level, but a large amount of industrial and commercial building is envisaged. Costs are now showing a distinct upward trend, the competition of the Government's re-armament programme being an important factor here. Meanwhile, as from February 1st, wages are to be increased by ¼d. per hour to 1s. 7d. per hour for craftsmen and proportionately to 1s. 2½d. per hour in the case of labourers.

CHEMICALS

Business on the home chemical market has been quite good during the past month in spite of the Christmas break. Pharmaceutical chemicals were well in demand, and the coal tar products market has been more active than is usual at this time of the year, though pitch has been a dull item. An improvement has shown itself in wood distillation products, the demand for charcoal and wood naphtha being particularly good items. There was an increase in overseas trade in chemicals, drugs, dyes and colours during December, 1936, exports being £43,438 and imports £141,122 greater than for the same period last year. Imports for the whole of 1936 increased by £982,751 compared with 1935, but exports decreased by £229,413.

POTTERY

The December unemployment figures for North Staffordshire were adversely affected by the completion of Christmas orders and by the temporary stoppage of production of Coronation wares. The position was, however, much better than in December, 1935. At Worcester employment was very good, while at Derby it was fair. Conditions in the industry remain patchy, short-time working by some firms being accompanied by the working of overtime by others. Exports of general earthenware were appreciably better last month than in December, 1935.

FOOTWEAR

Activity in the footwear trades suffered a seasonal contraction in December, when unemployment was rather worse than in the previous December. Holidays were consequently extended in many cases and short-time working was very general. On the other hand, exports of leather boots and shoes last month were above the previous year's level.

COTTON

During the past month the position of the cotton textile industry has undergone further improvement, and Lancashire begins the New Year with better prospects than for years past. Sales were larger than production in January, and order lists have consequently been extended. Selling prices are higher than for years back, but, on the other hand, costs have risen. Raw cotton prices, it is true, have shown little alteration in recent weeks, but, following the advance in weavers' wages, an increase of 1s. 1½d. in the £ has been granted to spinning operatives. Demand for piece-goods has broadened out and sales overseas during December were well above the level of recent years. A feature of the past month has been the revival of buying for India, and an improved business has been transacted for other outlets. Home trade demand has also been more active. Many idle looms have been restarted, and in the spinning section production is at 90 per cent. of capacity, against 89 per cent. a month ago and 83 per cent. a year ago. All mills are now reported to be making profits.

JUTE

Although unemployment remained heavy, 1936 was a better year for the jute industry than any since 1929. The improvement in prices took place despite a substantially increased production of jute manufactures in India, consequent upon the dispute between the Indian Jute Mills and the "outside" mills. Fortunately, the dispute coincided with an improvement in world demand, so that Dundee manufacturers were able to compete satisfactorily and even to obtain higher prices for their products. Recently costs have been tending upwards. The raw material has been very firm, while the operatives were granted a 4½ per cent. advance in wages by the Jute Trade Board. Nevertheless, business remains satisfactory, and it is hoped to pass these increasing costs on to the consumer in the form of higher prices.

LINEN

Demand for good quality flax remains strong on all markets, and prices continue their upward trend. Yarns are well sold

ahead and producing machinery is fully engaged. As regards cloth, a satisfactory volume of new business has been arranged, both on the home and export markets. Some heavy contracts have been placed for Government and public corporation requirements. Prices are on the upgrade.

RAYON

Business in rayon yarns, both for weaving and hosiery, is fairly satisfactory for the time of year, though activity on the spinning side is below normal. Stocks of yarn are fairly large, but the market, nevertheless, remains moderately firm, there being no strong selling pressure. Various sections of the trade are now busy on Coronation novelties, and the immediate outlook is considered good.

WOOL

The wool textile industry had a prosperous year in 1936 and enjoyed a further modest improvement in December. The unemployment percentage fell to 6.4 per cent., against 7.9 per cent. a year earlier, and in various occupations a shortage of labour was reported. In the worsted section, however, the position was not quite so good as in December, 1935. Activity in the carpet section is maintained at a high level. Meanwhile the export position remains satisfactory, further progress having been recorded last month. December shipments of woollen and worsted yarns and manufactures totalled £2,770,359, against £2,364,071 a year earlier, the improvement being due to increased demand from the Empire, the United States and the Far East. A feature of the past month was the resumption of Japanese buying of Australian wool, following the settlement of the "war" between the two countries. Prices of raw wool consequently appreciated and Bradford topmakers and spinners were compelled to raise their quotations. The grant of a 10 per cent. increase in the wages of Yorkshire mill operatives is a further factor making for higher costs. The immediate outlook, however, appears satisfactory.

AGRICULTURE

Fair progress has been made with the autumn sowing, states an official report, although work has been retarded on the heavier lands. Germination has been good, and plants generally are strong and healthy, except where floods have occurred. From the very varied estimates received, it appears that the area sown to wheat is 3 per cent. greater, and that sown to barley is 5 per cent. less, than a year ago. A slight reduction is indicated in the area sown

to oats. Cattle and sheep did fairly well during December, and breeding ewes are in satisfactory condition. Milk yields are somewhat below average for the time of year. Winter keep has not been drawn on unduly.

SHIPPING

The past year witnessed a remarkable improvement in the shipping position and freight rates showed a firm tendency at the close of December. The demand for tonnage broadened out in a most satisfactory manner and, on the other hand, the supply of idle tonnage was reduced to small dimensions. Consequently it became possible to establish a system of minimum freights in the River Plate market in February of last year, and subsequently to extend this system to cover all the principal markets; in many cases rates are now above the minimum. The improvement in the position is reflected in a 34 per cent. rise in *The Economist* index of whole cargo freight rates from 95.7 in December, 1935 (1898-1913 = 100) to 128.2 in December, 1936. The expansion of demand was not, however, confined to freight tonnage only, for passenger traffic was also better last year. Despite the war clouds over Spain, the outlook for the next few months is good. Passenger traffic is likely to increase in view of the Coronation, while the indications also point to an expansion of international trade in the near future.

RETAIL TRADE

The official statistics, published in the *Board of Trade Journal*, lend colour to the view that the constitutional crisis of December had some adverse effect upon retail trade. Thus, although the money value of retail sales was 5.5 per cent. above the corresponding 1935 figure, this was the smallest increase for some months. On the other hand, in 1935 December was a particularly good month. All districts recorded an improvement last month, the increases ranging from 1.7 per cent. in Central London and the West End to 7.4 per cent. in Suburban London. The South of England showed a gain of 6.6 per cent. and the North of England and Scotland advances of 5.4 and 3.8 per cent., respectively. Sales of food and perishables, amounting to some 48 per cent. of total sales, were 7.2 per cent. higher than a year earlier, the expansion in this group being most noticeable in the South of England and the suburbs of London. Sales of other merchandise, which in October and November had shown a relatively greater improvement, rose in December by only 4 per cent. The greatest advance in this group (+ 7.7 per cent.) was in boots and shoes.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—Following a year of advancing prosperity, Australia is now benefiting from the rise in the prices of primary products. Thus, a strong tone has been displayed at the wool sales recently, while wheat and base metals have sold at rising rates. According to a cable from the National Bank of Australasia, improved pastoral and dairying conditions are now apparent, particularly in eastern coastal districts. Bank clearings, receipts from customs and excise, and postal receipts are all higher than a year ago, while the Stock Exchange is buoyant for industrial and mining shares.

NEW ZEALAND.—Substantial increases in the price of wool are reported to have given a marked stimulus to confidence in the Dominion. Better prices have also been realised for dairy produce, and foreign trade is showing a marked expansion. Internal recovery is being assisted by large Government expenditure on public works, while this factor, together with the rising tendency of wages, has given a fillip to retail trade. Higher internal prices are consequently expected in coming months.

SOUTH AFRICA.—Prospects for the coming year are considered good, states a cable from the Standard Bank; Christmas trade expectations were fulfilled and turnovers in most sections were higher than in recent years. Building plans passed in Johannesburg in 1936 reached the record total of £9,775,180, against £6,797,546 in the previous year, and reports indicate that work on hand is sufficient to occupy contractors for two years. Maize prices are rather lower, but the wool market is strong, despite diminished Japanese support. Farming conditions and prospects show little change.

CANADA.—After a year of steady progress business remains buoyant for the time of year. Freight car loadings, employment, bank clearings and other indices are above the level of a year ago, and the outlook is encouraging. Stimulated by trade agreements with the United States and other countries, overseas trade made considerable headway last year. Meanwhile wholesale prices, notably for wheat and metals, have taken a strong upward turn, thus benefiting the Canadian producer.

INDIA.—Rainfall has been light to moderate in most parts of India, and crops are reported to be in good condition, except in the Central Provinces, where linseed has been slightly damaged by insects. The latest estimates of the area under the principal crops are as follow:—Rice, 81,446,000 acres, against 80,736,000 last year; winter rape and mustard, 2,813,000 acres, against 2,602,000; linseed, 2,756,000 acres, against 2,530,000; sesamum, 5,295,000 acres, against 5,370,000 acres. December imports fell by 63 lakhs of rupees to below the previous year's level, but exports rose by 44 lakhs and were 416 lakhs in excess of the total for December, 1935.

EUROPE

FRANCE.—The last three months of the past year have witnessed a gradual revival of confidence and activity in certain branches of industry, including the metal and textile industries. The official index of industrial production, for example, rose from 93 (1913 = 100) in August to 98 in November; a year ago the index stood at 95. Unemployment has declined, the number in receipt of benefit at the end of December being 410,785, compared with 439,782 a year ago. Foreign trade has taken an upward turn and taxation receipts are increasing. The improvement in confidence is reflected in the marked rise of the quotations for industrial securities since the beginning of the year. Nevertheless, there are still difficulties in the way of rapid recovery; the repatriation of capital has so far been disappointing, labour relations are still unsettled in a number of industries, and the problem of the Budget is not yet solved. None the less, the outlook is not unencouraging.

GERMANY.—Business activity continued to expand vigorously during the past year. The index of industrial production, calculated by the German Institute for Business Research, rose from 101.1 (1928 = 100) in November, 1935, to 113.7 in the corresponding month last year. Heavy expenditure on armaments was in a large measure responsible for the substantial expansion of activity. The number of unemployed, as officially recorded, declined from 2,508,000 to 1,478,000 during the past year. Foreign trade also tended to expand, both imports and exports in 1936 showing an increase over the figures for 1935. While the improvement was very marked in the capital equipment industries, retailment was also about 10 per cent. higher than in 1935. Prices have shown a tendency to rise. There are no indications of a setback in the near future, but the outlook remains somewhat uncertain.

NORWAY.—Industrial production in December continued the upward trend which was in evidence throughout 1936 and foreign trade was good. A sharp rise in prices was a feature of the month, an increase of 4.2 points in the "Ökonomin Revue" index carrying the figure to the highest since October, 1929. Demand for shipping tonnage shows an expansion and shipbuilding is on the up-grade. Retail trade is more active than it was twelve months ago.

SWEDEN.—The boom in Sweden continues. Demand for timber has recently been strong, and pulp sales have been brisk; consumption of iron and steel is increasing at advancing prices. Thus the index of industrial production continues to rise, and unemployment to fall. The normal seasonal slackness of employment

was not apparent in the early winter, and the outlook is good. Overseas trade is on the increase and the import surplus has been reduced. The rising tide of prosperity is reflected in the favourable Budget figures. Wholesale prices are rising, but retail prices show little change.

HOLLAND.—Since the devaluation of the guilder, recovery has been gaining ground. The current level of Stock Exchange prices discounts a further considerable improvement in business. Unemployment has now dropped below the level of a year ago, while foreign trade returns have a more satisfactory appearance. The expansion in business activity has swollen the revenue receipts, which actually exceeded the Budget estimate in November.

HUNGARY.—Hungary enters the New Year with favourable prospects. A greater measure of political tranquillity at home, higher wheat prices on world markets, and a virtually balanced Budget for the first time since 1930, hold out the promise of further economic improvement in coming months. In the first four months of the current financial year receipts were more than 10 per cent. in excess of the previous year's level, but expenditure showed a proportionately smaller advance.

UNITED STATES OF AMERICA

During the past year recovery continued to make rapid progress in most branches of activity. The volume of industrial production rose by about 15 per cent. between 1935 and the past year, and has now almost reached the pre-depression level. The index of industrial production, calculated by the Federal Reserve Board, rose from 82.4 (1929 = 100) in November, 1935, to 95.8 in the corresponding month last year. But while production of consumption goods is now as high as in the pre-depression year, the output of capital equipment is still somewhat below that level, despite rapid expansion in the past year. Owing to the need for re-equipment and extensions of industrial plant, activity in the capital goods industries may be expected to show further expansion in 1937. Moreover, building activity may also continue on the upgrade. The immediate outlook, however, is overshadowed by the efforts of the Committee for Industrial Organisation to reorganise the trade union system. And, since the Committee is resorting to the strike (as in the automobile industry, for example) to gain its objective, the progress of recovery may be hampered, but is unlikely to be arrested, during the next few months.

LATIN AMERICA

ARGENTINA.—Exports remain at a high level. Total exports for 1936 aggregated 1,652 million pesos in value, against 1,569 millions in 1935. The export surplus for last year may reach 500 million pesos, against 394 millions in 1935. Good crops of wheat and linseed are now coming on the market, and, with ideal weather conditions for growing maize, exports may continue on a high level for many months to come. The supply of exchange continues ample, with the "free" rate still approximating to the official rate. Retail trade is very good. Prospects generally are encouraging. Great Britain continues to predominate in Argentina's import trade, and the Argentine Government has recommended Congress to approve the new Anglo-Argentine Treaty since it assures a period of security of commercial relations between the two countries.

BRAZIL.—The exchange situation continues normal, with the rate showing an improving tendency, this being principally due to increased exports and an expansion in the favourable trade balance. Coffee prices are higher, probably mainly owing to official support, but there is increasing criticism of the regimentation of the industry. The commercial situation appears normal and the money market is easier.

CHILE.—Conditions in the "export" exchange market for sterling and United States dollars remain difficult, although "compensation" exchange for business with Germany and other countries appears to be easily forthcoming.

OTHER COUNTRIES.—This season's wool clip in Uruguay has met with a steady demand, and over 80 per cent. has already been sold at remunerative prices. The new wheat crop is of excellent quality and weight. In Peru, business conditions continue to improve; reports of the forthcoming cotton crop are favourable, and sugar prices are advancing. Central America is benefiting from satisfactory coffee crops, which are being marketed at higher prices.

THE FAR EAST

Although political conditions in Japan remain unsettled, business activity continues on the up-grade. There was an all-round improvement last year, due partly to the Government's policy of low interest rates and to inflationary armaments expenditure. Prices consequently showed a rising trend. These tendencies seem likely to continue in coming months. Meanwhile, the expansion of business has necessitated increased imports of raw materials, whereas exports have failed to record a comparable increase. Total imports in 1936 were 2,928 million yen, while exports amounted to 2,797 million yen—an increase of 12 per cent. and of 7½ per cent., respectively, over the previous year's figures. The import surplus rose by 115 million yen, but some part of this deficit will doubtless be covered by increased "invisible" exports. In China, recovery has been proceeding gradually ever since the devaluation of the currency, but its incidence has been somewhat patchy. The trade balance, however, was rather less favourable in the closing months of 1936, imports having risen above the previous year's level and exports showing a stagnant tendency.

UNITED STATES, FRANCE AND GERMANY

(a) SOURCES

Official or recognised trade publications.

(b) DEFINITIONS

- 31-36, 58-60, 100-101. Annual figures relate to end of year.
 37-38. Until 1932 all member banks of the Federal Reserve System, deposits subject to reserve. 1929 to 1932, averages of daily figures. Since 1933, deposits of weekly reporting member banks in 101 leading cities; annual figures relate to end of year, monthly figures to end of month.
 39. Annual figures relate to December.
 42. Excluding refunding issues.
 52, 54. Quarterly figures; shown under last month of quarter to which they relate.
 56, 57. Annual figures: 1929, 15 months to March; 1930, year to March, 1931; 1931, year to March, 1932; 1932, 9 months to December, 1932; 1933 onwards, calendar years. Monthly figures are cumulative.
 104. Yield on 6 per cent. mortgage bonds until 1934.

EUROPEAN COUNTRIES

BRITISH DOMINIONS AND FOREIGN COUNTRIES OUTSIDE EUROPE

(a) SOURCES

League of Nations' and other official and recognised trade publications.

(b) DEFINITIONS

- Notes in Circulation and Commercial Bank Deposits: Annual figures related to end of year.
 Quarterly figures are shown under last month of quarter to which they relate.
 Canadian Note Circulation: Prior to March, 1935, including Dominion Notes then transferred to Bank of Canada.
 Chinese Foreign Trade: Figures from 1929 to 1932 represent trade before separation from Manchuria. From 1933, Chinese trade with Manchuria shown separately.

86. Eight commodities. Annual figures represent stocks at end of year; monthly figures at end of month.
 87-88. Excluding Italy and Spain from 1935.

RAW MATERIALS AND CRUDE FOODSTUFFS

(a) SOURCES

Official and recognised trade publications, with the exception of the following:—

Gold: Union Corporation.

Average Prices: Calculated by *The Economist*, except those relating to rubber, raw wool (index of *Weekly Wool Chart* converted to 1929 basis), tea and tin.

(b) DEFINITIONS

Group I—

- 8, 17, 28, 34, 36, 37, 42, 44. Including all the principal producing countries of the world.
 8. Including Aachen (Germany) from 1932.
 18. New basis from 1934.
 34. Annual figures for 1934 and 1935 are subject to revision.
 36, 39-42. Annual figures: Year ended July 31st of year shown.
 37. Annual figures: July 31st of year shown.
 44. Annual figures: September 30th of year shown.

Group II—

- 4, 8, 12, 20, 28, 36, 42, 45. Including all the principal countries of the world.
 10-12, 46. Annual figures relate to end of year; monthly figures to end of month.
 14-16, 19-20, 22-25, 27-28. Quarterly production figures; shown under last month to which they refer.
 37. Annual figures relate to June 30th of year shown.

Group III—

- 6, 7, 9, 17, 28, 39, 43. Including all the principal countries of the world.
 8, 9, 18, 19, 29, 30, 44, 45. Annual figures relate to end of year; monthly figures to end of month.

THE ECONOMIST

TRADE SUPPLEMENT

New Series

SATURDAY, FEBRUARY 27, 1937

No. 2

The Trend of Business

THE salient features of the past few weeks were a sharp rise in commodity prices, accompanied by a marked, and somewhat indiscriminate, decline in the quotations for gilt-edged stocks and, to some extent, in those for industrial securities. These are phenomena usually associated with the advanced stage of the trade cycle, but they do not in themselves necessarily portend an early decline in business activity. An advance of raw material prices, while increasing costs of production, does not check enterprise so long as it can be passed on to the consumer under a liberal monetary policy. But it is now fairly evident that further expansion of capital goods construction at rising costs may tend to bring into existence plant and equipment which may become unremunerative during the next slump and accentuate its incidence.

Meantime, business activity showed a marked seasonal decline during January. *The Economist* index of Business Activity, shown graphically on this page, declined from 108½ (1935=100) in December to 107½ in January. With the exception of those relating to employment, commercial motors in use, consumption of raw cotton and imports of raw materials, all the component series of *The Economist* index, shown on page 15, registered a fall between December and January. Employment, it is true, declined much less than usual during this period; it must be remembered, however, that the employment figures relate to a particular day of the month and do not necessarily give a true indication of changes in the volume of activity from month to month.

On the other hand, the latest reports from various industrial centres suggest that the general trend of business activity remains upwards. Moreover, the course of industrial profits continues upwards, the reports published during January and analysed in *The Economist* of February 20th showing an increase of 15.9 per cent. over the preceding year.

Additions to productive capacity as well as re-equipment and modernisation of existing plant and machinery are proceeding apace. Nor are there any indications that this tendency, accentuated by re-armament, is likely to be arrested in the near future. But, in contrast to the position a year ago, the pace of expansion has slowed down, for the metal trades, which form the basis of the capital goods industries, are now working at capacity and are unable to expand output in proportion to the increase in demand at current prices. Although prices of raw materials and partly-finished articles are now rising more rapidly, consuming trades are not yet seriously alarmed by this movement. Nor is the scarcity of labour, though hampering expansion in certain directions, endangering the progress of general recovery.

The main factor, which is now severely limiting the extent to which the demand for capital goods can be satisfied, is the problem of supplies. The inability of the iron and steel industry, for example, to satisfy requirements is causing serious concern, especially as larger supplies of imported materials cannot now be obtained so easily owing to the expansion of world demand. Hence, there is some danger of an inordinate rise in prices which might render it unprofitable to add further to industrial equipment not designed for the production of armaments as well as to prejudice the competitive power of our export trades. Re-armament, probably the chief cause of these difficulties, is thus likely to be much more far-reaching in its ultimate effect than has been generally realised. Part of the expanding demand for capital equipment for civil purposes will

have to go unsatisfied, while the cost of the work actually carried out will be considerably higher than it would have been without the competition of re-armament demand.

Building activity remains well above the level of a year ago, but the relative importance of non-

dwelling house construction, partly due to re-armament, is steadily increasing. The returns of the building plans passed by 146 Local Authorities in January show a substantial decline in dwelling houses which was not entirely offset by the increase in plans passed for industrial and commercial construction.

Activity among consumers' goods trades continues to expand with the increase in employment, wages and industrial profits. Wage rates, for example, are now as high as in 1929, and the volume of employment is considerably higher than eight years ago.

The international setting is steadily improving, reflected in the expansion of international trade. Rising prices for primary products, accompanied by expanding sales, are stimulating recovery in the British Dominions and Colonies, as well as in South America, China, Scandinavia and other raw material producing countries.

Following the rapid expansion during the last quarter of 1936, business activity showed a decline early this year, accentuated by labour difficulties in the automobile industry and by the dislocation caused by disastrous floods. But there is still considerable scope for further expansion, though progress may be hampered by further labour disputes. In Germany, there has been a slight decline in activity, but the current level of production is still considerably higher than a year ago. Austria, Belgium, Holland, Poland and Switzerland are making gradual headway. In France, however, the expansion of activity has been slight so far, and business men and investors in that country still lack the confidence necessary for a revival of enterprise and investment.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of February. In the remainder they relate to the month of January.

COAL

Latest available information suggests that the sharp improvement of December was barely maintained last month. The monthly output of saleable coal was 19,490,000 tons, against 20,598,000 tons in December and 21,559,000 tons in January, 1936. Labour disputes and the influenza epidemic were to some extent responsible for the decline. On the other hand, the employment position was again a little better in January and unemployment was much below last year's level. Exports, too, were moderately satisfactory last month. Shipments abroad fell short of the corresponding 1935 figure, but were above the total of January, 1936. The improvement was especially marked in the case of France, which is by far the best of our overseas customers. Prices on the export markets now show a much firmer tendency, but business is hampered by the pressure for inland delivery, with the result that export inquiries have sometimes to be refused. It is reported that a number of pits in South Wales, which have been closed for some years, are now being reopened. Meanwhile, available supplies of industrial sorts are mainly absorbed by existing contracts, and the amount on offer on the open market is correspondingly limited. Business in house coal has been well maintained in recent weeks.

IRON AND STEEL

The position in the iron and steel industry is one of acute stringency, accompanied by rising prices. The industry is now working at capacity; hence the rate of further expansion of steel production is now conditioned by the rate at which new plant becomes available, on the one hand, and by the supply of raw materials, on the other hand. While productive capacity is being gradually increased, the scarcity of raw materials, such as coke, iron ore and scrap, presents a serious problem, which has been aggravated by the increase in the demand for steel in other countries. Moreover, the strong upward trend of the demand for steel abroad has also rendered difficult the supplementing of home production by heavier imports. The output of both pig iron and steel in January was slightly lower than in the preceding month. Imports of iron and steel materials in January at 93,100 tons, showed a decline of 11,700 tons on December and of 36,800 tons on the corresponding month a year ago. Exports, on the other hand, showed an increase over January and December, 1936. Meanwhile, home demand, stimulated by re-armament expenditure, continues to expand.

GENERAL ENGINEERING

The stringency of iron and steel, even more than the rise in prices and the shortage of skilled labour, is causing anxiety to the engineering industry. Indeed, the progress of the industry is hampered by the present and prospective scarcity of iron and steel. Demand for machinery continues on the up-grade, and re-armament orders are now rapidly increasing. To some extent, the output of the industry is supplemented by higher imports. Thus, total imports of machinery in January amounted to 10,323 tons, compared with 6,999 tons a year ago and 5,018 tons in January, 1935. The increase in imports has been particularly marked in the case of machine tools, purchases having risen from 598 tons in January, 1935, to 1,406 tons and 2,802 tons, respectively, in the corresponding months of 1936 and 1937. Exports in January, at 30,095 tons, compare with 30,023 tons in January, 1936, and 31,455 tons in 1935. Unemployment in engineering declined further in January, when the proportion of insured persons out of work was only 6.6 per cent. The extent of the revival in shipbuilding is revealed by the fact that the proportion of unemployed workers last month, at 26.4 per cent., showed a reduction of 10.2 per cent. on the corresponding month a year ago and of 19.7 per cent. compared with January, 1935. The pressure of new business, meantime, is still increasing.

ELECTRICAL EQUIPMENT

Despite a slight increase in unemployment during January, activity in electrical engineering continues to expand. Both home and foreign orders for heavy electrical machinery showed an increase in January. While imports of electrical apparatus and machinery remain at a relatively low level, exports in January were appreciably higher than a year ago. The indications, meantime, point to a further expansion of output, despite the sharp rise in the prices of copper and other raw materials.

AUTOMOBILES

From figures published by the Society of Motor Manufacturers it appears that 1937 may be another record year for the British motor industry. In the first three months of the current motor year production of private cars amounted to 95,886, against only 82,487 in the corresponding period of the previous season. New registrations in December, at 27,822, were no less than 24 per cent. above the level of the previous year. Production of commercial vehicles is also making good progress. Meanwhile, exports continue on the up grade. In January, exports of cars totalled 6,489 units, against 4,540 a year earlier; on the other hand, imports were slightly higher at 1,716 units, compared with 1,119 units in January, 1936. Sales of commercial vehicles overseas aggregated 1,846 units last month, against 1,378 in the same month of last year.

BUILDING

Activity in building and public works contracting has been well maintained since the beginning of the year. As far as building is concerned, the relative importance of non-residential construction continues to increase. The large-scale re-equipment and extension of British industrial plant, stimulated by re-armament, involves the construction of many new factories. Residential building is maintained at a high level by "assisted" construction. The proportion of insured building operatives unemployed in January showed a reduction of 10.2 per cent. on the corresponding month last year. Building costs are now increasing more rapidly; prices of raw materials are rising, and wage rates were again advanced at the beginning of this month. Largely as a result of the continued expansion of non-residential construction, an early and substantial decline in total building activity appears improbable. The value of building plans passed by 146 local authorities in January showed a sharp decline in dwelling-houses, which was not entirely offset by the further increase in plans passed for other forms of construction. While this tendency must not be overlooked, the construction of public works continues to show an upward tendency, despite the marked improvement which occurred during the past twelve months.

CHEMICALS

The home chemical market has been fairly active during the past month. Business in industrial chemicals has been on a very fair scale, with acetone, formaldehyde, formic and oxalic acids particularly active items. In the coal tar products market tar acids have been in good demand, and a satisfactory volume of business has been transacted in most other products. Trade in wood distillation products has continued on a good scale, and prices are firm, with a tendency to rise. The pharmaceutical chemicals market has been quiet but steady. There was an improvement in overseas trade during January, exports of chemicals, drugs, dyes and colours showing an increase in value of £106,354, as compared with January, 1936. Ammonium sulphate, drugs and medicines were the only items for which there were appreciable decreases in exports. The value of chemical products imported was £105,173 greater than in January, 1936.

POTTERY

Although the industry is better situated than at this time last year, no further improvement was discernible in January. Employment in North Staffordshire showed little change and continued moderate on the whole. At Derby and Worcester employment was good, and at Bristol fair. Short-time working is still common, but overtime is occasionally worked. Exports of general earthenware last month were larger than in January, 1936, the improvement being well spread geographically. On the other hand, shipments of china, tiles and sanitary ware were below the level of a year ago.

FOOTWEAR

Although short-time working is still common, the employment position showed a slight improvement in January. Unemployment is now considerably less severe than at this time last year. Meanwhile, exports remain on the upgrade. Sales of leather boots and shoes in overseas markets last month totalled 27,746 dozen pairs, against 26,299 in the previous year. The most striking improvement was in exports to New Zealand.

COTTON

Spinners and manufacturers did a substantial volume of business during the past month, and order lists are reported to be healthier than at any time since the post-war boom. Some slackening of demand has been apparent in recent weeks, but this was only to be expected in view of the high level of demand in January. A further reduction last month in numbers unemployed was partly due to vacancies caused by sickness. Spinners and manufacturers have now advanced their prices, and profit margins are much more encouraging, for raw cotton prices have shown little alteration. Exports of yarns and manufactures in January were above the level of a year ago, and demand is well maintained. As regards India, Karachi has been the best outlet during the past month. Java and South America have been good markets, while a considerable business has been transacted for West Africa. Operations for the Dominions have been somewhat irregular. Steady buying has been encountered for the home trade, and some substantial Government contracts have been arranged. Meanwhile, sales of American yarns have generally exceeded production, while the price-fixing movement has had further successes. On January 31st production in the spinning section was unchanged at 90 per cent. of capacity, compared with 81 per cent. a year earlier.

JUTE

The event of the month was the decision of the Indian Jute Mills to remove all restrictions on working hours and on the extension of looms as from March 1st. The decision was made after a dispute with the "outside" mills lasting many months and was designed to force the latter to come to terms. Production in India has not yet risen, for a number of mills have been idle in consequence of labour troubles. Demand has accordingly been sufficient to keep prices steady. Some expansion of production is, however, expected in the near future. Meanwhile, spinners and

AGRICULTURE

At the end of February, states an official report, work on the land generally was somewhat in arrear. Despite the wet weather, early sown corn has germinated well. On the whole, potatoes are keeping better than was expected in the earlier part of the season. Where lambing has begun the fall appears to be satisfactory, but in a few districts losses have occurred owing to the wet conditions. Cattle and sheep have done fairly well. Milk yields are decreasing owing to the inferior quality of much of last year's hay. With care, existing stocks of winter keep should last until the spring.

FISHING

The Minister of Agriculture announced in the House of Commons this week that the Government propose to introduce legislation for a scheme to regulate production and marketing in the white fish industry. It is planned to set up three bodies—an independent commission, a central board or joint council, which will be the co-ordinating body for the whole industry, and a producers' board representing the trawler owners. The decision follows the recommendations in the second report of the Sea Fish Commission, the herring industry having already been provided for. During 1936, British takings of white fish were heavier than in 1935, but the aggregate value of the catch fell by 3½ per cent. owing to a decline in prices. British takings of herrings were sold at better prices than in the previous year. A reduction in the catch of white fish last month was accompanied by an improvement in prices, while a larger catch of herrings also realised better rates than in January, 1936.

SHIPPING

Following the remarkable improvement recorded in 1936, the freight markets again displayed a good tone in January. The improvement is reflected in *The Economist* index of whole cargo shipping freights, which rose from 128.2 in December (1898-1913 = 100) to 135.6 in the following month. An easier tendency, however, was apparent at the end of January. Smaller grain shipments adversely affected the demand for tonnage in the Plate market and quietude spread to other markets also. But during the past fortnight, larger movements of wheat and maize have imparted a better tone to the markets and the outlook is satisfactory. Passenger traffic should shortly be favourably affected by the influx of visitors for the Coronation.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—According to information cabled by the National Bank of Australasia, January rainfalls were generally over average. Pastoral conditions have therefore much improved in South and West Australia, although more rain is needed in the dairying districts of Queensland. Higher wool and wheat prices are expected to add largely to the incomes of primary producers this season. Meanwhile, industrial production and building activity show further expansion, with factory and shop employment above pre-depression levels. Imports and exports for the past twelve months were, respectively, £10 and £13 millions sterling above the previous year's level. The Stock Exchange has a strong tone.

SOUTH AFRICA.—Farming conditions and prospects have improved in consequence of recent general rains, states a cable from the Standard Bank. Maize markets firmed up after early weakness. Union wool markets are firm at the lower levels, with active competition from Japan and Germany. Exports of deciduous fruits this season have been below the previous year's level, owing to the partial failure of the crop, but shipments of pears are satisfactory, and grape exports are expected to be up on last year. Meanwhile, railway earnings are above Budget estimates, and the Transvaal gold output is well maintained. Building plans approved in Johannesburg during January amounted to a record figure, and Government plans for Cape Town harbour will involve large expenditures over the next few years. Wholesale and retail trade remain brisk.

CANADA.—The latest available economic indicators suggest that the improvement shown in the closing months of 1936 has been well maintained. There has been no setback in mining, while prospects for the heavy industries have been improved by the placing of substantial orders for railway equipment. Meanwhile, the wood pulp and lumbering industries remain highly active. British Columbian ports have recently profited greatly by the United States shipping strike, this province now being more prosperous than for years past. The central Government has recently placed a refunding loan in New York at the lowest rate of interest ever offered for a Dominion loan.

INDIA.—Rainfall has been generally light and the condition of the crops is reported to be good in most districts. The first all-India estimate of the area covered by wheat is 32,167,000 acres, against 32,760,000 acres last year; while the final estimate of the sugar crop is 4,431,000 acres, against 4,020,000 acres a year ago. The yield of raw sugar is put at 6,717,000 tons, compared with 5,908,000 tons last season. Meanwhile, wholesale prices are tending upwards. Imports in January, although slightly smaller than in the same month of 1936, were 2,61 lakhs of rupees more than in December. Exports were 4,19 lakhs above the December level and 7.74 lakhs in excess of last year's corresponding figure.

EUROPE

FRANCE.—The last four months of the past year witnessed a steady, if modest, expansion of industrial activity. Thus, the official index of industrial production (1913 = 100) rose from 93 in August to 100 in December. In December, 1935, the index stood at 96. Since the beginning of the year, however, recovery appears to have made little further headway, and the position remains precarious. The immediate outlook is obscured by the lack of confidence among business men, which the Government has so far been unable to restore. Fundamentally, the stage is set for recovery, but the social and financial policy of the Government has tended to undermine confidence and check enterprise. In this respect the present position in France is not unlike that of the United States in the summer of 1933. Much is hoped from the forthcoming exhibition and from the increase in tourist traffic generally, as well as from the forces making for an expansion in international trade. But these developments alone can scarcely be expected to solve all the difficulties hampering recovery.

GERMANY.—There has been a seasonal decline in business activity during the past month, reflected in an increase in the number of unemployed persons, from 1,478,900 to 1,853,000. In general, however, the current level of industrial production remains well above the level of a year ago. The index of industrial production calculated by the German Institute for Business Research stood at 110.2 (1929 = 100) in December, against 113.7 in November and 96.2 in December, 1935. Activity remains most marked in the capital equipment industries, the current output of steel, for example, being well above the 1929 level. The official index of wholesale prices remained practically unchanged in recent weeks, but the trend of quotations for industrial shares has been upwards.

BELGIUM.—After a temporary setback in the summer, industrial activity in Belgium resumed its upward trend. The number of unemployed is considerably smaller than a year ago. Production of iron and steel and textiles is above last year's level. The upward tendency of imports and exports continued in recent months.

NORWAY.—Foreign trade figures for January indicate some contraction in turnover compared with December, 1936. But compared with January, 1936, imports increased from 64.1 to 91.6 million kroner and exports from 55.4 to 63.2 million kroner. Domestic business is increasing in volume. Building activity continues to expand, and the tendency of prices is decidedly

upwards, the wholesale price index having risen from 146.5 in December to 150.4 on January 31st.

POLAND.—Business activity continues its gradual upward trend. The index of industrial production calculated by the Polish Institute for Economic Research rose from 68.4 (1928 = 100) in December, 1935, to 74.9 in November and 77.5 in December, 1936. Expansion has been most marked in the case of capital equipment. Little headway has been made so far by industries producing consumers' goods.

DENMARK.—After a period of rapid expansion, industrial activity has been maintained about 30 per cent. above the 1929 level for many months. Over the past year the woodworking, textile and iron and steel industries have registered a substantial expansion in output. The volume of exports of butter and eggs during December was higher, and that of bacon slightly lower, than in the corresponding month in 1935.

UNITED STATES OF AMERICA

Following the rapid advance during the last quarter of 1936, business activity showed a decline early this year, accentuated by labour difficulties in the automobile industry and by the dislocation caused by disastrous floods. A year ago there was a similar setback, which lasted during the first quarter of 1936. Actually, the volume of industrial production in December, as measured by the Federal Reserve Board, was slightly above the average level of output in 1929. Nevertheless, there is still considerable scope for further expansion, though future progress may be temporarily impeded by further labour disputes. The momentum of recovery, however, has gained sufficient force to overcome any temporary difficulties. While the output of consumption goods may be expected to continue its upward trend this year, progress is likely to be most marked in the capital equipment industries. The process of re-equipment and extension of industrial plant is now in full swing, but much leeway remains to be made up in the building, iron and steel, railways and electricity industries. The agricultural community is benefiting from the marked rise in prices which has taken place in recent months. The value of imports and exports is steadily increasing.

LATIN AMERICA

ARGENTINA.—The current year promises to be the most prosperous for Argentina since the beginning of the world depression, and there is a general feeling of optimism. Shipments of new-crop fine cereals and of old-crop maize have continued at record levels, whilst further large conversion operations in the United States dollar debt have been undertaken, all of which should help to support the peso. The year 1935 closed with an export surplus of nearly 536 million pesos, the highest for several years past. As a temporary measure, the meat industry will be subsidised out of the Exchange Profits Fund in respect of exports to the United Kingdom, in order to offset the new British import duty.

URUGUAY.—Conditions continue to improve, and, there being apparently a good supply of exchange to cover imports from Great Britain, no exchange quota for this country has been fixed for the first quarter of 1937.

CHILE.—Interest is now mainly centred on the General Election in March next. The Budget for 1936 closed with a substantial surplus of ordinary revenue over expenditure. During the past few weeks there has been a distinct improvement in the Chilean "export" exchange market for sterling and United States dollars, the recent stringency having been eased considerably, thereby facilitating payment of outstanding bills for collection.

BRAZIL.—Business conditions continue normal, with no important change in import market conditions. Coffee export bills continue to be offered freely, and, as current exports exceed imports in value, there is a tendency to build up a reserve of cover, which should lead to a further improvement in the exchange value of the milreis. Brazil's overseas commerce for the first eleven months of 1936 was higher in value, in respect to both imports and exports, than in the corresponding period of any of the four preceding years.

OTHER COUNTRIES.—The seasonal outward movement of coffee from the Central American countries continues buoyantly, with corresponding benefit to the exchange markets and business conditions generally.

THE FAR EAST

With the formation of the Hayashi Cabinet, to replace the Hirota Ministry, and the resumption of the Diet on February 15th the political outlook in Japan is less obscure. Business circles are stated to be in sympathy with the new Cabinet owing to the prospect of gradual reforms, such as a reduction of the Budget figures and an alleviation of tax burdens. Government funds, industrial stocks and commodities have accordingly rallied. Following an active period at the end of January, the money market turned easy. Wholesale prices remain on the up grade. Japan's imports totalled 320 million yen in January, against 241 millions in the same month of last year, while her exports were 209 millions, compared with 171 millions in January, 1936. China's export trade also remains above the previous year's level. Her imports and exports in December last totalled 92.16 and 79.88 million standard dollars respectively, against 65.22 and 70.58 millions in December, 1935.

British Industrial Developments

The following reports on British industry cover, in most cases, the period to the middle of March. In the remainder they relate to the month of February.

COAL

After the lull in January, the industry was again more active in February. Although there were two less working days, the output of commercially disposable coal amounted to 19,796,800 tons last month, against 19,489,600 tons in January and 19,640,000 tons in February, 1936. The employment position showed little change, and was very bad in South Wales and Cumberland, but was appreciably better than in the same month of last year. The improvement in exports compared with a year ago was well maintained, though February's shipments had not recovered to the 1935 level. France again took substantially larger quantities, while Norway and Sweden were good customers. Shipments to Denmark and to Germany were, however, smaller than in the same month of last year. Export inquiries remain numerous, but collieries are not always able to take advantage of them. In recent weeks export business has been hampered by severe storms, which have delayed shipping. Meanwhile, business in industrial fuel continues active and spot supplies remain short. House coal has been in good demand in recent weeks and substantial orders have passed to the collieries.

IRON AND STEEL

Demand for iron and steel continues to expand more rapidly than supplies, thus hampering the expansion of the consuming industries. As a result of the scarcity of semi-finished materials, for example, a number of plants have been forced to curtail the output of finished steel products. To some extent, however, the shortage is exaggerated by the anxiety of consumers to cover their requirements for longer periods ahead and by their practice to apply for larger quantities than actually required in the expectation that only part of their demands will be satisfied. The position has been rendered more difficult by the marked reduction in imports, due to the growth of demand elsewhere. The current monthly rate of world steel production is now well over 10 million metric tons, compared with an average of 9.7 million tons in 1929. While world demand has tended to expand, British imports of iron and steel have declined steadily, from 170,300 tons in July, 1936, to 82,900 tons last month, against 123,200 tons during the corresponding month a year ago. British production of crude steel, on the other hand, is gradually expanding, output in February, at 995,900 tons, showing an increase of 57,400 tons over February, 1936. Total output of crude steel this year may show an increase of about 1,000,000 tons over 1936, while imports of all iron and steel materials, at the current rate, may show a decline of about half a million tons. The total quantity of steel available this year, therefore, will be substantially heavier than a year ago, though it may not be sufficient to meet the growing home requirements and, at the same time, sustain the higher volume of exports.

GENERAL ENGINEERING

The volume of new orders for machinery, swelled by Government contracts, is expanding rapidly. The industry is still very much concerned with the difficulty of obtaining supplies of iron and steel within the time required. Indeed, the question of iron and steel supplies is still causing much more concern than the rise in prices and the scarcity of skilled labour. Moreover, the pressure of Government contracts, which are receiving priority, is expected to increase further. The proportion of unemployed workers in general engineering continued to decline in February, when it was 6.2 per cent., compared with 10.8 per cent. a year ago. The industry is finding it impossible to accept all new business on offer. An increasing volume of home orders, therefore, is diverted abroad, while export business is declining. The volume of exports declined from 32,700 tons in February, 1936, to 30,700 tons during the past month. During the same period imports rose in volume from 6,200 tons to 11,900 tons. Owing to the inability of the industry in this country to supply all requirements, a substantial proportion of imports are allowed to enter under licence. Most individual branches in the industry are experiencing great activity. The pressure of orders, however, is most marked in the machine tool section. Imports of machine tools, incidentally, increased from 778 tons in February, 1936, to 2,604 tons in the past month. Heavier imports of rolling-mill machinery indicate the extension of the iron and steel industry's capacity now in progress. Meanwhile, the trend of activity in engineering remains upwards.

ELECTRICAL EQUIPMENT

Activity in the electrical equipment industry continues to expand. The volume of new orders is still increasing both on home and export account. Indeed, the rising trend of exports is one of the most satisfactory features. The value of exports of electrical goods and apparatus rose from £726,200 in February, 1936, to £803,900 last month. Similarly, exports of electrical machinery increased from £235,400 to £255,900 during this period.

AUTOMOBILES

Reflecting the increase in purchasing power, the home market continues to absorb an increasing number of private cars. Thus, new registrations in January totalled 28,820, against 26,580 in

the same month of last year, while registrations in the first four months of the current season were almost 11 per cent. in excess of the comparable aggregate for last season. Foreign cars are also in increasing demand, imports amounting to 1,427 last month, against 923 in February, 1936. Meanwhile, British producers, despite the shortage of steel and other difficulties, are making progress in overseas markets. Exports of cars, which totalled 5,325 units in February, 1936, had risen to 6,143 units last month. The outlook still appears favourable.

BUILDING

Building activity increased last month, when there was a decline of 1.5 per cent. in the proportion of insured unemployed workers in the industry. The Economist index of building activity showed a slight rise between January and February. The construction of public works is also expanding, the proportion of insured workers unemployed in that branch of activity in February being 42.4 per cent., a fall of 1.2 per cent. on January and of 6.2 per cent. on the corresponding month a year ago. Moreover, the latest figures of building plans passed indicate that constructional activity is likely to continue at a high level for some time to come. At £10,699,000, the value of plans passed by 146 local authorities last month shows an increase of 6 per cent. over February, 1936. To some extent the rise in the value of the plans passed is probably due to the increase in costs of construction, which are now advancing more rapidly. Actually, plans passed for dwelling houses declined from £6,391,000 in February, 1936, to £5,300,000 in the past month, but this fall was more than offset by an increase, from £3,712,000 to £5,399,000, in other forms of construction. Incidentally, in February the value of plans passed for non-residential purposes for the first time exceeded that for dwelling houses, an indication of the expansion in industrial capacity and in commercial and public building.

CHEMICALS

Business in the home chemical market was on a very fair scale during February, although demand for industrial chemicals was not quite as active as during the previous month. On the other hand, there was more trade in dyestuffs, and considerable interest was shown in most coal tar products, tar acids being particularly active. An improvement was also reported from the wood distillation industry. The pharmaceutical chemicals market was quiet but steady, with deliveries covering fair quantities. The trade returns for February show a definite improvement in overseas trade in chemicals, drugs, dyes and colours as compared with February, 1936, exports increasing in value by £352,855 and imports by £55,887.

POTTERY

Employment in North Staffordshire showed an improvement in February and was fair on the whole. In the china section there was increased activity due to Coronation orders, and shortages of labour were reported in certain occupations. Employment was good at Derby, very good at Worcester and fair at Bristol. The position was considerably better than at this time last year. Exports of general earthenware were, however, smaller in February than in the same month of 1935 and 1936, the decline in shipments being widely distributed. Sales of electrical ware were larger than a year ago, and increases were also recorded in sanitary ware and glazed tiles.

FOOTWEAR

A marked improvement in February was reflected in an increase in the number of workpeople employed and in the aggregate wages paid. Short-time working decreased, and there was a considerable amount of overtime working. Exports, however, were rather below last year's level, amounting to 30,259 dozen pairs, against 31,300 in February, 1936. The decline was substantial in the case of the Union of South Africa, which, however, remained the chief overseas outlet. Shipments to New Zealand again showed a striking advance.

COTTON

The condition of the cotton textile industry remains healthy, though fewer new orders were booked during the past month. It is now quite common for manufacturers to be engaged three or four months ahead, and in some instances cloth orders now booked will not be completed until the end of the year. Prices are accordingly hardening, the employment position shows a remarkable improvement compared with a year ago, and shortages of workers are reported from certain areas. Among the principal export outlets, demand from India has been rather disappointing, and it is reported that looms which are usually engaged on producing cloths for India have now been turned on to contracts for other markets. The offtake by other overseas customers, however, remains encouraging. Despite complaints about the rise in prices, a fair volume of business has been transacted with home trade buyers. Cloth manufacturers have been handicapped in some instances by sickness among their workpeople and by the scarcity of certain yarns. The strong position of firms with wide looms remains a feature of the trade. Spinners have been doing well, and the price maintenance scheme in the Egyptian spinning section came into operation on March 1st. At the end of February 92 per cent. of the spindles was estimated to be in full production, against 81 a year earlier.

JUTE

Although the members of the Indian Jute Mills Association are now at liberty to extend their working hours and increase the number of their looms, production has been held in check by strikes. The Calcutta market has accordingly remained steady. It has been rumoured that the Indian Government is contemplating intervention in the dispute regarding working hours, but no definite information is yet available. Meanwhile conditions at home show little change. Exports of jute yarns and manufactures showed a substantial improvement in February compared with the same month of last year, but business has recently been quiet generally. Prices, however, are fairly firm.

LINEN

Flax prices are firm at top limits, with little material on offer. Supplies of Irish fibre are beginning to decline, but Courtrai is in strong demand. For the first time for many years market conditions and prices are stated to be dominated by yarn and cloth requirements, rather than by costs and tendencies of the raw material. The volume of new business in damasks and fine cloths with the United States and other overseas markets is satisfactory.

RAYON

Business in yarns is expanding, and there has recently been a marked increase in the call for yarns for the hosiery and knit-goods trade. Where the prices of rayon fabrics are unchanged, trade is being favourably affected by the rise in cotton and wool prices. There is a steady demand for staple fibre from both the cotton and the worsted spinning trades.

WOOL

The wool textile industry is in a healthy position, and the majority of the mills are busy. Employment is good generally and some shortage of skilled worsted weavers is reported. The and some shortage of skilled worsted weavers is reported. The woolen section is rather more active, and here much overtime and night shift working are common. The percentage of insured work-people unemployed in the industry as a whole was 7.4 in February, against 7.1 in the previous month and 9.7 a year ago. Meanwhile, the industry is faced with rising costs. The expansion of demand

in all parts of the world, coupled with the impossibility of increasing supplies at short notice, has brought about a substantial rise in raw wool prices. This has created difficulties for spinners, for it is not easy to pass the rise on to the consumer. In the meantime, exports remain above the level of a year ago. Sales of wool tops and of woollen and worsted yarns last month were larger than in February, 1936, but exports of yarns were disappointing. The outlook remains favourable.

AGRICULTURE AND FISHERIES

Very little cultivation could be carried out in February. In only a few districts has spring sowing been attempted. Autumn-sown crops were generally in good and forward condition at the beginning of the month, but on waterlogged lands are now beginning to lose colour. Lambing became general in February, except in the North and amongst hill flocks. Prospects are relatively good, but it has been necessary to resort to more hand feeding than usual. Milk yields have been difficult to maintain, and are slightly below average. Winter keep is likely to be sufficient, but a shortage of straw is reported in some districts. Meanwhile, the fishing industry had a rather less satisfactory month. Landings of demersal fish in Great Britain rose from 1,023,503 cwt. in February, 1936, to 1,052,633 cwt. in February, 1937, but the aggregate value of the catch fell from £787,556 to £776,339. Among pelagic fish February's landings of herrings totalled 22,604 cwt. (valued at £12,816), against 36,021 cwt. (valued at £13,425) in the same month of 1936.

SHIPPING

The demand for tonnage was less active during February, and freight rates consequently had an easier tendency. Thus *The Economist* index (1898-1913 = 100) fell from 135.6 in January to 134.3 in February, the latter figure comparing with 90.6 a year earlier. The quietude was maintained until mid-March, when the expansion of grain shipments gave rise to renewed inquiries for tonnage. The shipping companies are also benefiting from the active world demand for scrap metal, a number of vessels having been chartered for this trade during the past month. In view of the progressive reduction in the tonnage of idle shipping, and the expansion of world trade, the outlook is encouraging.

r. Revised. p. Provisional.

Business Developments Overseas

BRITISH EMPIRE

AUSTRALIA.—A cable from the National Bank of Australasia states that rural production prospects are generally satisfactory. Wheat is selling steadily. Two million bales of wool were sold during the last eight months at the satisfactory average price of 16.3d. per lb., greasy. Butter production, however, remains below last season's level. Meanwhile, industrial output is expanding, while the building and allied trades continue active. The rise in retail turnover is below expectations, but the outlook is considered promising. The favourable trade balance for January was £2,600,000, and the Stock Exchange is animated.

SOUTH AFRICA.—The prosperity of Union commerce and industry is reflected in the national and railway budgets, presented on March 15th, states a cable from the Standard Bank. These disclosed surpluses of £5,000,000 and £1,873,180, respectively. Building plans passed in Johannesburg in February were valued at the record total of £1,218,157, and general activity at other large centres is increasing. Farming conditions and outlook are also favourable. Wholesale and retail turnovers at large centres are well maintained and prospects are good, although a slight recession from the recent high levels is expected at Johannesburg, as railway bookings for the Easter exodus from the Rand are exceptionally heavy.

CANADA.—Business activity remains on the up-grade and prospects appear favourable. Unseasonable weather has recently hampered business in certain directions, but the general level of industrial activity is well above that of a year ago. According to the Canadian Bank of Commerce, a large volume of new construction work is in sight; but at present the building industry is by no means active. The wheat position has improved strikingly during the present season, and Canada is also benefiting in marked degree from the rise in base metal prices. Both internal and external trade are expanding.

NEW ZEALAND.—The progress of recovery is being assisted by large expenditure by the Government, which is also stimulating retail trade. The policy has been facilitated by the rise in the price of New Zealand's staple exports—wool and dairy produce—a factor which has alleviated the exchange position. Taxes have been raised, but there is little financial anxiety in view of the expansion of incomes and the buoyancy of the revenue.

EUROPE

FRANCE.—Business activity in France is gradually expanding. Between August, 1936, and January this year the official index of industrial production rose from 66.7 (1929 = 100) to 72.0. The efforts made by the Government to restore confidence among business men and to set in motion a repatriation of capital have been partially successful, but the situation remains precarious. Prices continue their upward movement. Contrary to the normal seasonal trend, the number of persons in receipt of unemployment benefit declined from 426,000 to 410,000 during February, compared with an increase from 477,000 to 487,000 during the corresponding period last year. Exports rose from Frs. 1,203 millions in January, 1936, to Frs. 1,773 millions this year. Owing to the rise in prices, however, the expansion of imports was much more pronounced; they amounted to Frs. 3,319 millions last January, against Frs. 2,014 millions a year ago.

GERMANY.—The seasonal decline in business activity early this year was followed by an improvement in February. The number unemployed, as officially recorded, declined from 1,853,000 at the end of January to 1,611,000 at the end of February, against 2,515,000 a year ago. Output of coal, pig iron and steel rose between December and January, when production was substantially higher than a year ago. Activity in the metal-using industries remains at a high level. Imports declined from Rm. 367 millions in December to Rm. 336 millions in January, and exports fell from Rm. 457 millions to Rm. 415 millions. The value of both imports and exports, however, remained well above last year's level. The trend of wholesale prices and of the cost of living is steadily upwards.

NORWAY.—Foreign trade continues to expand, the figures for January showing an increase of about 35 million kroner, compared with the same month last year. Prices are steadily rising. Unemployment figures indicate a decrease of about 8 per cent. on the month, industrial production was well maintained, and the favourable development of the freight markets continued, so that practically the whole merchant fleet was employed.

GREECE.—Weather conditions in February continued to be favourable for agriculture. Foreign trade returns for January showed an increase in value both of imports and exports, with a reduction in the adverse balance of trade, as compared with January, 1936. The tobacco and currants markets were active in February and prices firm, particularly for tobacco. Business on the Athens Stock Exchange was lively. The gold and foreign exchange reserve of the bank of issue showed a fresh slight increase. Public revenue and wholesale prices rose further.

HOLLAND.—Holland is recovering fairly rapidly from the depression. The index of retained imports of raw materials, an indication of the trend of industrial activity, rose from 63.6

(1929 = 100) in July, 1936, to 91.4 in December and 92.0 in January, 1937. Voluntary unemployment insurance statistics show a decline of about 30,000 in the number of persons without work between the end of January, 1936 and 1937. Foreign trade is on the up-grade.

POLAND.—Business activity is expanding steadily. The index of production calculated by the Polish Institute for Economic Research rose from 77.7 (1929 = 100) last December to 80.3 in January. A year ago the index stood at 67.5. Nevertheless, the latest unemployment statistics still compare unfavourably with those of a year ago.

UNITED STATES OF AMERICA

Business activity is rapidly recovering from the setback early this year, the current level of activity being about 15-20 per cent. higher than a year ago. Moreover, industrial expansion is proceeding over a wide front, and, as in the United Kingdom, the upward movement of prices is gaining momentum. The metal industries are actively engaged in re-equipping and enlarging the country's industrial capacity. But the building industry, though gaining ground, has still much leeway to make up before approaching the pre-depression level of activity. Consumers' goods trades, especially textile and automobile manufacturers, are producing almost to capacity, and retail trade is brisk. Nevertheless, expansion is hampered in certain industries by the strike epidemic, the end of which is not yet in sight.

LATIN AMERICA

ARGENTINA.—The boom in the Argentine export trade recorded in the second half of 1936 continues. Total exports in January, 1937, reached a record figure of 280,155,155 pesos, against 143,409,420 pesos in the same month of 1936, and, as imports were only slightly higher, the favourable balance in January this year was four times greater at 173,180,739 pesos. Despite the ample supply of exchange, however, there is still no change in the control regulations, nor in the prior permit system which maintains Great Britain as the chief supplier to the Argentine. A feature, however, was the jump in Argentine imports from the United States in January to almost the level of imports from the United Kingdom. The expansion in exports is making for increased activity in both the import and retail trades, and the outlook is encouraging. Although some new crop maize has been lost as a result of hot weather, good general rains have recently fallen, and the crop, which will come on the market at the end of March, promises to be of a satisfactory nature both as regards quantity and quality.

URUGUAY.—The improvement in Uruguay's credit has enabled the Government to convert outstanding 6 and 6½ per cent. internal debt bonds to a flat 5 per cent. basis.

CHILE.—Preliminary results of Chile's General Election on March 7th indicate that the parties of the "Right" have obtained a majority in both Houses of Congress which should ensure a continuation of the policy of the present Government. Chile's trade figures for 1936 showed a continuation of the expansion observable in the past four years, but, as a result of the operation of the "compensation" system, Germany has now displaced the United States as the principal supplying country. The "export" exchange market for sterling and dollars continues to show increased ease, due to greater shipments and higher prices of copper, wool and meat.

BRAZIL.—Following upon a sharp rise in coffee prices in the Brazilian markets in recent months, there was a sudden break in mid-February, it being officially explained that the Government had refrained from supporting price levels obtained through speculative activities, but that it would continue to support the interests of the coffee industry and of legitimate trading. The market is unsettled pending definite official fixation of the new level of coffee prices. Brazil's foreign trade in 1936 was higher than in the few preceding years, and the export surplus was over £9,000,000 (gold), compared with about £5,600,000 in 1935. Higher aggregate exports were recorded in an increasing number of commodities besides coffee, notably in cotton.

CENTRAL AMERICA.—The outlook in Central American countries continues to improve by reason of the good sales of new crop coffee at higher prices.

THE FAR EAST

After a seasonal setback in January, industrial production in Japan is now again on the up-grade. Imports of raw materials, especially cotton, have been swollen this year by excess purchases in anticipation of import restrictions. Hence, the import balance for the first two months of the year amounted to 193 million yen, an increase of 33.5 per cent. over the corresponding period of last year. Meanwhile, prices are showing a strong upward trend, the metal markets having been particularly active. The clarification of the political situation has had a favourable effect on the Stock Exchange. In China, recovery is definitely under way. In Hongkong, the shipbuilding trade is active and a further fillip is expected in consequence of the British Government's re-armament programme. China's overseas trade continues to show an improvement over the previous year's figures.

UNITED KINGDOM

(Population, mid 1935, 46,886,000; Area 95,030 sq. miles; 244,000 sq. kms)

GOLD MARKET

Messrs Samuel Montagu and Company write on February 17, 1937:—
The Bank of England gold reserve against notes amounted to £313,660,661 on February 10, 1937, the same as on February 3rd. Bar gold to the value of about £1,670,000 was available in the open market during the week. Although prices showed a premium over dollar parity at the time of fixing, most of the gold offered was secured for the United States of America. The s.s. "Mongolia," which sailed from Bombay on February 13th, carries gold to the value of about £71,000.

SILVER MARKET

The market has maintained a steady tone, and business has been of a fairly general character. Buying for America has again been in evidence, and there has been some speculative buying, demand being offset by further reselling of holdings and sales on China account. The Indian Bazaars have also resold, besides making a few fresh forward purchases. There is at present no indication of any wide variation from the present level. Quotations for gold and silver are shown below:—

1937	Price of Gold per Fine Ounce	Equivalent Value of £ sterling	Price of Bar Silver in London per ounce standard	Price of Silver New York per ounce .999 fine
Feb. 11.....	s. d. 141 11	s. d. 11 11-67	d. 20 1/2	Feb. 10 45
" 12.....	142 2	11 11-42	20 1/2	Feb. 11 45
" 13.....	142 2 1/2	11 11-37	20 1/2	Feb. 12 45
" 15.....	142 1 1/2	11 11-46	20 1/2	Feb. 14 45
" 16.....	142 0 1/2	11 11-54	20 1/2	Feb. 16 45
" 17.....	142 0 1/2	11 11-54	20 1/2	Feb. 17 45
Average.....	142 1	11 11-50	20-094	20-073
Feb. 18.....	142 1	11 11-50	20 1/2	20 1/2

The highest rate of exchange on New York recorded during the period from February 11 to February 17, 1937, was \$4-90, and the lowest 4-89 1/2.
